This command starts writing PCAPs of all web traffic from the most recent session and all new incoming sessions that match service=80. It writes out PCAPs no larger than 2 GiBs and if all the PCAPs in the directory grow larger than 100 GiBs, then it deletes the oldest PCAPs until the directory is 10% smaller than the max size. Keep in mind that the directory size checking is not exact and it only checks every 15 minutes by default. You can adjust the number of minutes between checks by passing `cacheMinutes` as a parameter, but this only works with Security Analytics 10.5 and later.

```
sdk content sessions=79000-79999 render=nwd
append=content-%1%.nwd metaFormatFilename=did
```

This is a poor person's backup command. It grabs 1000 sessions and outputs the full content (sessions, meta, packets, or logs) to the NWD (NetWitness Data Format) format. NWD is a special format that can be re-imported to a Packet or Log Decoder without reparsing. So essentially, the original parsed session imports without changes. The timestamp does not change as well, so if it was originally parsed 6 months ago, the timestamp upon import will be retained as 6 months ago.

Note: Do not expect great performance with this command, especially with packets. Gathering the packets for a session involves a lot of random I/O and can drastically slow down the export. Logs do not suffer as much from this problem (only one log per session), but behind the scenes this command uses the /sdk content API and this is not a performance minded streaming API like /sdk packets. So again, do not expect great performance.

The `metaFormatFilename` parameter is very helpful in this command. If this command is run on a Concentrator with more than one service, the NWD filenames will be created with the `did` meta for each session (the %1% in the append parameter is substituted with the value of `did`). Each filename will indicate exactly which Decoder the data came from.

```
sdk content session=1-u where="service=80,139,25,110"
render=files maxDirSize=200mb cacheMinutes=10
```

This is another fun little command. It works very similar to our old Visualize product if you pair the output directory with something like Windows Explorer in Icon mode. It extracts files from all web, email, and SMB traffic. This includes all kinds of files, such as images, zip files, videos, PDFs, office documents, text files, executables, and audio files. If it extracts malware, your virus scanner will flag it. Do not worry, nothing will be executed by the command, so it does not infect the machine (unless you try to execute it yourself). However, it can be useful because if you do find malware, the filename indicates the session id where it was extracted. You can then query that session id and see what host the malware possibly infected and take action. You can filter what gets extracted with the parameters `includeFileTypes` or `excludeFileTypes` (see the command help). For instance, adding `excludeFileTypes=".exe;.dmg;.msi"` prevents executables and installers from being extracted. This command just runs nonstop extracting files from all existing and any new sessions. After the directory gets littered with more than 200 MiBs of files, it automatically starts cleaning up the files every 10 minutes.

Note: This command only makes sense for packet sessions, not logs.

```
sdk content session=1-now where="time='2015-01-27 12:00:00'-'2015-01-27 13:00:00'
&& (service=25,110,80)" subdirFileTypes="audio=.wav;.mp3;.aac;
video=.wmv;.flv;.mp4;.mpg;.swf; documents=.doc;.xls;.pdf;.txt;.htm;.html
images=.png;.gif;.jpg;.jpeg;.bmp;.tif;.tiff archive=.zip;.rar; other=*"
renameFileTypes=".download|.octet-stream|.program|.exe;.jpeg|.jpg" render=files
maxDirSize=500mb
```

This command extracts files from HTTP and email sessions from a one-hour period and then groups the extracted files into directories specified by the `subdirFileTypes` parameter. For instance, any extracted audio file with the extension .wav, .mp3 or .aac will be placed into the subdirectory audio, which will be created under the specified output directory. The same goes for all the other groups specified in that parameter. Some files will also be automatically renamed based on their file extension. This is handled by `renameFileTypes`. Any file with an extension .download, .octet-stream or .program will be renamed to .exe. Files with the extension .jpeg will be renamed .jpg. Once the top-level directory exceeds 500 MiBs, the oldest files get cleaned. This command stops at the last session at the time the command started.

```
sdk search session=1-now where="service=80,25,110" search="keyword='party' sp ci"
```

This command searches all packets and logs (the `sp` parameter) for the keyword `party`. If party is found anywhere in the packets or logs, it outputs the session id along with the text it found and the surrounding text for context. The where clause indicates that it only searches web and email traffic. The `ci` parameter means that it is a case insensitive search. You can substitute `regex` for `keyword` and it performs a regex search.

```
sdk search session=1-now search="keyword='checkpoint' sp ci" render=log
append=checkpoint-logs.log fileExt=.log
```

This is an interesting command example. It searches all logs (or it could be packets) for the keyword `checkpoint` and if that keyword is seen, it extracts the log to a file **checkpoint-logs.log**. There are all kinds of possibilities with this command. Essentially, when a hit is detected, it hands off the session to the content call. So any parameters you pass to `sdk search` that it does not recognize, it just passes along to the content call. This allows the full capabilities of the `sdk content` call, but only working on those sessions with content search hits. With great power comes great responsibility!

Commands Used for Troubleshooting

NwConsole provides the following commands that are helpful when troubleshooting Security Analytics:

- **whatIsWrong**: Provides a snapshot of a service's configuration, stats, and failure and warning logs for a specified past period of time.
- **dbcheck**: Performs consistency checking of database files.
- **topQuery**: Helps pinpoint queries that are taking an excessively long time to run.
- **netbytes**: Troubleshoots the network connections on the current host
- **netspeed**: Troubleshoots the connection between the host computer running NwConsole and the remote computer connected to it using the `login` command.

The following sections as well as the NwConsole help and topic information (man) pages, provide additional information.

whatIsWrong

When a service is not working correctly, the reason is usually somewhere in the logs that the service has written. You can use the `whatIsWrong` console command to obtain a snapshot of a service's configuration, stats, and failure and warning logs (with surrounding context logs) for a specified past period of time, which defaults to the previous seven days. You can save the results of running whatIsWrong into a specified plain text file. The output of this command can be a useful starting point to help determine what is currently wrong with a service.

To use the whatIsWrong console command, log on to the service to troubleshoot using the `login` command, and run the `whatIsWrong` command.

Hint: Use `help whatIsWrong` to see all of the available parameters, including the number of days/hours to look back for events, the pathname to store results, whether or not to append or overwrite the results file, and the delimiter to use for log fields. You can also limit the number of most recent logs used to find context, and you can specify how many context logs per warning/failure log to retrieve.

Whenever you receive a request for logs for a Core service, you should run the whatIsWrong command first and use the results collected as a starting point.

dbcheck

The `dbcheck` command is used to perform consistency checking of database files (session, meta, packets, logs, stats, and so on). This might be necessary when a service cannot start because of errors in the consistency of the database files. Normally a service would automatically recover and correct any consistency issues on startup, but there are times when this does not occur. When a service starts (like Decoder), it typically does not read or open most database files in order to start quickly. It assumes most files are in a consistent state and only does a cursory check of the most recently written files. If there are problems, `dbcheck` can perform those consistency checks, but ONLY if the service is not running.

Caution: Do not attempt to run this command while a service is running.

For example, you can check a single file:

```
dbcheck /var/netwitness/decoder/packetdb/packet-000000001.nwpdb
```

You can also use wildcards to check multiple files:

```
dbcheck /var/netwitness/decoder/metadb/meta-00000002*.nwmdb
```

topQuery

The `topQuery` command can help pinpoint queries that are taking an excessively long time to run. This command parses the audit logs of a service and returns the top N longest running queries for the specified time period.

The easiest way to run it is to log on to the service (usually a Broker or Concentrator) and type `topQuery`. The default behavior is to return the top 100 longest running queries for the last seven days.

Type `help topQuery` for the list of parameters. Here are some additional examples with explanations:

```
topQuery hours=12 top=10
```

This command returns the top 10 queries for the last 12 hours.

```
topQuery time1="2015-03-01 00:00:00" time2="2015-03-14 00:00:00"
```

This command returns the top 100 queries between March 1, 2015 and March 14, 2015. Times are in UTC, not local.

```
topQuery input=/var/log/messages output=/tmp/top20.txt top=20 user=sauser1
```

Instead of connecting to a service, it parses the syslog audit messages for the top 20 queries in the last 7 days, but only for queries executed by user sauser1. It writes the top 20 queries to /tmp/top20.txt instead of the console screen. The parameter user is a regex, so you can specify multiple usernames by writing something like `user="(sauser1|sauser2)"`.

netbytes

The `netbytes` command is very useful for troubleshooting the network connections on the current host. It displays continuous send and receive statistics for all network interfaces. Once executed, you must press **Ctrl-C** to exit this command, which also exits NwConsole.

netspeed

The `netspeed` command is used to troubleshoot the connection between the host computer running NwConsole and the remote computer connected to it through the `login` command. You must supply the amount of bytes to transfer and it will time the speed of the connection. The netspeed command is very useful for troubleshooting Aggregation performance issues that might be network related.

```
login somedecoder:50004 admin ...
```

```
netspeed transfer=4g
```

To troubleshoot the connection between a Concentrator and a Decoder, SSH into the Concentrator, run NwConsole, and then log on to the Decoder and run `netspeed`. The output from the command gives you an indication of the maximum network throughput. If it is much less than the standard 1 Gbps interface, it could indicate a network issue.

RESTful API

The RESTful API that ships with RSA NetWitness® Suite is a way to programmatically communicate with the NEXTGEN architecture. It must be enabled by setting `/rest/config/enabled` to **on**, which is the default. The default port for communication is the default port + 100 (for example, **50105** for a Concentrator), but that can be changed by setting the `/rest/config/port` parameter. SSL is controled by the setting in `/sys/config/ssl`. For information about how to perform these tasks, see Access the RESTful API in NetWitness Suite.

The API is based on HTTP and is quite easy to use. The acceptable output formats are:

- text/plain
- text/xml
- text/html
- application/json

The content type that is returned can be controlled through the **HTTP Accept** header. It is possible to set the parameter **force-content-type** to one of the previous values.

The easiest way to begin is to point a browser to the REST port (for details about how to perform these tasks, see Access the RESTful API in NetWitness Suite):

`PATH: http://<hostname or IP>:<REST port>`

This command performs the default command of **ls**, and returns a listing for the root node tree used by NEXTGEN:

Usage

The REST API accepts commands by using URL parameters and by POSTing application/json.

The special content type, `application/x-netwitness-string-params`, passes parameters, as plain text, in the format:

```
param1=value1 param2="value \"2\""
```

Note: Quotes, as part of the value, must be preceded by the backslash \ character. Any character can be escaped in this manner, including the backslash itself \\.

The format of the URL consists of the following components:

```
http://<hostname or IP>:<port>/[node1][/node2][…]?msg=<message name>
[&param1=value1][&param2=value2][…]
```

Usage example: the "/logs" Node

The /logs node supports several different messages:

- **ls**–Returns a list of child nodes. It supports the parameters depth and options.
- **mon**–Monitor this node (and possibly descendants) for changes. However, this message is not supported by the REST API because it requires a persistent connection and pipe that cannot be done via REST. Monitoring currently requires the full NextGen SDK library.
- **pull**–This command pulls logs from the service. It supports two parameters: **count**, which controls how many logs to return, and **id2**, which controls the ending log ID to return. **id2** is optional and when it is not provided, the last log written is returned.
- **info**–Returns detailed node information.
- **help**–The parameters are covered in more detail in Find More Details.
- **count**–A simple command to return the number of child nodes.
- **stopMon**–Stop monitoring the node from a previous mon command (also not supported by REST).
- **download**–A more complicated command to download a large number of log messages with several parameters to control log types and text matching capabilities. Like the **mon** command, this requires more than a simple request/response, which is not supported by the REST node interface.
- **timeroll**–Any log entries that exceed a given age are deleted.

To get a full list of NEXTGEN messages and parameters, use the help message:

```
http://<hostname>:<port>/logs?msg=help
```

The above command returns:

description	A container node for other node types
security.roles	everyone,logs.manage
message.list	The list of supported messages for this node
ls	[depth:<uint32>] [options:<string>]
mon	[depth:<uint32>] [options:<uint32>]
pull	[id2:<uint64>] [count:<uint32>] [timeFormat:<string>]
info	
help	[msg:<string>] [op:<string>] [format:<string>]
count	
stopMon	
download	[id1:<uint64>] [id2:<uint64>] [time1:<date-time>] [time2:<date-time>] op:<string> [logTypes:<string>] [match:<string>] [regex:<string>] [timeFormat:<string>]
timeroll	[timeCalc:<string>] [minutes:<uint32>] [hours:<uint32>] [days:<uint32>] [date:<string>]
debugGen	[count:<uint32>]

Example Syntax

To view the last 100 logs:

```
http://hostname:50105/logs?msg=pull
```

To view the logs in XML format:

```
http://hostname:50105/logs?msg=pull&force-content-type=text/xml
```

To see the last 10 logs in plain text:

```
http://hostname:50105/logs?msg=pull&count=10&force-content-type=text/plain
```

Find More Details

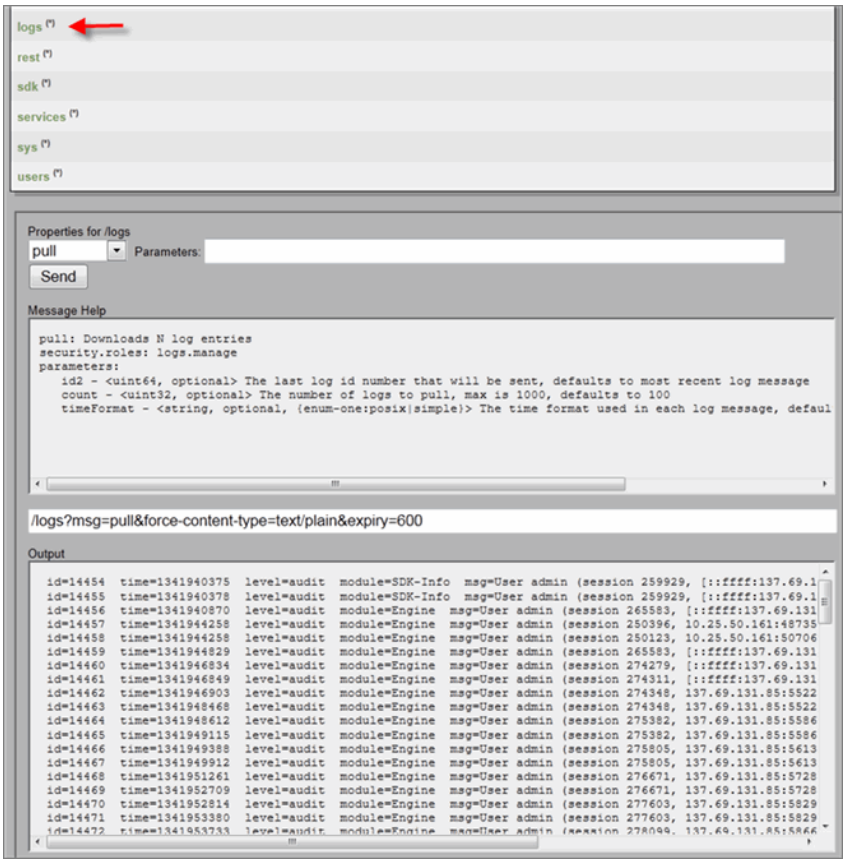
For more detailed information about a message (for example the pull message), request help specific to just that message. The **help** message displayed above uses the parameter name **msg**, but in the URL below, **message** is used, an alias for the help **msg** parameter to avoid conflicts with the REST API **msg**.

```
http://<hostname>:<port>/logs?msg=help&message=pull
```

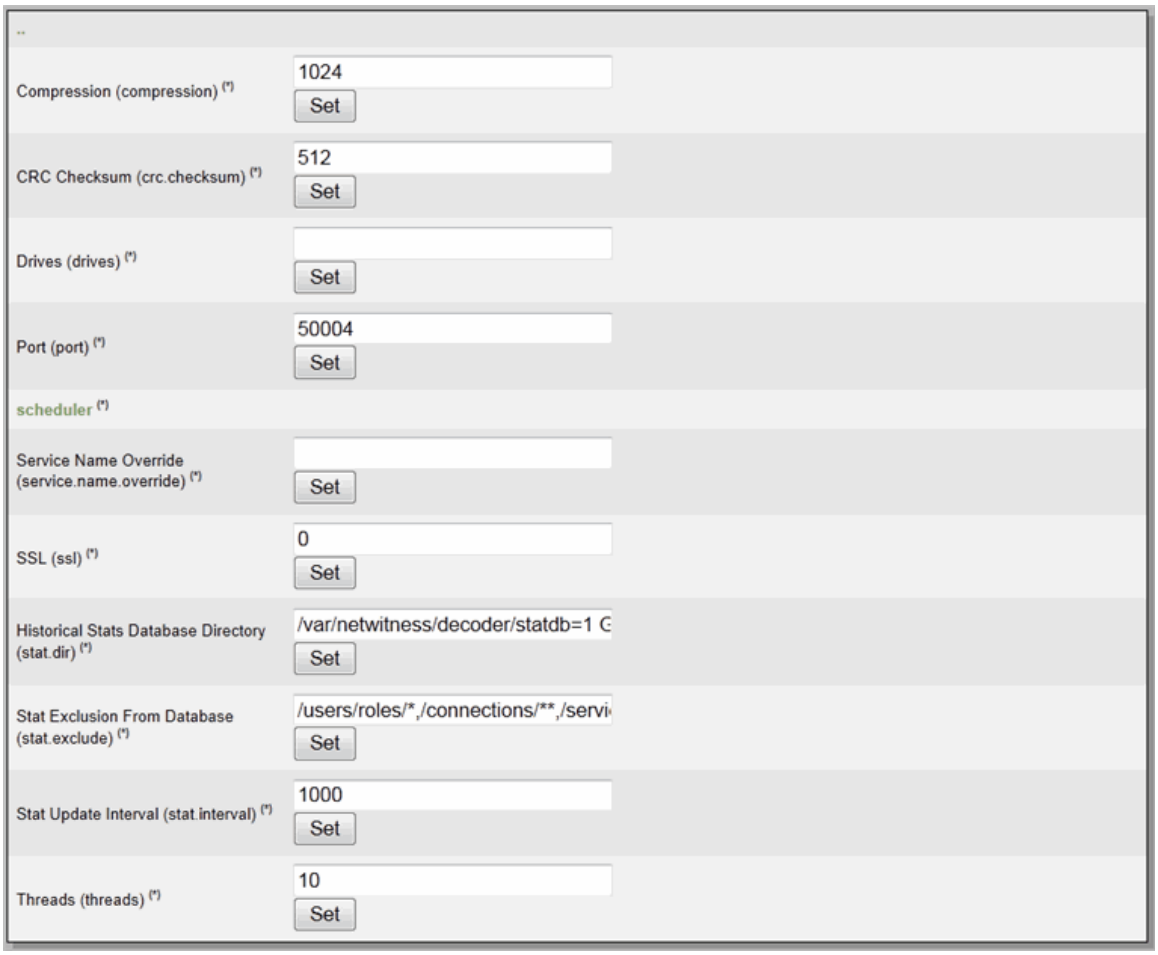
```
        Downloads N log entries
        security.roles: logs.manage
        parameters:
pull    id2 - <uint64, optional> The last log id number that will be sent, defaults to most recent log message
        count - <uint32, optional> The number of logs to pull, max is 1000, defaults to 100
        timeFormat - <string, optional, {enum-one:posix|simple}> The time format used in each log message, default is posix time (seconds since
        1970)
```

Alternately, you can go back to the browser and click the (*) in the properties pane on one of the nodes, as shown here:

When you select a command, the **Message Help** is displayed. When you click **Send**, the output is shown in a separate pane, as shown here:



In this view, you can easily navigate the node tree to use the various commands supported by NEXTGEN or to make configuration changes.



For example, from `/sys/config`, you can make configuration changes and click **Set** to send the changes.

Access the RESTful API in NetWitness Suite

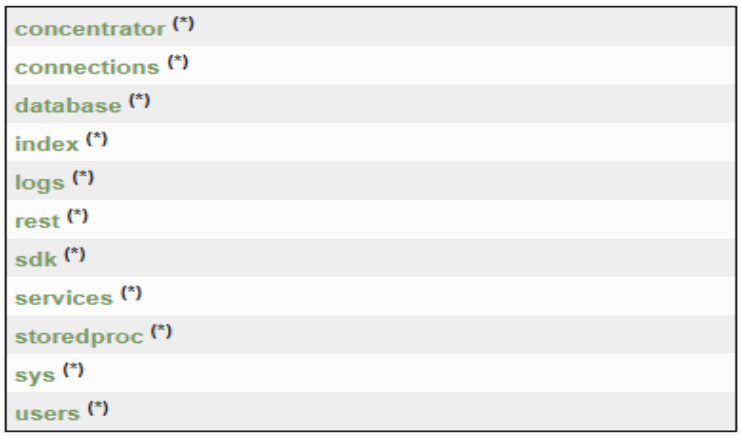
This topic describes how to enable the REST API in NetWitness Suite. The REST API must be enabled by setting `/rest/config/enabled` to **on**, which is the default. The default port for communication is the default port + 100 (for example, **50105** for a Concentrator), but that can be changed by setting the `/rest/config/port` parameter. SSL is controled by the setting in `/sys/config/ssl`.

To enable the REST port:

1. In the NetWitness Suite web user interface, go to **ADMIN** > **Services** and select a service, for example, a Concentrator.
2. In the **Host** column, click on the host name. The Hosts page opens, and the IP address of the host is displayed in the **Host** column. Make a note of the IP address.

   Note: If the IP address listed in the Host column is the same as the IP address of the NetWitness Suite web UI, the API is not available for that service.
3. Go to **ADMIN** > **Services**, select the service, and then select **View** > **Config**. Under **System Configuration**, note the port number. You will use this port number as a basis for accessing the API, but you must add 100 to it. For example, if the port number is listed as **50005**, you would enter **50105**.
4. In the browser, type the IP address of the service and append the port number to the IP address as shown here:
   `http://<hostname or IP address>:<port>`

   Note: The URL is HTTP, and not HTTPS.
5. In the Authentication dialog, enter the user name and password and click **Log in**. A listing of the root node tree used by NEXTGEN is displayed:



Packets

You can retrieve a **pcap** file using the REST service.

```
http://<hostname>:<port>/sdk/packets
```

If you point a browser to this URL, the web page lets you enter a list of session IDs or a time range. When you click **Submit**, it generates a **pcap** based on the supplied criteria.

Programmatically, using HTTP GET or POST, submit either a **sessions** parameter with a comma-separated list of session IDs and session ranges (#-#) or a **time1** and **time2** parameter. Times must be in the format **YYYY-MM-DD HH:MM:SS**, for example: **2010-Apr-20 09:00:00**.

Note: Since the list of sessions can get quite long, this API accepts the content-type `application/x-netwitness-string-params` for a **POST** command.

Importing Packets

You can import packets to a DECODER using the REST service.

```
http://<hostname>:<port>/decoder/import
```

If you point a browser to this URL, the web page lets you select a **pcap** file for upload. It also accepts pcap files POSTed to this URL.

REST begins processing incoming data immediately after the HTTP header is parsed. This means import of a **pcap** file occurs quickly and allows for large transfers. There is still a limit, but it is much larger (GBs) and is based on how well the import process can keep up with the client POST coming in. If the client posts a huge pcap (many GBs), it is still possible to overfill the current buffer. Any pcap that is 4 GBs or less should be able to process without issue.

Note: The DECODER cannot be concurrently importing or capturing, or an error results.

Parser/Feed Upload

You can upload Parsers and Feeds using the REST service.

`http://<hostname>:<port>/decoder/parsers/upload`

If you point a browser to this URL, the web page lets you select a parser or feed file for upload.

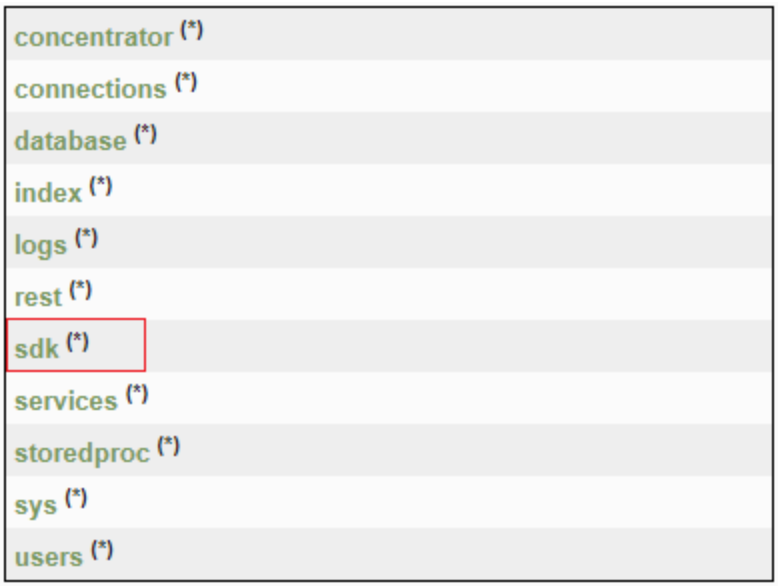
You can also force a reload by selecting the toggle or providing the parameter `reload=1` on the URL.

Stat Graphing

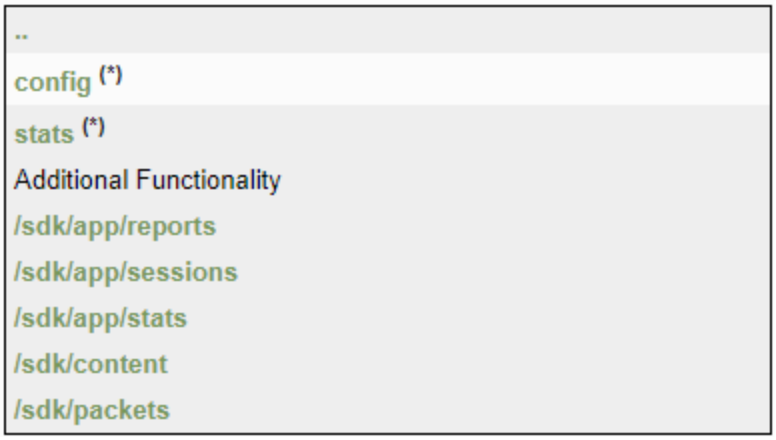
The REST interface has a built-in statistics graphing tool, which helps you monitor performance for a service during a specified time period. You can use this tool to collect and graph single or multiple statistics from a host during a specific time range. You can also graph real-time statistics.

To access the statistical graphing tool:

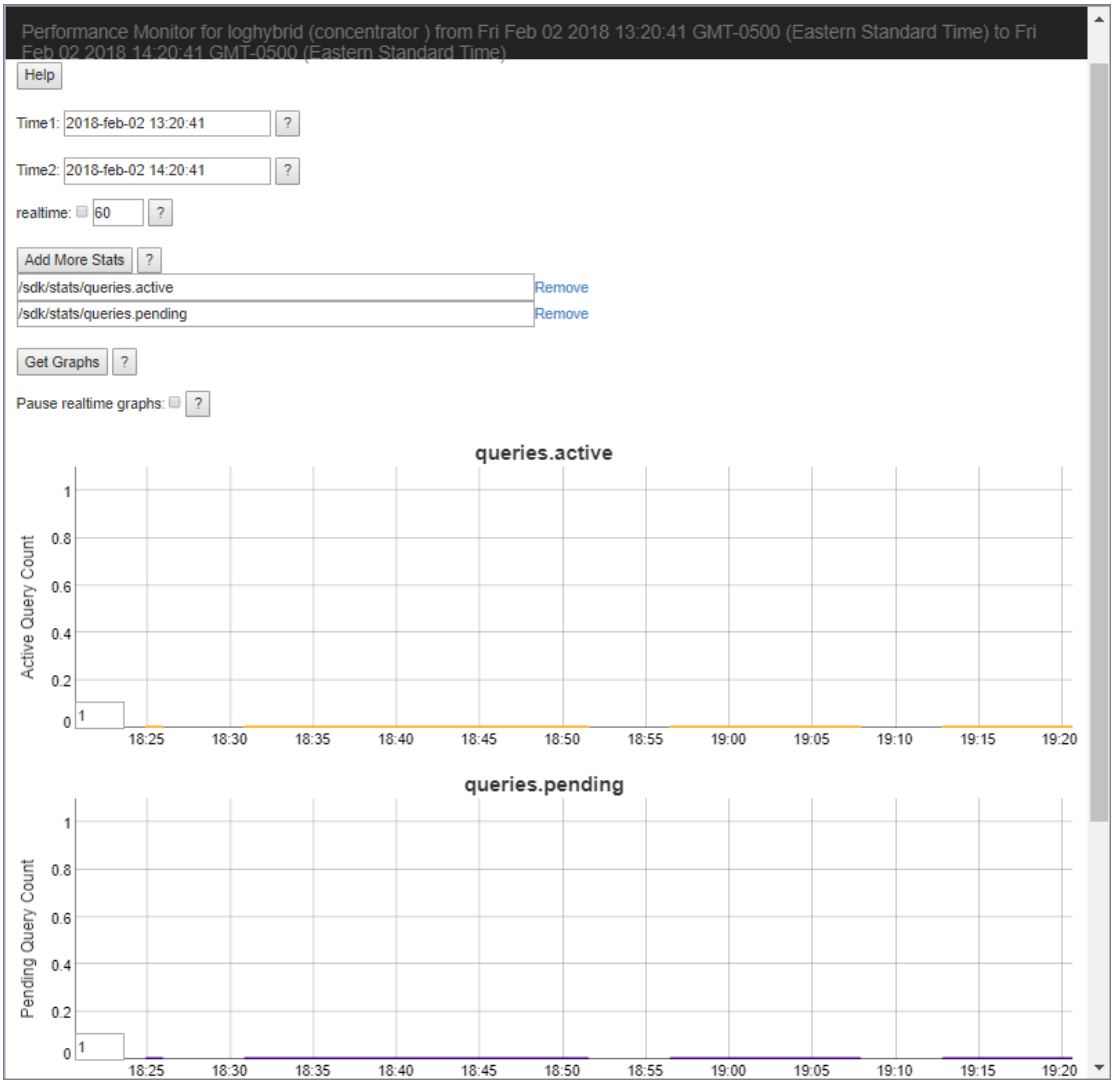
1. From the root node tree page, click `sdk`. (For information on accessing the root tree note page, see Access the RESTful API in NetWitness Suite.)



The options for additional functionality are displayed:



2. Click **sdk/app/stats**. The Performance Monitor window opens, and statistical graphs are displayed at the bottom of the page.



Click the Help buttons for detailed information about this page and the fields it contains.

SDK Commands

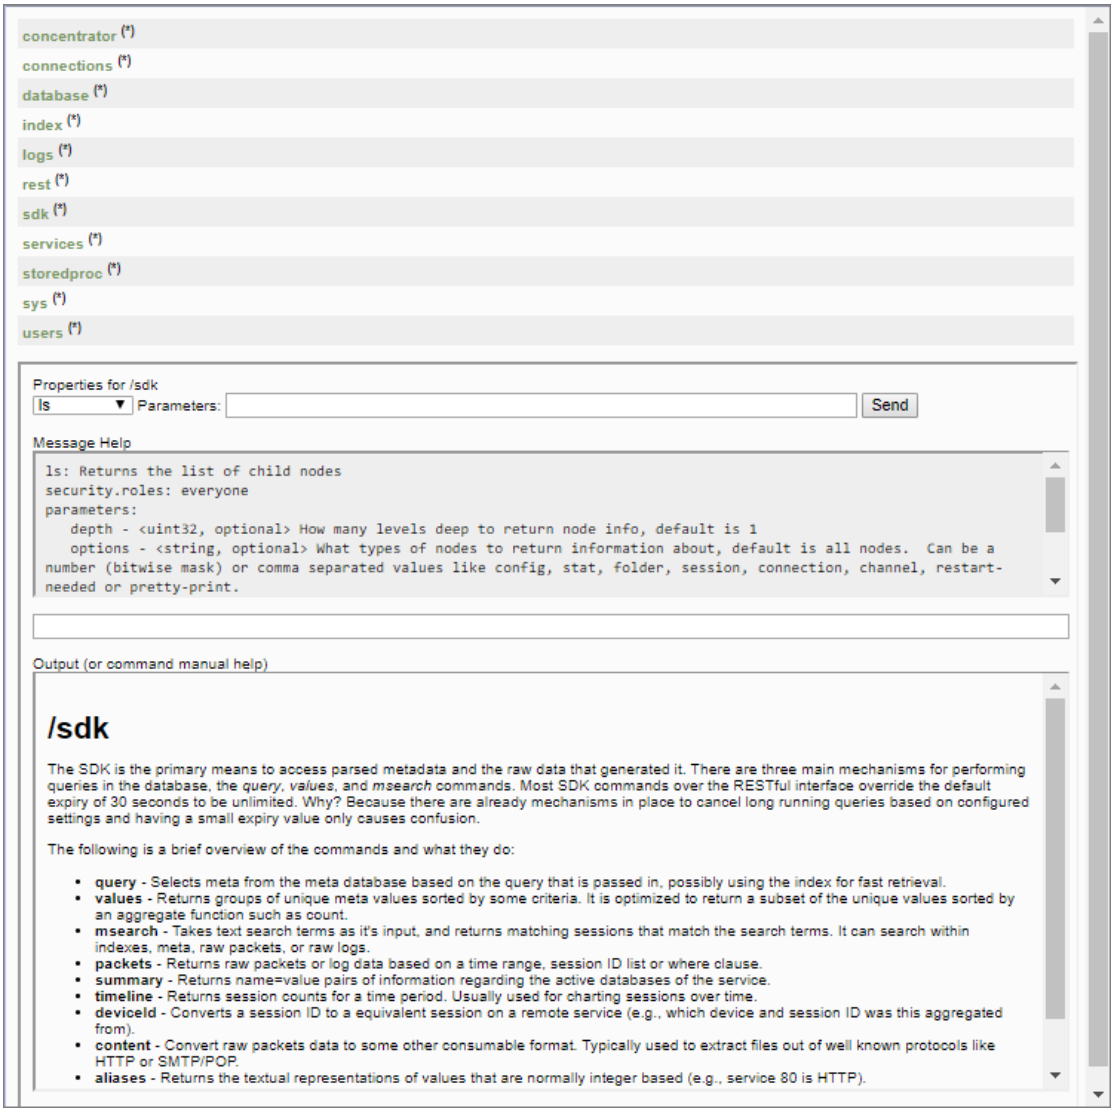
All queries on the system are performed by commands sent to the **/sdk** node.

The **/sdk** node has built-in help documentation for each message. To view the help for each command, click on the asterisk (*) beside the sdk node and then choose one of the messages from the drop-down menu. The documentation for the message is displayed in the Output window at the bottom of the screen.

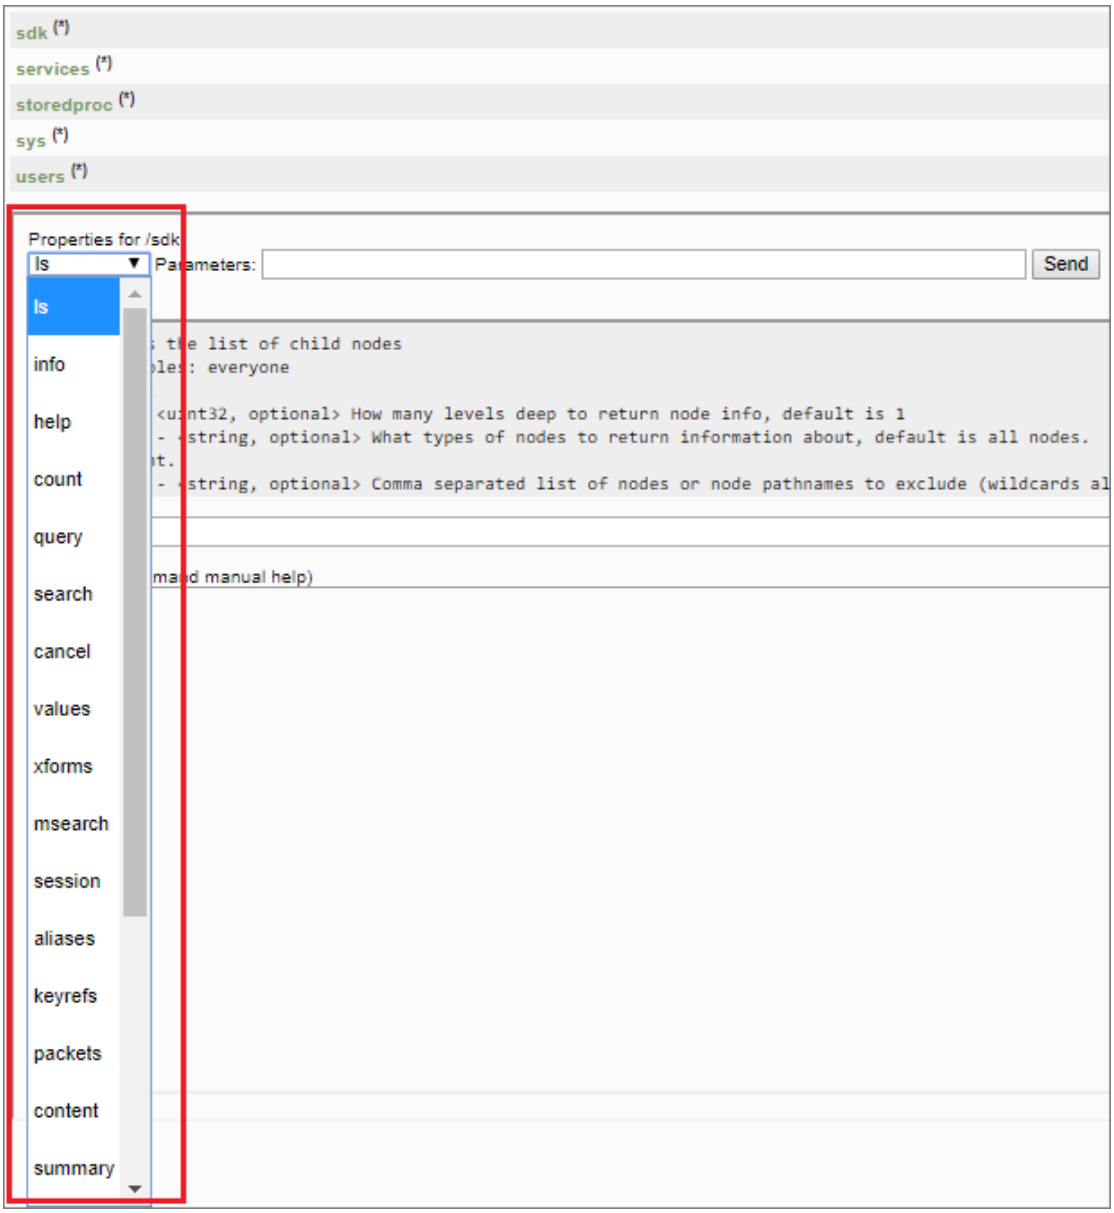
To access the help:

1. From the root node tree page, click `sdk`. (For information on accessing the root tree note page, see Access the RESTful API in NetWitness Suite.)
2. Click the asterisk (*) next to sdk.

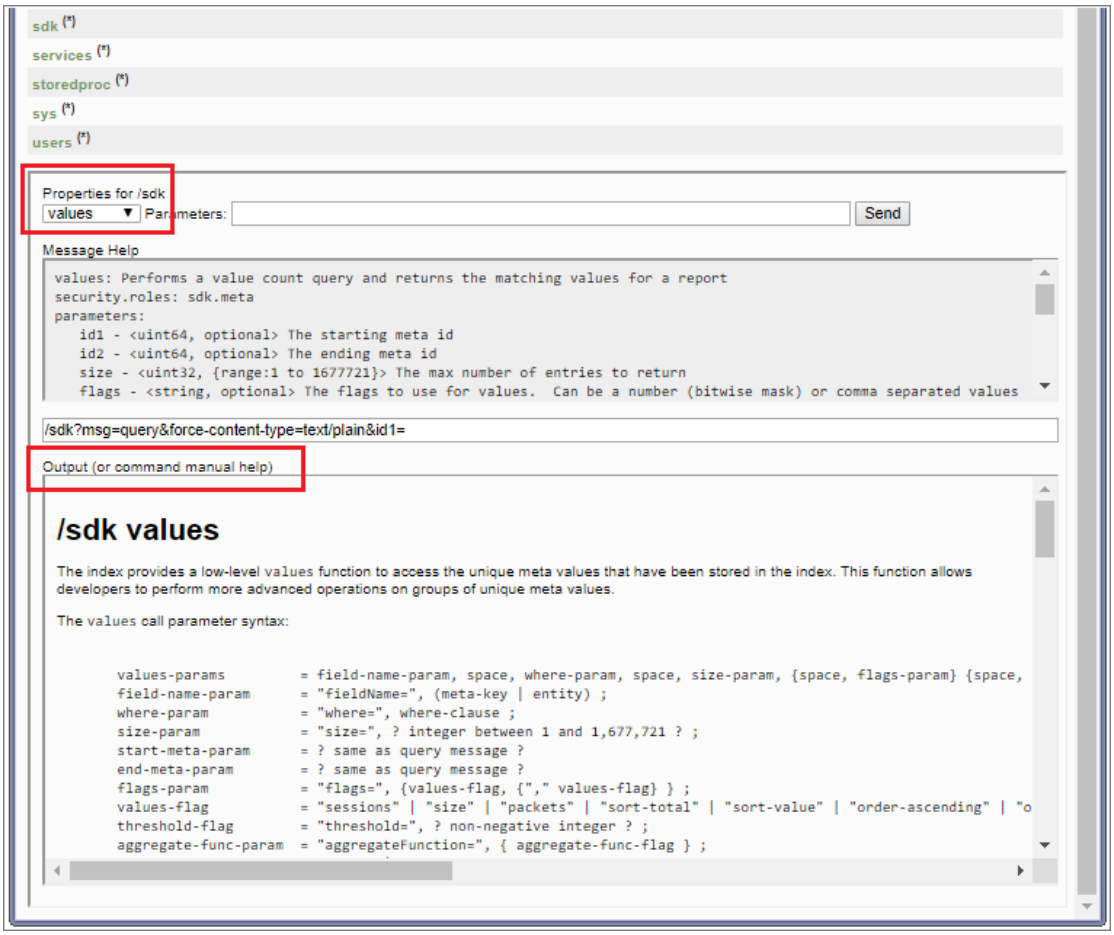
Information about the **/sdk** node is displayed.



3. To find more specific information, select a property from the **Properties for /sdk** drop-down menu:



The help for the property that you selected is displayed in the Output section:



SDK Commands Further Reference

This guide should be used in conjunction with the SDK documentation, which explains the format of queries and results. This document primarily focuses on how to send queries and parameters via the REST API, not how the queries themselves are formatted. The *Core Database Tuning Guide* explains those concepts in detail. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents. All metadata returned via REST is encoded as **UTF-8**.

There is another parameter specific to the REST API called **expiry**. This parameter can be set to the number of seconds to wait for a response before the system returns a timeout error. The default is 30 seconds, which is sufficient for most requests. For queries, the standard SDK sets an infinite timeout. If you set **expiry** to zero (`&expiry=0`), this removes the timeout for that request. It is probably a good idea to set a larger timeout for queries and other requests that may take longer than 30 seconds during normal operations.

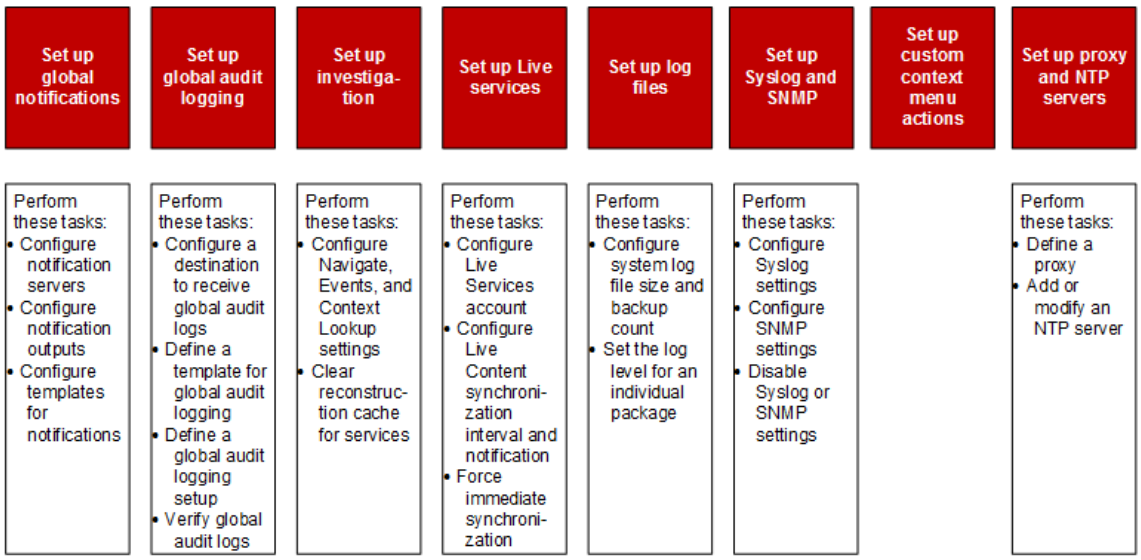
System Configuration Overview

In the Administration System view, administrators can configure system settings to receive optimal performance from NetWitness Suite. This diagram show the available configuration options.



In this guide, the standard procedures provide instructions for administrators who want to customize settings that apply across the system in NetWitness Suite. Although some of these settings have default values, the administrator needs to view and evaluate all default values.

Additional procedures are not essential for the set up of NetWitness Suite, they include certain customization options that are beyond the usual setup; for example, adding custom context menus or setting up a proxy.

In addition, reference topics and troubleshooting topics supply detailed information about the user interface and suggestions for resolving possible issues.

The following sections describe system configuration:

- Standard Procedures provide instructions for administrators who want to customize settings that apply across the system in NetWitness Suite.
- Additional Procedures provide instructions for setting up customization options that are beyond the usual system configuration.

Standard Procedures

The topics in this section provide instructions for administrators who want to customize settings that apply across the system in NetWitness Suite. Although some of these settings have default values, the administrator needs to view and evaluate all default values. The procedures can be performed in any sequence and are listed alphabetically.

Access System Settings

Configure Notification Servers

Configure Notification Outputs

Configure Templates for Notifications

Configure the Email Settings as Notification Server

Configure Email Servers and Notification Accounts

Configure Global Audit Logging

Configure Investigation Settings

Configure Live Services Settings

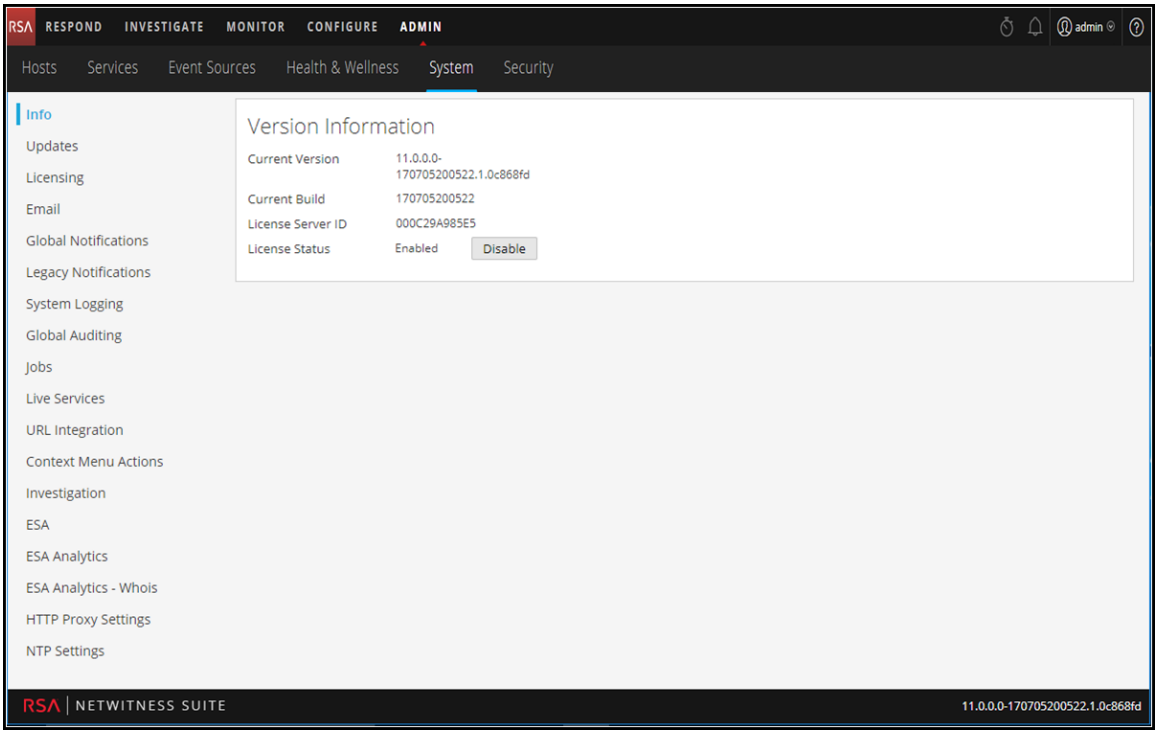
Configure Log File Settings

Access System Settings

This topic introduces system configuration capabilities of NetWitness Suite in the Administration System view. Administrators can configure notifications, email notifications, global audit logging, logging settings, connection to Live Services, and URL integration in NetWitness Suite.

To access the system settings:

Go to **ADMIN > System**.
The Administration System view is displayed.



On the left panel of the Administration System view is an options panel listing all system nodes available for configuration. When you select a node, the associated content is displayed in the right panel.

Configure Notification Servers

This topic provides instructions on how to configure notification servers. For ESA, notification servers are required to define an ESA rule. A notification server is also required to configure global audit logging.

Global Notifications configurations define notifications settings for Event Source Management (ESM), Health and Wellness, Global Audit Logging, Event Stream Analysis (ESA), and Respond. Notification Servers define the servers from which you want to receive notifications from the system. For Global Audit Logging, define Log Decoders as Syslog Notification Servers.

You can define, delete, edit, import, and export a notification server in NetWitness Suite. Individual topics describe the relevant procedures. For more information on ESA alert configuration, see "Notification Methods" in the *Alerting with ESA Correlation Rules User Guide*. You delete, edit, import, and export notification outputs and notification servers in the same way as templates. You cannot disable or delete notification servers associated with global audit logging configurations.

Notification Servers Overview

This topic provides an overview of notification servers. You configure notification servers in the Administration System view (ADMIN > System > Notifications > Servers tab).

Global Notifications are used by a variety of components in NetWitness Suite, such as Event Stream Analysis (ESA), Respond, Health and Wellness, Event Source Management (ESM), and Global Audit Logging. Notification settings are called **Notification Servers**.

Event Stream Analysis sends notifications to users through email, SNMP, or Syslog about various system events. In ESA, these alert notification settings are called Notification Servers. You can configure multiple notification servers and use them while defining an ESA rule, for example, you can configure multiple mail servers or Syslog servers and use the settings while defining an ESA rule.

You can configure the following notification servers:

- Email
- SNMP
- Syslog
- Script

Email notification servers enable you to configure email server settings to send alert notifications. SNMP notification servers enable you to configure SNMP trap host settings as a notification server to send alert notifications.

Syslog notification servers enable you to configure Syslog settings as a notification server to send notifications. When enabled, Syslog provides auditing through the use of the RFC 5424 Syslog protocol. Syslog has proven to be an effective format to consolidate logs, as there are many open source and proprietary tools for reporting and analysis. For Global Audit Logging, you can only use Syslog Notification Servers.

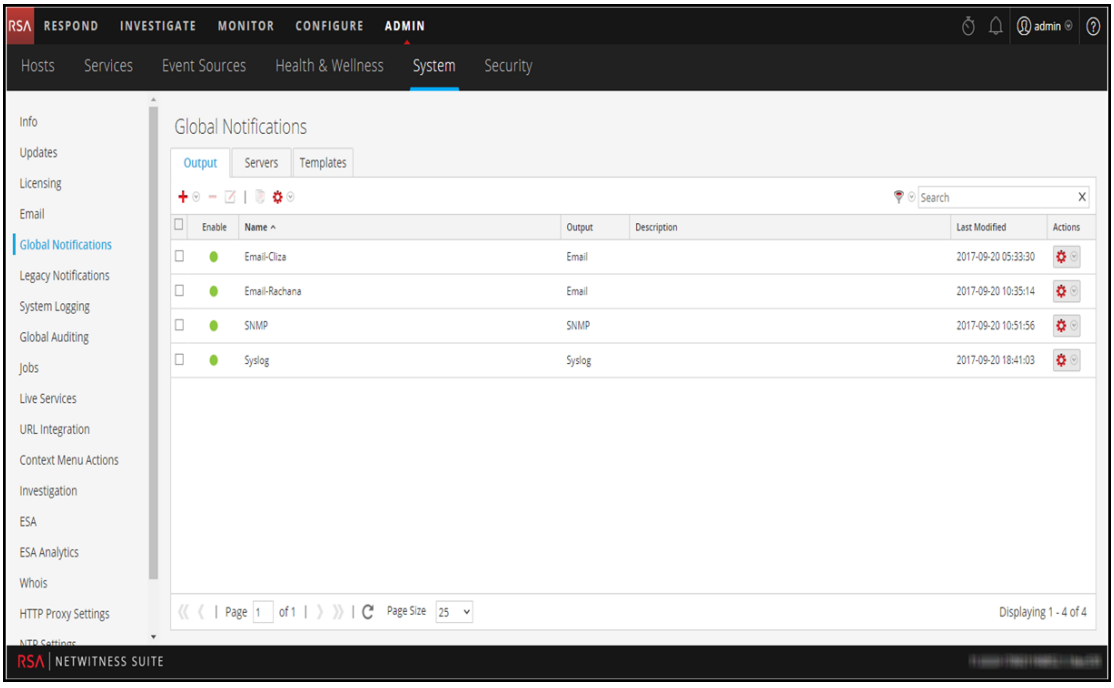
Script notification servers enable you to configure Script as a notification server.

For detailed information on the different notification server configurations, including parameters and descriptions, see Define Notification Server Dialogs.

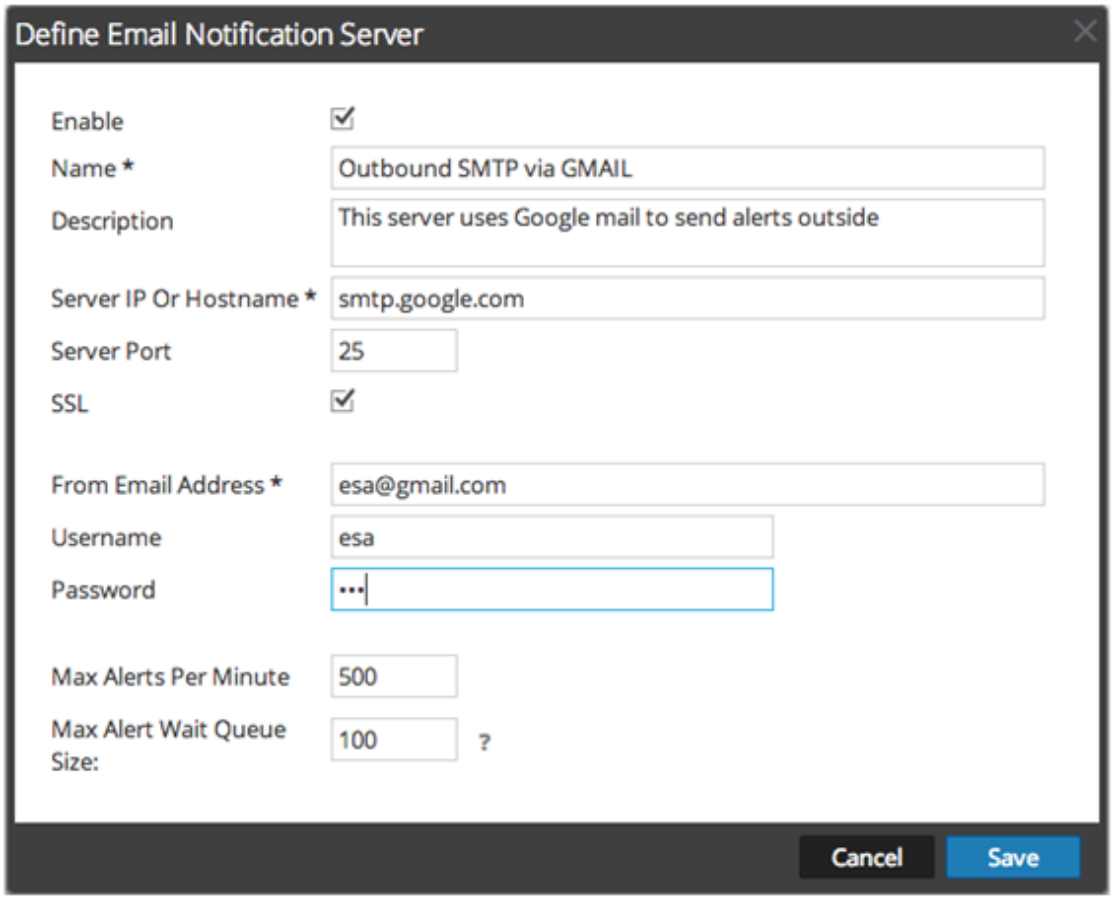
Configure the Email Settings as Notification Server

To configure email server settings as a notification server to send alert notifications:

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.
   The **Notifications** configuration panel is displayed with the **Output** tab open.
3. Click the **Servers** tab.



4. From the + drop-down menu, select **Email**.



5. In the **Define Email Notification Server** dialog, provide the required information and click **Save**.

Note: For ESM/SMS and ESA notifications, you must specify only the hostname/FQDN in the Server IP or Hostname field.

For details of the parameters and descriptions, see Define Notification Server Dialogs .

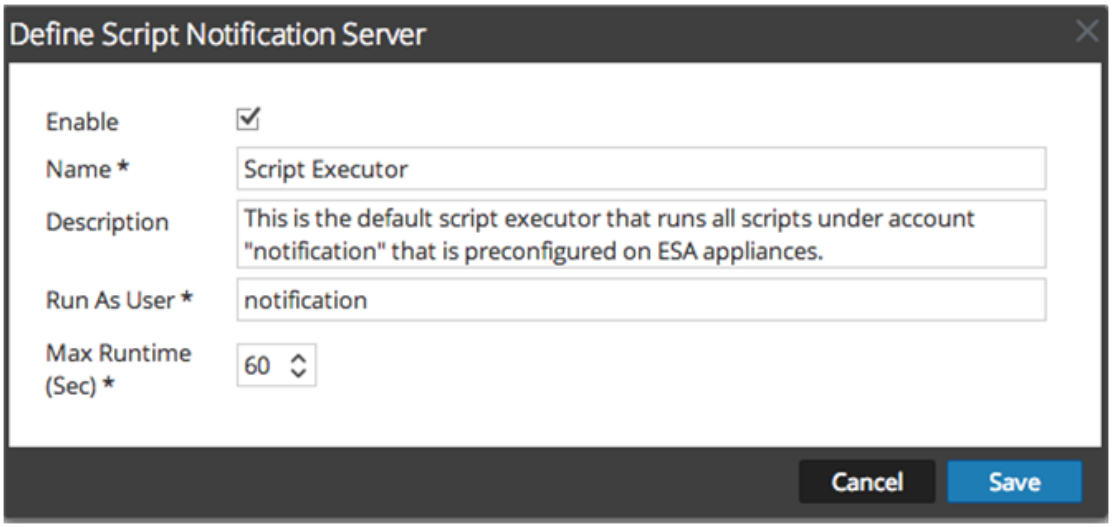
Configure Script as a Notification Server

ESA allows you to run scripts in response to ESA alerts. However, you must first configure the user identity and other details that are required to run the scripts.

To configure Script as a notification server:

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.
3. Click the **Servers** tab.

4. From the + drop-down menu, select **Script**.



5. In the **Define Script Notification Server** dialog, provide the required information and click **Save**.

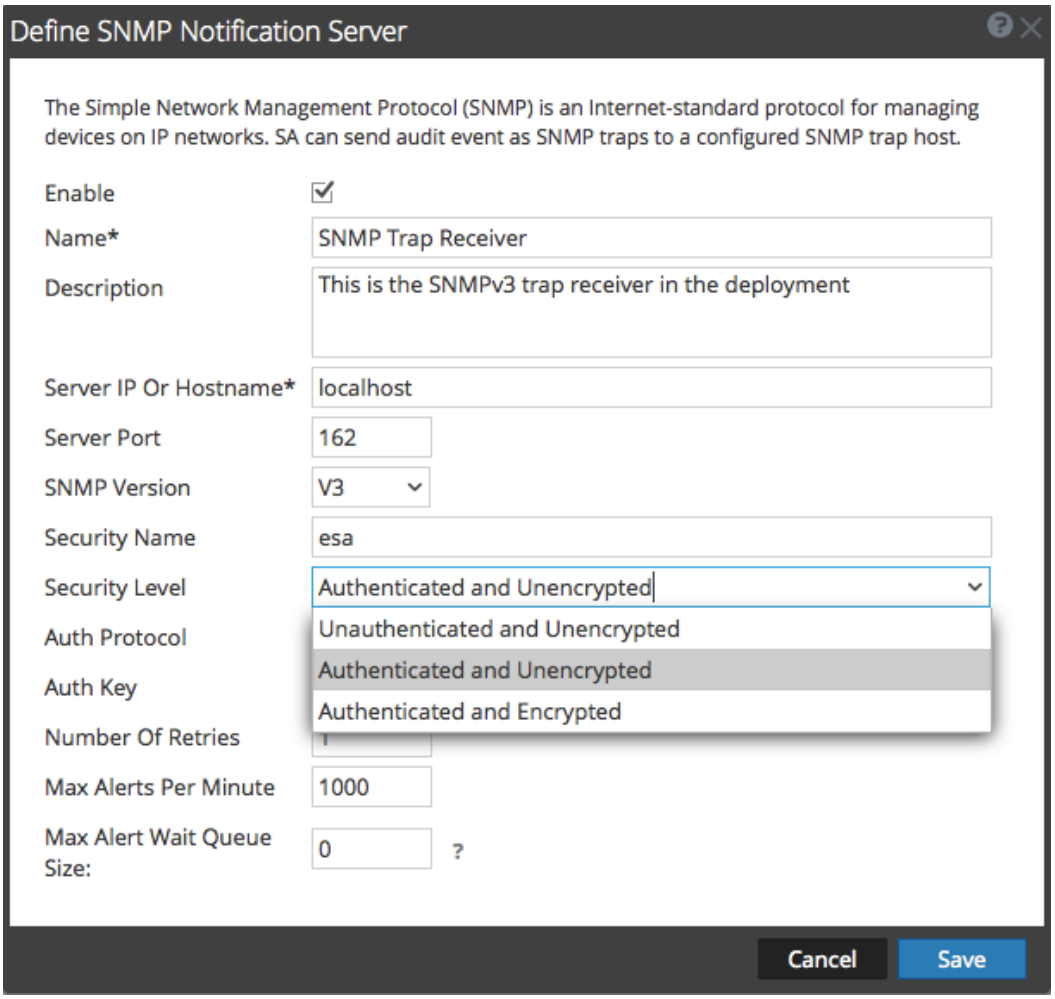
For details of the parameters and descriptions, see Define Notification Server Dialogs.

Configure the SNMP Settings as Notification Server

To configure the SNMP trap host settings as a notification server to send alert notifications:

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.
3. Click the **Servers** tab.

4. From the + drop-down menu, select **SNMP**.



5. In the **Define SNMP Notification Server** dialog, provide the required information and click **Save**.

For details of the parameters and descriptions, see Define Notification Server Dialogs.

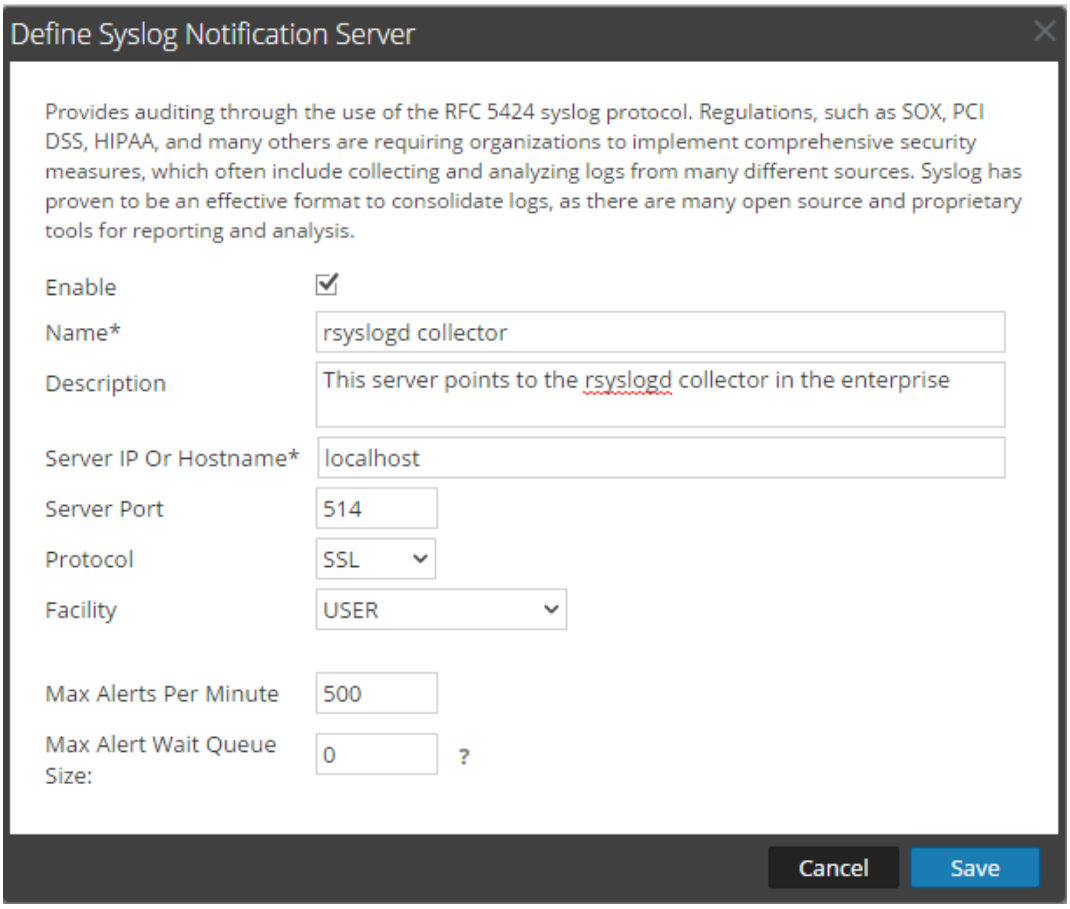
Configure a Syslog Notification Server

This topic provides instructions on how to configure a Syslog notification server. When enabled, Syslog provides auditing through the use of the RFC 5424 Syslog protocol. Syslog has proven to be an effective format to consolidate logs, as there are many open source and proprietary tools for reporting and analysis.

To configure Syslog as a notification server:

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.

3. Click the **Servers** tab.
4. From the drop-down menu, select **Syslog**.



5. In the **Define Syslog Notification Server** dialog, provide the required information and click **Save**.

For details of the parameters and descriptions, see Define Notification Server Dialogs.

Configure Notification Outputs

This topic provides instructions on how configure notification outputs. These notification outputs are required to define an ESA rule.

Global Notifications configurations define notifications settings for Event Source Management (ESM), Health and Wellness, Global Audit Logging, Event Stream Analysis (ESA), and Respond.

Note: You do not need to configure the Output tab for Global Audit Logging.

Notification Output configurations define email addresses and subject lines, SNMP trap OID settings, syslog output settings, and script code.

You can define, delete, edit, import, and export notification outputs in NetWitness Suite. Individual topics describe the relevant procedures. For more information on ESA alert configuration, see "Notification Methods." You delete, edit, import, and export notification outputs and notification servers in the same way as templates. If you attempt to delete a notification output being used by alerts, you will receive a warning confirmation message that the alerts using the notification will not function properly. The message shows the number of alerts in use.

Notification Outputs Overview

This topic provides an overview of notification outputs. These notification outputs are required when defining an ESA rule. You configure notification outputs in the Administration System view (ADMIN > System > Notifications > Outputs tab).

Global Notifications configurations define notifications settings for Event Source Management (ESM), Health and Wellness, Global Audit Logging, Event Stream Analysis (ESA), and Respond.

Note: You do not need to configure notification outputs (the Output tab) for Global Audit Logging.

Notification outputs are the destinations used for sending notifications. For ESA, notification outputs enable you to define how you want to receive the ESA alerts. The following are the different notification outputs supported by NetWitness Suite:

- Email
- SNMP
- Syslog
- Script

Email notification settings define the destination email address to which you can send the alerts. You can also add a custom description in the subject of the email and define multiple destination email addresses.

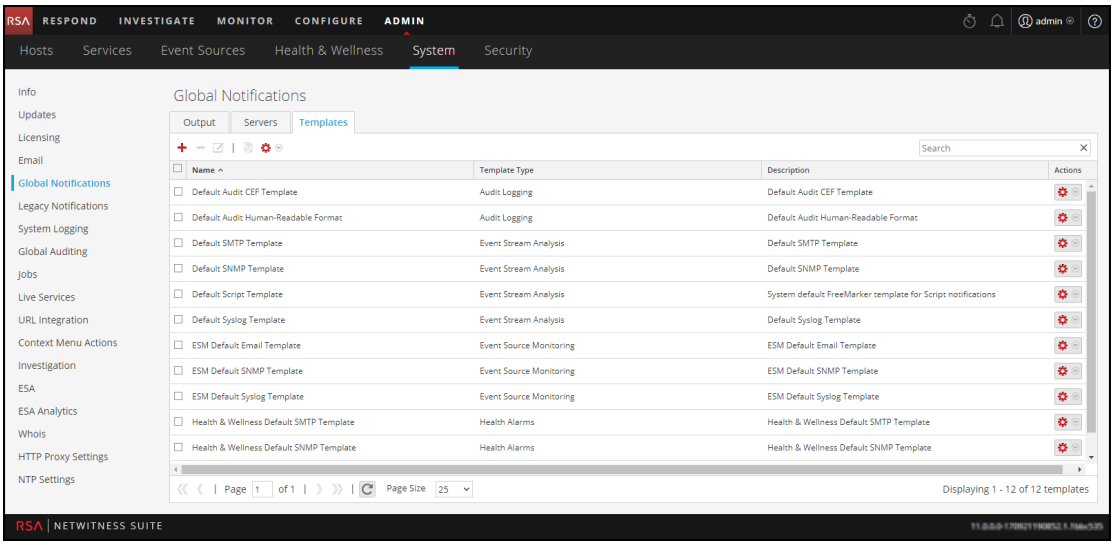
SNMP notification settings enable you to define the SNMP settings to send alert notifications. Syslog notifications enable you to define the Syslog settings used to send alert notifications. Script notifications enable you to define the Script that executes in response to the alert.

For detailed information on the notification configurations, including parameters and descriptions, see Define Notification Server Dialogs.

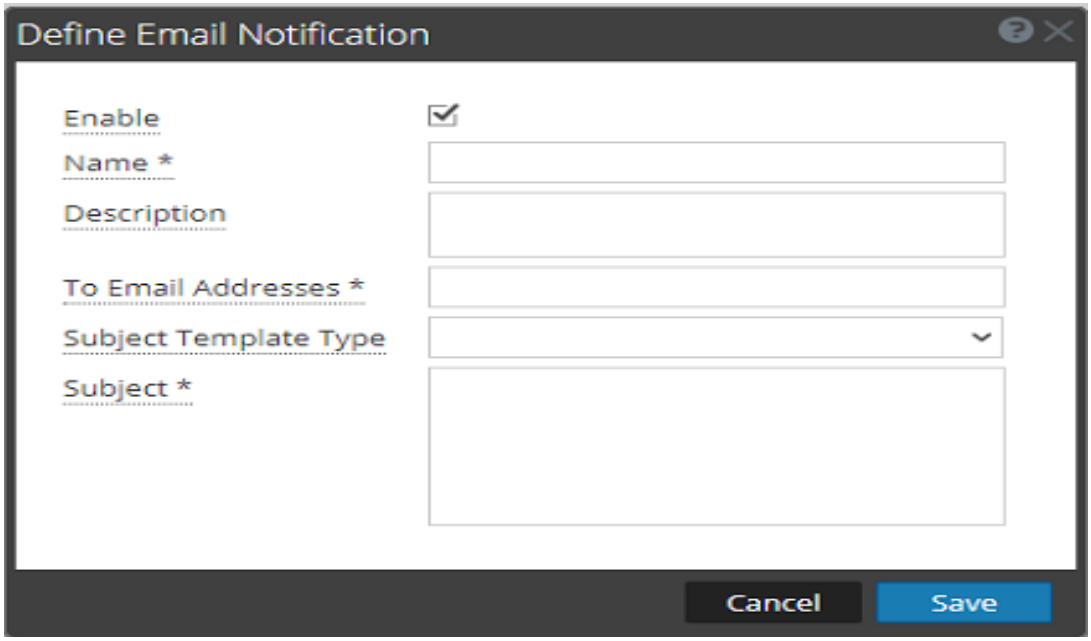
Configure Email as a Notification

To configure Email as a notification:

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.



3. On the **Output** tab, from the + drop-down menu, select **Email**.



4. In the **Define Email Notification** dialog, provide the required information and click **Save**.

For details of the parameters and descriptions, see Define Notification Server Dialogs.

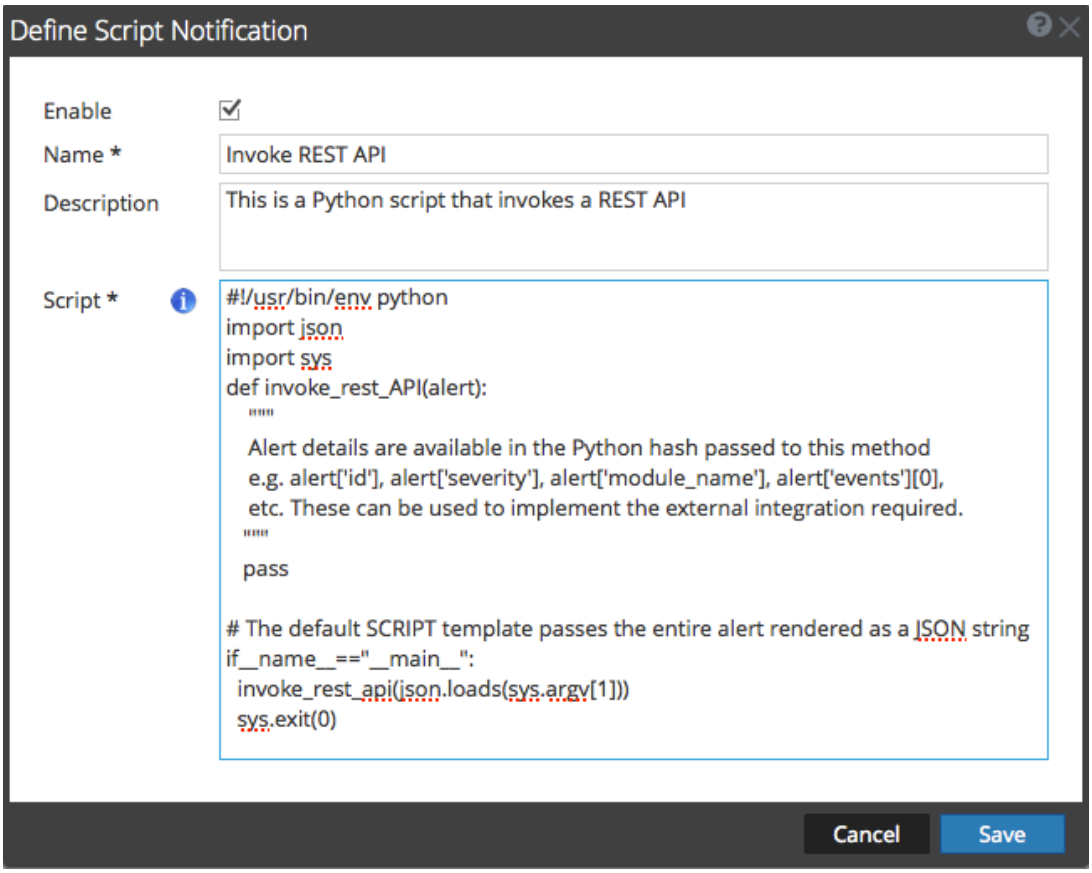
Configure Script as a Notification

This topic provides instructions to define the Script and configure it as a notification output. ESA allows you to run scripts in response to ESA alerts. You need to define the script using the ADMIN > System > Notifications > Output tab. You can use any script for ESA notifications.

To configure the script as a notification:

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.

3. On the Output tab, from the + drop-down menu, select **Script**.



4. In the **Define Script Notification** dialog, provide the required information and click **Save**.

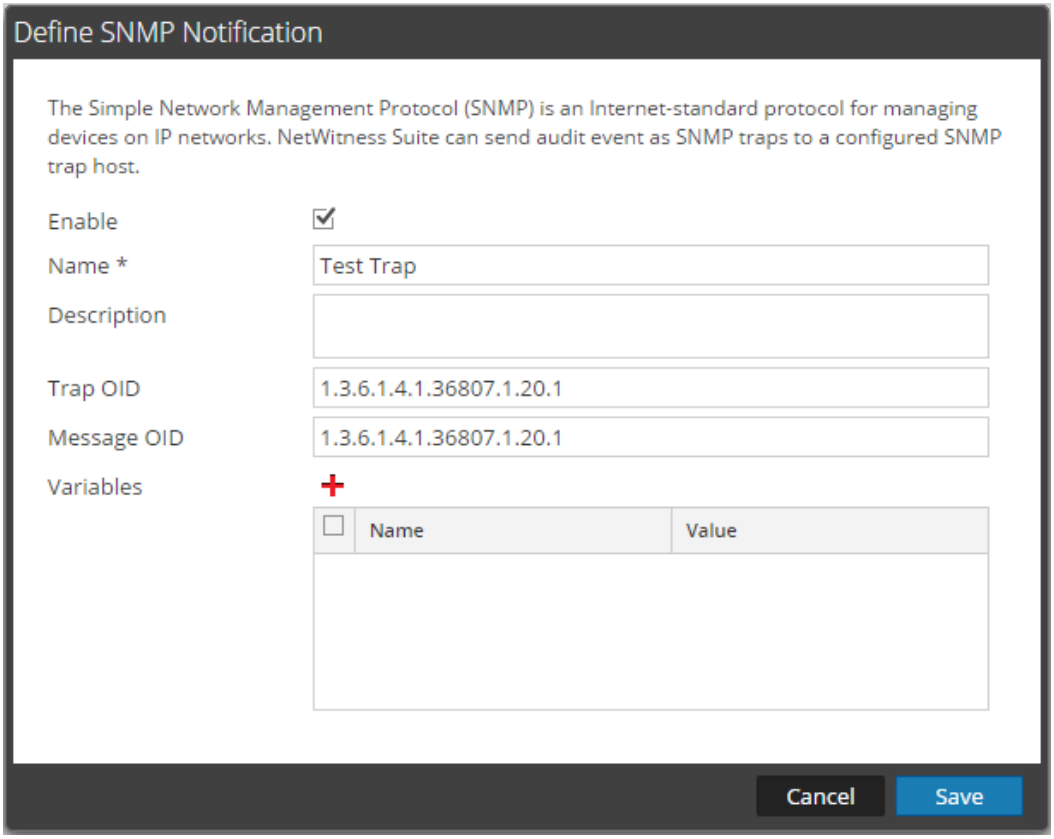
For details of the parameters and descriptions, see Define Notification Server Dialogs.

Configure SNMP as a Notification

To configure SNMP as a notification output to send alert notifications:

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.

3. On the Output tab, from the + drop-down menu, select **SNMP**.



4. In the SNMP Notification dialog, provide the required information and click **Save**.

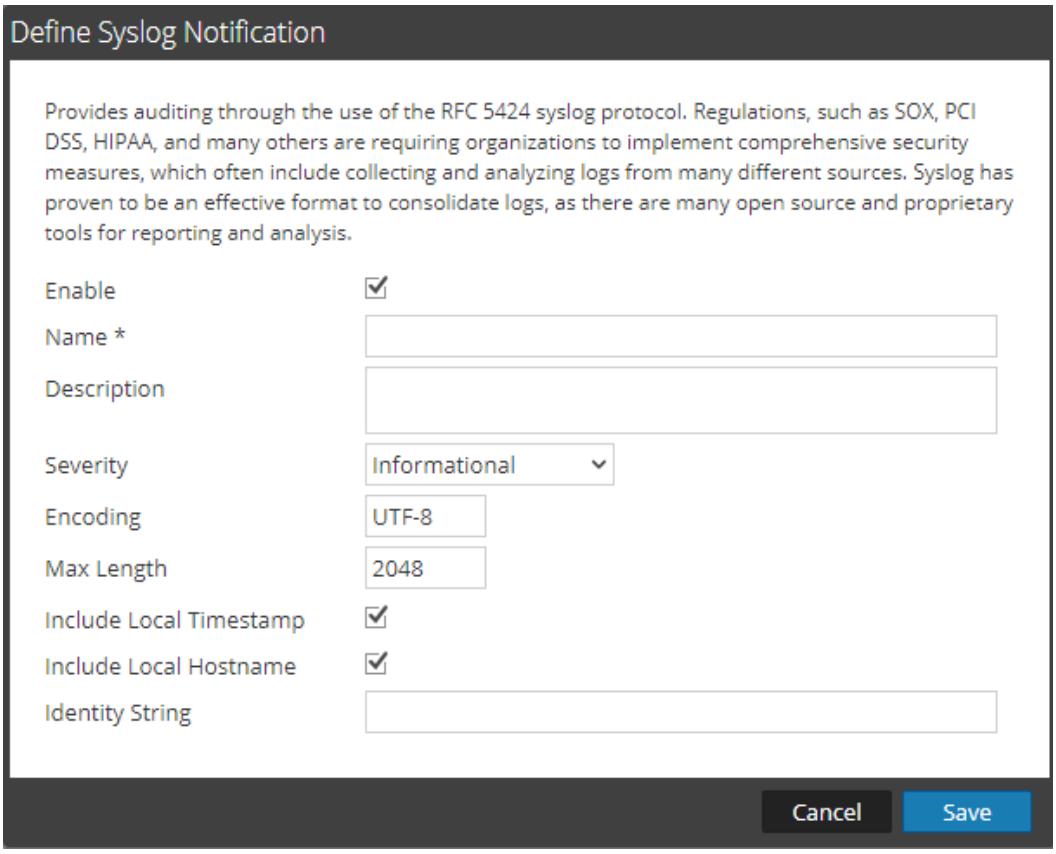
For details of the parameters and descriptions, see Define Notification Server Dialogs.

Configure Syslog as a Notification

To configure Syslog as a notification output when sending alert notifications:

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.

3. On the Output tab, from the + drop-down menu, select **Syslog**.



4. In the **Define Syslog Notification** dialog, provide the required information and click **Save**.

For details of the parameters and descriptions, see Define Notification Server Dialogs.

Configure Templates for Notifications

You configure notification templates in the Administration System view (ADMIN > System > Notifications > Templates tab). A notification template defines the format and message fields of the notifications. There are different template types for the notifications that you can configure:

- Audit Logging
- Event Stream Analysis
- Event Source Monitoring
- Health Alarms

You can use the available default templates or you can configure your own templates for Email, SNMP, Syslog, and Script, depending on the template type.

Global audit logging sends audit logs in the format specified in the Audit Logging template. You can use the default audit logging templates or you can define your own audit logging template. For more information on how to define an Audit Logging template, see Define a Template for Global Audit Logging.

Event Stream Analysis (ESA) sends notifications in the format specified in the Event Stream Analysis templates. The default Event Stream Analysis templates for email, SNMP, Syslog, and Script are available on installation. You can customize these templates as well as create new templates which you can use for the notifications. For more information on how to define ESA templates, see Define a Template for ESA Alert Notifications.

For more information on ESA alert configuration, see "Notification Methods" in the *Alerting with ESA Correlation Rules User Guide*. You cannot delete templates associated with global audit log configurations.

Note: When upgrading from NetWitness Suite 10.4, all existing notification templates migrate to the Event Stream Analysis template type.

To learn how to define, delete, edit, duplicate, import, and export a notification template in NetWitness Suite, see:

Configure Global Notifications Templates

Define a Template for ESA Alert Notifications

Import and Export a Global Notifications Template

Configure Global Notifications Templates

This topic provides instructions for adding, editing, duplicating, and deleting global notifications templates.

You can use the available default templates or you can configure your own templates for Email, SNMP, Syslog, and Script, depending on the template type.

Global audit logging sends audit logs in the format specified in the Audit Logging template. You can use the default audit logging templates or you can define your own audit logging template. For more information on how to define an Audit Logging template, see "Define a Template for Global Audit Logging."

Event Stream Analysis (ESA) sends notifications in the format specified in the Event Stream Analysis templates. The default Event Stream Analysis templates for email, SNMP, Syslog, and Script are available on installation. You can customize these templates as well as create new templates which you can use for the notifications. For more information on how to define ESA templates, see Define a Template for ESA Alert Notifications.

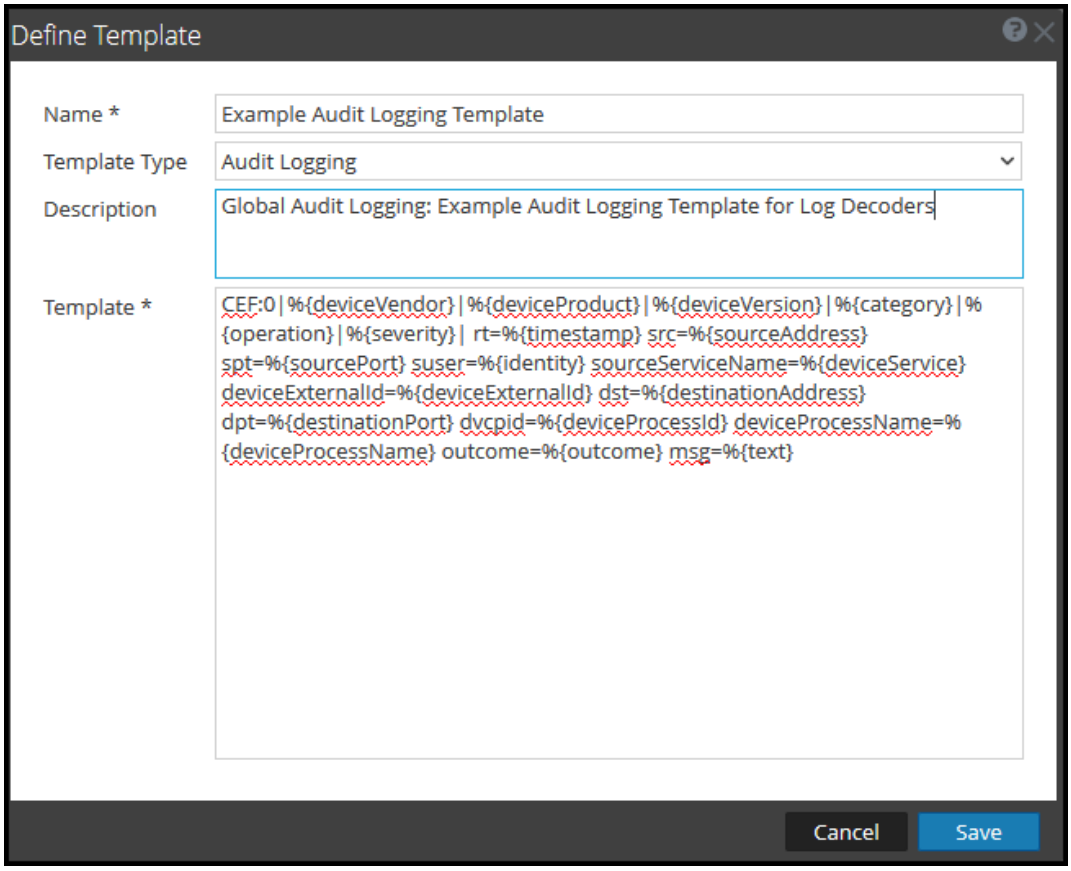
When upgrading from NetWitness Suite 10.4, all existing notification templates migrate to the Event Stream Analysis template type.

Add a Template

You can use the default templates provided or you can configure your own templates. To configure your own template:

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.
3. Click the **Templates** tab.
4. Click + to configure a template.
5. In the **Define Template** dialog, provide the following information:
    a. In the **Name** field, type the name for the template.
    b. In the **Template Type** field, select the type of template you want to create. For example, if you are creating a template for global audit logging, select the Audit Logging template type.
    c. In the **Description** field, type a brief description for the template.
    d. In the **Template** field, specify the format for the template.

e. Click **Save** to save the template.



Duplicate a Template

You can make a copy of an existing default or user-defined template. To duplicate a template:

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.
3. Click the **Templates** tab.
4. Select the template that you want to duplicate and click .

   The Duplicate Alert Template dialog is displayed.

5. Type the name for the duplicate template.
6. Click **OK**.

You can modify a default or user-defined template. When you edit a template, the changes are reflected only when the alert is triggered.

Edit a Template

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.
3. Click the **Templates** tab.
4. Select a template and click .
5. In the **Define Template** dialog, modify the **Name**, **Template Type**, **Description**, and **Template** fields as required.
6. Click **Save** to save the template.

Delete a Template

You can delete a user-defined template. When you delete a template that is used in an ESA rule, the Event Stream Analysis default template is used for alerts. You cannot delete templates associated with global audit logging configurations.

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.
3. Click the **Templates** tab.
4. Select one or more templates and click .

   A confirmation dialog is displayed.
5. Click **Yes**.

   The selected template is deleted.

Define a Template for ESA Alert Notifications

This topic describes how you can define a template for alert notifications. Event Stream Analysis (ESA) allows you to define useful templates for alerts. You need to have a good understanding of FreeMarker and the ESA data model to define a template. For more information on FreeMarker, see FreeMarker Template Author's Guide.

ESA Data Model

Consider an ESA alert rule as shown below:

```
@Name('module_144d43f5_f0b4_4cd0_8c6c_5ce65c37e624_Alert')
@Description('Brute Force Login To Same Destination')
@RSAAlert(oneInSeconds=0, identifiers={"ip_dst"})
SELECT* FROMEvent (ec_activity = 'Logon',ec_theme = 'Authentication',ec
outcome = 'Failure',ip_dst IS NOT NULL)
.std:groupwin(ip_dst)
.win:time_length_batch(60 seconds, 2)
GROUPBYip_dst HAVING COUNT(*) = 2;
```

When a rule like the above is fired, the alert generated will have two constituent events each resembling a NextGen session with multiple meta values. The alert data-object passed to the FreeMarker template evaluator will be as follows:

```
(root)
 |
 +- id = "4e67012f-9c53-4f0b-ac44-753e2c982b79"              // Unique identifier for each alert
 |
 +- severity = 1                                  // The severity of the alert
 +- time = 2013-12-31T11:02Z                          // The alert time (needs a ?datetime for proper rendering)
 | +- moduleType = "ootb"                           // The module type
 |
 +- moduleName = "Brute Force Login To Same Destination"        // A description of the module
 |
 +- statement = "module_144d43f5_f0b4_4cd0_8c6c_5ce65c37e624_Alert" // The name of the EPL statement
 | +- events                                        // The constituent events - as a sequence of event maps
    |  +- [0]                                     // offset 0 (i.e. the first constituent event)
    | |    | |
    |  +- event_cat_name = "User.Activity.Failed Logins"
    |  +- device_class = "Firewall"                    // event meta (accessible as ${events[0].device_class}$)
    | |    |  +- event_source_id = "uttam:50002:1703395"   // Investigation URI to the individual session (used by SA)
    | |
    |  +- ...                                    // Other meta
    | |
    |  +- sessionid = 1703395                          // NextGen sessionid
    | |
    |  +- time = 1388487764                           // event/session time at NextGen source (as a long Unix timestamp)
    | |
    |  +- user_dst = "user5"
    |
    +- [1]                                      // offset 1 (i.e. the second consituent event)
       |
       +- device_class = "Firewall"
       |
       +- event_cat_name = "User.Activity.Failed Logins"
       |
       +- event_source_id = "uttam:50002:1703405"
       |
       +- ...
       |
       +- sessionid = 1703405
       |
       +- time = 1388487766
       |
       +- user_dst = "user5"
```

There are two types of template variables available in the data model:

- **Alert Meta Data:** These hold alert level details like statement name, module name, alert id, alert time, severity, and others. In FreeMarker terminology, these are top level variables associated with the alert instance itself and can be referenced simply by their names like `${moduleName}`. The `time` meta is special because it is of type `Date` and it needs to be suffixed with a `?datetime` to be properly rendered.

- **Constituent Event Meta Data**: These include the session meta fields from individual events that constitute the alert. An alert can have multiple constituent events, so there can be more than one such maps in the same alert. These show up as a sequence of hashes to the FreeMarker template evaluator and must be referenced. For instance, the alert has two constituent events the event_source_id for the first is available as `${events[0].event_source_id}` and the same for the second is accessible as ${events[1].event_source_id.} You also need to be aware of which meta fields are multi-valued because those need be treated as sequences, for example ${events[0].alias_host} will not work because it is a sequence.

Note: The metadata available in the constituent events for a given alert is determined by the EPL SELECT clause. For example, alerts from `SELECT sessionid, time FROM ...` will have only two meta values available (sessionid, time). Constituent events in `SELECT * FROM Event ...` will carry all meta fields from the `Event` type with **non-null** values.

If your template uses meta keys that are not present in all alert output, you should consider using the FreeMarker provisions for default values.

For example, if a template with text Id=${id},ec_outcome=${ec_outcome} is evaluated for an alert which does not include the meta key `ec_outcome` then the template evaluation fails. In such cases, you can use the missing value placeholder `${ec_outcome!"default"}`.

Import and Export a Global Notifications Template

This topic provides instructions on how to import and export a template for notifications.

- You can export default or user-defined templates.
- You can import a template that has been exported from the NetWitness Suite instance. If you import a template with the same name as an existing template, then the existing template will be overwritten.

Import a Template

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.

3. Click the **Templates** tab.
4. In the toolbar, select **> Import**.

   The **Import** dialog is displayed.
5. In the **Enter File Name** field, type the filename or click **Browse** and select the file to be imported.
6. Click **Import**.

Export a Template

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.
3. Click the **Templates** tab.
4. Select the template you want to export.

   Note: You can export all the templates using the **> Export All** option.
5. In the **Actions** column, select **> Export**.

   The **Export** dialog is displayed.
6. In the **Enter File Name** field, type the filename.
7. Click **Save**.

Configure Email Servers and Notification Accounts

This topic provides instructions for configuring email so that users can receive notifications in NetWitness Suite. RSA NetWitness® Suite can send notifications to users via email about various system events. To be able to configure these email notifications, you must first configure the SMTP email server. The Email Configuration panel provides a way to:

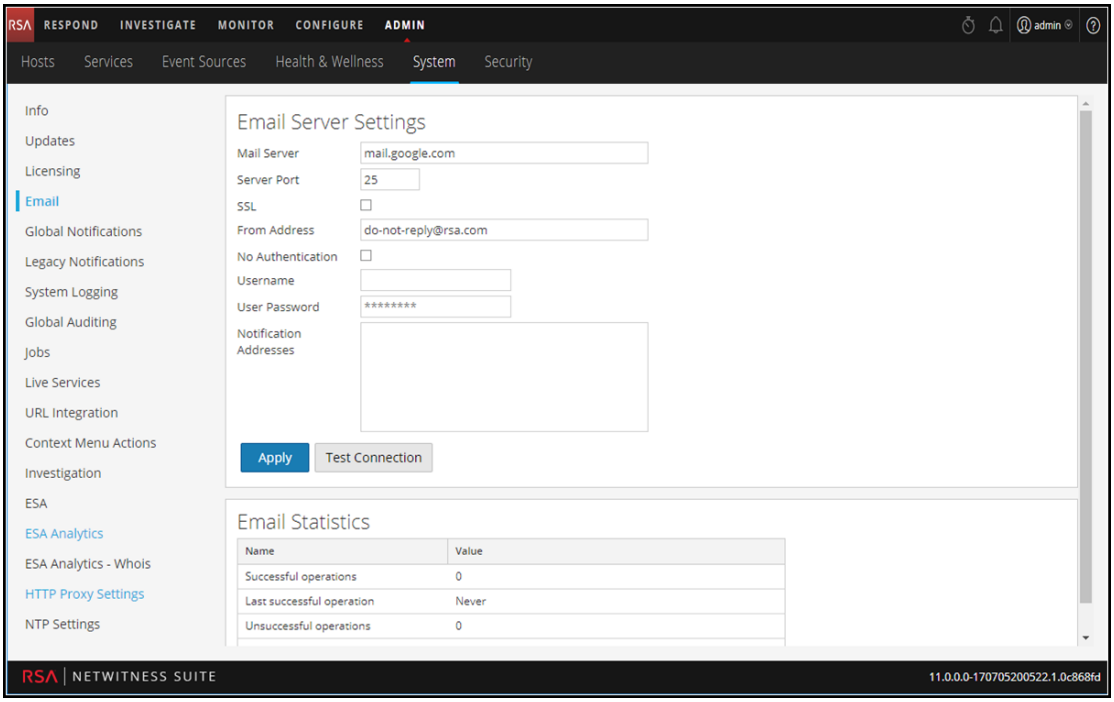
- Configure the email server.
- Set up an email account to receive notifications.
- View statistics on email operations.

NetWitness Suite requires access to an SMTP mail server in order to send reports to users. Each user account can be configured to receive emailed reports. These reports can be generated manually, through the user interface, or automatically, through the auditing system. The following guidelines apply:

- Any SMTP mail host can be used to deliver emails, and each host requires a different configuration. The SMTP provider provides the settings for configuration.
- Some SMTP servers require user authentication in order to relay emails successfully. Typically, this is the login and password for the email account.
- Best practice is to create a new, dedicated email account on the SMTP email server for NetWitness Suite reports.

To configure NetWitness Suite email notifications:

1. Go to **ADMIN > System**.
   The Administration System view is displayed.
2. In options panel, select **Email**.



3. If you want to change the default mail server, specify the **Mail server** name and **Server port**.
4. If the email server communicates with NetWitness Suite using SSL, check the box next to **Use SSL**.
5. In the **From address** field, type the name of the email account sending NetWitness Suite email notifications.
6. If the SMTP server requires user authentication to relay emails successfully, type the **Username** and **User Password** for logging in to the email account.

7. To activate the settings, click **Apply**.

   You can now configure NetWitness Suite modules to receive various notifications by email.

Configure Global Audit Logging

Global Audit Logging provides NetWitness Suite Auditors with consolidated visibility into user activities within NetWitness Suite in real-time from one centralized location. This visibility includes audit logs gathered from the NetWitness Suite system and the different services throughout the NetWitness Suite infrastructure.

NetWitness Suite audit logs collect in a centralized system that converts them into the required format and forwards them to an external syslog system. The external syslog system can be a third-party syslog server or a Log Decoder.

You configure global audit logging in the Global Audit Logging Configurations panel. An audit logging template defines the format and message fields of the audit log entries. A Syslog Notification Server configuration defines the destination to send the audit logs. If you want to forward audit logs to a Log Decoder, configure a Syslog type of Notification Server for the Log Decoder.

The following are some of the user actions logged from NetWitness Suite:

- **User logouts**: The NetWitness Server authenticates the logout action and the action is logged in the audit logs file.

  For example:

  ```
  2018-03-13 06:47:02,911 deviceVersion: "11.1.0.0" deviceService: "SA_
  SERVER" category: AUTHENTICATION operation: "Logoff" outcome:
  "Success" identity: "admin" userRole: "Administrators"
  ```

- **All UI pages accessed**: The NetWitness Server logs system entries related to all the accessed UI pages in the audit logs file.

  For example:

  ```
  2018-03-13 07:03:51,234 deviceVersion: "11.1.0.0" deviceService: "SA_
  SERVER" category: SYSTEM operation: "Page Accessed" outcome:
  "Success" key: "[UNF] Dashboard" identity: "admin" userRole:
  "Administrators"

  2018-03-13 07:04:11,153 deviceVersion: "11.1.0.0" deviceService: "SA_
  SERVER" category: SYSTEM operation: "Page Accessed" outcome:
  "Success" key: "[INV] Navigation" identity: "admin" userRole:
  "Administrators"

  2018-03-13 07:04:11,168 deviceVersion: "11.1.0.0" deviceService: "SA_
  SERVER" category: SYSTEM operation: "Page Accessed" outcome:
  "Success" key: "[INV] &amp;quot;NWAPPLIANCE26785 - Broker&amp;quot;
  ```

```
Navigation" identity: "admin" userRole: "Administrators"

2018-03-13 07:04:38,275 deviceVersion: "11.1.0.0" deviceService: "SA_
SERVER" category: SYSTEM operation: "Page Accessed" outcome:
"Success" key: "[INV] Malware Analysis" identity: "admin" userRole:
"Administrators"

2018-03-13 07:04:39,745 deviceVersion: "11.1.0.0" deviceService: "SA_
SERVER" category: DATA_ACCESS operation: "HttpRequest" parameters: "
{referrer=https://10.31.125.48/investigation/malware, method=GET,
userAgent=Mozilla/5.0 (Windows NT 10.0; Win64; x64)
AppleWebKit/537.36 (KHTML, like Gecko) Chrome/65.0.3325.146
Safari/537.36, queryString=_dc=1520924725291&page=1&start=0&limit=20,
uri=/jobs/jobs, remoteAddress=0:0:0:0:0:0:0:1}" outcome: "Success"
identity: "admin" userRole: "Administrators"
```

- **Committed configuration changes**: The NetWitness Server manages all the configuration changes (including when a user changes their own password) and logs its findings into the audit logs file.
  For example:

```
2018-03-13 08:35:58,094 API{action=/rsa/process/ready, success=true,
identity=admin(unauthenticated), parameters={Arguments=[]}}

2018-03-13 08:36:08,978 DataAccess{action=update, success=true,
identity=admin, parameters={Account=admin}}

2018-03-13 08:36:08,978 API{action=/rsa/security/account/set,
success=true, identity=admin, parameters={Arguments=[Account
(id=admin)]}}
```

- **Queries performed by the user**: The NetWitness Server logs all queries performed by the user in the audit logs file.
  For example:

```
2018-03-13 08:49:17,321 deviceVersion: "11.1.0.0" deviceService: "SA_
SERVER" category: DATA_ACCESS operation: "query" parameters:
"NativeValuesMessage{ deviceId=12, isAppliancePath=false,
timeout=null, collectionName=\'\', appliancePath=false,
sdkPath=\'/sdk\',

```

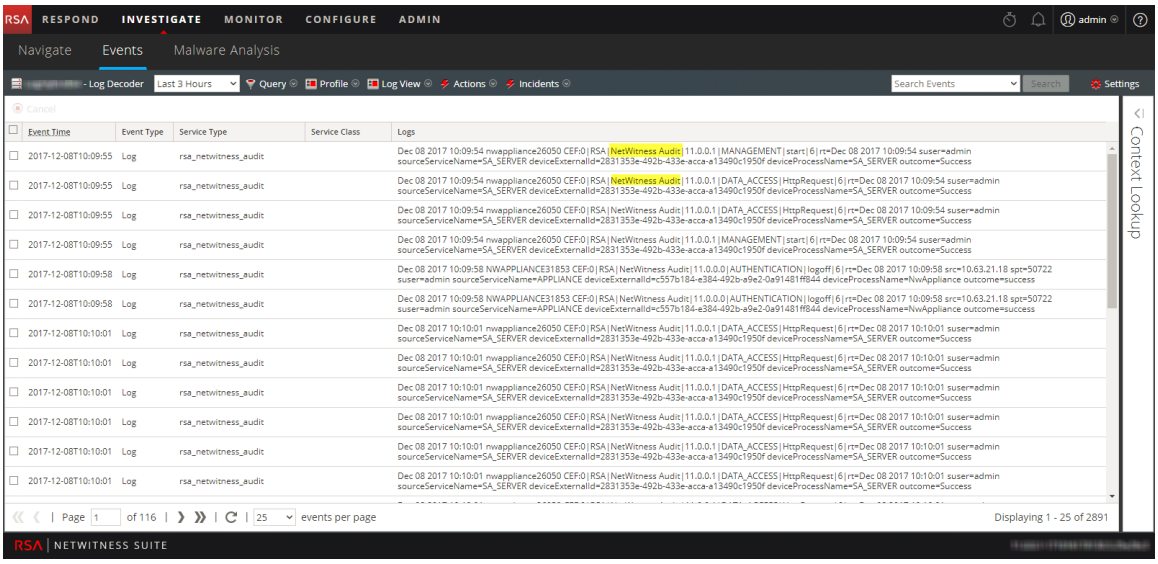
After you create a global audit logging configuration, audit logs containing these user actions automatically go to the external syslog system in the format specified in the selected Audit Logging template. You can create multiple global audit logging configurations for different destinations that use different templates. For example, you can create a global audit logging configuration for an external Syslog server with a template that contains all of the available meta keys and another configuration for a Log Decoder with a template that contains selected meta keys.

For Log Decoders, you use the Default Audit CEF Template. You can add or remove fields from the Common Event Format (CEF) template if you have specific requirements. Define a Template for Global Audit Logging provides instructions and Supported CEF Meta Keys describes the CEF meta keys available to use in the audit logging templates.

For third-party syslog servers, you can use a default audit logging template or define your own format (CEF or non-CEF). Define a Template for Global Audit Logging provides instructions and Supported Global Audit Logging Meta Key Variables describes the available variables.

Auditors can view the audit logs on the selected Log Decoder or third-party syslog server. If using a Log Decoder, auditors can view the audit logs using NetWitness Suite Investigations or Reports.

The following figure shows global audit logs in Investigation (INVESTIGATE > Events).



For examples of some of the user actions logged, see Add New Configuration Dialog. For a list of message types being logged by the various NetWitness Suite components, see Global Audit Logging Operation Reference.

Global Audit Logging - High-Level Procedure

Global Audit Logging is configured in the Global Audit Logging Configurations panel, which is accessed from ADMIN > System view > Global Auditing. Before you can configure Global Audit Logging, you need to configure a Syslog Notification Server and an Audit Logging template. A Syslog Notification Server defines the destination to send the audit logs. An Audit Logging template defines the format and message fields of the audit log entry.

The Global Audit Logging Configuration panel provides a **view settings** link that takes you to the Global Notifications panel (ADMIN > System view > Global Notifications) where you can configure the Syslog Notification Server and Audit Logging template.

Perform the following procedures in the order shown to configure Global Audit Logging.

Procedures	Reference / Instructions
1. Configure a Syslog Notification Server.	Configure a Syslog Notification Server to use for Global Audit Logging. You can define a third-party syslog server or Log Decoder as a destination to receive the audit logs. Configure a Destination to Receive Global Audit Logs. Global Audit Logging configurations use the Syslog notification server type. If you want to forward audit logs to a Log Decoder, create a Notification Server of the Syslog type.

Procedures	Reference / Instructions
2. Select or configure an Audit Logging template to use.	Select an Audit Logging template for the Syslog notification server. You can use a default Audit Logging template or define your own audit logging template. Global Audit Logging configurations use the Audit Logging template type and a Syslog notification server. Configure Templates for Notifications provides additional information. For Log Decoders, use the **Default Audit CEF Template**. You can add or remove fields from the Common Event Format (CEF) template if you have specific requirements. Define a Template for Global Audit Logging provides instructions. For third-party syslog servers, you can use a default audit logging template or define your own format (CEF or non-CEF). Define a Template for Global Audit Logging provides instructions and Supported Global Audit Logging Meta Key Variables describes the available variables.
3. (Optional - Only if consuming with a Log Decoder) Deploy the Common Event Format parser to your Log Decoder from Live.	Ensure that you have deployed and enabled the latest Common Event Format parser from Live. Find and Deploy Live Resources and Enable and Disable Log Parsers provide instructions.
4. Define a global audit logging configuration, which defines how the global audit logs are forwarded to external Syslog systems.	Define a Global Audit Logging Configuration provides instructions. After you add a Global Audit Logging configuration, audit logs are forwarded to the selected Notification Server in the configuration.

Procedures	Reference / Instructions
5. Verify that the global audit logs show the audit events.	Test your audit logs to ensure that they show the audit events as defined in your audit logging template. Verify Global Audit Logs provides instructions.

Configure a Destination to Receive Global Audit Logs

In Global Audit Logging, Syslog Notification Servers are the configurations that define the destinations to receive global audit logs. You need to configure a Syslog Notification Server to use Global Audit Logging. You can define a third-party syslog server or a Log Decoder as the destination to receive the audit logs.

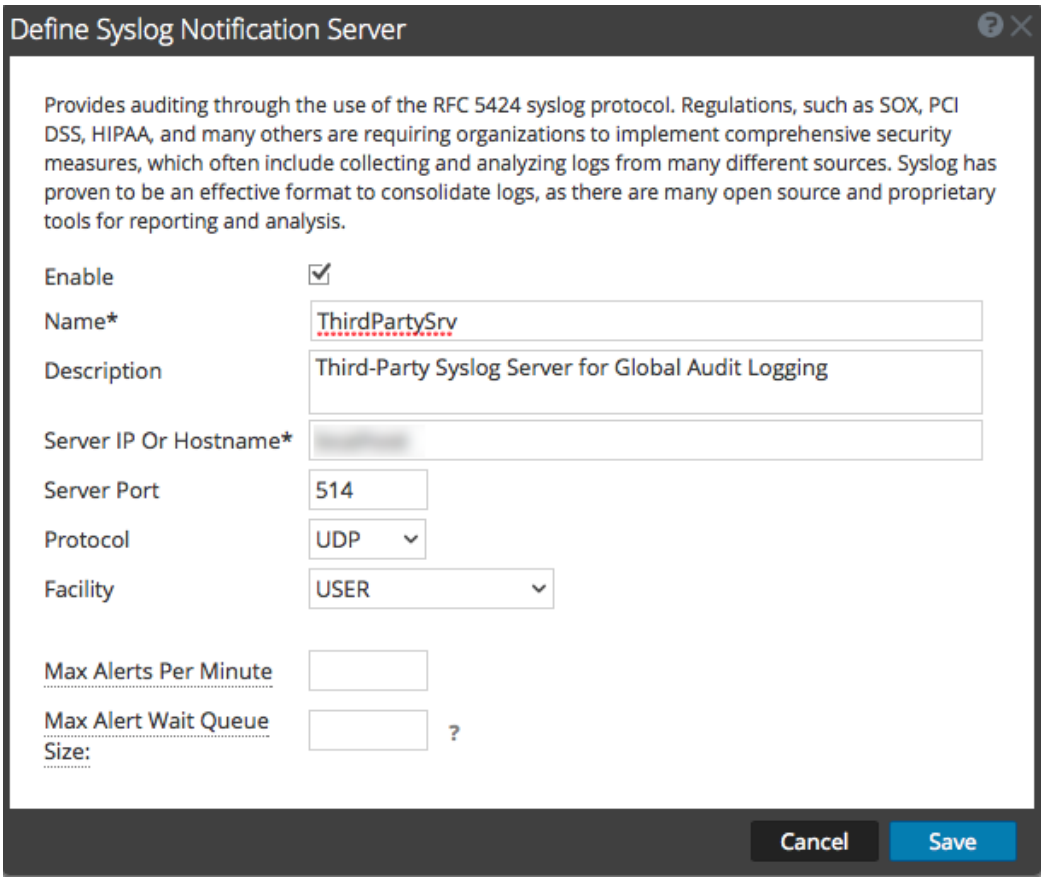
Configure a Syslog Notification Server for a Third-Party Syslog Server

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.
3. Click the **Servers** tab.

   Note: You do not need to configure the Output tab for Global Audit Logging.

4. From the drop-down menu, select **Syslog**.

   The **Define Syslog Notification Server** dialog is displayed.



5. Configure the Syslog notification server as described in the following table.

Field	Description
Enable	Select to enable the notification server.
Name	A name to identify or label the third-party syslog server.
Description	(Optional) A brief description of the notification server.
Server IP or Hostname	The third-party syslog server hostname or IP address.
Server Port	The port number where the target syslog process is listening.
Protocol	The protocol to be used for transferring formatted audit logs to the third-party syslog server.
Facility	The syslog facility to be used for writing formatted audit logs to the third-party syslog server.

The **Max Alerts Per Minute** and **Max Alert Wait Queue Size** fields are not used for Global Audit Logging.

6. Click **Save**.

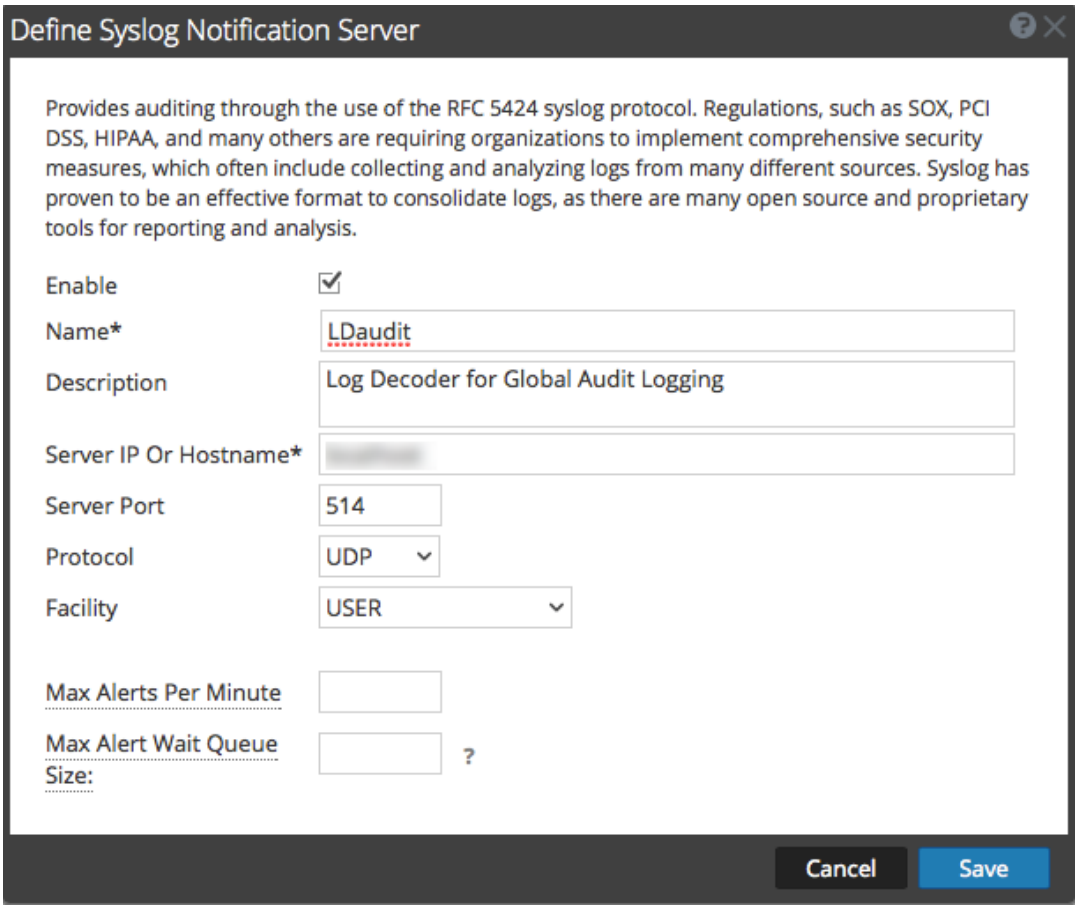
Configure a Syslog Notification Server for a Log Decoder

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.
3. Click the **Servers** tab.

   Note: You do not need to configure the Output tab for Global Audit Logging.

4. From the drop-down menu, select **Syslog**.

   The **Define Syslog Notification Server** dialog is displayed.



5. Configure the Syslog notification server as described in the following table.

Field	Description
Enable	Select to enable the notification server.
Name	A name to identify or label the Log Decoder syslog notification server.
Description	(Optional) A brief description of the notification server.
Server IP or Hostname	The Log Decoder hostname or IP address.
Server Port	The port number where the target syslog process is listening.
Protocol	The protocol to be used for transferring formatted audit logs to the Log Decoder.
Facility	The Syslog facility to be used for writing formatted audit logs to the Log Decoder.

The **Max Alerts Per Minute** and **Max Alert Wait Queue Size** fields are not used for Global Audit Logging.

6. Click **Save**.

Next Steps

Select a default Audit Logging template to use for Global Audit Logging. If necessary, you can define your own custom template. Define a Template for Global Audit Logging provides additional information.

Define a Template for Global Audit Logging

This topic provides instructions on how to define an audit logging template to use for Global Audit Logging. Before you configure Global Audit Logging, configure a Syslog notification server and select an Audit Logging template. You can choose to use a default audit logging template or you can define your own template.

NetWitness Suite includes two default audit logging templates:

- **Default Audit CEF Template**: You can use this template for Log Decoders and third-party syslog servers.
- **Default Audit Human-Readable Format**: You can use this template only for third-party syslog servers. Do not forward messages from this template to a Log Decoder.

The first procedure provides instructions on how to define an audit logging template for a Log Decoder. The audit logging template defines the format and message fields of the audit logs sent to the Log Decoder or third-party syslog server.

Global audit logging templates that you define for a Log Decoder use Common Event Format (CEF) and must meet the following specific standard requirements:

- Include the CEF headers in the template.
- Use only the extensions (Key=Value) listed in the Supported CEF Meta Keys table.
- Ensure that the extensions are in the `key=%{string}<space>key=%{string}` format.

The second procedure provides instructions on how to define a custom global audit logging template in human-readable format for a third-party syslog server. For third-party syslog servers, you can define your own format (CEF or non-CEF).

Define a Global Audit Logging Template for a Log Decoder

You can use the **Default Audit CEF Template** to send global audit logs to a Log Decoder. To define your own template:

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.

3. Click the **Templates** tab.
4. Click + to configure a template.
5. In the **Define Template** dialog, provide the following information:
   a. In the **Name** field, type the name for the template.
   b. In the **Template Type** field, select the **Audit Logging** template type.
   c. In the **Description** field, type a brief description for the template.
   d. In the **Template** field, enter the format for the audit logging template.
   The following format is a customized template provided as an example. It differs from the default CEF template.

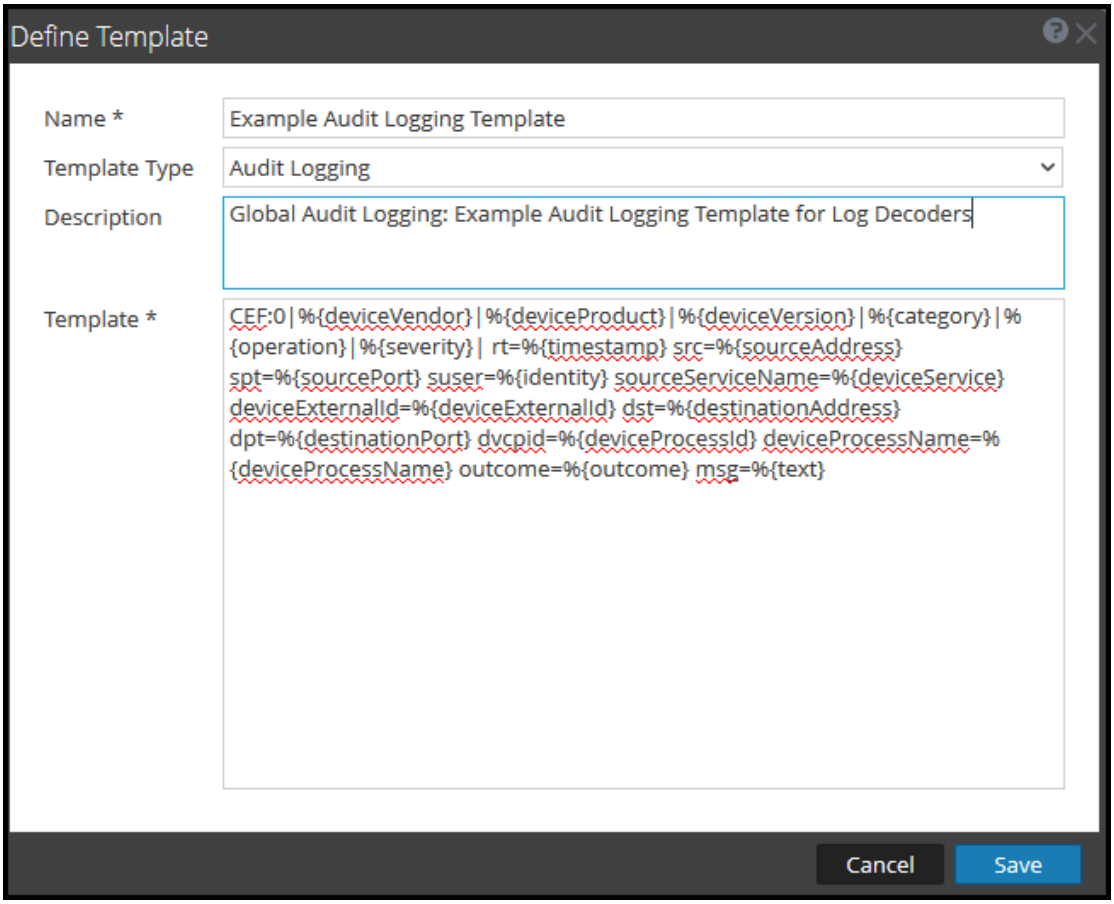
```
CEF:0|%{deviceVendor}|%{deviceProduct}|%{deviceVersion}|%{category}|%{operation}|%{severity}| rt=%{timestamp} src=%{sourceAddress} spt=%{sourcePort}
suser=%{identity} sourceServiceName=%{deviceService}
deviceExternalId=%{deviceExternalId} dst=%{destinationAddress}
dpt=%{destinationPort} dvcpid=%{deviceProcessId}
deviceProcessName=%{deviceProcessName} outcome=%{outcome} msg=%{text}
```

   The highlighed CEF syslog header is required to conform to the CEF standard and is a requirement for the CEF parser in the Log Decoder. The other keys are optional and you can configure them. See all the supported meta keys that are supported by the CEF parser in the Log Decoder in the Supported CEF Meta Keys table.

Note: Use all of the extensions in the following format:
`deviceProcessName=%{deviceProcessName} outcome=%{outcome}`
Include a `<space>` between each key=%{string} pair in the extension keys section.

Note: After you upgrade to 11.1 from earlier versions, then '$' is replaced with '%' automatically

6. Click **Save**.



After you define the CEF audit logging template, ensure that you have deployed and enabled the latest Common Event Format (CEF) parser from Live. "Find and Deploy Live Resources" in the *Live Services Management Guide* provides instructions.

Note: If you need to use a specific meta key for Investigations and Reporting, ensure that the meta keys that you select are indexed in the **table-map-custom.xml** file on the Log Decoder. If they are not indexed, follow the instructions in the "Maintain the Table Map Files" topic in the *Host and Services Configuration Guide*procedure to update the table mappings. Ensure that the meta keys are also indexed in the **index-concentrator-custom.xml** on the Concentrator. See the "Edit a Service Index File" topic in the *Host and Services Configuration Guide* for additional information.

Define a Custom Global Audit Logging Template

For third-party syslog servers, you can define your own template format (CEF or non-CEF). You can use the **Default Audit Human-Readable Format** template to send global audit logs to a third-party syslog server in a format that is easier to read than the CEF format. If you want to define your own template in human-readable format, follow this procedure.

For Log Decoders, you must use a CEF template with some specific requirements. The *Define an Audit Logging Template for a Log Decoder* procedure above provides instructions for creating a template in CEF format.

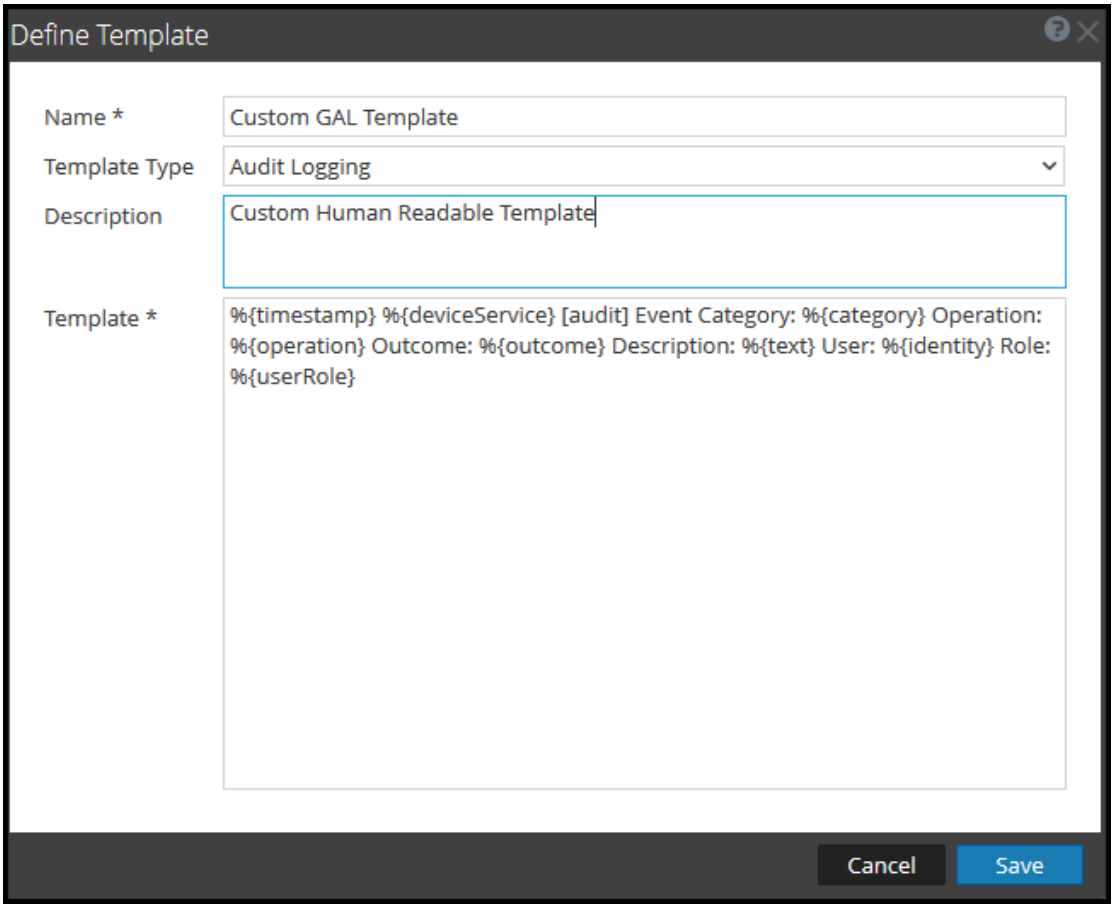
To define a custom global audit logging template in human-readable format:

1. Go to **ADMIN > System**.
2. In the left navigation panel, select **Notifications**.
3. Click the **Templates** tab.
4. Click + to configure a template.
5. In the **Define Template** dialog, provide the following information:
   a. In the **Name** field, type the name for the template.
   b. In the **Template Type** field, select the **Audit Logging** template type.
   c. In the **Description** field, type a brief description for the template.
   d. In the **Template** field, enter the format for the audit logging template. The following example is in human-readable format with selected meta key variables.

```
%{timestamp} %{deviceService} [audit] Event Category: %{category}
Operation: %{operation} Outcome: %{outcome} Description: %{text}
User: %{identity} Role: %{userRole}
```

You can use any of the meta key variables that are supported by global audit logging shown in the Supported Global Audit Logging Meta Key Variables table.

6. Click **Save**.



The following example shows global audit logs in human-readable format for this template:

```
Apr 06 2018 14:16:04 REPORTING_ENGINE [audit] Event Category:
CONFIGURATION Operation: Set Outcome: null Description: null User: admin
Role: Administrators+Administrators+PRIVILEGED_CONNECTION_AUTHORITY

Apr 06 2018 14:16:04 REPORTING_ENGINE [audit] Event Category:
CONFIGURATION Operation: IPDBConfig Outcome: SUCCESS Description: Config
update event occurred User: admin Role:
Administrators+Administrators+PRIVILEGED_CONNECTION_AUTHORITY

Apr 06 2018 14:16:04 NW_SERVER [audit] Event Category: DATA_ACCESS
Operation: /admin/1/config Outcome: Success Description: null User:
admin Role: Administrators+Administrators+PRIVILEGED_CONNECTION_
AUTHORITY
```

Next Step

Define a Global Audit Logging Configuration provides instructions for defining a global audit logging configuration for NetWitness Suite.

Define a Global Audit Logging Configuration

This topic tells administrators how to define a global audit logging configuration. This procedure is required only if you choose to set up centralized audit logging in your environment. These global audit logging configurations define how the global audit logs are forwarded to external syslog systems or Log Decoders. Audit logs are forwarded to the selected Notification Servers.

Prerequisites

Before starting this procedure, configure the following to use for global audit logging:

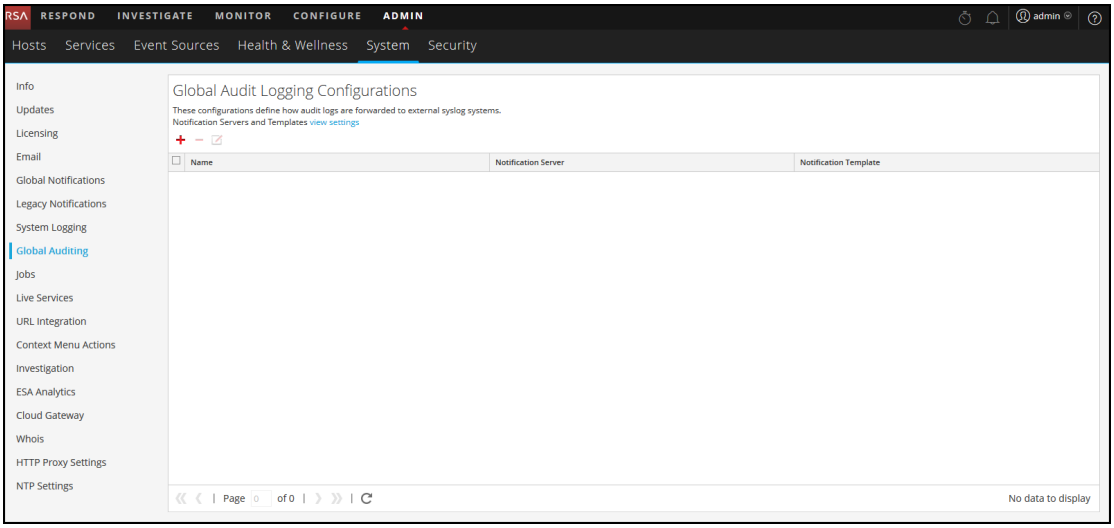
- Syslog Notification Server
- Audit Logging Template

You configure the notification server and template on the Global Notifications panel. You can access the Global Notifications panel by clicking the **view settings** link on the Global Audit Logging Configurations panel. You can only define a Syslog type of Notification Server for global audit logging. For Log Decoders, use a Syslog type of Notification Server and a Common Event Format (CEF) audit logging template. You can use a default audit logging template or define your own template. You can create multiple audit logging templates and Syslog Notification Servers to use for your global audit logging configurations.

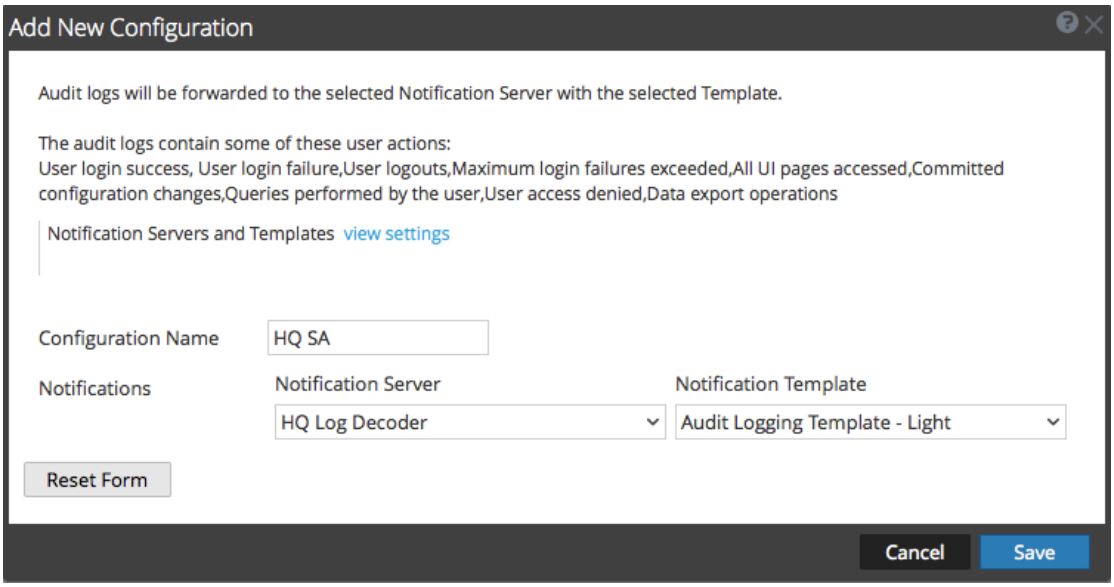
If you are forwarding global audit logs to a Log Decoder, deploy the Common Event Format parser to your Log Decoder from Live.

Add a Global Audit Logging Configuration

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Auditing**.
   The **Global Audit Logging Configurations** panel is displayed.



3. Click + to add a global audit logging configuration.
   The **Add New Configuration** dialog is displayed.



4. In the **Configuration Name** field, type a unique name for the global audit logging configuration. For example, you can create a configuration for a specific type of global audit logging configuration, such as HQ NW for a NetWitness Suite headquarters configuration.

5. In the **Notifications** section, select the syslog **Notification Server** to use for this configuration. The notification server is the destination to send the global audit logs.
6. Select the audit logging **Notification Template** to use for this configuration. The Audit Logging template defines the format and audit log message fields to be sent.
7. Click **Save**.

Add New Configuration Dialog provides additional information and examples of the user actions logged. For a list of message types being logged by the various NetWitness Suite components, see Global Audit Logging Operation Reference.

Edit a Global Audit Logging Configuration

This topic provides instructions on how to edit a global audit logging configuration. You can edit a global audit logging configuration to change the destination of the global audit logs for your user audits by selecting a different Notification Server. You can also change the format and message fields of the global audit log entries by selecting a different Notification Template. You make changes to the Notification Server or Template on the Global Notifications panel. You can access the Global Notifications panel by clicking the **view settings** link on the Global Audit Logging Configurations panel.

You cannot change which NetWitness Suite user actions are logged and sent in the global audit logs.

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Auditing**.
3. In the **Global Audit Logging Configurations** panel, select a configuration to edit and click .
4. In the **Add New Configuration** dialog, modify the global audit logging configuration as required. You can modify the **Configuration Name** and select a different **NotificationServer** or **Template**.
5. Click **Save.**

Delete a Global Audit Logging Configuration

Deleting a global audit configuration does not delete the associated notification server and template. After you delete a global audit logging configuration, the forwarding of global audit logs specified in that configuration is discontinued.

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Auditing**.

3. In the **Global Audit Logging Configurations** panel, select a configuration to delete and click − .

   A confirmation dialog is displayed.

4. Click **Yes**.

   The selected configuration is deleted.

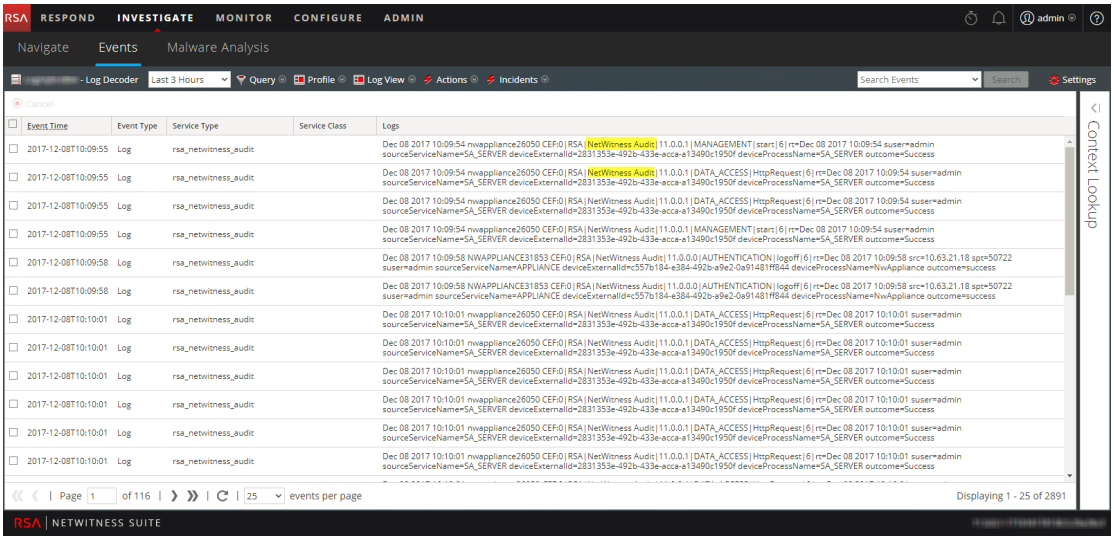
Verify Global Audit Logs

This topic provides instructions on how to verify global audit logs. After you have configured global audit logging, you need to test your global audit logs to ensure that they show the audit events as defined in your global audit logging template.

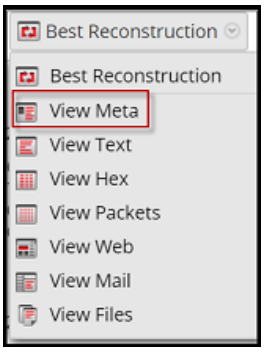
Before starting this task, complete the steps detailed in Configure Global Audit Logging.

To view and verify the global audit logs if you are using a Log Decoder:

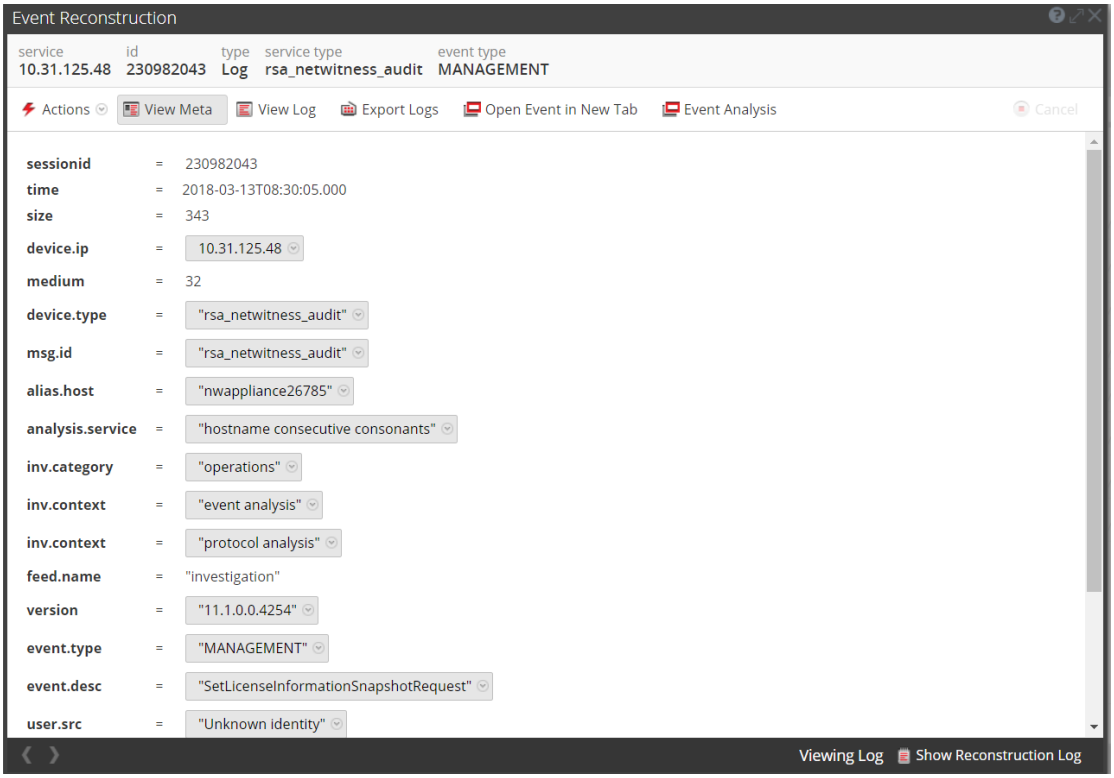
1. Go to **Investigate > Events**.
2. From within the Navigate view, select the Log Decoder, and click **Navigate**.



3. Compare the fields in the global audit logs with the fields defined in the global audit logging template that you used in your global audit logging configuration.
4. Double-click a log and in the Event Reconstruction dialog, select **View Meta**.



5. Verify that the meta that you want to audit is correct.



Example CEF Output

The following example shows global audit logs for an audit logging Common Event Format (CEF) template.

Template:

```
CEF:0|%{deviceVendor}|%{deviceProduct}|%{deviceVersion}|%{category}|%{operation}|%{severity}|

rt=%{timestamp} src=%{sourceAddress} spt=%{sourcePort}

suser=%{identity} sourceServiceName=%{deviceService}

deviceExternalId=%{deviceExternalId} dst=%{destinationAddress}
```

```
dpt=%{destinationPort} dvcpid=%{deviceProcessId}
deviceProcessName=%{deviceProcessName} outcome=%{outcome} msg=%{text}
```

Example logs:

```
CEF:0|RSA|NetWitness Audit|11.1.0.0|AUTHENTICATION|logoff|6|rt=Mar 11
2018 08:58:34 src=10.31.125.48 spt=53392 suser=admin
sourceServiceName=BROKER deviceExternalId=92284373-3cdf-4362-be5b-
426f46410262 deviceProcessName=NwBroker outcome=success
```

```
CEF:0|RSA|NetWitness Audit|11.1.0.0|AUTHENTICATION|logoff|6|rt=Mar 11
2018 09:00:00 src=10.31.125.48 spt=52212 suser=admin
sourceServiceName=CONCENTRATOR deviceExternalId=f17aa153-ac33-4775-ad20-
84962d06ab9e deviceProcessName=NwConcentrator outcome=success
```

```
CEF:0|RSA|NetWitness Audit|11.1.0.0|AUTHENTICATION|logoff|6|rt=Mar 11
2018 08:58:34 src=10.31.125.48 spt=53392 suser=admin
sourceServiceName=BROKER deviceExternalId=92284373-3cdf-4362-be5b-
426f46410262 deviceProcessName=NwBroker outcome=success
```

Configure Investigation Settings

This topic provides instructions for administrators who are configuring the settings that apply to all Investigations on the NetWitness Suiteinstance being configured. The settings for configuring and tuning behavior of NetWitness Suite Investigation are available in the System view > Investigation panel. These settings apply to all investigations and reconstructions on the current instance of NetWitness Suite.

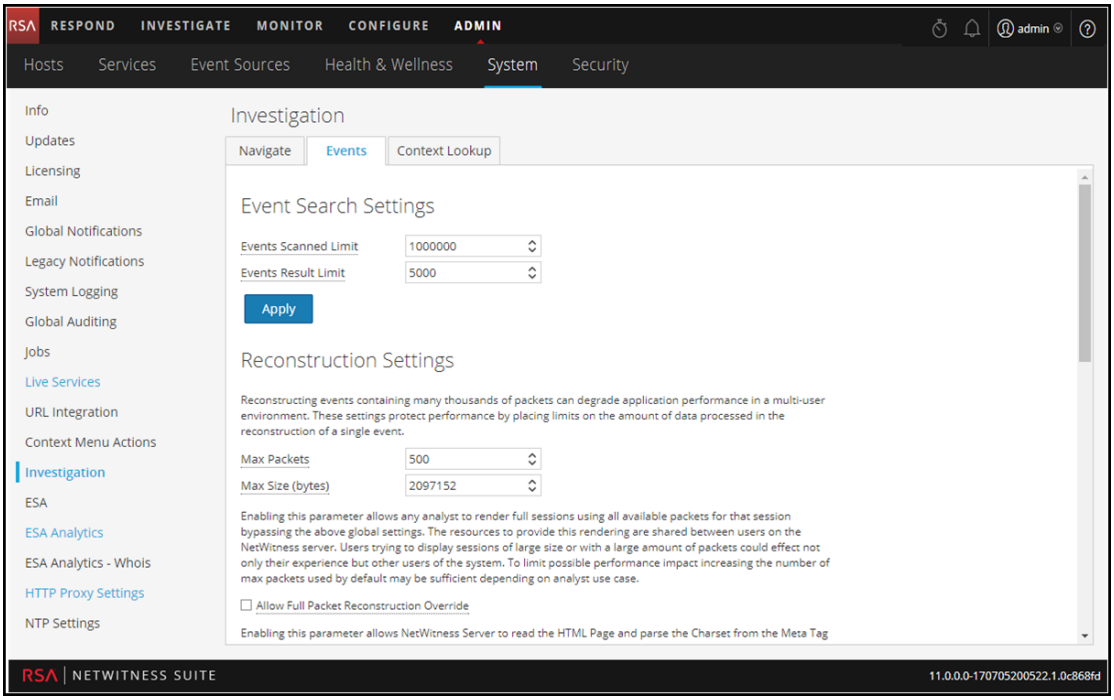
Configure Navigate, Events, and Context Lookup Settings

The Context Hub is preconfigured with meta fields mapped to the entities. NetWitness Respond and Investigate use these default mappings for context lookup. For information about adding meta keys, see "Configure Settings for a Data Source" in the *Context Hub Configuration Guide*.

Caution: For the Context Lookup to work correctly in the Respond and Investigate views, RSA recommends that when mapping meta keys in the ADMIN > SYSTEM > Investigations > Context Lookup tab, you add only meta keys to the Meta Key Mappings, not fields in the MongoDB. For example, `ip.address` is a meta key and `ip_address` is not a meta key (it is a field in the MongoDB).

1. Go to **ADMIN > System.**
2. In the options panel, select **Investigation.**

   The Investigation Configuration panel is displayed.



3. In the **Navigate** tab, in the **Render Threads Settings** field, select the maximum number of concurrent meta key values that are loaded by a single user in the navigate view. Click **Apply**.
4. In the **Navigate** tab, in the **Parallel Coordinates Settings** section, set the maximum limits for meta values scanned and meta value results that can be included in a parallel coordinates visualization. For better performance, these are the recommended settings: Meta Values Scan Limit -100000 and Meta Values Result Limit to 1,000-10,000
   Click **Apply**.
5. In the **Events** tab, in the **Event Search Settings** section, set the maximum numbers of events scanned and event results displayed when an analyst is conducting an event search in the Events view. Click **Apply**.
6. In the **Events** tab, in the **Reconstruction Settings** section, set the limits for the amount of data processed in the reconstruction of a single event. The default values are 100 maximum packets and 2097152 bytes. If analysts are seeing slow performance when reconstructing sessions in Investigation, the reconstructing settings may need adjustment. Click **Apply.**

   Caution: Setting a higher value affects the performance of the NetWitness Server by increasing the time and memory taken to create a reconstruction of an event. Setting the value to zero disables any limit and may lead to a NetWitness Server crash.

7. (Optional) In the **Events** tab, in the **Web View Reconstruction Settings** section, enable the use of supporting files in a web view reconstruction, and configure the additional settings to

calibrate web view reconstructions. These include the time range (in seconds) to scan for related events, the maximum number of related events to scan, and overrides to Reconstruction Settings for use with web view reconstructions. Click **Apply**.

8. In the **Context Lookup** tab, manage mapping of Context Hub meta types with meta keys in Investigation. You can add or remove meta keys to the list of meta types supported in Investigation by Context Hub. Procedures associated with this tab are provided in "Manage Meta Type and Meta Key Mapping" in the *Investigation and Malware Analysis Guide*.

Clear Reconstruction Cache for Services

Under Reconstruction Cache Settings, administrators can clear the cache for one or more services. For example, the administrator can clear the cache for a single Broker, a Broker and Decoder, or all connected services. These are a few examples of causes for stale cache being used in a reconstruction.

- The downstream services may have their sessions invalidated or data reset. As an example, if Investigation is browsing a Broker and a downstream Concentrator or Decoder has a data reset, the meta and session data for the investigating service (Broker) does not match the content if the downstream service has reset and repopulated. The reconstruction in Investigation shows content from cache, which does not match the real content. Even if the Decoder is offline, content is still displayed in the Broker reconstruction. Clearing cache on the Broker causes the NetWitness Suite to reach out to the Decoder and an error is returned because the Decoder is offline.
- Another case where cache may be stale is when a service ID for a downstream service changes. This can happen when exporting, importing, deleting, and adding services to NetWitness Suite because NetWitness Suite can reuse service IDs. In this case, clearing the cache on the Broker causes NetWitness Suite to request data from the services.

To clear reconstruction cache, do one of the following:

1. To clear cache for one or more services, select the services and click **Clear Cache for the Selected Services**.
2. To clear the cache for all listed services, click **Clear Cache for All Services.**
   The reconstruction cache for the selected services is cleared. NetWitness Suite sends a request for data to the services.

Configure Live Services Settings

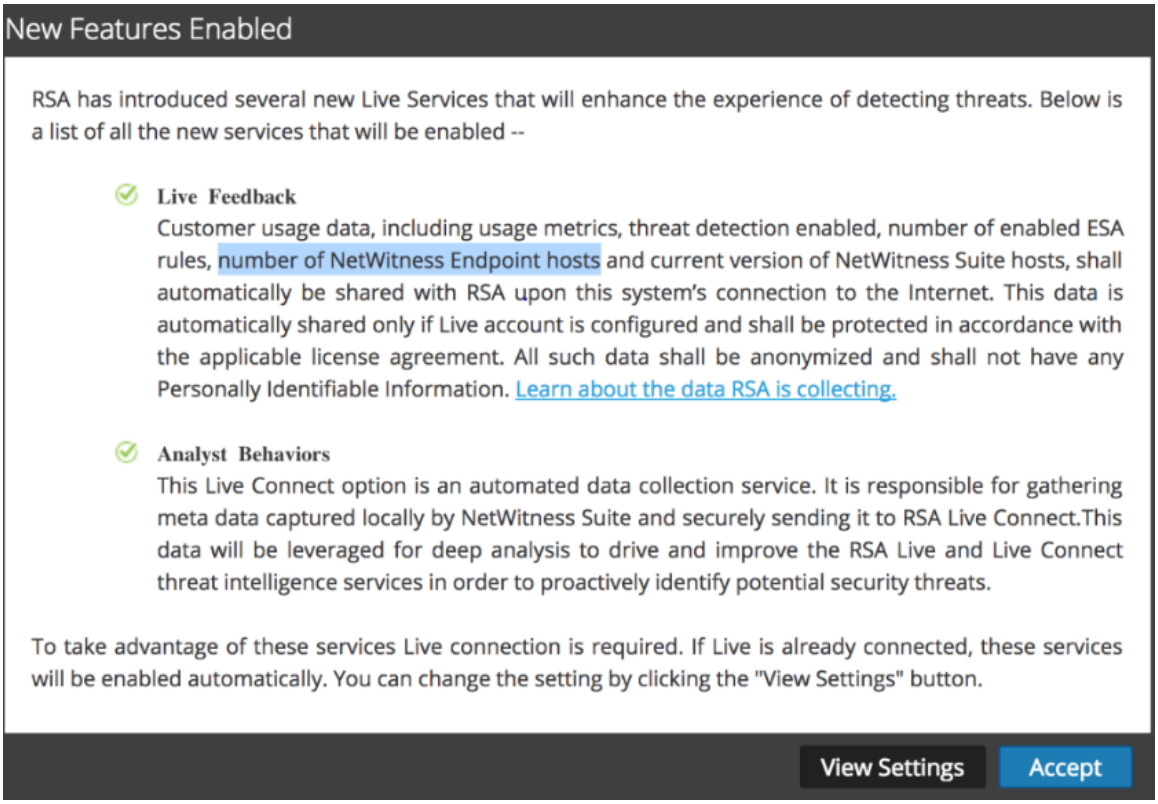
Options for configuring Live Services are in the System view > Live Services Configuration panel. The Live Configuration panel allows you to configure:

- The Live account.
- The Live Content update schedule and preferences for notification of updates.
- Participation in Live Services Feedback.
- Sharing Live Content Usage
- RSA Live Connect (Beta)

Prerequisite

To activate your Live account for NetWitness Suite, please contact RSA Customer Care. When you have a confirmation that your Live account has been set up, you can configure and test the CMS server connection.

When you log on to NetWitness Suite for the first time, you are prompted with **New Features Enabled** dialog.



When you click **Accept**, you automatically agree to the following:

- Participate in Live Feedback.
- Use Live Connect features to receive threat intelligence data.
- Allow NetWitness Suite to send anonymous, technical data about your environment to RSA.

If you click **View Settings**, you are redirected to the Live Services user interface to view the settings for Live Feedback and Live Connect Threat Data Sharing. If you have not configured the Live Account a masked screen is displayed.

For information on Analyst Behaviors and Data Sharing, see "NetWitness Suite Feedback and Data Sharing" topic in the *Live Services Management Guide*.

About Live Feedback Participation

When you participate in Live Feedback, it collects relevant information for further improvement. For information on Live Feedback, see Live Feedback Overview.

When you install NetWitness Suite, you will be prompted to participate in Live Feedback. For information, see Configure Live Services Settings

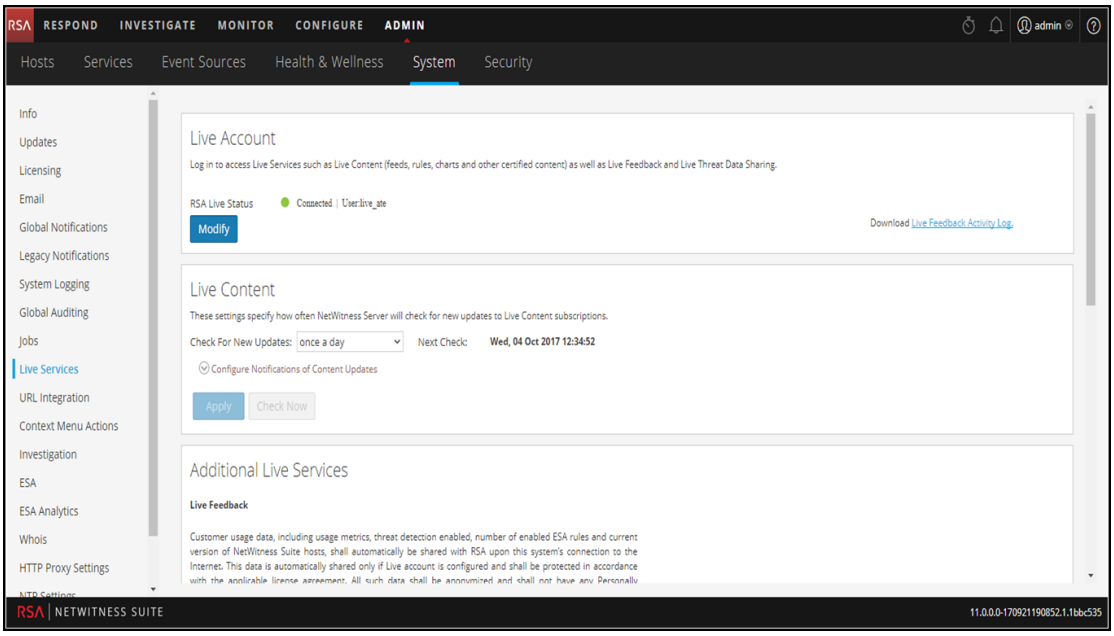
If needed, you can manually download historical usage data and share it with RSA. For information on how to download historical usage data and share it with RSA, see Upload Data to RSA for Live Feedback.

This topic contains the following procedures:

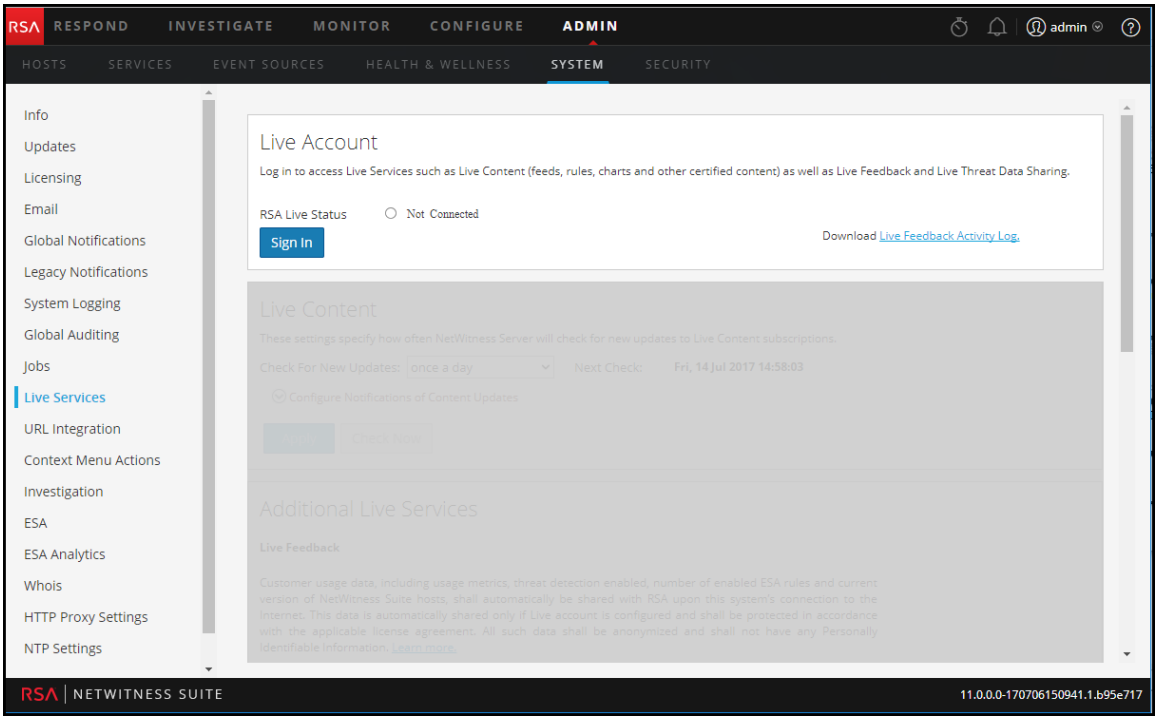
- Access the Live Services Configuration Panel
- Configure Live Account
- Configure the Live Content Synchronization Interval and Notification
- Force Immediate Synchronization
- Using RSA Live Connect

Access the Live Services Configuration Panel

1. Go to **ADMIN** > System.
2. In the options panel, select **Live Services**.



Note: If you are not signed in with your Live Account credentials, a masked screen is displayed.



Configure Live Account

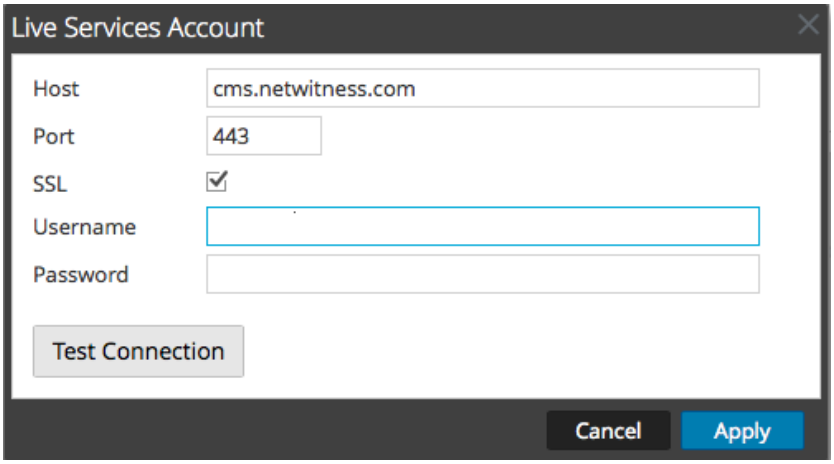
In the **Live Account** section, you must set up the user's Live account. The information needed to set up the user's Live account consists of the Username, Password, and Live URL for the Content Management System. This information is provided by Customer Care.

To configure a Live account:

1. In the **Live Account** section, click **Sign In**.

   Note: The **Modify** button shows that the live account is configured. Click **Modify** to change the user that is accessing Live Services.

2. In the Live Services Account dialog box, enter the Host (typically **cms.netwitness.com**) and type your username and password.

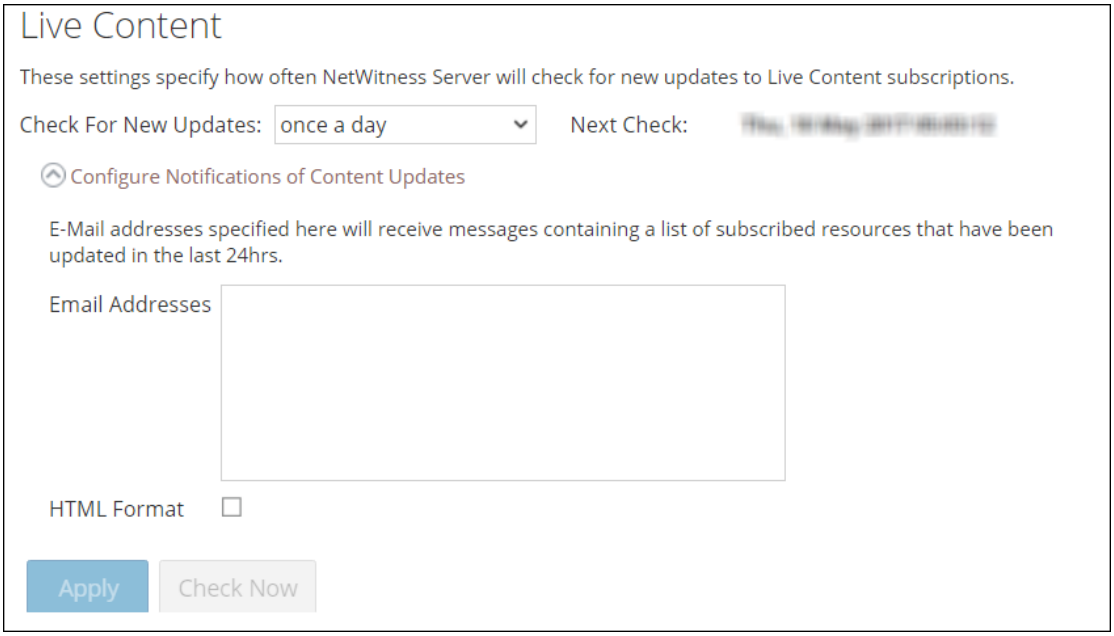


3. (Optional) If you are using a different CMS, type the host URL for the Content Management System. The default points to the CMS at **cms.netwitness.com**.
4. (Optional) If you are using a different CMS, type the communications port for Live to send requests to the Content Management System. The default for this field is **443**, which is the communications port on the Content Management System.
5. (Optional) If you do not want to use SSL, uncheck the **SSL** option. (SSL is enabled by default.)
6. Click **Test connection** to test the connection to CMS.
7. To save and apply the configuration, click **Apply**.

Configure the Live Content Synchronization Interval and Notification

You can change the interval at which NetWitness Suite checks for new updates to Live Content:

1. Use the **Check for New Updates** field to change the interval. Select an interval from the drop-down list. The default value for this setting is **once a day**.



2. To configure Live Services to send update reports to one or more people, in the **Email Addresses** field, type the email addresses as a comma-separated list, for example, **john@company.com,ted@company.com,brian@company.com**
3. (Optional) To receive messages in HTML format rather than plain text, select **HTML Format**.
4. To save and apply, click **Apply**.

   The time and date of the next scheduled Live synchronization based on the configured interval for checking is displayed.

Force Immediate Synchronization

Instead of waiting for the next scheduled resource cycle, this option forces Live to begin immediate synchronization of the subscribed resources in this instance of NetWitness Suite. One use for this is to see the immediate impact of a configuration change. For example, a new service has been added, or new resources have been toggled for automatic deployment. The scheduled synchronization could take place hours later if Live Services is set to synchronize a few times a day.

Caution: Synchronization can cause a parser reload if a FlexParser is deployed in the update cycle. This is acceptable once or twice a day, but a number of back-to-back parser reloads can cause packet loss at the Decoder. If this is the initial setup and you haven't configured Live resource subscriptions, do not Synchronize Now. Wait until you have configured subscriptions.

To force immediate synchronization, click **Check Now**. NetWitness Suite checks for updates in subscribed resources.

Using RSA Live Connect

RSA Live Connect is a cloud based threat intelligence service. This service collects, analyzes, and assesses threat intelligence data such as IP addresses, domains, and files collected from various sources including the RSA NetWitness® Suite and RSA NetWitness® Endpoint customer community. RSA Live Connect consists of the following features:

- Threat Insights
- Analyst Behaviors

Threat Insights

Threat Insights provides analysts the opportunity to pull threat intelligence data such as IP related information from the Live Connect service to be leveraged by the analysts during investigation.

By default, **Threat Insights** is enabled in **Additional Live Services** section. If Context Hub service is configured, Live Connect is automatically added as a data source for Context Hub. For more information, see "Configure Live Connect Data Source for Context Hub" topic in the *Context Hub Configuration Guide*.

With Live Connect as a data source for context hub, you can use the Context Lookup option in INVESTIGATE > Navigate view or INVESTIGATE > Events view to fetch contextual information. For instructions, see "View Additional Context for a Data Point" topic in the *Investigation and Malware Analysis Guide*.

Analyst Behaviors

Analyst Behaviors is a feature where analysts participate in sharing data to RSA community. This is an automated data collection service. Its goal is to share potential threat intelligence data to the RSA Live Connect cloud service for analysis. The type of data that could be shared from your network to RSA Live Connect includes various types of meta data captured by NetWitness Suite such as ip.src, ip.dst, ip.addr, device.ip, alias.ip, alias.host, paddr, sessionid, domain.dst, domain.src. For information on Analyst Behaviors and Data Sharing, see "NetWitness Suite Feedback and Data Sharing" topic in the *Live Services Management Guide*.

Live Feedback Overview

This topic provides an introduction to Live Feedback. Live Feedback collects relevant information such as the Licensing usage data for Packet Decoder, Log Decoder and Malware Analysis, Threat Detection Enabled or Disabled status, Number of enabled ESA rules,and version number details of all the services of NetWitness Suite. For more information about the licensing usage data for Packer Decoder, Log Decoder and Malware Analysis, see the **Metered Licenses Tab** topic in the *Licensing Guide*. The information is collected to improve future releases of NetWitness Suite. You will automatically be signed on to live feedback and you cannot disable this option.

In addition to this, information on the Live Content Usage can also be shared with RSA. Live Content usage metrics for resource types from **CONFIGURE > Live Content > Search Criteria** such as total count of RSA Application Rule, RSA Correlation Rule etc. can be shared with RSA. The information collected is used to improve the use of Live Content. For more information about sharing live content configuration, see Live Services Configuration Panel.

About Live Feedback Participation

When you participate in Live Feedback, it collects relevant information for further improvement. For information on Live Feedback, see Live Feedback Overview.

When you install NetWitness Suite, you will be prompted to participate in Live Feedback. For information, see Configure Live Services Settings

If needed, you can manually download historical usage data and share it with RSA. For information on how to download historical usage data and share it with RSA, see Upload Data to RSA for Live Feedback.

Note: Live Feedback is activated only if you have configured your Live account.

The Live Feedback data is in JSON format as mentioned below. When you sign up with your Live Account credentials, a single encrypted JSON file is automatically uploaded to the RSA servers everyday.

JSON File

The JSON file consists of usage data information for a component or a set of components. In case of a set of components with the same license id, the usage data for all the components is aggregated and represented as a component called Entitlement. However, even if there is a single component such as a log decoder or decoder, an Entitlement component will be generated and will display the usage data for a single component. This aggregation is for components namely log decoders, decoders or malware analysis.

Note: The version of Entitlement is always null as it is the aggregate for a license data.

For example, if there are three Decoders with the same license id "xxx" with the following usage data:
Decoder1 = 150 MB
Decoder2 = 250 MB
Decoder3 = 100 MB
The aggregated usage data of 500 MB is displayed.

This JSON file is described in the following sections:

- Components
- Metrics
- Other Product Details
- Sample

Components

Details of each service in your NetWitness Suite deployment. This is represented as Component. For each component the following details are displayed.

Component	Description
Version	Version number of the component in the NetWitness Suite deployment. For example, 11.1.0.0.x.x.x.x.
ID	This is the unique Component ID that represents the host and is used to link to the metrics generated.
Properties	• **Name** - This is the name of the property for that component. For example, malware analysis, ESA, log decoder, etc. • **Value** - This is the unique value to identify the component.

Metrics

Metrics of the components (hosts) such as log decoder, decoder and malware analysis. The license usage data for each host is shared. For Live Content usage metrics, resource types from **CONFIGURE > Live Content > Search Criteria** such as total count of RSA Application Rule, RSA Correlation Rule etc. are shared.

Component	Description
StartTimeUTC	This is the time from when the metrics is collected. (in EPOCH format).

Component	Description
Stats	• **Value** - This is the value generated for the specific component ID for each component. • **Name** - This is the name of the statistics for which the metrics is collected. For example, Capture Total Bytes.
EndTimeUTC	This is the time when the metrics collection is complete (in EPOCH format).
Component ID	This is the ID of the component for which the value is recorded.

Other Product Details

- **Product Type** - This is the name of the product. In this example, the Product Type is NetWitness Suite.
- **Version** - This is the version of the JSON file which tracks the changes made to the file format.
- **Product Instance** - This is the License Server ID.
- **Checksum** - This is the information which is used for integrity checks.

The following table describes details of the JSON file with examples.

Metrics	Description
Content	Displays the content that contains all the Components, Metrics, Product Type and Product Instance data except Checksum.

Metrics	Description

Components	The details of all the services in NetWitness Suite are represented as a Component. The details of the component such as the version number of the component, the name, and the value is displayed as shown below:
	 	"Content": {
	"Components": [{
	"Version": "11.1.0.0",
	"Id": 5,
	"Properties": [{
	"Value": "5714c78be4b0ea5bd2b96e63",
	"Name": "InstanceId"
	}],
	"Name": "malwareanalysis"
	},
	Version: Displays the version of NetWitness Suite service. For example, 11.1.0.0.
	ID: Displays an unique id which is generated for the NetWitness Suite service and is used to link to the metrics for that particular component. In this example, the ID for Malware Analysis is 5 and the metrics is displayed for ComponentId 5 in bytes, as shown below:
	 	"Metrics": [{
	"StartTimeUTC": 1442102400000,
	"Stats": [{
	"Value": "1582940012678",
	"Name": "Total FileBytes"
	}],
	"EndTimeUTC": 1442188799000,
	"ComponentId": 5
	},
	Properties: Displays the properties for the component such as name and value as shown in the above figure.
	Value: Displays the value of the property which is an internal UUID for a component as shown in the above figure This is generated by NetWitness Suite.
	For example, For malware analysis the value displayed as
	`"55f7a0b30e502231c42d063f"`
	Name: "InstanceId": Displays the name of the property as shown in the above figure.
	Name": "malwareanalysis": Displays the name of component which is a service name such as LogDecoder, Decoder, or MalwareAnalysis.

Metrics	Description

Metrics	Displays the list of the metrics with the usage data for components namely log decoder, decoder and malware analysis.
	In this example, the metrics is displayed for ComponentId 5 in bytes, as shown below.
	 	"Metrics": [{
	"StartTimeUTC": 1442102400000,
	"Stats": [{
	"Value": "1582940012678",
	"Name": "Total FileBytes"
	}],
	"EndTimeUTC": 1442188799000,
	"ComponentId": 5
	},

	StartTimeUTC: Displays the time when the metrics is collected, in the EPOCH format.
	Stats: Displays the usage value and usage type statistics of the component.
	Value: Displays the value of the statistics. For example, "Value": "1582940012678" as shown in the above figure.
	Name: Displays the name of the statistics. For example, Capture Total Bytes or Total File bytes.
	EndTimeUTC: Displays the time when the metrics collection is complete, in the EPOCH format.
	ComponentId: Displays the component id for which the metric values are collected. This is the same as the "ID" in the Components section.
Content	Displays the content that contains all the Components, Metrics, Product Type and Product Instance data except Checksum.
ProductType	Displays the product type that generates the file. For example, `"ProductType": "NetWitness Suite"`
ProductInstance	Displays the License server Id and is unique per NetWitness Suite. For example, `"ProductInstance": "00-0C-29-6C-66-E3"`

Metrics	Description
Checksum	Displays the Checksum for the "Content" section in the file. Used by RSA for integrity check. For example, `"Checksum": "883DACF97E4BCD9F590A1461A4DD0A312B5883A6CF82E0518E77AAB6A6DDB654"`

Sample

Here is a sample JSON file.

```
{
    "Content": {
        "Components": [{
            "Version": "11.1.0.0",
            "Id": 7,
            "Properties": [{
                "Value": "57470c96e4b0cf62c7bfbd53",
                "Name": "InstanceId"
            }],
            "Name": "esa"
        },
        {
            "Version": "11.1.0.0",
            "Id": 4,
            "Properties": [{
                "Value": "5714c78be4b0ea5bd2b96e69",
                "Name": "InstanceId"
            }],
            "Name": "incidentmanagement"
        },
        {
            "Version": "11.1.0.0",
            "Id": 2,
            "Properties": [{
                "Value": "5714c78be4b0ea5bd2b96e65",
                "Name": "InstanceId"
            }],
            "Name": "sa"
        },
        {
            "Version": "11.1.0.0",
            "Id": 1,

        }, {
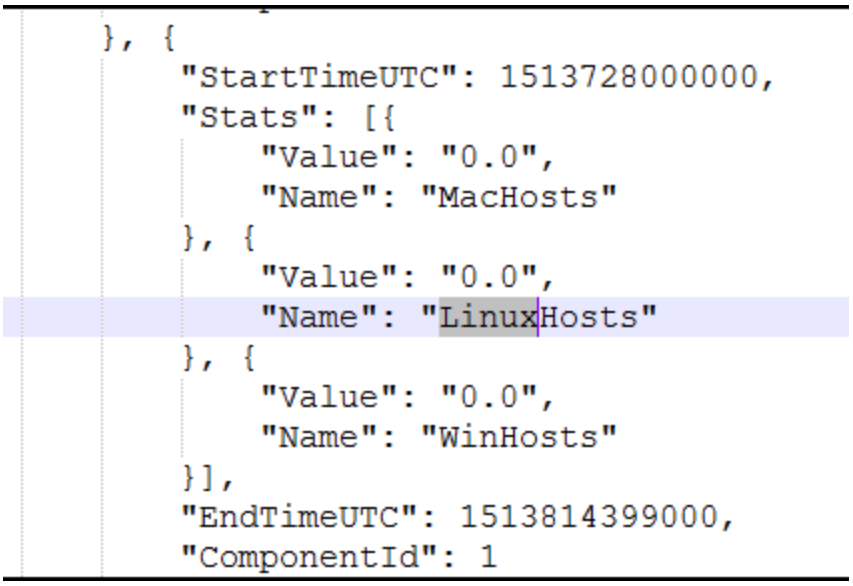
            "Value": "-1",
            "Name": "Threshold"
        }, {
            "Value": "1000654868",
            "Name": "AccountId"
        }, {
            "Value": "B02E-03A1-08A6-EC3B",
            "Name": "ActivationId"
        }, {
            "Value": "2015-05-05 00:00:00",
            "Name": "LicenseStartDate"
        }, {
            "Value": "permanent",
            "Name": "LicenseEndDate"
        }, {
            "Value": "20t-52osb7",
            "Name": "FeatureId"
        }, {
            "Value": "smcBroker",
            "Name": "Name"
        }, {
            "Value": "20t-52osb7",
            "Name": "InstanceId"
        }],
        "Name": "Entitlement"
    }, {
```

For Endpoint, WinHosts, LinuxHosts and MacHosts metrics are displayed which indicate the number of agents deployed. Here is a sample of the Endpoint metrics within the JSON file.



Upload Data to RSA for Live Feedback

This topic provides instructions for a NetWitness Suite administrator to export the metrics in NetWitness Suite for Live Feedback.

If the Live Account is not configured, you can manually upload the usage data to RSA. For more information, see Live Services Configuration Panel.

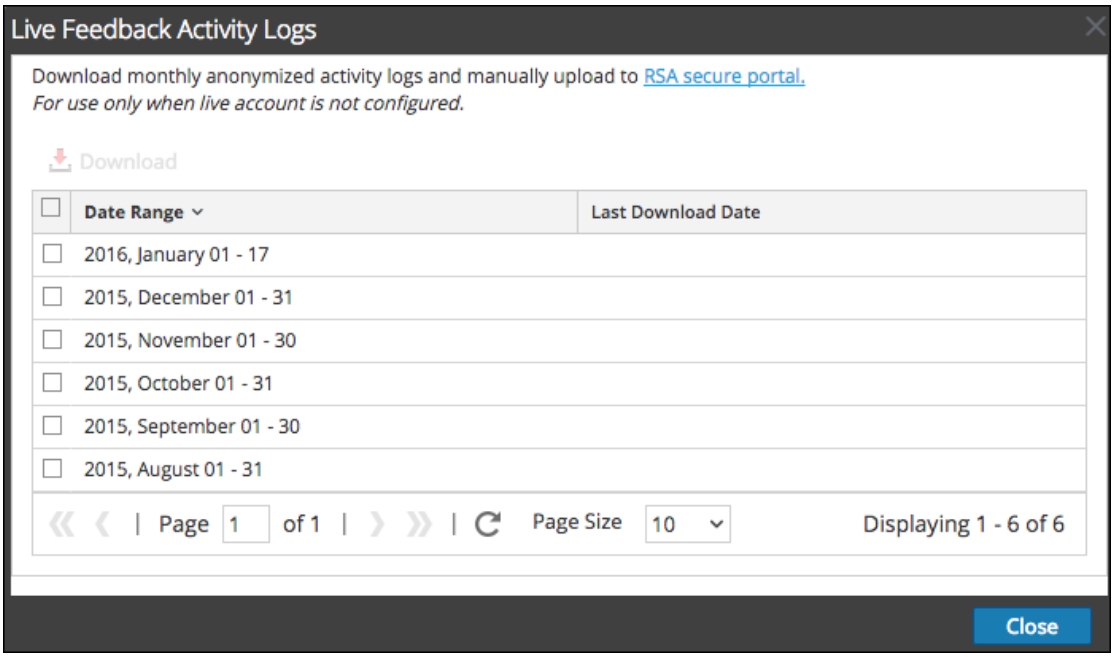
The Live Account section has a Live Feedback Activity Log which enables you to download the usage data required for Live Feedback. This is active regardless of the Live Account configuration.

You can first download the Live Feedback historical data, and then upload it to share with RSA.

Download Live Feedback Historical Data

To download the Live Feedback historical data:

1. Go to **ADMIN** > **System**.
2. In the options panel, select **Live Services**.
   The **Live Account** screen is displayed which consists of the **RSA Live Status** and Download **Live Feedback Activity Log**.
3. Click the **Download Live Feedback Activity Log**.
   The **Download Live Feedback Activity Log** window opens which allows the NetWitness Suite user to download the required Live Feedback historical data.



4. Select one or multiple entries by selecting the checkboxes and click **Download**.

> **Note:** If you select multiple entries in the history table, the downloaded zip file consists of an individual JSON file for each month.

The downloaded Live Feedback data is in JSON format, and is bundled as a .zip file. For more information, see Live Feedback Overview.

Share Data with RSA

After you download the Live Feedback data, you can then upload it using the following procedure.

To share the data to RSA:

1. Click on the **RSA Secure Portal** available on the **Live Feedback Activity Logs** window. The RSA NetWitness® Suite Live Feedback login screen is displayed.
2. Login to the Upload Live Feedback Activity Logs portal using your Live ID credentials.
3. Click **Choose File**, and select the downloaded file.
4. Click **Upload.**

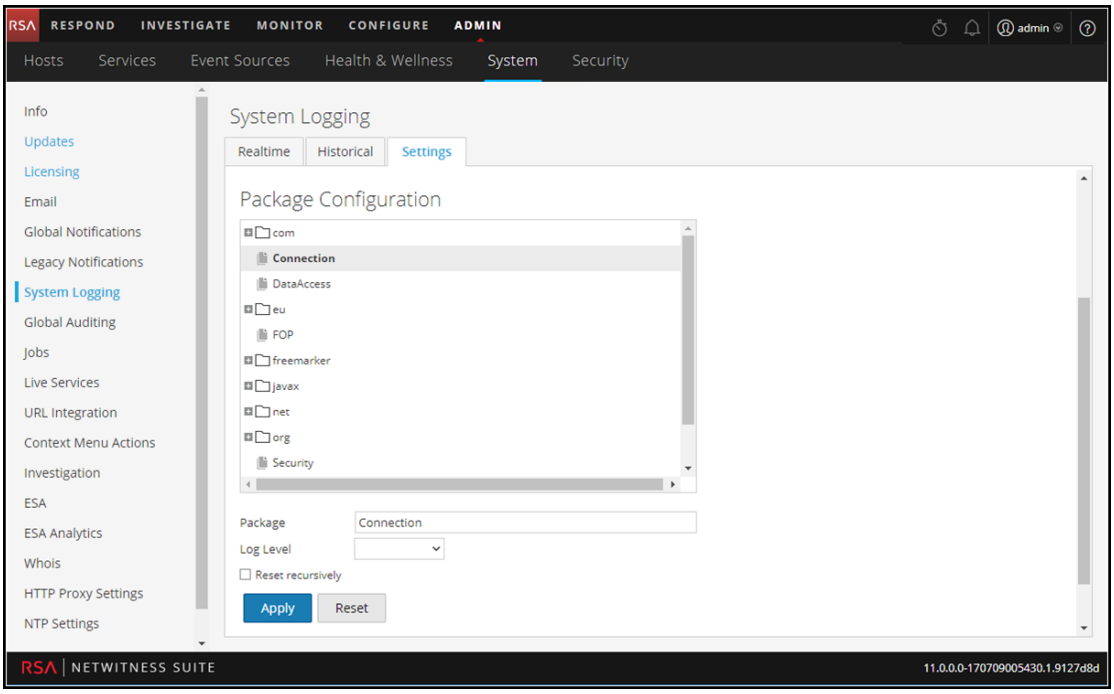
Configure Log File Settings

In RSA NetWitness® Suite, you can configure the size of the log files, the number of backup log files maintained, as well as the default logging levels for the packages within NetWitness Suite.

Configure System Log File Size and Backup Count

The log file size and backup count are configured with default values. If you want to change the default values for the log file size and number of backups:

1. Go to **ADMIN > System.**
2. In options panel, select **System Logging**.
   The System Logging Configuration panel opens to the Realtime tab by default.
3. Click the **Settings** tab.

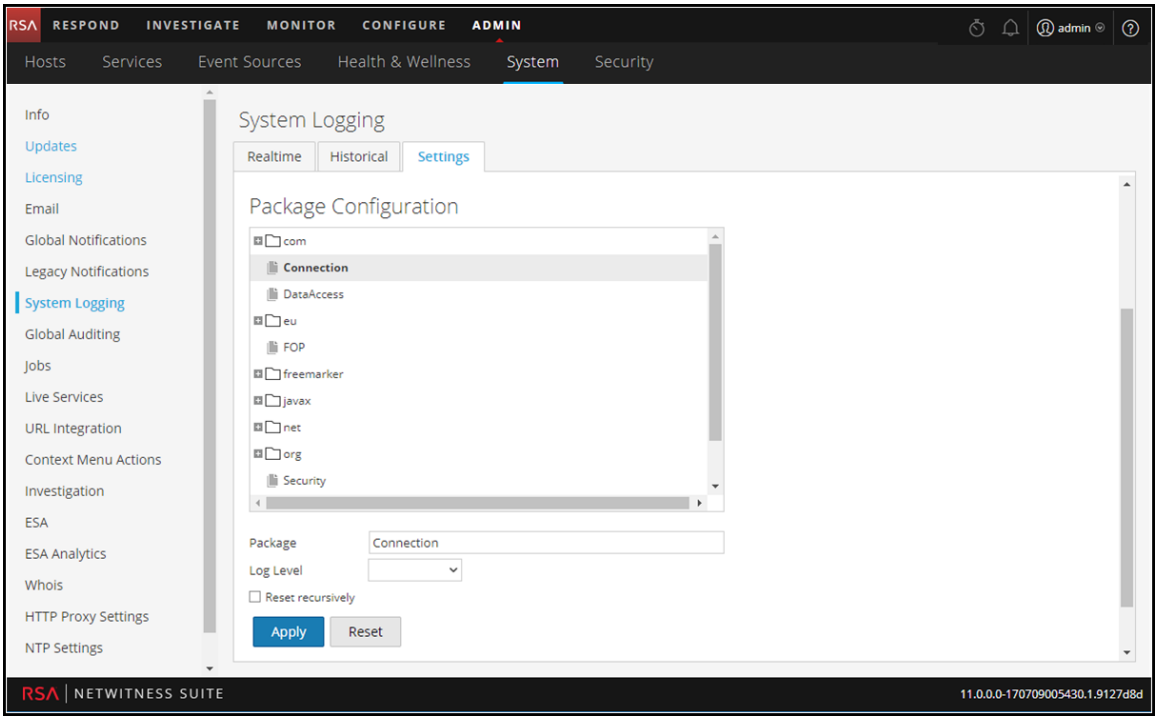


4. In the **Max Log Size** field, type the maximum size in bytes. The minimum value for this setting is **4096**.
5. In the **Max # Backup Files** field, type the maximum number of backup logs to maintain. The minimum value for this setting is **0**. When the maximum number of log files is attained, and a new backup file is made, the oldest backup is discarded.
6. Click **Apply**.
   The changes go into effect immediately.

Set the Log Level for an Individual Package

The Package Configuration section shows the NetWitness Packets in a tree structure. The tree contains all the packages used within NetWitness Suite. You can drill down into the tree to view the log levels of each package. The log level for all packages that are not explicitly set is the same as the **root** log level. To set the log level for a package:

1. Select the package in the **Package** tree.
   The name of the package is displayed in the **Package** field. If a log level is already set for the package, that level is shown.



2. Select the **Log Level** in the drop-down list.
3. Click **Apply**.
   The new log level becomes effective immediately.
4. (Optional) If you want to revert to the default log level specified for **root**, click **Reset**.

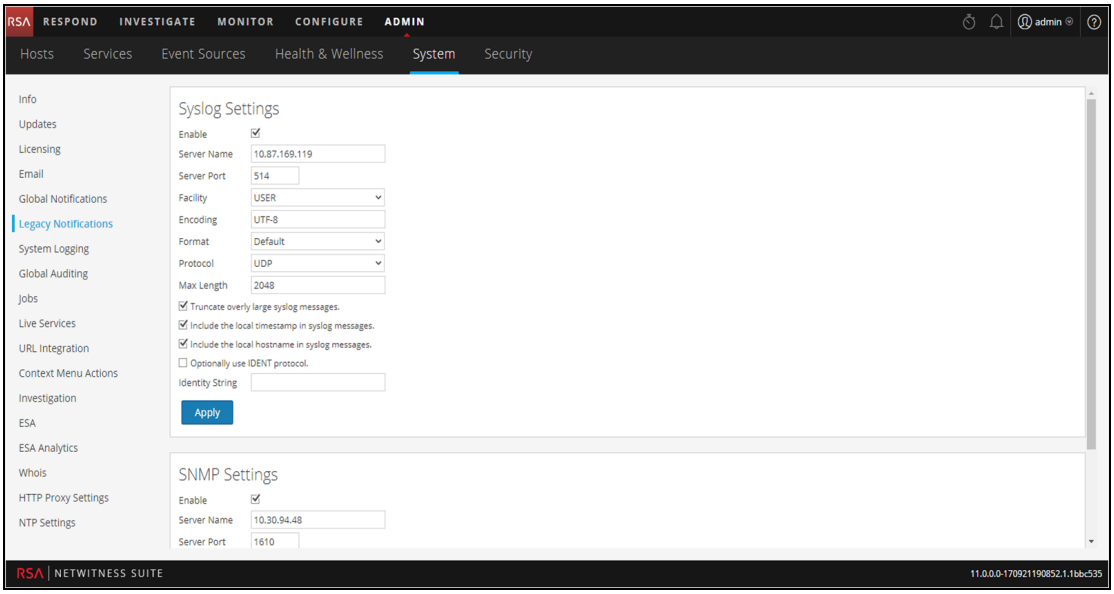
Configure Syslog and SNMP Settings

On the Legacy Notifications panel, you can configure syslog and SNMP notification settings. These configurations are used for Entitlement, legacy Event Source Management (ESM), Warehouse Connector monitoring, and Archiver monitoring.

Configure and Enable Syslog Settings

1. Go to **ADMIN > System**.

2. In the options panel, select **Legacy Notifications**.
   The Legacy Notifications Configuration panel is displayed.



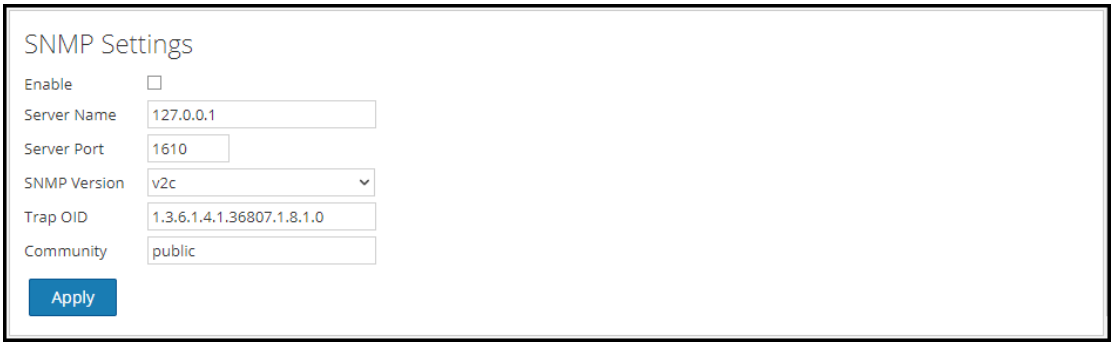
3. In the **Server Name** and **Server Port** fields under **Syslog Settings**, type the host name where the target syslog process is running and the port where the target syslog process is listening.
4. In the **Facility**, **Encoding**, **Format**, and **Max length** fields, specify the syslog facility, message text encoding, message format, and maximum message length.
5. In the **Protocol** field, select either UDP or TCP.
6. (Optional) Select the options for what to include in messages: **Truncate overly large syslog messages**, **Include the local timestamp in syslog messages**, and **Include the local hostname in syslog messages**.
7. (Optional) Configure syslog to prepend an Identity String before each syslog alert.
8. Click the **Enable** checkbox.
9. Click **Apply**.
   Syslog notifications are immediately enabled.

Legacy Notifications Configuration Panel provides detailed information about these settings.

Configure and Enable SNMP Settings

1. Go to **ADMIN > System**.
2. In the options panel, select **Legacy Notifications**.
   The Legacy Notifications Configuration panel is displayed, with SNMP Settings at the

bottom of the panel.



3. In the **Server Name** and **Server Port** fields under **SNMP Settings**, type the host name and listening port of the SNMP trap host.
4. Select the **SNMP version** in the drop-down menu, **v1** or **v2c**.
5. In the **Trap OID** field. specify the object ID for the SNMP trap on the trap host that receives the audit event. The default value is **0.0.0.0.0.1**.
6. In the **Community** field, specify the community string used to authenticate on the SNMP trap host, the default value is **public**.
7. Click the **Enable** checkbox.
8. Click **Apply**.
   SNMP notifications are immediately enabled.

Legacy Notifications Configuration Panel provides detailed information about these settings.

Disable Syslog or SNMP Settings

To disable syslog or SNMP settings on this NetWitness Suite instance:

1. Clear the appropriate **Enable** checkbox.
2. Click **Apply**.
   The selected settings are immediately disabled.

Additional Procedures

Additional procedures are not essential for the set up of NetWitness Suite, they include certain customization options that are beyond the usual setup; for example, adding custom context menus or setting up a proxy.

Add Custom Context Menu Actions

Configure NTP Servers

Configure Proxy for NetWitness Suite

Add New Configuration Dialog

Supported CEF Meta Keys

Supported Global Audit Logging Meta Key Variables

Global Audit Logging Operation Reference

Local Audit Log Locations

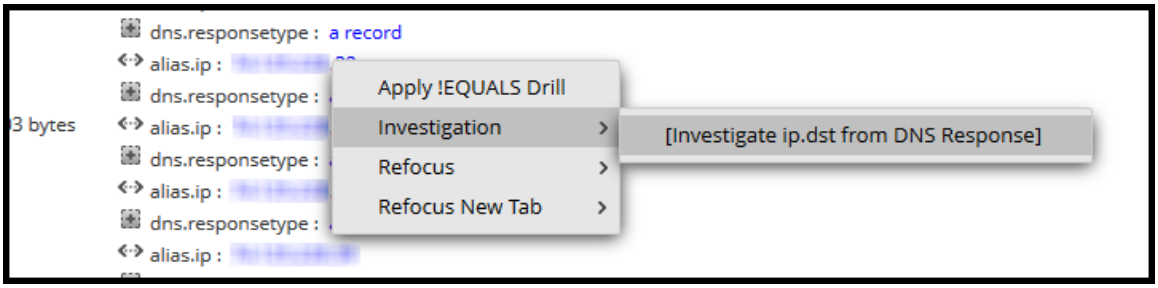
Add Custom Context Menu Actions

In the Context Menu Actions panel, administrators can view, add, and edit context menu actions for the current instance of NetWitness Suite. Each context menu action applies to a specific context in the NetWitness Suite user interface, and appears as an option when you right-click a specific location in the user interface.

Some context menu actions are built into NetWitness Suite; you cannot edit or delete any of the default context menu actions. You can create and edit custom context menu actions. If you want to create a custom variation of a built-in context menu action, you can copy the configuration to a new context menu action and modify the custom context menu action. A context menu action is defined by cascading style sheet (CSS) code that defines:

- The title of the option in the context menu.
- The NetWitness Suite module in which the context menu is available.
- The content to which the action applies.

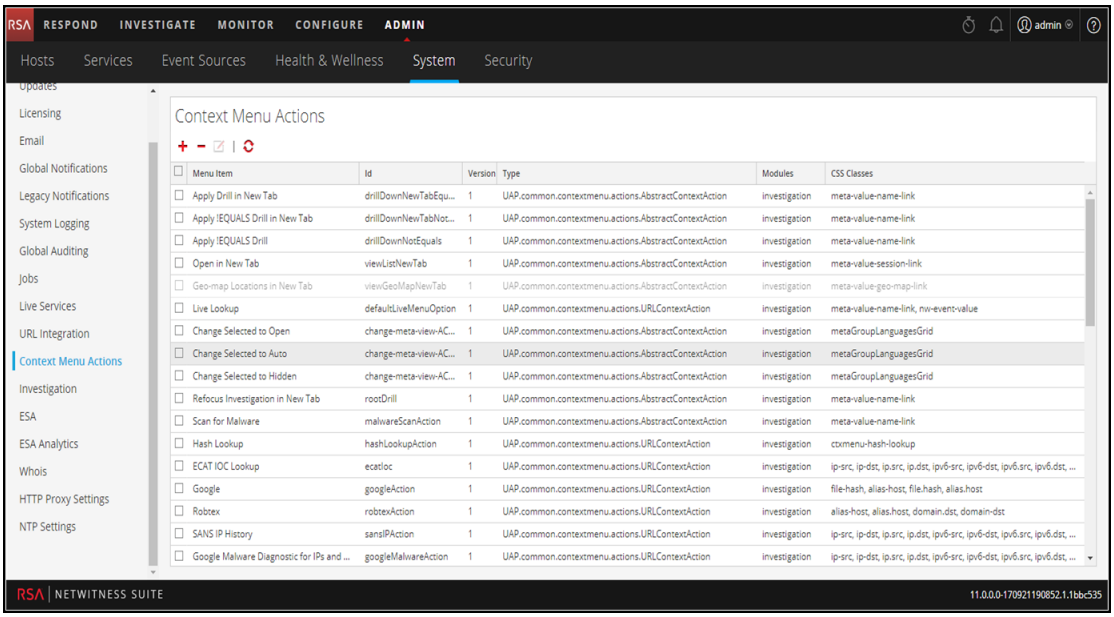
This is an example of a custom context menu action; the steps and CSS code to create this example are provided as an example procedure below.



View Context Menu Actions in NetWitness Suite

To view existing context actions in NetWitness Suite both default and custom:

1. Go to **ADMIN > System.**
2. In the options panel, select **Context Menu Actions**.



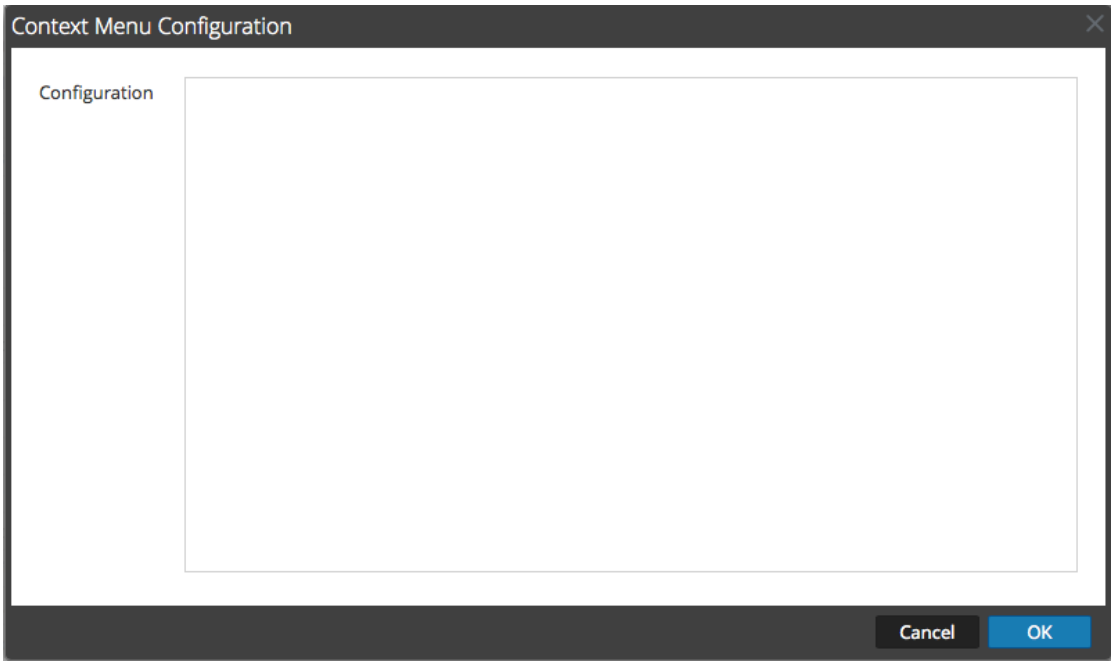
Details of the information in the Context Menu Action panel are provided in Context Menu Actions Panel.

Add a Context Menu Action

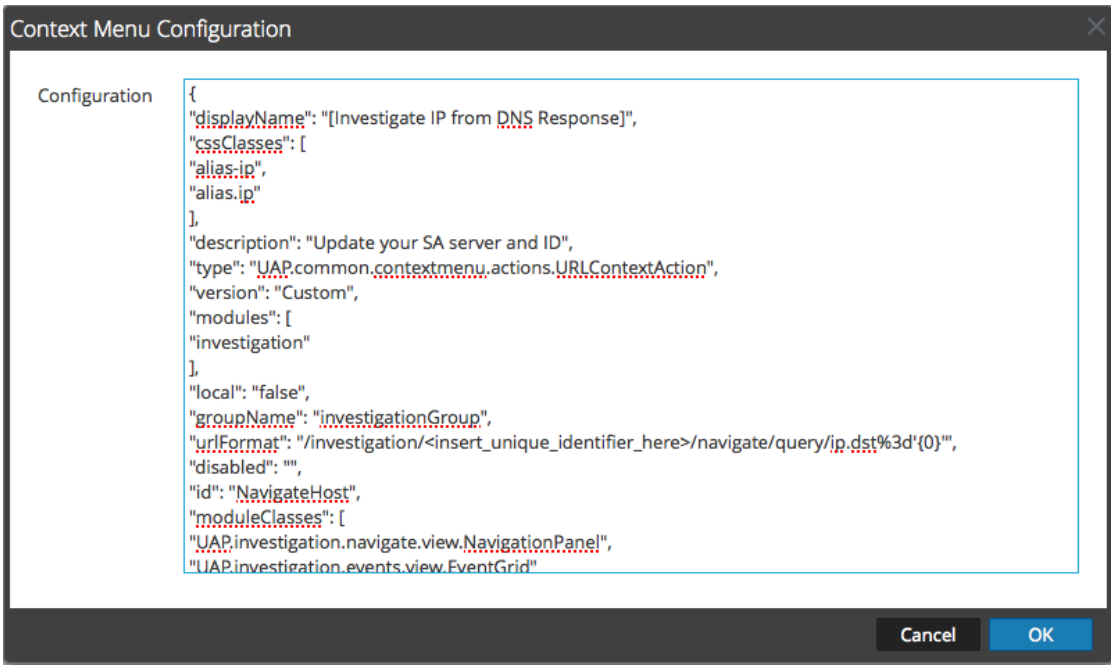
To add a context menu action in NetWitness Suite:

1. In the toolbar, click +.

   The Context Menu Configuration dialog is displayed.



2. Type the CSS code to define the context menu action. The example procedure at the end of this topic provides step-by-step instructions that you can use to create a useful context menu action.



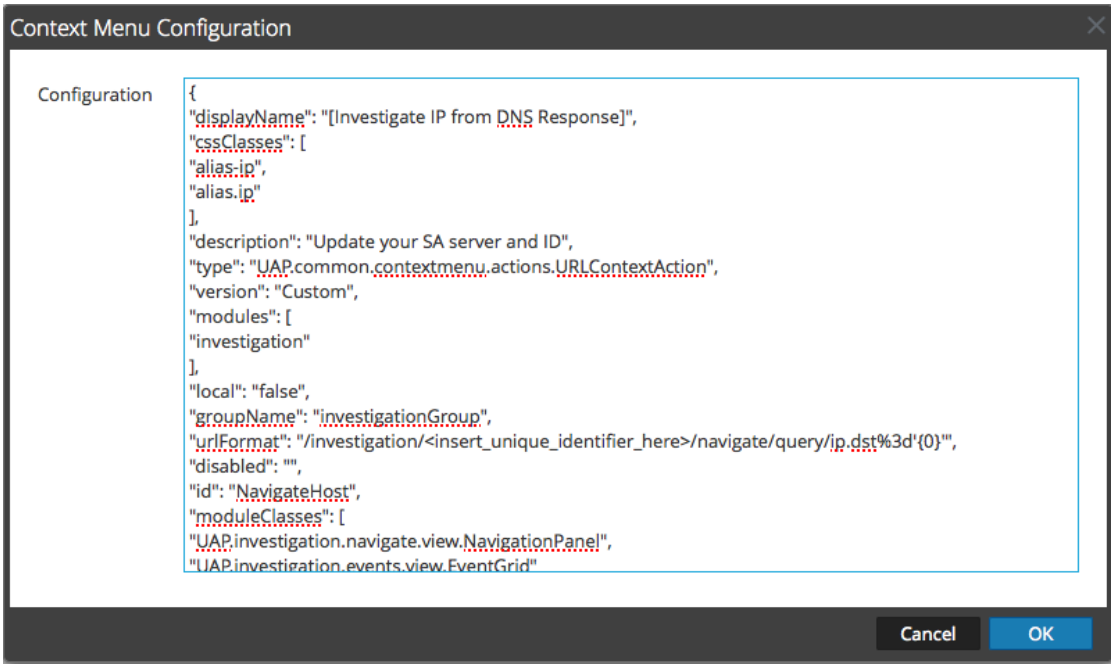
3. Click **OK.**
   The new context menu action is created and added at the end of the list of context menu actions.

4. To activate the new context menu action, restart the browser.
   The context menu action becomes available in the configured location.

Edit a Context Action

To edit a context action:

1. Select the row in the grid and either **double-click** the row or click .
   The **Context Menu Configuration Dialog** is displayed.



2. Edit the **Configuration**.
3. To save the changes, click **OK**.
4. To use the updated action, restart the browser.

Delete a Context Action

To remove a context menu action from NetWitness Suite entirely:

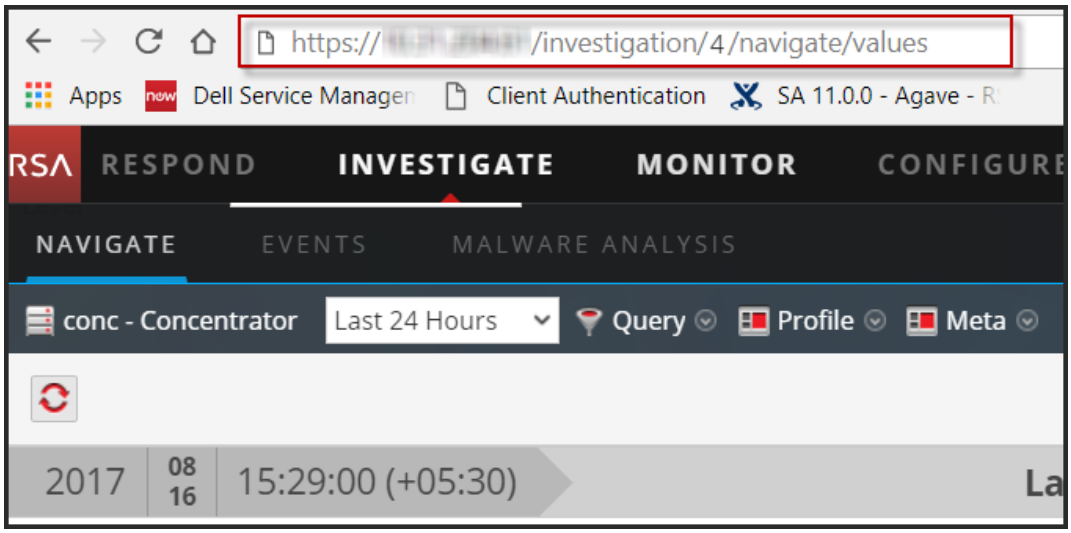
1. Select the action.
2. Click .
   A dialog requests confirmation that you want to delete the context menu action.
3. Click **Yes**.
   The option is removed from the Context Menu Actions panel.
4. Restart the browser to remove the action from the context menus in which it appeared.

Example Procedure: Context Menu Action to Investigate ip.dst from alias.ip

This example adds a context menu action that allows analysts to pivot from the `alias.ip` values (the IP addresses returned from a DNS request) to the `ip.dst` meta key. It helps analysts to locate any detected traffic to the IP address that was returned for a DNS query.

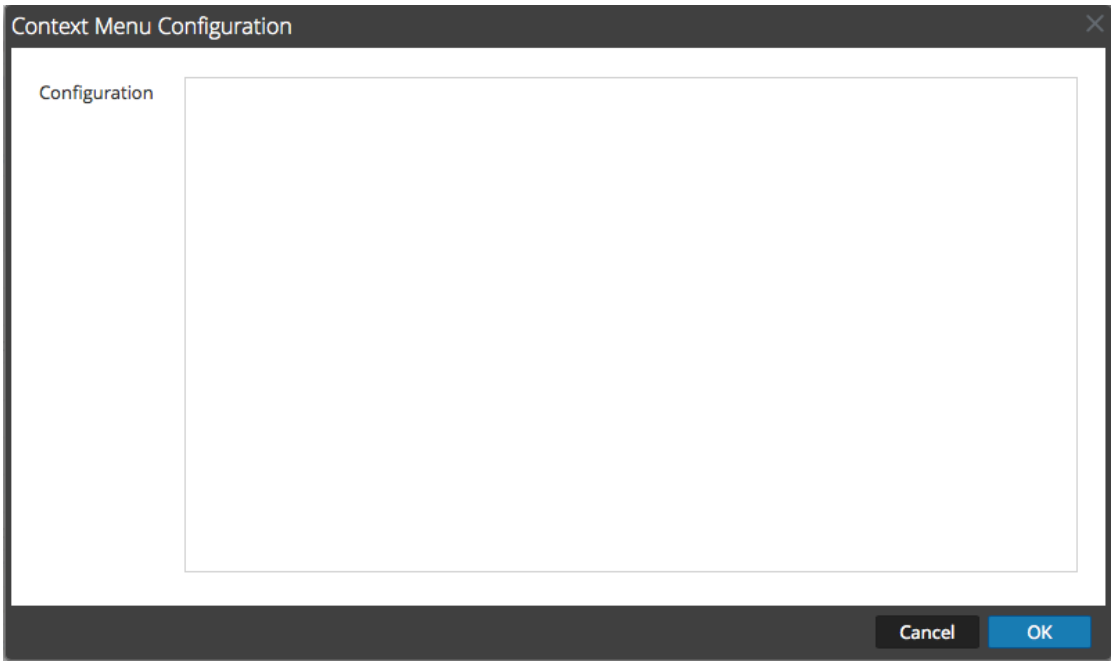
To implement the context menu action:

1. Determine the unique identifier for your NetWitness Server as follows:
   a. Log onto NetWitness Suite, in the main menu, select **INVESTIGATE > Navigate**, choose a service (for example, a Concentrator) to investigate, and wait for the values to load.
   b. Look for the URL and locate the number after `investigation`. In this example, the unique identifier for the action is 4. You need this unique identifier to add to the context menu action.



2. In the toolbar, click +.

   The Context Menu Configuration dialog is displayed.



3. Copy the entire sample code block below and paste it in the window.

```
{
    "displayName": "[Investigate IP from DNS Response]",
    "cssClasses": [
        "alias-ip",
        "alias.ip"
    ],
    "description": "Update your NW server and ID",
    "type": "UAP.common.contextmenu.actions.URLContextAction",
    "version": "Custom",
    "modules": [
        "investigation"
    ],
    "local": "false",
    "groupName": "investigationGroup",
    "urlFormat": "/investigation/<insert_unique_identifier_
here>/navigate/query/ip.dst%3d'{0}'",
    "disabled": "",
    "id": "NavigateHost",
    "moduleClasses": [
```

```
            "UAP.investigation.navigate.view.NavigationPanel",
            "UAP.investigation.events.view.EventGrid"
        ],
        "openInNewTab": "true"
    }
```

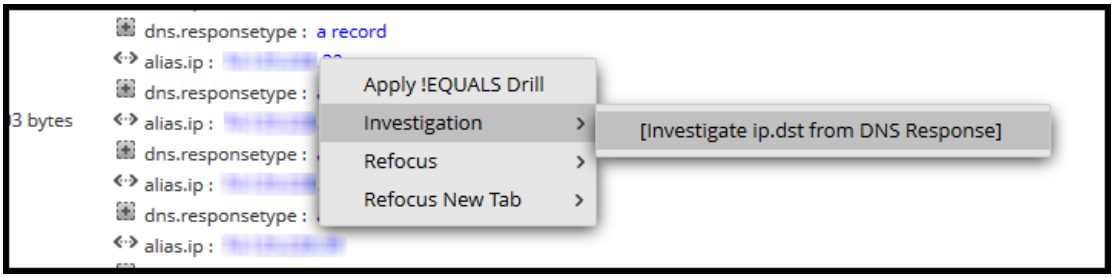
4. In the **urlFormat** line replace **<insert-unique_identifier_here>** with your unique identifier. The URL should look like this:

   `"/investigation/4/navigate/query/ip.dst%3d'{0}'"`

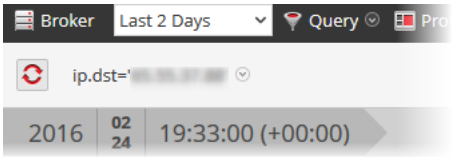
5. Click **OK**, and restart your browser.

6. To test the action, open an investigation in the Navigate view and right-click on the meta key `alias.ip`.

   The context menu with the Investigation option should look like the following figure.



7. Should produce a pivot like this.



8. If you are using this example for DNS traffic investigation, you may want to consider creating a meta group specific to DNS traffic as described in "Manage User-Defined Meta Groups" in the *Investigation and Malware Analysis Guide*.

Configure NTP Servers

This topic provides instructions on how to configure Network Time Protocol (NTP) servers. NTP is a protocol designed to synchronize host machine clocks over a network. For more information on NTP go to their home page (http://www.ntp.org/).

Note: NW Core hosts must be able to communicate with the NW host with UDP port 123 for NTP time synchronization.

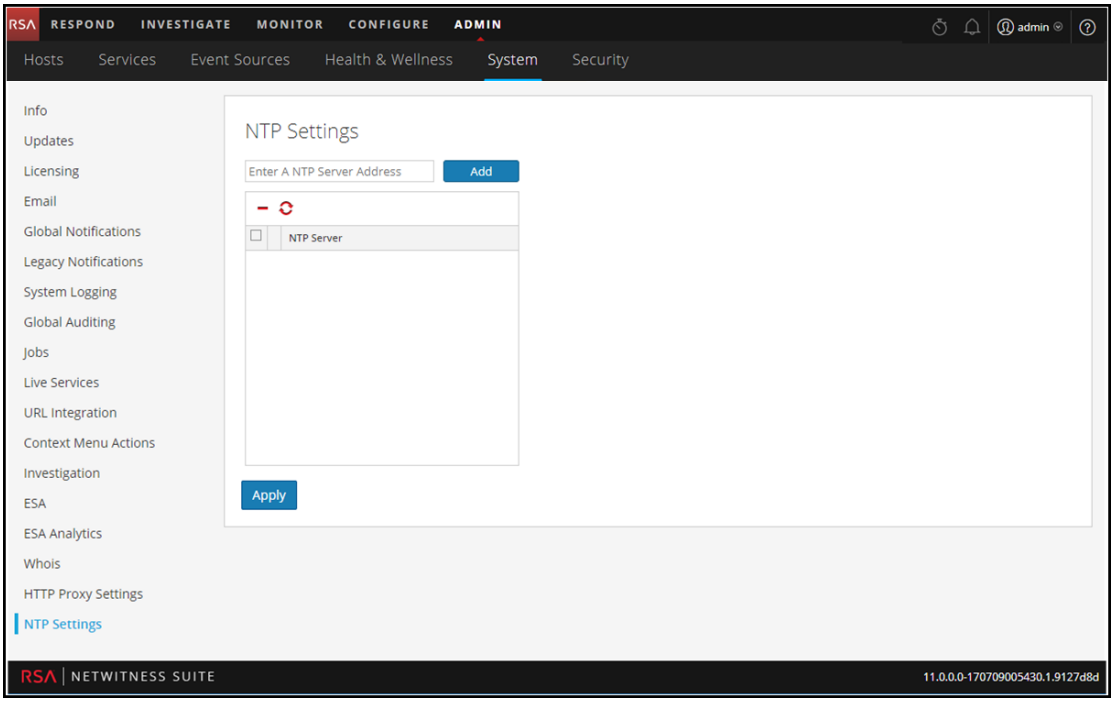
You use the **ADMIN** > **System** > **NTP Settings** view to configure one or more NTP servers. After you configure an NTP server, NetWitness Suite uses NTP to synchronize the host machine clocks. You configure multiple NTP servers for Fail Over purposes. This topic contains the following procedures:

- Add an NTP Server
- Modify an NTP Server

Add an NTP Server

To add an NTP server:

1. Go to **ADMIN > System**.
2. In the options panel, select **NTP Settings**.
   The NTP Settings panel is displayed prompting you to enter the hostname (that is, the IP Address or FQDN) of an NTP server.



3. Enter the IP address or FQDN for an NTP server.
   If the hostname syntax is invalid, NetWitness Suite disables the **Add** and **Apply** buttons and displays **Entered an invalid hostname**.
4. Click **Add**.
   - If the hostname syntax is valid and NetWitness Suite can reach the server, it displays **Validating**.

- If the hostname syntax is valid and NetWitness Suite cannot reach a server, the following is displayed, where ***hostname*** is the hostname that you attempted to add: **The NTP server *hostname* is unreachable. Please verify the address or check your firewall settings.**

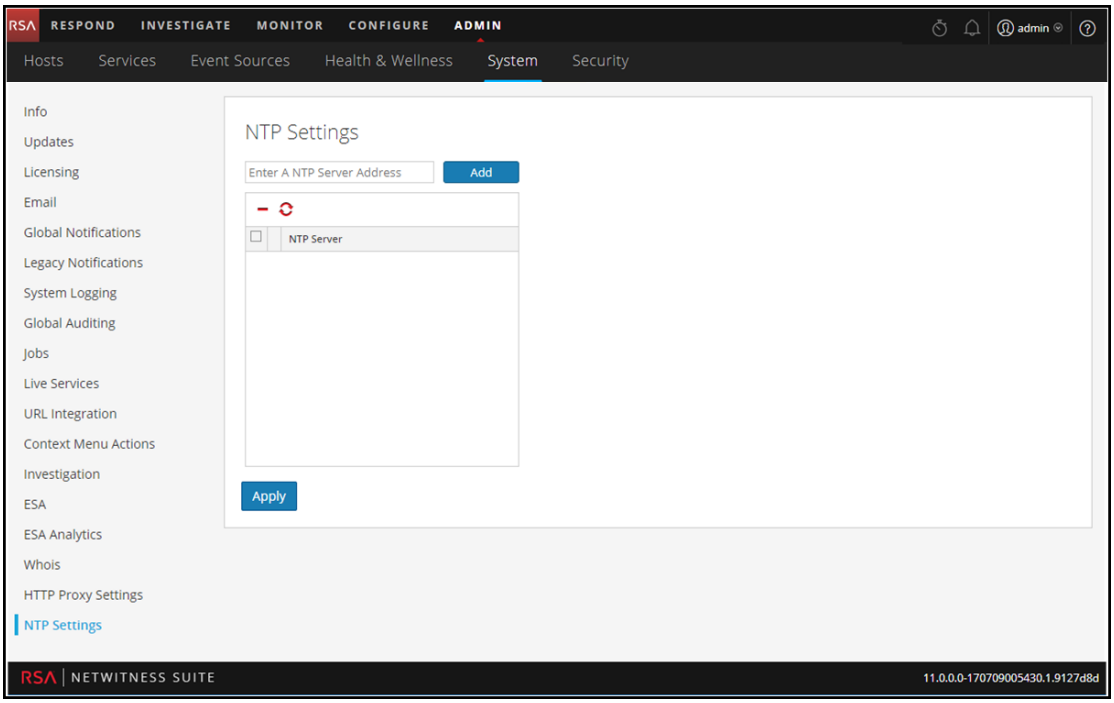
5. Click **Apply**.
   A dialog displays notification that the settings have been saved and requests confirmation that you want to apply the settings now.
6. Click **Yes**.
   The NTP server specified now ensures that your host machine clocks are synchronized. If you decide to configure multiple NTP servers and a server is down, NetWitness Suite will fail over to next server configured.

For details of the parameters and descriptions, see NTP Settings Panel.

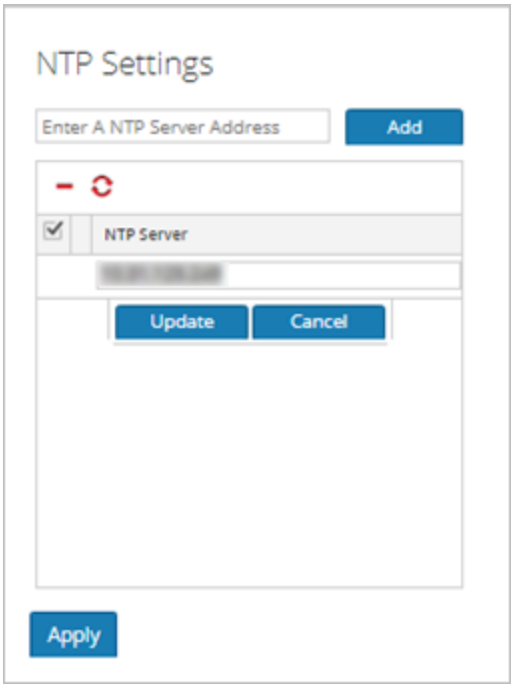
Modify an NTP Server

To modify an existing NTP server:

1. Go to **ADMIN > System**.
2. In the options panel, select **NTP Settings**.
   The NTP Setting panel is displayed.



3. Double-click the **NTP Server** hostname that you want to modify.
   The NTP Server textbox becomes editable and the Update and Cancel buttons are displayed.



4. Edit the hostname, click **Update**, and click **Apply.** (click **Cancel** before you click **Apply** to cancel the edit.)
   NetWitness Suite changes the hostname according to your edits.

Troubleshooting System Configuration

The topics in this section provide troubleshooting information for administrators who are configuring settings that apply across the system in NetWitness Suite.

Troubleshoot Global Audit Logging

Troubleshooting NTP Server Configuration

Troubleshoot Global Audit Logging

This topic provides information about possible issues that NetWitness Suite users may encounter when implementing Global Audit Logging in NetWitness Suite. Look for explanations and solutions in this topic.

After you configure Global Audit Logging, you should test your audit logs to ensure that they show the audit events as defined in your audit logging template. If you cannot view the audit logs on your third-party syslog server or Log Decoder, or the audit logs do not appear as expected, look at the basic troubleshooting suggestions below. If you are still having issues, you can look at the advanced troubleshooting suggestions.

Basic Troubleshooting

If you cannot view audit logs on a third-party syslog server or Log Decoder:

- Verify that RabbitMQ is up and running.
- Verify the syslog notification server configuration and make sure it is enabled. (This configuration is located at ADMIN > System > Global Notifications. Do not select Legacy Notifications.)
- Check the Global Audit Logging configuration.

Configure Global Audit Logging and Verify Global Audit Logs provide instructions. If you are sending audit logs to a Log Decoder:

- Ensure that the Log Decoder is aggregating on the Concentrator on the same host (ADMIN > Services > (Select Concentrator) > > View > Config).
- Verify that the latest CEF parser is deployed and enabled.
- Check the audit logging notification template. You must use a CEF template and all logs feeding into the Log Decoder must use a CEF template.

If you are sending audit logs to a third-party syslog server:

- Ensure that the destination port configured for the third-party syslog server is not blocked by a firewall.

Advanced Troubleshooting

In order to use Global Audit Logging on your network, RabbitMQ must be functioning.

For centralized audit logging, each of the NetWitness Suite services writes audit logs to rsyslog listening on port 50514 using UDP on the local host. The rsyslog plugin provided in the audit logging package adds additional information and uploads these logs to RabbitMQ.
Logstash running on the NetWitness Serverhost aggregates audit logs from all of the NetWitness Suite services, coverts them to the required format, and sends them to a third-party syslog server or Log Decoder for investigation. You configure the format of the global audit logs and the destination used by Logstash through the NetWitness Suite user interface.

Define a Global Audit Logging Configuration provides instructions.

Verify the Packages and Services on the Hosts

NetWitness Suite Host

The following packages or services must be present on the NetWitness Server host:

- rsyslog-8.4.1
- rsa-audit-rt
- logstash-5.6.4
- rsa-audit-plugins
- rabbitmq server

Services on a Host other than the NetWitness Suite Host

The following packages or services must be present on each of the NetWitness Suite hosts other than the NetWitness Server host:

- rsyslog-8.4.1
- rsa-audit-rt
- rabbitmq server

Log Decoder

If you forward global audit logs to a Log Decoder, the following parser should be present and enabled:

- CEF

Possible Issues

What if I perform an action on a service but audit logs do not reach the configured third-party syslog server or Log Decoder?

The possible causes could be one or all of the following:

- A service is not logging to the local syslog server.
- Audit logs are not getting uploaded to RabbitMQ from the local syslog.
- Audit logs are not aggregated on the NetWitness Server host.
- Aggregated logs on the NetWitness Server host are not being forwarded to the configured third-party syslog server or Log Decoder.
- The Log Decoder is not configured to receive global audit logs in CEF format:
  - Log Decoder capture is not turned on
  - CEF Parser is not present
  - CEF Parser is not enabled

Possible Solutions

The following table provides possible solutions for the issues.

Issue	Possible Solutions

A service is not logging to the local syslog server.	• Ensure that rsyslog is up and running.
	You could use the following command:
	`service rsyslog status`
	• Ensure that rsyslog is listening on port 50514 using UDP.
	You could use the following command:
	`netstat -tulnp|grep rsyslog`
	• Ensure the application or component is sending audit logs to port 50514. Run the tcpdump utility on the local interface for port 50514.
	You could use the following command:
	`sudo tcpdump -i lo -A udp and port 50514`
	
	See "Solution Examples" below to view the command outputs.

Issue	Possible Solutions

Audit logs are not getting uploaded to RabbitMQ from the local syslog.	• Ensure that the rsyslog plugin is up and running. You could use the following command:
	`ps -ef|grep rsa_audit_onramp`
	• Ensure the RabbitMQ server is up and running. You could use the following command:
	`service rabbitmq-server status`
	See "Solution Examples" to view the command outputs.

Audit logs are not aggregated on the NetWitness Server host.	• Ensure Logstash is up and running. You could use the following commands:
	`ps -ef|grep logstash`
	`service logstash status`
	• Ensure the RabbitMQ server is up and running. You could use the following command:
	`service rabbitmq-server status`
	• Ensure the RabbitMQ server is listening on port 5672. You could use the following command:
	`netstat -tulnp|grep 5672`
	• Check for any errors generated at the Logstash level. You could use the following command for the location of the log files:
	`ls -l /var/log/logstash/logstash.*`
	See "Solution Examples" to view the command outputs.

Issue	Possible Solutions

Aggregated logs on the NetWitness Server host are not being forwarded to the configured third-party syslog server or Log Decoder.	• Ensure Logstash is up and running.
	You could use the following commands:
	`ps -ef|grep logstash`
	`service logstash status`
	• Check for any errors generated at the Logstash level.
	You could type the following command for the location of the log files:
	`ls -l /var/log/logstash/logstash*`
	See "Solution Examples" below to view the command outputs.
	• Ensure that the destination service is up and running.
	• Ensure that the destination service is listening on the correct port using the correct protocol.
	• Ensure that the configured port on the destination host is not blocked.

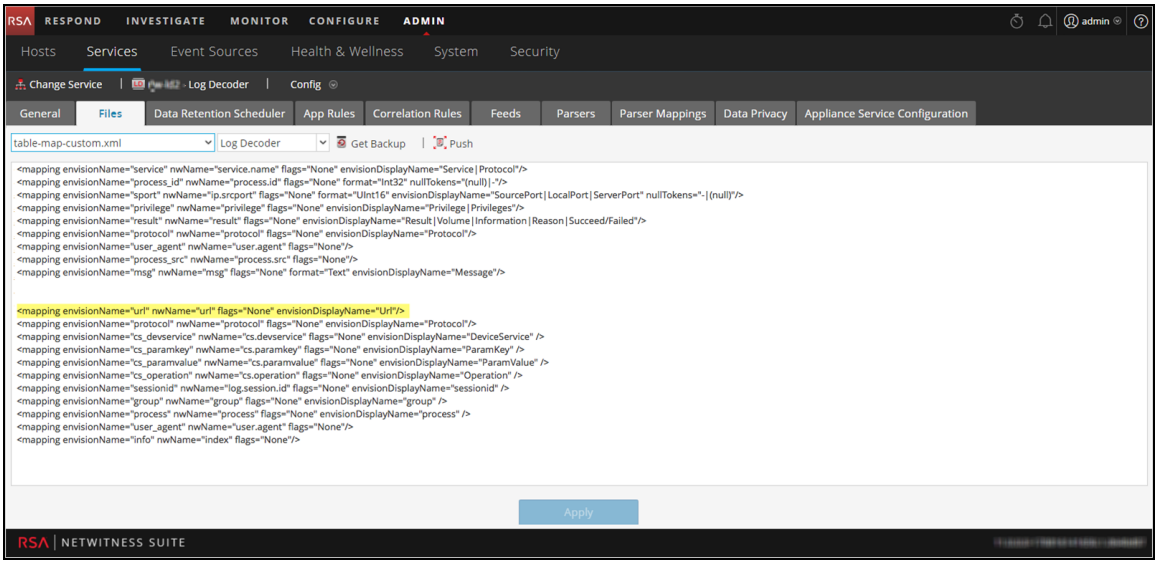
Audit logs forwarded from the Logstash lead to parse failure at the Log Decoder.	• Ensure that you are using an appropriate notification template. Audit Logs parsed by a Log Decoder must be in CEF format. The destination from which audit logs directly or indirectly make their way to the Log Decoder must also use a CEF Template. • The Notification Template must follow the CEF standard. Follow the steps in this guide to either use the default CEF template or create a custom CEF template following strict guidelines. Define a Template for Global Audit Logging provides additional information. • Verify the Logstash configuration.

Why can't we see the custom metadata in Investigation?

Usually, if a meta key is not visible in Investigation, it is not being indexed. If you need to use custom meta keys for Investigations and Reporting, ensure that the meta keys that you select are indexed in the **table-map-custom.xml** file on the Log Decoder. Follow the "Maintain the Table Map Files" procedure to modify the **table-map-custom.xml** file on the Log Decoder.

Ensure that the custom meta keys are also indexed in the **index-concentrator-custom.xml** on the Concentrator. "Edit a Service Index File" provides additional information.

The following figure shows an example **table-map-custom.xml** file in NetWitness Server (ADMIN > Services > (select the Log Decoder) > >View > Config) with a custom meta `url` example highlighted.

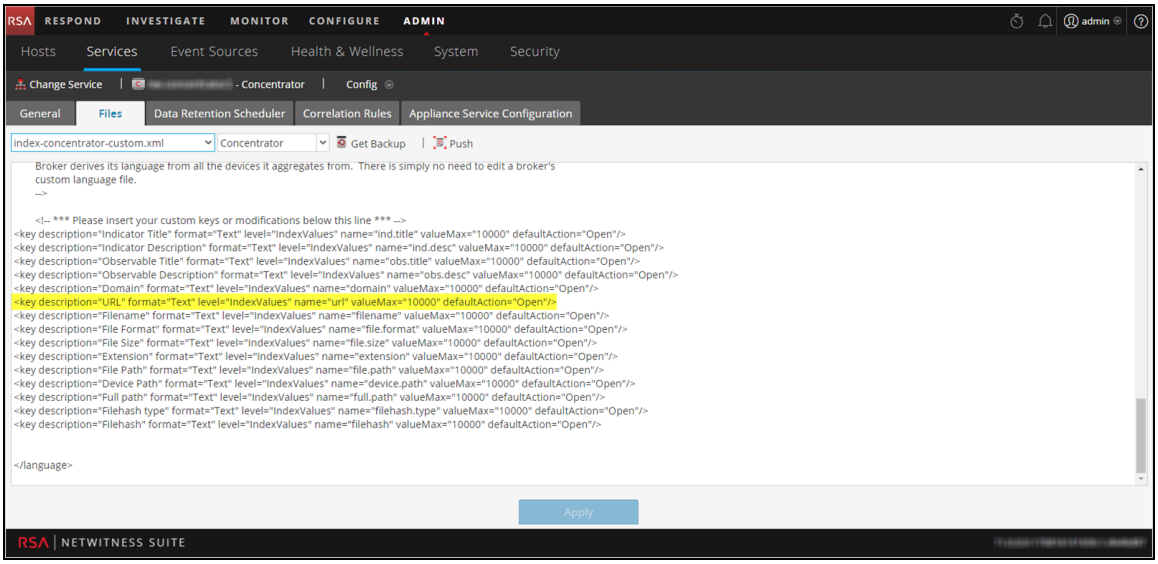


The `url` custom meta example is highlighted in the following code sample from the **table-map-custom.xml** file above:

```
<mapping envisionName="url" nwName="url" flags="None"
envisionDisplayName="Url"/>
<mapping envisionName="protocol" nwName="protocol" flags="None"
envisionDisplayName="Protocol"/><mapping envisionName="cs_devservice"
nwName="cs.devservice" flags="None" envisionDisplayName="DeviceService"
/><mapping envisionName="cs_paramkey" nwName="cs.paramkey" flags="None"
envisionDisplayName="ParamKey" /><mapping envisionName="cs_paramvalue"
nwName="cs.paramvalue" flags="None" envisionDisplayName="ParamValue"
/><mapping envisionName="cs_operation" nwName="cs.operation"
flags="None" envisionDisplayName="Operation" /><mapping
envisionName="sessionid" nwName="log.session.id" flags="None"
envisionDisplayName="sessionid" /><mapping envisionName="group"
```

```
nwName="group" flags="None" envisionDisplayName="group" /><mapping
envisionName="process" nwName="process" flags="None"
envisionDisplayName="process" /><mapping envisionName="user_agent"
nwName="user.agent" flags="None"/><mapping envisionName="info"
nwName="index" flags="None"/>
```

The following figure shows an example **index-concentrator-custom.xml** file in NetWitness Server (ADMIN > Services > (select the Concentrator) > > View > Config) with a custom meta `url` example highlighted.



The `url` custom meta example is highlighted in the following code sample from the **index-concentrator-custom.xml** file above:

```
<key description="Severity" level="IndexValues" name="severity"
valueMax="10000" format="Text"/><key description="Result"
level="IndexValues" name="result" format="Text"/><key
level="IndexValues"  name="ip.srcport" format="UInt16"
description="SourcePort"/><key description="Process" level="IndexValues"
name="process" format="Text"/><key description="Process ID"
level="IndexValues" name="process_id" format="Text"/><key
description="Protocol" level="IndexValues" name="protocol"
format="Text"/><key description="UserAgent" level="IndexValues"
name="user_agent" format="Text"/><key description="DestinationAddress"
level="IndexValues" name="ip.dst" format="IPv4"/><key
description="SourceProcessName" level="IndexValues" name="process.src"
```

```
format="Text"/><key description="Username" level="IndexValues"
name="username"  format="Text"/><key description="Info"
level="IndexValues" name="index"  format="Text"/><key
description="customdevservice" level="IndexValues" name="cs.devservice"
format="Text"/>
<key description="url" level="IndexValues" name="url"  format="Text"/>
<key description="Custom Key" level="IndexValues" name="cs.paramkey"
format="Text"/><key description="Custom Value" level="IndexValues"
name="cs.paramvalue"  format="Text"/><key description="Operation"
level="IndexValues" name="cs.operation"  format="Text"/><key
description="CS Device Service" level="IndexValues" name="cs.device"
format="Text" valueMax="10000" defaultAction="Closed"/>
```

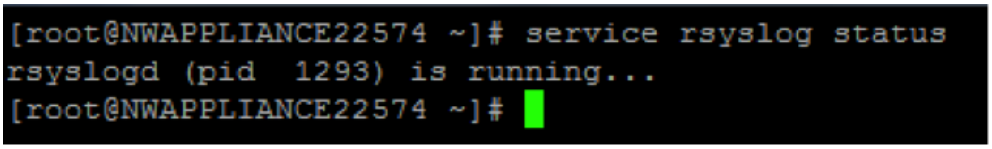
Solution Examples

The following possible solution examples show the outputs of the example commands. See the above table for the complete listing of possible solutions.

Ensure that rsyslog is up and running

You can use the following command:

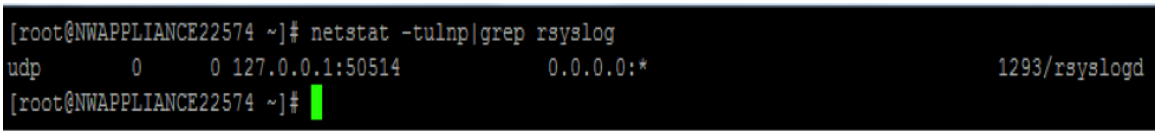
```
service rsyslog status
```



Ensure that rsyslog is listening on port 50514 using UDP

You can use the following command:

```
netstat -tulnp|grep rsyslog
```

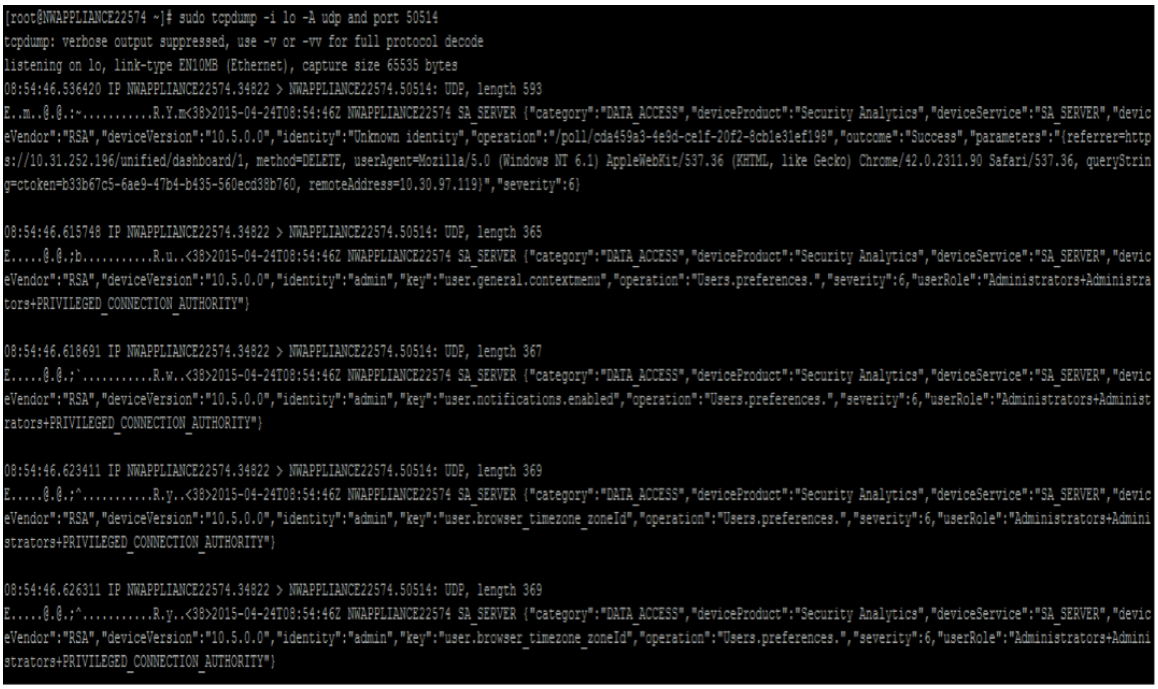


Ensure that the application or component is sending audit logs to port 50514

The following figure shows the output of running the tcpdump utility on the local interface for port 50514.

You can use the following command:

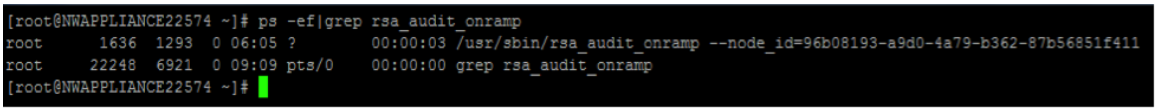
```
sudo tcpdump -i lo -A udp and port 50514
```



Ensure that the rsyslog plugin is up and running

You can use the following command:

```
ps -ef|grep rsa_audit_onramp
```



Ensure the RabbitMQ server is up and running

You can use the following command:

```
service rabbitmq-server status
```

```
[root@NWAPPLIANCE22574 ~]# service rabbitmq-server status
Status of node sa@localhost ...
[{pid,1862},
 {running_applications,
     [{rabbitmq_federation_management,"RabbitMQ Federation Management",
         "3.4.2"},
      {rabbitmq_management,"RabbitMQ Management Console","3.4.2"},
      {rabbitmq_web_dispatch,"RabbitMQ Web Dispatcher","3.4.2"},
      {webmachine,"webmachine","1.10.3-rmq3.4.2-gite9359c7"},
      {mochiweb,"MochiMedia Web Server","2.7.0-rmq3.4.2-git680dba8"},
      {rabbitmq_federation,"RabbitMQ Federation","3.4.2"},
      {rabbitmq_stomp,"Embedded Rabbit Stomp Adapter","3.4.2"},
      {rabbitmq_management_agent,"RabbitMQ Management Agent","3.4.2"},
      {rabbit,"RabbitMQ","3.4.2"},
      {ssl,"Erlang/OTP SSL application","5.3.2"},
      {public_key,"Public key infrastructure","0.21"},
      {crypto,"CRYPTO version 2","3.2"},
      {asn1,"The Erlang ASN1 compiler version 2.0.4","2.0.4"},

      {inets,"INETS  CXC 138 49","5.9.7"},
      {mnesia,"MNESIA  CXC 138 12","4.11"},
      {amqp_client,"RabbitMQ AMQP Client","3.4.2"},
      {rabbitmq_auth_mechanism_ssl,
          "RabbitMQ SSL authentication (SASL EXTERNAL)","3.4.2"},
      {xmerl,"XML parser","1.3.5"},
      {sasl,"SASL  CXC 138 11","2.3.4"},
      {stdlib,"ERTS  CXC 138 10","1.19.4"},
      {kernel,"ERTS  CXC 138 10","2.16.4"}]},
 {os,{unix,linux}},
 {erlang_version,
     "Erlang R16B03 (erts-5.10.4) [source] [64-bit] [smp:2:2] [async-threads:30] [kernel-poll:true]\n"},
 {memory,
```

Ensure logstash is up and running

You can use the following commands:

```
ps -ef|grep logstash
service logstash status
```

```
[root@NWAPPLIANCE22574 ~]# ps -ef|grep logstash
logstash  1583     1  0 06:05 ?       00:01:09 /usr/bin/java -Djava.io.tmpdir=/var/lib/logstash -Xmx500m -XX:+UseParNewGC -XX:+UseConcMarkSweepGC -Djava.awt.headless=true -XX:C
MSInitiatingOccupancyFraction=75 -XX:+UseCMSInitiatingOccupancyOnly -jar /opt/logstash/vendor/jar/jruby-complete-1.7.11.jar -I/opt/logstash/lib /opt/logstash/lib/logstash/runner
.rb agent --pluginpath /opt/logstash -f /etc/logstash/conf.d -l /var/log/logstash/logstash.log
root      8509  6921  0 09:31 pts/0    00:00:00 grep logstash
[root@NWAPPLIANCE22574 ~]# service logstash status
logstash is running
[root@NWAPPLIANCE22574 ~]#
```

Ensure the RabbitMQ server is listening on port 5672

For example, type the following command:

```
netstat -tulnp|grep 5672
```

```
[root@NWAPPLIANCE22574 ~]# netstat -tulnp|grep 5672
tcp        0      0 127.0.0.1:5672              0.0.0.0:*                   LISTEN      1862/beam.smp
tcp        0      0 0.0.0.0:25672               0.0.0.0:*                   LISTEN      1862/beam.smp
[root@NWAPPLIANCE22574 ~]#
```

Check for any errors generated at the Logstash level

You can type the following command for the location of the log files:

```
ls -l /var/log/logstash/logstash.*
```

```
[root@NWAPPLIANCE22574 ~]# ls -l /var/log/logstash/logstash.*
-rw-r--r--. 1 root     root        0 Apr 24 06:05 /var/log/logstash/logstash.err
-rw-r--r--. 1 logstash logstash 1043 Apr 24 06:04 /var/log/logstash/logstash.log
-rw-r--r--. 1 root     root       57 Apr 24 06:12 /var/log/logstash/logstash.stdout
[root@NWAPPLIANCE22574 ~]#
```

See the Possible Solutions table above for the complete listing of issues and possible solutions.

Troubleshooting NTP Server Configuration

This topic describes NTP server configuration issues that you may encounter and suggests solutions to these problems.

Issues Identified by Messages in the NTP Settings Panel or Log Files

This section provides troubleshooting information for issues identified by messages NetWitness Suite displays in the NTP Settings panel and log files.

Message	User Interface: **Unexpected error occurred. First check the logs then contact Customer Care to resolve error.** **System Log:** **Timestamp Level Message** *yyyy-dd-mmThh:mm:ss:ms* ERROR com.rsa.smc.sa.adm.exception.MCOAgent Exception: No request sent, we did not discover any nodes
Possible Cause	Low level NetWitness Suite configuration is in error or supporting service is not running.
Solution	Contact Customer Care.
Message	User Interface: **Specified an invalid Hostname syntax**.
Possible Cause	Tried to enter NTP server hostname that does not confirm to IP address or FQDN syntax.
Solution	Reenter hostname in using correct syntax.
Message	User Interface: **Specified NTP server that already exists.**
Possible Cause	Tried to enter NTP server hostname that is already defined in NetWitness Suite.
Solution	Enter hostname for an NTP server not configured in NetWitness Suite.
Message	User Interface: **Cannot reach NTP server *hostname***. Please verify the server address and your firewall settings.
Possible Cause	The server address or firewall settings may be in error.

Solution	Verify the server address and your firewall settings and correct them if required.

References

This topic provides reference materials that describe the user interface for configuring system settings in NetWitness Suite and define parameters. Administrators use options in the Administration System view to configure system settings. Each panel is described in a separate topic.

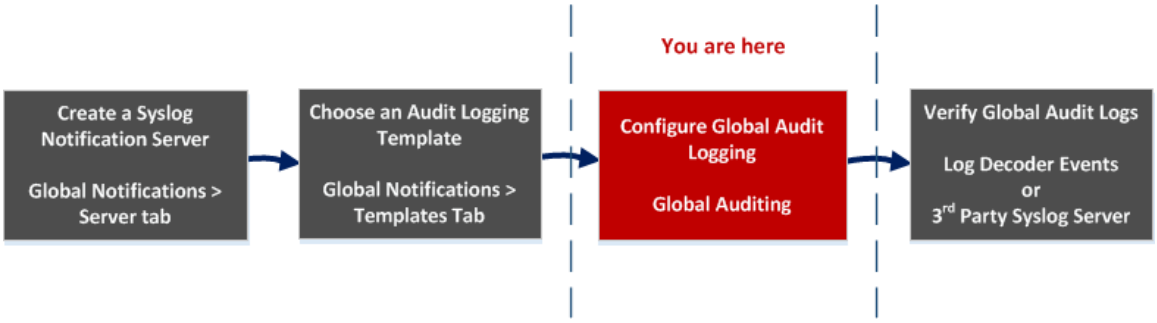
Global Audit Logging Configurations Panel

In the **Global Audit Logging Configurations** panel (ADMIN > System > Global Auditing), you configure global audit logging by adding configurations that define how global audit logs are forwarded to external syslog systems. Global audit logs are forwarded to the selected Notification Server in your global audit logging configuration using the selected Notification Template.

Global Audit Logging provides auditors with consolidated visibility into user activities within NetWitness Suite in real-time from one centralized location.

Workflow

This workflow shows the necessary procedures to configure and verify Global Audit Logging.



Before you can define a Global Audit Logging configuration, you need to create a Syslog Notification Server on the Global Notifications > Server tab. The Syslog Notification Server is the destination that receives the global audit logs. Next, you need to select or define an Audit Logging template on the Global Notifications > Templates tab. The Audit Logging template defines the format and message fields of the audit logs sent to the Log Decoder or third-party syslog server. If you are consuming with a Log Decoder, deploy the Common Event Format parser to your Log Decoder from Live.

Note: You do not need to configure the Global Notifications > Output tab for Global Audit Logging.

After you add a Global Audit Logging configuration here, audit logs are forwarded to the selected Notification Server in the configuration. Verify your audit logs to ensure that they show the audit events as defined in your audit logging template.

What do you want to do?

Role	I want to ...	Show me how
Administrator	Create a Syslog Notification Server.	Configure a Destination to Receive Global Audit Logs

Role	I want to ...	Show me how
Administrator	Choose an Audit Logging template.	Define a Template for Global Audit Logging
Administrator	Configure Global Audit Logging	Define a Global Audit Logging Configuration For the complete procedure, see "Global Audit Logging - High-Level Procedure" in Configure Global Audit Logging.
Administrator	Verify Global Audit logs	Verify Global Audit Logs

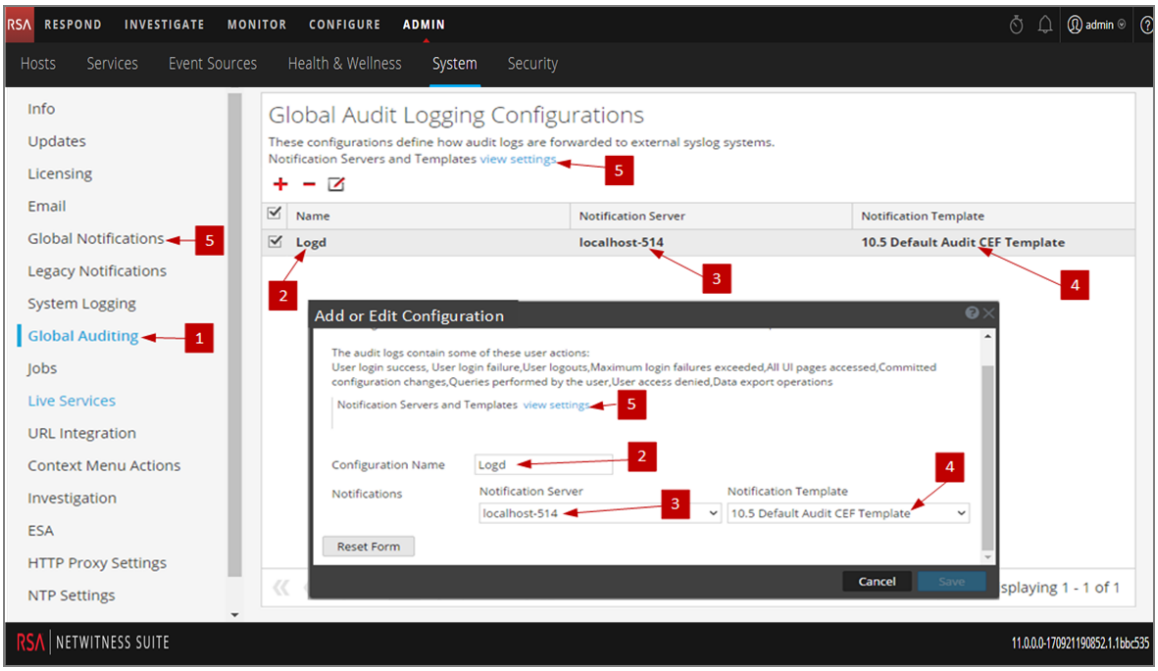
Quick Look

The following example illustrates a Global Audit Logging configuration. The configuration defines how NetWitness Suite forwards global audit logs to external syslog systems.



1. Displays the Global Audit Logging Configurations panel.
2. Name that identifies the Global Audit Logging configuration.
3. Notification Server assigned to the Global Audit Logging configuration.
4. Notification Template assigned to the Global Audit Logging configuration.
5. Displays the Global Notifications panel where you set up Servers and Templates required to configure a Global Audit Logging configuration.

Toolbar

The following table describes the toolbar actions

Icon	Description
+	Adds a global audit logging configuration.
−	Deletes a global audit logging configuration. Deleting a global audit configuration does not delete the associated notification server and template. After you delete a global audit logging configuration, the forwarding of global audit logs specified in that configuration is discontinued.

Icon	Description
	Edits a global audit logging configuration. You can change the destination of the global audit logs for your user audits by selecting a different Notification Server. You can also change the format and message fields of the global audit log entries by selecting a different Notification Template. You cannot change which NetWitness Suite user actions are logged and sent in the global audit logs.

Configurations

The following table describes the listed configurations.

Title	Description
	To select an individual configuration, select the checkbox next to the configuration. To select all configurations, select the checkbox in the title bar of the table.
Name	Displays the name of the global auditing configuration. For example, you can name the configurations based on the destination of the global audit logs, such as HQ SA and My Syslog Server.
Notification Server	Displays the Syslog Notification Server selected as the destination for the global audit logs. If you want to forward global audit logs to a Log Decoder, create a Syslog type of Notification Server. Configure a Destination to Receive Global Audit Logs provides instructions on how to create a Syslog Notification Server for global audit logging.

Title	Description
Notification Template	Displays the Audit Logging Notification Template selected for the configuration. It defines the format and message fields of the audit log entries. For Log Decoders, use the **Default Audit CEF Template**. You can add or remove fields from the Common Event Format (CEF) template if you have specific requirements. Define a Template for Global Audit Logging provides instructions and Supported CEF Meta Keys describes the available CEF meta keys. For, third-party syslog servers, you can use a default audit logging template or define your own format (CEF or non-CEF). Define a Template for Global Audit Logging provides instructions and Supported Global Audit Logging Meta Key Variables describes the available meta key variables.

Add New Configuration Dialog

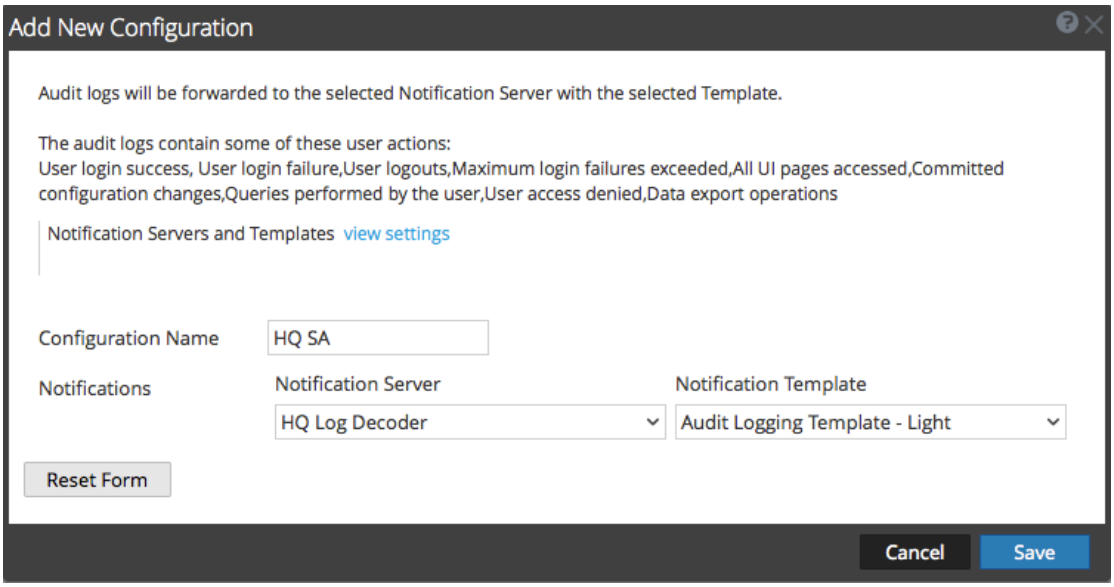
In the RSA NetWitness® Suite Administration System view Global Audit Logging Configurations panel, you can create multiple global audit logging configurations. These configurations are used to forward global audit logs to a central location to perform user audits.

Procedures related to global audit logging are described in Configure Global Audit Logging.

To access the **Add New Configuration** dialog:

1. In the main menu, select **ADMIN > System**.
2. In the options panel, select **Global Auditing**.
3. In the **Global Audit Logging Configurations** panel, click +.

   The **Add New Configuration** dialog is displayed.



The Notifications section enables you to select a syslog notification server for the global audit logging configuration and a template to use for the global audit logs. The template defines the details of the global audit log entries.

Features

The following table describes the features in the Add New Configuration and Edit Configuration dialogs.

Feature	Description
Notifications Servers and Templates **view settings** link	Takes you to the Global Notifications panel where you can view or configure the notification server and template settings. A syslog notification server and an audit logging template are required before you can create a global audit configuration.
Configuration Name	Specifies the unique name used to identify the global audit logging configuration.
Notification Server	Specifies the syslog notification server to send the selected audit log information. Configure a Destination to Receive Global Audit Logs provides instructions on how to create a Syslog Notification Server for global audit logging.
Notification Template	Specifies the template to use for the global audit logging configuration. The template should be an Audit Logging template. For Log Decoders, use the **Default Audit CEF Template**. You can add or remove fields from the Common Event Format (CEF) template if you have specific requirements. Define a Template for Global Audit Logging provides instructions. For third-party syslog servers, you can use a default audit logging template or define your own format (CEF or non-CEF). Define a Template for Global Audit Logging provides instructions and Supported Global Audit Logging Meta Key Variables describes the available variables.
Reset Form button	Clears the configuration settings in the dialog.

User Actions Logged

The following table provides examples of some of the user actions logged from NetWitness Suite. These actions are the minimum user actions logged when applicable.

User Action	Example
User login success	A user logs on with valid credentials.
User login failure	A user tries to log on using invalid credentials.
User logouts	A user logs out from NetWitness Suite (Administration > Sign Out) or a user logs out due to a session timeout.
Max login failures exceeded	A user tries to log on using invalid credentials five times. Five (5) is the number of Max Login Failures defined in Administration Security view > Settings tab (Administration > Security > Settings tab).
All UI pages accessed	When a user accesses the Reporting module (Administration > Reports), it logs as `[REP] Reports`. When a user accesses the Administration System view (Administration > System), it logs as `[ADM] System`.
Committed configuration changes	A user changes his or her password and or any security setting (Administration > Security > Settings tab).
Queries performed by the user	A user performs an investigation query.
User access denied	A user tries to access a module and does not have permissions to access it.
Data export operations	A user exports data from the Events view (Investigation > Events > Actions > Export).

For lists of message type being logged by the various NetWitness Suite components, see Global Audit Logging Operation Reference.

Supported CEF Meta Keys

This topic describes the Common Event Format (CEF) meta keys that NetWitness Suite global audit logging supports.

Global audit logging templates that you define for a Log Decoder use Common Event Format (CEF) and must meet the following specific standard requirements:

- Include the CEF headers in the template.
- Use only the extensions and custom extensions in a (Key=Value) format from the meta key table below.
- Ensure that the extensions and custom extensions are in the `key=%{string}<space>key=%{string}` format.

For third-party syslog servers, you can define your own format (CEF or non-CEF).

Procedures related to this table are described in Define a Template for Global Audit Logging and Configure Global Audit Logging.

Supported Common Event Format (CEF) Meta Keys

The following table describes the CEF Syslog meta keys that NetWitness Suite global audit logging supports. The Datetime and Hostname fields in the Syslog Prefix are not configurable and not included in the template, but they are prepended to every log message by default. The CEF Header is required to conform to the CEF standard and for any CEF parser. The Extensions and Custom Extensions are optional. The Default Audit CEF Template contains many of the fields in this table. You can add any of the Extensions and Custom Extensions listed to the global audit logging template that you define.

CEF Field	String	Description	NW Meta Keys	Index in Log Decoder
Syslog Prefix				
Datetime	Not Configurable	Syslog Header date time	event.time.str	Transient
Hostname	Not Configurable	Syslog Header hostname	alias.host	None

CEF Field	String	Description	NW Meta Keys	Index in Log Decoder
CEF Header		The CEF Header fields are required to conform to the CEF standard and for any CEF parser.		
CEF:Version	CEF:0	CEF Header	--STATIC--	N/A
DeviceVendor	%{deviceVendor}	The product vendor, RSA	-	N/A
DeviceProduct	%{deviceProduct}	The product family. This is always NetWitness Suite Audit.	product	Transient
DeviceVersion	%{deviceVersion}	Host/Service version	version	Transient
Signature ID	%{category}	Identifier of the audit event. It specifies the the category of the audit event.	event.type	None
Name	%{operation}	Description of the event	event.desc	None
Severity	%{severity}	Severity of the audit event	severity	Transient
Extensions				

CEF Field	String	Description	NW Meta Keys	Index in Log Decoder
deviceExternalId	%{deviceExternalId}	Unique ID of the host or service generating the audit event	hardware.id	Transient
deviceFacility	%{deviceFacility}	Syslog facility used when writing the event to syslog daemon. For example, authpriv.	cs.devfacility	Custom
deviceProcessName	%{deviceProcessName}	Name of the executable corresponding to dvcpid	process	None
dpt	%{destinationPort}	Destination Port	ip.dstport	None
dst	%{destinationAddress}	Destination IP Address	ip.dst	None
dvcpid	%{deviceProcessId}	ID of the process generating the event, which is the process ID of the NetWitness Suite service	process.id	Transient

CEF Field	String	Description	NW Meta Keys	Index in Log Decoder
msg	%{text}	Free text, extra information, or actual description for the event	msg	Transient
outcome	%{outcome}	Outcome of the operation performed corresponding to the audit event	result	Transient
proto	%{transportProtocol}	Network protocol used	protocol	Transient
requestClientApplication	%{userAgent}	Browser detail of the user accessing the page	user.agent	Transient
rt	%{timestamp}	Time at which the event is reported	event.time	None
sourceServiceName	%{sourceService}	The service that is responsible for generating this event	service.name	Transient
spt	%{sourcePort}	Source Port	ip.srcport	Transient

CEF Field	String	Description	NW Meta Keys	Index in Log Decoder
spriv	%{userRole}	User role permissions assignment. For example: admin.owner, appliance.manage, connections.manage, everyone, logs.manage, services.manage, storedproc.execute, storedproc.manage, sys.manage, users.manage	privilege	Transient
src	%{sourceAddress}	Source IP Address	ip.src	None
suser	%{identity}	Identity of the logged on user responsible for generating the audit event	user.dst	None
Custom Extensions				
deviceService	%{deviceService}	Service responsible for generating the event	cs.devservice	Custom

CEF Field	String	Description	NW Meta Keys	Index in Log Decoder
parameters	%{parameters}	API and Operation parameters, which capture specific parameters about a query	index	Transient
paramKey	%{key}	A configuration item key. It is the config param for which the audit event is captured. For example: /sys/config/stat.interval	cs.key	Custom
paramValue	%{value}	A configuration value. It is the value captured during the update.	cs.value	Custom

CEF Field	String	Description	NW Meta Keys	Index in Log Decoder
userGroup	%{userGroup}	Role assignment. For example: Administrators, Analysts, MalwareAnalysts, Malware_Analysts, Operators, PRIVILEGED_CONNECTION_AUTHORITY, SOC_Managers	group	None
referrerURL	%{referrerUrl}	The parent URL that refers to the current URL	url	Transient
sessionId	%{sessionId}	Session or connection identifier	log.session.id	Transient

Note: Use all of the extensions in the following format:
`deviceProcessName=%{deviceProcessName} outcome=%{outcome}`
Include a `<space>` between a value and a tagname.

By default, all meta keys are not indexed. In the above table, the **Index in Log Decoder** column shows the state of the `flags` keyword (Transient, None, and Custom). If a key is set to `Transient`, it is parsed but not stored in the database. If it is set to `None`, it is indexed and stored in the database. A key listed as "Custom" does not exist in the table-map.xml file and, therefore, it is not stored or parsed at all.

"Maintain the Table Map Files" provides instructions for verifying and updating the table mappings. "Edit a Service Index File" provides information on updating the custom index file on the Concentrator.

Supported Global Audit Logging Meta Key Variables

This topic describes the meta key variables that NetWitness Suite global audit logging supports.

NetWitness Suite provides predefined global audit logging templates that you can use for your global audit logging configurations. For third-party syslog servers, you can define your own template format (CEF or non-CEF) using supported meta key variables.

Procedures related to this table are described in Define a Template for Global Audit Logging and Configure Global Audit Logging.

Supported Global Audit Logging Meta Key Variables

The following table describes the meta key variables that NetWitness Suite global audit logging supports. Use these values to create a custom audit logging template for a third-party syslog server.

Variable	Description
%{category}	Identifier of the audit event. It specifies the the category of the audit event.
%{destinationAddress}	Destination IP Address
%{destinationPort}	Destination Port
%{deviceExternalId}	Unique ID of the service generating the audit event
%{deviceFacility}	Syslog facility used when writing the event to syslog daemon. For example, authpriv.
%{deviceProcessId}	ID of the process generating the event, which is the process ID of the NetWitness Suite service
%{deviceProcessName}	Name of the executable corresponding to dvcpid

Variable	Description
%{deviceProduct}	The product family. This is always NetWitness Suite Audit.
%{deviceService}	Service responsible for generating the event
%{deviceVendor}	The product vendor, RSA
%{deviceVersion}	Host/Service version
%{identity}	Identity of the logged on user responsible for generating the audit event
%{key}	A configuration item key. It is the config param for which the audit event is captured.
%{operation}	Description of the event
%{outcome}	Outcome of the operation performed corresponding to the audit event
%{parameters}	API and Operation parameters, which capture specific parameters about a query
%{referrerUrl}	The parent URL that refers to the current URL
%{sessionId}	Session or connection identifier
%{severity}	Severity of the audit event
%{sourceAddress}	Source IP Address

Variable	Description
%{sourcePort}	Source Port
%{sourceService}	The service that is responsible for generating this event
%{text}	Free text, extra information, or actual description for the event
%{timestamp}	Time at which the event is reported
%{transportProtocol}	Network protocol used
%{userAgent}	Browser detail of the user accessing the page
%{userGroup}	Role assignment
%{userRole}	User role permissions assignment
%{value}	A configuration value. It is the value captured during the update

Global Audit Logging Operation Reference

This topic lists message types being logged by the various NetWitness Suite components. Most messages plainly state the operation being logged; when necessary the meaning of the message is explained.

After you create a global audit logging configuration, audit logs automatically go to the external syslog system in the format specified in the selected audit logging template. The message types being logged by the various NetWitness Suite components are shown in the following tables.

CARLOS

The following table lists the operations logged by CARLOS.

Serial #	Operation Name	Meaning
1	SetProviderConfiguration	A new notification server (for example, SMTP server) was added or updated
2	SetInstanceConfiguration	A new notification type (for example, email destination) was added or updated
3	SetTemplateDefinition	A new template was added or updated
4	RemoveProviderConfiguration	A notification server was removed
5	RemoveInstanceConfiguration	A notification type was removed
6	RemoveTemplateDefinition	A template definition was removed
7	Commit	A configuration bean change was committed
8	Set	A JMX property value was set via NetWitness Suite Explore view

ESA

The following table lists the operations logged by the Event Stream Analysis (ESA).

Serial #	Operation Name	Meaning
9	SetSourceRequest	A concentrator was added or updated to ESA as source
10	RemoveSourceRequest	A concentrator was removed from ESA as source
11	SetEplModule	An EPL module was deployed or updated to ESA
12	RemoveEplModule	An EPL module was removed from ESA
13	SetEnrichmentSourceRequest	An ESA enrichment source was added/updated
14	RemoveEnrichmentSourceRequest	An ESA enrichment source was removed
15	SetDatabaseReference	An enrichment database reference was made to ESA
16	UpdateEnrichmentData	Data rows added to an ESA enrichment source
17	SetEnrichmentConnection	A connection was made between an EPL module and an enrichment source
18	RemoveEnrichmentConnection	A connection between an EPL module and an enrichment source was removed
19	DisableTrialModule	ESA Trial rules were disabled

Investigation

The following table lists the operations logged by Investigations.

Serial #	Operation Name	Meaning
1	VisualizePreferences	Operations related to Informer Visualization Request.
2	ParallelCoordinates	Operations related to Loading of Co-Ordinate View Navigation.
3	TimeLine	Operations related to Loading of Timeline View Navigation.
4	ExteralQuery	Operation when a Direct Query is fired via URL.
5	PrintView	Operations to open Investigation in Print View.
6	submitExtractFiles	Operation to submit a Request to Extract files from Sessions.
7	submitExtractLogs	Operation to submit a Request to Extract Logs from Sessions.
8	submitExtractPcap	Operation to submit a Request to Extract Sessions from Sessions.
9	DataScienceDrill	Operation to investigate from Data Science Report.
10	breadCrumbs	Operation to access the Query Breadcumbs.
11	Create	Operation when a new Investigation Query is being saved as a predicate to be used for URL Integration.

Serial #	Operation Name	Meaning
12	userPredicates	Operation to access Recent Queries of a user.
13	chartDefaultMetas	Operation to access last used Meta for generating Coordinate Chart.
14	defaultDevice	Operation to access the Default Investigation Device.
15	deleteDefaultDevice	Operation to delete the Default Investigation Device.
16	chartPreferences	Operation to edit an Investigation Navigation Chart Parameters such as Height.
17	devicePreferences	Operation to save the preferences about the Investigation Device such asTime Range, Profile, Meta Groups etc.
18	topValues	Operation to get the Top Values for Metas. Normally called from Top Values Dashlet.
19	MetaLanguages	Operation to read the Meta Languages from a Device.
20	MetaGroups	Operations related to Investigation Meta Groups.
21	DefaultMetaKeys	Operations related to Investigation Default Meta Keys.
22	UpdateDefaultMetaKeys	Operations to update Investigation Default Meta Keys.

Serial #	Operation Name	Meaning
23	UpdateMetaGroup	Operations to update Investigation Meta Groups.
24	ApplyMetaGroup	Operations to use Investigation Meta Groups.
25	DeactivateMetaGroup	Operations to reset Investigation Meta Groups in UI.
26	DeleteMetaGroup	Operations to remove Investigation Meta Group.
27	DeleteMetaGroups	Operations to remove multiple Investigation Meta Groups.
28	ImportMetaGroups	Operations to import Investigation Meta Groups.
29	ExportMetaGroup	Operations to export multiple Investigation Meta Groups.
30	GeoMap	Operation to access the Geo Map View of Investigation.
31	deleteEndpointCache	Operation to clear Reconstruction Cache of a Device.
32	delete	Operation to delete Alert Templates.
33	CustomColumnGroup	Operation to apply or read Custom Column Group.
34	Import	Operations related to Import of Column Group or Profiles.
35	Export	Operations related to Export of Column Group or Profiles.

Serial #	Operation Name	Meaning
36	SaveProfile	Operation to save an Investigation Profile.
37	ApplyProfile	Operation to apply an Investigation Profile.
38	DeactivateProfile	Operation to deactivate an Investigation Profile.
39	DeleteProfile	Operation to delete an Investigation Profile.
40	DeleteProfiles	Operation to delete multiple Investigation Profiles.

Reporting Engine

The following table lists the operations logged by the Reporting Engine.

Serial #	Operation Name	Meaning
1	TEMPLATE	For all operations related to template
2	CHART	For all operations related to chart
3	REPORT	For all operations related to report
4	RULE	For all operations related to rule
5	IMAGE	For all operations related to Logo Images used in Reports.
6	LIST	For all operations related to list
7	ALERT	For all operations related to alert
8	CONFIG	For all operations related to configuration change

Serial #	Operation Name	Meaning
9	SCHEDULE	For all operations related to schedule
10	ROLE	For all operations related to role/authorization
11	BATCH_JOB	For all operations related to batch jobs
12	SCHEDULER	For all operations related to scheduler
13	QUERYPROCESSOR	For all operations related to queryprocessor
14	FORMATTER	For all operations related to formatter
15	OUTPUTACTION	For all operations related to outputaction
16	STATUSMANAGER	For all operations related to statusmanager
17	BATCH_RUNDEF	For all operations related to batch rundef
18	CHARTGROUP	For all operations related to chart group
19	REPORTGROUP	For all operations related to report group
20	RULEGROUP	For all operations related to rule group
21	LISTGROUP	For all operations related to list group
22	DISKSPACE	For all operations related to disk space

Warehouse Connector

The following table lists the operations logged by the Warehouse Connector.

Serial #	Operation Name	Meaning
1	LockBox Password Create	Operation to create LockBox Password.
2	LockBox Password Update	Operation to update LockBox Password.
3	LockBox Password Refresh	Operation to refresh LockBox Password.
4	Adding Stream	Operation to add a Stream.
5	Adding Source	Operation to add a Source.
6	Adding Destination	Operation to add a Destination.
7	Removing	Operation to remove a Source, Stream, or Destination.
8	Changing Password	Operation to change the Password.
9	Updating Source	Operation to update a Source.
10	Adding Source to Stream	Operation to add a Source to a Stream.
11	Deleting Source from Stream	Operation to delete a Source from a Stream.
12	Setting Destination to Stream	Operation to set a Destination to a Stream.
13	Finalizing Stream	Operation to finalize a Stream and initiate the aggregation.
14	Stopping Stream	Operation to stop a Stream.

Serial #	Operation Name	Meaning
15	Starting Stream	Operation to start a Stream.
16	Reloading Stream	Operation to reload a Stream.

Health & Wellness

The following table lists the operations logged by Health & Wellness.

Serial #	Operation Name	Meaning
1	SavePolicyRequest	Operation while adding or modifying a Policy.
2	RemovePolicyRequest	Operation while removing a Policy.

NetWitness Suite Core Services

The following table lists the operations logged by NetWitness Suite Core Services.

Serial #	Operation Name	Meaning
1	FILE-Command	Operation to list, retrieve and delete files from approved directories on this device.
2	SERVICE-Start	Service started
3	SERVICE-Stop	Service stopped
4	REDIRECT-Syslog	Operation for syslog forwarding.
5	ADD-Monitor	Issuing a filesystem monitor operation
6	DELETE-Monitor	Issuing a filesystem monitor deletion operation
7	SHUTDOWN-Service/shutdown.service	Shutting down appliance service
8	REBOOT-Service	Restarting appliance service

Serial #	Operation Name	Meaning
9	CONFIGURE-Network	Issuing Network Configuration change
10	SET-NTP	Issuing NTP set operation
11	STOP-NTP	Issuing NTP stop operation
12	NTP-Timesync	Issuing NTP time sync operation
13	SET-SNMP	Issuing SNMP set
14	UPGRADE/upgrade	Issuing upgrade operation
15	create.collection	Operation to create an empty collection.
16	restore	Issuing restore
17	session.aggregation	Issuing aggregation start/stop
18	add.device	Adding a device for aggregation
19	edit.device	Editing a device used for aggregation
20	delete.device	Deleting a device used for aggregation
21	capture.start	Starting capture operation
22	capture.stop	Stopping capture operation
23	select.interface	Selecting capture interface
24	export	Operation to export packets or sessions.
25	reload	Issuing a parser reload
26	schema	Issuing a schema request for loaded parsers
27	upload/file.upload	Issuing file upload

Serial #	Operation Name	Meaning
28	notify	Issuing feed notify
29	delete	Issuing file deletion
30	edit.config	Configuration change operation
31	parsers.transforms	Perform a language key transformation
32	data.reset	Data reset operation
33	timeout	REST request timeout
34	cancel	Cancel a running query
35	timeroll	Operation to delete the database files that exceed a given limit.
36	dump	Operation to dump information out of the database in nwd formatted files.
37	session.wipe	Issuing a session wipe operation
38	REPLACE-Rule	Issuing a rule replace operation
39	MERGE-Rule	Issuing a rule merge operation
40	ERASE-Rule	Issuing deletion of a set of all rules
41	ADD-Rule	Issuing a rule addition operation
42	DELETE-Rule	Issuing deletion of a set of rules
43	sdk.info	Issuing SDK summary info.
44	sdk.session	Issuing SDK session info.
45	sdk.language	Issuing SDK language
46	sdk.aliases	Issuing SDK alias request

Serial #	Operation Name	Meaning
47	sdk.transform	Issuing SDK transformation request
48	sdk.search	Issuing session content search request
49	sdk.cache	Operation related to session content cache
50	sdk.content	Issuing session content request
51	check.authorization	Operation to check user roles for permissions to execute an operation.
52	close.connection	Issuing a connection close operation
53	handshake	Issuing an SSL handshake
54	logon/login	Operation to login from NW to the other services, mostly to privileged users.
55	STOREDPROCOP	Issuing file upload cancel/start
56	ADD-Task	Added scheduled task
57	DELETE-Task	Deleted scheduled task
58	logoff	Issuing logout operation
59	list.cacerts	Issuing list trusted CA certificate operation
60	delete.cacerts	Issuing delete trusted CA certificate operation
61	add.cacerts	Issuing addition of trusted CA certificate operation
62	restart.command	Issuing restart command line option

Serial #	Operation Name	Meaning
63	delete.file/file.delete	Operation to delete system configuration files.
64	update.file/file.update	Operation to update system configuration file.
65	create.file	Issuing file creation operation
66	query	Issue a database query
67	unlock	Issuing unlock user account operation
68	user.add	Operation to create user accounts on individual devices.
69	user.delete	Operation to delete a user on individual devices.
70	group.create	Operation to add a new group to the system.
71	user.remove	Remove a user account from a group
72	group.delete	Delete a group from the /users/groups tree
73	add.user	Issuing add user command to collection
74	delete.user	Issuing delete user command to collection
75	remove.user	Removing an user from collection
76	collection.open	Issuing an open command for a collection

Serial #	Operation Name	Meaning
77	collection.close	Issuing a close command for a collection
78	collection.delete	Issuing collection deletion command
79	reingest.start	Operation to start reingesting of packet data in collection.
80	feed.notify	Issuing a feed notify command
81	collect	Issuing a collect command
82	collect.start	Issuing a data collection start
83	collection.global	Issuing import parser command
84	parser.reload	Issuing parser reload command
85	reingest	Operation to reingest packet data in collection.
86	collection.create	Issuing a create collection command
87	collection.restore	Issuing a restore collection command
88	collection.clone	Issuing a clone collection command
89	parser.reload	Issuing parser reload command
90	sdk.query	Performs a query against the meta database
91	sdk.msearch	Search for pattern matches in many sessions or packets
92	sdk.values	Performs a value count query and returns the matching values for a report

Serial #	Operation Name	Meaning
93	sdk.timeline	Returns the count of sessions/size/packets in discrete time intervals

Malware Analysis

The following table lists the operations logged by the Malware Analysis (MA) component.

Serial #	Operation Name	Meaning
1	GetDashBoardSummaryRequest	Get dashboard analysis statistics
2	GetFileScoreSummaryRequest	Get aggregated file scores by score type and risk level
3	CountEventsAndFilesRequest	Get count of events and files over a time frame
4	GetAvVendorDetectionRequest	Get AV vendor analysis results
5	GetAVVendorsRequest	Get list of AV Vendors supported
6	SetInstalledAVVendors	Request Update list of installed AV Vendors in config
7	CountEventByCriteriaRequest	Count events by criteria
8	FindEventByIdRequest	Get event by id
9	FindEventByCriteriaRequest	Get event by criteria
10	DeleteEventRequest	Delete event
11	CommentOnEventRequest	Add comment to event
12	ReSubmitEventRequest	Resubmit event for analysis
13	FindEventScoreByIdRequest	Get event score by event id

Serial #	Operation Name	Meaning
14	FindEventScoreByCriteriaRequest	Get event score by criteria
15	FindMetaByIdRequest	Get meta by id
16	FindMetaByCriteriaRequest	Get meta by criteria
17	FindMetaValueByCriteriaRequest	Get meta value by criteria
18	CountByDistinctMetaValueRequest	Count distinct meta values
19	CountByMetaNameAndValueWithDate RangeIntervalRequest	Count meta and values with interval for charting
20	CountByValueAndAverageOverallScore Request	Count meta and map to overall scores for events
21	CountByValueAndAverageGroupScore Request	Count meta and map to group scores for events
22	CountFileEntryByCriteriaRequest	Count files by criteria
23	FindFileEntryByIdRequest	Get file by id
24	FindFileEntryByCriteriaRequest	Get file by criteria
25	ReSubmitFileEntryRequest	Resubmit file for analysis
26	FileDownloadRequest	Download file from repository
27	FileUploadRequest	Upload file for analysis
28	FindFileScoreByIdRequest	Get file score by id
29	FindFileScoreByCriteriaRequest	Get file score by criteria
30	FindHashValueByIdRequest	Get whitelist/blacklist Hash value by id
31	FindHashValueByCriteriaRequest	Get whitelist/blacklist Hash value by criteria
32	AddHashValueRequest	Add whitelist/blacklist Hash value

Serial #	Operation Name	Meaning
33	UpdateHashValueRequest	Update whitelist/blacklist Hash value
34	DeleteHashValueRequest	Delete whitelist/blacklist Hash value
35	FindHashValueByMd5Request	Find whitelist/blacklist Hash value by md5
36	AddHashValueInFileRequest	Add File to repository as well as hash value
37	GetDefaultRulesRequest	Get default IOC Rules configuration
38	ResetToDefaultRulesRequest	Reset IOC Rules configuration to default
39	GetAllOverrideRulesRequest	Get IOC Rules user created override configuration
40	FindOverrideRuleByIdRequest	Find IOC override rule by id
41	AddOverrideRuleRequest	Add IOC override rule
42	UpdateOverrideRuleRequest	Update IOC override rule
43	DeleteOverrideRuleRequest	Delete IOC override rule
44	SubmitOnDemandNextGenRequest	Submit new ondemand nextgen scan
45	FindOnDemandJobEntryByIdRequest	Get ondemand job entity by id
46	FindOnDemandJobEntryByCriteria Request	Get ondemand job entity by criteria
47	GetOnDemandJobInfoRequest	Get ondemand job reference entity by id
48	GetOnDemandDefaultConfiguration	Request Get ondemand default configuration

Serial #	Operation Name	Meaning
49	CancelOnDemandJobRequest	Cancel ondemand job in progress
50	DeleteOnDemandJobRequest	Delete ondemand job
51	ReSubmitOnDemandJobRequest	Resubmit ondemand job
52	SubscriptionRequest	Subscribe to MA Cloud communication
53	UnSubscribeRequest	Unsubscribe from MA Cloud communication
54	GetTopEventInfluencesRequest	Get Top N event influences
55	GetServerInfoRequest	Get server info, such as server time
56	DataResetRequest	Reset database
57	OnDemandJobStatusNotification	Report ondemandjob progress to subscribers
58	LicenseStatusNotification	Report license status - num samples analyzed
59	DataResetNotification	Report that data was reset
60	GetIocSummaryRequest	Get IOC rules aggregated by event/file scores
61	FindAlertTemplatesByCriteriaRequest	Get rabbitmq alert templates by criteria
62	SaveAlertTemplateRequest	Update alert template
63	DeleteAlertTemplateRequest	Delete alert template
64	GetJobStatusRequest	Get in progress job analysis thread status
65	GetEventTypeCountSummaryRequest	Get event analysis counts by date chart

Serial #	Operation Name	Meaning
66	Logon	Logon to the MA Service
67	Modified	Modifying config changes
68	GetNextGenSummaryRequest	Get nextgen dashboard summary statistics

NetWitness Suite User Interface

The following table lists the operations logged by the NetWitness Suite User Interface component.

Serial #	Operation Name	Meaning
1	uploadTrialLicense	Upload Trial License
2	LicenseEntitle	Entitle License
3	LicenseDeactivation	Deactivate License
4	ExpiredLicense	License Expired
5	LicenseOutOfComplianceAcknowledgement	EULA Acknowledgement
6	resetLicense	Reset License
7	usageDateExport	License data usage - csv/pdf
8	refreshLicense	Refresh LLS license
9	LicenseOutOfCompliance	Out of Compliance
10	OOTBEntitlementOutOfCompliance	OOTB Trial license Out of Compliance
11	OOTBEntitlementFirstLoginTimeModified	OOTB time modified
12	OOTBEntitlementFileDeleted	OOTB File deleted
13	OOTBEntitlementDataTampering	OOTB data tampering

Serial #	Operation Name	Meaning
14	uploadOfflineResponse	Upload offline response
15	offlineDownloadCapRequest	Download offline request
16	movePerpetualToMetered	Move Service-based license to Metered
17	moveMeteredToPerpetual	Mover Metered to Service-based license
18	mapServiceLicense	Map Service to Real license
19	delete	Operation to delete Alert Templates.
20	HttpRequest	Operation for Audit Logging of the accessed URL.
21	Page Accessed	Operation for Audit Logging of the accessed page.
22	Navigate	Operation to navigate to the accessed page.
23	Events	Operation to view the accessed event page.
24	Recon	Operation for Event Reconstruction requested.
25	Services	Operation while reading the list of available devices for investigation.
26	Service	Operation for a List of devices requested to be investigated.

Serial #	Operation Name	Meaning
27	Collections	Operation to view the list of collections requested.
28	Profiles	Operation to apply a Profile.
29	ColumnGroups	Operation to apply or read Column Group.
30	ParallelCoordinates	Operations related to Loading of co-ordinate view navigation.
31	Timeline	Operations related to loading of timeline view navigation.
32	PrintView	Operations to open investigation in print view.
33	Preferences	Operations related to Informer Request.
34	import	Operations related to Import of Column Group or Profiles.
35	export	Operations related to Export of Column Group or Profiles.
36	Predicate	Operations related to Queries (Predicates) used for Investigation.
37	Languages	Operation for Language requested from a Device.
38	CancelLanguageLoad	Operation for Language Load Canceled from Navigate Page.

Serial #	Operation Name	Meaning
39	summary	Operation for a summary requested from a Device.
40	languages	Operation for a language requested from a device.
41	aliases	Operation for meta aliases requested from a device.
42	query	Operation for SDK Query requested from a device.
43	msearch	Operation for a meta search requested from a device.
44	nodeListing	Node Listing for a node requested from a Device.
45	content	SDK Content call requested from a Device for downloading a PCAP or Log.
46	Export Files	File Listing Requested for a Session in File View or Extraction jobs.
47	packets	Packets requested for sessions in Packet View or Extraction Jobs.
48	deleteEndpointCache	Operation to clear reconstruction cache of a device.

Serial #	Operation Name	Meaning
49	Logon	Operation for user to sign in to NetWitness Suite User Interface.
50	Logoff	Operation for user to sign out of NetWitness Suite User Interface.
51	defaultDevice	Operation to access the Default SA UI Device.
52	deleteDefaultDevice	Operation to delete the Default investigation device.
53	submitExtractFiles	Operation to submit a request to Extract files from Sessions.
54	submitExtractLogs	Operation to submit a Request to Extract Logs from Sessions.
55	submitExtractPcap	Operation to submit a Request to Extract Sessions from Sessions.
56	MetaGroup	Operations related to SA UI Meta Groups.
57	ExternalQuery	Operation when a Direct Query is fired via URL.
58	GeoMap	Operation to access the Geo Map View of Investigation.
59	SaveProfile	Operation to save an Investigation Profile.

Serial #	Operation Name	Meaning
60	ApplyProfile	Operation to apply an Investigation Profile.
61	DeleteProfile	Operation to apply an Investigation Profile.
62	DeactivateProfile	Operation to apply an Investigation Profile.
63	VisualizePreferences	Operations related to Informer Visualization Request.
64	ExportMetaGroup	Operations to export multiple SA UI Meta Groups.
65	userPredicates	Operations to export multiple SA UI Meta Groups.
66	FileView	Operation for reconstruction request for File View.
67	resource.update	Operation when Live Subscription State changes.

Respond

The following table lists the operations logged by the RESPOND component.

Serial #	Operation Name	Meaning
1	update	Update notification setting
2	update	Update integration settings configuration
3	delete	Delete Alerts
4	create	Create new incident

Serial #	Operation Name	Meaning
5	update	Update incident details
6	read	Read incident details
7	delete	Delete incidents
8	read	Read remediation tasks
9	delete	Delete Remediation tasks
10	update	Update remediation tasks
11	create	Create new rule
12	update	Update existing alert rule
13	reorder	Reorder priority of alert rules

Security Server

The following table lists the events logged by the Security Server.

Log Category	Description
Authentication:	Logs events pertaining to user logins and logouts.
Authorization:	Logs events pertaining to user access checks and RBAC management.
UserAccount	Logs events pertaining to NetWitness Suite domain account management.
ExternalProvider:	Tracks events pertaining with external account providers (for example, Active Directory).

The following example shows an event logged by the Security Server:

```
2018-03-13 16:25:02,938 UserAccount{action=ExpirePassword, success=true,
identity=admin, parameters={id=Justin}}
```

Local Audit Log Locations

NetWitness Suite has global audit logging capabilities. When you configure global audit logging, audit logs from all NetWitness Suite components collect in a centralized system, which converts them into the required format and forwards them to a third-party syslog server or a Log Decoder.

To view audit logs from the individual services, you can look at the local audit log locations.The following table shows the local directory paths of the audit logs for the NetWitness Suite user interface and the various NetWitness Suite services.

Service/Module	Audit Log Location
NetWitness Suite User Interface (NetWitness Suite Web Server)	The NetWitness Suite user interface sends audit logs to the following locations: • `/var/lib/netwitness/uax/logs/audit/audit.log` (human-readable format) • Syslog running on the local host (JSON format) The NetWitness Suite user interface uses the AUTH facility of syslog to write audit logs to syslog. You can only see audit logs in the first location (`/var/lib/netwitness/uax/logs/audit/audit.log`).
Core Services (Decoder, Log Decoder, Concentrator, Broker, and Archiver), Log Collector, Warehouse Connector, and Workbench	The Core services and similar services send audit logs to Syslog running on the local host. Path: `/var/log/secure` (JSON format) The Core services use the AUTHPRIV facility of syslog to write audit logs to syslog.

Service/Module	Audit Log Location

Reporting Engine, Malware Analysis, Respond, and Event Stream Analysis (ESA)	These services send audit logs to the following locations:
	• `<application-home-directory>/logs/audit/audit.log` (human-readable format)
	• Syslog running on the local host (JSON format)
	
	The following are the audit log locations of these services:
	Reporting Engine:
	`/var/netwitness/re-server/rsa/soc/reporting-engine/logs/audit/audit.log`
	Respond Server:
	`/var/log/netwitness/respond-server/respond-server.audit.log`
	Malware Analysis:
	`/var/lib/netwitness/malware-analytics-server/spectrum/logs/audit/audit.log`
	Event Stream Analysis:
	`/opt/rsa/esa/logs/audit/audit.log`
	These services use the AUTH facility of syslog to write audit logs to syslog. You can only see audit logs in the first location (`<application-home-directory>/logs/audit/audit.log`).

Health & Wellness, Event Source Management (ESM), and Appliance and Service Grouping (ASG)	These Services send audit logs to the following locations: • `/opt/rsa/sms/logs/audit/audit.log` (human-readable format) • Syslog running on the local host (JSON format) These services use the AUTH facility of syslog to write audit logs to syslog. You can only see audit logs in the first location (`/opt/rsa/sms/logs/audit/audit.log`).

Global Notifications Panel

Global Notifications panel introduces the features for configuring notification settings. Global Notifications configurations define notifications settings for Event Source Management (ESM), Health and Wellness, Global Audit Logging, Event Stream Analysis (ESA), and Respond.

In the Global Notifications panel, you can configure the following global notification settings:

- Notification Outputs
- Notification Servers
- Templates

WorkFlow

2 Displays the Output Tab

3 Displays the Servers Tab

4 Displays the Templates Tab

Toolbar and Features

The Global Notifications panel has three tabs: Output, Servers, and Templates.

Feature	Description
Output tab	This tab enables you to configure notification outputs. See Output Tab for more information.
Servers tab	This tab enables you to configure notification servers. See Servers Tab for more information.
Templates tab	This tab enables you to configure notification templates. See Templates Tab for more information.

This table describes the columns in the grid for Notification Outputs and Notification Servers.

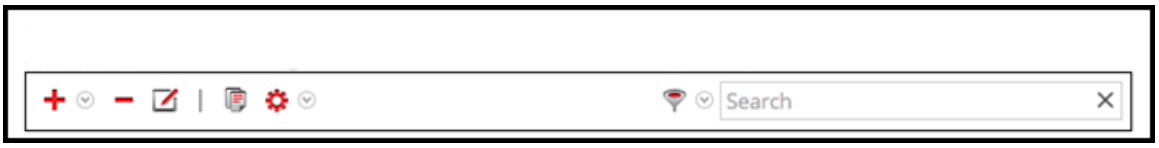
Column	Description
	Selects a row for an action in the toolbar. Clicking the checkbox in the column title selects or deselects all rows in the grid.
Enable	Indicates whether the configuration is enabled. A solid colored green circle indicates that a configuration is enabled. A blank white circle indicates that a configuration is not enabled.
Name	A name that identifies or labels the configuration.
Output	The configuration output. The outputs are Email, SNMP, Syslog, and Script.
Description	A brief description about the configuration.
Last Modified	Shows the date and time of the last configuration change.
Actions	Provides an Actions menu for the selected configuration with actions that can be taken on the configuration. The Actions menu enables you to delete, edit, duplicate, and export the configuration.

This table describes the columns in the grid for Notification Templates.

Column	Description
	Selects a row for an action in the toolbar. Clicking the checkbox in the column title selects or deselects all rows in the grid.
Name	A name that identifies or labels the template.
Template Type	The type of template. The types are Audit Logging, Event Stream Analysis, Event Source Monitoring, and Health Alarms.
Description	A brief description about the template.
Actions	Provides an Actions menu for the selected configuration with actions that can be taken on the template. The Actions menu enables you to delete, edit, duplicate, and export the template.

Global Notifications Panel Toolbar

The Global Notifications panel toolbar is at the top of the Output, Servers, and Templates tabs. The following figure shows the toolbar on the Output and Servers tabs.



The following figure shows the toolbar on the Templates tab.

The following table describes the features of the Global Notifications panel toolbar.

Feature	Description
	Adds a notification server on the Servers tab, adds a notification output (notification) on the Output tab, and adds a notification template on the Templates tab. On the Servers and Output tabs, you can select to configure Email, SNMP, Syslog, and Script notification settings.
	Removes a selected notification configuration. You cannot delete notification servers and notification types that are associated with global audit log configurations. If you attempt to delete a notification output (notification) being used by alerts, you will receive a warning confirmation message that the alerts using the notification will not function properly. The message shows the number of alerts in use. You can also delete a configuration by selecting a configuration and then in the Actions column, selecting > Delete.

Feature	Description
	Edits a selected notification configuration. You can also edit a configuration by selecting a configuration and then in the Actions column, selecting > Edit.
	Duplicates a selected notification configuration. You can also duplicate a configuration by selecting a configuration and then in the Actions column, selecting > Duplicate.
	Displays the following options: • **Import**: Imports a notification server, type, or template. For example, on the Servers tab, you can import a notification server configuration. • **Export All**: Exports all of the configurations. For example, if you are on the Servers tab, you can export all of the notification server configurations. • **Export**: Exports a selected configuration. You can also export a configuration by selecting a configuration and then in the Actions column, selecting > Export.
	Filters by Email, SNMP, Syslog, or Script.
	Searches configurations in the grid.

Define Notification Server Dialogs

This topic describes the Define Notification Server dialogs used to configure the settings of the various types of notification servers. You configure notification servers in the ADMIN > System > Notifications > Servers tab.

Notifications are used by a variety of components in NetWitness Suite, such as Event Stream Analysis (ESA), Respond, and Global Audit Logging. Notification settings are called Notification Servers. In the Servers tab of the Administration System view Notifications panel, you can create multiple Notification Server configurations.

You can configure the following types of notification server settings in NetWitness Suite:

- Email
- SNMP
- Syslog
- Script

For Global Audit Logging, you can only use Syslog Notification Servers.

Procedures related to notification servers are described in Configure Notification Servers.

To access the Define Notification Server dialogs:

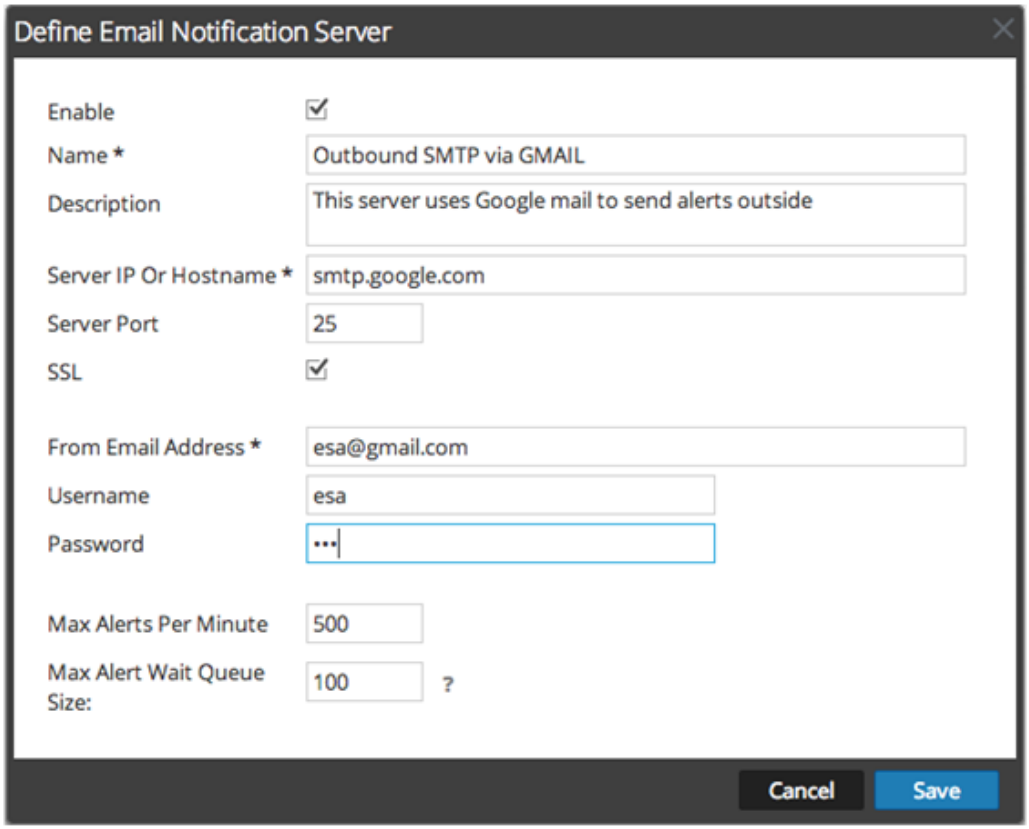
1. Go to **ADMIN > System**.
2. In the left navigation panel, select **Global Notifications**.
3. In the **Notifications Servers** panel, click + and then select a type of notification server (Email, SNMP, Syslog, or Script)
   The Define Notification Server dialog is displayed for your selection.

There are four notification server dialogs, which allow you to configure notification servers.

Email

Email notification servers enable you to configure email server settings to send alert notifications.

The following figure shows the Define Email Notification Server dialog.



The following table lists the various parameters that you need to define for the email notification servers.

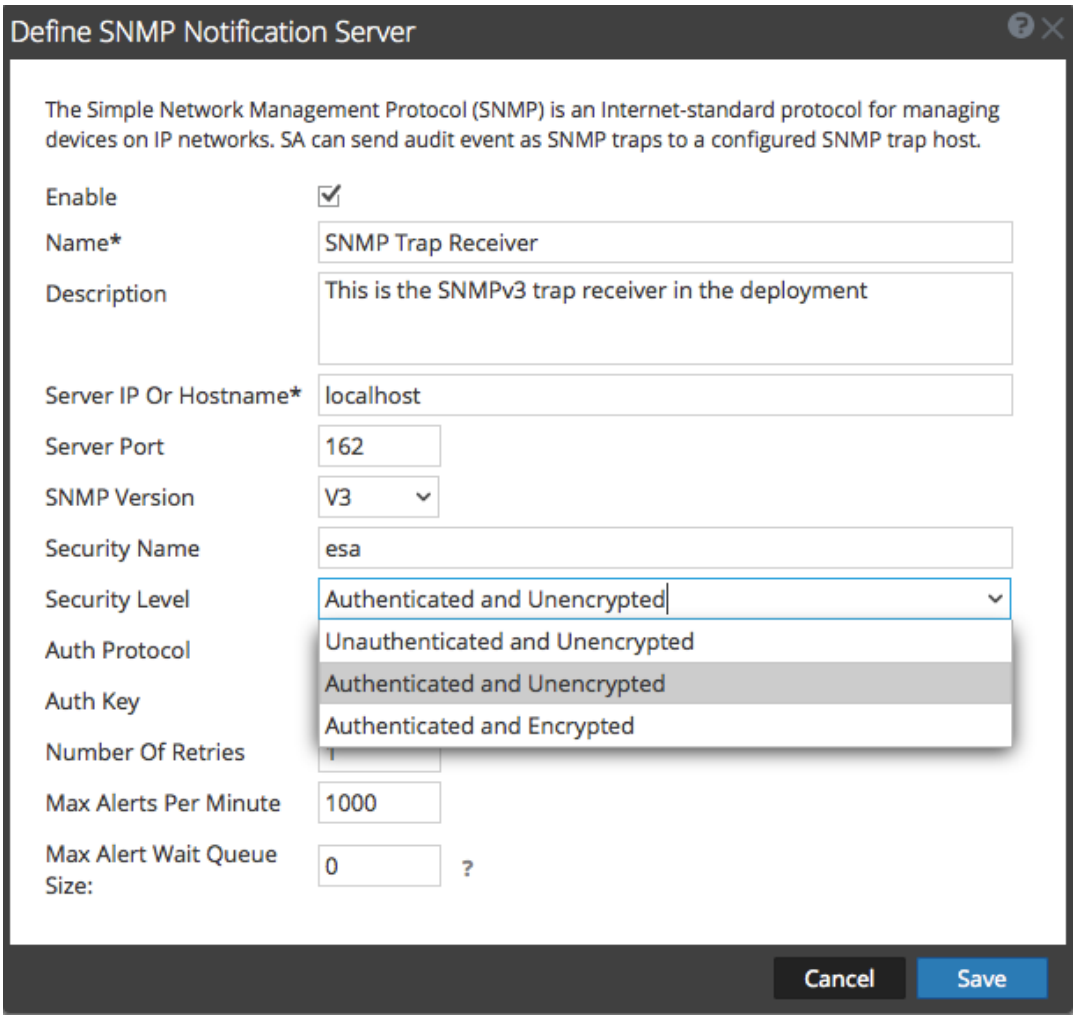
Parameters	Description
Enable	Select to enable the notification server.
Name	A name to identify or label the notification server.
Description	A brief description about the notification server.
Server IP Or Hostname	Hostname of the email server. For ESM/SMS and ESA notifications, you must specify only the hostname/FQDN.
Server Port	The server port.

Parameters	Description
SSL	Select the option if you want the communication to happen through SSL.
From EMail Address	Email account from which you want to send email notifications.
Username	Username for logging into the email account if the SMTP server requires user authentication to relay emails successfully.
Password	User password for logging into the email account if the SMTP server requires user authentication to relay emails successfully.
Max Alerts Per Minute	Describes the maximum number of alerts per minute.
Max Alert Wait Queue Size	Describes the maximum number of alerts to be queued before they are dropped.

SNMP

SNMP notification servers enable you to configure SNMP trap host settings as a notification server to send alert notifications.

The following figure shows the Define SNMP Notification Server dialog.



The following table lists the various parameters that you need to define for the SNMP notification servers.

Parameters	Description
Enable	Select to enable the notification server.
Name	A name to identify or label the notification server.
Description	A brief description about the notification server.
Server IP Or Hostname	SNMP trap host IP address or hostname.

Parameters	Description
Server Port	Listening port number on the SNMP trap host.

<table>
<tr><th>Parameters</th><th>Description</th></tr>
<tr><td>SNMP Version</td><td>SNMP version. The following are the options:
V1
V2C
V3
If you select SNMP Version 3 (v3), the following parameters are displayed:

<table><tr><th>Parameters</th><th>Description</th></tr><tr><td>Notification Type</td><td>Based on the notification type a SNMP messages are sent each time an alert is generated.
The following notification types are supported:
Inform - Inform is acknowledged trap. The sender gets an acknowledgement from the receiver.
Trap - Trap is unacknowledged notification</td></tr><tr><td>Authoritative Engine ID (This optioin is availabe only for notification type TRAP)</td><td>An identifier which is used to identify the agents. Authoritative engine ID along with the username is used to uniquely identify the agent.</td></tr><tr><td>Security Level</td><td>Define the security level. The following are the options:
Unauthenticated and Unencrypted
Authenticated and Unencrypted
Authenticated and Encrypted</td></tr></table></td></tr>
</table>

Parameters	Description	
	Auth Protocol (This option is available only for security level Authenticated and Unencrypted and Authenticated and Encrypted)	Authentication protocol which is used to validate a user before providing an access to the server. The options are: • SHA • MD5
	Auth Key (This option is available only for security level Authenticated and Unencrypted and Authenticated and Encrypted)	A password that you want to use for authentication.
	Privacy Protocol (This option is available only for security level Authenticated and Encrypted)	Privacy protocol is an encryption technique for data communication.
	Private Key (This option is avaliable only for security level Authenticated and Encrypted)	A password that you want to use for encryption.
Community	Community string used to authenticate on the SNMP trap host. The default value is **public**.	

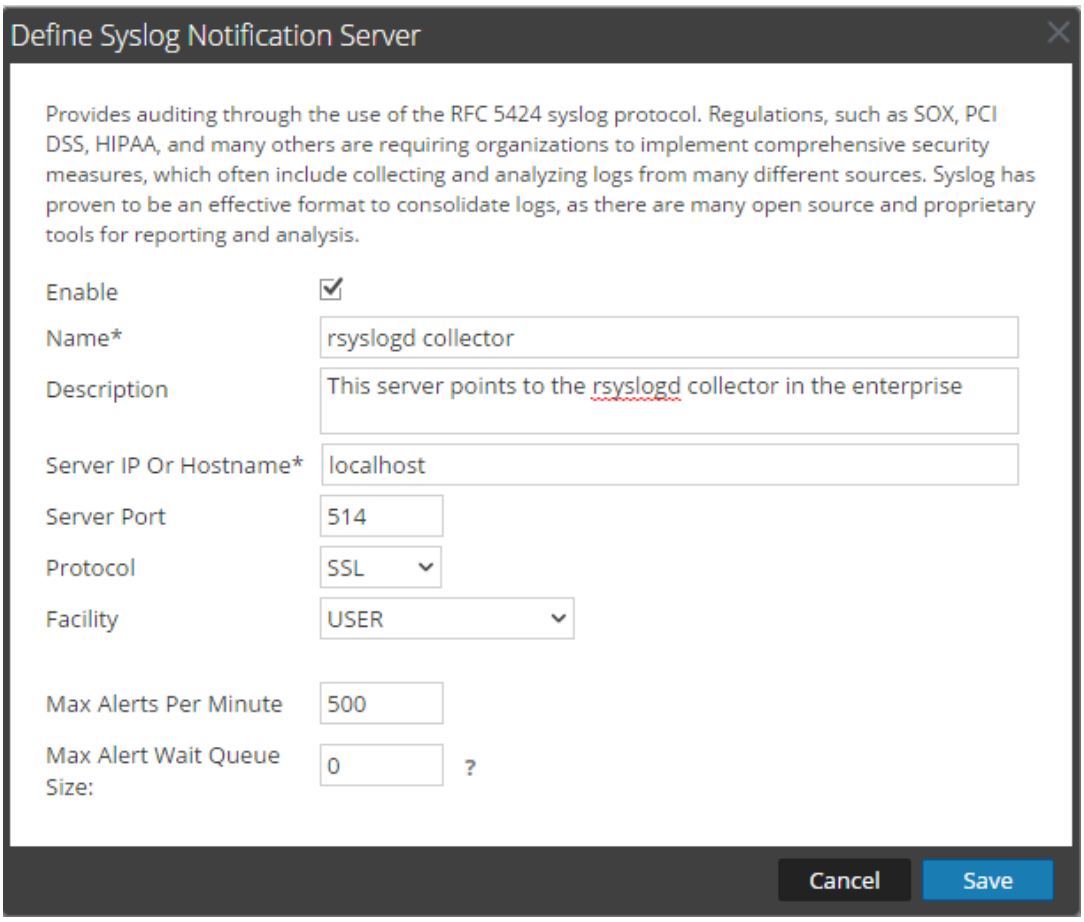
Parameters	Description
Number of Retries	Number of retries for the trap.
Max Alerts Per Minute	Maximum number of alerts per minute.
Max Alert Wait Queue Size	Maximum number of alerts to be queued before they are dropped.

Syslog

Syslog notification servers allow you to configure Syslog settings as a notification server to send notifications. When enabled, Syslog provides auditing through the use of the RFC 5424 Syslog protocol. Syslog has proven to be an effective format to consolidate logs, as there are many open source and proprietary tools for reporting and analysis.

You cannot disable notification servers associated with global audit logging configurations.

The following figure shows the Define Syslog Notification Server dialog.



The following table lists the various parameters that you need to define for the Syslog notification servers.

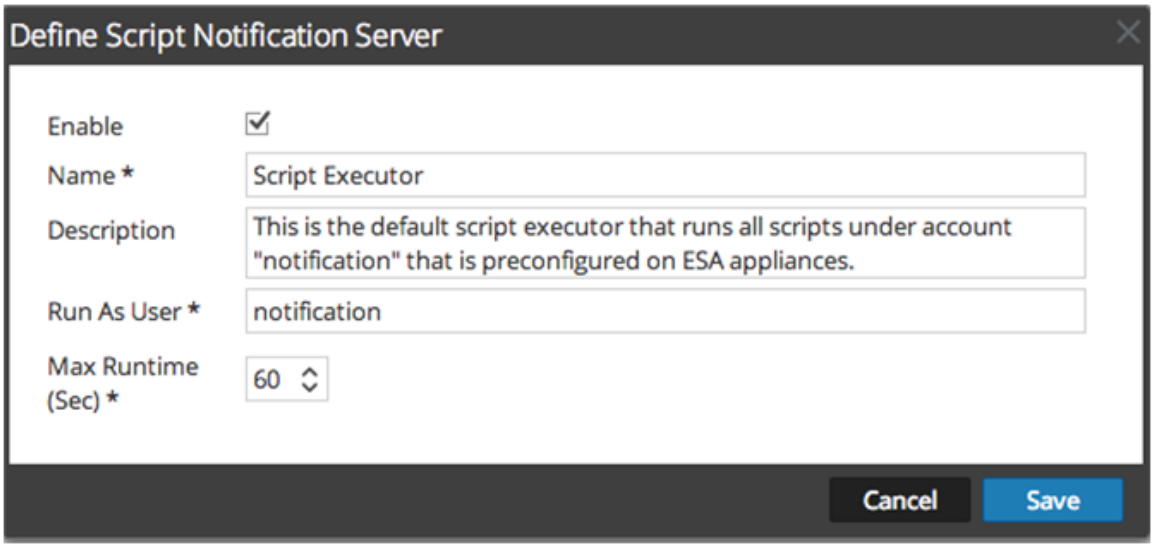
Parameters	Description
Enable	Select to enable the notification server.
Name	A name to identify or label the notification server.
Description	A brief description about the notification server.
Server IP Or Hostname	The hostname of the host where the target Syslog process is running.
Server Port	The port number where the target Syslog process is listening.
Protocol	The protocol to be used to transfer the Syslog files.

Parameters	Description
Facility	The designated Syslog facility to use for all outgoing messages. It is used to specify what type of program is logging the message. Some possible values are KERN, USER, MAIL, and DAEMON. This lets the configuration file specify that messages from different facilities will be handled differently.
Max Alerts Per Minute	Maximum number of alerts per minute. This field is not used for Global Audit Logging.
Max Alert Wait Queue Size	Maximum number of alerts to be queued before they are dropped. This field is not used for Global Audit Logging.

Script

Script notification servers enable you to configure Script as a Notification Server.

The following figure shows the Define Script Notification Server dialog.



The following table lists the various parameters that you need to define for the Script notification servers.

Parameters	Description
Enable	Select to enable the notification server.

Parameters	Description
Name	A name to identify or label the notification server.
Description	A brief description about the notification server.
Run As User	Name of the user identity under which the script is executed. The default user identity is **notification**. For ESA, you cannot set this to anything else unless you have created the account on the ESA host.
Max Runtime (Sec)	The maximum time (in seconds) the script is allowed to run.

Define Notification Output Dialogs

This topic provides descriptions of the various notification output dialogs. You configure notification outputs in the ADMIN > System > Notifications > Output tab. Notifications are basically the destinations used for sending notifications. For ESA, notifications enable you to define how you want to receive the ESA alerts. The following are the different notifications supported by NetWitness Suite:

- Email
- SNMP
- Syslog
- Script

Procedures related to notifications are described in Configure Notification Outputs.

To access the Define Notification dialogs:

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.
3. On the **Output** tab, click + and then select a notification output (Email, SNMP, Syslog, or Script)
   The Define Notification dialog is displayed for your selection.

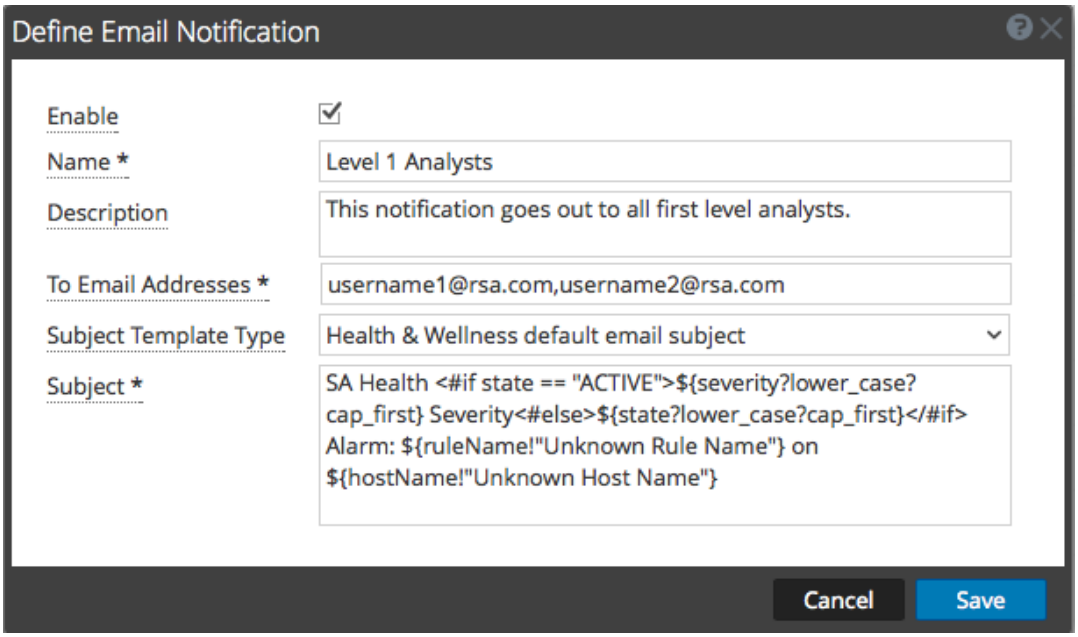
Features

There are four notification dialogs, which allow you to configure notification outputs.

Email

Email notifications enable you to define the destination email address to which you can send the alerts. It also enables you to add a custom description in the subject of the email and also to define multiple destination email addresses.

The following figure shows the Define Email Notification dialog.



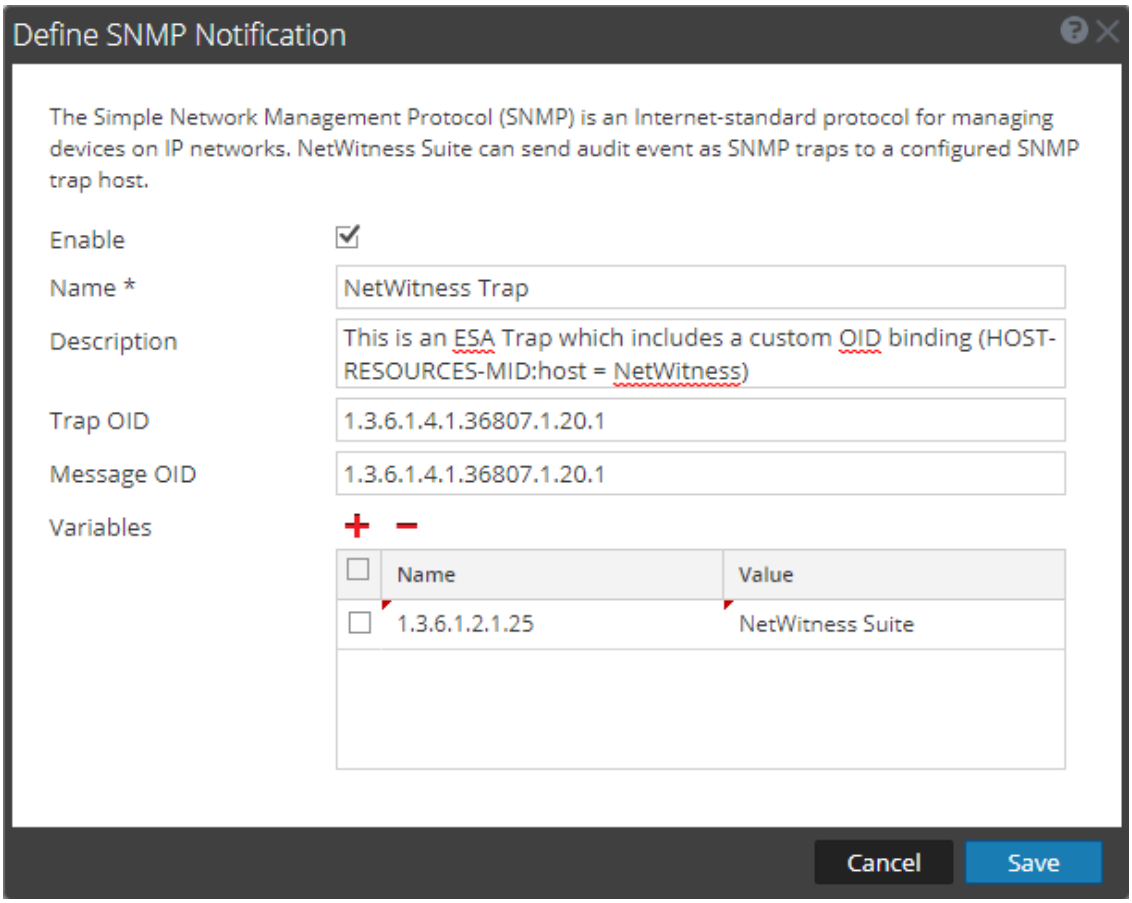
The following table lists the various parameters that you need to define for the email notifications.

Parameter	Description
Enable	Select to enable the notification.
Name	A name to identify or label the notification.
Description	A brief description about the notification.
To Email Addresses	Describes the destination email address to which the alert needs to be sent. **Note:** You can define multiple email addresses.
Subject Template Type	Lists available templates for creating a subject. When you choose a template, the Subject field is automatically filled in with the code for your chosen template.
Subject	Custom description about the triggered alert. This information is automatically filled in if you choose one of the predefined templates from the Subject Template Type drop-down menu. **Note:** To provide a custom subject, please refer to "Include the Default Email Subject Line" topic in the *System Maintenance Guide*.

SNMP

SNMP notifications enable you to define the SNMP settings to send alert notifications.

The following figure shows the Define SNMP Notification dialog.



The following table lists the various parameters that you need to define for the SNMP notifications.

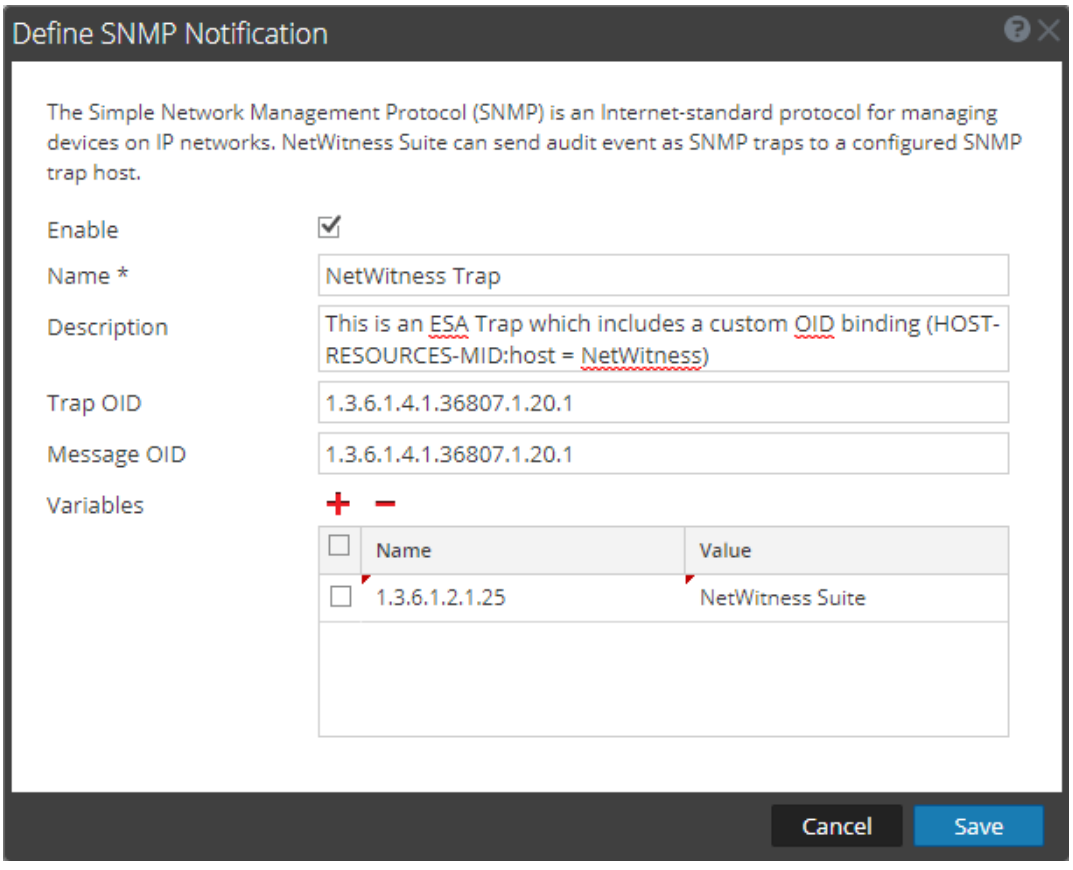
Parameter	Description
Enable	Select to enable the notification.
Name	A name to identify or label the notification.
Description	A brief description about the notification.

Parameter	Description
Trap OID	The object ID for the SNMP trap on the trap host that receives the event. The default value is **1.3.6.1.4.1.36807.1.20.1**. This value is a hierarchical name that represents the system that generates the trap. 1.3.6.1.4.1 is the common prefix for all enterprises and 36807.1.20.1 identifies NetWitness Suite.
Message OID	The message object identifier for the SNMP trap.
Variables	Additional information that should be included within the trap. It is a variable that is a name value pair.

Syslog

Syslog notifications enable you to define the Syslog settings to send alert notifications.

The following figure shows the Define Syslog Notification dialog.



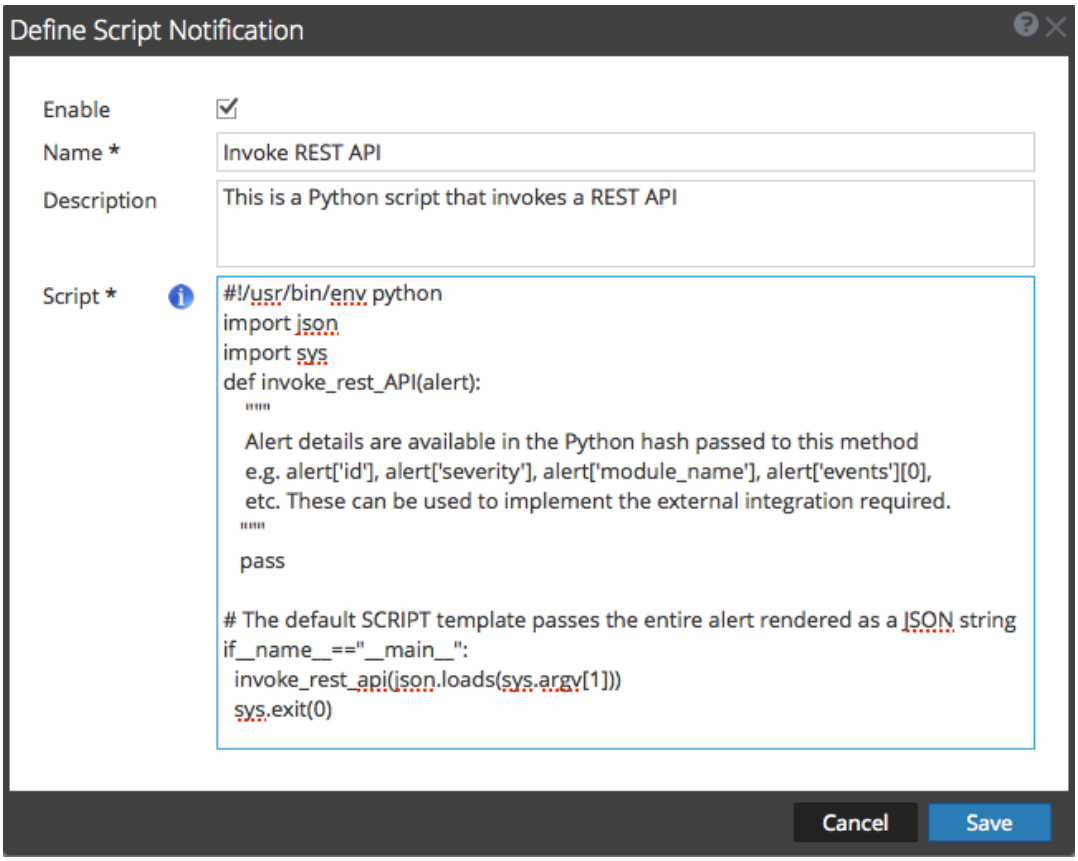
The following table lists the various parameters that you need to define for the Syslog notifications.

Parameter	Description
Enable	Select to enable the notification.
Name	A name to identify or label the notification.
Description	A brief description about the notification.
Severity	Defines the severity of the alert.
Encoding	Defines the encoding format. In some environments where no regular character sets are used (for example, Japanese characters), this field will help selecting the right encoding of the characters.
Max Length	The maximum length of a Syslog message in bytes. The default value is **2048**. Messages that exceed the maximum length are truncated when the **Truncate overly large syslog messages** checkbox is selected, which is found in Administration > System > Legacy Notifications. Legacy Notifications Configuration Panel provides additional information.
Include Local Timestamp	Select to include the local timestamp in messages.
Include Local Hostname	Select to include the local hostname in Syslog messages.
Identity String	An identity string to be prefixed to each Syslog alert. If the string is blank, no identity string is prefixed to the outgoing Syslog alerts. You can use this to identify the alerts from ESA.

Script

Script notifications enable you to define the Script that executes in response to the alert. You can use any script for ESA notifications.

The following figure shows the Define Script Notification dialog.



The following table lists the various parameters that you need to define for the Script notifications.

Parameter	Description
Enable	Select to enable the notification.
Name	A name to identify or label the notification.
Description	A brief description about the notification.
Script	Defines the script.

Define Notification Template Dialog

In the Global Notifications panel, you can configure global notification settings for Notification Servers, Notification Outputs, and Notification Templates. On the Templates tab, you configure the templates for various notifications. The notification template defines the format and message fields of the notifications. You can select a default template or you can use the Define Template dialog to configure and edit templates.

You can define the following template types:

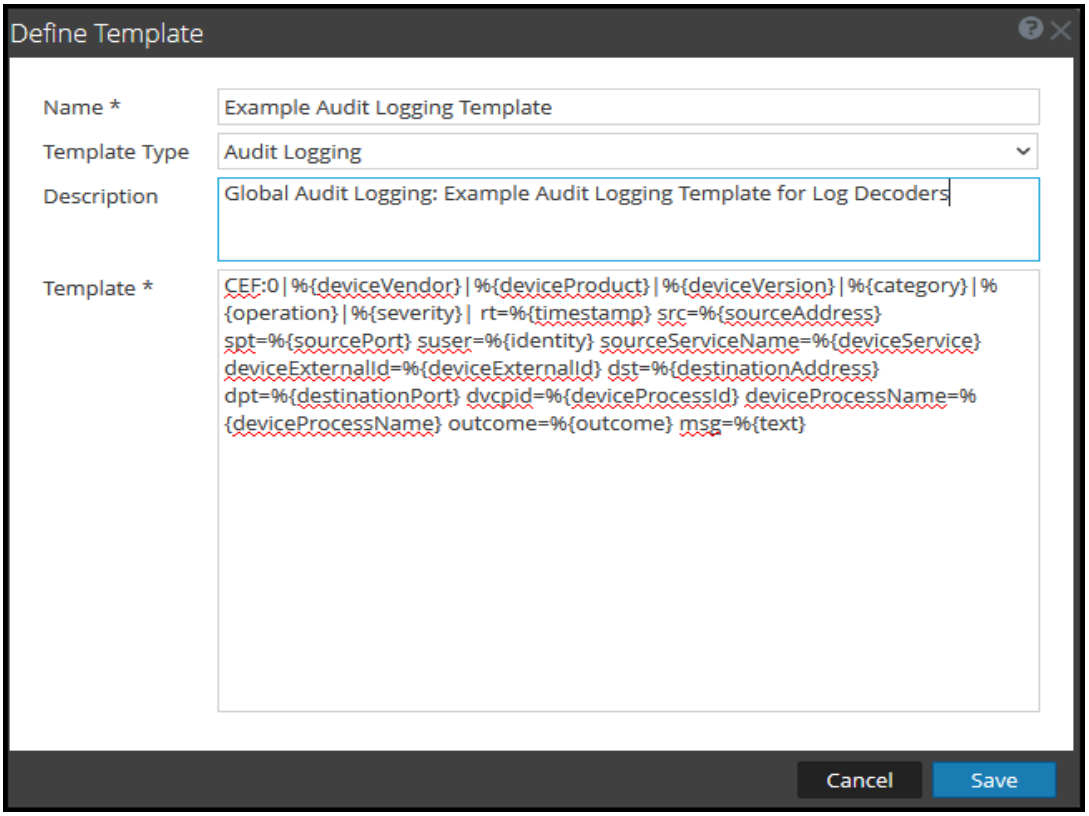
- Audit Logging
- Event Stream Analysis
- Event Source Monitoring
- Health Alarms

Procedures related to notification templates are described in Configure Templates for Notifications.

To access the Define Template dialog:

1. Go to **ADMIN > System**.
2. In the left navigation panel, select **Global Notifications > Template Tab**.
3. In the **Notifications Configurations** panel, click , or select a configuration and click .

The **Define Template** dialog is displayed.



The following table describes the features in the Define Template dialog.

Field	Description
Name	Type a unique name for the notification template.
Template Type	Select the type of template that you want to create: • **Audit Logging**: Use this template for Global Audit Logging. • **Event Stream Analysis**: Use this template type for ESA alert notifications. • **Event Source Monitoring**: Use this template type for ESM notifications. • **Health Alarms**: Use this template type for Health and Wellness notifications.
Description	Add a description for the template. For example, if you create a notification template for Log Decoders to use for Global Audit Logging, you could mention that information in the description.

Field	Description
Template	Specify the format for the template. Define a Template for Global Audit Logging provides instructions on how to define an audit logging template to use for Global Audit Logging. To define a template for Event Stream Analysis (ESA), see Define a Template for ESA Alert Notifications.

Output Tab

In the **Global Notifications** panel, in the **Output** tab (ADMIN > System > Notifications > Output), you configure notification outputs. Global Notifications configurations define notifications settings for Event Source Management (ESM), Health and Wellness, Global Audit Logging, Event Stream Analysis (ESA), and Respond.

Notification Output configurations define email addresses and subject lines, SNMP trap OID settings, syslog output settings, and script code.

Notifications are the destinations configured for the alert notifications that are sent by ESA service. You can configure the following as destinations using the Output tab:

- Email
- SNMP
- Syslog
- Script

Note: You do not need to configure the Output tab for Global Audit Logging. For detailed steps, see Configure Global Audit Logging.

Workflow

This workflow shows the necessary procedures to configure and verify the output for Global Notifications. You can perform the following:

- Configure the Email settings as notification.
- Configure SNMP settings as notification.
- Configure Syslog settings as notification.
- Configure a Script as notification.

What do you want to do?

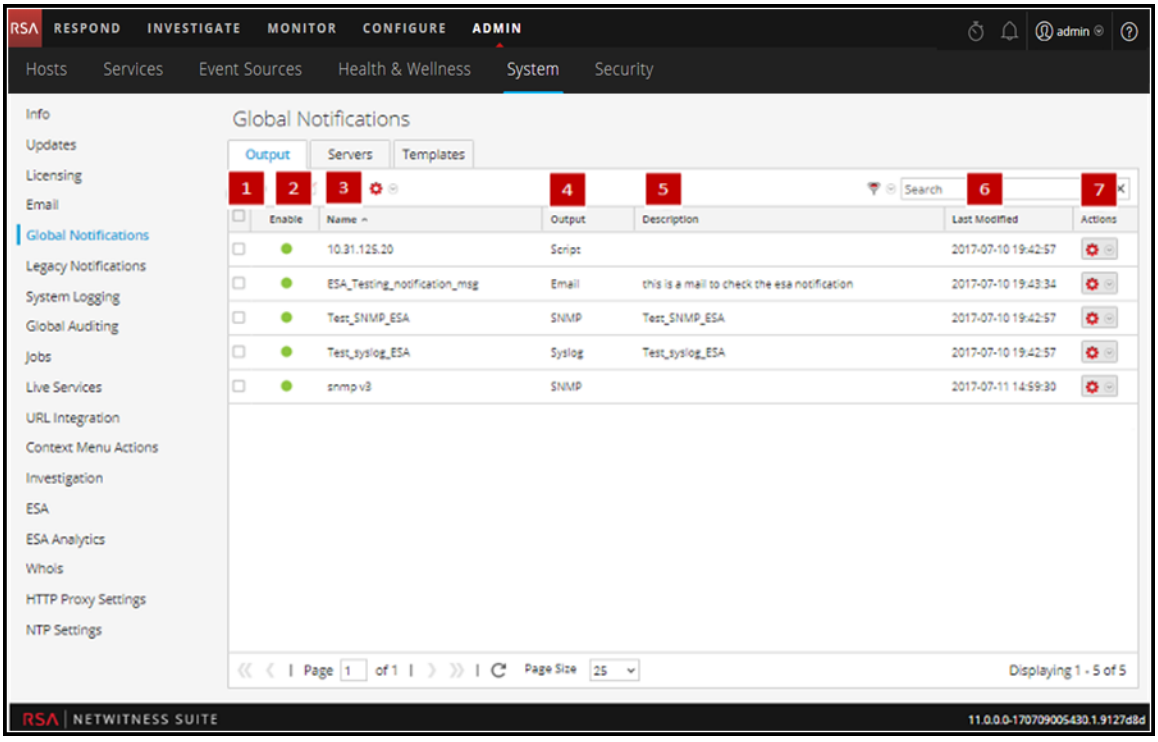
- Configure Syslog as a Notification

Quick Look

The following example illustrates Global Notification Outputs configuration.

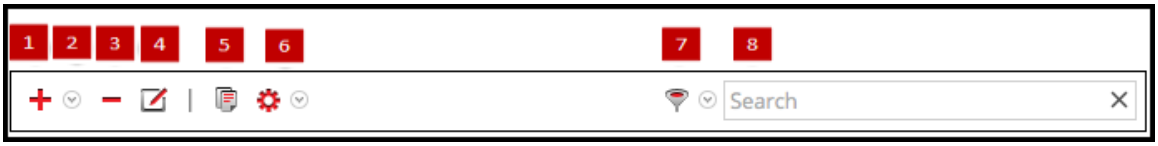


1 Selects a row for an action in the toolbar. Selecting the check box in the column title selects or deselects all rows in the grid.

2 Indicates whether the configuration is enabled. A solid colored green circle indicates that a

	configuration is enabled. A blank white circle indicates that a configuration is not enabled.
3	Identifies or labels the configuration.
4	Identifies the configuration output. The outputs are Email, SNMP, Syslog, and Script.
5	Describes the configuration.
6	Shows the date and time of the last configuration change.
7	Provides an Actions menu for the selected configuration with actions that can be taken on the configuration. The Actions menu enables you to delete, edit, duplicate, and export the configuration.

The Global Notifications panel toolbar is at the top of the Output tag and provides the following options:



1	Adds a notification output
2	Configures Email, SNMP, Syslog, and Script notification settings.
3	Removes a selected notification configuration. You cannot delete notification servers and notification types that are associated with global audit log configurations. If you attempt to delete a notification output (notification) being used by alerts, you will receive a warning confirmation message that the alerts using the notification will not function properly. The message shows the number of alerts in use. You can also delete a configuration by selecting a configuration and then in the Actions column, selecting > Delete.
4	Edits a selected notification configuration. You can also edit a configuration by selecting a configuration and then in the Actions column, selecting > Edit.
5	Duplicates a selected notification configuration. You can also duplicate a configuration by selecting a configuration and then in the Actions column, selecting > Duplicate.
6	Displays the following options: • **Import**: Imports a notification server, type, or template. For example, on the Servers tab, you can import a notification server configuration. • **Export All**: Exports all of the configurations. For example, if you are on the Servers tab, you can export all of the notification server configurations.

- **Export**: Exports a selected configuration. You can also export a configuration by selecting a configuration and then in the Actions column, selecting > Export.

7 Filters by Email, SNMP, Syslog, or Script.

8 Searches configurations in the grid.

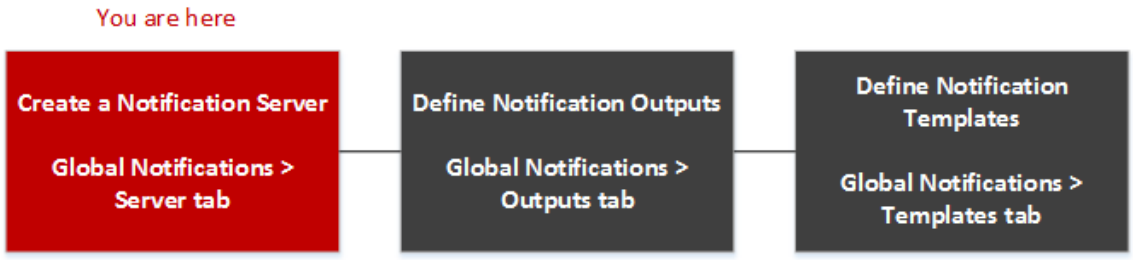
Servers Tab

Servers Tab describes the components of the Global Notifications > Servers tab. This tab enables to configure notification servers. Global Notifications configurations define notifications settings for Event Source Management (ESM), Health and Wellness, Global Audit Logging, Event Stream Analysis (ESA), and Respond.

Configure **Notification Servers** in the Servers tab. On the Servers tab, add the servers from which you want to receive notifications from the system. For Global Audit Logging, define Log Decoders as Syslog Notification Servers.

Event Stream Analysis can send notifications to users through email, SNMP, or Syslog when an alert is triggered on the ESA service. These alert notification senders are called Notification Servers. You can configure multiple notification settings and use them while defining an ESA rule, for example, you can configure multiple mail servers or Syslog servers and use the settings while defining an ESA rule.

Workflow



The workflow shows the necessary procedures to configure and verify the Servers for Global Notifications. You can perform the following:

- Configure the Email settings as a notification server.
- Configure SNMP settings as a notification server.
- Configure Syslog settings as a notification server.
- Configure a Script as a notification server.

What do you want to do?

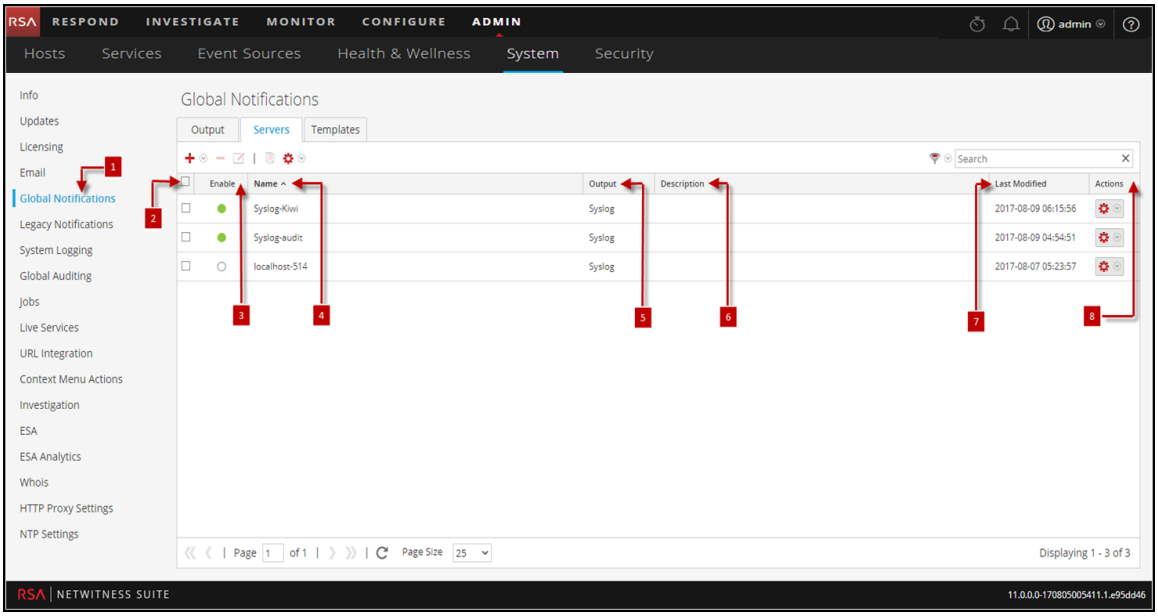
Quick Look

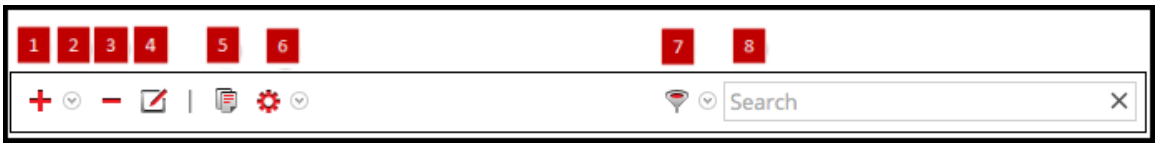
The following example illustrates Global Notification Servers configuration.



1	Displays the Server Tab Panel.
2	Selects a row for an action in the toolbar. Selecting the checkbox in the column title selects or deselects all rows in the grid.
3	Indicates whether the configuration is enabled. A solid colored green circle indicates that a configuration is enabled. A blank white circle indicates that a configuration is not enabled.
4	Identifies or labels the configuration.
5	Identifies the configuration output. The outputs are Email, SNMP, Syslog, and Script.
6	Describes the configuration.
7	Shows the date and time of the last configuration change.
8	Provides an Actions menu for the selected configuration with actions that can be

taken on the configuration. The Actions menu enables you to delete, edit, duplicate, and export the configuration.

The Global Notifications panel toolbar is at the top of the Output tag and provides the following options:



1. Adds a notification output
2. Configures Email, SNMP, Syslog, and Script notification settings.
3. Removes a selected notification configuration. You cannot delete notification servers and notification types that are associated with global audit log configurations. If you attempt to delete a notification output (notification) being used by alerts, you will receive a warning confirmation message that the alerts using the notification will not function properly. The message shows the number of alerts in use. You can also delete a configuration by selecting a configuration and then in the Actions column, selecting > Delete.
4. Edits a selected notification configuration. You can also edit a configuration by selecting a configuration and then in the Actions column, selecting > Edit.
5. Duplicates a selected notification configuration. You can also duplicate a configuration by selecting a configuration and then in the Actions column, selecting > Duplicate.
6. Displays the following options:
   - **Import**: Imports a notification server, type, or template. For example, on the Servers tab, you can import a notification server configuration.
   - **Export All**: Exports all of the configurations. For example, if you are on the Servers tab, you can export all of the notification server configurations.
   - **Export**: Exports a selected configuration. You can also export a configuration by selecting a configuration and then in the Actions column, selecting > Export.
7. Filters by Email, SNMP, Syslog, or Script.
8. Searches configurations in the grid.

Templates Tab

The Notification Templates tab enables to configure notification templates. Global Notifications configurations define notifications settings for Event Source Management (ESM), Health and Wellness, Global Audit Logging, Event Stream Analysis (ESA), and Respond. Notification templates define the format and message fields of the notifications.

Select a default template or configure templates for Email, SNMP, Syslog, and Script, depending on the template type. For Event Stream Analysis (ESA) templates, configure Email, SNMP, Syslog, and Script. For Audit Logging templates, configure Syslog.

Event Stream Analysis templates are not specific to any type of alert notifications, that is, the same template can be used for all types of notifications.

When upgrading from NetWitness Suite 10.4, all existing notification templates migrate to the Event Stream Analysis template type.

3. Choose a Template Type
4. Describes the templates
5. Provides an Actions menu for the selected templates with actions that can be taken on the Templates. The Actions menu enables you to delete, edit, duplicate, and export the configuration.

HTTP Proxy Settings Panel

HTTP Proxy Settings Panel introduces the proxy support features of the Administration System view > HTTP Proxy Settings panel.

Note: Proxy support is only for HTTP and HTTPS proxies and not SOCKS5.

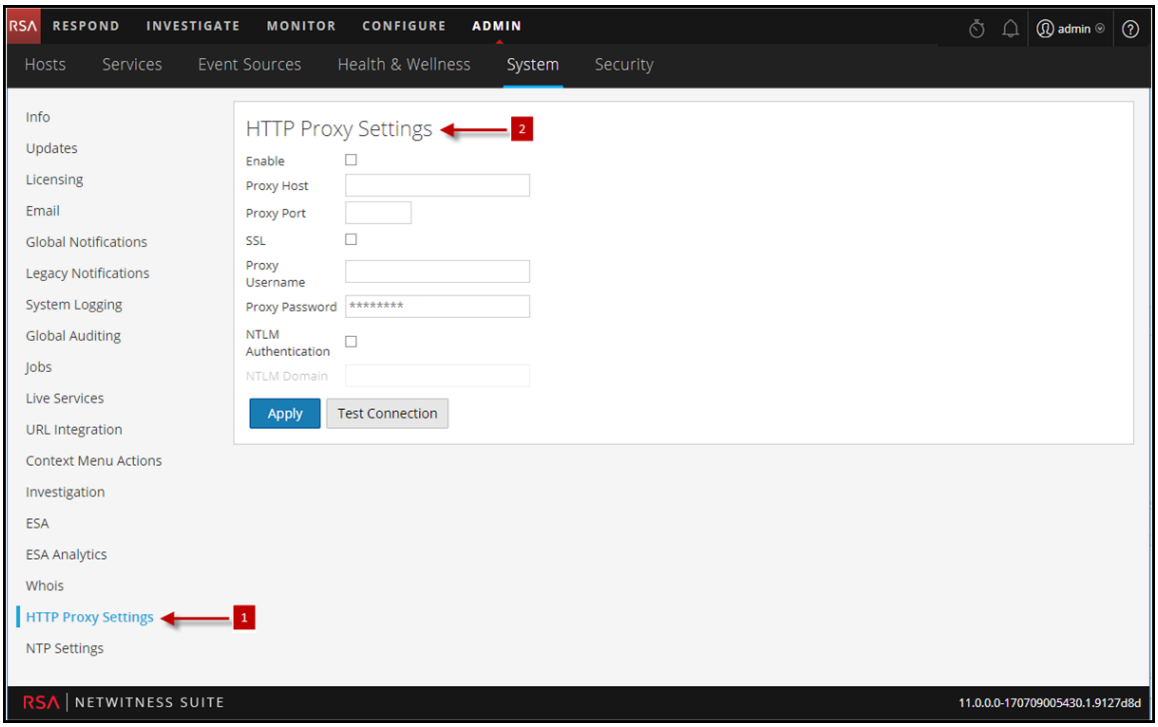
The HTTP Proxy Settings panel provides a user interface for configuring a proxy for use across NetWitness Suite modules and services. The Proxy Settings set up a proxy to be used wherever a proxy is needed in NetWitness Suite. The settings in this panel override any proxy settings configured for an individual service such as Malware Analysis or Live.

Related topics

"Configure Proxy for NetWitness Suite" in Additional Procedures

Quick Look

The following example illustrates an HTTP Proxy Settings Panel.



1 Displays the HTTP Proxy Settings Panel.

2 Allows the user to configure HTTP Proxy Sittings.

This table describes the features in the HTTP Proxy Settings section.

Feature	Description
Enable	Enable the system proxy configuration for use in NetWitness Suite.
Proxy Host	The hostname for the proxy host.
Proxy Port	The port used for communication on the proxy host.
SSL	(Optional) Enable communication using SSL.
Proxy Username	(Optional) The user name used to log on to the proxy host if the proxy requires authentication.
Proxy Password	(Optional) The user password used to log on to the proxy host if the proxy requires authentication.
NTLM Authentication	Use NT LAN Manager authentication and session security protocols.
NTLM Domain	The name of NTLM domain.
Apply	Applies any changes made, and they become effective immediately.

Email Configuration Panel

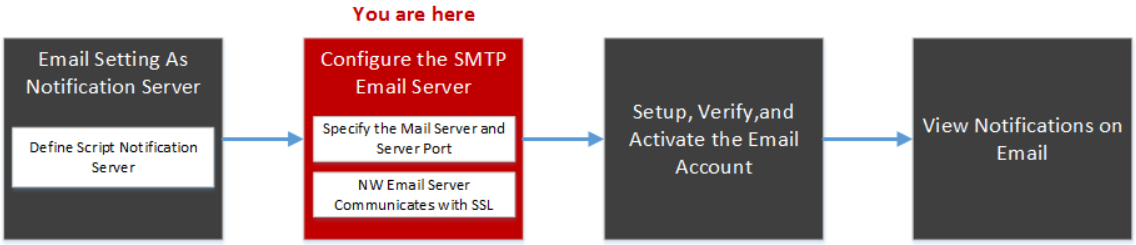
The Email Configuration Panel provides information about email configuration settings in the System View > Email Configuration panel. RSA NetWitness® Suitesends notifications to users via email about various system events. To be able to configure these email notifications, first configure the SMTP email server (See Configure Email Servers and Notification Accounts).

The Email Configuration panel provides a way to:

- Configure the email server.
- Set up an email account to receive notifications.
- View statistics on email operations.

Workflow

This workflow shows the necessary procedures to configure and verify Email Panel.



What do you want to do?

Role	I want to ...	Show me how

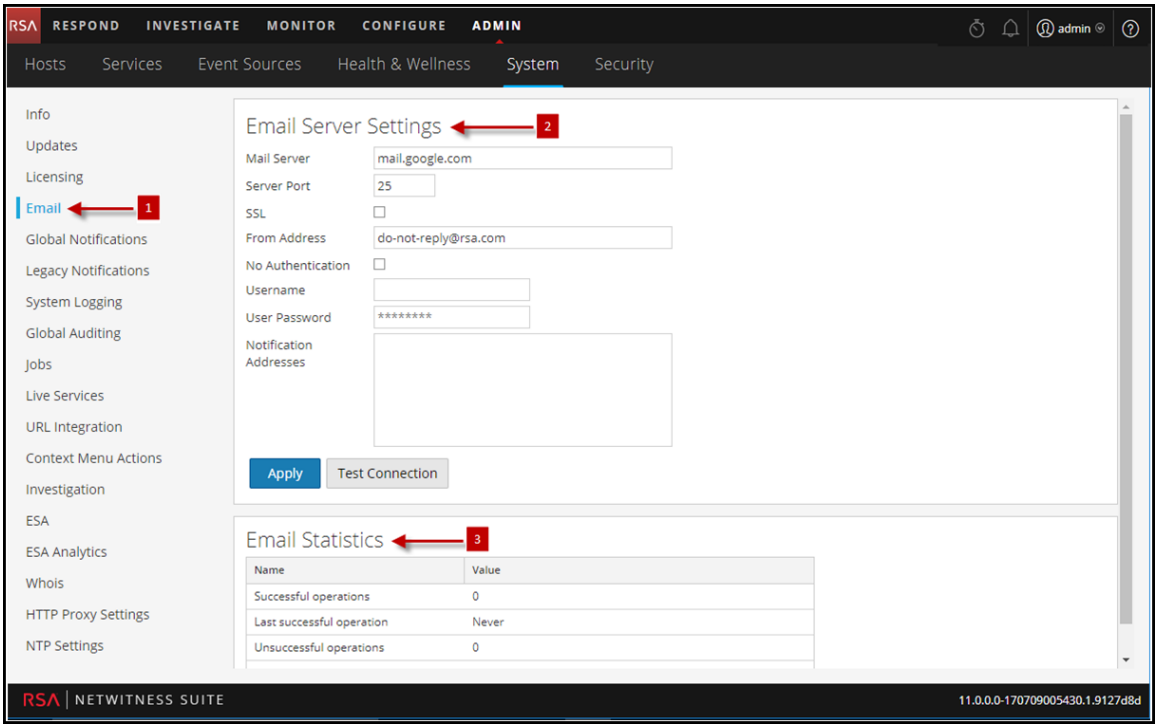
- Configure Email Servers and Notification Accounts

Quick Look

The following example illustrates an Email configuration. The configuration defines how events are notified on Email.



1	Displays the Email Configuration Panel.
2	Allows the user to configure Email Server sittings.
3	Provides feedback on Email operations.

The **Email Configuration** panel has two sections: **Email Server Settings** and **Email Statistics**.

Email Server Settings

In the **Email Server Settings** section, you configure the following parameters.

Feature	Description
Mail server	The email server name. The default value is **mail.google.com**.
Server port	The server port used to send and receive emails. The default value is **25**.
Use SSL	The preference for SSL use in communications between the email server and NetWitness Suite. The default value is to not use SSL (unchecked).
From address	The address that appears in all emails from NetWitness Suite. The default from address for emails is **do-not-reply@rsa.com**.
Username	The username to access the email server. The default value is **blank**.
User password	The user password to access the email server. The default value is **blank**.
Test connection	Tests the connection to the email server.
Apply	Applies the email configuration to this instance of NetWitness Suite.

Email Statistics

The Email Statistics section provides feedback on the number of successful and failed email operations as well as the time of the last successful and unsuccessful email operation. For each statistic the name of the statistic and the value is displayed.

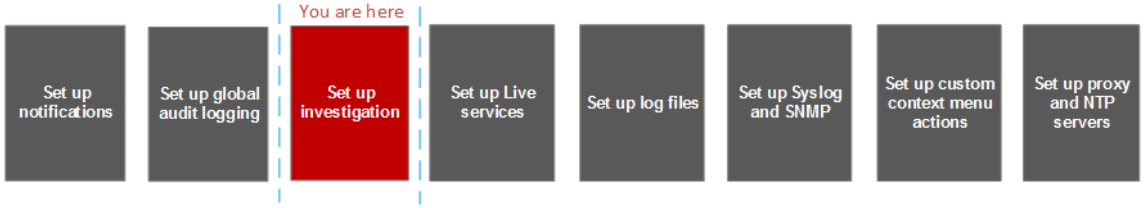
Investigation Configuration Panel

The System view > Investigation Configuration panel, which provides the user interface for Administrators to configure the system-wide settings that NetWitness Suite Investigation uses when analyzing data and reconstructing an event.

The Investigation Configuration settings allow an administrator to manage application performance for Investigation. As analysts analyze and reconstruct sessions that they are investigating, performance can be affected by operations that involve loading, searching, visualizing, and reconstructing large amounts of data.

Note: Analysts can also set individual preferences for Investigation in the Profiles view and in the Navigation view.

Workflow



What do you want to do?

Role	I want to ...	Show me how
Administrator	Configure navigate, events and context lookup settings	Configure Investigation Settings
Administrator	Clear reconstruction cache for services	Configure Investigation Settings

Related Topics

- Standard Procedures

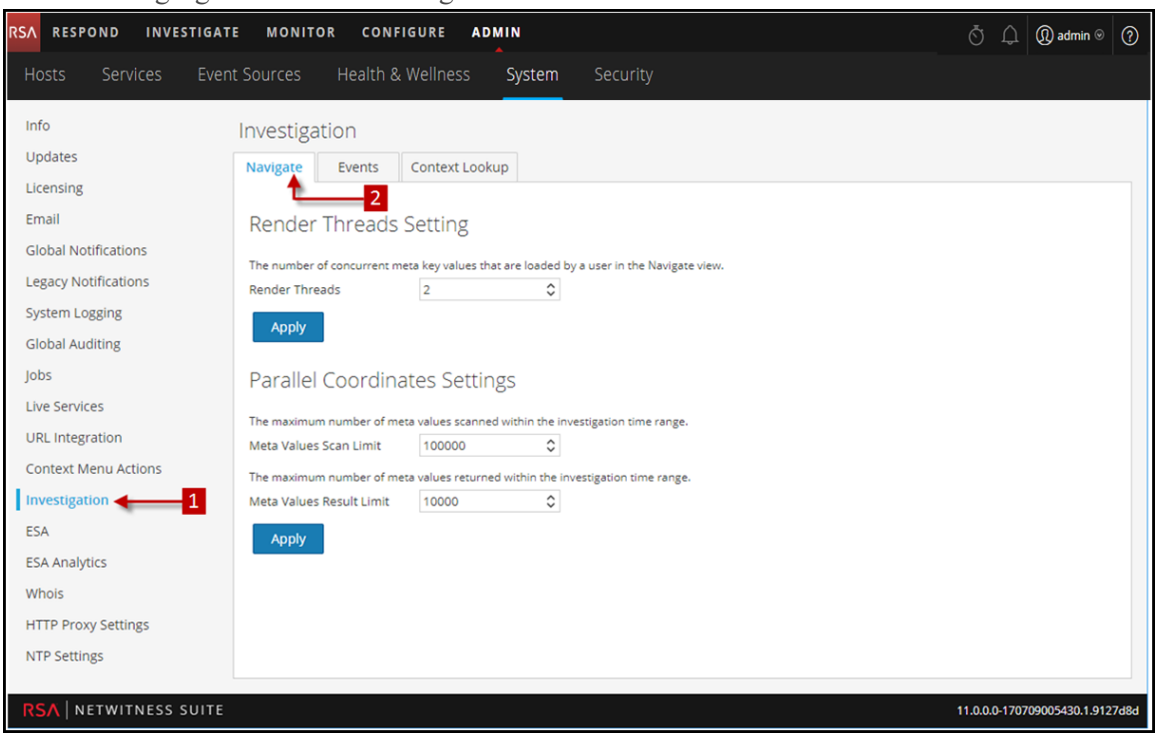
Quick Look

The Investigation Configuration panel has three tabs: Navigate, Events, and Context Lookup.

Though most fields in the tabs have a selection list with specific increments through the range of possible values, you can enter a value within the allowed range manually. An invalid entry is signaled by the field highlighted in red. When valid values are selected, clicking Apply in a given section puts the changes into effect immediately.

Navigate Tab

The following figure shows the Navigate tab.



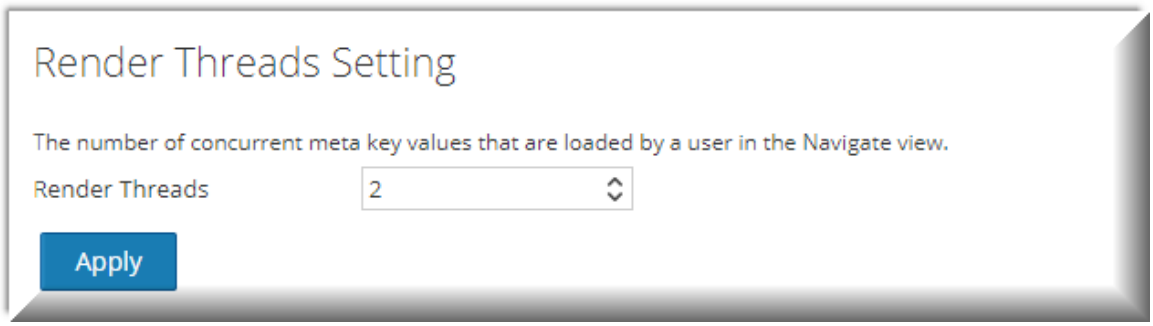
1 Displays the Investigation Configuration Panel.

2 Displays the Navigate Tab.

The Navigate tab has two sections: Render Threads Setting and Parallel Coordinates Settings.

Render Threads Setting

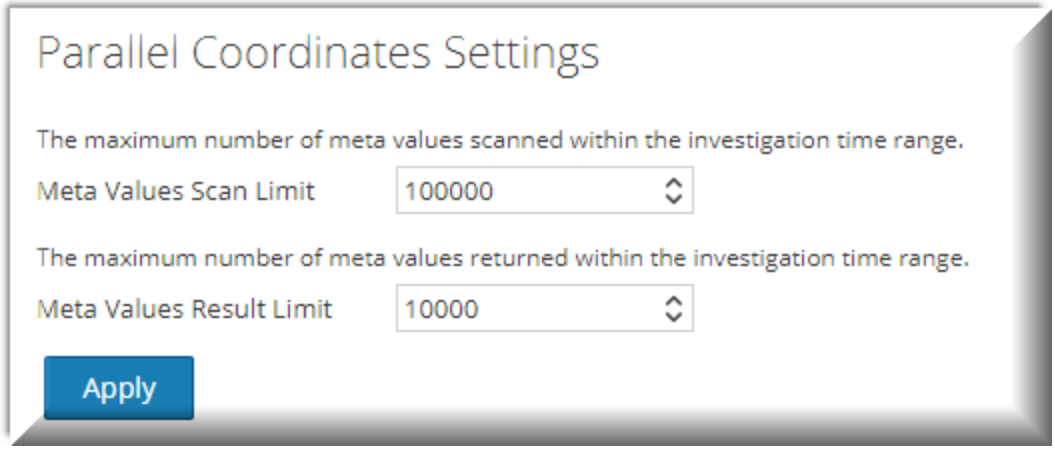
The Render Threads Setting is a selectable value between 1 and 20, which defines the number of concurrent (Values) loads in the Navigate view. The default value is 1.



Parallel Coordinates Settings

The Parallel Coordinates Settings apply to the Parallel Coordinates visualization in the Navigate view. There is a fixed limit on the amount of data that can be rendered as a parallel coordinates chart. In NetWitness Suite the administrator can configure parallel coordinates limits here.

Note: For better performance, recommended settings are **Meta Values Scan Limit: 100000** and **Meta Values Result Limit: 1000-10000**.



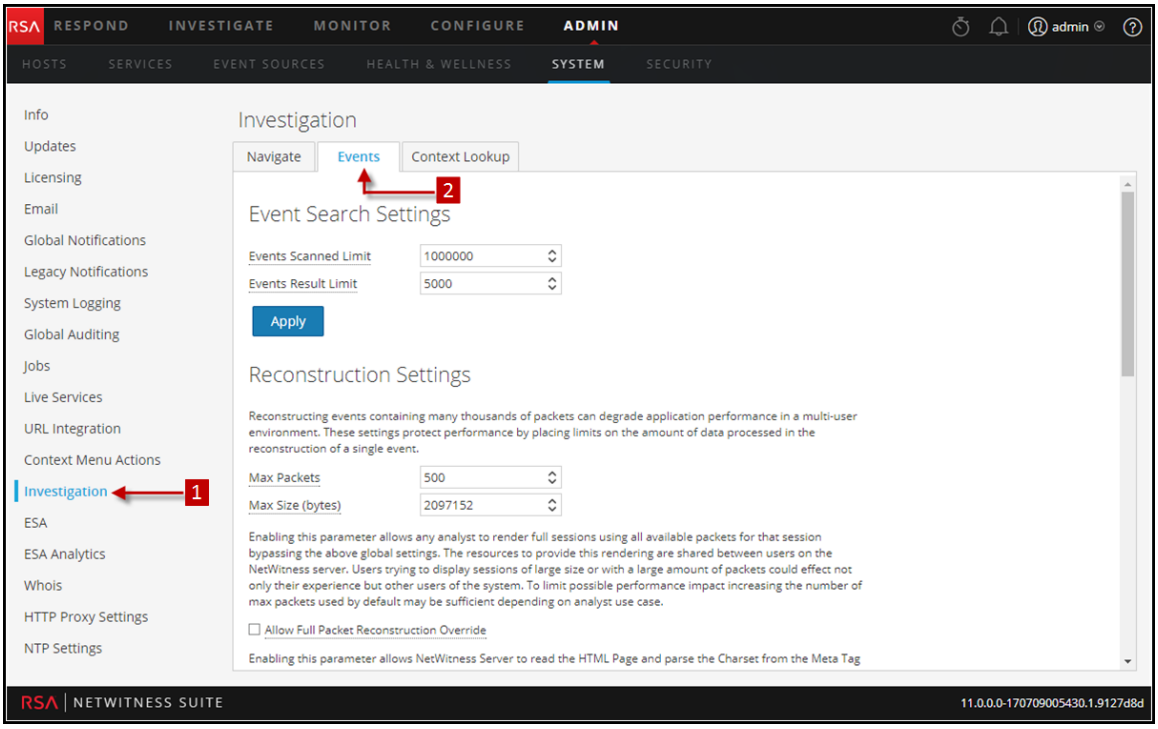
The following table describes the Parallel Coordinates Settings.

Parameter	Description
Meta Values Scan Limit	The maximum number of meta values scanned within the Investigation time range the analyst has selected in the Navigate view. Possible values are in the range of 1,000 to 10,000,000. The default value is 100,000.
Meta Values Result Limit	The maximum number of meta values returned within the Investigation time range the analyst has selected in the Navigate view. Possible values are in the range of 100 to 1,000,000,000. The default value is 10,000.

Quick Look

Events Tab

The following figure shows the Events tab.



Procedures associated with this panel are provided in Standard Procedures.

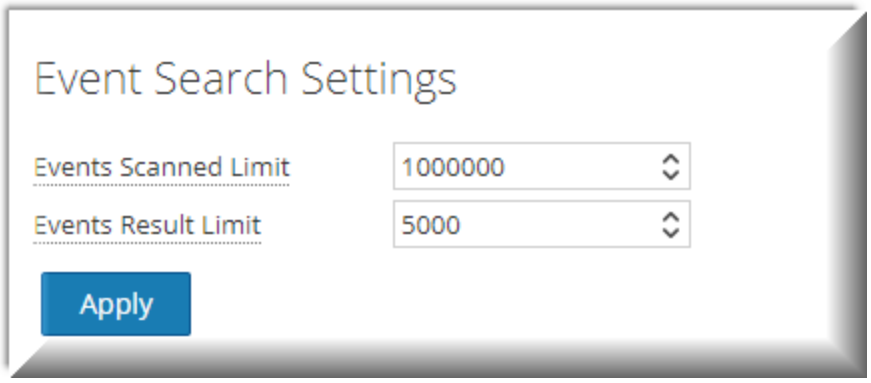
1 Displays the Investigation Configuration Panel.

2 Displays the Events Tab.

The Events tab provides configurable settings that affect the investigation of events. This tab has four sections: Event Search Settings, Reconstruction Settings, Web View Reconstruction Settings, and Reconstruction Cache Settings.

Event Search Settings

The Event Search Settings help to limit the number of events scanned when searching in the Events view.



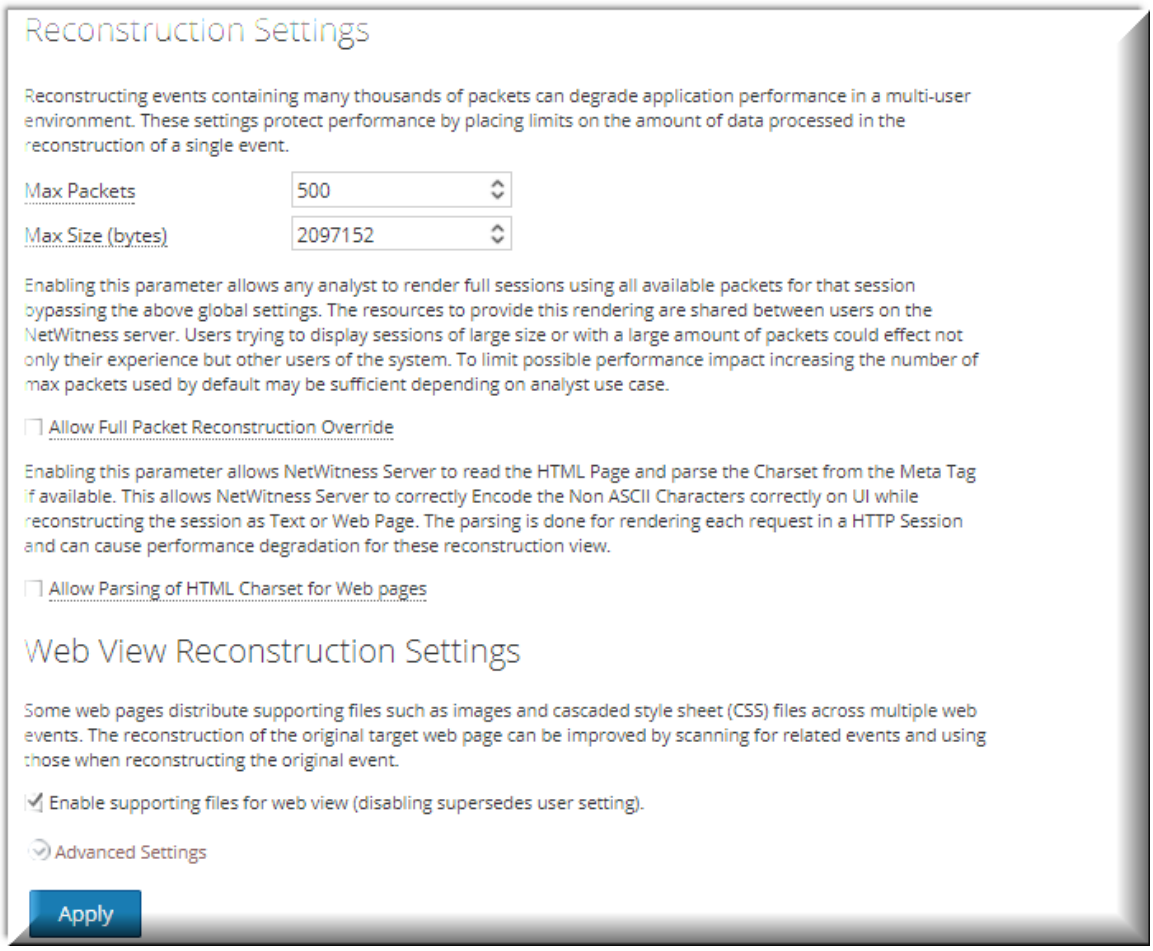
The following table describes the Event Search Settings.

Parameter	Description
Events Scanned Limit	The maximum number of events to scan when searching in the Events view.
Events Result Limit	The maximum number of results to return when searching in the Events view.

Reconstruction Settings

As analysts reconstruct sessions that they are investigating, some events can be very large and contain many thousands of source packets. Reconstructing these sessions, especially in a multi-user environment, can degrade application performance. The Reconstruction Settings allow an administrator to limit the number of packets and the size of a single event during reconstruction.

Note: An override to the Reconstruction Settings section is configurable for web views (under Web View Reconstruction Settings).



The following table describes the Reconstruction Settings features.

Parameter	Description
Maximum number of packets for a single event	This setting protects performance by placing a limit on the number of packets processed for a single event reconstruction. Possible values are in the range from 100 to 10,000 packets, using manual entry or increments of 100 from the selection list. The default value is 100 packets.

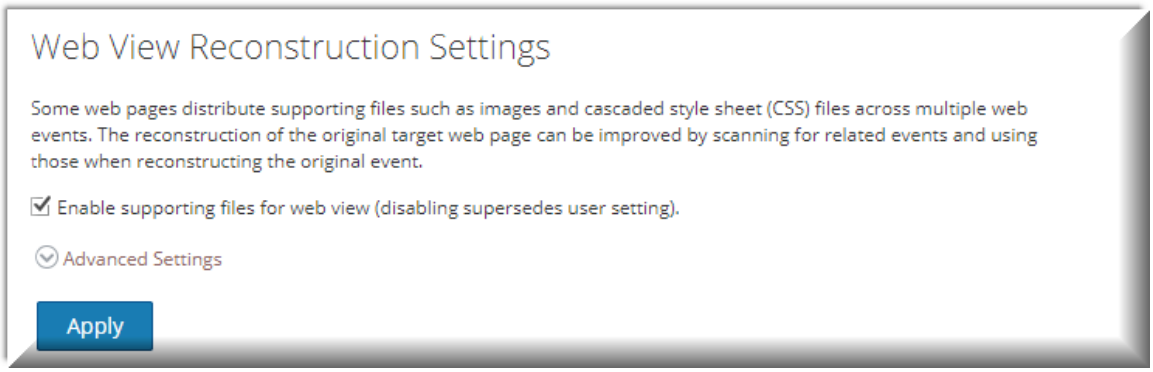
Parameter	Description
Maximum size, in bytes of a single event	This setting protects performance by placing a limit on the maximum size, in bytes, of a single event reconstruction. Possible values are in the range from 102,400 to 104,857,600 bytes, using manual entry or increments of 10,240 from the selection list. The default value is 2,097,152 bytes.
Allow Full Packet Reconstruction Override	When this checkbox is selected, the analysts is provided with a Use More Packets button in the Reconstruction Panel. This enables the NW Server to regenerate events using all the packets available in the Event.
Allow Parsing of HTML Charset for Web pages	This option allows the NetWitness Server to identify the web page encoding defined in the HTML meta tag instead of the HTTP header. The default setting is disabled.

Web View Reconstruction Settings

The Web View Reconstruction Settings allow an administrator to configure settings that improve the reconstruction of a web view by scanning and reconstructing related events that contain the same supporting files. When NetWitness Suite is reconstructing a web view that spans multiple events, it is possible to improve the reconstruction of the target event by scanning and reconstructing related events that contain the same supporting files, such as images and cascaded style sheet (CSS) files.

- The only related events scanned are HTTP service type events with the same source address as the target event, and a time stamp within a specified time range before and after the target event.
- The maximum number of related events to scan is configurable.

Clicking on the Advanced Settings option displays all configurable settings in this section.



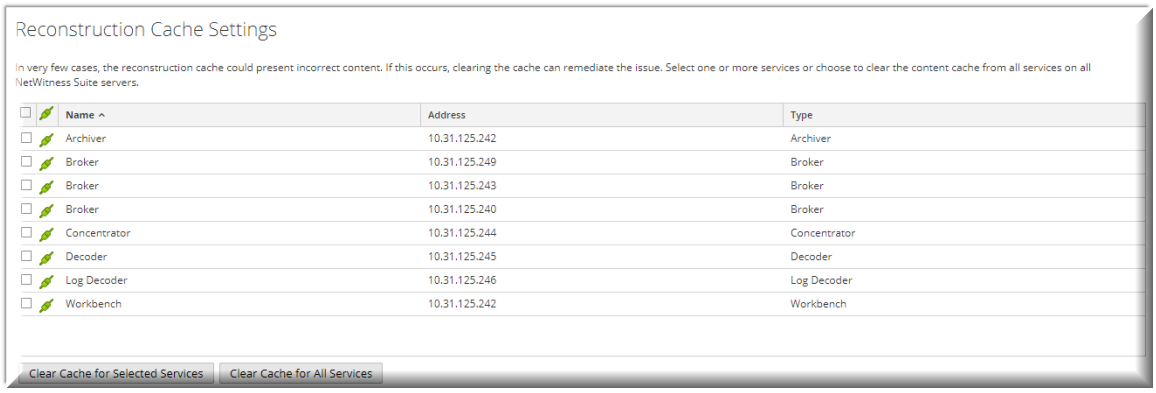
The following table describes the Web View Reconstruction Settings.

Parameter	Description
Enable supporting files for web view	This option determines how web views that have related data in other sessions are reconstructed. The default setting is enabled. When enabled, supporting files from related events can be used in the reconstruction of web views. Additional settings for calibrating the performance are enabled in this section, and Analysts have the option to enable CSS use in reconstructions. When disabled, supporting files from related events are not used and the setting for analysts to enable CSS use in reconstructions is disabled.
Time Range to Scan Related Events	Available when **Enable supporting files for web view** is checked. Configures the time range within which NetWitness Suite scans related events that are of the service type HTTP and have the same source address as the target event. This is a value between 0 and 60. • Seconds Before Target Event • Seconds After Target Event

Parameter	Description
Limit the number of related events processed	Allows configuration of the maximum number of related events that NetWitness Suite scans within the specified time range to discover supporting files for the target event. By default, this is disabled. When enabled, the Maximum Related Events field becomes active.
Max Related Events	When **Limit the number of events processed** is enabled, this field specifies the maximum number of related events that NetWitness Suite scans within the specified time range to discover supporting files for the target event. This is a selectable value between 10 and 1,000, using an increment of 100. The default value is 100.
Limit the number of packets and size of each related event	Overrides the general settings for the maximum number of packets and maximum size (in bytes) for individual related events.
Maximum Number of Packets for a Single Related Event	Possible values are in the range from 100 to 10,000 packets, using increments of 100 from the selection list. The default value is 100 packets.
Maximum Size, in Bytes, of a Single Related Event	Possible values are in the range from 102,400 to 104,857,600 bytes, using increments of 10,240 from the selection list. The default value is 524,288 bytes.

Reconstruction Cache Settings

In some cases, the reconstruction cache can present incorrect content; for this reason NetWitness Suite removes reconstructions that are older than a day from the cache. The cache is cleaned every day at midnight. Between the daily cache cleanings, certain actions may result in stale cache being used for a reconstruction, and if the need arises, administrators can manually clear cache for one or more services that are connected to the current NetWitness Server.



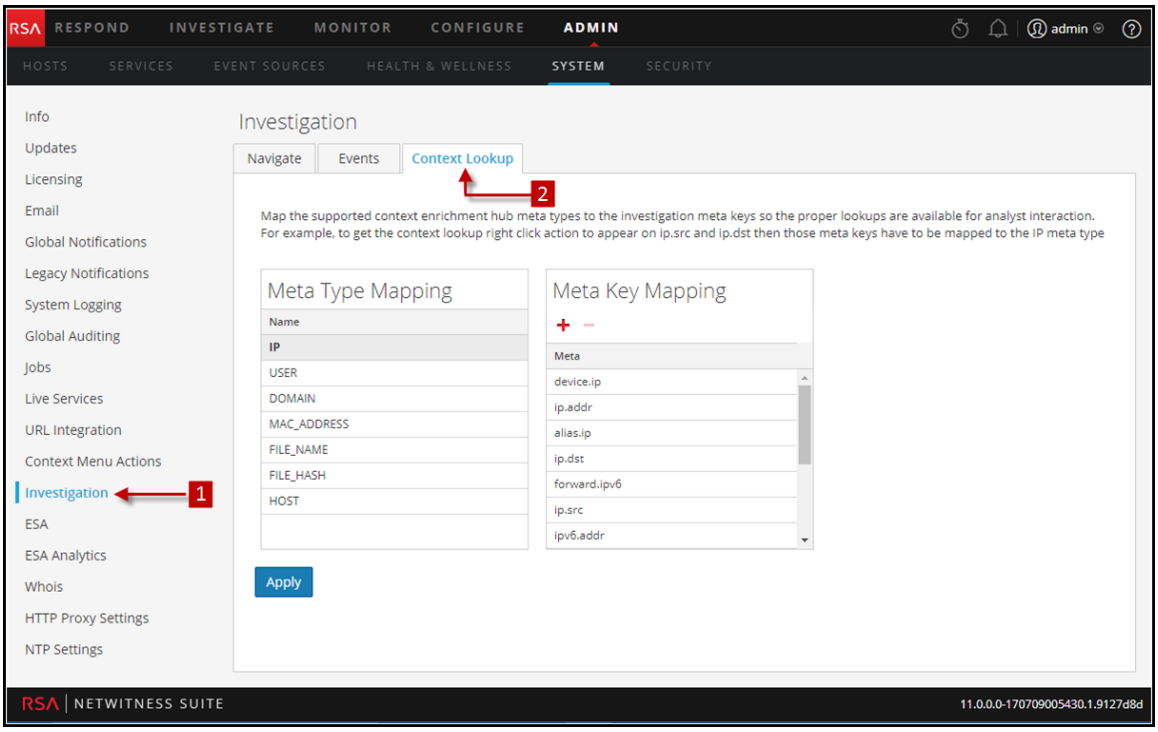
The following table describes the Reconstruction Cache Settings features.

Feature	Description
Selection box	Selection box in individual rows and in the title bar allow selection of one or more, or all services that need to have cache cleared manually.
Clear Cache for Selected Services	Clears the reconstruction cache for each selected service.
Clear Cache for All Services	Clears the reconstruction cache for all services.

Quick Look

Context Lookup Tab

The following figure shows the Context Lookup tab.



Procedures associated with this panel are provided in "Manage Meta Type and Meta Key Mapping" in the *Context Hub Configuration Guide*.

1 Displays the Investigation Configuration Panel.

2 Displays the Context Lookup Tab.

The Context Lookup tab enables the administrator to configure the Investigation meta keys and meta type mapping. The administrator can add or remove meta keys found in Investigation to the list of meta types supported by Context Hub service. NetWitness Respond and Investigate use these default mappings for context lookup. For information about adding meta keys, see "Configure Settings for a Data Source" in the *Context Hub Configuration Guide*.

Caution: For the Context Lookup to work correctly in the Respond and Investigate views, RSA recommends that when mapping meta keys in the ADMIN > SYSTEM > Investigations > Context Lookup tab, you add only meta keys to the Meta Key Mappings, not fields in the MongoDB. For example, `ip.address` is a meta key and `ip_address` is not a meta key (it is a field in the MongoDB).

The following table describes the features of the Context Lookup tab.

Feature	Description

Feature	Description
+	Adds an meta key to the selected meta type supported by Context Hub.
−	Deletes the meta key from the selected meta type.
Apply	Saves the changes made to the Context Lookup tab.

Live Services Configuration Panel

Live Services Configuration Panel introduces the features for setting up your Live account and the CMS server connection.

Live Account consists of two sections, namely RSA Live Status and Download Live Feedback Activity Log. **Sign In** by entering your Live Account credentials to access the Live Services. To activate your Live account for NetWitness Suite, please contact RSA Customer Care. When you have confirmation that your Live account has been set up, you can configure the CMS server connection as described in Configure Live Services Settings

The Live Services panel provides the user interface for:

- The Live account
- The Live Content update schedule and preferences for notification of updates
- Participation in Live Feedback
- Sharing Live Content Usage Details
- RSA Live Connect (Beta)

New Features Enabled Dialog

When you log onto NetWitness Suite for the first time, you will be prompted with **New Features Enabled** dialog.

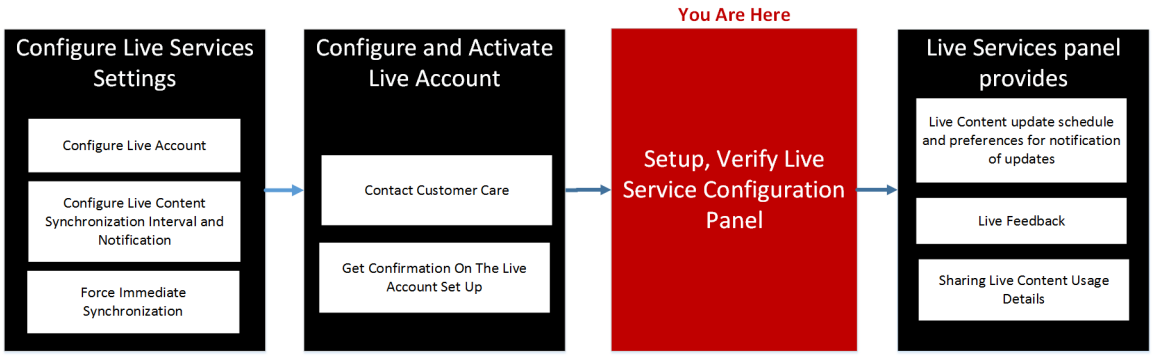
Feature	Description
Accept	Clicking Accept indicates that you agree to the following: • Participate in Live Feedback • Allow NetWitness Suite to send RSA the usage metrics and version of NW hosts about your environment to RSA, provided a Live Account is configured. • Receive threat intelligence data from Live Connect.
View Settings	Clicking **View Settings** redirects you to the Live Services UI to view the settings. If you have not configured the Live Account, a masked screen is displayed.

For information on Live Feedback, see Live Feedback Overview

For information on Analyst Behaviors and Data Sharing, see the "NetWitness Suite Feedback and Data Sharing topic in the *Live Services Management Guide*.

For information on Live Connect Threat Insights, see Configure Live Services Settings

Workflow



What do you want to do?

Role	I want to ...	Show me how
Administrator	Configure Live Account, CMS Server Connection	Configure the Email Settings as Notification Server
Administrator	Upload Data to RSA for Live Feedback	Upload Data to RSA for Live Feedback
Administrator	Setup, Verify Live Service Configuration Panel	Live Services Configuration Panel
Administrator	Overview On Live Feedback	Live Feedback Overview

Related Topics

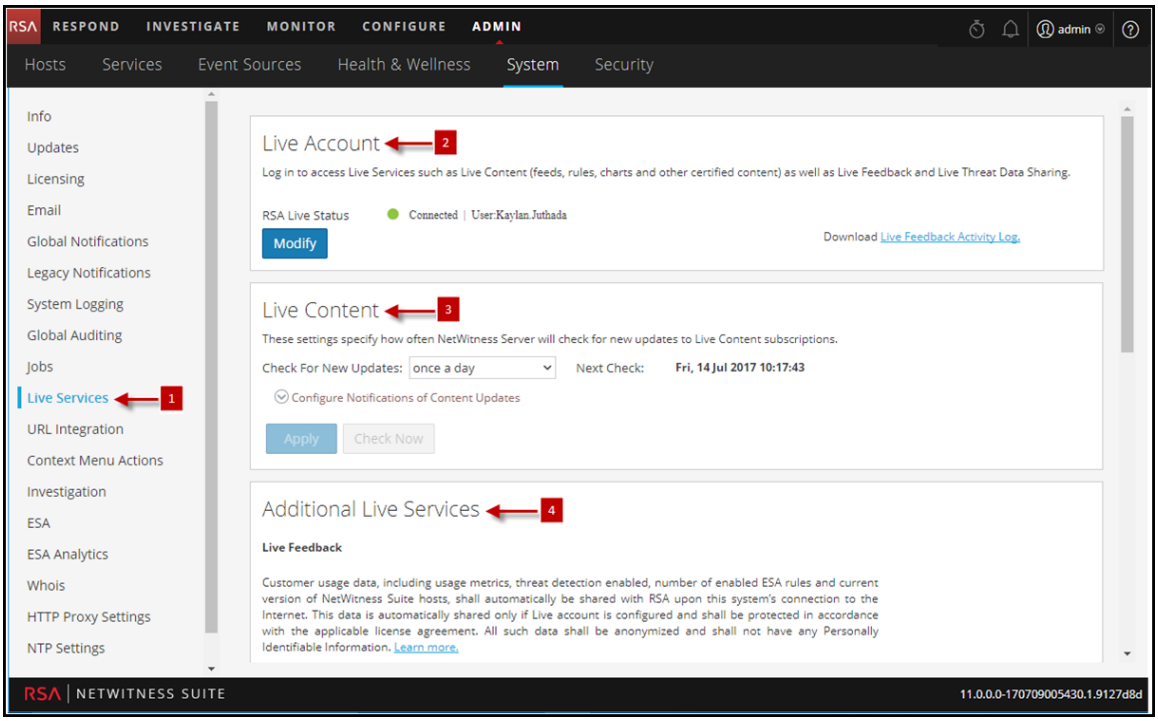
- Live Services Management Guide

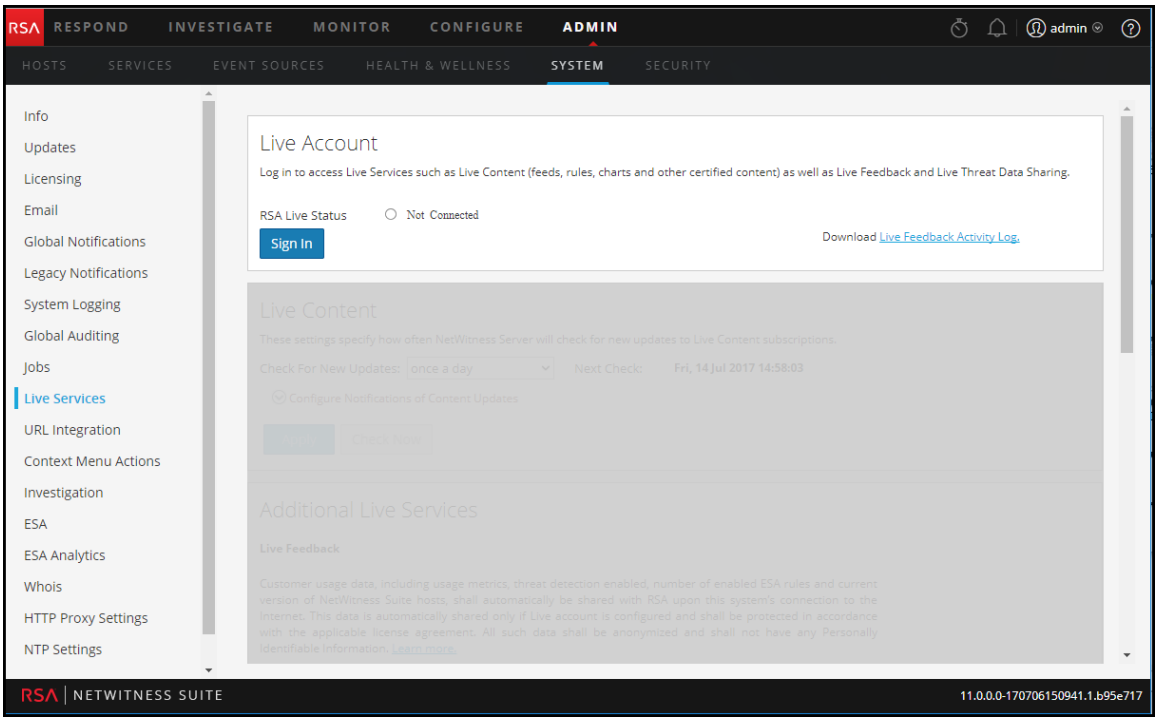
Live Services Quick Look

You access this view in the **ADMIN > System > Live Services**.



1	Displays the Live Services Configuration Panel.
2	Enter Live Account Credentials with the help of Customer Care.
3	Provides updates on Live Content.
4	Additional Live Services provide Live feedback.

Note: If you are not signed in with your Live Account credentials, a masked screen is displayed as shown here.



The Live Configuration panel has three sections: Live Account, Live Content, and Additional Live Services.

Live Account Section

In the **Live Account** section, you must enter the Live credentials. The information needed to set up the user's Live account consists of the Username, Password, and Live URL for the RSA Content Management System. This information is provided by Customer Care.

The following table describes the Live Account section features.

Feature	Description
Host	The Live URL for the Content Management System. The default value points to the RSA CMS at **cms.netwitness.com**.
Port	The communications port for Live to send requests to the Content Management System. The default value for this field is **443**, which is the communications port on the Content Management System.
SSL	Allows the user to communicate via SSL.
Username	The Live account user name as provided by RSA Customer Care.
Password	The Live account user password as provided by RSA Customer Care.

Feature	Description
Test connection	Tests if the connection is successful or not.
Apply	Saves and applies the configuration.

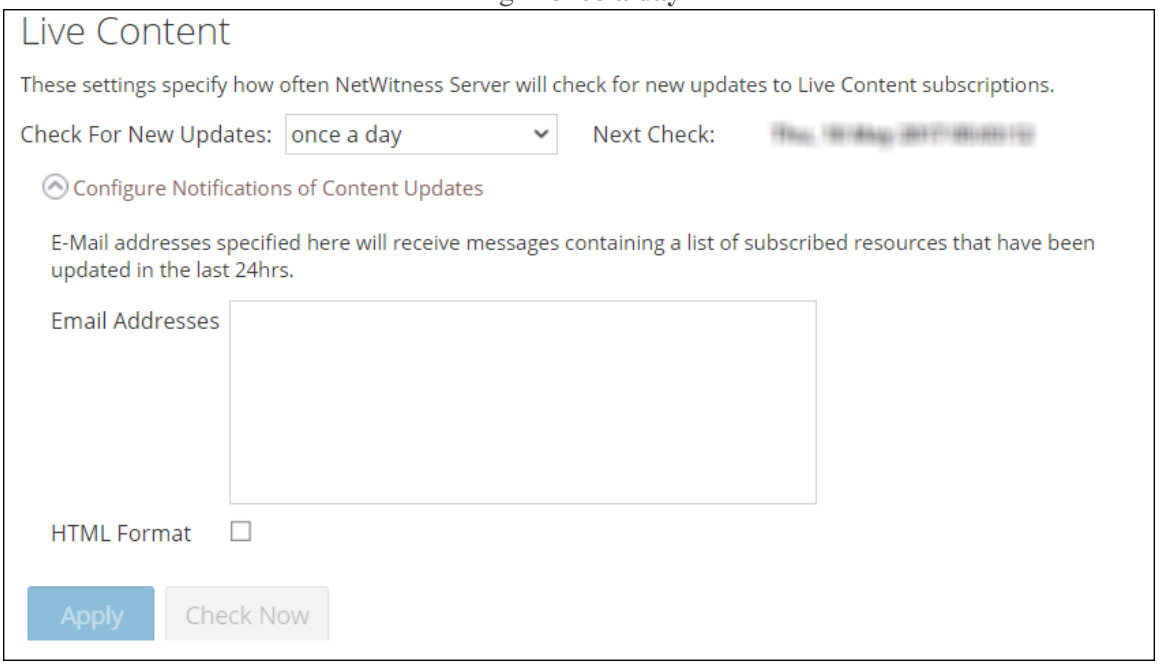
The Live Account section provides an option to download and share the Live Feedback historical data by clicking Live Feedback Activity Log.

For more information about how to download historical data, see Upload Data to RSA for Live Feedback

Live Content Section

You can configure the Live Content Synchronization interval and notification at which NetWitness Suite checks for new updates to Live Content:

Use the **Check for New Updates** field to change the interval. Select an interval from the drop-down list. The default value for this setting is **once a day**.



The following table describes the Live Content features.

Feature	Description
Check for new updates	This setting dictates how often NetWitness Suite checks for new updates to Live Subscriptions and synchronizes subscribed resources and tags: • once a day • twice a day • four times a day • every hour • every other hour • every half hour The default value for this setting is once a day.
Next Check	Displays the time and date of the next scheduled Live synchronization based on the configured interval for checking.
Email Addresses	Email addresses specified here receive messages containing a list of subscribed resources that have been updated in the last 24 hours.
HTML format	Specifies the format of email messages. • Checked = HTML • Not checked = text
Check Now	Instead of waiting for the next scheduled resource cycle, this option forces Live to begin immediate synchronization of the subscribed resources in this instance of NetWitness Suite. **Caution:** Use this feature with caution because synchronization can cause a parser reload if a Lua Parser or Flex Parser is deployed in the update cycle. This is acceptable once or twice a day, but a number of back-to-back parser reloads can cause packet loss at the Decoder. If this is the initial setup and you haven't configured Live resource subscriptions, do not Synchronize Now. Wait until you have configured subscriptions.
Apply	Applies the changed configuration to the subscription synchronization behavior. The changes become effective immediately. The **Next Live synchronization is scheduled for** field is updated if the time changed.

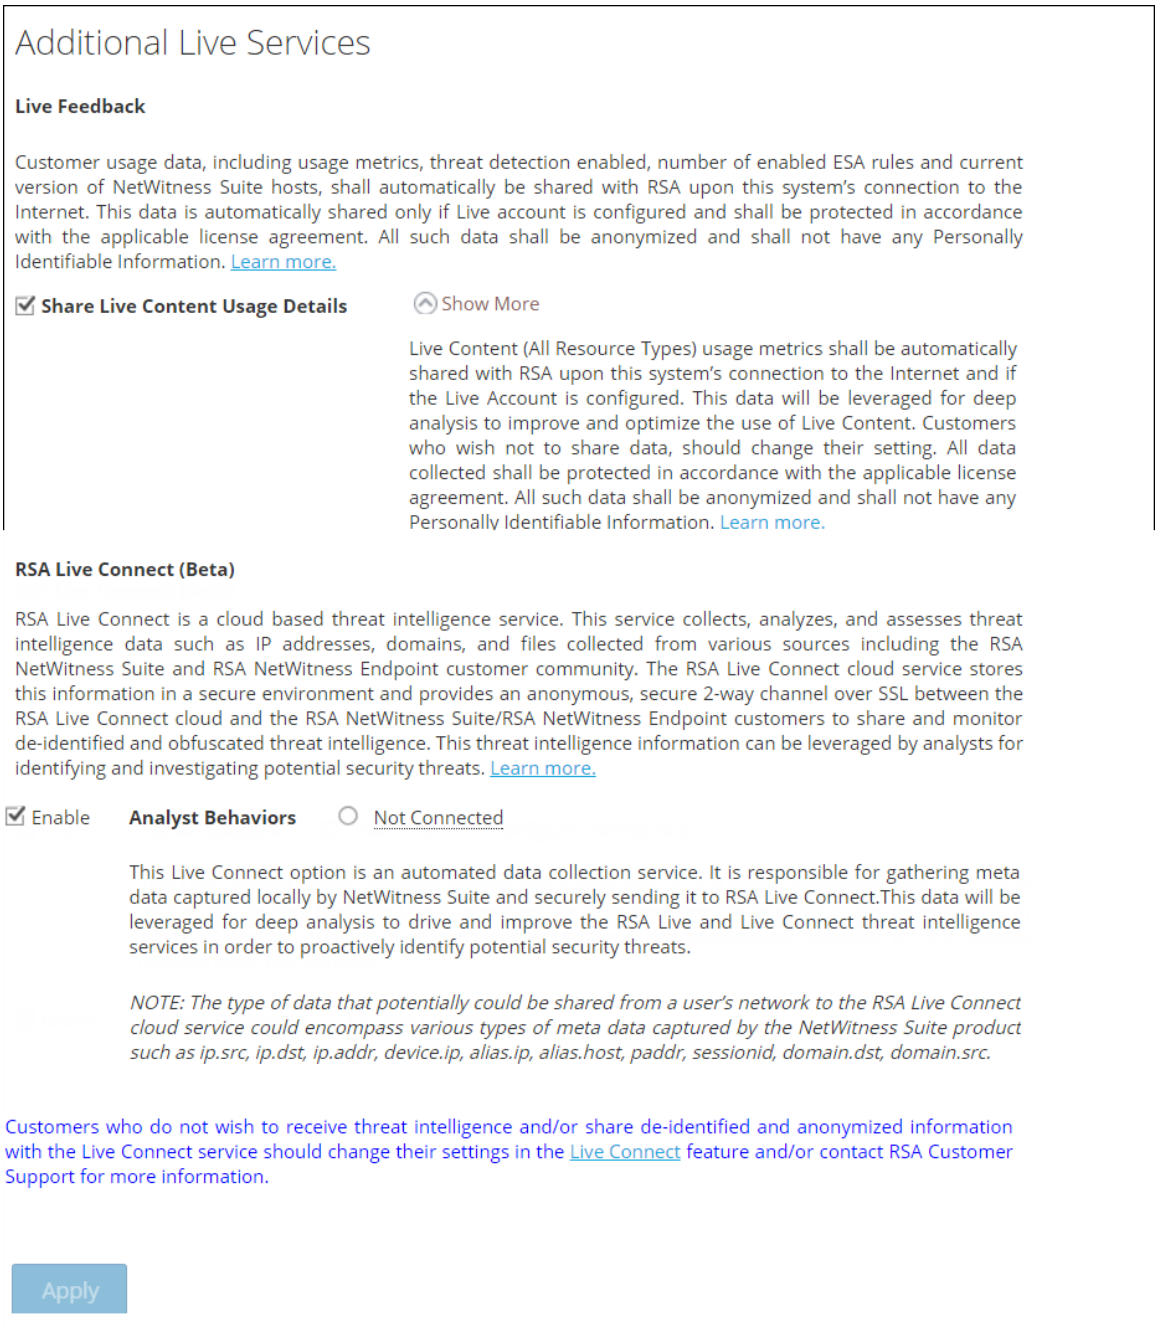
Force Immediate Synchronization

To force immediate synchronization, click **Check Now**. NetWitness Suite checks for updates in subscribed resources.

Instead of waiting for the next scheduled resource cycle, this option forces Live to begin immediate synchronization of the subscribed resources in this instance of NetWitness Suite. One use for this is to see the immediate impact of a configuration change. For example, a new service has been added, or new resources have been toggled for automatic deployment. The scheduled synchronization could take place hours later if Live Services is set to synchronize a few times a day.

Caution: Synchronization can cause a parser reload if a Flex Parser is deployed in the update cycle. This is acceptable once or twice a day, but a number of back-to-back parser reloads can cause packet loss at the Decoder. If this is the initial setup and you haven't configured Live resource subscriptions, do not Synchronize Now. Wait until you have configured subscriptions.

Additional Live Services



Note: Click on Learn more to know more about the data RSA is collecting. For more information, see Live Feedback Overview

The following tables describes the Additional Live Services features.

Feature	Description

Live Feedback	Lists the types of data RSA is collecting:
	• Product Name
	• Product Version
	• Product Instance
	• Activation Key
	• Details of each Component such as:
	  • ID
	  • Name
	  • Version
	  • Instance ID
	• Metrics for each component

Share Live Content Usage Details)	Enables NetWitness Suite to send anonymous, technical data about the content usage metrics to RSA. This option is enabled by default.
RSA Live Connect	Provides more information about Live Connect service and configuring Live Services.
Enable (Threat Insights)	Enables Threat Insights feature where Live Connect is added as a data source for Context Hub service and the analyst can pull threat intel data during investigation. Ensure that context hub is already configured before enabling this feature. This option is enabled by default (checked).
Enable (Analyst Behaviors)	Enables NetWitness Suite to send anonymous, technical data about your environment to RSA. This option is enabled by default (checked).

Feature	Description
Apply	Applies the configured changes. The changes become effective immediately. **Note:** This option is applicable only for Threat Insights and Analyst Behaviors.

About Live Feedback Participation

When you participate in Live Feedback, it collects relevant information for further improvement. For information on Live Feedback, see Live Feedback Overview.

When you install NetWitness Suite, you will be prompted to participate in Live Feedback. For information, see Configure Live Services Settings

If needed, you can manually download historical usage data and share it with RSA. For information on how to download historical usage data and share it with RSA, see Upload Data to RSA for Live Feedback.

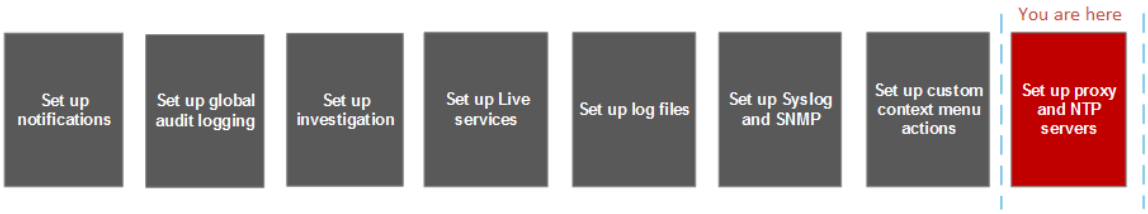
NTP Settings Panel

NTP setting panel is a protocol designed to synchronize the host machine clocks over a network. For more information on NTP see their home page (http://www.ntp.org/).

Note: NetWitness Suite core hosts must be able to communicate with the NW host with UDP port 123 for NTP time synchronization.

You use the**ADMIN** > **System** > **NTP Settings** view to configure one or more NTP servers. After you configure an NTP server, NetWitness Suite uses NTP to synchronize the host machine clocks. You configure multiple NTP servers for Fail Over purposes.

Workflow



What you need to do?

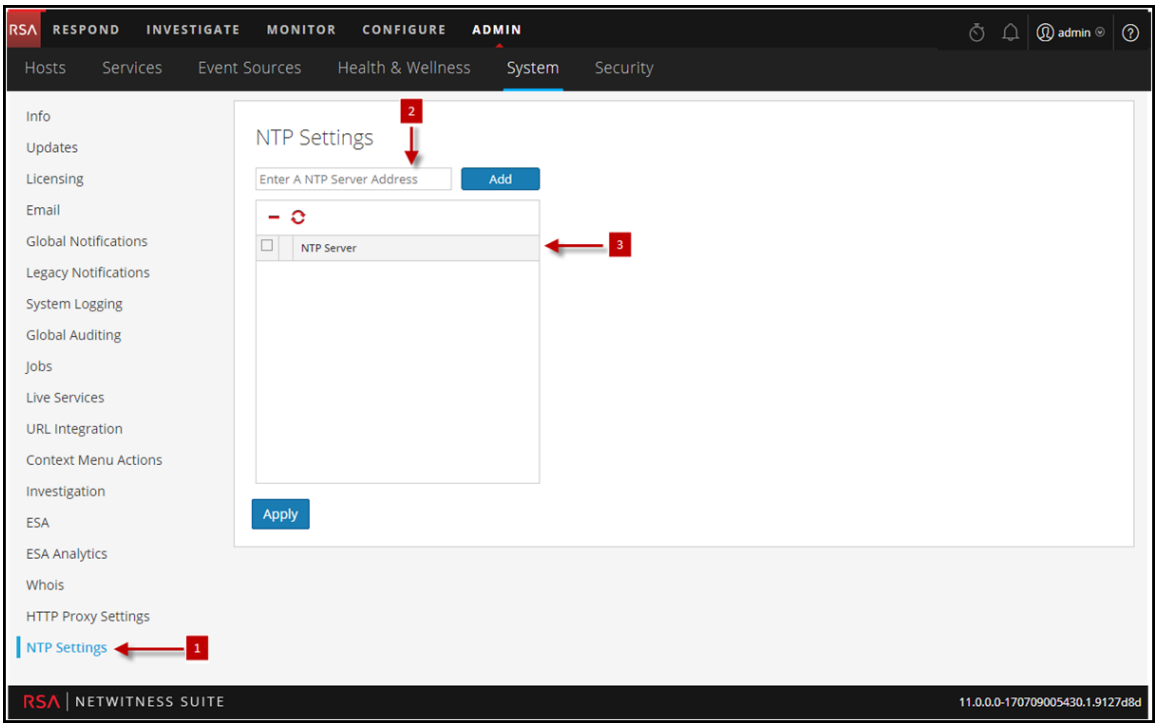
Role	I want to ...	Show me how
Administrator	Add or Modify an NTP Server	Configure NTP Servers

Related Topics

- Configure NTP Servers
- Troubleshooting NTP Server Configuration

Quick Look

The following example illustrates an NTP setting panel. The panel defines how to add NTP server to NTP setting panel.



1. Displays the NTP setting panel.
2. Enter the NTP Server IP Address or hostname.
3. Click on an existing hostname.

The following table describes the settings in the NTP Settings panel.

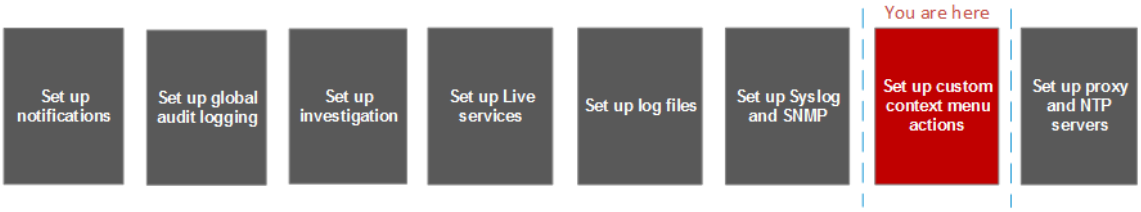
Setting	Description
Add	Enter the NTP Server IP Address or hostname to add the NTP server to NetWitness Suite.
	Delete the selected NTP server.
	Synchronizes the selected NTP server.
	Selects the NTP server that you want to delete or synchronize.

Setting	Description
NTP Server	NTP Server IP Address or hostname. If you click on an existing hostname, NetWitness Suite makes the hostname editable and displays the following command buttons: • **Update** - Applies your edits. • **Cancel** - Cancels your edits.
Apply	Applies the NTP server settings and synchronizes host machine clocks to NTP.

Context Menu Actions Panel

In the Context Menu Actions panel, Administrators can view built-in context menu actions, and add, edit, or delete custom context menu actions that appear as options in a context menu.

Workflow

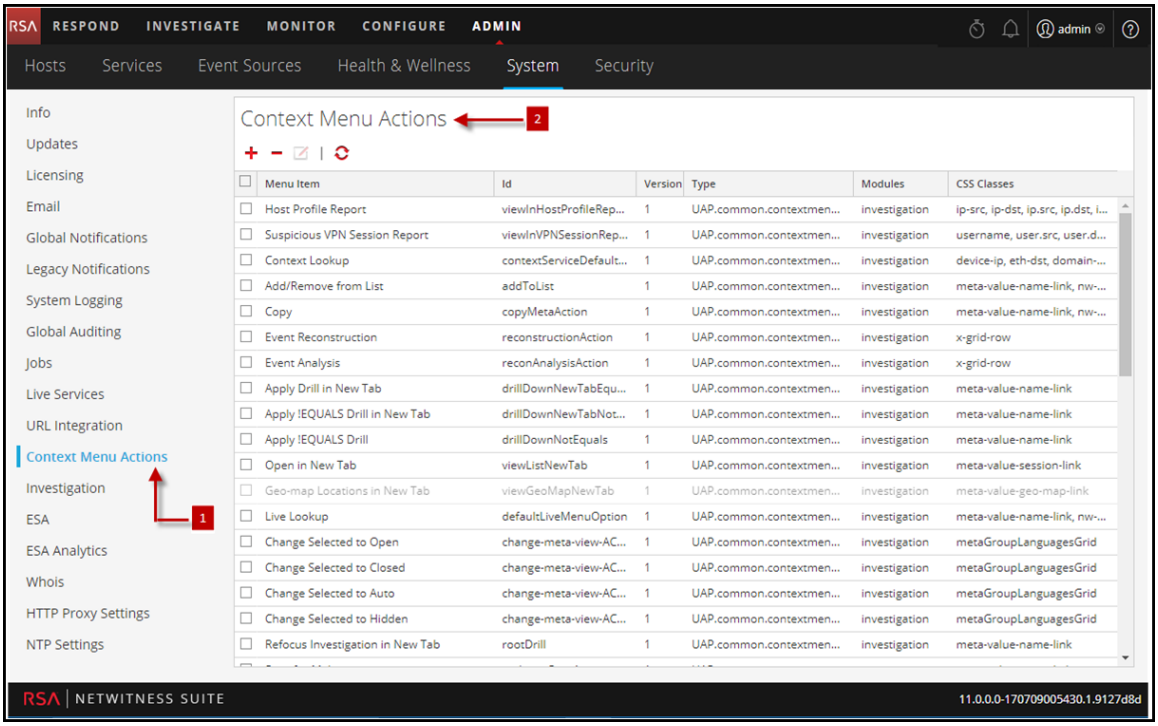


What do you want to do?

Role	I want to ...	Show me how
Administrator	Custom Context Menu Actions panel	Add Custom Context Menu Actions.

Quick Look

The following figure is an example of the Context Menu Actions panel.



1 Displays the Context Menu Actions Panel.

2 Toolbar allows you to Add, Edit, Delete Context Menu Actions.

The Context Menu Actions panel has a list and a toolbar. The following table describes the toolbar options and grid features.

Features	Description
	Displays the Context Menu Configuration dialog, in which you can create a new context action.
	Refreshes the list.
	Deletes the selected context actions. NetWitness Suite does not request confirmation that you want to delete the action. The selected actions are immediately deleted with no opportunity to cancel.
	Displays the Edit Context Action dialog, in which you can edit an existing context action.
Menu Item	The menu item as it appears in the context menu. When creating a context menu action, the parameter is `displayName`. Here is a line of sample code: `"displayName": "User Agent String Lookup”`
ID	The unique ID for the context action. When creating a context menu action, the parameter is `id`. Here is a line of sample code: `"id": "UserAgentStringAction"`
Version	The version number of the context action. When creating a context menu action, the parameter is `version`. Here is a line of sample code: `"version": "1"`

Features	Description
Type	The type of context action. When creating a context menu action, the parameter is `type`. All NetWitness Suite context action types begin with this string: `UAP.common.contextmenu.actions`. The last part of the string identifies the menu within NetWitness Suite, for example, `URLContextAction` or `LivePostContextAction`. Here is a line of sample code: `"type": "UAP.common.contextmenu.actions.URLContextAction"`

Modules	The names of the modules in which the context action is available. Currently all built-in context menu actions are for the Investigation module.
	When creating a context menu action, the parameter is `modules`.
	Here is a line of sample code:
	`"modules": [`
	`"investigation"`
	`],`

Module Classes	The CSS classes that identify the names of the module views in which the context action is available. Currently all built-in context menu actions are for the Investigation module and the non-meta key module classes are described in detail below.
	Here are a few lines of sample code:
	`"moduleClasses": [`
	`"UAP.investigation.navigate.view.NavigationPanel”,`
	`<-- Enabled in Navigate pane-->`
	`“UAP.investigation.events.view.EventGrid”`
	`],`

Features	Description

CSS Classes	The CSS classes to which the context menu action applies. The CSS classes define where the context menu shows up inside investigation when you right-click. When creating a context menu action, the parameter is `cssClasses`.
	Here is a line of sample code:
	`"cssClasses": [`
	`"client"`
	`]`
	Most of the CSS Classes that you can add are meta keys. You can also add certain non-meta key CSS classes. See additional details and examples below.

CSS Classes and Examples

CSS classes can be meta keys and non-meta keys.

Meta Key CSS Classes

One type of CSS class that you can add is meta keys. For meta keys that have a period, change the period to a dash when defining a CSS class. For example, the meta key `alias.host` becomes the CSS class `alias-host`. The meta key `ip.src` becomes the CSS class `ip-src`.

Non-Meta Key CSS Classes

Built-in non-meta key CSS Classes are also available. The classes in the following table define actions and the part of the user interface where the action is available.

CSS Class	Type	Description
`meta-value-session-link`	Action	Open on meta session count number
`meta-value-name-link`	Action	Open on meta value name
`nw-event-value`	Action	Use for reconstruction context actions on meta value
`UAP.investigation.navigate.view.NavigationPanel`	User interface	Applies to Navigate view

CSS Class	Type	Description
`UAP.investigation.events.view.EventGrid`	User interface	Applies to Event View
`UAP.investigation.reconstruction.view.content.ReconstructedEventDataGrid`	User interface	Applies to Event Reconstruction View

Example

This is a commented example of a context menu action to validate the user agent from the Client Application (client) meta key. The comments are removed automatically once applied in the Administration System view. The new menu item is displayed after restarting the browser.

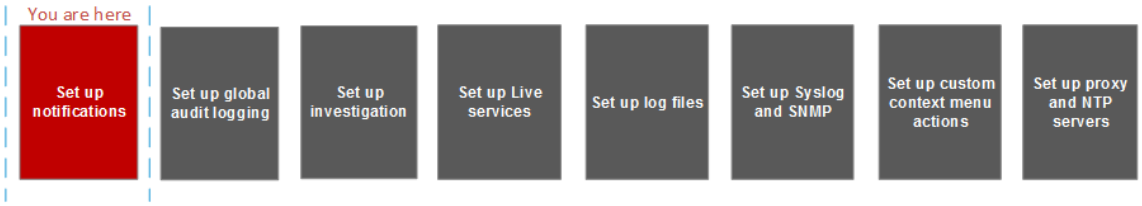
```
{
     "displayName": "User Agent String Lookup”, <!-- What name shows up in NW UI -->
     "cssClasses": [
         “client”  <!-- What meta key to launch from -->
     ],
     "description": "",
     "type": "UAP.common.contextmenu.actions.URLContextAction",
     "version": "1",
     "modules": [
         "investigation"
     ],
     "local": "false",
     "groupName": "externalLookupGroup”, <!-- What group to show link in. Remove line to show in main list -->
     "urlFormat": "http://www.useragentstring.com/?uas={0}&getText=all”, <!-- The {0} gets replaced with whatever was right clicked on -->
     "disabled": "",
     "id": "UserAgentStringAction",
    "moduleClasses": [
         "UAP.investigation.navigate.view.NavigationPanel”, <-- Enabled in Navigate pane-->
        “UAP.investigation.events.view.EventGrid” <-- Enabled in Event View pane -->
     ],
     "openInNewTab": "true",
     "order": "15"
 }
```

Legacy Notifications Configuration Panel

The Legacy Notifications Configuration panel provides the ability to configure syslog and SNMP notification settings. These configurations are used for Entitlement, legacy Event Source Management (ESM), Warehouse Connector monitoring, and Archiver monitoring.

Procedures related to these settings are described in Configure Syslog and SNMP Settings.

Workflow



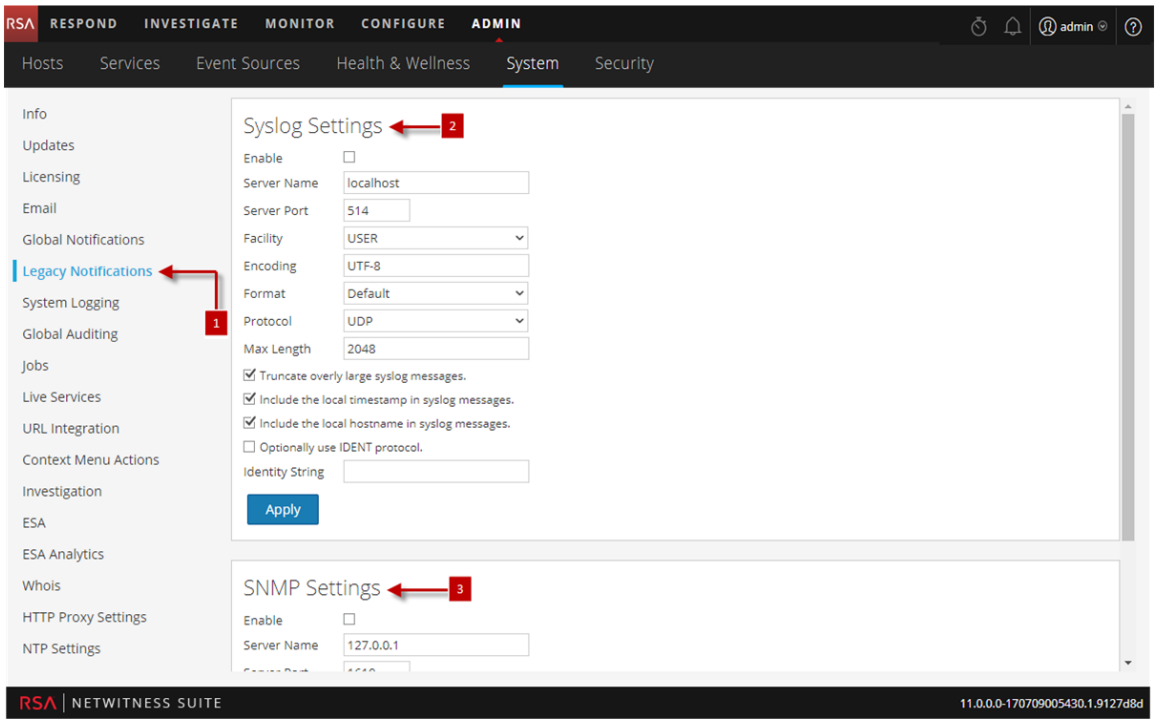
What do you want to do?

Role	I want to ...	Show me how
Administrator	Configure Syslog Settings	Configure Syslog and SNMP Settings
Administrator	Configure SNMP Settings	Configure Syslog and SNMP Settings

Related Topics

- Configure Syslog and SNMP Settings

Quick Look



1	Displays the Legacy Notification Configuration Panel.
2	Allows the user to configure syslog notifications for Entitlement, legacy Event Source Management (ESM), Warehouse Connector monitoring, and Archiver monitoring.
3	Allows the user to configure SNMP notifications for Entitlement, legacy Event Source Management (ESM), Warehouse Connector monitoring, and Archiver monitoring.

The Legacy Notifications Configuration Panel consists of two sections: Syslog Settings and SNMP Settings.

Syslog Settings

The following table describes the available options for configuring syslog notifications for Entitlement, legacy Event Source Management (ESM), Warehouse Connector monitoring, and Archiver monitoring.

Feature	Description
Enable	Enables the syslog settings configured here.

Feature	Description
Server Name	Specifies the host where the target syslog process is running.
Server port	Specifies the port where the target syslog process is listening.
Facility	Specifies the designated syslog facility to use for all outgoing messages. Possible values are KERN, USER, MAIL, DAEMON, AUTH, SYSLOG, LPR, NEWS, UUCP, CRON, AUTHPRIV, FTP, LOCAL1 through LOCAL7.
Encoding	Specifies the encoding to use for text in syslog messages, for example, UTF-8.
Format	Specifies the message format. Possible values are: Default, PCI DSS, or SEC.
Protocol	Specifies the communications protocol used when sending syslogs: UDP or TCP. By default, the UDP protocol is selected.
Max length	Specifies the maximum length in bytes of any syslog message. The default value is **2048**. Messages that exceed the maximum length are truncated when the **Truncate overly large syslog messages** checkbox is selected.
Truncate overly large syslog messages	When checked, any messages exceeding the maximum length are truncated.
Include the local timestamp in syslog messages	When checked, NetWitness Suite includes the local timestamp in messages.
Include the local hostname in syslog messages	When checked, NetWitness Suite includes the local hostname in syslog messages.
Optionally use IDENT protocol	When checked, NetWitness Suite prepends the identity string to outgoing syslog alerts.

Feature	Description
Identity string	This is an identity string to be prepended to each syslog alert. If the string is blank, no identity string is prepended to the outgoing syslog alerts. You can use this to identify the source of the alert. Users conventionally set it to the name of the program that sends the syslog message.
Apply	Applies the syslog configuration settings.

SNMP Settings

The following table describes the available options for configuring SNMP notifications for Entitlement, legacy Event Source Management (ESM), Warehouse Connector monitoring, and Archiver monitoring.

Feature	Description
Enable	Enables the SNMP settings configured here.
Server Name	Specifies the SNMP trap host.
Server port	Specifies the listening port on the SNMP trap host
SNMP version	Specifies the SNMP version, **v1** or **v2c**.
Trap OID	Specifies the object ID for the SNMP trap on the trap host that receives the audit event. The default value is **0.0.0.0.0.1**.
Community	Specifies the community string used to authenticate on the SNMP trap host, the default value is **public**.
Enable	Enables SNMP notifications as configured here.
Apply	Applies the SNMP configuration settings.

NetWitness Suite System Maintenance

This guide encompasses the tasks that administrators perform after initial network setup to allow NetWitness Suite to manage hosts and services in the network, maintain and monitor the network, manage jobs, and tune performance.

The following diagram shows the different system maintenance tasks available to you.

The following topics describe these tasks:

- Best Practices
- Monitoring Health and Wellness of NetWitness Suite
- Displaying System and Service Logs
- Maintaining Queries Using URL Integration
- Managing NetWitness Suite Updates
- FIPS Support
- Troubleshoot NetWitness Suite

Best Practices

Safeguarding Assets with RSA Supplied Policies

The purpose of the RSA Core Policies delivered with NetWitness Suite is to help you safeguarding your NetWitness Suite Domain assets immediately (before you configure rules specific to your environment and your Security Policy).

RSA recommends that you set up email notifications to the appropriate asset owners for these policies as soon as possible. This will notify them when performance and capacity thresholds are crossed so they can take action immediately.

RSA also recommends that you evaluate the Core policies and disable a policy or change its service/group assignments according to your specific monitoring requirements.

Safeguarding Assets with Policies Based on Your Environment

RSA Core Policies are generic and may not provide sufficient monitoring coverage for your environment. RSA recommends that you gather issues over a period of time, not identified by the RSA Core Policies, and configure rules to help you prevent these issues.

Creating Rules and Notifications Judiciously

RSA recommends that you make sure that each rule and policy is necessary before you implement it, if possible. RSA also recommends that you review implemented policies or a regular basis for their validity. Invalid alarms and email notifications can adversely affect the focus of the asset owners.

Troubleshooting Issues

RSA recommends that you review Troubleshooting Health & Wellness and Troubleshoot NetWitness Suite when you receive error messages in the user interface and log files from hosts and services.

Monitoring Health and Wellness of NetWitness Suite

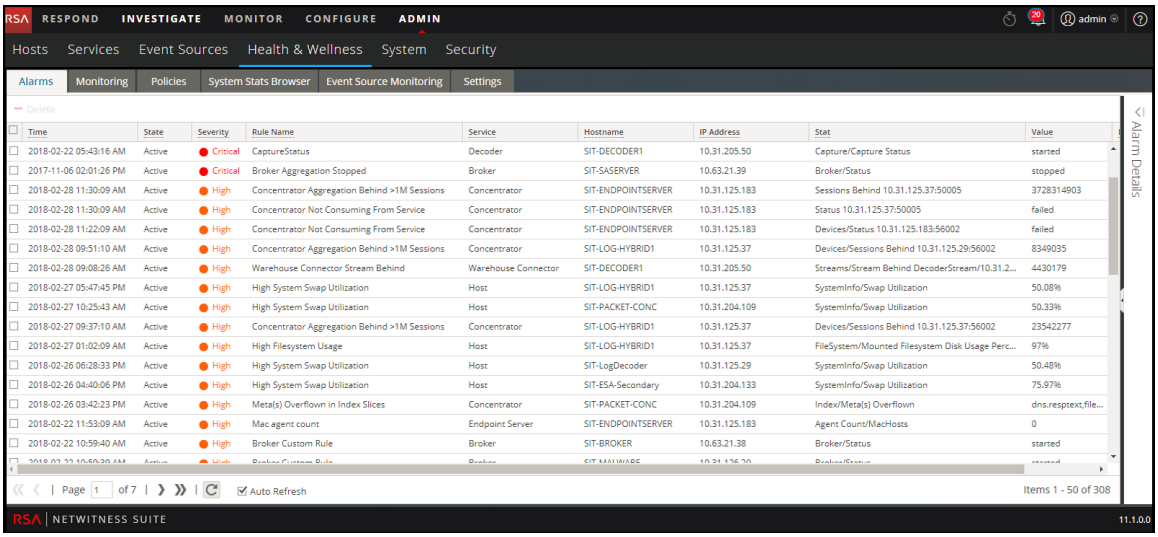
The Health & Wellness module of NetWitness Suite provides the ability to:

- View the current health of all the hosts, services running on the hosts, and various aspects of the hosts' health.
- Monitor the hosts and services in your network environment.
- View details of various event sources configured with NetWitness Suite.
- View system stats for the selected hosts by filtering the views as required.

In addition, you can configure Archiver monitoring and Warehouse Connector monitoring, use the procedures on monitoring host statistics, and work with system logs to monitor NetWitness Suite.

Note: All users have permission to view the entire Health and Wellness interface by default. The Administrator and the Operator roles are the only roles that can manage the Policies view by default. Please refer to the "Role Permissions" topic in the *Security User Management Guide* for a complete list of the default permissions for the NetWitness Suite Interface.

The figure displays the Health & Wellness module of the NetWitness Suite user interface and various sections in the Health & Wellness module.



Manage Policies

Policies are either user-defined or supplied by RSA. A policy defines:

- Services and hosts to which the policy applies.
- Rules that specify statistical thresholds that govern alarms.
- When to suppress the policy.
- Who to notify when an alarm triggers and when to notify them.

For the related reference topics, see NetWitness Suite Out-of-the-Box Policies

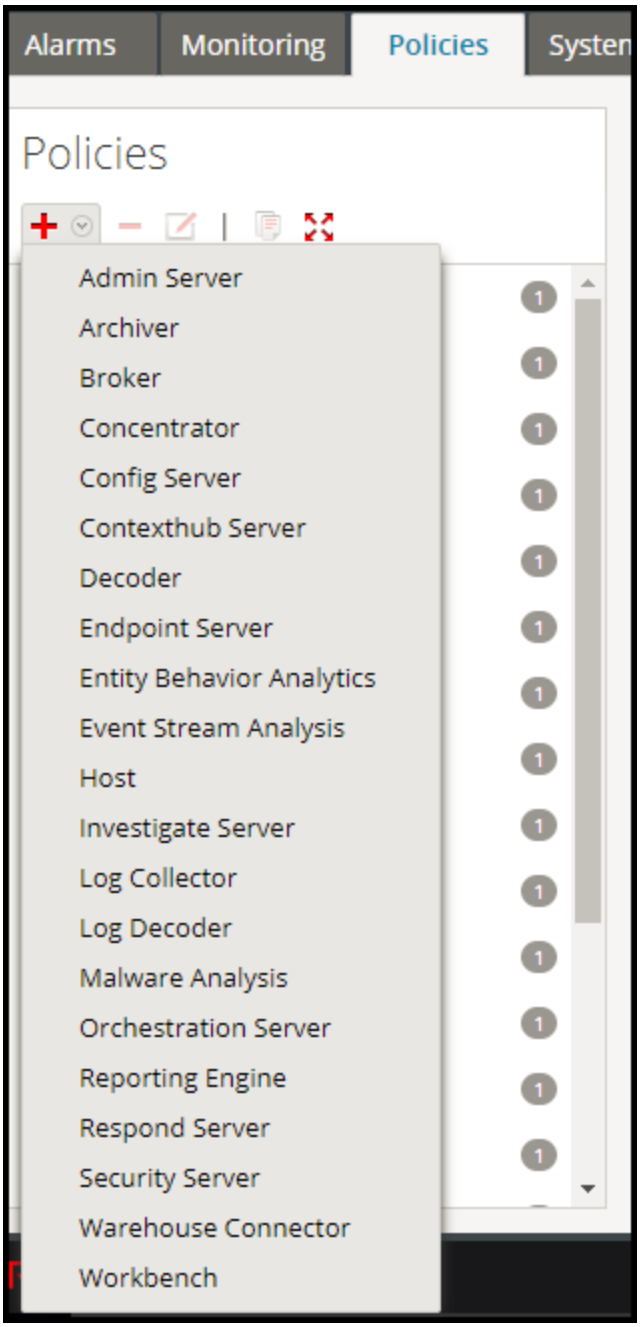
Note: You can now configure a policy to notify Public Key Infrastructure (PKI) certificate expiration status.

Add a Policy

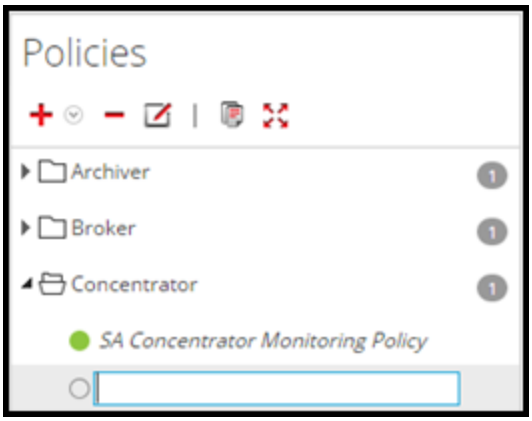
1. Go to **ADMIN > Health & Wellness.**
2. Click **Policies** tab.

   The Policies view is displayed.
3. Click in the **Policies** panel.

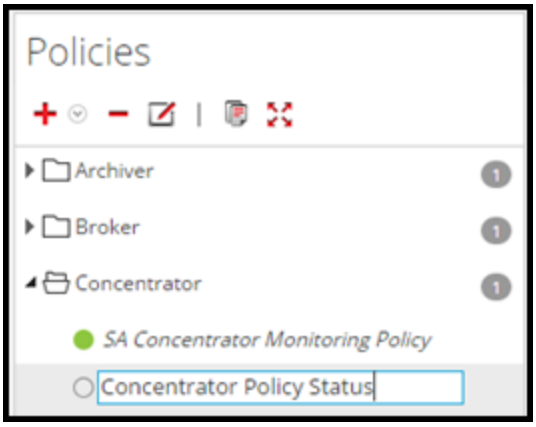
   A list of your hosts and services displays for which you can create health policies.



4. Select a host or service (for example, **Concentrator**).
   For PKI policy, you must select a host (for example, Host).
   The host or service is displayed in the Policies panel with a blank Policy Detail panel.



5. Enter a name for the Policy (for example, **Concentrator Policy Status**) in the **Policies** panel.



The name (for example, **Concentrator Policy Status**) is now displayed as the policy name in Policy Detail panel.

6. Create a Policy in the Policy Detail panel:

   a. Select the **Enable** checkbox.

   b. Add relevant services (in this example, any relevant Concentrator services) that you want to monitor for health statistics.
   For PKI policy, you must select the LOCALHOST to monitor for health statistics.

   c. Add relevant rule conditions you want to configure for the policy.

   d. Suppress enforcement of the policy for the time periods you want.

   e. Add any email notifications you want for the policy.

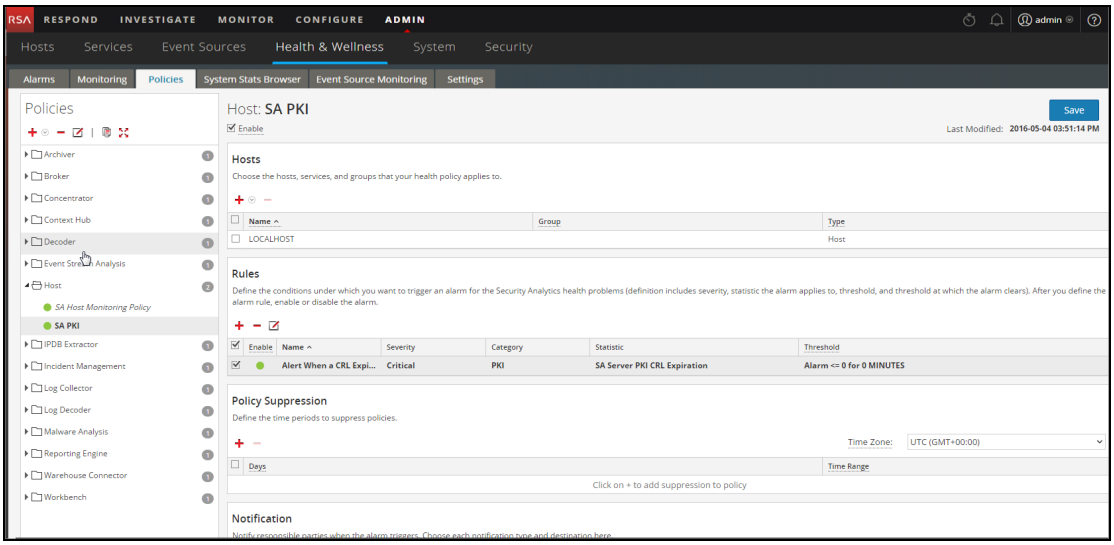
   f. Click **Save** in the Policy Detail panel.

   The Policy is added.

Add Policy Example

Below is the high-level example for configuring PKI policy:

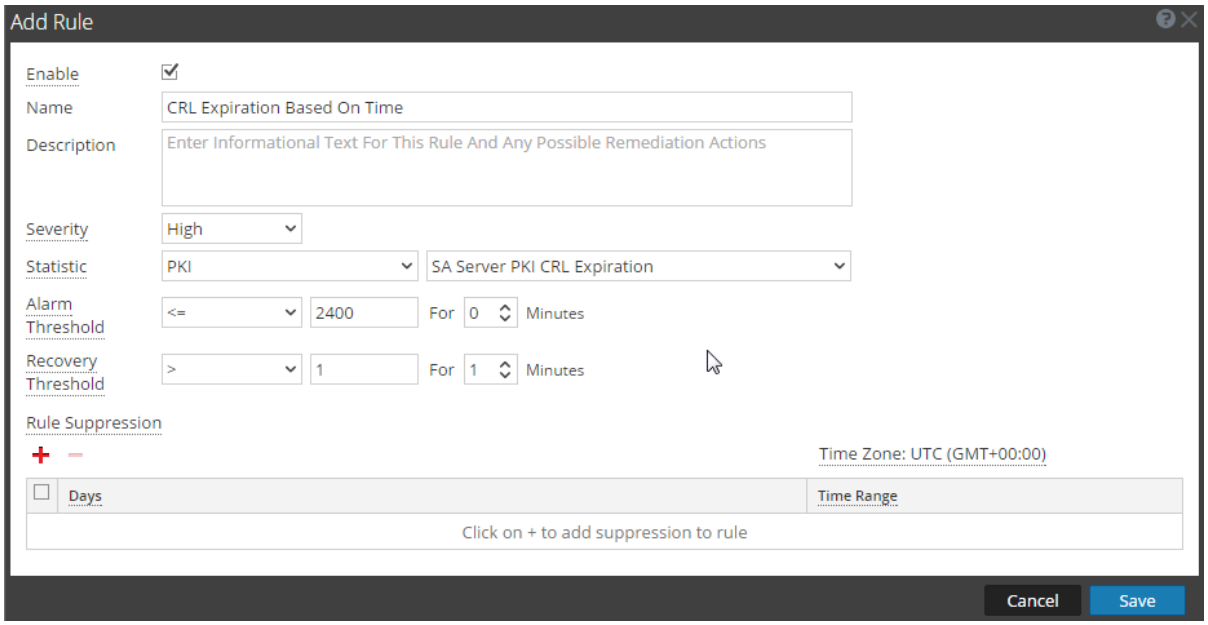
1. Add a new PKI policy.



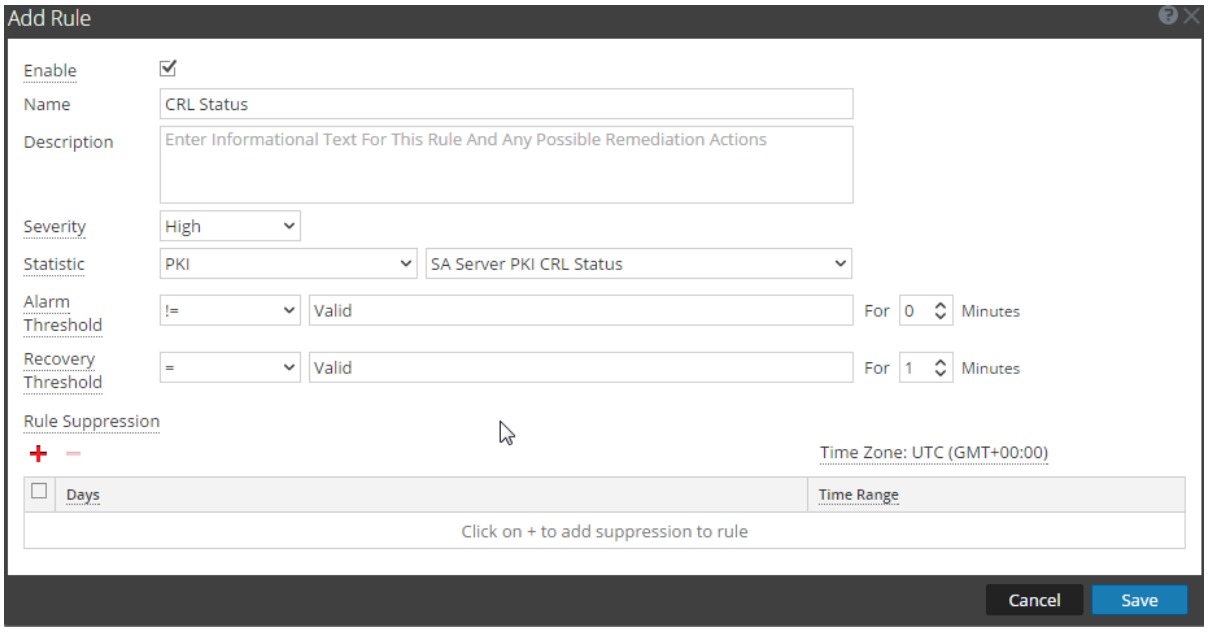
2. Add a Rule with Statistics:

   - For CA Expiration

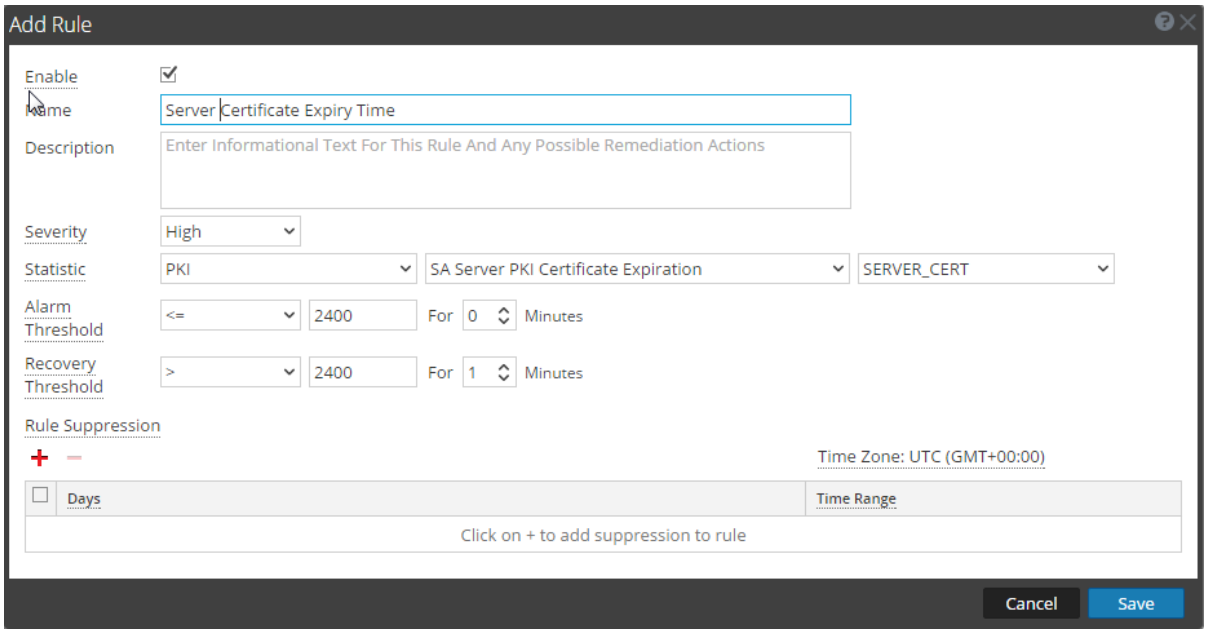
   - For CRL Expiration



- For CRL Status



- For Server Certificate Expiration



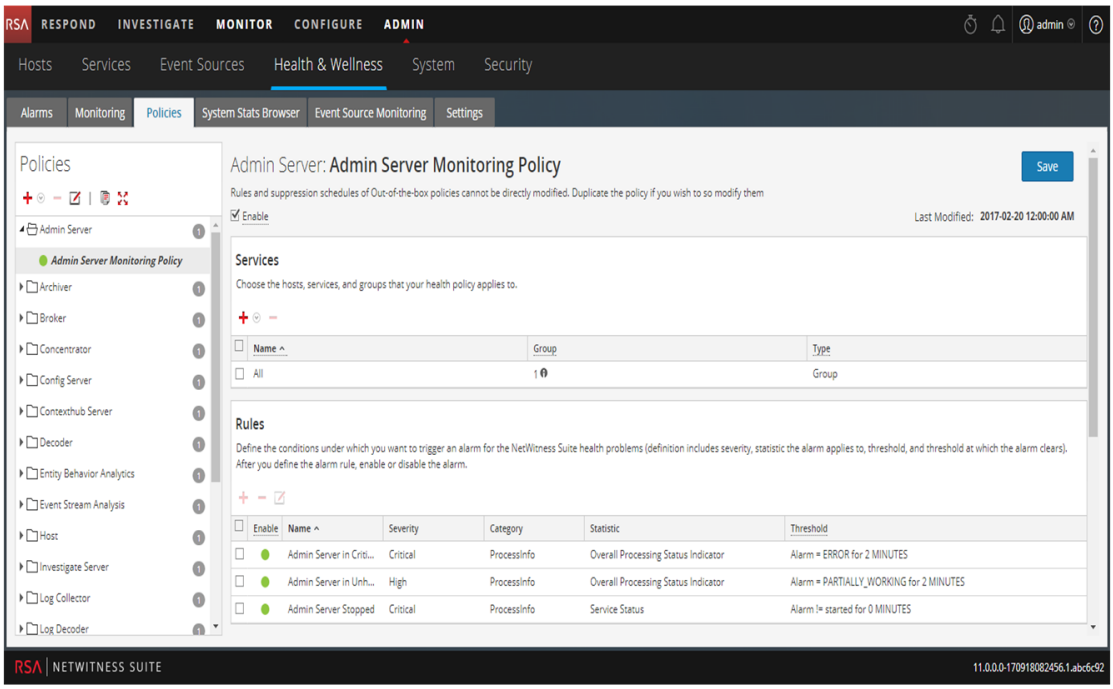
Edit a Policy

1. Go to **ADMIN > Health & Wellness.**
2. Click the **Policies** tab.

   The Policies view is displayed.
3. Select a policy (for example, **Concentrator Policy Status**) under a host or service.

   The Policy Detail is displayed.
4. Click .

   The policy name (for example, **Admin Server Monitoring Policy**) and policy detail panel become editable.

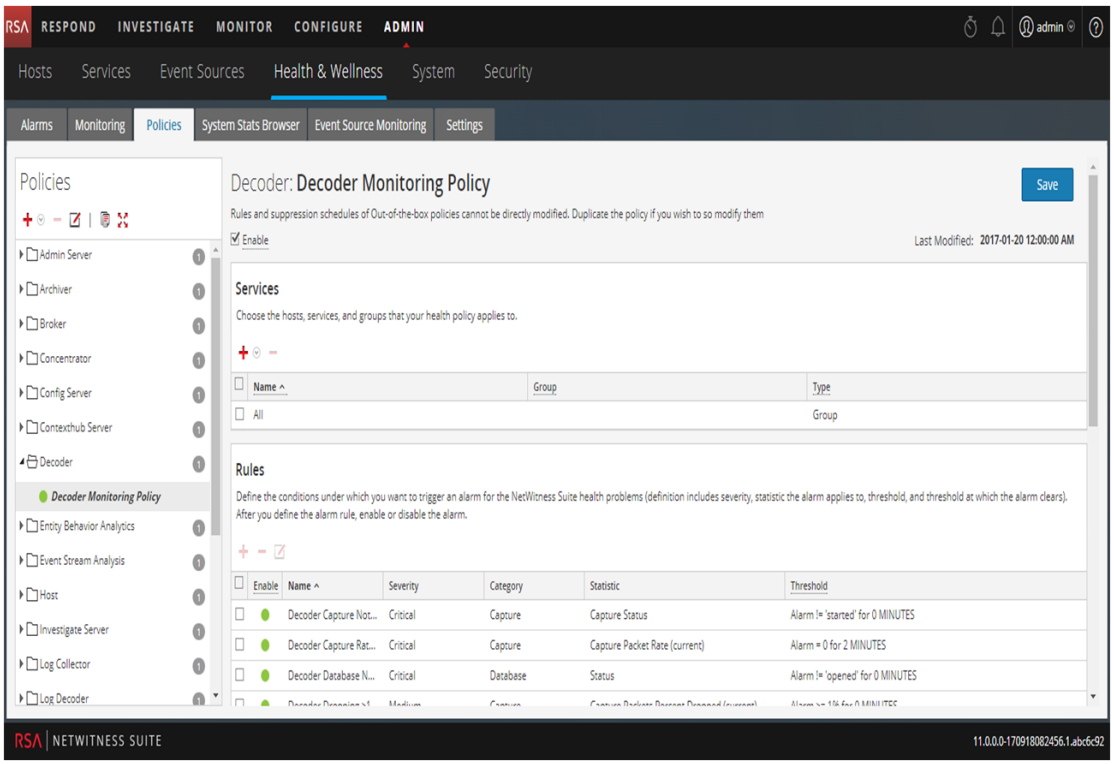


5. Make the required changes and click **Save** in the Policy Detail panel. You can:
   - Edit the Policy name.
   - Enable or disable the policy.
   - Add or delete hosts and services in the policy.
   - Add, delete or modify rules in the policy.
   - Add/Edit/Delete suppressions in the policy.
   - Add/Edit/Delete notifications in the policy.

Note: Save applies the policy rules based on the selection of enable/disable. It also resets the rule condition timers for changed rules, and the entire Policy.

Duplicate a Policy

1. Go to **ADMIN > Health & Wellness**.
2. Click the **Policies** tab.
3. Select a policy (for example, **Concentrator Policy Status**) under a host or service.
4. Click .NetWitness Suite copies the policy and lists it with **(1)** appended to the original policy's name.



5. Click and rename the Policy [for example, rename **Decoder Monitoring Policy(1)** to **New Concentrator Policy Status**.

> **Note:** A duplicated policy is disabled by default and the host and service assignments are not duplicated. Assign any relevant hosts and services to the duplicated policy before you use it to monitor health and wellness of the NetWitness Suite infrastructure.

Assign Services or Groups

To assign hosts or services to a policy:

1. Go to **ADMIN > Health & Wellness.**
2. Click the **Policies** tab.

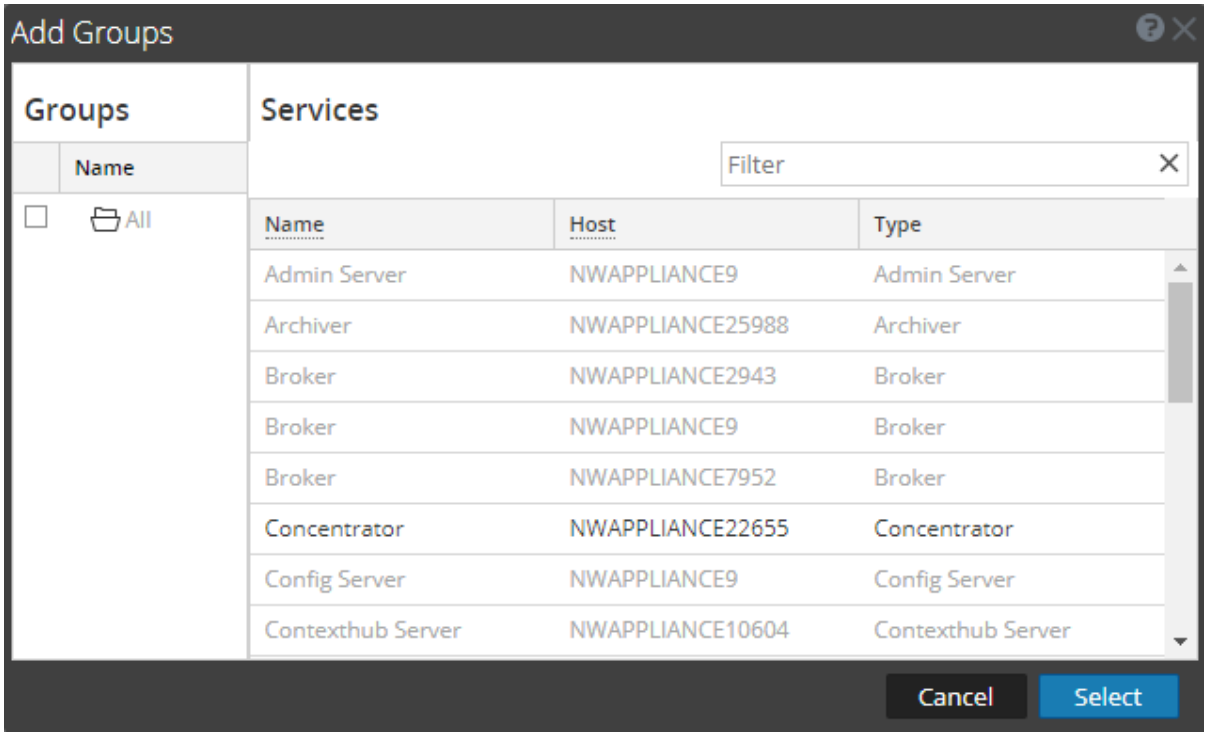
   The Policies view is displayed.
3. Select a policy (for example, **First Policy**) under a host or service.

   The Policy Detail is displayed.
4. Click in the Services and Groups list toolbar.
5. Choose one of the following actions:

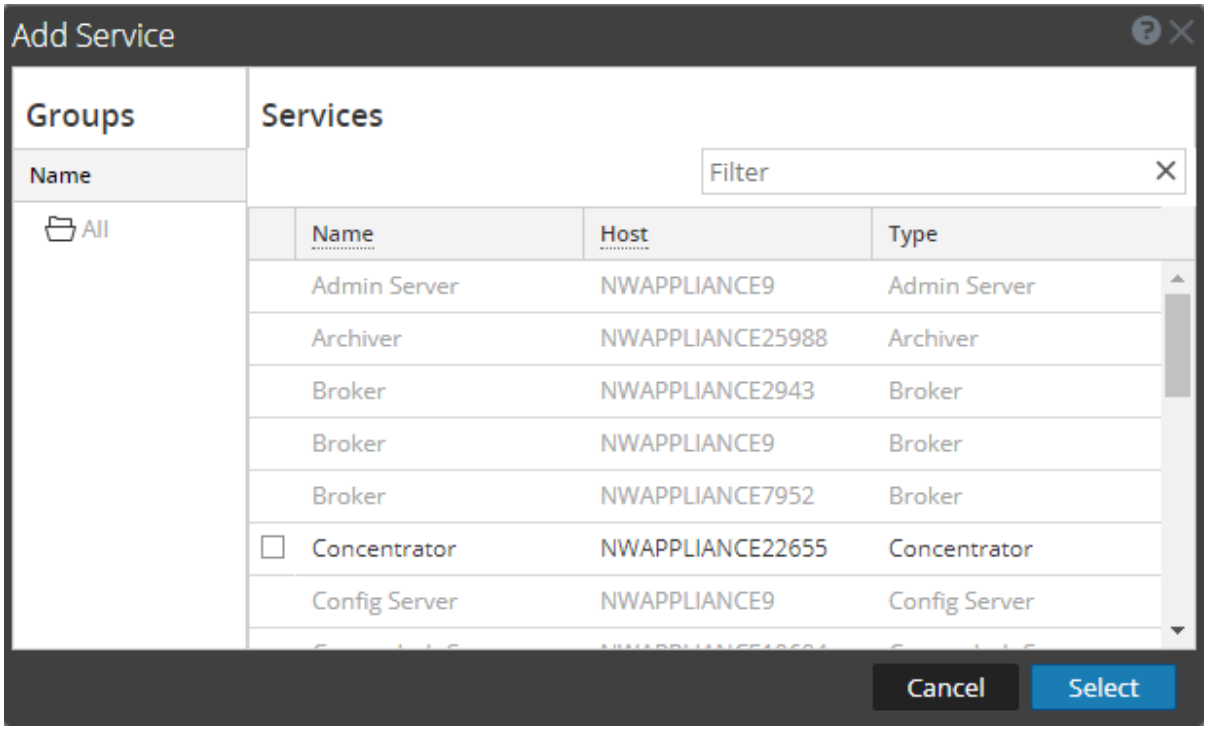
- For Hosts, select **Groups** or **Hosts** from the selection menu.
- For Services, select **Groups** or **Services** from the selection menu.

6. Depending on whether you are assigning services or groups, perform one of the following actions:

- **Groups**, the **Groups** dialog is displayed from which you can select predefined groups of hosts or services.



- **Services**, the **Services** dialog is displayed from which you can select individual services.



7. Select the checkbox next to the groups or services you want to assign to the policy, click **Select** in the dialog, and click **Save** in the Policy Detail panel.

Note: Services are filtered for selection based on the type of policies. For example, you can only select concentrator services for a concentrator type policy.

Remove Services or Groups

To remove a host or service from a policy:

1. Go to **ADMIN > Health & Wellness**.
2. Click **Policies** tab.

   The Policies view is displayed.
3. Select a policy under a service.

   The Policy Detail is displayed.
4. Select a host or service.
5. Click − .

   The host or service is removed from the policy.

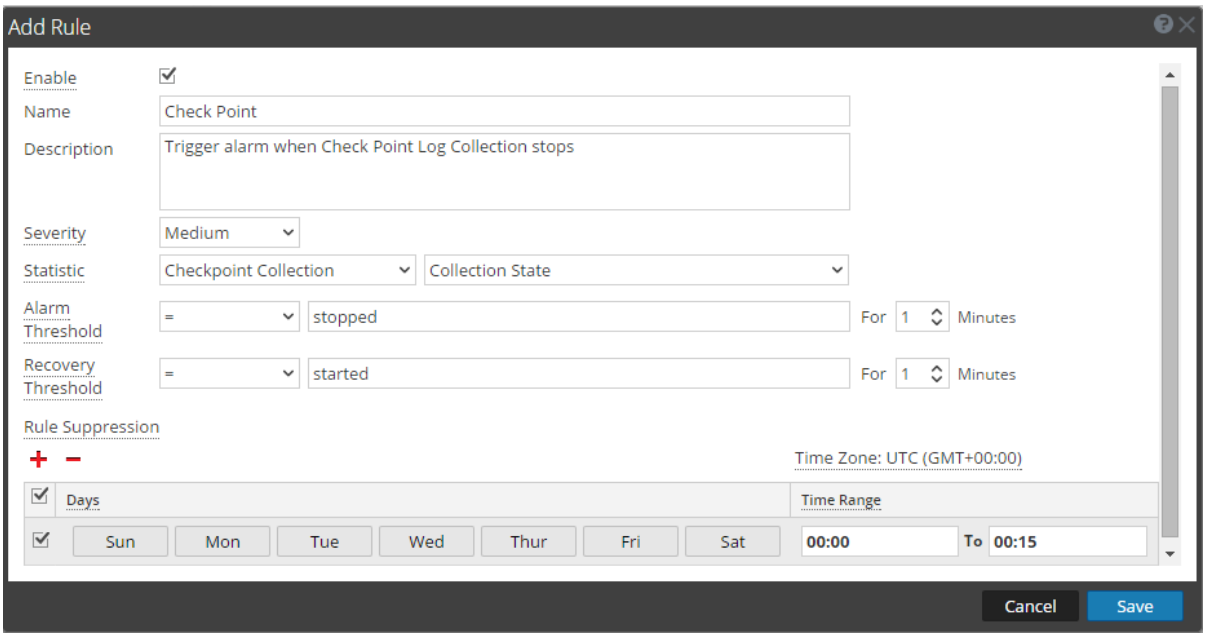
Add or Edit a Rule

To add a rule to a policy:

1. Go to **ADMIN > Health & Wellness.**
2. Click the **Policies** tab.

   The Policies view is displayed.
3. Select a policy (for example, **Checkpoint**) under a host or service.

   The Policy Detail is displayed.
4. Depending on whether you are adding an existing rule or adding a rule, do the following:
   - To add: click + in the Rules list toolbar.
   - To edit: select a rule from the Rules list and click .
5. Complete the dialog to define or update the rule.
6. Add the **Description** field as shown in the following example.



7. Click **OK**.

   The rule is added (or updated) to the policy.

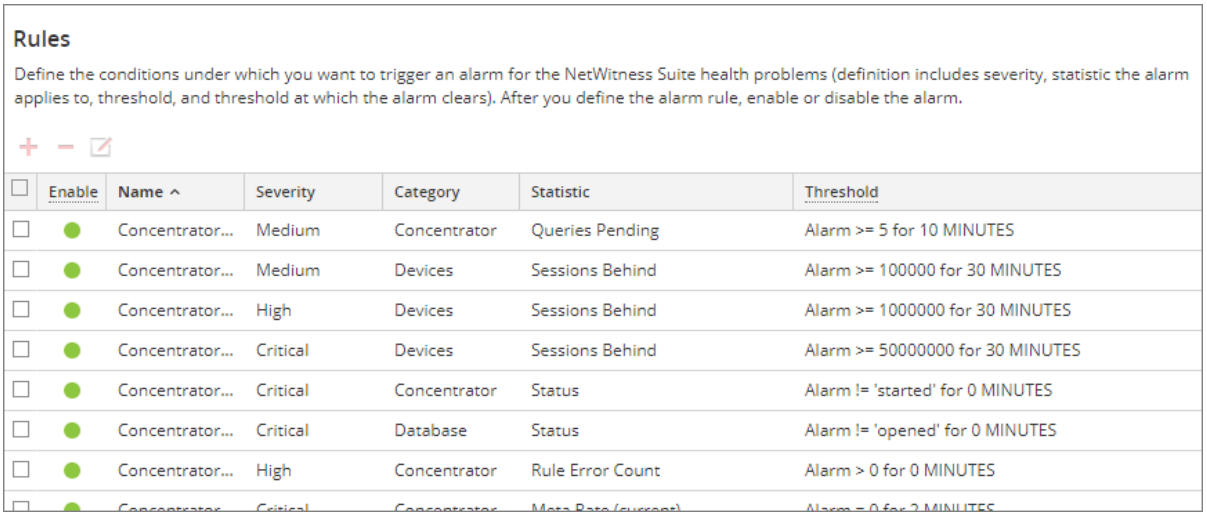
Hide or Show Rule Conditions Columns

To hide or show rule conditions columns in the Rules panel:

1. Go to **ADMIN > Health & Wellness.**
2. Click **Policies** tab.

   The Policies view is displayed.
3. Select a policy under a service.

   The Policy Detail is displayed.
4. Go to the **Rules** panel.



5. Click **v** to the right of **Category** , select **Columns**, and uncheck the **Static** and **Threshold** rule conditions.

   You can check or uncheck any Rules column to show or hide it.
   The **Rules** panel displays without the rule conditions.

Delete a Rule

To remove a host or service from a policy:

1. Go to **ADMIN > Health & Wellness.**
2. Click the **Policies** tab.

   The Policies view is displayed.
3. Select a policy under a service.

   The Policy Detail is displayed.
4. Select a rule from the **Rules** list (for example, **Checkpoint**).
5. Click .

   The rule is removed from the policy.

Suppress a Rule

1. Click the **Policies** tab.
   The Policies view is displayed.
2. Select a policy under a service.
   The Policy Detail is displayed. You can specify rule suppressions time ranges when you initially add it or you can edit the rule and specify suppression time ranges.
3. Add or edit a rule.
4. In the **Rules Suppression** panel of the **Add** or **Edit Rule** dialog, specify the days and time ranges during which you want the rule suppressed.

Suppress a Policy

1. Add or edit a policy.
   The Policies view is displayed.
2. In the **Policy Suppression** panel:
   a. Select a time zone from the **Time Zone** drop-down list.
      This time zone applies to the entire policy (both policy suppression and rule suppression).
   b. Click + in the toolbar.
   c. Specify the days and time ranges during which you want the policy suppressed.

Add an Email Notification

To add an email notification to a policy:

1. Add or edit a policy.
   The Policies view is displayed.
2. In the **Notification** panel:
   a. Click + in the toolbar.
      A blank EMAIL notification row is displayed.
   b. Select the email:
      - Notification types in the Recipient column (see "Configure Notification Outputs" in the *NetWitness Suite System Configuration Guide* for the source of the values in this drop-down list).

- Notification server in the Notification Server column (see 'Configure Notification Servers" in the *NetWitness Suite System Configuration Guide* for the source of the values in this drop-down list).
- Template server in the Template column (see "Configure Notification Templates" in the *NetWitness Suite System Configuration Guide*for the source of the values in this drop-down list).

> **Note:** Refer to **Include the Default Email Subject Line** if you want to include the default Email subject line from the Health & Wellness template in your Health & Wellness Email notifications for specified recipients.

Delete an Email Notification

To add an email notification to a policy:

1. Add or edit a policy.
   The Policies view is displayed.
2. In the **Notification** panel:
   a. Select an email notification.
   b. Click .
   The notification is removed.

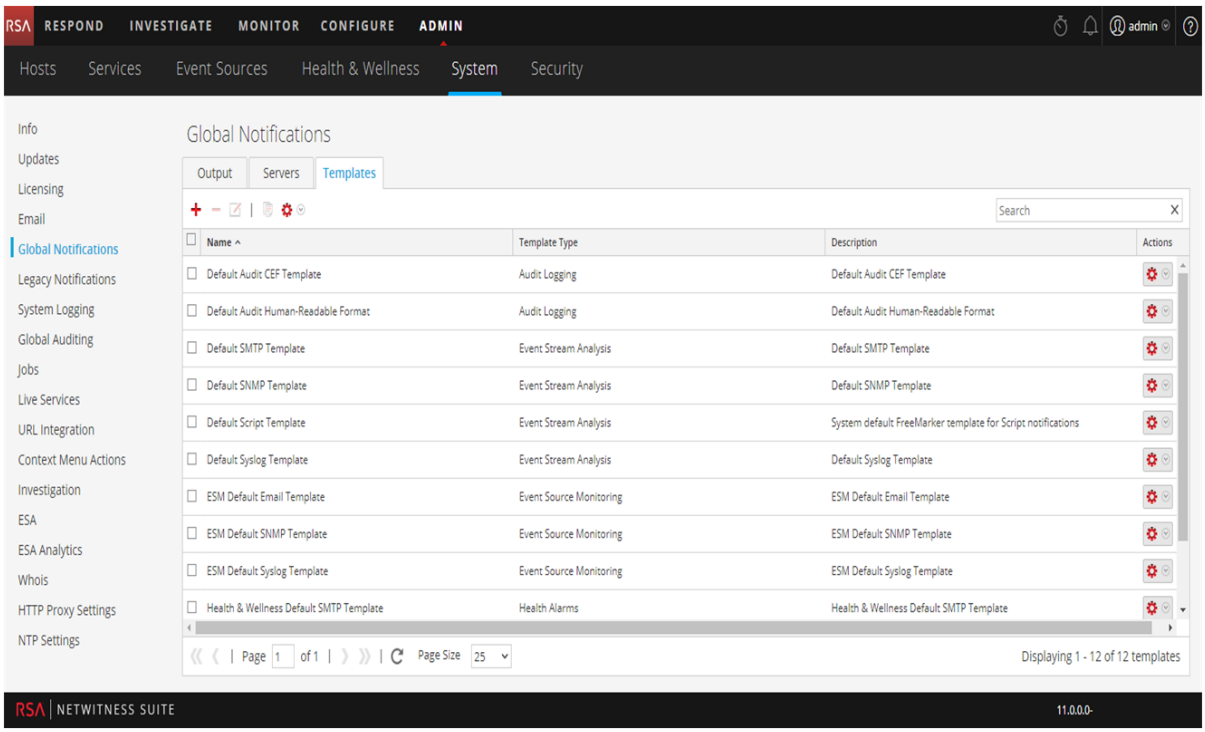
Include the Default Email Subject Line

The emails generated by the notifications you set up for policies do not include the subject line from the Health & Wellness Default Email Notification templates. You need to specify the subject line in the do not include subject lines. This procedure shows you how to insert a subject line into the templates.

For related reference topics, see Policies View and NetWitness Suite Out-of-the-Box Policies.

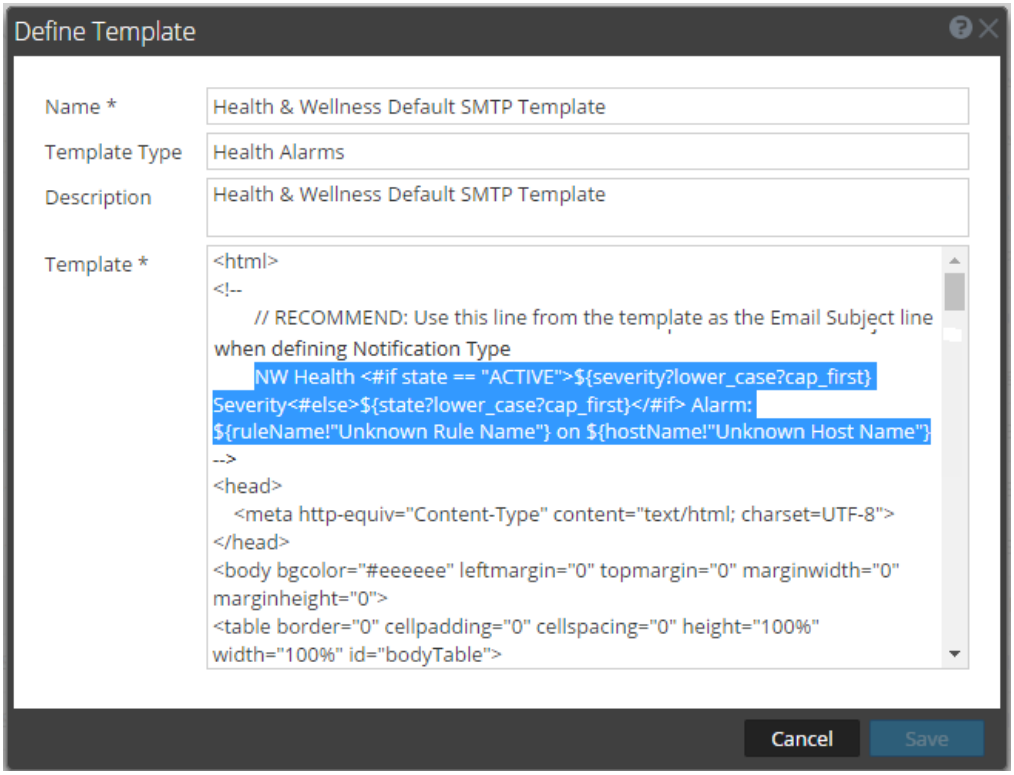
To include the subject line from a Health & Wellness email template in your email notification:

1. Go to **ADMIN > System**.
2. In the options panel, select **Global Notifications**.
3. Select a Health & Wellness Email Template (for example, **Health & Wellness Default SMTP Template**).



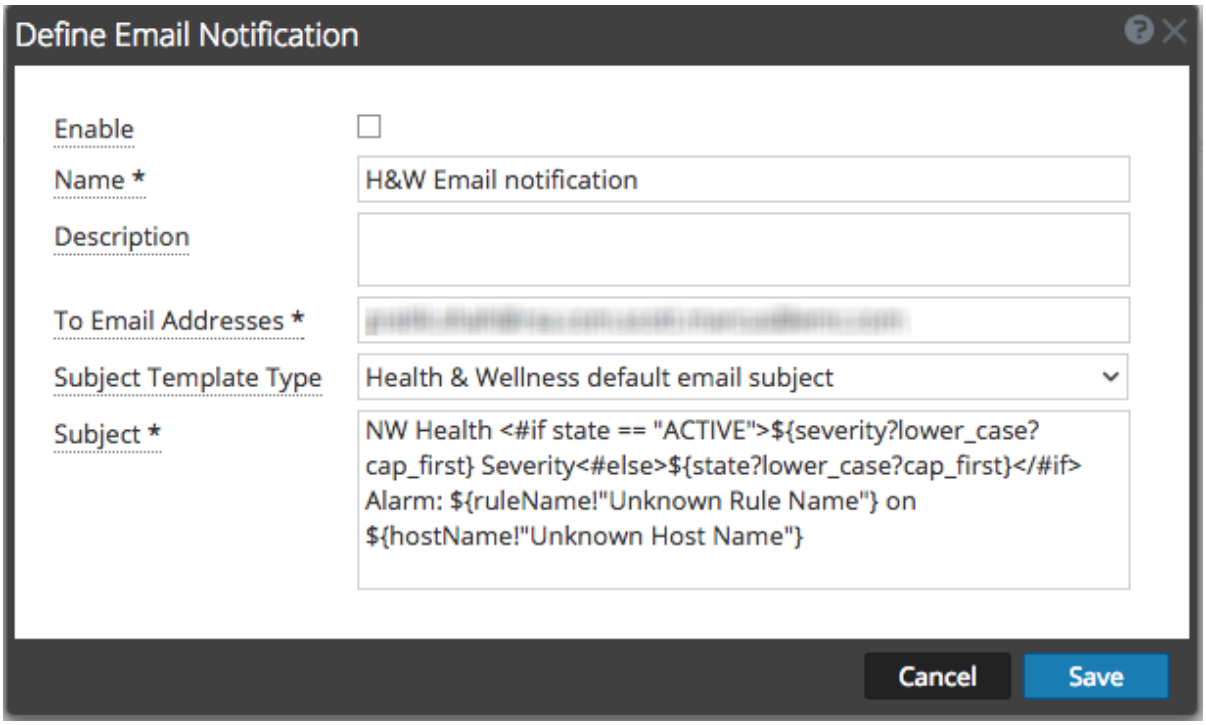
The Define Template dialog is displayed.

4. Click , then in the **Template** field, copy the Subject Line (Highlight the subject line and press Ctrl-C) into the buffer.



5. Click **Cancel** to close the Template.
6. Click the **Output** tab and select a notification (for example **Health & Wellness**).
7. Click .

   The **Define Email Notification** dialog is displayed.
8. Replace the value in **Subject** field text box with the subject line that you have in the buffer (highlight the existing text and press Ctl-V).



9. Click **Save**.

Monitor System Statistics

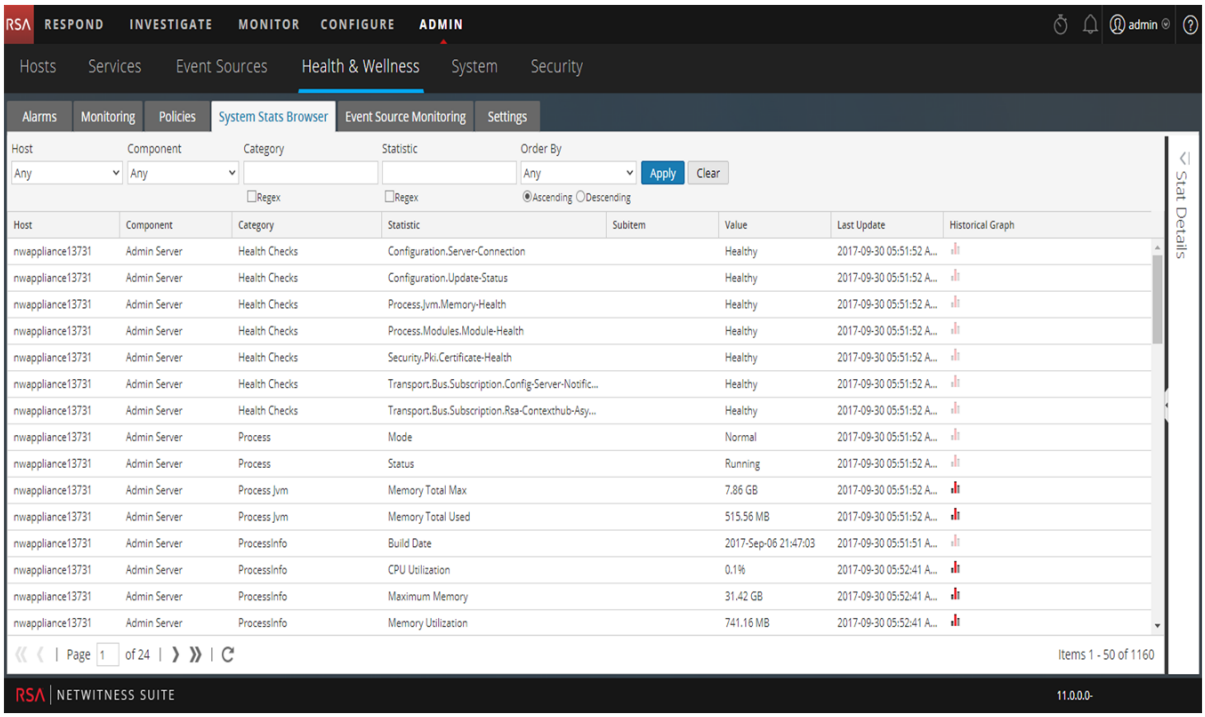
The System Stats Browser filters statistics by the selected host, component running on the host, statistical category, individual statistic, or any combination of host, component, category, and statistic. You can also choose the order in which to display this information.

To access the System Stats browser:

1. Go to **ADMIN** > **Health & Wellness**.

   The Health & Wellness view is displayed with the Alarms tab open.
2. Click the **System Stats Browser** tab.

The System Stats Browser tab is displayed.



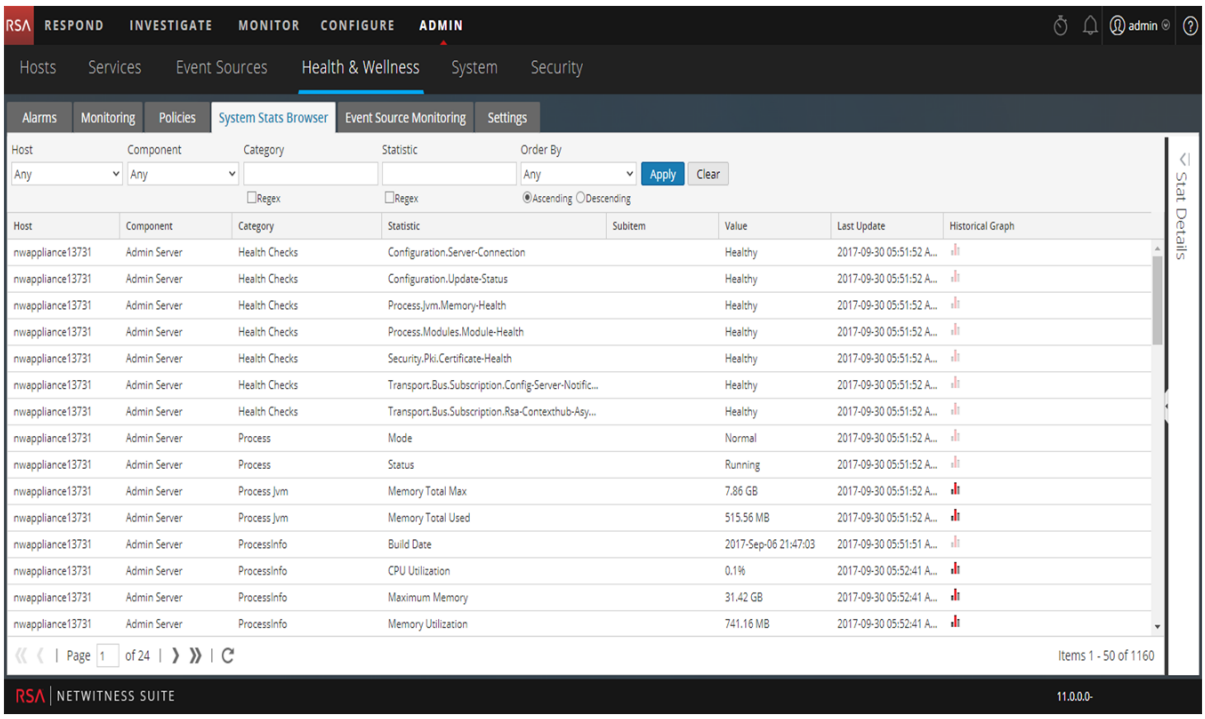
Filter System Statistics

You can filter the System Statistics in one of the following ways to monitor:

- Statistics collected for a particular host
- Statistics collected for a particular component
- Statistics collected of a particular type or that belongs to a certain category
- Statistics listed in an ordered way as per the selection chosen

To filter the list of system statistics:

1. Go to **ADMIN > Health & Wellness**.
   The Health & Wellness view is displayed with the Alarms tab open.
2. Click **System Stats Browser**.
   The System Stats Browser tab is displayed.

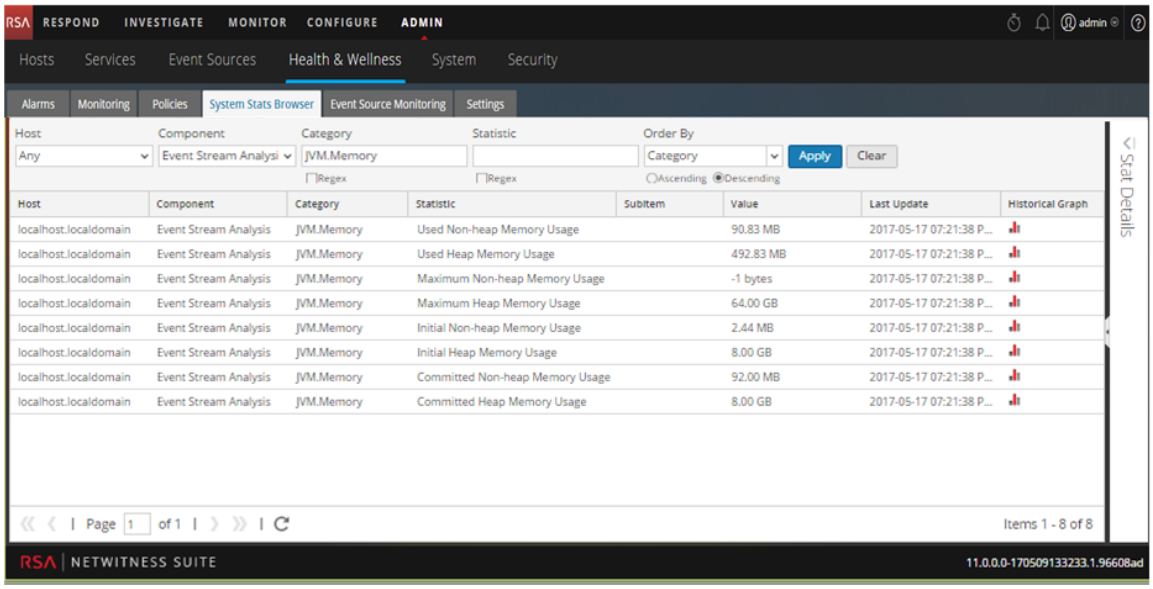


Filter the list of System Statistics in one of the following ways:

- To view System Stats of a particular host, select the host in the **Host** drop-down list.
  The System Stats for the selected host is displayed.
- To view System Stats of a particular component, select the component in the **Component** drop-down list.
  The System Stats for the selected component is displayed.
- To view System Stats of a particular category, type the category name in the **Category** field.
  Select **Regex** to enable Regex filter. It performs a regular expression search against text and lists out the specified category. If Regex is not selected it supports globbing pattern matching.
  The System Stats for the selected category is displayed.
- To order the list of statistics in a preferred order you can set the order in the **OrderBy** column
- To view a particular statistic across hosts, type the statistic name in the **Statistic** field.
  Select **Regex** to enable Regex filter. It performs a regular expression search against text and lists out the specified category. If Regex is not selected it supports globbing pattern matching.
  The System Stats for the selected statistics is displayed.

  The following figure shows the System Stats Browser filtered by the

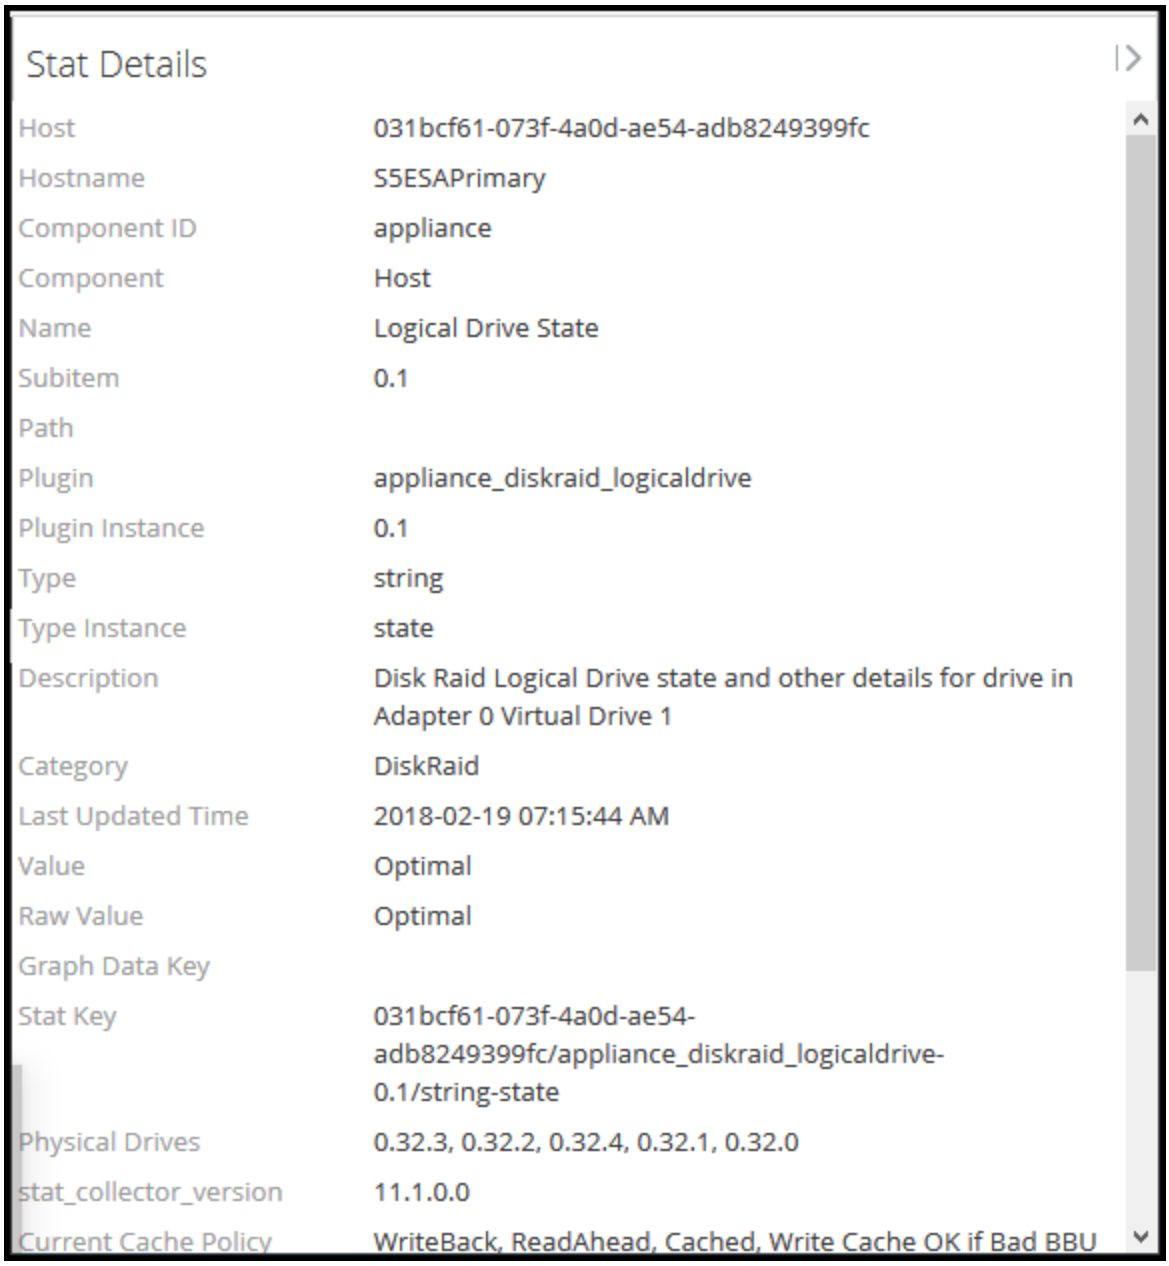
NWAPPLIANCE10604 host listed in descending statistical category order.



4. To view the details for an individual statistic:

   a. Select a row to select a statistic.

   b. Click <|.
   The Stat Details is displayed.



For details on various parameters in the **ADMIN** > **Health & Wellness** > **System Stats Browser** view, see System Stats Browser View

View Historical Graph of System Statistics

The historical graph of the collected system stats gives you information about the variation of the stats over a time frame selected.

To view a historical graph:

1. Go to **ADMIN > Health & Wellness**.

   The Health & Wellness view is displayed with the Alarms tab open.

2. Click the **System Stats Browser** tab.

3. In the System Stats Browser tab, specify the filter criteria to display the statistics you want.

4. In the **Historical Graph** column, select .

   The Historical graph for the selected statistic is displayed.

   The figure below gives an example of the historical graph for Memory Utilization statistic for a host.

   The graphical view is customized to display the statistics collected for the current day and the values are zoomed in for an interval of an hour (10.15 - 11.15 hrs). Hover over the graph to view the details at a particular instant. For example, in the figure it displays the memory utilization at 11.00 hrs.

Note: You can customize the graph view by selecting the Time Frame and Date range. You can zoom in using the zoom in value, time window, or by just a click and a drag in the plot area. For details on the parameters to customize and zoom in functions, see Historical Graph for System Stats. Any break or gap in chart line indicates that the service or host was down during that time.

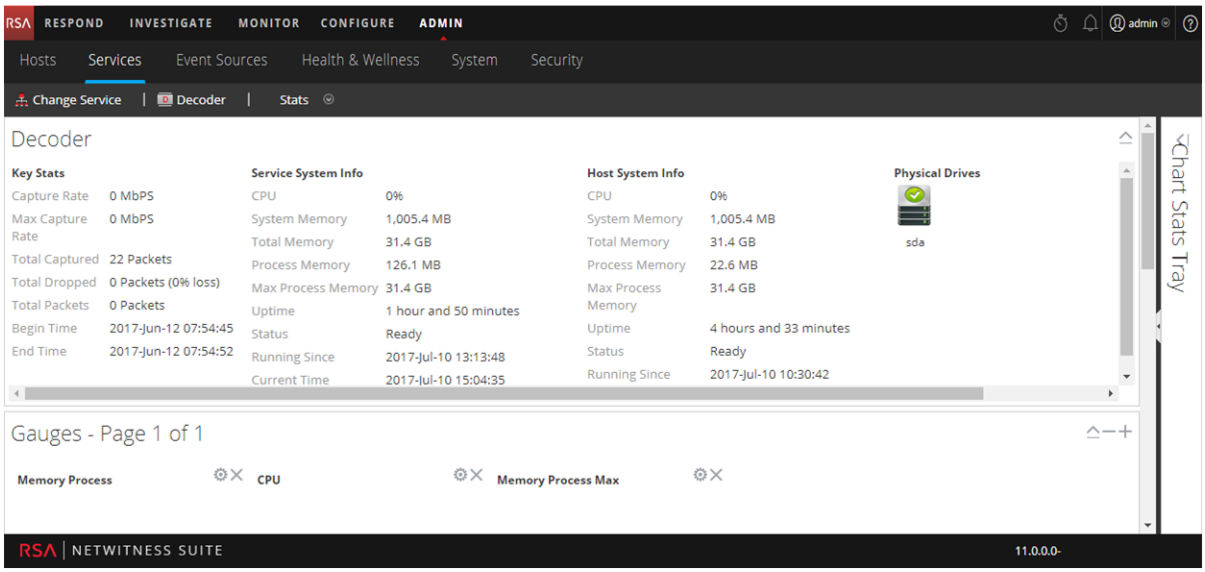
Monitor Service Statistics

NetWitness Suite provides a way to monitor the status and operations of a service. The Service Stats view displays key statistics, service system information, and host system information for a device. In addition more than 80 statistics are available for viewing as gauges, and in timeline charts. Only statistics for session size, sessions, and packets are viewable in historical timeline charts.

Although different statistics are available for different types of services, certain elements are common for any Core device.

To monitor service statistics in NetWitness Suite:

1. Go to **ADMIN > Services**.
   The Services view is displayed.
2. Select a service, and select **View > Stats** in the Actions column.



3. To customize the view: Collapse or expand charts, for example expand the Chart Stats Tray to see available charts. Drag a section up or down to change the sequence. For example, drag the Gauges section to the top so that it is above the Summary Stats section.

Add Statistics to a Gauge or Chart

In the Services Stats view, you can customize the monitored statistics for individual services. The Chart Stats Tray lists all available statistics for the service. The number of statistics varies according to the type of service being monitored. Any statistic in the Chart Stats Tray can be displayed in a gauge or a timeline chart. Only statistics for session size, sessions, and packets are viewable in historical timeline charts.

Create a Gauge for a Statistic

To create a gauge for a statistic in the Services Stats view:

1. Go to **ADMIN > Services**.

   The Admin Services View is displayed.

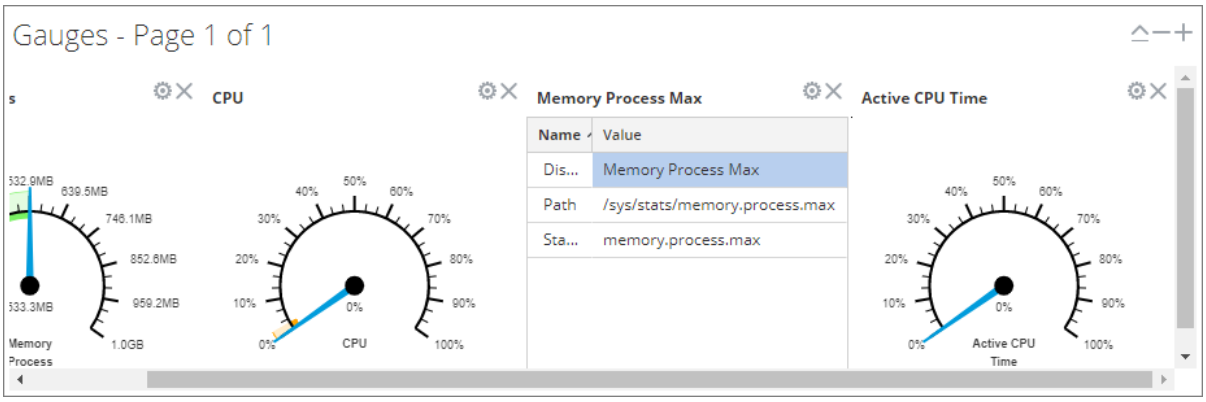
2. Select a service and select **View > Stats** in the Actions column.

   The Chart Stats Tray is displayed on the right side.

3. If the tray is collapsed, click <| to view the list of available statistics.

4. From the **Chart Stats Tray**, click on any statistic and drag it into the **Gauges** section.

   A gauge is created for the statistic. If there is no space for the gauge, a new page is created on the Gauges section and the gauge is added to the new page. In the example, the Active CPU Time chart was added to the Gauges section by dragging it from the Chart Stats Tray.

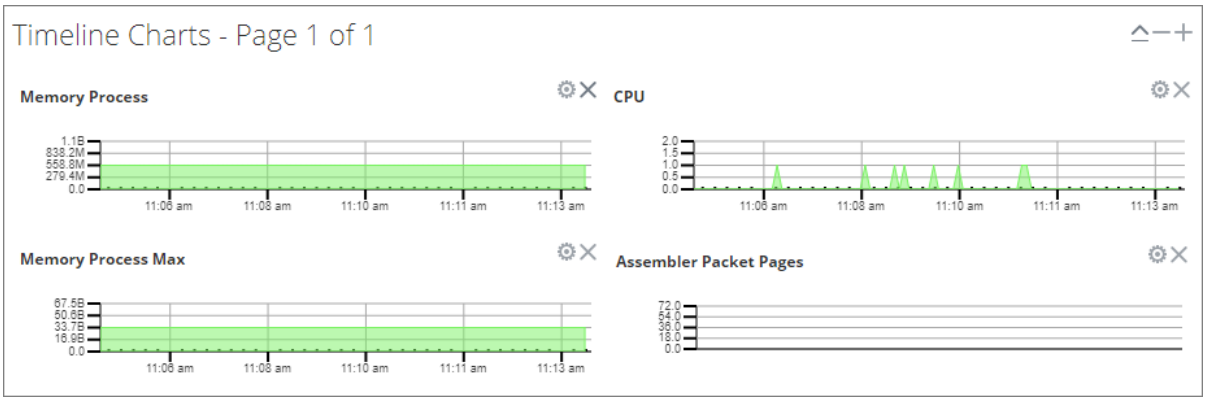


Create a Timeline Chart for a Statistic

To create a timeline for a statistic:

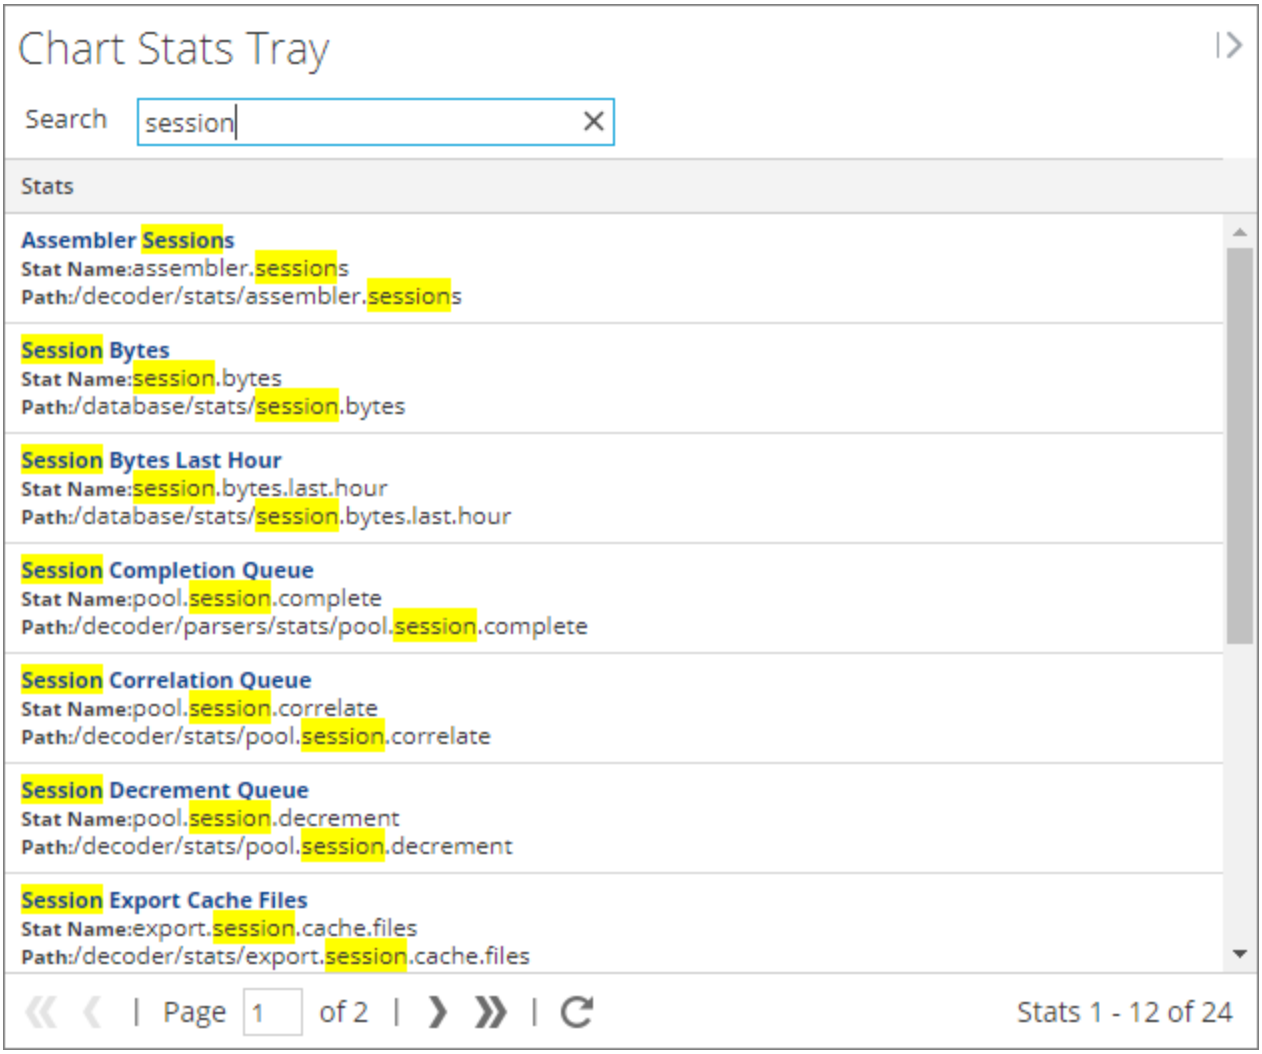
From the **Chart Stats Tray**, click on a statistic and drag it into the **Timeline Charts** or the **Historical Timeline Charts** section.

A timeline chart is created for the statistic. If there is no space for the chart, a new page is created on the Timeline Chart section and the chart is added to the new page. In the example, the Assembler Packet Pages chart was added to the Timeline Charts section by dragging it from the Chart Stats Tray.



Search for a Statistic in the Chart Stats Tray

To search for a statistic, type a search term; for example, **session**, in the Search field and press **RETURN**. Statistics that match are displayed with the matching word highlighted.

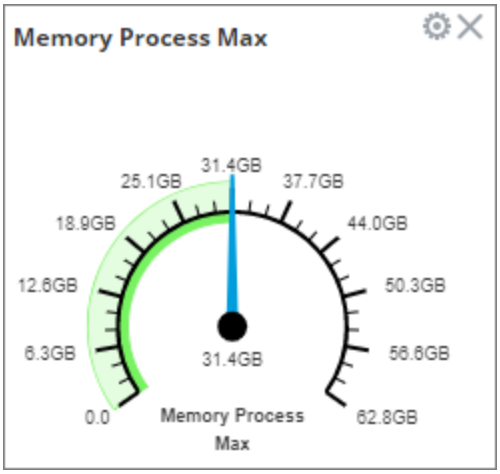


Edit Properties of Statistics Gauges

The Gauges section of the Service Stats view presents statistics in the form of an analog gauge. The properties of each individual gauge are editable; all gauges have an editable title and some have additional editable properties.

Edit Properties of a Gauge

1. Go to **ADMIN > Services**
   The Admin Services view is displayed.
2. Select a service and select **View > Stats** in the Actions column.
   The Service Stats view includes the Gauges section.
3. Go to the gauge for which you want to edit properties (for example, **Memory Process**).



4. Click the Properties icon ( ) to display the parameter names and values.
5. To highlight the value of the **Display Name** field, double-click on the value; for example, **Memory Process**.

   Note: Clicking the other two values does nothing because the properties are not editable in the gauge.

5. Type a new value for the Display Name and click the **Properties** icon ( ).
   The new title replaces **Memory Process**.

Add Stats to the Gauges Section

You can add more gauges by dragging a statistic from the **Chart Stats Tray** into the **Gauges** section.

1. To expand the Chart Stats Tray, click <|.
2. Scroll down and select a statistic, for example, **Session Rate (maximum)**.
3. Drag the statistic to the **Gauges** section.
   The new gauge is displayed in the Gauges section.

Edit Properties of Timeline Charts

Timeline charts display statistics in a running timeline. The Service Stats view includes two types of timelines: current time and historical. You can drag any statistic available in the Chart Stats Tray to the Timeline Charts section. Only statistics for session size, sessions, and packets are viewable in historical timeline charts. The properties of an individual timeline chart are editable; all timeline charts have an editable title and some have additional editable properties.

To access the charts:

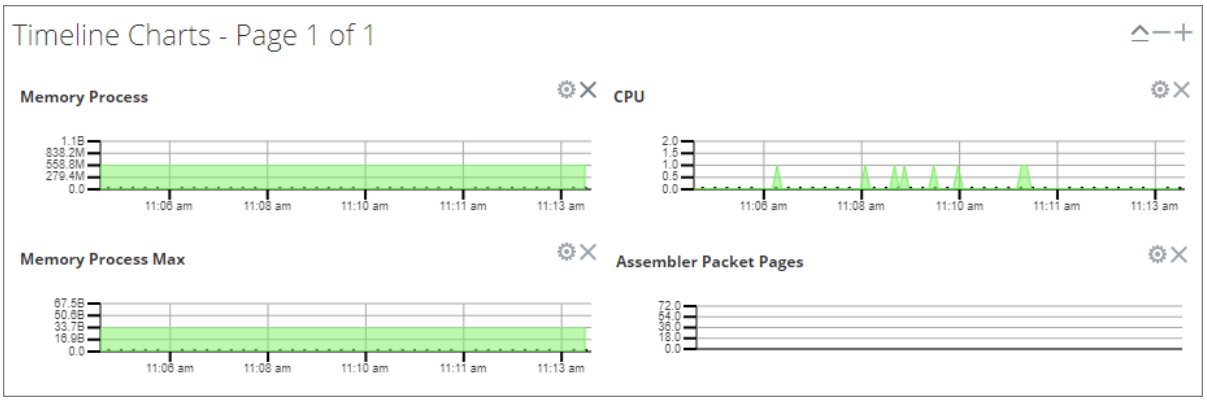
1. Go to **ADMIN > Services**.
2. Select a service and click **Stats**.

   The Services Stats view is displayed. The charts are in this view.

Edit Properties of a Timeline

To edit properties of a timeline chart:

1. Go to the timeline chart for which you want to edit properties (for example, **Memory Process**).



2. Click the **Properties** icon ( ) to display the parameter names and values.
3. Double-click on a value (for example, the **Display Name** field) to make the value editable.

   Note: Clicking the other two values does nothing because the properties are not editable in the chart.

4. Type a new value and click the **Properties** icon.

   The timeline chart is displayed with new values.

Edit Properties of a Historical Timeline

To edit properties of a historical timeline chart:

1. Go to Historical Timeline Charts.
2. Click the **Properties** icon ( ) to display the parameter names and values.
3. Click on a value (for example, **01/27/2015** for the **Begin Date** field) to make the value editable.
4. Type a new value.
5. Edit the **End Date** and **Display Name** if required.
6. Click the **Properties** icon ( ).

   The historical timeline is displayed with new values.

Note: To return the properties of the historical timeline chart back to the default so that the values dynamically update, remove the Begin Date and the End Date, place your cursor in the Begin Date field, and refresh your browser.

Add Stats to Timeline Charts

You can add timeline charts by dragging a statistic from the Chart Stats Tray into the Timelines section.

1. To expand the Chart Stats Tray, click .
2. Scroll down and select a statistic; for example, **Session Rate (maximum)**.
3. Drag the statistic to the **Timelines Section**.

   The new timeline is displayed in the Timelines section.

Monitor Hosts and Services

NetWitness Suite provides a way to monitor the status of hosts and services installed. You can view the current health of all the hosts, services running on the hosts, their CPU usage and memory consumption and the host details and service details.

To monitor hosts and services in NetWitness Suite:

1. Go to **ADMIN > Health & Wellness**.

   The Health & Wellness view is displayed with the Alarms tab open.

2. Select the **Monitoring** tab.
   A list of all hosts and their associated services that belong to the group **All** is displayed by default.
   The operational status, CPU usage, and memory usage for each host is displayed.

   Click ⊞ to the left of a host (⊞ is visible if there are services installed on a host)

3. A list of services installed on the selected host is displayed.
   The name, operating status, CPU usage, memory usage, and the time operating for each service is displayed.

Filter Hosts and Services in the Monitoring View

You can filter hosts and services in the monitoring view in one of the following ways:

- Hosts belonging to a particular group
- Specific host and its associated services
- Hosts whose services are stopped
- Hosts whose services have stopped processing or processing has been turned off

- Hosts that have Physical drive problems
- Hosts that have Logical drive problems
- Hosts that have Full File systems

For the related reference topic, see Monitoring View.

To filter hosts and services:

1. Go to **ADMIN > Health & Wellness**.

   The Health & Wellness view is displayed with the Alarms tab open by default.

2. Select the **Monitoring** tab.
3. Filter the hosts and services in one of the following ways:
   - To view a list of hosts and their associated services belonging to a particular group, select the group in the Groups panel.

     All hosts and their associated services belonging to the specified group are displayed in the Hosts panel.

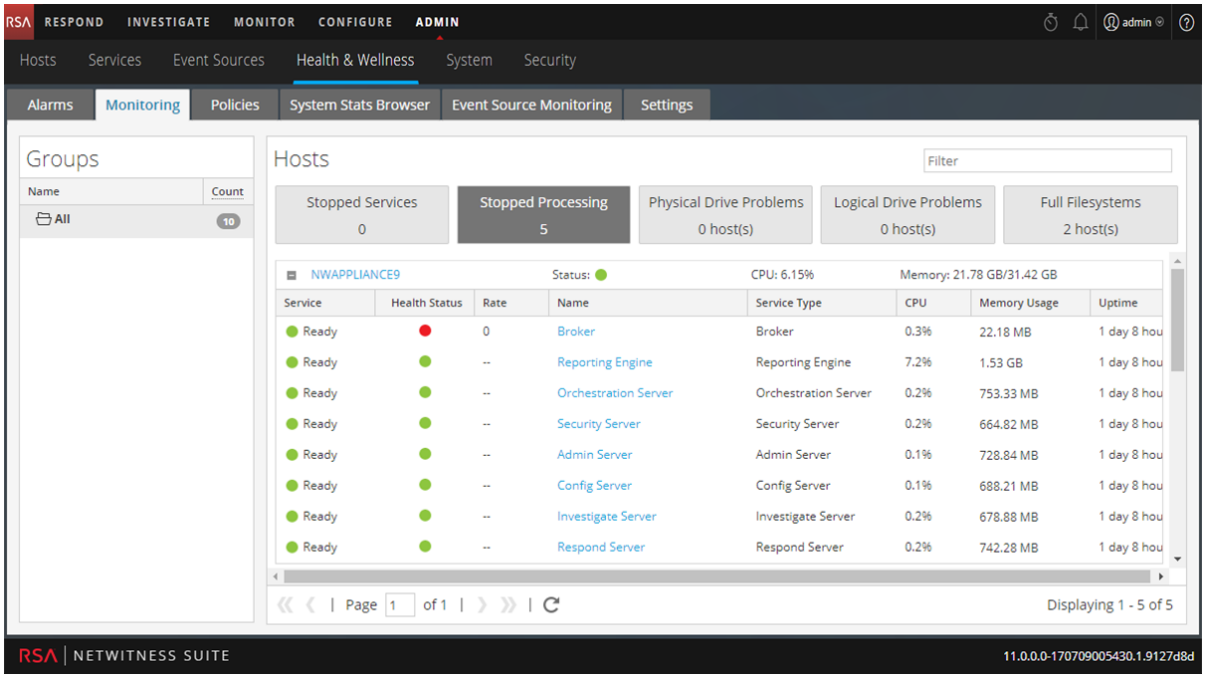
     Note: The grouping of hosts is derived from the groups created in the Administration page. All groups created in the Administration page are displayed here.

     For example, if you select the group **LC_Group** in the Groups panel, a list of all hosts that are part of the group are displayed.

   - To view a list of all services that have stopped processing, click **Stopped Processing** in the Hosts panel.

     A list of all the hosts that have at least one service with the status as stopped processing is displayed.

     Note: The buttons on the top display the System Statistics for all the hosts configured in NetWitness Suite and does not change with application of filters on groups.



Note: In a similar way you can filter the list of hosts and the associated services by choosing the right filter
- Click Stopped Services to display a list of all stopped services.
- Click Physical Drive Problems to display a list of host with Physical Drive Problems.
- Type the host name in the Filter box to display only the required host and the services running on the host.

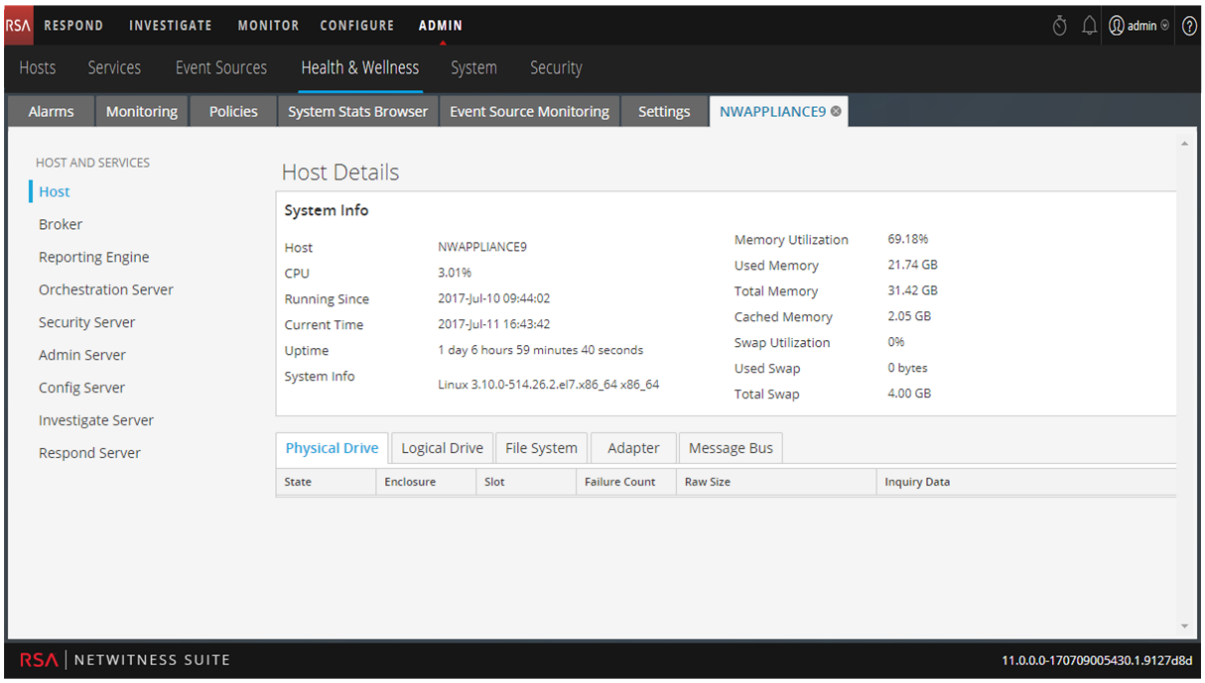
Monitor Host Details

You can view the details of the host, its memory and CPU usage, system information, the physical drive, logical drive and file system details to further investigate if you encounter some problem with the host.

To view host details:

1. Go to **ADMIN > Health & Wellness**.
   The Health & Wellness view is displayed with the Alarms tab open.
2. Select the **Monitoring** tab.
3. Click a host in the **Hosts** panel.

The Host Details view is displayed as a new page.



Monitor Service Details

You can view the details of a service, its memory and CPU usage, system information, and various details depending on the service selected.

To view service details:

1. Go to **ADMIN > Health & Wellness**.

   The Health & Wellness view is displayed with the Alarms tab open.

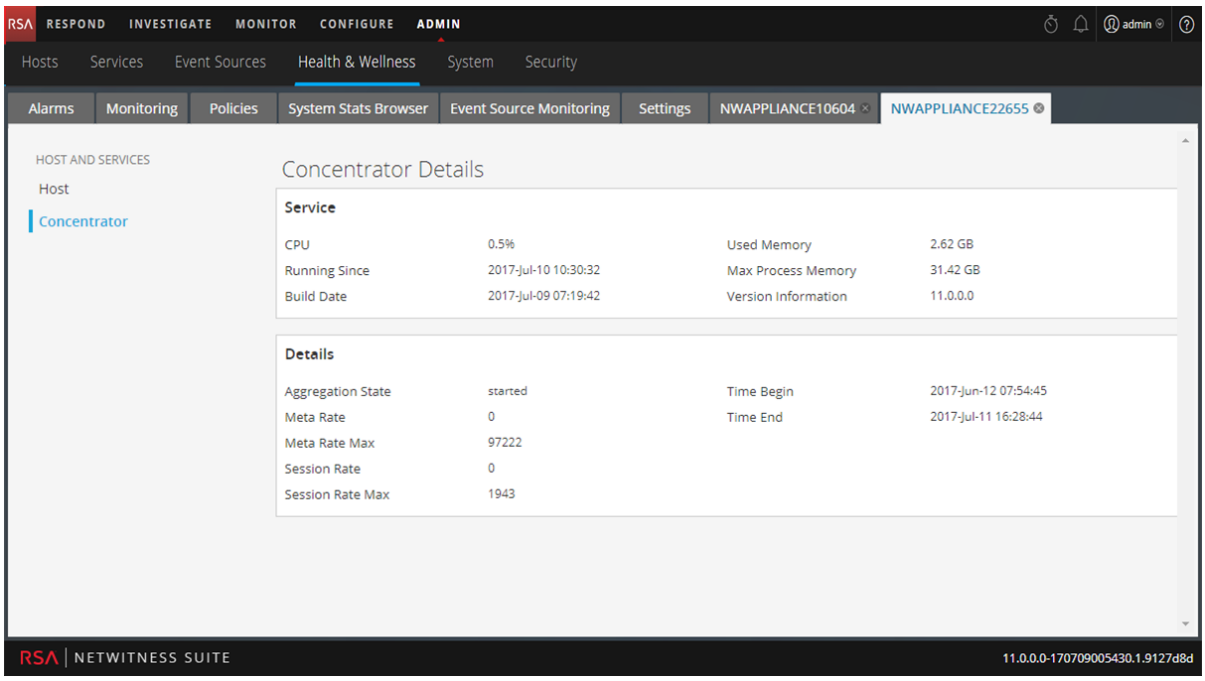
2. Select the **Monitoring** tab.

3. Click ⊞ for a host in the Hosts panel.

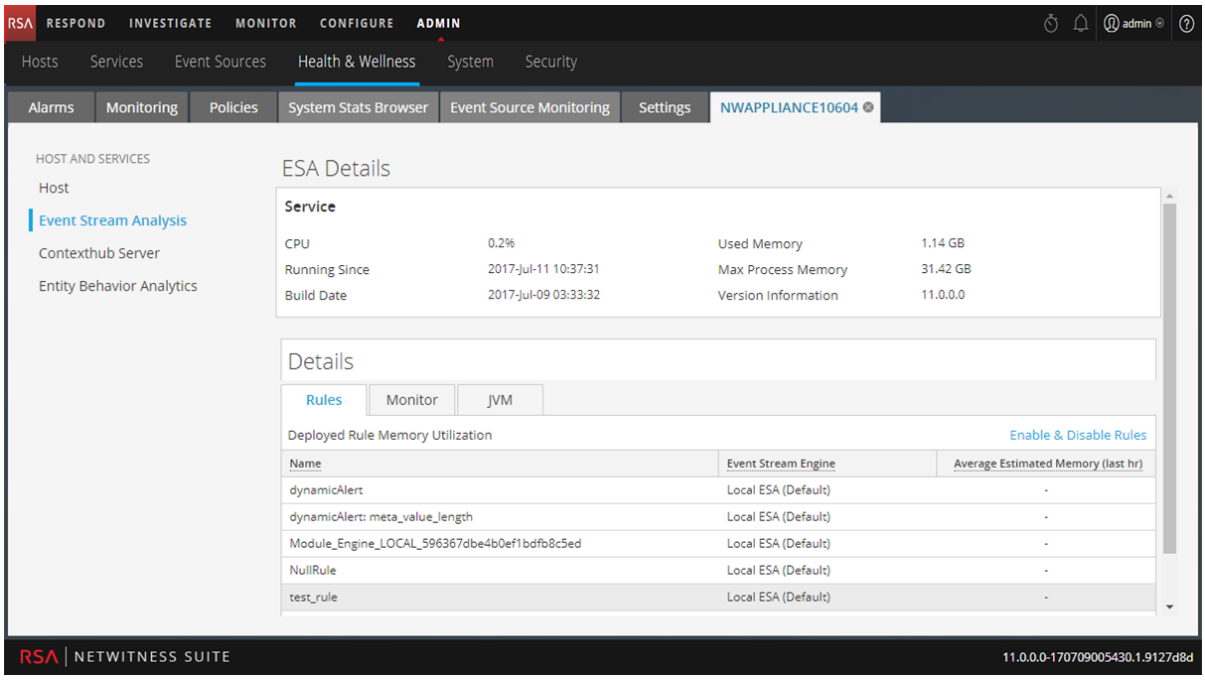
   A list of services running on the host is displayed.

4. Click on any service.

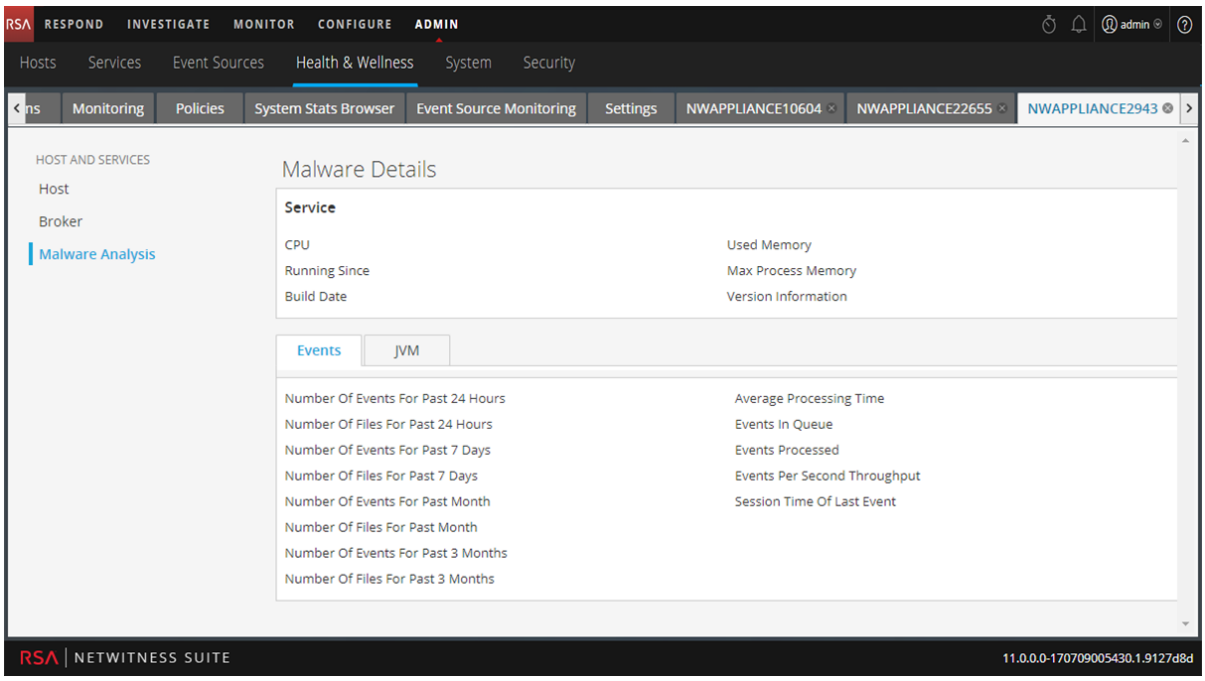
   The service details view is displayed as a new page. The Archiver, Broker, Concentrator, and Decoder service details views have the **Service** and **Details** panels.



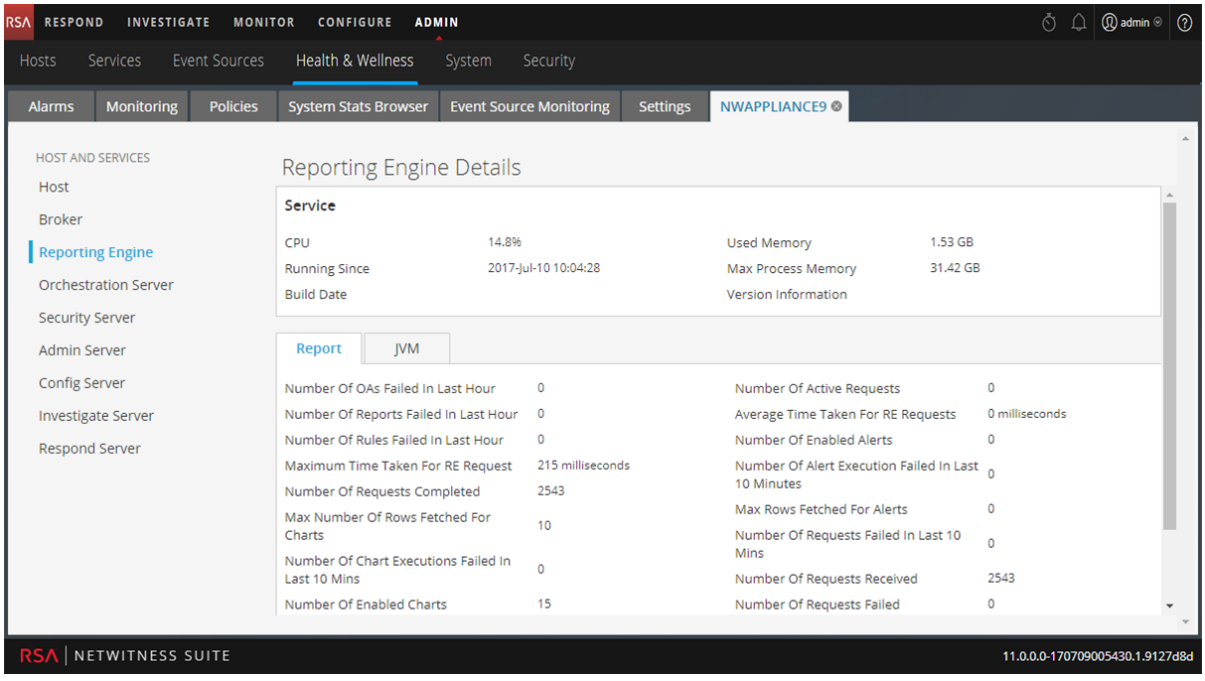
The Event Stream Analysis (ESA) service details view has the **Service**and **Details** panels, plus the **Monitor** and **JVM** tabs that show additional statistics.



The Malware Analysis service details view has the **Service** panel plus the **Rules, Events,** and **JVM** tabs that show additional statistics.



The Reporting Engine service details view has the **Service** panel plus the **Report** and **JVM** tabs that show additional statistics.



Note: Alternatively, you can access the service details page by clicking the services listed in the options panel in the Host Details view.

Refer to Monitoring View for a detailed description of the Details view for each service.

Monitor Event Sources

The event source monitoring feature of NetWitness Suite provides the following functionalities:

- Support for failover
- Provides a consolidated list of event sources and their associated collector and log decoder devices
- Regex support for rules
- Decommission
- Filtering capabilities
- Historical graph

In addition, you can monitor event sources, check the number of events generated from a source type and view the historical graph of the events collected. To monitor event sources you have to configure the event sources so that they generate and send out notifications when required.

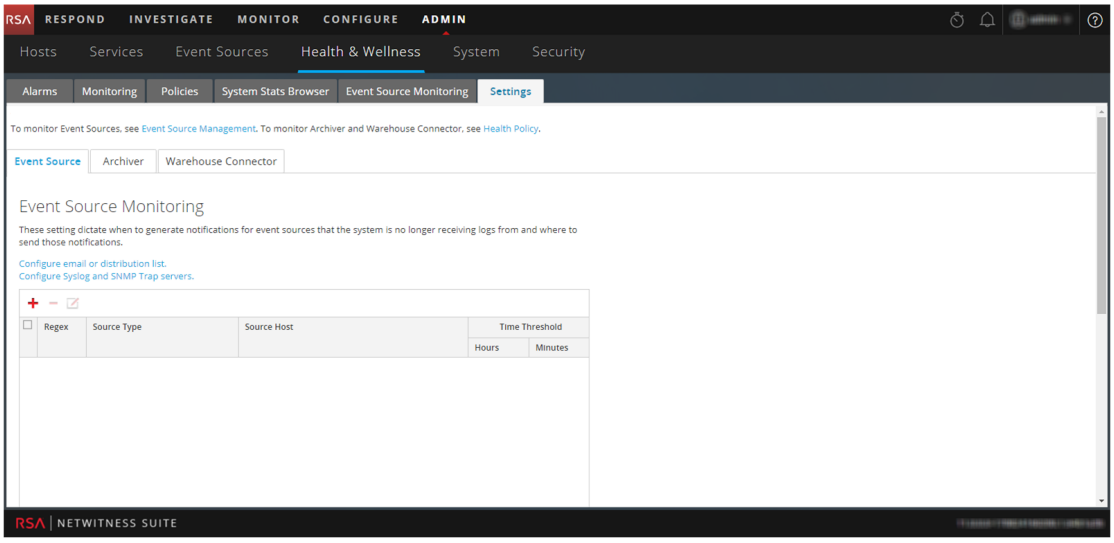
Configure Event Source Monitoring

To monitor event sources you have to configure the event sources so that they generate and send out notifications when required. For the related reference topic, see Health and Wellness Settings View - Event Sources.

To configure and enable event monitoring in NetWitness Suite:

1. Go to **ADMIN** > **Health & Wellness**.
2. Select **Settings** > **Event Source**.

   The Event Source tab is displayed.

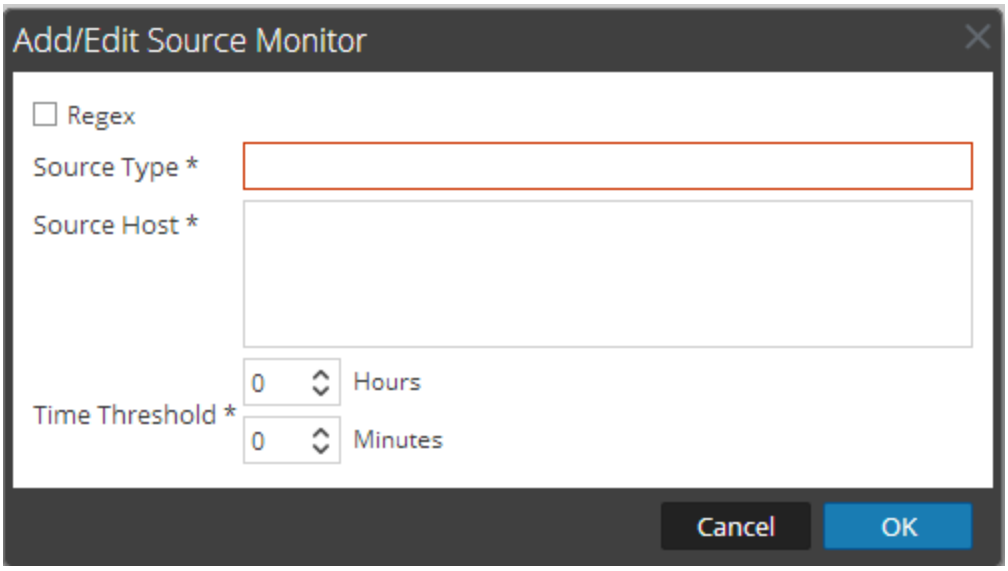


3. Under **Event Source Monitoring**, click +.

   The Add/Edit Source Monitor dialog is displayed.

4. Define the **Source Type**, **Source Host**, and **Time Threshold** for the source of the event source that you want to monitor to detect when NetWitness Suite stops receiving logs from it. If you do not specify a **Time Threshold**, NetWitness Suite monitors the event source until you set a threshold.

   Note: For **Source Type** and **Source Host**, you must specify the values that you configured for the event source in the **Event Sources** tab of the **Administration** > **Services** > Log Collector service > **View** > **Config** view. You add or modify the the event sources that you want to monitor. The two parameters that identify an event source are **Source Type** and **Source Host**. You can use **globbing** (pattern matching and wildcard characters) to specify the **Source Type** and **Source Host** of event sources



5. Click **OK**.

   The event source is displayed in the panel.

6. Configure the method of notification, by doing one of the following:

   - Select **Configure email or distribution list**.

     The AMIN > System > Email Configuration Panel is displayed so that you can specify to whom the notifications are sent.

   - Select **Configure Syslog and SNMP Trap servers**.

     The Administration > System Auditing Configuration panel is displayed so that you can configure the Syslog and SNMP Traps to which the notifications are sent.

7. Click **Apply**.

   NetWitness Suite begins sending notifications when it stops receiving events from this event source after the time threshold has elapsed.

For details on parameters in the Event Source Monitoring settings view, see Event Source Monitoring View.

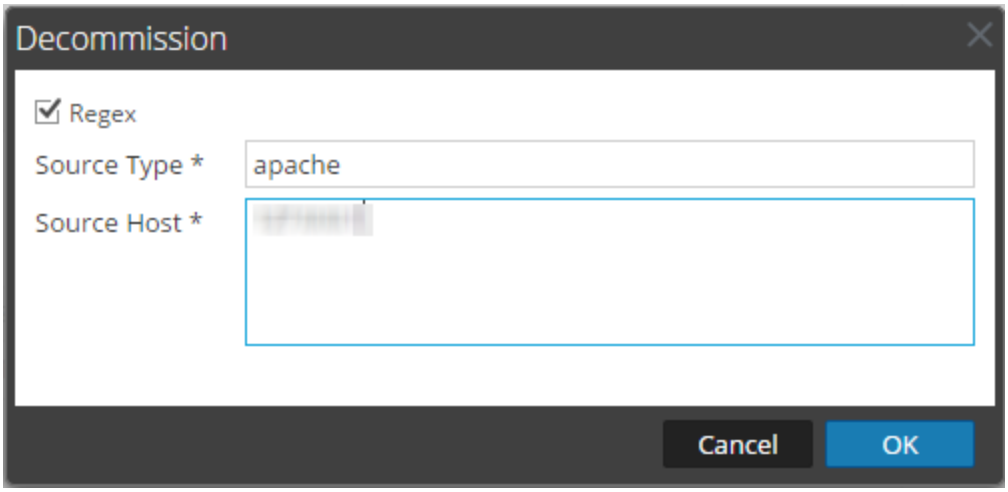
Decommission Event Source Monitoring

If a Log Collector service (Local Collector or Remote Collector) for which you set up Event Source monitoring becomes inoperable, NetWitness Suite continues to notify that you it is not receiving events from it until you decommission the Collector.

Caution: If you configured a failover Local Collector for a Remote Collector and the Local Collector fails over to a standby Log Decoder, you must decommission the Local Collector to stop the notifications.

To decommission event source monitoring for an event source:

1. Go to **ADMIN**> **Health & Wellness**.
2. Select **Settings** > **Event Source**.
   The **Event Source** tab is displayed.
3. Under **Decommission**, click +.
   The **Decommission** dialog displays.
4. Define the **Source Type** and the **Source Host** for the source for which you want to decommission event monitoring notifications.



Filter Event Sources

You can choose a filter to display:

- Events belonging to a particular event source
- Events belonging to particular event source types
- Events collected from a particular log Collector
- Events list arranged in a order based on the Event Source Type, Log Collector, Log Decoder or Last Event Time.

To filter the list of event sources:

1. Go to **ADMIN > Health & Wellness**.
2. Select **Event Source Monitoring**.
3. Filter the list in one of the following ways:

- To view the events generated by a particular event source, type the required event source in the **Event Source** field. Select **Regex** to enable Regex filter and click **Apply**. It performs a regular expression search against text and lists out the specified category. This field also supports globbing pattern matching.
  All events generated by the Event Source specified are displayed.
- To view events collected from a particular Log Collector, select a Log Collector from the drop-down list and click **Apply**.
  A list of all events being collected from the specified Log Collector from various event sources is displayed.

Note: Similarly, you can also choose the following filters:
- To view events belonging to an event source type, select the event source type and click **Apply**.
- To view events received in a specified time frame, select the required time frame and click **Apply**. You can further filter the query results to contain only event sources that logs have been received from within the selected time or the query results to contain only event sources that logs have not been received from within the selected time.

For details on various parameters and description, see Event Source Monitoring View.

View Historical Graph of Events Collected for an Event Source

The historical graph of the events collected from an event source gives you information about the variation of the collection over a time frame selected.

To view a historical graph:

1. Go to **ADMIN > Health & Wellness**.
   The Health & Wellness view is displayed with the Alarms tab open.

2. Click **Event Source Monitoring**.
   The Event Source Monitoring view is displayed.

3. In the **Historical Graph** column, select .
   The Historical graph for the selected event source is displayed.
   The figure below gives an example of the historical graph for the event source type **winevent_snare**.

   The graphical view is customized to display the events collected for the current day and the values are zoomed in for an interval of an hour (09.05 - 105.05 hrs). Hover over the graph to view the details at a particular instant. For example, in the figure it displays the average rate of collection at 09.30 hrs.

Note: You can customize the graph view by selecting the Time Frame and Date range. You can zoom in using the zoom in value, time window, or by just a click and a drag in the plot area. For details on the parameters to customize and zoom in functions see Health and Wellness Historical Graphs collected from an event source.
If there is no data displayed on the chart it may be due to one of the following reasons:
- event source is down.
- event source is not processing anything right now.

Monitor Alarms

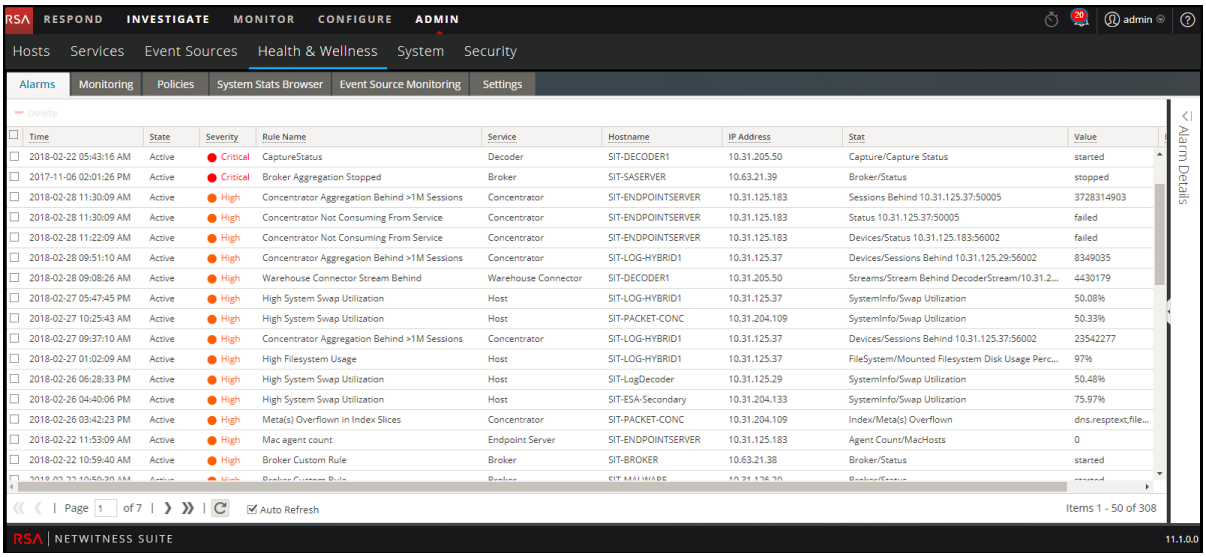
You can set up alarms and monitor them in the Health and Wellness interface for the hosts and services in your NetWitness Suite domain. Alarms display in the view as **Active** when the Policy-rule-defined statistical thresholds for hosts and services have been crossed. Alarms are grayed out and change to the **Cleared** status when the clearing threshold has been crossed.

You set up the parameters for alarms in Manage PoliciesManage Policies For the related reference topic, see Health and Wellness View - Alarms View.

To monitor the alarms set up in NetWitness Suite:

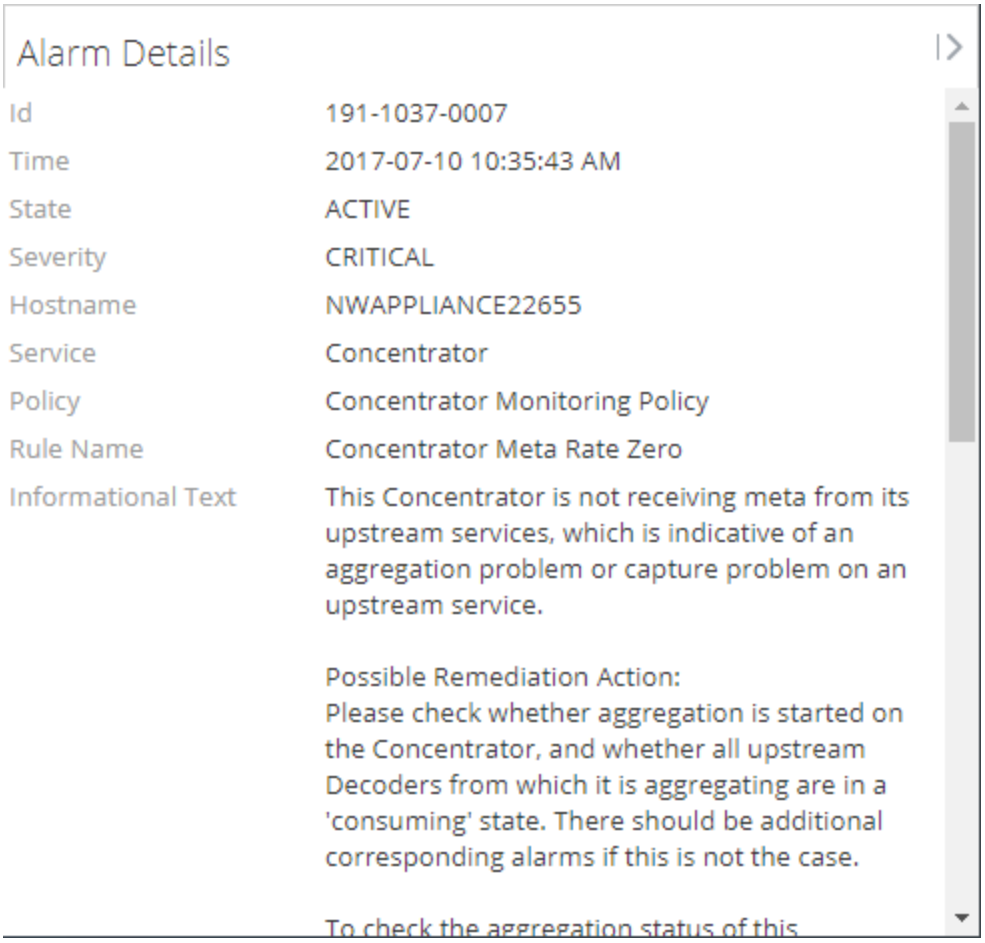
1. Go to **ADMIN > Health & Wellness**.

   The Health & Wellness view is displayed with the Alarms tab open by default.



2. Click on the alarm for which you want to display details in the Details Panel.

3. Click (expand) to view the details for the alarm you selected.



Monitor Health and Wellness Using SNMP Alerts

You can monitor an NetWitness Server component to proactively alert using Simple Network Management Protocol (SNMP) based on the thresholds or system failures.

You can monitor the following for NetWitness Suite components:

- CPU utilization that reaches a defined threshold.
- Memory utilization that reaches a defined threshold.
- Disk utilization that reaches a defined threshold.

SNMP Configuration

The NetWitness Servers can be configured to send out SNMPv3 Threshold Traps and Monitor Traps. Threshold traps are sent in conjunction with configured node thresholds by the NetWitness Suite Core applications themselves. Monitor traps are sent by the SNMP daemon itself for the items indicated in its configuration file. The customer must set up the SNMP daemon on another service to receive SNMP traps from NetWitness Suite. You can set up SNMP on NetWitness Suite in the configuration setting for the NetWitness Server. For more information, see "Service Configuration Settings" in the *NetWitness Suite Host and Services Getting Started Guide* for the specific host.

Thresholds

Thresholds can be set on any service statistics that can accept the setLimit message. You can retrieve the current thresholds using the getLimit message. To set a limit, you can pass a low and high threshold value.

When the value of the stat crosses either the low or high threshold, a SNMP trap is triggered indicating the threshold is crossed. The trap will not be triggered if the value is below the low and above the high value, but another trap is triggered if it crosses back into the normal range (above the low and below the high).

You must set the threshold for the service using the Service Explorer view or the REST API.

Following is a sample threshold for monitoring CPU usage (below 10% or above 90%):

```
/sys/stats/cpu setLimit low=10 high=90
```

Following is an example of how the threshold is set using REST API:

```
http://<log decoder>:50102/sys/stats/cpu?msg=setLimit&low=10&high=90
```

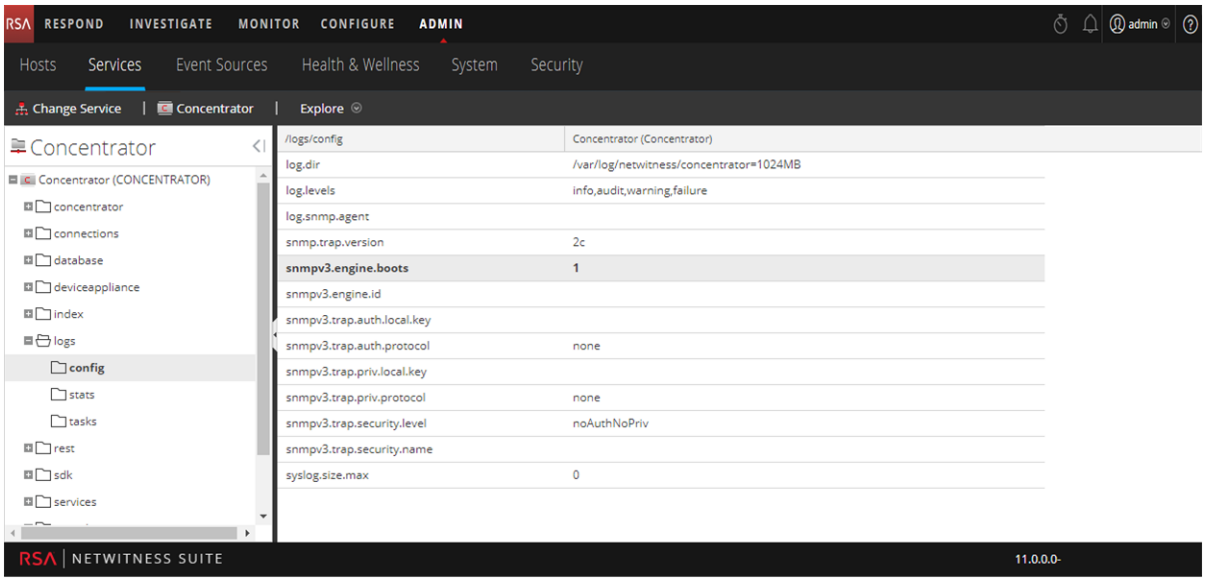
If the CPU usage spikes to 90% or higher, a SNMP trap will be generated:

```
23435333 2013-Dec-16 11:08:35 Threshold warning path=/sys/stats/cpu
old=77% new=91
```

Configure SNMPv3 for a Host

1. Go to **ADMIN > Services**.
   The Services view is displayed.
2. Select the service.
3. In the Actions column, select **View > Explore**.
4. In the nodes list, expand the list and select a config folder. For example, logs > config

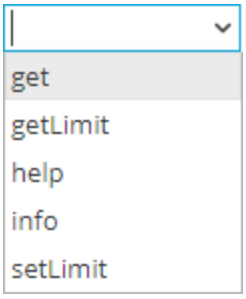
5. Set the SNMPv3 configuration.



Set the Threshold for a Service

1. Go to **ADMIN > Services**.
   The Services view is displayed.
2. Select the service.
3. In the Actions column, select **View > Explore**.
4. In the nodes list, expand the list and select a stat folder.
5. Select a stat, for example, cpu, and right-click.
6. From the drop-down menu, select **Properties.**

   The Properties panel is displayed. The Properties panel has a drop-down list of available messages for the parameter.



7. Select setLimit.
8. Specify the low and high values.

Troubleshooting Health & Wellness

Issues Common to All Hosts and Services

You may see the wrong statistics in the Health & Wellness interface if:

- Some or all the hosts and services are not provisioned and enabled correctly.
- You have a mixed-version deployment (that is, hosts updated to different NetWitness Suite versions).
- Supporting services are not running.

Issues Identified by Messages in the Interface or Log Files

This section provides troubleshooting information for issues identified by messages NetWitness Suite displays in the Health & Wellness Interface or includes in the Health & Wellness log files.

Message	User Interface: **Cannot connect to System Management Service** System Management Service (SMS) logs: `Caught an exception during connection recovery! java.io.IOException at com.rabbitmq.client.impl.AMQChannel.wrap (AMQChannel.java:106) at com.rabbitmq.client.impl.AMQChannel.wrap (AMQChannel.java:102) at com.rabbitmq.client.impl.AMQConnection.start(AMQConnection.java:346) at com.rabbitmq.client.impl.recovery. RecoveryAwareAMQConnectionFactory. newConnection (RecoveryAwareAMQConnectionFactory.java:36) at com.rabbitmq.client.impl.recovery. AutorecoveringConnection. recoverConnection(AutorecoveringConnection.java:388) at com.rabbitmq.client.impl.recovery. AutorecoveringConnection.beginAutomaticRecovery (AutorecoveringConnection.java:360) at com.rabbitmq.client.impl.recovery.AutorecoveringConnection. access$000(AutorecoveringConnection.java:48) at com.rabbitmq.client.impl.recovery.`

	AutorecoveringConnection$1.shutdownCompleted (AutorecoveringConnection.java:345) at com.rabbitmq.client.impl.ShutdownNotifierComponent. notifyListeners(ShutdownNotifierComponent.java:75) at com.rabbitmq.client.impl.AMQConnection$MainLoop.run (AMQConnection.java:572) at java.lang.Thread.run(Thread.java:745) Caused by: com.rabbitmq.client.ShutdownSignalException: connection error at com.rabbitmq.utility.ValueOrException.getValue (ValueOrException.java:67) at com.rabbitmq.utility.BlockingValueOrException. uninterruptibleGetValueBlockingValueOrException.java:33) at com.rabbitmq.client.impl.AMQChannel$BlockingRpcContinuation. getReply (AMQChannel.java:343) at com.rabbitmq.client.impl.AMQConnection.start (AMQConnection.java:292) ... 8 more Caused by: java.net.SocketException: Connection reset at java.net.SocketInputStream.read (SocketInputStream.java:189) at java.net.SocketInputStream.read (SocketInputStream.java:121) at java.io.BufferedInputStream.fill (BufferedInputStream.java:246) at java.io.BufferedInputStream.read (BufferedInputStream.java:265) at java.io.DataInputStream.readUnsignedByte (DataInputStream.java:288) at com.rabbitmq.client.impl.Frame.readFrom(Frame.java:95) at com.rabbitmq.client.impl.SocketFrameHandler.readFrame (SocketFrameHandler.java:139) at com.rabbitmq.client.impl.AMQConnection$MainLoop.run (AMQConnection.java:532)
Possible Cause	RabbitMQ service not running on the NetWitness Server.

Solution	Restart the RabbitMQ, SMS, and NetWitness Suite services using the following commands.
	`systemctl restart rabbitmq-server`
	`systemctl restart rsa-sms`

	`systemctl restart jetty`

Message/ Problem	User Interface: **Cannot connect to System Management Service**
Cause	The System Management Service, RabbitMQ, or Mongo service is not running.

Solution	Run the following commands on NetWitness Server to make sure all these services are running.
	`[root@nwserver ~]# systemctl status rsa-sms`
	`RSA NetWitness SMS :: Server is not running.`
	`[root@nwserver ~]# systemctl start rsa-sms`
	`Starting RSA NetWitness SMS :: Server...`
	`[root@nwserver ~]# systemctl status rsa-sms`
	`RSA NetWitness SMS :: Server is running (5687).`
	`[root@nwserver ~]# systemctl status mongod`
	`mongod (pid 2779) is running...`
	`systemctl status rabbitmq-server`
	`Status of node nw@localhost ...`
	`[{pid,2501},`
	`{running_applications,`
	`[{rabbitmq_federation_management,"RabbitMQ Federation Management",`
	`"3.3.4"},`

Message/ Problem	User Interface: **Cannot connect to System Management Service**
Possible Cause	`/var/lib/rabbitmq` partition usage is 70% or greater.
Solution	Contact Customer Care.

Message/ Problem	User Interface: **Host migration failed.**
Possible Cause	One or more NetWitness Suite services may be in a **stopped** state.
Solution	Make sure that the following services are running then restart the NetWitness Server: Archiver, Broker, Concentrator, Decoder, Event Stream Analysis, Response Server, IPDB Extractor, Log Collector, Log Decoder, Malware Analysis, Reporting Engine, Warehouse Connector, Workbench.

Message/ Problem	User Interface: **Server Unavailable.**
Possible Cause	One or more NetWitness Suite services may be in a **stopped** state.
Solution	Make sure that the following services are running then restart the NetWitness Server: Archiver, Broker, Concentrator, Decoder, Event Stream Analysis, Response Server, IPDB Extractor, Log Collector, Log Decoder, Malware Analysis, Reporting Engine, Warehouse Connector, Workbench.

Message/ Problem	User Interface: **Server Unavailable**
Possible Cause	System Management Service (SMS), RabbitMQ, or Mongo service is not running.

Solution 1	Run the following commands on NetWitness Server to make sure all these services are running.
	`[root@nwserver ~]# systemctl status rsa-sms`
	`RSA NetWitness SMS :: Server is not running.`

	[root@nwserver ~]# systemctl start rsa-sms Starting RSA NetWitness SMS :: Server... [root@nwserver ~]# systemctl status rsa-sms RSA NetWitness SMS :: Server is running (5687). [root@nwserver ~]# systemctl status mongod mongod (pid 2779) is running... systemctl status rabbitmq-server Status of node nw@localhost ... [{pid,2501}, {running_applications, [{rabbitmq_federation_management,"RabbitMQ Federation Management", "3.3.4"},
Solution 2	Make sure `/var/lib/rabbitmq` partition is less than 75% full
Solution 3	Check NetWitness Server log files (`var/lib/netwitness/uax/logs/nw.log`) for any errors.

Message/ Problem	ContextHub stops and does not allow you to add or edit data sources and lists.
Possible Cause	The storage is full by 95% or above.
Solution 1	Increase the storage by updating the YML file, located at /etc/netwitness/contexthub-server/ contexthub-server.yml. For example, to increase storage from 120 to 150 GB, enter a value (in bytes) by editing the relevant parameter: `rsa.contexthub.data.disk-size: 161061273600`
Solution 2	Delete unwanted or unused large list.
Solution 3	Configure the TTL index for the list to automatically delete STIX and TAXI data and to clean up storage space.

Message/ Problem	Context Hub runs on a fixed memory and 50% is reserved for cache. When cache is 100% full, the cache response stops. For all new lookups the response will be slow.
Possible Cause	The cache is full by 50% or above.
Solution 1	By default, Context Hub cleans the cache every 30 minutes. Reduce the cache expiration time of data sources.
Solution 2	Disable cache for data sources.
Solution 3	Increase the RAM of the CH Java process by editing the `-Xmx` option available in the /etc/netwitness/contexthub-server/contexthub-server.conf file. In `JAVA_OPTS`, search for the `-Xmx` option. For example, edit the entry as follows: `-Xmx8G` where `8G` represents 8GB space. Then restart the ContextHub service. **Note:** The memory is less than the available system memory. Be aware that there are many other services running on the host.

Message/ Problem	List Data Source displays an unhealthy stats or status.
Possible Cause 1	Unable to: • access the data source • parse or read a CSV file • schema mismatched CSV
Possible Cause 2	Unable to authenticate when accessing the data source.
Solution 1	Make sure to save the csv file at correct location i.e/var/lib/netwitness/contexthub-server/data/ and verify the required read permissions.

Solution 2	Make sure the csv file schema specified while configuring the data source matches. If not, then either create a new data source with the new schema or edit the csv file to match the schema. For example, if you configure a List Data Source with a schema with column1, column2, and column3. And next time you update the csv file where the number of column increase or decrease or the order of the columns are changed. In this case there is a schema mismatch and the configured list data source will show “Unhealthy” in Health and Wellness stats.
Solution 3	Make sure the password is correct. To confirm edit the data source, enter the password and click test connection. For more information related the above solutions, see "Configure Lists as a Data Source" topic in the *Context Hub Configuration Guide*.

Issues Not Identified by the User Interface or Logs

This section provides troubleshooting information for issues that are not identified by messages NetWitness Suite displays in the Health & Wellness Interface or includes in the Health & Wellness log files. For example, you may see incorrect statistical information in the Interface.

Problem	Incorrect statistics displayed in Health and Wellness interface.
Possible Cause	SMS service is not running. SMS service must be running on the NetWitness Server.
Solution	Restart SMS service.

Problem	NetWitness Suite does not show the version to which you upgraded until you restart jettysrv (jeTTy server).
Possible Cause	When NetWitness Suite checks a connection, it polls a service every 30 seconds to see if it is active. During that 30 seconds, if the service comes back up, it will not get the new version.
Solution	1. Manually stop the service.

	2. Wait until you see that it is it offline. 3. Restart the service. NetWitness Suite displays the correct version.

Problem	NetWitness Server does not display the **Service Unavailable** page.
Possible Cause	After you upgrade to NetWitness Suite version 10.5, JDK 1.8 is not default version and this causes the jettysrv (jeTTy server) to fail to start. Without the jeTTy server, the NetWitness Suite server cannot display the **Service Unavailable** page.
Solution	Restart jettysrv.

Problem	The SMS service is stopped and the following error is displayed in the log file: `java.lang.OutOfMemoryError: Java heap space`
Solution	You can use the following solution to increase the memory according to your needs. 1. Open /opt/rsa/sms/conf/wrapper.conf  2. Replace `wrapper.java.additional.1=-Xmx8192m` with: `wrapper.java.additional.1=-Xmx16g`

3. Restart the SMS service:

```
systemctl start rsa-sms
```

Managing NetWitness Suite Updates

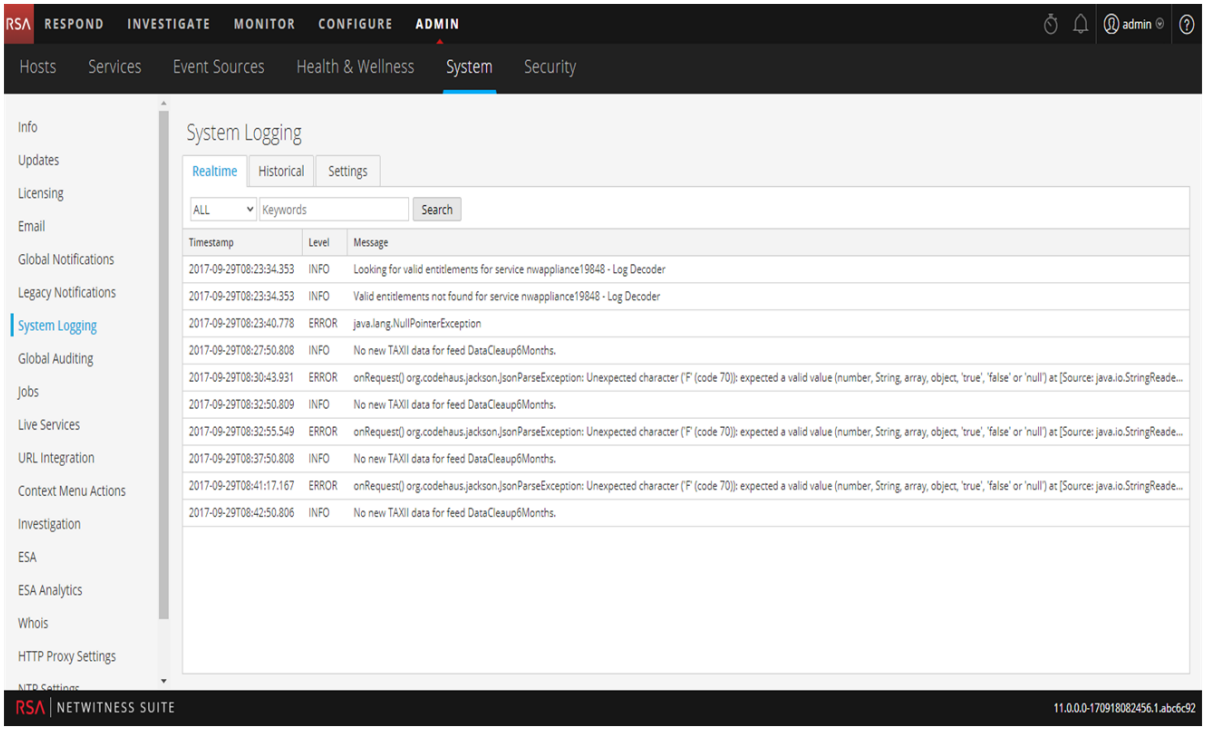
RSA issues NetWitness Suite software version updates on a regular basis as it strives to continually improve the product. A software version update consists of a release, service pack, or patch (including security patch) and ancillary software on which the release, service pack, or patch depends. User guides are provided for each software version update release, which include detailed steps for installing the update. It is important that you download the update guide for the release from RSA Link (https://community.rsa.com/community/products/netwitness) and follow the steps described there. Additional information is available in the "Update Existing Host to New Version" topic in the *Hosts and Services Getting Started Guide* and in System Updates Panel - Settings Tab.

Displaying System and Service Logs

NetWitness Suite provides views into system logs and service logs. When you view service logs, you can also select messages for the service or host.

View System Logs

1. Go to **ADMIN > System.**
2. In the options panel, select **System Logging**.

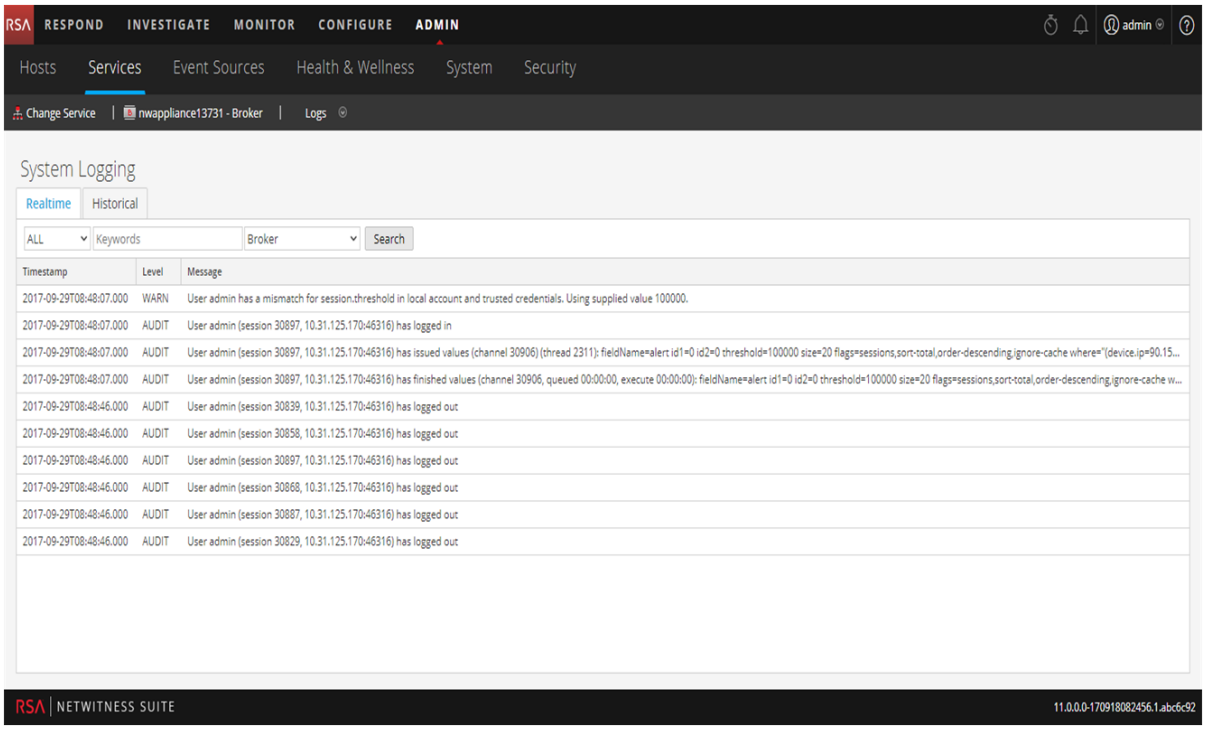


Display Service Logs

To display NetWitness Suite service logs:

1. Go to **ADMIN > Services**.
2. In the **Services** grid, select a service.

3. In the **Actions** column, select **View > Logs**.



Filter Log Entries

To filter the results shown in the Realtime tab:

1. (Optional) For system and service logs, select a **Log Level** and a **Keyword**, or both. System logs have seven log levels. Service logs have only six log levels because they do not include the **TRACE** level. The default is **ALL** log entries.
2. (Optional) For service logs, select the Service: host or service.
3. Click **Filter**.

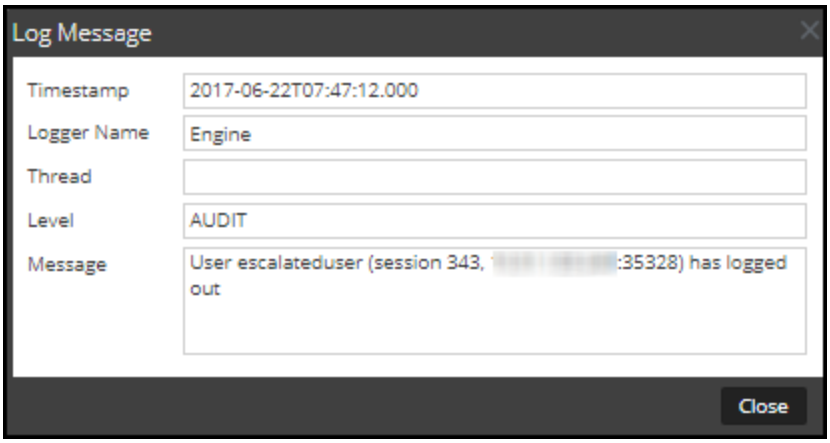
   The view is refreshed with the most recent 10 entries matching your filter. As new matching log entries become available, the view is updated to show those entries.

Show Details of a Log Entry

Each row of the Realtime tab Log grid provides the summary information of a log entry. To view complete details:

1. Double-click a log entry.

   The **Log Message** dialog, which contains the Timestamp, Logger Name, Thread, Level and Message, is displayed.



2. After viewing, click **Close**.

Access Reporting Engine Log File

All Log Files

The Reporting Engine stores the following logs in the **rsasoc/rsa/soc/reporting-engine/log** directory:

- Current logs in the **reporting-engine.log** file.
- Backup copies of previous logs in the **reporting-engine.log.*** file.
- All UNIX script logs in the files that have the following syntax: **reporting-engine.sh_*timestamp*.log** (for example, **reporting-engine.sh_20120921.log**).

The Reporting Engine rarely writes command line error messages to the **rsasoc/nohup.out** file.

Upstart Logs

The Reporting Engine appends the log messages and output written by upstart daemon and the commands used to start the reporting-engine to the **/var/log/secure** directory.

An upstart log file is a system log file so only the root user can read it. The Reporting Engine generates log files, retains backup copies of previous log files, stores UNIX script log files, and appends upstart log files to another directory.

Search and Export Historical Logs

NetWitness Suite provides a searchable view of the NetWitness Suite log or the service log in a paged format. When initially loaded, the grid shows the last page of the log entries for the system or the service. You can export logs from the current view.

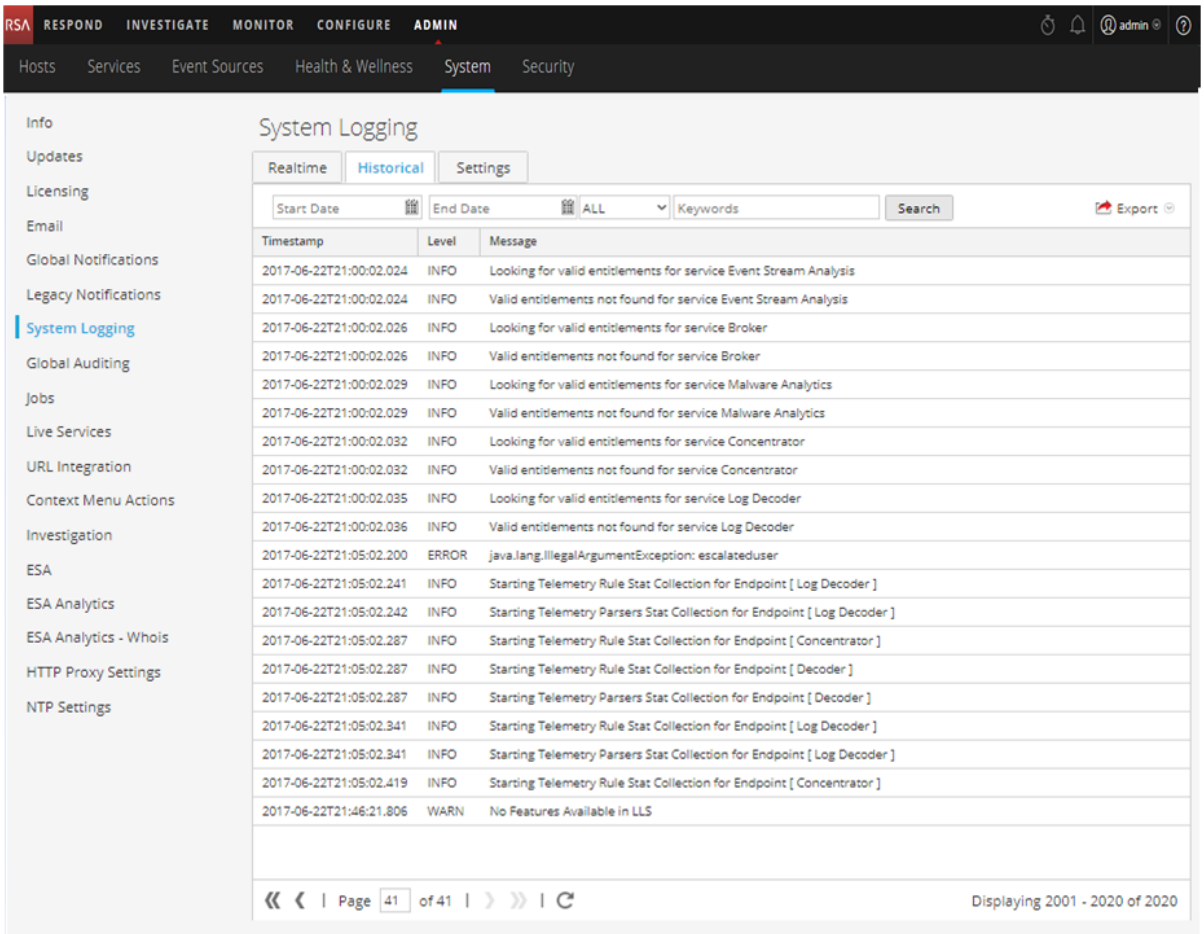
Display the Historical System Log

To display the historical log for the system:

1. Go to **ADMIN > System.**
2. In the options panel, select **System Logging**.

   The System Logging panel is opened to the Realtime tab by default.
3. Click the **Historical** tab.

   A list of historical logs for the system is displayed.



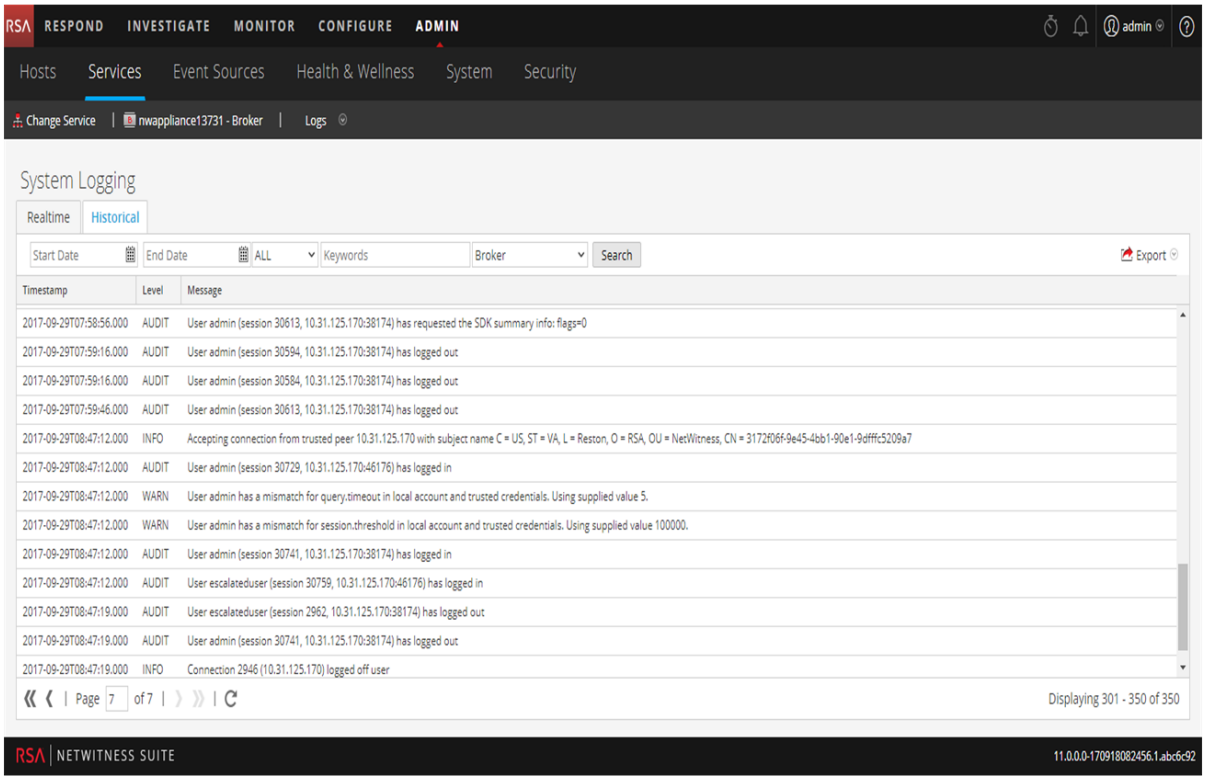
Display a Historical Service Log

To display the historical log for services:

1. Select **ADMIN > Services**.
2. Select a service.
3. In the **Actions** column, select **View > Logs**.

   The service logs view is displayed with the Realtime tab open.
4. Click the **Historical** tab.

   A list of historical logs for the selected service is displayed.



Search Log Entries

To search the results shown in the **Historical** tab:

1. (Optional) Select a **Start Date** and **End Date**. Optionally, select a **Start Time** and **End Time**.
2. (Optional) For system and service logs, select a **Log Level** and a **Keyword**, or both. System logs have seven log levels. Service logs have only six log levels because they do not include the **TRACE** level. The default is **ALL** log entries.
3. (Optional) For service logs, select the Service: host or service.

4. Click **Search**.

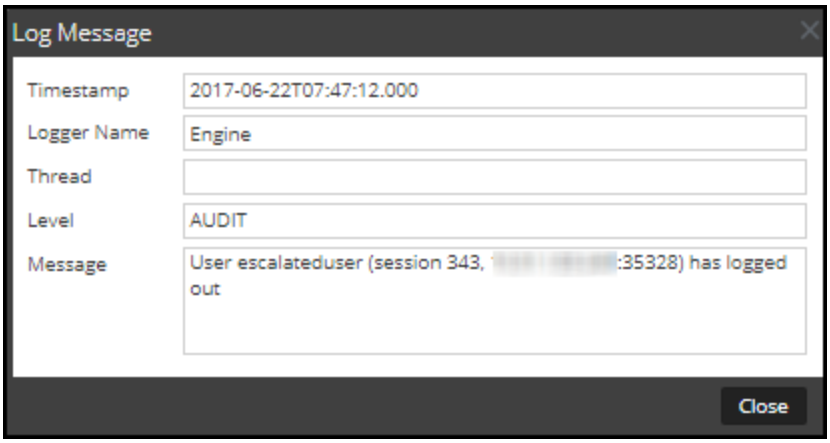
   The view is refreshed with the most recent 10 entries matching your filter. As new matching log entries become available, the view is updated to show those entries.

Show Details of a Log Entry

Each row of the **Historical** tab Log grid provides the summary information of a log entry. To display all the details for a log message:

1. Double-click a log entry.

   The **Log Message** dialog, which contains the Timestamp, Logger Name, Thread, Level and Message, is displayed.



2. After viewing, click **Close**.

   The dialog closes.

Page Through Log Entries

To peruse the different pages of the grid, use the paging controls on the bottom of the grid as follows:

- Use the navigation buttons
- Manually type the page number you want to view, and press **ENTER**.

Export a Log File

To export the logs in the current view:

Click **Export**, and select one of the drop-down options: **CSV Format** or **Tab Delimited**.
The file is downloaded with a filename that identifies the log type and the field delimiter. For example, a NetWitness Suite system log exported with comma-separated values is named **UAP_log_export_CSV.txt**, and a host log exported with tab-separated values is named **APPLIANCE_log_export_TAB.txt**.

Maintaining Queries Using URL Integration

A URL integration provides a way to represent the bread crumbs, or query path, you take when actively investigating a service in the Navigate view. You do not need to display and edit these objects often.

A URL integration maps a unique ID that is automatically created each time you click on a navigation link in the Navigation view to drill into data. When the drill-down completes, the URL reflects the query IDs for the current drill point. The Display Name is displayed in the bread crumb in the Navigate view.

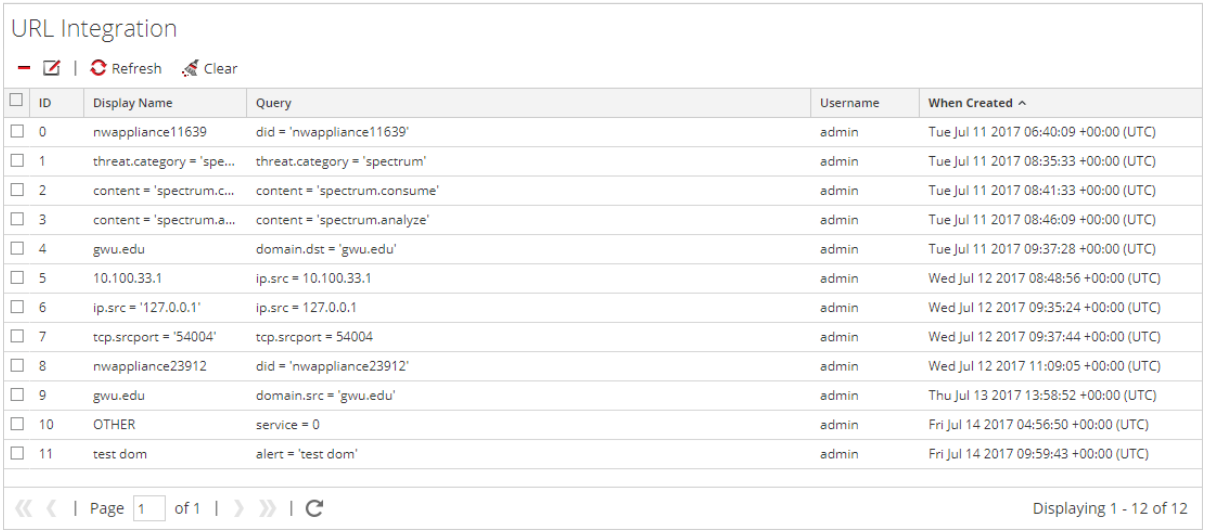
The **URL Integration** panel provides a list of queries and allows users who have the proper permissions to modify this underlying source of data and analyze the query patterns of other users of the NetWitness Suite system. Within the panel, you can:

- Refresh the list.
- Edit a query.
- Delete a query.
- Clear all queries in the list.

Caution: After a query has been removed from the system, any Investigation URLs that included the ID of that query will no longer function.

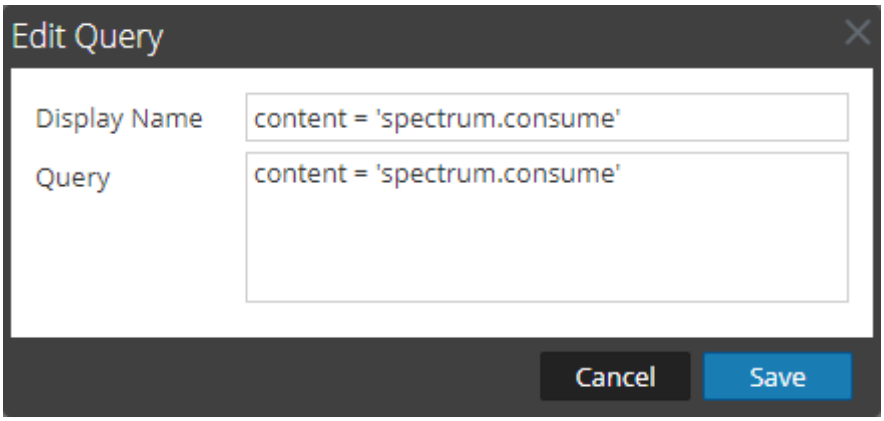
Edit a Query

1. Go to **ADMIN > System**.
2. In the options panel, select **URL Integration**.



3. Select the row in the grid and either double-click the row or click .

   The **Edit Query Dialog** is displayed.



4. Edit the **Display Name** and the **Query**, but do not leave either field blank.
5. To save the changes, click **Save**.

Delete a Query

Caution: After a query has been removed from the system, any Investigation URLs that included the ID of that query will no longer function.

To remove a query from NetWitness Suite entirely:

1. Select the query.
2. Click

A dialog requests confirmation that you want to delete the query.

3. Click **Yes**.

Clear All Queries

To clear all queries from the list:

- Click

The entire list is cleared.

Use a Query in a URI

URL Integration facilitates integrations with third-party products by allowing a search against the NetWitness Suite architecture. By using a query in a URI, you can pivot directly from any product that allows custom links, into a specific drill point in the Investigation view in NetWitness Suite.

The format for entering a URI using a URL-encoded query is:

http://<nw host:port>/investigation/<serviceId>/navigate/query/<encoded query>/date/<start date>/<enddate>
where

- **<nw host: port>** is the IP address or DNS, with or without a port, as appropriate (ssl or not). This designation is only needed if access is configured over a non-standard port through a proxy.
- **<serviceId>** is the internal Service ID in the NetWitness Suite instance for the service to query against. The service ID can be represented only as an integer. You can see the relevant service ID from the url when accessing the investigation view within NetWitness Suite. This value will change based on the service being connected to for analysis.
- **<encoded query>** is the URL-encoded NetWitness Suite query. The length of query is limited by the HTML URL limitations.
- **<start date>** and **<end date>** define the date range for the query. The format is <yyyy-mm-dd>T<hh:mm>. The start and end dates are required. Relative ranges (for example, Last Hour) are not supported in this version. All times are run as UTC.

For example:
http://localhost:9191/investigation/12/navigate/query/alias%20exists/date/2012-09-01T00:00/2012-10-31T00:00

Examples

These are query examples where the NetWitness Server is 192.168.1.10 and the serviceID is identified as 2.

All activity on 03/12/2013 between 5:00 and 6:00 AM with a hostname registered

- Custom Pivot: alias.host exists
- https://192.168.1.10/investigation/2...13-03-12T06:00

All activity on 3/12/2013 between 5:00 and 5:10 PM with http traffic to and from IP address 10.10.10.3

- Custom Pivot: service=80 && (ip.src=10.10.10.3 || ip.dst=10.0.3.3)
- Encoded Pivot Dissected:
  - service=80 => service&3D80
  - ip.src=10.10.10.3 => ip%2Esrc%3D10%2E10%2E10%2E3
  - ip.dst=10.10.10.3 => ip%2Esrc%3D10%2E10%2E10%2E3
  - https://192.168.1.10/investigation/2...13-03-12T17:10

Additional Notes

Some values may not need to be encoded as part of the query. For example, commonly the IP src and dst is used for this integration point. If leveraging a third-party application for integration of this feature, it is possible to reference those without encoding applied.

FIPS Support

NetWitness Suite 11.0 ships with FIPS-validated 140-2 Cryptographic Modules that support all cryptographic operations within NetWitness Suite. NetWitness Suite leverages two modules that support a level 3 design assurance:

- RSA BSAFE Crypto-J
- OpenSSL with BSAFE (OWB)

Both modules have been certified with an operational environment comparable to the standard NetWitness Suite configuration.

By default, the cryptographic modules enforce the usage of FIPS-certified cipher suites wherever possible. For exceptions, refer to the information below and to the release notes. For additional information about the FIPS modules, see http://csrc.nist.gov/groups/STM/cmvp/documents/140-1/140val-all.htm.

The RSA BSAFE Crtypo-J FIPS Certificate number is 2468 and the OWB FIPS Certificate is included in the RSA BSAFE Crypto-C Micro Edition with certificate number 2300.

In 11.0.0.0, FIPS is enabled on all services except Log Collector. This includes Log Decoder and Decoder if they were FIPS-enabled in 10.6.4.x. FIPS cannot be disabled on any services except for Log Collector, Log Decoder and Decoder.

Note: For a fresh installation of 11.0.0.0, by default, all core services will be FIPS enforced except Log Collector and Log Decoder. FIPS cannot be disabled on any services except for Log Collector, Log Decoder and Packet Decoder.

Note: For upgrades to 11.0.0.0 from 10.6.4.x, the following conditions apply for the Log Collector, Log Decoder and Decoder services:
- Log Collector is not FIPS enabled after upgrading to 11.0.0.0, even if FIPS was enabled in 10.6.4.x. You must enable FIPS support after upgrading to 11.0.0.0. See the instructions in FIPS support for Log Collectors.
- If FIPS was enabled for the Log Decoder and Packet Decoder services in 10.6.4.x, FIPS will also be enabled in 11.0.0.0. However, if Log Decoder and Packet Decoder were NOT FIPS enabled in 10.6.4.x, they will not be enabled in 11.0.0.0, and you can manually enable FIPS for these services if required. See the instructions in FIPS support for Log Decoders and Decoders.

FIPS support for Log Collectors

To enable FIPS for Log Collectors:

1. Stop the Log Collector service.
2. Open the `/etc/systemd/system/nwlogcollector.service.d/nwlogcollector-opts-managed.conf` file.
3. Change the value of the following variable to **off** as described here:
   `Environment="OWB_ALLOW_NON_FIPS=on"`
   to
   `Environment="OWB_ALLOW_NON_FIPS=off"`
4. Reload the system daemon by running the following command:
   `systemctl daemon-reload`
5. Restart the Log Collector service.
6. Set the FIPS mode for the Log Collector service in the UI :

   Note: This step is not required if you are upgrading from 10.6.4 to 11.0.0.0 and FIPS was enabled in 10.6.4.

   a. Go to **ADMIN** > **Services**.
   b. Select the Log Collector service and go to **View** > **Config**.
   c. In SSL FIPS Mode, select the checkbox under Config Value and click **Apply**.

FIPS support for Log Decoders and Decoders

To enable FIPS for Log Decoders and Decoders that did not have FIPS enabled in 10.6.4.x:

1. Go to **ADMIN** > **Services** and select a Log Decoder or Packet Decoder service.
2. Select **View** > **Config**, and in **System Configuration**, enable **SSL FIPS Mode** by selecting the check box in the **Config Value** column.
3. Restart the service.
4. Click **Apply**.

Troubleshoot NetWitness Suite

For information about troubleshooting NetWitness Suite, see the following topics:

- Debugging Information
- Error Notification
- Miscellaneous Tips
- NwLogPlayer
- Troubleshoot Feeds

Debugging Information

NetWitness Suite Log Files

The following files contain NetWitness Suite log information.

Component	File
rabbitmq	/var/log/rabbitmq/nw@localhost.log /var/log/rabbitmq/nw@localhost-sasl.log
collectd	/var/log/messages
nwlogcollector	/var/log/messages
nwlogdecoder	/var/log/messages
sms	/opt/rsa/sms/wrapper.log
sms	/opt/rsa/sms/logs/sms.log
sms	/opt/rsa/sms/logs/audit/audit.log
NetWitness Suite	/var/lib/netwitness/uax/logs/nw.log
NetWitness Suite	/var/lib/netwitness/uax/logs/ audit/audit.log
NetWitness Suite	/opt/rsa/jetty9/logs

Files of Interest

The following files are used in key NetWitness Suite components, and can be useful when trying to track down miscellaneous issues.

Component	File	Description
rabbit	/etc/rabbitmq/rabbitmq.config	RabbitMQ configuration file. This configuration file partially drives the behavior of RabbitMQ, particularly around network/SSL settings.
rabbit	/etc/rabbitmq/rabbitmq-env.conf	RabbitMQ environment configuration file. This file specifies the RabbitMQ node name and location of the enabled plugins file.
rabbit	/etc/rabbitmq/rsa_enabled_plugins	This file specifies the list of enabled plugins in RabbitMQ. This file is managed by the RabbitMQ server, via the rabbitmq-plugins command. This file overrides the /etc/rabbitmq/enabled_plugins path, in order to work around issues with upgrading the Log Collector from early versions.

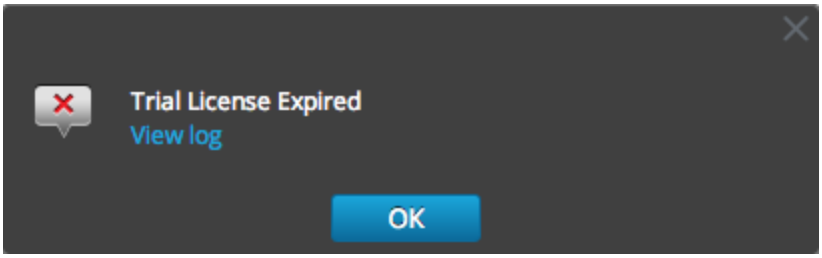
Component	File	Description
rabbit	/etc/rabbitmq/ssl/truststore.pem	The RabbitMQ trust store. This file contains a sequence of PEM-encoded X.509 certificates, represented trust CAs. Any clients that connect to RabbitMQ and present a certificate that is signed by a CA in this list is considered a trusted client.

Component	File	Description
rabbit	/var/log/rabbitmq/mnesia/nw@localhost	The RabbitMQ Mnesia directory. Mnesia is the Erlang/OTP database technology, for storing Erlang objects persistently. RabbitMQ uses this technology for storing information such as the current set of policies, persistent exchanges and queues, and so forth. Importantly, the msg_store_ persistent and msg_store_transient directories are where RabbitMQ stores messages that have been spooled to disk, e.g., if messages are published as persistent messages, or which have paged off to disk due to memory limitations. Keep a close eye on this directory, if the disk or memory alarms have tripped in RabbitMQ. **Caution:** Do not delete these files manually. Use RabbitMQ tools to purge or delete queues. Modifying these files manually may render your RabbitMQ instance inoperable.

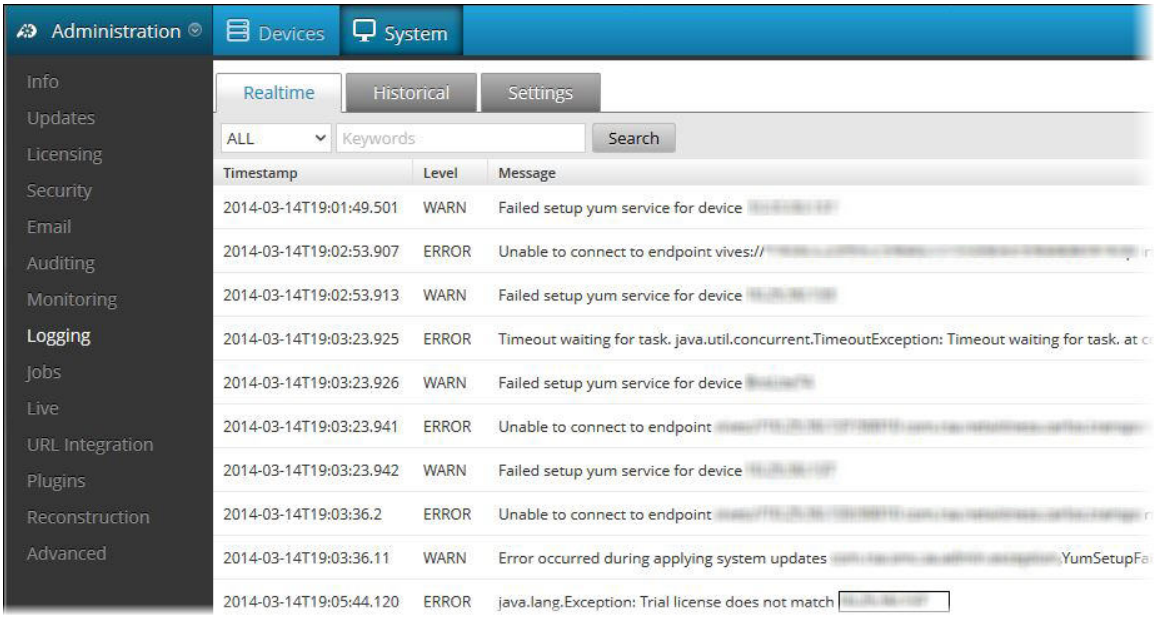
Error Notification

NetWitness Suite has a set of error message types associated with different components and operations. NetWitness Suite displays feedback in the form of a simple error notification and a log entry.

When an error notification dialog is displayed, you have two options: simply acknowledge the message or view the system log for more information.



If you want to view the system log for more information when an error notification is displayed, click **View log**. The log opens in the **Administration** > **System** view with a list of messages. Timestamp and message level are also listed.



Miscellaneous Tips

Audit Log Messages

It can be useful to see which user actions result in which log message types in the **/var/log/**messages file.

The event categories spreadsheet included in the log parser package in the NetWitness Suite Parser v2.0.zip archive lists the event categories and the event parser lines to help with building reports, alerts, and queries.

NwConsole for Health & Wellness

RSA has added a command option called **logParse** in **NwConsole**. This command option supports log parsing, a convenient way to check log parser without setting up the full system to do log parse. For more information about the **logParse** command, at the command line, type `help logParse`.

Thick Client Error: remote content device entry not found

Error: "*The remote content device entry was not found*," generated for a correlation rule applied to a concentrator.

Problem: in Investigation, if you click the `correlation-rule-name` meta value in the Alert meta key, you do not get session information.

Solution: Instead of using correlation rules on decoders and concentrators, use ESA rules. The ESA rules **do** record the correlation sessions that match the ESA rule.

View Example Parsers

Since flex and lua parsers are encrypted when they are delivered by Live, you cannot easily view their contents.

However, some plain text examples are available here: **https://community.emc.com/docs/DOC-41108**.

Configure WinRM Event Sources

The following Inside EMC article has a video that walks through the process of setting up Windows RM (Remote Management) collection: **https://inside.emc.com/docs/DOC-122732**.

Additionally, it contains two scripts that are shortcuts for procedures described in the "Windows Event Source Configuration Guide."

NwLogPlayer

NwLogPlayer is a utility that simulates syslog traffic. In the hosted environment, `NwLogPlayer.exe` is a command line utility located on the RSA NetWitness® Suite Client machine in the following directory:

```
C:\Program Files\NetWitness\NetWitness 9.8
```

NwLogPlayer is also located on the Log Decoder host in `/usr/bin`.

Usage

At the command line, type `nwlogplayer.exe -h` to list the available options, as reproduced here:

`--priority arg`	set log priority level
`-h [ --help ]`	show this message
`-f [ --file ] arg (=stdin)`	input message; defaults to **stdin**
`-d [dir ] arg`	input directory
`-s [ --server ] arg (=localhost)`	remote server; defaults to **localhost**
`-p [ --port ] arg (=514)`	remote port; defaults to **514**
`-r [ --raw ] arg (=0)`	Determines raw mode. • 0 = add priority mark (default) • 1= File contents will be copied line by line to the server. • 3 = auto detect • 4 = enVision stream • 5 = binary object
`-m [ --memory ] arg`	Speed test mode. Read up to 1 Megabyte of messages from the file content and replays.
`--rate arg`	Number of events per second. This argument has no effect if **rate** > eps that the program can achieve in continuous mode.
`--maxcnt arg`	maximum number of messages to be sent
`-c [ --multiconn ]`	multiple connection
`-t [ --time ] arg`	simulate time stamp time; format is `yyyy-m-d-hh:mm:ss`
`-v [ --verbose ]`	If **true**, output is verbose
`--ip arg`	simulate an IP tag
`--ssl`	use SSL to connect

`--certdir arg`	OpenSSL certificate authority directory
`--clientcert arg`	use this PEM-encoded SSL client certificate
`--udp`	send in UDP

Troubleshoot Feeds

Overview

The purpose of the feed generator is to generate a mapping of an event source to the list of groups to which it belongs.

If you have an event source from which you are collecting messages, and yet it is not displayed in the correct event source groups, then this topic provides background and information to help you track down the problem.

Details

The ESM Feed maps multiple keys to single value. It maps the DeviceAddress, Forwarder, and DeviceType attributes to groupName.

The purpose of the ESM feed is to enrich event source Meta with the groupName collected on the Log Decoder.

How it Works

The feed generator is scheduled to update every minute. However, it is triggered only if there are any changes (create, update, or delete) in event sources or groups.

It generates a single feed file with event source to group mapping, and pushes the same feed to all of the Log Decoders that are connected to NetWitness Suite.

Once the feed file is uploaded on the Log Decoders, for any new events, it enriches events Meta data with groupName, and appends this groupName to logstats.

Once the groupName is in logstats, the ESM Aggregator groups information and sends it to ESM. At this point, you should see the **Group Name** column under the **Event Source Monitoring** tab.

The entire process can take some time. Therefore, you may need to wait for several seconds after you add a new group or event source, before the Group name is displayed.

Note: If the event source type attribute changes when the feed is updated, NetWitness Suite adds a new logstats entry, rather than updating the existing one. Thus, there will be two different logstats entries in logdecoder. Previously existing messages would have been listed under the previous type, and all new messages are logged for the new event source type.

Feed File

The format of the feed file is as follows:

```
DeviceAddress, Forwarder, DeviceType, GroupName
```

The `DeviceAddress` is either `ipv4, ipv6`, or `hostname`, depending on which of these have been defined for the event source.

The following is a sample of the feed file:

```
"12.12.12.12","d6","NETFLOW","grp1"
"12.12.12.12","ld4","netflow","grp1"
"12.12.12.12","d6","netfow","grp1"
"0:E:507:E6:D4DB:E:59C:A","10.25.50.243","apache","Apachegrp"
"1.2.3.4","LCC","apache","Apachegrp"
"10.100.33.234","LC1","apache","Apachegrp"
"10.25.50.248","10.25.50.242","apache","Apachegrp"
"10.25.50.251","10.25.50.241","apache","Apachegrp"
"10.25.50.252","10.25.50.255","apache","Apachegrp"
"10.25.50.253","10.25.50.251","apache","Apachegrp"
"10.25.50.254","10.25.50.230","apache","Apachegrp"
"10.25.50.255","10.25.50.254","apache","Apachegrp"
"13.13.13.13","LC1","apache","Apachegrp"
"AB:F255:9:8:6C88:EEC:44CE:7",,"apache","Apachegrp"
"Appliance1234",,"apache","Apachegrp"
"CB:F255:9:8:6C88:EEC:44CE:7","10.25.50.253","apache","Apachegrp"
```

Troubleshooting

You can check the following items to narrow down where the problem is occurring.

Feed File Existence

Verify that the feeds ZIP archive exists in the following location:

```
/opt/rsa/sms/esmfeed.zip
```

Do not modify this file.

Group Meta Populated on LD

Verify that the group meta is populated on the Log Decoder. Navigate to the Log Decoder REST and check logstats:

```
http://LogDecoderIP:50102/decoder?msg=logStats&force-content-type=text/plain
```

This is a sample logstats file with group information:

```
device=apache  forwarder=NWAPPLIANCE10304  source=1.2.3.4  count=338  lastSeenTime=2015-Feb-04 22:30:19  lastUpdatedTime=2015-Feb-04 22:30:19 groups=IP1234Group,apacheGroup
device=apachetomcat  forwarder=NWAPPLIANCE10304  source=5.6.7.8  count=1301  lastSeenTime=2015-Feb-04 22:30:19  lastUpdatedTime=2015-Feb-04 22:30:19  groups=AllOtherGroup,ApacheTomcatGroup
```

In the above text, the group information is **bold**.

Device Group Meta on Concentrator

Verify that the **Device Group** meta exists on the Concentrator, and that events have values for the `device.group` field.

SMS Log File

Check the SMS log file in the following location to view informational and error messages: `/opt/rsa/sms/logs/sms.log`

The following are example informational messages:

```
Feed generator triggered...
Created CSV feed file.
Created zip feed file.
Pushed ESM Feed to LogDeocder : <logdecoder IP>
```

The following are example error messages:

```
Error creating CSV File : <reason>Unable to push the ESM Feed: Unable to
create feed zip archive.
Failed to add Group in CSV: GroupName: <groupName> : Error: <error>
Unable to push the ESM Feed: CSV file is empty, make sure you have al-
least on group with al-least one eventsource.
Unable to push the ESM Feed: No LogDecoders found.
Unable to push the ESM Feed: Unable to push feed file on LogDecoder-
<logdecoderIP>Unable to push the ESM Feed:
admin@<logdecoderIP>:50002/decoder/parsers received error: The zip
archive "/etc/netwitness/ng/upload/<esmfeedfileName>.zip" could not be
opened
Unable to push the ESM Feed: <reason>
```

Verify Logstats data is getting Read & Published by ESMReader & ESMAggregator

These are the steps to verify that logstats are collected by **collectd** and published to Event Source Management.

ESMReader

1. On LogDecoders add **debug "true"** flag in **/etc/collectd.d/NwLogDecoder_ESM.conf**:

```
#
# Copyright (c) 2014 RSA The Security Division of EMC
#
<Plugin generic_cpp>    PluginModulePath "/usr/lib64/collectd"
    debug "true"

    <Module "NgEsmReader" "all">        port      "56002"
        ssl       "yes"
        keypath   "/var/lib/puppet/ssl/private_keys/d4c6dcd4-6737-
4838-a2f7-    ba7e9a165aae.pem"
        certpath  "/var/lib/puppet/ssl/certs/d4c6dcd4-6737-4838-
a2f7-   ba7e9a165aae.pem"
        interval  "600"
        query     "all"
        <stats>        </stats>    </Module>    <Module
"NgEsmReader" "update">        port      "56002"
```

```
        ssl       "yes"
        keypath   "/var/lib/puppet/ssl/private_keys/d4c6dcd4-6737-
4838-a2f7-    ba7e9a165aae.pem"
        certpath  "/var/lib/puppet/ssl/certs/d4c6dcd4-6737-4838-
a2f7-   ba7e9a165aae.pem"
        interval  "60"
        query     "update"
        <stats>        </stats>    </Module></Plugin>
```

2. Run the command:
   `collectd service restart`
3. Run the following command:
   `tail –f /var/log/messages | grep collectd`
   Verify that ESMReader is reading logstats and there are no errors. If there are any read issues, you will see errors similar to the following:

```
Apr 29 18:47:45 NWAPPLIANCE15788 collectd[14569]: DEBUG: NgEsmReader_
all: error getting ESM data for field "groups" from logstat
device=checkpointfw1 forwarder=PSRTEST source=1.11.51.212. Reason:
<reason>Apr 29 18:58:36 NWAPPLIANCE15788 collectd[14569]: DEBUG:
NgEsmReader_update: error getting ESM data for field "forwarder" from
logstat device=apachetomcat source=10.31.204.240. Reason: <reason>
```

ESMAggregator

1. On NetWitness Suite, uncomment the verbose flag in **/etc/collectd.d/ESMAggregator.conf**:

```
        # ESMAggregator module collectd.conf configuration file
        #
        # Copyright (c) 2014 RSA The Security Divsion of EMC
        #

        <Plugin generic_cpp>    PluginModulePath "/usr/lib64/collectd"

        <Module "ESMAggregator">
                verbose 1
                interval "60"
                cache_save_interval "600"
```

```
                persistence_dir "/var/lib/netwitness/collectd"
        </Module>    </Plugin>
```

2. Run the following:
   `collectd service restart.`
3. Run the following command:
   `run "tail -f /var/log/messages | grep ESMA`
   Look for for ESMAggregator data and make sure your logstat entry is available in logs.

Sample output:

```
Mar  1 02:32:08 NWAPPLIANCE15936 collectd[11203]: ESMAggregator:
MetaData[0] logdecoder[0] = d4c6dcd4-6737-4838-a2f7-ba7e9a165aae

counter-3.3.3.3 with a value of 1752 for
NWAPPLIANCE15788/cacheflowelff/esm_counter-3.3.3.3 aggregated from 1 log
```

Configure JMX Feed Generator Job Interval

Although the feed generation job is scheduled to execute every minute by default, you can change this by using `jconsole`, if necessary.

To change the feed generator job interval:

1. Open **jconsole** for the SMS service.
2. On the MBeans tab, navigate to **com.rsa.netwitness.sms** > **API** > **esmConfiguration** > **Attributes**.
3. Modify the value for the property **FeedGeneratorJobIntervalInMinutes**.
4. Go to **Operations** under the same navigation tree, an click **commit()**. This persists the new value in the corresponding json file under **/opt/rsa/sms/conf**, and uses the value if SMS is restarted.

Setting a new value reschedules the feed generator job for the new interval.

References

This section describes the NetWitness Suite user interface views in which you can perform system maintenance tasks. You use this interface to:

- Monitor and maintain services (settings, statistics, command and message syntax, REST API, RSA Console utility, and protocols supported in NetWitness Suite).
- Display the current NetWitness Suite version and license status.
- Manage your Local Update Repository from which you apply software version updates to hosts.

The following topics describe each interface in detail:

- Health and Wellness View
- System View - System Info Panel

Health and Wellness View

The Health and Wellness settings allow you to set and view alarms, monitor events, and view policies and system statistics. For more details on each of these, see the following topics:

- Health and Wellness View - Alarms View
- Event Source Monitoring View
- Health and Wellness Historical Graphs
- Health and Wellness Settings View - Archiver
- Health and Wellness Settings View - Event Sources
- Health and Wellness Settings View - Warehouse Connector
- Monitoring View
- Policies View
- System Stats Browser View

Health and Wellness View - Alarms View

You can monitor hosts and services to determine when user-defined limitations have been reached by viewing all the active alarms. Policy rules, that you define or assign to hosts and services, in the **Policies tab** trigger these alarms. You can:

- View all the alarms that are currently active for all your systems and services
- Select an alarm and view its details

What do you want to do?

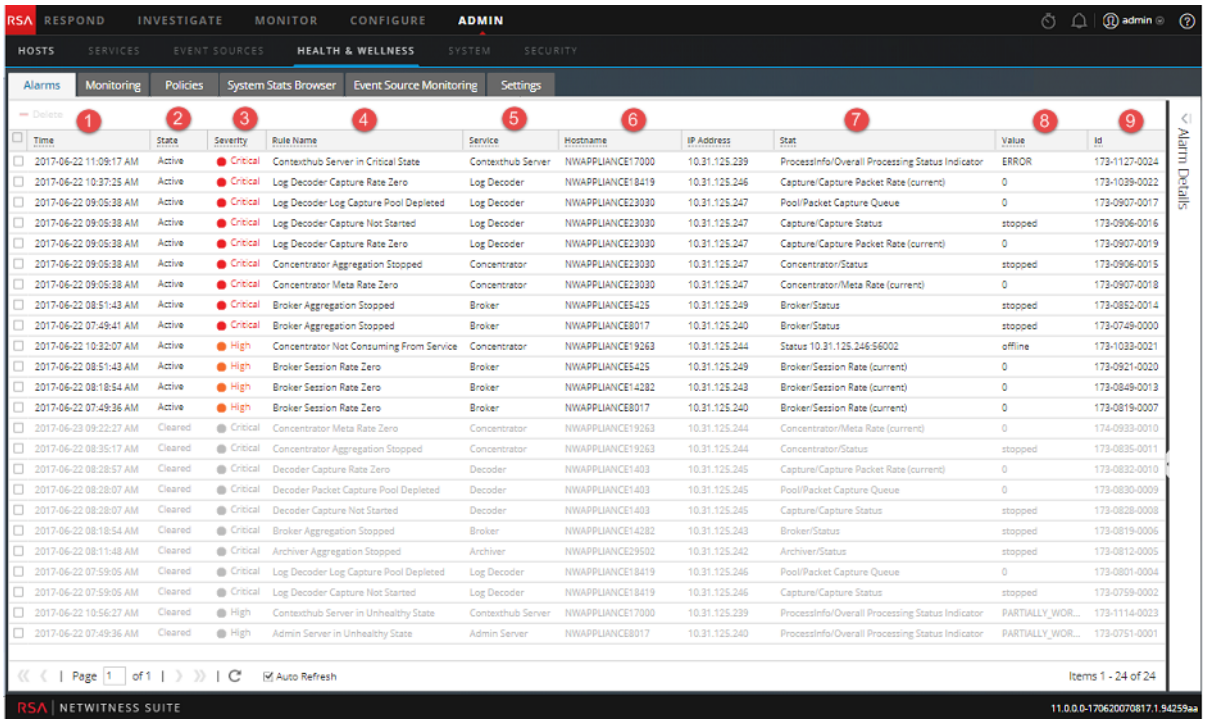
Role	I want to ...	Show me how
Administrator	View the alarm status of NetWitness Servers and services.	Monitor Alarms
Administrator	View detailed information about a specific alarm.	Monitor Alarms

Related Topics

Manage Policies

Quick Look

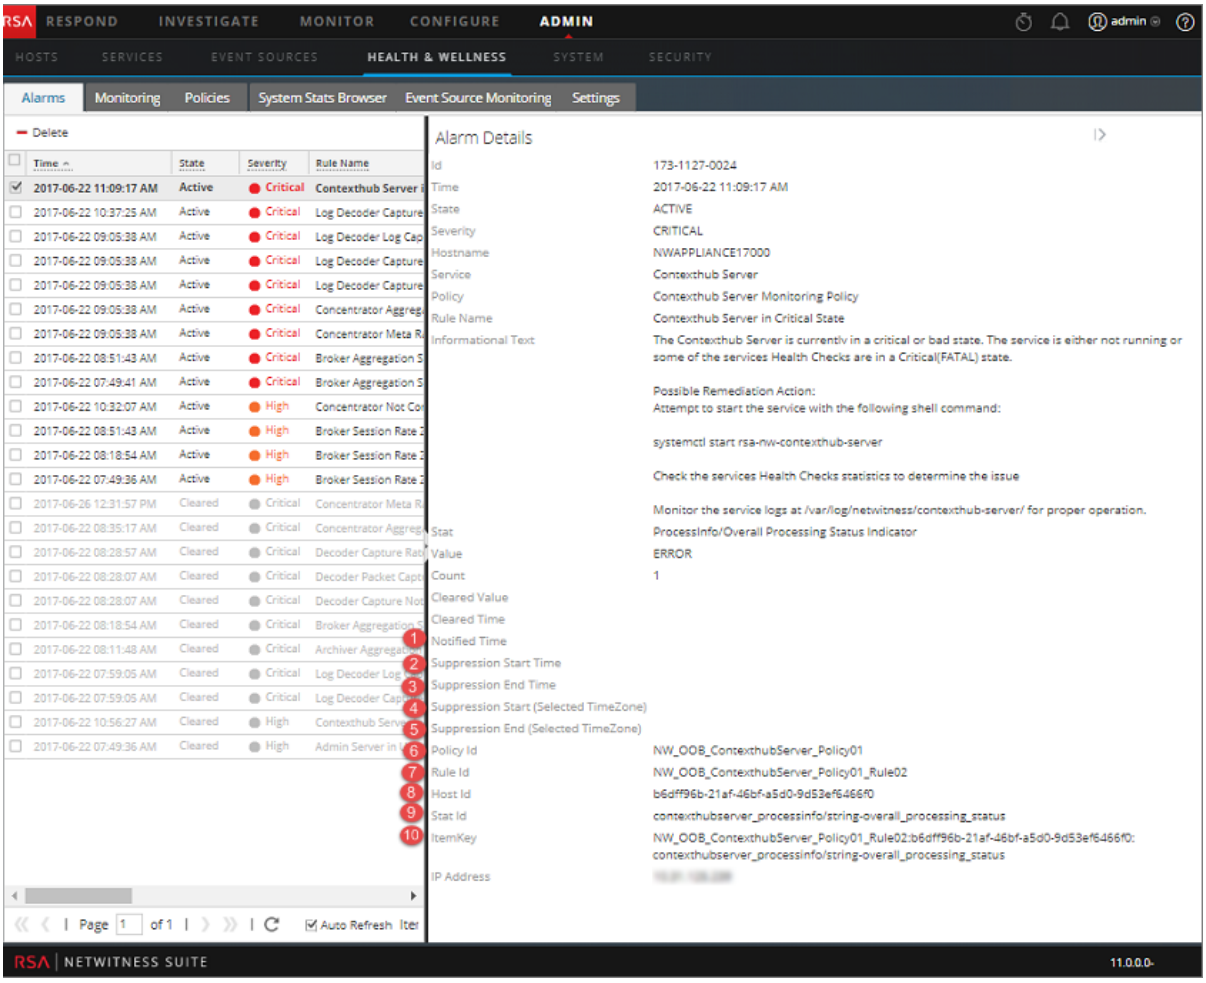
The required permission to access this view is **Manage services**. To access the Alarms view, go to **Admin** > **Health & Wellness**. The Health & Wellness view opens with the Alarms tab displayed. The Alarms tab contains an alarms list and an Alarm Details panel.



1	Time when the alarm was triggered.
2	Status of the alarm: • **Active** - the statistical threshold was crossed triggering the alarm. • **Cleared** - the clearing threshold was crossed and the alarm is no longer active.
3	Severity assigned to this alarm: • **Critical** • **High** • **Medium** • **Low**
4	Name of the rule that triggers the alarm.
5	Service defined in the rule.
6	Host on which the alarm is triggered.
7	Statistic selected in the rule that triggers the alarm.
8	Value of the statistic that triggered the alarm.
9	Identification number of the alarm.

Note: NetWitness Suite sorts the alarms in time order. You can sort the relevant parameters in ascending or descending order.

This figure shows the Alarms tab with the Alarm Details panel expanded.



Alarm Details Panel

The Alarm Details panel displays information for the alarm selected in the Alarms list. It contains all the information in the Alarms list plus the following fields.

1	Alarm Notified time
2	Suppression start time
3	Suppression end time
4	Suppression start (selected time zone)
5	Suppression end (selected time zone)
6	The Policy ID

7 The Rule ID

8 The Host ID

9 The Stat ID

Event Source Monitoring View

Note: To manage Event Sources, see "About Event Source Management" in the *NetWitness Suite Event Source Management Guide*.

NetWitness Suite provides a way to monitor the statistics for various event sources in the User Interface. The information displayed is historical and comes from the Log decoder. You can customize the view depending on the parameter you select to filter the data.

To access the Event Source Monitoring view:

1. Go to **ADMIN > Health & Wellness**.

   The Health & Wellness view is displayed with the Alarms tab open.

2. Click **Event Source Monitoring**.

What do you want to do?

Role	I want to ...	Show me how
Administrator	View the Events Collected from an Event Source	Historical Graph View for Events Collected from an Event Source

Related Topics

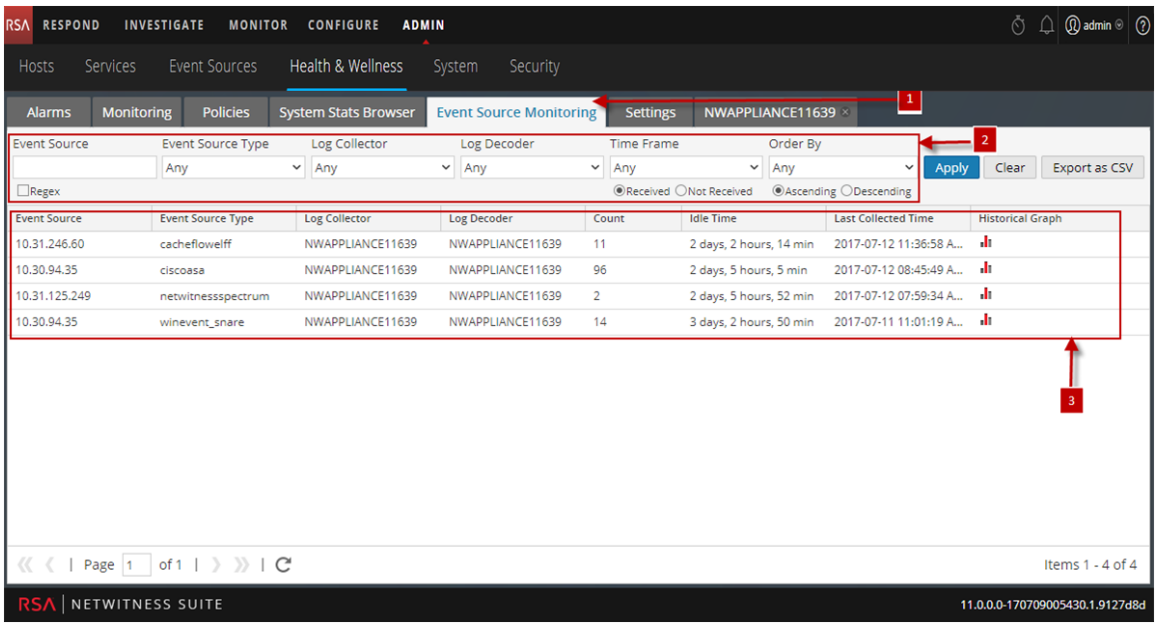
Quick Look

The Event Source Monitoring view is displayed.



1 Displays Event Source Monitoring tab.

2 Toolbar used to filter and customize the Event Source Monitoring tab.

3 Displays Event Source Stats panel.

Filters

This table lists the various parameters you can use to filter and customize the event source monitoring view.

Parameter	Description
Event Source	Type the name of an event source you want to monitor. Select Regex to enable Regex filter. It performs a regular expression search against text and lists out the specified category. If Regex is not selected it supports globbing pattern matching.
Event Source Type	Select an event source type for the event source selected.
Log Collector	Select the Log Collector to display the data collected by the specified Log Collector.

Parameter	Description
Log Decoder	Select a Log Decoder to display the data collected by the specified Log Decoder.
Time Frame	Select the time frame for which you want the stats. Select **Received** if you need the query results to contain only event sources that logs have been received from within the selected time. or Select **Not Received** if you need the query results to contain only event sources that logs have not been received from within the selected time
Order By	Select the order in which the list needs to be filtered. Select Ascending to filter it in an ascending order.
Apply	Click to apply the filters chosen and display the list accordingly.
Clear	Click to clear the chosen filters.
Export as CSV	Click to export the information as a csv file.

Event Source Stats View Display

Parameter	Description
Event Source	Displays the name of the event source.
Event Source Type	Displays the event source type.
Log Collector	Displays the Log Collector from where the events were initially captured.
Log Decoder	Displays the Log Decoder where the events are being processed.
Count	Displays the number of events received by Log Decoder since last reset of count value.
Idle Time	Displays the time lapsed after the last stat collection.

Parameter	Description
Last Collected Time	Displays the time at which the Log Decoder last processed an event for the event source
Historical Graph	Click to view the historical graph of the stats collected for the event source.

Health and Wellness Historical Graphs

Configuring the Archiver monitoring enables you to automatically generate notification when critical thresholds concerning Archiver aggregation and storage have been met. The Historical Graph view provides a visualization of historical data.

Note: Historical graphs are not available for non-numeric statistics, and is indicated by a greyed out icon.

See the following topics for more details:

- Historical Graph View for Events Collected from an Event Source
- Historical Graph for System Stats

Historical Graph View for Events Collected from an Event Source

The Historical Graph view for events collected from an event source provides a visualization of historical data. To access this view:

1. Go to **ADMIN > Health & Wellness**.

   The Health & Wellness view is displayed with the Monitoring tab open.

2. Click **Event Source Monitoring**.

   The Event Source Monitoring view is displayed.

3. In the **Historical Graph** column, select .

   The Historical graph for the selected event source type is displayed in a popup window.

The figure displays the events collected from the event source type **winevent_snare**.

You can customize the graph as required. The table lists the various parameters used to customize the historical graph.

Parameter	Description
Time Frame	Select the Time Frame for which you want to view the historical data. The available options are: Current Day, Current, Week, Current Month.
From <date> To <date>	Select the date range for which you want to view the historical data.

You can zoom in for a detailed view of the data in the Historical graph.

Zoom In Function 1 and 2

You can select one of the values to view the historical data for the selected value. The figure below displays an example for the 6h frame selected for zoom in. The slider bar at the right bottom corner is also changed to a 6h window.

Alternatively, you can slide the bar in the right hand corner to zoom in to a required frame.

Zoom In Function 3

You can click and drag in the plot area to zoom in for a required frame of time.

Historical Graph for System Stats

To access the Historical Graph for the System Stats:

1. Go to **ADMIN > Health & Wellness**.

   The Health & Wellness view is displayed with the Alarms tab open.

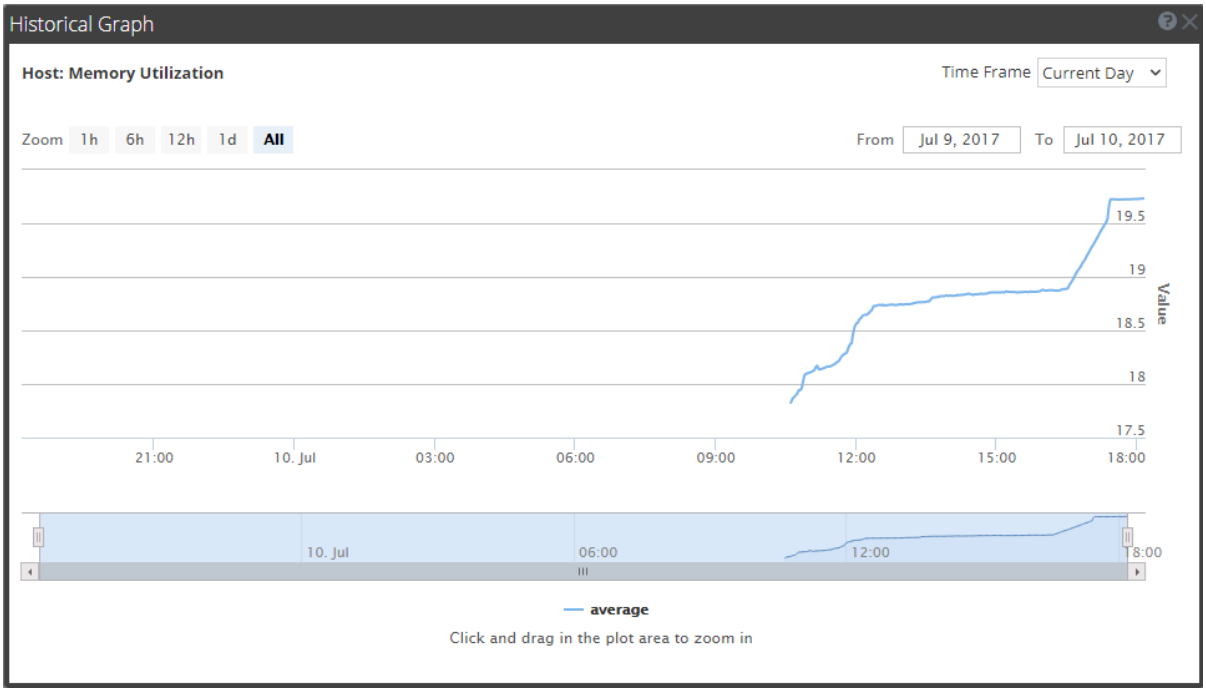
2. Click the **System Stats Browser** tab.

   The System Stats Browser tab is displayed.

3. In the **Historical Graph** column, select .

   The Historical graph for the selected statistic for a host is displayed.

   The figure displays the system stats view for the Memory Utilization statistics.



Parameters

You can customize the graph view as required. The table lists the various parameters used to customize the historical graph view.

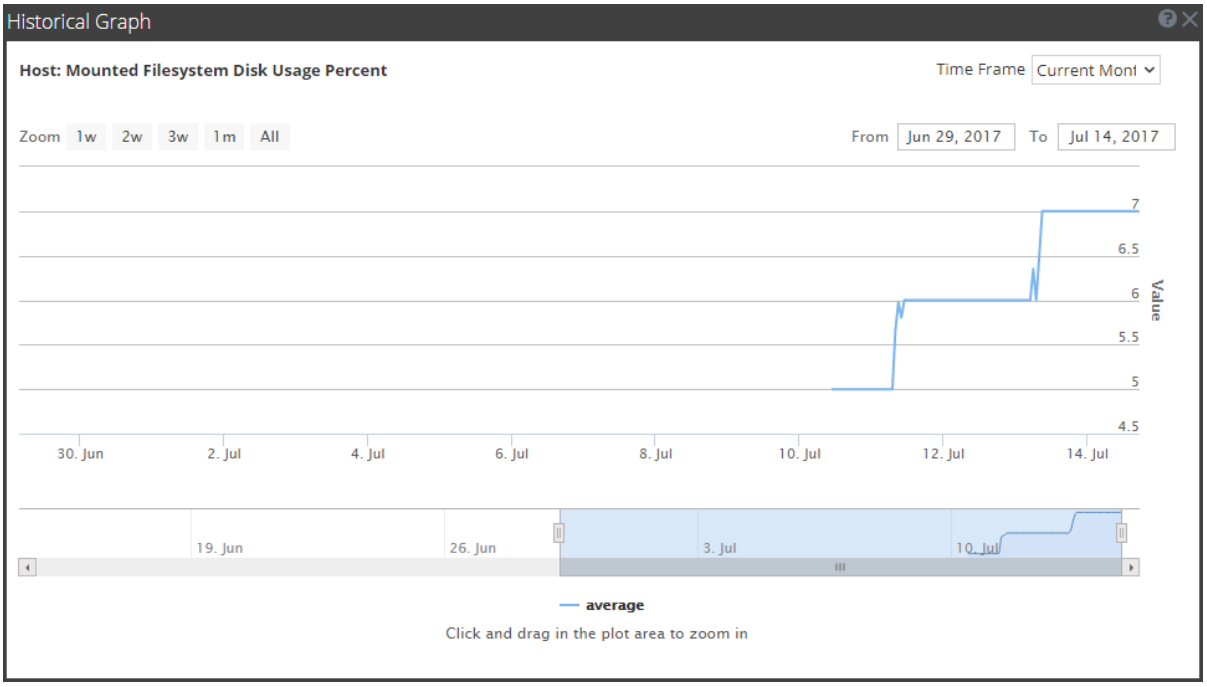
Parameter	Description
Time Frame	Select the time frame for which you want to view the historical data. The available options are: **Current Day**, **Current Week**, **Current Month**, and **Current Year**.
From <date> To <date>	Select the date range for which you want to view the historical data,

You can zoom in for a detailed view of the data in the Historical graph.

Zoom in function 1 and 2:

You can select one of the values to view the historical data for the selected value. The figure below displays an example for the 6h frame selected for zoom in. The slider bar at the right bottom corner is also changed to a 6h window.

Alternatively, you can slide the bar in the right hand corner to zoom in to a required frame.



Zoom in function 3:

You can click and drag in the plot area to zoom in for a required frame of time.

The figure below displays an example of how the graph appears while you click and drag.

Health and Wellness Settings View - Archiver

Note: To monitor Archiver and Warehouse Connector, see Health Policy.

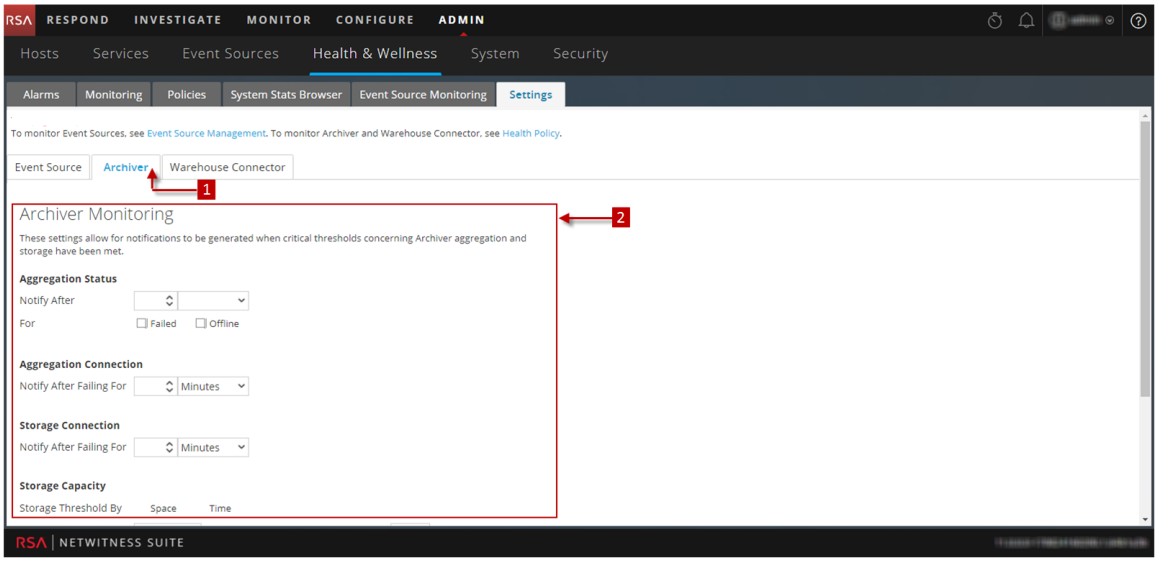
To access the Archiver Monitoring view:

1. Go to **Administration > Health & Wellness**.
2. Select **Settings > Archiver**.

What do you want to do?

Role	I want to ...	Show me how
Administrator	Monitor service details of Archiver	Monitor Service Details

Quick Look



1	Displays Archiver Monitoring Panel
2	Configure Archiver Monitoring Panel to automatically receive notification

Features

The following table lists the parameters required to configure the Archiver to automatically generate notification when critical thresholds are reached.

Parameter	Value	Description
Aggregation Status	Notify After	Number of minutes or hours after which the you will get notified of the Aggregation status
	For	Failed - If enabled, you get notification when the Archiver aggregation status is failed for the defined number of minutes or hours. Offline - If enabled, you get a notification when the Archiver aggregation status is offline for the defined number of minutes or hours
Aggregation Connection	Notify After Failing for	Number of minutes or hours after which you will receive a notification if the Archiver aggregation connection fails.
Storage Connection	Notify After Failing for	Number of minutes or hours after which you will receive a notification if the Archiver storage connection fails.
Storage Capacity	Storage Threshold By	Select **Space**, if you want to receive a notification when the Archiver storage capacity exceeds the percentage defined in the **When Storage Size Is** field. Select **Time**, if you want to receive a notification when the files stored in the Archiver exceeds the defined number of days in the **When Oldest Storage File Is** field
	When Storage Size Is	Enter what percent full the storage size should be if you want to receive a notification.
	When Warm Storage Size Is	Enter what percent full the warm storage size should be if want to receive a notification.

Parameter	Value	Description
Notification Type	Configure email or distribution list	Click to configure email so that you can receive notifications in NetWitness Suite.
	Configure Syslog and SNMP Trap servers	Click to configure audit logs.
	NW Console, Email, Syslog Notification, SNMP Trap Notification	Enable NW Console to get notifications on the NetWitness Suite UI notification toolbar. Enable Email to get email notifications. Enable Syslog Notification to generate syslog events. Enable SNMP Trap Notification to get audit events as SNMP traps.

Health and Wellness Settings View - Event Sources

Note: To manage Event Sources, see "About Event Source Management" in the *RSA NetWitness Suite Event Source Management Guide*.

The Event Source Monitoring view consists of the Event Source panel, Add/Edit Source Monitor dialog, Decommission panel, and the Decommission dialog. You use the view to configure:

- When to generate notifications for event sources from which the Log Collector is no longer receiving logs.
- Where to send those notifications.
- When to decommission a Log Collector when a Remote Collector and the Local Collector fails over to a standby Log Decoder.

The required role to access this view is **Manage NW Auditing**. To access this view:

1. Go to **Admin > Health & Wellness**.
2. Select **Settings > Event Source**.

What do you want to do?

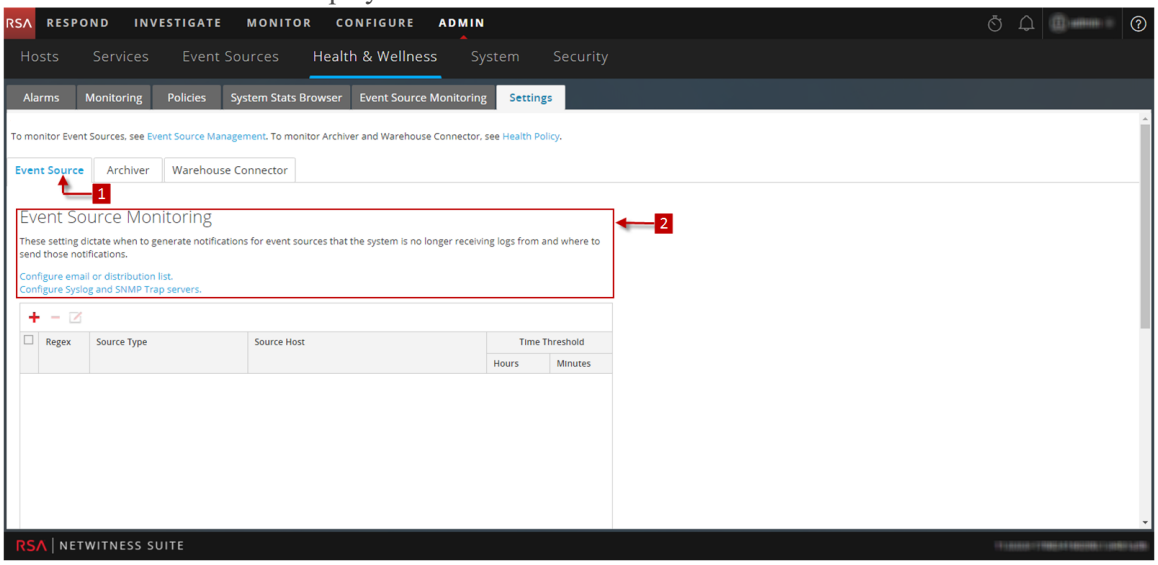
Role	I want to ...	Show me how
Administrator	View the functionality of Event Source Monitoring	Monitor Event Sources

Related Topics

Configure Event Source Monitoring

Quick Look

The Event Source tab is displayed.



1	Displays Event Source Monitoring Panel
2	Configure Event Source Monitoring Panel to receive notification

Event Source Monitoring Panel

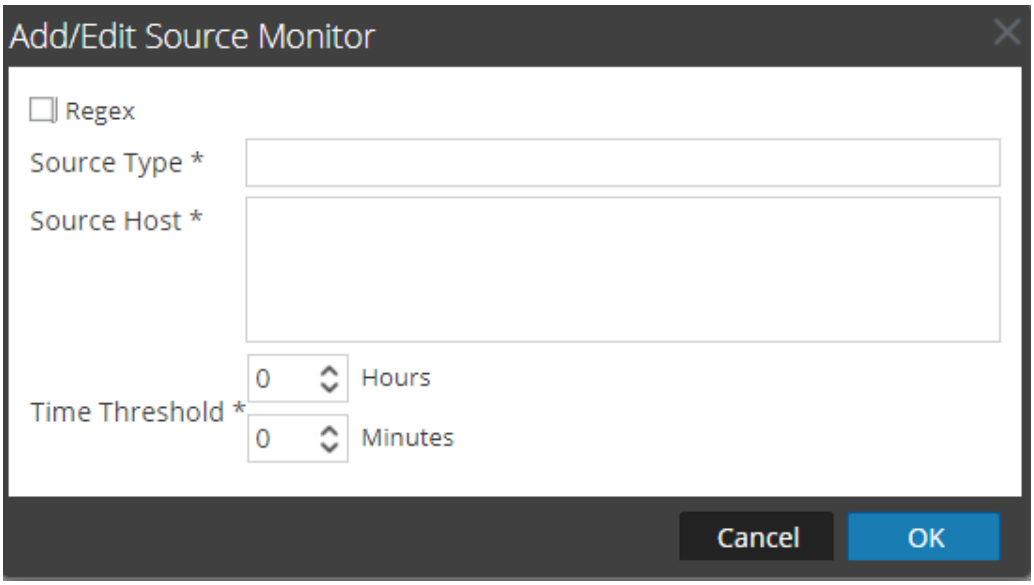
Feature	Description
Configure email or distribution list.	Opens the **Administration** > **System** > **Email view** so you can adjust the email distribution for the Event Source Monitoring output, if necessary.
Configure Syslog and SNMP Trap servers.	Opens the **Administration** > **System** > **Auditing view** so you can adjust the Syslog and SNMP trap distribution for the Event Source Monitoring output, if necessary.
+	Displays the Add/Edit Source Monitor dialog in which you add or modify event sources to monitor.
−	Deletes the selected event sources from monitoring.
☐	Selects an event source.

Feature	Description
Source Type	Displays the source type of the event source.
Source Host	Displays the source host of the event source.
Time Threshold	Displays the time period after which NetWitness Suite stops sending notifications (Time Threshold).
Apply	Applies any additions, deletions, or changes and they become effective immediately.
Cancel	Cancels any additions, deletion, or changes.

Decommission Panel

Feature	Description
	Displays the Decommission dialog in which you add or modify event sources to decommission.
	Deletes the selected event sources from decommissioning.
	Selects an event source.
Regex	Displays if you choose to use regular expressions
Source Type	Displays the source type of the decommissioned event source.
Source Host	Displays the source host of the decommissioned event source.
Apply	Applies any additions, deletions, or changes and they become effective immediately.
Cancel	Cancels any additions, deletions, or changes.

Add/Edit Source Monitor Dialog



In **Add/Edit Source Monitor** dialog, you add or modify the the event sources that you want to monitor. The two parameters that identify an event source are **Source Type** and **Source Host**. You can use **globbing** (pattern matching and wildcard characters) to specify the Source Type and Source Host of event sources as shown in the following example:

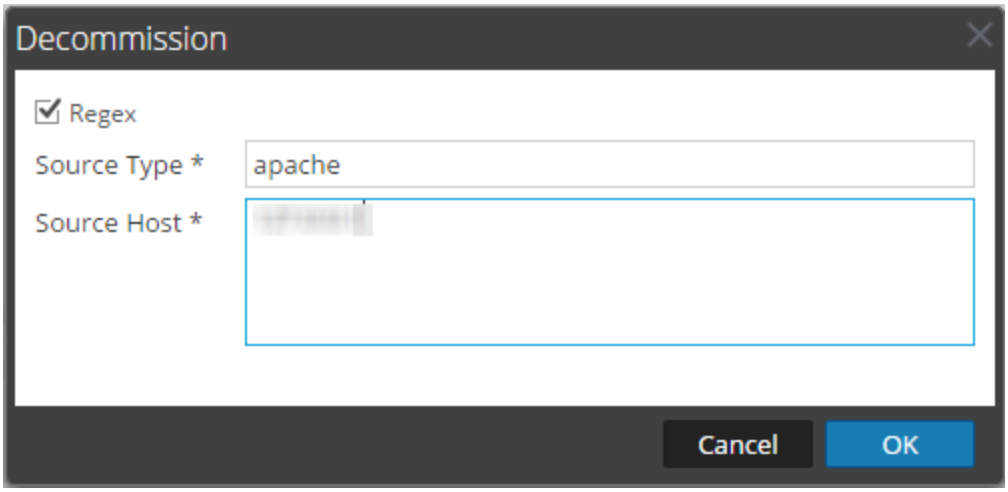
Source Type	Source Host
ciscopix	**1.1.1.1**
*	**1.1.1.1**
*	*
*	**1.1.1.1|1.1.1.2**
*	**1.1.1.[1|2]**
*	**1.1.1.[123]**
*	**1.1.1.[0-9]**
*	**1.1.1.11[0-5]**
*	**1.1.1.1,1.1.1.2**
*	**1.1.1.[0-9]|1.1.1.11[0-5]**

Source Type	Source Host
*	**1.1.1.[0-9]|1.1.1.11[0-5],10.31.204.20**
*	**1.1.1.***
*	**1.1.1.[0-9]{1,3}**

Features

Feature	Description
Regex	Select the checkbox if you want to use regular expressions
Source Type	The source type of the event source. You must use the value that you configured for the event source in the **Event Sources** tab of the **Administration** > **Services** > Log Collector service > **View** > **Config** view.
Source Host	Hostname or IP address of the event source. You must use the value that you configured for the event source in the **Event Sources** tab of the **Administration** > **Services** > Log Collector device > **View** > **Config** view.
Time Threshold	The time period after which NetWitness Suite starts sending notifications.
Cancel	Closes the dialog without adding the event source, or changes to the event source, to the Event Source Monitoring panel.
OK	Adds the event source to the Event Source Monitoring panel.

Decommission Dialog



Feature	Description
Source Type	The source type of the event source. You must use the value that you configured for the event source in the **Event Sources** tab of the **Administration** > **Services** > Log Collector device > **View** > **Config** view.
Source Host	Hostname or IP address of the event source. You must use the value that you configured for the event source in the **Event Sources** tab of the **Administration** > **Services** > Log Collector service > **View** > **Config** view.
Cancel	Closes the dialog without applying any event source additions, deletions, or changes to the Decommissioning panel.
OK	Applies any event source additions, deletions, or changes to the Decommissioning panel.

Health and Wellness Settings View - Warehouse Connector

Note: To monitor Archiver and Warehouse Connector, see "Health Policy".

Configuring the Warehouse Connector monitoring enables you to automatically generate notification when critical thresholds concerning Warehouse Connector and storage have been met.

Access the Warehouse Connector Monitoring view

1. Go to **Admin** > **Health & Wellness**.
2. Select **Settings** > **Warehouse Connector**.

What do you want to do?

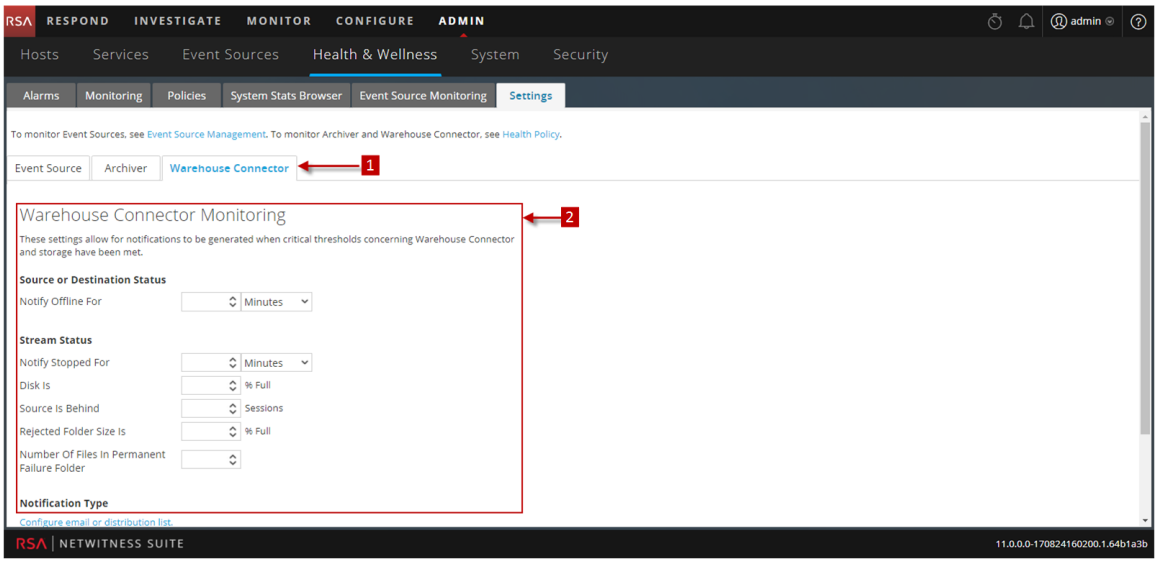
Role	I want to ...	Show me how
Administrator	View the details of Warehouse connector	Warehouse Connector Details View

Related topics

Monitor Service Details

Quick Look

The Warehouse Connector Monitoring view is displayed.



1 Displays Warehouse Connector Monitoring view Panel

2 Allows to configure Warehouse Connector Monitoring parameters

Warehouse Connector Monitoring parameters

The following table lists the parameters required to configure the Warehouse Connector to automatically generate notification when critical thresholds are reached.

Parameter	Value	Description
Source or Destination Status	Notify Offline For	Number of minutes or hours after which the you will receive a notification if the source or destination connection fails.
Stream Status	Notify Stopped For	Number of minutes or hours after which you would like to receive a notification when the Stream goes offline.
	Disk Is	The limit on the percentage of disk usage after which you would like to receive a notification.
	Source Is Behind	Number of sessions after which a notification is raised if the source goes behind the defined number of sessions.
	Rejected Folder Size Is	Limit on the percentage of folder usage after which you would like to receive a notification.
	Number Of Files in Permanent Failure Folder	Limit on the number of files in the permanent failure folder after which you would like to receive a notification.
Notification Type	Configure email or distribution list	Click to configure email so that you can receive notifications in NetWitness Suite.
	Configure Syslog and SNMP Trap servers	Click to configure audit logs.

Parameter	Value	Description
	NW Console, Email, Syslog Notification, SNMP Trap Notification	Enable NW Console to get notifications on the NetWitness Suite UI notification toolbar. Enable Email to get email notifications. Enable Syslog Notification to generate syslog events. Enable SNMP Trap Notification to get audit events as SNMP traps.

Monitoring View

NetWitness Suite provides detailed statistics and other information about the host and the individual NetWitness Suite services on Details views. You can view the current health of all the hosts, services running on the hosts, various aspects of the hosts' health, host details and service details in the Monitoring view.

To access this view:

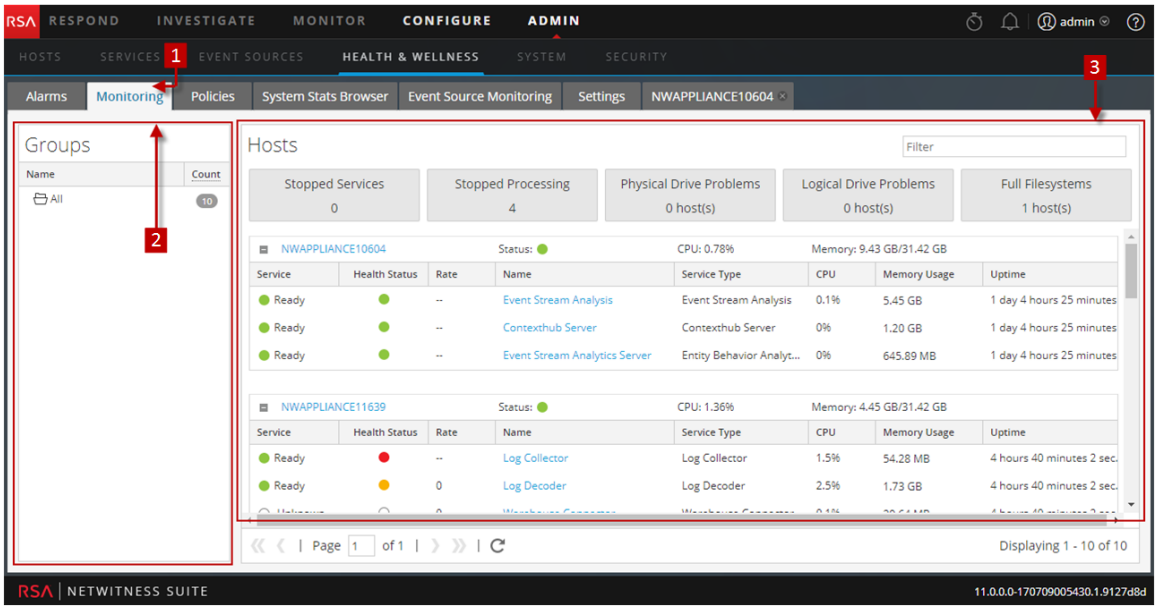
1. Go to **ADMIN > Health & Wellness**.
2. Click the **Monitoring** tab.

What do you want to do?

Role	I want to ...	Show me how
Administrator	View and Perform Procedures	Monitor Hosts and Services

Quick Look

The Monitoring view is displayed.



1	Displays Monitoring tab.
2	Group Panel to select a Group.
3	Hosts panel displays operational statistics.

Groups Panel

The Groups panel lists all the groups of hosts available. When you select a group, the associated content is displayed in the Hosts panel.

Note: If the total host **Count** in the **Groups** panel is lower than the actual number of hosts displayed in the **Hosts** panel, please refer to the Troubleshooting Health & Wellness topic for possible causes of this issue and recommended solutions.

Hosts Panel

The Hosts panel displays operational statistics for hosts and the services running on each host.

Parameter	Description
Filter	Type a host name or a service name in the Filter field to display the corresponding hosts and services in the Host panel.
Stopped Services	Click **Stopped Services** to display a list of all stopped services. It also displays the host on which the service is installed.
Stopped Processing	Click **Stopped Processing** to display a list of all the hosts that have services installed on them that are in the stopped processing status.
Physical drive Problems <#> host(s)	Click to view the hosts that have physical drive problems.
Logical Drive Problems <#> host(s)	Click to view the hosts that have logical drive problems.
Full Filesystems <#> host(s)	Click to view the hosts that have full file systems.

Note: The summary information in the boxes at the top displays the System Statistics for all the hosts configured in NetWitness Suite and does not change with host of filters on groups.

The top panel is followed by a list of hosts, the services installed on them and information regarding the hosts and services.

Parameter	Description
Host Name	Displays the host name. If a host has services installed you will see a ⊞ prefixed to the host name. Click ⊞ to view all the services installed on the host.
Status	Displays the status of the Host. ● - denotes that the host is active and running. ● - denotes that the host is stopped or yet to start processing.
CPU	Displays the current CPU usage of the host.
Memory	Displays the Memory used by the host.

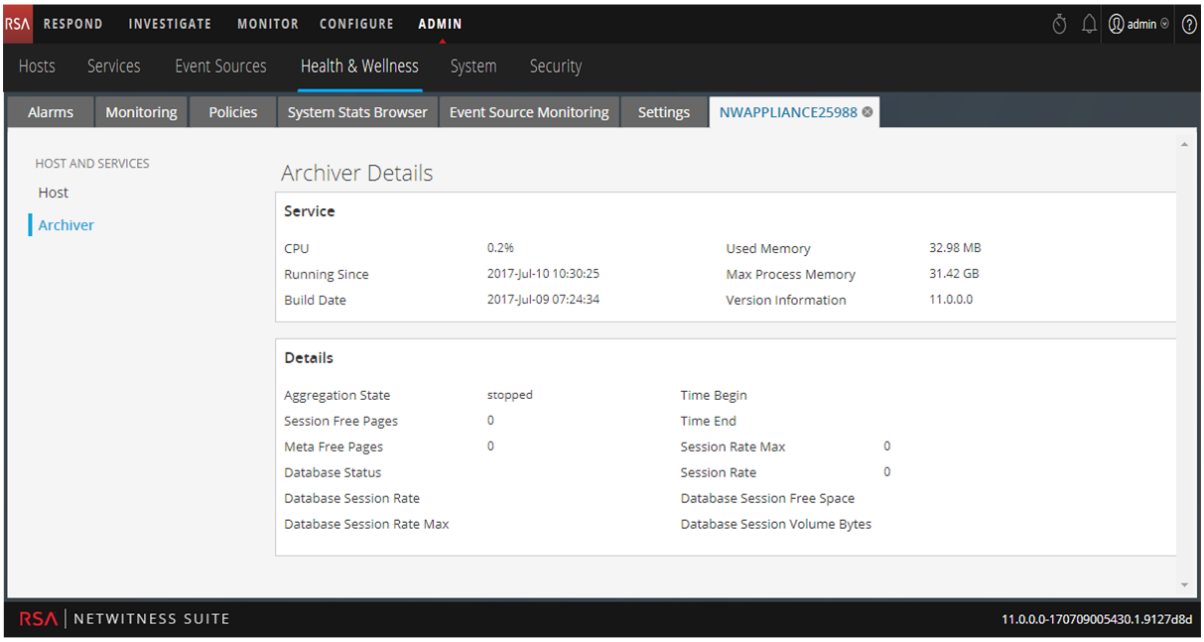
When you click ⊞ prefixed to the host name, a list of all the services installed on the host is displayed. The table below describes various parameters displayed for a service and their description.

Parameter	Description
Service	Displays the status of the service. ● Ready - denotes that the service is active and running. ● Stopped - denotes that the service is stopped or yet to start processing.
Health Status	Displays the processing status of the Service. ● - denotes that the process is running and the data is being processed at a rate greater than zero. ● - denotes that the processing is stopped. ● - denotes that the processing is turned on but the data is not being processed.
Rate	Denotes the rate at which the data is being processed.
Name	Name of the service.

Parameter	Description
Service Type	Name of the type of service.
CPU	Displays the current CPU usage of the service.
Memory Usage	Displays the Memory used by the service.
Uptime	Displays the time for which the service has been running.

Archiver Details View

The Archiver Details view provides information about the Archiver. The following figure depicts the Archiver Details.



For the related procedure, see Monitor Service Details

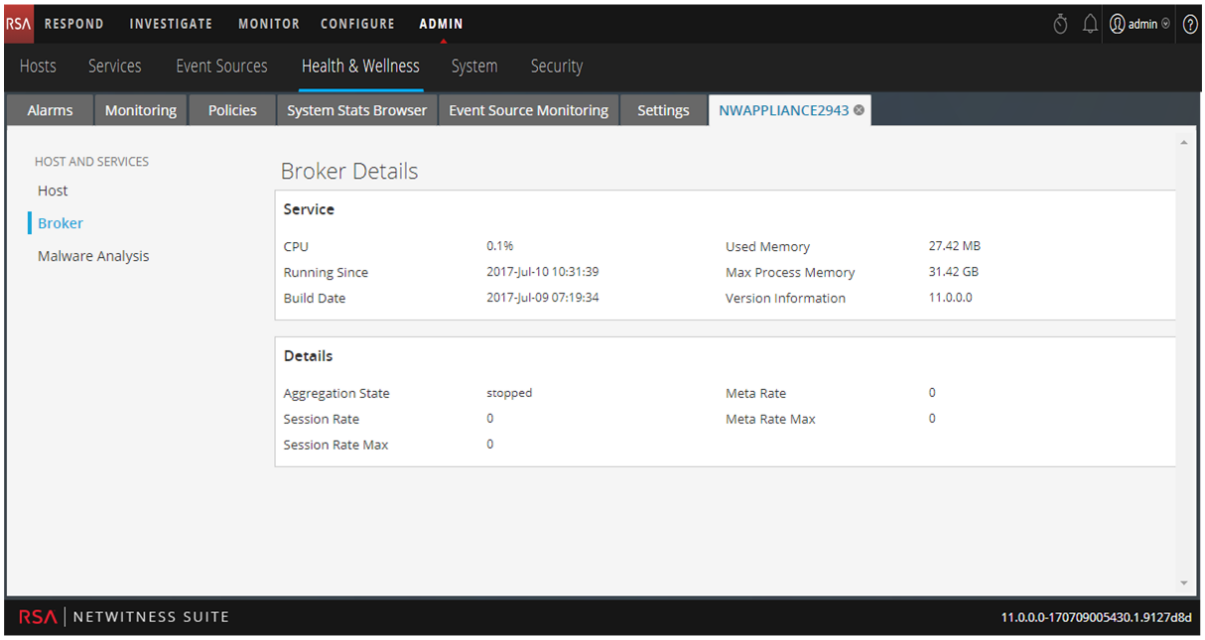
This section displays the current generic statistics for the service.

Statistic	Description
Aggregation State	State of data aggregation.
Time Begin	Time (UTC) when the first session was tracked by the index.
Session Free Pages	Session pages available for aggregation.
Time End	Time (UTC) when the last session was tracked by the index.
Meta Free Pages	Pages available for aggregation.
Session Rate Max	Maximum sessions per second rate.

Statistic	Description
Database Status	Status of databases. Valid values are: • **closed** - not available for QUERY and UPDATE (databases are being initialized). This value is seldom seen. • **opened** - available for QUERY and UPDATE. • **failure** - failed to open. This can happen for any number of reasons. You can check this if CAPTURE fails to start or if queries fail to return data. This is normally caused by database corruption.
Session Rate	Sessions per second rate.
Database Session Rate	Per second rate at which the service is writing sessions to the database.
Database Session Free Space	Amount of session free space available for aggregation.
Database Session Rate Max	Maximum per second rate at which the service is writing sessions to the database.
Database Session Volume Bytes	Number of session bytes in the database.

Broker Details View

The Broker Details view provides information for the Broker. The following figure depicts the Broker Details.



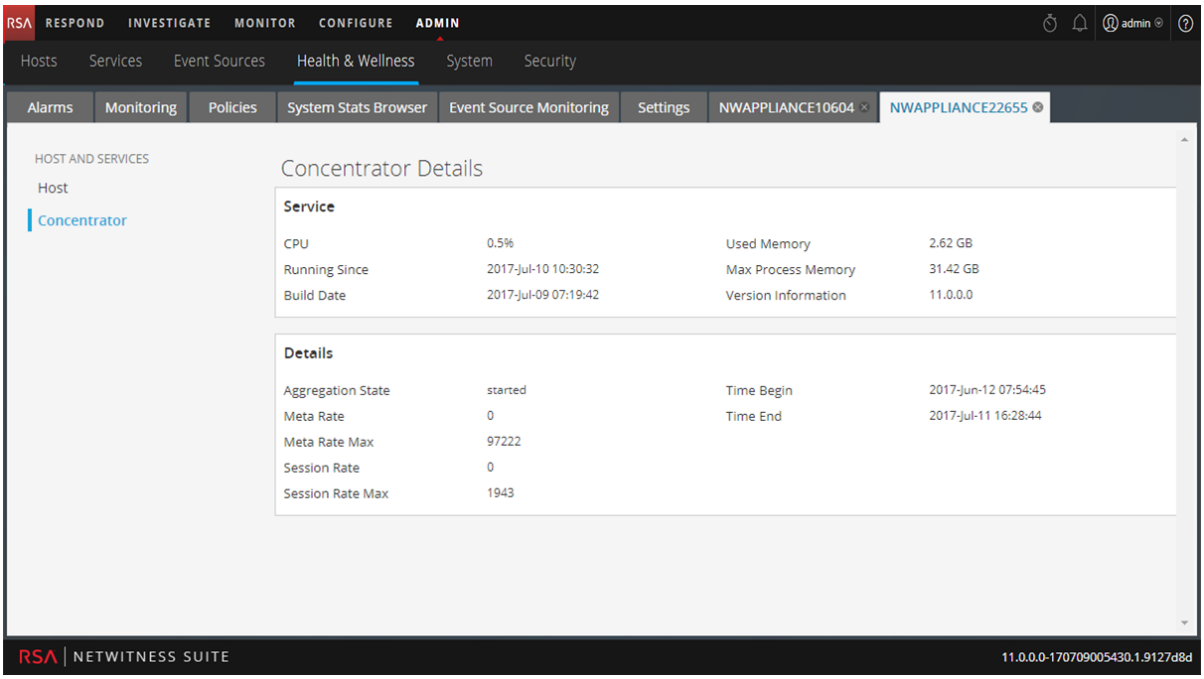
For the related procedure, see Monitor Service Details.

This section displays the current generic statistics for the service.

Statistic	Description
Aggregation State	State of data aggregation.
Meta Rate	Metadata objects per second rate.
Session Rate	Sessions per second rate.
Meta Rate Max	Maximum metadata objects per second rate.
Session Rate Max	Maximum sessions per second rate.

Concentrator Details View

The Concentrator Details view provides information for the Concentrator. The following figure depicts the Concentrator Details.



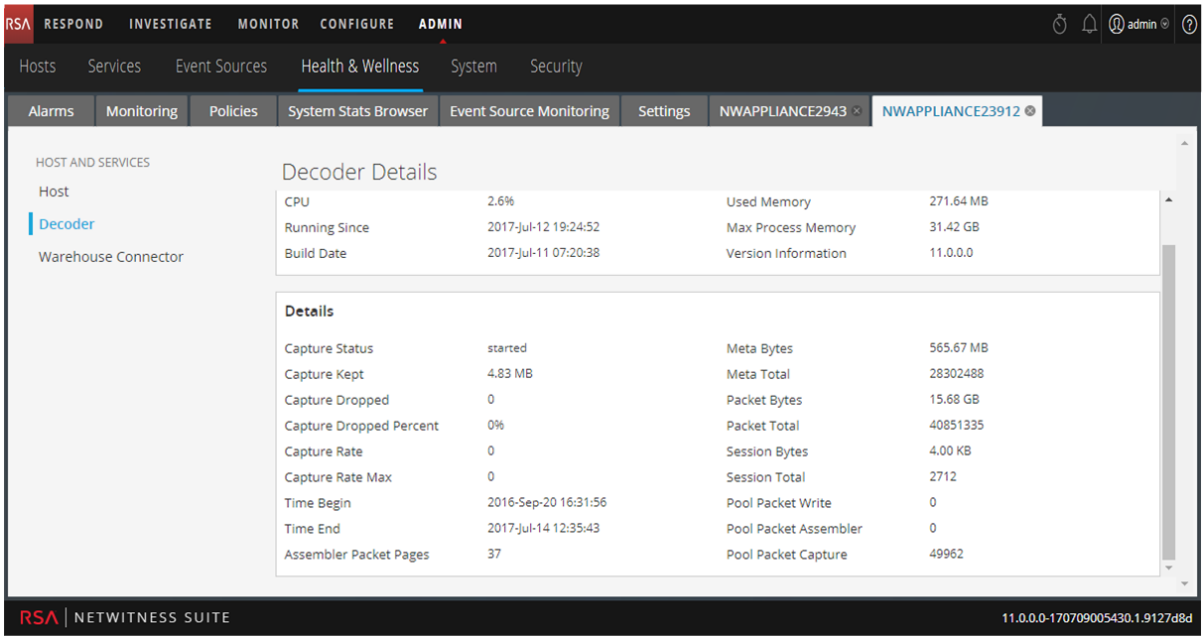
For the related procedure, see Monitor Service Details

The section displays the current generic statistics for the service.

Statistic	Description
Aggregation State	State of data aggregation.
Time Begin	Time (UTC) when the first session was tracked by the index.
Meta Rate	Metadata objects per second rate.
Time End	Time (UTC) when the last session was tracked by the index.
Meta Rate Max	Maximum metadata objects per second rate.
Session Rate	Sessions per second rate.
Session Rate Max	Maximum sessions per second rate.

Decoder Details View

The Decoder Details view provides information for the Decoder. The following figure depicts the Decoder Details.



For the related procedure, see Monitor Service Details.

This section displays the current generic statistics for the service.

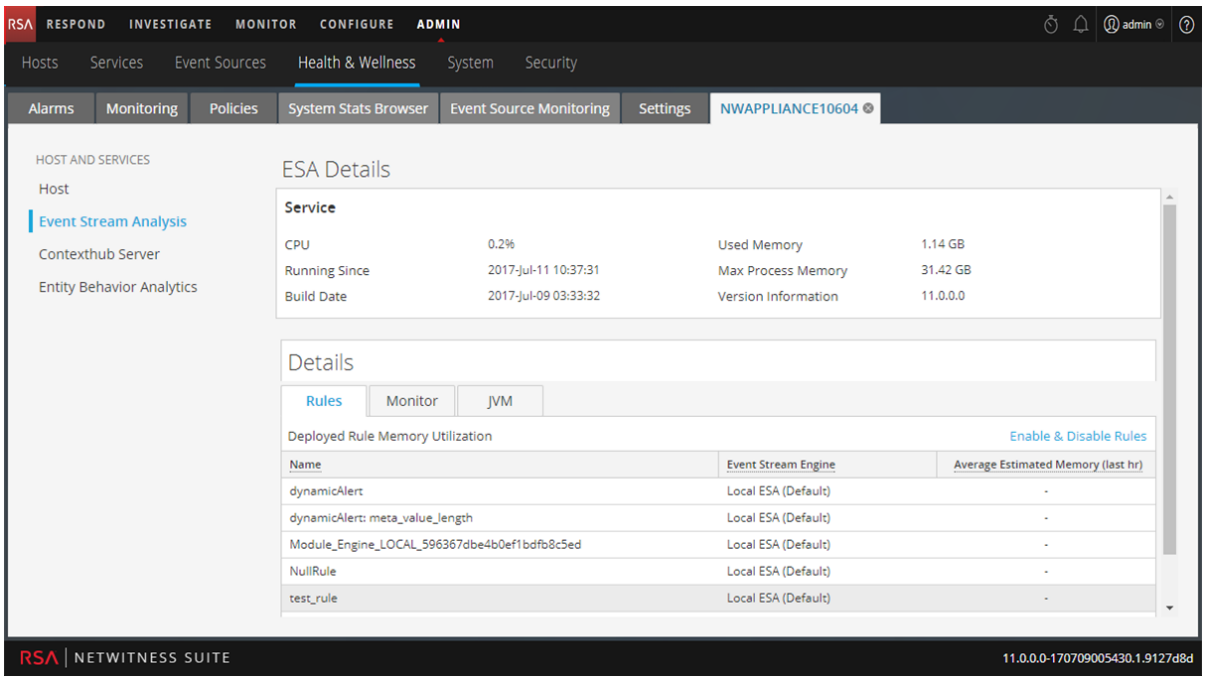
Statistic	Description
Capture Status	Status of data capture. Valid values are: • **starting** - Starting data capture (not capturing data yet). • **started**- Capturing data. • **stopping**- Stopping data capture (received request to stop data capture, but not have not stopped capturing data yet). • **stopped** - Not capturing data. • **disabled** - Not configured as a Decoder service.
Meta Bytes	Number of meta bytes in the database.
Capture Kept	Number of packets kept during capture.

Statistic	Description
Meta Total	Number of metadata in the database.
Capture Dropped	Number of packets reported by the network card as dropped. After the service stops capturing data, rate is reset to zero.
Packet Bytes	Number of packet bytes in the database.
Capture Dropped Percent	Packets reported by the network card as dropped as a percentage.
Packet Total	Number of packet objects held in the packet database. The total decreases when the database rolls files off due to size constraints. After the service stops capturing data, the number is not reset.
Capture Rate	Megabits per second rate at which the service is capturing data. Rate is a rolling average sample over a short time period (10 seconds). After the service stops capturing data, rate is reset to zero.
Session Bytes	Number of session bytes in the database.
Capture Rate Max	Maximum megabits per second rate at which the service is capturing data. Rate is a rolling average sample over a short time period (10 seconds). After the service stops capturing data, displays the maximum rate during data capture.
Session Total	Number of sessions held in the session database. This value shrinks when the database rolls files off due to size constraints. After the service stops capturing data, the number is not reset.
Time Begin	Time when first packet was captured (time when the first packet was stored in the packet database). This time increases as packets are rolled out of the packet database.

Statistic	Description
Pool Packet Write	Number of packet pages currently in the PCS pipeline that need to be written to the database.
Time End	Time when the last packet was captured (time when packet was written to the database). The time increases as new packets are captured.
Pool Packet Assembler	Number of packet pages waiting to be assembled.
Assembler Packet Pages	Number of packet pages waiting to be assembled.
Pool Packet Capture	Number of packet pages available for capture.

Event Steam Analysis (ESA) Details View

The Event Stream Analysis Details view provides information for ESA. The following figure depicts the Event Stream Analysis Details.



For the related procedure, see Monitor Service Details.

This section displays the current generic statistics and Rule information for the service. It consists of **Rules**, **Monitor**, and Java Virtual Machine (**JVM**) tabs that show Event Stream Analysis rules and additional statistics.

Monitor tab

Displays the following generic statistical information for the Event Stream Analysis service:

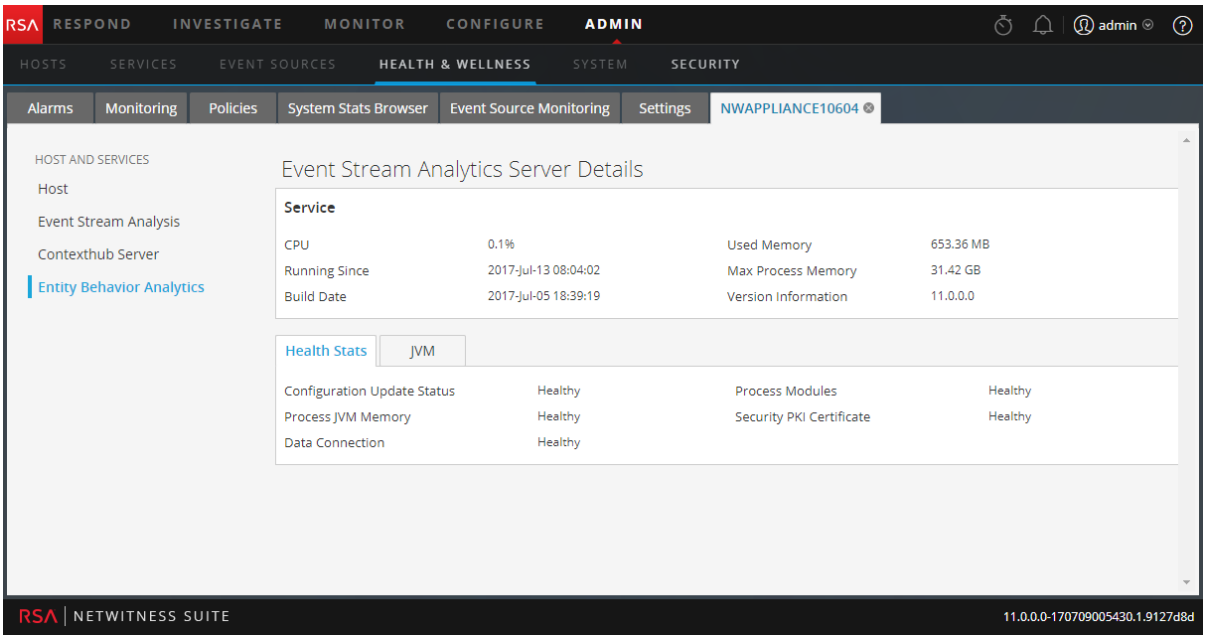
- Average number of bytes received per event message field.
- Average number of bytes received per event message.
- Total number of bytes of bytes received.
- Total number of fields received.
- Number of rules deployed on the ESA Service. The Sum of Enabled rules and Disabled rules should equal to Deployed
- Total number of events matched to all rules on the ESA service.
- Total number of events analyzed by the ESA Service since the last service start.
- Total number of alerts fired based on all the rules on the ESA service.
- Total dropped as late.
- Total fed on time.

- Total exit early.
- Seconds between feeds.
- Time span in window.
- Total events in window.
- Percent window consumed.
- Total source work units.
- Total bus dropped by payload.
- Total bus dropped events.
- Total bus dropped by fields.
- Total number of alerts sent to the message bus.
- Total number of bus events.
- Total number of Bus work units.
- Total endpoints detected.
- Total lost endpoints.
- Total failed client count.
- Total successful client count.
- Total successful server count.
- Minutes since last success.
- Number of times proxy was requested and granted.
- Total successful requests.
- Number of times proxy was requested and not granted.
- Total unsuccessful requests.

ESA Analytics Details View

The ESA Analytics Details view provides health status information about the selected ESA Analytics service. ESA Analytics services process the data for automated threat detection. It is important that you address any checked item that shows a status other than green (healthy), so that data processing is not interrupted and critical events are not missed.

The following figure shows the ESA Analytics Details view.



For the related procedure, see Monitor Service Details.

ESA Analytics Details

This section displays the current generic statistics for the selected ESA Analytics service.

Health Status

The Health Status section shows the health of the following items for the selected ESA Analytics service:

- Mongo
- JVM (Java Virtual Machine)
- Disk Space
- Suspicious Domains Module
- User Behavior Analytics Module

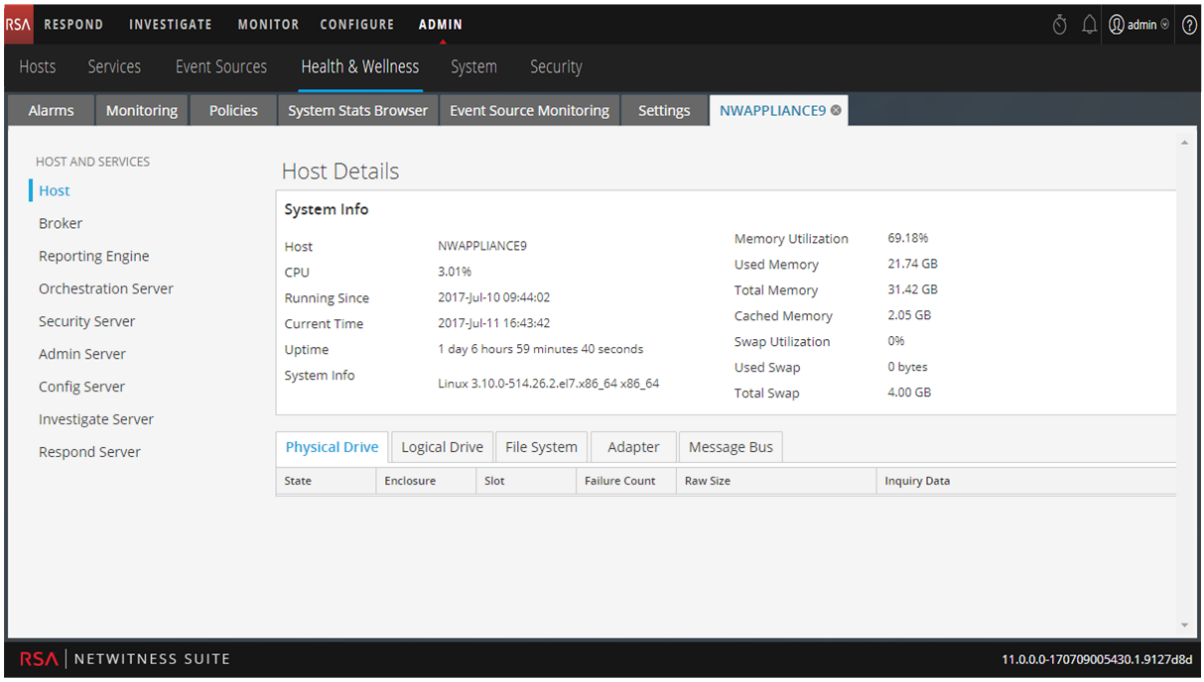
The following table describes the meaning of each health status.

Health Status	Description
Green	Healthy
Yellow	Unhealthy
Red	Critical and it needs immediate attention.

Health Status	Description
- -	Inapplicable

Host Details View

The Host Details view provides information about a host. The following figure depicts the Host Details.



The options panel on the left displays the host and the services installed on the host. You can click on Host any service to view the statistics and other pertinent information for that host or service.

The Details panel displays information that is specific to the host and provides additional information regarding the hardware of the host.

For the related procedure, see .Monitor Service Details

This section displays the current performance, capacity, and historical statistics for the host.

Parameter	Description
Host	Hostname.
CPU	Current CPU usage of the host.
Running Since	Time when the host was started.

Parameter	Description
Current Time	Current time on the host
Uptime	Time for which the host has been active.
System Info	OS version installed on the host.
Memory Utilization	Percentage of memory utilized by the host.
Used Memory	Memory used in GB.
Total Memory	Capacity of the memory installed on the system.
Cached Memory	Memory that is cached to disk in GB.
Swap Utilization	Percentage of system swap in use.
Used Swap	Swap used in GB.
Total Swap	Capacity of the swap installed on the system.

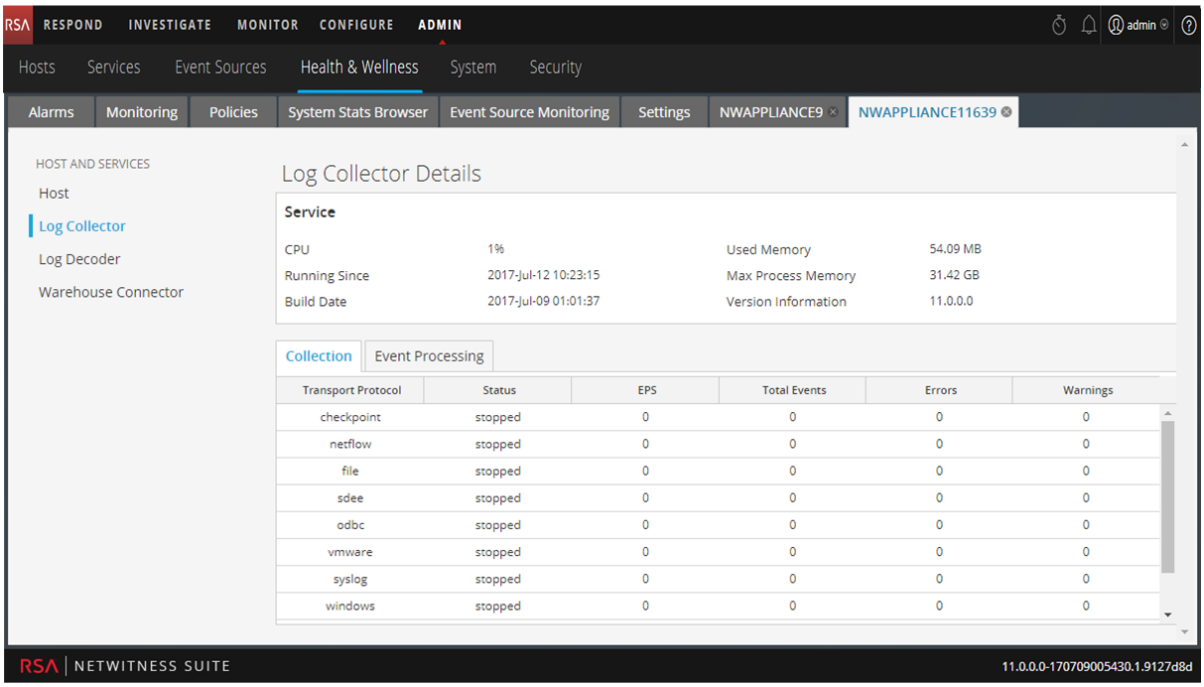
The lower section displays the current generic statistics for the host in the tabs described in the following table.

Tab	Description
Physical Drive	Type of physical drive, its usage and additional information of the physical drive on the host.
Logical Drive	Logical drive on the host.
File System	File system information, the size, current usage and available capacity on the host.
Adapter	Adapter used on the host.

Tab	Description
Message Bus	**Publish In Rate** - rate at which incoming messages are published to the message bus queue. **Total Messages Queued** - number of messages in the message queue. **Memory Used** - amount of memory used by the message bus (in bytes). **Disk Free** - free disk space available for the message bus (in bytes). **Memory Limit** - system memory limit. If the memory usage exceeds this value, this trips the **Memory Alarm** and Security Analytics stops accepting messages. **Disk Free Limit** - limit of free disk space available for the message bus. If the available disk space falls below this value, this trips the **Disk Free Alarm** and Security Analytics stops accepting messages. **Memory Limit Available** - Amount of memory available to this message broker (in bytes) before the **Memory Used Alarm** is tripped. **Disk Limit Available** - Amount of free disk space available to this message broker (in bytes) before the **Disk Free Limit** alarm is tripped. **Disk Free Alarm** - **True** or **False**. **True** indicates that the available disk space is below the value set in **Disk Free Limit** and Security Analytics has stopped accepting messages. **Memory Alarm** - **True** or **False**. **True** indicates that the available memory is below the value set in **Memory Limit** and Security Analytics has stopped accepting messages.

Log Collector Details View

The Log Collector Details view provides information for the Log Collector. The following figure depicts the Log Collector Details.



For the related procedure, see Monitor Service Details.

The lower section consists of the **Collection** and **Event Processing** tabs that display generic statistics for the service.

Collection Tab

Displays the event collection statistics for each Log Collection protocol you have implemented in NetWitness Suite (see "Log Collection Getting Started Guide" in the ***Log Collection Guides***).

Event Processing Tab

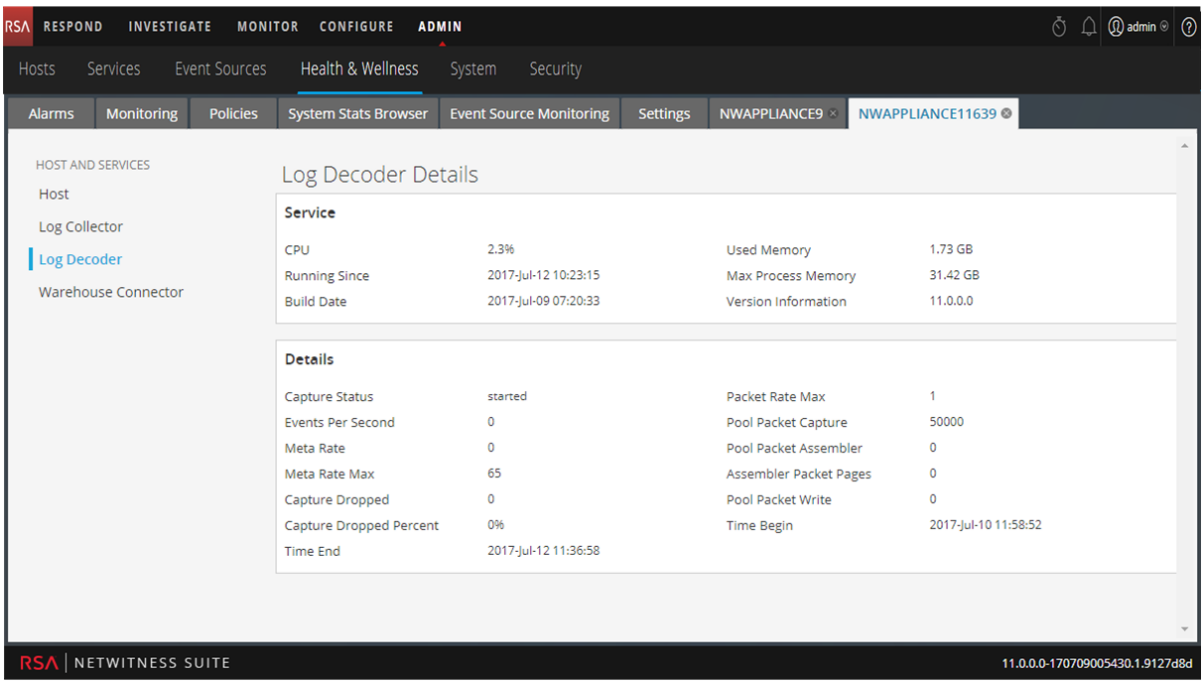
Displays statistics for the NetWitness Suite internal event processing protocol (that is, the Log Decoder) for Log Collection.

Parameter	Description
Transport Protocol	NetWitness Suite protocol use for Log Collections (that is, the Log Decoder).

Parameter	Description
Status	Status of the Log Decoder. Valid values are: • **starting** - Starting data capture (not capturing data yet). • **started** - Capturing data. • **stopping**- Stopping data capture (received request to stop data capture, but not have not stopped capturing data yet). • **stopped** - Not capturing data. • **disabled** - Not configured as a Decoder service.
EPS	Rate (events per second) at which this the Log Decoder is processing events from the Log Collector.
Total Events	Total events processed by the Log Decoder.
Errors	Number of errors encountered.
Warnings	Number of warnings encountered.
Byte Rate	Current throughput in bytes per second.

Log Decoder Details View

The Log Decoder Details view provides information for the Log Decoder. The following figure depicts the Log Decoder Details.



For the related procedure, see Monitor Service Details.

This section displays the current generic statistics for the service.

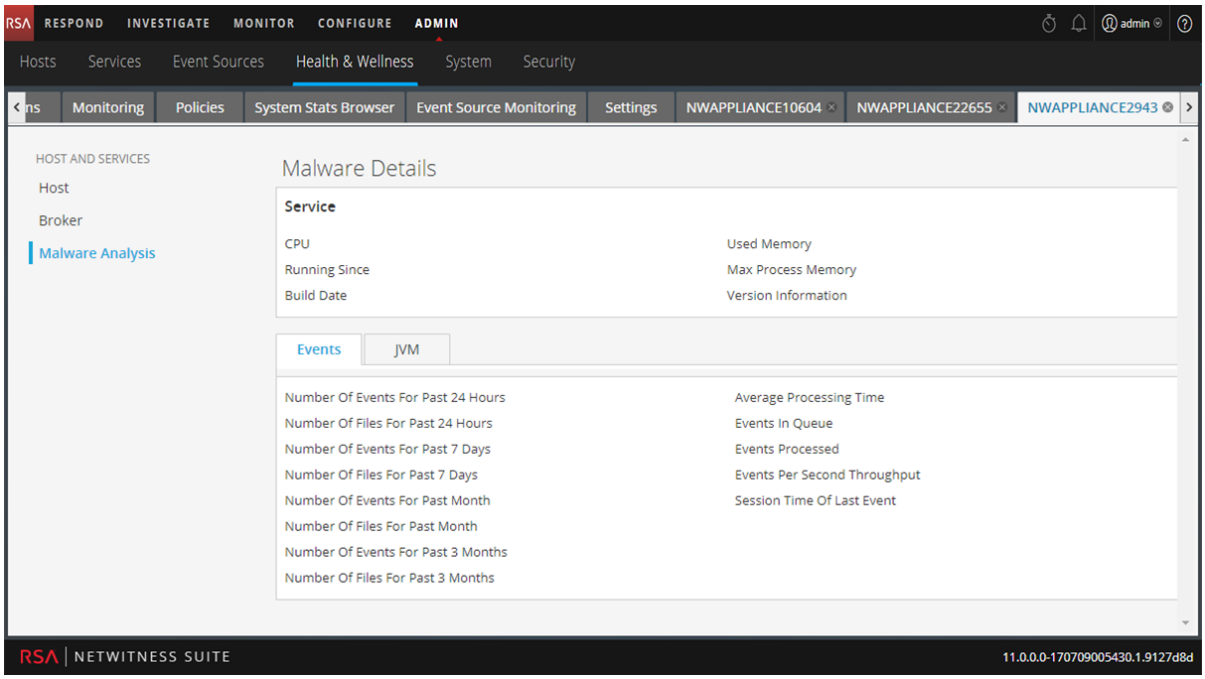
Statistic	Description
Capture Status	Status of data capture. Valid values are: • **starting** - Starting data capture (not capturing data yet). • **started** - Capturing data. • **stopping** - Stopping data capture (received request to stop data capture, but not have not stopped capturing data yet). • **stopped** - Not capturing data. • **disabled** - Not configured as a Log Decoder service.
Packet Rate Max	Maximum per second rate at which the service is writing packets to the database. Rate is a rolling average sample over a short time period (10 seconds). After the service stops capturing data, displays the maximum rate during data capture.
Events Per Second	Rate (events per second) at which the Log Decoder is processing events from the Log Collector.

Statistic	Description
Pool Packet Capture	Number of packet pages available for capture.
Meta Rate	Per second rate at which the service is writing metadata objects to the database. Rate is a rolling average sample over a short time period (10 seconds). After the service stops capturing data, rate is reset to zero.
Pool Packet Assembler	Number of packet pages waiting to be assembled.
Meta Rate Max	Maximum per second rate at which the service is writing metadata objects to the database. Rate is a rolling average sample over a short time period (10 seconds). After the service stops capturing data, displays the maximum rate reached during data capture.
Assembler Packet Pages	Number of packet pages waiting to be assembled.
Capture Dropped	Number of packets reported by the network card as dropped. After the service stops capturing data, rate is reset to zero.
Pool Packet Write	Number of packet pages in the PCS pipeline that need to be written to the database.
Capture Dropped Percent	Packets reported by the network card as dropped as a percentage.
Time Begin	Time when first packet was captured (time when the first packet was stored in the packet database). This time increases as packets are rolled out of the packet database.

Statistic	Description
Time End	Time when the last packet was captured (time when packet was written to the database). The time increases as new packets are captured.

Malware Details View

The Malware Details view provides information for Malware Analysis. The following figure depicts the Malware Details.



For the related procedure, see Monitor Service Details.

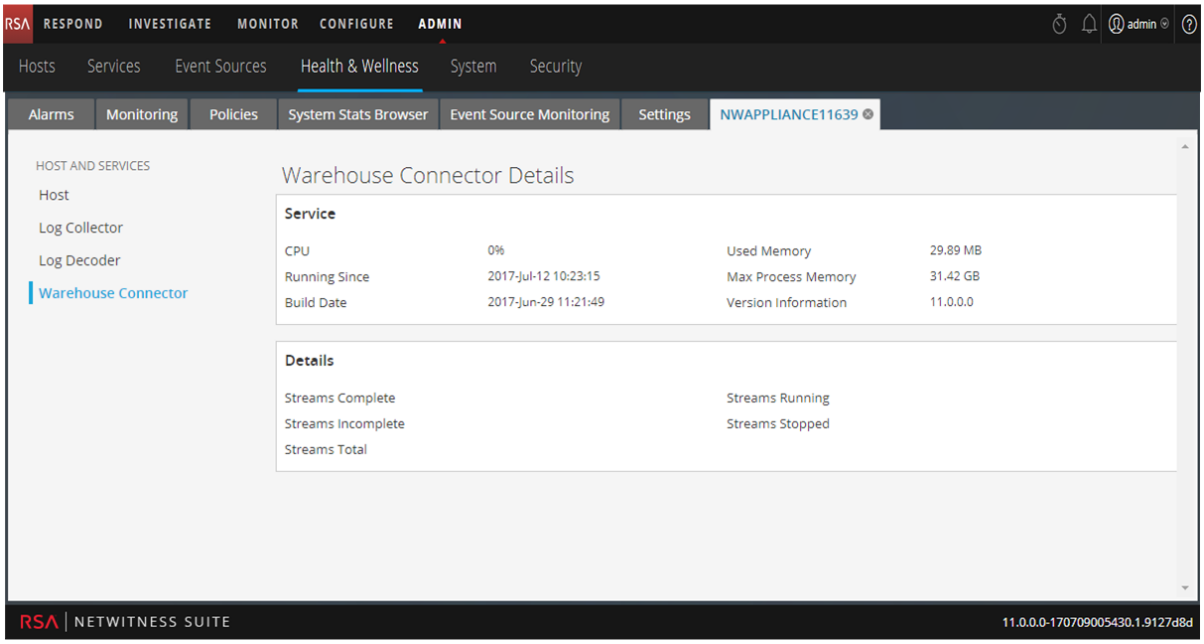
Displays the following event-related statistical information for the Malware Analysis service.

- Number of events for the past 24 hours
- Average processing time
- Number of files for the past 24 hours
- Events in queue
- Number of events for the past 7 days
- Events processed
- Number of events for the past 7 days
- Events per second throughput

- Number of events for the past month
- Session time of the last event
- Number of files for the past month
- Number of events for the past 3 months
- Number of files for the past 3 months

Warehouse Connector Details View

The Warehouse Connector Details tab provides information for the Warehouse Connector, such as the date it was built, CPU, and version information. The following figure depicts the Warehouse Connector Details.



For the related procedure, see Monitor Service Details.

Policies View

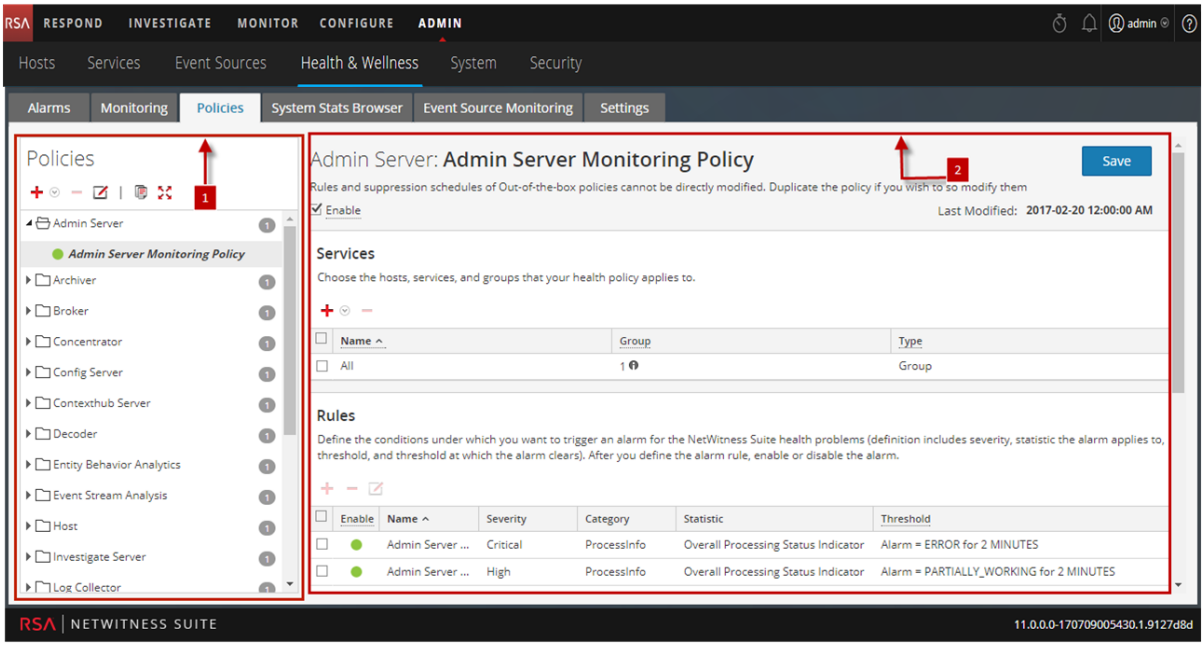
The required permission to access this view is **Manage services**.

What do you want to do?

Role	I want to ...	Show me how
Administrator	View the policies NetWitness Server and Services	Manage Policies
Administrator	Add, Edit, Duplicate, and Delete Policies	Manage Policies

Quick Look

The figure depicts the Policies view.



1 Policies Panel

2 Policy Detail Panel

1. Go to **ADMIN > Health & Wellness**.
2. Click the **Policies** tab.

Policies Panel

In the Policies panel, you can add or delete policies for hosts and services in this panel.

Feature	Description
	Displays available service types to create a new policy . Select one so that you can define a policy or policies for it.
	Deletes the selected policy from the Policies panel. You can only delete one policy at a time.
	Allows you to change the name of the policy.
	Creates a copy of the selected policy. For example, if you select **First Policy** and click , NetWitness Suite creates a copy of this policy and names it First Policy (1).
	Expands the list of policies under the services and hosts in the **Policies** panel.
	Contracts the list of policies under the services and hosts in the **Policies** panel.
	List of: • Services and hosts for which you have defined policies. • RSA standard policies that you can apply to hosts and services.

Policy Detail Panel

The **Policy Detail** panel displays the policy selected from the Policies panel.

Feature	Description
Save	Saves any changes you made in this panel.
Policy Type	Displays the type of policy you selected.
Modified Date	Displays the last date this policy was modified.
Enable	Select and deselect this checkbox to enable and disable the policy.
Services	

Feature	Description
	Displays menu in which you select: • **Groups** to display the **Groups** dialog from which you select service groups to this policy. • **Service/Host** to display the **Services/Hosts** dialog from which you select services to add to this policy. If policy type is **Host**, the menu will have **Host** not **Service**. You can select services based on policy type.
	Deletes the selected service or group from this policy.
Rules	
	Displays the Add Rule dialog in which you define a rule for this policy.
	Deletes the selected rule from this policy.
	Displays the Edit Rule dialog for the selected rule.
Policy Suppression	
	Adds a policy suppression timeframe row.
	Deletes the selected policy suppression timeframe row.
Time Zone	Selects the time zone for the Policy from the drop-down list. This time zone applies to both Policy Suppression and Rule Suppression.
	Selects the checkbox to select a policy suppression timeframe row.
Days	Days of the week that you want to suppress the policy according to the time range specified. Click on the day of the week that you want to suppress the policy. You can select any combination of days including all days.
Time Range	Time range during which the policy is suppressed for the days selected.
Notifications	

Feature	Description
+	Adds an EMAIL notification row.
−	Deletes the selected policy suppression timeframe row.
Notification Settings	Opens the Notification Servers view in which you can define the Email notification settings.
☐	Selecting the checkbox selects a policy suppression time frame row.
Output	The type of notification defined on the Global Notifications page. Can be email, SNMP, Syslog, or Script.
Recipient	The name of the person receiving the notification.
Notification Server	Select the EMAIL notification server. See "Configure Notification Servers" in the *System Configuration Guide* for the source of the values in this drop-down list.
Template	Select the Template for this EMAIL notification. RSA provides the Health & Wellness Default SMTP Template and the alarms template. See" Configure Notification Templates"in the *System Configuration Guide* for the source of the other values in this drop-down list. **Note:** Refer to Include the Default Email Subject Line if you want to include the default Email subject line from the Health & Wellness template in your Health & Wellness Email notifications for specified recipients.

Groups dialog

Feature	Description
Groups panel	
Name	Displays the service groups you have defined. You can select: • **All** to display all your services in the **Services** panel. • A group to display the services in comprise that group in the **Services** panel.
Services panel	

Feature	Description
Name	Displays the name of the service.
Host	Displays the host on which the service is running.
Type	Displays the type of service.

Rules Dialog

Feature	Description
☐ Enable	Select and deselect this checkbox to enable and disable the rule for this policy.
Name	Enter the name of the rule.
Description	Enter the description of the rule. RSA suggests that you include the following information in this field. • Informational description - purpose of the rule and what problem it monitors. • Remediation - steps to take to resolve the condition that triggers the alarm for this rule.
Severity	Select the severity of the rule. Valid values are: • Critical • High • Medium • Low

Feature	Description
Statistic	Select the statistics you want to check with this rule. You can select: • Statistical category from the left drop-down list. • Statistic from the right drop-down list. **Note:** For Public Key Infrastructure (PKI) policy, select PKI in the category and statistics as any one of the following: - NetWitness Server PKI Certificate Expiration - Displays the time left before the certificate expires. - NetWitness Server PKI CRL Expiration - Displays the time left before the Certificate Revocation List (CRL) expires. - NetWitness Server PKI CRL Status - Displays the current status of the CRL. Please refer to the System Stats Browser View for examples of the statistics you may want to check with a rule.
Alarm Threshold	Define the threshold of the rule that will trigger the policy alarm: • Amount **Note:** For CRL expiry the supported format is ddddhhmm, for example: - 10000 represent 1 day - 2359 represent 23 hours and 59 minutes - 10023 represent 1 day and 23 minutes - 3650100 represent 365 days and 1 hour • Time in minutes

Recovery	Defines when to clear the threshold of the rule:
	• Operator:
	  • For NetWitness Suite 10.5 (=, !=, <, <=, >, or >=)
	  • For NetWitness Suite 10.5.0.1 and later (See Threshold Operators below)
	• Amount
	• Time in minutes

Rule Suppression	
+	Selecting this option allows you to add a rule suppression timeframe row.

Feature	Description
−	Selecting this option allows you to delete the selected rule suppression time frame row.
☐	Selecting the checkbox allows you to select a rule suppression time frame row.
Time Zone: *time-zone*	Displays the Policy time zone. You select the time zone for a policy in the Policy Suppression panel.
Days	Days of the week that you want to suppress the rule according to the time range specified. Click on the day of the week that you want to suppress the rule. You can select any combination of days including all days.
Time Range	Time range during which the rule is suppressed for the days selected.

Threshold Operators

The **Alarm Threshold** and **Recovery Threshold** fields in the **Rules** dialog prompt you for either numeric or string operators based on the statistic criteria you specify.

NetWitness Suite Out-of-the-Box Policies

The following table lists the NetWitness Suite Out-of-the-Box Policies with the rules defined for each policy.

You can perform the following tasks on any of these policies:

- Change service/group assignments.
- Disable/enable them.

You cannot perform the following tasks on any of these policies:

- Delete them.
- Edit Policy names.

Note: Additional information about the Out-of-the-Box Policies can be found in the User Interface under
Health & Wellness – Policies.

Policy Name	Rule Name	Alarm Triggered
	Communication Failure Between Master Security Analytics Host and a Remote Host	Host is down, Network is down, Message Broker is Down, or Invalid or missing security certificates for 10 minutes or more.

Policy Name	Rule Name	Alarm Triggered
NetWitness Server Monitoring Policy	Critical Usage on Rabbitmq Message Broker Filesystem	For `var/lib/rabbitmq`, Mounted Filesystem Disk Usage goes over 75%.
	Filesystem is Full	Overall Mounted Filesystem Disk Usage reaches 100%.
	High Filesystem Usage	Overall Mounted Filesystem Disk Usage goes over 95%.
	High System Swap Utilization	Swap Utilization goes under 5 % for 5 minutes or more.
	High Usage on Rabbitmq Message Broker Filesystem	Mounted Filesystem Disk Usage for `var/lib/rabbitmq` goes over 60%.
	Host Unreachable	Host down.
	LogCollector Event Processor Exchange Bindings Status	Issue with Log Collection Message Broker Queues for 10 minutes or more.
	LogCollector Event Processor Queue with No Bindings	Issue with Log Collection Message Broker Queues for 10 minutes or more.
	LogCollector Event Processor Queue with No Consumers	Issue with Log Collection Message Broker Queues for 10 minutes or more.
	Power Supply Failure	Host not receiving power.
	RAID Logical Drive Degraded	For Raid Logical Drive, Drive State equals Degraded or Partially Degraded.

Policy Name	Rule Name	Alarm Triggered
	RAID Logical Drive Failed	For Raid Logical Drive, Logical Drive State equals Offline, Failed, or Unknown.
	RAID Logical Drive Rebuilding	For Raid Logical Drive, Logical Drive State equals Rebuild.
	RAID Physical Drive Failed	For Raid Physical Drive, Physical Drive State does not equal Online, Online Spun Up, or Hotspare.
	RAID Physical Drive Failure Predicted	For Raid Physical Drive, Physical Drive Predictive Failure Count is greater than 1.
	RAID Physical Drive Rebuilding	For Raid Physical Drive, Physical Drive State equals Rebuild.
	RAID Physical Drive Unconfigured	For Raid Physical Drive, Physical Drive State contains Unconfigured(good).
	SD Card Failure	SD Card Status does not equal ok.
NetWitness Suite Archiver Monitoring Policy	Archiver Aggregation Stopped	Archiver Status does not equal started.
	Archiver Database(s) Not Open	Database Status does not equal opened.
	Archiver Not Consuming From Service	Devices Status does not equal consuming.
	Archiver Service in Bad State	Service State does not equal started or ready.
	Archiver Service Stopped	Server Status does not equal started.

Policy Name	Rule Name	Alarm Triggered
NetWitness Suite Broker Monitoring Policy	Broker >5 Pending Queries	Queries Pending greater than or equal to 5 for 10 minutes or more.
	Broker Aggregation Stopped	Broker Status does not equal started.
	Broker Not Consuming From Service	Devices Status does not equal consuming.
	Broker Service in Bad State	Service State does not equal started or ready.
	Broker Service Stopped	Server Status does not equal started.
	Broker Session Rate Zero	Session Rate (current) equals 0 for 2 minutes or more.

Policy Name	Rule Name	Alarm Triggered
NetWitness Suite Concentrator Monitoring Policy	Concentrator >5 Pending Queries	Queries Pending greater than or equal to 5 for 10 minutes or more.
	Concentrator Aggregation Behind >100K Sessions	Devices Sessions Behind is greater than or equal to 100000 for 1 minute or more.
	Concentrator Aggregation Behind >1M Sessions	Devices Sessions Behind is greater than or equal to 1000000 for 1 minute or more.
	Concentrator Aggregation Behind >50M Sessions	Devices Sessions Behind is greater than or equal to 50000000 for 1 minute or more.
	Concentrator Aggregation Stopped	Broker Status does not equal started.
	Concentrator Database(s) Not Open	Database Status does not equal opened.
	Concentrator Meta Rate Zero	Concentrator Meta Rate (current) equals 0 for 2 minutes or more.
	Concentrator Not Consuming From Service	Devices Status does not equal consuming.
	Concentrator Service in Bad State	Service State does not equal started or ready.
	Concentrator Service Stopped	Server Status does not equal started.

Policy Name	Rule Name	Alarm Triggered
NetWitness Suite Decoder Monitoring Policy	Decoder Capture Not Started	Capture Status does not equal started.
	Decoder Capture Rate Zero	Capture Rate (current) equals 0 for 2 minutes or more.
	Decoder Database Not Open	Database Status does not equal opened.
	Decoder Dropping >1% of Packets	Capture Packets Percent Dropped (current) is greater than or equal to 1%.
	Decoder Dropping >10% of Packets	Capture Packets Percent Dropped (current) is greater than or equal to 10%.
	Decoder Dropping >5% of Packets	Capture Packets Percent Dropped (current) is greater than or equal to 5%.
	Decoder Packet Capture Pool Depleted	Packet Capture Queue equals 0 for 2 minutes or more.
	Decoder Service in Bad State	Service State does not equal started or ready.
	Decoder Service Stopped	Server Status does not equal started.
NetWitness Suite Event Steam Analysis Monitoring Policy	ESA Overall Memory Utilization > 85%	Total ESA Memory Usage % is greater than or equal to 85 %.
	ESA Overall Memory Utilization > 95%	Total ESA Memory Usage % is greater than or equal to 95 %.
	ESA Service Stopped	Server Status does not equal started.
	ESA Trial Rules Disabled	Trial Rules Status does not equal enabled.

Policy Name	Rule Name	Alarm Triggered
NetWitness Suite IPDB Extractor Monitoring Policy	IPDB Extractor Service in Bad State	Service State does not equal started or ready.
	IPDB Extractor Service Stopped	Server Status does not equal started.
NetWitness Suite Incident Management Monitoring Policy	Incident Management Service Stopped	Server Status does not equal started.
NetWitness Suite Log Collector Monitoring Policy	Log Collector Service Stopped	Server Status does not equal started.
	Log Decoder Event Queue > 50% Full	Number of events currently in the queue is using 50% or more of the queue.
	Log Decoder Event Queue > 80% Full	Number of events currently in the queue is using 80% or more of the queue.
	Log Collector Service in Bad State	Service State does not equal started or ready.

Policy Name	Rule Name	Alarm Triggered
NetWitness Suite Log Decoder Monitoring Policy	Decoder Dropping>10% of Packets	Capture Packets Percent Dropped (current) is greater than or equal to 10%
	Log Capture Not Started	Capture Status does not equal started.
	Log Decoder Capture Rate Zero	Capture Rate (current) equals 0 for 2 minutes or more.
	Log Decoder Database Not Open	Database Status does not equal opened.
	Log Decoder Dropping >1% of Logs	Capture Packets Percent Dropped (current) is greater than or equal to 1%.
	Log Decoder Dropping >5% of Logs	Capture Packets Percent Dropped (current) is greater than or equal to 5%.
	Log Decoder Packet Capture Pool Depleted	Packet Capture Queue equals 0 for 2 minutes or more.
	Log Decoder Service Stopped	Server Status does not equal started.
	Log Decoder Service in Bad State	Service State does not equal started or ready.
NetWitness Suite Malware Analysis Monitoring Policy	Malware Analysis Service Stopped	Server Status does not equal started.

Policy Name	Rule Name	Alarm Triggered
NetWitness Suite Reporting Engine Monitoring Policy	Reporting Engine Alerts Critical Utilization	Alerts Utilization is greater than or equal to 10 for 5 minutes or more.
	Reporting Engine Available Disk <10%	Available disk space is less than 10%.
	Reporting Engine Available Disk <5%	Available disk space is less than or equal to 5%.
	Reporting Engine Charts Critical Utilization	Charts Utilization is greater than or equal to 10 for 5 minutes or more.
	Reporting Engine Rules Critical Utilization	Rules Utilization is greater than or equal to 10 for 5 minutes or more.
	Reporting Engine Schedule Task Pool Critical Utilization	Schedule Task Pool Utilization is greater than or equal to 10 for 15 minutes or more.
	Reporting Engine Service Stopped	Server Status does not equal started.
	Reporting Engine Shared Task Critical Utilization	Shared Task Pool Utilization is greater than or equal to 10 for 5 minutes or more.

Policy Name	Rule Name	Alarm Triggered
NetWitness Suite Warehouse Connector Monitoring Policy	Warehouse Connector Service in Bad State	Service State does not equal started or ready.
	Warehouse Connector Service Stopped	Server Status does not equal started.
	Warehouse Connector Stream Behind	Stream Behind is greater than or equal to 2000000.
	Warehouse Connector Stream Disk Utilization > 75%	Stream Disk Usage (Pending Destination Load) is greater than or equal to 75.
	Warehouse Connector Stream in Bad State	Stream Status does not equal consuming or online for 10 minutes r more.
	Warehouse Connector Stream Permanently Rejected Files > 300	Number of files in the permanently rejected files is greater than or equal to 300.
	Warehouse Connector Stream Permanently Rejected Folder > 75% Full	Rejected folder usage is greater than or equal to 75%.
NetWitness Suite Workbench Monitoring Policy	Workbench Service in Bad State	Service State does not equal started or ready.
	Workbench Service Stopped	Server Status does not equal started.

System Stats Browser View

NetWitness Suite provides a way to monitor the status and operations of hosts and services. The System Stats Browser tab displays key statistics, service system information, and host system information for a host or service.

You can customize the stats view depending on the parameter you select to filter the data.

To access the System Stats Browser view:

1. Go to **ADMIN > Health & Wellness**.

   The Health & Wellness view is displayed with the Alarms tab open.

2. Click the **System Stats Browser** tab.

What do you want to do?

Role	I want to ...	Show me how
Administrator	View the System Stat Historical Graph	Historical Graph for System Stats

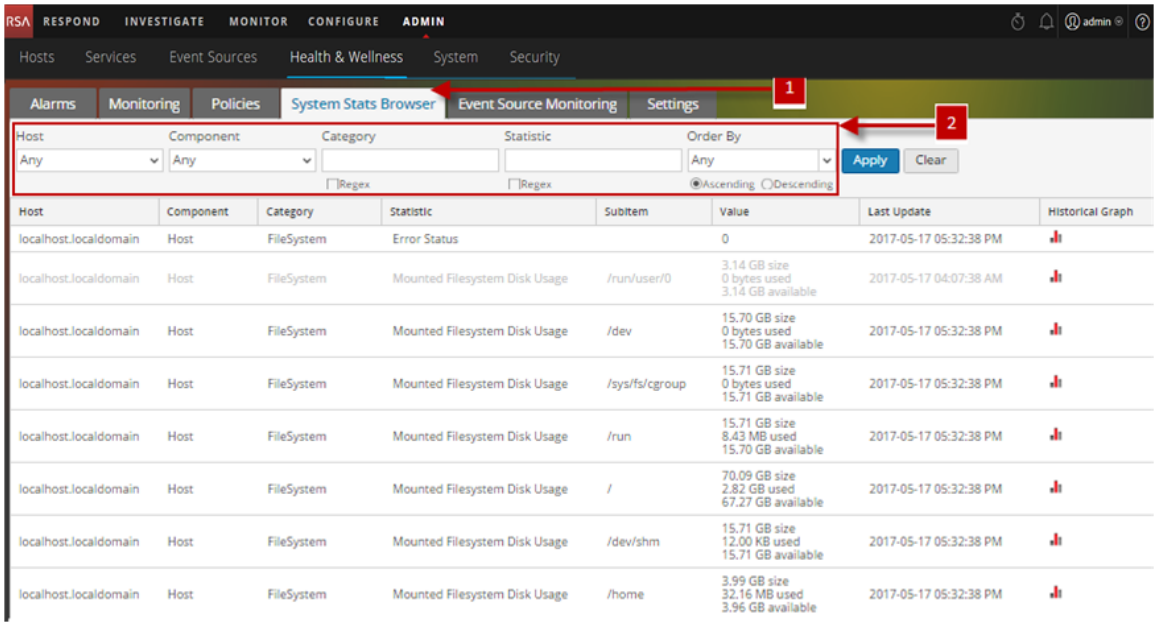
Related Topics

Monitor Service Statistics

Filter System Statistics

Quick Look

The System Stats Browser view is displayed.



1 Displays System Stats Browser View

2 Toolbar used to filter and customize the System Stats Browser View

Note: Historical graphs are enabled, and can be displayed, for statistics with numeric values. However, historical graphs are disabled for statistics with string values, for example, Health checks (Healthy), and are displayed as gray in the UI.

Filters

This table lists the various parameters you can use to filter and customize the System Stats view.

Parameter	Description
Host	Select a host from the drop-down menu to display the stats of the selected host. Select **Any** to list all the available hosts.
Component	Select a component from the drop-down menu to display the stats for the selected component. Select **Any** to list out all the components on a selected host.
Category	Type the category to display the stats for the required category. Select Regex to enable Regex filter. It performs a regular expression search against text and lists out the specified category. If Regex is not selected it supports globbing pattern matching.
Statistic	Type the statistic to display the required statistic on all the hosts or components. Select Regex to enable Regex filter. This performs a regular expression search against text and lists out the specified category. If Regex is not selected it supports globbing pattern matching.
Order By	Select the order in which the list needs to be filtered. Select Ascending to filter the list it in an ascending order.

Commands

Command	Action
Apply	Click to apply the filters chosen and display the list accordingly.

Command	Action
Clear	Click to clear the chosen filters.

System Stats View Display

Displays statistics, service system information, and host system information for a host or service.

Access Stats Details

Select one of the stats and click **Stats Details** on the right hand side of the panel.

The Stats details panel opens with details of the selected stats.

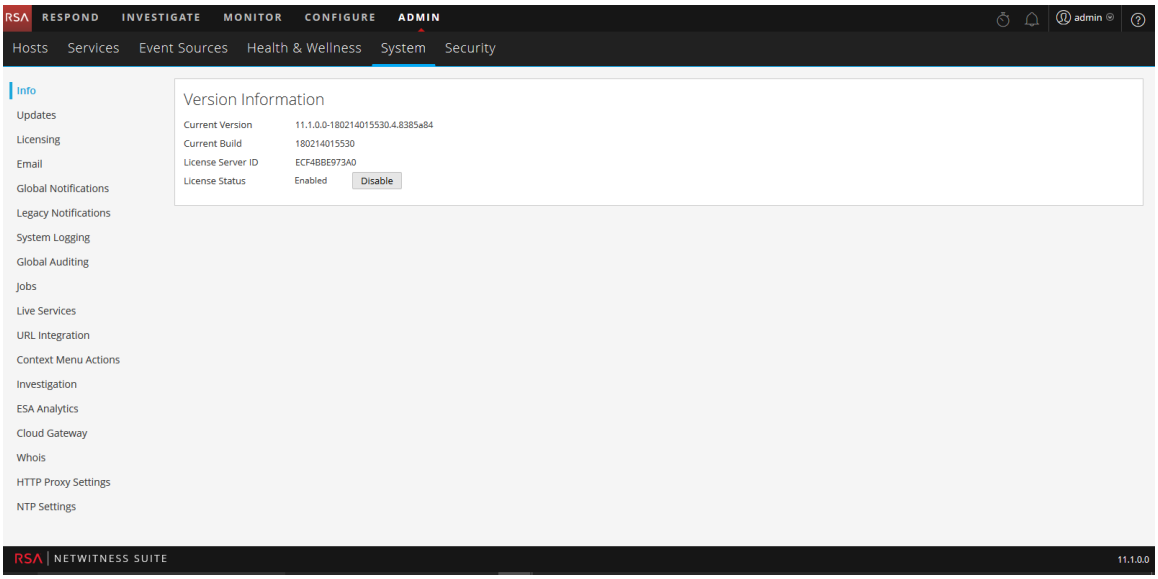
System View - System Info Panel

This topic describes the System Information panel, which displays information about the system version and license status.

The required role to access this view is **Manage System Settings**.

To access this view, do one of the following:

- Go to **ADMIN > System**.
  The System Information panel is displayed by default.
- When you receive a notification that a new version of NetWitness Suite is available in the Notifications tray, click **View**.



The Version Information section displays version information about the version of NetWitness Suite that is currently installed. The following table describes the features of the Version Information section.

Name	Description
Current Version	Displays the version of Security Analytics that is currently running. The format of the version is *major-relase.minor-release.stability-id.build-number*. Possible values for the *stability-id* are: • 1 - Development • 2 - Alpha • 3 - Beta • 4 - RC • 5 - Gold
Current Build	Identifies the current build revision for use in troubleshooting situations.
License Server ID	Each client host is shipped with the Local Licensing Server (LLS) installed to manage host licenses. This field indicates whether the LLS is installed for this instance of Security Analytics. • When the LLS is installed, the Licensing Server ID is displayed. • **Unknown** indicates that the LLS is not installed.
License Status	Indicates whether or not the license is enabled. If the license is: • Enabled, **Enabled** is displayed in this field and there is a **Disable** button to the right so you can disable it. • Disabled, **Disabled** is displayed in this field and there is an **Enable** button to the right so you can enable it.

System Updates Panel - Settings Tab

System Updates Settings tab describes the interface you use to set up a connection to Live Update Repository. These settings ensure that the NetWitness Suite can reach the Live Update Repository and synchronize it with your Local Update Repository.

The required permission to access this view is **Apply System Updates**.

To access this view:

1. Go to **ADMIN > System**.
2. Select **Updates**.

What do you want to do?

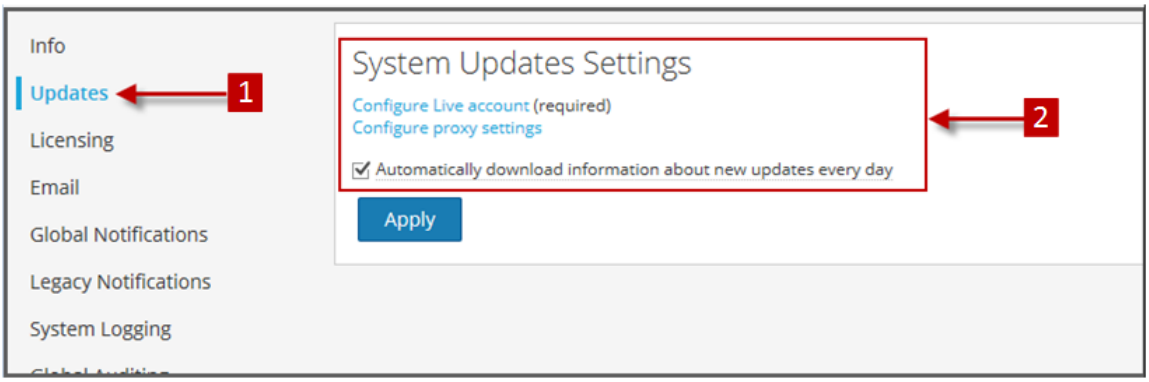
Role	I want to ...	Show me how
Administrator	Automatically download updates	Enable automatic synchronization with the RSA update repository.

Related Topics

Managing NetWitness Suite Updates

Quick Look

The System Updates Settings panel is displayed.



1 Displays System Update Setting Tab

2 Configure Account and Setting for Automatic Updates

Features

This table describes the features in the System Updates Settings panel.

Feature	Description
Configure Live account	Displays the **ADMIN** > **System** > **Live Services** panel in which you can configure your Live Account credentials if they are not configured.
Configure proxy settings	Displays the **ADMIN** > **System** > **HTTP Proxy Settings** panel in which you can configure an HTTP proxy if it is not configured.
Automatically download information about new updates every day	Select to enable automatic synchronization with the RSA update repository. If there are new updates available, information will automatically be displayed in the **ADMIN** > **HOSTS** panel.
Apply	Applies the settings in this tab.

System Logging - Settings View

The RSA NetWitness SuiteSettings view in the System Logging panel configures the size of the log files, the number of backup log files maintained, as well as the default logging levels for the packages within NetWitness Suite. The **Configure Log File Settings** topic in the *System Configuration Guide* provides detailed procedures.

To access the Settings tab:

1. Go to **ADMIN > System.**
2. In the options panel, select **System Logging**.
   The System Logging panel opens to the Realtime tab by default.
3. Click the **Settings** tab.

What do you want to do?

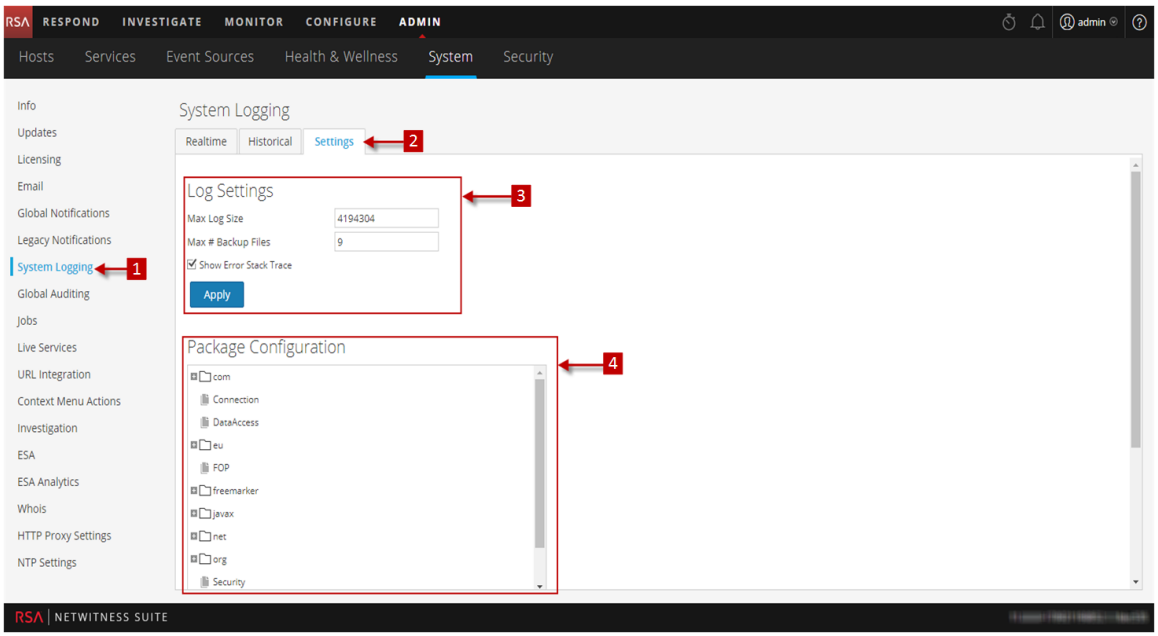
Role	I want to ...	Show me how
Administrator	Configure the size of the Log files	Setup the Log Settings Toolbar

Related Topics

System Logging - Historical Tab

System Logging - Realtime Tab

Quick Look



1	Displays System Logging Panel
2	Displays Settings Tab
3	The section allows the user to configure Log Settings
4	The section allows the user to configure Package

Features

The **Settings** tab has two sections: Log Settings and Package Configuration.

Log Settings

The Log Settings section configures the size of the NetWitness Suite log files and the number of backup logs that NetWitness Suite maintains.

Feature	Description
Max Log Size	Configures the maximum size in bytes of each log file. The minimum value for this setting is **4096**.

Feature	Description
Max # Backup Files	Specifies how many backup log files are maintained. The minimum value for this setting is **0**. When the maximum number of log files is attained, and a new backup file is made, the oldest backup is discarded.
Show Error Stack Trace	Select checkbox to display ERROR, STACK, and TRACE log messages.
Apply	Puts the settings into effect immediately for all future logs.

Package Configuration

The Package Configuration section shows the NetWitness Suite packages in a tree structure.

Feature	Description
Package tree	The tree contains all the packages used within NetWitness Suite. You can drill down into the tree to view the log levels of each package. The **root** logging level represents the default log level for all packages that are not explicitly set. The root level is set to **INFO**
Package field	This field is populated with the name of the selected package when you select a package in the **Package** tree.
Log Level	If the selected package has a log level explicitly set, the value is displayed in the **Log Level** field.
Reset recursively	Select checkbox to reset the log recursively.
Apply	This button puts the settings into effect immediately for all future logs.
Reset	This button resets the selected package to the log level of **root**.

System Logging - Realtime Tab

This topic describes the features of the System Logging > Realtime tab and the Services Logs view > Realtime tab.

The **Realtime** tab is a view of the NetWitness Suitelog or a service log. When it is initially loaded, the view contains the last 10 log entries. As new entries become available, the view is updated with those entries.

To access the Realtime tab:

1. Go to **ADMIN > System.**
2. In the options panel, select **System Logging**.
   The System Logging panel opens to the **Realtime** tab by default.

What do you want to do?

Role	I want to ...	Show me how
Administrator	See details of Log entry	Displaying System and Service Logs

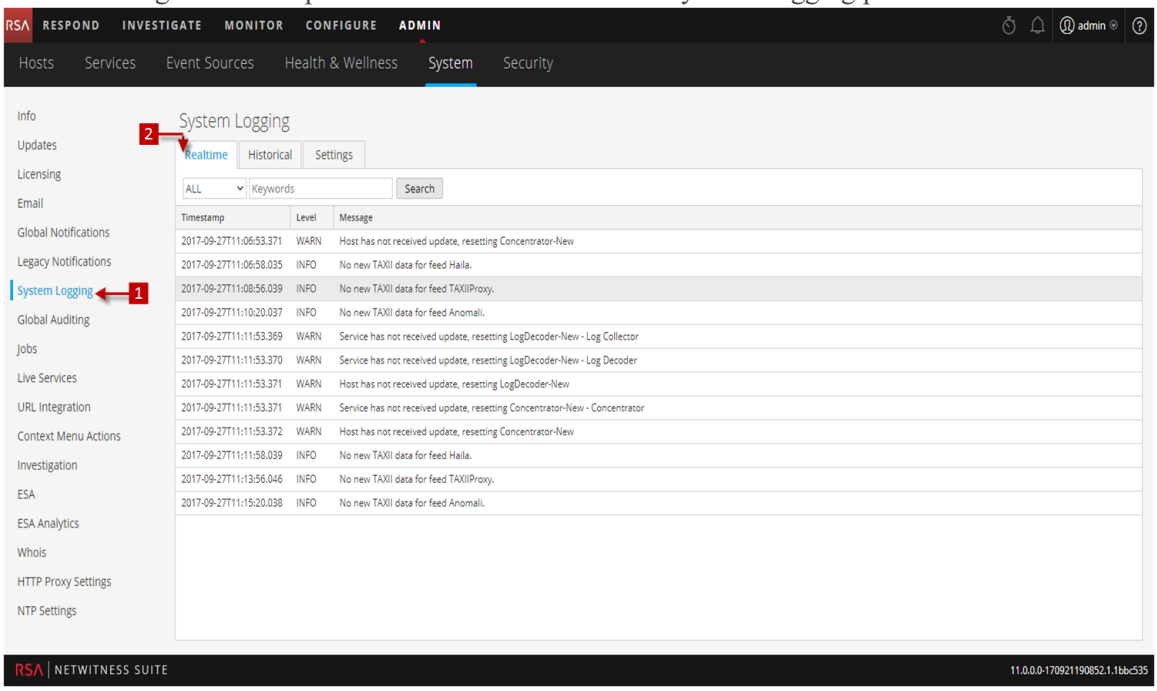
Quick Look

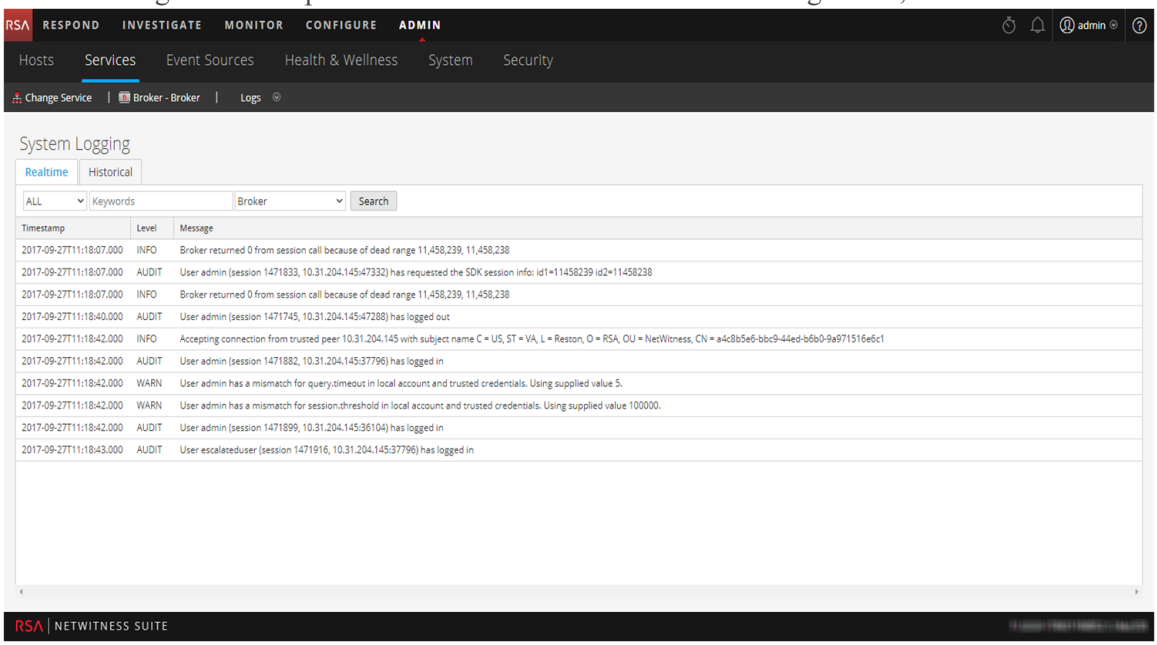
The following is an example of the **Realtime** tab in the System Logging panel.



1 Displays System Logging Panel

2 Displays Realtime Tab

The following is an example of the **Realtime** tab in the Services Logs view, which is similar.



Features

The **Realtime** tab has a toolbar with input fields to allow filtering of the entries, and below the toolbar is a grid containing the log entries.

Toolbar

Feature	Description
Log Level drop-down	Selects the log level for entries to display in the grid. The **Log Level** drop-down shows the available log levels for the system or the service. • System logs have seven log levels. • Service logs have only six log levels because they do not include the **TRACE** level. • The default is **ALL** log entries.
Keywords field	Specifies a keyword to use when filtering entries. This field is the same for system and service log filtering.
Service field (Service Logs only)	Specifies the service type to use when filtering service log entries. Possible values are the host or the service.
Filter button	Click to activate filtering based on the log level, keyword, and service selections.

Log Grid Columns

Column	Description
Timestamp	This is the timestamp for the entry.
Level	This is the log level for the message.
Message	This is the text of the log entry.

System Logging - Historical Tab

The Historical tab provides a searchable view of the NetWitness Suite log or the service log in a paged format. When initially loaded, the grid shows the last page of the log entries for the system or the system.

To access the Historical tab:

1. Go to **ADMIN > System.**
2. In the options panel, select **System Logging**.

   The System Logging panel opens to the **Realtime** tab by default.
3. Click the **Historical** tab.

What do you want to do?

Role	I want to ...	Show me how
Administrator	View the Historical Graph	Historical Graph for System Stats

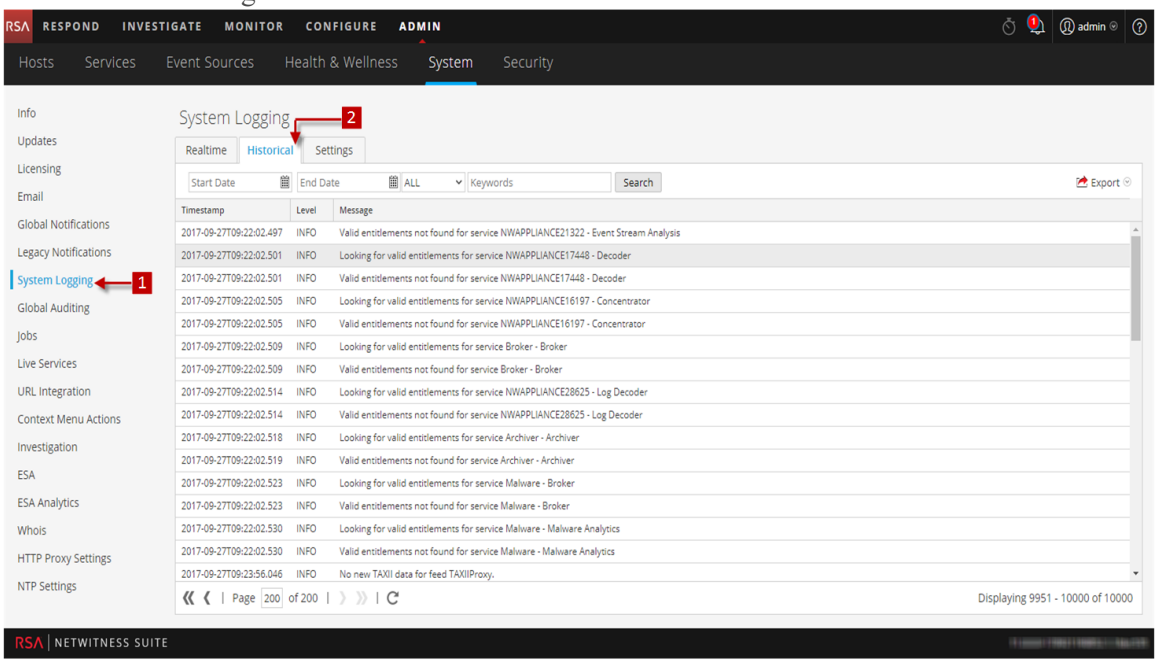
Related Topics

System Logging - Realtime Tab

System Logging - Settings View

Quick Look

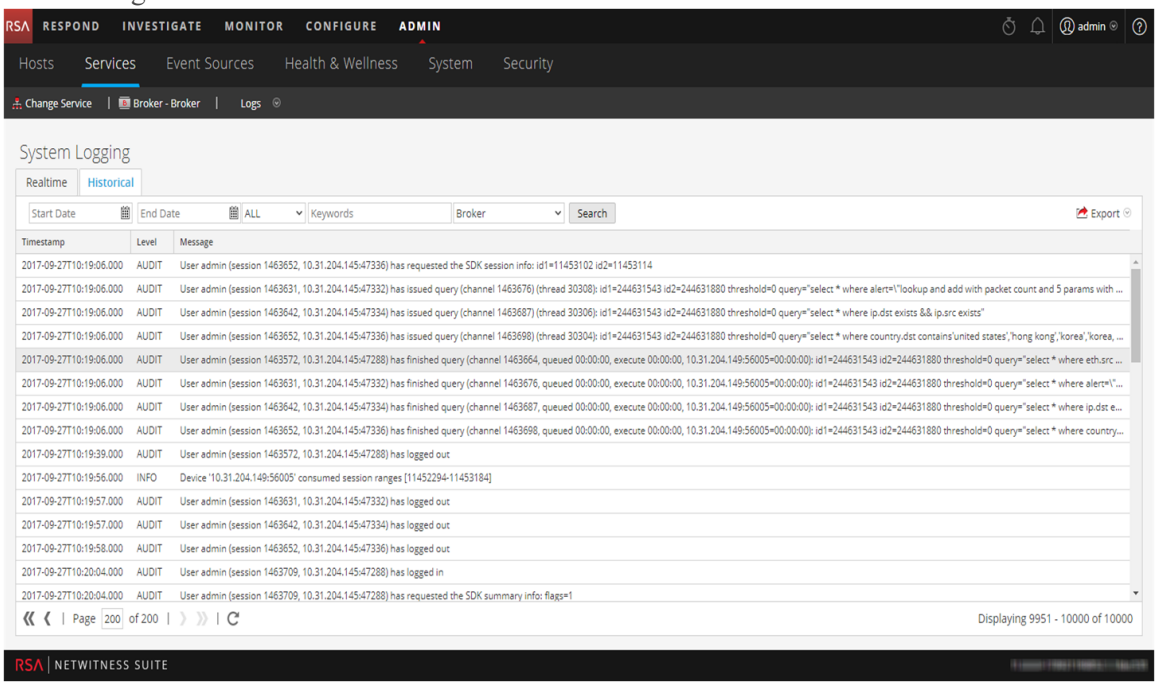
The following is an example of the **Historical** tab in the System Logging panel. It shows the NetWitness Suite logs.



1 Displays System Logging Tab

2 Displays Historical Tab

The following is an example of the **Historical** tab in the Services Logs view. It shows the services logs.



Features

The **Historical** tab has a toolbar with input fields to allow filtering of the entries, a grid containing the log entries, and paging tools.

Feature	Description
Start Date and **End Date**	The **Start Date** and **End Date** range search options limit the log entries to a point in time. When used, you must provide both a start and end date. The times are optional. The date range is validated to assure that the end date is not before the start date.
Log Level drop-down	Selects the log level for entries to display in the grid. The **Log Level** drop-down shows the available log levels for the system or the service. • System logs have seven log levels. • Service logs have only six log levels because they do not include the **TRACE** level. • The default is **ALL** log entries.
Keyword field	Specifies a keyword to use when filtering entries. This field is the same for system and service log filtering.
Service field (Service Logs only)	Specifies the service type to use when filtering service log entries. Possible values are the host or the service.
Search button	Click to activate a search based on the start and end date, log level, keyword, and service selections.
Export	Click to export the currently viewed grid entries to a text file. You can select either comma-separated or tab-separated format for the entries in the file.

Column	Description
Timestamp	This is the timestamp for the entry.
Level	This is the log level for the message.
Message	This is the text of the log entry.

The paging tools below the grid provide a way to navigate through the pages of log entries.

Search Log Entries

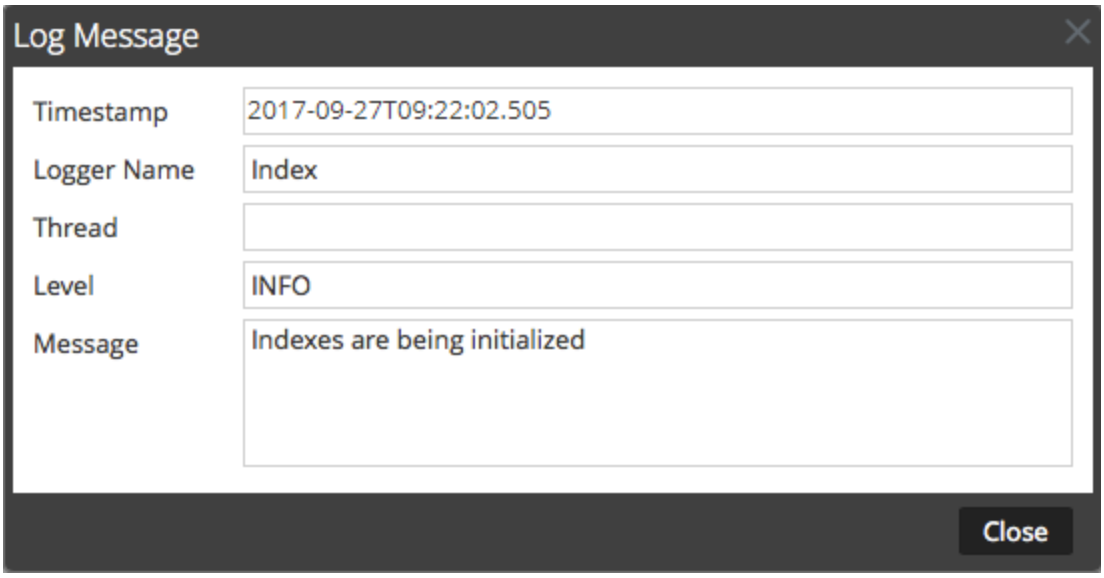
To search the results shown in the **Historical** tab:

1. (Optional) Select a **Start Date** and **End Date**. Optionally, select a **Start Time** and **End Time**.
2. (Optional) For system and service logs, select a **Log Level** and a **Keyword**, or both.
3. (Optional) For service logs, select the **Service**: host or service.
4. Click **Search**.
   The view is refreshed with the most recent 10 entries matching your filter. As new matching log entries become available, the view is updated to show those entries.

Show Details of a Log Entry

Each row of the **Historical** tab Log grid provides the summary information of a log entry. To view complete details:

1. Double-click a log entry.
   The Log Message dialog, which contains the Timestamp, Logger Name, Thread, Level and Message, is displayed.



2. When finished viewing, click **Close**.

Page Through the Entries

To view the different pages of the grid, use the paging controls on the bottom of the grid as follows:

- Use the navigation buttons
- Manually enter the page you want to view, and press **ENTER**.

Export

To export the logs in the current view:

Click **Export**, and select one of the drop-down options, **CSV Format** or **Tab Delimited**.
The file is downloaded with a filename that identifies the log type and the field delimiter. For example, a NetWitness Suite system log exported with comma-separated values is named **UAP_log_export_CSV.txt**, and an appliance log exported with tab-separated values is named **APPLIANCE_log_export_TAB.txt**.

Set Up System Security

This topic introduces a set of end-to-end procedures for implementing system security. Each step in the following topics explains a system-wide setting. Follow the steps in order to set up security in NetWitness Suite.

Topics

- Step 1. Configure Password Complexity
- Step 2. Change the Default Admin Passwords
- Step 3. Configure System-Level Security Settings
- Step 4. (Optional) Configure External Authentication

Step 1. Configure Password Complexity

This topic provides instructions to set system-wide NetWitness Suite password complexity requirements.

Passwords are an important part of your network security strategy. They provide critical front-line protection for your computer systems and help prevent attacks and unauthorized access to private information.

Password policies, designed to enhance the security of corporate networks, vary depending on the industry, corporate requirements, and regulations. Because of these password policy variations, NetWitness Suite software allows you to configure the password complexity requirements for internal NetWitness Suite users to conform to your corporate password policy guidelines.

Password complexity requirements apply only to internal users and are not enforced for external users. External users rely on their own methods and systems to enforce password complexity.

In addition, you can set a global default user expiration period and determine if and when internal users receive notification that their passwords are about to expire. The password expiration notification consists of a password expiration message when a user logs on to NetWitness Suite.

Password Strength

Strong passwords make it more difficult for attackers to guess user passwords and help prevent unauthorized access to your organization's network. You can define the appropriate level of password strength for your NetWitness Suite users. When you configure the password strength settings, they apply to internal NetWitness Suite users, including the admin user.

You can choose to enforce any combination of the following password strength requirements when a NetWitness Suite user creates or changes their password:

- Minimum password length
- Minimum number of uppercase characters
- Minimum number of lowercase characters
- Minimum number of decimals (0 through 9)
- Minimum number of special characters
- Minimum number of non-Latin alphabetic characters (includes Unicode characters from Asian languages)
- Whether or not the password can contain the username

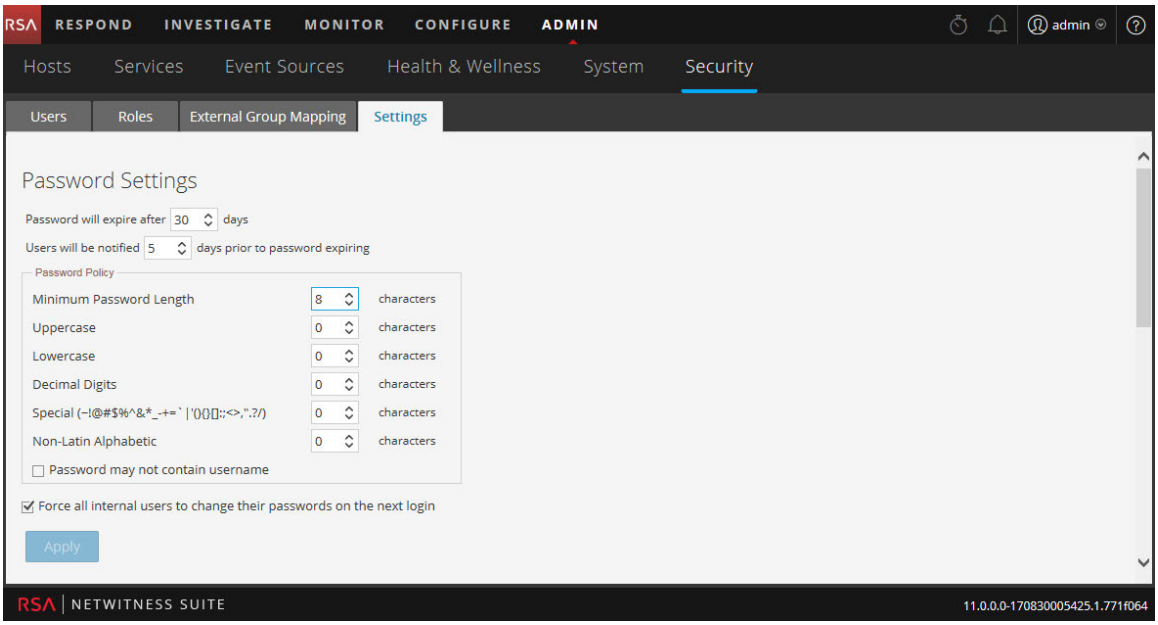
For example, you can create a strong password requirement that has a minimum of 8 characters, cannot contain the username of the user, and contains a mix of uppercase and lowercase letters, numbers, and special characters.

If you choose to enforce a minimum number of non-Latin alphabetic characters, ensure that your users have these characters available to them when setting their passwords.

The topic "STIG Compliant Passwords" in the *System Maintenance Guide* provides an example of a strong password policy.

Configure Password Strength

1. In NetWitness Suite, go to **ADMIN > Security**.
   The Security view is displayed with the **Users** tab open.
2. Click the **Settings** tab.



3. In the **Password Settings** section, select the password complexity requirements to enforce when NetWitness Suite users set their passwords and specify the minimum characters required, if applicable. Set the value to 0 for requirements you do not want to enforce, except for Minimum Password Length, which has a minimum value of 4 characters.

Requirement	Description
Password will expire after <n> days	The default number of days before a password expires for all internal NetWitness Suite users. A value of zero (0) disables password expiration. For new installations, the default value is 30. For upgrades, the previous value will migrate automatically to the upgraded installation.
Users will be notified <n> days prior to password expiring	The number of days before the password expiration date, to notify a user that their password is about to expire. Users see a Password Expiration Message dialog when they log on to NetWitness Suite. The minimum value is 1 day.
Minimum Password Length	Specifies a minimum password length. A minimum password length prevents users from using short passwords that are easy to guess. There is a minimum password length of 4 characters required by default.
Uppercase	Specifies a minimum number of uppercase characters for the password. This includes European language characters A through Z, with diacritic marks, Greek characters, and Cyrillic characters. For example: • Cyrillic uppercase: Д Ц • Greek uppercase: Π Λ
Lowercase	Specifies a minimum number of lowercase characters for the password. This includes European language characters a through z, sharp-s, with diacritic marks, Greek characters, and Cyrillic characters. For example: • Cyrillic lowercase: д ц • Greek lowercase: π λ
Decimal Digits	Specifies a minimum number of decimal characters (0 through 9) for the password.
Special (~!@#$%^&*_-+=`|'(){}[]:;<>,".?/)	Specifies a minimum number of special characters for the password: `~!@#$%^&*_-+=`|'(){}[]:;<>,".?/`

Requirement	Description
Non-Latin Alphabetic	Specifies a minimum number of Unicode alphabetic characters that are not uppercase or lowercase. This includes Unicode characters from Asian languages. For example: • Kanji (Japanese): 頁 (leaf) 枒 (tree)
Password May Not Contain Username	Specifies that a password cannot contain the case-insensitive username of the user.

4. If you want your password policy changes to take effect at the next login instead of the next password change, select **Force all internal users to change their passwords on the next login**. Note that this setting is checked by default.
5. Click **Apply**.
   The password strength settings take effect when internal users create or change their passwords. If you selected **Force all internal users to change their passwords on the next login**, all internal users must change their password the next time they log on to NetWitness Suite.

Step 2. Change the Default Admin Passwords

This topic provides instructions for changing the admin password for the NetWitness Suite service and for the Core services.

The system administrator's user account is installed with NetWitness Suite. The username is **admin** and the default password is the password that was entered in the Text-based User Interface (TUI) during the NetWitness Suite installation process. The **Administrators** role is assigned to admin. This role has full system privileges to control what a user can do and which services a user can access. The only modification you can make to this account is to change the password. Unlike other NetWitness Suite users, changes to the **admin** user password do not automatically propagate to downstream services. When you configure the password strength settings, they apply to all NetWitness Suite users, including the admin user.

Passwords, an important aspect of computer security, are the front line of protection for your system. The **admin** user is pre-installed in NetWitness Suite and on each Core service. For security, you create the Users and Roles for your organization in NetWitness Suite, and on each Core service.

Best Practices

RSA recommends the following best practices:

- Change the **admin** password of each service from the default.
- Create a different password for the **admin** account on each service.

Change the admin Password for the NetWitness Suite

Change the **admin** password for the NetWitness Suite in the Profile view. See "Change Password" in the *NetWitness Suite Getting Started Guide*. The password of the **admin** user does not propagate to Core services.

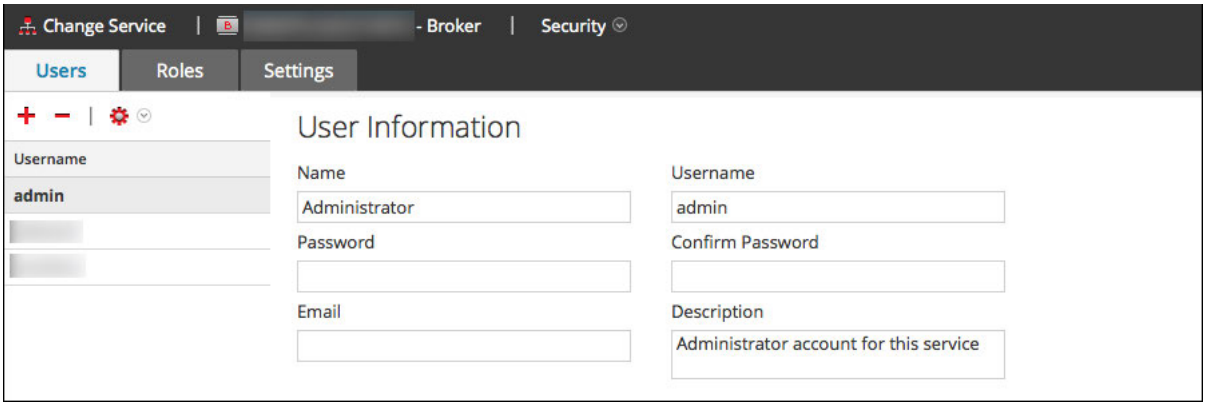
Note: After you change the admin password, you must remove and re-add a Data Source on the Reporting Engine. For more information, see the **Remove and re-add a Data Source on the Reporting Engine** section below.

Change the admin Password for Core Services

To change the admin password for a Core service:

1. In NetWitness Suite, go to **ADMIN > Services.**
2. Select a service, and then select **> View > Security**.

3. On the **Users** tab, select the **admin** user.



4. In the **Password** field, type a new admin password for the selected service.
5. In the **Confirm Password** field, retype the new password.
6. Click **Apply**.

Note: After you change the admin password, you must remove and re-add a Data Source on the Reporting Engine. For more information, see **Remove and re-add a Data Source on the Reporting Engine** below.

Remove and re-add a Data Source on the Reporting Engine

Reporting Engine validates a Data Source using the Data Source username and password. If you change the username or password of a Data Source, you must remove and re-add the Data Source.

To remove and re-add a data source on the Reporting Engine:

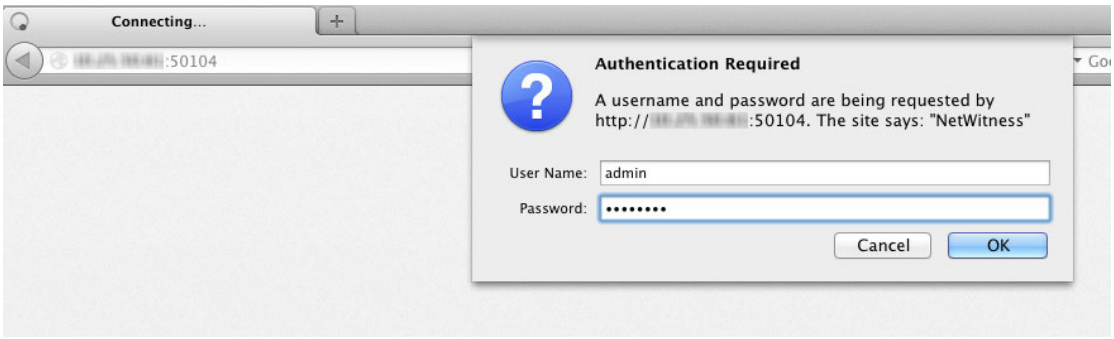
1. In NetWitness Suite, go to **ADMIN > Services**.
2. In the Services view, select Reporting Engine and **View > Config**.
3. Click the **Sources** tab.
4. Select a service to remove and click −
5. Click + and select **Available Services.**
6. Select the service you removed in step 4 and click **OK**.
7. When prompted, enter the new username and password for the service.

Change the admin Password for a Service Using the REST API

In rare circumstances, you may need to change the admin password for a Core service outside of the NetWitness Suite user interface. This is simply another way to perform the Core service password change, and is not the preferred method.

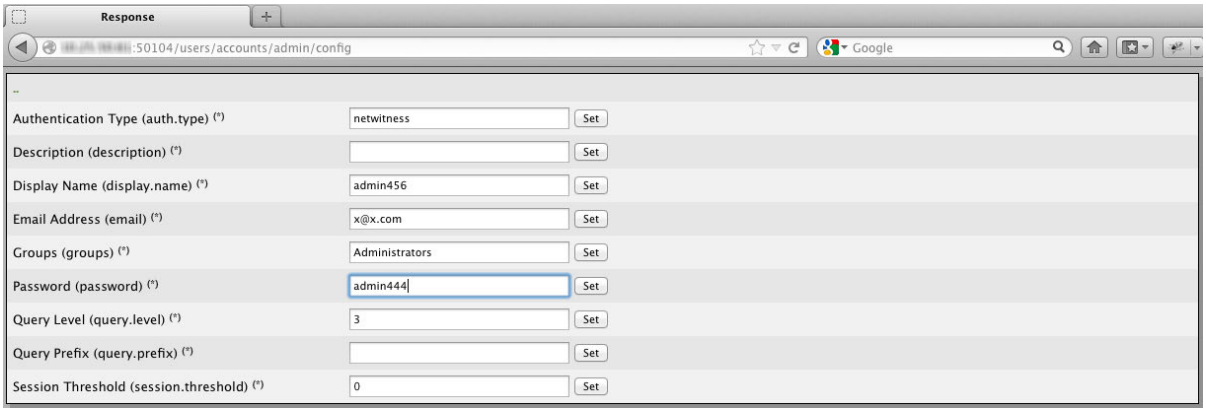
To change the admin password for the service using the REST User Interface:

1. Open a web browser, and go to the following URL:
   <hostname>:<port>
   where the **hostname** is the name of a NetWitness Suite Core service and **port** is the port used for REST communication. Here is an example for a Decoder:
   `http://10.20.30.40:50104`
   The authentication dialog is displayed.



2. In the dialog enter the user name and password used for authentication as admin on the service, and click **OK**. The default user name is **admin** and the default password is **netwitness**.
   The REST window for the service is displayed.

3. Navigate through the node structure to **users/accounts/admin/config**.
   The user configuration fields for admin are displayed in the browser window.



4. In the Password field, type a new admin password and click **Set**.

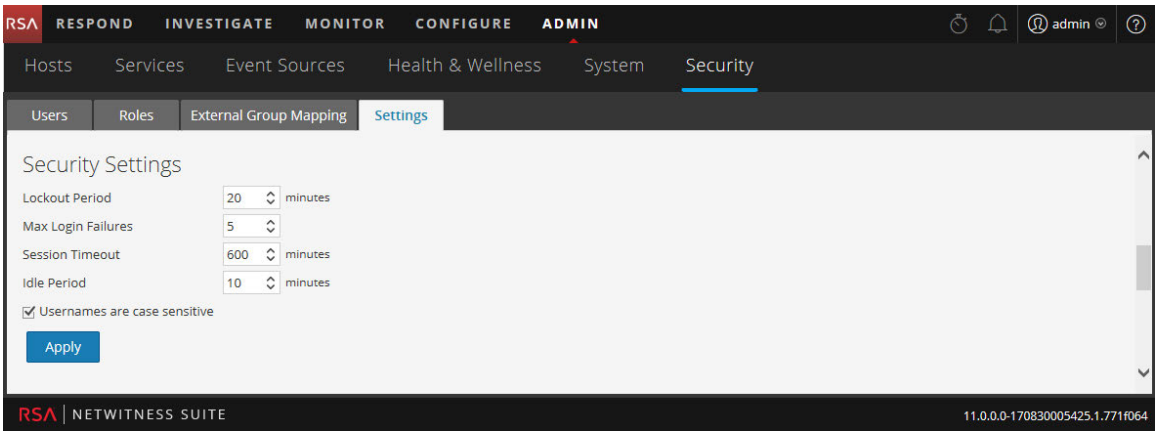
Step 3. Configure System-Level Security Settings

This topic explains how to set system-wide security parameters.

Most global security settings, such as the maximum number of failed login attempts to allow, apply to all NetWitness Suite users and sessions. Settings related to passwords in the Password Strength section, such as password expiration period and the default number of days before user passwords expire, apply to internal NetWitness Suite users, but not external users.

Configure Security Settings

1. In NetWitness Suite, go to **ADMIN > Security**.
   The Security view is displayed with the **Users** tab open.
2. Click the **Settings** tab.



3. In the **Security Settings** section, specify values for the fields as described in the following table.

Field	Description
Lockout Period	Number of minutes to lock a user out of NetWitness Suite after the configured number of failed logins is exceeded. The default value is 20 minutes.
Max Login Failures	The maximum number of unsuccessful login attempts before a user is locked out. The default value is 5.

Field	Description
Session Timeout	The maximum duration of a user session before timing out in minutes. The default value is 600. The session times out when the configured time has elapsed, after which the user must log in again. The maximum allowed value is 30,000. **Note:** If you migrated to NetWitness Suite 11.0 from version 10.6.x and previously used a value of 0 for an unlimited session timeout, the value was reset automatically to 30,000 minutes, as a value of 0 is no longer supported.
Idle Period	Number of minutes of inactivity before a session times out. The default value is 10. The maximum allowed value is 30,000. **Note:** If you migrated to NetWitness Suite 11.0 from version 10.6.x and previously used a value of 0 for an unlimited idle period, the value was reset automatically to the default value of 10, as a value of 0 is no longer supported.
Usernames are case sensitive	Select this option if you want the Username field on the NetWitness Suite login screen to be case sensitive. For example, if usernames are case sensitive, you could use admin to log on to NetWitness Suite, but you could not use Admin.

4. Click **Apply**. The Security Settings take effect immediately. If a password expires, the user receives a prompt to change the password when they log on to NetWitness Suite.

Step 4. (Optional) Configure External Authentication

This topic introduces the external authentication methods that NetWitness Suite supports.

When a user logs in, NetWitness Suite first attempts to authenticate locally. If no local user is found, and External Authentication configuration is enabled, an attempt is made to authenticate externally.

External authentication allows users who do not have an internal NetWitness Suite user account to log on to NetWitness Suite and receive role-based permissions.

NetWitness Suite supports two methods of external authentication, Active Directory and Pluggable Authentication Modules (PAM). Topics in this section describe how to configure and test each method.

Topics

- Configure Active Directory
- Configure PAM Login Capability

Configure Active Directory

This topic explains how to configure NetWitness Suite to use Active Directory to authenticate external user logins.

When a user logs in, NetWitness Suite first attempts to authenticate locally. If no local user is found, and Active Directory configuration is enabled, an attempt is made to authenticate with Active Directory Service. You can configure Active Directory settings to enable authentication of external groups in the Admin > Security view > Settings tab.

In an environment with multiple authentication servers, LDAP forwarding allows LDAP referral following for AD group lookups. LDAP forwarding can increase the time required to log on because AD group lookups are extended to connected authentication servers. When your AD instance attempts to contact domain controllers that are blocked by your firewall, users can experience a delay of several minutes in logging on to NetWitness Suite. NetWitness Suite has a configuration option that specifies whether LDAP forwarding occurs; by default, LDAP referrals are disabled. When disabled, your AD instance does not attempt to contact referred domain controllers.

Note: The Settings tab also provides the option to enable PAM configuration, which can be used simultaneously with Active Directory configurations. For information on enabling and configuring PAM authentication, see Configure PAM Login Capability.

Procedures

Configure Active Directory Authentication

1. Go to **ADMIN > Security**.
   The Security view is displayed with the **Users** tab open.
2. Click the **Settings** tab.
   The Active Directory Configurations list is displayed in the panel so that you can add or edit

a configuration.

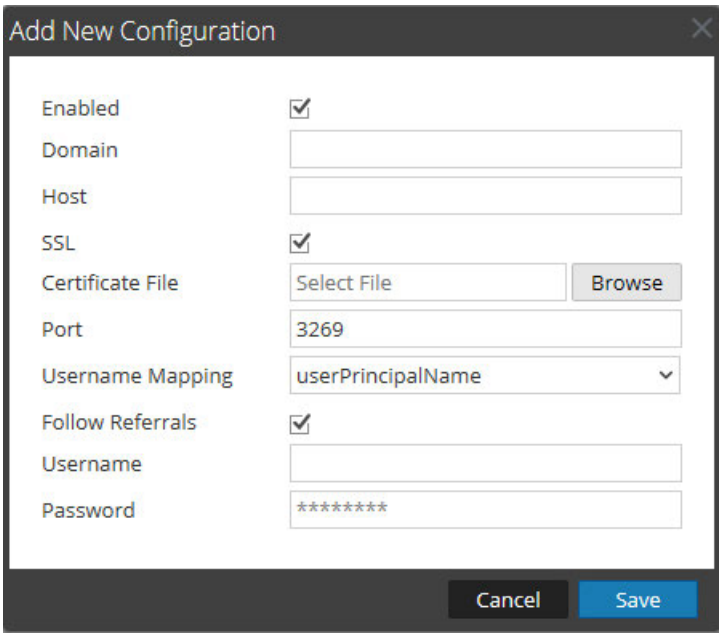
3. Add, edit, or delete domains as necessary, as described in the following sections.
   The domains added to this list are automatically populated in the External Group Mapping tab so that you can map security roles to each group.

Note: To configure security roles used for Active Directory access, see Step 5. (Optional) Map User Roles to External Groups.

Add a New Active Directory Configuration

To add a new active directory configuration in the Active Directory Configurations list:

1. Under Active Directory Configurations, click +.
   The Add New Configuration dialog is displayed.



2. Click the **Enabled** checkbox.
3. Enter **Domain**, **Host** and **Port** information for the Active Directory Service.
4. (Optional) To select SSL for this configuration, check the **SSL** checkbox. You must then enter the Active Directory server certificate file by clicking **Browse** and selecting the desired file to upload.
5. In the **Username Mapping** field, select the Active Directory search field to use for username mapping. You can select userPrincipalName (UPN) or sAMAccountName.
6. For sites that have multiple authentication servers, click **Follow Referrals** to enable or disable LDAP referral following for AD group lookups.
7. To provide credentials to bind to the Active Directory Service while searching Active Directory group, enter the credentials in the **Username** and **Password** fields.

Note: If you selected sAMAccountName in the **Username Mapping** field, you must enter the username in the format "domain\user" to authenticate.

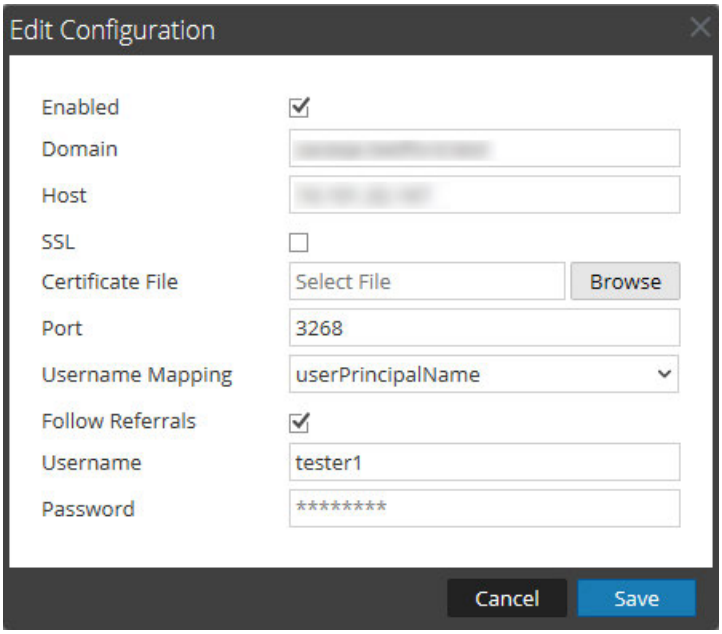
8. Click **Save**.
   The new configuration is listed in the Active Directory Configurations list.

Edit an Active Directory Configuration

To edit an active directory configuration in the Active Directory Configurations list:

1. Under **Active Directory Configurations**, select the configuration you wish to edit and click .

The Edit Configuration dialog is displayed.



2. (Optional) Enter the **Domain**, **Host** and **Port** information for the Active Directory Service.
3. (Optional) To select SSL for this configuration, check the **SSL** checkbox. You must then enter the Active Directory server certificate file by clicking **Browse** and selecting the desired file to upload.
4. (Optional) In the **Username Mapping** field, select the the Active Directory search field to use for username mapping.
5. To specify the Follow LDAP referrals behavior in environments with multiple authentication servers, click the **Follow Referrals** checkbox.
   a. If you want to disable LDAP forwarding, uncheck the box.
   b. If you want to enable LDAP forwarding, check the box.
6. To provide credentials to bind to the Active Directory Service while searching Active Directory group, enter the credentials in the **Username** and **Password** fields.
7. Click **Save**.
   The configuration is listed in the Active Directory Configurations list.

Test an Active Directory Configuration

To test an active directory configuration:

1. Select the configuration to be tested from the Active Directory Configurations list.
2. In the toolbar, click Test.
   A message that the test is successful is displayed.
3. If the test does not succeed, review and edit the configuration.

Delete an Active Directory Configuration

To delete an active directory configuration:

1. Under Active Directory Configurations, select the configuration to be deleted from the Active Directory Configurations list.
2. In the toolbar, click −.
   A message is displayed warning you that all users in the selected Active Directory configuration will not be able to log in to NetWitness Suite if it is deleted.
3. Do one of the following:
   a. To confirm the deletion, click **Yes**.
   b. To cancel the deletion, click **No**.

Configure PAM Login Capability

This topic explains how to configure NetWitness Suite to use Pluggable Authentication Modules (PAM) to authenticate external user logins.

PAM login capability involves two separate components:

- PAM for user authentication
- NSS for group authorization

Together they provide external users the capability to log on to NetWitness Suite without having an internal NetWitness Suite account, and to receive permissions or roles determined by mapping the external group to a NetWitness Suite security role. Both components are required for a login to succeed.

External authentication is a system-level setting. Before configuring PAM, carefully review all of the information here.

Pluggable Authentication Modules

PAM is a Linux-provided library responsible for authenticating users against authentication providers such as RADIUS, Kerberos, or LDAP. For implementation, each authentication provider uses its own module, which is in the form of an operating system (OS) package such as pam_ldap. NetWitness Suite uses the OS-provided PAM library, and the module that the PAM library is configured to use, to authenticate users.

Note: The PAM provides only the ability to authenticate.

Name Service Switch

NSS is a Linux feature that provides databases that the OS and applications use to discover information like hostnames; user attributes like home directory, primary group, and login shell; and to list users that belong to a given group. Similar to PAM, NSS is configurable and uses modules to interact with different types of providers. NetWitness Suite uses OS-provided NSS capabilities to authorize external PAM users by looking up whether a user is known to NSS and then requesting from NSS the groups of which that user is a member. NetWitness Suite compares the results of the request to the NetWitness Suite External Group Mapping and if a matching group is found, the user is granted access to log on to NW with the level of security defined in the External Group Mapping.

Note: NSS does not provide authentication.

PAM and NSS Combination

Both PAM (authentication) and NSS (authorization) must succeed in order for an external user to be allowed to log on to NetWitness Suite. The procedure for configuring and troubleshooting PAM is different than the procedure for configuring and troubleshooting NSS. The PAM examples in this guide include Kerberos, LDAP, and Radius. The NSS examples include LDAP and UNIX. The PAM and NSS module combination used is determined by site needs.

Process Overview

To configure PAM login capability, follow the instructions in this document to complete each step:

1. Configure and test the PAM module.
2. Configure and test the NSS service.
3. Enable PAM in NetWitness Server.
4. Create group mappings in NetWitness Server.

Prerequisites

Before beginning the setup of PAM, review the procedure and gather the external authentication server details depending on the PAM module you want to implement.

Before beginning the setup of NSS, review the procedure, identify the group names that you will use in the External Group mapping, and gather the external authentication server details, depending on the NSS service being used.

Before beginning setup of PAM in NetWitness Suite, identify the group names that you will use in the External Group mapping. When mapping roles, the role in NetWitness Suite must match a group name that exists in the external authentication server.

Configure and Test the PAM Module

Choose one of the following sections to set up and configure the PAM component:

- PAM Kerberos
- PAM LDAP
- PAM RADIUS
- SecurID

PAM Kerberos

Kerberos Communication Ports – TCP 88

To configure PAM authentication using Kerberos:

1. Execute the following command (but first verify that the `krb5-workstation` package is installed in your environment):
   `yum install krb5-workstation pam_krb5`
2. Edit the following lines in the Kerberos configuration file `/etc/krb5.conf`. Replace variables, which are delimited by <angle brackets>, with your values and omitting the angle brackets. Capitalization is required where shown.

```
# Configuration snippets may be placed in this directory as well
includedir /etc/krb5.conf.d/

[logging]
default = FILE:/var/log/krb5libs.log
kdc = FILE:/var/log/krb5kdc.log
admin_server = FILE:/var/log/kadmind.log

[libdefaults]
 dns_lookup_realm = false
 ticket_lifetime = 24h
 dns_lookup_kdc = true
 renew_lifetime = 7d
 forwardable = true
 rdns = false
 default_realm = <DOMAIN.COM>
 default_ccache_name = KEYRING:persistent:%{uid}

[realms]
 <DOMAIN.COM> = {
 kdc = <SERVER.DOMAIN.COM>
 admin_server = <SERVER.DOMAIN.COM>
 }

 [domain_realm]
 <domain.com> = <DOMAIN.COM>
 <.domain.com> = <DOMAIN.COM>
```

3. Test the Kerberos configuration with the command:
   `kinit <user>@<DOMAIN.COM>`
   No output after entering the password indicates success.

4. Edit the NetWitness Server PAM configuration file `/etc/pam.d/securityanalytics` to add the following line. If the file does not exist, create it and add the following line:
   `auth sufficient pam_krb5.so no_user_check`

This completes the configuration for PAM Kerberos. Now, proceed to the next section, *Configure and Test the NSS Service*.

PAM LDAP

LDAP Communication Ports - TCP 389 or TCP 636

TCP 389 can be used for both unencrypted and in most cases encrypted traffic and is usually sufficient. Most modern LDAP implementations support the `start_tls` command once connected to port 389, which upgrades the connection from an unencrypted to an encrypted state. In this instance, LDAP URIs still begin with `ldap://` even when using `start_tls`.

TCP 636 is used only in instances where the LDAP server does not support the `start_tls` command. In this case, LDAP URIs begin with `ldaps://` and the `start_tls` command is not used.

Note: The PAM LDAP example in this guide has been tested with OpenLDAP server. User should refer to other documentation also if a different directory server is used.

To configure PAM authentication using LDAP:

1. Execute the following command (but first verify that the `openldap-clients` package is installed in your environment):
   `yum install nss-pam-ldapd openldap-clients`
2. Edit the LDAP configuration file `/etc/nslcd.conf` as shown in the following example:

Note: Replace variables, which are delimited by <angle brackets>, with your values and omit the angle brackets. Capitalization is required where shown.

Sample `/etc/nslcd.conf` file entries:

```
uri ldap://<server.domain.com>
 base <dc=domain,dc=com>
 binddn <cn=bineuser,dc=domain,dc=com>
 bindpw <secret>
```

3. After modifying the `/etc/nslcd.conf` file, run the following command:
   `systemctl restart nslcd`
4. (Optional) To enable secure transport for LDAP communication with peer certificate verification (more secure), refer to Linux man page for nslcd for the correct code modification for the `/etc/nslcd.conf` file.

5. (Optional) To enable secure transport for LDAP communication without peer certificate, refer to Linux man page for nslcd for the correct code modification for the `/etc/nslcd.conf` file.
6. To troubleshoot the LDAP configuration, first stop the `nslcd` service by entering the following command:
   ```
   systemctl stop nlscd
   ```
7. To output troubleshooting and status information from the service to the console, run the `nslcd` service in debug mode from the command line:
   ```
   nslcd -d
   ```
8. Edit the NetWitness Server PAM configuration file `/etc/pam.d/securityanalytics` to add the following line. If the file does not exist, create it and add the following line:
   ```
   auth sufficient pam_ldap.so
   ```

This completes the configuration for PAM LDAP. Now, proceed to the next section, *Configure and Test the NSS Service*.

PAM RADIUS

Radius Communication Ports - UDP 1812 or UDP 1813

To configure PAM authentication using Radius you must add the NetWitness Server to your Radius Server's Client list and configure a shared secret. Contact the Radius Server Administrator for this procedure.

To configure PAM authentication using RADIUS:

1. Execute the following command (but first verify that the `pam_radius_auth` package is installed in your environment):
   ```
   yum install pam_radius_auth
   ```
2. Edit the RADIUS configuration file, `/etc/raddb/server` as follows:
   ```
   # server[:port] shared_secret  timeout (s)
   server    secret     3
   ```
3. Edit the NetWitness Server PAM configuration file `/etc/pam.d/securityanalytics` to add the following line. If the file does not exist, create it and add the following line:
   ```
   auth sufficient pam_radius_auth.so
   ```
4. Execute the following command to copy the RADIUS library:
   ```
   cp /usr/lib/security/pam_radius_auth.so /usr/lib64/security/
   ```

Caution: For PAM RADIUS to work, the `/etc/raddb/server` files must have write permission. The command needed for this is: `chown netwitness:netwitness /etc/raddb/server`.

Caution: You must restart the Jetty server after making the above changes for PAM RADIUS.

The PAM Modules and associated services output information to `/var/log/messages` and `/var/log/secure`. These outputs can be used to assist in troubleshooting configuration problems.

The following procedure is an example of the steps to configure PAM authentication for RADIUS using SecurID:

Note: The examples in these tasks use RSA Authentication Manager as the RADIUS server.

1. Execute the following command (but first verify that the `pam_radius_auth` package is installed in your environment):

   ```
   yum install pam_radius_auth
   ```

2. Edit the RADIUS configuration file, `/etc/raddb/server` and update it with the authentication manager instance hostname, shared secret and timeout value:

   ```
   # server[:port] shared_secret timeout (s)

    111.222.33.44         secret       1

    #other-server        other-secret 3

    192.168.12.200:6369 securid      10
   ```

   Note: You must comment out `127.0.0.1` and `other-server` lines and add the IP address of the authentication manager primary instance with RADIUS port number (for example, `192.168.12.200:1812`), RADIUS shared secret, and a timeout value of 10.

3. Edit the NetWitness Server PAM configuration file `/etc/pam.d/securityanalytics` to add the following line. If the file does not exist, create it and add the following line:

   ```
   auth sufficient pam_radius_auth.so
   ```

   Note: You can add `debug` to the end of the above line in the `/etc/pam.d/securityanalytics` file to enables PAM debugging (for example, `auth sufficient pam_radius_auth.so debug`)

4. Execute the following command to copy the RADIUS library:

   ```
   cp /usr/lib/security/pam_radius_auth.so /usr/lib64/security/
   ```

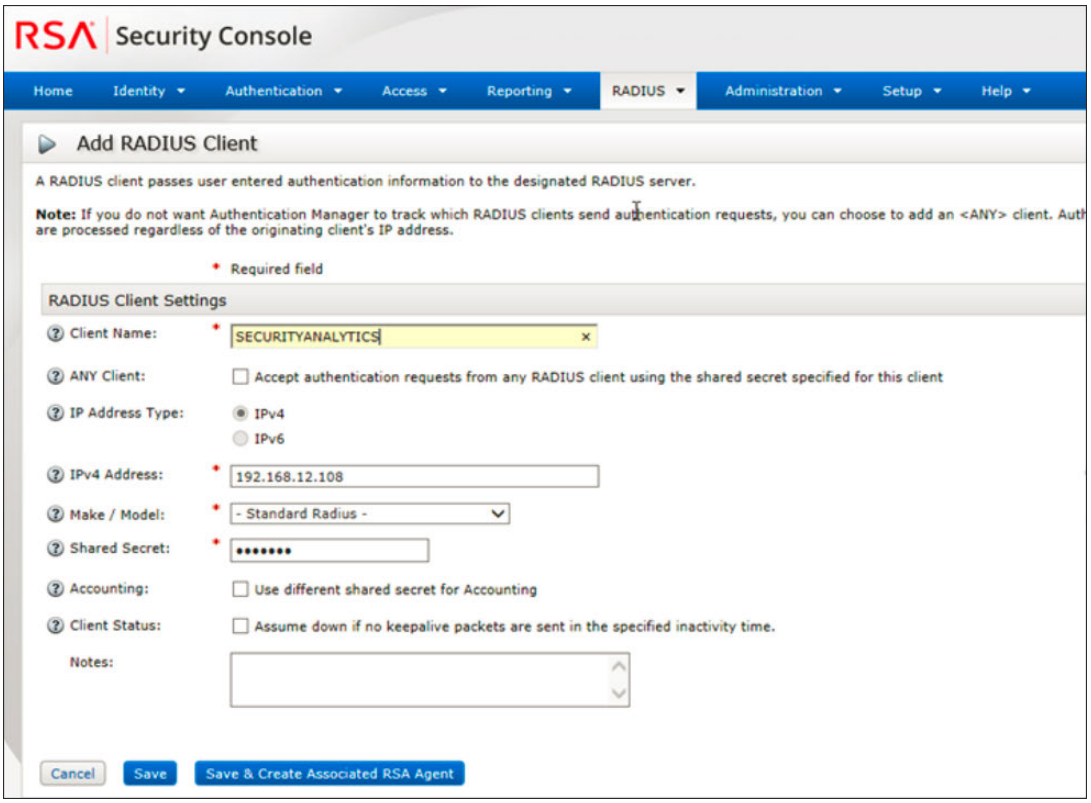
The PAM Modules and associated services output information to `/var/log/messages` and `/var/log/secure`.These outputs can be used to assist in troubleshooting configuration problems.

Add a RADIUS Client and Associated Agent

Note: The examples in these tasks use RSA Authentication Manager as the RADIUS server. You must use administrative account credentials to log on RSA Authentication Manager Security Console.

To add a RADIUS Client and Associated Agent:

1. Log on to RSA Authentication Manager.
   The Security Console is displayed.
2. In the Security Console, Click **RADIUS > RADIUS Client > Add New**.
   The Add RADIUS Client page is displayed.

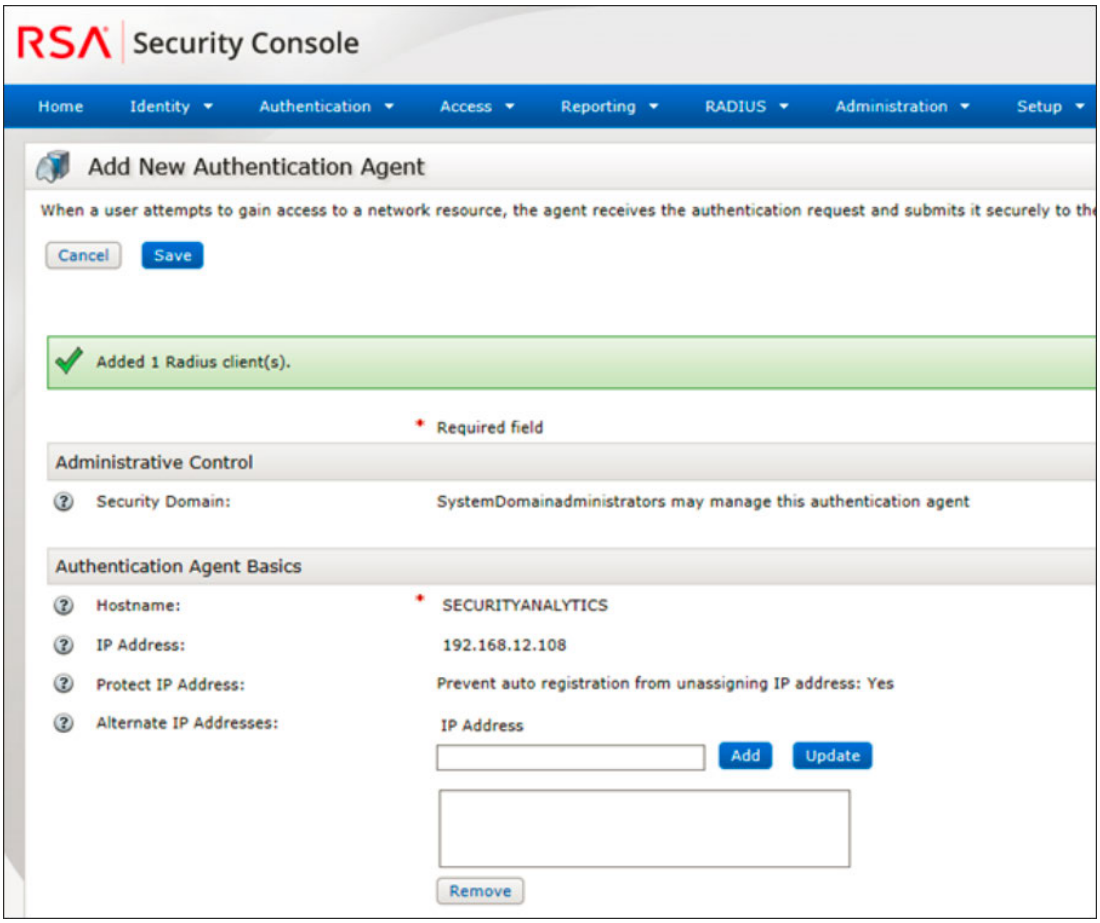


3. In RADIUS Client Settings, provide the following information:
   a. In the **Client Name** field, enter the name of the client, for example, NetWitness Suite.
   b. In the **IPv4 Address** field, enter the IPv4 address of the RADIUS client, for example, 192.168.12.108.

c. In the **Make/Model** drop-down list, select the type of RADIUS client, for example, Fortinet.

d. In the **Shared Secret** field, enter the authentication shared secret.

4. Click **Save & Create Associated RSA Agent**.



5. Click **Save**.

If Authentication Manager Instance is unable to find the authentication agent on the network, A warning page is displayed. Click **Yes, Save Agent**.

For more information, see Add a RADIUS Client topic in *RSA Authentication Manager 8.2 Administrator's Guide*.

This completes the configuration for PAM RADIUS. Now, proceed to the next section, *Configure and Test the NSS Service*.

PAM Agent for SecurID

PAM Communication Port - UDP 5500

Prerequisites

The RSA SecurID PAM module is supported only under the following conditions:

1. Trusted connections must be enabled and functioning between NetWitness Suite and Core services.

Process Overview

The high-level steps to configure the SecurID PAM module are:

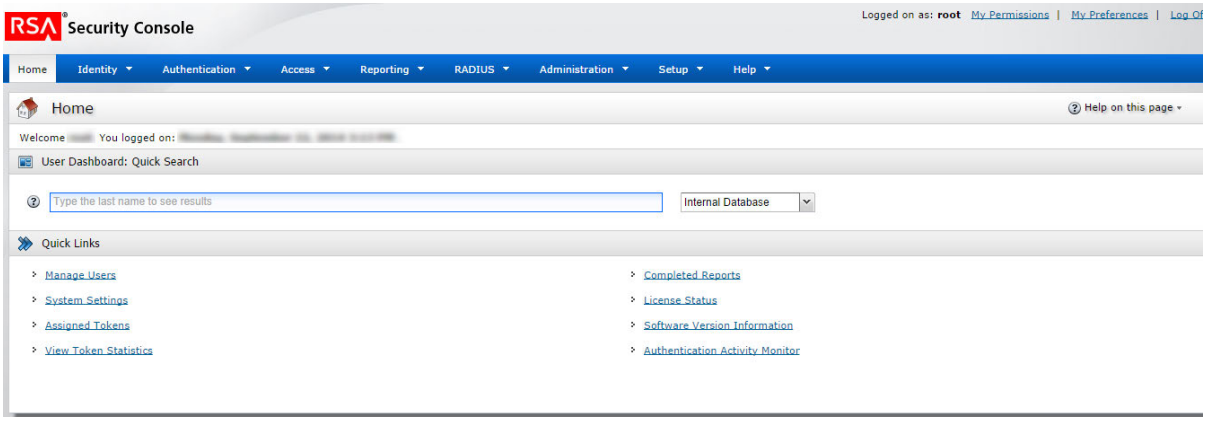
1. Configure **Authentication Manager**:
   a. Add Authentication Agent.
   b. Download configuration file.
2. Configure **NetWitness Server**:
   a. Copy configuration file from Authentication Manager and customize it.
   b. Install the PAM SecurID Module.
3. Test connectivity and authentication.

Then follow the remaining procedures in the sections that follow:

- Configure NSS.
- Enable PAM in NetWitness Server.
- Configure group mappings in NetWitness Server.

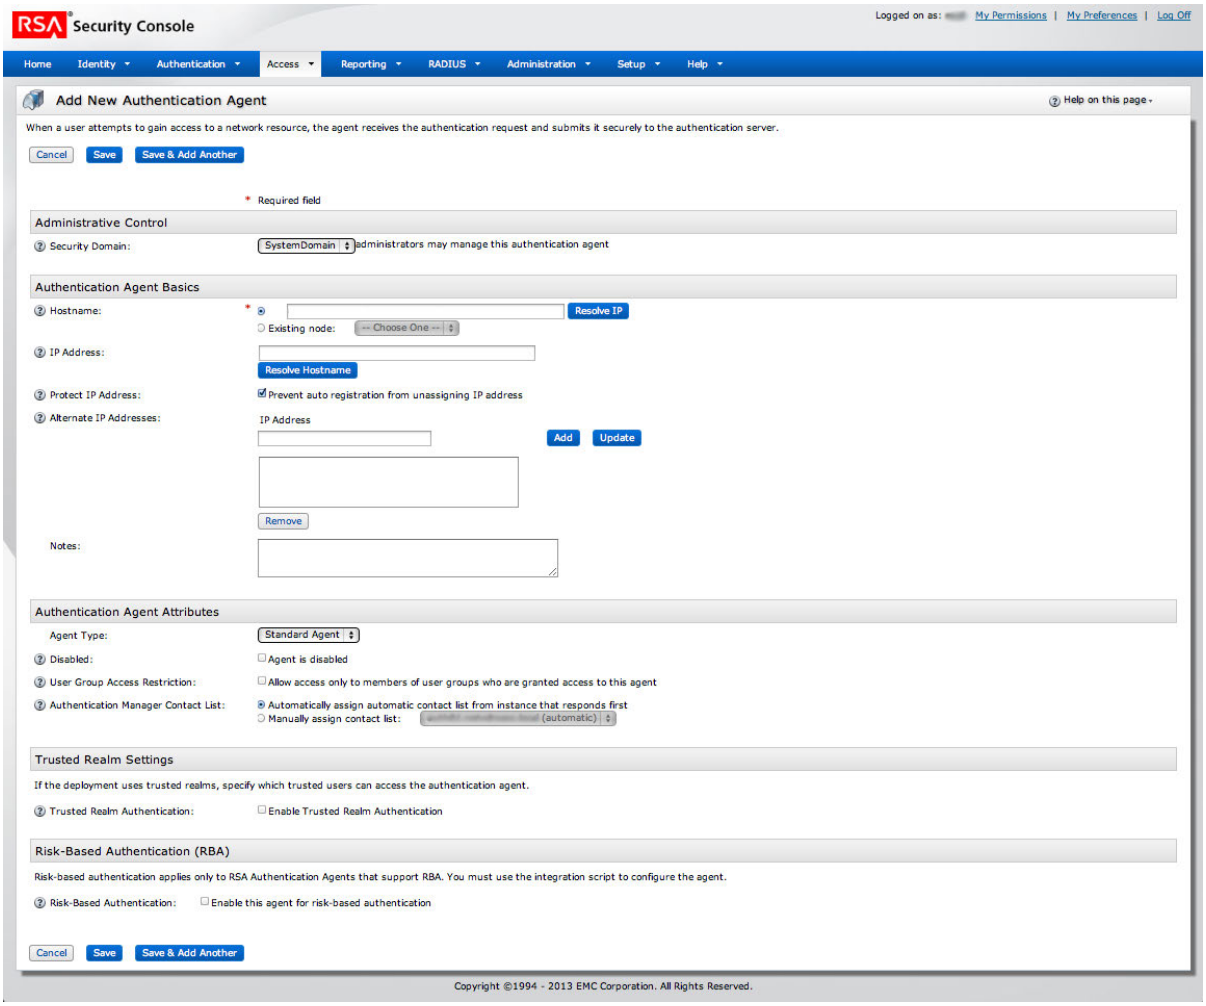
To configure Authentication Manager:

1. Log on to RSA Authentication Manager.
   The Security Console is displayed.

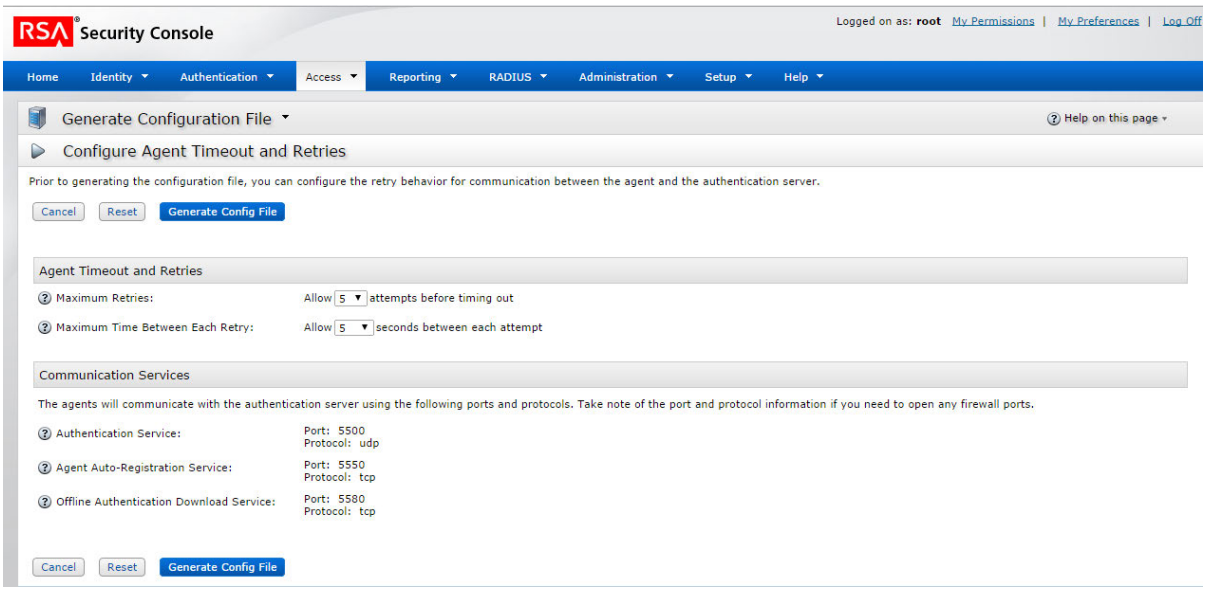


2. In the Security Console, add a new authentication agent.
   Click **Access > Authentication Agents > Add New.**

The Add New Authentication Agent page is displayed.



3. In the **Hostname** field, type the hostname of the NetWitness Server.
4. Click **Resolve IP**.
   The IP address of the NetWitness Server is automatically displayed in the **IP Address** field.
5. Keep the default settings and click **Save**.
6. Generate a configuration file.
   Go to **Access > Authentication Agents > Generate Configuration File**.
   The Generate Configuration File page is displayed.



7. Keep the defaults and click **Generate Config File**.
   This creates **AM_Config.zip**, which contains two files.
8. Click **Download Now**.

To install and configure the PAM SecurID module:

1. On the NetWitness Server, make a directory:
   `mkdir /var/ace`
2. On the NetWitness Server, copy `sdconf.rec` from the .zip file to `/var/ace`.
3. Create a text file `sdopts.rec` in the `/var/ace` directory.
4. Insert the following line:
   `CLIENT_IP=<IP address of NetWitness Server>`
5. Install the SecurID Authorization Agent for PAM, which is available in the yum repository:
   `yum install sid-pam-installer`
6. Run the install script:
   `/opt/rsa/pam-agent-installer/install_pam.sh`
7. Follow the prompts to accept or change the defaults.
8. Edit the NetWitness Server PAM configuration file, `/etc/pam.d/securityanalytics` to add the following line. If the file does not exist, create it and add the following line:
   `auth sufficient pam_securid.so`

This completes the installation of the SecurID PAM module. Next, test the connectivity and authentication. Then, follow the procedures in Configure and Test the NSS Service.

Note: If the PAM SecurID setup is not complete, it may crash the Jetty server and the NetWitness Suite UI will not be displayed. You must wait until the PAM authentication configuration is complete and then restart the Jetty server.

To test connectivity and authentication:

1. Run `/opt/pam/bin/64bit/acetest`, enter **username** and **passcode**.
2. (Optional) If acetest fails, turn on debugging:
   `vi/etc/sd_pam.conf`
   `RSATRACELEVEL=15`
3. Run `/opt/pam/bin/64bit/acestatus`. Output below

```
RSA ACE/Server Limits
 ---------------------
 Configuration Version : 15 Client Retries : 5
 Client Timeout : 5 DES Enabled : Yes

RSA ACE/Static Information
 -------------------------
 Service : securid Protocol : udp Port Number : 5500

RSA ACE/Dynamic Information
 --------------------------
 Server Release : 8.1.0.0 Communication : 5

RSA ACE/Server List
 ------------------
 Server Name :  auth81.netwitness.local
 Server Address :  192.168.100.10
 Server Active Address : 192.168.100.10
 Master : Yes Slave : No Primary : Yes
 Usage : Available for Authentications
```

4. (Optional) To troubleshoot the Authentication Manager server, go to **Reporting > Real-time Activity Monitors > Authentication Activity Monitor.** Then click **Start Monitor**.
5. If you changed the setting, reset RSATRACELEVEL to 0:
   `vi/etc/sd_pam.conf`
   `RSATRACELEVEL=0`

Caution: After installation, verify that VAR_ACE in the `/etc/sd_pam.conf` file points to the correct location of the sdconf.rec file. This is the path to the configuration files. The command needed for this is: `chown -R netwitness:netwitness /var/ace`.

This completes the configuration for PAM Agent for SecurID. Now, proceed to the next section, *Configure and Test the NSS Service*.

Configure and Test the NSS Service

Choose an NSS Service

There are two NSS service options: LDAP and UNIX. There are advantages and disadvantages to each option.

NSS LDAP Pros	NSS LDAP Cons
Basic configuration is simpler	May require additional configuration and roles inside of Active Directory
Can communicate with any LDAP implementation	Requires configuration of an LDAP bind account
Uses a single TCP port for communication - easier to work with firewalls and proxies	More difficult to enable secure transport unless configured to not validate server certificates
Does not require joining NW host to AD domain	

NSS UNIX

No configuration is necessary to enable the NSS UNIX module; it is enabled in the host operating system by default. To authorize a user for a specific group, simply add that user to the operating system and add them to a group:

1. Create an OS group to use add your external user to with this command:
   `groupadd <groupname>`
2. Add the external user to the OS with this command:
   `adduser -G <groupname> -M -N <externalusername>`

Note: Note that this does NOT permit or allow access to the NW Server console.

This completes the configuration for NSS UNIX. Next, go to Test NSS Functionality.

NSS LDAP

An LDAP bind user must be created in directory server in order for NSS to be used. This user should be configured to not have its password expire. Because these credentials must be specified to the NSS LDAP service in plaintext, the permissions of `/etc/nslcd.conf` should be left at their default of 600 so the file cannot be read by system users other than root.

LDAP Communication Ports - TCP 389 or TCP 636

TCP 389 can be used for both unencrypted and in most cases encrypted traffic and is usually sufficient. Most modern LDAP implementations support the `start_tls` command once connected to port 389, which upgrades the connection from an unencrypted to an encrypted state. In this instance, LDAP URIs still begin with `ldap://` even when using `start_tls`.

TCP 636 is only used in instances where the LDAP server does not support the `start_tls` command. In this instance, LDAP URIs begin with `ldaps://` and the `start_tls` command is not used.

To configure the NSS module for LDAP:

1. Execute the following command (but first verify that the `nss-pam-ldapd` package is installed in your environment):
   ```
   yum install nss-pam-ldapd
   ```
2. Edit `/etc/nslcd.conf` to include the lines below, ensuring that all existing lines in the file are first commented out using a hash mark # at the beginning of the line:
   ```
   uid nslcd
   gid ldap
   uri ldap://<server.domain.com>
   base <dc=domain,dc=com>
   binddn <cn=binduser,dc=domain,dc=com
   bindpw <secret>
   ```
   Note: You will need to add additional mappings between NSS lookups and LDAP lookups for your specific environment. Please refer to Linux man page for nslcd for specific details.
3. (Optional) To enable secure transport for LDAP communication with peer certificate verification (more secure), refer to Linux man page for nslcd for the correct code modification for the `/etc/nslcd.conf` file.
4. (Optional) To enable secure transport for LDAP communication without peer certificate, refer to Linux man page for nslcd for the correct code modification for the `/etc/nslcd.conf` file.
5. Edit the NSS configuration file `/etc/nsswitch.conf`. Update only the below two entries and leave the rest at their default values:

```
passwd:files ldap
group:files ldap
```

6. To enable and start the NSLCD service, enter these commands:
   ```
   systemctl enable nslcd
   systemctl start nslcd
   ```
7. Test NSS functionality using guidance in the *Test NSS Functionality* section. If NSS tests fail, troubleshoot NSS LDAP as described in *Troubleshoot NSS LDAP*.
8. When you have confirmed that NSS is working properly from the command line, reboot the host for the NSS changes to take effect.
   ```
   reboot
   ```

To troubleshoot NSS LDAP:

1. To troubleshoot NSS LDAP, first stop the nslcd service by entering the following command:
   ```
   systemctl stop nslcd
   ```
2. To output troubleshooting and status information from the service to the console, run the nslcd service in debug mode from the command line.
   ```
   nslcd -d
   ```
3. (Optional) To increase debug verbosity, add an additional d multiple times to the end of nslcd -d, for example, enter the following command:
   ```
   nslcd -ddd
   ```
4. From a separate ssh session, use the `getent` commands from the Testing NSS Functionality section of this guide to test NSS. Watch the debug output from nslcd for any indications of where the failure is occurring. Increase nslcd debugging verbosity as needed.
   ```
   getent passwd <pamUser>
   getent group <groupOfPamUser>
   ```
5. Make any necessary adjustments to `/etc/nslcd.conf` based on the output of step 2 or 3.
6. In the nslcd debug window from step 2 or 3, stop `nslcd` with `CTRL-C`. Repeat step 2 or 3 and continue troubleshooting until the `getent` command succeeds.
7. When `getent` succeeds, stop the command line `nslcd` and start the service daemon:
   ```
   systemctl start nslcd
   ```

Common problems may include:

- LDAP secure transport SSL certificate not installed on LDAP/AD server.
- CA certificate verification failed – comment out the `tls_cacert` line in `/etc/nslcd.conf` and instead try `tls_reqcert never`. If it succeeds, you know that certificate verification that is failing.
  - Root CA certificate is not in PEM format.
  - Using issuing CA certificate rather than root CA certificate.
  - LDAP server's SSL certificate name does not match its hostname.
- Incorrect base DN.
- LDAP bind user or password is not specified correctly.
- Incorrectly specifying `ldaps://` instead of `ldap://` in `uri` line of `/etc/nslcd.conf`. `ldaps://` should only be used when using LDAPS but not using the `start_tls` command.
- Active Directory users and groups do not have `uidNumber` or `gidNumber` attributes set.
- Network firewall is blocking communications.
- LDAP server hostname specified cannot be resolved.
  - Incorrect DNS settings in `/etc/resolv.conf`.
  - Bad hostname specified in `uri` line of `/etc/nslcd.conf`.

This completes the configuration for NSS LDAP. Next, go to Test NSS Functionality.

Test NSS Functionality

To test whether NSS is working with any of the previous NSS services, use the following commands:

```
getent passwd <pamUser>
 getent group <groupOfPamUser>
```

Output should be similar to:

```
[root@~]# getent passwd myuser
 myuser:*:10000:10000::/home/myuser:/bin/sh
```

```
[root@~]# getent group mygroup
 mygroup:*:10000:myuser3
```

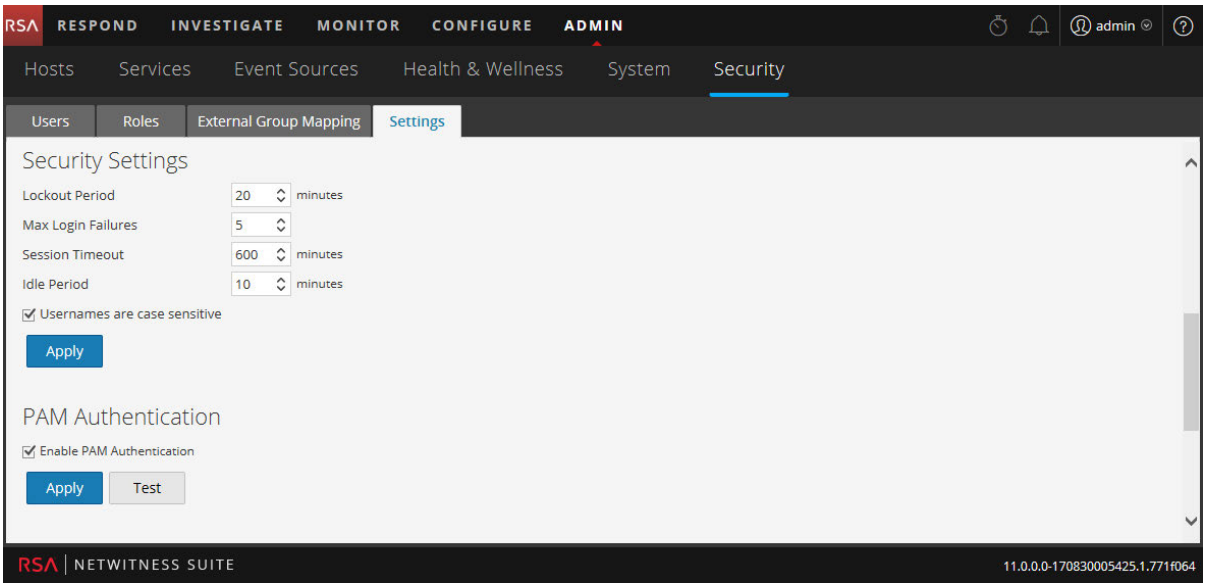
- If neither command produces output, NSS is not working properly for external authorization. Refer to the troubleshooting guidance for your NSS module provided in this document.

- If `getent` commands succeed and authentication success is confirmed in `/var/log/secure` but NetWitness Suite still fails to allow External users to login:
  - Was the correct group name specified for the NSS group in NW External Group Mapping? See Enable PAM and Create Group Mappings below.
  - It is possible that the NSS configuration has changed and NetWitness Suite has not picked up the change. A reboot of the NetWitness Suite host will cause NetWitness Suite to pick up NSS configuration changes. A restart of the Jetty server is not sufficient.

Proceed to the next section, Enable PAM in NetWitness Server.

Enable PAM in NetWitness Server

1. In NetWitness Suite, go to **ADMIN > Security**.
   The Admin > Security view is displayed with the Users tab open.
2. Click the **Settings** tab.
3. Under **PAM Authentication**, select **Enable PAM Authentication** and click **Apply**.

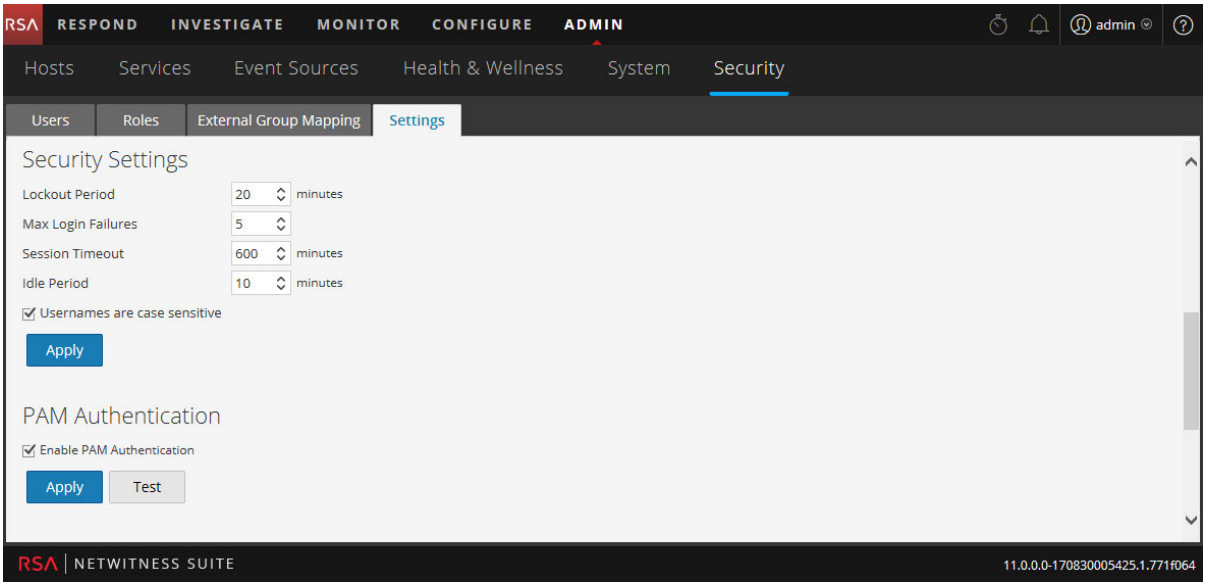


Test PAM Authentication

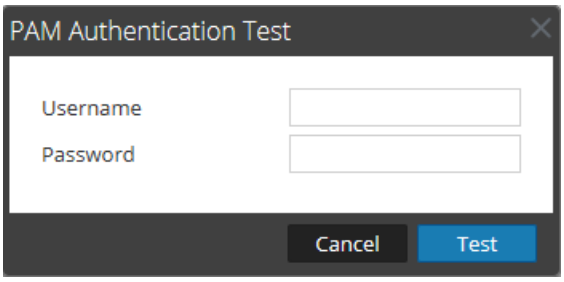
To test external authentication for PAM:

1. Go to **ADMIN > Security**.
   The Security view is displayed with the **Users** tab open.
2. Click the **Settings** tab.

3. Under **PAM Authentication**, select **Enable PAM Authentication**.



4. Under **PAM Authentication** options, click **Test.**
   The **PAM Authentication Test** dialog is displayed.



5. Type a user name and password that you want to test for authentication using the current PAM configuration.
6. Click **Test**.
   The external authentication method is tested to ensure connectivity.
7. If the test does not succeed, review and edit the configuration.

PAM is enabled, and Active Directory configurations will also remain enabled. PAM configurations are automatically populated in the External Group Mapping tab so that you can map security roles to each group. To configure security roles used for PAM access, see Step 5. (Optional) Map User Roles to External Groups.

How Role-Based Access Control Works

This topic explains role-based access control (RBAC) when there is a trusted connection between NetWitness Server and a Core service.

In the RSA NetWitness® Suite, roles determine what users can do. A role has permissions assigned to it and you must assign a role to each user. The user then has permission to do what the role allows.

Pre-Configured Roles

To simplify the process of creating roles and assigning permissions, there are pre-configured roles in NetWitness Suite. You can also add roles customized for your organization.

The following table lists each pre-configured role and the permissions assigned to it. All permissions are assigned to the Administrators role. A subset of permissions is assigned to each of the other roles.

Role	Permission
Administrators	Full system access. The System Administrators persona is granted all permissions by default.
Operators	Access to configurations but not to meta and session content. The System Operators persona is focused on system configuration, but not Investigation, ESA, Alerting, Reporting, and Respond.
Analysts	Access to meta and session content but not to configurations. The Security Operation Center (SOC) Analysts persona is centered around Investigation, ESA Alerting, Reporting, and Respond, but not system configuration.
Respond_ Administrator	Access to all Respond permissions.
SOC_ Managers	Same access as Analysts plus additional permission to handle incidents. The SOC Managers persona is identical to Analysts, but with permissions necessary to configure Respond.

Role	Permission
Malware_ Analysts	Access to investigations and malware events. The only access granted to the Malware Analysts persona is the Malware Analysis module.
Data_Privacy_ Officers	The Data Privacy Officer (DPO) persona is similar to Administrators with additional focus on configuration options that manage obfuscation and viewing of sensitive data within the system (see *Data Privacy Management*). Users with the DPO role can see which meta keys are flagged for obfuscation, and they also see obfuscated meta keys and values created for the flagged meta keys.

Trusted Connections Between Server and Service

In a trusted connection, a service explicitly trusts NetWitness Server to manage and authenticate users. This reduces administration on each service because authenticated users do not have to be defined locally in each Core service.

As the following table shows, you perform all user management tasks on the server.

Task	Location
Add a user	Server
Maintain usernames	Server
Maintain passwords	Server
Authenticate internal NetWitness Suite users	Server
(Optional) Authenticate external users with: - Active Directory - PAM	 Server Server
Install and configure PAM	Server

The benefits of a trusted connection and centralized user management are that:

- You perform all user administration tasks once, on NetWitness Server only.
- You control access to services but do not have to set up and authenticate users on the services.
- Users enter passwords once at NetWitness Suite logon and are authenticated by the server.
- Users, already authenticated by the server, access every Core service in ADMIN > Services without entering a password.

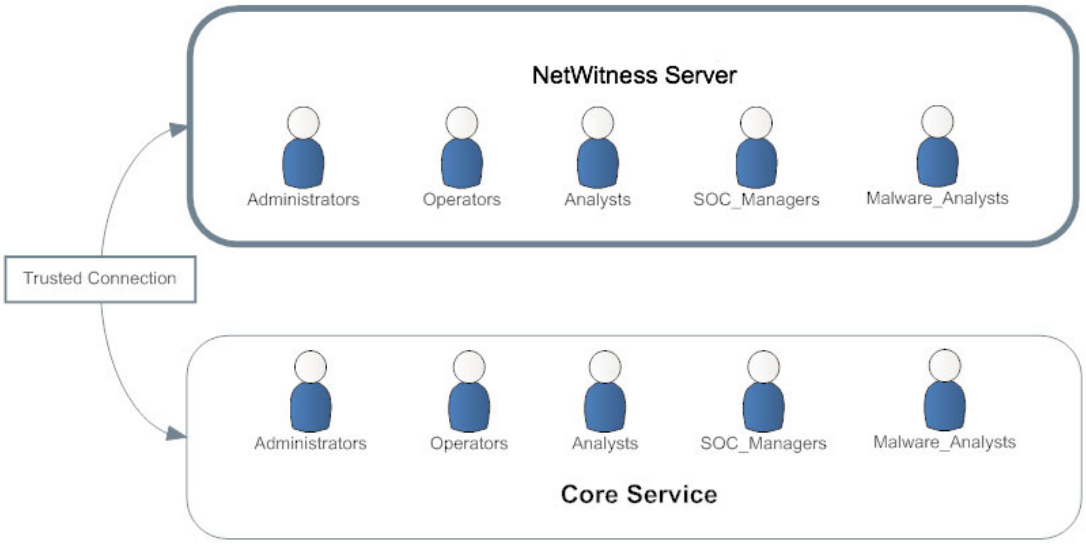
How Trusted Connections Are Established

When you install or upgrade to 11.0, trusted connections are established by default with two settings:

1. SSL is enabled.
2. The Core service is connected to an encrypted SSL port.

Common Role Names on the Server and Services

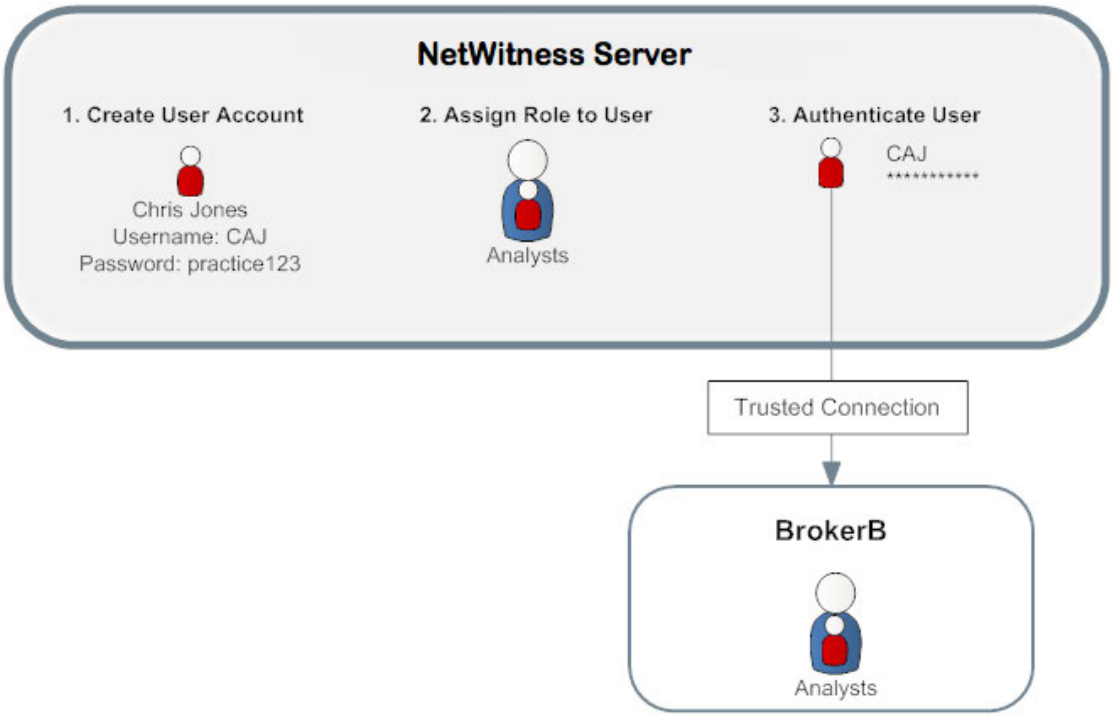
Trusted connections rely on common role names on the server and service. On a fresh installation, NetWitness Suite installs the five pre-configured roles on the server and each Core service.



If you add a custom role, such as JuniorAnalysts, you must add the role to each service, such as ArchiverA and BrokerB. Role names are case-senstive, cannot contain spaces and must be identical. For example, JuniorAnalyst (singular) and JuniorAnalysts (plural) do not meet the requirements for common role names.

End-to-End Workflow for User Setup and Service Access

This workflow shows how role-based access control works when there is a trusted connection between NetWitness Server and the service BrokerB.



1. On NetWitness Server, create an account for a new user:
   Name: Chris Jones
   Username: CAJ
   Password: practice123
2. Determine if you want to assign a pre-configured or custom role to Chris Jones:
   - **Pre-Configured role**
     a. Keep or modify the default permissions assigned to the **Analysts role,** which include permissions such as access to the Alerting, Investigation and Malware modules,
     b. Assign the Analysts role to Chris Jones.
   - **Custom role**
     a. Create the custom role, such as JuniorAnalysts.
     b. Assign permissions to the **JuniorAnalysts role**.

c. Assign the JuniorAnalysts role to Chris Jones.

d. Add the JuniorAnalysts role to the service, such as BrokerB.

3. The user, Chris Jones, logs on to NetWitness Server:
   Username: CAJ
   Password: practice123
4. The server authenticates Chris.
5. The trusted connection allows the authenticated user, Chris, to access BrokerB without entering another password.

For more detailed descriptions and procedures, see Manage Users with Roles and Permissions.

Related Topic

- Role Permissions

Role Permissions

This topic describes access to the user interface that users assigned to the built-in NetWitness Suite roles have by default.

Within NetWitness Suite, user access to each module, dashlet, and view is restricted based on the assigned permissions described in this topic. You can locate these role permissions in the Add or Edit Roles dialogs accessible from the Admin > Security > Roles tab.

In the Add or Edit Role dialogs, the tabs in the Permission section represent different areas of the NetWitness Suite and show the available permissions for those areas. For example, the Administration tab shows the permissions available in the Admin view.

Note: There is no Configure tab in the Add/Edit Role dialogs that corresponds to the Configure view. To assign permissions in the Configure view, assign permissions to the views contained within the Configure view: Live Content (Live), Incident Rules (Incidents), Respond Notifications (Incidents, Respond-server, Integration server), ESA Rules (Alerting), Subscriptions (Live), and Custom Feeds (Live).

Note: To the left of the Administration tab is a tab marked with an asterisk (*). This tab indicates access to management of backend services only.

The tables that follow show the default permissions assigned to each NetWitness Suite user role:

- Administrators
- Operators
- Analysts
- Respond Administrator
- SOC Managers (SOC Mgrs)
- Malware Analysts (MAs)
- Data Privacy Officers (DPOs)

Since the Administrators role has all of the permissions by default, it is not included in the tables.

Service Permissions Format for New Services

The service permissions for some new NetWitness Suite services contain three parts in the following format:

<service name>.<resource>.<action>

For example, for the **investigate-server.metrics.read** permission:

- service name = **investigate-server**
- resource = **metrics**
- action = **read**

Users assigned this permission can read any metrics that the investigate-server service exposes.

Administration

The following table lists the permissions in the Administration tab assigned to each role. The Administrators role has all of the permissions by default and is not listed.

Permission	Operators	Analysts	SOC Mgrs	MAs	DPOs
Access Administration Module	Yes	Yes	Yes	Yes	Yes
Access Health & Wellness	Yes	Yes	Yes	Yes	Yes
Apply System Updates	Yes				
Can Opt In to Live Intelligence Sharing	Yes				
Manage Advanced Settings	Yes				
Manage ATD Settings	Yes				
Manage Auditing	Yes				Yes
Manage Email	Yes				
Manage Global Auditing	Yes				Yes
Manage Health & Wellness Policy	Yes				
Manage LLS	Yes				
Manage Logs	Yes				Yes
Manage Notifications	Yes				
Manage Plugins	Yes				

Permission	Operators	Analysts	SOC Mgrs	MAs	DPOs
Manage Predicates	Yes				
Manage Reconstruction	Yes				
Manage Security	Yes				Yes
Manage Services	Yes				Yes
Manage System Settings	Yes				
Modify ESA Settings	Yes				
Modify Event Sources	Yes

View Services	Yes				Yes

Admin-server

The following table describes the permissions in the Admin-server tab. The Administrators role has all of the permissions and is the only role granted permissions by default.

Permission	Description
admin-server.configuration.manage	Permission to modify all service configuration parameters

Permission	Description
admin-server.health.read	Permission to view any health notifications that the service exposes
admin-server.logs.manage	Permission to change log-related configuration
admin-server.metrics.read	Permission to view any metrics that the service exposes
admin-server.process.manage	Permission to start and stop the service
admin-server.security.manage	Permission to edit security-related resources (passwords, keys, and so on)
admin-server.security.read	Permission to view security-related resources

Alerting

The following table lists the permissions in the Alerting tab assigned to each role. The Administrators role has all of the permissions by default and is not listed.

Permission	Operators	Analysts	SOC Mgrs	MAs	DPOs
Access Alerting Module	Yes	Yes	Yes		Yes
Manage Rules			Yes		Yes
View Alerts	Yes	Yes	Yes		Yes
View Rules			Yes		Yes

Cloud-gateway-server

The following table describes the permissions in the Cloud-gateway-server tab. The Administrators role has all of the permissions and is the only role granted permissions by default.

Permission	Description
cloud-gateway-server.configuration.manage	Permission to modify all service cloud gateway parameters

Permission	Description
cloud-gateway-server.health.read	Permission to view any health notifications that the service exposes
cloud-gateway-server.logs.manage	Permission to change log-related configuration
cloud-gateway-server.metrics.read	Permission to view any metrics that the service exposes
cloud-gateway-server.process.manage	Permission to start and stop the service
cloud-gateway-server.security.manage	Permission to edit security-related resources (passwords, keys, and so on)
cloud-gateway-server.security.read	Permission to view security-related resources
cloud-gateway-server.uploadstream.manage	Permission to edit uploadstream configuration settings
cloud-gateway-server.uploadstream.read	Permission to view uploadstream configuration settings

Config-server

The following table describes the permissions in the Config-server tab. The Administrators role has all of the permissions and is the only role granted permissions by default.

Permission	Description
config-server.*	All permissions (everything below)
config-server.configuration.manage	Permission to modify all service configuration parameters
config-server.health.read	Permission to view any health notifications that the service exposes

Permission	Description
config-server.logs.manage	Permission to change log-related configuration
config-server.metrics.read	Permission to view any metrics that the service exposes
config-server.process.manage	Permission to start and stop the service
config-server.security.manage	Permission to edit security-related resources (passwords, keys, and so on)
config-server.security.read	Permission to view security-related resources

Contexthub-server

The following table describes the permissions in the Contexthub-server tab.

Permission	Description
contexthub-server.*	All permissions (everything below)
contexthub-server.configuration.manage	Permission to modify all service configuration parameters
contexthub-server.connection.manage	Permission to modify all connection settings
contexthub-server.connection.read	Permission to view all connection settings
contexthub-server.connectiontypes.read	Permission to view all configured connection types
contexthub-server.datasource.manage	Permission to modify data source settings
contexthub-server.datasource.read	Permission to view data source settings
contexthub-server.health.read	Permission to view any health notifications that the service exposes

Permission	Description
contexthub-server.listentries.manage	Permission to modify list entries
contexthub-server.logs.manage	Permission to change log-related configuration
contexthub-server.metrics.read	Permission to view any metrics that the service exposes
contexthub-server.process.manage	Permission to start and stop the service
contexthub-server.query.read	Permission to view queries
contexthub-server.security.manage	Permission to edit security-related resources (passwords, keys, and so on)
contexthub-server.security.read	Permission to view security-related resources
contexthub-server.stix.read	Permission to view stix settings
contexthub-server.taxiidatasource.manage	Permission to modify settings for the taxii data source
contexthub-server.taxiidatasource.read	Permission to view settings for the taxii data source

The following table lists the permissions in the Contexthub-server tab assigned to each role. The Administrator role has all of the permissions by default and is not listed.

Permission	Operators	Analysts	SOC Mgrs	MAs	DPOs
contexthub-server.*					Yes
contexthub-server.configuration.manage					
contexthub-server.connection.manage					
contexthub-server.connection.read		Yes	Yes	Yes

Endpoint-server

The following table describes the permissions in the Endpoint-server tab. The Administrators role has all of the permissions by default.

Permission	Description
endpoint-server*	All permissions (everything below)
endpoint-server.agent.manage	Permission to download and manage agent packager configuration
endpoint-server.agent.read	Permission to view the agent packager configuration
endpoint-server.ca.manage	Permission to generate and download the agent packager
endpoint-server.ca.read	Permission to generate and download the agent packager
endpoint-server.configuration.manage	Permission to modify all endpoint configuration parameters
endpoint-server.dataretention.manage	Permission to configure the data retention policy

Permission	Description
endpoint-server.dataretention.read	Permission to view the data retention policy
endpoint-server.filter.manage	Permission to delete filters
endpoint-server.filter.read	Permission to view filters
endpoint-server.health.read	Permission to view any health notifications that the service exposes
endpoint-server.logs.manage	Permission to change log-related configuration
endpoint-server.machine.manage	Permission to delete hosts
endpoint-server.machine.read	Permission to view hosts
endpoint-server.metrics.read	Permission to view any metrics that the service exposes
endpoint-server.policy.manage	Permission to update and save schedule scan configuration
endpoint-server.policy.read	Permission to view existing schedule scan configuration
endpoint-server.process.manage	Permission to start and stop the service
endpoint-server.scan.manage	Permission to perform endpoint scan
endpoint-server.scan.read	Permission to view endpoint scan data
endpoint-server.security.manage	Permission to edit security-related resources (passwords, keys, and so on)
endpoint-server.security.read	Permission to view security-related resources

The following table lists the permissions in the Endpoint-server tab assigned to each role. The Administrator role has all of the permissions by default and is not listed.

Permission	Operators	Analysts	SOC Mgrs	MAs	DPOs
endpoint-server*	Yes

Esa-analytics-server

The following table describes the permissions in the Esa-Analytics-server tab. The Administrators and Operators roles have all of the permissions and are the only roles granted permissions by default.

Permission	Description
esa-analytics-server.*	All permissions (everything below)
esa-analytics-server.analytics.manage	Permission to modify ESA analytics
esa-analytics-server.analytics.read	Permission to view ESA analytics
esa-analytics-server.configuration.manage	Permission to modify all service configuration parameters
esa-analytics-server.health.read	Permission to view any health notifications that the service exposes
esa-analytics-server.logs.manage	Permission to change log-related configuration
esa-analytics-server.metrics.read	Permission to view any metrics that the service exposes
esa-analytics-server.model.manage	Permission to modify ESA models
esa-analytics-server.model.read	Permission to view ESA models
esa-analytics-server.process.manage	Permission to start and stop the service

Permission	Description
esa-analytics-server.security.manage	Permission to modify security-related resources
esa-analytics-server.security.read	Permission to view security-related resources

Incidents

The following table lists the permissions in the Incidents tab assigned to each role. The Administrators role has all of the permissions by default and is not listed.

Permission	Operators	Analysts	SOC Mgrs	MAs	DPOs
Access Incident Module		Yes	Yes	Yes	Yes
Configure Incident Management Integration			Yes		Yes
Delete Alerts and incidents					Yes
Manage Alert Handling Rules			Yes		Yes
View and Manage Incidents		Yes	Yes	Yes	Yes

Integration-server

(The Integration-server permissions are available in NetWitness Suite version 11.1 and later.)

The following table describes the permissions in the Integration-server tab.

Permission	Description
integration-server.*	All permissions (everything below)
integration-server.api.access	Permission to authorize external requests from 3rd party applications
integration-server.configuration.manage	Permission to view and modify all service integration configuration parameters

Permission	Description
integration-server.health.read	Permission to read any health notifications that the service exposes
integration-server.logs.manage	Permission to change log-related integration configurations
integration-server.metrics.read	Permission to read any metrics that the service exposes
integration-server.notification.manage	Permission to change global notification configurations (for example, SMTP server)
integration-server.notification.read	Permission to read global notification configurations (for example, SMTP server)
integration-server.notification.send	Permission to send notifications (for example, Email)
integration-server.process.manage	Permission to start and stop the service
integration-server.security.manage	Permission to edit security-related resources (passwords, keys, and so on)
integration-server.security.read	Permission to read security-related resources
integration-server.template.manage	Permission to change notification template
integration-server.template.read	Permission to read notification template

The following table lists the permissions in the Integration-server tab assigned to each role. The Administrator role has all of the permissions by default and is not listed.

Permission	Operators	Analysts	SOC Mgrs	MAs	DPOs
integration-server.*					Yes
integration-server.api.access

Investigate

The following table lists the permissions in the Investigate tab assigned to each role. The Administrators role has all of the permissions by default and is not listed.

Permission	Operators	Analysts	SOC Mgrs	MAs	DPOs
Access Investigation Module		Yes	Yes	Yes	Yes

Permission	Operators	Analysts	SOC Mgrs	MAs	DPOs
Context Lookup		Yes	Yes	Yes	
Create Incidents from Investigation		Yes	Yes	Yes	
Manage List from Investigation		Yes	Yes	Yes	
Navigate Events		Yes	Yes	Yes	Yes
Navigate Values		Yes	Yes	Yes	Yes

Investigate-server

The following table describes the permissions in the Investigate-server tab. The Administrators, Analysts, SOC Managers, Malware Analysts, and Data Privacy Officers roles have all of the permissions and are the only roles granted permissions by default.

Permission	Description
investigate-server.*	All permissions (everything below) for the Event Analysis view
investigate-server.configuration.manage	Permission to change any configuration properties for the service
investigate-server.content.export	Permission to export content from the service
investigate-server.content.reconstruct	Permission to view the summary view, the packet, packet map, text, log, and file reconstructions, as well as the packet count
investigate-server.event.read	Permission to view events that the service exposes
investigate-server.health.read	Permission to view any health notifications that the service exposes
investigate-server.logs.manage	Permission to change log-related configuration

Permission	Description
investigate-server.metagroup.manage	Permission to manage meta groups
investigate-server.metagroup.read	Permission to view and use meta groups
investigate-server.metrics.read	Permission to view any metrics that the service exposes
investigate-server.process.manage	Permission to start and stop the service
investigate-server.security.manage	Permission to edit security-related resources (passwords, keys, and so on)
investigate-server.security.read	Permission to view security-related resources

Live

The following table lists the permissions in the Live tab assigned to each role. The Administrators role has all of the permissions by default and is not listed.

Permission	Operators	Analysts	SOC Mgrs	MAs	DPOs
Live					
Access Live Module	Yes	Yes	Yes		Yes
Manage Live System Settings	Yes				
Resources					
Deploy Live Resources	Yes				Yes
Manage Live Feeds	Yes				Yes
Manage Live Resources	Yes				Yes
Search Live Resources	Yes	Yes	Yes		Yes

Permission	Operators	Analysts	SOC Mgrs	MAs	DPOs
View Live Resource Details	Yes	Yes	Yes		Yes

Malware

The following table lists the permissions in the Malware tab assigned to each role. The Administrators role has all of the permissions by default and is not listed.

Permission	Operators	Analysts	SOC Mgrs	MAs	DPOs
Download Malware File(s)		Yes	Yes	Yes	Yes
Initiate Malware Analysis Scan		Yes	Yes	Yes	Yes
View Malware Analysis Events		Yes	Yes	Yes	Yes

Orchestration-server

The following table describes the permissions in the Orchestration-server tab. The Administrators, Operators, and Data Privacy Officers roles have all of the permissions and are the only roles granted permissions by default.

Permission	Description
orchestration-server.*	All permissions (everything below)
orchestration-server.configuration.manage	Permission to modify all service configuration parameters
orchestration-server.file.read	Permission to view files
orchestration-server.health.read	Permission to view any health notifications that the service exposes
orchestration-server.logs.manage	Permission to change log-related configuration
orchestration-server.metrics.read	Permission to view any metrics that the service exposes
orchestration-server.process.manage	Permission to start and stop the service

Permission	Description
orchestration-server.security.manage	Permission to edit security-related resources (passwords, keys, and so on)
orchestration-server.security.read	Permission to view security-related resources

Reports

The following table lists the permissions in the Reports tab assigned to each role. The Administrators role has all of the permissions by default and is not listed.

Permission	Operators	Analysts	SOC Mgrs	MAs	DPOs
Alert					
Define RE Alert		Yes	Yes		Yes
Export RE Alert Definition		Yes	Yes		Yes
Manage RE Alerts		Yes	Yes		Yes
View RE Alerts		Yes	Yes		Yes
View Scheduled RE Alerts		Yes	Yes		Yes
Chart					
Define Chart		Yes	Yes		Yes
Delete Chart		Yes	Yes		Yes
Export Chart Definition		Yes	Yes		Yes
Manage Charts		Yes	Yes		Yes
View Charts		Yes	Yes		Yes
List					
Define Lists		Yes	Yes		Yes

Permission	Operators	Analysts	SOC Mgrs	MAs	DPOs
Delete List		Yes	Yes		Yes
Export List		Yes	Yes		Yes
Manage Lists		Yes	Yes		Yes
Report

Access View		Yes	Yes		Yes
Rule					
Add RE Alert Definition from Rule		Yes	Yes		Yes
Define Rule		Yes	Yes		Yes
Delete Rule		Yes	Yes		Yes
Export Rule		Yes	Yes		Yes
Manage Rules		Yes	Yes		Yes

Permission	Operators	Analysts	SOC Mgrs	MAs	DPOs
View Rule Usage		Yes	Yes		Yes
Schedules					
Define Schedule		Yes	Yes		Yes
Delete Schedule		Yes	Yes		Yes
View Schedules		Yes	Yes		Yes
Warehouse Analytics					
Define Jobs		Yes	Yes		Yes
Delete Jobs		Yes	Yes		Yes
Manage Jobs		Yes	Yes		Yes
View Jobs		Yes	Yes		Yes

Respond-server

The following table describes the permissions in the Respond-server tab.

Permission	Description
respond-server.*	All permissions (everything below)
respond-server.alert.delete	Permission to delete alerts
respond-server.alert.manage	Permission to create, update, or delete alerts
respond-server.alert.read	Permission to view alerts
respond-server.alertrule.manage	Permission to create, update, or delete alert aggregation rules
respond-server.alertrule.read	Permission to view alert aggregation rules

Permission	Description
respond-server.configuration.manage	Permission to change any configuration properties for the service
respond-server.health.read	Permission to view any health notifications that the service exposes
respond-server.incident.delete	Permission to delete incidents
respond-server.incident.manage	Permission to create, update, or delete incidents
respond-server.incident.read	Permission to view incidents
respond-server.journal.manage	Permission to create, update, or delete journal entries for an incident
respond-server.journal.read	Permission to view journal entries for an incident
respond-server.logs.manage	Permission to change log-related configuration
respond-server.metrics.read	Permission to view any metrics that the service exposes
respond-server.notification.manage	(This permission is available in NetWitness Suite version 11.1 and later.) Permission to configure Respond notification settings such as the selected email server, SOC Managers, and who will be sent the notifications (Assignee and SOC Managers).
respond-server.notification.read	(This permission is available in NetWitness Suite version 11.1 and later.) Permission to view Respond notification settings.
respond-server.process.manage	Permission to start and stop the service

Permission	Description
respond-server.remediation.manage	Permission to create, update, or delete remediation tasks
respond-server.remediation.read	Permission to view remediation tasks
respond-server.security.manage	Permission to edit security-related resources (passwords, keys, and so on)
respond-server.security.read	Permission to view security-related resources

The following table lists the permissions in the Respond-server tab assigned to each role. The Administrators and Respond Administrator roles have all of the permissions by default and are not listed.

Permission	Operators	Analysts	SOC Mgrs	MAs	DPOs
respond-server.*					Yes
respond-server.alert.delete					
respond-server.alert.manage		Yes	Yes	Yes	
respond-server.alert.read		Yes	Yes	Yes	
respond-server.alertrule.manage			Yes		
respond-server.alertrule.read			Yes		
respond-server.configuration.manage					
respond-server.health.read					
respond-server.incident.delete					
respond-server.incident.manage		Yes	Yes	Yes	

Permission	Operators	Analysts	SOC Mgrs	MAs	DPOs
respond-server.incident.read		Yes	Yes	Yes	
respond-server.journal.manage		Yes	Yes	Yes	
respond-server.journal.read		Yes	Yes	Yes	
respond-server.logs.manage					
respond-server.metrics.read					
respond-server.notification.manage			Yes		
respond-server.notification.read			Yes		
respond-server.process.manage					
respond-server.remediation.manage		Yes	Yes	Yes	
respond-server.remediation.read		Yes	Yes	Yes	
respond-server.security.manage					
respond-server.security.read					

Respond Notification Settings Permissions

(The Respond notification setting permissions are available in NetWitness Suite version 11.1 and later.)

Note: If you are updating from NetWitness Suite version 11.0 to 11.1, you will need to add additional permissions to your existing built-in NetWitness Suite user roles. For all upgrades to 11.1, you will need to add additional permissions to custom roles.

The following permissions are required for Respond Administrators, Data Privacy Officers, and SOC Managers to access Respond Notification Settings (CONFIGURE > Respond Notifications).

Incidents tab:

- Configure Incident Management Integration

Respond-server tab:

- respond-server.notification.manage
- respond-server.notification.read

Integration-server tab:

- integration-server.notification.read
- integration-server.notification.manage

Security-server

The following table describes the permissions in the Security-server tab. The Administrators, Operators, and Data Privacy Officers roles have all of the permissions and are the only roles granted permissions by default.

Permission	Description
security-server.*	All permissions (everything below)
security-server.account.manage	Permission to view, create, modify, or remove NetWitness Suite local accounts
security-server.account.read	Permission to view NetWitness Suite local accounts
security-server.ca.manage	Permission to manage NetWitness Suite deployment PKI parameters (for example, sign certificates, and so on)
security-server.ca.read	Permission to view NetWitness Suite deployment PKI parameters
security-server.configuration.manage	Permission to modify all service configuration parameters
security-server.health.read	Permission to view any health notifications that the service exposes
security-server.logs.manage	Permission to change log-related configuration
security-server.metrics.read	Permission to view any metrics that the service exposes

Permission	Description
security-server.permission.manage	Permission to create or remove NetWitness Suite permissions
security-server.process.manage	Permission to start and stop the service
security-server.role.manage	Permission to create, modify, or remove NetWitness Suite roles (for example, add role permissions)
security-server.role.read	Permission to view NetWitness Suite role definitions
security-server.security.manage	Permission to edit security-related resources (passwords, keys, and so on)
security-server.security.read	Permission to view security-related resources
security-server.user.manage	Permission to view, create, modify, or remove NetWitness Suite user profiles
security-server.user.read	Permission to view NetWitness Suite user profile details (for example, roles, login times, and so on)

Manage Users with Roles and Permissions

This topic introduces a set of end-to-end procedures for managing users in NetWitness Suite. These steps explain how to add a user in NetWitness Suite and then how to control what the user can do.

Topics

- Step 1. Review the Pre-Configured NetWitness Roles
- Step 2. (Optional) Add a Role and Assign Permissions
- Step 3. Verify Query and Session Attributes per Role
- Step 4. Set Up a User
- Step 5. (Optional) Map User Roles to External Groups

Step 1. Review the Pre-Configured NetWitness Roles

To simplify the process of creating roles and assigning permissions, there are pre-configured roles in NetWitness Suite.

Role	Permission
Administrators	Full system access
Operators	Access to configurations but not to meta and session content
Analysts	Access to meta and session content but not to configurations
Respond_ Administrator	Access to all Respond server and Incidents permissions
SOC_ Managers	Same access as Analysts plus additional permission to handle incidents
Malware_ Analysts	Access to malware events and to meta and session content
Data_Privacy_ Officers	Access to meta and session content as well as configuration options that manage obfuscation and viewing of sensitive data within the system (see Data Privacy Management).

The administrator can also add custom roles.

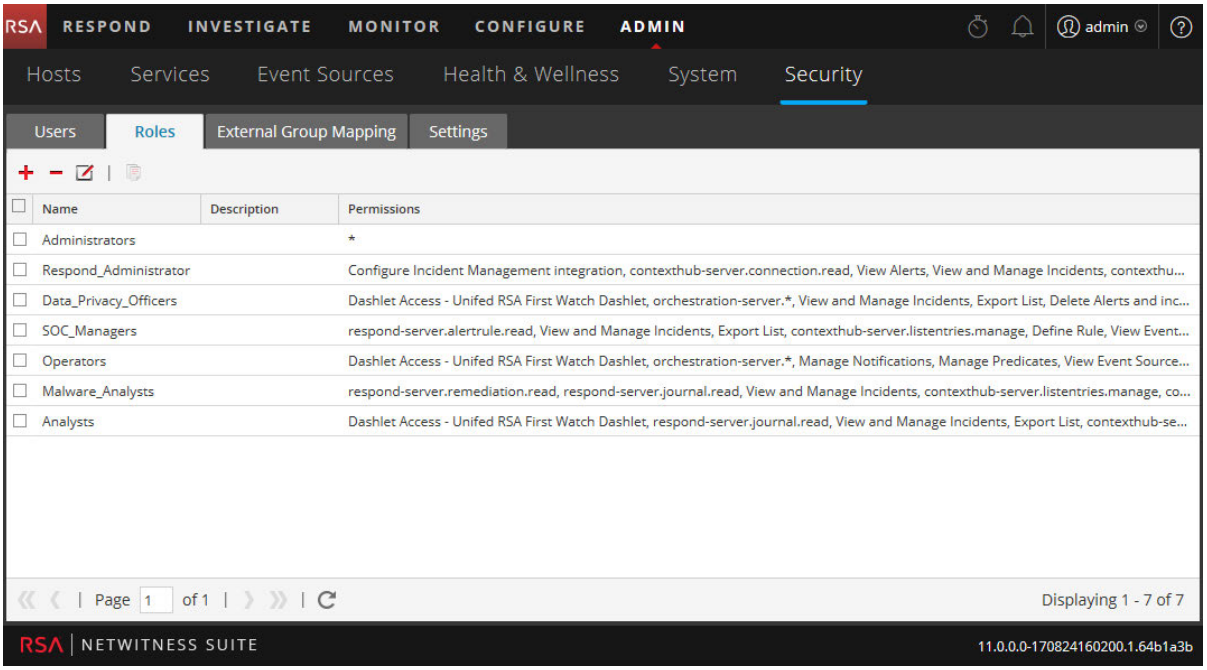
Step 2. (Optional) Add a Role and Assign Permissions

Although NetWitness Suite has pre-configured roles, you can add custom roles. For example, in addition to the pre-configured Analysts role you could add custom roles for AnalystsEurope and AnalystsAsia. For a detailed list of permissions, see Role Permissions.

Each of the following procedures starts on the **Roles** tab.

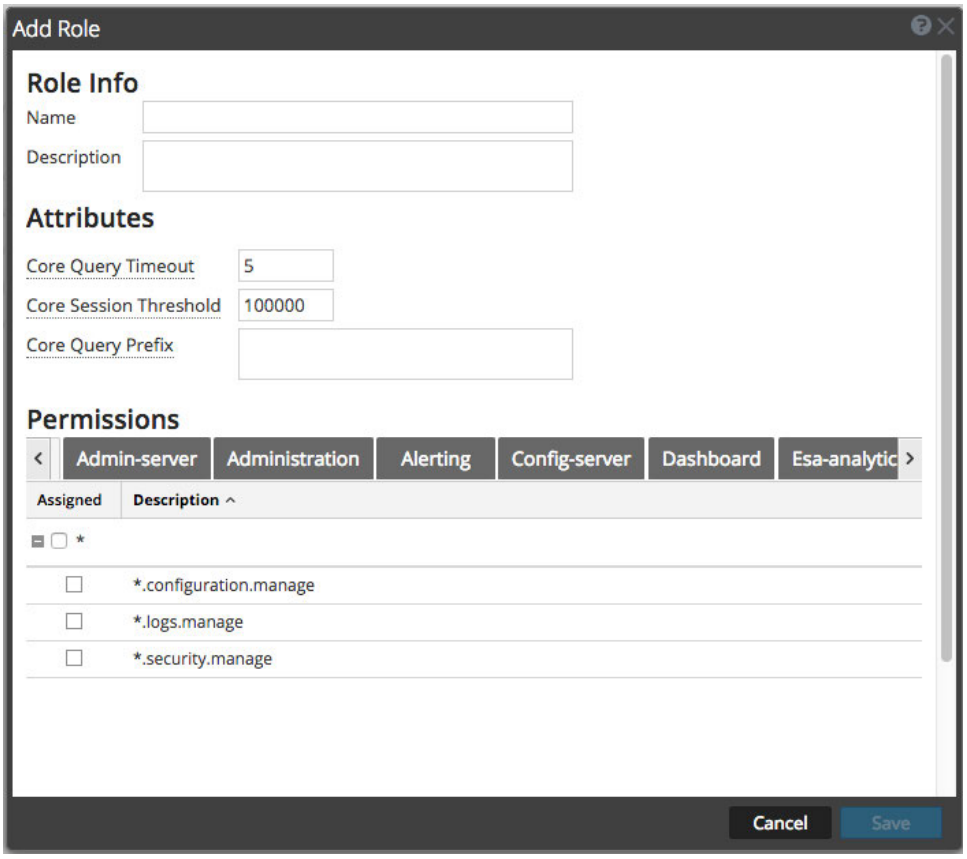
To navigate to the Roles tab:

1. Go to **ADMIN > Security**.
   The Security view is displayed with the **Users** tab open.
2. Click the **Roles** tab.



Add a Role and Assign Permissions

1. In the **Roles** tab, click ✚ in the toolbar.
2. The **Add Role** dialog is displayed.



3. In the **Role Info** section, type the following information for the role:
   - **Name**
   - (Optional) **Description**
4. In the **Attributes** section, enter the desired values for each attribute. For more information on attributes, see Step 3. Verify Query and Session Attributes per Role.
5. In the **Permissions** section:
   - Click ‹ and › to scroll through the modules.
   - Select a module the role will access.
   - Select each permission the role will have.

5. Repeat the previous step until you select all permissions to assign to the role.
6. Click **Save** to add the new role, which is effective immediately. You can now assign the new role to users.

Duplicate a Role

An efficient way to add a new role is to duplicate a similar role, save it with a new name and revise the permissions that are already assigned.

1. In the **Roles** tab, select the role you want to duplicate and click .
2. Type a new role name and click **Save**.
3. To change the permissions, follow the steps in the next procedure.

Change Permissions Assigned to a Role

1. In the **Roles** tab, select the role and click .
   The **Edit Role** dialog is displayed.
2. In the **Permissions** section:
   - Click and to scroll through the modules.
   - Select a module to revise permissions for it.
   - Select or deselect each permission.
3. Repeat the previous step until the role has the required permissions.
4. Click **Save**. The revised permissions are effective immediately.

Delete a Role

You can delete a role if it is not assigned to any users.

1. In the **Roles** tab, select the role and click .
2. A dialog requests confirmation that you want to delete the role. Click **Yes**.

Step 3. Verify Query and Session Attributes per Role

This topic explains the query and session attributes and provides instructions for setting these attributes for user roles. This topic also describes how these role settings impact individual user settings and what happens if a user is a member of multiple roles.

After you define your user roles, it is important to verify the query and session attributes that are set for each role. You can adjust these settings according to your requirements.

Query and Session Attributes

Query and session attributes determine how to handle the queries that a user runs. These attributes enable you to lock down the information that users can retrieve. These attributes apply to all sessions of users assigned to a role.

Depending on your requirements, you can specify the following query-handling attributes for a user role:

- **Core Query Timeout** is an optional setting that applies to NetWitness Suite Core services. It specifies the maximum number of minutes that a user can run a query. If this value is set, it must be zero (0) or greater. A value of zero represents no timeout. The default value is 5 minutes.
- **Core Session Threshold** is a required setting. This value must be zero (0) or greater. The default is 100000. The limit you specify here overrides the **Max Session Export** value defined in the Investigate view settings. If the threshold is greater than zero, a query optimization will extrapolate the total session counts that exceed the threshold. When the meta value count returned by the query reaches the threshold, the system will:
  - Stop its determination of the session count.
  - Show the threshold and percentage of query time used to reach the threshold.
- **Core Query Prefix** is an optional filter applied to queries the user runs. The prefix restricts query results that the user sees. For example, the `'service' = 80` query prefix is prepended to any queries run by the user, and the user can only access metadata of HTTP sessions.

Note: In Version 11.1 and later, you can use configured meta entities in a Core Query Prefix. For additional information about configuring meta entities, refer to the *Core Database Tuning Guide*.

The query-handing attribute settings applied for a user depend on the role memberships of the user. It is important to verify the query-handling attribute settings for your roles.

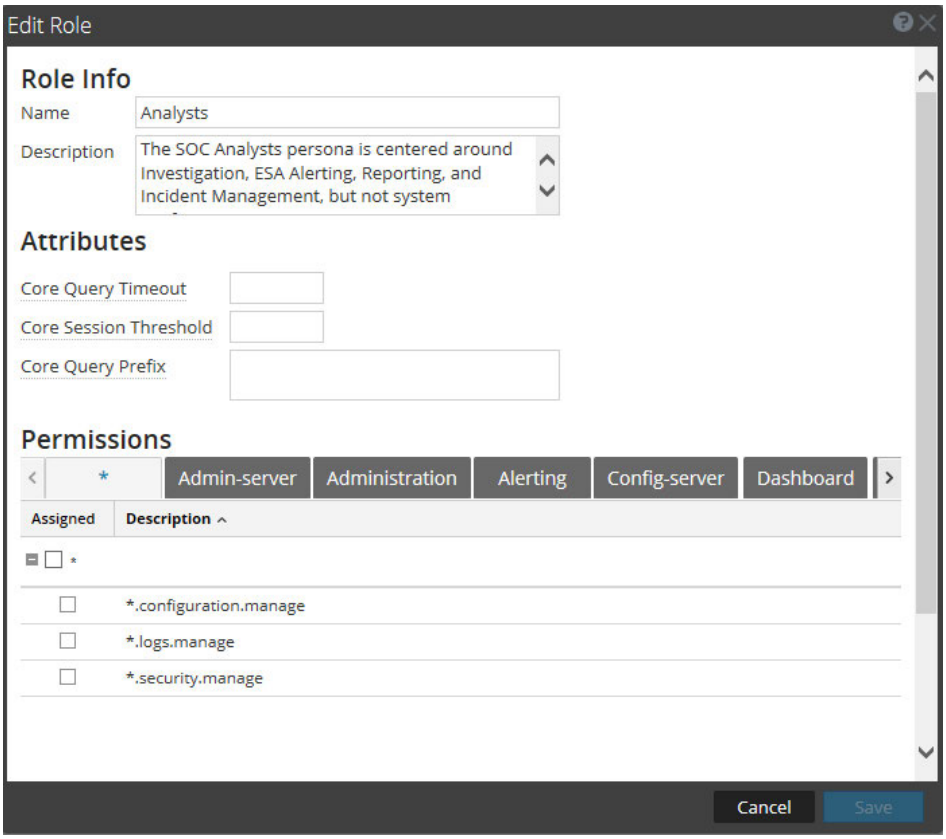
How Query-Handling Attribute Settings Apply to Individual Users

If a user is a member of multiple roles, the following logic applies for the user:

- **Query Timeout:** The most permissive (highest) value of all assigned roles is applied to the user.
- **Query Prefix:** The query prefixes of each of the user roles are AND'd together.
- **Session Threshold:** The highest value of all the assigned roles is applied to the user.

Set Query Handling Attributes for a User Role

1. Go to **ADMIN > Security**.
   The Security view is displayed with the **Users** tab open.
2. Click the **Roles** tab. If you are adding a role, click . If you are editing a role, select the role and click .
   The Add or Edit Role dialog is displayed.



3. To set the attributes for the role, in the **Attributes** section:
   - (Optional) In the **Core Query Timeout** field, type the maximum number of minutes that a user can run a query. This timeout applies to queries performed from Investigate.
   - Type a **Core Session Threshold** for the system to stop its determination of the session count.
   - (Optional) Type a **Core Query Prefix** to filter query results that role members see in the Investigate Navigate view, Events view, and Event Analysis view. You can specify a query that is prepended to all queries executed by users with a specific role. For example, if the `'service' = 80` query prefix is prepended to all queries by users in this role, the users can only access metadata of HTTP sessions. If users attempt to navigate to non-HTTP event, the view is not displayed.
4. Click **Save.**

Step 4. Set Up a User

This topic introduces procedures to set up a new user.

Topics

- Add a User and Assign a Role
- Enable, Unlock, and Delete User Accounts

Add a User and Assign a Role

This topic explains how to add a new user to each type of user account, local and external. It also explains how to assign a role to a local user.

All NetWitness Suite users must have a local or external user account.

The following considerations are important when managing local and external user accounts.

Local User Account	External User Account
Managed within NetWitness Suite	Managed externally and outside the scope of this document
Roles assigned directly	Roles assigned by external group mapping
Derives permissions from each role assigned to the user, as explained in this topic	Derives permissions from each role mapped to the account's external user group, as explained in Step 5. (Optional) Map User Roles to External Groups.
NetWitness Suite manages all user information.	NetWitness Suite manages user identification only. This includes Username, Full Name and Email.

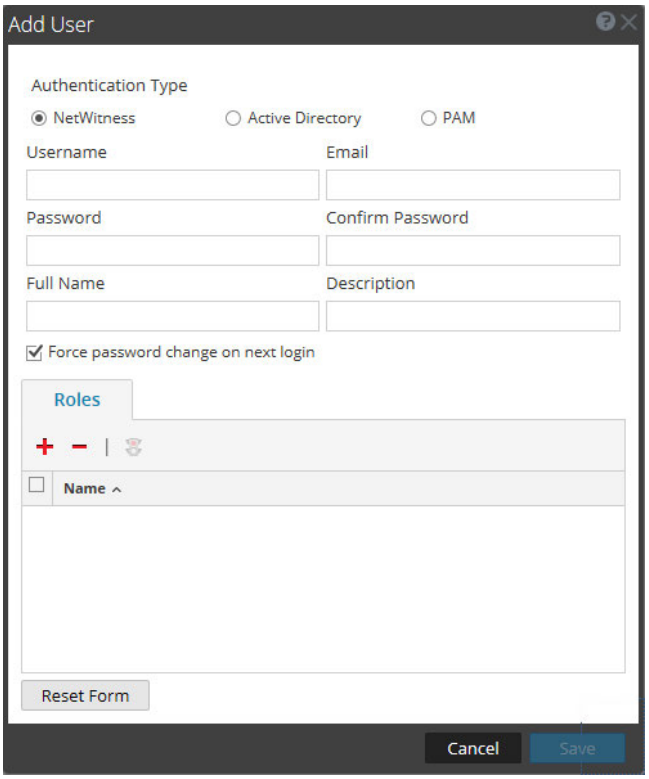
Procedures

Each of the following procedures starts on the Users tab. To navigate to the Users tab, go to **ADMIN > Security**. The Security view is displayed with the Users tab open.

Add a User and Assign a Role

To add a local user account and assign a role to the user:

1. In the **Users** tab, click + in the toolbar.
   The **Add User** dialog is displayed.



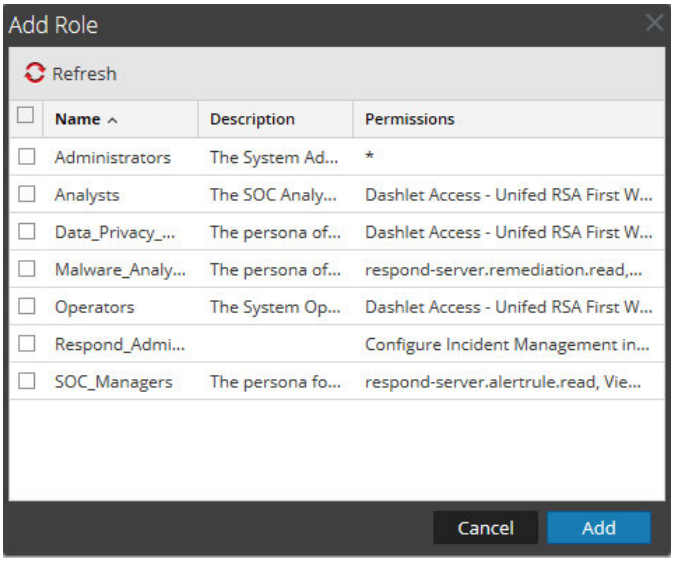
2. Type the following account information for the new user:
   - **Authentication Type**: **NetWitness** is selected by default and is the correct choice when adding a local user. This option is only displayed when there are AD or PAM configurations set up to allow for selecting that authentication type. If there are no AD or PAM configurations, the authentication type is set to NetWitness automatically and there are no other options available.
   - **Username** for logging on to NetWitness Suite
   - **Email** address
   - Password for logging on to NetWitness Suite, in the **Password** and **Confirm Password** fields
   - **Full Name** of the new user
   - (Optional) **Description** of the user account
3. To expire the user password the next time the user logs on, select **Force password change on next login**.

   This does not affect any active user sessions. The appears in the user row to show that the user password expired. After a password is expired, you cannot undo it. This checkbox is

cleared the next time you edit the user account.

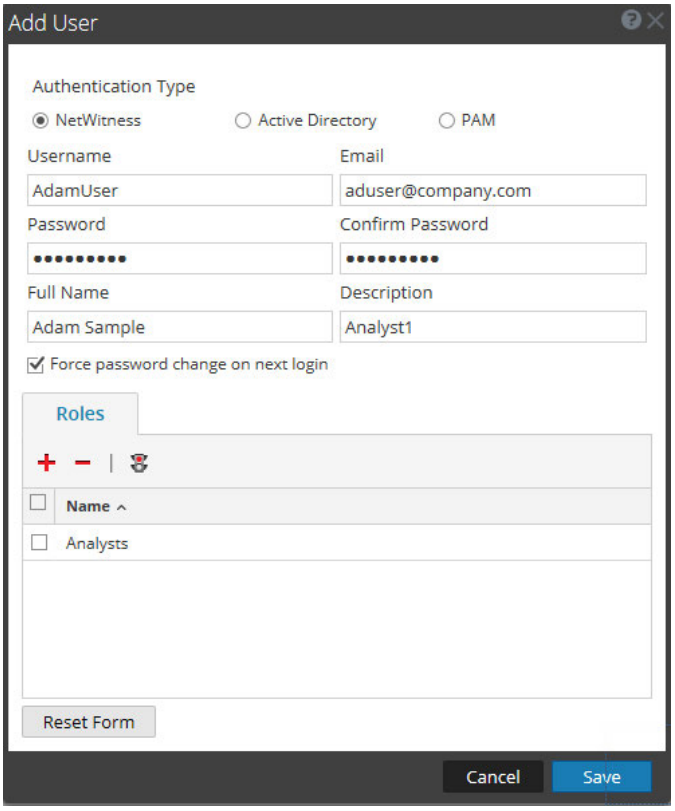
4. To assign a role to the user, click + in the **Roles** tab.

   The **Add Role** selection dialog shows the list of available roles.



5. Select each role to assign and click **Add**.

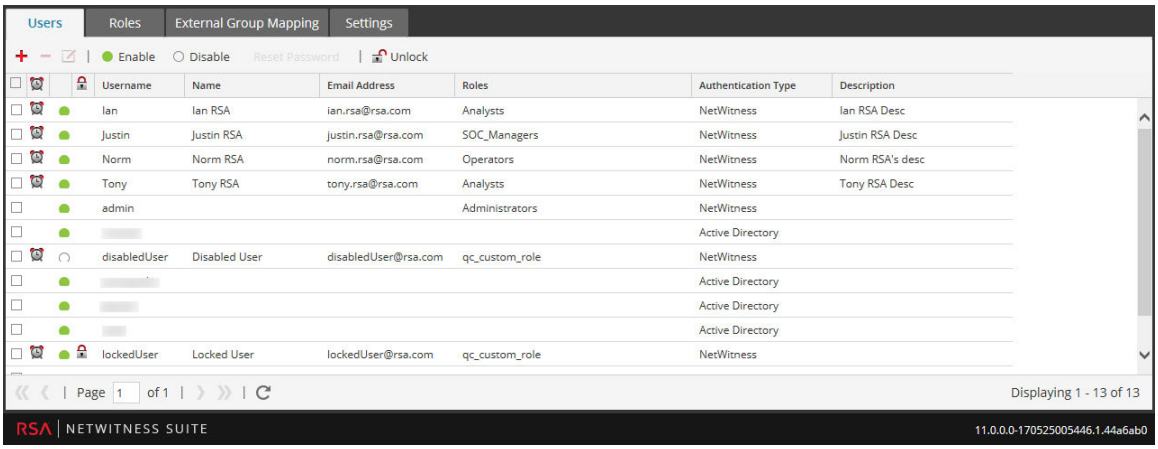
   The **Add User** dialog shows each role assigned to the user.



6. (Optional) Select a role and click to **Show all permissions** for the role.

7. Click **Save**.

   The **Users** tab shows the new user and each role assigned to the user. The account is active immediately.



Add a User for External Authentication

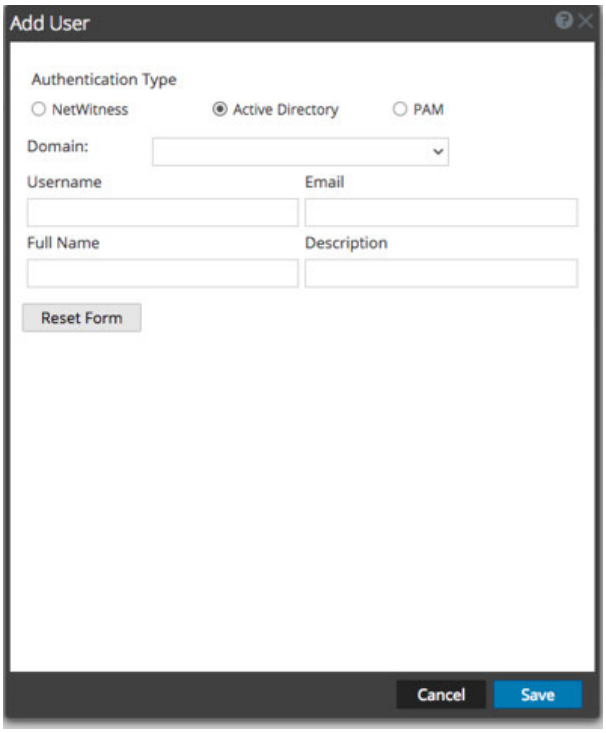
Prerequisite: External authentication must be configured. Refer to Step 4. (Optional) Configure External Authentication.

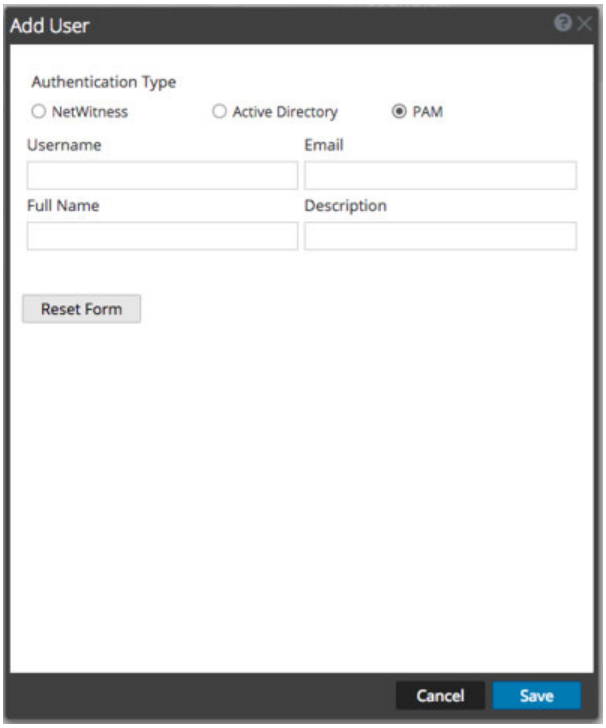
To add a user that is authenticated externally, outside of NetWitness Suite:

1. In the **Users** tab, click + in the toolbar.

   The **Add User** dialog is displayed.

2. For **Authentication Type**, select either **Active Directory** or **PAM**. The dialog will update to show the required fields for the selected external authentication type.





3. Type the following information:

   - **Domain** (if select Active Directory authentication only): Select the Active Directory domain for the user from the drop-down list of available domains.

- **Username** for logging on to NetWitness Suite
- **Email** address
- **Full Name** of the new user
- (Optional) **Description** of the user account

4. Click **Save**. The Users tab shows the new user account, which still needs a role and permissions.
5. To map a role to the new user, see Step 5. (Optional) Map User Roles to External Groups.

Change User Information or Roles

To change a user's account information or assigned roles:

1. In the **Users** tab, select a user and click in the toolbar.
   The **Edit User** dialog is displayed.
2. To edit user information, change any of the following fields:
   - **Email**
   - **Full Name**
   - **Description**
3. To expire the **internal** user password the next time the user logs on, select **Force password change on next login**.
   This does not affect any active user sessions. The appears in the user row to show that the user password expired. After a password is expired, you cannot undo it. This checkbox is cleared the next time you edit the user account.
4. In the **Roles** section:
   - To assign another role, click , select a role and click **Add**.
   - To remove an assigned role, select the role and click .
7. Click **Save**.

Delete a User

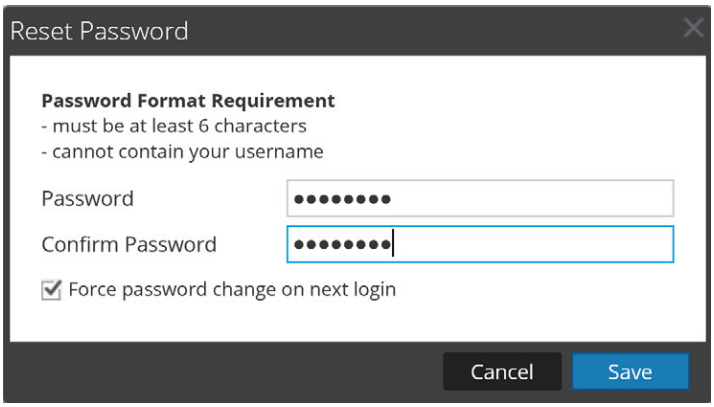
1. In the **Users** tab, select a user.
2. In the toolbar, click .

3. Click **Save**.

Note: To fully delete a user that is externally authenticated by Active Directory, you must also delete the user from the AD Group.

Reset a User Password

1. In the **Users** tab, select a user.
2. In the toolbar, click **Reset Password**.



The **Password Format Requirement** section lists the specific requirements for the password. Administrators can adjust these requirements for all internal users in the password policy. See Step 1. Configure Password Complexity.

3. Choose whether to force a password change the next time the user logs in to NetWitness Suite.
4. Click **Save**.

Enable, Unlock, and Delete User Accounts

This topic provides instructions for enabling, unlocking, and deleting user accounts.

All users of NetWitness Suite must either have a local user account with username and password or have an external user account. Within NetWitness Suite, you can enable, disable, and delete local user accounts.

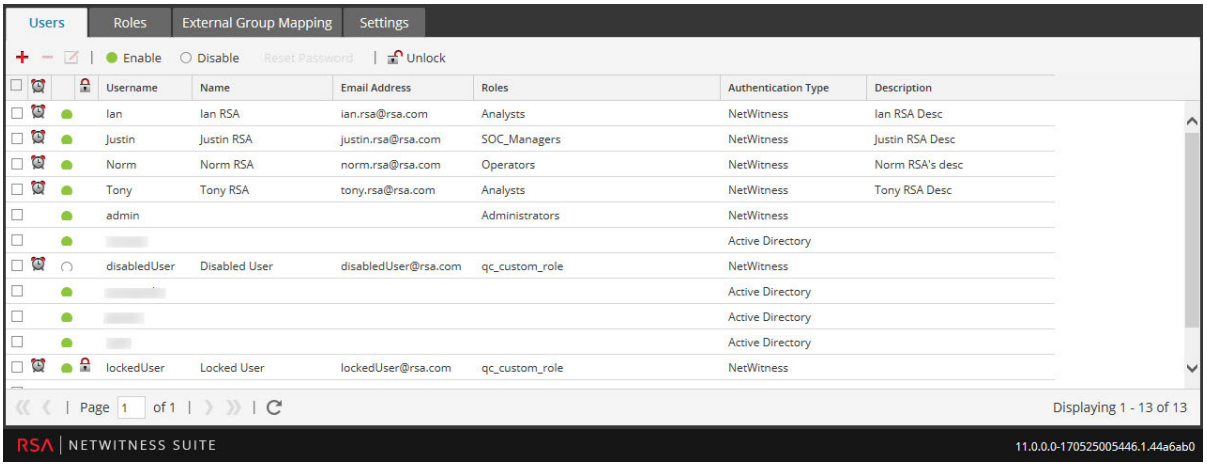
The first time an external user logs into NetWitness Suite, a new user entry is automatically created with NetWitness Suite. NetWitness Suite manages only user identification information; for example, Full Name and Email.

You can unlock locked accounts for both local and external users.

Enable Disabled NetWitness Suite User Accounts

To enable NetWitness Suite user accounts that have been disabled:

1. In NetWitness Suite, go to **ADMIN > Security**.
   The Security view is displayed with the **Users** tab open.



2. In the **Users** grid, select one or more accounts.
3. Click Enable.
   A dialog requests confirmation.
4. If you want to enable the accounts, click **Yes**.
   The accounts are enabled, and the user can log in to NetWitness Suite.

Disable NetWitness Suite User Accounts

You can block user access by disabling users. Disabling the user does not delete user preferences. This action blocks user access without deleting user preferences so that upon re-enabling users, user preferences are intact. You can re-enable users to restore user access. Disabling users applies only to Local users and not External Users.

To disable NetWitness Suite user accounts:

1. In the **Users** grid, select one or more accounts.
2. Click Disable.

   A dialog requests confirmation.
3. If you want to disable the accounts, click **Yes**.

   The accounts are disabled, and the user can no longer log in to NetWitness Suite.

Unlock Locked NetWitness Suite User Accounts

A user is locked out for a period of time after a number of failed consecutive login attempts. To unlock NetWitness Suite user accounts that are locked due to excessive failed login attempts:

1. In the **Users** grid, select one or more accounts.
2. Click Unlock.

   A dialog requests confirmation.
3. If you want to unlock the accounts, click **Yes**.

   The accounts are unlocked, and the user can log on to NetWitness Suite.

Delete NetWitness Suite User Accounts

If not using External Authentication, a user can log on to NetWitness Suite using a local account. These local accounts are directly managed using NetWitness Suite. To revoke access to a local user, either disable the account or delete the account completely from the system.

Note: This deletes all user preferences for the account from NetWitness Suite. If this is not the intention, disable the user instead of deleting the user.

To delete NetWitness Suite user accounts:

1. Go to **ADMIN > Security**.

   The Security view is displayed with the **Users** tab open.
2. In the Users list, select one or more accounts.
3. Click −.

   A warning dialog requests confirmation.
4. If you want to delete the accounts, click **Yes**.

   The accounts are removed from NetWitness Suite, and the users can no longer log in to NetWitness Suite.

Step 5. (Optional) Map User Roles to External Groups

This topic describes the method for mapping NetWitness Suite user roles to external groups.

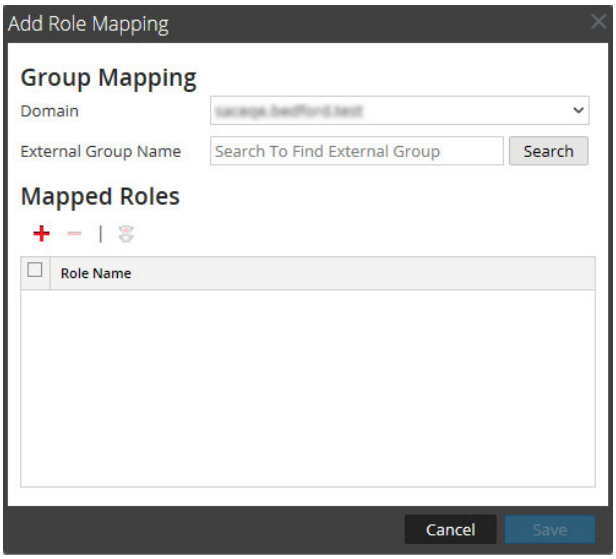
In NetWitness Suite, external groups derive permissions for various modules and views from NetWitness Suite user roles, which have permissions assigned to them. To provide access to an external group, map user roles to it. To modify an external group's access, edit the roles mapped to it. Add and delete roles until the external group has the necessary access. Changes take effect immediately.

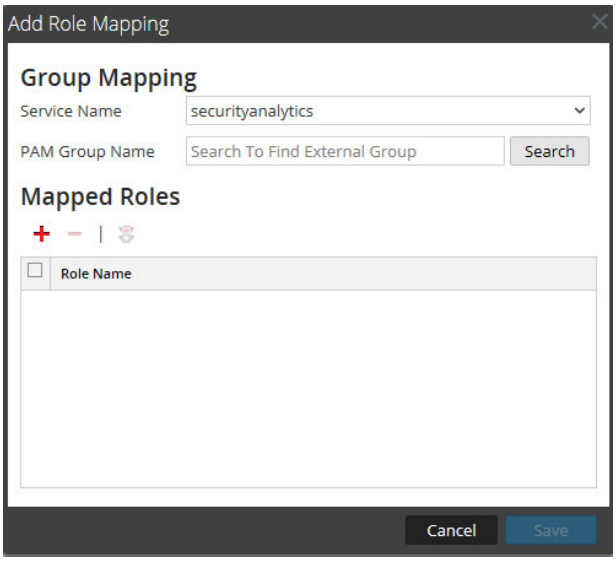
Prerequisites

In the Settings tab, you must set up a method for external user authentication to make external groups visible to NetWitness Suite.

Add Role Mapping for an External Group

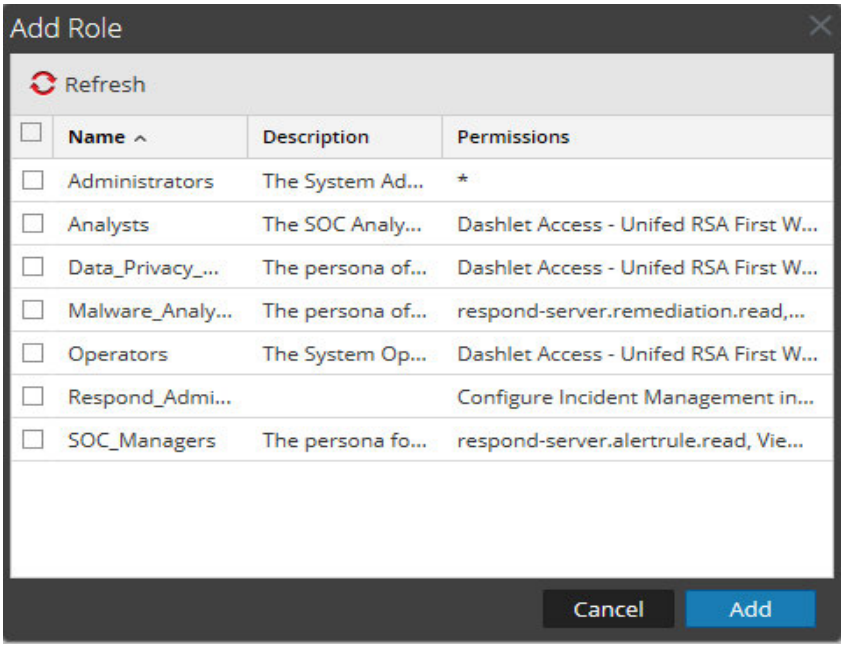
1. In NetWitness Suite, go to **ADMIN > Security**.
   The Security view is displayed with the **Users** tab open.
2. Click the **External Group Mapping** tab.
3. In the toolbar, click +.
   The **Add Role Mapping** dialog for the external authentication method you selected is displayed.





4. Click **Search** and search for an external group name in the Search for External Groups, then select an external group name.

5. To add roles to the group mapping, click + in the **Mapped Roles** section.
   The **Add Role** dialog is displayed.



6. Click the checkbox in the title bar to select all roles, or select roles individually.
7. To add the roles to the **Mapped Roles** section in the Add Role Mapping dialog, click **Add**.
   The dialog closes and the selected roles are displayed in the Mapped Roles section.
8. If you want to delete roles from the **Mapped Roles** section, select the roles and click −.
9. When the **Add Role Mapping** dialog reflects the role mapping that you want to define for the group, click **Save**.
   The Add Role Mapping dialog closes, and the new role mapping is listed in the External Group Mapping tab list.

Edit Role Mapping for a Group

1. In the **External Group Mapping** action bar, click **Edit**.
   The **Edit Role Mapping** dialog is displayed with the group name in the **External Group Name** field.
2. To add roles to the mapping, click + in the **Mapped Roles** section.
   The Add Role dialog is displayed.
3. Click the checkbox in the title bar to select all roles, or select roles individually.
4. To add the roles to the **Mapped Roles** section in the **Add Role Mapping** dialog, click **Add**.
   The dialog closes, and the selected roles are displayed in the Mapped Roles section.

5. If you want to delete roles from the **Mapped Roles** section, select the roles and click −.
6. When the **Edit Role Mapping** dialog reflects the role mapping that you want to define for the group, click **Save**.
   The dialog closes, and the edited role mapping is listed in the External Group Mapping tab.

Related Topic

- Search for External Groups

Search for External Groups

This topic provides instructions for searching for external groups that have NetWitness Suite user roles mapped to them.

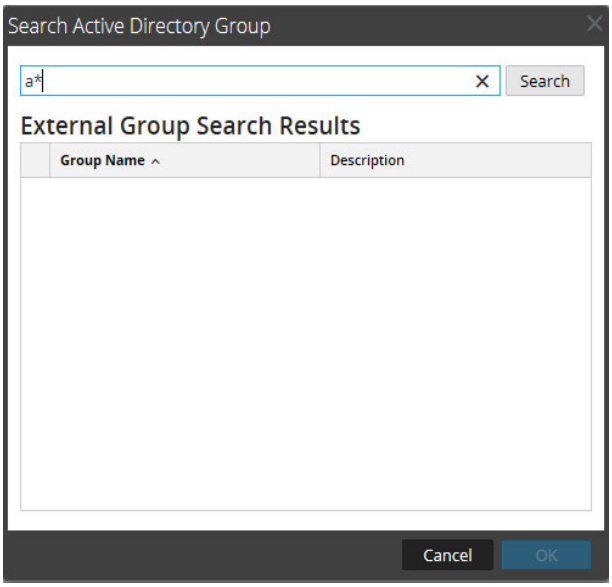
Prerequisites

A method for external user authentication must be enabled.

Procedure

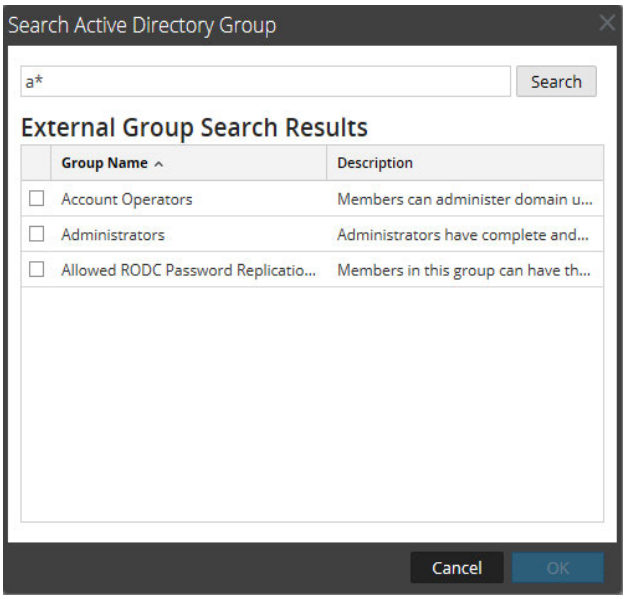
To search for an external group:

1. In NetWitness Suite, go to **ADMIN > Security**.
   The Security view is displayed with the **Users** tab open.
2. Click the **External Group Mapping** tab.
3. In the toolbar, click + or .
   The **Add Role Mapping** dialog for the external authentication method you selected is displayed.
4. The **Group Mapping** section is dependent on the selected external authentication method.
   - For **Active Directory**, select a **Domain**. Then click **Search** next to **External Group Name**.
   - For **PAM**, click **Search** next to **PAM Group Name**.
     The **Search External Groups** dialog is displayed.
5. In **Common Name**, type a group name or part of a group name with the wild card character (*).



6. Click **Search**.

   The results are displayed in the **External Group Search Results** section.



7. Select the group to which you want to assign roles and click **OK**.

Admin Security View

This topic describes each user interface element in the Admin > Security view and in all related dialogs and tabs. The interface components are listed in alphabetical order.

The Admin > Security view provides the capability to manage user accounts, manage user roles, map external groups to NetWitness Suite roles, and modify other security-related system parameters. These apply to the NetWitness Suite system and are used in conjunction with the security settings for individual services.

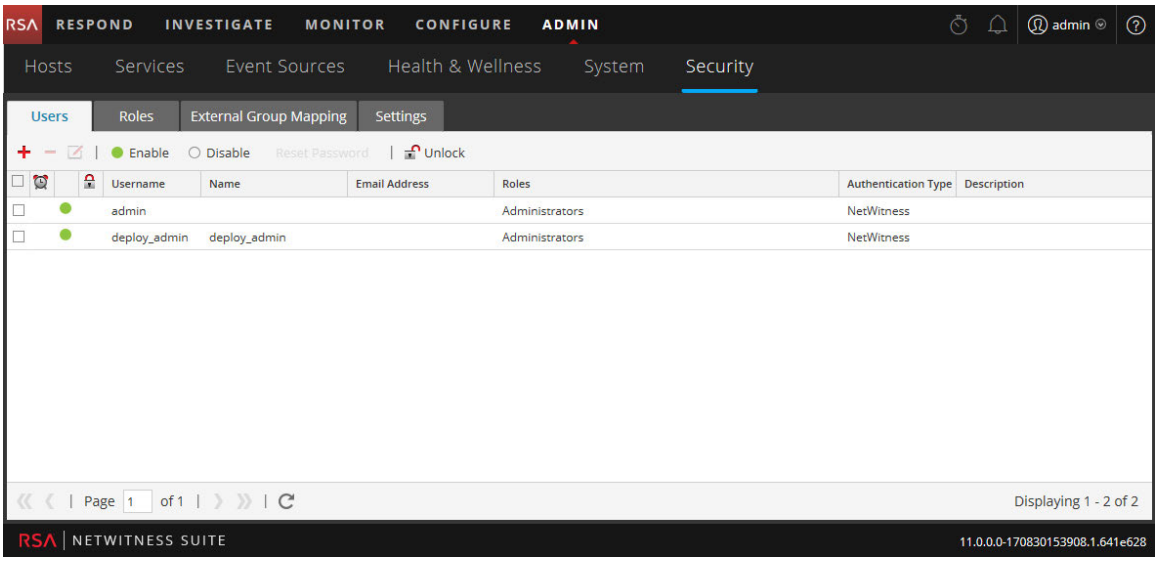
What do you want to do?

Role	I want to ...	Show me how
Admin	Manage users	Step 4. Set Up a User
Admin	Manage roles	Step 1. Review the Pre-Configured NetWitness Roles Step 2. (Optional) Add a Role and Assign Permissions
Admin	(Optional) Configure external group mappings	Step 5. (Optional) Map User Roles to External Groups
Admin	Configure settings	Step 3. Configure System-Level Security Settings

Related topics

- Users Tab
- Roles Tab
- External Group Mapping Tab
- Settings Tab

To display the Admin Security view, go to **ADMIN > Security**.



The Admin > Security view has four tabs:

- The **Users** tab provides a way to manage user accounts.
- The **Roles** tab provides a way to define security roles and assign roles to user accounts.
- The **External Group Mapping** tab provides a way to manage access parameters for LDAP groups.
- The **Settings** tab provides a way to configure password complexity and expiration for internal NetWitness Suite users and to configure system behavior due to failed logins and inactivity. It also provides a way to configure external authentication.

Users Tab

This topic introduces the features and functions to set up a user account in the Admin > Security view > Users tab.

Each NetWitness Suite user must have a user account. In the Users tab, you can create, edit, delete, enable/disable and unlock a user account.

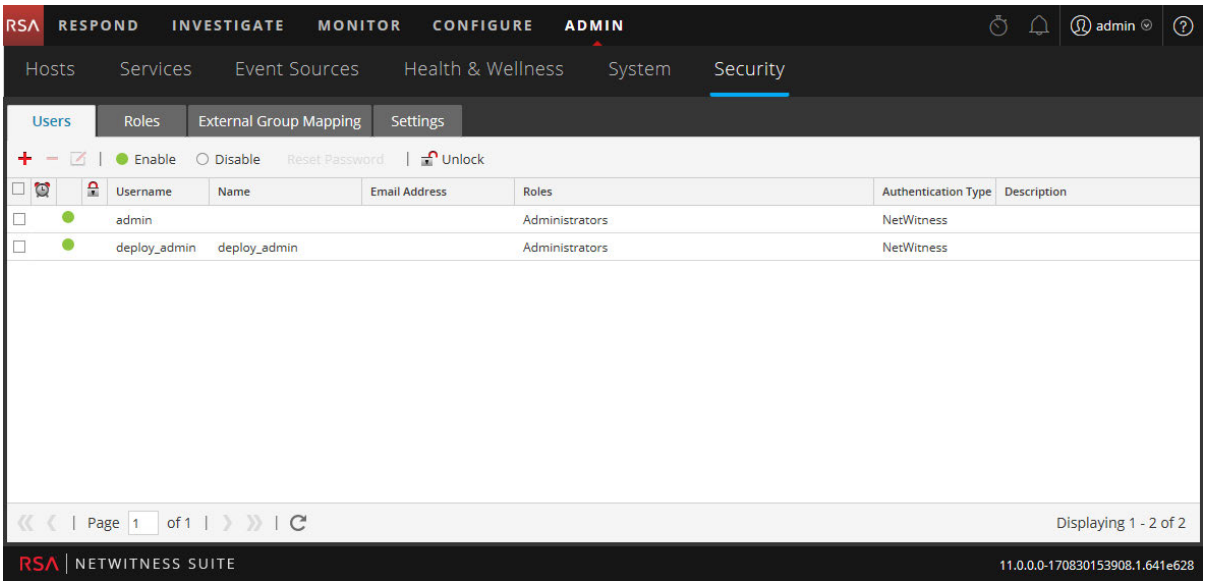
What do you want to do?

Role	I want to ...	Show me how
Admin	Set up a new user	Step 4. Set Up a User Add a User and Assign a Role
Admin	Manage user accounts	Enable, Unlock, and Delete User Accounts

Related Topics

- Add or Edit User Dialog

To access this view, go to **ADMIN > Security**. The Security view opens to the **Users** tab by default.



The Users tab consists of the User list with a toolbar at the top. These are the toolbar features.

Feature	Description
	Opens the Add User dialog.
	Deletes the selected user.
	Opens the Edit User dialog for the selected user.
	Enables a disabled user account with all user preferences intact.
	Blocks user access without deleting user preferences so that upon re-enabling users, user preferences are intact.
Reset Password	Opens the Reset Password dialog, which enables you to change the password of the selected user. This dialog lists the password format requirements necessary to change the password and allows you to force the user to change their password on the next login.
Unlock	Unlocks a user account that has been locked due to too many failed login attempts.

The **Users** list has these columns.

Column	Description
	If this icon appears in a user row, it indicates that the user password has expired.
Username	Username to log on to NetWitness Suite.
Name	Name of the user to whom the account belongs.
Email Address	Email address of the user.
Roles	Role assigned to the user.
External	Authentication method, which could be external by Active Directory or PAM or internal by NetWitness Suite.
Description	Description of the user account.

Add or Edit User Dialog

This topic introduces the Add User and Edit User dialogs accessible from the Admin > Security view > Users tab.

All users must either have a local user account with username and password or an external user account that is mapped to NetWitness Suite.

What do you want to do?

Role	I want to ...	Show me how
Administrator	Add a User and Assign a Role	Step 2. (Optional) Add a Role and Assign Permissions
Administrator	Change User Information	Step 2. (Optional) Add a Role and Assign Permissions
Administrator	Reset a User Password	Step 2. (Optional) Add a Role and Assign Permissions
Administrator	Add a User for External Authentication	Step 2. (Optional) Add a Role and Assign Permissions

Related Topics

- Manage Users with Roles and Permissions
- Enable, Unlock, and Delete User Accounts

User Preferences

To display the **Add User** or **Edit User** dialog:

1. In NetWitness Suite, go to **ADMIN > Security**.
   The Security view is displayed with the **Users** tab open.
2. Do one of the following:
   - In the action bar, click .
     The **Add User** dialog is displayed.

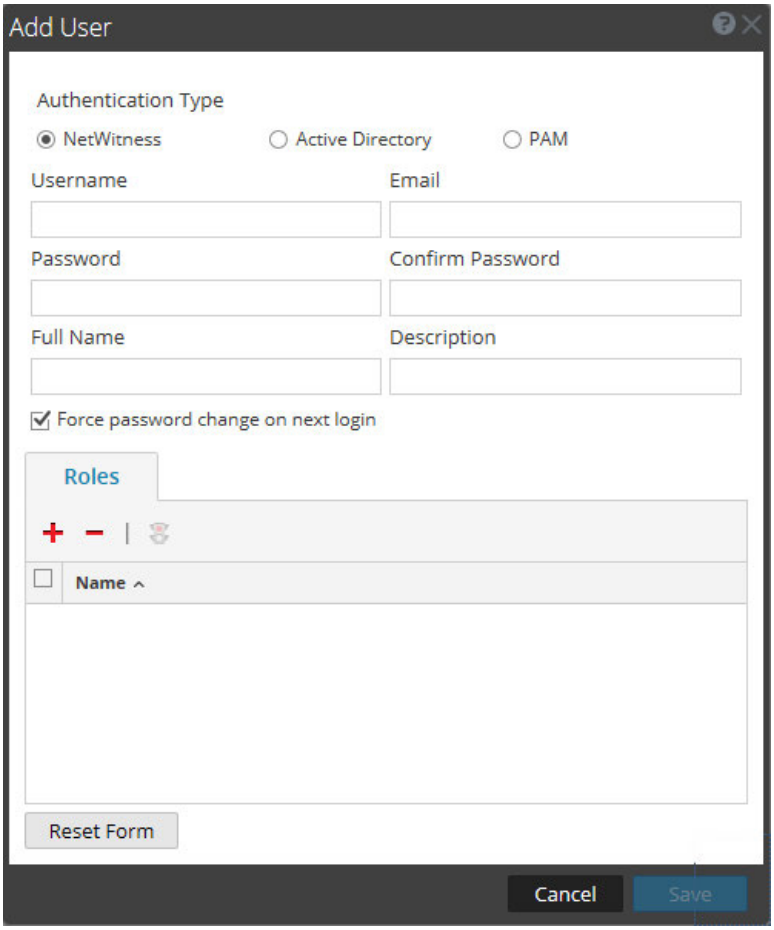
- Select a user and in the action bar, click .

  The **Edit User** dialog is displayed.

The Add User and Edit User dialogs are the same except that the Add User dialog contains additional **Password** and **Confirm Password** fields. You can add a password for a new user in the Add User dialog. Users can change their own passwords in the user preferences. You can reset a password for a user directly from the Users tab.

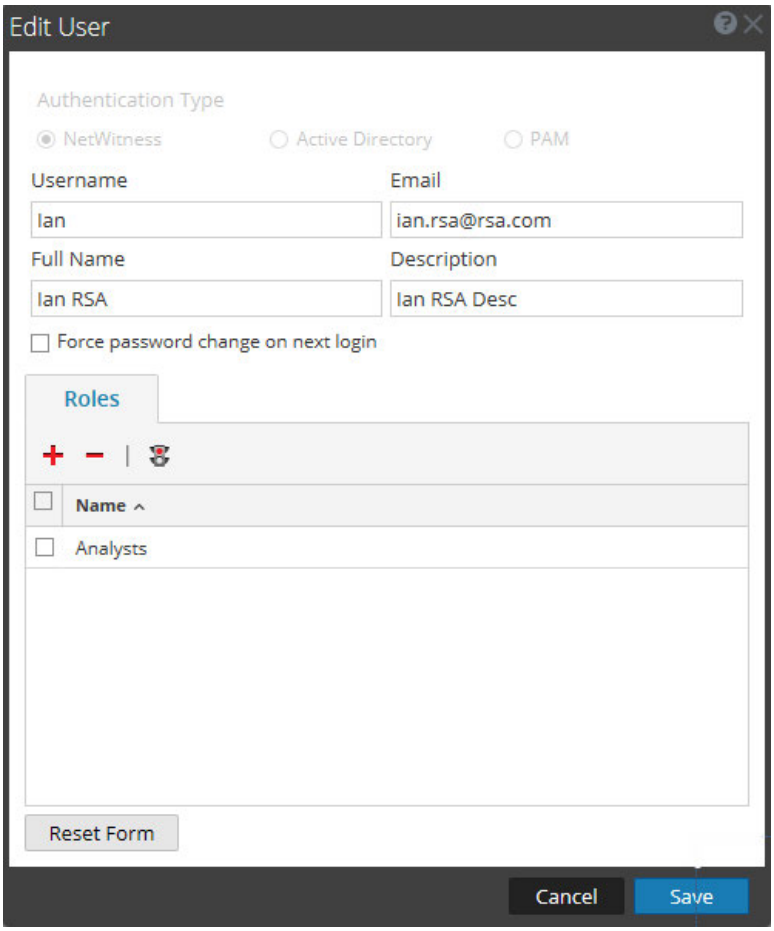
Add User Dialog

This is the Add User dialog for an internal user.



Edit User Dialog

This is the Edit User dialog for an internal user.



The Add User and Edit User dialogs show:

- Authentication type
- User information
- Roles to which the user belongs

User Information

The following table provides descriptions of the user information.

Field	Description
Authentication Type	The authentication type for the user. Default selection is NetWitness, which designates an internal user. Options for external users are Active Directory and PAM. This field is disabled when editing a user.
Username	Username for the NetWitness Suite user account.

Field	Description
Full Name	Name of the user.
Password	(Add User dialog only) Password to log on to NetWitness Suite.
Confirm Password	(Add User dialog only) Password confirmation for adding the user password.
Email	Email address of the user.
Description	(Optional) Description of the user.
Force password change on next login	Expires the user password the next time the user logs on to NetWitness Suite. This field applies only to internal users. This does not affect any active user sessions. The appears in the user row to show that the user password expired. After a password is expired, you cannot undo it. This checkbox is cleared the next time you edit the user account.
Reset Form	Removes any changes in process.

Roles Tab

The following table provides descriptions of the Roles tab options. The Roles tab shows the roles that are assigned to the user.

Option	Description
	Opens the Add Role dialog that lists roles you could assign to the user.
	Removes the selected role from being assigned to the user.
	Shows permissions for the selected role.
Name	Lists each role assigned to the user.

Roles Tab

This topic introduces the functions of the Admin > Security view > Roles tab.

Roles are assigned to all NetWitness Suite users. Users receive the permissions the roles allow. In the Roles tab you can create, duplicate, edit and delete a role. You can also see a list of all roles and their respective permissions.

What do you want to do?

Role	I want to ...	Show me how
Admin	View preconfigured roles	Step 1. Review the Pre-Configured NetWitness Roles
Admin	Create a new role	Step 2. (Optional) Add a Role and Assign Permissions

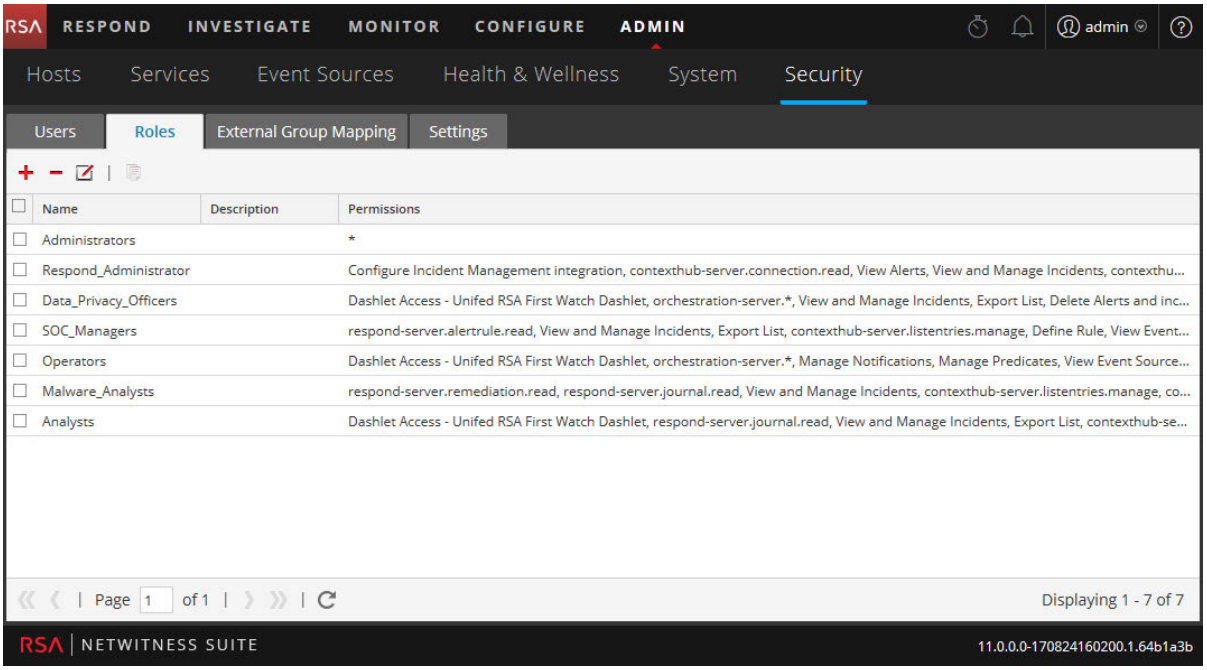
Related Topics

- Add or Edit Role Dialog

To access this view:

1. Go to **ADMIN > Security**.
   The Security view opens to the **Users** tab by default.

2. Click the **Roles** tab.



The Roles tab consists of the Roles list with a toolbar at the top.

The following table describes the toolbar features.

Feature	Description
+	Displays the Add Role dialog.
	Displays the Edit Role dialog.
−	Displays a warning message, and asks for confirmation that you want to delete a role.
	Duplicates a role to save with a different name.

The following table describes the roles list features.

Column	Description
Name	Displays the name of a role that can be given to a user.
Description	Displays a description of the role.
Permissions	Displays the permissions assigned to the role.

Add or Edit Role Dialog

This topic introduces the Add Role and Edit Role dialogs accessible from the Admin > Security view > Roles tab.

In the Add Role and Edit Role dialogs, you can add or edit a role and the permissions assigned to it. You can also specify the query-handling attributes for role members to lock down the information that they can retrieve. The structure of these dialogs is the same. The only difference is that you either add a new role or modify an existing role.

When you change permissions for a role, the change is immediately applied to users who are assigned the particular role after the role is saved.

What do you want to do?

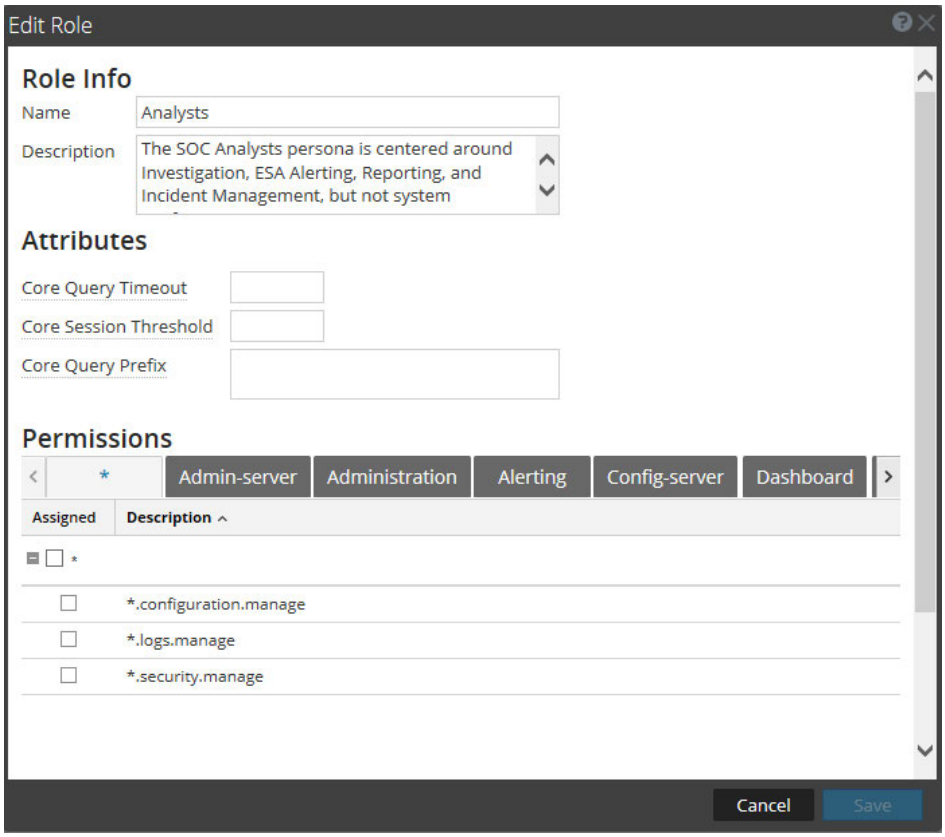
Role	I want to ...	Show me how
Admin	View preconfigured roles	Step 1. Review the Pre-Configured NetWitness Roles
Admin	Create a new role	Step 2. (Optional) Add a Role and Assign Permissions
Admin	Edit a role	Step 2. (Optional) Add a Role and Assign Permissions
Admin	Delete a role	Step 2. (Optional) Add a Role and Assign Permissions

To access this view:

1. In NetWitness Suite, go to **ADMIN > Security**.
   The Security view opens to the **Users** tab by default.
2. Click the **Roles** tab.
3. Do one of the following:
   - In the action bar, click .
     The **Add Role** dialog is displayed.

- Select a role and in the action bar, click .

  The **Edit Role** dialog is displayed.



The Add Role and Edit Role dialogs include three sections: **Role Info**, **Attributes**, and **Permissions**.

Role Info

This is the information in the **Role Info** section.

Feature	Description
Name	The name of the user role.
Description	An optional description of the user role.

Attributes

This is the information in the **Attributes** section. A value shown in italics indicates a default value, for example, *5*. A value shown without italics indicates a change from the default value, for example, `1200`. Step 3. Verify Query and Session Attributes per Role provides more information.

Feature	Description
Core Query Timeout	(Optional) Specifies the maximum number of minutes that a user can run a query. The default value is 5 minutes. This timeout only applies to queries performed from Investigation. If this value is set, it must be zero (0) or greater. A value of zero represents no timeout. When migrating to NetWitness Suite 10.5 and later, if there is no value set in the roles, 5 minutes is set by default. **Note:** NetWitness Suite 10.5 and later Core services use this field.
Core Session Threshold	Controls how the service scans meta values to determine session counts. This value must be zero (0) or greater. If this value is greater than zero, a query optimization will extrapolate the total session counts that exceed the threshold. When the meta value returned by the query reaches the threshold, the system will: • Stop its determination of the session count • Show the threshold and percentage of query time used to reach the threshold The default value is `100000`. The limit you specify here overrides the **Max Session Export** value defined in the INVESTIGATE view settings.
Core Query Prefix	(Optional) Filters query results to restrict what the role members see. By default, this is blank. For example, the `'service' = 80` query prefix prepends to any queries run by the user and the user can only access meta of HTTP sessions.

Permissions

This is the information in the **Permissions** section. Role Permissions describes the permissions.

Feature	Description
Module tabs	There are eight tabs, one for each module: Administration, Alerting, Incidents, Investigation, Live, Malware, Reports, and Dashboard. Each tab lists the permissions for a module.
Description column	List of all permissions for the module.
Assigned column	Checkbox that indicates if a module permission is assigned to the role.
Save	Saves the role with the selected permissions assigned to it.
Cancel	Cancels any work and closes the dialog.

External Group Mapping Tab

If you set up external user authentication, you can map NetWitness Suite user roles to an external group. The External Group Mapping tab provides information about each external group to which you have mapped roles.

What do you want to do?

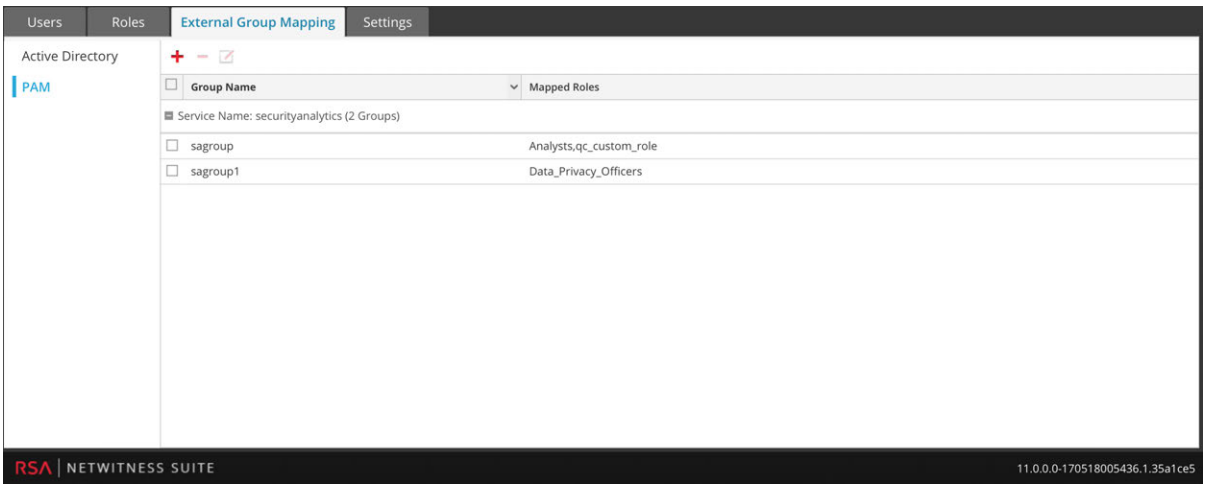
Role	I want to ...	Show me how
Admin	Map a role to an external group	Step 5. (Optional) Map User Roles to External Groups
Admin	Search for an external group	Search for External Groups

Related Topics

- Add Role Mapping Dialog
- Search External Groups Dialog

To access this view:

1. In NetWitness Suite, go to **ADMIN > Security**.
   The Security view is displayed with the **Users** tab open.
2. Click the **External Group Mapping** tab.



The External Group Mapping tab consists of a toolbar and list.

The list has the following features.

Feature	Description
Group type	In the column on the left, click either **Active Directory** or **PAM** to show groups for the selected type.
Selection box	In a row, toggles selection of a group name. In the title bar, toggles selection of all group names.
Group Name	Displays the name of the external group that has access to NetWitness Suite.
Mapped Roles	Displays the NetWitness Suite roles mapped to the external group.

The **toolbar** has the following features.

Feature	Description
	Displays the Add Role Mapping dialog in which you can select an external group and map it to a NetWitness Suite role.
	Displays a warning message and asks for confirmation to remove all NetWitness Suite roles mapped to the external group.
	Displays the Edit Role Mapping dialog in which you can add or remove NetWitness Suite roles from the external group.

Add Role Mapping Dialog

This topic introduces the features of the Admin >Security > External Group Mapping tab > Add Role Mapping dialog.

In NetWitness Suite each user role has its own set of permissions. You can map one or more NetWitness Suite roles to an external group, which grants the group the same set of permissions that each role has.

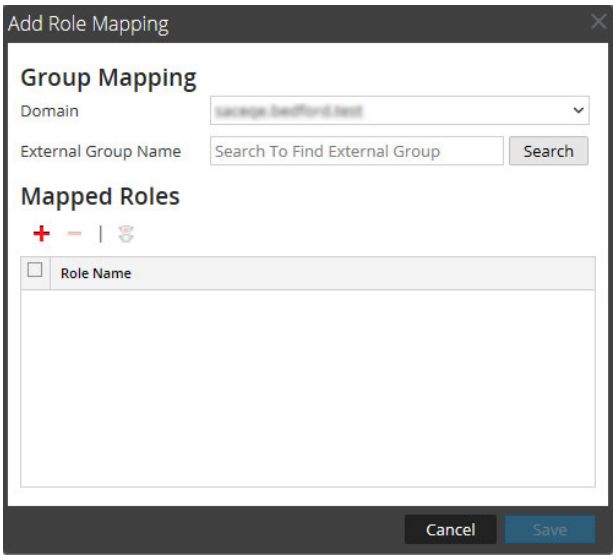
What do you want to do?

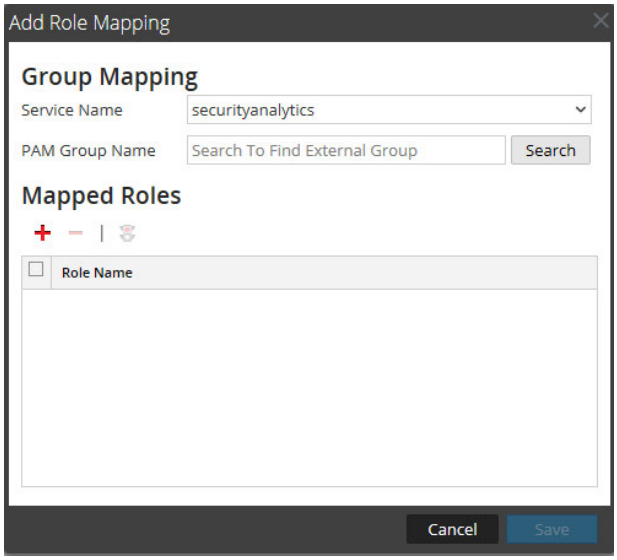
Role	I want to ...	Show me how
Admin	Map a role to an external group	Step 5. (Optional) Map User Roles to External Groups
Admin	Search for an external group	Search for External Groups

To access this dialog:

1. In NetWitness Suite, go to **ADMIN > Security**.
2. Click the **External Group Mapping** tab.
3. In the toolbar, click +.

   The **Add Role Mapping** dialog for the external authentication method you set up is displayed.





The Add Role Mapping and the Edit Role Mapping dialogs are nearly identical. The only difference is that you cannot search in the Edit Role Mapping dialog.

Group Mapping

The **Group Mapping** section has the following features.

Feature	Description
Domain	Displayed if you set up Active Directory for external user authentication.The domain name of the external AD group to which roles are mapped.

Feature	Description
External Group Name	Displayed if you set up Active Directory for external user authentication.The external group to which roles are mapped.
PAM Group Name	Displayed if you configured PAM for external user authentication. The name of the external group to which roles are mapped.
Search	Displays a search dialog in which you can search for external groups. Search is not available in the Edit Role Mapping dialog.

Mapped Roles

The **Mapped Roles** section has the following features.

Feature	Description
+	Opens the Add Role dialog, in which configured NetWitness Suite user roles to add are listed.
−	Removes selected roles from the Mapped Roles grid.
Name	Displays the name of the NetWitness Suite user role.
Permissions	Displays the permissions associated with the NetWitness Suite user role.
Cancel	Cancels the new group mapping or changed group mapping and closes the dialog.
Save	Saves the new group mapping or changed group mapping and closes the dialog.

Search External Groups Dialog

This topic describes the features of the Admin > Security view > Search External Groups dialog.

If you set up external user authentication, you can map NetWitness Suite user roles to external groups. You search for external groups to select the groups to which you want to map NetWitness Suite roles.

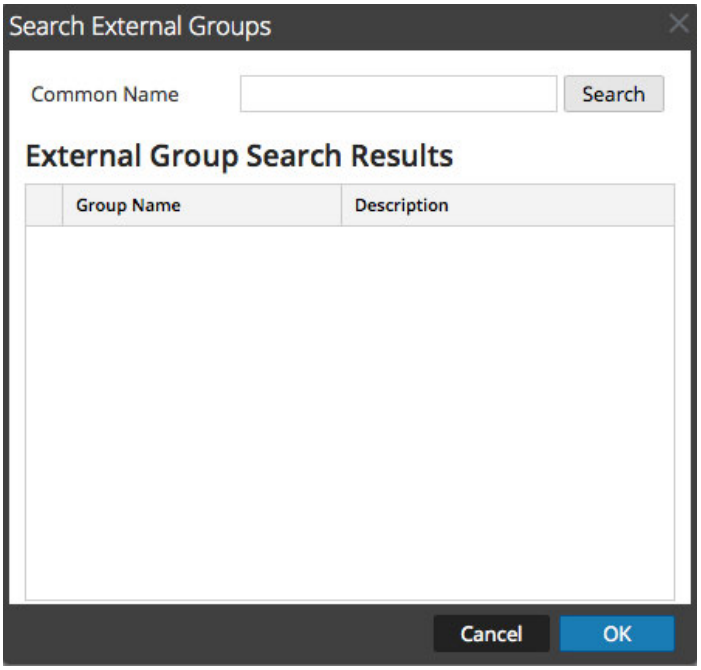
What do you want to do?

Role	I want to ...	Show me how
Admin	Map a role to an external group	Step 5. (Optional) Map User Roles to External Groups
Admin	View external group mappings	External Group Mapping Tab
Admin	Search for external groups	Search for External Groups

To access this dialog:

1. Go to **ADMIN > Security**.
   The Security view is displayed with the **Users** tab open.
2. Click the **External Group Mapping** tab.
3. In the toolbar, click +.
   The Add Role Mapping dialog for the external authentication method you set up is displayed.
4. In the Group Mapping section, select a **domain**.

5. In the Group Mapping section, click **Search**.
   The **Search External Groups** dialog is displayed.



The following table describes the features of the Search External Groups dialog.

Feature	Description
Common Name	Group name for which you are searching. Can be the exact name or can contain the wild card character (*) to match any character.
Group Name	External group to which you could map roles.
Description	Optional text about the group.
OK	Displays the Add Role Mapping dialog, showing the external group you selected.
Cancel	Closes the dialog.

Settings Tab

This topic explains the ADMIN > Security view > Settings tab. In the Settings tab, you configure password complexity for internal NetWitness Suite users and system-wide security parameters.

For information on configuring NetWitness Suite security, see Set Up System Security.

Password complexity requirements apply only to internal users and are not enforced for external users. External users rely on their own methods and systems to enforce password complexity.

What do you want to do?

Role	I want to ...	Show me how
Admin	Configure password complexity	Step 1. Configure Password Complexity
Admin	Configure system-level security settings	Step 3. Configure System-Level Security Settings
Admin	(Optional) Configure external authentication	Step 4. (Optional) Configure External Authentication

Related Topics

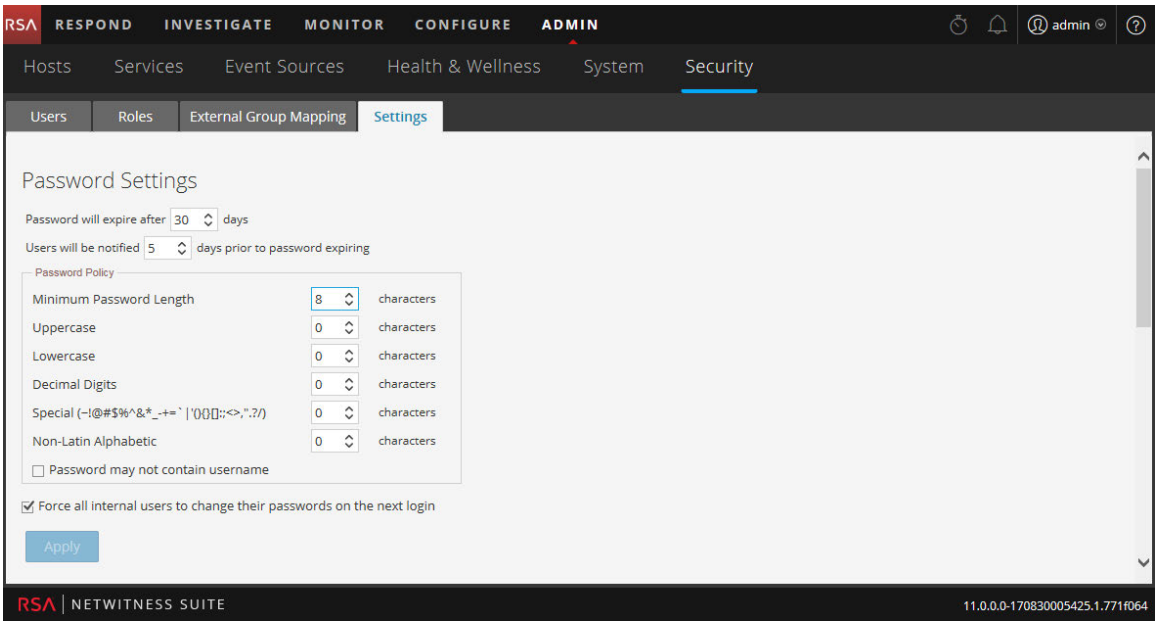
- Set Up System Security

Admin Security View Settings Tab

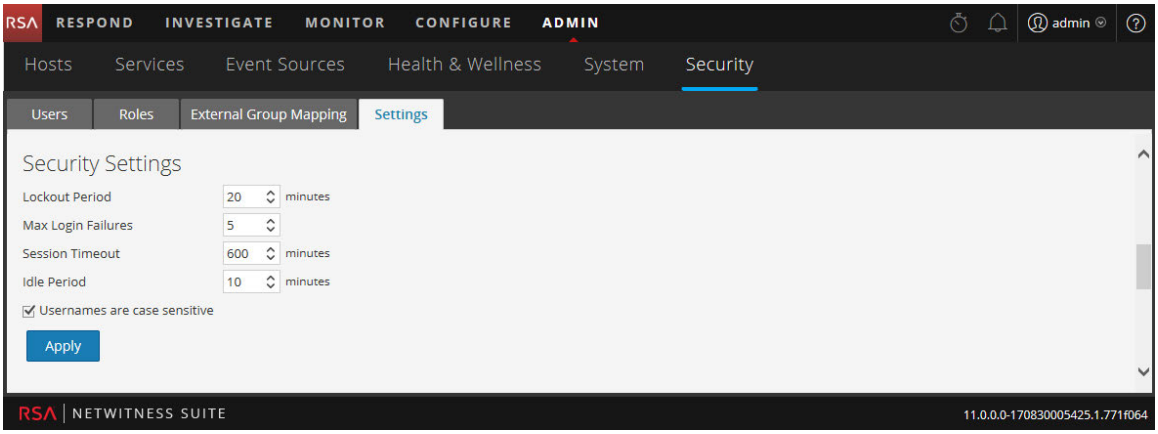
To access the Settings tab:

1. Go to **ADMIN > Security**.
   The Security view is displayed with the **Users** tab open.
2. Click the **Settings** tab.

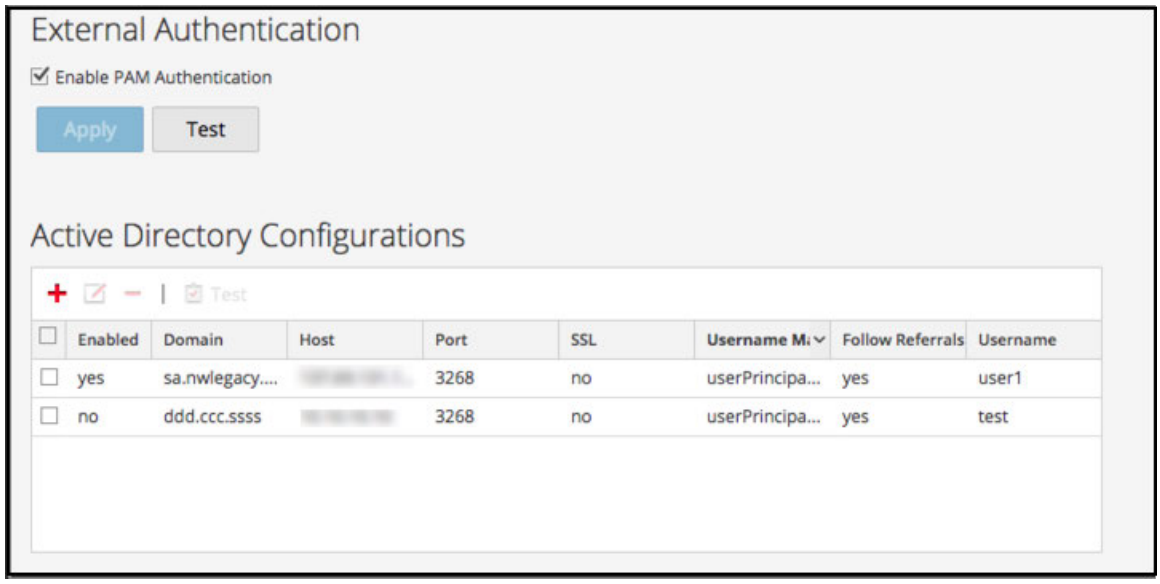
The following figure shows the Password Settings section of the Settings tab.



The following figure shows the Security Settings section of the Settings tab.



The following figure shows the PAM Authentication and Active Directory Configurations sections of the Settings tab.



Password Settings

The Password Policy section enables you to configure password complexity requirements for internal NetWitness Suite users when they set their passwords.

Option	Description
Password will expire after <n> days	The default number of days before a password expires for all internal NetWitness Suite users. A value of zero (0) disables password expiration. For new installations, the default value is 30. For upgrades, the previous value will migrate automatically to the upgraded installation.
Users will be notified <n> days prior to password expiring	The number of days before the password expiration date, to notify a user that their password is about to expire. Users receive a one-time email on the specified date before their passwords expire. They also see a Password Expiration Message dialog when they log on to NetWitness Suite. The minimum value is 1 day.
Minimum Password Length	Specifies a minimum password length requirement for NetWitness Suite user passwords. A minimum password length prevents users from using short passwords that are easy to guess.

Option	Description
Uppercase	Specifies a minimum number of uppercase characters for the password. This includes European language characters A through Z, with diacritic marks, Greek characters, and Cyrillic characters. For example: • Cyrillic uppercase: Д Ц • Greek uppercase: Π Λ
Lowercase	Specifies a minimum number of lowercase characters for the password. This includes European language characters a through z, sharp-s, with diacritic marks, Greek characters, and Cyrillic characters. For example: • Cyrillic lowercase: д ц • Greek lowercase: π λ
Decimal Digits	Specifies a minimum number of decimal characters (0 through 9) for the password.
Special (~!@#$%^&*_-+=`|'(){}[]:;<>,".?/)	Specifies a minimum number of special characters for the password: `~!@#$%^&*_-+=`|'(){}[]:;<>,".?/`
Non-Latin Alphabetic	Specifies a minimum number of Unicode alphabetic characters that are not uppercase or lowercase. This includes Unicode characters from Asian languages. For example: • Kanji (Japanese): 頁 (leaf) 栞 (tree)
Password May Not Contain Username	Specifies that a password cannot contain the case-insensitive username of the user.

Option	Description
Force all internal users to change their passwords on the next login	Forces all internal users to change their passwords the next time they log on to NetWitness Suite instead of when they create or change their passwords. Note that this setting is checked by default.
Apply	Password strength settings take effect when NetWitness Suite users create or change their passwords. If **Force all internal users to change their passwords on the next login** is selected, all internal users must change their password the next time they log on to NetWitness Suite.

Security Settings

The Security Settings section enables you to configure global security settings for NetWitness Suite users.

Option	Description
Lockout Period	Number of minutes to lock a user out of NetWitness Suite after the configured number of failed logins is exceeded. The default value is 20 minutes.
Max Login Failures	The maximum number of unsuccessful login attempts before a user is locked out. The default value is 5
Session Timeout	The maximum duration of a user session before timing out in minutes. The default value is 600. If the value is 0, there is no maximum time for a session. If the value is a positive integer, the session times out when the configured time has elapsed. The user must log in again.
Idle Period	Number of minutes of inactivity before a session times out. The default value is 10. If the value is 0, the session will not timeout.
Usernames are case sensitive	Select this option if you want the Username field on the NetWitness Suite login screen to be case sensitive. For example, if usernames are case sensitive, you could use admin to log on to NetWitness Suite, but you could not use Admin.

Option	Description
Apply	Makes the settings become effective immediately.

PAM Authentication

The PAM Authentication section enables you to configure NetWitness Suite to use Active Directory or PAM to authenticate and test external user logins.

Option	Description
Enable PAM Authentication	Allows NetWitness Suite to use Pluggable Authentication Modules (PAM) to authenticate external user logons.
Apply	Makes the PAM configuration settings become effective in the next logon.
Test	Prompts for a username and password, then tests the currently enabled PAM authentication method.

Active Directory Configurations

The Active Directory Configuration section enables you to configure NetWitness Suite to use Active Directory to authenticate external user logins.

Option	Description
Enabled	Enables Active Directory authentication for NetWitness Suite users.
Domain	Domain name where the Active Directory Service is located.
Host	Host name or IP address where the Active Directory Service is located.
Port	Port on the host that is used for Active Directory Service authentication.
SSL	Indicates whether the Active Directory Service uses Secure Sockets Layer (SSL). To enable SSL so that your Active Directory Service can communicate with NetWitness Suite version 11.1 and later, you must upload an Active Directory server certificate.
Username Mapping	Indicates the Active Directory search field to use for username mapping. You can specify userPrincipalName (UPN) or sAMAccountName.

Option	Description
Follow Referrals	Indicates whether NetWitness Suite will follow LDAP referrals made by Active Directory.
Username	If Username is provided here, it binds to the Active Directory Service while searching Active Directory groups. This credential is not used for any other purpose.

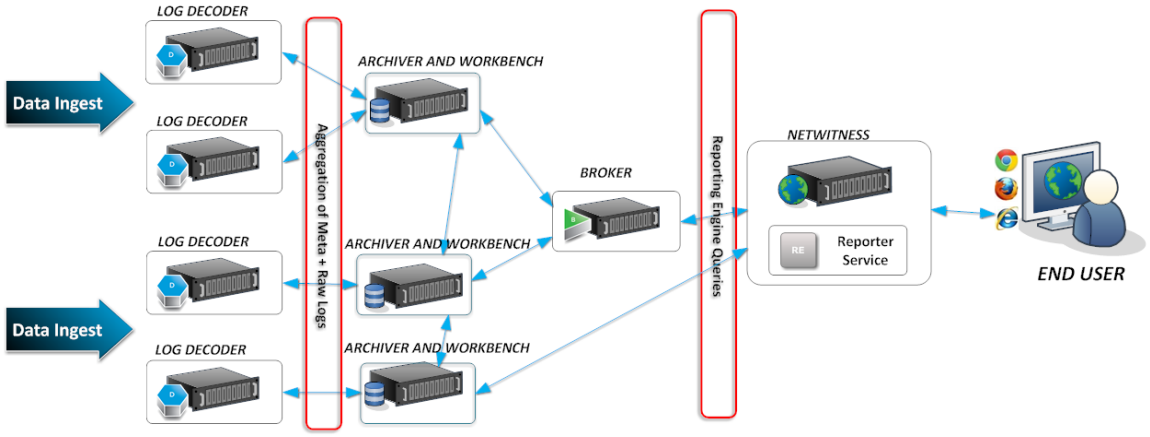
Troubleshooting 33

Workbench Overview

The NetWitness Suite Workbench service allows collections to be created with restored data that was saved offline from an Archiver. Once the data has been copied and saved into a collection, it can be analyzed from Investigation and Reporting.

The following diagram depicts the architecture of a NetWitness Suite network that implements the Workbench.

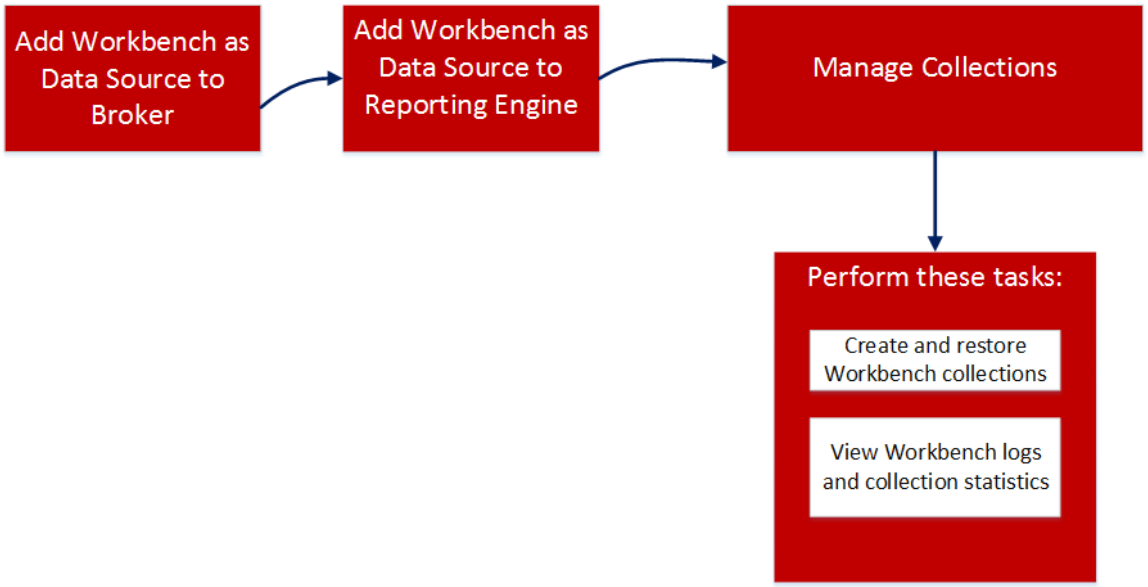


Workbench Configuration Procedures

Note: While NetWitness Suite 11.1 continues to support the Workbench, and some customers may have configured Workbench to handle restoring of data, the best practice for restoring data is to use the Archiver. to configure archival and restoring of data, following the instructions provided in the *Archiver Configuration Guide*.

Workflow

These are the basic steps for configuring and managing a Workbench service.



1. Add a Workbench service as a data source to Broker (see Adding Workbench Service as a Data Source to Broker).
2. Add a Workbench service as a data source to Reporting Engine (see Adding Workbench as a Data Source to Reporting Engine
3. Manage collections on a Workbench service (see Managing Collections).
4. Investigate a Workbench (see Managing Collections).

Prerequisites

Before configuring the Workbench service, you must:

- Add the NetWitness Suite workbench service to the host in your network environment. (Refer to Workbench Overview.)
- Install the NetWitness Suite Workbench host in your network environment. For more information, refer to the *Host and Services Getting Started Guide*.

The steps to configure the Workbench service are:

1. Adding Workbench Service as a Data Source to Broker
2. Adding Workbench as a Data Source to Reporting Engine

When configuration is complete, you can create and manage collections as described in Managing Collections.

Adding Workbench Service as a Data Source to Broker

Prerequisites

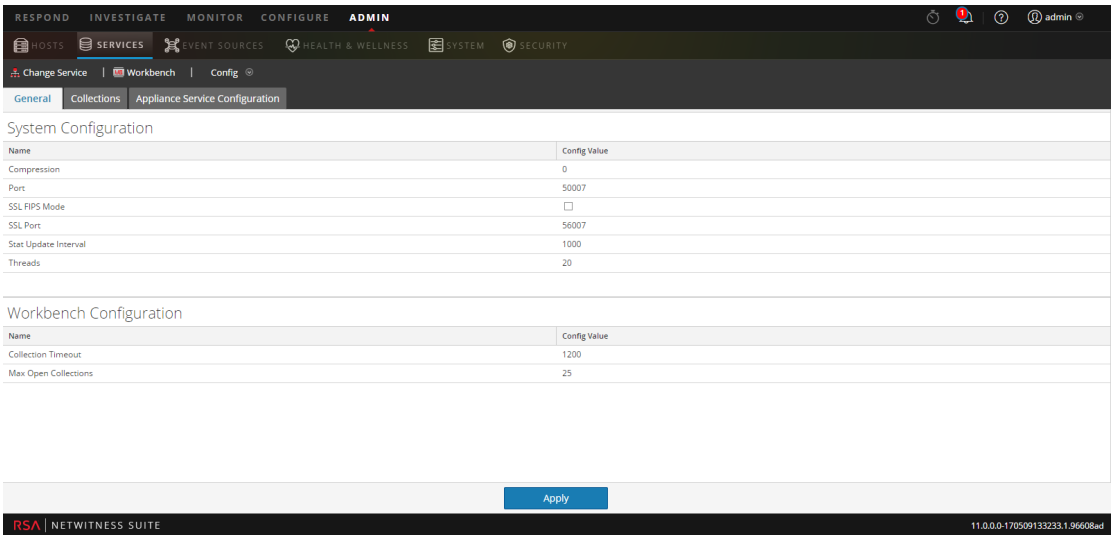
Before adding the Workbench service, you must:

- Install the Workbench service on the Archiver appliance.
- Add a collection on the workbench service.

To add the Workbench service as a data source on the Broker:

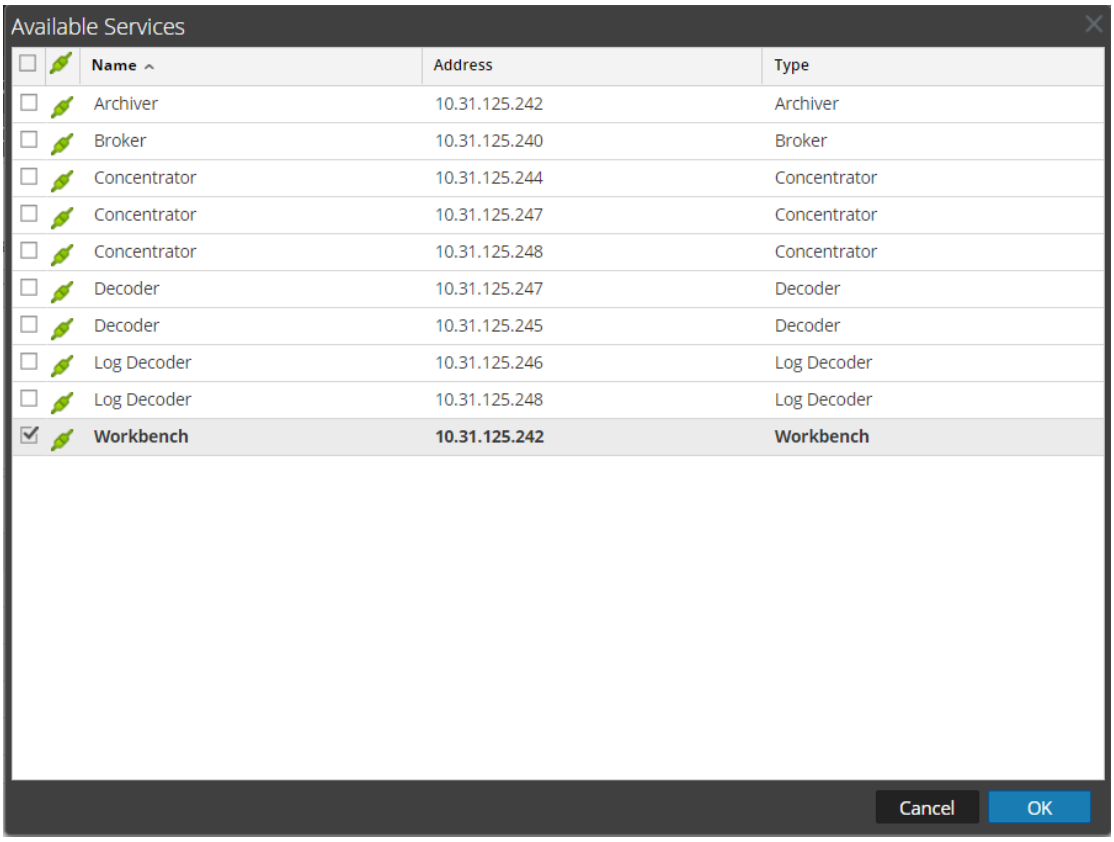
1. Go to **ADMIN >Services**.
2. Select a Broker service, and select **> View > Config.**

   The Service Config view is displayed.

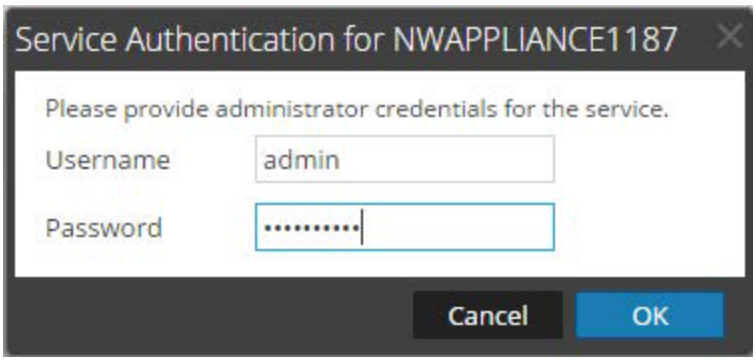


3. Select the **General** tab.
4. Click and select **Available Services**.

   The Available Services dialog is displayed.

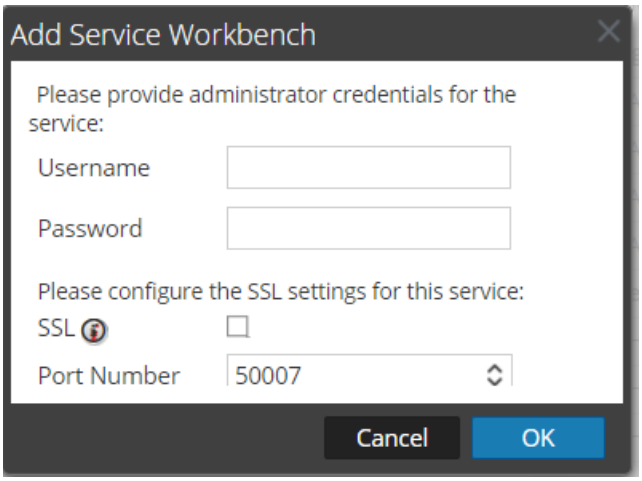


5. Select the Workbench service and click **OK**.
6. If the Workbench service is using a Trust Model, a Service Authentication dialog for the selected service is displayed.



7. Type the username and password for admin credentials for the service and click **OK**.

   The Add Service Workbench dialog is displayed.



8. Type the username and password for admin credentials for the service and click **OK**.

   The workbench service is now added as a data source to the Broker and is listed in the NWDATA Sources list.

Note: This procedure has to be performed for each collection.

Adding Workbench as a Data Source to Reporting Engine

Prerequisites

These are the tasks required before adding the Workbench as a data source to Reporting:

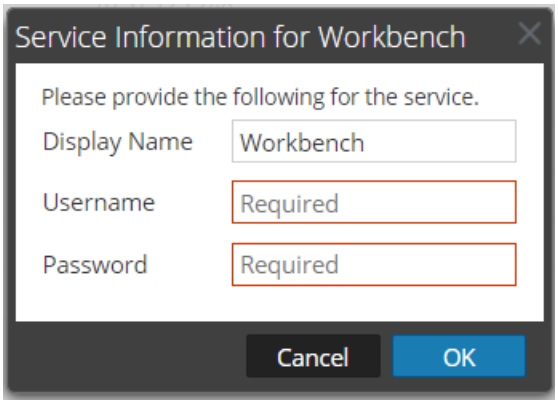
1. Add the Reporting Engine as a service to your NetWitness Suite deployment.
2. Add the Workbench as a service to your NetWitness Suite Archiver host (if not already installed).

Note: Adding Workbench collections as a data source to Reporting Engine depends on a trusted connection. If the Workbench is established with a trusted connection, you must manually add Workbenchcollections as a source to the Reporting Engine.

To associate the Workbench data source with the Reporting Engine:

1. Go to **ADMIN > Services**.
2. Select a **Reporting Engine** in the Services grid. Select **View > Config**.
3. Switch to the **Sources** tab.
4. Select .
5. Select **Available Services**. Select a Workbench service in the Available Services dialog.
6. Click **OK**.

   The Service Information dialog is displayed.



7. Enter User Name and Password.

- Required if the Workbench service is Trusted.
- Optional if the Workbench service is not trusted (added manually).

8. Click **OK**.
9. Select **Collection** in Add a Collection from Workbench dialog.
10. Click **OK**.

Result

You can now create reports on the data collected by the Workbench.

Managing Collections

An Administrator can create and delete Workbench collections and view Workbench statistics and logs. This topic provides all of these procedures and an example procedure for restoring a collection for Reporting and Investigation.

- Mount Archiver Directories
- Create a Collection
- Delete a Collection
- Investigate a Collection
- View Workbench Collection Statistics
- View Workbench Logs

Mount Archiver Directories

If data is in offline storage or cold-tier storage, you need to mount the Archiver directories in order to restore the data for reporting and investigation purposes:

1. Go to **ADMIN > Services**.
2. Select an **Archiver** from the Services grid and select **> View > Explore**.
   The Explorer view for the Archiver is displayed
3. Right-click on the **Database** node in left-hand tree and select **Database** properties to open them in the right-hand panel.
4. Run the **manifest** command for a time range, for example, 2017-April-01 to 2017-April-10.
   The search returns all files that need to be restored for the selected query.

Create a Collection

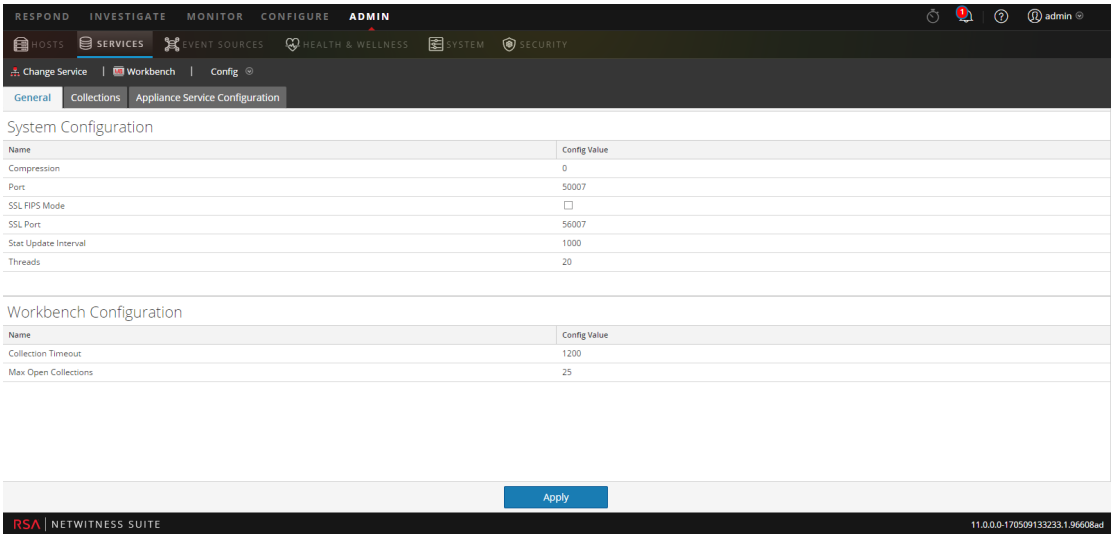
Administrators can create collections of restored data from a backup or from an existing set of data.

Note: You can point the source path to the location of the database files and the restore command copies them to the workbench. You need to mount those directories to the Archiver (where the Workbench is installed) before a restoration collection can be created.

To create a collection using data restored from the backed up data or existing subset of data:

1. Go to **ADMIN> Services.**
2. In the Services view, select a **Workbench**, then select **> View > Config**.

   The Services Config view is displayed with the General tab open.

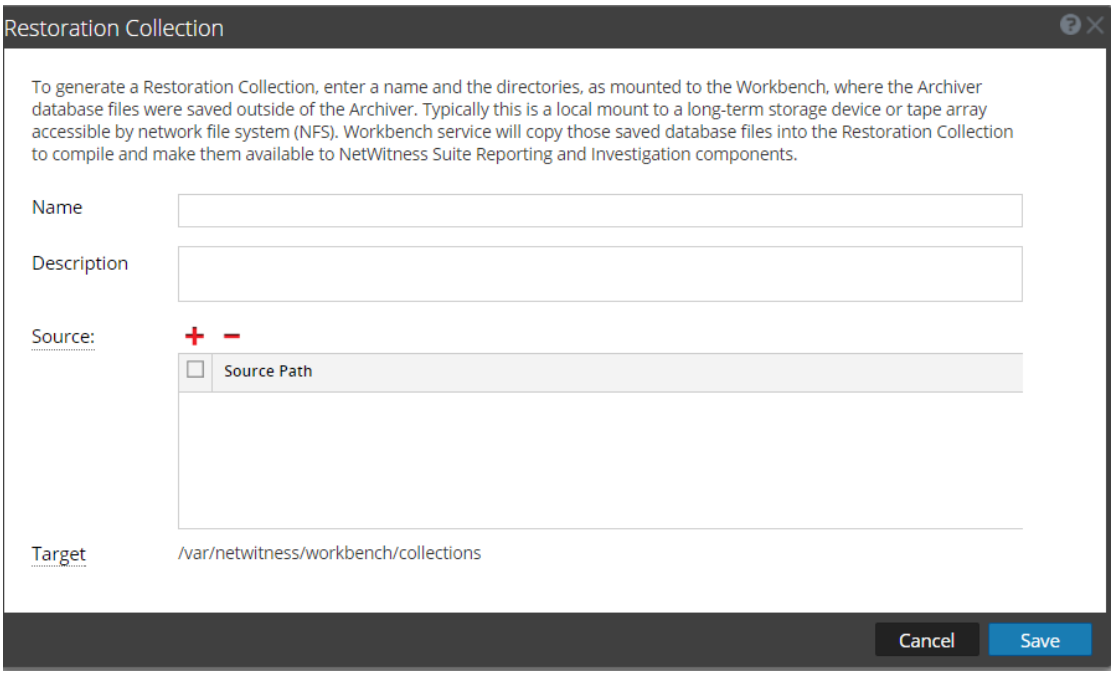


3. Click the **Collections** tab.

   The Collections grid is displayed.

4. Click in the toolbar.

   The Restoration Collection dialog is displayed.



5. Provide the following information:

- **Name:** Name of the Workbench collection that you want to restore.
- **Source:** Location where the Archiver database files have been moved from cold storage.

Note: Target is the location where the collection is created.

6. Click **Save** to restore the collection.

Note: If the source path provided to create the restoration collection does not exist, the following error message is displayed:

```
The source path does not exist '/xxx/xxx/'.
```

If there is insufficient storage to restore your collection, the following error is displayed:

```
Error during disk space checking. Insufficient disk space in
location '/xxx/xxx'.
```

The Schedule Job dialog is displayed with the following message:

```
Restoring data into a new collection. Check the jobs page for
progress.
```

7. Click the **Jobs** icon in the NetWitness Suite toolbar to expand the list of restoration collection jobs with their current status.

Note: Restoring a collection that is larger than 550 GB may take several hours to process.

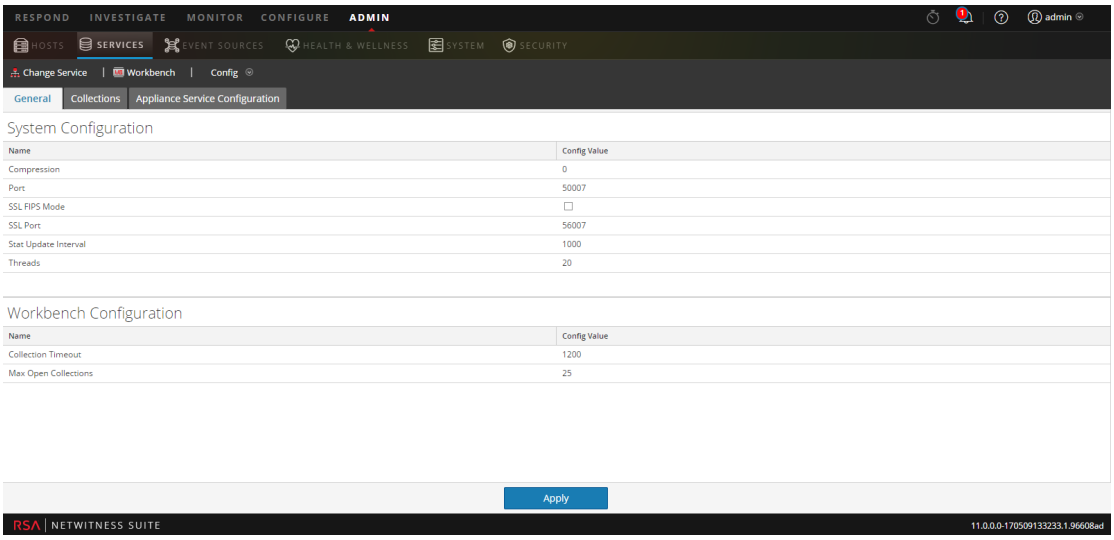
Delete a Collection

Administrators can delete collections from the Workbench service.

Perform the following steps to delete a collection:

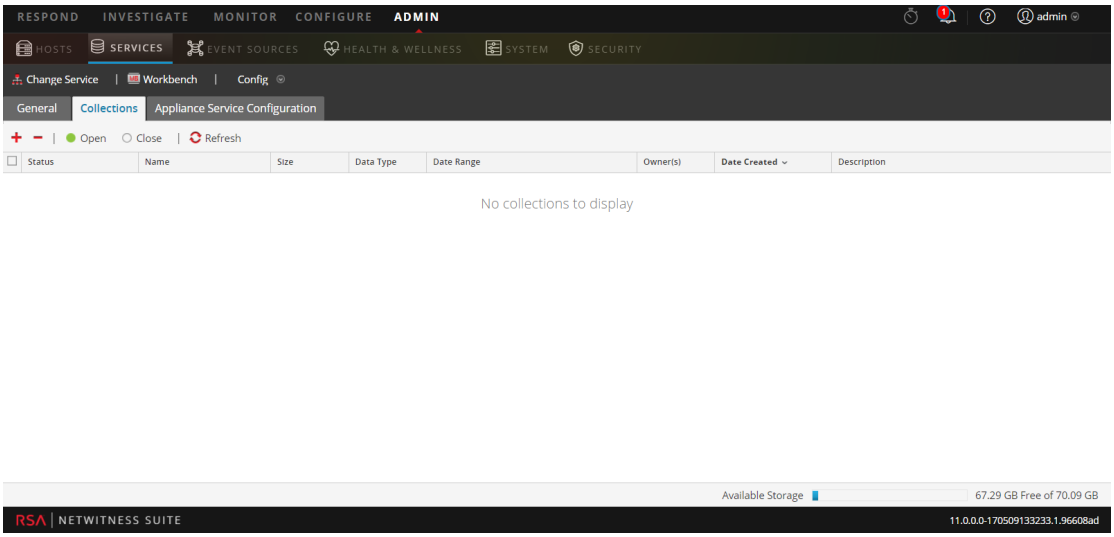
1. Go to **ADMIN > Services.**
2. From the Services view, select a **Workbench** and click **> View > Config**.

   The Services Config view opens with the General tab displayed.



3. Select the **Collections** tab.

   The Collections grid is displayed.



4. In the Collections grid, select the collection that you want to delete.
5. Click − from the toolbar.

   A warning dialog requests confirmation.
6. If you want to delete the collection, click **Yes**.

   The collection is removed from the Workbench service.

Example Procedure: How to Restore a Collection for Reporting and Investigation

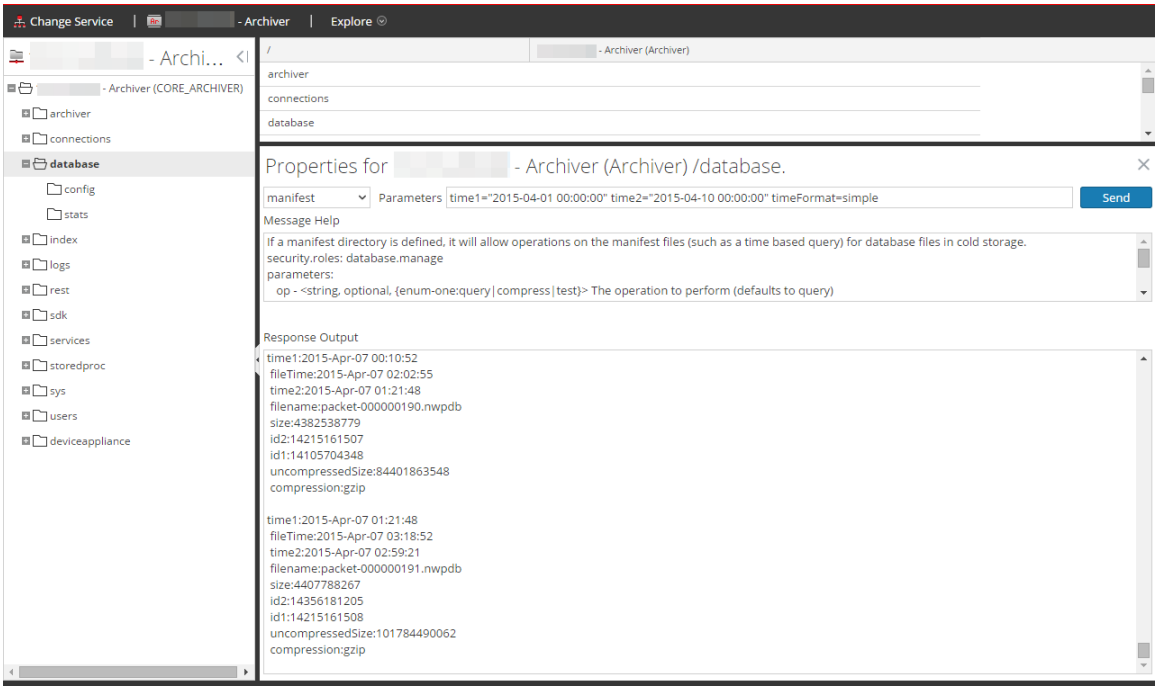
The following steps illustrate how to restore data for reporting and investigation purposes that is in offline storage or cold-tier storage. In the following example, data is restored for the time range beginning on 2015-April-01 through 2015-April-10.

To restore data for reporting and investigation purposes:

1. Go to **ADMIN > Services**.
2. Select the **Archiver** from the Services grid.
3. Navigate to the Explorer view of the Archiver appliance by selecting **> View > Explore**.
   The Explorer view for Archiver is displayed
4. Right click on **Database** node in left-hand tree and select **Database** properties to open them in the right-hand panel.
5. Run the **manifest** command for the selected time range 2015-April-01 to 2015-April-10.
   The search returns all files that need to be restored for your selected query.

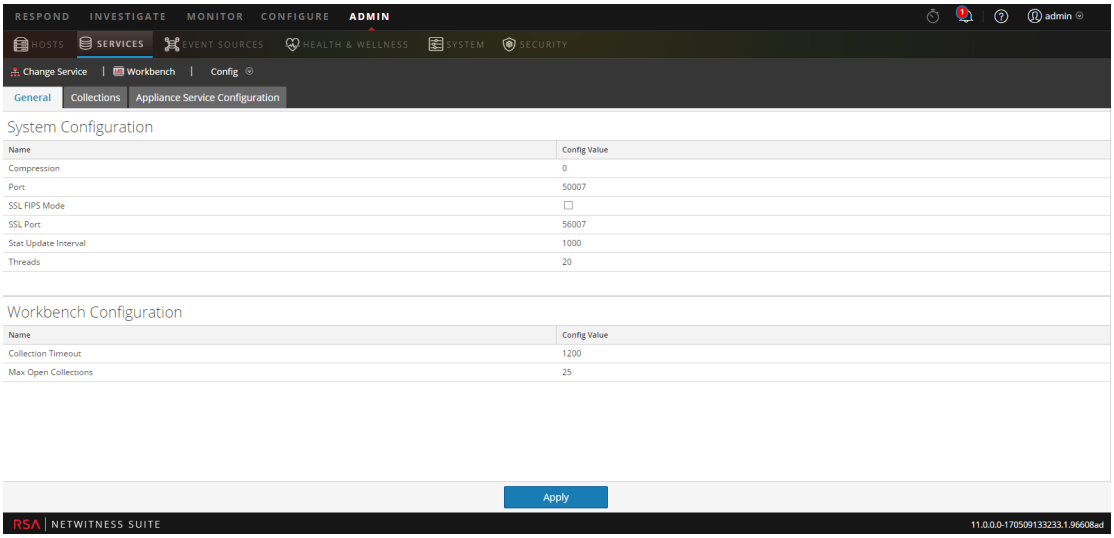
Example Search:

```
time1="2015-04-01 00:00:00" time2="2015-04-10 00:00:00"
timeFormat=simple
```



6. Go to **ADMIN > Services**.
7. In the Services view, select a **Workbench**, then select **> View > Config**.

   The Services Config view is displayed with the General tab open.



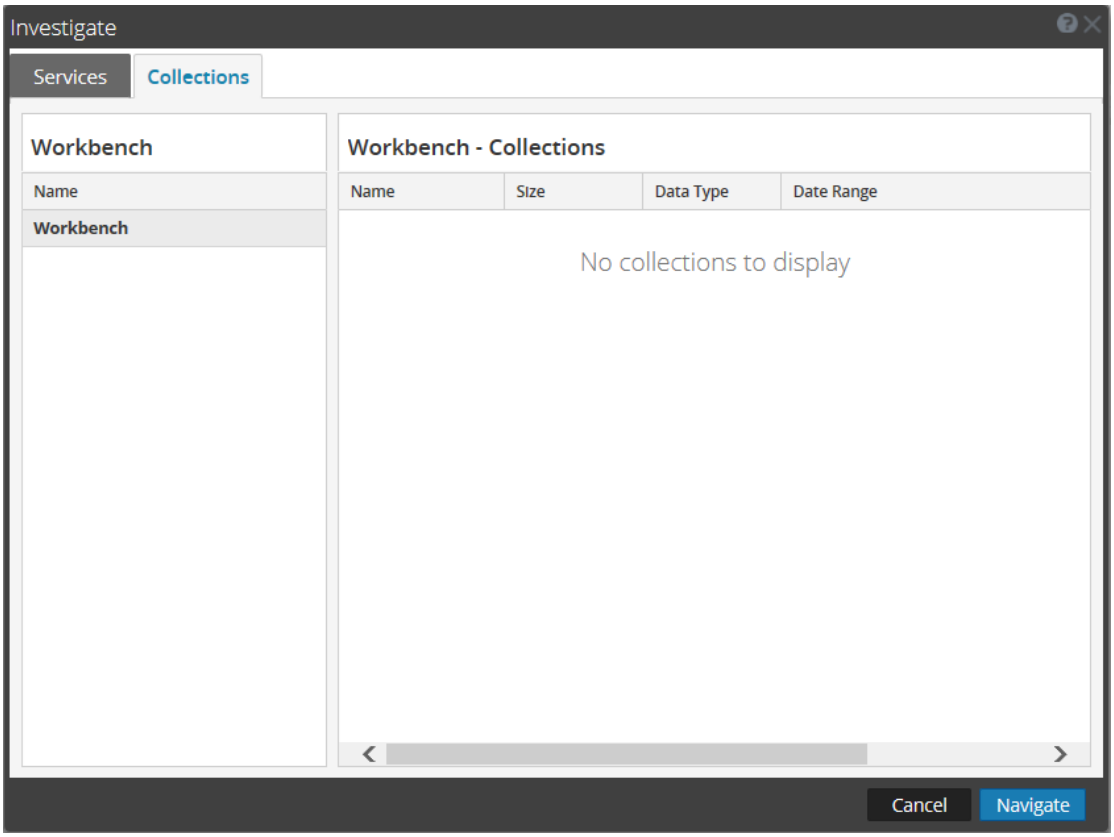
8. Select the **Collections tab.**
9. Create a restoration collection with the source path pointing to files listed in the manifest command output.
10. Save the collection.

    After successfully creating a collection, you can use this collection for reporting and investigation purposes.

Investigate a Collection

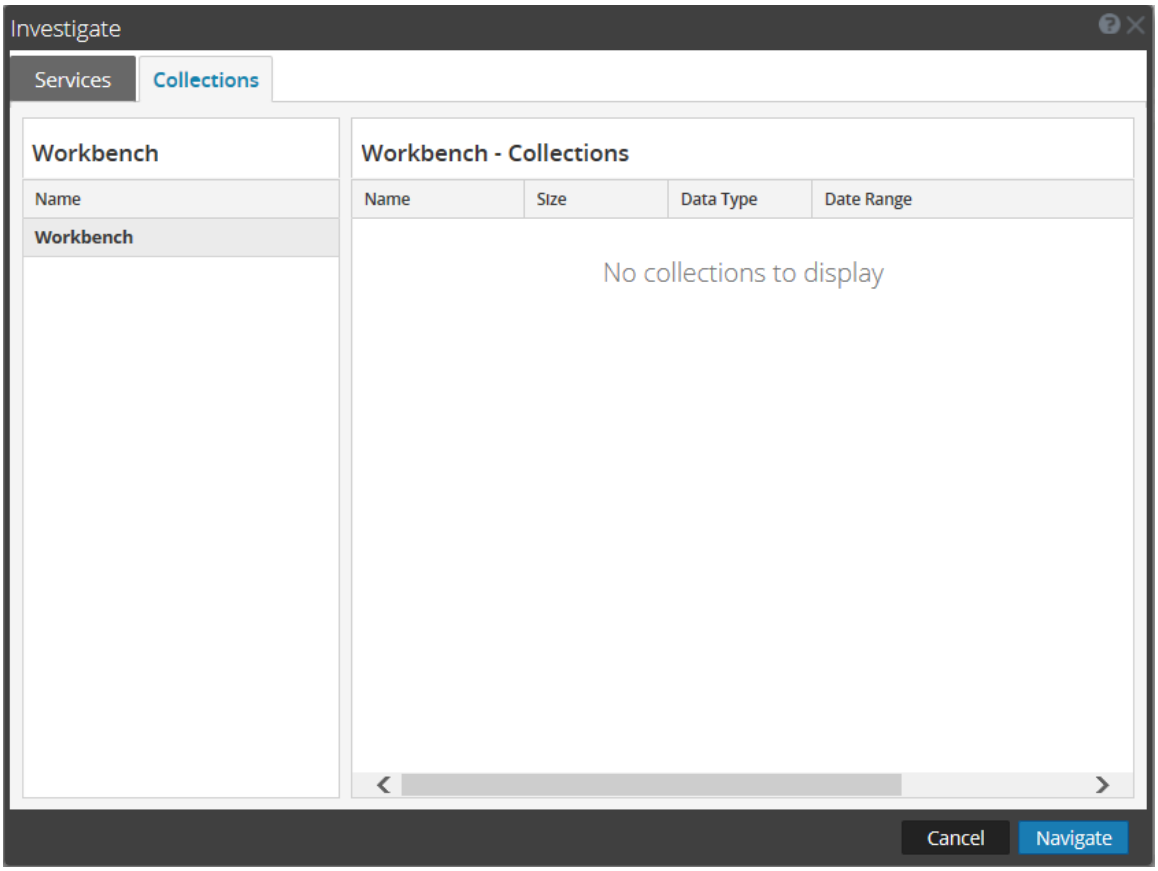
To perform an investigation on a workbench collection:

1. Select **Investigate**.
   The Investigate dialog is displayed.



2. Click the **Collections** tab in the Investigate dialog.
3. Select a Workbench service in the left panel.
4. Select the collection you want to investigate in the right panel.
5. Click **Navigate**.

The Navigate view is displayed showing data pertaining to the Workbench collection that you selected.



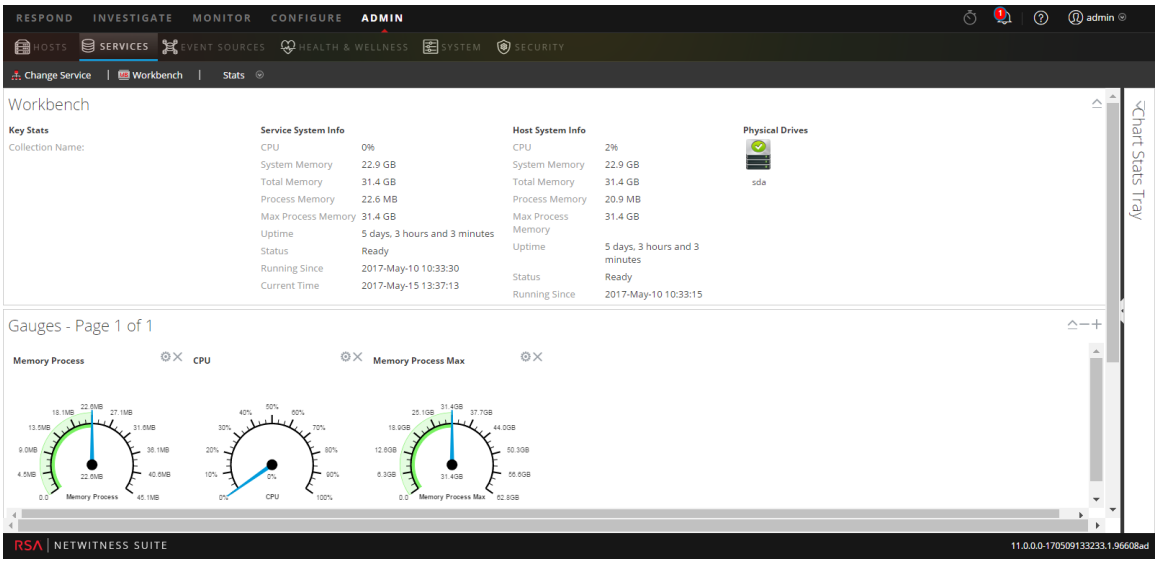
Note: For detailed information about using Investigation, see *Investigation and Malware Analysis Guide*.

View Workbench Collection Statistics

The same statistics available for other services are provided for the Workbench service. The Services Stats view displays key statistics and system information that pertain to your selected Workbench service. The information is displayed in several different sections within the Stats view: Workbench, Gauges, Timeline Charts and Chart Stats Tray. The Chart Stats Tray lists all available statistics for the Workbench. Any statistic in the Chart Stats Tray can be displayed in a gouge or a timeline chart.

Perform the following steps to view workbench statistics:

1. Go to **ADMIN > Services**.
2. In the Services view, select a **Workbench**, then select **> View > Stats**.
   The Services Stats view is displayed.



Note: For more information about Workbench statistics, see the *Host and Services Getting Started Guide*.

View Workbench Logs

Perform the following steps to view logs on a Workbench service:

1. Go to **ADMIN > Services.**
2. In the Services view, select a **Workbench**, then select **> View > Logs**.
   The Services Logs grid is displayed.

Note: For information about viewing and configuring audit logs, see the topic "Configure Global Audit Logging" in the *System Configuration Guide* .

References

Workbench Reference Topics:

- Services Config View - Workbench
- Services Config View - Collections Tab
- Services Config View - General Tab

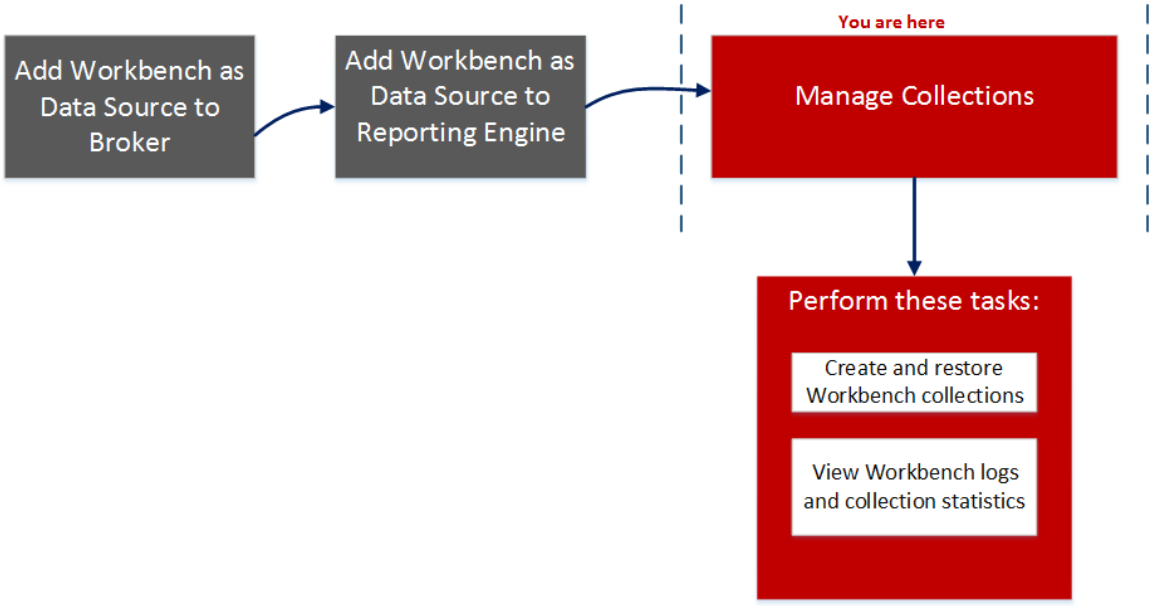
Services Config View - Workbench

In the Services Config view for workbench, some of the parameters are the same as other NetWitness Suite services, while others are specific to the Workbench service.

The Services Config view - Workbench (ADMIN > Services >, select Workbench service and select View > Config) provides a way to configure a Workbench service.

Workflow

These are the basic steps for configuring and managing a Workbench service.



What do you want to do?

Role	I want to...	Show me how...
Administrator	Add Workbench as data source to Broker	Adding Workbench Service as a Data Source to Broker
Administrator	Add Workbench as a Data Source to Reporting Engine	Adding Workbench as a Data Source to Reporting Engine
Administrator	*Create or delete a collection	Managing Collections

Role	I want to...	Show me how...
Administrator	*View Workbench statistics and logs	Managing Collections
Administrator	View configuration information about appliances that are connected to the Workbench service.	Select the **Appliance Service Configuration** tab. The Appliance Service Configuration tab is the same for all NetWitness Suite services. It provides configuration information about appliances that are connected to the Workbench service. For information on the **Appliance Service Configuration** tab, see **Appliance Service Configuration Tab** in the *Host and Services Getting Started Guide*.

*You can perform this task here.

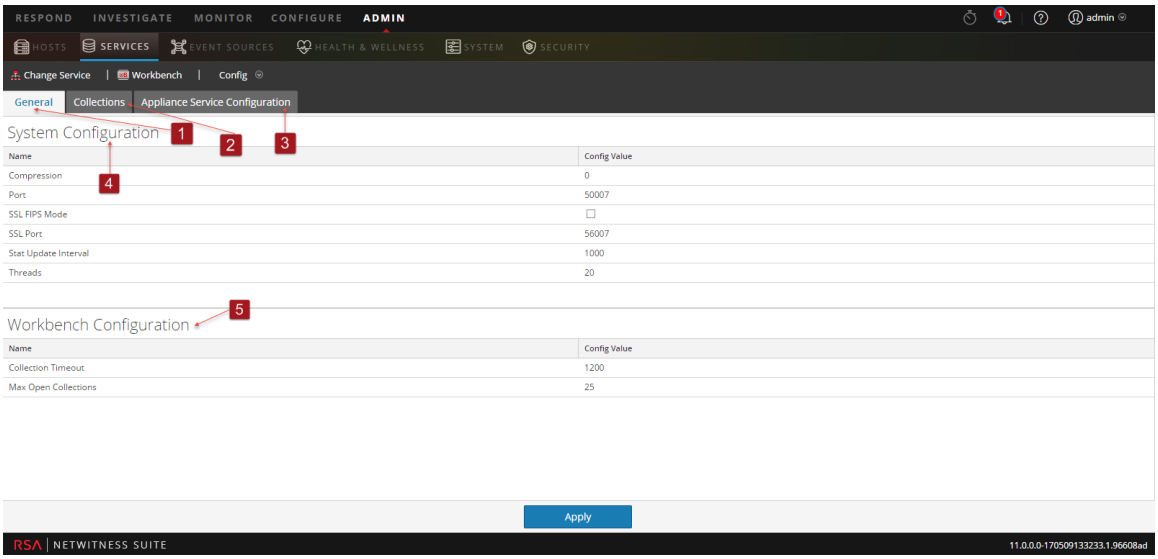
- Workbench Configuration Procedures

Quick Look

The Workbench service has three tabs and two panels in the Config view:

- General tab
- Collections tab
- Appliance Service Configuration tab
- System Configuration panel
- Workbench Configuration panel



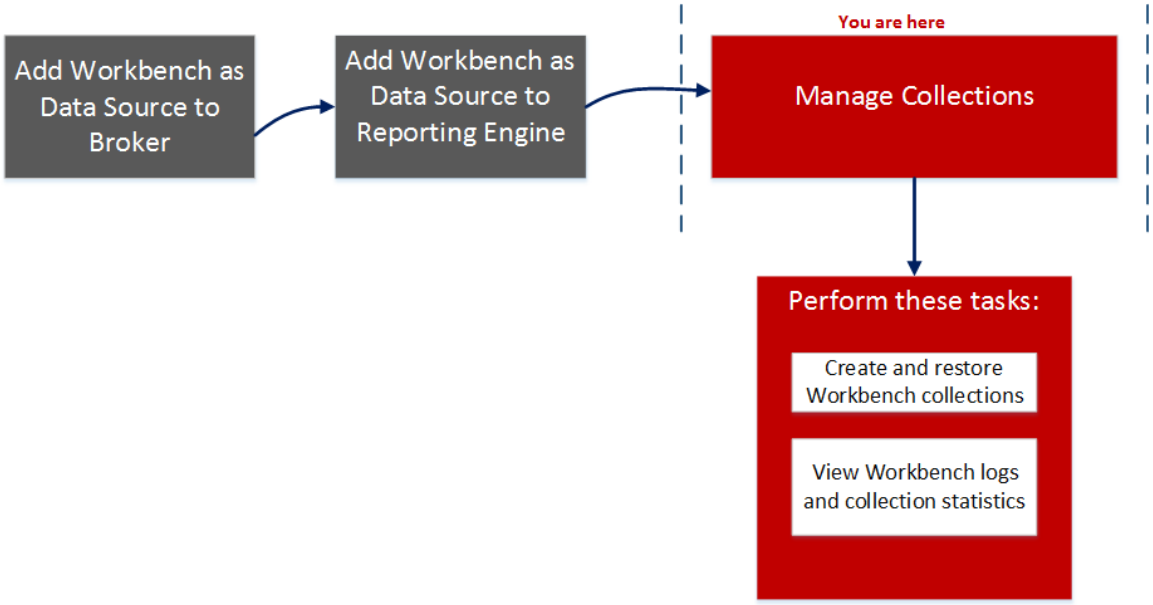
1	General tab provides a way to manage basic Workbench service configuration.
2	Collections tab provides a way to manage collections on a Workbench service.
3	Appliance Service Configuration tab provides a way to configure a Workbench service.
4	System Configuration panel provides a way to manage service configuration for a Workbench service.
5	Workbench Configuration panel provides a way to start and stop a Workbench service.

Services Config View - Collections Tab

The Collections tab for the Workbench service provides a way to manage workbench collections. To access the Collections tab, go to **ADMIN > Services >** select a Workbench service, select **View > Config** and select the **Collections** tab.

Workflow

These are the basic steps for configuring and managing a Workbench service.



What do you want to do?

Role	I want to...	Documentation
Administrator	*Create and restore Workbench collections.	Managing Collections
Administrator	*View Workbench logs and collection statistics.	Managing Collections

Role	I want to...	Documentation
Administrator	View configuration information about appliances that are connected to the Workbench service.	Select the **Appliance Service Configuration** tab. The Appliance Service Configuration tab is the same for all NetWitness Suite services. It provides configuration information about appliances that are connected to the Workbench service. For information on the **Appliance Service Configuration** tab, see **Appliance Service Configuration Tab** in the *Host and Services Getting Started Guide*.

*You can perform this task here.

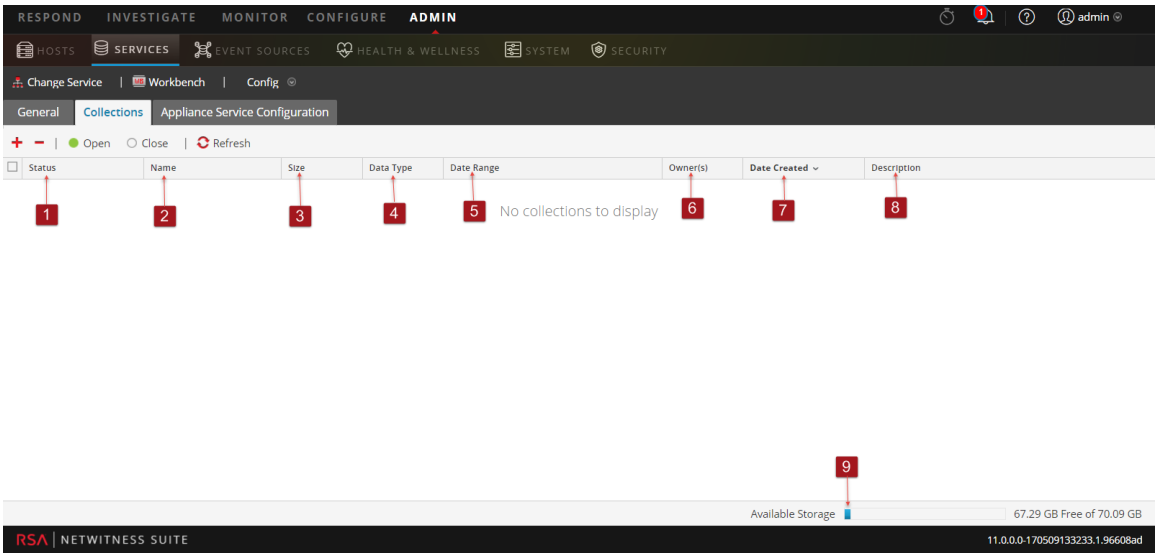
- Workbench Configuration Procedures

Quick Look

The Collections tab has a toolbar and a grid that lists relevant information about the Workbench collections.

The following figure is an example of the Collections grid.



1	Status of the Restoration Collection: • **Resorting Data** - Data restoration is in progress. • **Closed** - Data is restored. • **Opening** - Data is being indexed. • **Ready** - Indexing is complete. • **Closing** - Collection is closing.
2	**Name**: Name of the file being restored.
3	**Size**: Collection size.
4	**Data Type**: Logs.
5	**Date Range**: Lists the range of dates when the collection is being restored.
6	**Owner**: Lists the Collection creator.
7	**Date Created**: Shows the date when the collection was created.
8	**Description**: Description of the Restoration collection.
9	**Available Storage Indicator**: Shows the available disk space, given in gigabytes (GB). The Workbench validates to ensure there is enough available space when attempting to create a restoration collection.

Toolbar

These are the toolbar options.

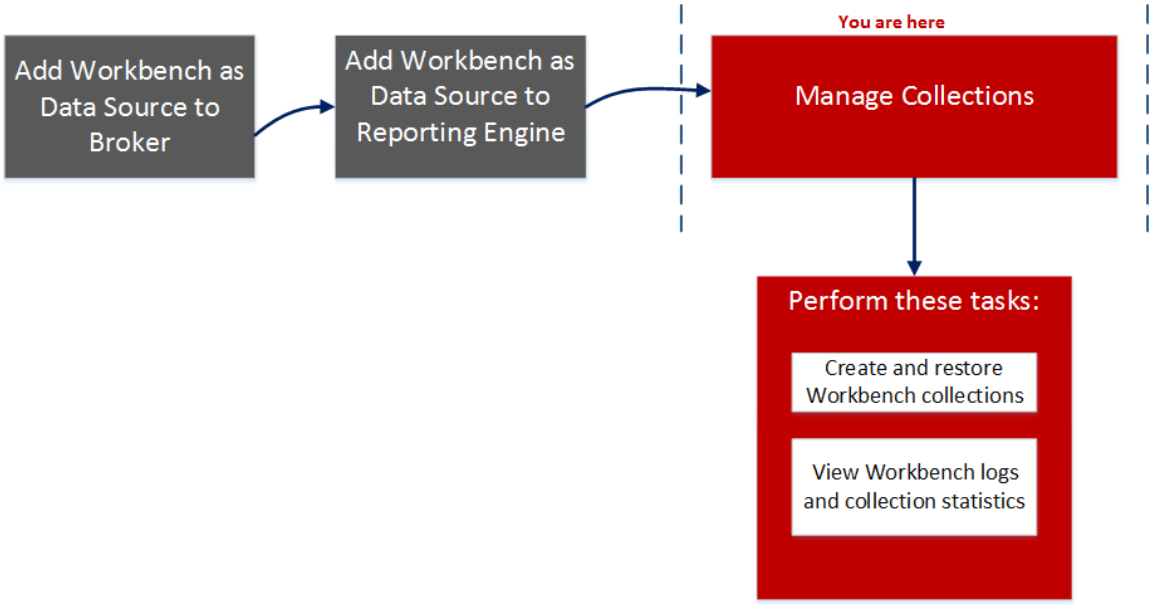
Parameter	Description
	Creates a new restoration collection.
	Deletes the selected Workbench collection.
Open and Close - Refers to the status of the restoration collection.	Open - Makes collection available for investigation and reporting. Close - Makes collection unavailable for investigation and reporting while preserving resources.
	Refreshes the list of Workbench collections.

Services Config View - General Tab

The General tab for the Workbench service provides a way to manage basic service configuration. To access the General tab, go to **Admin** > **Services** > select service and select > **View** > **Config**.

Workflow

These are the basic steps for configuring and managing a Workbench service.



What do you want to do?

Role	I want to...	Show me how...
Administrator	*Create and restore Workbench service collections.	Managing Collections
Administrator	*View Workbench logs and collection statistics.	Managing Collections
Administrator	*Process Workbench collections.	Managing Collections

*You can perform this task here.

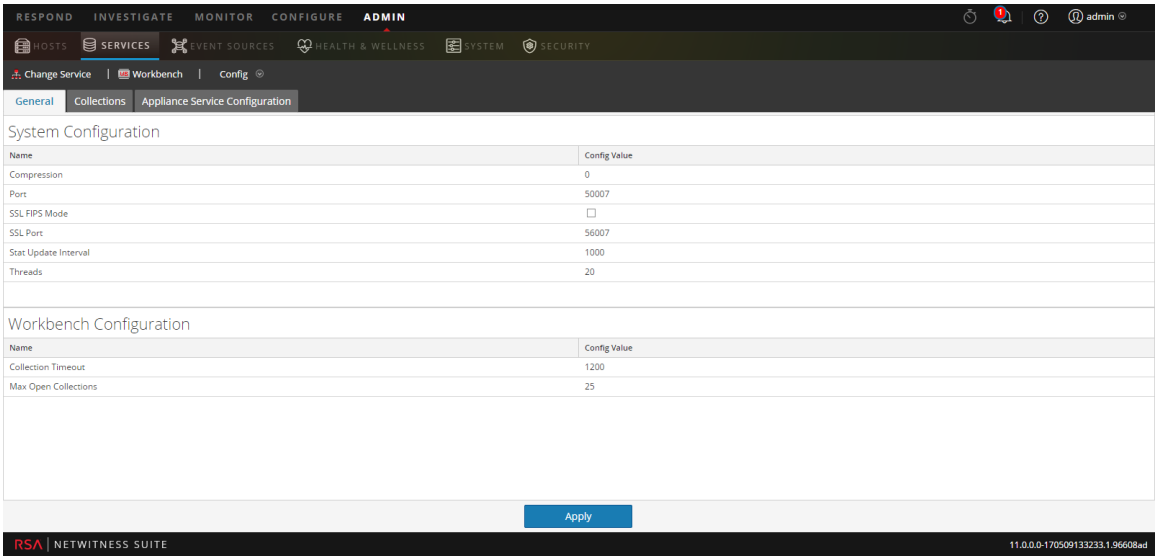
- Workbench Configuration Procedures

Quick Look

The General tab has two panels:

- System Configuration
- Workbench Configuration

The following figure is an example of the General tab.



System Configuration Panel

The System Configuration panel displays configuration parameters for the Workbench service. The following table describes the System Configuration panel features.

Parameter	Description
Compression	When set to a positive value, the minimum amount of bytes before a message is compressed. **0** means no compression for any message. Change takes effect on subsequent connections.
Port	The unencrypted port this service will listen on. **0** means disabled. Change takes effect on service restart.
SSL FIPS Mode	Determines whether the OpenSSL library will enter FIPS mode. Change takes effect on service restart.

Parameter	Description
SSL Port	The SSL port this service will listen on. **0** means disabled. Change takes effect on service restart.
Stat Update Interval	Determines how often (in milliseconds) statistic nodes are updated in the system. Change takes effect immediately.
Threads	The number of threads in the thread pool to handle incoming requests. Change takes effect immediately.

Workbench Configuration Panel

The Workbench Configuration panel displays configuration parameters for the Workbench collections. The following table describes the Workbench Configuration panel features.

Parameter	Description
Collection Timeout	The number of seconds before an idle collection is automatically closed.
Max Open Collections	The number of collections that can be open at once. A setting of 0 disables the limit.
Apply	Updates the modified configurations in the panel.

Troubleshooting

NetWitness Suite notifies users of issues using popup notifications.

NetWitness Suite Workbench returns the following types of error messages explained in the following table.

Problem	Possible Causes	Solutions

Unable to connect to workbench service from NetWitness Suite **user interface Administration page.**	NetWitness Suite service is not running.	Verify that your NetWitness Suite service is running. Log in to your NetWitness Server and run the following command:
		`status nwworkbench`
		Firewall rules should allow connections from 50007, 50607 and 50107.
		Verify your connection by running the following command:
		`service iptables status`
		Verify that you are able to launch REST. Execute the following command for your appliance:
		`https://<IPAddress>:50107 service`
		If you are able to launch REST service for your appliance, you can confirm that there is no problem with the appliance. Navigate to the NetWitness Suite side for further investigation as follows:
		• Enable debug mode and watch for sa.log errors located at:
		`/var/lib/netwitness/uax/logs`
		• Enable developer tools using the shortcut `Ctrl+Shift+I` for Chrome and verify the preview and response for the request.

Problem	Possible Causes	Solutions
Not able to view Appliance service configuration tab for workbench appliance running in SSL mode.		Enable SSL for appliance service and restart the appliance service.

The following error message is displayed when trying to load meta in order to create a report on a workbench collection: "Unable to fetch schema from data source when trying to load meta."		Load meta for the appliance from the NetWitness Suite User Interface Rule library and watch for any errors in Reporting Engine log located at:
		`/home/rsasoc/rsa/soc/reporting-engine/logs`
		Launch REST for the device and watch for any error if you run the following query:
		`/sdk?msg=language&force-content-type=text/plain&expiry=600&size=10`

Problem	Possible Causes	Solutions
No results are displayed after running query from NetWitness Suite User Interface via the Reporting Engine.		Run the query on the Reporting Engine and watch for `/var/log/messages` on the data source. Look for an exact query that matches the data source. **TIP**: Search for `[SDK-Query]` in log file. Copy the exact query and run from REST SDK to see if you get any results. REST Query: /sdk?msg=query&force-contenttype=text/plain&expiry=600&query=select%20user.dst&size=10
Workbench Available storage indicator in Workbench Collections Tab is not accurate.	Available storage indicator in the User Interface displays the default Collections directory shown below: /VAR/NETWITNESS/WORKBENCH/COLLECTIONS	None.
Unable to open new collections after opening existing collections.	There is a workbench configuration called “Max Open Collections” that is set to 25 by default. This configuration specifies the number of collections that can be open at the same time.	You can modify this number. A setting of zero disables the limit of maximum open collections.

Problem	Possible Causes	Solutions
Successfully opened a collection that got to Ready state. But after a while, the collection automatically changed to Closed state.	There is a workbench configuration called “collection.timeout” that is set to 1200 seconds by default. This configuration specifies the number of seconds before an idle collection is automatically closed. Maximum time allowed before timeout occurs is 86,400 seconds (24 hours).	A setting of zero disables the timeout.
Querying for a time range using `/database manifest` command returned blank output.	Blank output indicates that there are no **nwdb** files available for the time range.	None.
Created collection, but collection status is not available in Jobs, and collection is not displayed in workbench Collections tab.	You might be running in a mixed mode environment (for example, creating a collection on a 10.4.x version of workbench from a 10.5 NetWitness Suite User Interface.	The collection is displayed in the workbench Collections tab after you reload the page.

Problem	Possible Causes	Solutions
Noticed blank Date Range and Date Created values for collections.	All collections display blank Date Range and blank Date Created values.	Date Range and Date Created values are displayed after upgrading to 10.5.
Discrepancy in behavior of adding workbench collections as a data source to Reporting Engine.	This behavior depends on whether you have a trusted connection or a non-trusted connection.	If your workbench service is established with a trusted connection, you should manually add workbench collections as a source to Reporting Engine. If your workbench service is not established with a trusted connection when the workbench restoration collection was created, it automatically sends a message to the Reporting Engine to add it as a source in the Reporting Engine.
Collection attributes (size, date range and date created) are not displayed.	Date range is not displayed for a collection if Jetty service is restarted while restoration is in process. Restoration collections created from an Explorer view display a blank Date Range. Any collections created on a 10.4 Workbench will display blank Date Range and blank Date Created values after upgrading to 10.5. In a mixed mode environment (10.5 NetWitness Server and 10.4.x workbench), size, date range, and date created are not displayed.	None.

Problem	Possible Causes	Solutions
Exception or blank page is displayed when drilling down on a workbench collection.	Collection closed because it exceeded the collection time out.	Investigate the collection from the beginning.
Empty collection is created.	Empty collection is displayed if restoration fails because Workbench service is restarted during collection creation.	None.
Service abruptly shuts down.		Run the service from command line and watch for any errors. For an example, run the command from the server console `/usr/sbin/NwWorkbench` for workbench.
REST request denied.		Verify user.agent.whitelist config located at `/rest/config/`. If non-blank, this should be a regex expression to match valid HTTP user agents. If the regex fails to match, all REST requests will be denied (see allow.missing.user.agent for the potential exception). If blank, all requests are allowed.

Problem	Possible Causes	Solutions
Queries with raw meta return blank values for Raw field.		Verify that you have a relevant `packet db`.

Security Configuration Guide Overview

This guide provides information about the security configuration settings and security best practices for RSA NetWitness Suite.

This guide applies to NetWitness Suite version 11.0 or later. There will be periodic updates made to the content.

Anyone using this guide should possess experience as a network engineer, equivalent to at least that of a journeyman, and also have a strong understanding of network concepts and TCP/IP communications.

Security Configuration Settings

This topic describes information about various security configuration settings that are designed to help you securely operate RSA NetWitness Suite.

You can adjust the following security configuration settings:

- Access Control Settings
- Log Settings
- Communication Security Settings
- Data Security Settings
- Alert System Settings
- Other Security Considerations

Access Control Settings

Access control settings are designed to enable the protection of resources against unauthorized access or by external components.

- User Authentication
- User Authorization
- Component Authentication

User Authentication

User authentication settings are designed to control the process of verifying an identity claimed by a user for accessing RSA NetWitness Suite.

NetWitness Suite Core Trusted Connection

NetWitness Suite Core 11.0 has the ability to connect and authenticate over SSL without having to provide user account information on the service itself. This feature is only available over the native port and not the REST interface. For more information on trusted connection, see *Host and Services Getting Started Guide*.

User Accounts

The following table identifies the default RSA NetWitness Suite user roles including the Administrator (admin) account and several service accounts. When deploying, you must enter a password for the system administrator account and all the service accounts. For more information on passwords and password strength, see "Settings Tab" Help topic in *System Security and User Management Guide*.

Note: Custom roles can be added as required. For instructions, see "Add a Service User Role" topic in *Host and Services Configuration Guides*.

User Roles	Description
Administrators	Full system access
Operators	Access to configurations but not to meta and session content.
Analysts	Access to meta and session content but not to configurations.
SOC_Managers	Same access as Analysts plus additional permission to handle incidents.
Malware_Analysts	Access to malware events and to meta and session content.
Data_Privacy_Officers	Access to meta and session content as well as configuration options that manage obfuscation and viewing of sensitive data within the system (see Data Privacy Management).
Respond_Adminstrator	Access to all Respond server and Incidents permissions.

Note: By default, the Administrator user is assigned to each NetWitness Suite service.

Configuring New Accounts

Each RSA NetWitness Suite user must have an account to log on to the UI. For instructions on adding new user accounts, see "Manage Users with Roles and Permissions" Help topic in *System Security and User Management Guide*.

Caution: RSA recommends that you ensure that users are approved by the company for logging on to the system before creating an account for them. Even if users are approved, RSA recommends that you only assign the minimum set of access permissions that enable the users to perform their jobs.

Authentication Configuration

User authentication settings are designed to control the process of verifying an identity claimed by a user for accessing NetWitness Suite. For more information, see "Set Up System Security" topic in the *System Security and User Management Guide*.

Below are recommendations for some of the configurations:

- **Default System Administrator Account**: RSA recommends that you instruct RSA NetWitness Suite administrators on your corporate IT policy and security best practices to generate and manage passwords for the default System Administrator account. RSA recommends that you change the default System Administrator password and the admin passwords for the service accounts per your company's password policy. For more information on password strength settings, see "Password Strength" topic in the *System Security and User Management Guide*. You should change the System Administrator password using the Admin user preferences. For instructions on how to change the password, see "Change the Default admin Passwords" in the *System Security and User Management Guide*.
- **External Authentication**: RSA NetWitness Suite supports external authentication. For more information, see "Configure External Authentication" topic in the *System Security and User Management Guide*.

User Passwords

NetWitness Suite Users

Administrators can set the appropriate level of password strength for the user and can force users to change their passwords when password strength policy changes. Administrators can specify global default user password expiration period and the notification period for the password expiry. For more information, see "Configure System-Level Security Settings" topic in the *System Security and User Management Guide*.

The following table shows the default security parameters settings for passwords.

Caution: RSA recommends that you change these settings in accordance with your corporate policy. Users must ensure the idle period and session time-out is specified.

Parameter	Default Setting
Global Default User Password Expiration Period	0
Notify User <n> Days Prior to Password Expiry	5

NetWitness Suite Core Service Users

Administrators can change the password of a service user and replicate the new password to all the NetWitness Suite Core services with the defined user account. For more information, see "Change a Service User Password" topic in the *Host and Services Configuration Guides*.

You can also change your password from the Preferences panel in the Profile view. For more information, see "Profile View Preferences Panel" topic in the *NetWitness Suite Getting Started Guide*.

Security Parameter Settings

The following table shows the default security parameters settings.

Caution: RSA recommends that you change these settings in accordance with your corporate policy.

Parameter	Default Setting
Lockout Period	20 minutes
Idle Period	10 minutes
Session Timeout	600 minutes

Parameter	Default Setting
Max Login Failures	5

For more information on security parameter settings, see "Security Settings" topic in the *System Security and User Management Guide*.

User Authorization

User authorization settings are designed to control rights or permissions that are granted to a user for accessing a resource managed by RSA NetWitness Suite.

Access Roles

RSA NetWitness Suite allows you to create access roles that you can assign to users. Each access role is mapped to a list of user authorization settings.

For more information, see the following NetWitness Suite 11.0 topics:

- "Role Permissions" in the *Alerting Using ESA Guide*.
- "Manage Users with Roles and Permissions" in the *System Security and User Management Guide*.

Note: Additionally, RSA NetWitness Suite recommends that you review users' task permissions on a routine basis to ensure that each user is granted the correct task permissions.

RSA NetWitness Suite allows access roles to be assigned to users through external group membership or directly to user accounts. RSA recommends that you assign permissions through group membership and not assign permissions directly to user accounts. For more information, see "Map User Roles to External Groups" Help topic in the *System Security and User Management Guide*.

The user roles assigned also control permissions that are granted to accounts that need access to a specific component of NetWitness Suite.

Component Authentication

This topic describes Component authentication settings control the process of verifying an identity claimed by an external or internal system or component.

Host Configuration and Service Authentication

When you install or upgrade to RSA NetWitness® Suite 11.0 or later, trusted connections are established by default with two settings:

1. SSL is enabled.
2. NetWitness Server is connected to core services using the encrypted SSL port.

RSA NetWitness Suite allows secure authentication services for the following hosts as SSL is enabled by default:

- Decoder
- Log Decoder
- Concentrator
- Broker
- Log Collector
- Archiver
- ESA
- Malware Analysis

Note: By default all the services on the hosts have SSL enabled.

For more information, see Help topic in the *Host and Service Configuration Guides*.

Changing Credentials for Default Configuration Service Accounts

For instructions on resetting the password for the admin of the host service accounts, see "Users Tab" topic in the *Host and Services Configuration Guides*.

Note: The default user name that the host service accounts admin cannot be modified.

Configuring Live Account Authentication

RSA NetWitness Suite supports secure authentication for the Live account connection to Content Management System (CMS) as the SSL is enabled by default. The default communications port on the CMS is 443. For instructions on configuring this setting, see "Configure Live Settings" topic in the *System Configuration Guide*.

Configuring Lockbox Authentication

Lockbox provides an encrypted file that Warehouse Connector or Log Collector uses to store and protect sensitive data. You need to create the lockbox by providing a lockbox password while configuring the Warehouse Connector or Log Collector for the first time. For more information on lockbox setup, see the following topics:

- "Log Collector - Step 3: Set Up a Lockbox" in the *Log Collection Guides*.
- "Warehouse Connector - Step 2: Create Lockbox" in the *Host and Services Configuration Guides*.

Display Logon Banner for Remote SSH Connections

RSA NetWitness Suite allows you to customize the logon banner to display standard government or corporate warning signs for SSH remote connections to the hosts. An example message would be the following:

"This system is private. Use or misuse may be logged and invalid access pursued."

1. Log on to the appliance using root credentials.
2. Type **cd /etc/** to switch to the **/etc/** directory.
3. Edit the **/etc/issue.net** file with the required banner text.
4. Save the changes and exit.
5. Type **cd /etc/ssh** to switch to the **/etc/ssh** directory.
6. Edit the **/etc/ssh/sshd_config** file to remove the comment for the banner and provide the location of the banner text file (For example, **/etc/issue.net**).
   The following file is an example of an **sshd.config** file before being modified:

   ```
   # no default banner path
   #Banner none
   ```

   The following file is an example of an **sshd.config** file after being modified:

   ```
   # no default banner
   #Banner /etc/issue.net
   ```

7. Save the changes and exit.
8. Type **service sshd restart** in order to restart the sshd service.

Log Settings

A log is a chronological record of system activities that enables the reconstruction and examination of the sequence of environments and activities surrounding or leading to an operation, procedure, or event in a security-relevant transaction.

Global Audit Logging provides NetWitness Suite Auditors with consolidated visibility into user activities within NetWitness Suite in real-time from one centralized location. NetWitness Suite audit logs collect in a centralized system that converts them into the required format and forwards them to an external syslog system. The external syslog system can be a third-party syslog server or a Log Decoder. For more information, see "Global Audit Logging Overview" topic in the *System Configuration Guide*.

Log Description

The following table shows the security-relevant logs provided by RSA NetWitness Suite.

Component	Reference
Appliance and Service Logs	See "Services Explore View and Services Logs View" topics in the *Host and Services Configuration Guides* and "Configure Log File Settings" topic in the *System Configuration Guide*.
Audit Logs	See " Configure Global Audit Logging" topic in *System Configuration Guide*.
Syslogs	See " Configure Syslog and SNMP Settings" topic in the *System Configuration Guide*.

Log Management and Retrieval

For more information on:

- Log settings: See "Configure Log File Settings" topic in the *System Configuration Guide*.

  Note: RSA recommends that you set the maximum log file size in accordance to your corporate policy.

- Log forwarding: See "Set Syslog Forwarding" topic in the *Host and Services Configuration Guides*.
- Setting log overrides:
  You may override the default logging levels if you want to include messages generated by specific modules.

`Syntax: <module>=<level>`

`SDK-Language=none`

Where level is one or more of `"none|debug|info|warning|failure|audit|all"`, all options must be separated by a pipe |

none and all are mutually exclusive with each other and all other options.

Overrides are useful for query auditing (that is, those modules that begin with SDK-) or for debugging by module (that is, Index)

- Data
- Engine
- Index
- Network
- Packet
- Parse
- Decoder
- Rules
- Concentrator
- Appliance
- SDK
- SDK-Query
- SDK-Values
- SDK-Language
- SDK-Info
- SDK-Session
- SDK-Timeline
- SDK-Content
- SDK-Search

Note: RSA recommends that you restrict permissions to the log files folder to the appropriate user.

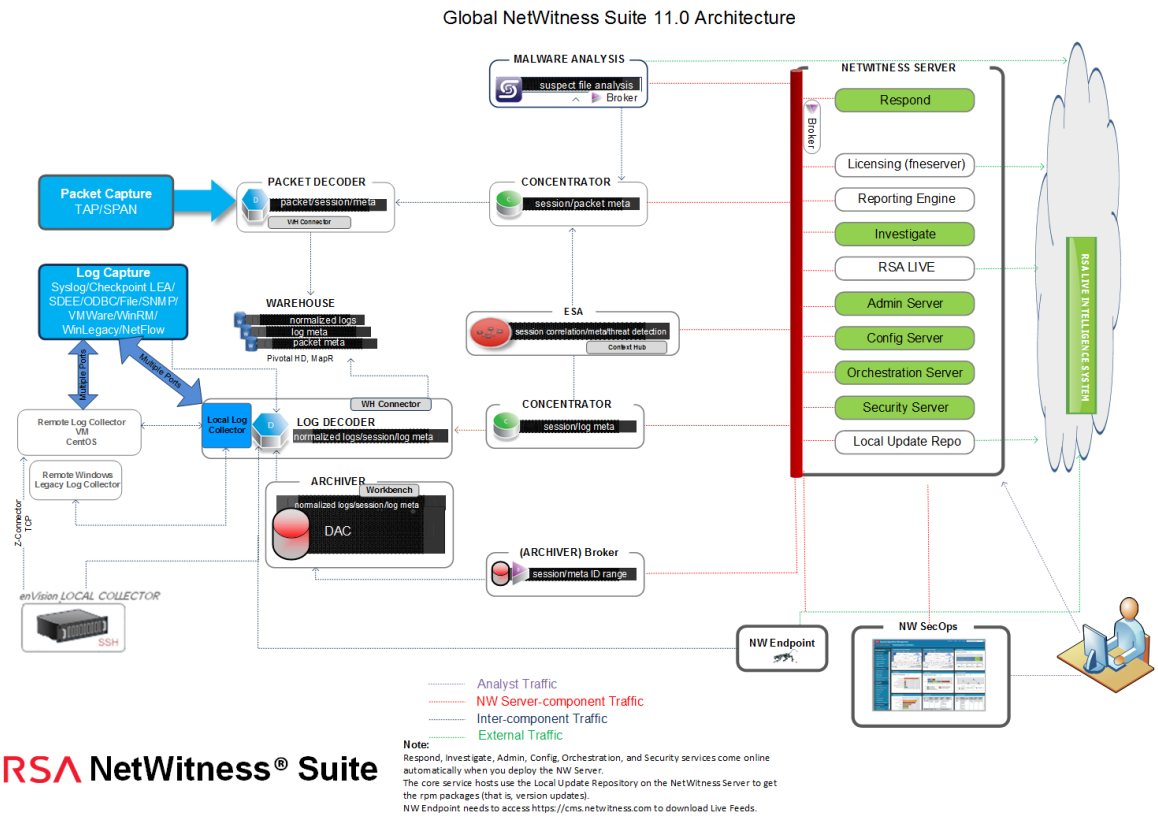
Communication Security Settings

Communication security settings are designed to enable the establishment of secure communication channels between RSA NetWitness Suite components, as well as between RSA NetWitness Suite components and external systems or components.

Port Usage

To help ensure security, RSA recommends that you configure your firewall rules and access control lists to expose only the ports and protocols necessary for the operation of RSA NetWitness Suite. The services, such as Reporting Engine, Respond Service, Malware, Log Collector, Live account, Broker, Concentrator, Decoder, and Log Decoder, use specific TCP ports to communicate with each other and the following:

- Web user client interfaces
- Live CMS
- LDAP synchronization
- Third-party email server
- NetWitness Suite console



RSA NetWitness® Suite

All communication from NetWitness Suite is over the native NetWitness Suite Core ports as against the REST API ports. The additional native NetWitness Suite Core port per appliance allows an administrator to enable secure (SSL) network communications while still being able to utilize non-secure (HTTP and NetWitness Suite Core native) connectivity methods for communication between services that are present on the same system. Administrators can toggle the ports on and off to support only SSL, only non-SSL, or both.

Refer to the following diagram and port table to ensure that all the relevant ports are opened for components in your NetWitness Suite deployment to communicate with each other.

This section contains the port specifications for the following hosts.

NW Server Host

Archiver Host

Broker Host

Concentrator Host

Event Stream Analysis Host

Log Collector Host

Log Decoder Host

Log Hybrid Host

Malware Host

Packet Decoder Host

Packet Hybrid Host

NW Server Host

Source Host	Destination Host	Destination Ports	Comments
Admin Work-station	NW Server	TCP 443, 80	nginx - NetWitness UI
Admin Workstation	NW Server	TCP 15671	RabbitMQ Management UI
Admin Work-station	NW Server	TCP 22	SSH
NW Hosts	NW Server	TCP 4505, 4506	Salt Master Ports
NW Server	NW Server	TCP 50003, 50103, 56003	Broker Ports
NW Server	NW Server	TCP 5671	RabbitMQ-amqp
NW Server	NW Server	UDP 50514	Audit Ports
NW Server	NW Server	TCP 7000, 7003, 7009, 7010	Launch Ports
NW Server	NW Server	TCP 50006, 50106, 56006	NetWitness Appliance Ports
NW Hosts	NW Server	UDP 123	NTP
NW Hosts	NW Server	TCP 27017	MongoDB
NW Server	NW Server	UDP 123	NTP
NW Server	NFS Server	TCP 111 2049 UDP 111 204	iDRAC Installations
NW Server	NW Endpoint	TCP 443, 9443	

Archiver Host

Source Host	Destination Host	Destination Ports	Comments
Admin Workstation	Archiver	TCP 15671	RabbitMQ Management UI
Admin Workstation	Archiver	TCP 22	SSH
NW Server	Archiver	TCP 56008 (SSL), 50008 (Non-SSL), 50108 (REST)	Archiver Application Ports
NW Server	Archiver	TCP 56006 (SSL), 50006 (Non-SSL), 50106 (REST)	NetWitness Appliance Ports
NW Server	Archiver	TCP 5671	RabbitMQ (AMQPS) message bus for all NW hosts.
NW Server	Archiver	TCP 514, 6514, 56007 (SSL), 50007 (Non-SSL), 50107 (REST), UDP 514	Workbench Application Ports
Archiver	Archiver	UDP 50514	Audit Data
Archiver	Archiver	UDP 123	NTP
Archiver	NFS Server	TCP 111 2049 UDP 111 204	iDRAC Installations

Broker Host

Source Host	Destination Host	Destination Ports	Comments
Admin Workstation	Broker	TCP 15671	RabbitMQ Management UI

Source Host	Destination Host	Destination Ports	Comments
Admin Workstation	Broker	TCP 22	SSH
NW Server	Broker	TCP 56003 (SSL), 50003 (Non-SSL), 50103 (REST)	Broker Application Ports
NW Server	Broker	TCP 56006 (SSL), 50006 (Non-SSL), 50106 (REST)	NetWitness Appliance Ports
NW Server	Broker	TCP 5671	RabbitMQ (AMQPS) message bus for all NW hosts.
Broker	Broker	UDP 50514	Audit Data
Broker	Broker	UDP 123	NTP
Broker	NW Server	TCP 111 2049 UDP 111 2049	iDRAC Installations

Concentrator Host

Source Host	Destination Host	Destination Ports	Comments
Admin Work-station	Concentrator	TCP 15671	RabbitMQ Management UI
Admin Work-station	Concentrator	TCP 22	SSH
NW Server	Concentrator	TCP 56005 (SSL), 50005 (Non-SSL), 50105 (REST)	Concentrator Application Ports
Malware	Concentrator	TCP 56005 (SSL)	Malware
NW Server	Concentrator	TCP 56006 (SSL), 50006 (Non-SSL), 50106 (REST)	NetWitness Appliance Ports

Source Host	Destination Host	Destination Ports	Comments
NW Server	Concentrator	TCP 5671	RabbitMQ (AMQPS) message bus for all NW hosts.
Concentrator	NFS Server	TCP 111 2049 UDP 111 204	iDRAC Installations

Note: For the latest architecture and port usage information, see "Network Architecture and Ports" topic in the *Deployment Guides*.

Topics

- Network Encryption

Network Encryption

You can configure RSA NetWitness Suite to send or receive data from external data sources.

Note: RSA recommends that whenever you have the option to choose between unsecured and secured versions of a communication protocol, you choose the secured version.

NetWitness Suite Web Server Communications

The RSA NetWitness Suite UI or web server which communicates with the Live Service (CMS) over port 443 using the HTTPS protocol.

Note: During installation, the system is engineered to set the default communication protocol to HTTPS over port 443.

Reporting Engine, ESA and Warehouse Connector : External Communication

RSA recommends that you use the secure tcp protocol and enable an SSL connection while configuring Reporting Engine, ESA, Warehouse Connector, Licensing, and Malware.

For more information on Reporting Engine, see "Step 4: Configure Output Actions" topic in the *Host and Services Configuration Guides*.

For more information on Malware external communication, see " Step 1. Configure Malware Analysis Operating Environment" topic in the *Host and Services Configuration Guides*.

For more information on ESA, see " Notification Methods" topic in the *Alerting Using ESA Guide*.

For more information on the Warehouse Connector, see "Configure Warehouse Connector" topic in the *Host and Services Configuration Guides*.

For more information on Licensing, see "Configure NetWitness Suite Notifications" topic in the *Alerting Using ESA Guide*.

Log Collector Service

To help secure communication between the Log Collector service running on the Log Decoder and the event sources, RSA recommends the protocols in the following table

Event Source	Protocol	Resources
File	SFTP, SCP, FTPS	For more information, see " File Collection Protocol Configuration" topic in the *Log Collection Guides*.
ODBC	ODBC	For more information on configuring an ODBC event source, see "ODBC Collection Configuration" topic in the *Log Collection Guides*. **Note:** Note: Depending on the event source, administrators can configure additional progress driver parameter for secure connections. For more information, see Progress document at https://www.progress.com/odbc/resources/documentation/books-and-readme-file. For more information on using a Certificate, see the certificate creation kit at http://openssl.org/. For more information on securing communication with SQL Server, Oracle, and ODBC, see the URLs: http://technet.microsoft.com/en-us/l...QL.105%29.as http://technet.microsoft.com/en-us/l.../cc754431.aspx http://www.oracle.com/technetwork/database/options/advanced-security/overview/index.html http://www.psdn.progress.com/progres...92/odr/odr.pdf
Windows	HTTPS	For more information on configuring a Windows event source to use certificates and enable HTTPS, see NetWitness Suite 11.0 Help topic *Windows Collection Configuration Guide*.
Check Point	OPSEC LEA	For more information on configuring a Check Point event source to use certificates, see NetWitness Suite 11.0 Help topic *Check Point Collection Configuration Guide*.
Netflow	Netflow	For more information on configuring a Netflow event source to use certificates, see NetWitness Suite11.0 Help topic *Netflow Collection Configuration Guide*.

Event Source	Protocol	Resources
SDEE	SDEE	For more information on configuring a SDEE event source to use certificates, see NetWitness Suite 11.0 Help topic *SDEE Collection Configuration Guide*.
SNMP	SNMP	For more information on configuring a SNMP event source to use certificates, see NetWitness Suite 11.0 Help topic *SNMP Collection Configuration Guide*.
VMware		For more information on configuring a VMware event source to use certificates, see NetWitness Suite11.0 Help topic *VMware Collection Configuration Guide*.
Legacy Windows and NetApp		For more information on configuring a Legacy Windows event source to use certificates, see NetWitness Suite11.0 Help topic *Legacy Windows and NetApp Collection Configuration Guide*
Amazon Web Services (AWS) Cloud Trail	HTTPS	For more information on configuring an AWS Cloud Trail event source to use certificates, see NetWitness Suite 11.0 Help topic *AWS (CloudTrail) Collection Configuration Guide*.

Note: For more information on enabling SSL for component communications, see Component Authentication.

Data Security Settings

Data security settings are designed to enable the definition of controls to prevent data permanently stored by RSA NetWitness Suite from being disclosed in an unauthorized manner.

Securing Data

To help protect online data, such as current database, log, and configuration files, RSA recommends that you restrict access to the files and database and configure permissions so that only trusted administrators are allowed to access them.

RSA recommends that you back up your sensitive data, encrypt it, and keep it in a secure physical location in accordance with your corporate disaster recovery and business continuity policies.

The backup can be done in the following ways:

- Regular backup of Configuration and Data files – You can back up and restore data and configuration files for the core host and services and all the modules of NetWitness Suite. For more information, see "Back Up and Restore Data for Hosts and Services" topic in the *System Maintenance Guide*.
- Regular backup of critical configuration – You can export configurations using the Export option available on the UI. For example, you can take a backup of critical rules, reports, alerts, ESA rules, dashboards, investigation profiles, meta groups, event sources, global notifications, and so on. For more information, see topics:
  - "Export a Rule, Export an Alert and Export a Report" in the *Reporting Guide*.
  - "Rule Library View and Dashboard" in the *Alerting using ESA Guide*.
  - "Manage Profiles Dialog and Export a Meta Group" in the *Investigation and Malware Analysis Guide*.
  - "Events View and Export Event Sources" in the *Event Source Management Guide*.
  - "Global Notifications Panel Toolbar" in the *System Configuration Guide*.

Data Privacy

Data Privacy is very integral and helps you manage privacy-sensitive data. You can achieve data privacy using the Data Privacy Officer (DPO) role. The DPO can configure NetWitness Suite to limit the exposure of meta data and raw content (packets and logs) using a combination of techniques. The methods available to protect data in NetWitness Suite include:

- Data Obfuscation
- Data Retention Enforcement
- Auditing Logging

For more information, see topics in the Data Privacy Management.

Default Storage Passwords

The default storage passwords for database accounts that store alerts in ESA, Respond Service, and Data Science can be changed. For more information, see "Change Default Storage Passwords" topic in the *Host and Services Configuration Guide*.

Alert System Settings

For instructions on configuring NetWitness Suite to send alerts or notifications, see following topics in the *System Configuration Guide*:

- "Email Configuration Panel"
- "Global Audit Logging Configurations Panel"
- "Global Notifications Panel"

FIPS Compliance

This topic provides information on the Federal Information Processing Standards (FIPS) compliant mode for RSA NetWitness Suite. The FIPS publications are guidelines that set best practices for software and hardware security products for the protection of valuable and sensitive information.

When the FIPS compliant mode is used, products that support one or more FIPS standards can be set into a mode where the product uses FIPS approved algorithms and methods only.

NetWitness Suite supports both FIPS approved and non-FIPS approved functions. In FIPS mode, the product is incapable of using any non-FIPS approved methods.

NetWitness Suite Components working in FIPS mode

The table below lists the NetWitness Suite components that work in FIPS mode. The method you use to activate or deactivate FIPS depends on the type of security library used by your NetWitness Suite services. Your NetWitness Suite services use the security libraries, as mentioned in the following table.

Services	Security Library
Event Stream Analysis (ESA), Malware Analysis, Reporting Engine, NetWitness Suite Host, Respond Service, and Context Hub	BSAFE
Broker, Concentrator, Decoder, Log Decoder, Warehouse Connector, Archiver, and Workbench	BSAFE

FIPS 140-2 Certified Cryptographic Modules are enabled for all services that perform cryptographic operations. For the following services, although the FIPS Cryptographic Module is leveraged, the use of FIPS cipher suites is not being enforced:

- NTP: UPD Port 123
- TCP: SSH Port 22
- TCP: Salt API Loopback Port 8000
- CollectD
- Log Collector
- Log Decoder

Note: In 11.0, FIPS is enabled by default for all services, except for Log Collector and Log Decoder. For more information on how to enable FIPS on log Collector and Log Decoder see *RSA NetWitness® Suite 11.0 Release note.*

Note: Security Technical Implementation Guide (STIG) is not supported for version 11.0.

Other Security Considerations

This topic describes various other security configuration settings that are not covered in previous sections.

Changing the RabbitMQ Management Password for Windows Legacy Collectors

For Windows Legacy Log Collectors (WLCs), a default password is used for the "logcollector" username to access the RabbitMQ broker on that machine. RSA recommends that you change the password for WLCs, per the procedure outlined, which involves changing the RabbitMQ password for the Log Collector and for the RabbitMQ broker.

Note: For CentOS, changing the RabbitMQ password is not supported.

If you are using a Log Collector, you may have to initialize the "lockbox". For instructions, see "Step 3: Set Up a Lockbox" topic in the *Log Collection Guides*.

To change the RabbitMQ password:

1. Change the RabbitMQ password in Log Collector:
   a. Go to the Explore view for the Log Collector service.
   b. Right-click the **event-broker** node and select **config**.
   c. Type the new password in the **amqp_password** field. The password is encrypted by a key that is managed through the lockbox of this Log Collector. This only changes the password on the Log Collector side.

   Note: Most of the settings should not be changed. Ensure you do NOT change the Message Queue User Name "amqp_username" because it is referred to in some certificate checks.
2. Change the RabbitMQ password for the RabbitMQ broker:
   a. Go to the Explore view for the Log Collector service.
   b. Right-click the **event-broker** node and select **properties**.
   c. Select **passwd** in the drop-down list.
   d. In the **Parameters** field, type the old and new password.
   Ensure you remember your old password. If it was never changed, it should be "netwitness" by default.

Example: `Parameters: oldpw=<netwitness> newpw=<YourNewPasswordHere>`

e. Click **Send**.

Hardening the NetWitness Suite Core service

By default, all NetWitness SuiteCore services ship with a default username and password and with SSL turned off. To harden the service, you have to run it with the command line option `-s harden=true`.

Using a Decoder, here's an example command line:

```
NwDecoder -s harden=true -s defaultUsername=<username> -s
defaultPassword=<password>
```

The above command does the following:

1. Removes the default admin account (with caveats, see below).
2. Creates a new account <username> with a password of <password> (thus meeting the password requirements below).
3. Enables SSL on both the native and REST ports.
4. Strengthens default password requirements:
   - /users/config/account.lockout.time = 60
   - /users/config/password.alpha.lowercase.min = 1
   - /users/config/password.alpha.uppercase.min = 1
   - /users/config/password.length.min = 8
   - /users/config/password.numeric.min = 1
   - /users/config/password.symbol.min = 1
5. Sets /rest/config/user.agent.whitelist = Apache-HttpClient/\d\.\d\.\d

   Note: This setting prevents the browsers to connect to the REST port.

The caveat for changing the default user account is that there cannot be an already existing configuration file. This is always true the first time the service is run or before the service is licensed. To harden a service, you must run it before a configuration is written or delete whatever configuration file exists and then harden.

To alter the command line for a service that writes its own upstart script without actually SSHing into the box and modifying the script, there is a new parameter that you can pass to either the /sys shutdown or /decoder reset command (substitute decoder for the actual service name) and this parameter is called "cl" for command line. What you do is pass name=value pairs to the "cl" parameter and those parameters will take affect on the next restart of the service.

Example:

```
/sys shutdown reason="Restart because license was applied"
cl="harden=true default
Username=<username> defaultPassword=<password>"
```

The above command shuts down the service (which should be restarted by Linux upstart) and the command line parameters will be applied on the restart. This command line exactly matches the command line given above for the decoder service. If you want to do a configuration reset, you can use the following:

```
 /broker reset config=true cl="harden=true defaultUsername=<username>
defaultPassword=<password>"
```

This will delete the broker configuration file and create a new default configuration that is automatically hardened with the given default account and credentials. The admin account will not exist when the broker restarts, only the <username> account exists.

NFS Access Controls

By default, the NFS mounts are wide open. To lock them down to a specific address, you must edit the exports file and specify the IP addresses that are allowed to interact with the SAW.

The SAW NFS service is managed from the command line using *mapr-nfsserver*.

```
[root@saw-node1 ~]# service mapr-nfsserver
Usage: /etc/init.d/mapr-nfsserver {start|stop|status|restart|}
[root@saw-node1 ~]# service mapr-nfsserver status
nfsserver (pid 5692 5691) is running...
[root@saw-node1 ~]#
```

If nfs-utils is installed on the node, you can execute a *showmount* on the localhost to see the exposed exports.

```
[root@saw-node1 ~]# showmount -e localhost
Export list for localhost:
/mapr *
/mapr/saw *
[root@saw-node1 ~]#
```

Exports are controlled using the exports file in the */opt/mapr/conf* directory.

```
[root@saw-node1 ~]# cat /opt/mapr/conf/exports
# Sample Exports file
# for non /mapr exports
# <Path> <comma separated cldb addresses=host:port> <exports_control>
# for /mapr exports
# <Path> <exports_control>
#access_control -> order is specific to default
# list the hosts before specifying a default for all
# a.b.c.d,1.2.3.4(ro) d.e.f.g(ro) (rw)
# enforces ro for a.b.c.d & 1.2.3.4 and everybody else is rw
# special path to export clusters in mapr-clusters.conf. To disable
exporting,
# comment it out. to restrict access use the exports_control
#
/mapr (rw)
#to export only certain clusters, comment out the /mapr & uncomment.
# Note: this will cause /mapr to be unexported
#/mapr/clustername (rw)
#to export /mapr only to certain hosts (using exports_control)
#/mapr a.b.c.d(rw),e.f.g.h(ro)
# export /mapr/cluster1 rw to a.b.c.d & ro to e.f.g.h (denied for
others)
#/mapr/cluster1 a.b.c.d(rw),e.f.g.h(ro)
# export /mapr/cluster2 only to e.f.g.h (denied for others)
#/mapr/cluster2 e.f.g.h(rw)
# export /mapr/cluster3 rw to e.f.g.h & ro to others
#/mapr/cluster2 e.f.g.h(rw) (ro)
[root@saw-node1 ~]#
```

To restrict the SAW exports to a certain IP address or group of IPs, you must first edit the exports file and then restart the *mapr-nfsserver service*.

```
[root@saw-node1 ~]# vi /opt/mapr/conf/exports
[root@saw-node1 ~]# cat /opt/mapr/conf/exports | grep ^/mapr
/mapr 10.42.1.87(rw)
[root@saw-node1 ~]# showmount -e localhost
Export list for localhost:
/mapr *
/mapr/saw *
```

```
[root@saw-node1 ~]# service mapr-nfsserver restart
[root@saw-node1 ~]# showmount -e localhost
Export list for localhost:
/mapr 10.42.1.87
/mapr/saw 10.42.1.87
[root@saw-node1 ~]# mount -t nfs -o nolock,tcp localhost:/mapr/saw
/saw
mount.nfs: access denied by server while mounting localhost:/mapr/saw
[root@saw-node1 ~]#
```

Note: Trying to mount the export on the localhost will fail as only a specific host IP is now allowed to use the NFS mount

Secure Deployment and Usage Settings

This topic describes the settings for secure deployment and usage. It is very important to protect all physical, local, and remote access to the RSA NetWitness Suite appliances. It is also important to restrict all access methods to the absolute minimum required to maintain RSA NetWitness Suite.

Note: RSA recommends that you do not set up the test environments to be exact copies of the full production environment. If the test environment is identical to the production environment, you should take the same precautions to protect the test environment as you do in the production environment.

Security Controls Map

This topic describes the security controls map. An RSA NetWitness Suite deployment can consist of the following components:

- Decoder
- Log Decoder
- Concentrator
- Broker
- Log Collector
- Context Hub
- Malware
- ESA
- Archiver
- NetWitness Warehouse
- NetWitness Server
- External Warehouse - Hortonworks
- External CMS Library (Live)

NetWitness Suite supports integration with products such as RSA NetWitness Endpoint and RSA Archer.

RSA recommends that you access the host on secure client machines within the network. If you must access the host through remote access, RSA recommends that you connect to the network through a secure VPN connection. Only allow remote access to NetWitness Suite hosts for secure maintenance using the Remote Desktop Protocol (RDP) through a secure VPN connection.

Caution: RSA recommends that you deploy the hosts in a secure location, where physical access to the hosts are restricted only to the personnel who manage the hosts.

Securely Enclave

To help protect NetWitness Suite against unauthorized authentication and access by end users or machines, RSA recommends that you deploy NetWitness Suite hosts such as Broker, Concentrator, and Decoder.

You can help create a secure enclave by separating the low security corporate network from the high security network with firewalls. To help create a secure enclave, RSA recommends that you:

- Implement basic physical security elements, policies, procedures, and processes for the low security network.
- Provide access to the hosts within the secure enclave through a secure virtual private network (VPN) tunnel only, such as IPSec tunnel, to establish encryption and authentication of all network traffic to and from the hosts.

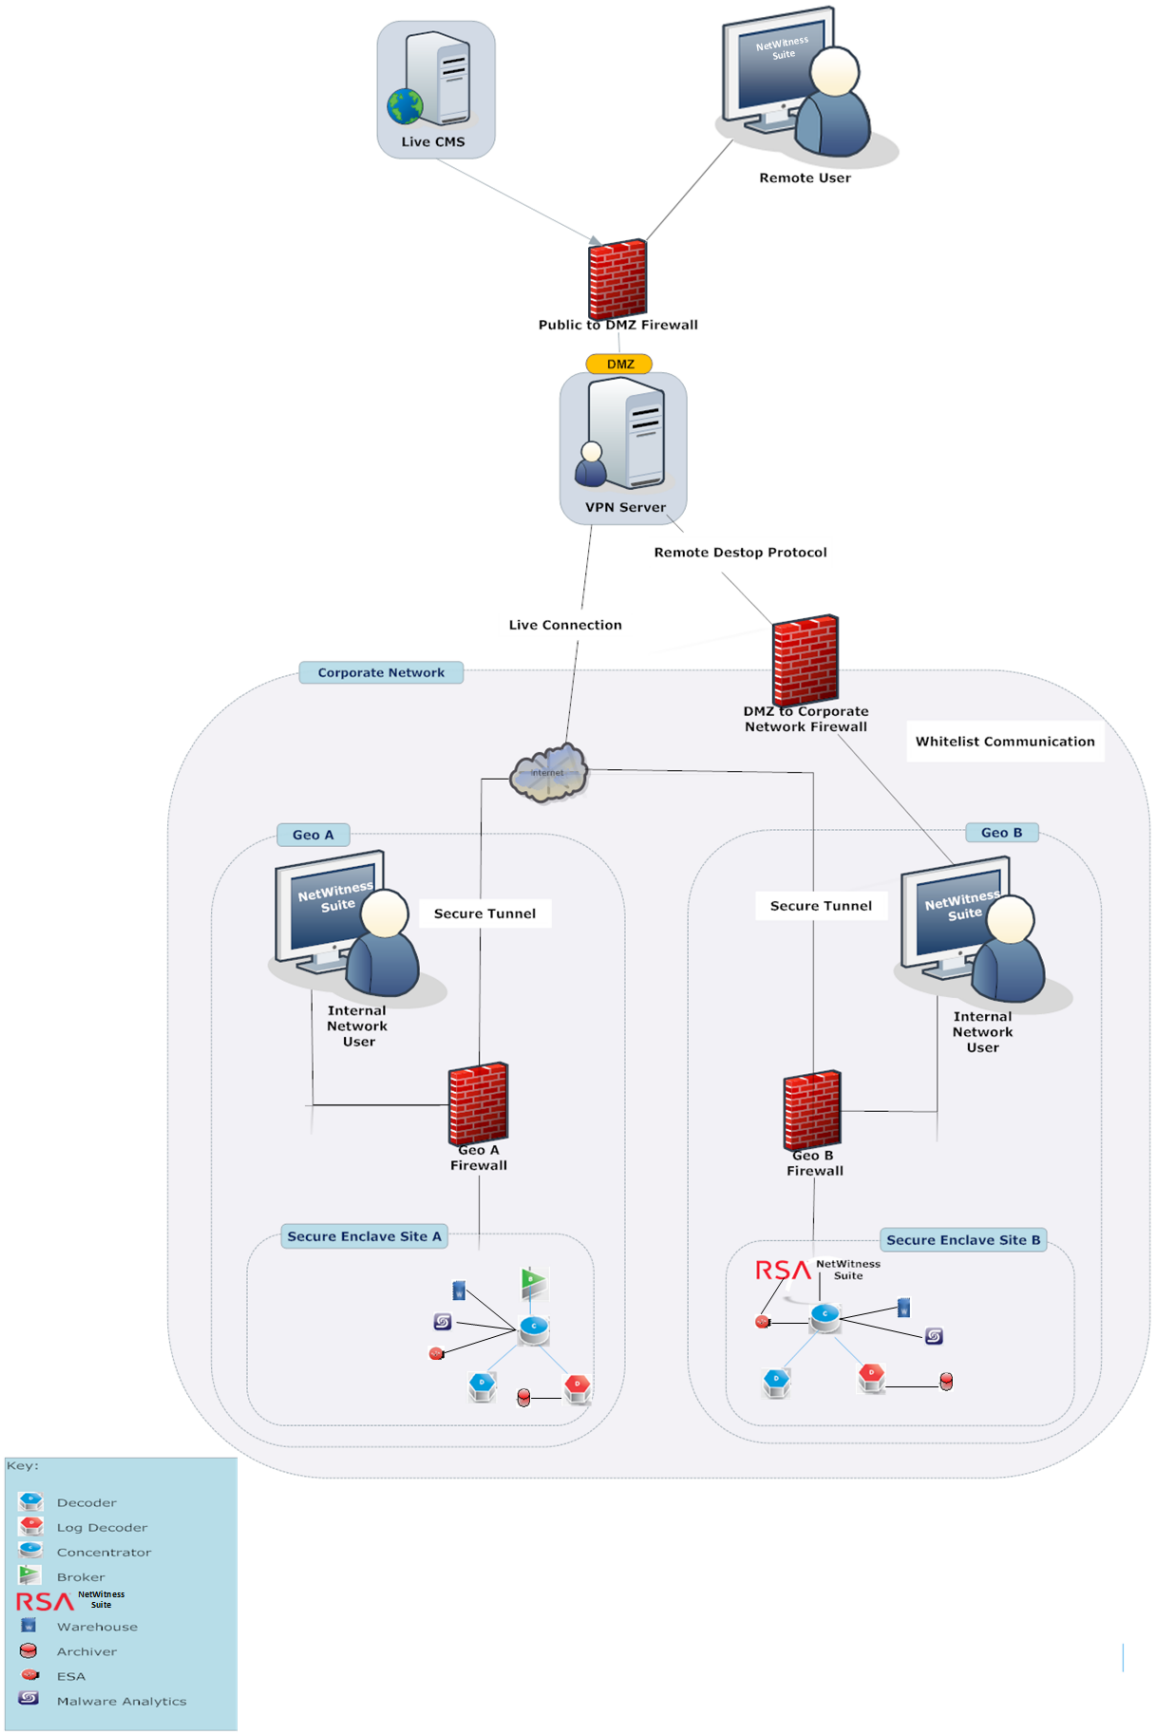
Note: The client machines through which you access NetWitness Suite can be present outside of the Secure Enclave.

Secure Deployment Guidelines

To help ensure a secure deployment, RSA recommends that you:

- Deploy multiple hosts in the corporate network. The multiple hosts in the example are in two geographic locations and include the following components:
  - NetWitness Suite
  - Broker
  - Packet Decoder
  - Log Decoder
  - Concentrator
  - ESA
  - Archiver
  - NetWitness Warehouse
  - Malware Analysis
- Ensure that all the components are connected to the same subnetwork.
- Deploy firewalls at each site to ensure the secure transfer of data from an instance of NetWitness Suite at one site to another instance of NetWitness Suite located at a different site.
- Configure firewall rules to control all communication between different sites and other components in the network as depicted in the previous figure.
- Implement data transfer between sites using a secure tunnel IPSec.

The following figures show the deployment of multiple sites within a corporate network:



Live CMS
NetWitness Suite
Remote User
Public to DMZ Firewall
DMZ
VPN Server
Remote Destop Protocol
Live Connection
Corporate Network
DMZ to Corporate Network Firewall
Whitelist Communication
Internet

Secure Tunnel
Secure Tunnel
NetWitness Suite
Internal Network User
Internal Network User
Geo A Firewall
Geo B Firewall
Secure Enclave Site A
Secure Enclave Site B
RSA NetWitness Suite
Key:
Decoder
Log Decoder
Concentrator
Broker
RSA NetWitness Suite
Warehouse
Archiver
ESA
Malware Analytics

Firewall Rules

It is important that you use a firewall to restrict network traffic between RSA NetWitness Suite and external systems. RSA NetWitness Suite recommends that you configure firewall rules to help ensure secure communication for the following connections:

- Demilitarized zone (DMZ) to corporate network
- Corporate network to site sub network
- Site to site
- Live CMS to DMZ
- External email server to DMZ

Note: RSA recommends that you restrict access from client hosts to only known IP addresses. For example, if you set up the NetWitness Suite Client UI on IP address 192.168.0.1, configure your firewall to allow only the IP address 192.168.0.1 to connect to the NetWitness Suite host.

Note: The firewall rules should be configured on an external firewall and not on any of the NetWitness Suite host.

RSA recommends that you configure firewall rules as described in the sections below. These recommendations are based on the following assumptions:

- You have a stateful firewall, indicating that only the establishment of TCP ports is considered.
- You specify the direction of communication for the UDP ports because the connections are sessionless.
- You deploy NetWitness Suite as shown in the Security Controls Map.
- The firewall processes the rules top to bottom, finishing with a generic drop of all the packets.

DMZ to Corporate Network

RSA recommends that you:

- Configure whitelist communication from the VPN server in the DMZ to the client machines on which you run RSA NetWitness Suite applications such as NetWitness Suite Web UI.
- Create firewall rules for all the machines from which you intended to remotely access the corporate network through Remote Desktop Protocol (RDP).

Corporate Network to Site

RSA recommends that the firewall at each RSA NetWitness Suite site allow access only from designated client machines through a whitelisted IP address and port.

RSA recommends that you secure the following ports to ensure secure communication between the client machine that is set as the RSA NetWitness Suite Web UI and the NetWitness Suite site:

- TCP 443

For more information, see Communication Security Settings. To help ensure secure communication between the client machines that access the NetWitness Suite UI and a site, you must set up the firewall rules as shown below:

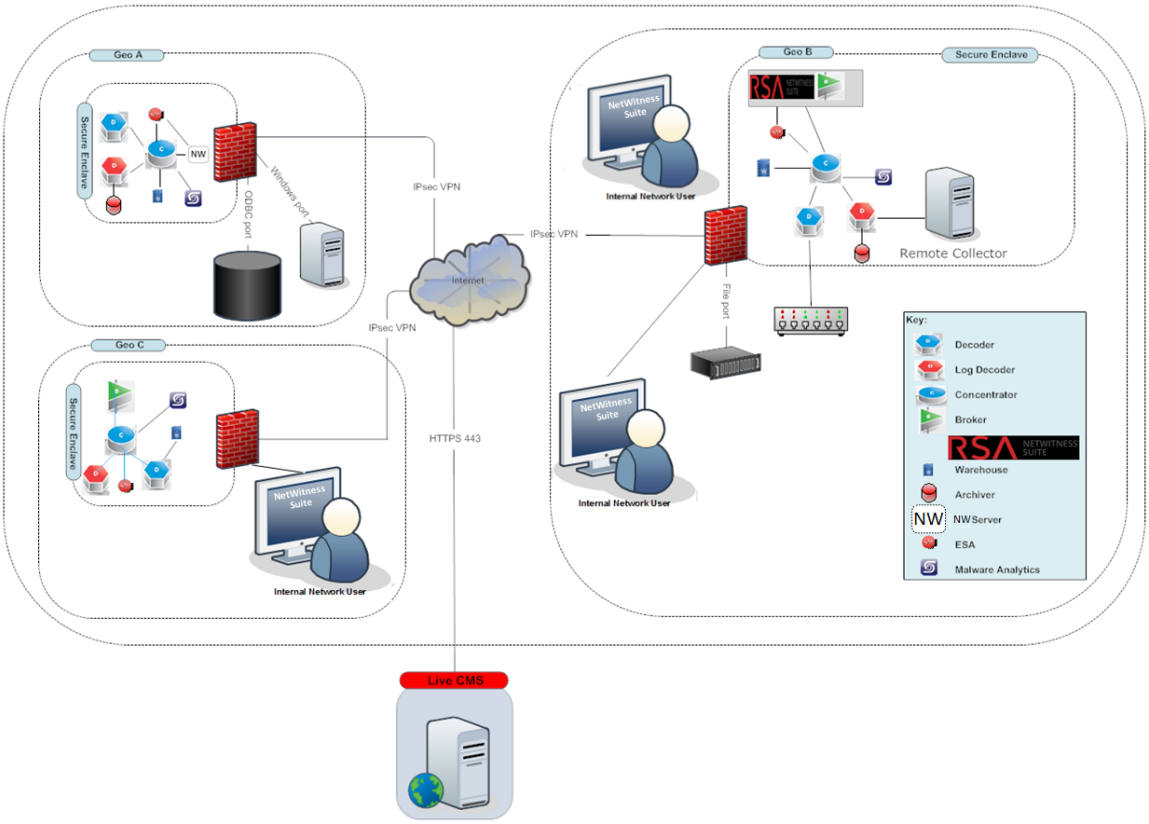
ALLOW $nwclient_IP to $nwsite_IP on port 443/tcp

DROP all from * to *

where **nwclient_IP** is the IP address assigned to the client machine that is set as the NetWitness Suite web UI and **nwsite_IP** is the IP address assigned to the Broker host within which the RSA NetWitness Suite web server is running.

Site to Site

RSA NetWitness Suite may run in multiple sub-networks within your corporate network, called sites. You can configure RSA NetWitness Suite to allow the hosts located in one site to communicate with the hosts in another site.



For this scenario, RSA recommends that you do the following:

- Ensure that the firewall at each RSA NetWitness Suite site allows communication between two sites only through a whitelisted IP address and port. For a graphical depiction of the site-to-site security control map showing the site firewalls, see the above figure.
- NetWitness Suite system update uses port 80. That means NetWitness Server site to another site (where brokers, decoders exist), port 80 should be open.

Live CMS to DMZ

To ensure secure communication between the RSA NetWitness Suite site and Live CMS, set up the firewall rules as shown below:

ALLOW $nw_site_IP to $Live_IP on port 443/tcp

DROP all from * to *

where **nw_site_IP** and **Live_IP** are the IP addresses assigned to the NetWitness Suite site and the Live CMS respectively.

Note: If you are using proxy server with self-signed certificate, you must add exception in proxy server rule to allow traffic between Live CMS server (cms.netwitness.com, port 443) and NetWitness Server.

RSA Download Central to DMZ

To ensure secure communication between the RSA NetWitness Suite site and RSA Download Central, set up the firewall rules as shown below:

ALLOW $nw_site_IP to $rsa_DLC_IP on port 80/tcp

DROP all from * to *

where **nw_site_IP** and **rsa_DLC_IP** are the IP addresses assigned to the NetWitness Suite site and RSA Download Central respectively.

External Email Server to DMZ

To ensure secure communication between the RSA NetWitness Suite site and the External Email Server, set up the firewall rules as shown below:

ALLOW $nw_site_IP to $Email_IP on port 443/tcp

DROP all from * to *

where **nw_site_IP** and **Email_IP** are the IP addresses assigned to the NetWitness Suite site and the external email server respectively.

Syslog Server to Site

If you have enabled the syslog port, to ensure secure communication between the RSA NetWitness Suite site and the Syslog Server, set up the firewall rules as shown below:

ALLOW $nw_site_IP to $Syslog_IP on port 514/udp

DROP all from * to *

where **nw_site_IP** and **Syslog_IP** are the IP addresses assigned to the NetWitness Suite site and the syslog server respectively.

SNMP Server to Site

If you have enabled the SNMP port, to ensure secure communication between the RSA NetWitness Suite site and the SNMP Server, set up the firewall rules as shown below:

ALLOW $nw_site_IP to $SNMP_IP on port 1610/SNMP

DROP all from * to *

where **nw_site_IP** and **SNMP_IP** are the IP addresses assigned to the NetWitness Suite site and the SNMP server respectively.

Secure Deployment Settings

The following table shows the security controls that RSA recommends putting in place to help secure the deployment.

Default Deployment Setting	Secure Deployment Settings	Pros of Secure Deployment Settings	Cons of Secure Deployment Settings	Instructions on how to configure secure deployment settings
HTTPS is enabled by default between the NetWitness Suite client and the server	For the best possible security between the client and the server, use certificates from CA.	Provides a high level of protection for the communication between client and server by avoiding tampering, spoofing, and man-in-the middle attacks.	May have impact on performance	For instructions on installing external certificates, see SSL Certificate Guidance for NetWitness Suite

Secure Maintenance

This topic describes some common solutions to help ensure secure maintenance.

Security Patch Management

All security patches for RSA NetWitness Suite originate at RSA and are available for you via the NetWitness Suite User Interface. For more information, see "Manage NetWitness Suite Updates" topic in the *System Maintenance Guide* .

The following table lists the third-party components for which patches are needed.

Third-party Component for which patch is needed	Frequency of Patch	EMC Respons-ibility (Y/N)	Customer Responsibility (Y/N)	Reference to instructions for Applying Patch
NetWitness Suite Hosts	Monthly and Quarterly	Y	Y	Based on EMC RSA recom-mendations

Note: From 2016 onwards, security patches will be part of the product release only and will not be shipped out separately.

Virus Scanning

RSA recommends that you:

- Deploy anti-virus client software on the deployed servers in accordance with your enterprise requirements.
- Run anti-virus and anti-malware tools with the most current definition files on the deployed servers.
- Scan all files/drivers before uploading on the deployed server.
- Follow best practices for patch management and regularly review available patches for all anti-virus and anti-malware software.

Ongoing Monitoring and Auditing

As with any critical infrastructure component, RSA NetWitness Suite recommends that you constantly monitor your system and perform periodic and random audits (for example, configuration, permissions, and security logs). You should ensure that the configurations and user access settings match your company policies and needs. For more information, see "Global Audit Logging Configurations Panel" topic in the *System Configuration Guide*.

Hardware Replacement

If RSA NetWitness Suite hardware fails or is faulty, order a replacement by contacting RSA Customer Support. While awaiting a replacement, the Redundant Array of Independent Disks (RAID) configuration is designed to ensure that there is no data loss due to a hardware failure.

The RAID configuration on NetWitness Suite:

- Hosts are RAID 1.
- Direct Attach Capacity (DAC) disk shelves is RAID 5.

Physical Security Controls Recommendations

This topic describes physical security controls.

Recommendations

Physical security controls help to enable the protection of resources against unauthorized physical access and physical tampering. RSA recommends that the physical devices and servers for RSA NetWitness Suite are deployed in a secure data center leveraging the organization's best practices for physically securing a data center, server rack, and/or server.

Supporting Users

This topic describes well-defined policies around help desk procedures for your RSA NetWitness Suite installation.

It is important to have well-defined policies around help desk procedures for your RSA NetWitness Suite installation. RSA recommends that your help desk administrators understand the importance of password strength and the sensitivity of data, such as user logon names and passwords. Creating an environment where an end user is frequently asked for this kind of sensitive data increases the opportunity for social engineering attacks. Train end users to provide, and help desk administrators to request, the least amount of information needed in each situation.

Preventing Social Engineering Attacks

Fraudsters frequently use social engineering attacks to trick unsuspecting employees or individuals into divulging sensitive data that can be used to gain access to protected systems. RSA recommends that you use the following guidelines to help reduce the likelihood of a successful social engineering attack:

- Help desk administrators should only ask for User IDs over the phone when receiving help desk calls. Help desk administrators should never ask for user passwords.
- The help desk telephone number should be well known to all users.
- Help desk administrators should perform an action to authenticate the user's identity before performing any administrative action on a user's behalf. For example, ask users one or more questions to which only they know the answer.
- If help desk administrators need to initiate contact with a user, they should not request any user information. Instead, users should be instructed to call the help desk back at a well-known help desk telephone number to ensure that the original request is legitimate.

Confirming User Identities

It is critical that your help desk administrators verify end users' identities before performing any help desk operations on their behalf. RSA recommends that you verify user identity using the following methods:

- Call the end user back on a phone owned by the organization and on a number that is already stored in the system.

Caution: Be wary of using mobile phones for identity confirmation, even if they are owned by the company because mobile phone numbers are often stored in locations that are vulnerable to tampering or social engineering.

- Send the user an email to a company email address. If possible, use encrypted email.
- Work with the employee's manager to verify the user's identity.
- Verify the identity in person.
- Use multiple open-ended questions from employee records. For example, "Name one person in your group" or "What is your badge number?" Avoid yes or no questions.

Advice for Your Users

RSA recommends that you instruct your users to do the following:

- Never give passwords to anyone.
- Change passwords at regular intervals.
- Inform your users of what information requests to expect from help desk administrators.
- Always log off from the web interface when finished.
- Always lock their desktops when stepping away from their computers.
- Regularly close their browser and clear their cache of data.

Note: Consider regular training to communicate this guidance to users.

RSA Archer Integration

Administrators can integrate RSA NetWitness Suite with RSA NetWitness Security Operations (SecOps) Manager to send alerts and incidents from NetWitness Suite to Archer for incident management and remediation. This guide provides a high-level workflow for configuring this integration.

Note: When you upgrade from Security Analytics 10.6.5 to NetWitness Suite 11.1, the Archer SecOps integration is no longer valid and must be re-configured.

The following table list the NetWitness Suite 11.1 integration options with NetWitness SecOps Managert Version 1.3.1.2.

NetWitness SecOps Manager Version	NetWitness Suite 11.1 Integration	Reference
1.3.1.2	Event Stream Analysis (ESA)	For more information, see "Configure Event Stream Analysis for Integration with Archer SecOps" section.
1.3.1.2	Reporting Engine (RE)	For more information, see "Configure Reporting Engine for Integration with Archer SecOps" section.
1.3.1.2	Respond	For more information, see "Configure Respond for Integration with Archer SecOps 1.3.1.2" section.
1.3.1.2	Archer Feeds	For more information, see "RSA Archer Feeds" section.

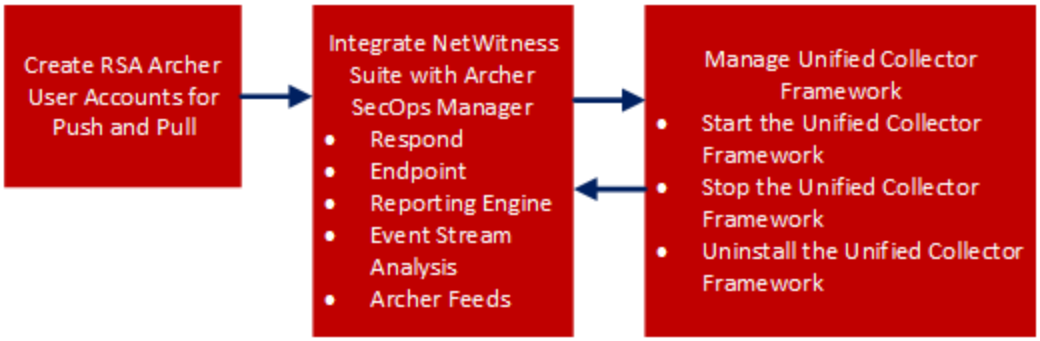
Configure NetWitness to Work With Archer

The RSA NetWitness SecOps Manager solution enables you to aggregate all actionable security alerts, allowing you to become more effective, proactive, and targeted in your incident response and SOC management. For more information on RSA NetWitness SecOps capabilities, see RSA Archer documentation on the RSA Archer Community or on the RSA Archer Exchange Community.

The version of RSA Archer determines how NetWitness Suite will be integrated. See the *SecOps Installation Guide* for Archer platforms supported.

NetWitness SecOps Manager 1.3.1.2 integrates with NetWitness Suite using the RSA UCF (Unified Collector Framework) which comprises of NetWitness Respond integration service and SecOps Watchdog service.

This figure represents the flow of NetWitness Suite 11.1 integration with NetWitnessSecOps Manager 1.3.1.2.



Create RSA Archer User Accounts for Push and Pull

You must create a user account for the web service client to transfer data to the RSA Archer GRC Platform.

You require two RSA Archer user accounts to avoid conflicts while sending and receiving data from RSA NetWitness Suite.

To create a user account for push and pull, perform the following:

1. On RSA Archer UI, click **Administration** > **Access Control** > **Users** > **Add New**.
2. In the **First Name** and **Last Name** fields, enter a name that indicates that the UCF uses this account to push data into RSA Archer GRC. For example, UCF User, Push.

   Note: When configuring the Pull account, enter a name that indicates that the UCF uses this account to pull data from RSA Archer GRC. For example, UCF User, Pull.
3. (Optional) Enter a user name for the new user account.

Note: If you do not specify a user name, the RSA Archer GRC Platform creates the user name from the first and last name entered when you save the new user account.

4. In the **Contact Information** section, in the **Email** field, enter an email address to associate with the new user account
5. In the **Localization** section, change the time zone to (UTC) Coordinated Universal Time.

Note: The UCF uses UTC time to baseline all the time-related calculations.

6. In the **Account Maintenance** section, enter and confirm a new password for the new user account.

Note: Make a note of the user name and password for the new user account that you just created. You need to enter these credentials when you set up the UCF to communicate with the RSA Archer GRC Platform through the web service client.

7. Clear the Force Password Change On **Next Sign-In** option.
8. In the **Security Parameter** field, select the security parameter that you want to use for this user.

Note: If you assign a default security parameter with a password change interval of 90 days, you also must update the user account password stored in the SA IM integration service every 90 days. To avoid this, you can optionally create a new security parameter for the SA IM integration service user account and set the password change interval to the maximum value allowed by your corporate standards.

9. Click the **Groups** tab, and perform the following:
   a. In the **Groups** section, click **Lookup**.
   b. In the **Available Groups** window, expand Groups.
   c. Scroll down and select SOC: Solution Administrator and EM: Read Only.
   d. Click **OK**.
10. Click **Apply**, then click **Save**.
11. If the machine language and regional settings of your RSA Archer GRC system are set to anything other than English-US, perform the following:
    a. Open the user account you just created, and in the **Localization** section, in the Locale field, select **English (United States)**, and click **Save**.
    b. On the Windows system hosting your RSA Archer GRC Platform, open Internet Information Services (IIS) Manager.

c. Expand your RSA Archer GRC site, click **.Net Globalization**, in both the **Culture** and **UI Culture** fields, select **English (United States)**, and click **Apply**.

d. Restart your RSA Archer GRC site.

12. Repeat steps 1 – 11 to create a second user account for the UCF to pull data from RSA Archer GRC.

Integrate NetWitness Suite With Archer SecOps Manager

You have to configure the system integration settings to manage incident workflow in RSA NetWitness SecOps Manager.

For information on how to configure system integration settings to manage incident workflow in RSA Archer Security Operations, see the "Manage Incidents in NetWitness SecOps Manager" topic in the *NetWitness Respond Configuration Guide*.

RSA Unified Collector Framework (UCF)

RSA NetWitness Suite integrates with RSA Archer SecOps Manager 1.3.1.2 using the RSA Unified Collector Framework (UCF). The RSA Unified Collector Framework (UCF) integrates with all supported SIEM tools and the RSA NetWitness SecOps Manager solution. After you configure the system integration settings, all incidents are managed in NetWitness SecOps Manager instead of NetWitness Respond. Incidents created before the integration will not be managed in NetWitness SecOps Manager.

Note:
• You must configure the same option in both RSA NetWitness Suite and the Unified Collector Framework.
• Integration of the RSA NetWitness Respond module with Reporting Engine or Event Stream Analysis can result in duplicate events, alerts, and incidents created in RSA Archer SecOps Manager.

UCF supports multiple SIEM tools connections at the same time, such as supporting NetWitness Suite Reporting Engine, HP ArcSight, and NetWitness Respond. However, different instances of the same SIEM tool are not supported, such as two NetWitness Suite servers connected to the same UCF.

Prerequisites

- Install the RSA_Archer_Security_Operations_Management package on Archer. See RSA Archer documentation RSA Archer Community or on the Content Tab at https://community.emc.com/community/connect/grc_ecosystem/rsa_archer_exchange.
- Install NetWitness SecOps Manager 1.3.1.2.

- Ensure you have NetWitness Suite 11.1 as it is compatible with NetWitness SecOps Manager 1.3.1.2.
- Ensure that Respond is configured in RSA NetWitness Suite.

The RSA Unified Collector Framework (UCF) allows you to integrate your RSA Archer Security Operations Manager system with the following:

- NetWitness Respond
- NetWitness Suite Reporting Engine
- NetWitness Suite Event Stream Analysis
- Archer Feeds

Configure Respond for Integration with Archer SecOps Manager

To configure Respond for Archer SecOps, perform the following in NetWitness Suite:

Step 1: Select the Mode for NetWitness Respond

1. Go to **ADMIN** > Services, select the Respond Server service, and then select > **Config** > **Explore**.
2. Navigate to `respond/integration/export`.
3. Set the `archer-sec-ops-integration-enabled` field to **true**.
4. Restart the Respond service by running the following command:
   `systemctl restart rsa-nw-respond-server`

Step 2: Configure NetWitness Respond to forward alerts to UCF

1. Navigate to `C:\Program Files\RSA\SA IM integration service\cert-tool\certs` in the SecOps middleware box.
2. Copy both `keystore.crt.pem` and `rootcastore.crt.pem` from the certs folder (to the import folder of NW-server):
   `cp rootcastore.crt.pem /etc/pki/nw/trust/import`

   `cp keystore.crt.pem /etc/pki/nw/trust/import`

   Note: Before you copy the files from UCF to NetWitness Admin server, examine the files to remove any blank lines and save them.
3. SSH to NW-server box
   a. Run the update-admin-node command
   `orchestration-cli-client --update-admin-node`

b. Restart the RabbitMQ service

```
systemctl restart rabbitmq-server
```

c. Create user archer and set permissions for the virtual host '/rsa/system'

```
rabbitmqctl add_user archer archer

rabbitmqctl clear_password archer

rabbitmqctl set_permissions -p /rsa/system archer ".*" ".*" ".*"
```

Step 3: Forward Alerts to the NetWitness Respond

- **To forward NetWitness Suite Event Stream Analysis alerts to NetWitness Respond, perform the following:**
  a. Go to **ADMIN > Services > ESA** service.
  b. Select an Event Stream Analysis service and then select > **View** > **Config**.
  c. Click the **Advanced** tab.
  d. Ensure that the **Forward Alerts on Message Bus** checkbox is selected by default. If not, select the **Forward Alerts on Message Bus** checkbox and click **Apply**.
- **To forward NetWitness Suite Reporting Engine alerts to NetWitness Respond, perform the following:**
  a. Go to **ADMIN > Services > Reporting Engine** service.
  b. Select the Reporting Engine service, and then select > **View** > **Config**.
  c. Click the **General** tab.
  d. In the **System Configuration section**, select the **Forward Alerts to Respond** checkbox and click **Apply**.
- **To forward NetWitness Suite Malware Analysis alerts to NetWitness Respond, perform the following:**
  a. Go to **ADMIN > Services > Malware Analysis** service
  b. Select the Malware Analysis service, and then select > **View** > **Config**.
  c. Click the **Auditing** tab.
  d. In the **Respond Alerting** section, verify that the **Enabled Config Value** checkbox is selected. If the checkbox is not selected, select the checkbox, and click **Apply**.

Step 4: Forward Endpoint Alerts to the NetWitness Respond

RSA Endpoint alerts can be sent to RSA Archer GRC through NetWitness Respond. For more information on how to Configure NetWitness Endpoint Alerts via Message Bus, see "Configure NetWitness Endpoint Alerts via Message Bus" topic in the *NetWitness Endpoint Integration Guide*.

Step 5: Aggregate Alerts into Incidents

The Respond Server service consumes alerts from the message bus and normalizes the data to a common format (while retaining the original data) to enable simpler rule processing. It periodically runs rules to aggregate multiple alerts into an incident and set some attributes of the Incident (for example, severity, category, and so on). For more information on aggregating alerts, see the "Configure Alert Sources to Display Alerts in Respond View" topic in the *NetWitness Respond Configuration Guide*.

To configure alert aggregation:

1. Go to **CONFIGURE > Incident Rules**.
2. To enable the rules provided out of the box, perform the following:
   a. Double-click the rule.
   b. Select **Enabled**.
   c. Click **Save**.
   d. Repeat steps a-c for each rule.
3. To add a new rule, do the following:
   a. Click +.
   b. Select **Enabled**.
   c. Complete the following fields:
      - Rule Name
      - Action
      - Match Conditions
      - Grouping Options
      - Incident Options
      - Priority
      - Notifications
4. Click **Save**.

Configure Endpoints in RSA Unified Collector Framework

Endpoints provide the connection details required for the UCF to reach both your RSA NetWitness Suite and RSA Archer GRC systems.

Note: Some endpoints are necessary to use different integrations. The following list shows the mandatory endpoints.

Mandatory Endpoint Integration

- Archer Push endpoint
- Archer Pull endpoint
- Mode selection: SecOps or Non SecOps mode.

Note:
• If Non SecOps mode is selected, incidents are managed in NetWitness Respond instead of RSA Archer Security Operations Management.
• You must configure the port depending on the protocol (TCP, UDP, or secure TCP).
• Ensure the certificate subject name for your RSA Archer GRC server matches the hostname.

Procedure

1. On the UCF system, open the Connection Manager, as follows:
   a. Open a command prompt.
   b. Change directories to `<install_dir>\SA IM integration service\data-collector`.
   c. Enter:
   ```
   runConnectionManager.bat
   ```
2. In the **Connection Manager**, enter **1** for Add Endpoint.
3. Add an endpoint for pushing data to RSA Archer Security Operations Management, as follows:
   a. Enter the number for Archer.

      Note: SSL must be enabled to add the RSA Archer endpoints.

   b. For the endpoint name, enter **push**.
   c. Enter the URL of your RSA Archer GRC system.
   d. Enter the instance name of your RSA Archer GRC system.

e. Enter the user name of the user account you created to push data into your RSA Archer GRC system.

f. Enter the password for the user account you created to push data into your RSA Archer GRC system, and confirm the password.

g. When asked whether this account is used for pulling data, enter **False**.

4. Add an endpoint for pulling data from RSA Archer Security Operations Management, as follows:

a. Enter the number for Archer.

> **Note:** SSL must be enabled to add the RSA Archer endpoints.

b. For the endpoint name, enter **pull**.

c. Enter the URL of your RSA Archer GRC system.

d. Enter the instance name of your RSA Archer GRC system.

e. Enter the user name of the user account you created to pull data from your RSA Archer GRC system.

f. Enter the password for the user account you created to pull data from your RSA Archer system, and confirm the password.

g. When asked whether this account is used for pulling data, enter **True**.

5. Add an endpoint for RSA NetWitness Suite

- For RESPOND

a. Enter the number for Security Analytics IM.

b. Enter a name for the endpoint.

c. Enter the SA Host IP address.

d. For SA Messaging Port, enter **5671**.

e. Enter the target queue for remediation tasks. Selecting All processes both the RSA Archer Integration (GRC) and IT Helpdesk (Operations).

f. When asked whether to automatically add certificates to the SA trust store, enter **No**. The certificates were added manually in previous steps.

g. In UCF connection manager, select the mode, as follows:

i. Enter the number for Mode Selection.

ii. Select Manage incident workflow exclusively in RSA Archer Security Operations Management from the drop-down.

Note: Make sure you select the second option as the first option is not supported in NetWitness Suite 11.1 release.

- For Reporting Engine and Event Stream Analysis

a. To use third-party integrations, add the Syslog Server Endpoint, as follows:

i. Enter the number for Syslog Server Endpoint.

ii. Enter the following:

- User defined name
- SSL Configured TCP port number

  Note: Defaults to 1515. If you do not want to host the Syslog server in this mode, enter **0**.

- TCP port number - Enter the TCP port if the Syslog client sends the Syslog message in TCP mode.

  Note: Defaults to 1514. If you do not want to host the Syslog server in this mode, enter **0**.

- UDP port number - Enter the UDP port if the Syslog client sends the Syslog message in UDP mode.

  Note: Defaults to 514. If you do not want to host the Syslog server in this mode, enter **0**.

By default, the Syslog server will run in the above three modes, unless it is disabled by entering **0**.

b. To test the Syslog client, enter the number for Test Syslog Client. Use the Test Syslog client with the files from `<install_dir>\SA IM integration service\config\mapping\test-files\`.

6. In the Connection Manager, enter **5** to test each endpoint.

Configure Reporting Engine for Integration with NetWitness SecOps Manager

To configure Syslog Output Action for the Reporting Engine, perform the following:

1. Select **ADMIN > Services**.
2. Select your Reporting Engine Service, and click **View** > **Config**.
3. Click the **Output Actions** tab.
4. In the **NetWitness Suite Configuration** section, in the **Host Name** field, enter the host name or IP address of your Reporting Engine server.
5. In the **Syslog Configuration** section, add the Syslog Configuration as follows:
   a. In the **Server Name** field, enter the hostname of the UCF.
   b. In the **Server Port** field, enter the port that you selected in the UCF Syslog configuration.
   c. In the **Protocol** field, select the transport protocol.

   Note: If you select Secure TCP, SSL must be configured.
6. Click **Save**.

To Configure NetWitness Suite Reporting Engine SSL for Secure Syslog Server:

If the Syslog server is configured with Secure TCP, configure the SSL.

1. Copy the certificate `keystore.crt.der` from the UCF machine to NetWitness Suite server box at `/usr/lib/jvm/java-1.8.0-openjdk-1.8.0.161-0.b14.el7_4.x86_64/jre/lib/security`.
2. Run the following command:

   ```
   keytool -import -file keystore.crt.der -alias ucf-syslog -keystore /etc/pki/nw/trust/truststore.jks -storepass changeit
   ```

   Note: Do not copy and paste the above code. Type it in to avoid errors.
3. Enable **ServerCertificateValidationEnabled** to **true:**
   - Navigate to **ADMIN** > **Service**.
   - Click > **View > Explore** of the Reporting Engine service .

- Expand **com.rsa.soc.re** > **Configuration** > **SSLContextConfiguration**.
- Expand **sslContextConfiguration** and set **ServerCertificateValidationEnabled** to **true**.

4. Restart the Reporting Engine service by running the following command:
   `service rsasoc_re restart`

To Configure Rules in NetWitness Suite:

1. Click **MONITOR >Reports > Manage**.
   The Manage tab is displayed.
2. In **Rule Groups** panel, click ✚.
3. Enter a name for the new group.
4. Select the group you created, and in the Rule toolbar, click ✚.
5. In the **Rule Type** field, select NetWitness DB.
6. Enter a name for the rule.
7. Enter values in the **Select** and **Where** fields based on the rule that you want to create.

   Note: Add the Syslog configuration with the Syslog name set above.

8. Click **Save**.

Note: To see the same number of alerts in the Reporting Engine and RSA Archer GRC, ensure that you've selected Once for execute in both the Syslog and Record tabs.

To Add Alert Templates for the Reporting Engine in NetWitness Suite:

The UCF syslog configuration comes with out-of-the-box alert templates that you can use when you create an alert with a syslog output action. These templates define the criteria used to aggregate alerts into incidents in your RSA Archer GRC Platform.

The sample templates are located in the following location on the UCF system:

`<install_dir>\SA IM integration service\config\mapping\templates\SecOps_SA_Templates`

1. Click **MONITOR > Reports > Manage > Alerts**.
2. Click the **Template** tab.
3. Click ✚.

Note: After you copy the template in the Create/Modify Template window, make sure to replace `cs25=${sa.host} cs25Label=sahost` to `cs25=${nw.host} cs25Label=nwhost`.

1. In the **Name** field, enter a name for the alert template.
2. In the **Message** field, enter the alert message.
3. Click **Create**.
4. Repeat steps 3 to 6 for each alert template that you want to add.

To Configure Alerts in NetWitness Suite:

In RSA NetWitness Suite Reporting Engine, an alert is a rule that you can schedule to run on a continuous basis and log its findings to several different alerting outputs.

1. Click **MONITOR > Reports > Manage > Alerts**.
2. Click +.
3. Select **Enable**.
4. Select the rule you created.
5. Select **Push to Decoders**.

   Note: If you do not enter a value in this field, the link in the RSA Archer Security Alerts application to RSA NetWitness Suite will not work.
6. From the Data Sources list, select your data source.
7. In the **Notification** section, select **Syslog**.
8. Click +.
9. Complete the Syslog configuration fields.
10. In the **Body Template** field, select the template that you want to use for this Syslog alert.
11. Click **Save**.

Configure Event Stream Analysis for Integration with Archer SecOps Manager

To Configure Event Stream Analysis Syslog Notification Settings in NetWitness Suite:

1. Click **ADMIN** > **System** > **Global Notifications**.
2. Click the **Output** tab.
3. Define and enable an Event Stream Analysis Syslog notification.
4. Click the **Servers** tab.
5. Define and enable a Syslog notification server.

6. In the Syslog Server Configuration section, enter the following:

   Field Description:

   - Name - Specify the custom name
   - Server IP (Hostname) - Specify the hostname or IP Address of the system on which you installed the UCF.
   - Port - Specify the port number on which you want the UCF to listen for.
   - Facility - Specify the Syslog facility
   - Protocol - Select the protocol.

7. Click **Save**.

To Configure NetWitness Suite Event Stream Analysis SSL for Secure Syslog Server:

If the Syslog server is configured with Secure TCP, configure the SSL.

1. Select **ADMIN > Services**.
2. Select the Event Stream Analysis service. Go to **Explore > Configuration > SSL** .
3. Set **ServerCertificateValidationEnabled** to **true.**
4. Copy the `rootcastore.cert.pem` from UCF machine to Event Stream Analysis server to `/etc/pki/ca-trust/source/anchors`.
5. Run the following command:

   ```
   update-ca-trust
   ```

6. Restart the Event Stream Analysis server by running the following command:

   ```
   service rsa-nw-esa-server restart
   ```

To Add Event Stream Analysis Alert Templates

The UCF syslog configuration comes with out-of-the-box alert templates that you can use when you create an alert with a syslog output action. These templates define the criteria used to aggregate alerts into incidents in your RSA Archer GRC Platform.

The sample templates are located in the following location on the UCF system:

`<install_dir>\SA IM integration service\config\mapping\templates\SecOps_SA_`

`Templates\SecOps_SA_ESA_templates.txt`

1. Select **ADMIN > System > Global Notifications**.
2. Click the **Templates** tab.
3. Click ✚.
4. In the **Template Type** field, select Event Stream Analysis.

5. In the **Name** field, enter the name for the template.
6. (Optional) In the **Description** field, enter a brief description for the template.
7. In the **Template** field, enter the alert message.
8. Click **Save**.
9. Repeat steps 3 – 8 for each alert template that you want to add.

To Create Event Stream Analysis Rules

1. Click **CONFIGURE** > **ESA Rules**.
2. In the **Rule Library**, click ✚.
3. Select **Rule Builder**.
4. In the **Rule Name** field, enter a name for the rule.
5. In the **Description** field, enter a description for the rule.
6. Select the **Severity**.
7. In the **Condition** section, do the following:
   a. Click ✚ to build a statement.
   b. Enter a name, select a condition type, and add meta data/value pairs for your statement.
   c. Click **Save**.
   d. Repeat steps a – c until you have built all your statements for the rule.
8. In the **Notifications** section, select **Syslog**.
9. Select the notification, Syslog server, and template that were created previously.
10. Click **Save** and **Close**.
11. Click **Configure** > **Deployments**.
12. Click ✚ for Event Stream Analysis services section.
13. Select the Event Stream Analysis Service.
14. Click **Deploy Now**.
15. In the **Event Stream Analysis Rules** section, click ✚ to choose the Event Stream Analysis Rule that you created, and click **Deploy Now**.

RSA Archer Feeds

By default, only the IP Address and Criticality Rating fields in the RSA Archer Devices application are fed into RSA NetWitness Suite by the SA IM Integration Service. You can customize the Enterprise Management plug-in to include the Business Unit and Facility fields that are cross-referenced in the Devices application in the feed. For more details, see Archer documentation at https://community.emc.com/community/connect/grc_ecosystem/rsa archer or https://community.emc.com/community/connect/grc_ecosystem/rsa_archer_exchange.

Note: If you plan to feed Business Unit and Facility information from your RSA Archer GRC Platform into Live, you must also add keys for these fields to the index-concentrator-custom.xml file.

Update the Concentrator and Decoder Services

The SA IM Integration Service in NetWitness SecOps Manager manages the files for a custom feed and deposits these files in a local folder that you specify when you configure the Enterprise Management Endpoint. The Live module of RSA NetWitness Suite retrieves the feed files from this folder. Live then pushes the feed to the Decoders, which start creating metadata based on captured network traffic and the feed definition. To make each Concentrator aware of the new metadata created by the Decoders, you must edit the `index-concentrator-custom.xml`, `index-logdecoder-custom.xml`, and `index-decoder-custom.xml files`.

1. Select **ADMIN > Services**.
2. Select your Concentrator, and select > **View > Config**.
3. Click the **Files** tab.
4. From the drop-down list, select index-concentrator-custom.xml. Do one of the following:
   - If content already exists in the file, add a key for the new meta data element as follows:

     ```
     <key description="Criticality" format="Text" level="IndexValues"
     name="criticality" defaultAction="Open"/>
     ```

     Note: Do not copy and paste code. Type it in to avoid errors.
   - If the file is blank, add the following content:

     ```
     <?xml version="1.0" encoding="utf-8"?>
     <language level="IndexNone" defaultAction="Auto">
     <key description="Criticality" format="Text" level="IndexValues"
     name="criticality" defaultAction="Open"/>
     </language>
     ```
5. Click **Apply**.
6. To add multiple devices, do the following:

a. Click **Push**.

b. Select the devices to which you want to push this file.

c. Click **OK**.

7. Repeat steps 1-7 for the Log Decoders and Index Decoders, using index-logdecoder-custom.xml and index-decoder-custom.xml.

8. Restart the Concentrator and Decoder services by running the following commands:

```
service nwdecoder restart
service nwconcentrator restart
```

Add the RSA Archer Enterprise Management Endpoint in the UCF

1. In the UCF connection manager, select the mode, as follows:

   a. Enter the number for Mode Selection.

   b. Select one of the following options:

   - Manage incident workflow in RSA NetWitness Suite.
   - Manage incident workflow exclusively in RSA Archer Security Operations Management.

2. Add the RSA Archer Enterprise Management Endpoint, as follows:

   a. Enter the number for Enterprise Management.

   b. Complete the fields in the table below.

Field	Description
Endpoint Name	Optional endpoint name.
Web Server Port	Defaults to 9090. Can be configured to host the web server url. The URL with the port number should be provided as the URL in NetWitness Suite live feed: http://hostname:port/archer/sa/feed

Field	Description
Criticality	Criticality of the assets to be pulled from RSA Archer GRC. If **false**, pull assets with any criticality. If **true**, pull assets with only high criticality. To configure this manually, edit the em.criticality property in the collector-config properties file to provide a comma-separated list of criticalities: LOW, MEDIUM, HIGH.
Feed Directory	Directory where the assets CSV file from RSA Archer GRC are saved. **Note:** The directory path provided must exist.
Web Server Username	Username for authenticating to the EM web server.
Web Server Password	Password for authenticating to the EM web server.
SSL Mode	Defaults to No. If **No**, the URL uses `http mode: http://hostname:port/archer/sa/feed` If you have not updated the host file, see "Update the RSA NetWitness Suite Host File" section. **Note:** NetWitness Suite currently does not support Archer recurring feeds in SSL mode.

Update the RSA NetWitness Suite Host File

1. Edit the host file on the NetWitness Suite server at the following location: vi /etc/hosts
2. Enter the following for the UCF host IP address:

   ```
   <ucf-host-ip> <ucf-host-name>
   ```

3. Restart NetWitness Suite server by running the following command:

   ```
   service jetty restart
   ```

4. While configuring the NetWitness Suite live feed, enter the hostname for the URL instead of the IP address and the port number configured for Enterprise Management endpoint in the

UCF:

`http: //<ucf-host-name> : <EM_Port>/archer/sa/feed.`

5. Verify that the connection works.

Create a Recurring Feed Task

In order for RSA NetWitness Suite to download feed files from the NetWitness Respond Integration Service and push the feeds to Decoders, you must create a recurring feed task and define the feed settings.

Note: For RSA Archer SecOps 1.2: In order for RSA NetWitness Suite to download feed files from your UCF machine and push the feeds to Decoders, you must create a recurring feed task and define the feed settings. The procedure is similar to RSA Archer SecOps 1.3, with a few exceptions. See documentation on the RSA Archer Exchange Community for details.

1. Select **CONFIGURE > Custom Feeds**.
2. In the Feeds view, Click +.
3. Select **Custom Feed**, and click **Next**.
4. Select **Recurring**.
5. Enter a name for the feed.
6. In the URL field, enter the following:

   `http://ucf_hostname/archer/sa/feed`

   where *`http :ucf_hostname_or_ip:port`* is the address of your NetWitness Respond Integration Service system. For example: `http://<ucf-host-name>` .
7. Select **Authenticated**.
8. In the **User Name** and **Password** fields, enter the credentials of the user account you created in the Add the RSA Archer Enterprise Management Endpoint in the UCF procedure.
9. Define the recurrence interval for the feed.
10. In the **Date Range** section, define a start and end date for the feed, and click **Next.**
11. Select each Decoder to which you want to push this feed, and click **Next**.
12. In the **Type** field, ensure that IP is selected.
13. In the **Index Column** field, select 1.
14. In the second column, set the Key value to criticality, and click **Next**.
15. Review your feed configuration details, and click **Finish**.

Manage Unified Collector Framework

This section provides additional tasks for configuring and managing the RSA Unified Collector Framework (UCF) for Archer SecOps Manager 1.3.1.2 Integration.

Start the RSA Unified Collector Framework

1. Click **Control Panel > Administrative Tools > Services**.
2. Select RSA Unified Collector Framework.
3. Click **Start**.

Stop the RSA Unified Collector Framework

1. Click **Control Panel > Administrative Tools > Services**.
2. Stop the RSA SecOps WatchDog Service.

   Note: If you do not stop the Watchdog service, the Watchdog service starts the NetWitness Respond Service before intended.

3. Select RSA Unified Collector Framework.
4. Click **Stop**.

Note: If the service takes too long to shutdown, use the Task Manager to end the RSASAIMDCService.

Uninstall the RSA Unified Collector Framework

1. Click **Control Panel** > **Programs and Features**.
2. Select **RSA Unified Collector Framework**.
3. Click **Uninstall**.

Troubleshoot RSA Archer Integration

This section provides resolutions to common problems that you may encounter while configuring Archer SecOps Manager 1.3.1.2 with NetWitness Respond.

Setting the CA Truststore

Problem: After adding the endpoint for NetWitness Respond, the CA truststore fails to set.

Resolution:

1. Ensure that the SSH credentials for the NetWitness Suite host are valid.
2. If the credentials are correct, but the error still occurs, manually copy certificates.

Remediation Tasks in RSA Archer Security Operations Manager

Problem: Remediation Tasks being pushed to the operations queue through the UCF are not appearing in RSA Archer Security Operations Manager as Findings.

Resolution:

1. Open the Connection Manager:
    - Open a command prompt
    - `Change directories to <install_dir>\SA IM integration service\data-collector.`
    - `Type: runConnectionManager.bat`
2. Enter 2 to edit endpoint.
3. Enter 3 to NetWitness Suite Respond.
4. Ensure the Target Queue is set to All or Operations.

Errors between RSA NetWitness Suite and RSA Unified Collector Framework

Problem: In the `<install_dir>\SA IM integration service\logs\collector.log`, there are SSL errors between RSA NetWitness Suite and RSA Unified Collector Framework.

Resolution:

1. Verify that the SSL certificates are valid.

   Note: NetWitness Respond certificates are valid for two years.

2. If your certificates are expired, regenerate and copy the expired certificates.

To regenerate and copy the certificates, do the following:

1. In Command Prompt, go to `<install_dir>\SA IM integration service\data-collector`.
2. Enter: `runConnectionManager.bat`
3. Enter the number for Regenerate SA IM Integration Service Certificate.
4. In the NetWitness Suite Respond endpoint, in Connection Manager, enter the number for Edit Endpoint.
5. Enter Yes to copy the certificates automatically to the NetWitness Suite trust store.

Note: If certificates fail to copy, manually copy the certificates.

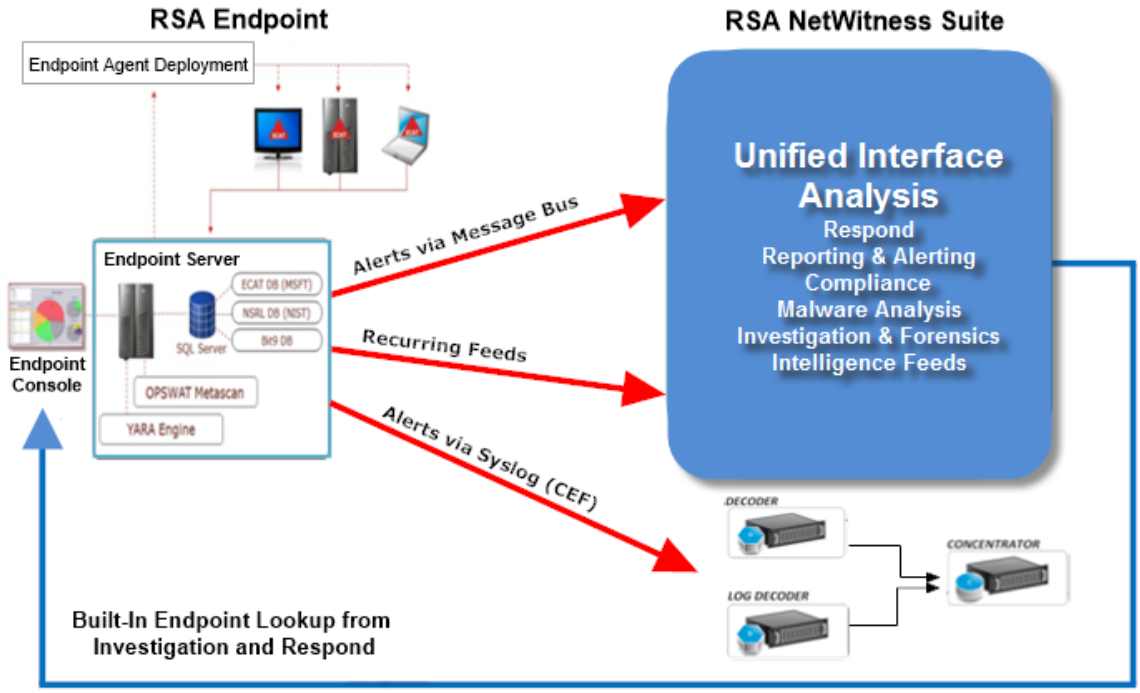
RSA NetWitness Endpoint Integration

RSA customers who are using RSA NetWitness Endpoint 4.3.0.4, 4.3.0.5, or 4.4 can integrate NetWitness Endpoint and RSA NetWitness Suite in several different ways. This guide is for RSA NetWitness Suite version 11.1.

Integration Options



Built-in NetWitness Endpoint Lookup

With the RSA NetWitness Endpoint user interface (UI) installed on the same machine where the analyst is using a browser to access NetWitness Suite, the built-in NetWitness Endpoint Lookup from NetWitness Suite Investigation and NetWitness Suite Respond provides right-click access to the NetWitness Endpoint console server for the following meta keys: IP address (ip-src, ip-dst, ipv6-src, ipv6-dst, orig_ip), host (alias-host, domain.dst), client, and file-hash. These are described in the "Launch an External Lookup of a Meta Key" topic in *Investigation and Malware Analysis User Guide* and the "View Alerts" topic in *NetWitness Respond User Guide*.

NetWitness Suite configuration is not required for endpoint lookup when you are using one of the built-in parsers, NetWitness Endpoint or CEF, and you have not customized the default meta keys used when loading metadata in Investigation. For more information, see "Manage and Apply Default Meta Keys in an Investigation" topic in the *Investigation and Malware Analysis User Guide*.

Note: The exception occurs if you customize NetWitness Suite by editing the display setting for the default meta keys in Investigation, add meta keys to the table-map-custom.xml file, or customize NetWitness Endpoint feeds. Some configuration is required to add the custom meta keys to the context menu NetWitness Endpoint Lookup in the **ADMIN** > **System** view as described in the "Add Custom Context Menu Actions" topic in the *System Configuration Guide*.

Integration Methods

With an RSA NetWitness Endpoint 4.3.0.4, 4.3.0.5, or 4.4 console server installed on a Windows host and proper configuration of NetWitness Endpoint and NetWitness Suite by an administrator, three additional integrations of NetWitness Endpoint analysis data are possible.

The following are the RSA NetWitness Endpoint integration methods:

- Configure Endpoint Alerts via Message Bus
- Configure Contextual Data from Endpoint via Recurring Feed
- Configure Endpoint Alerts via Syslog into a Log Decoder

Endpoint alerts via message bus into NetWitness Respond. This integration provides the capability for forwarding Endpoint alerts to Respond via message bus.

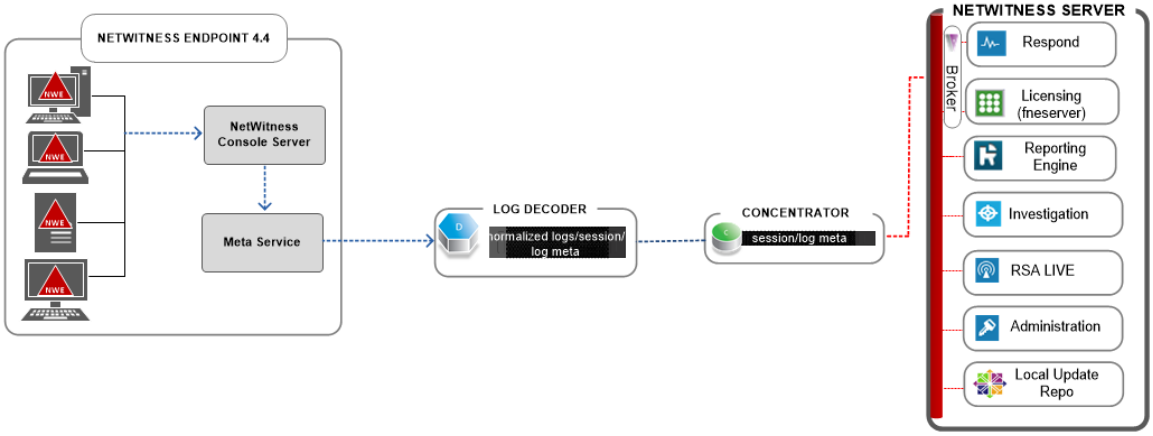
Contextual data from Endpoint via a NetWitness Suite Live recurring feed. This integration can enrich the session displayed in NetWitness Suite Investigation with contextual information; some examples include the host operating system, MAC address, IIOC score, and other data that may not be present in the log or packet data.

NetWitness Endpoint alerts via Syslog (CEF) into NetWitness Suite Log Decoders. This integration provides the capability to forward Endpoint events via Syslog and to correlate the events with other log or packet metadata in the NetWitness Suite ecosystem.

NetWitness Endpoint Meta Integration

The NetWitness Endpoint Meta Integration with RSA NetWitness Suite offers customers that have both products a way to more easily take advantage of their products in a single user interface. The following diagram illustrates how NetWitness Endpoint integrates with the NetWitness Suite. The NetWitness Endpoint metadata is collected and published from all machines where NetWitness Endpoint agents are deployed, and then sent to the NetWitness Suite Log Decoder.

The meta can then be viewed in the associated NetWitness Suite Concentrator and also in NetWitness Suite Investigate.



NetWitness Endpoint Alerts and Indicators of Compromise

NetWitness Endpoint IIOC (Instant Indicator of Compromise) is a database query that NetWitness Endpoint runs on collected NetWitness Endpoint scan data to determine the presence of potential malware on scanned hosts. RSA NetWitness Endpoint 4.1.2 or later ships with IOCs that users can enable and mark as alertable. RSA NetWitness Endpoint runs IOC queries regularly on new scan data, which is collected and stored in the database. If the IOC query is satisfied, this indicates a potential indicator of compromise, and the event can be reported to a user or sent to an external system as an alert.

Possible types of alerts are:

- Machine alert: This alert indicates that the machine in question is suspicious.
- Module alert: This alert indicates that a module, such as a file, a DLL, or an executable, is suspicious. It contains details about the module in question.
- Event alert: This alert represents any other suspicious activity detected by NetWitness Endpoint that does not fall into the above categories.

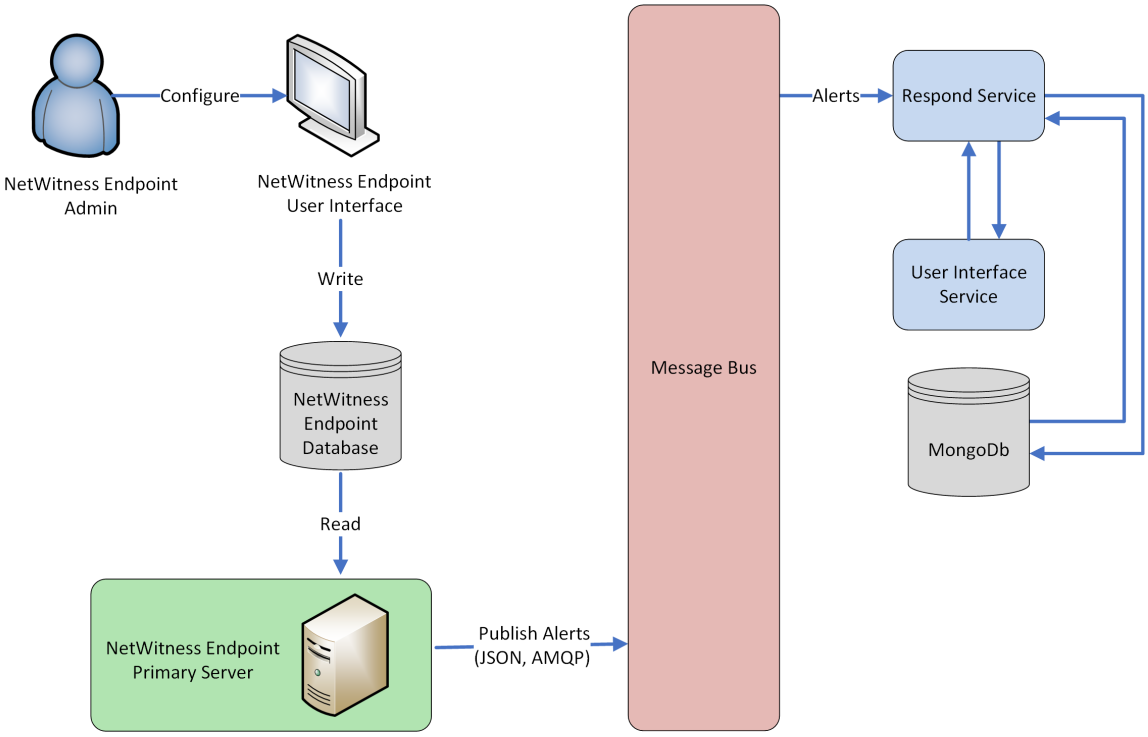
Each of these alert types can be sent to NetWitness Suite.

Configure NetWitness Endpoint Alerts via Message Bus

This procedure is required to integrate NetWitness Endpoint with NetWitness Suite so that the NetWitness Endpoint alerts are picked up by the Respond component of NetWitness Suite and displayed in the **RESPOND > Alerts** view.

Note: RSA supports NetWitness Endpoint versions 4.3.0.4, 4.3.0.5, or 4.4 for NetWitness Respond integration. For more information, see the "RSA NetWitness Suite Integration" topic in the *NetWitness Endpoint User Guide*.

The diagram below represents the flow of NetWitness Endpoint alerts to the Respond Incident List view of NetWitness Suite and its display in the **RESPOND > Alerts** view.



Prerequisites

Ensure that you have the following:

- The Respond service is installed and running on NetWitness Suite.
- NetWitness Endpoint 4.3.0.4, 4.3.0.5, or 4.4 is installed and running.

Configure NetWitness Endpoint to Forward NetWitness Endpoint Alerts

To configure NetWitness Endpoint to send alerts over the message bus to the NetWitness Suite user interface:

1. In the NetWitness Endpoint user interface, click **Configure > Monitoring and External Components**.

   The **External Components Configuration** dialog is displayed.

   1. From the components listed, select **Incident Message Broker** and click + to add a new IM broker.

2. Enter the following fields:

   a. **Instance Name**: Enter a unique name to identify the IM broker.

   b. **Server Hostname/IP address**: Enter the Host DNS or IP address of the IM broker (NetWitness Server).

   c. **Port number**: The default port is 5671.

3. Click **Save**.

4. Navigate to the **ConsoleServer.exe.config** file in **C:\Program Files\RSA\ECAT\Server**.

5. Modify the virtual host configurations in the file as follows:
   `<add key="IMVirtualHost" value="/rsa/system" />`

   Note: In NetWitness Suite11.0 and 11.1, the virtual host is "/rsa/system". For version 10.6.x and below, the virtual host is "/rsa/sa".

6. Restart the API Server and Console Server.

7. To set up SSL for Respond Alerts, perform the following steps on the NetWitness Endpoint primary console server to set the SSL communications:

   a. Export the NetWitness Endpoint CA certificate to .CER format (Base-64 encoded X.509) from the personal certificate store of the local computer (without selecting the private key).

   b. Generate a client certificate for NetWitness Endpoint using the NetWitness Endpoint CA certificate. (You MUST set the CN name to ecat. Run cmd.exe console with Administrator rights.)

   ```
   makecert -pe -n "CN=ecat" -len 2048 -ss my -sr LocalMachine -a
   sha1 -sky exchange -eku 1.3.6.1.5.5.7.3.2 -in "NweCA" -is MY -ir
   LocalMachine -sp "Microsoft RSA SChannel Cryptographic Provider" -
   cy end -sy 12 c:\client.cer
   ```

   Note: In the previous code sample, if you upgraded to version 4.3 (or later) from a previous version and did not generate new certificates, you should substitute `"EcatCA"` for `"NweCA"`.

   Or, if your current operating system has PowerShell version 5.1 or later, you can use the following code sample:

   ```
   PS C:\> New-SelfSignedCertificate -KeyExportPolicy Exportable -
   Subject "CN=ecat" -KeyAlgorithm RSA -KeyLength 2048 -
   CertStoreLocation "cert:\LocalMachine\My" -HashAlgorithm SHA256 -
   KeySpec KeyExchange -TextExtension @("2.5.29.37=
   {text}1.3.6.1.5.5.7.3.2,1.3.6.1.5.5.7.3.1") -Provider "Microsoft
   RSA SChannel Cryptographic Provider" -KeyUsage DigitalSignature,
   KeyEncipherment, KeyAgreement -Signer (Get-ChildItem -Path
   Cert:\LocalMachine\My\ -DnsName NweCA)-NotAfter (Get-
   Date).AddYears(5); Export-Certificate –Cert (Get-ChildItem –Path
   Cert:\LocalMachine\My\ -DnsName ecat) –FilePath C:\Client.cer
   ```

   c. Make a note of the thumbprint of the client certificate generated in step b. Enter the thumbprint value of the client certificate in the IMBrokerClientCertificateThumbprint section of the ConsoleServer.Exe.Config file as shown.

   ```
   <add key="IMBrokerClientCertificateThumbprint"
   value="896df0efacf0c976d955d5300ba0073383c83abc"/>
   ```

8. On the NetWitness Server, copy the NetWitness Endpoint CA certificate file in .CER format into the import folder:
   `/etc/pki/nw/trust/import`

9. Issue the following command to initiate the necessary Chef run:
   `orchestration-cli-client --update-admin-node`
   This appends all of those certificates into the truststore.
10. Restart the RabbitMQ server:
    `systemctl restart rabbitmq-server`
    The NetWitness Endpoint account should automatically be available on RabbitMQ.
11. Import the `/etc/pki/nw/ca/nwca-cert.pem` and `/etc/pki/nw/ca/ssca-cert.pem` files from the NetWitness Server and add them to the Trusted Root Certification stores in the Endpoint Server.

Troubleshooting

This section suggests how to resolve problems you may encounter when you configure NetWitness Endpoint alerts via Message Bus.

Known Issues	Solutions
Orchestration fails on admin node.	You must copy and paste the content of EcatCA certificate in `/etc/rabbitmq/ssl/truststore.pem` and restart the Rabbitmq service.

Configure Contextual Data from NetWitness Endpoint via Recurring Feed

You can configure RSA NetWitness Endpoint data in RSA NetWitness Suite to provide contextual data from NetWitness Endpoint to Decoder and Log Decoder sessions. This configuration adds contextual meta values in addition to the instant IOC alerts that can be used to build correlations to other metadata in the NetWitness Suite ecosystem.

Administrators can configure NetWitness Suite to consume system scan contextual data from NetWitness Endpoint via a NetWitness Suite Live recurring feed. This integration can enrich the session from a Decoder or Log Decoder with contextual information displayed in NetWitness Suite Investigation; some examples include the host operating system, MAC address, IIOC score, and other data that may not be present in the log or packet data into sessions from a Decoder or Log Decoder.

Note: Although this feature is targeted for customers with a packet Decoder, a recurring feed can also be implemented in Log Decoders.

Caution: In environments with many NetWitness Endpoint hosts, use of this recurring feed may result in decreased performance on the NetWitness Suite ingest devices (Decoder and Log Decoder).

Prerequisites

- Version 4.3.0.4, 4.3.0.5, or 4.4 NetWitness Endpoint Console server and NetWitness Server Version 10.4 and above installed.
- Version 11.0 RSA Decoder and Concentrator connected to the NetWitness Server in the network.

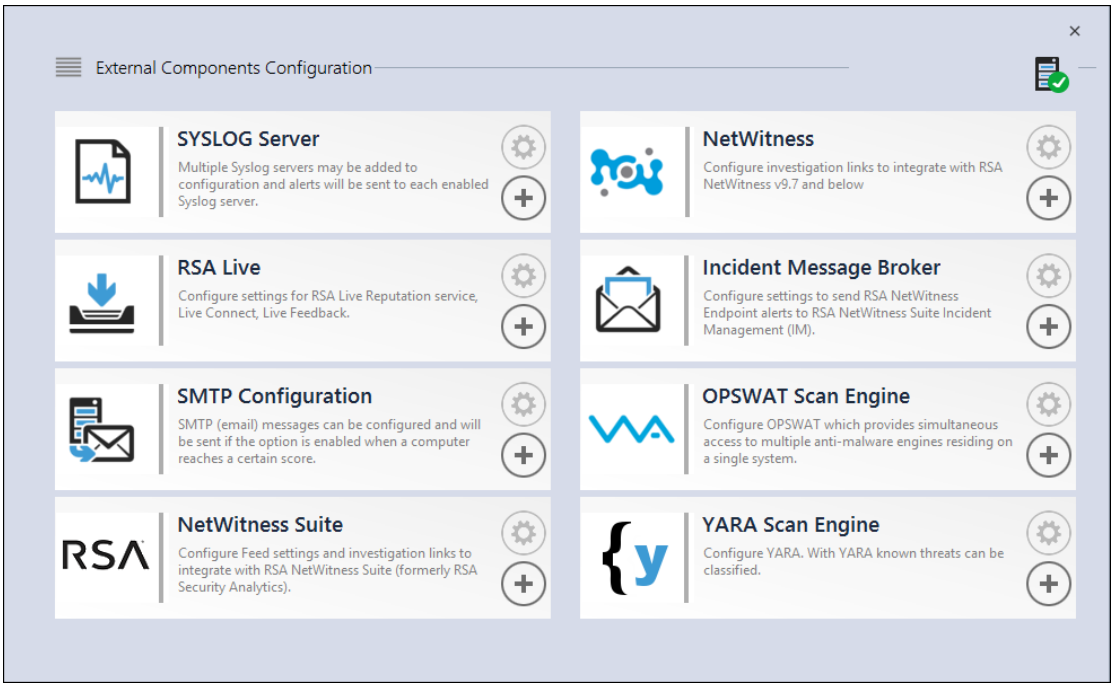
To Configure Contextual Data from NetWitness Endpoint via Recurring Feed, perform the following:

1. Enable the NetWitness Endpoint Feed for NetWitness Suite in the NetWitness Endpoint User Interface.
2. Export the NetWitness Endpoint CA Certificate from the NetWitness Endpoint Console server and Import it into NetWitness Suite trust store.
3. Configure the NetWitness Suite Concentrator service to define which meta keys are indexed.
4. Create a recurring feed in NetWitness Suite Live.

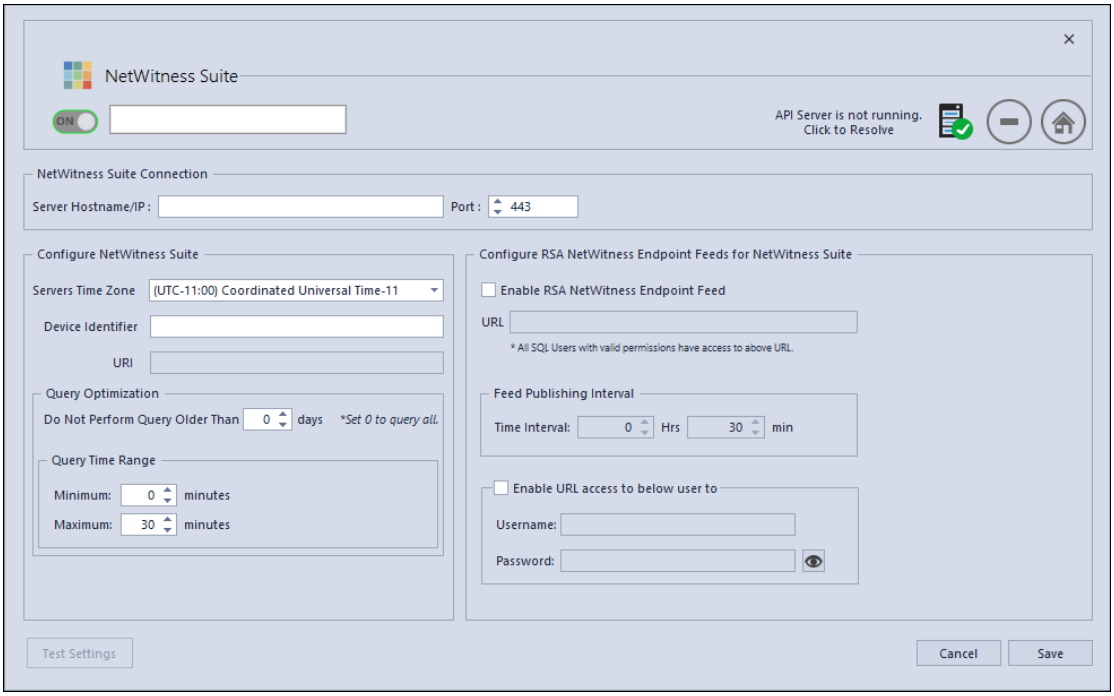
Enable the NetWitness Endpoint Feed for NetWitness Suite

1. In the NetWitness Endpoint user interface, create SQL user in NetWitness Endpoint:
   a. Open the NetWitness Endpoint user interface and log on using the proper credentials.
   b. From the menu bar, select **Configure > Manage Users and Roles**, right-click in the pane, and select **create sql user**.
   The Create a new SQL User dialog is displayed.

   c. Enter the **Login Name** and **Password** and click **Create**.
2. From the menu bar, select **Configure > Monitoring External Components**.
   The External Components Configuration dialog is displayed.



3. In NetWitness Suite, click +.
   The NetWitness Suite dialog is displayed.



4. In the **NetWitness Suite** panel, in **On**, enter the name to identify the NetWitness Suite component.

5. In the **NetWitness Suite Connection** panel, perform the following.
   a. In the **Server Hostname/IP** field, enter the host name or IP address of the NetWitness Server.
   b. In the **Port** field, enter the port number. By default port number is 443.
6. In the **Configure NetWitness Suite** panel, perform the following:
   a. In the **Servers Time Zone** field, select the time zone for the component from the drop-down list.
   b. In the **Device Identifier** field, enter the NetWitness Suite concentrator device ID.

   Note: You can find the Device Identifier in NetWitness Suite when you look up a Concentrator or Broker in **Investigation > Navigate >***<Concentrator or Broker Name>*. The Device Identifier is the number in the URL after "investigation." For example, in the URL `https://<IP address>investigation/319/navigate/values`, the Device Identifier is **319**.

   The **URI** field is populated when you click **Save**.
7. In the **Query Optimization** panel, in the **Do Not Perform Query Older Than** field, enter the number of days to limit the query period. Enter **0** if you want to discard this feature.
8. In the **Query Time Range** panel, perform the following:
   a. In the **Minimum** field, enter the number of minutes for the minimum query time range. This value is used to automatically increase the time range submitted to NetWitness Suite. This ensures that a query returns a positive response if the NetWitness Endpoint Agent's reported time is slightly different than NetWitness Endpoint's time.
   b. In the **Maximum** field, enter the number of minutes to limit the time range. This value is used to automatically limit the time range submitted to NetWitness Suite, so that a query does not overload the NetWitness Server.
9. In the **Configure RSA NetWitness Endpoint Feeds for NetWitness Suite** panel, perform the following:
   a. Select **Enable RSA NetWitness Endpoint Feed**.
   b. In the **URL** field, enter the SQL **Username** and **Password** (configured in step 1) to access the location of the feed.
      The **URL** field is populated when you click **Save**.
   c. Enter the time interval for the frequency at which feeds are published.

10. In the **Feed Publishing Interval** panel, in the **Time Interval** field, select the time interval in **hrs** and **mins** for the frequency at which feeds are published.
11. In the **Enable URL access to below user to** panel, enter the **Username** and **Password** of the NetWitness Endpoint user.
12. Click **Save**.
    A feed is created.

Export the NetWitness Endpoint SSL Certificate

Note: This procedure works only for NetWitness Suite 10.5 and above because Java 8 support was added for 10.5. If you are using an earlier version of NetWitness Suite, refer to the applicable version of this guide.

To export the NetWitness Endpoint CA certificate from the NetWitness Endpoint Console server and copy it to the NetWitness Suite host:

1. Log on to the NetWitness Endpoint Console.
2. Open **MMC**.
3. Add a certificate snap-in for **Computer account**.
4. Export the certificate named **`NweCA`** (in NetWitness Endpoint 4.3.0.4, 4.3.0.5, or 4.4 fresh install) or **`EcatCA`** (in NetWitness Endpoint upgraded from previous version to 4.3.0.4 or 4.3.0.5).
   a. Export without a private key.
   b. Export in DER encoded binary X.509 (`.CER`) format.
   c. Name it **`NweCA.cer`** (in NetWitness Endpoint 4.3.0.4, 4.3.0.5, or 4.4 fresh install) or **`EcatCA.cer`** (in NetWitness Endpoint upgraded from previous version to 4.3.0.4 or 4.3.0.5).
5. Copy the NetWitness Endpoint CA certificate to the NetWitness Suite host:
   - For NetWitness Endpoint 4.3.0.4, 4.3.0.5 or 4.4 fresh installation:
     `scp NweCA.cer root@<sa-machine>:.`
   - For NetWitness Endpoint upgraded from previous version to 4.3.0.4 or 4.3.0.5:
     `scp EcatCA.cer root@<sa-machine>:.`
6. To import the NetWitness Endpoint CA certificate into the NetWitness Suite Trusted store, perform the following:

a. Check the Java version installed on your NetWitness Suite using the following command:
`java -version`
The openjdk version is displayed. For example, openjdk version "`1.8.0_71`"

b. To set the JDK parameter, navigate to java directory. Enter the following commands:

- JDK=/usr/lib/jvm/java-1.8.0-openjdk-1.8.0.141-1.b16.el7_3.x86_64/jre/
- For NetWitness Endpoint fresh installation:

  $JDK/bin/keytool -import -v -trustcacerts -alias nweca -file ~/NweCA.cer -keystore $JDK/lib/security/cacerts -storepass changeit
- For NetWitness Endpoint upgraded from previous version:

  $JDK/bin/keytool -import -v -trustcacerts -alias ecatca -file ~/EcatCA.cer -keystore $JDK/lib/security/cacerts -storepass changeit

When prompted for certificate update confirmation, enter **Yes**.

7. On the NetWitness Suite host, do one of the following:
   - For NetWitness Endpoint 4.3.0.4, 4.3.0.5, or 4.4 fresh installation, edit **`/etc/hosts`** to map the IP address of the NetWitness Endpoint Console server to the name **NweServerCertificate** by adding the following line to the file:

     <ip-address-ecat-cs> NweServerCertificate
   - For NetWitness Endpoint upgraded from previous version to 4.3.0.4 or 4.3.0.5, edit **`/etc/hosts`** to map the IP address of the upgraded NetWitness Endpoint Console server to the name **`ecatserverexported`** by adding the following line to the file:

     <ip-address-ecat-cs> ecatserverexported
8. To restart NetWitness Suite, enter the following command:

   service jetty restart

Configure the NetWitness Suite Concentrator Service

1. Log on to NetWitness Suite and go to **ADMIN > Services**.
2. Select a Concentrator from the list and select **View > Config.**
3. Select the **Files** tab, and from the **Files to Edit** drop-down menu, select **index-concentrator-custom.xml**.
4. Add the following NetWitness Endpoint meta keys to the file and click **Apply**. Make sure that this file contains the XML sections already; if the lines are not included, add them. The following lines are examples; make sure the values match your configuration and the column names you included in the feed definition, where:
   description is the name of the meta key you want to display in NetWitness Suite

Investigation.

level is "IndexValues"

name matches the column name of the CSV file that NetWitness Suite uses while defining the recurring feed (see the table in *Configure the Recuring Custom Feed Task in NetWitness Suite* below).

```
<key description="Gateway" format="Text" level="IndexValues" name="gateway" valueMax="250000" defaultAction="Open"/>
<key description="Risk Number" format="Float64" level="IndexValues" name="risk.num" valueMax="250000" defaultAction="Open"/>
<key description="Strans Addr" format="Text" level="IndexValues" name="stransaddr" valueMax="250000" defaultAction="Open"/>
<key description="Domain" format="Text" level="IndexValues" name="domain" valueMax="250000" defaultAction="Open"/>
<key description="User Account" format="Text" level="IndexValues" name="username" valueMax="250000" defaultAction="Open"/>
<key description="Ecat Connectiontime" format="Text" level="IndexValues" name="ecat.ctime" valueMax="250000" defaultAction="Open"/>
<key description="Ecat Scantime" format="Text" level="IndexValues" name="ecat.stime" valueMax="250000" defaultAction="Open"/>
```

5. Restart the Concentrator to activate the custom key updates.

Configure the Recurring Custom Feed Task in NetWitness Suite

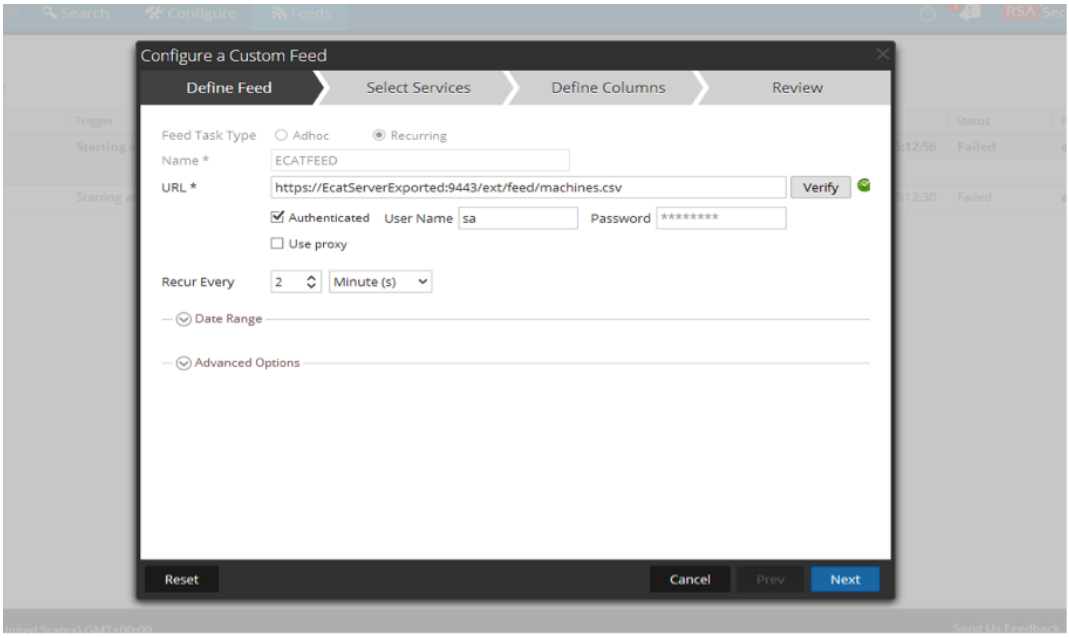
1. Log on to NetWitness Suite and go to **CONFIGURE > Custom Feeds**.
   The Feeds view is displayed.
2. In the toolbar, click .
   The Setup Feed dialog is displayed.
3. In the Setup Feed dialog, select **Custom Feed** and click **Next**.
   The Configure a Custom Feed wizard is displayed, with the Define Feed form open.
4. In the **Define Feed**, perform the following:
   a. In the **Feed Task Type** field, select **Recurring**.
   b. In the **Name** field, enter the name of the feed. For example, EndpointFeed.
   c. In the **URL** field, enter the URL with the hostname of the Windows server on which NetWitness Endpoint is installed:

- For NetWitness Endpoint 4.3.0.4, 4.3.0.5 or 4.4 fresh installation, use the URL **`https://NweServerCertificate:9443/api/v2/feed/machines.csv`**.
- For NetWitness Endpoint upgraded from previous version to 4.3.0.4 or 4.3.0.5, use the URL **`https://ecatserverexported:9443/api/v2/feed/machines.csv`**.

d. Enable the checkbox **Authenticated** and enter the username and password as noted in *Enable the ECAT Feed* above.

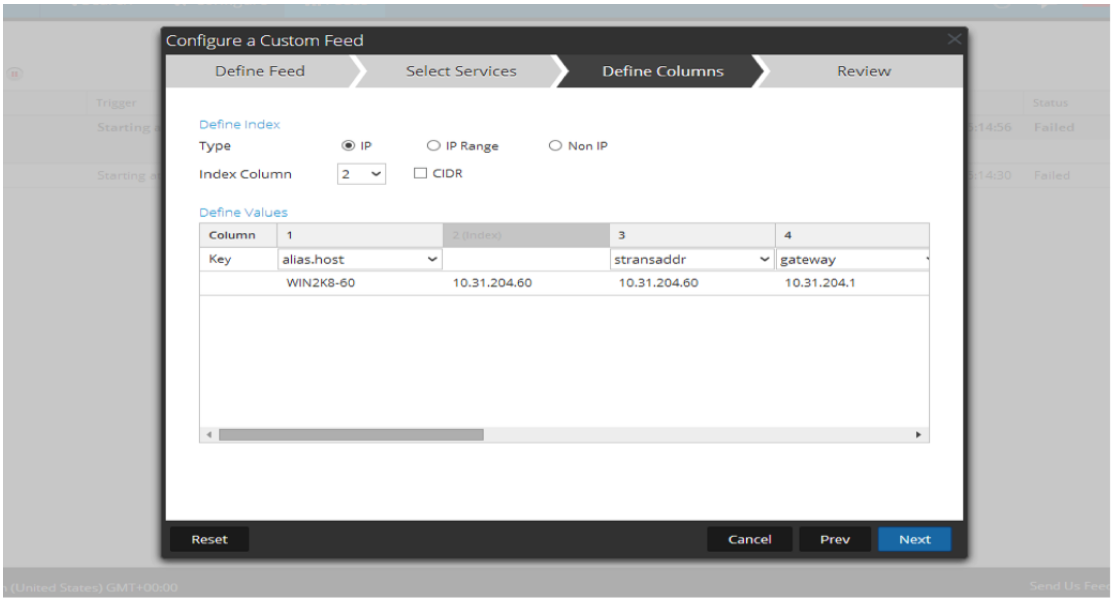
e. Click **Verify** to check if NetWitness Suite can reach the web resource.

f. Define the schedule and click **Next**.



5. In the **Select Services** tab, select the Decoder or groups to consume the feed. Click **Next**.

6. In the **Define Columns** tab, enter the column names as shown in the table below and save the feed.

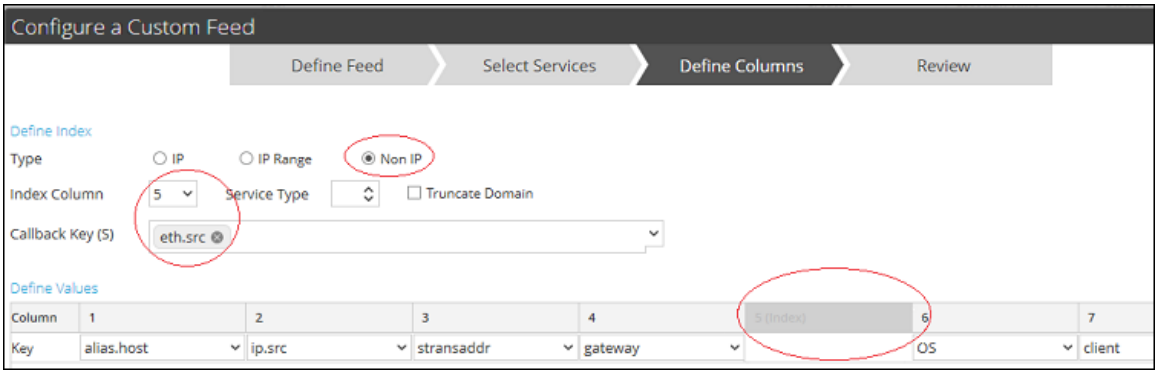


The following table shows the columns in the CSV file for the NetWitness Endpoint feed.

Column	Name	Description	Column Name in NetWitness Suite (Meta Key Name)
1	MachineName	Host name of the Windows agent	alias.host
2	LocalIp	IPv4 address	IP type (indexed column)
3	RemoteIp	Far end IP as seen by the router	stransaddr
4	GatewayIp	IP of the gateway	gateway
5	MacAddress	MAC address	eth.src
6	OperatingSystem	Operating system used by the Windows Agent	OS

Column	Name	Description	Column Name in NetWitness Suite (Meta Key Name)
7	AgentID	Agent ID of the host (unique ID assigned to the agent)	client
8	ConnectionUTCTime	Last time when the agent connected to NetWitness Endpoint server	ecat.ctime
9	Source Domain	Domain	domain.src
10	ScanUTC time	Last time when the agent was scanned	ecat.stime
11	UserName	Username of the client machine	username
12	Machine Score	Score of the agent indicating the suspicious level	risk.num

Note: In the table, the recommended index setting is LocalIp. However, if the LocalIp for NetWitness Endpoint Agent PC is allocated by a DHCP Server and the DHCP lease has expired, and if the IP is then re-allocated to another PC, the metadata created by the feed will be incorrect. To avoid this risk, use the machine name or the Mac address instead of the localIP address as the Feed's index. For example, to use a Mac address, you could enter the values as shown in the following figure.



Result

When viewing feed data in NetWitness Suite, upon a match of the indexed value (ip.src), meta data is populated in Investigation, Reporting, and Alerting Interfaces.

Configure Endpoint Alerts via Syslog into a Log Decoder

You can configure the use of RSA NetWitness Endpoint data in RSA NetWitness Suite to provide NetWitness Endpoint alerts via Syslog into Log Decoder sessions. This generates metadata that is used by NetWitness Suite Investigation, Alerts, and Reporting Engine.

For NetWitness Suite networks that are consuming logs, this integration of NetWitness Endpoint with NetWitness Suite pushes NetWitness Endpoint events to the Log Decoder via common event format (CEF) syslog messages and generates metadata that is used by NetWitness Suite Investigation, Alerts, and Reporting Engine. The use case for this integration is SIEM Integration to allow centralized event management, correlation of NetWitness Endpoint events with other Log Decoder data, NetWitness Suite reporting on NetWitness Endpoint events, and NetWitness Suite alerting of NetWitness Endpoint events.

Prerequisites

The following are required for this integration:

- Version 4.3.0.4, 4.3.0.5, or 4.4 NetWitness Endpoint UI.
- NetWitness Server Version 11.1 is installed.
- Version 10.4 or later RSA Log Decoder and Concentrator connected to the NetWitness Server in the network.
- Port UDP- 514 or TCP - 1514 open from NetWitness Endpoint server to Log Decoder in the firewall.

Procedure

1. Deploy the required parser (CEF or rsaecat) to the Log Decoder as described in the "Manage Live Resources" topic in *Live Services Management*. After you deploy the parser, make sure the parser is enabled. For more information, see Services Config View - General Tab.

Note: Use only one of these parsers. When the CEF parser is deployed, it supersedes the NetWitness Endpoint parser, and all CEF messages into NetWitness Suite are processed by the CEF parser. Enabling both parsers is an unnecessary burden on performance.

2. Configure NetWitness Endpoint to send syslog output to NetWitness Suite and generate NetWitness Endpoint alerts to the Log Decoder.

3. (Optional) Edit the table mapping in `table-map-custom.xml` and the `index-concentrator-custom.xml` to add fields based on user preferences for metadata to be mapped to NetWitness Suite.

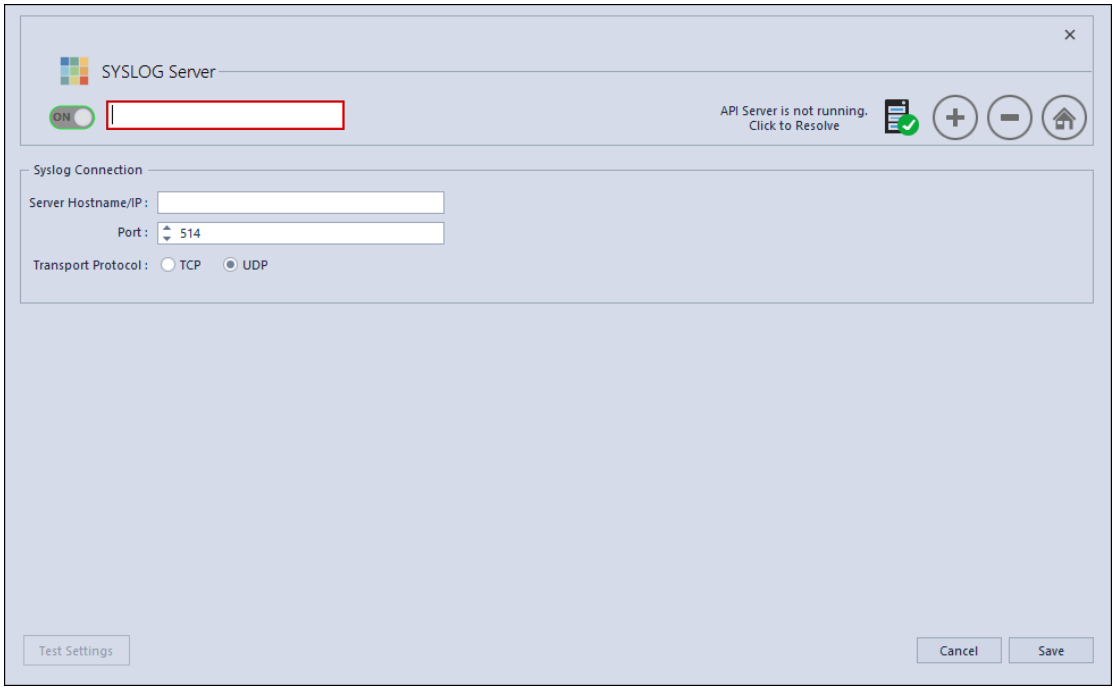
Configure NetWitness Endpoint to Send Syslog Output to NetWitness Suite

To add the Log Decoder as a Syslog external component and generate NetWitness Endpoint alerts to the Log Decoder:

1. Open the NetWitness Endpoint user interface and log on using the proper credentials.
2. From the menu bar, select **Configure > Monitoring and External Components**.

   The External Components Configuration dialog is displayed.
3. In **SYSLOG Server**, click ✚.

   The SYSLOG Server dialog is displayed.

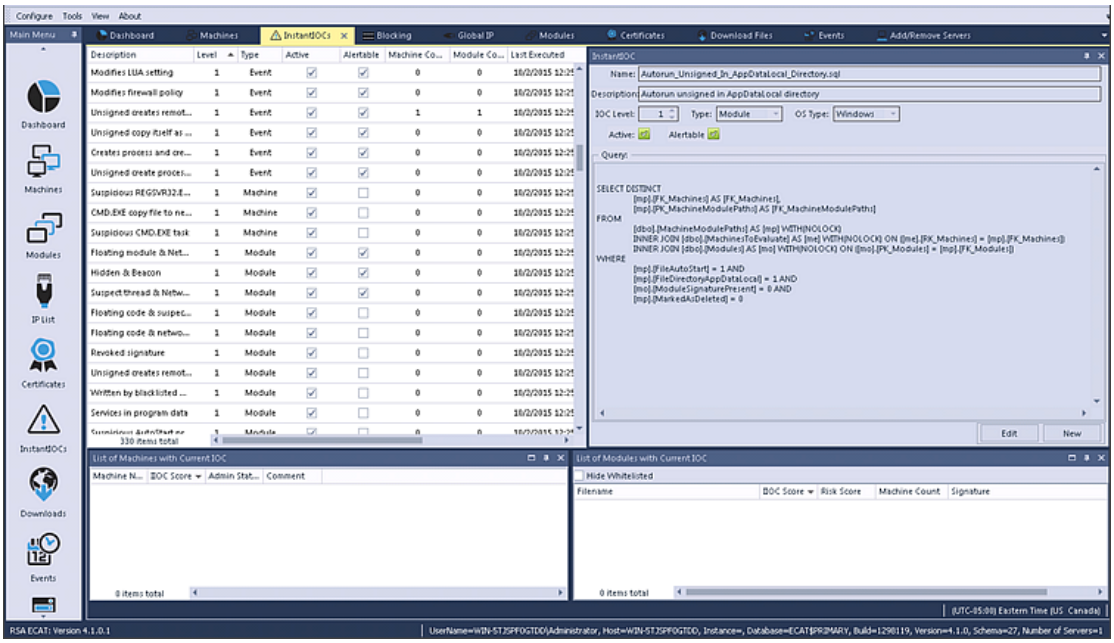


4. In the **NetWitness Suite** panel, in **On**, enter the descriptive name for the Log Decoder.
5. In the **Syslog Connection** panel, perform the following to enable Syslog messaging:

   Server Hostname/IP = The hostname DNS or IP address of the RSA Log Decoder
   Port = 514

Transport Protocol = Select **UDP** or **TCP** as appropriate for your Syslog server for the transport protocol.

6. Click **Save**.
7. Open the **InstantIOCs** window in the NetWitness Endpoint UI and, in the **Alertable** column, click to enable each IIOC for which you want alerts sent to the Log Decoder.



When the instant IOCs are triggered, Syslog alerts from the NetWitness Endpoint server are sent to the Log Decoder. Log Decoder alerts are then aggregated to the Concentrator. These events are injected into the Concentrator as metadata.

Edit the Table Mapping in table-map-custom.xml

In the default RSA table-map.xml provided by RSA, the meta keys in the `table-map.xml` file are set to `Transient`. In order to view the meta keys in Investigation, the keys must be set to `None`. To make changes to the mapping, you must add the entries to the `table-map-custom.xml` on the Log Decoder.

This is the list of meta keys in `table-map.xml`.

NetWitness Endpoint Fields	NetWitness Suite Mapping	Transient in NetWitness Suite
agentid	client	No
CEF Header Hostname Field	alias.host	No

NetWitness Endpoint Fields	NetWitness Suite Mapping	Transient in NetWitness Suite
CEF Header Product Version	version	Yes
CEF Header Product Name	Product	Yes
CEF Header Severity	severity	Yes
CEF Header Signature ID	event.type	No
CEF Header Signature Name	event.desc	No
destinationDnsDomain	ddomain	Yes
deviceDnsDomain	domain	Yes
dhost	host.dst	No
dst	ip.dst	No
end	endtime	Yes
fileHash	checksum	Yes
fname	filename	No
fsize	filename.size	Yes
gatewayip	gateway	Yes
instantIOCLevel	threat.desc	No
instantIOCName	threat.category	No
machineOU	dn	Yes
machineScore	risk.num	No
md5sum	checksum	Yes
os	OS	Yes

NetWitness Endpoint Fields	NetWitness Suite Mapping	Transient in NetWitness Suite
port	ip.dstport	No
protocol	protocol	Yes
Raw Message	msg	Yes
remoteip	stransaddr	Yes
rt	alias.host	No
sha256sum	checksum	Yes
shost	host.src	No
smac	eth.src	Yes
src	ip.src	No
start	starttime	Yes
suser	user.dst	No
timezone	timezone	Yes
totalreceived	rbytes	Yes
totalsent	bytes.src	No
useragent	user.agent	No
userOU	org	Yes

The following seven keys are not in `table-map.xml`; to use these keys in NetWitness Suite you need to add them to `table-map-custom.xml`, and set the flags to `None`.

NetWitness Endpoint Fields	NetWitness Suite Mapping	Transient in NetWitness Suite
moduleScore	cs.modulescore	Yes

NetWitness Endpoint Fields	NetWitness Suite Mapping	Transient in NetWitness Suite
moduleSignature	cs.modulesign	Yes
Target module	cs.targetmodule	Yes
YARA result	cs.yararesult	Yes
Source module	cs.sourcemodule	Yes
OPSWATResult	cs.opswatresult	Yes
ReputationResult	cs.represult	Yes

Here are the entries to be added to the `table-map-custom.xml` if required.

```
<mapping envisionName="cs_represult" nwName="cs.represult" flags="None"
envisionDisplayName="ReputationResult"/>
 <mapping envisionName="cs_modulescore" nwName="cs.modulescore" format="Int32"
flags="None" envisionDisplayName="ModuleScore"/>
 <mapping envisionName="cs_modulesign" nwName="cs.modulesign" flags="None"
envisionDisplayName="ModuleSignature"/>
 <mapping envisionName="cs_opswatresult" nwName="cs.opswatresult" flags="None"
envisionDisplayName="OpswatResult"/>
 <mapping envisionName="cs_sourcemodule" nwName="cs.sourcemodule" flags="None"
envisionDisplayName="SourceModule"/>
 <mapping envisionName="cs_targetmodule" nwName="cs.targetmodule" flags="None"
envisionDisplayName="TargetModule"/>
 <mapping envisionName="cs_yararesult" nwName="cs.yararesult" flags="None"
envisionDisplayName="YaraResult"/>
```

Note: Restart the Log Decoder or reload the log parsers for the changes to take effect.

Configure the NetWitness Suite Concentrator Service

1. Log on to NetWitness Suite and go to **ADMIN** > **Services**.
    1. Select a Concentrator from the list and select **View > Config.**
2. Select the **Files** tab, and from the **Files to Edit** drop-down list, select **index-concentrator-custom.xml**.
3. Add the NetWitness Endpoint meta keys to the file and click **Apply**. Make sure that this file contains the XML sections already; if the lines are not included, add them.
4. Restart the Concentrator.

5. To add the Concentrator as a data source in the Reporting Engine, in the **ADMIN** > **Services** view, select the Reporting Engine and Select **View> Config > Sources.** NetWitness Endpoint meta is populated in Reporting Engine, and you can run reports by selecting the appropriate meta keys.

Example

Note: The following lines are examples; make sure the values match your configuration and the column names you included in the feed definition, where:
description is the name of the meta key you want to display in NetWitness Suite Investigation.
level is "IndexValues"
name is the NetWitness Endpoint meta key name from the table below

```
<language>
<key description="Product" format="Text" level="IndexValues" name="product"
valueMax="250000" defaultAction="Open"/>
 <key description="Severity" format="Text" level="IndexValues" name="severity"
valueMax="250000" defaultAction="Open"/>
 <key description="Destination Dns Domain" format="Text" level="IndexValues"
name="ddomain" valueMax="250000" defaultAction="Open"/>
 <key description="Domain" format="Text" level="IndexValues" name="domain"
valueMax="250000" defaultAction="Open"/>
 <key description="Destination Host" format="Text" level="IndexValues"
name="host.dst" valueMax="250000" defaultAction="Open"/>
 <key description="End Time" format="TimeT" level="IndexValues" name="endtime"
valueMax="250000" defaultAction="Open"/>
 <key description="Checksum" format="Text" level="IndexValues" name="checksum"
valueMax="250000" defaultAction="Open"/>
 <key description="Filename Size" format="Int64" level="IndexValues"
name="filename.size" valueMax="250000" defaultAction="Open"/>
 <key description="Gateway" format="Text" level="IndexValues" name="gateway"
valueMax="250000" defaultAction="Open"/>
 <key description="Distinguished Name" format="Text" level="IndexValues" name="dn"
valueMax="250000" defaultAction="Open"/>
 <key description="Risk Number" format="Float64" level="IndexValues"
name="risk.num" valueMax="250000" defaultAction="Open"/>
 <key description="ReputationResult" format="Text" level="IndexValues"
name="cs.represult" valueMax="250000" defaultAction="Open"/>
 <key description="Module Score" format="Text" level="IndexValues"
name="cs.modulescore" valueMax="250000" defaultAction="Open"/>
 <key description="Module Sign" format="Text" level="IndexValues"
name="cs.modulesign" valueMax="250000" defaultAction="Open"/>
 <key description="opswat result" format="Text" level="IndexValues"
name="cs.opswatresult" valueMax="250000" defaultAction="Open"/>
 <key description="source module" format="Text" level="IndexValues"
name="cs.sourcemodule" valueMax="250000" defaultAction="Open"/>
 <key description="Target Module" format="Text" level="IndexValues"
name="cs.targetmodule" valueMax="250000" defaultAction="Open"/>
 <key description="yara result" format="Text" level="IndexValues"
```

```
name="cs.yararesult" valueMax="250000" defaultAction="Open"/>
 <key description="Protocol" format="Text" level="IndexValues" name="protocol"
valueMax="250000" defaultAction="Open"/>
 <key description="Event Time" format="TimeT" level="IndexValues"
name="event.time" valueMax="250000" defaultAction="Open"/>
 <key description="Source Host" format="Text" level="IndexValues" name="host.src"
valueMax="250000" defaultAction="Open"/>
 <key description="Start Time" format="TimeT" level="IndexValues" name="starttime"
valueMax="250000" defaultAction="Open"/>
 <key description="Timezone" format="Text" level="IndexValues" name="timezone"
valueMax="250000" defaultAction="Open"/>
 <key description="Received Bytes" format="UInt64" level="IndexValues"
name="rbytes" valueMax="250000" defaultAction="Open"/>
 <key description="Agent User" format="Text" level="IndexValues" name="user.agent"
valueMax="250000" defaultAction="Open"/>
 <key description="Source Bytes" format="UInt64" level="IndexValues"
name="bytes.src" valueMax="250000" defaultAction="Open"/>
 <key description="Strans Address" format="Text" level="IndexValues"
name="stransaddr" valueMax="250000" defaultAction="Open"/>
 </language>
```

Result

Analysts can:

- Create NetWitness Suite alerts based on NetWitness Endpoint events by configuring NetWitness Endpoint events as an enrichment source.
- Create ESA rules using NetWitness Endpoint meta as described in the "Add Rules to the Rules Library" topic in the *Alerting with ESA Correlation Rules User Guide*.
- Report on NetWitness Endpoint events using NetWitness Endpoint meta as described in the "Configure a Rule" topic in the *Reporting Guide*.
- View NetWitness Endpoint alerts in NetWitness Respond as described in the "View Alerts" topic in *NetWitness Respond User Guide*.
- View NetWitness Endpoint meta keys in Investigation along with standard NetWitness Suite core meta keys as described in the "Conduct an Investigation" topic in *Investigation and Malware Analysis User Guide*.

What's New

The RSA NetWitness Suite 11.1.0.0 release provides RSA NetWitness Endpoint Insights as part of the RSA NetWitness Suite thus presenting a common platform for investigations on logs, packets and endpoints.

NetWitness Endpoint Insights

RSA NetWitness Endpoint Insights provides visibility to vital host and user information. A new RSA NetWitness Endpoint Insights agent facilitates endpoint data to licensed RSA Netwitness Suite customers. It also transforms the collected endpoint data into powerful metadata that is correlated with network data across the entire suite. This helps to drive and prioritize investigation and response analyst workflows.

NetWitness Endpoint Insights Agent. This solution includes a lightweight agent for collecting host inventories, processes, user activity, and Windows logs thus reducing overall complexity of capturing logs and saving valuable time and resources for Security Operations Center (SOC) operations. This endpoint agent can be installed on Windows, Mac, or Linux hosts. It scans the hosts and sends data to the Endpoint Hybrid or Endpoint Log Hybrid over HTTPS. For more information, see the *Endpoint Insights Agent Installation Guide*.

NetWitness Endpoint Insights introduces two new services, Endpoint Hybrid and Endpoint Log Hybrid. You can deploy either one of these services.

Endpoint Hybrid. Is used for collection of endpoint data. There is no license required to collect endpoint data. The Endpoint Hybrid consists of an Endpoint Server, a Log Decoder, and a Concentrator. It can:

- Perform instant scans to understand the host behavior at any point in time.
- Store multiple scan snapshots.
- Process endpoint metadata for analysis and aggregation.
- Optimally store and manage scan data using retention policies.

Endpoint Log Hybrid. Is used to collect both endpoint and log data. In addition to the capabilities of an Endpoint Hybrid, this service can collect logs from Windows hosts through Endpoint agents, and all other event sources that are supported for log collection. The agent forwards the collected logs to a Log Decoder or Remote Log Collector. A license is required to collect log data. If you have throughput or perpetual licenses for Log Decoders, you can use them. If not, you must procure a license to collect logs both from the endpoint agent and any other log events collected using a Log Collector or Log Decoder. The Endpoint Log Hybrid consists of an Endpoint Server, Log Decoder, Concentrator, and Log Collector. For more information, see the *RSA NetWitness Endpoint Insights Configuration Guide*. Log collection capability can be enabled during agent installation. Logs can be filtered based on channels and a list of events that you want to collect. For more information, see the *Endpoint Insights Agent Installation Guide* and *Log Collection Configuration Guide* .

Endpoint Metadata. Data collected can be forwarded as metadata to a Log Decoder for seamless investigation for analysts along with log and packet data. You can generate reports and alerts with this metadata. For more information, see the *Endpoint Insights Configuration Guide*.

NetWitness Respond

Unassign Incidents. You can now change an incident assignee to "(unassign)" (RESPOND > Incidents).

Filter for Unassigned Incidents. You can now filter the Incidents List to show only unassigned incidents (RESPOND > Incidents – Filters panel).

Add Alerts to Incidents. In addition to creating incidents from alerts, you can now add alerts to existing incidents from the Alerts List view (RESPOND > Alerts).

Improved Search for Related Indicators. In the Related Indicators panel for an incident, when searching for related indicators, it is no longer necessary to specify a Source, Destination, and Detector. The search for related indicators now queries all fields applicable to the search (Incident Details view - Related Indicators panel). For more information, see the *NetWitness Respond User Guide*.

New Incident Rules User Experience. Aggregation rules are now called Incident Rules. The Incident Rules pages have been redesigned for ease of use and there is now an Incident Rules List view and an Incident Rule Details view (CONFIGURE > Incident Rules). To better differentiate incident rule enabled status, the icons now have different shapes as well as different colors.

Added a User Behavior Default Incident Rule. The User Behavior default incident rule captures network user behavior. This rule uses deployed RSA Live ESA Rules to create incidents from alerts. You can select the RSA Live ESA Rules that you want to monitor.

Updated Some Preconfigure (Default) Incident Rules with the Source IP Address Group by Value. The following default incident rules changed slightly and now have "Source IP Address" as the Group By value:

- High Risk Alerts: Reporting Engine
- High Risk Alerts: Malware Analysis
- High Risk Alerts: NetWitness Endpoint
- High Risk Alerts: ESA

For more information, see the *NetWitness Respond Configuration Guide*.

Send Respond Email Notifications. You can now send email notifications to Analysts assigned to incidents and to SOC Managers when incidents are created or updated (CONFIGURE > Respond Notifications). For more information, see the *NetWitness Respond Configuration Guide*.

NetWitness Investigate

Integrated User Interface for Endpoints. The new Hosts and Files views (available in the Investigate submenu) provide a view of all hosts and files found in the deployment. For more information, see the *NetWitness Investigate User Guide*.

Direct Access to Event Analysis in the Investigate Submenu. The Event Analysis view is accessible from the Investigate submenu, in addition to the previous methods of opening the view. For more information on the investigation activities and features of Event Analysis, see the *NetWitness Investigate User Guide*.

Meta Entities in Investigate. Administrators can create meta entities (groups of meta keys) that represent two or more meta keys. Meta entities can be used in the same ways that a meta key is used in Investigate, except in Parallel Coordinates visualizations. Predefined meta entities are available for typical scenarios. For example, to find entities such as all IP addresses, all user names, all files, or all hosts, analysts can use the meta entity to build a simple query without having to know the specific meta keys in the entity. For more information, see "How NetWitness Investigate Works" in the *NetWitness Investigate User Guide*.

Interactive Breadcrumb in Event Analysis with Autocomplete and Validation. The user interface lets analysts enter filters by clicking and typing, or using only keyboard actions. Analysts can add a `<meta key><operator><value>` filter to the breadcrumb, edit the filter, and delete one or more filters. Invalid filters are highlighted in a red box. Clicking the Query button executes the query, individual filters are ANDed, and the results are displayed in the Events List Panel. For more information, see “Filtering Events in the Events Analysis View" in the *NetWitness Investigate User Guide*.

Default and Custom Column Groups in the Event Analysis view. Column Groups have been enabled in the Event Analysis view. You can view and select default column groups and custom column groups, and the default is persisted per user. To manage column groups, go to INVESTIGATE > Events. In addition to the column groups in 11.0, the Endpoint Analysis, Outbound HTTP, and Outbound SSL/TLS groups have been added. For more information, see the *NetWitness Investigate User Guide*.

Ability to Reconstruct an Event Directly from the Navigate View. Given a known Event ID, analysts can reconstruct an event directly from the Navigate view. The **Actions > Go to event in Event Analysis** and **Actions > Go to event in Event Reconstruction** options in the Navigate view toolbar provide this capability. You can use this option without executing a query as you usually do when beginning an investigation. For more information, see “Reconstruct an Event from the Navigate View” in the *NetWitness Investigate User Guide*.

Pagination in the Event Analysis view > Packet Analysis. Pagination of packet data allows you to step through all the packets without rendering too much data at once. For more information, see the *NetWitness Investigate User Guide*.

Configurable Event Analysis View Using Event Preferences Panel. Analysts can personalize the Event Analysis views using the new Event Preferences panel. You can configure the default Event Analysis (Text, Packets, or File) and more display settings when you are analyzing an event. For more information, see "Configure User Preferences in Investigate" in the *NetWitness Investigate User Guide*.

Direct Link to Events View Email and Web Reconstruction from Event Analysis View. A link in the Event Analysis view opens the Web and email reconstructions of the selected event in the Events view reconstruction.

Right-click Actions on Meta values in the Event Analysis View. You can right-click a meta value in the Event Analysis view and launch actions such as look up the IP search and more. For more information, see the *NetWitness Investigate User Guide*.

Right-Click Meta Value Count in the Navigate View. Right-clicking the count next to a meta value in the Navigate view opens a context menu, from which you can send the event to a new tab in the Events view or the Event Analysis view. For more information, see the *NetWitness Investigate User Guide*.

Reporting

Reports for Endpoint Insights. Analysts can define and generate reports using endpoint metadata for analysis. To generate reports, the endpoint metadata must be forwarded to a Log Decoder. For more information, see the *Reporting User Guide*.

Health and Wellness

Monitor Endpoint Server. Administrators can monitor the health and wellness of the Endpoint Server from the Health and Wellness statistics. To monitor any statistics, you can create custom policies. For more information, see the *System Maintenance Guide*.

Event Stream Analysis and ESA Analytics

ESA Correlation Rules can use Context Hub data within rule logic. Lists of values created as data sources in Context Hub can now be configured as data enrichment sources in ESA and used within correlation rules as blacklist or whitelist sources. New Context Hub lists are available by default in the ESA rules for Netwitness 11.1 users. Users upgrading from previous versions to 11.1 will see these default lists in addition to their previously created context hub lists. For more information, see “Configure Context Hub List as an Enrichment Source” in the *Alerting with ESA Correlation Rules User Guide*.

Password change for ESA data source now available in UI. When editing settings for a data source, users may now change the configured password through the UI for ESA services. For more information, see “Configure ESA Correlation Rules” in the *ESA Configuration Guide*.

Core Services

Truncation options added to balance analytic value and storage space. An administrator can configure the system to save storage space by truncating data while still providing an analyst enough network data for analysis purposes. For more information, see “Configure Application Rules” in the *Decoder and Log Decoder Configuration Guide*.

Meta Entities in Correlation Rules and Application Rules. Administrators can create meta entities that represent two or more meta keys, and meta entities can be used anywhere that a meta key is used in the Log Decoder, Packet Decoder, and Concentrator rule builder. See the *Core Database Tuning Guide* for details.

Search API enhanced to return matches across entire word. This feature enhances the existing search API (msearch) to implement substring searches. A substring search is defined as finding arbitrary text somewhere in the middle, end, or beginning of a meta item. For example, an analyst can now search for "ball" in addition to "basket" to match "basketball." For more information, see the *Core Database Tuning Guide*.

Size buckets created to index size-related meta keys at the value level. This feature provides the option to use size buckets to index size-related meta keys at the value level, which facilitates doing further queries on the data not available when meta keys are indexed at the key level. For more information, see the *Core Database Tuning Guide*.

Capability added to optimize read/write operations on NWDB when adding new storage. The 10G Decoder now supports the capability to run a command on an existing NWDB (packet, log, meta, or session), that has at least two volumes, to stagger the files across all volumes in the most optimal read-write pattern. This is useful when adding new storage to an existing Decoder so the volumes can be staggered before restarting capture. For more information, see "Optimize Read/Write Operations When Adding New Storage" in the *Decoder Configuration Guide*.

Filter and rule hit counts provided to aid in troubleshooting. An administrator can now generate statistics in the form of hit counts for implemented rules and see the aggregate value to gauge the impact of specific rules or filters. This provides more insight into the impact of filters and rules on the local environment. For more information, see "Monitor Application Rules" in the *Decoder Configuration Guide*.

User Interface

Choose Light and Dark themes. You can now change the appearance of selected areas of NetWitness Suite User Interface from the global User Preferences settings. You have the option of viewing either the light or dark theme. For more information, see the *NetWitness Suite Getting Started Guide*.

Platform

Upgrade to CentOS 7.4 version. The OS version of NetWitness Suite is upgraded from CentOS 7.3 to CentOS 7.4 in the 11.1 release.

Administration

Manage Access for Endpoints. New roles and permissions are configurable in the ADMIN > Security > Roles and Permissions tabs to manage access for Endpoint related tasks. For more information, see the *System Security and User Management Guide*.

Introduced Respond Notification Settings permissions. These permissions enable Respond Administrators, Data Privacy Officers, and SOC Managers to access Respond Notification Settings (CONFIGURE > Respond Notifications), which enable them to send email notifications when incidents are created or updated. For more information, see the *NetWitness Respond Configuration Guide* and the *System Security and User Management Guide*.

Configurable Permissions to Manage Access to Reconstruction in the Event Analysis View. New permissions for the investigate-server are configurable in the ADMIN > Security > Roles tab. A message is displayed in the Event Analysis view when the administrator has restricted parts of the user interface by blocking individual permissions for a user role. For more information, see the "Role Permissions" section in the *System Security and User Management Guide*.

Log Parsing

Introduced Default Log Parser and Log Parser Rules tab. Logs that do not have a corresponding parser will be processed against rules and metadata is then extracted by those rules and is available for Enrichment, Investigation, Reporting, and Alerting. To view this new tab, go to **ADMIN > Event Sources > Log Parser Rules**. This will provide immediate visibility into logs from custom or unsupported sources. Administrators can view and test sample log messages and rules for their log parsers, including the newly added Default log parser. The default log parser is used to parse logs coming from the Log Decoder that do not match any of your configured log parsers. In this new Default log parser, you can:

- View the rules for a particular log parser, including the default log parser.
- View the names, literals, patterns, and meta for each configured log parser.
- Edit sample log messages to view how they would be parsed by a particular log parser.

Introduced Log Parser Customization. You may need to modify one or more of your log parsers. For example, you may need to fix an unknown message, or to parse certain fields differently than in the manner provided by default. Log Parser Customization allows you to add a new file with new parser elements or modify existing custom files. All customizations in this separate file do not get removed or overwritten by Log Decoder upgrades or the updating of parsers through RSA Live. This feature is described in detail in the Log Parser Customization topic in the RSA Content space on RSA Link

Remote Log Collector accepts secure Syslog. The RLC now accepts secure Syslog messages, and can optionally verify the peer.

Improved capture rate performance of Checkpoint Logs.

> **Note:** The following new features are located on the Event Source Discovery page.

Introduced filtering by event source type. Administrators can filter the event source discovery grid by device types to ensure that no extra event source types are included.

Introduced acknowledging multiple event sources. Administrators can select multiple event sources that have been discovered correctly and acknowledge them by clicking on the **Toggle Acknowledge** button. Acknowledged event sources are filtered from the view by default.

Introduced mapping multiple event sources. Administrators can select multiple event sources that have the same types that are not being discovered correctly and bulk map them to the appropriate parsers. This provides the ability to compare the event sources to an external list and quickly remediate the ones that do not match the list.

Introduced Automatic Mapping. The system automatically maps incoming events to a type based on previous logs received from that address, reducing the number of items that need attention in the Discovery workflow. The UI indicates that an address has been auto-mapped in the Discovery workflow.

Moved the Acknowledge and Map filters to the Filter Panel on the Event Source Discovery page. Administrators can quickly view and manage event sources.

Introduced searching for event sources on the Event Source Discovery page.

Unified Data Model

Unified Data Model for organizing various data. Unified Data Model (UDM) in RSA NetWitness Suite provides a combined insight from Logs, Packets, and Endpoints. It organizes the various elements of data coming into NetWitness from disparate sources into one standardized data model. The Analysts can then look for data concepts in one place as defined by the Unified Data Model. Meta concepts defined in the UDM should be used uniformly across the suite to get the best consistent results. NetWitness uses Meta Keys as a way to retain context of the raw data after its parsed and stored on disk. Hence, it’s extremely important to parse out data in the most accurate Meta key to retain context that's needed for Threat Detection, Analytics and Response. For more information, see the UDM content on RSA link.

Upgrade Instructions

The following upgrade paths are supported for RSA NetWitness Suite 11.1.0.0:

- RSA NetWitness Suite 10.6.5.x to 11.1.0.0
- RSA NetWitness Suite 11.0.0.x to 11.1.0.0

For more information on upgrading to 11.1.0.0, see the update instructions in the Product Documentation section.

Fixed Issues

This section lists issues fixed since the last major release.

Security

Tracking Number	Description
Libraries updated in 11.1 to address security vulnerabilities	• Apache Commons Collections: to 3.2.2 • Apache Commons Validator: to 1.5.1 • Salt: to salt-2017.7.2-1.el7 • Jpython: to 2.7.1 • Jetty: Java based HTTP, Servlet, SPDY, WebSocket Server: to 8.1.2
ASOC-49307	Samba https://access.redhat.com/errata/RHSA-2017:3260
ASOC-49306	Curl https://access.redhat.com/errata/RHSA-2017:3263
ASOC-43884	Logstash Upgraded to 5.6.4, vulnerabilities addressed: ESA ID — CVE ESA-2017-05 — CVE-2017-5645 ESA-2016-08 — CVE-2016-10362 ESA-2016-06 — CVE-2016-10363 ESA-2016-02 — CVE-2016-1000221 ESA-2016-01 — CVE-2016-1000222
ASOC-43718	Kernel https://access.redhat.com/errata/RHSA-2017:2930
ASOC-42524	Kernel https://access.redhat.com/errata/RHSA-2017:2679
ASOC-49308	Tcpdump https://access.redhat.com/errata/RHSA-2017:1871

Investigate

Tracking Number	Description

ASOC-41703	In a mixed mode environment the Event Reconstruction View > File View displays the word "terminated" instead of the list of files.
ASOC-41696	Analyst is unable to unzip the downloaded file archive due to the zip file not having the restricted content.
ASOC-37989	Right-click action in the Log View does not launch Event Reconstruction on Event Analysis when you click on a Logs column that wraps to more than one row.
ASOC-37348	In Event Analysis, the rendered packets message is not displayed for events with a small payload but large number of packets.

Log Collector, Virtual Log Collector

Tracking Number	Description
ASOC-49091, SMC-13792	Rebranded the Security Analytics Netflow Collector to Netwitness Netflow Collector in the CEF parser. RSA has renamed the **product name** value from “Security Analytics Log Collector” to “**NetWitness NetFlow Collector**” for the Netflow protocol on LogCollector. If you have any rules that that use “Product name” meta, and is matching on the value “Security Analytics Log Collector,” then that rule will not fire when you upgrade your Log Collector to 11.1. In this case, manually update these rules to match the new product name “**NetWitness NetFlow Collector**” .
ASOC-45452	Reworded an ODBC test connect log message to be more clear.
ASOC-45451	Resolved a Log Collector crash when closing an ODBC connection.
ASOC-45448	Added an ODBC configuration option to select whether **device.ip** is the actual source IP address, or if Log Collector event source IP address should be used for the **device.ip** meta value.
ASOC-31313	Added better handling for Windows log messages that contain malformed XML.
ASOC-16717	Bandwidth throttling configuration changes to control the rate that the Remote Collector sends event data to a Local Collector did not persist after a reboot. This issue has been fixed. The `set-shoveltransfer-limit.sh` script is used to set the bandwidth throttle for event data transferred from a remote collector to local collector.

Context Hub

Tracking Number	Description
ASOC-40944, ASOC-50159	Pivot to Investigate navigates to an incorrect URL when rabbitmq server is not reachable.

Respond

Tracking Number	Description
ASOC-41855	Unable to create an incident using 1000 alerts.
ASOC-41934	In 11.0, the "Suspected Command & Control Communication By Domain" aggregation rule Group By condition "Domain by Suspected C&C" was not functioning as expected and had to be changed to "Domain" to aggregate alerts and enable incidents to be created for "Suspected C&C." The "Domain by Suspected C&C" condition works correctly in 11.1 and should be used as the Group By condition for the "Suspected Command & Control Communication By Domain" aggregation rule (known as incident rule in 11.1). If you changed the "Suspected Command & Control Communication By Domain" aggregation rule Group By condition to "Domain" for 11.0, you will need to change it back to "Domain by Suspected C&C" for 11.1. (To do this, go to CONFIGURE > Incident Rules. In the Incident Rules list, locate the **Suspected Command & Control Communication by Domain** rule and click the link in the **NAME** field to open it. In the Incident Rules Details view Grouping Options section, set the **Group By** field to **Domain for Suspected C&C** and click **Save**.)

Event Stream Analysis and ESA Analytics

Tracking Number	Description
ASOC-39880	Trial rules become disabled despite low memory usage.
ASOC-45568	After upgrading to Security Analytics 10.5.1.1, ESA rules that leverage PostgreSQL database integration appear to no longer work.
ASOC-45569	When deploying an advanced rule with post-alert enrichment, if the advanced rule syntax does not contain @RSAAlert, rule deployment fails.

Features Not Supported

The following tables provide information on features no longer supported in RSA NetWitness Suite 11.1 or Later Releases.

Features Not Supported in 11.1.0.0 or later releases

No.	Feature	Notes
1	Malware Colo	Malware co-located is not supported in 11.1.0.0 and later releases. Malware Analysis is supported using a standalone Malware Analysis.
2	All-In-One (AIO) Deployment	All-in-one deployment is not supported. Fresh Install AIO has been removed.
3	Standalone Warehouse Connector	Standalone Warehouse Connector is not supported.
4	Administration Features	1. Forgot my password. 2. Email Notification to user when password expires. 3. Changing the Login banner is not supported. 4. Test/Search AD user.
5.	Pivotal	Pivotal is not supported.
6.	ESA Cross-Site Correlation	The ESA Cross-Site Correlation configuration option (previously found by going to ADMIN > System > ESA) has been removed and will not be supported as part of the 11.1 release going forward. If a 10.6.5.x user that was using this feature upgrades to 11.1, a message will inform them that the feature is no longer available, but they will still be able to see and modify the correlation rules that had previously been used for Cross-Site Correlation.

Features Available in Future Releases

The following features are not available in 11.1 and may be available in a future release.

No.	Feature	Notes
1	IPDB Reporting	IPDB Extractor service is not supported in 11.1.0.0 and will be available in later releases.
2	STIG	If you have a STIG hardened host, you cannot upgrade to 11.1.0.0 as the backup scripts do not support that.
3	Multiple Security Analytics Server (NetWitness Server) support	Multiple server deployment is not supported.
4	PKI Authentication	PKI Authentication feature is not available in 11.1.0.0
5	Warehouse Analytics	Warehouse Analytics is not supported for 11.1.0.0 and will be available in later releases.
6	Endpoint Analytics	Analytics, such as risk score or IOC calculation is not supported on the endpoint scan data
7	Endpoint Remediation	Response functionality (containment/blocking) is not supported.
8	Endpoint Tracking	Tracking network events is not supported.
9	Endpoint Kernel mode	Endpoint agent currently works in the User mode and does not support the Kernel mode detection
10	Endpoint File reputation	File reputation, such as OPSWAT, YARA, and Reversing Lab lookups are not supported and hence cannot whitelist or blacklist files.

Known Issues

This section describes issues that remain unresolved in this release. Wherever a workaround is available, it is noted or referenced in detail.

Known Issues During Upgrade to 11.1

The following known issues occur during upgrade from 10.6.5.x to 11.1 or update from 11..0.0.x to 11.1.

After offline update and reboot the UI still notifies to reboot host

Tracking Number: ASOC-50839

Problem: When you perform an offline update from 11.0.0.x to 11.1 and reboot through CLI, the UI still Notifies to reboot host.

Workaround: Reboot the host using the UI.

After upgrading to 11.1, there is Concentrator Initialization error if you have 'stransaddr' and 'dtransaddr' enabled on the Log Decoder and you have the same fields indexed on the Concentrator

Tracking Number: ASOC-50702

Problem: This error occurs when you have done customized meta keys on your Log Decoder and Concentrator.

Workaround: If you have 'stransaddr' and 'dtransaddr' enabled on the Log Decoder and you have those same fields indexed on the Concentrator, then you must change data type of these fields to IPv4 on both the Log Decoder and Concentrator.

Integration-server service is missing on the UI after update

Tracking Number: ASOC-50835

Problem: After upgrading 11.0.0.x to 11.1.0.0, the integration-server service is missing on the UI.

Workaround: None.

After upgrade from 10.6.5.x to 11.1.0.0, offline licenses are not retained.

Tracking Number: ASOC-41757

Problem: Even if you upload a new response bin file from Download Central, offline licenses still do not work. Though old files are restored in `/var/lib/fneserver`, the licenses still remain deactivated.

Workaround: Perform the following steps to restore the licenses:

1. Generate a new response bin file from Download Central.
2. SSH into a Netwitness Server host 11.1.0.0 (AdminServer).
3. Move ra* files (3 files) out of `/var/lib/fneserver/`

4. Log in to RSA NetWitness 11.1.0.0 UI with admin user credentials and navigate to ADMIN > System > Licensing Overview tab.
5. Under Licensing actions, click Refresh licenses.
6. Upload the response file received from Download Central under ADMIN > System > Licensing > Settings Tab > Upload Response.

Note: Upgrade using Online mode (RSA Netwitness Suite 11.1.0.0 connected to the Internet) works successfully and all licenses are restored after upgrade to 11.1.0.0.

After you upgrade to 11.1.0.0, the logstash files are not updated in Logstash output configuration file

Tracking Number: ASOC-49843

Problem: When you upgrade from 10.6.5 to 11.1.0.0 or 11.0.0.x to 11.1.0.0, logstash files are not updated in the Logstash output configuration file. This happens when they have a global audit setup.

Workaround: If global auditing is configured, you need to edit one of the syslog entries in the Global notifications servers and click Save to apply the latest Audit log configuration.

Configure Feed data from Endpoint via recurring feed not working after upgrade

Tracking Number: ASOC-50601

Problem: After upgrade, the recurring feed configured from legacy NetWitness Endpoint does not work due to the change in Java version

Workaround: Import the NetWitness Endpoint CA certificate into the NetWitness Suite Trusted store. For more information, see the 'Export the NetWitness Endpoint SSL Certificate' section in the *RSA NetWitness Endpoint Integration Guide*

Respond Notification Settings do not migrate from 10.6.5.x to 11.1

Tracking Number: ASOC-49390

Problem: The Incident Management notification settings in NetWitness Suite 10.6.5.x are different from the Respond notification settings available in 11.1, so your existing 10.6.5.x settings will not migrate to 11.1.

Workaround: Manually update the Respond Notification Settings in 11.1. To do this, go to CONFIGURE > Respond Notifications and set the notification settings. You will need to add the list of SOC Manager email addresses. See the “Configure Respond Email Notification Settings” procedure in the *NetWitness Respond Configuration Guide*.

Notification Servers from previous releases will not display in the Email Server drop-down list. The email servers settings must be edited and saved in the Global Notification Servers (ADMIN > System > Global Notifications > Server tab).

Custom Incident Management notification templates cannot be migrated to 11.1. No custom templates are supported in 11.1.

To access these settings, you will need additional permissions. See “Respond Notification Settings Permissions” in the *NetWitness Respond Configuration Guide*. For detailed information about user permissions, see the *System Security and User Management Guide*

Unable to select Domain for Suspected C&C and Domain in the rule builder

Tracking Number: ASOC-46834

Problem: When adding a condition to an Incident Rule, there is no option to select **Domain for Suspected C&C** from the match conditions drop-down list. Also, after upgrade to 11.1, for some incident rules, the **Domain** and **Domain for Suspected C&C** fields are blank.

Workaround: Use **Domain** in the Match Conditions drop-down list for both **Domain** and **Domain for Suspected C&C**. Pre-upgrade, make note of the rules that contain the Domain and Domain for Suspected C&C match conditions including the operators and values. After upgrade, manually add the conditions to 11.1 using only **Domain** in the Match Conditions.

1. Go to **CONFIGURE** > **Incident Rules** and click the link in the **Name** column for the rule that you want to update.
2. In the **Match Conditions** section, select **Domain** in the drop-down list (instead of Domain for Suspected C&C) and enter the rest of the condition.
3. Enter the remaining information for your rule and click **Save**. For more information about incident rules, see the *NetWitness Respond Configuration Guide*.

Respond – Missing Group By field in Aggregate Alert will not fire

Tracking Number: ASOC-49820

Problem: In 10.6.5.x, you do not require incident rules to use the **Group By** field. If you have any rules that do not use the Group By field in 10.6.5, then after upgrade you will need to manually add a value to the Group By field as it is a required field in 11.1. Without a Group By field value, the rules will not work and they will not create incidents.

Workaround: Add a Group By field value to the rules that do not use the Group By field. For each incident rule:

1. Go to **CONFIGURE** > **Incident Rules** and click the link in the **Name** column for the rule that you want to update.
2. In the **Group By** field, verify that a Group By value is selected. If not, select a Group By value.
3. Click **Save** to update the rule.

For more information about incident rules, see the *NetWitness Respond Configuration Guide*.

Aggregation Stops after Reconnection to Mongo.

Tracking Number: ASOC-50911

Problem: After configuring the Mongo database and rebooting the ESA server, incidents are not being created. The ESA primary server acts the database host for NetWitness Respond application data. The NetWitness Server acts as the database host for NetWitness Respond control data. After the application database is configured on the ESA server and restarted, you must also restart the Respond service on the NetWitness Server..

Workaround: After configuring the Mongo database and rebooting the ESA server, restart the respond-server service..

From the command line:

```
systemctl restart rsa-nw-respond-server
```

Or from NetWitness suite:

Go to **ADMIN** > **services**, select the Respond Server service, and then select > Restart.

FIPS is disabled by default for the Log Collector Service

Tracking Number: ASOC-41841

Problem: FIPS is disabled by default for the Log Collector service, even if FIPS was enabled in 10.6.5.x.

Note: Even if FIPS is enabled in 10.6.5.x, it becomes disabled post-migration.

Workaround: To enable FIPS on the Log collector service, perform the following steps:

1. Stop the Log Collector service.
2. Open the `/etc/systemd/system/nwlogcollector.service.d/nwlogcollector-opts-managed.conf` file.
3. Change the value of the following variable to **off** as described here:

   ```
   Environment="OWB_ALLOW_NON_FIPS=on"
   ```
   to
   ```
   Environment="OWB_ALLOW_NON_FIPS=off"
   ```
4. Reload the system daemon by running `systemctl daemon-reload` command.
5. Restart the Log Collector service.
6. Set the FIPS mode for the Log Collector service on the UI:

   Note: This step is not required in case of upgrade, if FIPS was enabled on 10.6.5.x.

   a. Go to ADMIN > Services.

   b. Select the Log Collector service and go to View > Config.

   c. In SSL FIPS Mode, select the checkbox under Config Value and click **Apply**.

   Note: To enable Log Decoder and Packet Decoder, in `/sys/config` set `ssl.fips` to ON and restart the service.

The investigation links are disabled for static charts during 10.6.5.x to 11.1 post-upgrade

Tracking Number: ASOC-42136

Problem: The investigation link is disabled for the static chart (the result of the report is in chart format) which has the datasource as NetWitness Suite-Broker (This service is available by default).

Workaround: There are two workarounds for this issue:

- The rules that have the result in a static chart can be viewed in Tabular format and the investigation works as expected.
- Or you can perform the following steps to fix the issue:
  1. Delete and add the NetWitness Suite-Broker again as the datasource to Reporting Engine with the same name.
  2. If the reports with a static chart are scheduled reports, then in the next run, the investigation link will work as expected.
  3. If the report is an Adhoc report, then re-run the report for getting the investigation links.

Post upgrade from 10.6.5.x to 11.1.0.0, Warehouse Connector is not installed on Decoders

Problem: The Warehouse Connector is not installed on the Decoders by default.

Workaround: If, after an upgrade there is a need to re-establish a Warehouse connection, a utility is provided to reinstall the service. The utility is deployed during the bootstrap phase. To install Warehouse Connector, you must run the following command and specify the host by ID (--host-id), name (--host-name), or address (--host-addr). The latest available version will be installed by default unless a specific version is specified with --version. To install the Warehouse Connector on a host, run the following command on the Admin server:

[root]warehouse-installer --host-id <*uuid of the host*>

Details about the command:

Location: /usr/bin

Utility Name: warehouse-installer

Usage:

[root@nw11pds5 bin]# warehouse-installer --help

Warehouse Connector Installer

warehouse-installer [options]

Install options:

--host-id <id> Specify host to install (by ID)

--host-name <name> Specify host to install (by name)

--host-addr <address> Specify host to install (by address)

--version <#.#.#.#> Install version (defaults to latest)

General options:

-v, --verbose Enable verbose output

Post upgrade from 10.6.5.x to 11.0.0.x, duplicate dashboards for threat indicators.

Tracking Number: ASOC-41701

Problem: The dashboard, Threat–Indicators, was updated to report against new Hunting meta keys and renamed to Threat–Malware Indicators. On upgrade, both will appear in the UI instead of the old being replaced.

Workaround: Enable the Threat–Malware Indicators report charts and dashboard and disable the old Threat–Indicators dashboard.

On upgrade, the Health and Wellness custom policies for Context Hub Server are not available.

Tracking Number: ASOC-41826

Problem: When you upgrade to Netwitness Suite 11.1.0.0, the Health and Wellness custom policies configured for 10.6.5.x Context Hub server will not be available.

Workaround: You must define these custom policies in 11.0.0.x.

On upgrade to 11.0.0.x, collections created from a 10.4 or later Workbench display blank Date Range and Date Created values

Tracking Number: ASOC-9035

Problem: Any collections created from a 10.4 or later Workbench displays blank Date Range and Date Created values after upgrading to 11.0.0.x.

Workaround: None.

On upgrade from 10.6.5.x to 11.1, the Geo-map dashlet cannot be created using a pre-configured (OOTB) chart.

Tracking Number: ASOC-41896

Problem: When you upgrade to Netwitness Suite 11.1.0.0, the Geo-map dashlet cannot be created using a preconfigured chart. This happens if a custom dashboard uses a Geo-map dashlet, which is created using a preconfigured chart.

Workaround: The data source must be manually updated for that preconfigured chart that is required to be used in the dashlet with Geo-map. Or, create a new chart using the same preconfigured rule and use the new chart in the dashlet with Geo-map.

On upgrade from 11.0 to 11.1, if you have been using the Entropy Parser and indexing payload, you will need to add the bucket flag to the index file so that the Entropy Parser can use index buckets.

Tracking Number: ASOC-45721

Problem: When you upgrade to Netwitness Suite 11.1.0.0, if you have been using the Entropy Parser on the Decoder (packets only) and are indexing payload, you must add the bucket flag to your index file to take advantage of the new index buckets feature.

Workaround: Add bucket flag to index file so Entropy Parser can use index buckets, as follows:

1. In the NetWitness Suite menu, select **ADMIN** > **Services**.
   The Services view is displayed.
2. Select each Concentrator service that is aggregating traffic from the decoders.
3. Under (actions), select **View** > **Config** and select the **Files** tab.

4. Select the `index-concentrator.xml file` and set the `bucket` flag to `true` for `payload.req` and `payload.res`. For example:

```
<key description="Payload Size Request" format="UInt 32"
level="IndexNone" bucket="true" name="payload.req"
valueMax="500000"/>

<key description="Payload Size Response" format=UInt32"
level="IndexNone" bucket="true" name="payload.res"
valueMaz="500000"/>
```

5. Click Apply.
6. For changes in the `index-concentrator.xml` file to take effect, you must restart the jetty service on the NW Server:
   `systemctl restart jetty.service`

On upgrade from 11.0 to 11.1, if your `Entropy=log2` flag was set to false, NetWitness resets the flag to true.

Tracking Number: ASOC-49115

Problem: When you upgrade to NetWitness Suite 11.1.0.0, if your `Entropy=log2` flag was set to false (`Entropy="log2=false"`), NetWitness resets this flag to true (`Entropy="log2=false"`) after you upgrade to 11.1 to align for all sources to include packets and NetWitness Endpoint Insights.

Workaround: If desired, you can set the flag back to false to retain the log10 calculation: `Entropy="log2=false"`

Context Hub

Workaround: You should add only those entries in the .csv file which they wish to append to the existing .csv file. If, you do not want to append any entries to the list then perform one of the options, as applicable:

OutOfMemory Error in the Context Hub service when large number of TAXII feeds are configured

Tracking Number: ASOC-41664, ASOC-42002

Problem: The Context Hub service runs into OutOfMemoryError and becomes unresponsive, if a large number of TAXII feeds are configured to fetch data.

Workaround: Restart the Context Hub service and make sure that the time range you select to fetch TAXII feeds from the TAXII server is not more than 6 months. If the issue persists even after updating the time range, see the Troubleshooting topic in the *Live Services Management Guide*.

Single-column and multi-column lists added from the Data Source tab are not supported for Add to a list and Remove from list.

Tracking Number: ASOC-37998

Problem: When you do a lookup on a specific context meta in the Investigation, Events, or Respond view, the list names displayed are the ones which have matching values.

When you right-click on a specific meta value and select the Add or Remove list option, the single-column and multi-column list names added from the data source tab will not be displayed. It will only display the lists added from the UI using the Lists tab.

Workaround: You need to manually add the values that were added from the Data Source tab to the specific CSV file. So that, next time when the scheduler runs, the values from the updated CSV file will be available in the specific lists.

Empty list is imported when list has values with missing quotes

Tracking Number: ASOC-34187

Problem: When you import a list with missing quotes such as “172.16.0.0, the list is saved without any data. This is because of the Apache bug (CSV-141), which does not parse the CSV file with incorrect format.

Workaround: Import a list with correct quotes. For example, “172.16.0.0”, “host.mycompany.com” and so on.

SSL handshake with RSA Archer certificate fails while adding it as a data source

Tracking Number: ASOC-32654

Problem: When you try to add RSA Archer as a data source using valid credentials, the test connection fails (ARCHER-37085). This happens when the 'Trust all Certificates' option is unchecked and you try to upload an RSA Archer trust certificate.

Workaround: Select the ‘Trust All Certificates’ checkbox and do not upload a certificate.

General Application Issues

The System Logs Off Idle Users in Respond and Some Investigate Views

Tracking Number: ASOC-46483

Problem: In the Respond view and some Investigate views (Event Analysis, Hosts, and Files), if a user is not actively querying data, the system logs off the user after the Idle Period is reached. The default Idle Period is 600 seconds (10 minutes). This can cause the work of an Analyst to be interrupted.

Workaround: If this becomes an issue with the Analysts, in the global security settings (ADMIN > Security), consider increasing the values of the **Session Timeout** and the **Idle Period**.

Endpoint

Unable to export files list to a CSV file

Tracking Number: ASOC-47549

Problem: While exporting data to a CSV file, database query takes a longer time when the database is under heavy load, and the UI request times-out.

Workaround: Apply appropriate filters and use at least one indexed field with an **Equals** operator to reduce the files for export. For more information on Filtering Hosts and Files, see *NetWitness Investigate User Guide*.

Sorting on Agent Scan Status and Agent Last Seen fields are not accurate

Tracking Number: ASOC-50057

Problem: In the **Investigate > Hosts** view, sorting on Agent Scan Status and Agent Last Seen fields do not display the correct order.

Workaround: None

Unable to generate Agent Packager if the auto uninstall is set in seconds

Tracking Number: ASOC-49324

Problem: In the **Auto Uninstall** field, if the seconds value is more than 9, for example, 02/12/2018 12:00:**10** PM, then click **Generate Agent** fails to generate the packager.

Workaround: Enter a value below 10 seconds in the Auto Uninstall field.

Sorting on columns should not be case-sensitive

Tracking Number: ASOC-32595

Problem: Sorting on columns in the Hosts and Files view is case-sensitive. It sorts the number first, uppercase, and then the lowercase.

Workaround: None.

No message is displayed when filtering the values takes more than 60 seconds.

Tracking Number: ASOC-50197

Problem: In the Hosts and Files view, while filtering the values, if it takes more than 60 seconds, the UI does not display any message or results.

Workaround: None.

*Generate and copy *nwelcfg file, does not update the timestamp*

Tracking Number: ASOC-49847

Problem: After installing the Endpoint Insights Agent, if the Administrator wants to update a new Log Collection configuration and the endpoint agent

After installing the Endpoint agent, if the administrator wants to update a new Log collection config via any of the copy methods or third party endpoint management tool, the config file timestamp remains as that of the Endpoint server time and not the agent time. As a result, if the endpoint agent is on a different timezone from the endpoint server, the timestamp does not get updated properly.

.**Workaround**: After copying the file, run the command on the Endpoint Agent: `copy /b <filename.nwelcfg> +,,` from the folder %programdata%\NWEAgent\ where the nwelcfg file is there.

Disable log collection in Windows Endpoint Agent is not supported

Tracking Number: ASOC-49846

Problem: Once an Endpoint Agent is installed with the windows log collection feature enabled, the user is unable to disable windows log collection.

Workaround: Run the uninstall command provided in the "Uninstall Agents" section in the *Endpoint Agent Install guide*. Reinstall an agent with windows log collection disabled.

Endpoint Agent - Account for Unresponsive UDP

Tracking Number: ASOC-40844

Problem: When the Primary Log Decoder/Remote Log Collector is not reachable and the Endpoint agent is configured to use UDP, the Secondary Log Decoder/Remote Log Collector is not used - this can lead to event loss.

Workaround: None.

Secondary LD/VLC cannot be unselected

Tracking Number: ASOC-48755

Problem: When an option is selected in the secondary channel for LD/VLC, then it cannot be unselected.

Workaround: Primary LD/VLC is a required field and it always needs a destination. Secondary option is an optional field. You can click **Reset** in the Packager UI and start again or refresh the page.

Respond

Related Links URL created for Malware Events is invalid

Tracking Number: ASOC-48392

Problem: In the Respond Alert Details and Incident Details views, the URL link for a Malware Analysis alert is invalid. To view the URL link in the Alert Details view, go to RESPOND > Alerts and in the Alerts list, click the link in the NAME column for a Malware Analysis alert. In the Event Details, you can see the URL for the Malware Analysis alert.

To view the URL link in the Incident Details view, go to RESPOND > Incidents and in the Incidents list, click the link in the ID or NAME column for a Malware Analysis incident. In the Incident Details view, click the View Datasheet icon ( ) to view the event details. If there are multiple events listed, click an event to view the event details. In the Event Details, you can see the URL for the Malware Analysis alert.

Workaround: None

Overlapping Relationship Data in the Nodal Graph for Certain Data

Tracking Number: ASOC-48034

Problem: In the Respond Incident Details view nodal graph, when there are multiple relationships within an incident, the text can overlap on the arrows between the nodes, which is difficult to read. This issue appears in an incident when the source IP of the alert is also the destination IP of another alert and the destination IP of the first alert is the source IP of the second.

Workaround: None

Respond Administrator cannot query Investigate or view Live dashlets in the Dashboard

Tracking Number: ASOC-40749

Problem: The Respond_Administrator role does not have permission to query Investigate. This is necessary so that the Respond Administrator can pivot to Investigate or create incidents from events. The Respond_ Administrator Role also does not have the Live: Access Live Module permission, which is required to view Live dashlets in the dashboard.

Workaround:

1. Manually create the Respond_Administrator role on the Core services. To do this, go to ADMIN > Services, select a Core service, and then in the Actions drop-down list, select View > Security > Roles Tab. Click + to add the Respond_Administrator role. Add the following permissions to the Respond_ Administrator role:
   - sdk.content
   - sdk.meta
   - sdk.packets
   - storedproc.execute

Replicate the Respond_Administrator role to other Core services that may be used by the users.

2. In the ADMIN > Security > Role tab, add the Live: Access Live Module permission to the Respond_ Administrator role.

Malware event File name with Korean characters is not shown properly in the Respond view

Tracking Number: ASOC-40159

Problem: If there are Korean characters in an alert that is received from Malware Analysis, they will not be displayed correctly in the Respond view.

Workaround: None.

Unable to query domain in source/destination.device.geolocation

Tracking Number: ASOC-39938

Problem: Geo-location that comes from ESA Correlation Rules is not available in the Incident Details view Related Indicators panel. (To access the Related Indicators panel, Go to RESPOND > Incidents and in the Incidents List, click the ID or NAME link of the incident. In the Incident Details view toolbar, click the Journal, Task, and Related icon. The Journal is displayed on the right. Click the RELATED tab.)

Workaround: None. This is a new functionality, so it is just data that is not searchable.

Security Analytics Incident Management link in the NetWitness SecOps Manager 1.3.1.2 is not valid in NetWitness Suite 11.1.0.0

Tracking Number: ASOC-41891

Problem: NetWitness Suite 11.1.0.0 will only work with NetWitness SecOps Manager 1.3.1.2. However, the Security Analytics Incident Management link in the NetWitness SecOps Manager 1.3.1.2 is navigating to the legacy Security Analytics Incident Management page, which is not valid in NetWitness Suite 11.1.0.0.

Workaround: None.

ESA Rules with severity as High or Low are not populated in the RSA Archer UI

Tracking Number: ARCHER-47101

Problem: When ESA alerts with severity High or Low are forwarded to RSA Archer, the Security Alert Priority field is not populated in the RSA Archer UI.

Workaround: None.

ESA Command and Control Aggregate Scores details are not populated in the RSA Archer UI.

Tracking Number: ASOC-50183

Problem: When ESA Command and Control Aggregate Scores details are forwarded from NetWitness Suite to RSA Archer UI, fields such as Beaconing Behavior, Rare Domains, Rare User Agents, Missing Referrers, and Suspicious Domains Aggregate Score do not get populated.

Workaround: None.

Incidents and Tasks are still available when RSA NetWitness SecOps Manager integration is enabled

Tracking Number: ASOC-39886

Problem: After enabling NetWitness SecOps Manager integration in the Respond Server service, all incidents are managed in NetWitness SecOps Manager. In previous versions, when SecOps was enabled, incidents and remediation tasks were hidden. In NetWitness Suite 11.0.0.x, users are still able to access incidents and tasks in the Respond view (RESPOND > Incidents and RESPOND > Tasks). They are also not prevented from creating incidents in NetWitness Suite. If they create incidents from the Respond Alert List view (RESPOND > Alerts) or from Investigate, those incidents will not go to NetWitness SecOps Manager.

Workaround: If you enabled SecOps Manager integration in the Respond Server service, do not use the following in the Respond view: Incidents List view, Incident Details view, and Tasks List view. Also, do not create incidents from the Respond Alerts List view or from Investigate.

For migrated incidents, the event count always shows as 0 in the Overview panel

Tracking Number: ASOC-38026

Problem: In the Incidents Overview panel Catalysts field, the number of events for migrated incidents always shows as 0 (zero). This is expected behavior in NetWitness Suite 11.0.0.x (To access the Overview panel, go to Respond > Incidents. If you click an incident in the Incidents List, the Overview panel appears to the right. If you click a link in the ID or NAME field in the Incidents List, the Incident Details view opens with the Overview panel on the left.)

Workaround: None.

Unable to Pivot to Investigate on all username, filename, and domain values when multiple values are present.

Tracking Number: ASOC-37997

Problem: If username fields contain commas that do not represent delimiters between values, you may not be able to pivot to Investigate on certain meta if there is more than one value in the field.

Workaround: You can query or pivot on other data, or manually investigate the meta. You can still access the meta through Investigate.

In memory table enrichment info is not displayed for ESA alerts

Tracking Number: ASOC-37533

Problem: You cannot view custom enrichments for ESA Correlation Rules in the Respond Alerts view.

Workaround: None.

DOMAIN and HOST metas do not display correctly in the Respond view

Tracking Number: ASOC-37232

Problem: Domain and Host metas may be incorrectly labeled in the Respond Incidents Details view when alias.host contains different types of data. The Domain field behavior is inconsistent and it may be populated with hostnames.

Workaround: None. Multiple types of information will continue to exist in the Domain field.

After upgrade, unable to filter incidents using the Assignee field

Tracking Number: ASOC-36973

Problem: After upgrading incidents from 10.6.5.x to 11.0.0.x, Analysts are not able to filter the migrated incidents using the Assignee field (RESPOND > Incidents - Filter panel).

Workaround: None.

Respond - Create Incidents from Alerts in the Respond Alert List view

Tracking Number: ASOC-35811

Problem: When you manually create an incident from alerts in the Respond Alert List view (RESPOND > Alerts) in 11.0.0.x, you just have the minimum functionality to create an incident from alerts. You can only provide a name for the incident and the priority defaults to Low. When manually creating an incident, you do not have additional options, such as adding a Priority, Assignee, or Category.

Workaround: You can update additional fields by manually editing the incident after you create it, such as changing the priority from Low to High. However, you cannot add a category to an incident.

Whitelist Domains while closing Incidents as False Positive

Tracking Number: ASOC-25135

Problem: In 10.6.5.x, if a Suspected C&C Incident was marked as "Closed - False Positive" , an entry was made to the "Whitelisted Domains" list from context hub. There should be a similar functionality in the Respond view.

Workaround: Analysts can manually add domains to a whitelist in the Respond view. The *NetWitness Respond User Guide* provides procedures.

Integration Settings for SecOps Manager should be exposed in the User Interface

Tracking Number: ASOC-25127

Problem: The Integration settings for sending all incidents to RSA NetWitness SecOps Manager should be exposed in the user interface.

Workaround: The user interface for partial RSA NetWitness SecOps Manager integration was removed in 11.0.0.x. Administrators can complete the integration from the Explorer view for the Respond Server service.

Incidents are not flagged when a user manually adds alerts to an existing incident.

Tracking Number: ASOC-16640

Problem: Investigation values are not highlighted when alerts in Respond have manually been added to an incident. Alerts that are dynamically added to an incident will get highlighted.

Workaround: None.

Log Collector

The vsftpd service has been changed to support only TLSv1.2

Tracking Number: ASOC-42497

Problem: For compliance reasons, the **vsftpd** service configuration on Log Collector and Virtual Log Collector nodes has been changed to support only TLSv1.2 and high encryption ciphers. TLSv1.0, 3DES and NULL encryption will no longer be accepted by default. This will break uploading of log files by FTPS protocol from event sources that do not support higher encryption.

Workaround: Use the following procedures to restore collection.

If you have event sources requiring TLSv1.0, use the below steps:

1. Edit `/etc/vsftpd/vsftpd.conf` and change the line `ssl_tlsv1=NO` to `ssl_tlsv1=YES`
2. Restart **vsftpd** service by running this command:

   ```
   systemctl restart vsftpd
   ```

If you have event sources requiring 3DES and/or NULL encryption, use the below steps:

1. Edit `/etc/vsftpd/vsftpd.conf` and change the line `ssl_ciphers=HIGH:-3DES:-aNULL` to `ssl_ciphers=HIGH`
2. Restart **vsftpd** service by running this command:

   ```
   systemctl restart vsftpd
   ```

DPO Role missing on Log Collector

Tracking Number: ASOC-7937

Problem: The new Data Privacy Officer role does not exist on the Log Collector.

Workaround: None.

Checkpoint collection not working with error "peer ended the session"

Tracking Number: ASOC-8351

Problem: The checkpoint collection is not working and the logs show the error: **peer ended the session**

Workaround: To resolve this issue:

1. Make a backup and then remove the checkpoint position file (**/var/netwitness/logcollector/runtime/checkpoint/eventsources/checkpoint.CP_Security.xml**).
2. Restart the service to regenerate the file.
3. (Optional) If the **Max Idle Time Poll** is set to 0, set it to 20.

Note: By removing the position file, your Log Collector may re-collect a substantial amount of log data.

Investigate

Three new meta groups for 11.0 and the same column groups for 11.1 are not created when you upgrade from 10.6.5 to 11.x: RSA Endpoint Analysis, RSA Outbound HTTP, RSA Outbound SSL/TLS.

Tracking Number: ASOC-51011

Problem: When you upgrade from Version 10.6.5 to 11.x, three out-of-the-box meta groups (RSA Endpoint Analysis, RSA Outbound HTTP, and RSA Outbound SSL/TLS) are not created due to a conflict with a column group added in Version 11.0. When you upgrade from Version 10.6.5 to 11.1, three out-of-the-box column groups (RSA Endpoint Analysis, RSA Outbound HTTP, and RSA Outbound SSL/TLS) are not created. These meta groups should appear in the Manage Meta Groups dialog and the Manage Column Groups dialog.

Workaround: None.

After upgrading to 11.1, there are mismatched data types between the Log Decoder (table-map.xml) and Concentrator (index-concentrator.xml) definitions.

Tracking Number: ASOC-50702

Problem: This error occurs when you have done customized meta keys on your Log Decoder and Concentrator.

Workaround: If you have 'stransaddr' and 'dtransaddr' enabled on the Log Decoder and you have those same fields indexed on the Concentrator, then you must change data type of these fields to IPv4 on both the Log Decoder and Concentrator.

If the URL for a drill point is very long and you use the query in the Event Analysis view, an error (414 Request error) is returned.

Tracking Number: ASOC-50196

Problem: Several situations create a very long query that the browser cannot handle, especially if you are using Internet Explorer, which has a much lower character limit than most browsers. Pivoting to Event Analysis from Reporting can result in a very long query, and a number of pivots in the Navigate view can create a very long query.

Workaround: Continue to work in the Navigate view or Events view when the URL becomes too long to render in the Event Analysis view.

Attempting a direct query, or query via link, that uses an IPV6 meta value with unsupported special characters generates an error in the Event Analysis view and the Navigate view.

Tracking Number: ASOC-50924

Problem: Literal ipv6 addresses with a percent (%) sign and also UNC Path Names such as 2001-db8-85a3-8d3-1319-8a2e-370-7348.ipv6-literal.net are not supported. The error in the Event Analysis view is Internal Server Error. The Navigate page shows a syntax error.

Workaround: None.

If you got to Event Analysis by way of the Events view, either by clicking the Event Analysis link or by right-clicking one of the events, the right-click options on meta values do not work.

Tracking Number: ASOC-50771

Problem: If you clicked Event Analysis in the Detail View of the Events view, the Event Analysis view opens as usual. However, the right-click options on a meta value in the Event Meta panel do not work.

Workaround: If you go through **Navigate** > **Event Analysis**, or if you go through Events and a reconstruction of an event, the right-click options function in Event Analysis.

The service keeps loading infinitely.

Tracking Number: ASOC-49854

Problem: This sometimes occurs when you open Event Analysis from the Navigate view or the Event view, and when you refresh the Event Analysis view.

Workaround: Refresh the page in the browser.

Cannot add meta entities to a custom column group in the Events view with the Optimize Investigation Page Loads option disabled.

Tracking Number: ASOC-50712

Problem: Meta keys belonging to meta entities are not displayed in custom column groups. This issue is seen in the Events view when you disable Optimize Investigate Page Loads in the Events view settings and then refresh the page.

Workaround: If you want to use meta entities in a custom column group, ensure that the Optimize Investigation Page Loads option is enabled.

Custom column groups that contain meta entities can be created in the Events view, but when the custom column group is used in the Event Analysis view, you cannot see the meta keys included in the meta entity in the results.

Tracking Number: ASOC-50349

Problem: Custom column groups are not displaying meta keys that belong to meta entities. This issue is seen in the Events list in the Event Analysis view.

Workaround: Use a column group that does not contain meta entities. However, meta entities can still be queried and used in the query builder.

When downloaded from the Event Reconstruction view, logs and metadata are always in text format irrespective of the format selected in the Events view.

Tracking Number: ASOC-50091

Problem: When you download metadata or a log in the Event Reconstruction view, the format that you selected in the Events view is not used. The exported data is always in text format.

Workaround: Download metadata and logs from the Events view if you want to use a format other than text format.

When you right-click on a meta value that contains a semicolon in the Event Analysis view and attempt to apply the drill in a new tab in the Navigate view, there is an error: Unable to build visualization

Tracking Number: ASOC-50041

Problem: The URL is correctly formed in the Event Analysis view, but when received in the Navigate view, only the part of the string before semicolon is queried, and everything after it is stripped off.

Workaround: Enter the query, complete with the semicolon, directly in the Query dialog in the Navigate view or Events view.

The query builder in the Event Analysis view is unresponsive for filters that contain a space.

Tracking Number: ASOC-49427

Problem: When adding a filter, if you add an extra space before <meta key>, between <meta key> and <operator>, and after <operator>, the query builder becomes unresponsive and the Query Events button is disabled so that you cannot continue adding filters.

Workaround: Click on an existing filter, and then click the query builder. If that does not work, refresh the page.

When you alter the URL and the new URL is for a restricted event, the reconstructed content for the previous query persists in the Event Analysis view and no error message is displayed.

Tracking Number: ASOC-45198

Problem: After viewing an event that you have access to, if you change the URL to an event you are restricted from viewing the content of the previous event is still displayed.

Workaround: None.

When you enter a query to a session to which you do not have access in the Event Analysis view, no data is displayed and there is no error message.

Tracking Number: ASOC-48945

Problem: If you enter a query in the Event Analysis view query builder that would result in viewing an event you are restricted from viewing, no data is displayed and there is no error message.

Workaround: You can check the URL in the Navigate view (**Navigate** > **Actions** > **Go to event in Event Analysis**), and the following message will be displayed: "Session is unavailable for viewing.".

When investigating in the Event Analysis view, the following error message is returned: "An Unexpected error has occurred."

Tracking Number: ASOC-48710

Problem: This error is displayed when the session you are attempting to access has been removed, rolled out, or you have insufficient permission to view the session.

Workaround: None.

In a mixed-mode environment, an analyst with insufficient permissions can download PCAPs and logs from a 10.6.5.x service in the Investigate > Event Analysis View, but not files or payloads.

Tracking Number: ASOC-49676, 41698

Problem: Role-Based Access Control (RBAC) on the 11.0.0.x and 11.1 NW Server is not applied uniformly to downloads when investigating 10.6.5.x services. If the sdk.packets setting has not been disabled, analysts with SDK Meta and roles permission in place to restrict viewing and reconstructing event content can download the PCAP and log of an event that has content restrictions. Other types of downloads appear to download, then generate errors due to insufficient permissions, and the data is still protected.

Workaround: Disable the sdk.packets setting on 10.6.5.x services to limit the analyst from downloading any PCAPs or logs during phased upgrade. When the upgrade of all services is complete, re-enable the sdk.packets setting in all services. The RBAC experience will be consistent across all services. See the "UpgradeTasks" section in the *Physical Host Upgrade Guide* for details.

Issue with Interaction between Expand and Contract Icons in Investigate Event Analysis.

Tracking Number: ASOC-47670

Problem: When you contract the left panel in the Event Analysis view, the right panel expands, but the expand/contract icon on right panel does not change to the contract icon. To contract the right panel using the expand/contract icon on the right panel you have to press it twice. The behavior should be that when you contract the left panel and the right panel expands, the expand/contract icon for right panel switches to contract and vise versa. There is a similar issue with the Show/Hide Events panel icon. If the Event panel is contracted and you click on the Show/Hide Events Panel icon, the left panel disappears and the right panel expands. The expand/contract icon on the right (and now only) panel remains in expanded form. When you click on the expand icon in this configuration, the left panel reappears and the right panel effectively contracts.The behavior should be: after you hide the left panel, the expand/contract icon on the right panel should take its contract form.

Workaround: When the expand/contract icon in the right panel or the Show/Hide Events panel icon in the toolbar has not changed to the correct state, click the icon twice.

PCAP and payload download issues in Event Analysis view in a Mixed Mode Environment

Tracking Number: ASOC-37309

Problem: The Event Analysis workflow requires all services to be running 11.0.0.x. If the NW Server, Broker, and Concentrator are running 11.0.0.x, and the Decoders are running 10.6.5.x, the admin user will not be able to download files, logs, PCAPs, and payloads.

Workaround: Download files from Event Reconstruction.

Parallel Coordinate visualization is not displaying special characters correctly

Tracking Number: ASOC-9346

Problem: When configuring the meta key content type as one of the meta for the axis, if the meta value contains any special characters, the values do not display correctly.

Workaround: None.

Workbench

Empty collection seen in Collections tab

Tracking Number: ASOC-6859

Problem: An empty collection is seen in the Collections tab if the workbench service stops or restarts during restoration process

Workaround: None.

Data range is not displayed for collection if workbench service or Jettysrv is restarted while restoration is in process

Tracking Number: ASOC-6822

Problem: The date range is not displayed for a collection if the workbench service or Jettysrv is restarted while the restoration is in process.

Workaround: None.

Custom Feeds

RSA Archer Recurring Feeds failing in SSL mode

Tracking Number: ARCHER-41524

Problem: RSA Archer recurring feeds does not work in SSL mode.

Workaround: You must create the RSA Archer recurring feeds in non-SSL mode..

The status of STIX feed progress bar is incomplete.

Tracking Number: ASOC-40642

Problem: Sometimes, the status of the progress bar for some of the STIX feeds are incomplete even if the feeds are successfully pushed to the Decoder(s).

Workaround: None.

Malware Analysis

Users with Analyst role are not able to run the on-demand malware scan

Tracking Number: ASOC-5425

Problem: A user who has the Analyst role has access to the Investigation and Malware Analysis modules. But when the user tries to run the on-demand Malware Analysis scan from the Investigation screen, it fails with an invalid username error. The job gets submitted but fails because of the credentials.

Workaround: None.

If the Core device is not configured with IP address, the View Network Session option is disabled for Malware Analysis events

Tracking Number: ASOC-5571

Problem: Due to the new service ID and changes to the ASG, Malware Analysis is not showing the View Network Session option from the Malware Event Summary. It looks like the device ID is coming as null.

Workaround: None.

Event Stream Analysis

ESA Rules deployed not listed while creating policy using statistics ESA Rule Memory Usage

Tracking Number: ASOC-50201

Problem: When you deploy new ESA rules in the Health and Wellness page and create a new policy under Event Stream Analytics using the statistic ESA Rule Memory usage, all ESA rules deployed are not listed.

Workaround: Run the following restart command on NetWitness Server: `systemctl restart rsa-sms`.

Unable to deploy ESA rule with array meta in Enrichment

Tracking Number: ASOC-47584

Problem: If a user configures an In-Memory table as an Enrichment Source in ESA where a table column has type as string, creates an ESA rule with a whitelist condition, and maps the string list column to a string array event meta key, when the rule is deployed, the rule is disabled as the datatype conversion from String[] to String is not allowed.

Workaround: None.

For ESA rules that use enrichment sources, the Ignore Case option does not work for first statement

Tracking Number: ASOC-49906

Problem: When creating an ESA rule that uses any enrichment source, if the Ignore Case option is enabled on the first enrichment statement, no results are returned. Note that this issue does not apply to any statements after the first statement (that is, substatements).

Workaround: When creating a new rule, the Ignore Case option is now disabled. For existing rules that have the Ignore Case option enabled for an enrichment statement, the option is still enabled but users will be prompted to disable the option when opening the rule in ESA and then save the updated rule.

ESA rule with meta entity does not get triggered

Tracking Number: ASOC-47522

Problem: When meta entities are configured for use in the Investigate interface, they are not available for use in the ESA Correlation Rule Builder. Customers are not able to build ESA correlation rules using meta entity information, and they must specify the exact pieces of metadata to use in the rules.

Workaround: None

Deployment (called Synchronization in 10.4 and earlier) fails if you deploy this rule from RSA Live: No Log Traffic detected from device in given time frame

Tracking Number: SAENG-5888

Problem: Deployment, formerly called synchronization, fails for rule "No Log Traffic detected from device in given time frame" deployed from Live. This issue is not observed if you deploy the rules from Live on a 10.4 setup and do the synchronization. The issue is observed if you update your system from a pre-10.4 where the rules are deployed from Live with incorrect Module IDs.

Workaround: Delete the rules with incorrect Module IDs and redeploy them from Live.

Case-sensitive sorting is not working properly in ESA All Rules grid

Tracking Number: SAENG-3605

Problem: When rule names begin with lower and upper case letters, the sort does not work properly in the Rule Name column of ESA All Rules grid. For example, "Rule 1" is not followed by "rule 2" when you sort by name.

Workaround: None.

Cannot set ESA compression level as in other appliances

Tracking Number: ASOC-26481

Problem: Administrators cannot set the compression level in ESA like they can with other appliances, even using the Explorer view.

Workaround: Delete the Concentrator source from ESA and add it again so that the compression level changes are reflected:

1. Remove the Concentrator data source from ESA. (Go to ADMIN > Services, select the Event Stream Analysis service, and from the actions menu select View > Config. On the Config view Data Sources tab, remove the Concentrator data source.)
2. Set compression level in ESA. (Go to the Explore view, and in the node list, navigate to Workflow/Source/nextgenAggregationSource and set the CompressionLevel.)
3. Add the Concentrator Data Source again to ESA. (Return to the Config view Data Sources tab and add the Concentrator data source.)

Event Stream Analysis service becomes unresponsive when using Query-based aggregation for automated threat detection for Logs

Tracking Number: ASOC-25174

Problem: Event Stream Analysis may become unresponsive due to heavy resource usage, and the configuration for the wrapper may need to be adjusted.

Workaround: You may need to change the ping time settings in the `wrapper.conf` file. Perform the following:

1. Go to **Administration > Services > Event Stream Analysis> Explorer** and navigate to the **`/opt/rsa/esa/conf/`**folder.
2. Change the settings to the following values:
   `wrapper.ping.timeout=300`
3. Add the following lines at the end of the file:
   ```
   wrapper.restart.delay=40
   wrapper.ping.timeout.action=RESTART
   ```
4. Restart the Event Stream Analysis service.

ESA Displays Warning For Array Operators

Tracking number: ASOC-14157

Problem: When writing an advanced rule, array operators, such as anyOf, fails. For example:

```
SELECT * FROM
Event(
alias_host.anyOf(i => i.length()>50)
);
```

results in an error similar to the following:

```
Logger name: com.espertech.esper.epl.enummethod.dot.PropertyExprEvaluatorScalarArray
Thread: pipeline-sessions-0
Level : WARN
Message : Expected array-type input from property 'alias_host' but received class java.util.Vector
```

Workaround: To do a fuzzy comparison, first convert the array to a string. For example:

SELECT * from Event **(cast(alias_host, string)**LIKE '%TESTHOST%');

> **Note:** If you used array operators in EPL developed in versions 10.5, 10.5.0.1, and 10.6, you will need to modify the EPL to use the above workaround.

Deployment fails if the server that hosts an external database goes down

Tracking Number: ASOC-9011

Problem: You configure a database connection to use the database as an enrichment source for a rule. A reference to the database is deployed on every ESA, even if the ESA does not deploy any rules that use the database. If the server that hosts the database goes down, any new deployment will fail.

Workaround: Restart the server that hosts the database.

Trial rules configuration: Out-of-Bound Values are Capped

Tracking Number: ASOC-6633

Problem: When configuring parameters for trial rules, you can configure the following values:

- **MemoryCheckPeriod**: Defines the polling interval to check the ESA memory consumption.
- **MemoryThresholdForTrialRules**: Defines the threshold value; when reached, all trial rules will be disabled.

  If you configure these parameters with out-of-bound values, the values are capped to the system's minimum or maximum values rather than the values defined in the parameters.

Workaround: None.

Reporting

Post-upgrade from 10.6.5.x to 11.1, Categories meta for incident collection is not supported.

Tracking Number: ASOC-40851

Problem: When using the Categories meta for incident collection, the results rendered are in an incorrect format. Hence this meta is not supported and you cannot use the categories meta in either select clause or where clause. Also, it is not available in the list of metas for selection in the Rule Builder page.

Workaround: None.

Incorrect data displayed for Charts.

Tracking Number: ASOC-35523, ASOC-37958

Problem: When a chart is executed for defined time ranges, the results are inconsistent between test chart and a view chart.

Workaround: None.

When querying on the Respond DB, empty rows are displayed.

Tracking Number: ASOC-37846

Problem: When querying on the Respond DB, and if the data is not available for the requested columns, then empty rows are displayed on the UI.

Workaround: None.

Hide and Investigate options are not supported in Google Chrome and Mozilla Firefox browsers on Windows 10 operating system.

Tracking Number: ASOC-37590

Problem: If you are using Chrome or Firefox browsers on a Windows 10 operating system, and click on a chart data point, the hide and investigate options are not displayed. However, these options are available using the Internet Explorer browser.

Workaround: Disable the touch feature on Chrome and Firefox browsers. To disable this option in Chrome use the following procedure:

1. Navigate to - chrome://flags/ on Chrome or Firefox Browser.
2. Select the "Disable" option for "Touch Events API" flag.
3. Relaunch the browser.

To disable this option in Firefox, use the following procedure:

1. Navigate to - "about:config".
2. Click on "I accept the risk".
3. Search for the "Preference Name" - "dom.w3c_touch_events.enabled".
4. Update the "Value" column to 0.
5. Relaunch the browser.

Administration

Audit Logs: SA_SERVER is not capturing the value for queryString

Tracking Number: ASOC-8994

Problem: When changing file contents of a NetWitness Suite service, the NetWitness Suite server audit logs do not indicate which file the user changed.

Workaround: None.

Password expiry email lacks source information

Tracking Number: ASOC-9187

Problem: The password expiry email sent by the NetWitness Suite server does not mention the name or URL of the NetWitness Suite server that sent the email. If there are multiple NetWitness Suite servers, you may not know where to go to update your password.

Workaround: None.

Audit logs do not report the page (name) accessed when user tries to access NetWitness Suite pages where the user does not have permissions

Event Source Management

Renaming the Log Collector or Log Decoder hostname is not reflected in Event Source Manage View

Tracking Number: ASOC-9235

Problem: On the **Administration > Host** page, if you edit the Log Collector or Log Decoder appliance "name," then the change will not be reflected on the **Administration > Event Sources > Manage** page in the Log Collector or Log Decoder columns.

Workaround: Once you update a name from the Host page, perform the following steps:

1. SSH to the NetWitness Suite appliance.
2. Restart the SMS service by running this command:

   ```
   systemctl restart rsa-sms
   ```

3. On the NetWitness Suite UI, wait for the **Event Source Manage** page to come back up, then delete the event sources with the old Log Collector or Log Decoder names.

Not all types are displayed for auto-mapped addresses.

Tracking Number: ASOC-48328

Problem: If a new application is added on an existing Event Source that is auto-mapped, there could be a delay in when that type shows in Event Source Discovery and is un-auto-mapped.

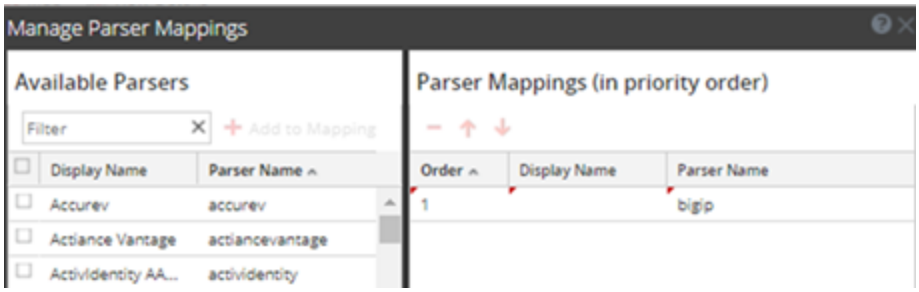
Workaround: None.

Suggested mappings do not load when the Event Source is created manually.

Tracking Number: ASOC-49492

Problem: For an Event Source that is manually added without entering a value for Log Decoder, when the **Manage Parser Mappings** dialog is opened, suggested Parser Mappings may not have a Display Name.

Workaround: Close the **Manage Parser Mappings** dialog, then reopen it and the Display Name is displayed as shown in the following example.



Core Services

The SSL FIPS Mode checkbox in the Services Config view should be disabled for Brokers, Concentrators, and Archivers, because changing the checkbox value does not turn off FIPS enforcement for the service.

Tracking Number: ASOC-41902

Problem: In 11.0.0.x, the Broker, Concentrator, and Archiver are always FIPS enforced and the administrator does not have the option to toggle between between FIPS and Non-FIPS. The admin can use the SSL FIPS Mode checkbox to toggle FIPS mode on and off on a Log Decoder, Packet Decoder, or Log Collector.

Workaround: None.

Broker System roles do not show the custom meta keys defined in Concentrator

Tracking Number: ASOC-6749

Problem: If any custom meta keys are defined, the same meta keys should show up in the Broker, too. But the Broker system roles are not showing the custom meta.

Workaround: You can copy the Concentrator Language file and the custom index file (if it exists) to the Broker to add the SDK meta key roles to the system roles.

Custom Feed configuration- Advanced Option XML file invalid error for multi metacallback.

Tracking Number: ASOC-40867

Problem: Netwitness Suite does not support uploading feeds for the xmls where there are more than one callback.

Workaround: The Adhoc Feed can be uploaded using NwConsole, or using the REST URL of the decoder directly. This is not applicable for Recurring Feed.

Ability to Create Source and Destination IP-Based Feeds Using CIDR or Range

Tracking Number: SATCE-628

Problem: When creating a source and destination-based feed on a Log Decoder, it only populates the source meta key. You cannot use a range-based or CIDR feed. You must list every single IP address.

Workaround: Create two different feeds using IP addresses and you can use CIDR in these feeds.

Product Documentation

The following documentation is provided with this release.

Introduction

This document describes RSA® NetWitness Log Parser Tool, Version 1.0. RSA recommends reading this document before installing and using the NetWitness Log Parser Tool.

This document contains the following sections.

- Product Documentation
- Installation
- Product Features
- Known Issues
- Product Feedback
- Revision History

Product Description

The RSA NetWitness Log Parser Tool (NwLPT) enables content users to build and modify NetWitness log parsers in an offline environment without affecting NetWitness. The Log Parser Tool enables analysts to create custom parsers for critical or custom sources in their environment that are not currently parsed in NetWitness.

The Log Parser Tool enables you to create custom parsers in less time with an easier to use user interface and an improved workflow over previous methods.

Product Documentation

The following documentation is provided with this release.

Document	Location
RSA® NetWitness Log Parser Tool User Guide 1.0	https://community.rsa.com/docs/DOC-85016

Installation

Installation Instructions for New Users

You can install the RSA NetWitness Log Parser Tool standalone on a Microsoft Windows or MacOS computer. Download the Windows and MacOS versions of the NetWitness Log Parser Tool from the following location and running the installer locally on your computer:

https://community.rsa.com/docs/DOC-85016

Installation Instructions for Beta Event Source Integrator Users

If you are a Beta Event Source Integrator user, you need to un-install the Event Source Integrator tool and download the new NetWitness Log Parser Tool installer from the following location:

https://community.rsa.com/docs/DOC-85016

Note: The Recent Parsers and Open Recent sections are empty, since this is a new installer.

Product Features

RSA NetWitness Log Parser Tool 1.0 includes the following features:

Easy Deployment of NetWitness Parsers

Using the NetWitness Log Parser Tool, you can deploy parsers on a single Log Decoder or multiple Log Decoders.

Generate Parsing Summary

You can generate a report on the parsing details of the parser and log file that you loaded. This report provides detailed information about the parsed messages and headers, as well as information about unused headers and messages and top 10 meta values.

Advanced Search on Parsers

The NetWitness Log Parser Tool supports advanced search options on the headers and messages sections.

Advanced Log Filtering

The NetWitness Log Parser Tool supports advanced search options on the logs section. The NetWitness Log Parser Tool allows you to filter for selected log values, HeaderIDs, MessageIDs, and regex patterns in the logs section.

Undo and Redo Functions

The Undo and Redo options allow you to undo and redo any number of commands while the parser is being built or updated.

Validation Checks for Headers and Messages

- Multiple validation checks have been added to ensure the parser follows the right syntax and best practices.
- For example, an empty Header ID is not allowed, only 1 MessageID allowed per Header definition, creation of messages is not allowed unless the MessageID and Payload are defined.

Direct Link to GitHub Community

The GitHub Community link provides access to a repository where you can share and contribute event source log parsers for the NetWitness Log Decoder.

Continuous Parsing and On-Demand Parsing

The NetWitness Log Parser tool features two parsing modes: Continuous Parse and On-Demand Parse.

- By default, the NetWitness Log Parser Tool uses Continuous Parse mode, which means the log file is reparsed whenever there is a change to the parser.
- On-demand parsing can be used to parse large log files exceeding 25 MB so that the parser does not attempt to parse the log file after every change.

Auto Splitting of Large Log Files

The Log File Auto Splitting option allows you to split the size of a log file that exceeds 25 MB.

Automatic Periodic Saving

All parsers opened in the tool are auto-saved to a temporary location at an interval of 30 seconds. The last saved time is displayed in the Status Bar at the bottom of the tool.

Importing Table-Map and Table-Map-Custom Files

Table-Map and Custom-Table-Map files can be uploaded to your environment using the NetWitness Log Parser Tool.

Graceful Error Handling

- Error and Exception handling added to multiple parts of the tool.
- Appropriate user readable error messages are displayed. For example, read-only files cannot be edited, you cannot open a non-compliant parser.

Advanced Tag-Value Functionality

The **<TAGVALMAP>** feature is an advanced feature that enables easy parsing of event logs using the **<TAGVAL>** format.

Known Issues

This section describes issues that remain unresolved in this release. Wherever a workaround or fix is available, it is noted or referenced in detail.

Description: Close icon is not visible in the Parser tab in MacOS.

Tracking Number: ASOC-45687

Workarounds: From the main menu, select **File > Close**.

The following shortcut can also be used to exit from the Parser tab:

- Windows: **CTRL+W**
- MacOS: **CMD+W**

Description: Header and Message section controls are draggable and movable in Windows 10.

Tracking Number: ASOC-45675

Workaround: None. Does not impact functionality.

Description: Tab cannot be directly typed as a TagVal delimiter in the tool.

Tracking Number: ASOC-45684

Workaround:

1. Type the tab spacing in a text editor such as Notepad**.**
2. Copy the tab spacing from Notepad and paste it in the **Delimiter** field under the **Parser Details > TagVal** section.

Description: Does not work on Windows Server 2008 VMs that do not have a video card backend.

Tracking Number: ASOC-23434

Workaround: None.

Description: Sometimes Payload Rewind rectangle periodically overlaps at the end of a header on MacOS.

Tracking Number: None.

Workaround: None. Does not impact functionality.

Description: Vertical scrolling of events in the Log Data section may not be smooth when you are using the Tools scroll bar.

Tracking Number: ASOC-17707

Workaround: Use your mouse to scroll in the Log Data section.

Description: *Invalid empty Header/Message node is created when Header or Message is deleted from the Detail View*.

Tracking Number: ASOC-32031

Workaround: This is a user interface issue only. Click on a different Header/Message, then click on the invalid Header/Message to get rid of the empty Header/Message node.

Description: Log Parser Tool dialog box text may overflow if the Display is set to Medium (125%) or Larger (150%) on a Windows System".

Tracking Number: None.

Workaround: Follow the steps below.

1. Click **Start** button in Windows.
2. Select **Control Panel**.
3. Click **Appearance and Personalization**.
4. Click on **Display**.
   A page opens that displays three radio buttons: **Smaller**, **Medium**, and **Larger**.
5. Select the **Smaller** radio button to reduce the size of the text and click **Apply**.
6. Restart your computer for the change to take effect.

Description: Advanced functions are not documented.

Tracking NumberASOC-17293

Workaround: None.

Description: All comments are removed from the parser.

Tracking Number: ASOC-31782

Workaround: None

Product Feedback

Introduction

The instructions in this guide apply to physical hosts exclusively. See the RSA *NetWitness Suite Virtual Host Installation Guide* for instructions on how to set up virtual hosts in 11.1.

Supported Hardware

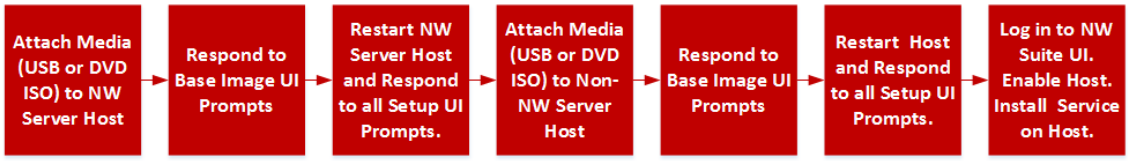
Series 4, Series 4S and Series 5.

Refer to the RSA *NetWitness Suite* Hardware Setup Guides for detailed information on each series type (https://community.rsa.com/community/products/netwitness/hardware-setup-guides).

Note: You must install the new Endpoint Hybrid or Endpoint Log Hybrid on the S5 or Dell R730 appliance. See "(Optional) Task 2 - Install Endpoint Hybrid or Endpoint Log Hybrid" in Post Installation Tasks for instructions on how to install Endpoint Hybrid and Endpoint Log Hybrid.

Physical Host Installation Workflow

The following diagram illustrates the RSA NetWitness® Suite 11.1 Physical Host Installation workflow.



Contact Customer Support

Refer to the Contact RSA Customer Support page (https://community.rsa.com/docs/DOC-1294) in RSA Link for instructions on how to get help on RSA NetWitness Suite 11.1.

Installation Preparation - Open Firewall Ports

The"Network Architecture and Ports" topic in the *RSA NetWitness® Suite Deployment Guide* lists all the ports in a deployment. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Caution: Do not proceed with the installation until the ports on your firewall are configured.

Installation Tasks

This topic contains the tasks you must complete to install NetWitness Suite 11.1 on physical hosts.

There are two main tasks that you must complete in the order shown.

Task 1 - Install 11.1 on the NetWitness Server (NW Server) Host

Task 2 - Install 11.1 on All Other Component Hosts

Task 1 - Install 11.1 on the NetWitness Server (NW Server) Host

For the NW Server, this task:

- Creates a base image.
- Sets up the 11.1 NW Server host.

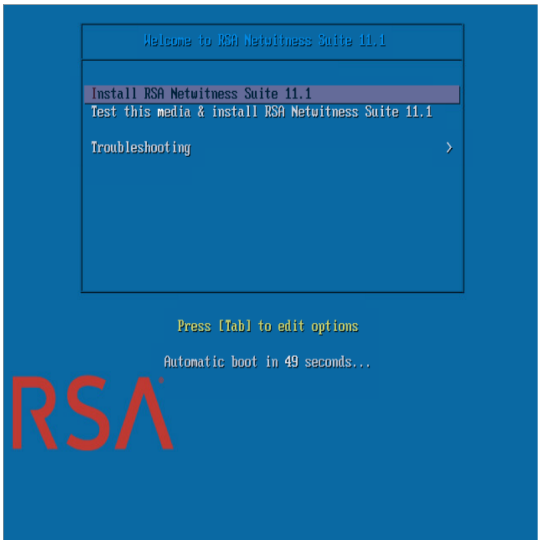
Complete the following steps to install the 11.1 NW Server host.

1. Create a base image on the host.
   a. Attach media (ISO) to the host.
      See the *RSA NetWitness Suite Build Stick Instructions* for more information.
      - Hypervisor installations - use the ISO image.
      - Physical media - use the ISO to create bootable flash drive media using the Universal Netboot Installer (UNetbootin) or another suitable imaging tool. See the *RSA NetWitness® Suite Build Stick Instructions* for information on how to create a build stick from the ISO. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.
      - iDRAC installations - the virtual media type is:
        - **Virtual Floppy** for mapped flash drives.
        - **Virtual CD** for mapped optical media devices or ISO file.
   b. Log in to the host and reboot it.

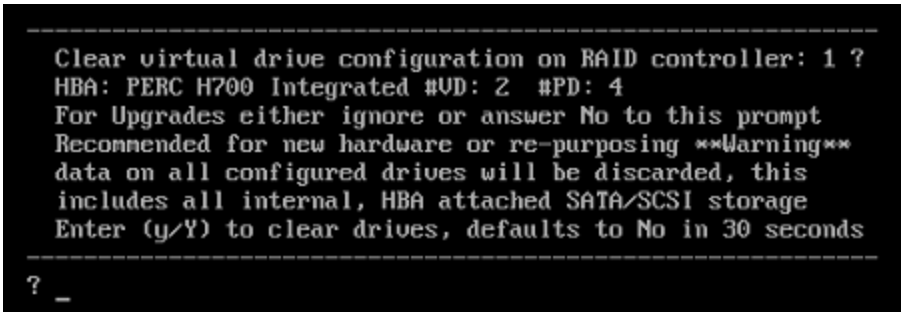
```
login: root
Password:
Last login: Tue Sep 19 13:27:15 on tty1
[root@saserver ~]# reboot
```

   c. Select **F11** (boot menu) during reboot to select a boot device and boot to the connected media.
      After some system checks during booting, the following **Welcome to RSA NetWitness**

Suite 11.1 installation menu is displayed. The menu graphics will render differently if you use a physical USB flash media.

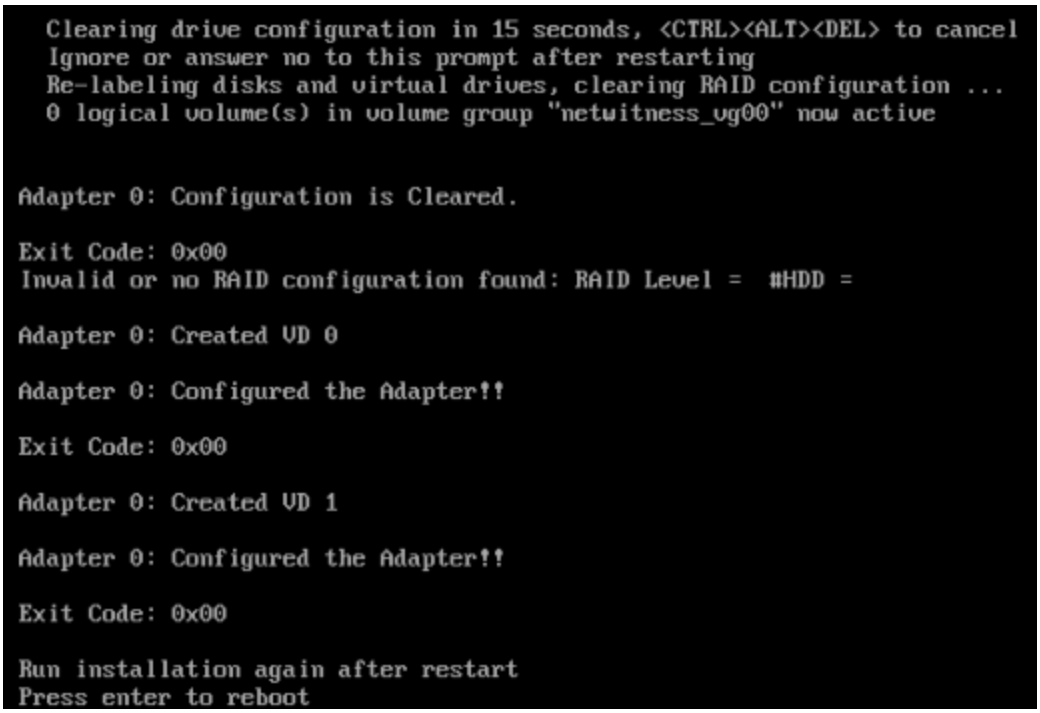


d. Select **Install RSA Netwitness Suite 11.1** (default selection) and press **Enter**.
The Installation program runs and stops at the **Enter (y/Y) to clear drives** prompt that asks you to format the drives.



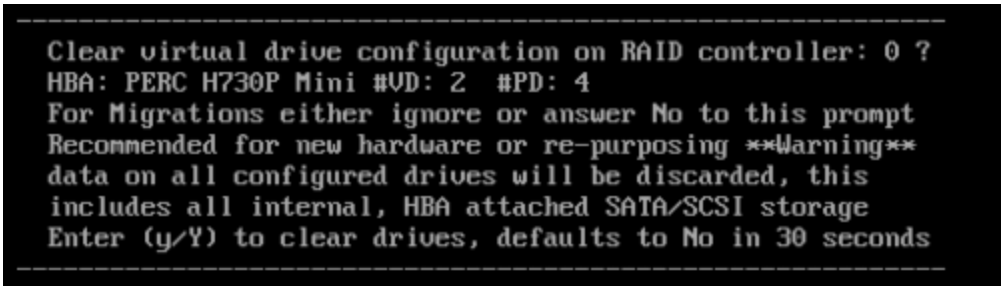
e. Type **Y** to continue.

The default action is No, so if you ignore the prompt and it will select No in 30 seconds and will not clear the drives. The **Press enter to reboot** prompt is displayed.



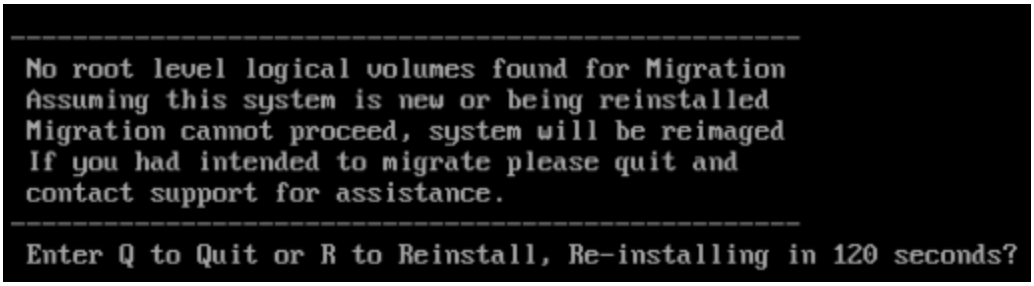
f. Press **Enter** to reboot the host.

The Installation program asks you to clear the drives again.



g. Type **N** because you already cleared the drives.

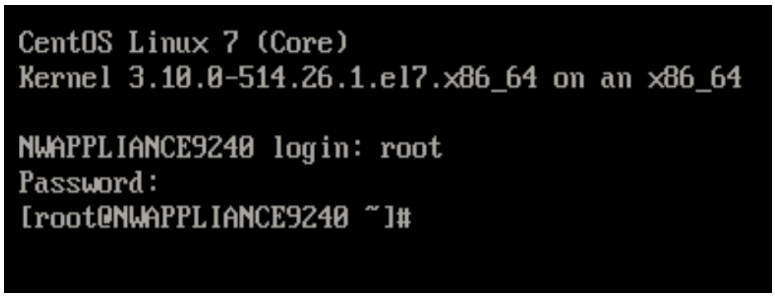
The **Enter Q (Quit) or R (Reinstall)** prompt is displayed.



h. Type **R** to install the base image.

The installation program displays the components as they are installed, which varies depending on the appliance, and reboots.

Caution: Do not reboot the attached media (media that contains the ISO file, for example a build stick).

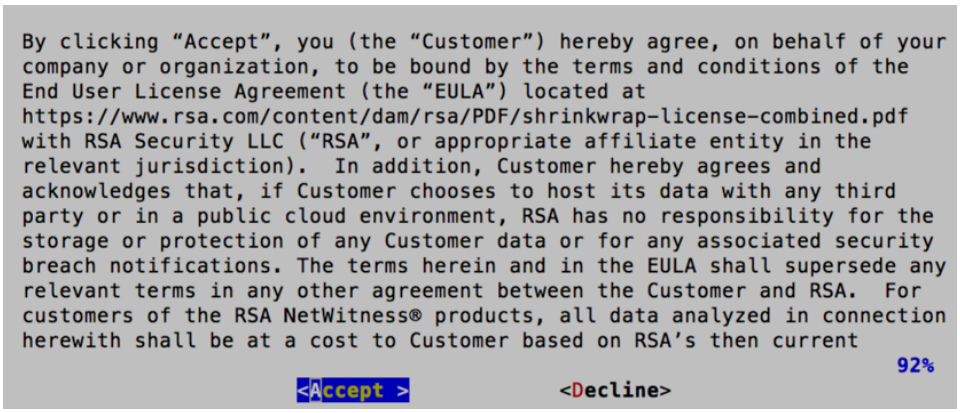


i. Log in to the host with the `root` credentials.

2. Run the `nwsetup-tui` command to set up the host.

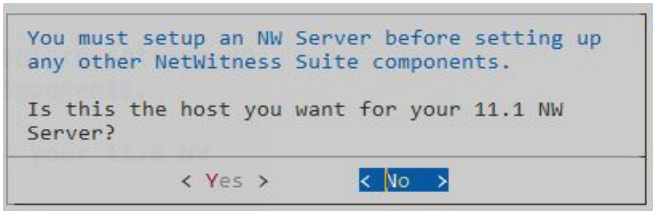
This initiates the `nwsetup-tui` (Setup program) and the EULA is displayed.

Note: 1.) When you navigate through the Setup program prompts, use the down and up arrows to move among fields, use Tab key to move to and from commands (such as **<Yes>**, **<No>**, **<OK>**, and **<Cancel>**. Press **Enter** to register your command response and move to the next prompt.
2.) The Setup program adopts the color scheme of the desktop or console you use access the host.
3.) If you specify DNS servers during Setup program (`nwsetup-tui`) execution, they MUST be valid (valid in this context means valid during setup) and accessible for the `nwsetup-tui` to proceed. Any misconfigured DNS servers cause the Setup to fail. If you need to reach a DNS server after setup that is unreachable during setup, (for example, to relocate a host after setup that would have a different set of DNS Servers), see (Optional) Task 1 - Re-Configure DNS Servers Post 11.1 .
If you do not specify DNS Servers during setup (`nwsetup-tui`), you must select **1 The Local Repo (on the NW Server)** in the **NetWitness Suite Update Repository** prompt in step 12 (the DNS servers are not defined so the system cannot access the external repo).



3. Tab to **Accept** and press **Enter**.

   The **Is this the host you want for your 11.1 NW Server** prompt is displayed.

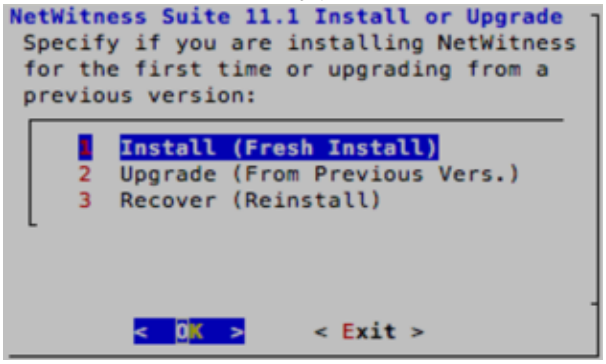


4. Tab to **Yes** and press **Enter**.

   Choose **No** if you already installed 11.1 on the NW Server.

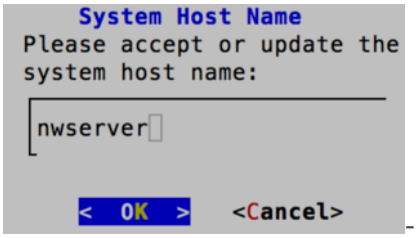
   Caution: If you choose the wrong host for the NW Server and complete the Setup, you must restart the Setup Program and complete (steps 2 -14) to correct this error.

   The **Install or Upgrade** prompt is displayed (**Recover** does not apply to the installation. It is for 11.1 Disater Recovery.).



5. Press **Enter**. **Install (Fresh Install)** is selected by default.

   The **Host Name** prompt is displayed.



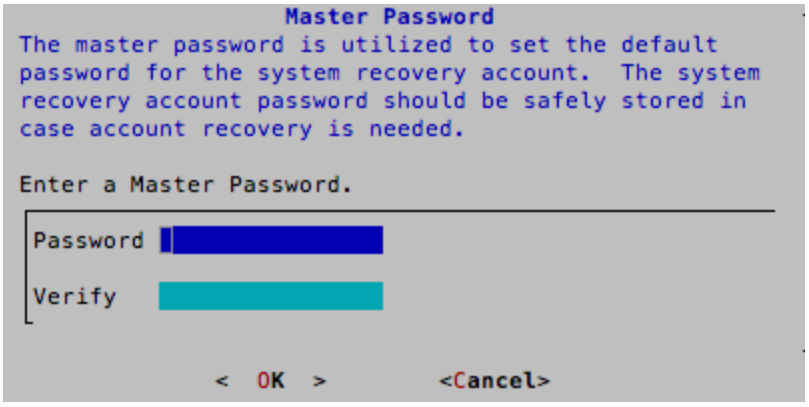
6. Press **Enter** if want to keep this name. If not edit the host name, tab to **OK**, and press **Enter** to change it.

   The **Master Password** prompt is displayed.

   The following list of characters are supported for Master Password and Deployment Password:

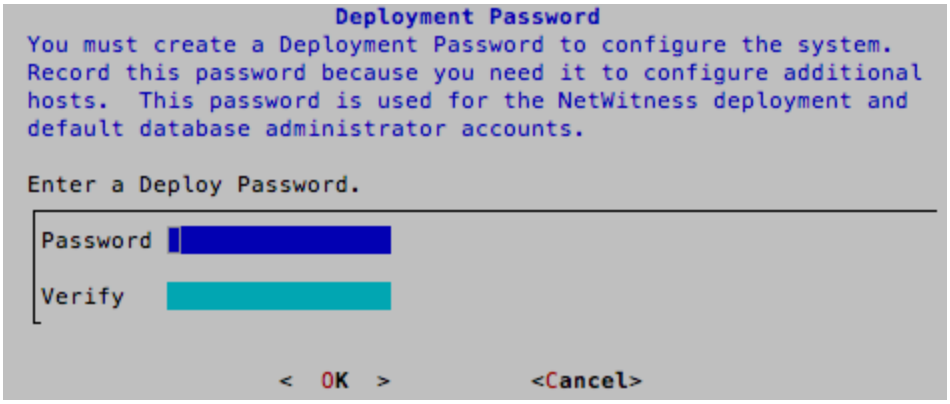
   - Symbols : ! @ # % ^ +
   - Numbers : 0-9
   - Lowercase Characters : a-z
   - Uppercase Characters : A-Z

   No ambiguous characters are supported for Master Password and Deployment Password. For example:
   space { } [ ] ( ) / \ ' " ` ~ ; : . < > -



7. Type in the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.

The **Deployment Password** prompt is displayed.



8. Type in the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.
   One of the following conditional prompts is displayed.

   - If the Setup program finds a valid IP address for this host, the following prompt is displayed.

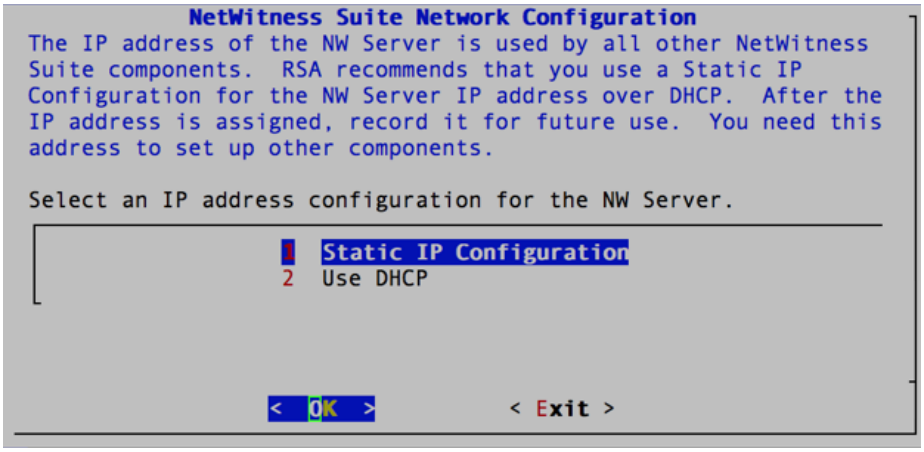
     
     Press **Enter** if you want to use this IP and avoid changing your network settings. Tab to **Yes** and press **Enter** if you want to change the IP configuration found on the host.

   - If you are using an SSH connection, the following warning is displayed.

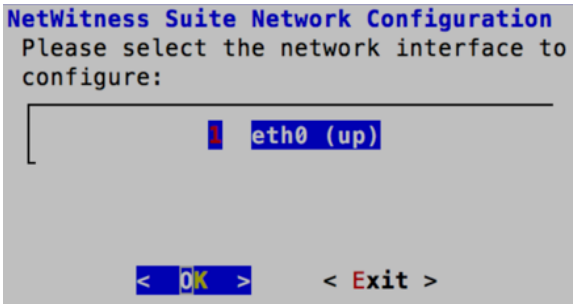
     Note: If you connect directly from the host console, the following warning will not be displayed.

     
     Press **Enter** to close warning prompt.

- If the Setup Program found an IP configuration and you chose to use it, the **Update Repository** prompt is displayed. Go to step 12 to and complete the installation.
- If the Setup Program did not find an IP configuration or if you chose to change the existing IP configuration, the **Network Configuration** prompt is displayed.

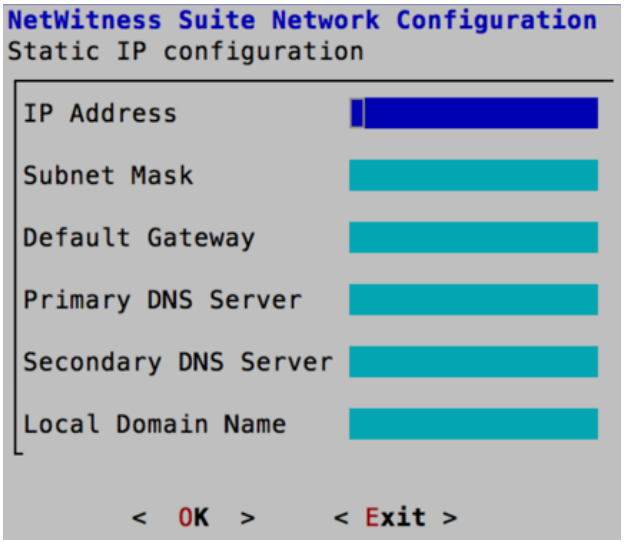


9. Tab to **OK** and press **Enter** to use **Static IP**.
   If you want to use **DHCP**, down arrow to 2 Use DHCP and press **Enter**.
   The **Network Configuration** prompt is displayed.



10. Down arrow to the network interface you want, tab to **OK**, and press **Enter**. If you do not want to continue, tab to **Exit**

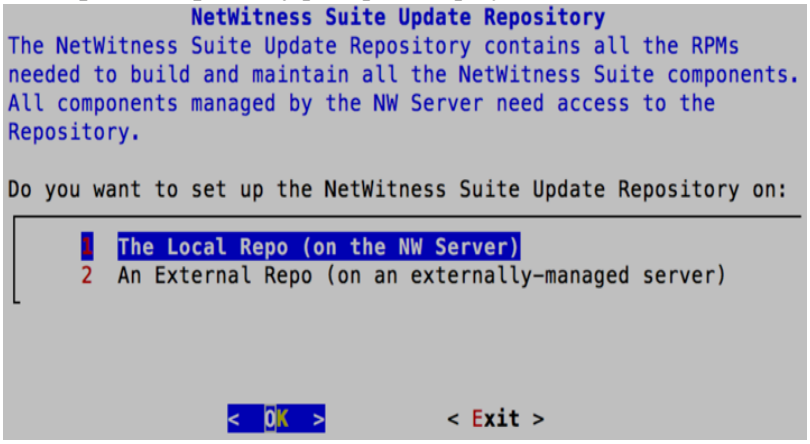
The **Static IP Configuration** prompt is displayed.



11. Type the configuration values (using the down arrow to move from field to field), tab to **OK**, and press **Enter**. If you do not complete all the required fields, an `All fields are required` error message is displayed (**Secondary DNS Server** and **Local Domain Name** fields are not required). If you use the wrong syntax or character length for any of the fields, an `Invalid <field-name>` error message is displayed.

Caution: If you select **DNS Server**, make sure that the DNS Server is correct and the host can access it before proceeding with the installation.

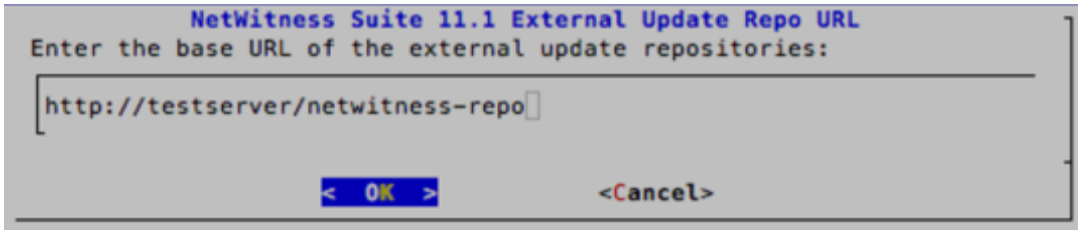
The **Update Repository** prompt is displayed.



12. Press **Enter** to choose the **Local Repo** on the NW Server.
    If you want to use an external repo, down arrow to **External Repo**, tab to **OK**, and press **Enter**.

- If you select **1 The Local Repo (on the NW Server)** in the Setup program, make sure that you have the appropriate media attached to the host (media that contains the ISO file, for example a build stick) from which it can install NetWitness Suite 11.1.0.0. If the program cannot find the attached media, you receive the following prompt.

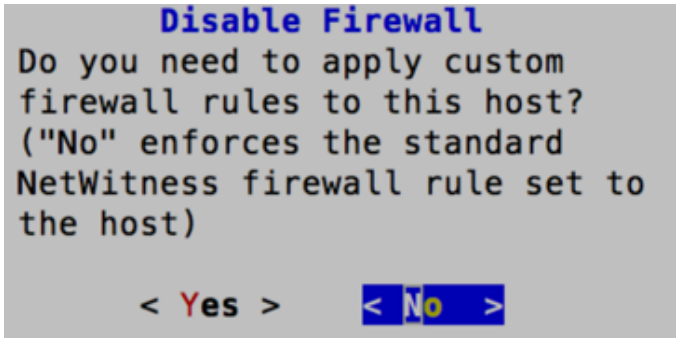
- If you select **2 An External Repo (on an externally-managed server)**, the UI prompts you for a URL. The repositories give you access to RSA updates and CentOS updates. Refer to Appendix B. Create an External Repository for instructions on how to create this repo and its external repo URL so you can enter it in the following prompt.



Enter the base URL of the NetWitness Suite external repo and click **OK.** The **Start Install** prompt is displayed.

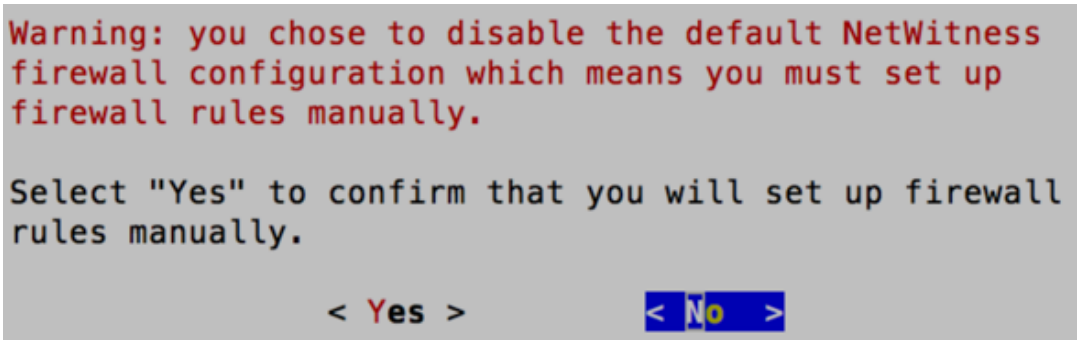
See "Set Up an External Repository with RSA and OS Updates" under "Hosts and Services Procedures" in the *RSA NetWitness Suite Hosts and Services Getting Started Guide* for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

The Disable firewall prompt is displayed.

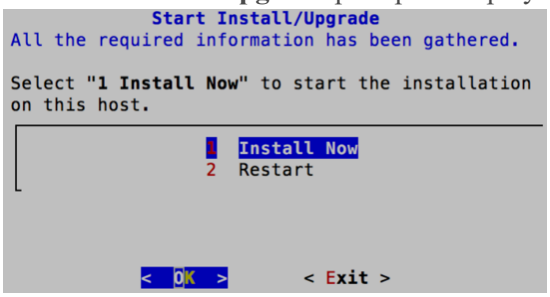


13. Tab to **No** (default), and press **Enter** to use the standard firewall configuration. Tab to **Yes**, and press **Enter** to disable the standard firewall configuration.

- If you select **Yes**, confirm your selection or **No** to use the standard firewall configuration.



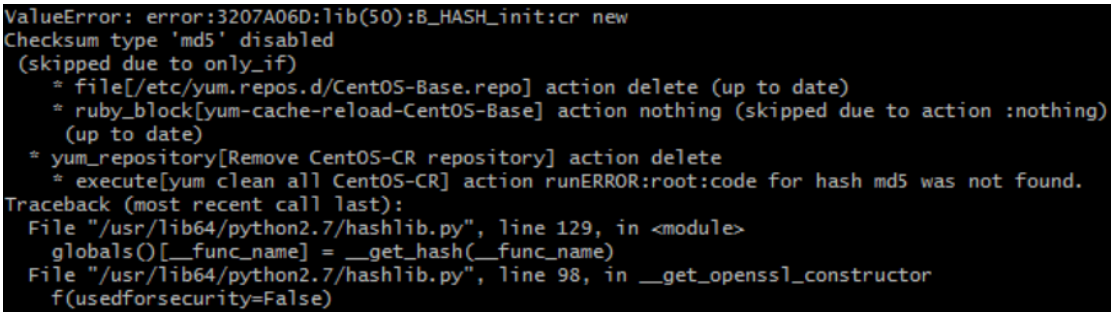
The **Start Install/Upgrade** prompt is displayed.



14. Press **Enter** to install 11.1 on the NW Server.

    When **Installation complete** is displayed, you have installed the 11.1 NW Server on this host.

> **Note:** Ignore the hash code errors similar to the errors shown in the following screen shot that are displayed when you initiate the `nwsetup-tui` command. Yum does not use MD5 for any security operations so they do not affect the system security.



Task 2 - Install 11.1 on Other Component Hosts

For a non-NW Server host this task:

- Creates a base image.
- Sets up the 11.1 non-NW Server host.

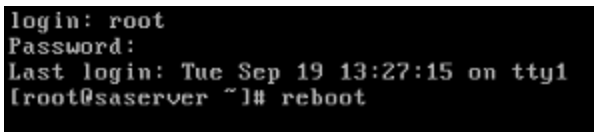
For ESA hosts:

- Install your primary ESA Host and install the **ESA Primary** service on it after you finish the Set Up program in the UI on the **ADMIN > Hosts** view.
- (Conditional) If you have a secondary ESA host, install it and install the **ESA Secondary** service on it after you finish the Set Up program in the UI on the **ADMIN > Hosts** view.

Complete the following steps to install NetWitness Suite 11.1 on a non-NW Server host.

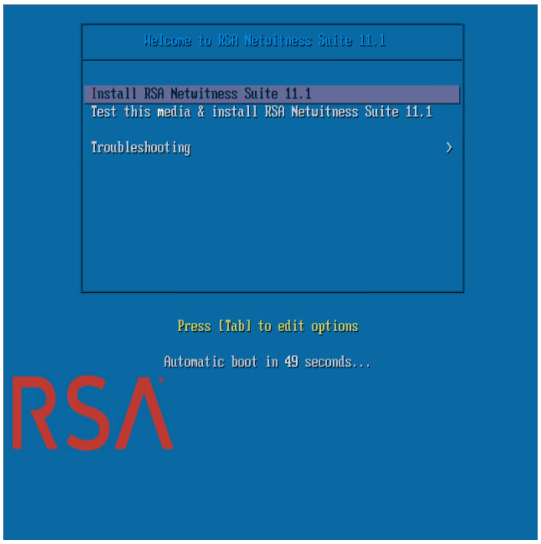
1. Create a base image on the host.
   a. Attach media (media that contains the ISO file, for example a build stick) to the host. See the *RSA NetWitness Suite Build Stick Instructions* for more information.
      - Hypervisor installs - use the ISO image.
      - Physical media - use the ISO file to create bootable flash drive media using the Universal Netboot Installer (UNetbootin) or another suitable imaging tool. See the *RSA NetWitness® Suite Build Stick Instructions* for information on how to create a build stick from the ISO file. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.
      - iDRAC installations - the virtual media type is:
        - **Virtual Floppy** for mapped flash drives.
        - **Virtual CD** for mapped optical media devices or ISO file.

        See the *RSA NetWitness Suite Build Stick Instructions* for more information.
   b. Log in to the host and reboot it.



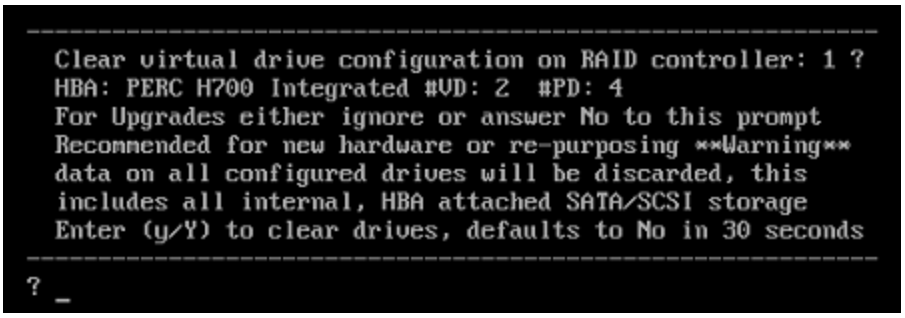
c. Select **F11** (boot menu) during reboot to select a boot device and boot to the connected media.

After some system checks during booting, the following **Welcome to RSA NetWitness Suite 11.1** installation menu is displayed. The menu graphics will render differently if you use a physical USB flash media.



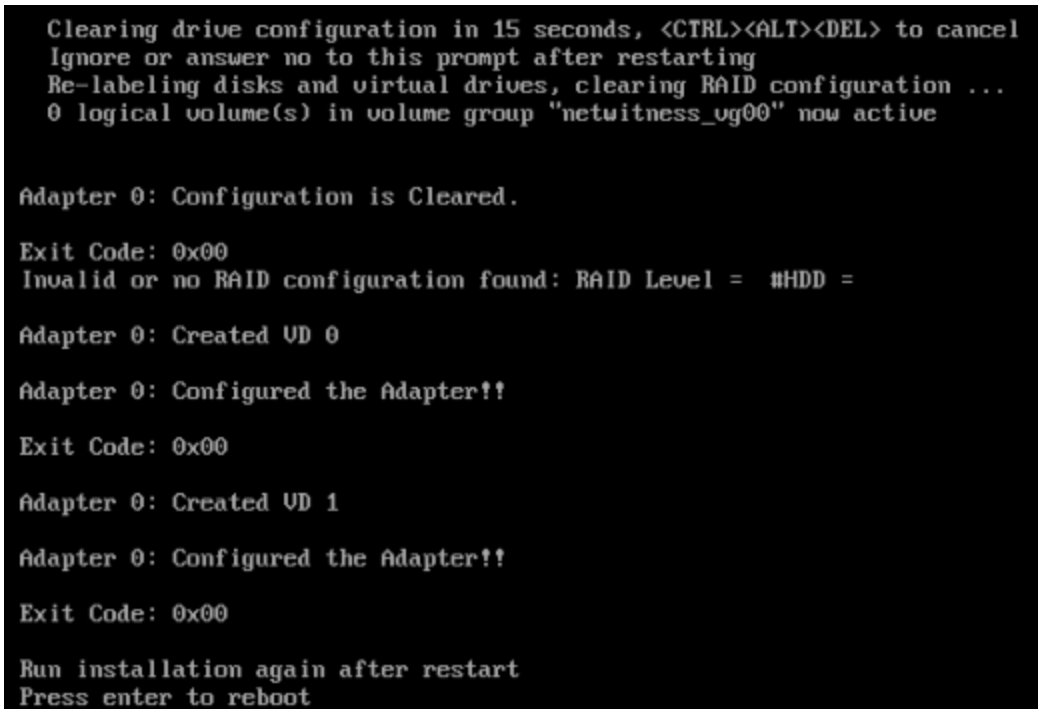
d. Select **Install RSA Netwitness Suite 11.1** (default selection) and press **Enter**.

The Installation program runs and stops at the **Enter (y/Y) to clear drives** prompt that asks you to format the drives.



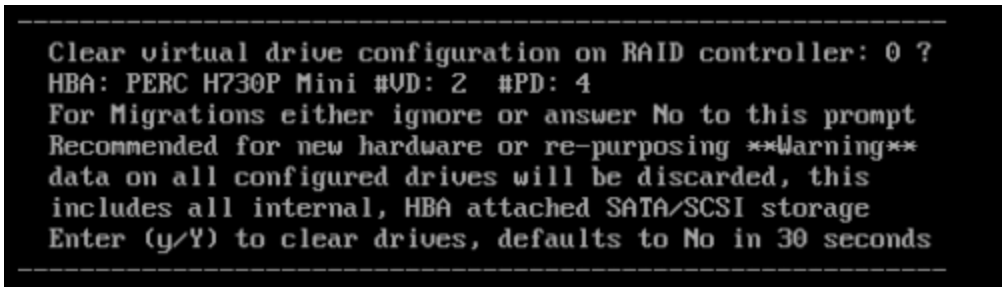
e. Type **Y** to continue.

The default action is No, so if you ignore the prompt and it will select No in 30 seconds and will not clear the drives. The **Press enter to reboot** prompt is displayed.



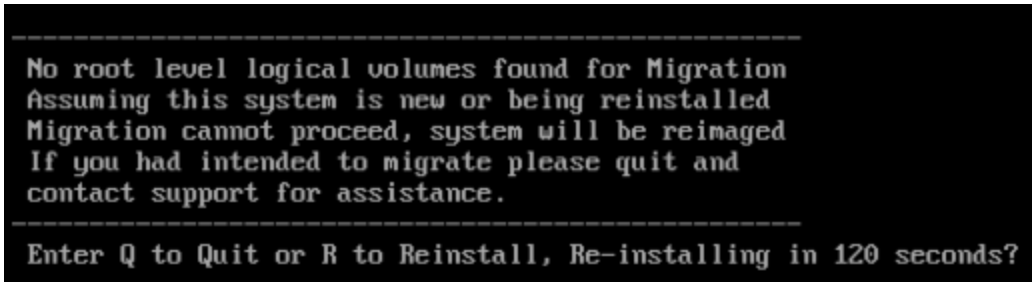
f. Press **Enter** to reboot the host.

The Installation program asks you to clear the drives again.



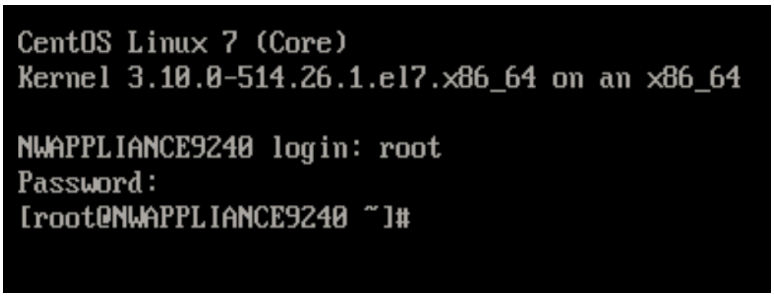
g. Type **N** because you already cleared the drives.

The **Enter Q (Quit) or R (Reinstall)** prompt is displayed.



h. Type **R** to install the base image.
The installation program displays the components as they are installed, which varies depending on the appliance, and reboots.

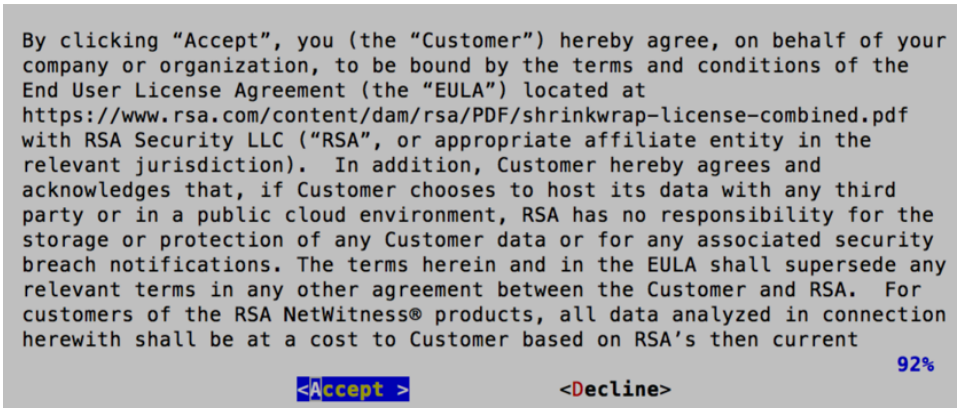
Caution: Do not reboot the attached media (media that contains the ISO file, for example a build stick).



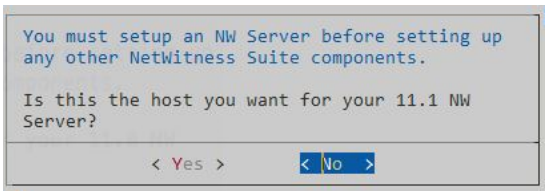
i. Log in to the host with the `root` credentials.

2. Run the `nwsetup-tui` command to set up the host..
This initiates the `nwsetup-tui` (Setup program) and the EULA is displayed.

Note: If you specify DNS servers during Setup program (`nwsetup-tui`) execution, they MUST be valid (valid in this context means valid during setup) and accessible for the `nwsetup-tui` to proceed. Any misconfigured DNS servers cause the Setup to fail. If you need to reach a DNS server after setup that is unreachable during setup, (for example, to relocate a host after setup that would have a different set of DNS Servers), see (Optional) Task 1 - Re-Configure DNS Servers Post 11.1 .
If you do not specify DNS servers during `nwsetup-tui` , you must select **1 The Local Repo (on the NW Server)** in the **NetWitness Suite Update Repository** prompt in step 11 (the DNS servers are not defined so the system cannot access the external repo).



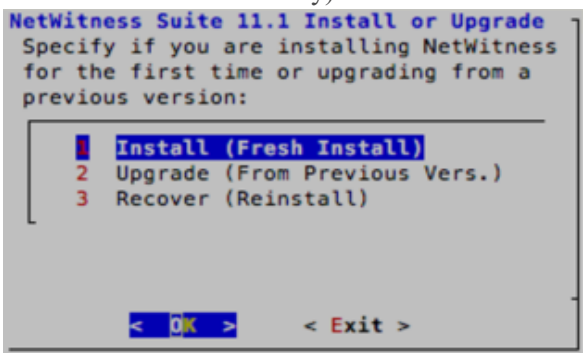
3. Tab to **Accept** and press **Enter**.
The **Is this the host you want for your 11.1 NW Server** prompt is displayed.



Caution: If you choose the wrong host for the NW Server and complete the installation, you must restart the step up program and complete (steps 2 - 14) of Task 1 - Install 11.1 on the NetWitness Server (NW Server) Host to correct this error.

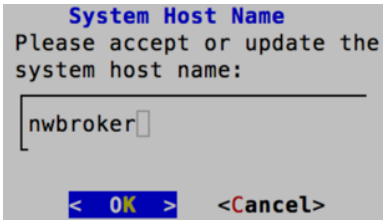
4. Press **Enter** (No).

   The **Install** or **Upgrade** prompt is displayed (**Recover** does not apply to the installation. It is for 11.1 Disaster Recovery).



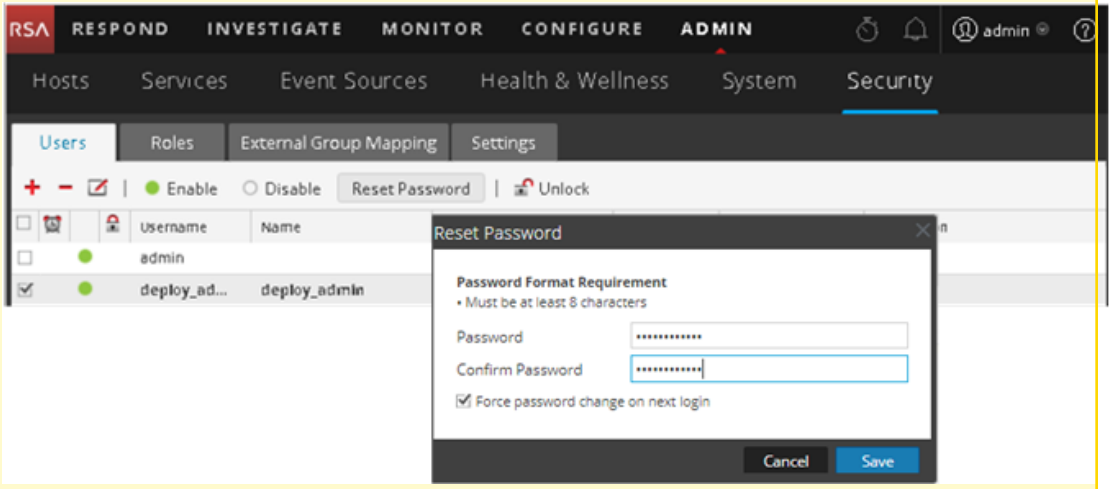
5. Press **Enter**. **Install (Fresh Install)** is selected by default.

   The **Host Name** prompt is displayed.



6. If want to keep this name, press **Enter**. If you want to change this name, edit it, tab to **OK**, and press **Enter**.

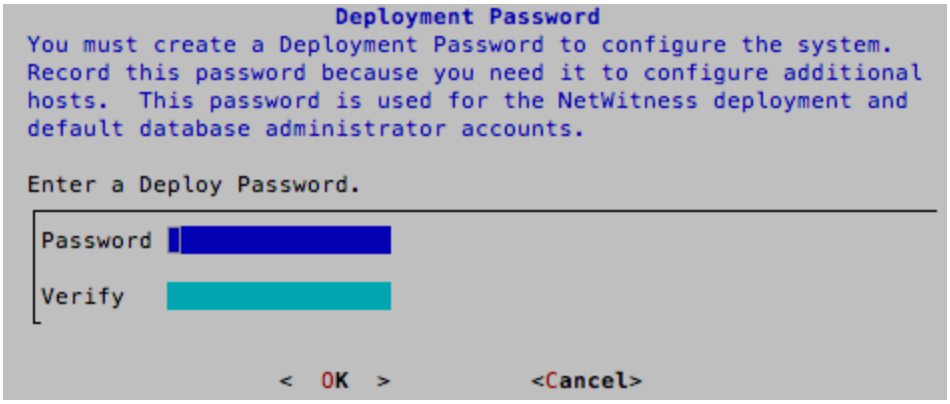
Caution: If you change the **deploy_admin** user password in the NetWitness Suite User Interface (**ADMIN**>**Security** >Select **deploy-admin - Reset password**),



you must:

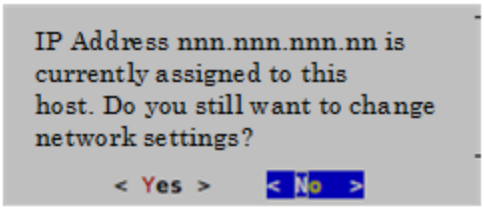
1. SSH to the NW Server host.
2. Run the `(/opt/rsa/saTools/bin/set-deploy-admin-password` script.
3. Use the new password when installing any new non-NW Server hosts.
4. Run `(/opt/rsa/saTools/bin/set-deploy-admin-password` script on all non-NW Server hosts in your deployment.
5. Write down the password because you may need to refer to it later in the installation.

The **Deployment Password** prompt is displayed.



Note: You must use the same deployment password that you used when you installed the NW Server.

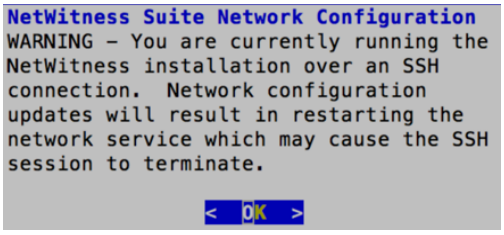
7. Type in the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.
   - If the Setup program finds a valid IP address for this host, the following prompt is displayed.



Press **Enter** if you want to use this IP and avoid changing your network settings. Tab to **Yes** and press **Enter** If you want to change the IP configuration found on the host.

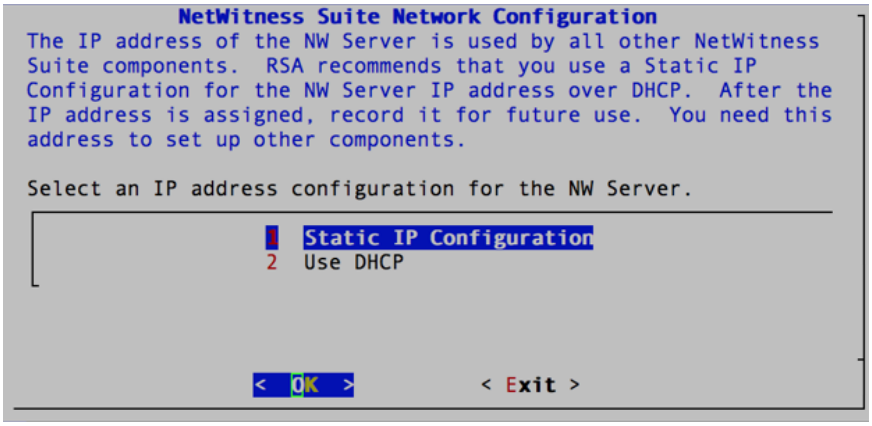
- If you are using an SSH connection, the following warning is displayed.

Note: If you connect directly from the host console, the following warning will not be displayed.



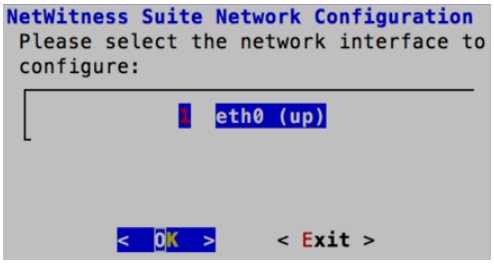
Press **Enter** to close warning prompt.

- If the Setup Program found an IP configuration and you chose to use it, the **Update Repository** prompt is displayed. Go to step 11 to and complete the installation.
- If the Setup Program could not find an IP configuration or if you chose to change the existing IP configuration, the **Network Configuration** prompt is displayed.



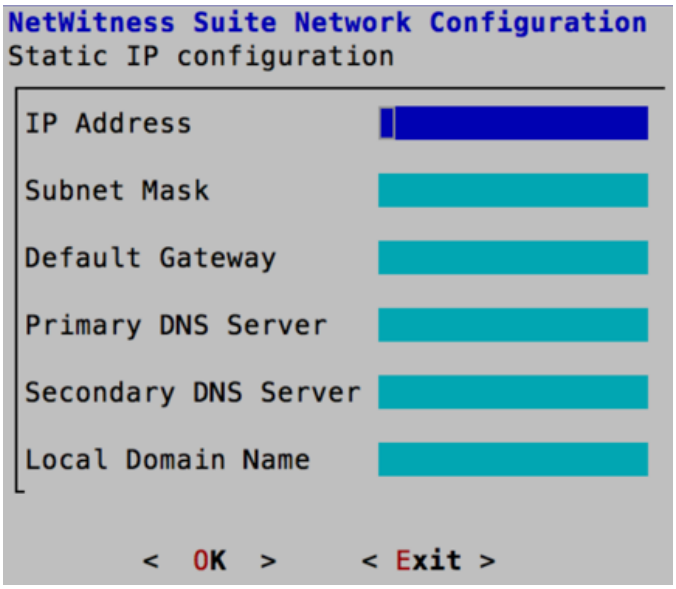
8. Tab to **OK** and press **Enter** to use a **Static IP**.
   If you want to use **DHCP**, down arrow to **2 Use DHCP** and press **Enter**.

The **Network Configuration** prompt is displayed.



9. Down arrow to the network interface you want, tab to **OK**, and press **Enter**. If you do not want to continue, tab to **Exit**.

   The **Static IP Configuration** prompt is displayed.



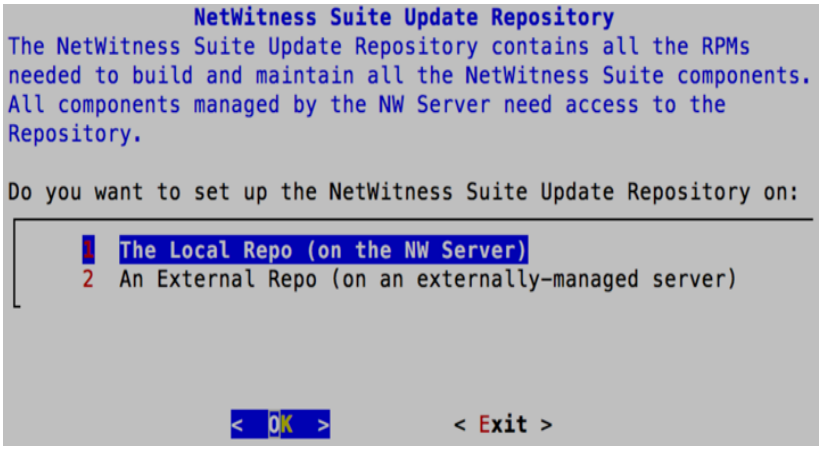
10. Type the configuration values (using the down arrow to move from field to field), tab to **OK**, and press **Enter**.

    If you do not complete all the required fields, an `All fields are required` error message is displayed (**Secondary DNS Server** and **Local Domain Name** fields are not required).

    If you use the wrong syntax or character length for any of the fields, an `Invalid <field-name>` error message is displayed.

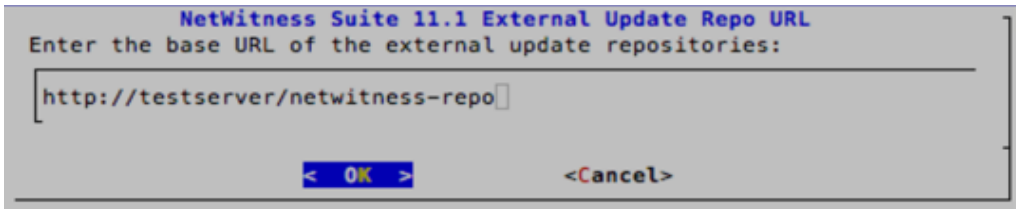
    Caution: If you select **DNS Server**, make sure that the DNS Server is correct and the host can access it before proceeding with the installation.

The **Update Repository** prompt is displayed.
Select the same repo you selected when you installed the NW Server Host for all hosts.

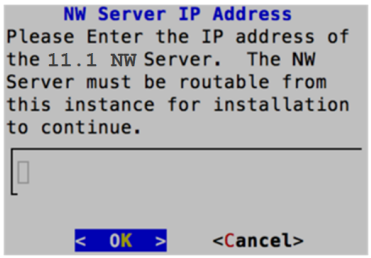


11. Press **Enter** to choose the **Local Repo** on the NW Server.
    If you want to use an external repo, down arrow to **External Repo**, tab to **OK**, and press **Enter**.

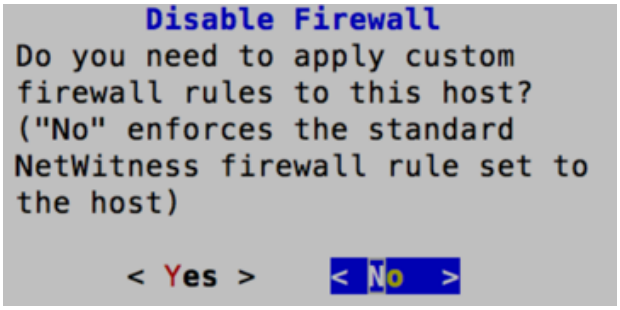
    - If you select **1 The Local Repo (on the NW Server)** in the setup program, make sure that you have the appropriate media attached to the host (media that contains the ISO file, for example a build stick) from which it can install NetWitness Suite 11.1.0.0.
    - If you select **2 An External Repo (a server managed externally - not on the NW Server)**, the UI prompts you for a URL. The repositories give you access to RSA updates and CentOS updates. Refer to Appendix B. Create an External Repository for instructions on how to create this repo and its external repo URL so you can enter it in the following prompt.



Enter the base URL of the NetWitness Suite external repo, tab to **OK** and press **Enter**.
The **NW Server IP Address** prompt is displayed.



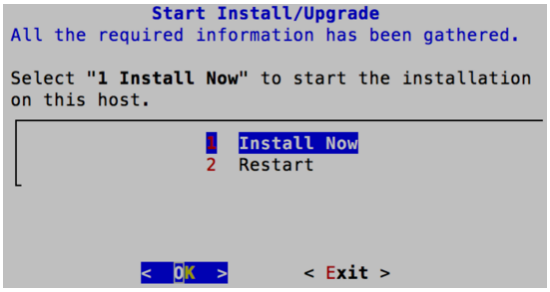
12. Type the NW Server IP address. Tab to **OK** and press **Enter**.
    The **Disable Firewall** prompt is displayed.



13. Tab to **No** (default), and press **Enter** to use the standard firewall configuration. Tab to **Yes**, and press **Enter** to disable the standard firewall configuration.

    - If you select **Yes**, confirm your selection or **No** to use the standard firewall configuration.

      The **Start Install** prompt is displayed.



14. Press **Enter** to install 11.1 on the non-NW Server.
    When **Installation complete** is displayed, you have a generic non-NW Server host with an operating system compatible with NetWitness Suite 11.1.

15. Install a component service on the host.

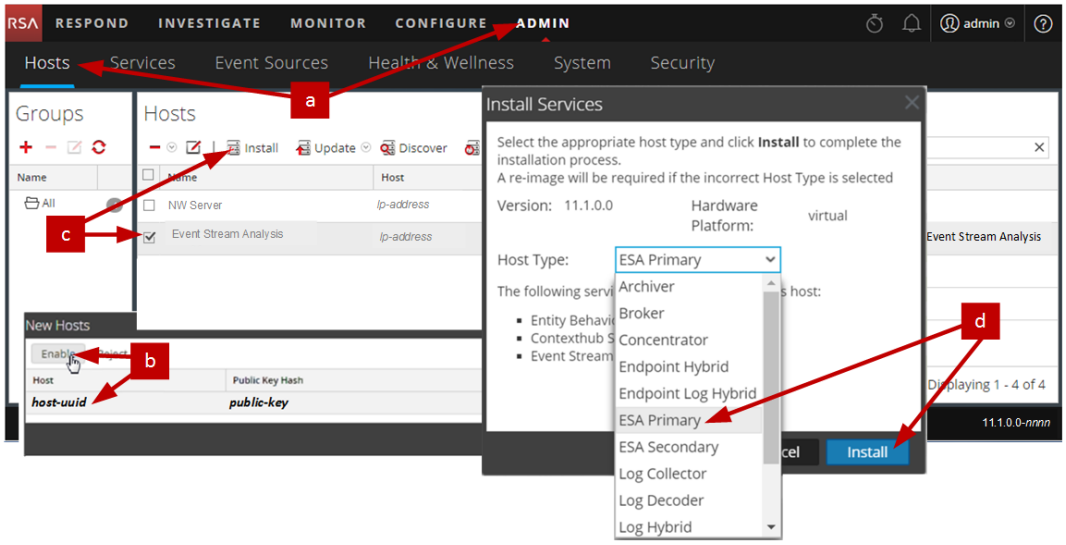
    a. Log into NetWitness Suite and click **ADMIN** > **Hosts**.
       The **New Hosts** dialog is displayed with the **Hosts** view grayed out in the background.

Note: If the **New Hosts** dialog is not displayed, click **Discover** in the Hosts view toolbar.

b. Select the host in the **New Hosts** dialog and click **Enable**.
The **New Hosts** dialog closes and the host is displayed in the **Hosts** view.

c. Select that host in the **Hosts** view (for example, **Event Stream Analysis**) and click Install.
The **Install Services** dialog is displayed.

d. Select the appropriate host type (for example, **ESA Primary**) in **Host Type** and click **Install**.



You have completed the installation of the non-NW Server host in NetWitness Suite.

16. Complete steps 1 through 15 for the rest of the NetWitness Suite non-NW Server components.

Update or Install Legacy Windows Collection

Refer to the *RSA NetWitness Legacy Windows Collection Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Note: After you update or install Legacy Windows Collection, reboot the system to ensure that Log Collection functions correctly.

Post Installation Tasks

This topic contains the task you complete after you install 11.1.

- General
- RSA NetWitness® Endpoint Insights

General

(Optional) Task 1 - Re-Configure DNS Servers Post 11.1

Complete the following steps to re-configure the DNS servers in NetWitness Suite 11.1.

1. Login to the server host with your `root` credentials.
2. Edit the `/etc/resolv.conf` file:
   a. Replace the IP address corresponding to `nameserver`.
   If you need to replace both DNS servers , replace the IP entries for both the hosts with valid addresses.
   The following example shows both DNS entries.

   The following example shows the new DNS values.

   b. Save the `/etc/resolv.conf` file.

RSA NetWitness® Endpoint Insights

(Optional) Task 2 - Install Endpoint Hybrid or Endpoint Log Hybrid

You must install one of the following services to install NetWitness Suite Endpoint Insights in your deployment:

Caution: You can only install one instance of the following services in your deployment.

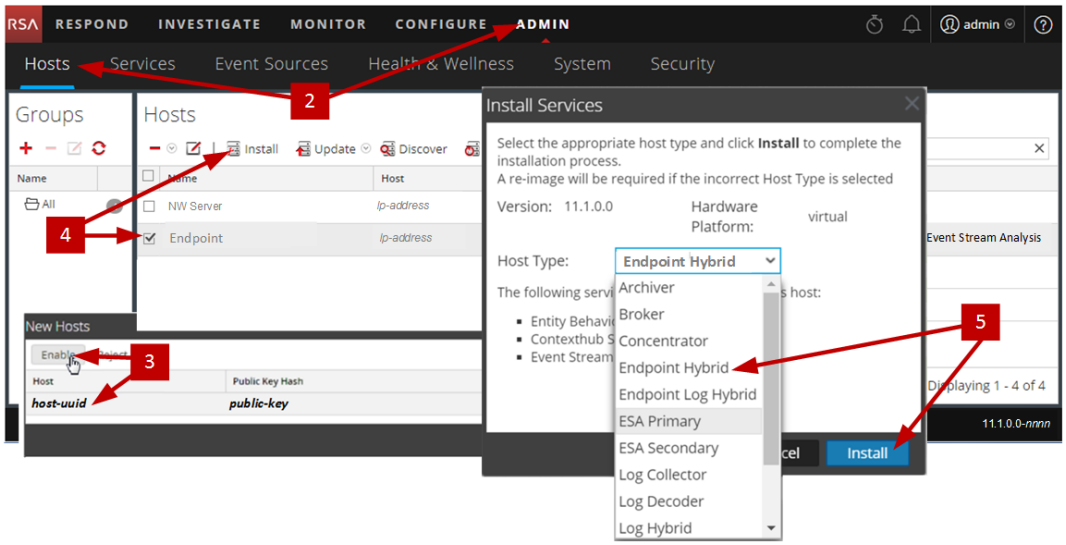
- Endpoint Hybrid
- Endpoint Log Hybrid

Note: You must install the Endpoint Hybrid or Endpoint Log Hybrid on the S5 or Dell R730 appliance.

1. Complete steps 1 - 14 in Task 2 - Install 11.1 on Other Component Hosts.
2. Log into NetWitness Suite and click **ADMIN** > **Hosts**.
   The New Hosts dialog is displayed with the Hosts view grayed out in the background.

   Note: If the New Hosts dialog is not displayed, click **Discover** in the **Hosts** view toolbar.
3. Select the host in the **New Hosts** dialog and click **Enable**.
   The New Hosts dialog closes and the host is displayed in the Hosts view.
4. Select that host in the **Hosts** view (for example, **Endpoint**) and click Install.
   The Install Services dialog is displayed.
5. Select the appropriate service, either **Endpoint Hybrid** or **Endpoint Log Hybrid**, and click **Install**.

Endpoint Hybrid is used as an example in the following screen shot.



6. Make sure that all Endpoint Hybrid or Endpoint Log Hybrid services are running.
7. Register the Endpoint server host IP address with the NW Server.
   a. SSH to the NW Server.
   b. Go to the `/opt/rsa/saTools/bin` directory.
      `cd /opt/rsa/saTools/bin`
   c. Run the `register-endpoint` script specifying the Endpoint host IP address.
      `./register-endpoint-ip -v --host-addr <ip-address>`

      Note: The script takes a few minutes to update the Endpoint Server IP address.
8. Configure Endpoint Meta forwarding.
   See *Endpoint Insights Configuration Guide* for instructions on how to configure Endpoint Meta forwarding.Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.
9. Install the Endpoint Insights Agent.
   See *Endpoint Insights Agent Installation Guide* for detailed instructions on how to install the agent. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Troubleshooting

This section describes solutions to problems that you may encounter during installations and upgrades. In most cases, NetWitness Suite creates log messages when it encounters these problems.

Note: If you cannot resolve an upgrade issue using the following troubleshooting solutions, contact Customer Support (https://community.rsa.com/docs/DOC-1294) .

This section has troubleshooting documentation for the following services, features, and processes.

- Command Line Interface (CLI)
- Backup Script
- Event Stream Analysis
- Log Collector Service (`nwlogcollector`)
- NW Server
- Reporting Engine

Command Line Interface (CLI)

Error Message	Command Line Interface (CLI) displays: "Orchestration failed." `Mixlib::ShellOut::ShellCommandFailed: Command execution failed. STDOUT/STDERR suppressed for sensitive resource in/var/log/netwitness/config-management/chef-solo.log`
Cause	Entered the wrong `deploy_admin` password in `nwsetup-tui`.
Solution	Retrieve your `deploy_admin` password password. 1. SSH to the NW Server host. `security-cli-client --get-config-prop --prop-hierarchy nw.security-client --prop-name deployment.password` SSH to the host that failed. 2. Run the `nwsetup-tui` again using correct `deploy_admin` password.

Error Message	`ERROR com.rsa.smc.sa.admin.web.controller.ajax.health.AlarmsController - Cannot connect to System Management Service`
Cause	NetWitness Suite sees the Service Management Service (SMS) as down after successful upgrade even though the service is running.
Solution	Restart SMS service. `systemctl restart rsa-sms`

Backup (`nw-backup` script)

Error Message	`WARNING: Incorrect ESA Mongo admin password for host <hostname>.`
Cause	ESA Mongo admin password contains special characters (for example, '!@#$%^qwerty').
Solution	Change the ESA mongo admin password back to the original default of 'netwitness' before running backup. See "ESA Config: Change MongoDB Password for admin Account" the *Event Stream Analysis Configuration Guide. Go to the* Master Table of Contents *for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.*

Error	Backup errors caused by the `immutable` attribute setting. Here is an example of an error that can be displayed: Cause	If you have any files that have the immutable flag set (to keep the Puppet process from overwriting a customized file), the file will not be included in the backup process and an error will be generated.
Solution	On the host that contains the files with the immutable flag set, run the following command to remove the immutable setting from the files: `chattr -i <filename>`

Error	Error creating Network Configuration Information file due to duplicate or bad entries in primary network configuration file: `/etc/sysconfig/network-scripts/ifcfg-em1` Verify contents of `/var/netwitness/logdecoder/packetdb/nw-backup/2018-02-23/S5-BROK-36-10.25.53.36-network.info.txt`
Cause	There are incorrect or duplicate entries for any one of the following fields: DEVICE, BOOTPROTO, IPADDR, NETMASK or GATEWAY, that were found from reading the primary Ethernet interface configuration file from the host being backed up.

Solution	Manually create a file at the backup location on the external backup server, as well as the backup location local to the host where other backups have been staged. The file name should be of the format `<hostname>-<hostip>-network.info.txt`, and should contain the following entries:
	`DEVICE=<devicename> ; # from the host's primary ethernet interface config file`
	`BOOTPROTO=<bootprotocol> ; # from the host's primary ethernet interface config file`
	`IPADDR=<value> ; # from the host's primary ethernet interface config file`
	`NETMASK=<value> ; # from the host's primary ethernet interface config file`
	`GATEWAY=<value> ; # from the host's primary ethernet interface config file`
	`search <value> ; # from the host's /etc/resolv.conf file`
	`nameserver <value> ; # from the host's /etc/resolv.conf file`

Event Stream Analysis

Problem	ESA service crashes after you upgrade to 11.1.0.0 from a FIPS enabled setup.
Cause	ESA service is pointing to an invalid keystore.

Solution	1. SSH to the ESA Primary host and log in.
	2. In the `/opt/rsa/esa/conf/wrapper.conf` file, replace the following line:
	`wrapper.java.additional.5=-Djavax.net.ssl.keyStore=/opt/rsa/esa/../carlos/keystore`
	with:
	`wrapper.java.additional.5=-Djavax.net.ssl.keyStore=/opt/rsa/carlos/keystore`
	3. Submit the following command to restart ESA.
	`systemctl restart rsa-nw-esa-server`
	Note: If you have multiple ESA hosts and you encounter that same problem, repeat steps 1 through 3 inclusive on each secondary ESA host.

Log Collector Service (`nwlogcollector`)

Log Collector logs are posted to `/var/log/install/nwlogcollector_install.log` on the host running the `nwlogcollector` service.

Error Message	`<timestamp>.NwLogCollector_PostInstall: Lockbox Status : Failed to open lockbox: The lockbox stable value threshold was not met because the system fingerprint has changed. To reset the system fingerprint, open the lockbox using the passphrase.`
Cause	The Log Collector Lockbox failed to open after the update.
Solution	Log in to NetWitness Suite and reset the system fingerprint by resetting the stable system value password for the Lockbox as described in the "Reset the Stable System Value" topic under "Configure Lockbox Security Settings" topic in the *Log Collection Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Error Message	`<timestamp> NwLogCollector_PostInstall: Lockbox Status : Not Found`
Cause	The Log Collector Lockbox is not configured after the update.
Solution	(Conditional) If you use a Log Collector Lockbox, log in to NetWitness Suite and configure the Lockbox as described in the"Configure Lockbox Security Settings" topic in the *Log Collection Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Error Message	`<timestamp>: NwLogCollector_PostInstall: Lockbox Status : Lockbox maintenance required: The lockbox stable value threshold requires resetting. To reset the system fingerprint, select Reset Stable System Value on the settings page of the Log Collector.`
Cause	You need to reset the stable value threshold field for the Log Collector Lockbox.
Solution	Log in to NetWitness Suite and reset the stable system value password for the Lockbox as described in "Reset the Stable System Value" topic under "Configure Lockbox Security Settings" topic in the *Log Collection Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Problem	You have prepared a Log Collector for upgrade and no longer want to upgrade at this time.
Cause	Delay in upgrade.
Solution	Use the following command string to revert a Log Collector that has been prepared for upgrade back to resume normal operation. `# /opt/rsa/nwlogcollector/nwtools/prepare-for-migrate.sh --revert`

NW Server

These logs are posted to `/var/netwitness/uax/logs/sa.log` on the NW Server Host.

Problem	After upgrade, you notice that Audit logs are not getting forwarded to the configured Global Audit Setup; or, The following message seen in the `sa.log`. `Syslog Configuration migration failed. Restart jetty service to fix this issue`
Cause	NW Server Global Audit setup migration failed to migrate from 10.6.5.x to 11.1.0.0.
Solution	1. SSH to the NW Server. 2. Submit the following command. `orchestration-cli-client --update-admin-node`

Reporting Engine Service

Reporting Engine Update logs are posted to to`/var/log/re_install.log` file on the host running the Reporting Engine service.

Error Message	`<timestamp> : Available free space in /var/netwitness/re-server/rsa/soc/reporting-engine [ ><existing-GB ] is less than the required space [ <required-GB> ]`
Cause	Update of the Reporting Engine failed because you do not have enough disk space.
Solution	Free up the disk space to accommodate the required space shown in the log message. See the "Add Additional Space for Large Reports" topic in the *Reporting Engine Configuration Guide* for instructions on how to free up disk space. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Appendix B. Create an External Repository

Complete the following procedure to set up an external repository (Repo).

1. Log in to the web server host
2. Create the `ziprepo` directory to host the NW repository (`netwitness-11.0.0.0.zip`) under `web-root` of the web server. For example, /var/netwitness is the web-root, submit the following command string.
   ```
   mkdir /var/netwitness/ziprepo
   ```
3. Create the 11.0.0.0 directory under `/var/netwitness/ziprepo`.
   ```
   mkdir /var/netwitness/ziprepo/11.0.0.0
   ```
4. Create the `OS` and `RSA` directories under `/var/netwitness/ziprepo/11.0.0.0`.
   ```
   mkdir /var/netwitness/ziprepo/11.0.0.0/OS
   mkdir /var/netwitness/ziprepo/11.0.0.0/RSA
   ```
5. Unzip the `netwitness-11.0.0.0.zip` file into the `/var/netwitness/ziprepo/11.0.0.0`directory.
   ```
   unzip netwitness-11.0.0.0.zip -d /var/netwitness/ziprepo/11.0.0.0
   ```
   Unzipping `netwitness-11.0.0.0.zip` results in two zip files (`OS-11.0.0.0.zip` and `RSA-11.0.0.0.zip`)and some other files.
6. Unzip the:
   a. `OS-11.0.0.0.zip` into the `/var/netwitness/ziprepo/11.0.0.0/OS` directory.
      ```
      unzip /var/netwitness/ziprepo/11.0.0.0/OS-11.0.0.0.zip -d
      /var/netwitness/ziprepo/11.0.0.0/OS
      ```
   b. `RSA-11.0.0.0.zip` into the `/var/netwitness/ziprepo/11.0.0.0/RSA` directory.
      ```
      unzip /var/netwitness/ziprepo/11.0.0.0/RSA-11.0.0.0.zip -d
      /var/netwitness/ziprepo/11.0.0.0/RSA
      ```

Virtual Host Setup Guide

This document provides instructions on the installation and configuration of RSA NetWitness® Suite 11.1.0.0 hosts running in a virtual environment.

Basic Virtual Deployment

This topic contains general guidelines and requirements for deploying RSANetWitness Suite 11.1.0.0 in a virtual environment.

Abbreviations Used in the Virtual Deployment Guide

Abbreviations	Description
CPU	Central Processing Unit
EPS	Events Per Second
VMware ESX	Enterprise-class, type-1 hypervisor, Supported versions - 6.5, 6.0 and 5.5
GB	Gigabyte. 1GB = 1,000,000,000 bytes
Gb	Gigbit. 1Gb = 1,000,000,000 bits.
Gbps	Gigabits per second or billions of bits per second. It measures bandwidth on a digital data transmission medium such as optical fiber.
GHz	GigaHertz 1 GHz = 1,000,000,000 Hz
IOPS	Input/Output Operations Per Second
Mbps	Megabits per second or millions of bits per second. It measures bandwidth on a digital data transmission medium such as optical fiber.
NAS	Network Attached Storage
OVF	Open Virtualization Format
OVA	Open Virtual Appliance. For purposes of this guide, OVA stands for Open Virtual Host.
RAM	Random Access Memory (also known as memory)
SAN	Storage Area Network
SSD/EFD HDD	Solid-State Drive/Enterprise Flash Drive Hard Disk Drive

Abbreviations	Description
SCSI	Small Computer System Interface
SCSI (SAS)	Point-to-point serial protocol that moves data to and from computer storage devices such as hard drives and tape drives.
vCPU	Virtual Central Processing Unit (also known as a virtual processor)
vRAM	Virtual Random Access Memory (also known as virtual memory)

Supported Virtual Hosts

You can install the following NetWitness Suite hosts in your virtual environment as a virtual host and inherit features that are provided by your virtual environment:

- NetWitness Server
- Event Stream Analysis - ESA Primary and ESA Secondary
- Archiver
- Broker
- Concentrator
- Log Decoder
- Malware Analysis
- Decoder
- Remote Log Collector
- Endpoint Hybrid
- Endpoint Log Hybrid

You must be familiar with the following VMware infrastructure concepts:

- VMware vCenter Server
- VMware ESXi
- Virtual machine

For information on VMware concepts, refer to the VMware product documentation.

The virtual hosts are provided as an OVA. You need to deploy the OVA file as a virtual machine in your virtual infrastructure.

Installation Media

Installation media are in the form of OVA packages, which are available for download and installation from Download Central (https://download.rsasecurity.com). As part of your order fulfillment, RSA gives you access to the OVA.

Virtual Environment Recommendations

The virtual hosts installed with the OVA packages have the same functionality as the NetWitness Suite hardware hosts. This means that when you implement virtual hosts, you must account for the back-end hardware. RSA recommends that you perform the following tasks when you set up your virtual environment.

- Based on resource requirements of the different components, follow best practices to use the system and dedicated storage appropriately.
- Make sure that back-end disk configurations provide a write speed of 10% greater than the required sustained capture and ingest rate for the deployment.
- For OVA, 32 GB RAM per host appliance is required.
- Build Concentrator directories for meta and index databases on the SSD/EFD HDD.
- If the database components are separate from the installed operating system (OS) components (that is, on a separate physical system), provide direct connectivity with either:
  - Two 8-Gbps Fiber Channel SAN ports per virtual host,
    or
  - 6-Gbps Serial Attached SCSI (SAS) connectivity.

Note: 1.) Currently, NetWitness Suite does not support Network Attached Storage (NAS) for Virtual deployments.
2.) The Decoder allows any storage configuration that can meet the sustained throughput requirement. The standard 8-Gbps Fiber Channel link to a SAN is insufficient to read and write packet data at 10 Gb. You must use multiple Fiber Channels when you configure to the connection from a **10G Decoder** to the SAN.

Virtual Host Recommended System Requirements

The following tables list the vCPU, vRAM, and Read and Write IOPS recommended requirements for the virtual hosts based on the EPS or capture rate for each component.

- Storage allocation is covered in Step 3 “Configure Databases to Accommodate NetWitness Suite”.
- vRAM and vCPU recommendations may vary depending on capture rates, configuration and content enabled.
- The recommendations were tested at ingest rates of up to 25,000 EPS for logs and two Gbps for packets, for non SSL.
- The vCPU specifications for all the components listed in the following tables are Intel Xeon CPU @2.59 Ghz.
- All ports are SSL tested at 15,000 EPS for logs and 1.5 Gbps for packets.

Note: The above recommended values might differ for 11.1.0.0 installation when you install and try the new features and enhancements.

Scenario One

The requirements in these tables were calculated under the following conditions.

- All the components were integrated.
- The Log stream included a Log Decoder, Concentrator, and Archiver.
- The Packet Stream included a Packet Decoder and Concentrator.
- The background load included hourly and daily reports.
- Charts were configured.

Log Decoder

EPS	CPU	Memory	Read IOPS	Write IOPS
2,500	6 or 15.60 GHz	32 GB	50	75
5,000	8 or 20.79 GHz	32 GB	100	100
7,500	10 or 25.99 GHz	32 GB	150	150

Packet Decoder

Mbps	CPU	Memory	Read IOPS	Write IOPS
50	4 or 10.39 GHz	32 GB	50	150

Mbps	CPU	Memory	Read IOPS	Write IOPS
100	4 or 10.39 GHz	32 GB	50	250
250	4 or 10.39 GHz	32 GB	50	350

Concentrator - Log Stream

EPS	CPU	Memory	Read IOPS	Write IOPS
2,500	4 or 10.39 GHz	32 GB	300	1,800
5,000	4 or 10.39 GHz	32 GB	400	2,350
7,500	6 or 15.59 GHz	32 GB	500	4,500

Concentrator - Packet Stream

Mbps	CPU	Memory	Read IOPS	Write IOPS
50	4 or 10.39 GHz	32 GB	50	1,350
100	4 or 10.39 GHz	32 GB	100	1,700
250	4 or 10.39 GHz	32 GB	150	2,100

Archiver

EPS	CPU	Memory	Read IOPS	Write IOPS
2,500	4 or 10.39 GHz	32 GB	150	250
5,000	4 or 10.39 GHz	32 GB	150	250
7,500	6 or 15.59 GHz	32 GB	150	350

Scenario Two

The requirements in these tables were calculated under the following conditions.

- All the components were integrated.
- The Log stream included a Log Decoder, Concentrator, Warehouse Connector, and Archiver.

- The Packet Stream included a Packet Decoder, Concentrator, and Warehouse Connector.
- Event Stream Analysis was aggregating at 90K EPS from three Hybrid Concentrators.
- Incident Management was receiving alerts from the Reporting Engine and Event Stream Analysis.
- The background load Included reports, charts, alerts, investigation, and incident management.
- Alerts were configured.

Log Decoder

EPS	CPU	Memory	Read IOPS	Write IOPS
10,000	16 or 41.58 GHz	50 GB	300	50
15,000	20 or 51.98 GHz	60 GB	550	100

Packet Decoder

Mbps	CPU	Memory	Read IOPS	Write IOPS
500	8 or 20.79 GHz	40 GB	150	200
1,000	12 or 31.18 GHz	50 GB	200	400
1,500	16 or 41.58 GHz	75 GB	200	500

Concentrator - Log Stream

EPS	CPU	Memory	Read IOPS	Write IOPS
10,000	10 or 25.99 GHz	50 GB	1,550 + 50	6,500
15,000	12 or 31.18 GHz	60 GB	1,200 + 400	7,600

Concentrator - Packet Stream

Mbps	CPU	Memory	Read IOPS	Write IOPS
500	12 or 31.18 GHz	50 GB	250	4,600
1,000	16 or 41.58 GHz	50 GB	550	5,500

Mbps	CPU	Memory	Read IOPS	Write IOPS
1,500	24 or 62.38 GHz	75 GB	1,050	6,500

Warehouse Connector - Log Stream

EPS	CPU	Memory	Read IOPS	Write IOPS
10,000	8 or 20.79 GHz	30 GB	50	50
15,000	10 or 25.99 GHz	35 GB	50	50

Warehouse Connector - Packet Stream

Mbps	CPU	Memory	Read IOPS	Write IOPS
500	6 or 15.59 GHz	32 GB	50	50
1,000	6 or 15.59 GHz	32 GB	50	50
1,500	8 or 20.79 GHz	40 GB	50	50

Archiver - Log Stream

EPS	CPU	Memory	Read IOPS	Write IOPS
10,000	12 or 31.18 GHz	40 GB	1,300	700
15,000	14 or 36.38 GHz	45 GB	1,200	900

Event Stream Analysis with Context Hub

EPS	CPU	Memory	Read IOPS	Write IOPS
90,000	32 or 83.16 GHz	94 GB	50	50

NetWitness Server and Co-Located Components

The NetWitness Server, Jetty, Broker, Incident Management, and Reporting Engine are in the same location.

CPU	Memory	Read IOPS	Write IOPS
12 or 31.18 GHz	50 GB	100	350

Scenario Three

The requirements in these tables were calculated under the following conditions.

- All the components were integrated.
- The Log stream included a Log Decoder and Concentrator.
- The Packet stream included a Packet Decoder and the Concentrator.
- Event Stream Analysis was aggregating at 90K EPS from three Hybrid Concentrators.
- Incident Management was receiving alerts from the Reporting Engine and Event Stream Analysis.
- The background load Included hourly and daily reports.
- Charts were configured.

Log Decoder

EPS	CPU	Memory	Read IOPS	Write IOPS
25,000	32 or 83.16 GHz	75 GB	250	150

Packet Decoder

Mbps	CPU	Memory	Read IOPS	Write IOPS
2,000	16 or 41.58 GHz	75 GB	50	650

Concentrator - Log Stream

EPS	CPU	Memory	Read IOPS	Write IOPS
25,000	16 or 41.58 GHz	75 GB	650	9,200

Concentrator - Packet Stream

Mbps	CPU	Memory	Read IOPS	Write IOPS
2,000	24 or 62.38 GHz	75 GB	150	7,050

Log Collector (Local and Remote)

The Remote Log Collector is a Log Collector service running on a remote host and the Remote Collector is deployed virtually.

EPS	CPU	Memory	Read IOPS	Write IOPS
15,000	8 or 20.79 GHz	8 GB	50	50
30,000	8 or 20.79 GHz	15 GB	100	100

Scenario Four

The requirements in these tables were calculated under the following conditions for Endpoint Hybrid.

- All the components were integrated.
- Endpoint Server is installed.
- The Log stream included a Log Decoder and Concentrator.

Endpoint Hybrid

Agents	CPU	Memory	IOPS Values		
5000	16 or 42 GHz	32 GB		**Read IOPS**	**Write IOPS**
			Log Decoder	250	150
			Concentrator	150	7,050
			MongoDb	250	150

Log Collector (Local and Remote)

The Remote Log Collector is a Log Collector service running on a remote host and the Remote Collector is deployed virtually.

EPS	CPU	Memory	Read IOPS	Write IOPS
15,000	8 or 20.79 GHz	8 GB	50	50
30,000	8 or 20.79 GHz	15 GB	100	100

Legacy Windows Collectors Sizing Guidelines

Refer to the *RSA NetWitness Suite Legacy Windows Collection Update & Installation* for sizing guidelines for the Legacy Windows Collector.

Install NetWitness Suite Virtual Host in Virtual Environment

Complete the following procedures according to their numbered sequence to install RSA NetWitness® Suite in a virtual environment.

Prerequisites

Make sure that you have:

- A VMware ESX Server that meets the requirements described in the above section. Supported versions are 6.5, 6.0, and 5.5.
- vSphere 4.1, 5.0, or 6.0 Client installed to log on to the VMware ESX Server.
- Administrator rights to create the virtual machines on the VMware ESX Server.

Step 1. Deploy the Virtual Host to create VM

Complete the following steps to deploy the OVA file on the vCenter Server or ESX Server using the vSphere client.

Prerequisites

Make sure that you have:

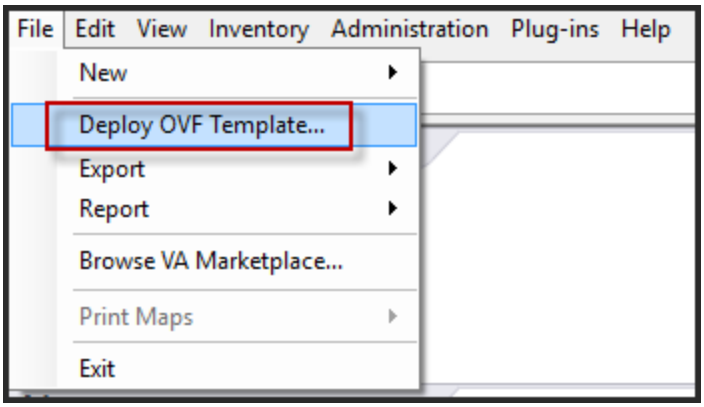
- Network IP addresses, netmask, and gateway IP addresses for the virtual host.
- Network names for all virtual hosts, if you are creating a cluster.
- DNS or host information.
- Password for virtual host access. The default username is `root` and the default password is `netwitness`.
- The NetWitness Suite virtual host package file for example, rsanw-11.1.0.xxxx.el7-x86_64.ova. (You download this package from Download Central (https://community.rsa.com).)

Procedure

Note: The following instructions illustrate an example of deploying an OVA host in the ESXi environment. The screens you see may be different from this example.

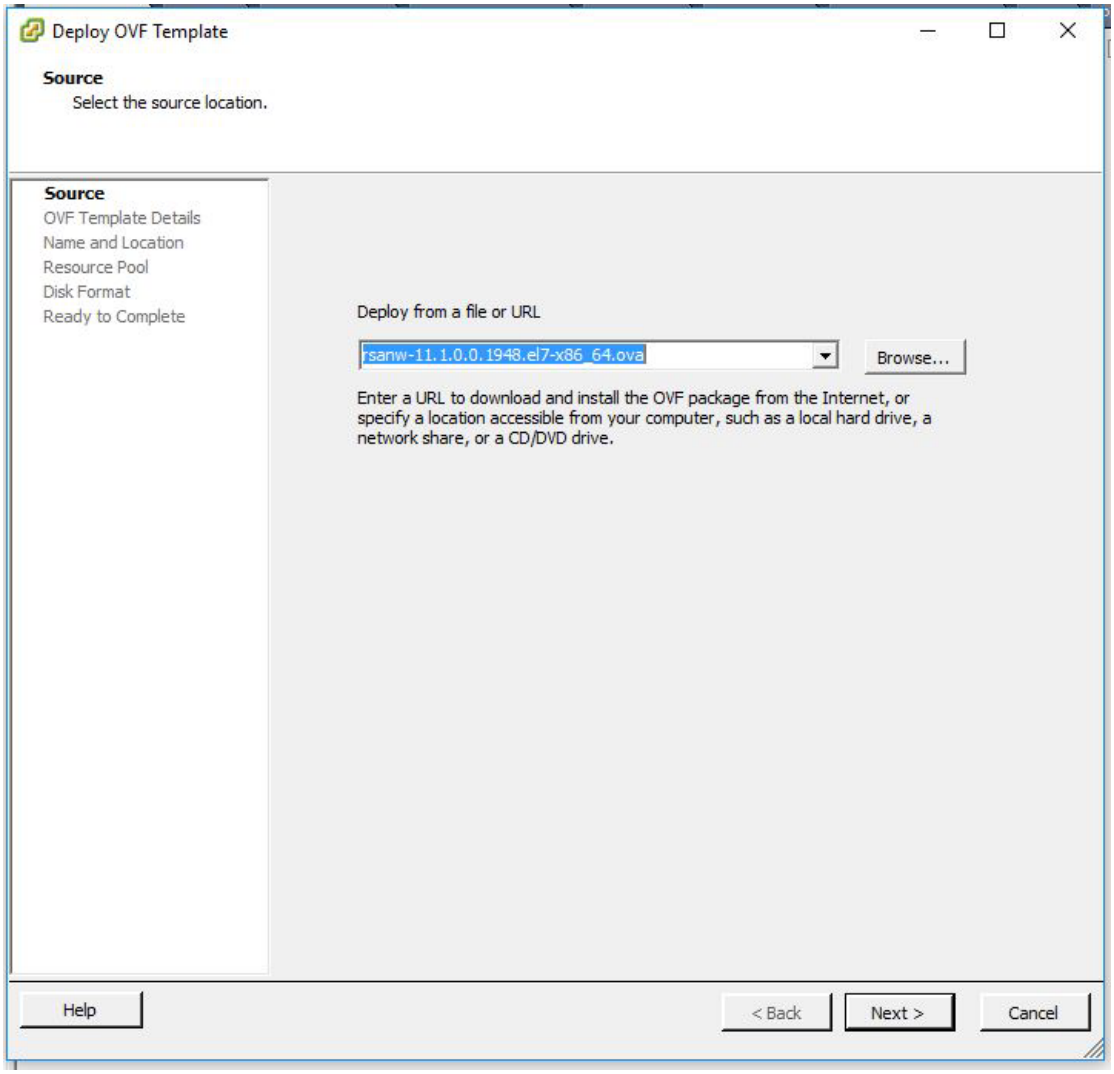
To deploy the OVA host:

1. Log on to the ESXi environment.
2. In the **File** drop-down, select **Deploy OVF Template**.

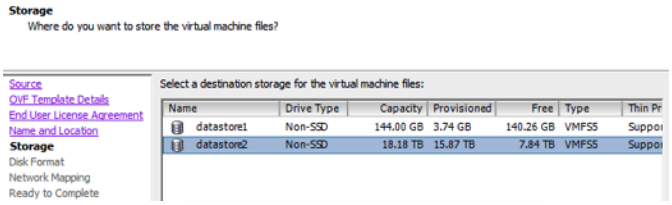


3. The Deploy OVF Template dialog is displayed. In the **Deploy OVF Template** dialog, select the OVF for the host that you want to deploy in the virtual environment (for example, **V11.1**

GOLD\\rsanw-11.1.0.0.1948.el7-x86_64.ova), and click **Next**.



4. The Name and Location dialog is displayed. The designated name does not reflect the server hostname. The name displayed is useful for inventory reference from within ESXi.
5. Make a note of the name, and click **Next**.
   Storage Options are displayed.

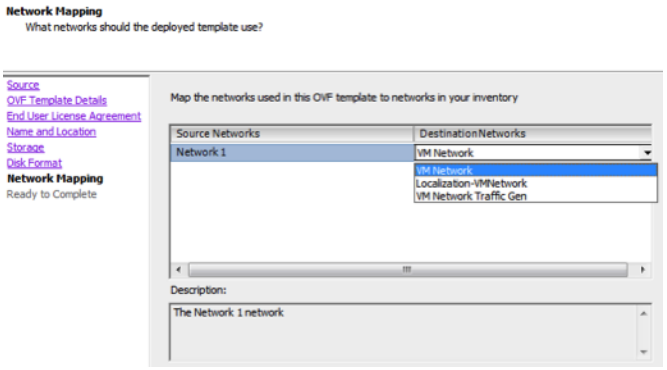


6. For Storage options, designate the datastore location for the virtual host.

Note: This location is for the host operating system (OS) exclusively. It does not have to be the same datastore needed to set up and configure additional volumes for the NetWitness Suite databases on certain hosts (covered in the following sections).

7. Click **Next**.

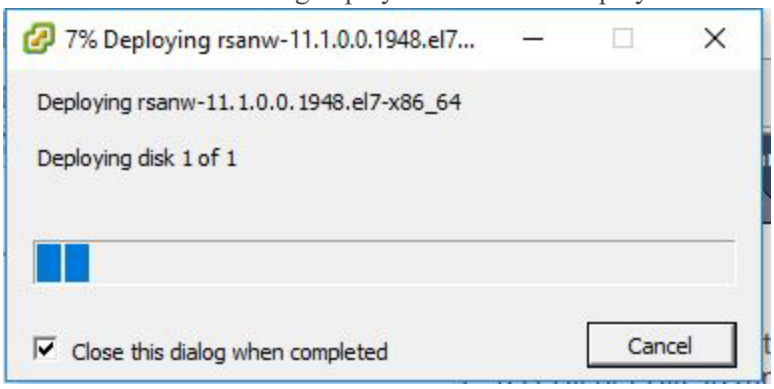
   The Network Mapping options are displayed.



8. Leave the default values, and click **Next**.

Note: If you want to configure Network Mapping now, you can select options, but RSA recommends that you keep the default values and configure network mapping after you configure the OVA. You configure the OVA in Step 4: Configure Host-Specific Parameters.

A status window showing deployment status is displayed.



After the process is complete, the new OVA is presented in the designated resource pool visible on ESXi from within vSphere. At this point, the core virtual host is installed, but is still not configured.

Step 2. Configure the Network and Install RSA NetWitness Suite

Complete the following steps to configure the network of the Virtual Appliance.

Prerequisites

Make sure that you have:

- Network IP addresses, netmask, and gateway IP addresses for the virtual host.
- Network names for all virtual hosts, if you are creating a cluster.
- DNS or host information.

Procedure

Perform the following steps for all virtual hosts to get them on your network.

Review Open Firewall Ports

Review the ***Network Architecture and Ports*** topic in the ***Deployment Guide*** in the NetWitness Suite help so that you can configure NetWitness Suite services and your firewalls.

Caution: Do not proceed with the installation until the ports on your firewall are configured.

There are two main tasks that you must complete in the order listed below to install NetWitness Suite 11.1

Installation Tasks

Task 1 - Install 11.1.0.0 on the NetWitness (NW) Server Host

Task 2 - Install 11.1.0.0 on Other Component Hosts

Task 1- Install 11.1.0.0 on the NW Server Host

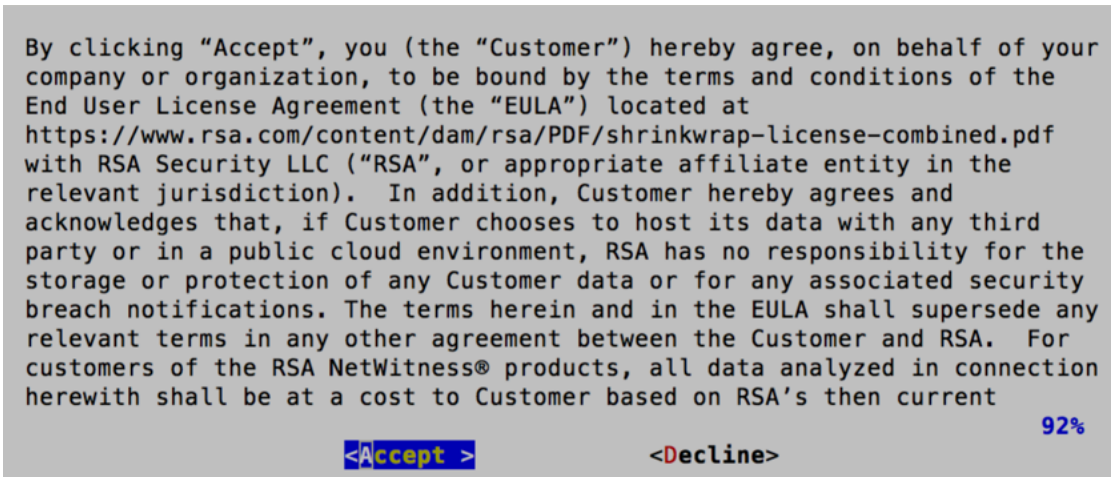
On the host you have deployed for the NW Server, this task installs:

- The 11.1.0.0 NW Server environmental platform.
- The NW Server components (that is, Admin, Config, Orchestration, Integration Server, Broker, Investigate Server, Reporting Engine, Respond Server and Security server).
- A repository with the RPM files required to install the other functional components or services.

1. Deploy your 11.1.0.0 environment:
   a. Add new VM.
   b. Configure storage.
   c. Set up firewalls.

2. Run the `nwsetup-tui` command. This initiates the Setup program and the EULA is displayed.

Note: 1.) When you navigate through the Setup program prompts, use the down and up arrows to move among fields, use Tab key to move to and from commands (such as <Yes>, <No>, <OK>, and <Cancel>. Press Enter to register your command response and move to the next prompt.
2.) The Setup program adopts the color scheme of the desktop or console you use access the host.
3.) If you specify DNS servers during Setup program (`nwsetup-tui`) execution, they MUST be valid (valid in this context means valid during setup) and accessible for the `nwsetup-tui` to proceed. Any misconfigured DNS servers cause the Setup to fail. If you need to reach DNS server after setup that unreachable during setup, (for example, to relocate a host after setup that would have a different set of DNS Servers), see (Optional) Task 1 - Re-Configure DNS Servers Post 11.1 in Post Installation Tasks.
If you do not specify DNS Servers during `nwsetup-tui` , you must select **1 The Local Repo (on the NW Server)** in the **NetWitness Suite Update Repository** prompt in step 12 (the DNS servers are not defined so the system cannot access the external repo).

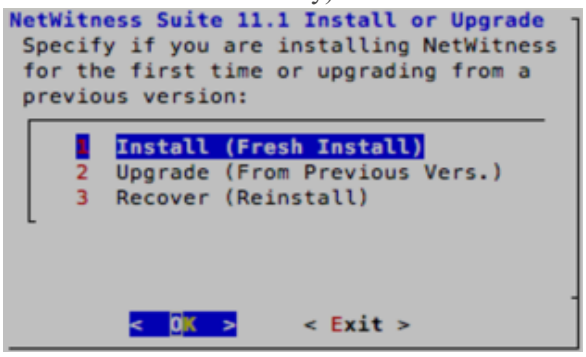


3. Tab to **Accept** and press Enter.
The **Is this the host you want for your 11.1 NW Server** prompt is displayed.

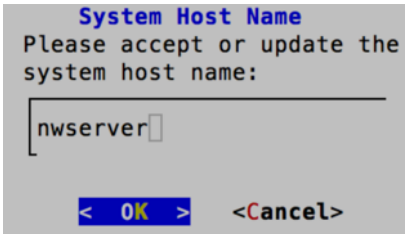
4. Tab to **Yes** and press Enter.
Choose **No** if you already installed 11.1.0.0 on the NW Server.

Caution: If you choose the wrong host for the NW Server and complete the Setup, you must start the Setup Program (step 3) and complete all the subsequent steps to correct this error.

The **Install** or **Upgrade** prompt is displayed (**Recover** does not apply to the installation. It is for 11.1 Disaster Recovery).



5. Press **Enter**. **Install (Fresh Install)** is selected by default.
   The **Host Name** prompt is displayed.

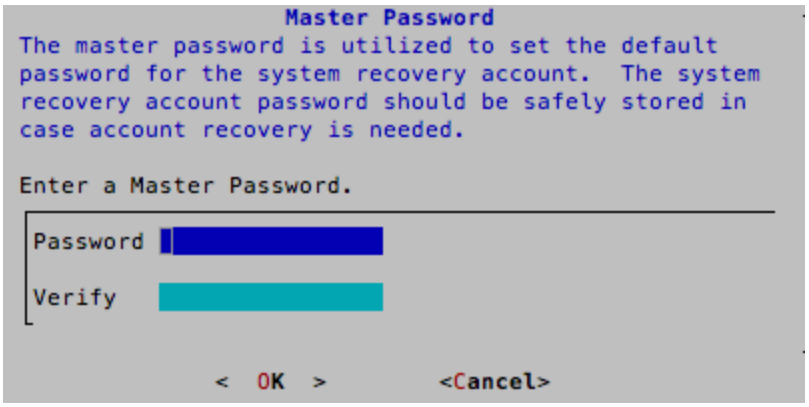


6. Press **Enter** if want to keep this name. If not edit the host name, Tab to **OK**, and press Enter to change it.

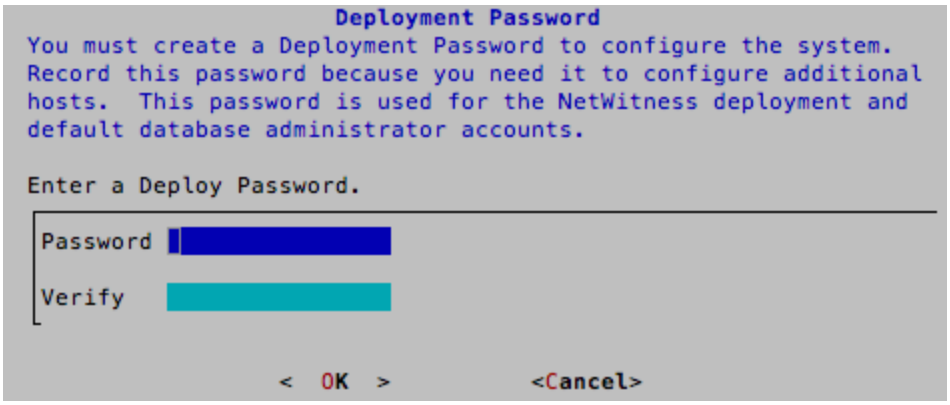
   1. Press **Enter** if want to keep this name. If not edit the host name, tab to **OK**, and press **Enter** to change it.
      The **Master Password** prompt is displayed.
      The following list of characters are supported for Master Password and Deployment Password:

      - Symbols : ! @ # % ^ +
      - Numbers : 0-9
      - Lowercase Characters : a-z
      - Uppercase Characters : A-Z

      No ambiguous characters are supported for Master Password and Deployment Password. For example:
      space { } [ ] ( ) / \ ' " ` ~ ; : . < > -



7. Down arrow to **Password** and type it in, down arrow to **Verify** and retype the password, Tab to **OK**, and press Enter.
   The **Deployment Password** prompt is displayed.



8. Type in the **Password**, down arrow to **Verify**, retype the password, Tab to **OK**, and press Enter.

One of the following conditional prompts is displayed.

- If the Setup program finds a valid IP address for this host, the following prompt is displayed.

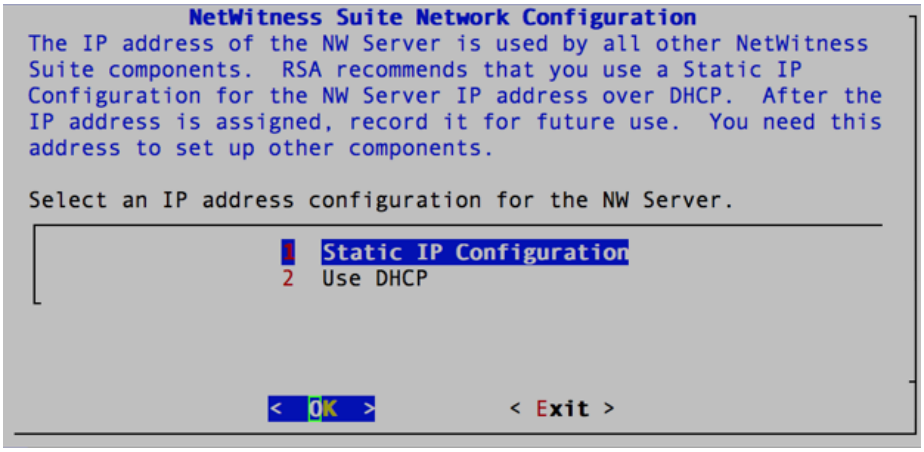
  Press **Enter** if you want to use this IP and avoid changing your network settings. Tab to **Yes** and press **Enter** If you want to change the IP configuration found on the host.

- If you are using an SSH connection, the following warning is displayed.

> **Note:** If you connect directly from the host console, the following warning will not be displayed.

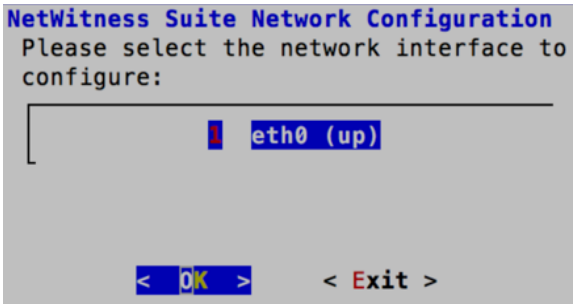
  Press **Enter** to close warning prompt.

- If the Setup Program found an IP configuration and you chose to use it, the **Update Repository** prompt is displayed. Go to step 12 to and complete the installation.
- If no IP configuration was found or if you chose to change the existing IP configuration, the **Network Configuration** prompt is displayed.



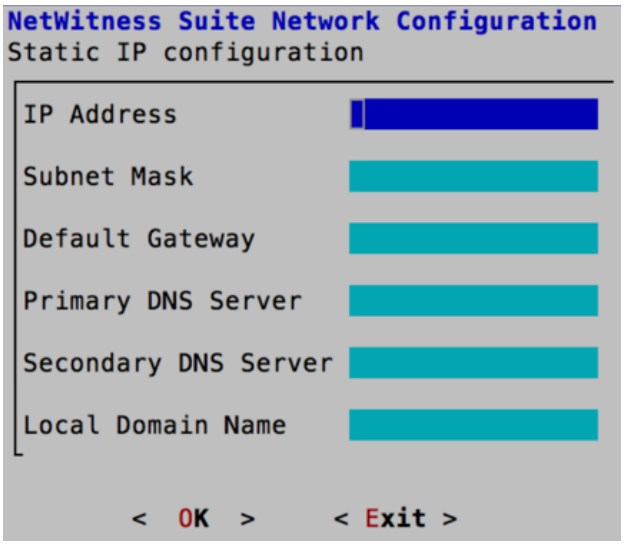
9. Tab to **OK** and press **Enter** to use **Static IP**.
   If you want to use **DHCP**, down arrow to 2 Use DHCP and press **Enter**.

The **Network Configuration** prompt is displayed.



10. Down arrow to the network interface you want, Tab to **OK**, and press **Enter**. If you do not want to continue, Tab to **Exit**

    The **Static IP Configuration** prompt is displayed.



11. Type the configuration values (using the down arrow to move from field to field), Tab to **OK**, and press **Enter**.

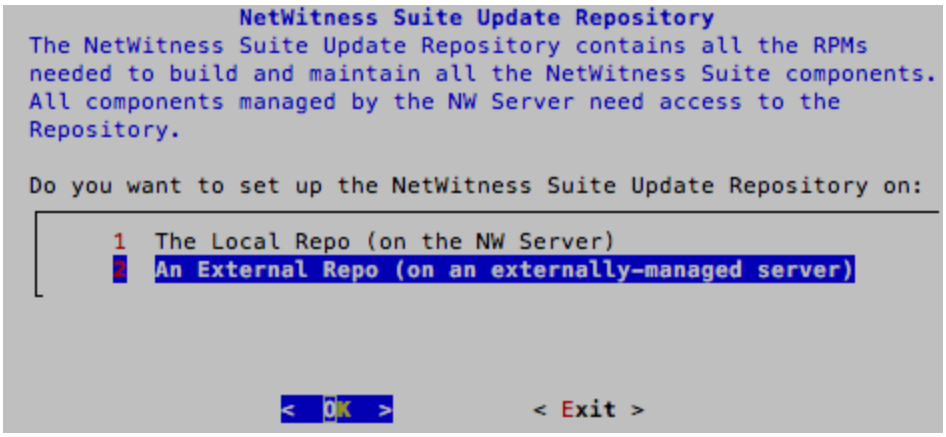
    If you do not complete all the required fields, an an `All fields are required` error message is displayed (**Secondary DNS Server** and **Local Domain Name** fields are not required.)

    If you use the wrong syntax or character length for any of the fields, an Invalid <field-name> error message is displayed.

    Caution: If you select **DNS Server**, make sure that the DNS Server is correct and the host can access it before proceeding with the install.

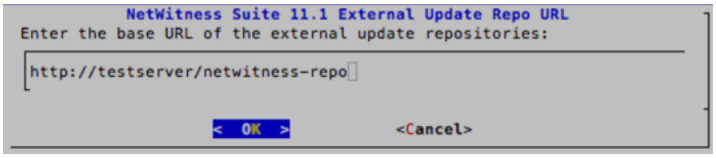
    The **Update Repository** prompt is displayed.

12. Use the down and up arrows to select **2 An External Repo (on an externally-managed server)**.



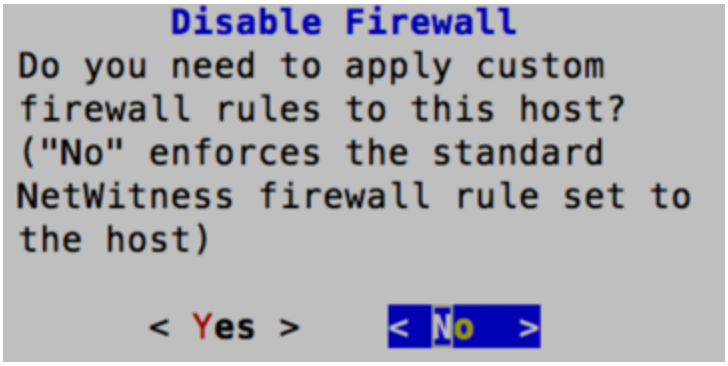
The **External Update Repo URl** prompt is displayed.
Refer to Appendix A. Create External Repository for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.1 to find NetWitness Suite 11.1 documents.

13. Enter the base URL of the NetWitness Suite external repo (for example, **http:/testserver/netwitness-repo**) and click **OK**.

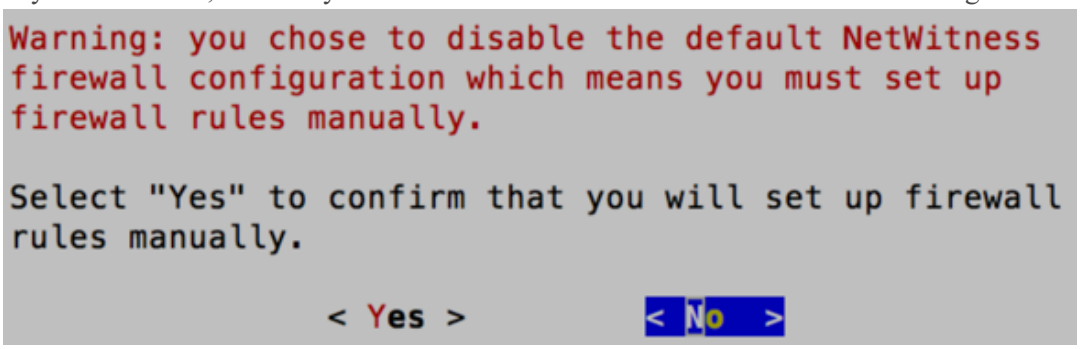


The **Disable** or use standard **Firewall** configuration prompt is displayed.

14. Tab to **No** (default), and press **Enter** to use the standard firewall configuration. Tab to **Yes**, and press **Enter** to disable the standard firewall configuration.

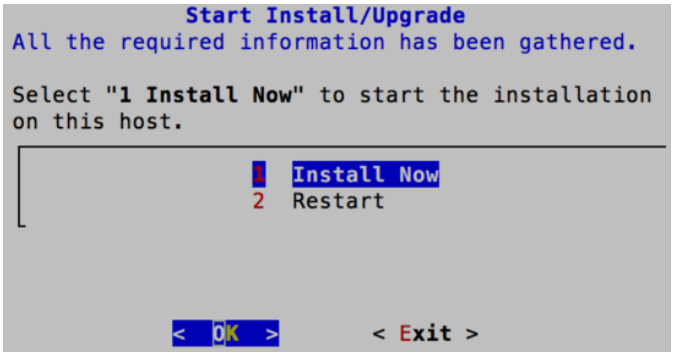


- If you select **Yes**, confirm your selection or **No** to use the standard firewall configuration.



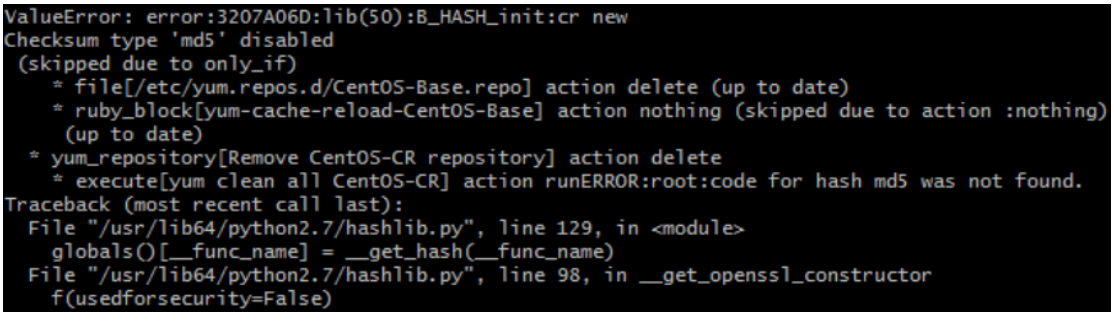
The **Start Install/Upgrade** prompt is displayed.

15. Press **Enter** to install 11.1.0.0 on the non-NW Server (**Install Now** is the default value).



When **Installation complete** is displayed, you have upgraded the 10.6.5.x SA Server to the 11.1 NW Server.

Note: Ignore the hash code errors similar to the errors shown in the following screen shot that are displayed when you initiate the `nwsetup-tui` command. Yum does not use MD5 for any security operations so they do not affect the system security.



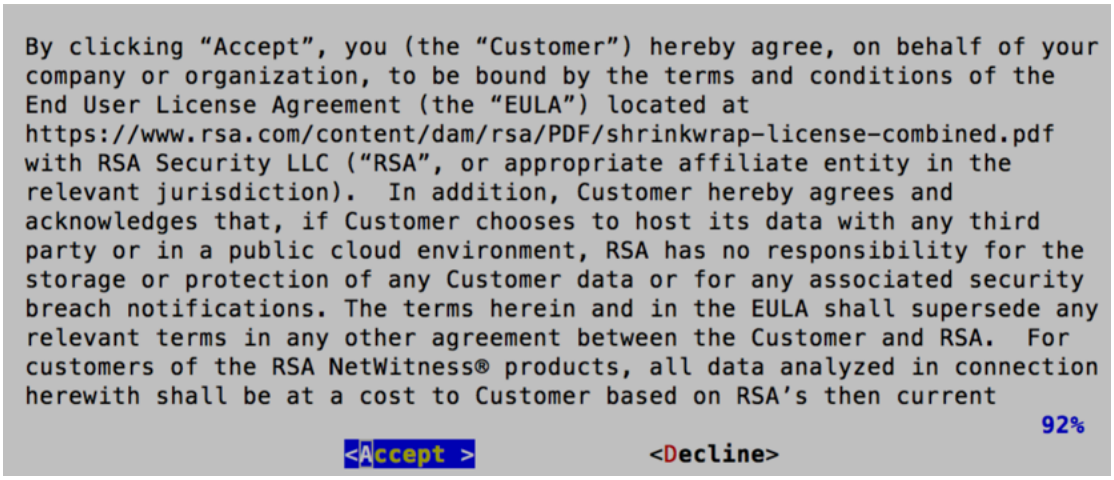
Task 2 - Install 11.1 for on Other Component Hosts

For a functional service, complete the following tasks on a non-NW Server host.

- Install the 11.1.0.0 environmental platform.
- Apply the 11.1.0.0 RPM files to the service from the NW Server Update Repository.

1. Deploy 11.1 OVA.
2. Run the `nwsetup-tui` command to set up the host..
   This initiates the Setup program and the EULA is displayed.

   Note: If you specify DNS servers during Setup program (`nwsetup-tui`) execution, they MUST be valid (valid in this context means valid during setup) and accessible for the `nwsetup-tui` to proceed. Any misconfigured DNS servers cause the Setup to fail. If you need to reach DNS server after setup that unreachable during setup, (for example, to relocate a host after setup that would have a different set of DNS Servers), see (Optional) Task 1 - Re-Configure DNS Servers Post 11.1 in Post Installation Tasks.
   If you do not specify DNS Servers during `nwsetup-tui` , you must select **1 The Local Repo (on the NW Server)** in the **NetWitness Suite Update Repository** prompt in step 12 (the DNS servers are not defined so the system cannot access the external repo).

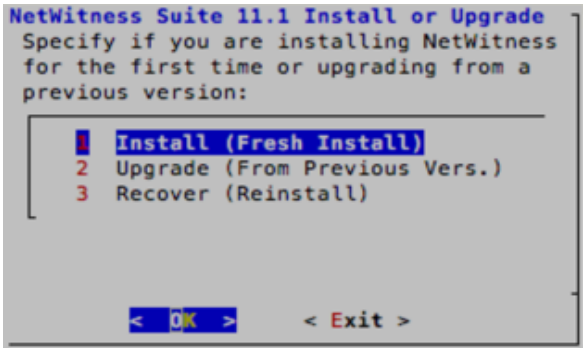
   


3. Tab to **Accept** and press Enter.
   The **Is this the host you want for your 11.1 NW Server** prompt is displayed.

   
   Caution: If you choose the wrong host for the NW Server and complete the installation, you must restart the step up program and complete (steps 2 - 14) of Task 1- Install 11.1.0.0 on the NW Server Host to correct this error.

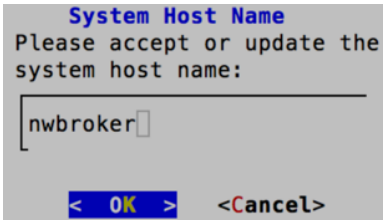
4. Press **Enter** (No).

   The **Install** or **Upgrade** prompt is displayed (**Recover** does not apply to the installation. It is for 11.1 Disaster Recovery).



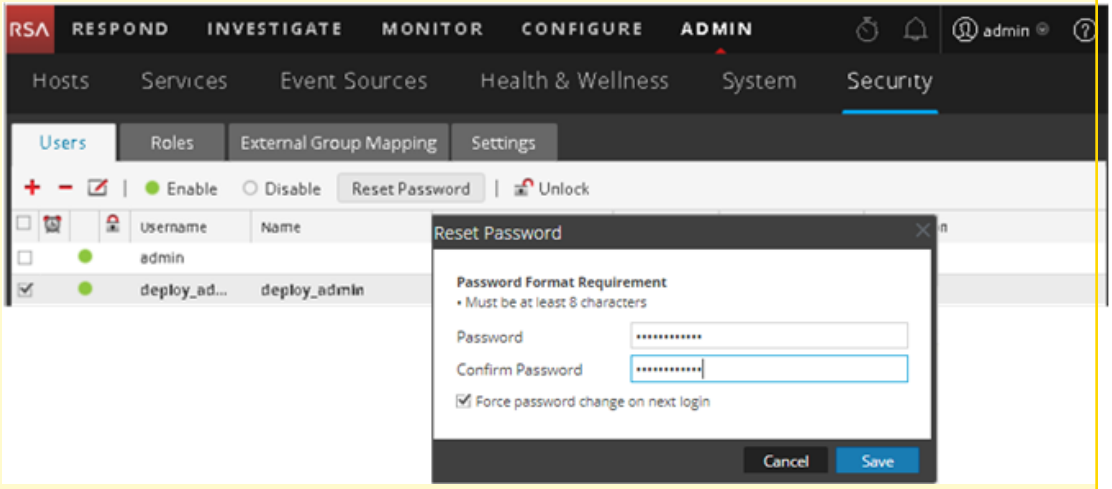
5. Press Enter. **Install (Fresh Install)** is selected by default).

   The **Host Name** prompt is displayed.



6. If want to keep this name, press **Enter**. If you want to change this name, edit it, tab to **OK**, and press **Enter**

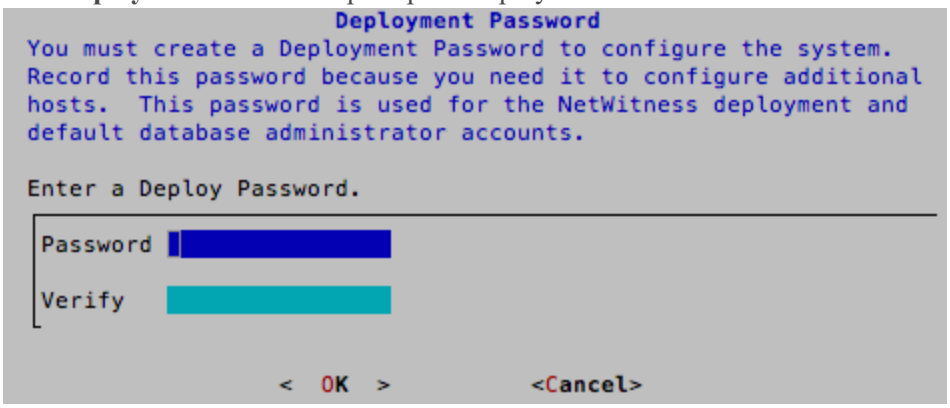
Caution: f you change the **deploy_admin** user password in the NetWitness Suite User Interface (**ADMIN**>**Security** >Select **deploy-admin - Reset password**),



you must:

1. SSH to the NW Server host.
2. Run the `(/opt/rsa/saTools/bin/set-deploy-admin-password` script.
3. Use the new password when installing any new non-NW Server hosts.
4. Run `(/opt/rsa/saTools/bin/set-deploy-admin-password` script on all non-NW Server hosts in your deployment.
5. Write down the password because you may need to refer to it later in the installation.

The **Deployment Password** prompt is displayed.



Note: You must use the same deployment password that you used when you installed the NW Server.

7. Type in the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.

One of the following conditional prompts is displayed.

- If the Setup program finds a valid IP address for this host, the following prompt is displayed.

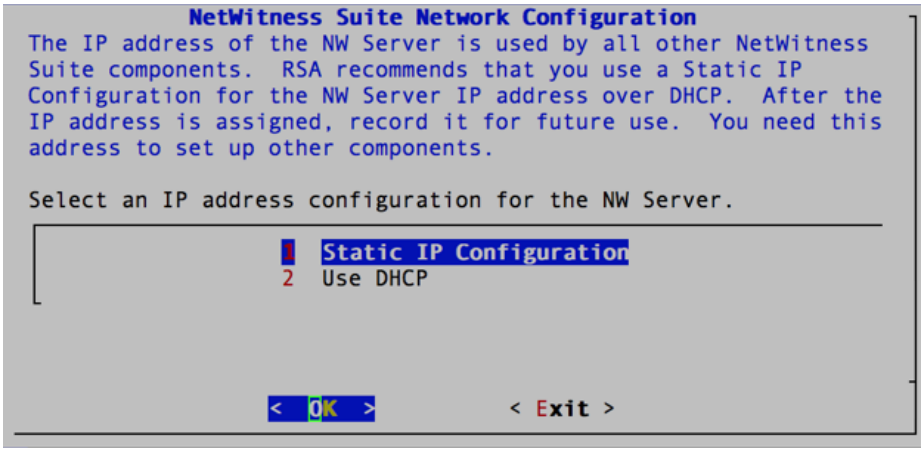
  Press **Enter** if you want to use this IP and avoid changing your network settings. Tab to **Yes** and press **Enter** If you want to change the IP configuration found on the host.

- If you are using an SSH connection, the following warning is displayed.

  Press **Enter** to close warning prompt.

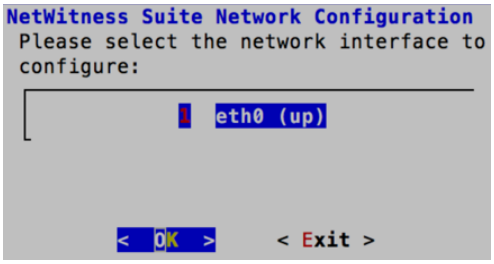
- If the Setup Program found an IP configuration and you chose to use it, the **Update Repository** prompt is displayed. Go to step 11 to and complete the installation.

- If no IP configuration was found or If you chose to change the existing IP configuration, the **Network Configuration** prompt is displayed.



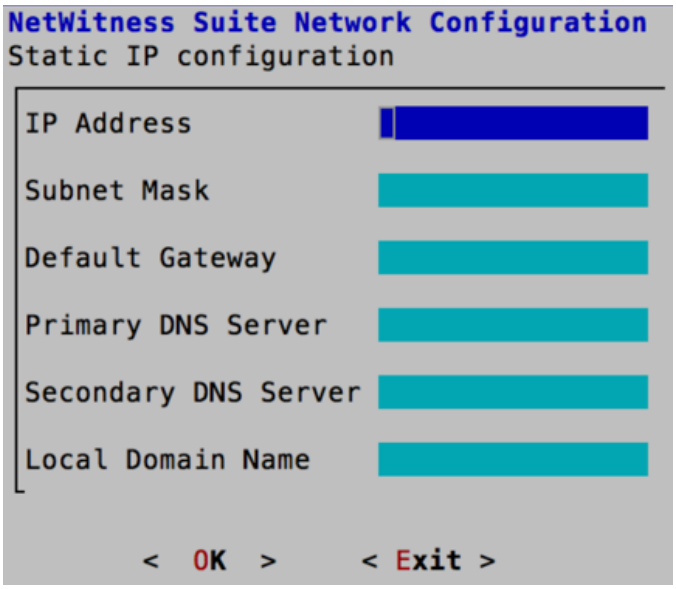
8. Tab to **OK** and press **Enter** to use **Static IP**.
   If you want to use **DHCP**, down arrow to **2 Use DHCP** and press **Enter**.

The **Network Configuration** prompt is displayed.



9. Down arrow to the network interface you want, Tab to **OK**, and press **Enter**. If you do not want to continue, Tab to **Exit**

   The **Static IP Configuration** prompt is displayed.



10. Type the configuration values (using the down arrow to move from field to field), Tab to **OK**, and press **Enter**.

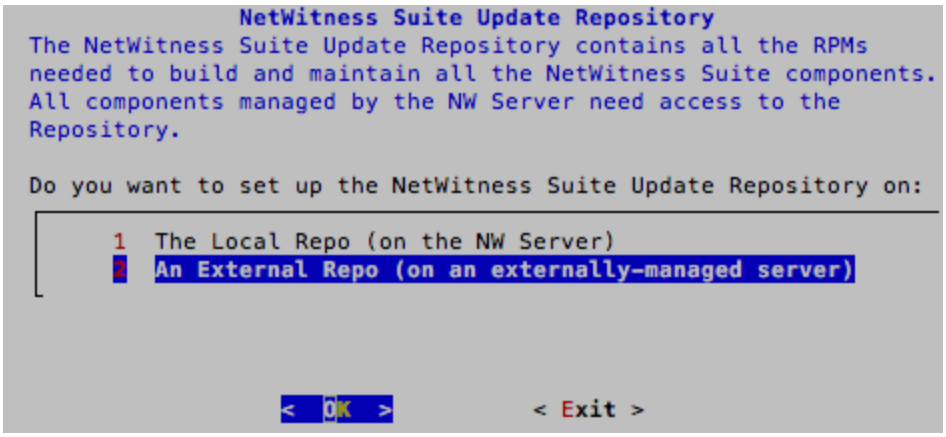
    If you do not complete all the required fields, an an `All fields are required` error message is displayed (**Secondary DNS Server** and **Local Domain Name** fields are not required.)

    If you use the wrong syntax or character length for any of the fields, an `Invalid <field-name>` error message is displayed.

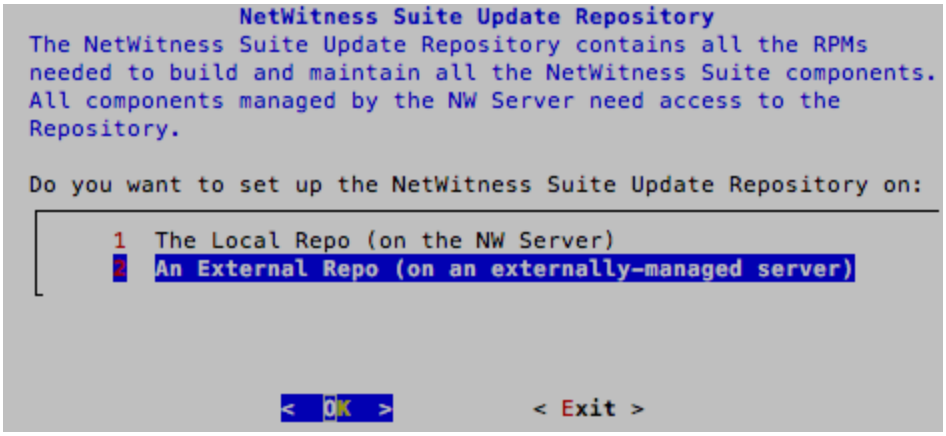
    Caution: If you select **DNS Server**, make sure that the DNS Server is correct and the host can access it before proceeding with the install.

    The **Update Repository** prompt is displayed.

.



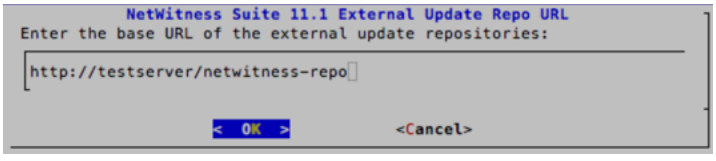
11. Use the down and up arrows to select **2 An External Repo (on an externally-managed server)**, tab to **OK**, and press **Enter**.



The **External Update Repo URL** prompt is displayed.

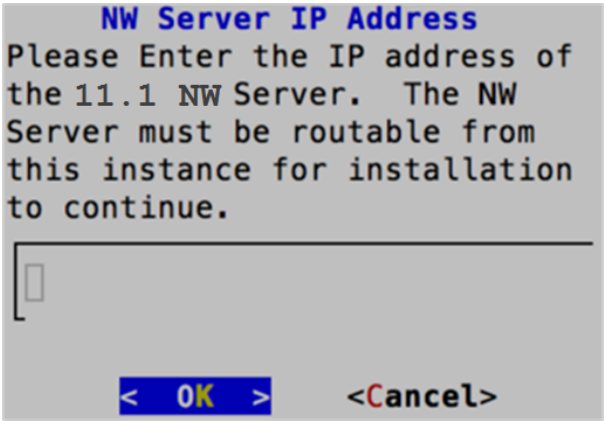
The repositories give you access RSA updates and CentOS updates.

12. Enter the base URL of the NetWitness Suite external repo (for example, **http://testserver/netwitness-repo**)and click **OK**. Refer to Appendix A. Create External Repository for instructions on how to create this repo and its external repo URL so you can enter it in the following prompt.



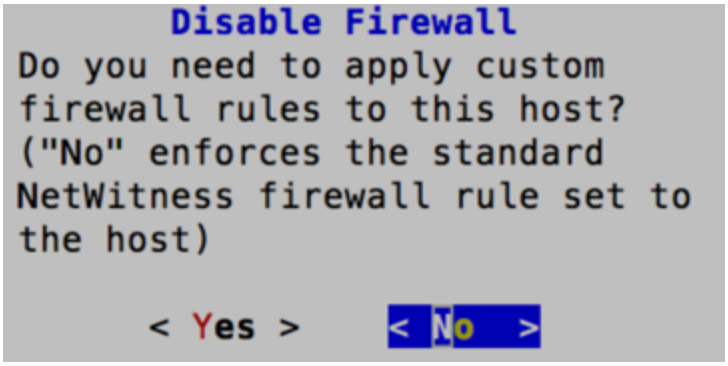
The **NW Server IP Address** is displayed.

13. Type the IP address of the NW Server, tab to **OK**, and press **Enter**.

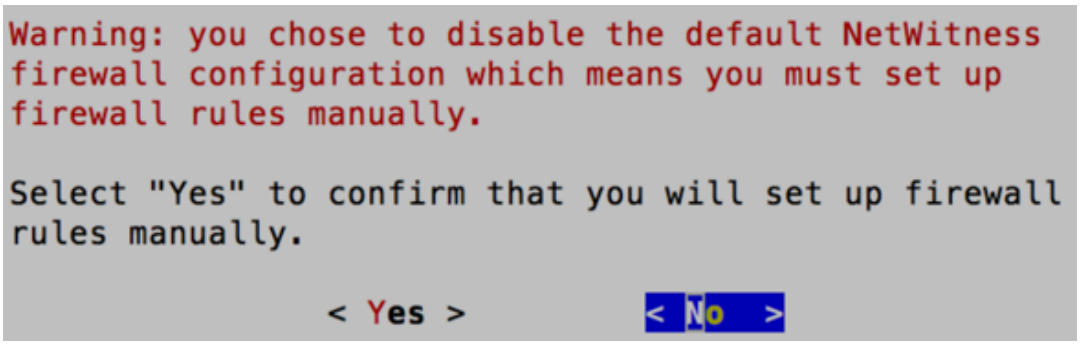


The **Disable** or use standard **Firewall** configuration prompt is displayed.

14. Tab to **No** (default), and press **Enter** to use the standard firewall configuration. Tab to **Yes**, and press **Enter** to disable the standard firewall configuration.



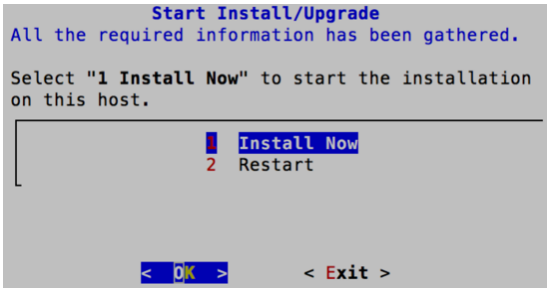
- If you select **Yes**, confirm your selection.



- If you select **No**, the standard firewall configuration is applied.

The **Start Install** prompt is displayed.

15. Press **Enter** to install 11.1.0.0 on the non-NW Server (**Install Now** is the default value).



When **Installation complete** is displayed, you have a generic host with an operating system compatible with NetWitness Suite 11.1.0.0.

16. Install a component service on the non-NW Server host.

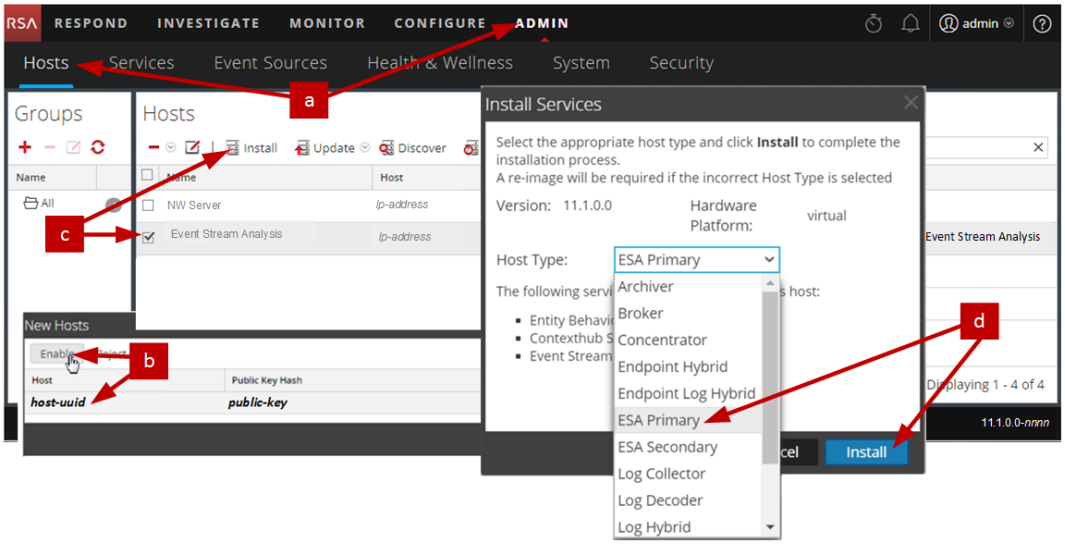
    a. Log into NetWitness Suite and click **ADMIN** > **Hosts**.
    The **New Hosts** dialog is displayed with the **Hosts** view grayed out in the background.

    Note: If the **New Hosts** dialog is not displayed, click **Discover** in the Hosts view toolbar.

    b. Select the host in the **New Hosts** dialog and click **Enable**.
    The **New Hosts** dialog closes and the host is displayed in the **Hosts** view.

    c. Select that host (for example, **Event Stream Analysis**) and click Install.
    The **Install Services** dialog is displayed.

    d. Select the appropriate host type (for example, **ESA Primary**) in **Host Type** and click **Install**.



You have completed the installation of the non-NW Server host in NetWitness Suite.

17. Complete steps 1 through 16 for the rest of the NetWitness Suite non-NW Server components.

Step 3. Configure Databases to Accommodate NetWitness Suite

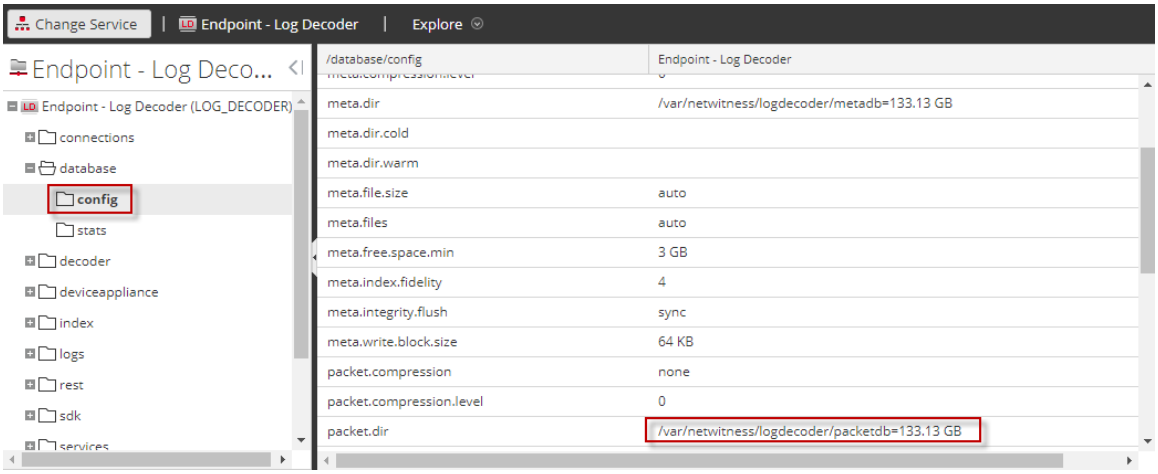
When you deploy databases from OVA, the initial database space allocation may not be adequate to support NetWitness Server. You need to review the status of the datastores after initial deployment and expand them.

Task 1. Review Initial Datastore Configuration

Review the datastore configuration after initial deployment to determine if you have enough drive space to accommodate the needs of your enterprise. As an example, this topic reviews the datastore configuration of the PacketDB on the Log Decoder host after you first deploy it from an Open Virtualization Archive (OVA) file.

Initial Space Allocated to PacketDB

The allocated space for the PacketDB is about 133.13 GB). The following NetWitness Suite Explore view example shows the size of the PacketDB after you initially deploy it from OVA.



Initial Database Size

By default, the database size is set to 95% of the size of file system on which the database resides. SSH to the Log Decoder host and enter the `df -k` command string to view the files system and its size. The following output is an example of the information that this command strings returns.

```
[root@LogDecoder ~]# df -kh
Filesystem                              Size  Used Avail Use% Mounted on
/dev/mapper/netwitness_vg00-root         30G  3.0G   27G  10% /
devtmpfs                                 16G     0   16G   0% /dev
tmpfs                                    16G   12K   16G   1% /dev/shm
tmpfs                                    16G   25M   16G   1% /run
tmpfs                                    16G     0   16G   0% /sys/fs/cgroup
/dev/mapper/netwitness_vg00-usrhome      10G   33M   10G   1% /home
/dev/mapper/netwitness_vg00-varlog       10G   42M   10G   1% /var/log
/dev/mapper/netwitness_vg00-nwhome      141G  396M  140G   1% /var/netwitness
/dev/sda1                              1014M   73M  942M   8% /boot
tmpfs                                    3.2G     0  3.2G   0% /run/user/0
[root@LogDecoder ~]#
```

PacketDB Mount Point

The database is mounted on the `packetdb` logical volume in `netwitness_vg00` volume group. `netwitness_vg00` and this is where you start your expansion planning for the file system.

Initial Status of netwitness_vg00

Complete the following steps to review the status of `netwitness_vg00`.

1. SSH to the Log Decoder host.
2. Enter the `lvs` (Logical Volumes Show) command string to determine which logical volumes are grouped in `netwitness_vg00`.

   `[root@nwappliance32431 ~}# lvs netwitness_vg00.`

   The following output is an example of the information that this command strings returns.

```
[root@LogDecoder ~]# vgs
  VG             #PV #LV #SN Attr   VSize    VFree
  netwitness_vg00   1   5   0 wz--n- <194.31g 100.00m
```

3. Enter the pvs (Physical Volumes Show) command string to determine which physical volumes belong to a specific group.

   `[root@nwappliance32431 ~}# pvs`

   The following output is an example of the information that this command strings returns.

```
[root@LogDecoder ~]# pvs
  PV         VG             Fmt  Attr PSize    PFree
  /dev/sda2  netwitness_vg00 lvm2 a--  <194.31g 100.00m
```

4. Enter the `vgs` (Volume Groups Show) command string to display the total size of specific volume group.

   `[root@nwappliance32431 ~}# vgs`

   The following output is an example of the information that this command strings returns.

```
[root@LogDecoder ~]# vgs
  VG              #PV #LV #SN Attr   VSize    VFree
  netwitness_vg00   1   5   0 wz--n- <194.31g 100.00m
```

Task 2. Review Optimal Datastore Space Configuration

You need to review the datastore space configuration options for the different hosts to get the optimal performance from your virtual NetWitness Suite deployment. Datastores are required for virtual host configuration, and the correct size is dependent on the host.

Note: (1.) Refer to the "**Optimization Techniques**" topic in the RSA NetWitness SuiteCore Database Tuning Guide for recommendations on how to optimize datastore space. (2.) Contact Customer Care for assistance in configuring your virtual drives and using the Sizing & Scoping Calculator.

Virtual Drive Space Ratios

The following table provides optimal configurations for packet and log hosts. Additional partitioning and sizing examples for both packet capture and log ingest environments are provided at the end of this topic.

Decoder			
Persistent Datastores	**Cache Datastore**		
PacketDB	**SessionDB**	**MetaDB**	**Index**
100% as calculated by Sizing & Scoping Calculator	6 GB per 100Mb/s of traffic sustained provides 4 hours cache	60 GB per 100Mb/s of traffic sustained provides 4 hours cache	3 GB per 100Mb/s of traffic sustained provides 4 hours cache

Concentrator		
Persistent Datastores	**Cache Datastores**	
MetaDB	**SessionDB** **Index**	**Index**

Concentrator		
Calculated as 10% of the PacketDB required for a 1:1 retention ratio	30 GB per 1TB of PacketDB for standard multi protocol network deployments as seen at typical internet gateways	5% of the calculated MetaDB on the Concentrator. Preferred High Speed Spindles or SSD for fast access

Log Decoder			
Persistent Datastores	**Cache Datastores**		
PacketDB	**SessionDB**	**MetaDB**	**Index**
100% as calculated by Sizing & Scoping Calculator	1 GB per 1000 EPS of traffic sustained provides 8 hours cache	20 GB per 1000 EPS of traffic sustained provides 8 hours cache	0.5 GB per 1000 EPS of traffic sustained provides 4 hours cache

Log Concentrator		
Persistent Datastores	Cache Datastores	
MetaDB	SessionDB Index	Index
Calculated as 100% of the PacketDB required for a 1:1 retention ratio	3 GB per 1000 EPS of sustained traffic per day of retention	5% of the calculated MetaDB on the Concentrator. Preferred High Speed Spindles or SSD for fast access

Task 3. Add New Volume and Extend Existing File Systems

After reviewing your initial datastore configuration, you may determine that you need to add a new volume. This topic uses a Virtual Packet/Log Decoder host as an example.

Complete these tasks in the following order.

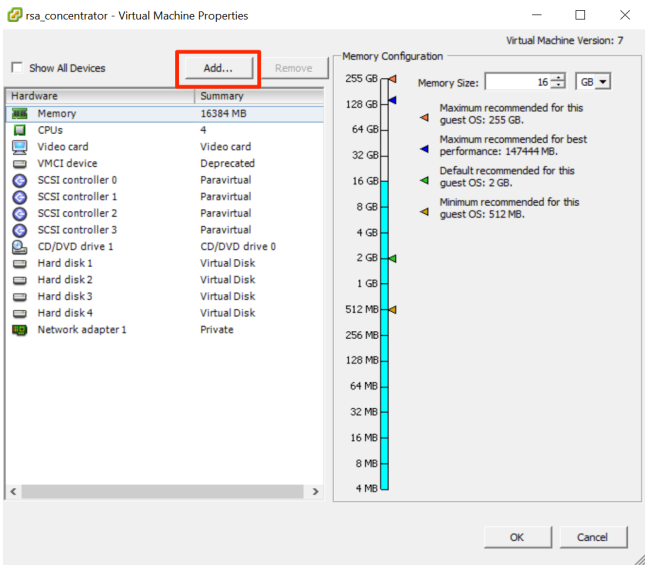
1. Add New Disk
2. Create New Volumes on the New Disk
3. Create LVM Physical Volume on New Partition
4. Extend Volume Group with Physical Volume
5. Expand the File System
6. Start the Services
7. Make Sure the Services Are Running
8. Reconfigure LogDecoder Parameters

Add New Disk

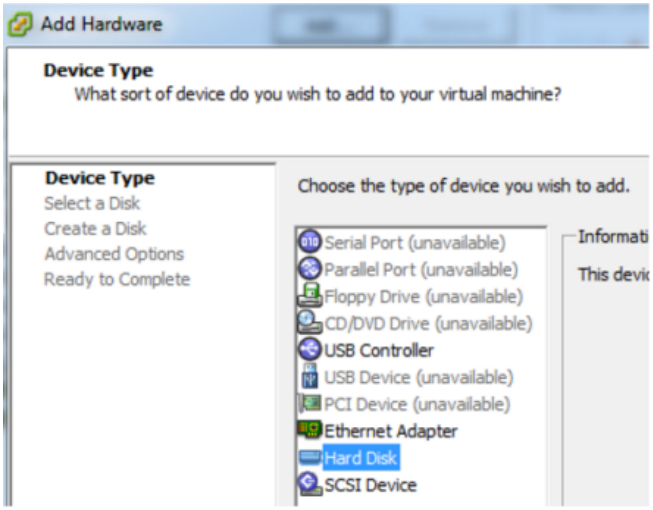
This procedure shows you how to add a new 100GB disk on the same datastore.

Note: The procedure to add a disk on different datastore is similar to the procedure shown here.

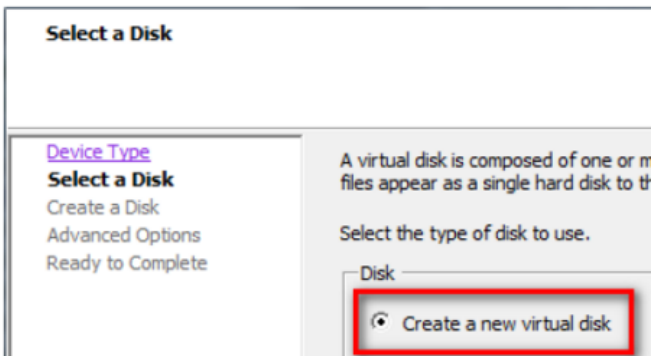
1. Shut down the machine, edit **Virtual Machine Properties**, click **Hardware** tab, and click **Add**.



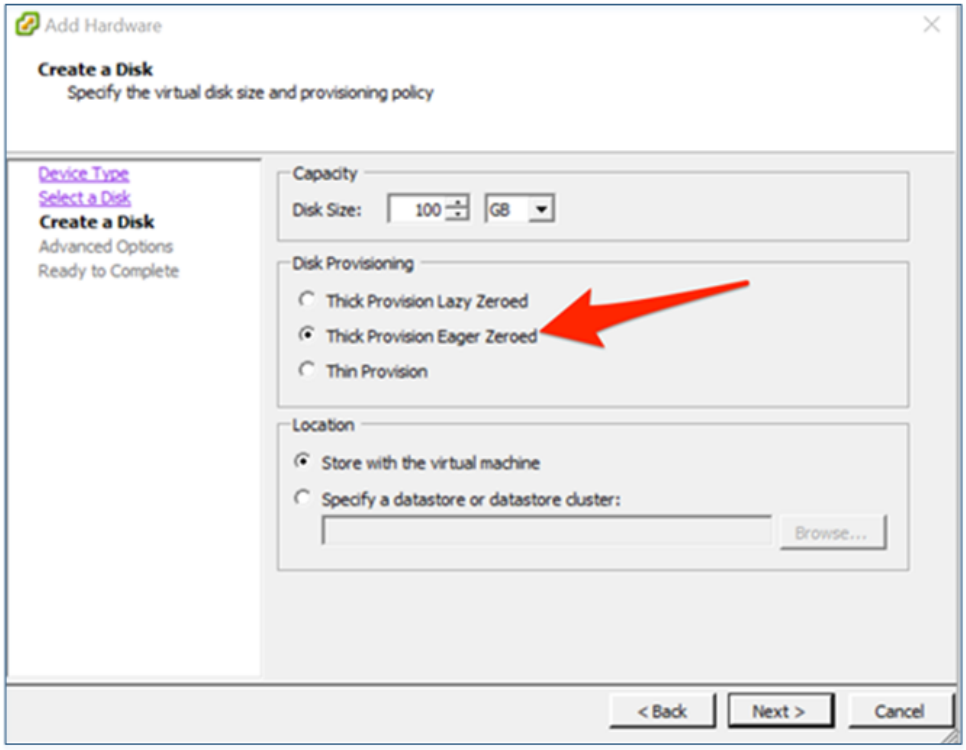
2. Select **Hard Disk** as the device type.



3. Select **Create a new virtual disk**.

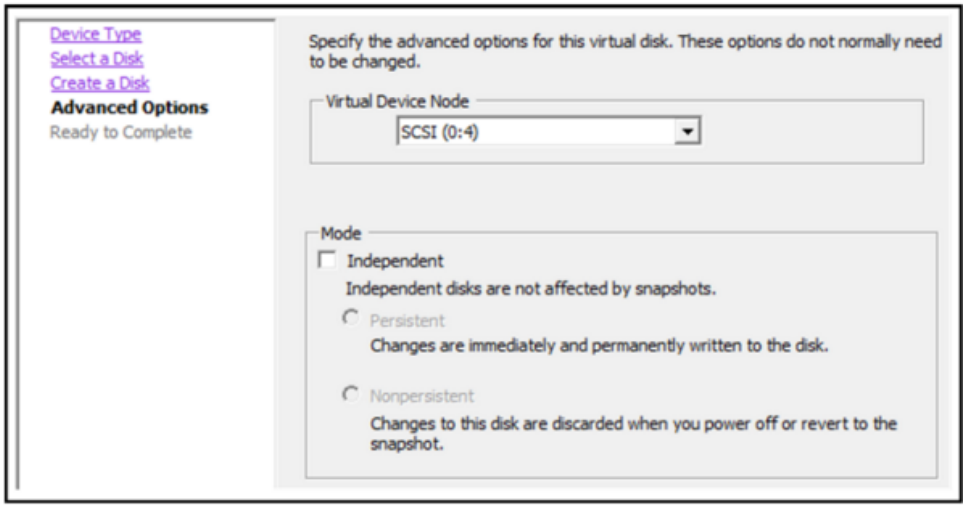


4. Choose the size of the new disk and where you want to create it (on the same datastore or a different datastore).



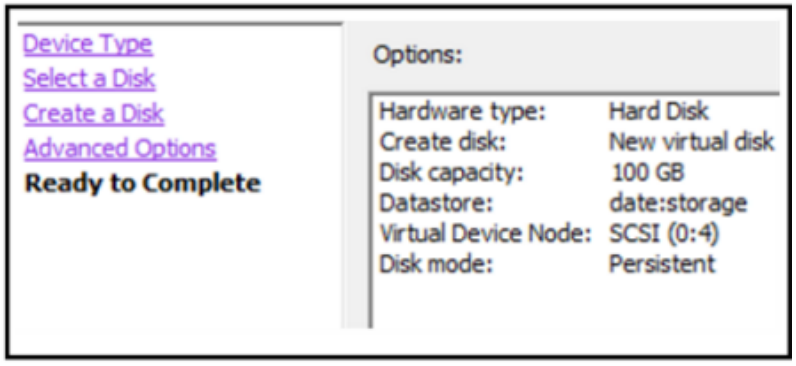
Caution: Allocate all the space for performance reasons.

5. Approve the proposed Virtual Device Node.



Note: The Virtual Device Node can vary, but it is pertinent to `/dev/sdX` mappings.

6. Confirm the settings.



7. Start virtual machine.
8. SSH to the machine.
9. Restart the machine and enter the following command.

   `lsblk`

   The following output is displayed showing the new disk.

```
[root@NWAPPLIANCE2599 database]# lsblk
NAME                          MAJ:MIN RM   SIZE RO TYPE MOUNTPOINT
fd0                             2:0    1     4K  0 disk
sda                             8:0    0 195.3G  0 disk
├─sda1                          8:1    0     1G  0 part /boot
└─sda2                          8:2    0 194.3G  0 part
  ├─netwitness_vg00-nwhome    253:15   0 140.2G  0 lvm  /var/netwitness
  ├─netwitness_vg00-varlog    253:16   0    10G  0 lvm  /var/log
  ├─netwitness_vg00-usrhome   253:17   0    10G  0 lvm  /home
  ├─netwitness_vg00-root      253:18   0    30G  0 lvm  /
  └─netwitness_vg00-swap      253:19   0     4G  0 lvm  [SWAP]
sdb                             8:16   0    48G  0 disk

sdd                             8:48   0   168G  0 disk
└─sdd1                          8:49   0   168G  0 part
  ├─VolGroup01-logcoll        253:4    0    64G  0 lvm  /var/netwitness/logcollector
  └─VolGroup01-packetdb       253:5    0   104G  0 lvm  /var/netwitness/logdecoder/packetdb
sde                             8:64   0    10G  0 disk
sr0                            11:0    1  1024M  0 rom
[root@NWAPPLIANCE2599 database]#
```

Note: 1.) You receive an **unknown partition table** error because the new disk has not been initialized. 2.) The **sd 2:0:4:0** pertains to the **SCSI:0:4** Virtual Device Node that appeared when you added the new device. 3.) The new disk device is **sde** (or `/dev/sde`).

10. Enter the following command string to stop the service.

    `root@LogDecoderGM ~] # service nwlogcollector stop; service nwlogdecoder stop`.

    This procedure uses the Log Decoder as an example.

    If you wanted to stop services on a Concentrator, you would enter:

    `service nwconcentrator stop`

    If you wanted to stop services on a Packet Decoder, you would enter:

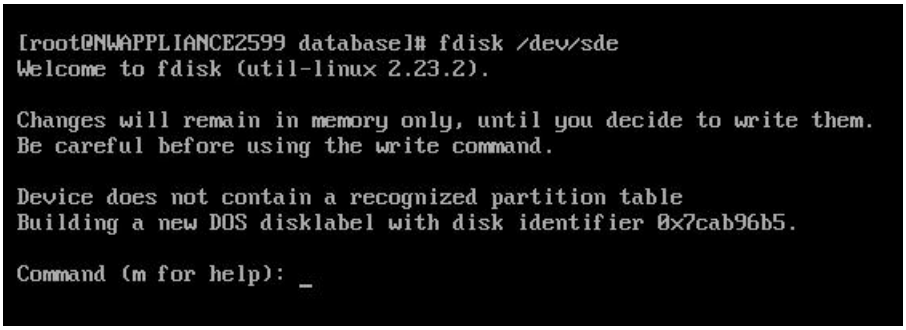
    `service nwdecoder stop`

Create Volumes on New Disk

1. SSH to the LogDecoder host.
2. Create a partition on the new disk and change its type to Linux LVM.

   `[root@NWAPPLIANCE2599 ~]# fdisk /dev/sde`

   The following information and prompt is displayed.



3. Type `p`.

   The following information is displayed.

```
Command (m for help): p

Disk /dev/sde: 10.7 GB, 10737418240 bytes, 20971520 sectors
Units = sectors of 1 * 512 = 512 bytes
Sector size (logical/physical): 512 bytes / 512 bytes
I/O size (minimum/optimal): 512 bytes / 512 bytes
Disk label type: dos
Disk identifier: 0x2a0cf37b

   Device Boot      Start         End      Blocks   Id  System

Command (m for help):
```

The default partition type is **Linux (83)**. You need to change it to Linux **LVM (8e)**.

4. Type `n`.

   The following prompt is displayed.

```
Command (m for help): n
Partition type:
   p   primary (0 primary, 0 extended, 4 free)
   e   extended
Select (default p): p
Partition number (1-4, default 1): 1
First sector (2048-20971519, default 2048):
Using default value 2048
Last sector, +sectors or +size{K,M,G} (2048-20971519, default 20971519):
Using default value 20971519
Partition 1 of type Linux and of size 10 GiB is set

Command (m for help): _
```

Partition 1 of type Linux and of size 10 GB is set

1. At the `Command m for help:` prompt type `t`.

   The following information and prompt is displayed.

```
Command (m for help): t
Selected partition 1
Hex code (type L to list all codes): 8e
Changed type of partition 'Linux' to 'Linux LVM'

Command (m for help):
```

2. Type `8e`.

   The following information and prompt is displayed.

```
Changed system type of partition 1 to 8e (Linux LVM).

Command (m for help):
```

3. Type `p`.

The following information is displayed.

```
Command (m for help): p

Disk /dev/sde: 10.7 GB, 10737418240 bytes, 20971520 sectors
Units = sectors of 1 * 512 = 512 bytes
Sector size (logical/physical): 512 bytes / 512 bytes
I/O size (minimum/optimal): 512 bytes / 512 bytes
Disk label type: dos
Disk identifier: 0x2a0cf37b

   Device Boot      Start         End      Blocks   Id  System
/dev/sde1            2048    20971519    10484736   8e  Linux LVM

Command (m for help):
```

4. At `Command (m for help):` prompt type `w`.

   The new partition table is written to the disk and fdisk quits to root shell.

```
Command (m for help): w
The partition table has been altered!

Calling ioctl() to re-read partition table.
[ 9838.504920]  sde: sde1
Syncing disks.
[root@NWAPPLIANCE2599 database]# _
```

   The new `/dev/sde1` partition is created on the new disk.

5. Complete one of the following steps to verify that the new partition exists.

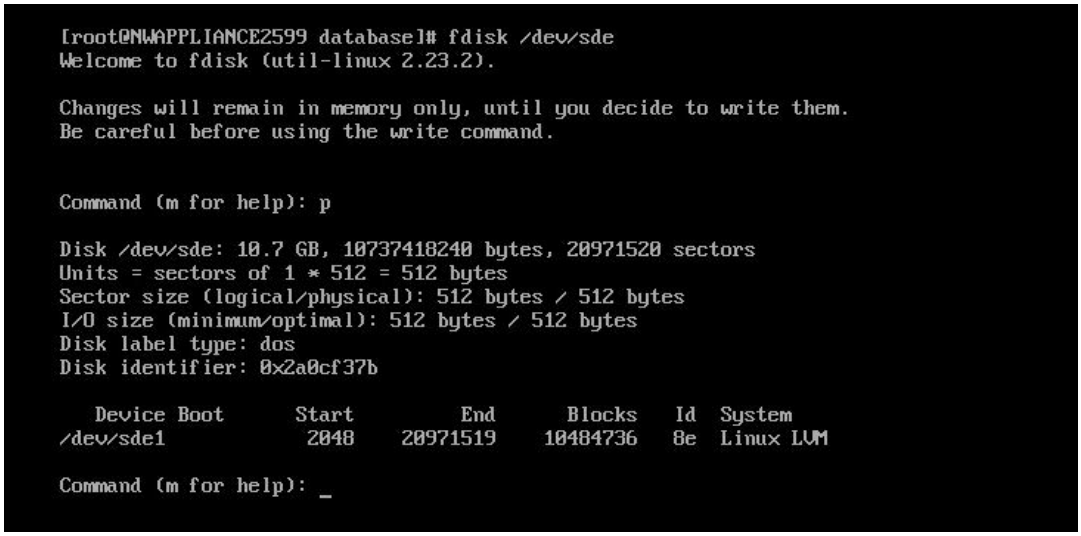
   - Type `dmesg | tail`.

     The following information is displayed.

```
[root@NWAPPLIANCE2599 database]# dmesg | tail
[  773.090059] XFS (dm-2): Mounting V4 Filesystem
[  773.214176] XFS (dm-2): Ending clean mount
[  785.595678] XFS (dm-3): Mounting V4 Filesystem
[  785.758078] XFS (dm-3): Ending clean mount
[  802.874171] XFS (dm-4): Mounting V4 Filesystem
[  803.028083] XFS (dm-4): Starting recovery (logdev: internal)
[  803.041709] XFS (dm-4): Ending recovery (logdev: internal)
[  813.249001] XFS (dm-5): Mounting V4 Filesystem
[  813.439422] XFS (dm-5): Ending clean mount
[ 9838.504920]  sde: sde1
[root@NWAPPLIANCE2599 database]#
```

   - Type `fdisk /dev/sde`.
   - Type `p`.

The following information is displayed.

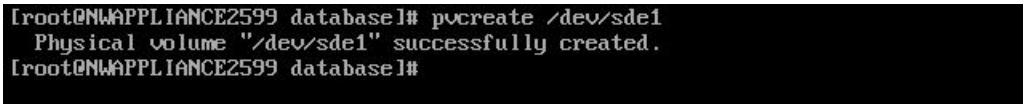


Create LVM Physical Volume on New Partition

1. SSH to the LogDecoder host.
2. Enter the following command string to create a Logical Volume Manager (LVM) physical volume on the new partition.

   ```
   [root@LogDecoderGM ~]# pvcreate /dev/sde1
   ```

3. The following information is displayed.

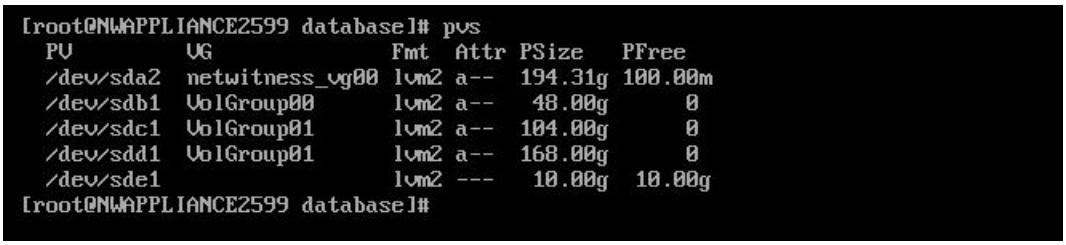


Extend Volume Group with Physical Volume

1. SSH to the LogDecoder host.
2. Enter the following command string to create a Logical Volume Manager (LVM) physical volume on the new partition.

   ```
   [root@LogDecoderGM ~]# pvs
   ```

   The following information is displayed.



`netwitness_vg00` consists of `/dev/sdc1`and `/dev/sdd1` physical volumes (PV), and LVM system. Note that the new`/dev/sde1` volume has 10GB of free space.

3. To add the physical volume to `netwitness_vg00`.

   a. Enter `vgextend netwitness_vg00 /dev/sde1`.

      The following information is displayed.

      ```
      Volume group "netwitness_vg00" successfully extended
      ```

   b. Enter pvs.

      The following information is displayed.

```
[root@NWAPPLIANCE2599 database]# vgextend netwitness_vg00 /dev/sde1
  Volume group "netwitness_vg00" successfully extended
[root@NWAPPLIANCE2599 database]# pvs
  PV         VG              Fmt  Attr PSize   PFree
  /dev/sda2  netwitness_vg00 lvm2 a--  194.31g 100.00m
  /dev/sdb1  VolGroup00      lvm2 a--   48.00g      0
  /dev/sdc1  VolGroup01      lvm2 a--  104.00g      0
  /dev/sdd1  VolGroup01      lvm2 a--  168.00g      0
  /dev/sde1  netwitness_vg00 lvm2 a--   10.00g  10.00g
[root@NWAPPLIANCE2599 database]#
```

      The volume was added to `netwitness_vg00`, but it has not been extended yet (you still have 10GB of free space). There are several Logical Volumes in `netwitness_vg00`, in this example involves the PacketDB.

4. To extend the PacketDB logical volume so that it uses all of the 10GB of free space.

   a. Enter `lvs netwitness_vg00`.
   The following information is displayed

```
[root@NWAPPLIANCE2599 database]# lvs
  LV      VG              Attr       LSize   Pool Origin Data%  Meta%  Move Log Cpy%Sync Convert
  nwhome  netwitness_vg00 -wi-ao---- 140.21g
  root    netwitness_vg00 -wi-ao----  30.00g
  swap    netwitness_vg00 -wi-ao----   4.00g
  usrhome netwitness_vg00 -wi-ao----  10.00g
  varlog  netwitness_vg00 -wi-ao----  10.00g
[root@LogDecoder ~]#
```

   b. Enter `lvextend -L+9.5G /dev/netwitness_vg00/nwhome`.

      The following information is displayed.

```
[root@NWAPPLIANCE2599 database]# lvextend -L+9.5G /dev/netwitness_vg00/nwhome
  Size of logical volume netwitness_vg00/nwhome changed from 140.21 GiB (35894 extents) to 149.71 GiB (38326 extents).
  Logical volume netwitness_vg00/nwhome successfully resized.
[root@NWAPPLIANCE2599 database]#
```

   b. Enter`lvs netwitness_vg00`.

      The following information is displayed.

```
[root@NWAPPLIANCE2599 database]# lvs netwitness_vg00
  LV      VG             Attr       LSize   Pool Origin Data%  Meta%  Move Log Cpy%Sync Convert
  nwhome  netwitness_vg00 -wi-ao---- 149.71g
  root    netwitness_vg00 -wi-ao----  30.00g
  swap    netwitness_vg00 -wi-ao----   4.00g
  usrhome netwitness_vg00 -wi-ao----  10.00g
  varlog  netwitness_vg00 -wi-ao----  10.00g
[root@NWAPPLIANCE2599 database]#
```

The `packetdb` Logical Volume has been expanded to 149.71 GB, but the `/var/netwitness` filesystem still has 140.21 GB.

Expand the File System

1. SSH to the LogDecoder host.
2. Enter the following command string to create a Logical Volume Manager (LVM) physical volume on the new partition.

   `[root@LogDecoderGM ~]# xfs_growfs /var/netwitness/`

   The following information is displayed.

```
[root@NWAPPLIANCE2599 database]# xfs_growfs /var/netwitness/
meta-data=/dev/mapper/netwitness_vg00-nwhome isize=256    agcount=4, agsize=9188864 blks
         =                       sectsz=512   attr=2, projid32bit=1
         =                       crc=0        finobt=0 spinodes=0
data     =                       bsize=4096   blocks=36755456, imaxpct=25
         =                       sunit=0      swidth=0 blks
naming   =version 2              bsize=4096   ascii-ci=0 ftype=0
log      =internal               bsize=4096   blocks=17947, version=2
         =                       sectsz=512   sunit=0 blks, lazy-count=1
realtime =none                   extsz=4096   blocks=0, rtextents=0
data blocks changed from 36755456 to 39245824
[root@NWAPPLIANCE2599 database]# _
```

Start Services

Enter the following command string to start the services on the LogDecoder host.

```
[root@LogDecoderGM ~]# service nwlogcollector start; service
nwlogdecoder start
```

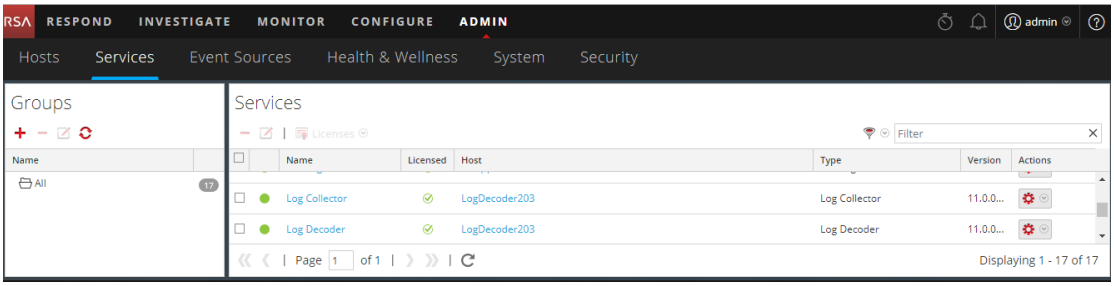
The following information is displayed.

```
nwlogcollector start/running, process 4069
nwlogdecoder start/running, process 4069
```

Make Sure that the Services Are Running

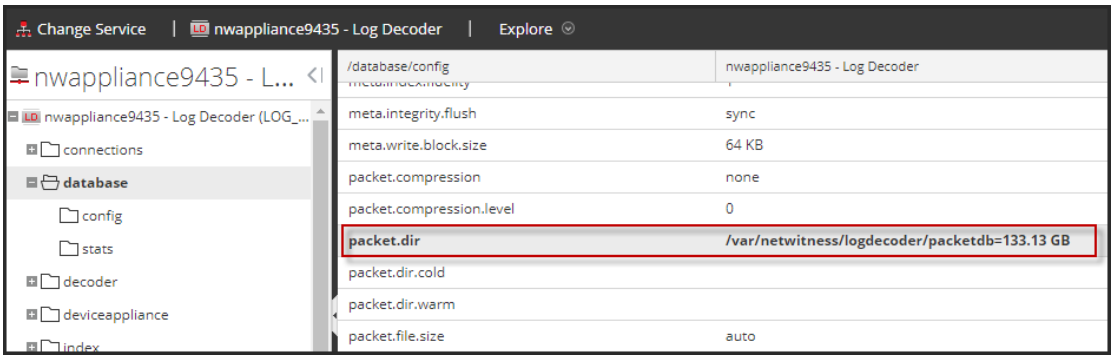
1. Log on to NetWitness Suite.
2. Click **Administration** > **Services**.

3. Make sure that the Log Collector and Log Decoder services are running.



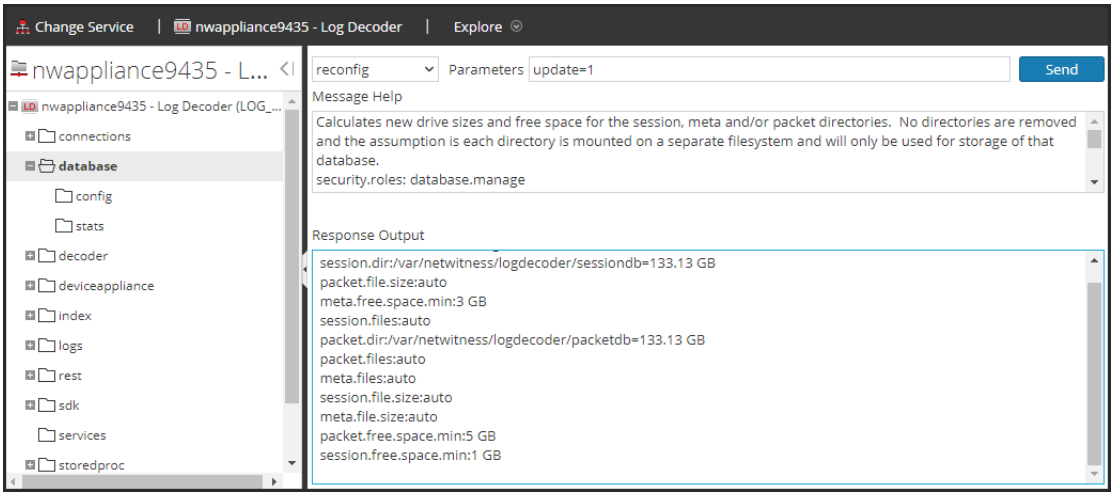
Reconfigure Log Decoder Parameters

1. Log on to NetWitness Suite.
2. Click **Administration** > **Services**.
3. Select the LogDecoder service.
4. Under actions, select View > Explore.
5. Click `database > config > packet.dir`.

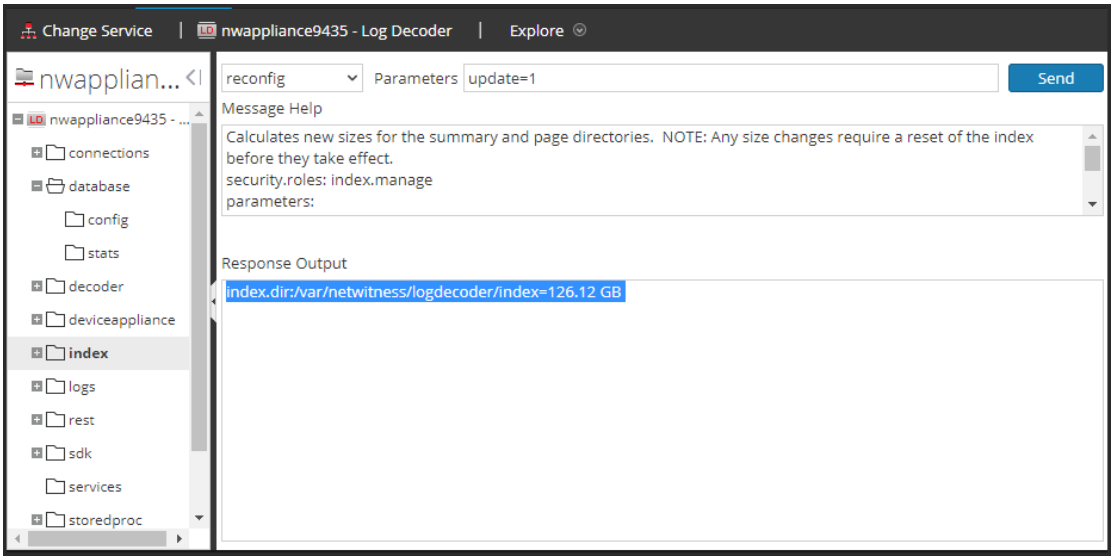


6. Right-click `database`, click **Properties**, select the **reconfig** command, specify **update=1** in **Parameters**, and click **Send**.

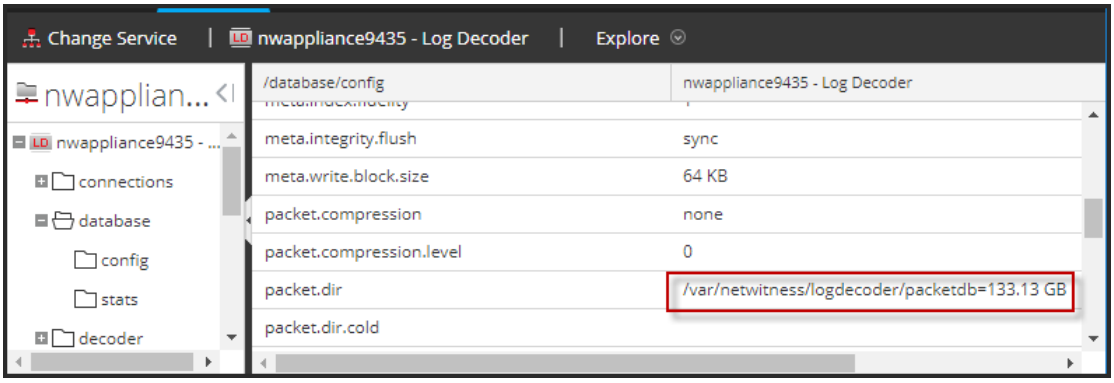
The `packetdb`parameter value changed from 98.74 GB to 133.13 GB.



7. Right-click `index`, click **Properties**, select the **reconfig** command, specify **update=1** in **Parameters**, and click **Send**.



8. Close the Properties dialog to return to the Explore view. The `packet.dir` parameter value is now 133.13 GB (95% of 203 GB).



Step 4. Configure Host-Specific Parameters

Certain application-specific parameters are required to configure log ingest and packet capture in the Virtual Environment.

Configure Log Ingest in the Virtual Environment

Log ingest is easily accomplished by sending the logs to the IP address you have specified for the Decoder. The Decoder's management interface allows you to then select the proper interface to listen for traffic on if it has not already selected it by default.

Configure Packet Capture in the Virtual Environment

There are two options for capturing packets in a VMWare environment. The first is setting your vSwitch in promiscuous mode and the second is to use a third-party Virtual Tap.

Set a vSwitch to Promiscuous Mode

The option of putting a switch whether virtual or physical into promiscuous mode, also described as a SPAN port (Cisco services) and port mirroring, is not without limitations. Whether virtual or physical, depending on the amount and type of traffic being copied, packet capture can easily lead to over subscription of the port, which equates to packet loss. Taps, being either physical or virtual, are designed and intended for loss less 100% capture of the intended traffic.

Promiscuous mode is disabled by default, and should not be turned on unless specifically required. Software running inside a virtual machine may be able to monitor any and all traffic moving across a vSwitch if it is allowed to enter promiscuous mode as well as causing packet loss due to over subscription of the port..

To configure a portgroup or virtual switch to allow promiscuous mode:

1. Log on to the ESXi/ESX host or vCenter Server using the vSphere Client.
2. Select the ESXi/ESX host in the inventory.
3. Select the **Configuration** tab.
4. In the **Hardware** section, click **Networking**.
5. Select **Properties** of the virtual switch for which you want to enable promiscuous mode.
6. Select the virtual switch or portgroup you want to modify, and click **Edit**.
7. Click the **Security** tab. In the **Promiscuous Mode** drop-down menu, select **Accept**.

Use of a Third-Party Virtual Tap

Installation methods of a virtual tap vary depending on the vendor. Please refer to the documentation from your vendor for installation instructions. Virtual taps are typically easy to integrate, and the user interface of the tap simplifies the selection and type of traffic to be copied.

Virtual taps encapsulate the captured traffic in a GRE tunnel. Depending on the type you choose, either of these scenarios may apply:

- An external host is required to terminate the tunnel, and the external host directs the traffic to the Decoder interface.
- The tunnel send traffic directly to the Decoder interface, where NetWitness Suite handles the de-encapsulation of the traffic.

Step 5. Post Installation Tasks

This topic contains the task you complete after you install 11.1.

- General
- RSA NetWitness® Endpoint Insights

General

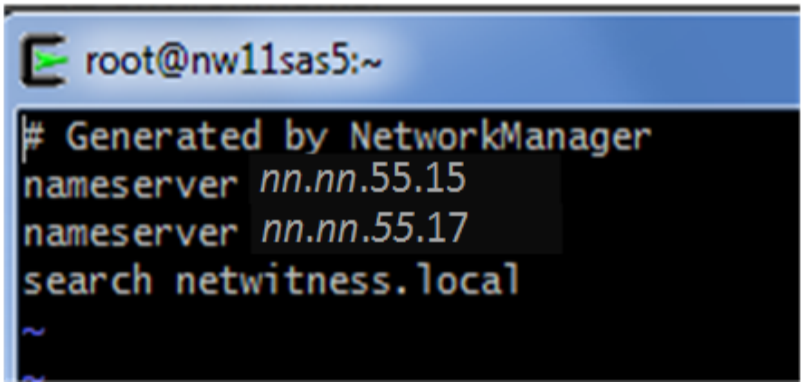
(Optional) Task 1 - Re-Configure DNS Servers Post 11.1

Complete the following steps to re-configure the DNS servers in NetWitness Suite 11.1.

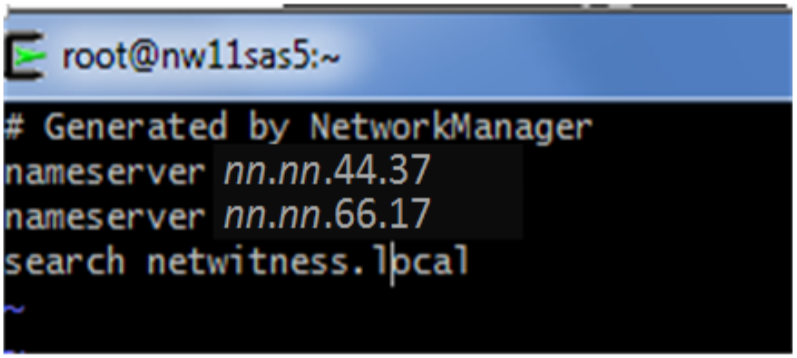
1. Login to the server host with your `root` credentials.
2. Edit the `/etc/resolv.conf` file:
   a. Replace the IP address corresponding to `nameserver`.
   If you need to replace both DNS servers , replace the IP entries for both the hosts with

valid addresses.

The following example shows both DNS entries.



The following example shows the new DNS values.



b. Save the `/etc/resolv.conf` file.

RSA NetWitness® Endpoint Insights

(Optional) Task 2 - Install Endpoint Hybrid or Endpoint Log Hybrid

You must install one of the following services to install NetWitness Suite Endpoint Insights in your deployment:

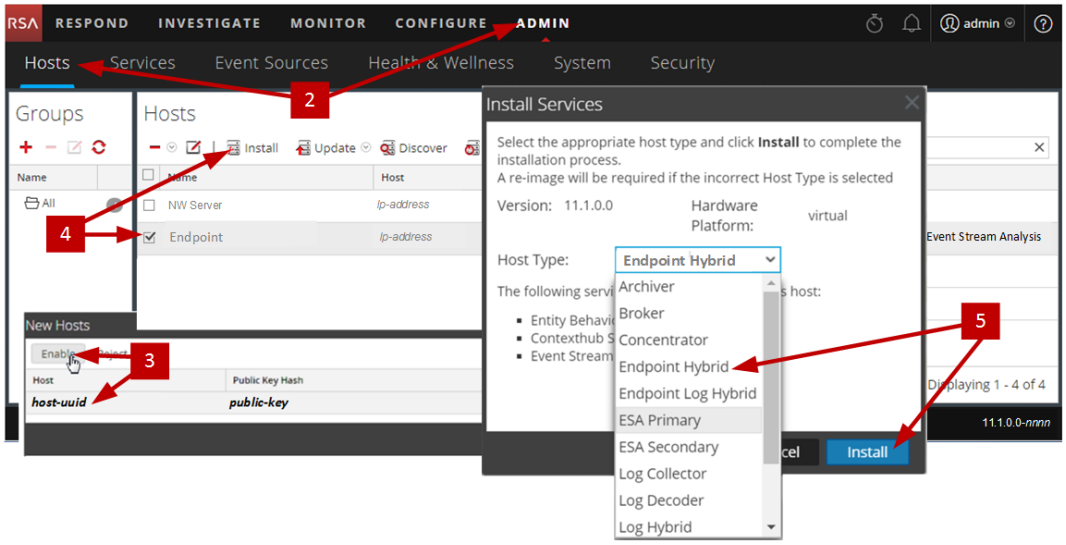
Caution: You can only install one instance of the following services in your deployment.

- Endpoint Hybrid
- Endpoint Log Hybrid

1. Complete steps 1 - 14 in Task 2 - Install 11.1 on Other Component Hosts.
2. Log into NetWitness Suite and click **ADMIN** > **Hosts**.
   The New Hosts dialog is displayed with the Hosts view grayed out in the background.

Note: If the New Hosts dialog is not displayed, click **Discover** in the **Hosts** view toolbar.

3. Select the host in the **New Hosts** dialog and click **Enable**.
   The New Hosts dialog closes and the host is displayed in the Hosts view.
4. Select that host in the **Hosts** view (for example, **Endpoint**) and click Install.
   The Install Services dialog is displayed.
5. Select the appropriate service, either **Endpoint Hybrid** or **Endpoint Log Hybrid**, and click **Install**.
   Endpoint Hybrid is used as an example in the following screen shot.



6. Make sure that all Endpoint Hybrid or Endpoint Log Hybrid services are running.
7. Register the Endpoint server host IP address with the NW Server.
   a. SSH to the NW Server.
   b. Go to the `/opt/rsa/saTools/bin` directory.
      `cd /opt/rsa/saTools/bin`
   c. Run the `register-endpoint` script specifying the Endpoint host IP address.
      `./register-endpoint-ip -v --host-addr <ip-address>`

      Note: The script takes a few minutes to update the Endpoint Server IP address.
8. Configure Endpoint Meta forwarding.
   See *Endpoint Insights Configuration Guide* for instructions on how to configure Endpoint Meta forwarding.Go to the Master Table of Contents for NetWitness Logs & Packets

11.1 to find NetWitness Suite 11.1 documents.

9. Install the Endpoint Insights Agent.
   See *Endpoint Insights Agent Installation Guide* for detailed instructions on how to install the agent. Go to the Master Table of Contents for NetWitness Logs & Packets 11.1 to find NetWitness Suite 11.1 documents.

Appendix A. Create External Repository

Complete the following procedure to set up an external repository (Repo).

Note: 1.) You need an unzip utility installed on the host to complete this procedure. 2.) You must know how to create a web server before you complete the following procedure.

1. Log in to the web server host
2. Create directory to host the NW repository (`netwitness-11.1.0.0.zip`), for example `ziprepo`under `web-root` of the web server. For example, /var/netwitness is the web-root, submit the following command string.
   `mkdir -p /var/netwitness/<your-zip-file-repo>`
3. Create the 11.1.0.0 directory under `/var/netwitness/<your-zip-file-repo>`.
   `mkdir -p /var/netwitness/<your-zip-file-repo>/11.1.0.0`
4. Create the `OS` and `RSA` directories under `/var/netwitness/<your-zip-file-repo>/11.1.0.0`.
   `mkdir -p /var/netwitness/<your-zip-file-repo>/11.1.0.0/OS`
   `mkdir -p /var/netwitness/<your-zip-file-repo>/11.1.0.0/RSA`
5. Unzip the `netwitness-11.1.0.0.zip` file into the `/var/netwitness/<your-zip-file-repo>/11.1.0.0`directory.
   `unzip netwitness-11.1.0.0.zip -d /var/netwitness/<your-zip-file-repo>/11.1.0.0`
   Unzipping `netwitness-11.1.0.0.zip` results in two zip files (`OS-11.1.0.0.zip` and `RSA-11.1.0.0.zip`)and some other files.
6. Unzip the:
   a. `OS-11.1.0.0.zip` into the `/var/netwitness/<your-zip-file-repo>/11.1.0.0/OS` directory.
      `unzip /var/netwitness/<your-zip-file-repo>/11.1.0.0/OS-11.1.0.0.zip -d /var/netwitness/<your-zip-file-repo>/11.1.0.0/OS`
      The following example illustrates how the Operating System (OS) file structure will appear after you unzip the file.

../

NetWitness Suite ISO Files 4

Create a NetWitness Suite USB Build Stick 5

Revision History **8**

Create Host Build Stick

These instructions tell you how to image an RSA NetWitness Suite host with the NetWitness Suite software image.

Resources Required

You need the following tools to complete these instructions.

- Automated tool to create a build stick [for example Universal Netboot (UNetbootin) installer tool]
- NetWitness Suite USB file
- USB drive with 8GB capacity

Automated Tool to Create Build Stick

You can use an automated tool to create the build stick. The UNetbootin tool is used in the examples in this document.

Note: Make sure that you have all of the resources listed above before starting the process.

Build Stick Installation Media

Installation media is in the form of ISO files, which are available for download from Download Central (https://download.rsasecurity.com). As part of your order fulfillment, RSA gives you access to the ISO files that pertain to each customer order.

NetWitness Suite ISO Files

The `rsa-<release number>.<build-number>.<OS number>-usb.iso` is the file naming convention for ISO files. When installing software on your NetWitness Suite host, make sure you are using the correct release. This document uses `rsa-11.x.x.x.<build-number>.el7-usb.iso` as an example of an ISO file.

Contact Customer Care at nwsupport@rsa.com for assistance.

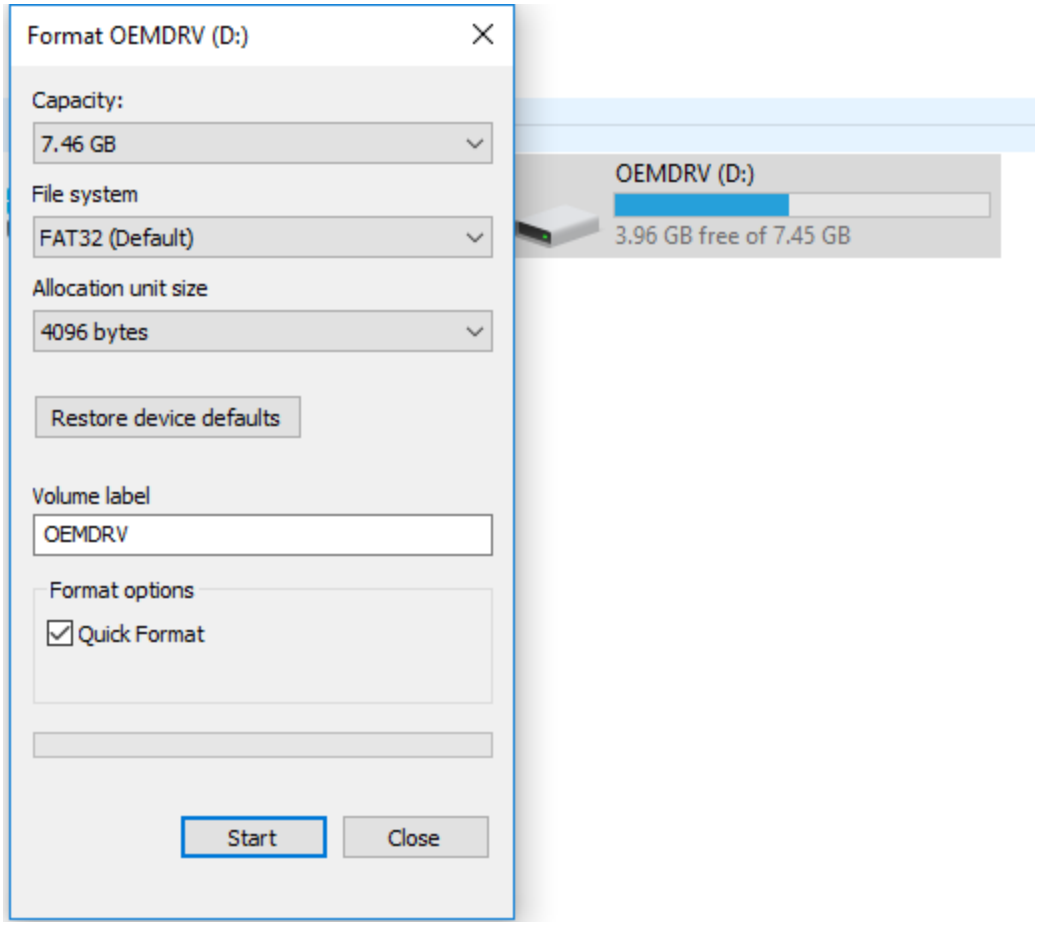
Create a NetWitness Suite USB Build Stick

Note: You must use a USB drive that is 8GB or larger and is formatted as FAT32.

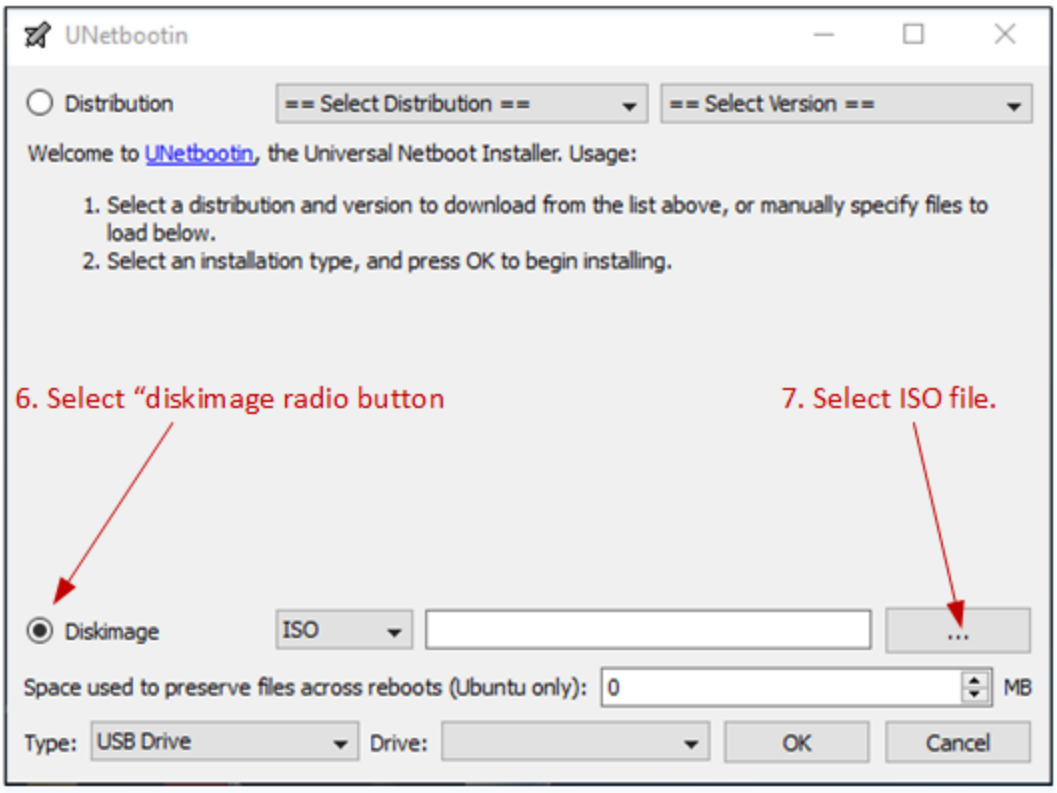
These instructions tell you how to create a USB "build-stick" to load the operating system and NetWitness Suite software onto your NetWitness Suite host.

Caution: All existing data on the USB drive will be destroyed.

1. Insert the USB drive that you will use as the build stick.
2. Format the USB drive.
   a. In Microsoft Windows Explorer, go to "**This PC**" for Windows 10 or **Computer** for older Windows Operating Systems.
   b. Right click the USB device, and click **Format**.
   c. In the format menu, make sure that your drive has **OEMDRV** for the **Volume label**, check the **Quick Format** checkbox, and click **Start**.

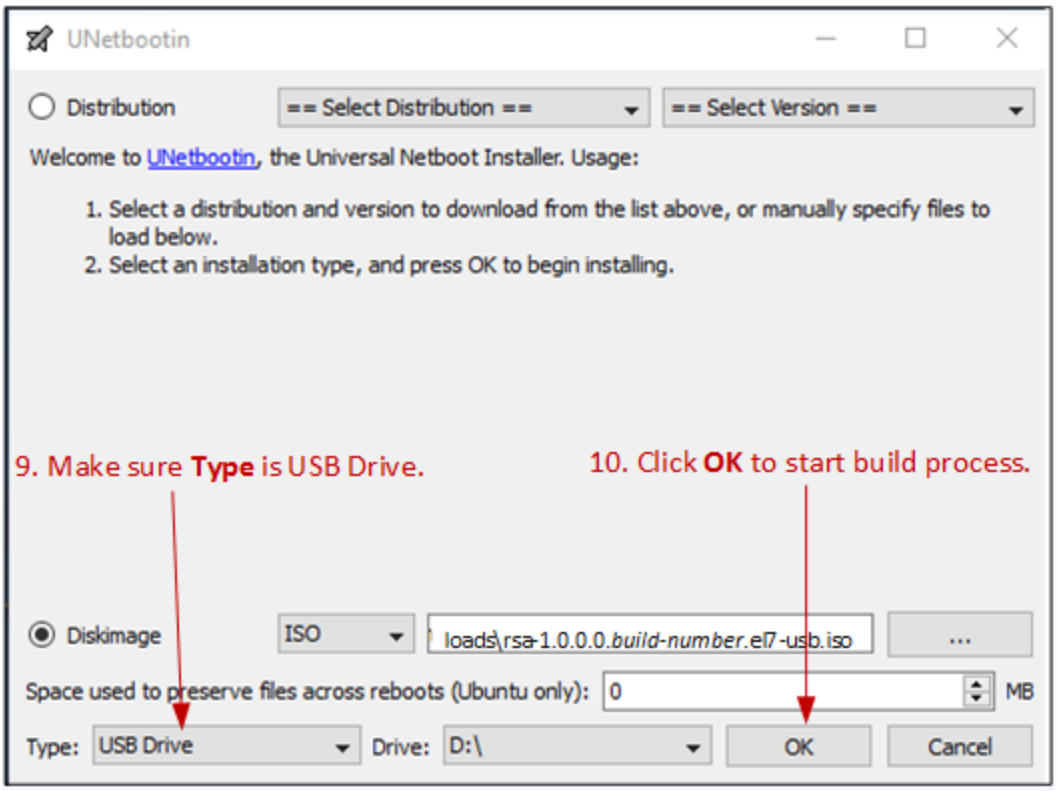


3. Download the NetWitness Suite USB ISO image.
4. Download an automated tool to create a build stick (for example UNetbootin).
5. Launch the tool.



6. Select the **Diskimage** radio button.
7. Select the appropriate version of the NetWitness Suite ISO by clicking on ... and navigating to the ISO file in your Local directory (for example, **C:/temp/rsa-11.x.x.x.<build-number>.el7-usb.iso**).

8. Highlight the usboot file and click **Open** to select the ISO file.



9. Confirm the **Type** is set to USB Drive and the **Drive** is set to the appropriate USB drive.
10. Click **OK** to start the build process.
11. After the process completes, **Exit** to complete the automated file extraction. (Do not click **Reboot Now** unless you want to reboot your Windows computer.)
12. Go to My Computer, right click **USB** and click **Safely Remove or Eject**.
13. After the USB drive is ejected, unplug the USB device.
    The bootable USB is now ready.

Introduction

Note: The information in this guide applies to Version 11.1 and later.

Hosts can be laptops, workstations, servers, tablets, routers, or any system, physical or virtual, where a supported operating system is installed. An Endpoint Insights Agent can be deployed on a host with either a Windows, Mac, or Linux operating system. The installation process involves:

1. Generating an agent packager to collect only endpoint data or to collect both endpoint and log data (Windows only)
2. Generating the agent installer

You can run the agent installer specific to your operating system to deploy agents on the hosts. The agents collect endpoint data and Windows logs (if enabled) from these hosts. It monitors activities and reports data and scan results to the Endpoint Hybrid or Endpoint Log Hybrid over HTTPs.

Supported Operating Systems

Windows

The agent software runs on the following Windows operating systems:

- Windows Vista (32 and 64-bit)
- Windows 7 (32 and 64-bit)
- Windows 8 (32 and 64-bit)
- Windows 8.1 (32 and 64-bit)
- Windows 10 (32 and 64-bit)
- Windows 2008 Server (32 and 64-bit)
- Windows 2008 R2 (32 and 64-bit)
- Windows 2012 Server
- Windows 2012 Server R2
- Windows 2016 Server

Linux

The agent software runs on either i386 or x84_64 architecture and on the following Linux operating systems:

- CentOS 6.x and 7.x
- Red Hat Linux 6.x and 7.x

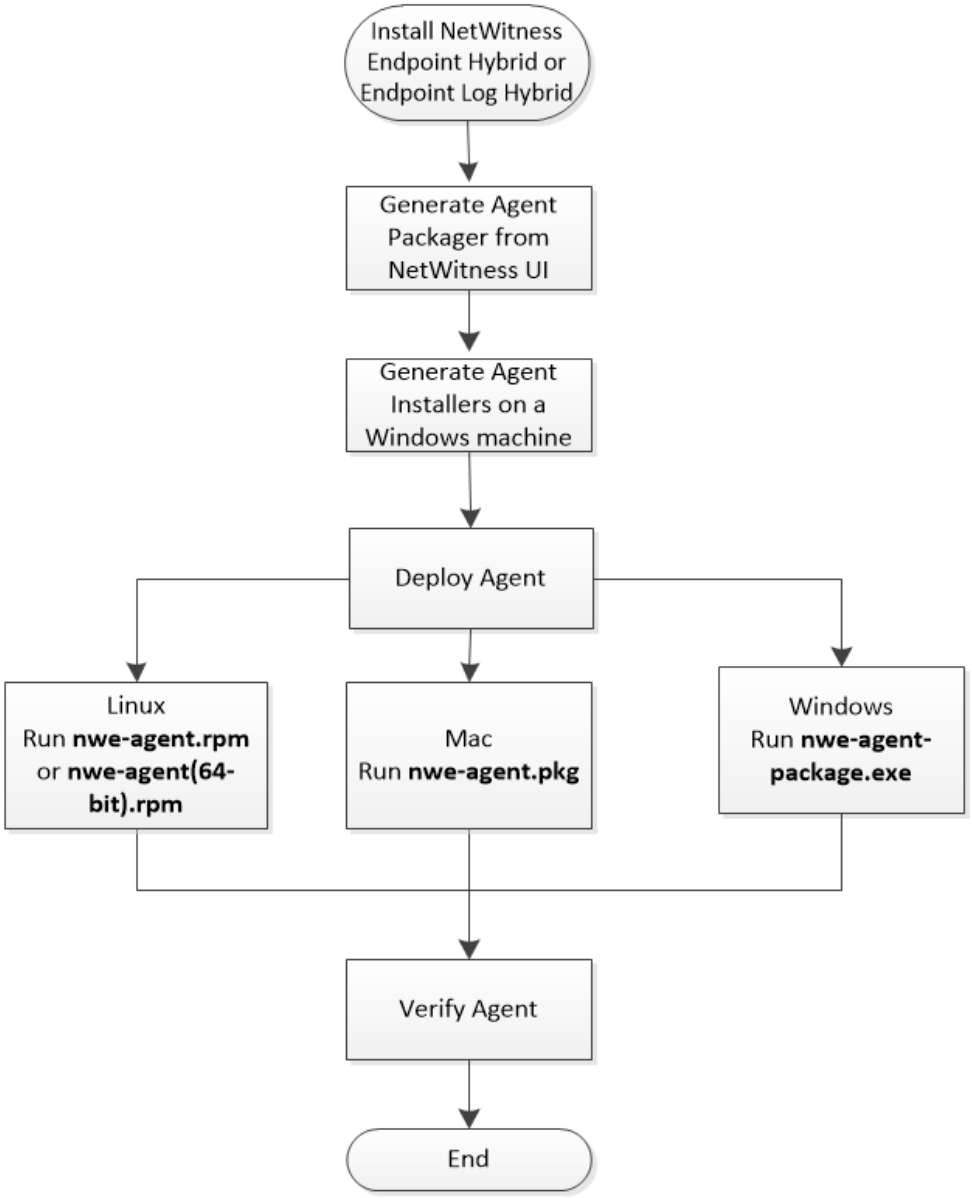
Mac

The agent software runs on the following Mac operating systems:

- Mac OS X 10.9 (Mavericks)
- Mac OS X 10.10 (Yosemite)
- Mac OS X 10.11 (El Capitan)
- Mac OS X 10.12 (Sierra)

Installation Flowchart

The following flowchart illustrates the Endpoint agent installation process:



Install NetWitness Endpoint Hybrid or Endpoint Log Hybrid
Generate Agent Packager from NetWitness UI
Generate Agent Installers on a Windows machine
Deploy Agent
Linux
Run **nwe-agent.rpm** or **nwe-agent(64-bit).rpm**
Mac
Run **nwe-agent.pkg**
Windows
Run **nwe-agent-package.exe**
Verify Agent
End

Prerequisites

- Install RSA NetWitness Suite. For more information, see the *Physical Host Installation Guide* or *Virtual Host Installation Guide*.
- Configure NetWitness Endpoint Hybrid or Endpoint Log Hybrid. For more information, see the *Endpoint Insights Configuration Guide*.

Generate an Endpoint Agent Packager

Generating an Agent Packager for Endpoint Data Collection

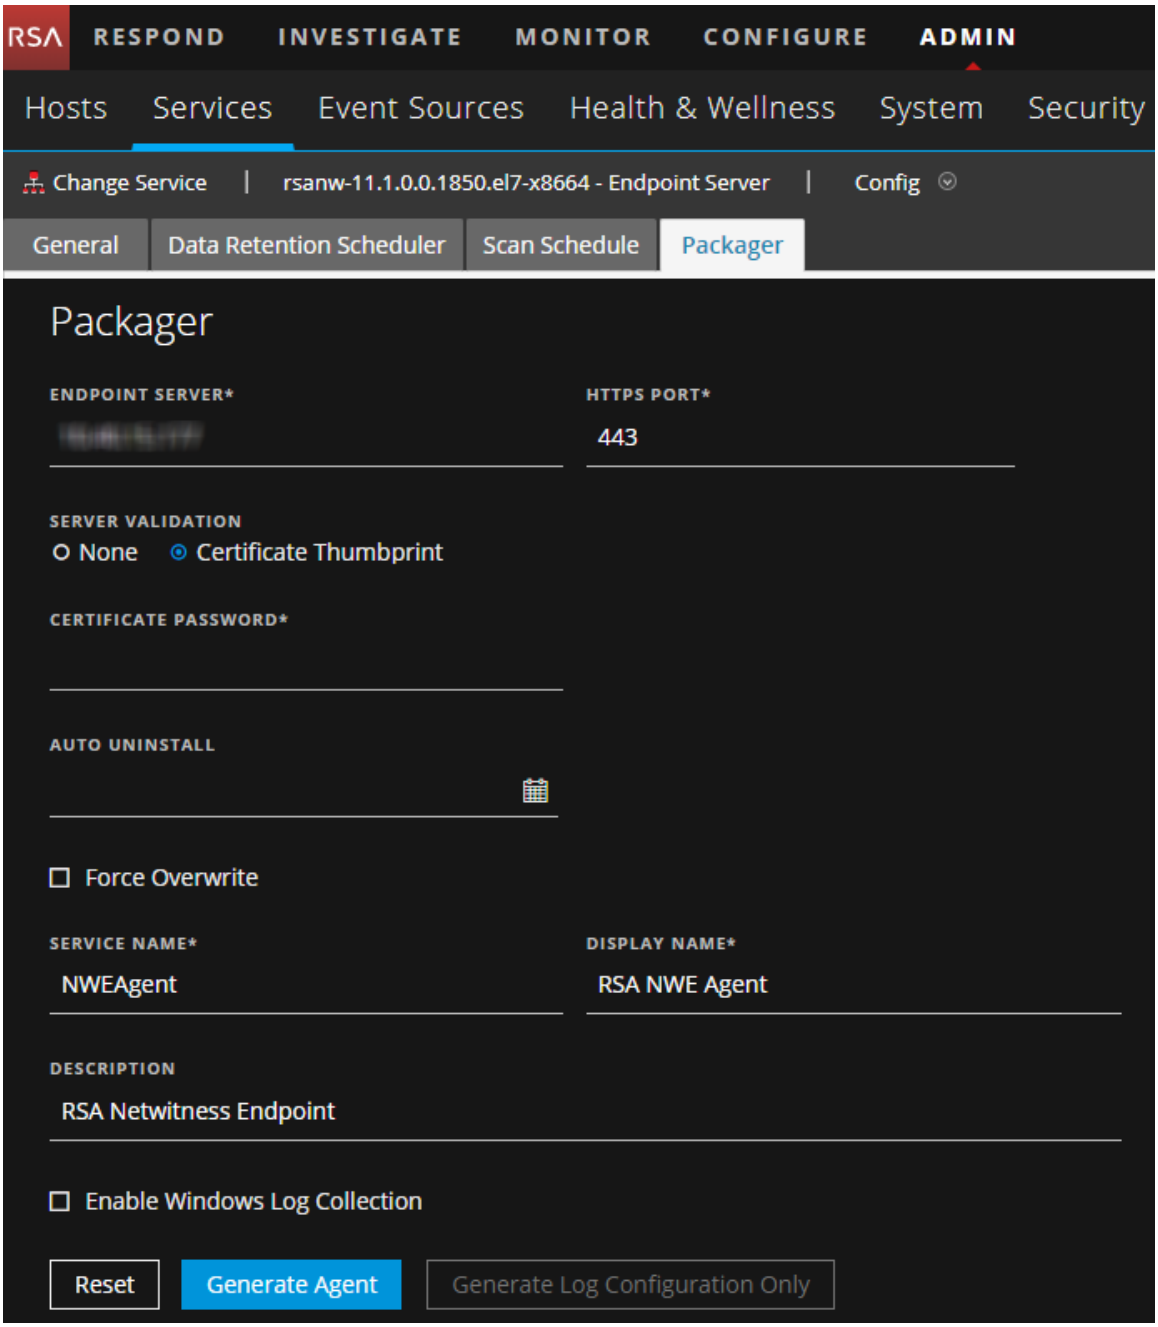
To generate an agent packager for collecting only endpoint data from hosts:

1. Log into NetWitness Suite.

   Type `https://<NW-Server-IP-Address>/login` in your browser to get to the NetWitness Suite Login screen.

2. Click **ADMIN > Services**.

3. Select the **Endpoint Server** service and click **> View > Config > Packager** tab. The Packager tab is displayed.



4. Enter the values in the following fields:

Field	Description
Endpoint Server	Host name or IP address of the Endpoint Server. For example, 10.10.10.3.

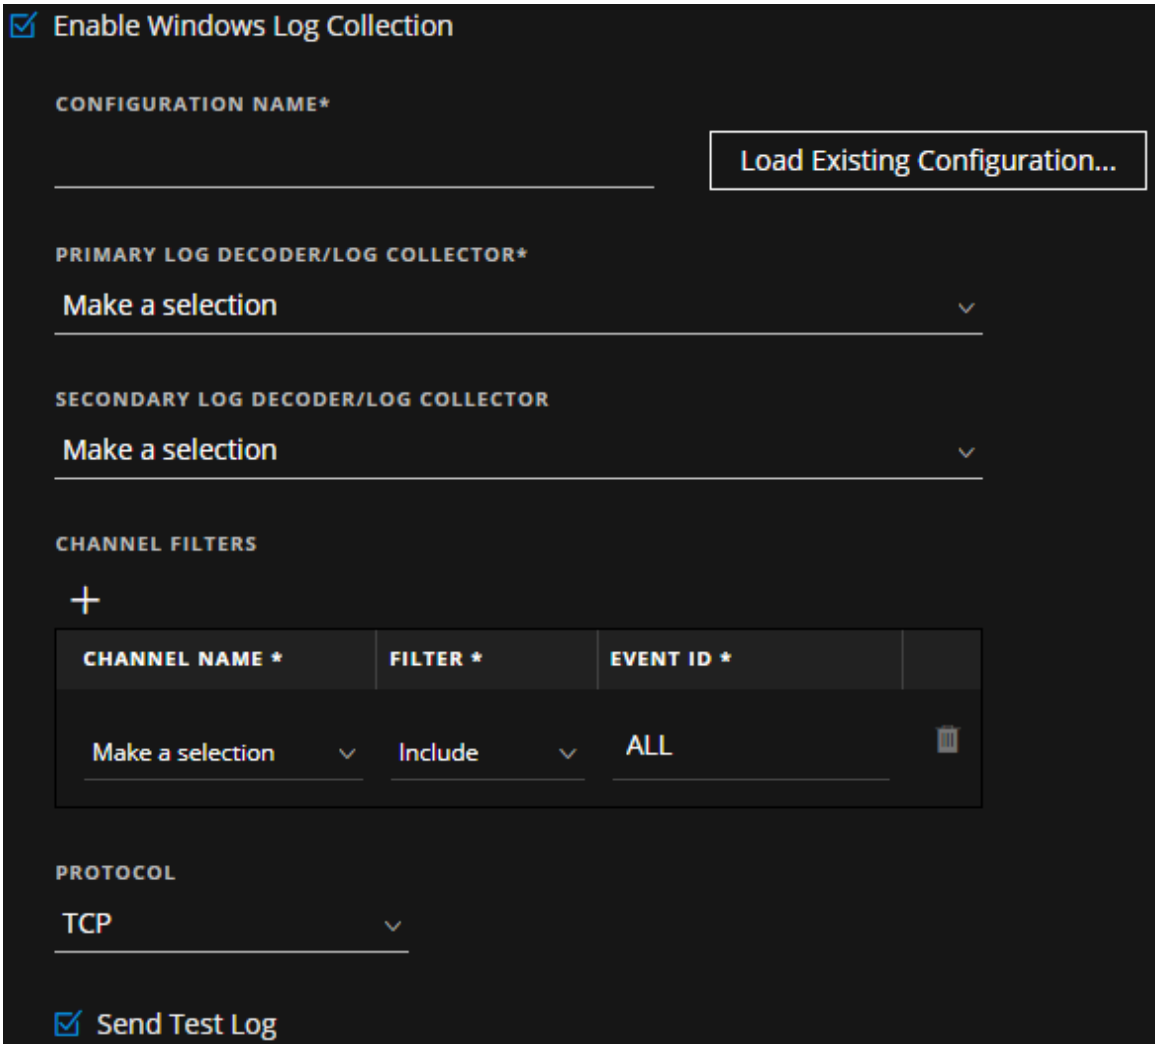
Field	Description
HTTPS Port	Port number. For example, 443.
Server Validation	Determines how the agent validates the Endpoint Server certificate: • None – The agent will not validate the server certificate. • Certificate Thumbprint – default selection. The agent identifies the server by validating the thumbprint of the Root CA of the server certificate.
Certificate Password	Password used to download the packager. The same password is used while generating the agent installer. For example, netwitness.
Auto Uninstall	Date and time the agent automatically uninstalls. You can leave it blank if not required.
Force Overwrite	Overwrites the installed Windows agent regardless of the version. If this option is not selected, the same installer can be run multiple times on a system, but installs the agent only once. **Note:** If you enable this option, make sure that you provide the same service name as the previously installed agent, while creating a new agent.
Service Name	Name of the agent. This field is applicable only for Windows. For example, NWEAgent.
Display Name	Display name of the agent. This field is applicable only for Windows. For example, NWE.
Description	Description of the agent. This field is applicable only for Windows. For example, RSA NetWitness Endpoint.
Generate Agent	Generates an agent packager.

5. Click **Generate Agent**.
   This downloads an agent packager (**AgentPackager.zip**) on the host where you are accessing the NetWitness Suite user interface.

Generating an Agent Packager with Windows Log Collection

You can enable the Windows Log Collection feature in the agent while generating the agent packager. By enabling this option, a Log Configuration file is generated, and the agent can collect and forward Windows logs. To enable the Windows Log Collection:

1. Perform steps 1 to 4 in Generating an Agent Packager for Endpoint Data Collection.
2. Select **Enable Windows Log Collection**.



3. Enter or select the values in the following fields:

Field	Description
Configuration Name	Name of the configuration. Configuration name can have special characters, alphanumeric values, hyphens, spaces, and underscores.

Field	Description
Load Existing Configuration	Loads an existing configuration from the user system. The Windows Log Collection fields get populated with the information on a successful upload. **Note:** Warning messages are displayed during upload if there are any errors or warning.
Primary Log Decoder/Log Collector	Primary Log Decoder or Log Collector for forwarding logs. This displays the list of Log Decoders or Remote Log Collectors in the current deployment. This field is a combination of display name of service, host name, and service type.
(Optional) Secondary Log Decoder/Log Collector	Secondary Log Decoder or Log Collector for forwarding logs. The secondary Log Decoder or Log Collector receives the Windows events if the agent cannot reach the primary Log Decoder or Log Collector. **Note:** For the UDP protocol, the secondary Log Decoder or Log Collector is not functional. The logs are not forwarded to the secondary Log Decoder or Log Collector when the primary is down, thus resulting in the event loss.
Protocol	Select the protocol from the drop-down menu. The available options are UDP, TCP, and TLS. By default, the protocol is TCP.

Field	Description
Channel Filters	Channels from which the logs are collected. You can add or remove a channel filter. There should be at least one channel filter to collect the logs. • **Channel Name**: Select the channel from the drop-down menu. The available options are System, Security, Application, Setup, and Forwarded Events. You can also create a custom channel by entering a custom channel name path. This is added to the channel name list. To find custom channels, go to the **Windows Event Viewer** on your computer. • **Filter**: Click to add a channel filter. Click the drop-down menu to Include or Exclude the event IDs from a particular channel when generating the agent packager or the Log Configuration file. By default, for the Include option, the Event ID is set to **ALL**. For the Exclude option, the Event ID is set to blank. Click to remove a channel filter. • **Event ID**: Enter the Event IDs for this channel. These are specific to channels and are the IDs that need to be collected. The event IDs can be numeric or a range. For example, use it in a range, 15-32. But, a reverse range is not allowed, for example, 32-15. Event IDs can also be used as combinations, for example, list of event IDs separated by commas, such as 248, 903, 16384, and so on. **Note:** When you enter ALL, it implies all event IDs for that channel. You can use Windows Event Viewer to identify event IDs and channel name to be configured in the UI. The following example displays the navigation to get event ID and channel name for Windows Powershell. To view the information, go to Run and type `Event Viewer`, go to **Applications and Services Logs** > **Windows Powershell**. The event IDs and channel name in Application and Services Logs for Windows Powershell are displayed.

Field	Description
	Send test log	Sends a test log message. By default, this option is enabled. A test log message is sent on a new agent deployment or configuration change from the agent to the Log Decoder. It contains all the fields configured for the agent. These events can help understand agents' connectivity to the destination.
Generate Agent	Generates an agent packager. The Log Configuration file is created in the AgentPackager.zip file.
Generate Log Configuration Only	Generates the Log Configuration file as per the parameters specified above or if uploaded using the Load Existing Configuration option. **Note:** The contents of the generated Log Configuration file should not be tampered. If any changes are made, the agent does not read the information from the file.

Note: You can enable the Windows Log Collection feature later by downloading and deploying the Log Configuration file. For more information, see the "Add/Update Windows Log Collection file using Endpoint Agent" section in the *Log Collection Configuration Guide*.

Generate Endpoint Agent Installers

To generate endpoint agent installers to deploy on hosts:

Note: Use a Windows machine to execute the agent packager file.

1. Unzip the **AgentPackager.zip** file. It includes the following:
   - **agents** folder – Contains executables for Linux, Mac, and Windows.
   - **config** folder – Contains configuration file and the certificates required to communicate between the Endpoint Server and the agent.
   - **AgentPackager.exe** file.
2. Run the **AgentPackager.exe** file.
3. Enter the same password used while generating the agent packager and press **Enter**. This creates the following installers in the root folder:
   - nwe-agent-package.exe (for Windows)
   - nwe-agent.pkg (for Mac)
   - nwe-agent.rpm (for Linux 32-bit)
   - nwe-agent(64-bit).rpm (for Linux 64-bit)

Deploy and Verify Endpoint Agents

This section provides instruction on how to deploy and verify agents.

Deploying Agents (Windows)

To deploy the agent, run the **nwe-agent-package.exe** file on the hosts you want to monitor.

Verifying Windows Agents

After deploying the Windows agents, you can verify if a Windows agent is running by using any of the following methods:

- Using the NetWitness Endpoint UI
  The Hosts view contains the list of all hosts with an agent. You can look for the host name on which the agent is installed.

Note: Click **Investigate** > **Hosts** or press F5 to refresh the list for latest data.

- Using Task Manager
  Open Task Manager and look for service name that you configured while generating the agent packager.
- Using Services.msc
  Open Services.msc in run and look for NWEAgent.

Deploying Agent (Linux)

To deploy the agent, run the **nwe-agent.rpm** (for 32-bit) or **nwe-agent(64-bit).rpm** (for 64-bit) file on the hosts you want to monitor. Use the 32-bit rpm for i386 and 64-bit rpm for x84_64 machines.

Verifying Linux Agents

After deploying the Linux agents, you can verify if a Linux agent is running by using any of the following methods:

- Using the NetWitness Endpoint UI.
  The Hosts view contains the list of all hosts with an agent.

Note: Click **Investigate > Hosts** or press F5 to refresh the list for latest data.

- Using Command Line

  Run the following command to get the PID:

  ```
  pgrep nwe-agent
  ```

- To check the NetWitness Endpoint version, run the command:

  ```
  cat /opt/rsa/nwe-agent/config/nwe-agent.config | grep version
  ```

Deploying Agent (Mac)

To deploy the agent, run the **nwe-agent.pkg** file on the hosts you want to monitor.

Verifying Mac Agents

After deploying the Mac agents, you can verify if a Mac agent is running by using any of the following methods:

- Using the NetWitness Endpoint UI

  The Hosts view contains the list of all hosts with an agent.

Note: Click **Investigate > Hosts** or press F5 to refresh the list for the latest data.

- Using Activity Monitor

  Open Activity Monitor (/Applications/Utilities/Activity Monitor.app) and look for NWEAgent.

- Using Command Line

  Run the following command to get the PID

  ```
  pgrep NWEAgent
  ```

- To check the NetWitness Endpoint version, run the command:

  ```
  grep a /var/log/system.log | grep NWEAgent | grep Version:
  ```

Configuring the Communication Between Endpoint Server and Endpoint Agents on Windows Vista, 2008 Server, Mac OS X 10.9 and 10.10

By default, the FIPS mode is enabled on the Endpoint Server, which means that agents installed on Windows Vista, 2008 Server, Mac OS X 10.9 and 10.10 cannot communicate with the Endpoint server.

To resolve this, perform the following steps on the Endpoint Hybrid or Endpoint Log Hybrid to disable the FIPS mode:

1. Go to `/etc/pki/tls/owb.cnf` and edit the file to disable the FIPS mode.

```
# FIPS Mode
#   Configures the BSAFE Libraries to be in FIPS Mode.
#
#   Values: "on", "off".
#   Default: "off"
fips_mode = off
```

2. Go to `/etc/nginx/conf.d/nginx.conf` and edit the file to comment the following lines:

```
#    ssl_ciphers AES256+EECDH:AES256+EDH:!aNULL;
#    ssl_prefer_server_ciphers on;
```

3. Restart the Nginx server using the following command:

```
systemctl restart nginx
```

Uninstall Agents

This section provides the commands to uninstall the agent.

Uninstalling Windows Agent

Run the following command:

```
msiexec /x{63AC4523-5F19-42F0-BC43-97C8B5373589}
```

Uninstalling Linux Agent

Run the following command:

```
rpm –ev nwe-agent
```

Uninstalling Mac Agent

Run the following commands:

1. `sudo launchctl unload /Library/LaunchDaemons/com.rsa.nwe.agent.daemon.plist`
2. `sudo rm -Rf /usr/local/nwe`
3. `sudo rm -Rf '/Library/Application Support/NWE'`
4. `sudo rm –Rf /Library/LaunchDaemons/com.rsa.nwe.agent.daemon.plist`
5. `sudo pkgutil --forget com.rsa.pkg.nwe`

RSA NetWitness® Suite 11.1 Upgrade Path 8

Supported Host Upgrade Path 8

Hardware, Deployments, Services, and Features Not Supported in 11.1 8

Event Stream Analysis (ESA) Upgrade Considerations 9

Upgrade Phases 9

Investigate in Mixed Mode 11

Upgrade Workflow 15

Contact Customer Support 15

Upgrade Preparation Tasks **16**

Global 16

Task 1 - Review Core Ports and Open Firewall Ports 16

Task 2 - Record Your 10.6.5.x admin user Password 17

Task 3 - Create a Backup of the /etc/fstab File 17

Respond 17

Task 4 - Check Aggregation Rules Match Conditions for “Domain” or “Domain for Suspected C&C” 17

Reporting Engine 18

(Conditional) Task 5 - Unlink External Storage 18

Warehouse Connector 19

(Conditional) Task 6 - Copy keytab files in root or etc Directory Stored in Other Directory 19

Backup Instructions **20**

Task 1 - Set up an External Host for Backing up Files 21

Task 2 - Create a List of Hosts to Back up 23

Troubleshooting Information 25

Task 3 - Set up Authentication Between Backup and Target Hosts 27

Task 4 - Check for Backup Requirements for Specific Types of Hosts 27

For All Host Types 27

For ESA Hosts with Mongo Databases 28

For Decoder, Concentrator, or Broker Hosts: Stop Data Capture and Aggregation 28
Log Collectors (LC) and Virtual Log Collectors (VLCs): Run prepare-for-migrate.sh 28
For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint: List RabbitMQ Usernames and Passwords 30
For Bluecoat Event Sources 30
Task 5 - Check for Adequate Space for the Backup 30
Task 6 - Back up Your Host Systems 31
Post Backup Tasks 35
Task 1 - Save a Copy of the all-systems File and the Backup Tar files 35
Task 2 - Ensure Required Backup Files Were Generated 35
Task 3 - (Conditional) For Multiple ESA Hosts, Copy mongodb tar files to Primary ESA Host 36
Task 4 - Ensure All Required Backup Files are on Each Host 36

Upgrade Tasks 39

Phase 1 - Upgrade SA Server, Event Stream Analysis, Malware Analysis Hosts, and Broker or Concentrator 39
Task 1 - Upgrade the 10.6.5.x SA Server to 11.1 NW Server 39
Task 2 - Upgrade 10.6.5.x ESA to 11.1 39
Task 3 - Upgrade 10.6.5.x Malware Analysis to 11.1 40
Task 4 - Upgrade 10.6.5.x Broker or 10.6.5.x Concentrator to 11.1 40
Phase 2 - Upgrade All Other Hosts 40
Decoder and Concentrator Hosts 40
Log Decoder Host 40
Virtual Log Collector Host 41
All Other 10.6.5.x Hosts to 11.1 42
Upgrade the 10.6.5.x SA Server Host to the 11.1 NW Server Host 42
Upgrade a 10.6.5.x non-SA Server Host to 11.1. 51

Update or Install Legacy Windows Collection 60

Post Upgrade Tasks 61

NW Server 61
Task 1 - Migrate Active Directory (AD) 61
Task 2 - Modify Migrated AD Configuration to Upload Certificate 62
Task 3 - Reconfigure Pluggable Authentication Module (PAM) in 11.1 62
Task 4 - Restore NTP Servers 62

Task 5 - Restore Licenses for Environments without FlexNet Operations-On Demand Access 62
(Conditional) Task 6 - If You Disabled Standard Firewall Config - Add Custom IPtables 63
(Conditional) Task 7 - Specify SSL Ports If You Never Set Up Trusted Connections 63
Task 8 - (Conditional) Correct Audit Log Templates That Are Not Updated in Logstash Output Conf File 64
RSA NetWitness® Endpoint 65
Task 9 - Reconfigure Recurring Feed Configured from Legacy Endpoint Because Java Version Changed 65
RSA NetWitness® Endpoint Insights 65
(Optional) Task 10 - Install Endpoint Hybrid or Endpoint Log Hybrid 65
Task 11 - Reconfigure Endpoint Alerts Via Message Bus 65
Event Stream Analysis Tasks 66
Task 12 - Reconfigure Automated Threat Detection for ESA 66
Task 13 - For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint Configure Mutually Authenticated SSL 66
Task 14 - Enable Threat - Malware Indicators Dashboard 67
Investigate 67
Task 15 - Make Sure User Roles Have Customized User Roles Have Investigate-server Permissions for Event Analysis Access 67
Log Collection 68
Task 16 - Reset Stable System Values for Log Collector after Upgrade 68
(Optional for Upgrades from 10.6.5.x with FIPS enabled for Log Collectors, Log Decoders and Packet Decoders)Task 17 - Enable FIPS Mode 69
Reporting Engine 69
(Conditional) Task 18 - Restore the CA certificates for External Syslog Servers for Reporting Engine 69
(Conditional) Task 19 - Restore External Storage for Reporting Engine 70
Respond 70
(Conditional) Task 20 - Restore Custom Analysts Roles 70
Task 21 - Restore Respond Service Custom Keys 70
Task 22 - Restore Customized Respond Service Normalization Scripts 71
Task 23 - Add Respond Notification Settings for Custom Roles 71
Task 24 - Manually Configure Respond Notification Settings 72
Task 25 - Update Default Incident Rule Group By Values 73
Task 26 - Add Group By Field to Incident Rules 74

Task 27 - Update Incident Rules Identified in the Domain in the Matching Conditions Upgrade Preparation Task 75
SecOps Manager 76
Task 28 - Reconfigure NW SecOps Manager Integration 77
Warehouse Connector 77
Task 29 - Restore keytab Files, Mount NFS, Install Service 77
Task 30 - Refresh Warehouse Connector Lockbox and Start Stream 77
Backup 78
Task 31 - Remove Backup-Related Files from Host Local Directories 78
Appendix A. Troubleshooting 79
Section 1 - General Troubleshooting information 79
Command Line Interface (CLI) 79
Backup (nw-backup script) 82
Event Stream Analysis 84

Configure NFS Server - NFS Server config File 95
Boot iDRAC to NFS Configuration 96
Appendix D. Create External Repository 97
Revision History 100

Introduction

The instructions in this guide apply to the upgrade of physical hosts to RSA NetWitness® Suite 11.1 exclusively. See the *RSA NetWitness® Suite 10.6.5 to 11.1 Virtual Host Upgrade Guide* for instructions on how to upgrade your virtual hosts to 11.1.

NetWitness Suite 11.1 is a major release that affects all products in the NetWitness Suite. The components of the suite are the NetWitness Server (Admin server, Config server, Integration server, Investigate server, Orchestration server, Respond server, and Security sever), Archiver, Broker, Concentrator, Context Hub, Decoder, Endpoint Hybrid, Endpoint Log Hybrid, ESA Primary, ESA Secondary, Log Collector, Log Decoder, Malware Analysis, Reporting Engine, Warehouse Connector, and Workbench.

Refer to the *RSA NetWitness Suite Getting Started Guide* to become familiar with the major changes to the 11.x User interface. Refer to the *RSA NetWitness Suite Deployment Guide* to become familiar with the major platform changes in 11.x.

Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Note: The Reporting Engine is installed on the NW Server host, Workbench is installed on the Archiver host, Warehouse Connector can be installed on the Decoder host or Log Decoder host.

CentOS6 to CentOS7 Upgrade

NetWitness Suite 11.1 is a major release that involves upgrading to a newer version of the operating system (CentOS6 to CentOS7). In addition, the 11.1 platform environment has been improved greatly to accommodate current and future physical and virtual deployment types. These changes require an upgrade to the new environment and an upgrade of the functionality.

RSA NetWitness® Suite 11.1 Upgrade Path

The earliest supported Upgrade path for RSA NetWitness® Suite 11.1 is Security Analytics 10.6.5.x. If you are running a version of NetWitness Suite that is prior to 10.6.5.x, you must update to 10.6.5.x before you can upgrade to 11.1. See the *RSA Security Analytics 10.6.5 Update Guide* (https://community.rsa.com/docs/DOC-85119) on RSA Link.

Supported Host Upgrade Path

You must upgrade a host to the same host type:

- Same Series RSA Physical Appliance to Same Series RSA Physical Appliance (that is, Series 4 to Series 4, Series 5 to Series 5).
  RSA does not support third-party physical hosts in 11.1.
- On-Prem Virtual to On-Prem Virtual

Caution: The 11.1 upgrade does not support mixed-platform upgrades (for example, it does not support physical to virtual).

Hardware, Deployments, Services, and Features Not Supported in 11.1

RSA does not support upgrade of the following hardware, deployments, services, and features to 11.1.

- RSA All-in-One (AIO) Appliance
- Multiple NetWitness Server Deployment
- IPDB service
- Malware Analysis service co-located on the SA Server (Upgrade of Malware Analysis Enterprise is supported in 11.1.)
- Standalone Warehouse Connector service (Upgrade of a co-located Warehouse Connector is supported in 11.1.)
- Custom Health & Wellness policy in 10.6.x for the Context Hub Service
  After you upgrade to NetWitness 11.1, your custom policy is not present. In its place, there is the out-of-the-box Context hub Server Monitoring Policy in the user interface, which is specific for version 11.1.

- Defense Information Strategic Agency-Security Technical Information Guide (DISA-STIG) hardened deployments.
- Warehouse Analytics (Data Science)

Event Stream Analysis (ESA) Upgrade Considerations

In RSA NetWitness® Suite 11.1, RSA changed how ESA Correlation Rules store and transmit the alerts the system generates. In 11.1, ESA sends all alerts to a central Alert system. The local mongo storage in ESA 10.6.5.x has been removed.

Caution: If you do not use Incident Management in 10.6.5.x, carefully consider whether or not to upgrade to version 11.1.

The following guidelines should help you determine whether or not to upgrade your ESA hosts to 11.1.

In your 10.6.5.x deployment, if you have:

- One ESA host, with or without Incident Management configured, upgrade to 11.1.
- Multiple ESA hosts configured to use Incident Management – The system will continue to aggregate alerts centrally. If the system is correctly sized and operating as intended in 10.6.5.x, you can upgrade to version 11.1.
- Multiple ESA hosts without configuration to use Incident Management and you are connecting to individual ESA hosts to view alerts, do not upgrade to version 11.1.

Note: If you did not use Incident Management in 10.6.5.x, you cannot view the 10.6.5.x ESA alerts in the 11.1 Respond component without running a migration script. Use the ESA Alert Migration script to migrate these alerts to the location in 11.1 that will allow Respond to view them. See the *ESA Alert Migration Instructions* knowledge base article (https://community.rsa.com/docs/DOC-81680) in RSA Link for instructions on how to run this script.

Upgrade Phases

RSA recommends that you stagger host upgrades as described in this section. The update to CentOS7 and the need of a physical or iDRAC access cause the 11.1 upgrade to take more time than most upgrades.

Caution: If you stagger the upgrade, you:
• must upgrade the hosts in Phase 1 first, in the order shown.
• may not have all the features operational until you update your entire deployment.
• will not have service administrative features available until you upgrade all the hosts in your deployment.

Phase 1

You perform Phase 1 first and you must upgrade the hosts in the following order:

1. Security Analytics Server host
2. Event Stream Analysis hosts
3. Malware Analysis hosts
4. Broker hosts (if you do not have a Broker, upgrade your Concentrator hosts)
   The 11.1 NW Server cannot communicate with 10.6.5.x core services for the new Investigate functionality. This is why you must upgrade the Broker or Concentrator hosts in Phase 1.

Phase 2

Upgrade the rest of your hosts.

RSA recommends that you follow the order in Phase 2 to reduce:

- functionality loss during investigation.
- downtime that results in the loss of packet and log capture.

Note: Other than Log Collection hosts with downstream event destinations, there is no technical reason to upgrade your hosts in the order shown in Phase 2.

This is the Phase 2 host upgrade order recommended by RSA.

1. Decoder hosts
2. Concentrator hosts
3. Archiver hosts
4. Log Collection hosts - Log Collectors on Log Decoder hosts (LDs), Virtual Log Collectors (VLCs) and Legacy Windows Collectors (LWCs)
   Before you upgrade a log collection host, you must prepare it for the upgrade. Part of this preparation ensures that no event data remains in the queues. This requires you to keep the downstream destinations of event data (Log Collectors, Virtual Log Collectors and Log Decoders) up and functioning properly.

If you have event data destinations downstream from the Log Decoder, you must prepare and upgrade log collectors in the following order.

a. LDs (one LD at a time)

b. VLCs and LWCs

If you do not have event data destinations downstream from the Log Decoder, you can prepare and upgrade multiple LDs, VLCs, and LWCs together.

5. All other hosts

See "Running in Mixed Mode" under "The Basics" in the *RSA NetWitness Suite Hosts and Services Getting Started Guide* for:

- Functionality gaps encountered while running in this mode.
- Examples of staggered upgrades.

Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Investigate in Mixed Mode

Mixed mode occurs when some services are upgraded to 11.1 and some are still on 10.6.5. This happens when you upgrade to 11.1 in phases.

Note: You must follow the host upgrade sequence as shown in Upgrade Phases to ensure complete Investigate functionality. The 11.1 Investigate server is installed when you upgrade the SA Server, but Broker hosts need to be upgraded to 11.1 to access the Event Analysis View. If the Broker is not upgraded, analysts see a warning icon next to the Broker and no data aggregated to that Broker can be displayed.

After you upgrade all services to 11.1, when an analyst conducts an investigation, Role-Based Access Control (RBAC) of downloads works consistently to limit access to restricted data.

In mixed mode (that is, some services are upgraded to 11.1 and some are still at 10.6.5), when an analyst conducts an investigation, RBAC is not applied uniformly to viewing and downloads.

If the `sdk.packets` setting has not been disabled on the 10.6.x services, analysts with SDK meta and roles permissions in place to restrict viewing and reconstructing an event's content can download the PCAP of an event that has content restrictions. Other types of downloads appear to be successful, then generate errors due to insufficient permissions, and the data is still protected.

During a phased update, you can disable the `sdk.packets` setting on 10.6.x services to limit the analyst from downloading any PCAPs or logs during mixed mode. After you update all services to 11.1 and re-enable `sdk.packets`, RBAC works consistently across all services.

This table identifies what you can see and download in Investigate when your NW Server at version 11.1 is connected to services at a lower version.

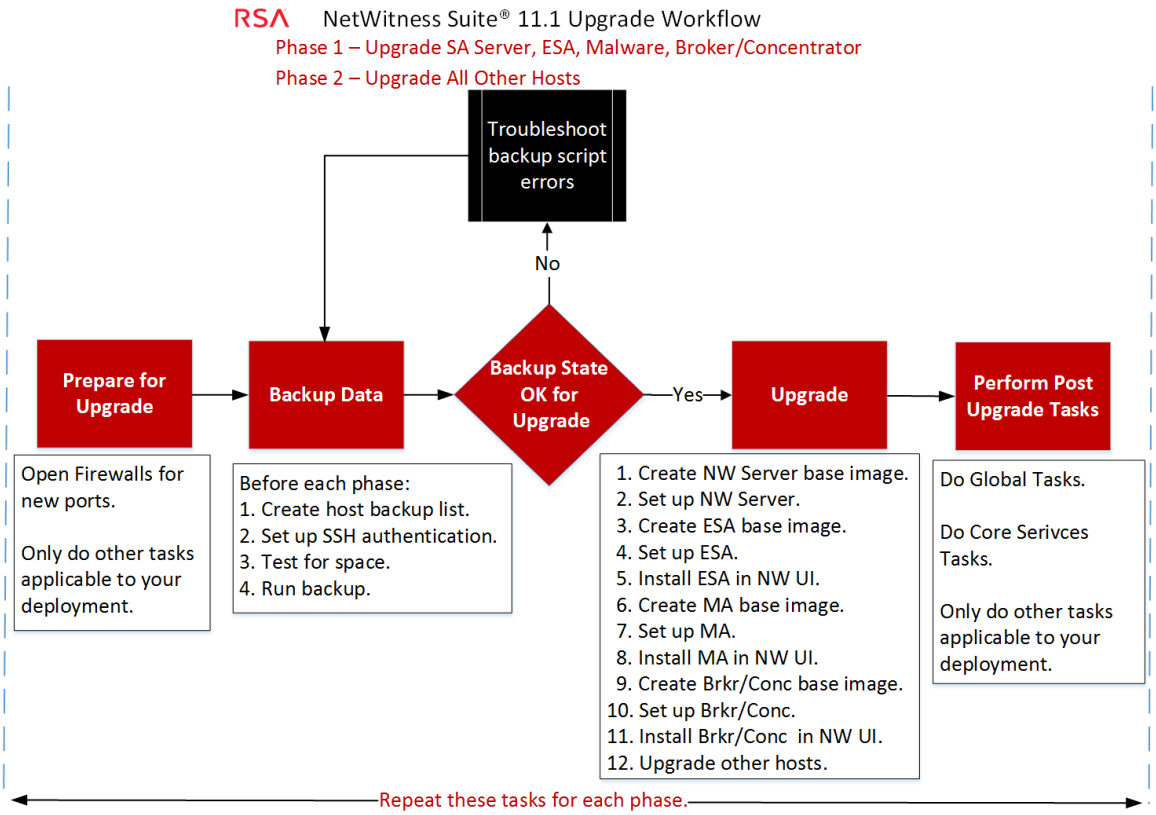
Connecting Service Version	Affected View	User Role With Restricted Content	Can See	Can Download Restricted Content Successfully	Can Download Restricted Content with Errors
11.1 Broker -> 10.6.5.x Concentrator -> 10.6.5.x Packet Decoder/Log Decoder	Events View	Analyst	RBAC permitted items	PCAP	File archive is downloaded but cannot unzip
	Event Reconstruction View	Analyst	RBAC permitted items	PCAP	File archive is downloaded but cannot unzip
	Event Analysis View	Analyst	RBAC permitted items	PCAP	Error Retrieving Payload from Service for Payload, Request Payload, Response Payload

Connecting Service Version	Affected View	User Role With Restricted Content	Can See	Can Download Restricted Content Successfully	Can Download Restricted Content with Errors
11.1 Broker -> 11.1 Concentrator ->11.1 Decoder/Log Decoder	Event Reconstruction View	Analyst and Data Privacy Officer	RBAC permitted items	PCAP	Files archive is downloaded but cannot unzip PCAPs and logs are downloaded as zero bytes

Connecting Service Version	Affected View	User Role With Restricted Content	Can See	Can Download Restricted Content Successfully	Can Download Restricted Content with Errors
11.1 Broker -> 11.0.0.x Concentrator -> 11.0.0.x Packet Decoder/Log Decoder	Events View	Analyst	RBAC permitted items	None	Files archive is downloaded but cannot unzip PCAPs and logs are downloaded as zero bytes
	Event Reconstruction View	Analyst	RBAC permitted items	None	File archive is downloaded but cannot unzip PCAPs and logs are downloaded as zero bytes
	Event Analysis View	Analyst	RBAC permitted items	None	Error Retrieving Payload from Service for Payload, Request Payload, Response Payload PCAPs and logs are downloaded as zero bytes

Upgrade Workflow

The following diagram illustrates the RSA NetWitness® Suite 11.1 upgrade workflow.



Contact Customer Support

Refer to the Contact RSA Customer Support page (https://community.rsa.com/docs/DOC-1294) in RSA Link for instructions on how to get help on RSA NetWitness Suite 11.1.

Upgrade Preparation Tasks

Complete the following tasks to prepare for the upgrade to NetWitness Suite 11.1. These tasks are organized by the following categories.

- Global
- Reporting Engine
- Respond
- Warehouse Connector

Global

You must complete these tasks regardless of how you deploy NetWitness Suite and which components you use.

Task 1 - Review Core Ports and Open Firewall Ports

The following tables lists new ports in 11.1.

Caution: Make sure that the new ports are implemented and tested before upgrading so that upgrade does not fail due to missing ports.

NW Server Host

Source Host	Destination Host	Destination Ports	Comments
NW Hosts	NW Server	TCP 4505, 4506	Salt Master Ports
NW Hosts	NW Server	TCP 27017	MongoDB

ESA Host

Source Host	Destination Host	Destination Ports	Comments
NW Server, NW Endpoint, ESA Secondary	ESA Primary	TCP 27017	MongoDB

Endpoint Hybrid or Endpoint Log Hybrid

Source Host	Destination Host	Destination Ports	Comments
Endpoint Hybrid or Endpoint Log Hybrid	NW Server	TCP 5672	Message Bus
Endpoint Server	NW Server	TCP 27017	MongoDB

All NetWitness Suite core ports are listed in the "Network Architecture and Ports" topic in the *RSA NetWitness® Suite Deployment Guide* in case you need to reconfigure NetWitness Suite services and firewalls. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 2 - Record Your 10.6.5.x `admin user` Password

Record your 10.6.5.x `admin user` password. You will need it to complete the upgrade.

Task 3 - Create a Backup of the `/etc/fstab` File

Copy the `/etc/fstab` file from all the physical hosts and into your local machine (backup host or remote machine).

Note: You need this file to restore a physical host with external storage mounts.

Respond

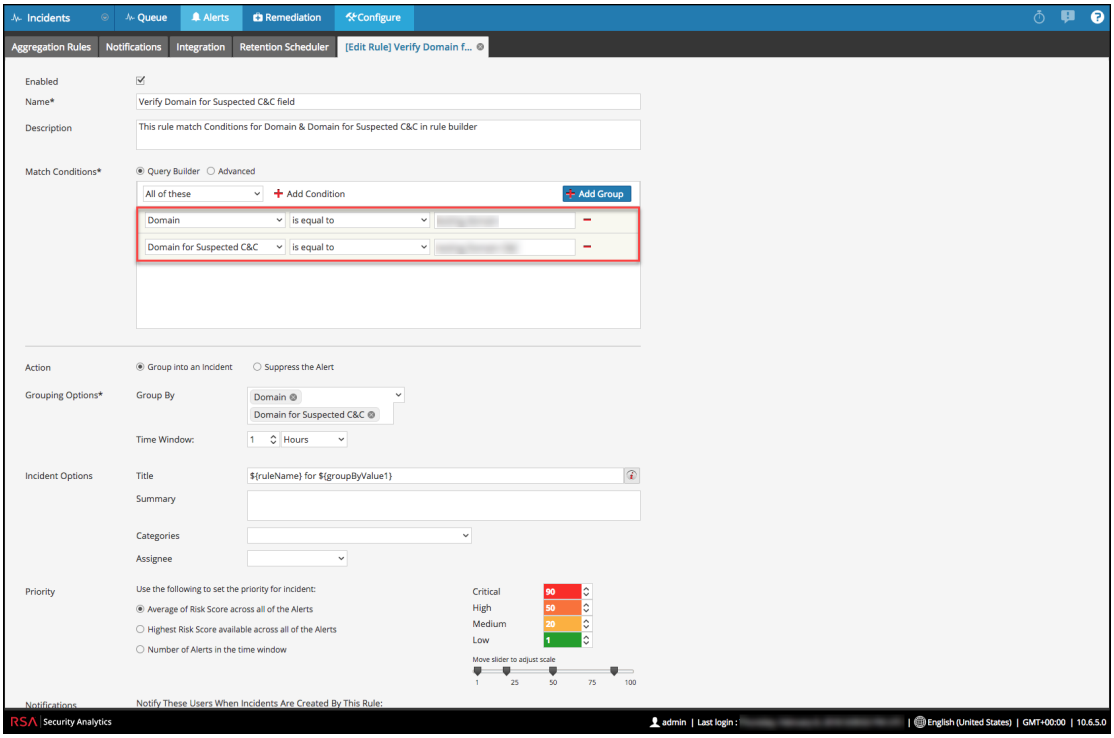
Task 4 - Check Aggregation Rules Match Conditions for “Domain” or “Domain for Suspected C&C”

Make a note of any Incident Management aggregation rules that have match conditions using Domain or Domain for Suspected C&C in the drop-down list in the rule builder. You will need to modify these rules to use Domain after you upgrade to 11.1 as described in the "Respond" Post Upgrade Tasks tasks .

Check the following for each aggregation rule:

1. In Security Analytics 10.6.5.x menu , click **Incidents** > **Configure** > **Aggregation Rules** tab and edit the rules to view the matching conditions.

2. In the **Match Conditions** section, look for **Domain** or **Domain for Suspected C&C** listed in the drop-down lists for the conditions.



3. Make a note of the rule name and the entire condition that uses **Domain** or **Domain for Suspected C&C**, including operators and values.

Reporting Engine

(Conditional) Task 5 - Unlink External Storage

If the Reporting Engine has external storage [such as Storage Area Network (SAN) or Network Attached Storage (NAS) for storing reports] you must perform the follow steps to unlink the storage.

In these steps:

- `/home/rsasoc/rsa/soc/reporting-engine/` is the Reporting Engine home directory.
- `/externalStorage/` is where the external storage is mounted.

1. SSH to the Reporting Engine host and log in with your `root` credentials.
2. Stop the Reporting Engine service.
   ```
   stop rsasoc_re
   ```
3. Switch to `rsasoc` user.
   ```
   su rsasoc
   ```

4. Change to the Reporting Engine the home directory.
   `cd /home/rsasoc/rsa/soc/reporting-engine/`
5. Unlink the `resultstore` directory mounted to external storage.
   `unlink /externalStorage/resultstore`
6. Unlink the `formattedReports` directory mounted to external storage.
   `unlink /externalStorage/formattedReports`

Warehouse Connector

(Conditional) Task 6 - Copy `keytab` files in `root` or `etc` Directory Stored in Other Directory

Copy the `keytab` files in the `root` or `etc` directory if it is stored in some other directory.

1. Record the absolute path of NFS mount directory and the `keytab` file.
   You need this information to restore the Warehouse Connector after upgrade.
2. Unmount the NFS directory.
   a. SSH to the Warehouse Connector and log in with `root` credentials.
   b. Submit the following commands to unmount the NFS directory.
      `umount <NFS-absolute-path>`

Backup Instructions

Backing up your configuration data for all your hosts from 10.6.5.x is the first step in upgrading from Security Analytics 10.6.5.x releases to NetWitness Suite 11.1.

Note: It is important that you place Custom Certificate files and any other certificate authority (CA) files in the `/root/customcerts` folder to ensure that these certificate files are backed up. Your custom certificate files that are placed in this directory will be automatically restored during the upgrade process. After upgrading to 11.1, your custom certificate files will be located in `/etc/pki/nw/trust/import`. For more information about backing up these types of files, see step 1 in For All Host Types.

Caution: These services are not supported in the 10.6.5.x backup and upgrade process.
- IPDB
- All in One servers
- Malware Analysis Co-Located on the Security Analytics Server
- Standalone Warehouse Connector
- Warehouse Analytics (Datascience)

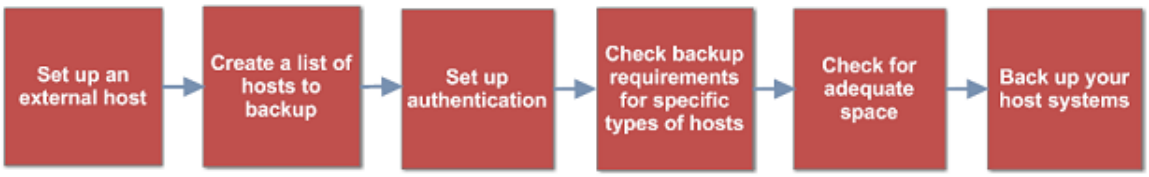
The following types of hosts can be backed up and are automatically restored during the upgrade process:

- **Security Analytics Admin Server** (may include Malware Analysis, Incident Management, Health and Wellness, and Reporting Engine)
- **Malware Analysis** (standalone)
- **Archiver**
- **Broker**
- **Event Stream Analysis** (including Context Hub and Incident Management database)
- **Concentrator**
- **Log Decoder** (including Local Log Collector and Warehouse Connector, if installed)
- **Log Hybrid**
- **Packet Decoder** (including Warehouse Connector, if installed)
- **Packet Hybrid**
- **Virtual Log Collector**

The following types of files are automatically backed up but must be restored manually after the upgrade process:

- PAM configuration files: For information about restoring the PAM configuration files, refer to "Task 5 - Reconfigure Plugable Authentication Module (PAM) in 11.1.", in the "Global" section of the **Post Upgrade Tasks**.
- `/etc/pfring/mtu.conf` and `/etc/init.d/pf_ring`: To restore these files you must manually retrieve them. The `/etc/pfring/mtu.conf` files will be located in `/var/netwitness/database/nw-backup/restore/etc/pfring/mtu.conf`, and the `/etc/init.d/pf_ring` files will be located in `/var/netwitness/database/nw-backup/restore/etc/init.d/pf_ring`. For information about how to restore these files, see "(Conditional) Task 2 - Restore Files for 10G Decoder" in the "Hardware Related Tasks" section of **Post Upgrade Tasks**.

The following diagram shows the high-level task flow of the steps you perform to back up your hosts.



The following sections describe each of these tasks:

- Task 1 - Set up an External Host for Backing up Files
- Task 2 - Create a List of Hosts to Back up
- Task 3 - Set up Authentication Between Backup and Target Hosts
- Task 4 - Check for Backup Requirements for Specific Types of Hosts
- Task 5 - Check for Adequate Space for the Backup
- Task 6 - Back up Your Host Systems
- Post Backup Tasks

Task 1 - Set up an External Host for Backing up Files

You must set up an external host to use for backing up files. The host must be running CentOS 6 with connectivity through SSH to the Security Analytics stack of hosts.

Note: If you are not able to use an external host for backing up files, contact RSA Customer Support (https://community.rsa.com/docs/DOC-1294) for assistance.

Ensure that the host names for the systems to be backed up are resolvable on the backup host machine, either by DNS or listed in the `/etc/hosts` file.

Note: These scripts are designed to run on CentOS 6 only. You must execute these scripts on CentOS 6 machines.

There are several scripts that you run during the backup process. You must download the zip file that contains the scripts (`nw-backup-v4.0.sh`) from RSA Link at this location: https://community.rsa.com/docs/DOC-81514 and copy it over to your CentOS 6 backup system. Extract the zip file to access the scripts. The scripts are:

- `get-all-systems.sh`: Creates the `all-systems` file, which contains a list of all your Security Analytics Servers and host systems to be backed up.
- `ssh-propagate.sh`: Automates sharing keys between the systems you are backing up and the backup host system so that you are not prompted for passwords multiple times.
- `nw-backup.sh`: Performs the backup of your hosts.
- `azure-mac-retention.ps1`: Applies only if you are using AZURE. See the *AZURE Deployment Guide* on for more information. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

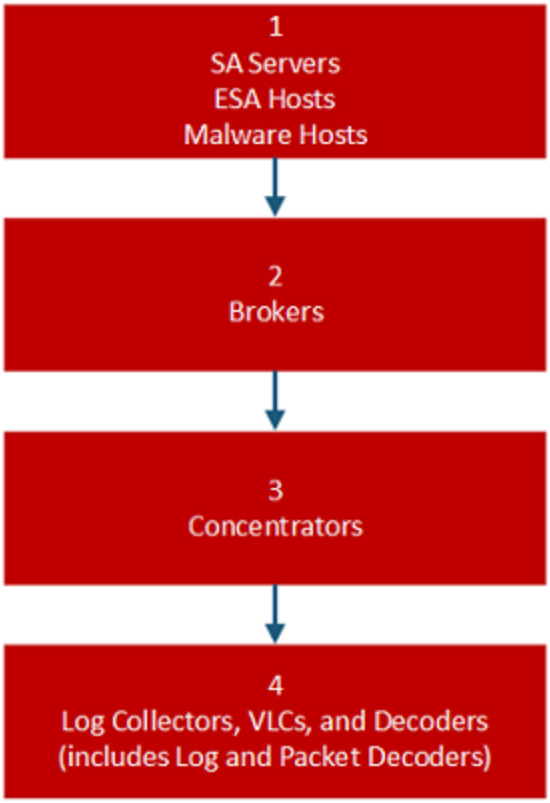
Note: If you have used the 10.6.x versions of the backup and restore scripts on your 10.6.5 hosts, you must still run all the scripts listed here.

Note: Do NOT use the scripts in the `nw-backup-v4.0.zip` file for regular backups. These scripts are specifically designed for upgrading from 10.6.5.x to 11.1.

Note: The backup scripts do not support backing up data for STIG-hardened hosts.

Task 2 - Create a List of Hosts to Back up

The script that you use to back up your files depends on the `all-systems` and `all-systems-master-copy` files, which contain a list of the hosts that you want to back up. The `all-systems-master-copy` file contains a list of all your hosts. The `all-systems` file is used for each backup session, and contains only those hosts which are being backed up for a particular session. You run the `get-all-systems.sh` script to generate these files. RSA recommends that you back up your hosts in groups, and not all at once. The recommended order and grouping of hosts for backup sessions is shown in the following diagram:



Limit each backup session to five hosts to ensure that you do not run out of space for the backup files. You create `all-systems` files for your backup sessions by using the `all-systems-master-copy` file as a reference and then manually editing the `all-systems` file to contain specific hosts.

To generate the `all-systems` and the `all-systems-master-copy` files:

1. From the host on which you are running the backup process, make the `get-all-systems.sh` script executable by running the following command:
   ```
   chmod u+x get-all-systems.sh
   ```
2. At the root level, run the `get-all-systems.sh` script:
   ```
   ./get-all-systems.sh <IP-Address-of-SA-Admin-Server>
   ```
   You will be prompted for the password for each host system once per host.

This script saves the `all-systems` file and the `all-systems-master-copy` file to `/var/netwitness/database/nw-backup/`.

3. Validate that the `all-systems` and `all-systems-master-copy` files were generated and that they contain the right hosts.
4. Edit the `all-systems` file to contain only the systems you are backing up. You can do this by using the `all-systems-master-copy` file as a reference, and then opening the `all-systems` file in an editor (such as vi) and modifying it to include only the systems you want to back up. RSA recommends that you comment out the hosts that you do not want to back up (add the number sign (#) to the beginning of the line that contains the host that will not be backed up).
   The following examples shows how to comment out the 10.6.5 Security Analytics Server:
   `loghybrid,loghyb,172.16.0.1,45fe9de1-1a82-49d7-9bb1-7ac5fa1d18d8,10.6.5.0`
   `#nwserver,nwserv106,172.31.255.23,67a9a0eb-1300-4fba-838f-7be4d8cf5e65,10.6.5.0`

   Note: If you use vi, be sure to include the path to the location of the `all-systems` file.

Here is an example of an `all-systems-master-copy` file:

```
nwserver,my-nw-server,10.0.0.1,af922b9f-cd61-49cd-afdc-a48e558cec3e,10.6.5.0
archiver,my-nw-archiver,10.0.0.2,a65c1236-5e46-4117-8529-8ea837074bd0,10.6.5.0
concentrator,my-nw-concentrator,10.0.0.3,dc620e94-bcf5-4d51-83fe-c003cdfcd7a6,10.6.5.0
esa,my-nw-esa,10.0.0.4,8b608c0d-a7f9-40c0-baee-8407dec774ab,10.6.5.0
logdecoder,my-nw-logdecoder,10.0.0.5,c8be5d45-e19e-4a8d-90ce-1cb2fe60077a,10.6.5.0
malwareanalysis,my-nw-malwareanalysis,10.0.0.6,2edc9585-7081-48c3-8f8c-e0d02aa0a2fd,10.6.5.0
packetdecoder,my-nw-packetdecoder,10.0.0.7,a8f2f574-3dd0-4b65-9cf7-d8141b78a192,10.6.5.0
vlc,my-nw-vlc,10.0.0.8,3ffefc4e-0b31-4951-bb77-dea5869fa98c,10.6.5.0
broker,my-nw-broker,10.0.0.9,0b65e7ce-61d5-4177-9647-c56ccfb0f737,10.6.5.0
```

And here is an example of an `all-systems` file that could be used in the first backup session, where only the Security Analytics Server, ESA host, and Malware Analysis host are backed up:

```
nwserver,my-nw-server,10.0.0.1,af922b9f-cd61-49cd-afdc-
a48e558cec3e,10.6.5.0
#archiver,my-nw-archiver,10.0.0.2,a65c1236-5e46-4117-8529-
8ea837074bd0,10.6.5.0
#concentrator,my-nw-concentrator,10.0.0.3,dc620e94-bcf5-4d51-83fe-
c003cdfcd7a6,10.6.5.0

#logdecoder,my-nw-logdecoder,10.0.0.5,c8be5d45-e19e-4a8d-90ce-
1cb2fe60077a,10.6.5.0
malwareanalysis,my-nw-malwareanalysis,10.0.0.6,2edc9585-7081-48c3-8f8c-
e0d02aa0a2fd,10.6.5.0
#packetdecoder,my-nw-packetdecoder,10.0.0.7,a8f2f574-3dd0-4b65-9cf7-
d8141b78a192,10.6.5.0
#vlc,my-nw-vlc,10.0.0.8,3ffefc4e-0b31-4951-bb77-dea5869fa98c,10.6.5.0
#broker,my-nw-broker,10.0.0.9,0b65e7ce-61d5-4177-9647-
c56ccfb0f737,10.6.5.0
```

Troubleshooting Information

- Be sure to save copies of the `all-systems` and `all-systems-master-copy` files in a safe location. Follow these recommendations:
  - Do not edit the `all-systems-master-copy` file.
  - If you create several different versions of the `all-systems` file (for example, for several backup sessions), be sure that each version of the file lists only those hosts that are currently being backed up, and the other hosts are commented out.
    For more information, see Post Backup Tasks.
- If any host systems are down while you are running the `get-all-systems.sh` script, the script creates a list of hosts for which it cannot find information. After the script completes and the `all-systems` file is created, you must edit the `all-systems` file manually and add the missing information for these hosts.
- The `get-all-systems.sh` script generates a list of hosts that were defined in the Security Analytics user interface. Ensure that all hosts and services are provisioned properly. If any hosts or services are not provisioned properly, they will not be backed up. RSA recommends that when you add hosts and services to Security Analytics, you use the Security Analytics user interface to ensure that they are provisioned properly. However, if there are any hosts or services that were not defined in the user interface, you must add them to the `all-systems` file manually.

- At the end of the `get-all-systems.sh` script, the script will check for any differences between the systems that the Security Analytics Server has listed, and the ones for which the script was able to find all the required information. If any Node ID's or system names are listed as missing, verify the existence of those systems, that their services are all running, and that they are properly communicating with the Security Analytics Server. (Any Windows Legacy Collectors or AWS Cloud Collectors will not be added to the `all-systems` file, and may account for discrepancies. **DO NOT add these items to the `all-systems` file manually**.)
- If the syntax in the `all-systems` file is incorrect, the script will fail. For example, if there is an extra space at the beginning or the end of a host entry, the script will fail.

Task 3 - Set up Authentication Between Backup and Target Hosts

RSA recommends that you run the `ssh-propagate.sh` script to automate sharing keys between the backup host and the host systems.

Note: If you have SSH keys that are protected with pass phrases, you can use `ssh-agent` to save time. For more information, refer to the man page for `ssh-agent`.

1. On the external backup host system, make the `ssh-propagate.sh` script executable by running the following command:
   `chmod u+x ssh-propagate.sh`
2. At the root directory, run the following command, where `<path-to-all-systems-file>` is the path to the directory where the `all-systems` file is stored:
   `ssh-propagate.sh <path-to-all-systems-file>`
3. You are prompted for the password once per host, but you will not need to enter it repeatedly later during the backup process.

Task 4 - Check for Backup Requirements for Specific Types of Hosts

After you create the `all-systems` file to use for backup, you must check to see if any of the hosts listed in the file have requirements that must be met before you run the backup process.

For All Host Types

Perform the following steps for all host types:

1. On the Security Analytics Server, place Custom Certificate files and any other certificate authority (CA) files in the `/root/customcerts` folder to ensure that these certificate files are backed up. Your custom certificate files that are placed in this directories will be automatically restored during the upgrade process. After upgrading to 11.1., your custom certificate files will be located in `/etc/pki/nw/trust/import`.
   You can convert CA certificates and keys to different formats to make them compatible with specific types of servers or software using OpenSSL. For example, you can convert a normal PEM file that would work with Apache to a PFX (PKCS#12) file and use it with Tomcat or IIS. To convert the files, SSH to the Security Analytics Server and run the following command strings to perform the conversions listed.
   Convert a DER file (.crt .cer .der) to PEM
   `openssl x509 -inform der -in certificate.cer -out certificate.pem`
   Convert a PEM file to DER

```
openssl x509 -outform der -in certificate.pem -out certificate.der
```

Convert a PEM Certificate File and a Private Key to PKCS#12 (.pfx .p12)

```
openssl pkcs12 -export -out certificate.pfx -inkey privateKey.key -in
certificate.crt -certfile CACert.crt
```

Convert a PKCS#12 File (.pfx .p12) Containing a Private Key and Certificates to PEM

```
openssl pkcs12 -in keyStore.pfx -out keyStore.pem -nodes
```

> **Note:** Add the following qualifier to the command string to:
> `-nocerts` convert private keys exclusively.
> `-nokeys` convert certificates exclusively.

2. Manually record any custom configurations made to CentOS 6 (for example, driver customizations) for restoration after you update to CentOS 7. Custom configurations to CentOS 6 are not automatically backed up and restored.

For ESA Hosts with Mongo Databases

The default 10.6.x Mongo database password is `netwitness`. If you have customized this password, you could encounter an error while running the backup script. You can either use your custom Mongo database password during the backup, or you could change that password back to `netwitness` before running the `nw-backup.sh` script.

1. Find out if the Mongo database password is `netwitness` or if it has been modified.
2. If it has been modified, either change it back to `netwitness`, or be sure you know what the customized password is so that you can enter it during the backup.

See "ESA Config: Change MongoDB Password for admin Account" in the *NetWitness Suite Event Stream Analysis Configuration Guide* for more information. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

For Decoder, Concentrator, or Broker Hosts: Stop Data Capture and Aggregation

In addition to the tasks described in For All Host Types, for Decoder, Concentrator, or Broker hosts, stop data capture and aggregation on all the systems that you are backing up. For instructions, refer to Appendix B. Stopping and Restarting Data Capture and Aggregation

Log Collectors (LC) and Virtual Log Collectors (VLCs): Run `prepare-for-migrate.sh`

> **Caution:** This task stops log collection so you must perform this step immediately before you upgrade to minimize the loss of event collection. Complete this task in accordance with the backup and upgrade tasks in this guide.

Prerequisites

You need the following information before you prepare LCs and VLCs for upgrade.

- If Lockbox was initialized on the LC and VLC, you must know the Lockbox password. It is required to reconfigure the Lockbox after upgrade.
- If you set the password for `logcollector` user for RabbitMQ, you must know the password so you can set it again after the upgrade.

Prepare LCs and VLCs for Upgrade

1. SSH to the Log Collector.
2. Submit the following command string.

   ```
   # /opt/rsa/nwlogcollector/nwtools/prepare-for-migrate.sh --prepare
   ```

   This command:

   - Stops the Puppet Agent service.
   - Disables the file collection accounts ("sftp" and all users in the group "upload") used for uploading log files to the Log Collector. The log files accumulate on the event sources until the Log Collector has been upgrade to 11.1.
   - Stops all the collection protocols in the Log Collector service.
   - Saves the list of Plugin accounts and RabbitMQ accounts.
   - Configures the RabbitMQ server so that new events cannot be published to it any longer. Consumers of events in the queues, such as shovels and Log Decoder Event Processors, will continue to run.
   - Waits until the Log Collector queues are empty.
   - Stops the Log Collector service.
   - Creates a marker file indicating that the Log Collector has been successfully prepared for upgrade.

Troubleshooting Information

The `prepare-for-migrate.sh` script:

- Sends informational, warning, and error messages to the console.
- Saves a session log in the `/var/log/backup/` directory.

You must fix any of the following errors and resume the preparation. Contact RSA Customer Support (https://community.rsa.com/docs/DOC-1294) for assistance.

- Log Collector queues with events but without consumers are found.
- Unable to stop the Puppet Agent service.
- Unable to stop a collection protocol in the Log Collector service.
- Unable to block event publishers to the RabbitMQ server.
- Unable to or taking too long for queue events to be consumed. The script makes 30 attempts waiting for the events to be consumed. After each attempt, it sleeps for 30 seconds.
- Unable to stop the Log Collector service.

For more information about troubleshooting, see Appendix A. Troubleshooting.

For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint: List RabbitMQ Usernames and Passwords

On the 10.6.5.x host, on the Security Analytics Server host, you must get a list of all RabbitMQ usernames and passwords so that after you perform the 11.1. upgrade, you can restore RabbitMQ user accounts.

To get a list of RabbitMQ usernames and passwords, run the following command:

```
rabbitmqctl list_users >> /root/rabbitmq_users.txt
```

To restore RabbitMQ user accounts, refer to *Task 2 - For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint Configure Mutually Authenticated SSL* in **Post Upgrade Tasks**.

For Bluecoat Event Sources

Bluecoat ProxySG event sources use FTPS protocol to upload log files to the Log Collector (LC) and Virtual Log Collector (VLC). The event source documentation contains the steps to configure VSFTPD service on the LC and VLC.

- If key material exists in `/root/vsftpd/` directory in 10.6.5.x, this material area will be backed up and restored. **If the material was in another location, you must back it up and restore it manually.**
- If the `/etc/vsftpd/vsftpd.conf` file exits in 10.6.5.x, it is backed up and restored.

Task 5 - Check for Adequate Space for the Backup

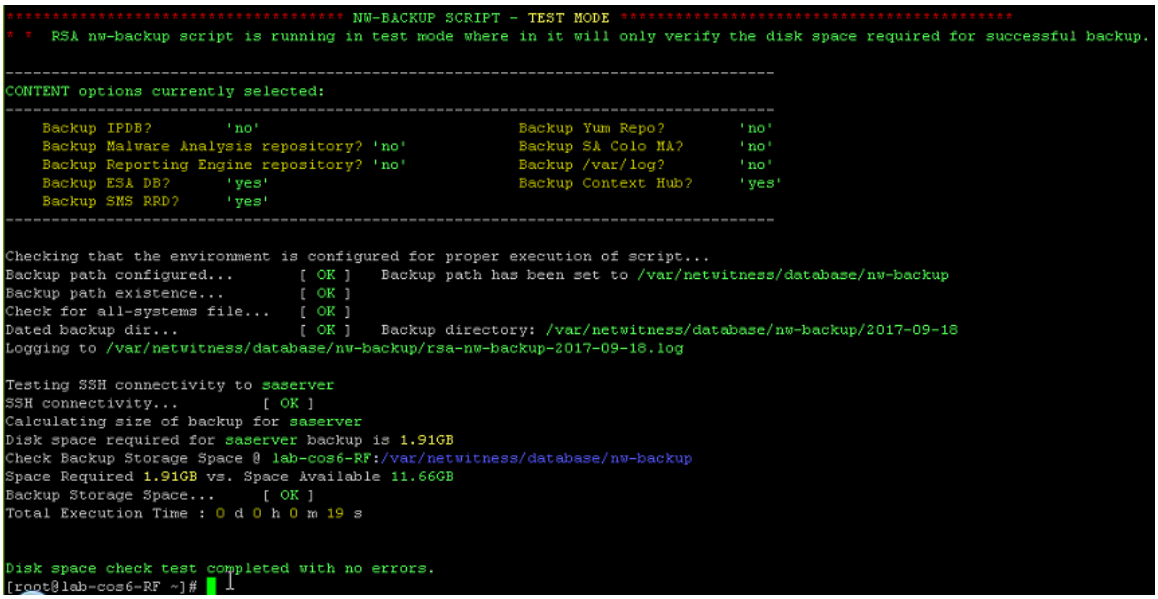
You can run the backup test script to check the amount of disk space that is required for the backup using the `-t` option described in Test Options. You run the script without actually backing up files or stopping any services. RSA recommends that you perform this step to ensure that you provide adequate space for the backup so that the backup captures all your data.

To check for adequate disk space:

1. Make the backup script executable by running the following command:
   `chmod u+x nw-backup.sh`
2. Run the following command at the root directory level:
   `./nw-backup.sh -t`
   The output displays the amount of disk space that is required for the backup.

> **Note:** The `./nw-backup.sh -t` command runs with the `-d` option by default. However, if you are looking for more accurate disk space results, you can override the `-d` option by using `-D`. Using the `-D` option will show how much space is required on each host for the data that will be backed up, but does not show how much space is available. If there is not enough space available, the `-D` option will throw an error. If you want to know how much space is available on the target host, you must run the `df -h` command on the host.

The following figure shows an example of the output from using the `-t` option.



Task 6 - Back up Your Host Systems

Before you run the backup script to do the actual backup, be sure that you have plenty of space. To back up your hosts, you run the `nw-backup.sh` script using the `-u` option. This option is required for upgrading to 11.1.

> **Note:** The script will stop services as it runs. However, you can stop services manually before you run the script if needed.

When you run the backup script, you can choose from several options that are described in the following sections.

Usage:
`./nw-backup.sh [-u -t -d -D -l -x -e] <external-mnt> -b <backup file path>`

General Options

`-u : This option is required for upgrading to 11.1. Enables the upgrade flag to run backup for upgrading to 11.1. It also enables disk space check (-d), backing up reporting engine reports (-r) and stores backup content locally (-l). Default: (no)`

`-d : enables disk space check in 'fast' mode (quick estimate of space using uncompressed data). Default: (no)`

`-D : enables disk space check in 'full' mode (estimate of space using compressed data, ~10X slower). Default: (no)`

`-l : stores backup content locally on each host (automatically set if -u is used). Default: (no)`

`-e <path to mount point> : copies backup files of all devices onto an external mount point. Default: (/mnt/external_backup)`

`-x : move all backup files to an external mount point. Default: (no) -COPY`

`-b <path to write backups> : path to the location for storing backup files on a backup server.` **`For upgrading to 11.1, please use the default location!`** `Default: (/var/netwitness/database/nw-backup)`

Note: Do **not** change the backup path in upgrade (-u) mode.

Note: When you run a backup with the `-u` option, all services are stopped. If you need to continue to use the 10.6.x machine after running the backup, reboot the 10.6.x system so that services are restarted.

Advanced Content Selection Options

`-c : back up Colocated Malware Analysis on SA servers. Default: (no)`

`-i : back up IPDB data (/var/netwitness/ipdbextractor). Default: (no)`

`-m : back up Malware Analysis File Repository. Default: (no)`

`-r : back up Reporting Engine Report Repository (automatically set if -u is used). Default: (no)`

`-v : back up system logs (/var/log). Default: (no)`

`-y : back up YUM Web Server & RPM Repository. Default: (no)`

`-S : If set: DISABLES back up of SMS RRD files. Default: (not-set)`

```
-C : If set: DISABLES back up of Context-Hub configuration and database.
Default: (not-set)

-E : If set: DISABLES back up of ESA Mongo database. Default: (not-set)
```

Test Options

```
 -t : performs script test run for disk space check only. Services are
not stopped and excludes execution of backup. Can be combined with (-d)
or (-D) and other flags. Default: (-t)
```

For example, the command:
`./nw-backup.sh`
would run the backup with options as set in the Header of the script itself.
OR, the command:
`./nw-backup.sh -ue /mnt/external_backup`
would run a normal backup using the backup path defined in the script, with the following options:

```
-u : enables the upgrade flag to run backup for upgrading to 11.1. It
also enables disk space check (-d), backing up reporting engine reports
(-r) and stores backup content locally (-l). Default: (no)

-e : Copy the backup files to external mount point, mounted on
/mnt/external_backup

For Help: ./nw-backup.sh -h
```

When you run the script, the following text is displayed at the top of the script:

Caution:
```
RSA nw-backup script backs up configuration files, data, and
logs on the options provided in the script. It tars the content, with
options to store the backup files on the backup server, move or copy
them to external storage on a mount point (USB/NFS/SMB), or SCP them
back to the target host.
This backup script has been qualified on the following versions of
Security Analytics:
10.6.5.x
Use of this script on any other versions of the product may not give
expected results and may not be supported by RSA Customer
Service.Note: All non-RSA custom files, scripts, Cronjobs and other
important files should be placed in /root, /home/'user', OR /etc to be
included in the backup.
```

To run the backup script to back up your hosts:

1. Ensure that the `all-systems` file contains only the hosts to back up. For information, see Task 2 - Create a List of Hosts to Back up.
2. Make the backup script executable by running the following command:
   `chmod u+x nw-backup.sh`
3. Begin the backup process by running the following command at the root directory level:

```
./nw-backup.sh -u
```

Note: You must use the `-u` option so that your files will be restored correctly during the upgrade to 11.1. Do NOT make any changes to the header of the backup script for the backup path because the path is specific to the upgrade, and that data needs to be in a specific place.

When the text "`Backup completed with no errors`" is displayed, the backup has completed successfully.

A log file, with a name similar to the following example, is created in the backup directory which provides information on the files being backed up:
`rsa-nw-backup-2017-03-15.log`

4. When the backup has completed, to ensure that the intended files were backed up, you can run the following command to see a list of all the files that were backed up:

   `tar -tzvf hostname-ip-address-backup.tar.gz`

   The following archive files are created:

   For all hosts:

   `<hostname-IPaddress>-root.tar.gz`

   `<hostname-IPaddress>-backup.tar.gz`

   `tar checksum` files

   `<hostname-IPaddress>-network.info.txt`

   For Security Analytics Servers:

   `<hostname-IPaddress>-root.tar.gz`

   `<hostname-IPaddress>-backup.tar.gz`

   `<hostname-IPaddress>-mongodb.tar.gz`

   `tar checksum` files

   `<hostname-IPaddress>-network.info.txt`

   For ESA Hosts:

   `<hostname-IPaddress>-root.tar.gz`

   `<hostname-IPaddress>-backup.tar.gz`

   `<hostname-IPaddress>-mongodb.tar.gz`

   `<hostname-IPaddress>-controldata-mongodb.tar.gz`

   `tar checksum` files

   `<hostname-IPaddress>-network.info.txt`

The archived files are located in the `/var/netwitness/database/nw-backup` directory. If any of the tar files appear smaller than expected, open them to be sure that the files were properly backed up.

Post Backup Tasks

Task 1 - Save a Copy of the `all-systems` File and the Backup Tar files

Make copies of the `all-systems` file, the `all-systems-master-copy` file, and the backup tar files and put the copies in a secure location. You cannot regenerate these files after you upgrade the Security Analytics Server (specifically the Admin service) to 11.1.

Task 2 - Ensure Required Backup Files Were Generated

After you run the backup scripts, several files are generated. These files are required for the 11.1. upgrade process. Before you begin the upgrade process, you must ensure that the required backup files are on the hosts that you are upgrading, and that you perform the following tasks.

The following files are generated on all hosts by the backup scripts:

- `all-systems`
- `all-systems-master-copy`
- `appliance_info`
- `service_info`
- `<hostname>-<host-IP-address>-backup.tar.gz`
- `<hostname>-<host-IP-address>-backup.tar.gz.sha256`
- `<hostname>-<host-IP-address>-root.tar.gz`
- `<hostname>-<host-IP-address>-root.tar.gz.sha256`
- `<hostname>-<host-IP-address>-network.info.txt`

In addition to the files listed above, the following files will be generated on the Security Analytics Server and ESA hosts:

- `<hostname>-<host IP address>-mongodb.tar.gz`
- `<hostname>-<host IP address>-mongodb.tar.gz.sha256`

The backup script will also generate the following `controldata-mongodb.tar.gz` files.

Note: The backup script copies the following files from all ESA hosts to the Security Analytics Server's backup path .

- `<esa hostname>-<esa hostip>-controldata-mongodb.tar.gz`
- `<esa hostname>-<esa hostip>-controldata-mongodb.tar.gz.sha256`

Task 3 - (Conditional) For Multiple ESA Hosts, Copy `mongodb tar` files to Primary ESA Host

If you have multiple ESA host systems in your enterprise, copy the following two files from each ESA host to the `/opt/rsa/database/nw-backup/` directory on the Primary ESA host system (the host that has the ContextHub service running on it) :

- `<hostname>-<host-IP-address>-mongodb.tar.gz`
- `<hostname>-<host-IP-address>-mongodb.tar.gz.sha256`

Task 4 - Ensure All Required Backup Files are on Each Host

Before you upgrade to 11.1., ensure that the appropriate files exist on the hosts that you are upgrading as described in the following lists.

There should be note here mentioning default backup path locations for that user knows where to go and check these files.

Note: The default paths for backup files are:
- Security Analytics Servers:`/var/netwitness/database/nw-backup`
- ESA hosts:`/opt/rsa/database/nw-backup`
- Malware hosts: `/var/lib/rsamalware/nw-backup`

Required Files for NetWitness Servers

- `all-systems-master-copy`
- `<hostname>-<host-IP-address>-backup.tar.gz`
- `<hostname>-<host-IP-address>-backup.tar.gz.sha256`
- `<hostname>-<host-IP-address>-root.tar.gz`
- `<hostname>-<host-IP-address>-root.tar.gz.sha256`
- `<hostname>-<host-IP-address>-network.info.txt`
- `<hostname>-<host-IP-address>-mongodb.tar.gz`
- `<hostname>-<host-IP-address>-mongodb.tar.gz.sha256`
- `<esa-hostname>-<esa-host-IP-address>-controldata-mongodb.tar.gz`
- `<esa-hostname>-<esa-host-IP-address>-controldata-mongodb.tar.gz.sha256`

Required Files for ESA Hosts

- `all-systems-master-copy`
- `<hostname>-<host-IP-address>-backup.tar.gz`
- `<hostname>-<host-IP-address>-backup.tar.gz.sha256`
- `<hostname>-<host-IP-address>-root.tar.gz`
- `<hostname>-<host-IP-address>-root.tar.gz.sha256`
- `<hostname>-<host-IP-address>-network.info.txt`
- `<hostname>-<host-IP-address>-mongodb.tar.gz`
- `<hostname>-<host-IP-address>-mongodb.tar.gz.sha256`

Required Files for All Other Hosts

- `all-systems-master-copy`
- `<hostname>-<host-IP-address>-backup.tar.gz`
- `<hostname>-<host-IP-address>-backup.tar.gz.sha256`
- `<hostname>-<host-IP-address>-root.tar.gz`
- `<hostname>-<host-IP-address>-root.tar.gz.sha256`
- `<hostname>-<host-IP-address>-network.info.txt`

Note: The following files are located in the `<hostname>-<host-IP-address>-backup.tar.gz` tar on all hosts:
`appliance_info`
`service_info`

Note: The paths to the location of the backup and restore files for iptables, NAT configurations, user accounts, and crontab entries are shown in the following list:
Backup paths:
`BUPATH=/opt/rsa/database/nw-backup` for the ESA Correlation Engine
`BUPATH=/var/lib/rsamalware/nw-backup` for the Malware Service
`BUPATH=/var/netwitness/database/nw-backup` for all other services
Restore locations:
`BUPATH/restore/etc/sysconfig` for Iptable rules
`BUPATH/restore/etc/sysconfig` for NAT configurations
`BUPATH/restore/etc` for Crontab entries
`BUPATH/restore/etc` for User Accounts (users are located in the `passwd` file, and groups are located in the `group` file. These are not restored during the upgrade process but can be restored manually.
`BUPATH/restore/etc/ntp.conf` for NTP configurations (must be restored using the NetWitness Suite UI)

Upgrade Tasks

This topic contains the tasks you must complete to upgrade Security Analytics 10.6.5.x to NetWitness Suite 11.1.

Caution: 1.) Make sure that you backed up your Security Analytics 10.6.5.x data before attempting to upgrade to NetWitness Suite 11.1.
2). Run the backup immediately before upgrading the hosts for each phase so that the data to avoid restoring stale data.
3.) This guide applies to physical host upgrades exclusively. If have physical and virtual hosts in your deployment, see the *RSA NetWitness® Suite 11.1 Virtual Host Upgrade Guide* for the steps to upgrade virtual hosts. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

There two phases that you must complete in the order shown.

- Phase 1 - Upgrade SA Server, Event Stream Analysis (ESA), and Malware Analysis Hosts

  Note: For Event Stream Analysis, if you had C2 modules enabled in 10.6.5.x, the modules will enter a warm-up after you upgrade the Event Stream Analysis service to 11.1 and they will not be available until the warm up completes.

- Phase 2 - Upgrade All Other Hosts

Phase 1 - Upgrade SA Server, Event Stream Analysis, Malware Analysis Hosts, and Broker or Concentrator

Task 1 - Upgrade the 10.6.5.x SA Server to 11.1 NW Server

Follow the instructions under Upgrade 10.6.5.x SA Server Host to 11.1 NW Server Host.

Task 2 - Upgrade 10.6.5.x ESA to 11.1

Caution: If you had C2 modules enabled in 10.6.5.x, the modules will enter a warm-up after you upgrade the Event Stream Analysis service to 11.1 and they will not be available until the warm up completes.

Follow the instructions under Upgrade a 10.6.5.x non-SA Server Host to 11.1 to upgrade your ESA hosts.

1. Create the base image on your primary ESA host, set it up through the Setup program, and install **ESA Primary** on the host in the user interface on the **Admin Hosts** view.

   Note: If you have multiple ESA hosts in your enterprise, you must upgrade the ESA Primary host, where all the `mongodb` (Mongo Database) backup tar files are located, first, before you upgrade ESA Secondary hosts.

2. (Conditional) If you have a secondary ESA host, create the base image on your secondary ESA host, set it up through the Setup program, and install **ESA Secondary** on the host in the user interface on the **Admin Hosts** view.

Task 3 - Upgrade 10.6.5.x Malware Analysis to 11.1

Follow the instructions under Upgrade a 10.6.5.x non-SA Server Host to 11.1.

Task 4 - Upgrade 10.6.5.x Broker or 10.6.5.x Concentrator to 11.1

Follow the instructions under Upgrade a 10.6.5.x non-SA Server Host to 11.1.

Note: If you do not have a Broker, upgrade your Concentrator hosts. The 11.1 NW Server cannot communicate with 10.6.5.x core services for the new Investigate functionality. This is why you must upgrade the Broker or Concentrator hosts in Phase 1.

Phase 2 - Upgrade All Other Hosts

See Appendix B. Stopping and Restarting Data Capture and Aggregation for instructions on how to stop and restart data capture and aggregation when upgrading the Decoder, Concentrator, and Log Collection hosts.

Decoder and Concentrator Hosts

1. Stop data capture and aggregation.
2. Complete the steps in Upgrade Non-NW Server Host to 11.1.
3. Restart data capture and aggregation.

Log Decoder Host

1. Make sure you have prepared the Log Collector as described in the "Log Collectors (LC) and Virtual Log Collectors (VLCs): Run prepare-for-migrate.sh" in the Backup Instructions.
2. Stop data capture on the Log Decoder.

3. Complete the steps in Upgrade Non-NW Server Host to 11.1.
4. Restart data capture on Log Decoder.

Note: After you upgrade, you will restart log collection after completing the Task 27 - Update Incident Rules Identified in the Domain in the Matching Conditions Upgrade Preparation Task in the **Post Upgrade Tasks**.

Virtual Log Collector Host

1. Make sure you have prepared the Virtual Log Collector as described the "Log Collectors (LC) and Virtual Log Collectors (VLCs): Run prepare-for-migrate.sh" in the Backup Instructions.
2. Back up your 10.6.5.x VLC by editing the `all-systems` file on host where you performed the backup.
   a. Make sure your `all-systems` file contents has this information before you perform this step.
   `vlc,<host-name>,<IP-address>,<UUID>,10.6.5.x`
   b. Run the following command to create backup.
   `./nw-backup.sh -u`
   See Backup Instructions for detailed procedures on how to back up the host.
3. Make sure the backup host contains the VLC backup in the following format.
   `<hostname>-<IPaddress>-root.tar.gz`
   `<hostname>-<IPaddress>-root.tar.gz.sha256`
   `<hostname>-<IPaddress>-backup.tar.gz`
   `<hostname>-<IPaddress>-backup.tar.gz.sha256`
   `<hostname-IPaddress>-network.info.txt`
   `all-systems-master-copy`
4. Power off the 10.6.5.x VLC so that a new 11.1 VM can be created with the same network configuration.
5. Deploy a fresh NetWitness 11.1 Non-NW Server host using the 11.1 NetWitness Suite ova.
6. Connect to the VM console of the new VLC.
7. Update the network configuration to be the same as the 10.6.5.x VLC.
   This information is stored in the `<hostname-IPaddress>-network.info.txt` 10.6.5.x VLC backup file.

Note: Make sure IPv6 is disabled.

a. Edit the `/etc/sysconfig/network-scripts/ifcfg-eth0` file and update the settings. Contents of `ifcfg-eth0` should be as follows.

```
TYPE=Ethernet
DEFROUTE=yes
NAME=eth0
UUID=<uuid>
DEVICE=eth0
DNS1=<nameserver from <hostname>-<ipaddress>-network-info.txt>
DNS2=<nameserver from <hostname>-<ipaddress>-network-info.txt>
BOOTPROTO=static
IPADDR=<ipaddress from <hostname>-<ipaddress>-network-info.txt>
NETMASK=<netmask from <hostname>-<ipaddress>-network-info.txt>
GATEWAY=<gateway from <hostname>-<ipaddress>-network-info.txt>
NM_CONTROLLED=no
ONBOOT=yes
```

b. Submit the following command string.

```
systemctl restart network.service
```

8. Create the backup directory.

```
# mkdir -p /var/netwitness/database/nw-backup/
```

9. Copy the backup from the backup host from `/var/netwitness/database/nw-backup` to the new VLC in the `/var/netwitness/database/nw-backup` directory.
10. Complete the steps 2 through 12 inclusive in Upgrade a 10.6.5.x non-SA Server Host to 11.1 for the rest of the NetWitness Suite components . Make sure that you select **Log Collector** for the service in step 12.

All Other 10.6.5.x Hosts to 11.1

Follow the instructions under Upgrade a 10.6.5.x non-SA Server Host to 11.1.

Upgrade the 10.6.5.x SA Server Host to the 11.1 NW Server Host

Make sure that you have backed up 10.6.5.x data for the SA Server host. **You must follow the instructions in Backup Instructions to back up the host.**

Caution: Run the backup immediately before upgrading the SA Server to 11.1 so that the data is as recent as possible. You must create the **all-systems** file before you upgrade the SA Server because you cannot do this after the SA Server has been upgraded to 11.1.

Complete the following steps to upgrade the 10.6.5.x SA Server host to the 11.1 NW Server host.

1. Create a base image on the host.

   a. Attach media (media that contains the ISO file, for example a build stick) to the host.
   You must use the build stick labeled "OEMDRV".
   See the *RSA NetWitness Suite Build Stick Instructions* for more information.

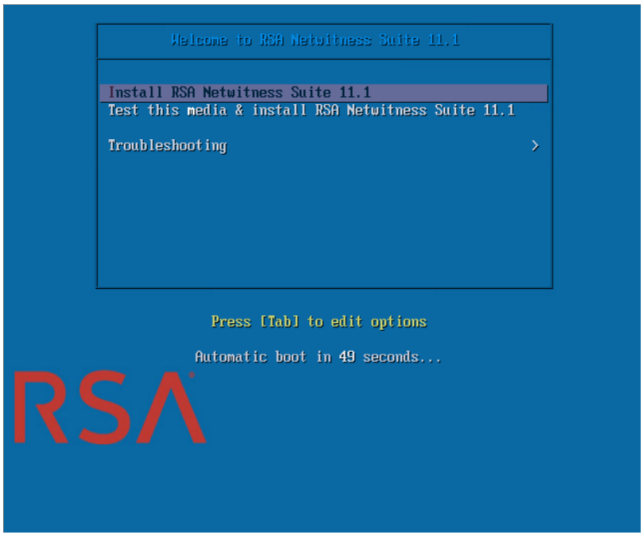
      - Hypervisor installations - use the ISO image.
      - Physical media - use the ISO file to create bootable flash drive media using the Universal Netboot Installer (UNetbootin) or another suitable imaging tool. See the *RSA NetWitness® Suite Build Stick Instructions* for information on how to create a build stick from the ISO file. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.
      - iDRAC installations - the virtual media type is:
        - **Virtual Floppy** for mapped flash drives.
        - **Virtual CD** for mapped optical media devices or ISO file.

   b. Log in to the host with and reboot it.

```
login: root
Password:
Last login: Tue Sep 19 13:27:15 on tty1
[root@saserver ~]# reboot
```

   c. Select **F11 (boot menu)** during reboot to select a boot device and boot to the connected media.
   After some system checks during booting, the following **Welcome to RSA NetWitness® Suite 11.1** installation menu is displayed. The menu graphics will render differently if you use a physical USB flash media.

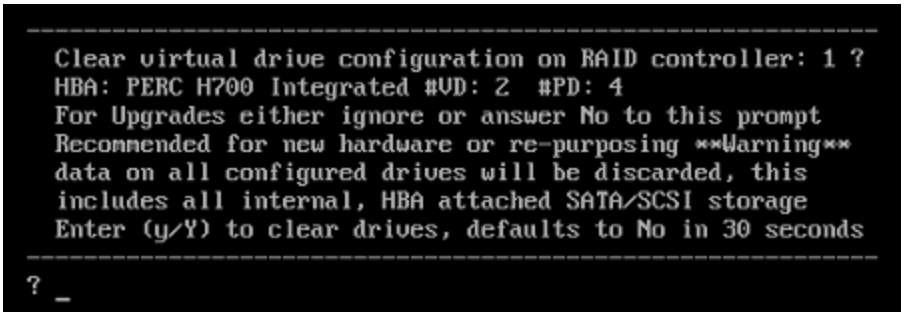
d. Select **Install RSA Netwitness Suite 11.1** (default selection) and press **Enter**.



The Operating System installation runs and stops at the **Enter (y/Y) to clear drives**.

e. Enter **n** (No).

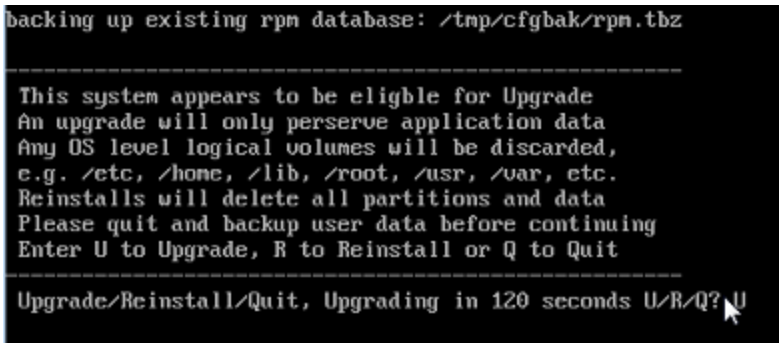
The default action is No, so if you ignore the prompt and it will select No in 30 seconds and will not clear the drives.



The **Upgrade/Reinstall/Quit(U/Q/R?** prompt is displayed.

f. Type **U** to upgrade the host.

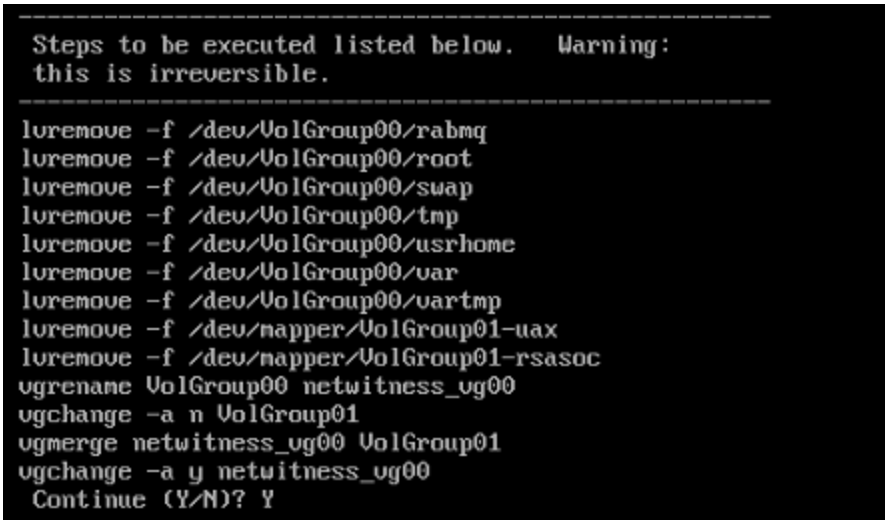
If you ignore the prompt, it will select U in 120 seconds.



It takes a few minutes for CentOS7 components to install. The installation program

displays the components as they are installed, which varies depending on the appliance. When CentOS7 installation is complete, the **Continue (Y/N)?** prompt is displayed.

g. Type **Y** and press **Enter** to confirm that you want to upgrade this host.



The old operating system is about to be removed. Continue (Y/N)? warning is displayed.

h. Type **Y** and press **Enter** to confirm that you want to replace the operating system.

When the host is upgraded to CentOS7, the host automatically reboots and prompts you to log in.

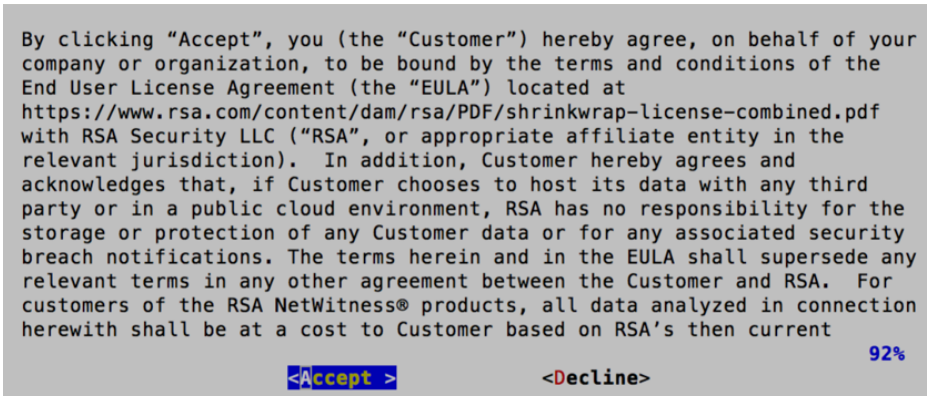
Caution: Do not reboot the attached media (media that contains the ISO file, for example a build stick).

i. Log in to the host with the `root` credentials.

2. Run the `nwsetup-tui` command to set up the host.
   This initiates the `nwsetup-tui` (Setup program) and the EULA is displayed.

Note: 1.) When you navigate through the Setup program prompts, use the down and up arrows to move among fields, use Tab key to move to and from commands (such as **<Yes>**, **<No>**, **<OK>**, and **<Cancel>**. Press **Enter** to register your command response and move to the next prompt.
2.) The Setup program adopts the color scheme of the desktop or console you use access the host.

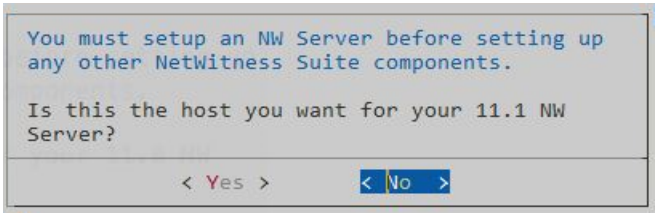
3. Tab to **Accept** and press **Enter**.



The **Is this the host you want for your 11.1 NW Server** NW Server prompt is displayed.

Caution: If you choose the wrong host for the NW Server and complete the upgrade, you must restart the step up program and complete the all the steps (steps 2 through 11) to correct this error.

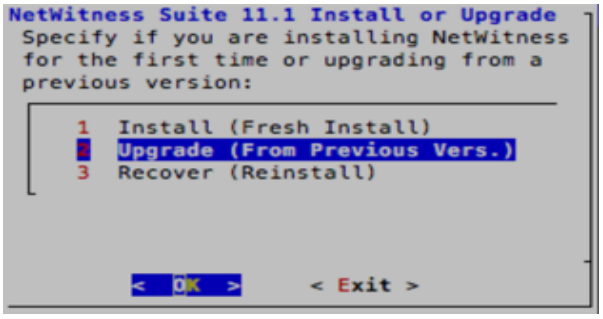
4. Tab to **Yes** and press **Enter**.



Choose **No** if you already upgraded the NW Server to 11.1.

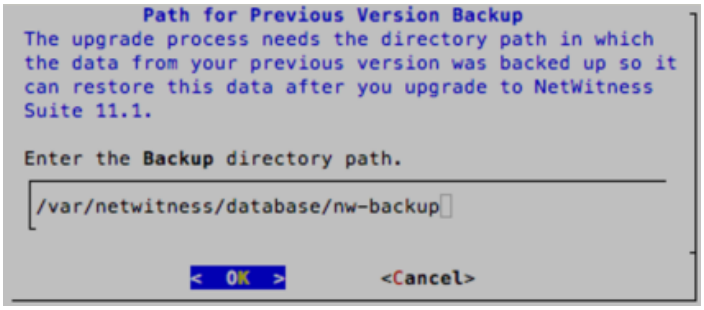
The **Install** or **Upgrade** prompt is displayed.

5. Use down arrow to select **2 Upgrade (From Previous Vers.)**, tab to **OK**, and press **Enter**.



The **Backup** path prompt is displayed.

6. Tab to **OK** and press **Enter** if want to keep this path. If not, edit the path, tab to **OK** and press **Enter** to change it.



This table lists the backup and restore paths by host/service.

Host	Backup Path	Restore Path
Malware	/var/lib/rsamlware/nw-backup	/var/netwitness/malware_analytics_server/nw-backup/restore
Event Stream Analysis	/opt/rsa/database/nw-backup	/var/netwitness/database/nw-backup/restore
NW Server	/var/netwitness/database/nw-backup	/var/netwitness/restore
All Other Hosts	/var/netwitness/database/nw-backup	/var/netwitness/database/nw-backup/restore

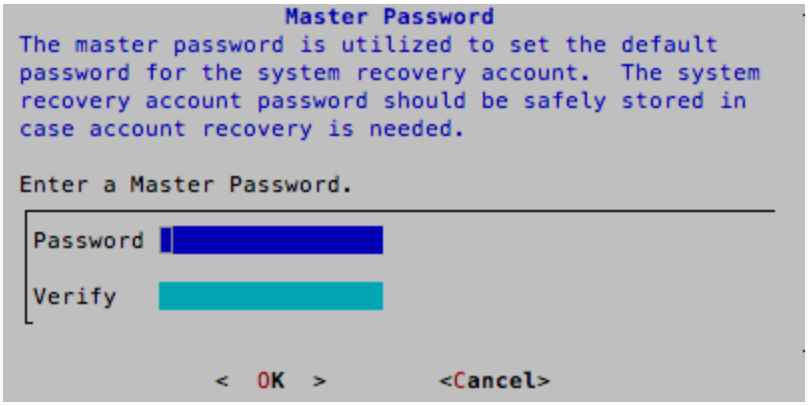
The **Master Password** prompt is displayed.

The following list of characters are supported for Master Password and Deployment Password:

- Symbols : ! @ # % ^ + ,
- Numbers : 0-9
- Lowercase Characters : a-z
- Uppercase Characters : A-Z

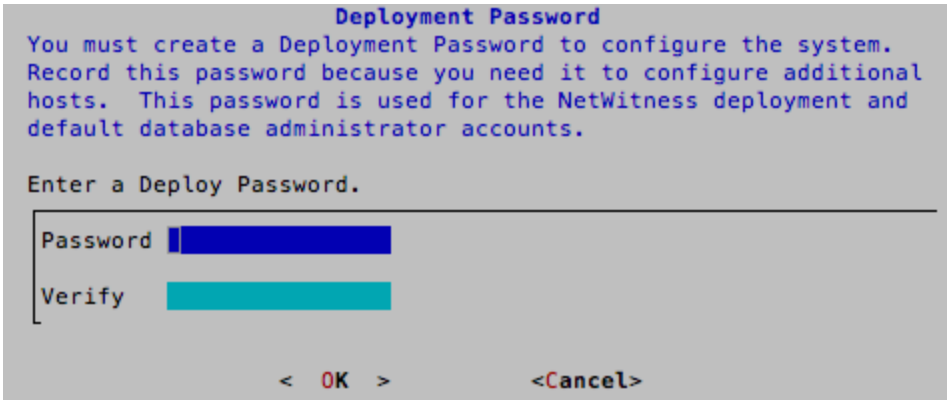
No ambiguous characters are supported for Master Password and Deployment Password. For example:
space { } [ ] ( ) / \ ' " ` ~ ; : . < > -

7. Type in the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.



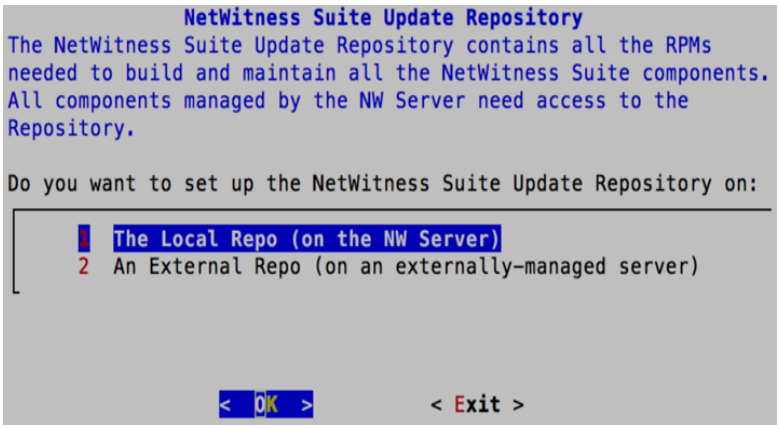
The **Deployment Password** prompt is displayed.

8. Type in the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.



The **Update Repository** prompt is displayed.

9. Use the down and up arrows to select the location from which you want to apply version updates to your hosts, tab to **OK**, and press **Enter**.



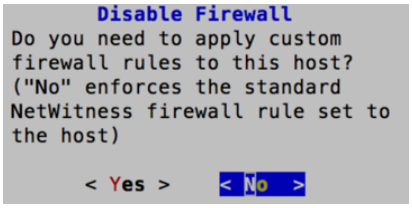
- If you select **1 The Local Repo (on the NW Server)** the setup program makes sure that you have the appropriate media attached to the host (media that contains the ISO file, for example a build stick) from which upgrade to NetWitness Suite 11.1. If the program cannot find the attached media, you receive the following prompt.

- If you select **2 An External Repo (on an externally-managed server)**, the UI prompts you for a URL. The repositories give you access RSA updates and CentOS updates. Refer to Appendix D. Create External Repository for instructions on how to create this repo and its external repo URL so you can enter it in the following prompt.

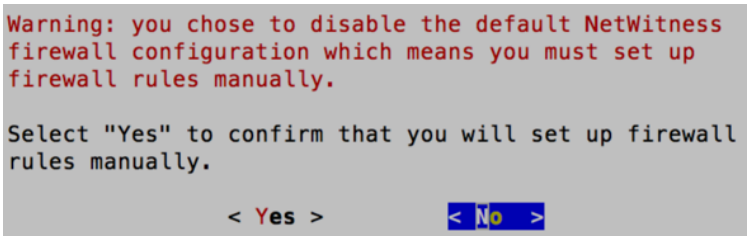
  Enter the base URL of the NetWitness Suite external repo and click **OK**.
  See "Set Up an External Repository with RSA and OS Updates" under "Hosts and Services Procedures" in the *RSA NetWitness Suite Hosts and Services Getting Started Guide* for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

The **Disable** or use standard **Firewall** configuration prompt is displayed.

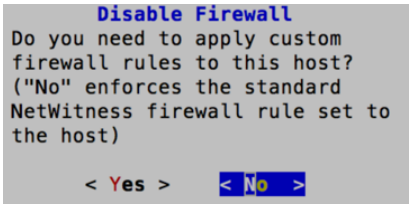
10. Tab to **No**, and press **Enter** to use the standard firewall configuration. Tab to **Yes**, and press **Enter** to disable the standard firewall configuration.



- If you select **Yes** to confirm your selection.

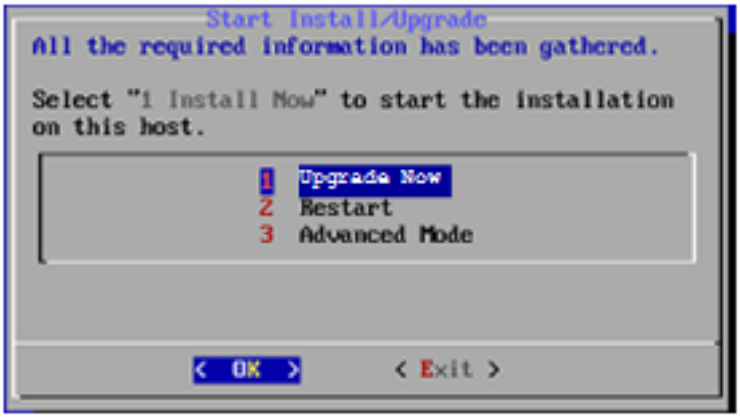


- If you select **No**, the standard firewall configuration is applied.



The **Install** or **Upgrade** prompt is displayed (**Recover** does not apply to the installation. It is for 11.1 Disaster Recovery).

11. Select 1 **Upgrade Now**, tab to **OK**, and press **Enter**.



When **Installation complete** is displayed, you have upgraded the 10.6.5.x SA Server to the 11.1 NW Server.

Note: Ignore the hash code errors similar to the errors shown in the following screen shot that are displayed when you initiate the `nwsetup-tui` command. Yum does not use MD5 for any security operations so they do not affect the system security.

```
ValueError: error:3207A06D:lib(50):B_HASH_init:cr new
Checksum type 'md5' disabled
 (skipped due to only_if)
    * file[/etc/yum.repos.d/CentOS-Base.repo] action delete (up to date)

```

12. Complete the NW Server before you upgrade any of the non-SA Server hosts to 11.1.

Upgrade a 10.6.5.x non-SA Server Host to 11.1.

Make sure that you backed up 10.6.5.x data for the host. **You must follow the instructions in Backup Instructions to back up the host.**

Caution: Run the backup immediately before upgrading the host to 11.1 so that the data is as recent as possible.

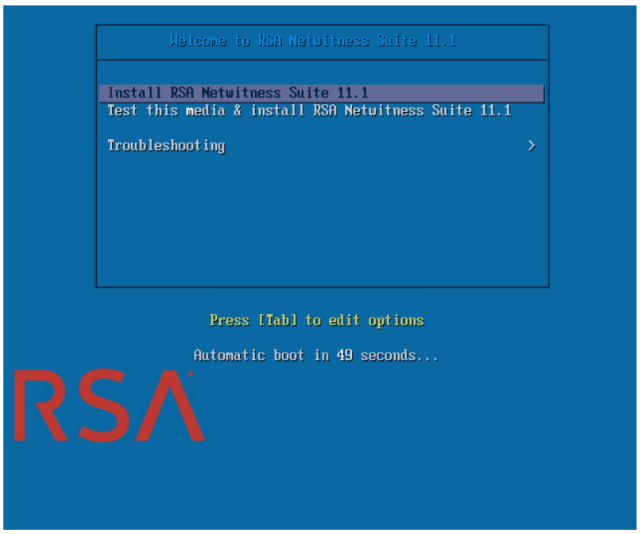
Complete the following steps to upgrade a 10.6.5.x non-SA Server Host to 11.1.

1. Create a base image on the host.
   a. Attach media (media that contains the ISO file, for example a build stick) to the host. See the *RSA NetWitness Suite Build Stick Instructions* for more information.
      - Hypervisor installations - use the ISO image.
      - Physical media - use the ISO to create bootable flash drive media using the Universal Netboot Installer (UNetbootin) or another suitable imaging tool. See the *RSA NetWitness® Suite Build Stick Instructions* for information on how to create a build stick from the ISO. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.
      - iDRAC installations - the virtual media type is:
        - **Virtual Floppy** for mapped flash drives.
        - **Virtual CD** for mapped optical media devices or ISO file.
   b. Log in to the host and reboot it.

```
login: root
Password:
Last login: Tue Sep 19 13:27:15 on tty1
[root@saserver ~]# reboot
```

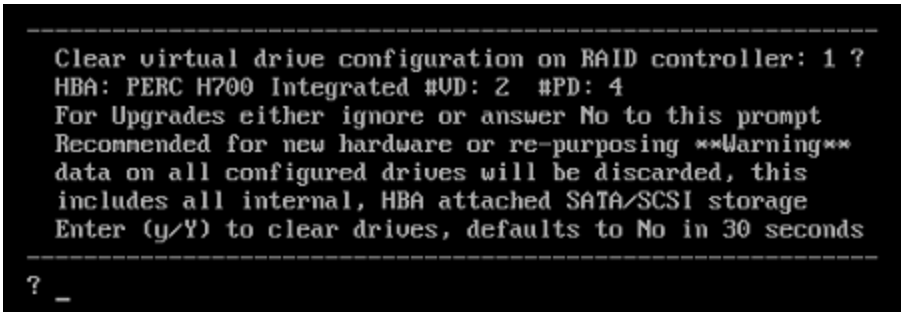
c. Select **F11 (boot menu)** during reboot to select a boot device and boot to the connected media.
After some system checks during booting, the following **Welcome to RSA NetWitness® Suite 11.1** installation menu is displayed. The menu graphics will render differently if you use a physical USB flash media.

d. Select **Install RSA Netwitness Suite 11.1** (default selection) and press **Enter**.



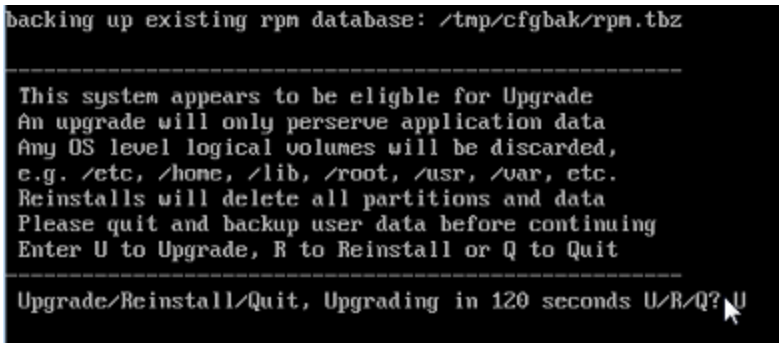
The Operating System installation runs and stops at the **Enter (y/Y) to clear drives**.

e. Enter **n** (No).
The default action is **No**, so if you ignore the prompt and it will select **No** in 30 seconds and will not clear the drives.



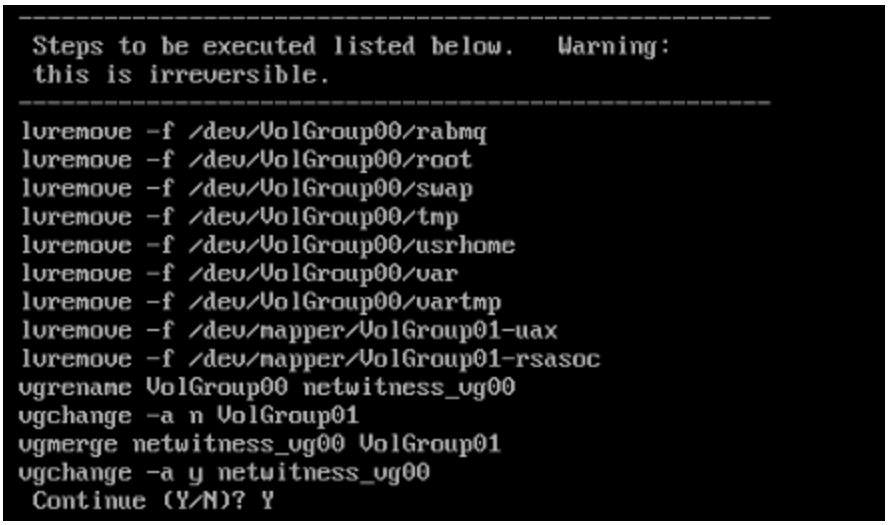
The **Upgrade/Reinstall/Quit (U/R/Q?)** prompt is displayed.

f. Type **U** to upgrade the host.
If you ignore the prompt, it will select **U** in 120 seconds.



It takes a few minutes for CentOS7 components to install. The installation program displays the components as they are installed which varies depending on the appliance. When CentOS7 installation is complete, the **Continue (Y/N)?** prompt is displayed.

g. Type **Y** and press **Enter** to confirm that you want to upgrade this host.



The old operating system is about to be removed. Continue (Y/N)? warning is displayed.

h. Type **Y** and press **Enter** to confirm that you want to replace the operating system.

When the host is upgraded to CentOS7, the host automatically reboots and prompts you to log in.

Caution: Do not reboot the attached media (media that contains the ISO file, for example a build stick).

i. Log in to the host with the `root` credentials.

2. Run the `nwsetup-tui` command to set up the host.

   This initiates the `nwsetup-tui` (Setup program) and the EULA is displayed.

3. Tab to **Accept** and press **Enter**.

   The **Is this the host you want for your 11.1 NW Server** prompt is displayed.

   Caution: If you choose the wrong host for the NW Server and complete the upgrade, you must restart the step up program and complete the all the steps (steps 2 through 11) of Upgrade the 10.6.5.x SA Server Host to the 11.1 NW Server Host to correct this error.

4. Tab to **No** and press **Enter**.

   The **Install** or **Upgrade** prompt is displayed.

5. Use down arrow to select **2 Upgrade (From Previous Vers.)**, tab to **OK**, and press **Enter**.

   The **Backup** path prompt is displayed.

6. Tab to **OK** and press **Enter** if want to keep this path. If not, edit the path, tab to **OK** and press **Enter** to change it.

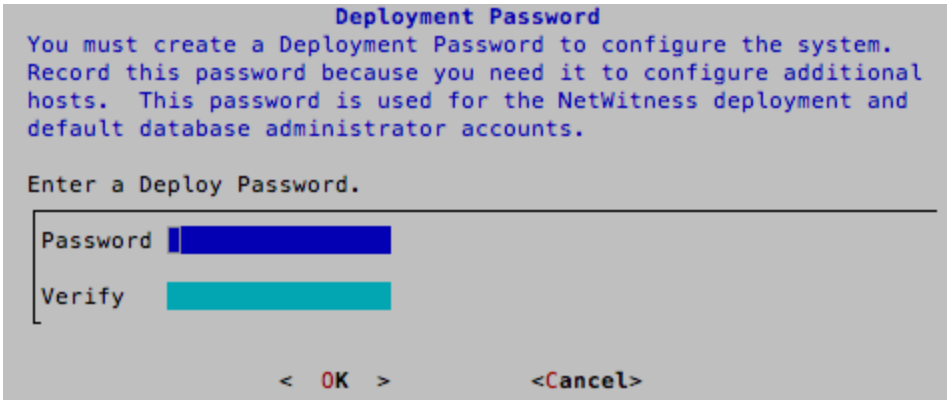
   This table lists the backup and restore paths by host/service.

Host	Backup Path	Restore Path
Malware	/var/lib/rsamlware/nw-backup	/var/netwitness/malware_analytics_server/nw-backup/restore
Event Stream Analysis	/opt/rsa/database/nw-backup	/var/netwitness/database/nw-backup/restore
NW Server	/var/netwitness/database/nw-backup	/var/netwitness/restore
All Other Hosts	/var/netwitness/database/nw-backup	/var/netwitness/database/nw-backup/restore

   The **Deployment Password** prompt is displayed.

Note: You must use the same deployment password that you used when you upgraded the NW Server.

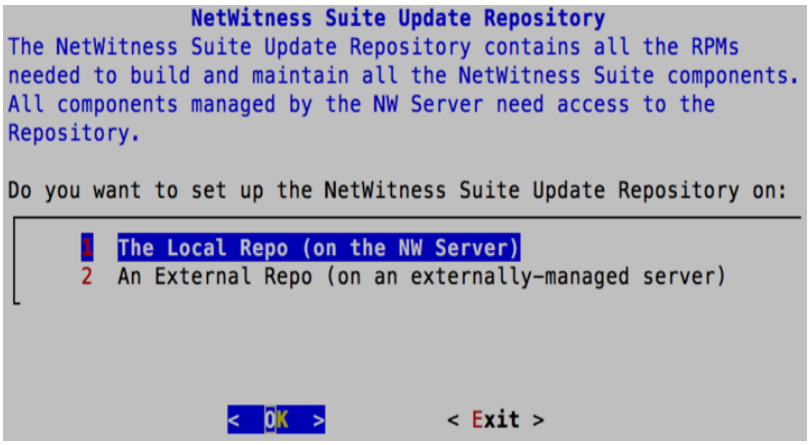
7. Type in the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.



The **Update Repository** prompt is displayed.

Select the same repo you selected when you upgraded the NW Server Host for all hosts.

8. Use the down and up arrows to select the location from which you want to apply version updates to your hosts (for example, **1 The Local Repo (on the NW Server)** , tab to **OK**, and press **Enter** .

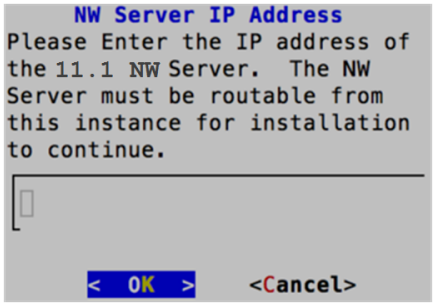


- If you select **1 The Local Repo (on the NW Server)** the setup program makes sure that you have the appropriate media attached to the host (media that contains the ISO file, for example a build stick) from which it can upgrade to NetWitness Suite 11.1.
- If you select **2 An External Repo (on an externally-managed server)**, the UI prompts you for a URL. The repositories give you access RSA updates and CentOS updates. Enter the base URL of the NetWitness Suite external repo and click **OK**. The repositories give you access RSA updates and CentOS updates. Refer to Appendix D. Create External

Repository for instructions on how to create this repo and its external repo URL so you can enter it in the following prompt.

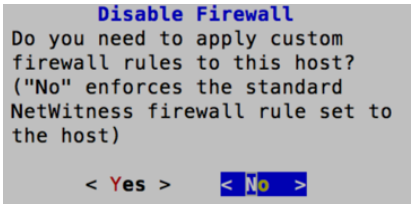
The **NW Server IP Address** prompt is displayed.

9. Type the IP address of the NW Server, tab to **OK**, and press **Enter**.

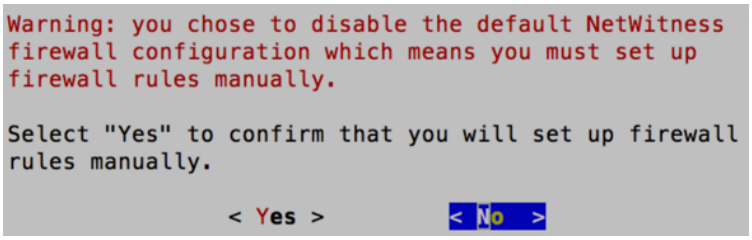


The **Disable** or use standard **Firewall** configuration prompt is displayed.

10. Tab to **No**, and press **Enter** to use the standard firewall configuration. Tab to **Yes**, and press **Enter** to disable the standard firewall configuration. The following example shows **No** - standard firewall configuration selected.



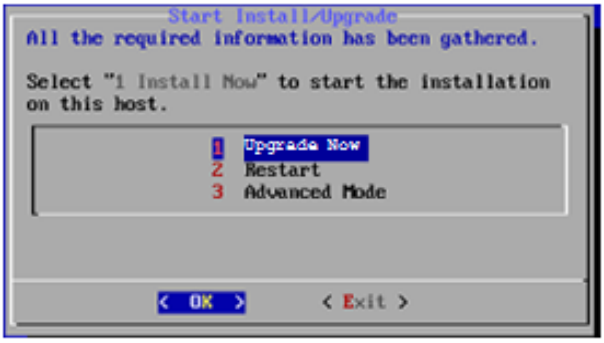
- If you select **Yes**, confirm your selection.



- If you select **No**, the standard firewall configuration is applied.

The **Install** or **Upgrade** prompt is displayed (**Recover** does not apply to the installation. It is for 11.1 Disaster Recovery).

11. Select 1 **Upgrade Now**, tab to **OK**, and press **Enter**.



When **Installation complete** is displayed, you have upgraded the host to the 11.1.

12. Install the service on this host:

    a. Log into NetWitness Suite and click **ADMIN** > **Hosts**.
    The **New Hosts** dialog is displayed with the **Hosts** view grayed out in the background.

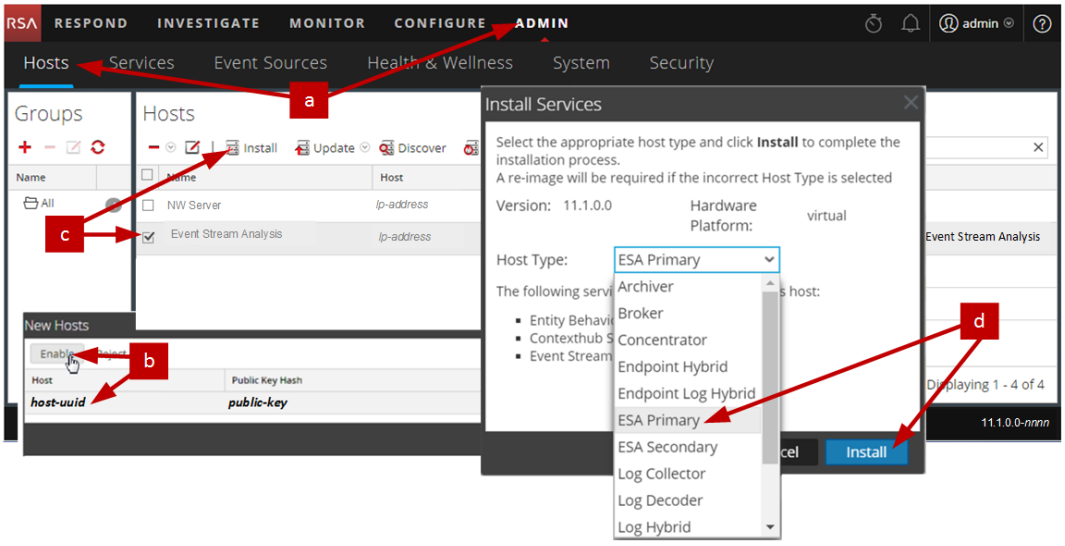
    Note: If the **New Hosts** dialog is not displayed, click **Discover** in the Hosts view toolbar.

    b. Click on the host in the **New Hosts** dialog and click **Enable**.
    The **New Hosts** dialog closes and the host is displayed in the **Hosts** view.

    c. Select that host in the **Hosts** view (for example, **Event Stream Analysis** and click Install.

    The **Install Services** dialog is displayed.

    d. Select the appropriate service (for example, **ESA Primary**) and click **Install**.



You have completed the upgrade of the non-NW Server host in NetWitness Suite

Note: When you upgrade a Respond host from 10.6.5.x to 11.1, it takes a period of time for Respond to come back online. This is caused by Respond indexing data while it is restored. The size of the data in the Mongo database will determine the time.

Update or Install Legacy Windows Collection

Refer to the *RSA NetWitness Legacy Windows Collection Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Note: After you update or install Legacy Windows Collection, reboot the system to ensure that Log Collection functions correctly.

Post Upgrade Tasks

This topic contains the tasks you must complete after you upgrade your hosts from 10.6.5.x to 11.1. These tasks are organized by the following categories.

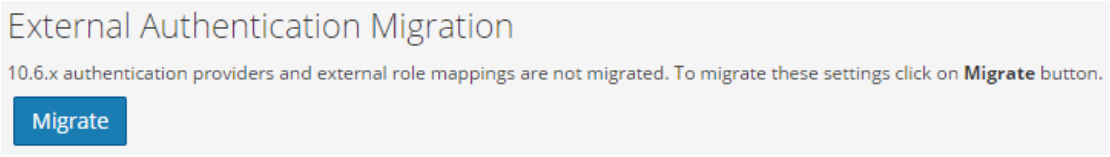
- NW Server
- RSA NetWitness® Endpoint
- RSA NetWitness® Endpoint Insights
- Event Stream Analysis
- Investigate
- Log Collection
- Reporting Engine
- Respond
- SecOps Manager (RSA Archer Security Incident Management, RSA Archer Security Operations & Breach Management and RSA Archer Issues Management)
- Warehouse Connector
- Backup

NW Server

Task 1 - Migrate Active Directory (AD)

The first time you log into the NetWitness Suite 11.1 User Interface, you must click on the Migrate button to complete the migration of AD.

1. Log in to NetWitness Suite 11.1 with your `admin user` credentials.
2. In the **NetWitness Suite** 11.1 menu, select **ADMIN** > **SECURITY** and click the **Settings** tab.
   The following dialog is displayed.



3. Click **Migrate**.
   The migration is complete and the dialog closes.

Task 2 - Modify Migrated AD Configuration to Upload Certificate

If you authenticated through Active Directory (AD) server, and enabled SSL for the AD connection in 10.6.5.x, you must modify the migrated AD configuration to upload the Active Directory server certificate.

Complete the following procedure to modify the migrated AD configuration to upload the certificate.

1. In the **NetWitness Suite** 11.1 menu, select **ADMIN** > **Security** and click the **Settings** tab.
2. Under **Active Directory Settings**, select an AD configuration and click .

   The Edit Configuration dialog is displayed.
3. Go to the **Certificate File** field, click **Browse**, and select a certificate from your network.
4. Click **Save**.

Task 3 - Reconfigure Pluggable Authentication Module (PAM) in 11.1

You must reconfigure PAM after you upgrade to 11.1. See "Configure PAM Login Capability" in the *RSA NetWitness® Suite System Security and User Management Guide* for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

You can refer to your 10.6.5.x PAM configuration files in the **/etc** directory in the your 10.6.5.x backup data for guidance.

Task 4 - Restore NTP Servers

You must use the NetWitness Suite 11.1 user interface to restore NTP server configurations. NTP server configuration information is located in `$BUPATH/restore/etc/ntp.conf`. Use the NTP server name and hostname from the `/var/netwitness/restore/etc/ntp.conf` file. See "Configure NTP Servers" in the *RSA NetWitness® Suite System Configuration Guide* for detailed instructions on how to add NTP servers. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 5 - Restore Licenses for Environments without FlexNet Operations-On Demand Access

If your environment does not have access to FlexNet Operations-On Demand, you need to re-download your NetWitness Suite licenses. Refer to "Step 1. Register the NetWitness Server" in the *RSA NetWitness Suite Licensing Management Guide* for instructions on how to re-download licenses. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

(Conditional) Task 6 - If You Disabled Standard Firewall Config - Add Custom IPtables

During the upgrade, you have the option of using these rules or disabling them. If you disabled them, follow these instructions as a baseline to create a user-managed firewall rule sets on all the hosts for which you disabled the standard firewall configuration.

Note: You can refer to the `$BUPATH/restore/etc/sysconfig/iptables` and `$BUPATH/restore/etc/sysconfig/ip6tables` in the restore folder of the backup to update the `ip6tables` and `iptables` files. The `/etc/netwitness/firewall.cfg` file contains the standard `iptables` firewall rules.

1. SSH to each host and log in with your root credentials.
2. Update the following `ip6tables` and `iptables` files with the custom firewall rules.
   `/etc/sysconfig/iptables`
   `/etc/sysconfig/ip6tables`
3. Reload the `iptables` and `ip6tables` services.
   ```
   service iptables reload
   service ip6tables reload
   ```

(Conditional) Task 7 - Specify SSL Ports If You Never Set Up Trusted Connections

Complete this task only if you never set up Trusted Connections. You would not have set up Trusted Connections if you:

- Used the base ISO image for 10.3.2 or earlier.
- Updated the system using RPMs exclusively to get to 10.6.5.x.

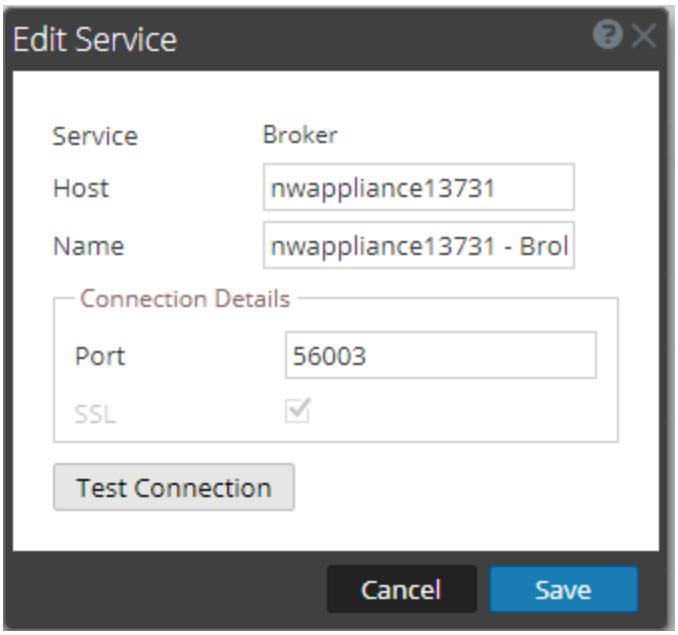
NetWitness Suite 11.1 cannot communicate with the core services for these customers because they are using a non-SSL port 500XX. You must update the Core service ports to an SSL port in the Edit Service dialog.

1. In the **NetWitness Suite** 11.1 menu, select **ADMIN** > **Services**.
2. Select each core service and change there ports from Non-SSL to SSL ports.

Service	Non-SSL	SSL
Broker	50003	56003
Concentrator	50005	56005
Decoder	50004	56004

Service	Non-SSL	SSL
Log Decoder	50002	56002

3. Click (Edit) from the SERVICES view toolbar.
   The Edit Service dialog is displayed.
4. Change the port from Non-SSL to SSL as shown in the table and click **Save** (for example, change the Broker port from 50003 to 56003).



Task 8 - (Conditional) Correct Audit Log Templates That Are Not Updated in Logstash Output Conf File

Problem: When a user updates from 10.6.5 to 11.1 and 11.0.0.0 to 11.1, if they have a global auditing set up, audit log templates are not getting updated in Logstash output conf file.

Workaround: If global auditing is configured, you need to edit one of the syslog entries in the Global notifications servers and click save to apply the latest Audit log configuration.

If you had global auditing configured in 11.0.x, you must complete the following procedure to apply the latest Global Auditing configuration.

1. In the **NetWitness Suite** 11.1 menu, select **ADMIN** > **System** > **Global Notifications**.
   The **Global Notifications** view is displayed.
2. Click the **Servers** tab, select any syslog server.
3. Click (edit icon) and click **Save**.

RSA NetWitness® Endpoint

Task 9 - Reconfigure Recurring Feed Configured from Legacy Endpoint Because Java Version Changed

You must reconfigure the Legacy Endpoint recurring feed due to the change in Java version. Complete the following step to fix this problem.

1. Import the NetWitness Endpoint CA certificate into the NetWitness Suite Trusted store as described in "Export the NetWitness Endpoint SSL Certificate" under the "Configure Contextual Data from Endpoint via Recurring Feed" topic in the *RSA NetWitness Endpoint Integration Guide* to import the certificate.
   Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

RSA NetWitness® Endpoint Insights

(Optional) Task 10 - Install Endpoint Hybrid or Endpoint Log Hybrid

See:

RSA NetWitness Suite 11.1 Physical Host Installation Guide for instructions for installation on a physical host.

RSA NetWitness Suite 11.1 Virtual Host Installation Guide for instructions for installation on a virtual host.

Task 11 - Reconfigure Endpoint Alerts Via Message Bus

1. On the NetWitness Endpoint Server, modify the virtual host configuration in the `C:\Program Files\RSA\ECAT\Server\ConsoleServer.exe` file to reflect the following configuration.
   `<add key="IMVirtualHost" value="/rsa/system" />`

   Note: In NetWitness Suite 11.1, the virtual host is `/rsa/system`. For 10.6.5.x and earlier versions, the virtual host is `/rsa/sa`.

2. Restart the API Server and Console Server.
3. SSH to the NW Server and log in with `root` credentials.
4. Submit the following command to add all certificates to the truststore.
   `orchestration-cli-client --update-admin-node`

5. Submit the following command to restart the RabbitMQ server.
   `systemctl restart rabbitmq-server`
   The NetWitness Endpoint account should automatically be available on RabbitMQ.
6. Import the `/etc/pki/nw/ca/nwca-cert.pem` and `/etc/pki/nw/ca/ssca-cert.pem` files from the NW Server and add them to the Trusted Root Certification stores in the Endpoint Server.

Event Stream Analysis Tasks

Task 12 - Reconfigure Automated Threat Detection for ESA

If you used Automated Threat Detection in 10.6.5.x, you must complete the following steps to reconfigure it using the ESA Analytics service in 11.1.

1. In the **NetWitness Suite** 11.1 menu, select **ADMIN** > **System** > **ESA Analytics**.
   The Suspicious Domains modules, Command and Control (C2) for Packets and C2 for Logs, require a whitelist named "**domains_whitelist**".
2. Conditional - If your previous Automated Threat Detection whitelist appears on the **Lists** tab of the Context Hub service:
   a. Click **ADMIN** > **Services**, select the Context Hub service, in the action commands ( ) drop-down menu, click **View** > **Config** > **Lists** tab).
   b. Rename your old Automated Threat Detection whitelist to "`domains_whitelist`" for the Suspicious Domains module.

For more information, see the *NetWitness Suite Automated Threat Detection Guide* and the "Configure ESA Analytics" section of the *NetWitness Suite ESA Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 13 - For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint Configure Mutually Authenticated SSL

If you integrate with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint, you must configure Mutually Authenticated SSL on each integrated system so that the application can authenticate itself when connecting to the RabbitMQ message bus.

Note: Use the RabbitMQ usernames and passwords that were obtained when you backed up your 10.6.5.x data (see Backup Instructions).

1. Create a user on the host system that is integrating with NetWitness Suite by logging into the host and running the following `rabbitmqctl` command.

   ```
   > rabbitmqctl add_user <username> <password>
   ```

   For example:

   ```
   > rabbitmqctl add_user wtd-incidents incidents
   ```

2. Set permissions for users by running the following command (use the username from step 1):

   ```
   > rabbitmqctl set_permissions -p /rsa/system <username> ".*", ".*", ".*"
   ```

   For example:

   ```
   > rabbitmqctl set_permissions -p /rsa/system wtd-incidents ".*", ".*", ".*"
   ```

Task 14 - Enable Threat - Malware Indicators Dashboard

In 11.1, the 10.6.5.x **Threat -Indicators Dashboard** was renamed to **Threat - Malware Indicators Dashboard**. If you used this dashboard in 10.6.5.x, you must:

1. Enable the **Threat - Malware Indicators Dashboard** in 11.1.
2. Set datasource for new dashlets.

   See "Dashlets" in RSA Link (https://community.rsa.com/docs/DOC-81463) for a description of Dashlets in the context of NetWitness Suite.

Investigate

Task 15 - Make Sure User Roles Have Customized User Roles Have `Investigate-server` Permissions for Event Analysis Access

After you upgrade to 11.1.0.0, any customized user role does not have `investigate-server.*` permission enabled by default. Complete the following procedure to make sure that the appropriate user roles have permission to access Event Analysis.

1. Log in to NetWitness Suite 11.1.0.0 with your `Admin user` credentials.
2. In the **NetWitness Suite** 11.1 menu, select **ADMIN** > **Security** .
3. Click the **Roles** tab.
4. Select the roles that need `investigate-server.*` permissions and click (edit icon).
5. Select the **Investigate-server** tab under under **Permissions**.

6. If investigate-server checkbox is not checked, check it for the users that require Event Analysis access.

7. Click **Save**.

Log Collection

Task 16 - Reset Stable System Values for Log Collector after Upgrade

Complete the following tasks to reset stable system values for the Log Collector after you upgrade it to 11.1 to ensure that all collection protocols resume normal operation.

Reset Stable System Values for the Lockbox

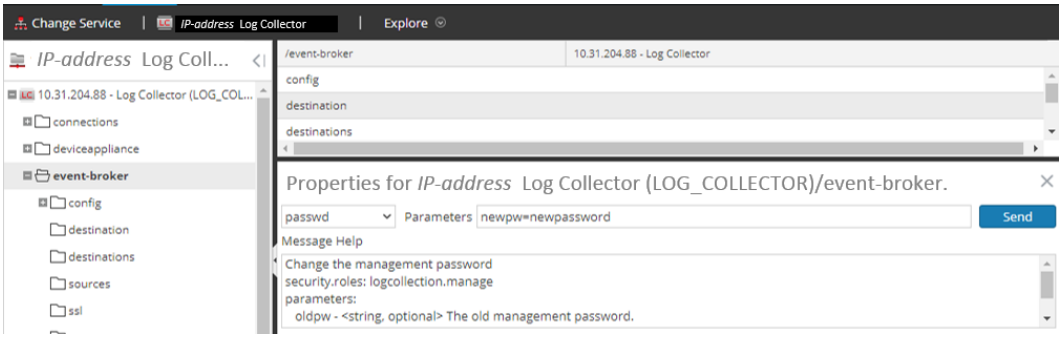
The Lockbox stores the key for encrypting event source and other passwords for the Log Collector. The Log Collector service cannot open the Lockbox because of the stable system value changes. As a result, you must Reset Stable System Values for the Lockbox . See "Log Collection: Step 3. Set Up a Lockbox" in the *RSA NetWitness® SuiteLog Collection Configuration Guide* for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Update Log Collector Service RabbitMQ User Account Password

If the logcollector service RabbitMQ user account password was changed, you must reenter it after the 11.1 upgrade.

1. In the **NetWitness Suite** 11.1 menu, select **ADMIN** > **Services**.
2. Select the Log Collector service.
3. Click (Actions) > **View** > **Explore**.
4. Right click `event-broker` > **Properties** .

5. Select `passwd` from the drop-down list, enter `newpw=><newpassword>` in Parameters (where `<newpassword>` is the RabbitMQ user account password), and click **Send**.



(Optional for Upgrades from 10.6.5.x with FIPS enabled for Log Collectors, Log Decoders and Packet Decoders)

Task 17 - Enable FIPS Mode

FIPS is enabled on all services except Log Collector, Log Decoder, and Decoder. FIPS cannot be disabled on any services except Log Collector, Log Decoder, and Decoder. For information about how to enable FIPS for these services, see the "Sys Maintenance: Activate or Deactivate FIPS" topic in the *RSA NetWitness® SuiteSystem Maintenance Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Reporting Engine

(Conditional) Task 18 - Restore the CA certificates for External Syslog Servers for Reporting Engine

You must restore CA certificates after the upgrade from the back up you made prior to the upgrade. The Backup script backs up the 10.6.5.x CA certificates into the `/usr/lib/jvm/java-1.8.0-openjdk-1.8.0.111-0.b15.el6_8.x86_64/jre/lib/security/cacerts` directory.

Complete the following procedure to restore the CA certificates in 11.1.

1. SSH to the NW Server host.
2. Export the CA certificates.
   ```
   keytool -export -alias <alias_name> -keystorepath_to_keystore_file -rfc -file path_to_certificate_file
   ```
3. Copy the CA pem into `/etc/pki/nw/trust/import` directory.

(Conditional) Task 19 - Restore External Storage for Reporting Engine

If you have external storage for the Reporting Engine (such as SAN or NAS for storing reports), you must restore the mount you unlinked before the upgrade. See "Reporting Engine: Add Additional Space for Large Reports" in the *RSA NetWitness® Suite Reporting Engine Configuration Guide* for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Respond

(Conditional) Task 20 - Restore Custom Analysts Roles

If you had custom analyst roles in 10.6.5.x, you must reinstate them in 11.1. See "Add a Role and Assign Permissions" in the *RSA NetWitness Suite System Security and User Management Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 21 - Restore Respond Service Custom Keys

In 10.6.5.x, if you added custom key for use in the **groupBy** clause, the `alert_rules.json` file was modified. The `alert_rules.json` file contains aggregation rule schema. RSA moved the `alert_rules.json` file to the following new location: `/var/lib/netwitness/respond-server/scripts`

1. Copy the custom keys from `/opt/rsa/im/fields/alert_rules.json` file in the backup directory.

   This directory is where the `alert_rules.json` file is restored from the 10.6.5.x backup.

2. Go to the `/var/lib/netwitness/respond-server/data/aggregation_rule_schema.json` in 11.1.

   This is the new file for 11.1.

3. Edit the `/var/lib/netwitness/respond-server/data/aggregation_rule_schema.json` to include the custom keys you copied in step one.

Task 22 - Restore Customized Respond Service Normalization Scripts

RSA re-factored the Respond service normalization scripts in 11.1 and moved them to the following new location:
`/var/lib/netwitness/respond-server/scripts`
If you customized these scripts in 10.6.5.x, you must:

1. Go to the to the `/opt/rsa/im/scripts` directory.
   This directory is where the following Respond service normalization scripts are restored from the 10.6.5.x backup.
   `data_privacy_map.js`
   `normalize_alerts.js`
   `normalize_core_alerts.js`
   `normalize_ecat_alerts.js`
   `normalize_ma_alerts.js`
   `normalize_wtd_alerts.js`
   `utils.js`
2. Copy any custom logic from the 10.6.5.x scripts.
3. Go to the `/var/lib/netwitness/respond-server/scripts` directory.
   This directory is where NetWitness Suite 11.1 stores the re-factored scripts.
4. Edit the new scripts to include the custom logic you copied in step 2 from the 10.6.5.x scripts.
5. Copy any custom logic from `/opt/rsa/im/fields/alert_rules.json` file.
   The `alert_rules.json` file contains aggregation rule schema.

Task 23 - Add Respond Notification Settings for Custom Roles

Respond Notification Setting permissions enable Respond Administrators, Data Privacy Officers, and SOC Managers to access Respond Notification Settings (**CONFIGURE** > **Respond Notifications**), which enable them to send email notifications when incidents are created or updated.

To access these settings, you will need to add additional permissions to your existing built-in NetWitness Suite user roles. You will also need to add permissions to your custom roles. See the "Respond Notification Settings Permissions" topic in the *NetWitness Respond Configuration Guide*. For detailed information about user permissions, see the *System Security and User Management Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 24 - Manually Configure Respond Notification Settings

The Incident Management notification settings in NetWitness Suite 10.6.5.x are different from the Respond notification settings available in 11.1, so your existing 10.6.5.x settings will not migrate to 11.1.

NetWitness Respond notification settings enable email notifications to be sent to SOC Managers and the Analyst assigned to an incident when an incident is created or updated.

To manually configure the Respond Notification Settings, go to **CONFIGURE** > **Respond Notifications.** See the "Configure Respond Email Notification Settings" procedure in the *NetWitness Respond Configuration Guide*.

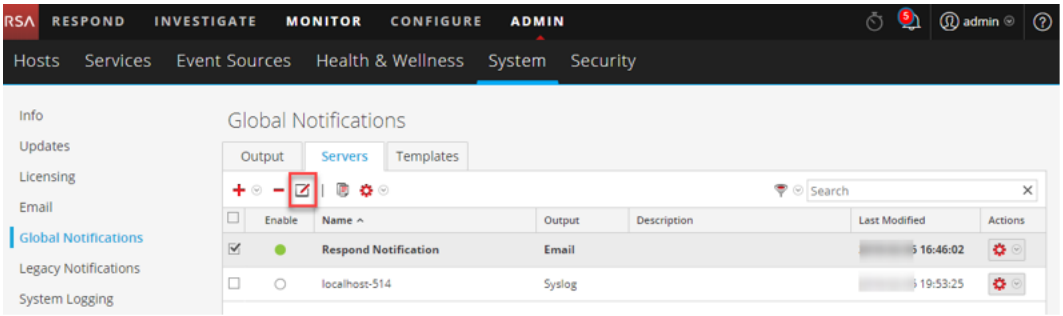
Notification Servers from 10.6.5.x will not display in the Email Server drop-down list. The email servers must be edited and saved in the Global Notification Servers panel (**ADMIN** > **System** > **Global Notifications** > **Server** tab).

1. In the **NetWitness Suite** 11.1 menu, select **ADMIN** > **System** > **Global Notifications** > **Server** tab.
2. Go to **CONFIGURE** > **Respond Notifications**. The Respond Notifications Settings view is displayed.

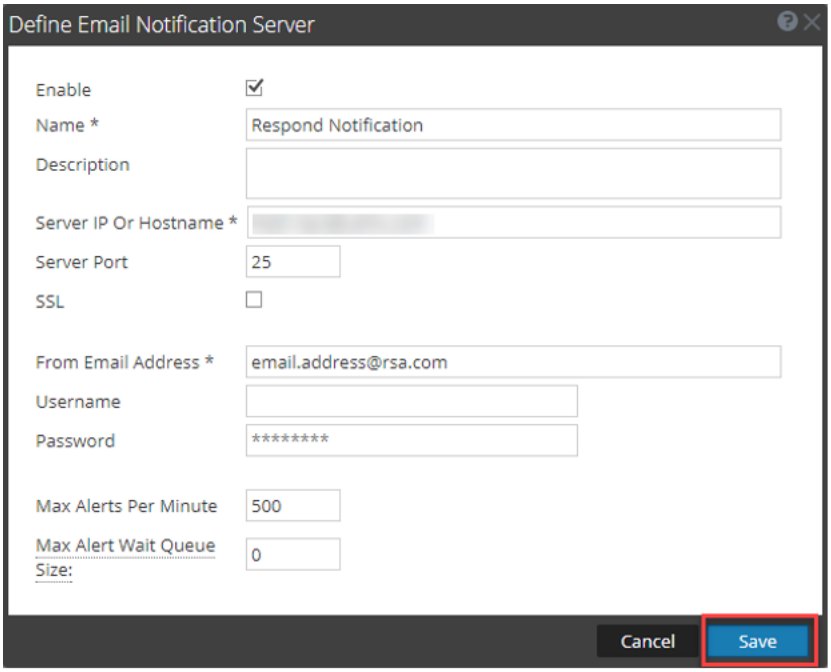
   Notice that the email notification servers do not appear in the EMAIL SERVER drop-down list.
3. Click the **Email Server Settings** link.

   You will see the Global Notifications panel.
4. Click the **Servers** tab.
5. For each of your email notification servers:

   a. Select the Email notification server and click .



b. In the Define Email Notification Server dialog, click **Save**.



6. Go back to **CONFIGURE** > **Respond Notifications**. Your servers will appear in the **EMAIL SERVER** drop-down list.
   Custom Incident Management notification templates cannot be migrated to 11.1. No custom templates are supported in 11.1.

Task 25 - Update Default Incident Rule Group By Values

Four of the default incident rules now use ”Source IP Address” as the Group By value. To update the default rules, change the Group By value of the following default rules to “Source IP Address”:

- High Risk Alerts: Reporting Engine
- High Risk Alerts: Malware Analysis
- High Risk Alerts: NetWitness Endpoint
- High Risk Alerts: ESA

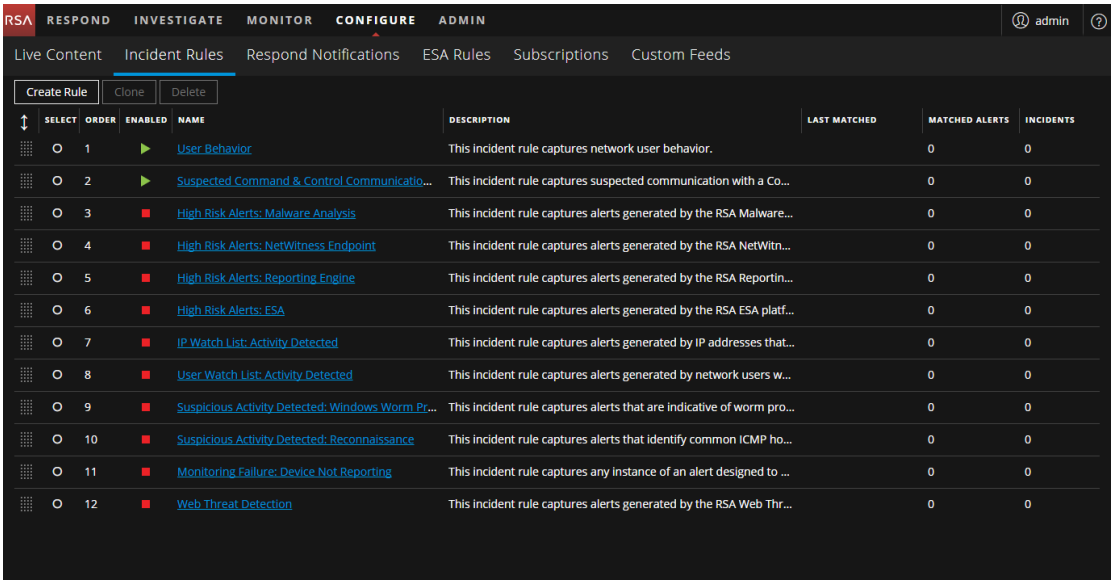
1. Go to **CONFIGURE** > **Incident Rules** and click the link in the **Name** column for the rule that you want to update. The Incident Rule Details view is displayed.
2. In the **Group By** field, select the new Group By value.
3. Click **Save** to update the rule.

Task 26 - Add Group By Field to Incident Rules

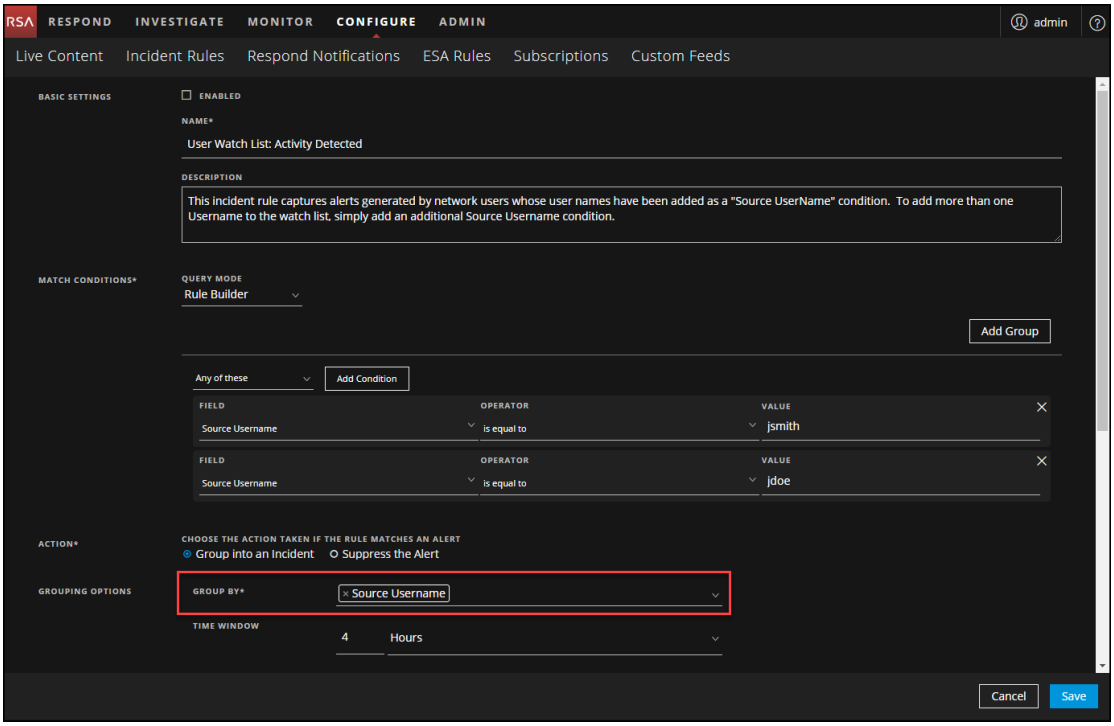
The **Group By** field is not required in 10.6.5, but it is required in 11.1. After you upgrade to 11.1, some incident rules will not have a **Group By** field, so you must add them to the rules or the rules will not work and they will not create incidents.

Complete the following steps for each incident rule:

1. Log in to RSA NetWitness® Suite.
2. Go to **CONFIGURE** > **Incident Rules** and click the link in the Name column for the rule that you want to update.



3. In the Group By field, verify that a Group By value is selected. If not, select a Group By value.



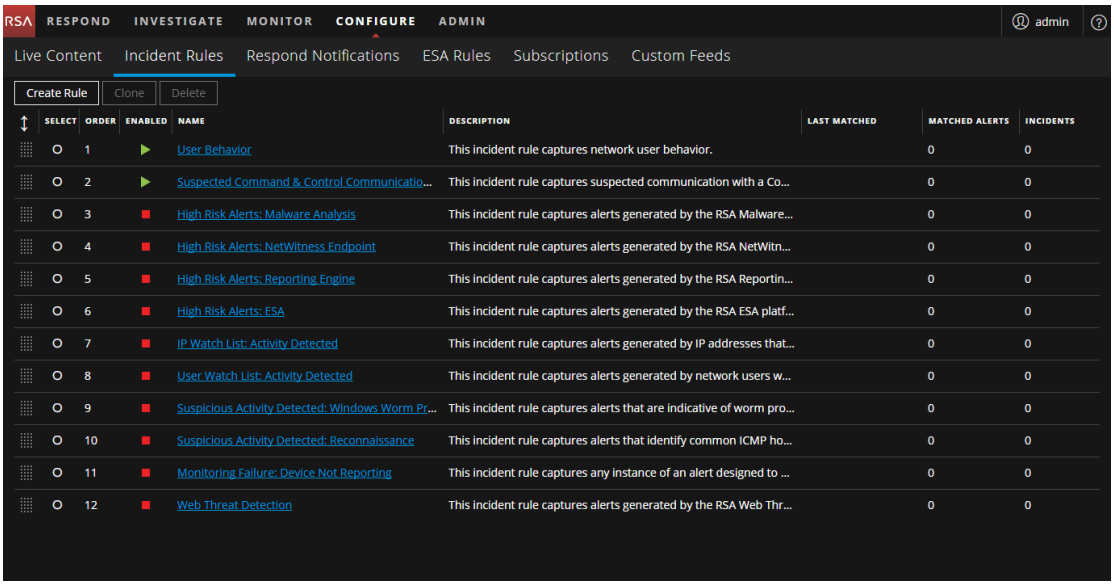
4. Click **Save** to update the rule.
   For information about incident rules, see the *NetWitness Respond Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 27 - Update Incident Rules Identified in the Domain in the Matching Conditions Upgrade Preparation Task

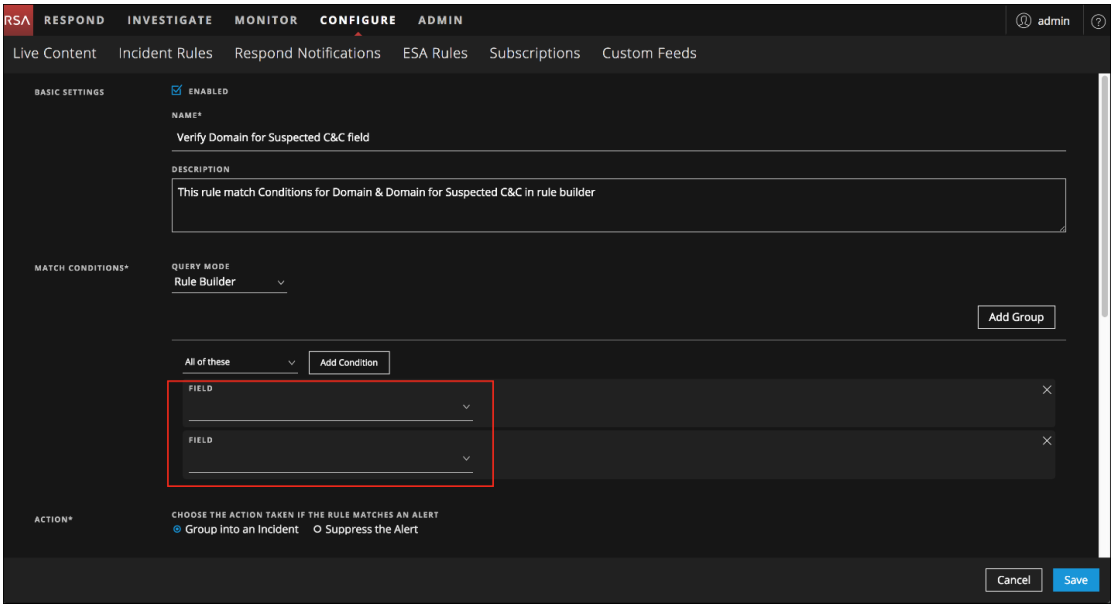
Modify the incident rules that you identified in the Task 4 - Check Aggregation Rules Match Conditions for "Domain" or "Domain for Suspected C&C" upgrade preparation task, which contained Domain or Domain for Suspected C&C in the matching conditions in rule builder, to use only Domain.

For each rule that you previously identified:

1. In the **NetWitness Suite** 11.1 menu, select **CONFIGURE** > **Incident Rules** and click the link in the Name column for the rule that you want to update.



2. In the **Match Conditions** section, in the blank fields, select **Domain** in the drop-down list and then select the conditions that you previously identified in the pre-upgrade tasks.



3. Click **Save** to update the rule.
   For information about incident rules, see the *NetWitness Respond Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

SecOps Manager

(RSA Archer Security Incident Management, RSA Archer Security Operations & Breach Management and RSA Archer Issues Management)

Task 28 - Reconfigure NW SecOps Manager Integration

For information on how to reconfigure NW SecOps for Event Stream Analysis, Reporting Engine, and Respond, see *RSA Archer Integration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Warehouse Connector

Task 29 - Restore `keytab` Files, Mount NFS, Install Service

1. Restore the `keytab` files from `<backup-path>/restore` directory.
2. Restore the Kerberos Realm Configuration from the `<backup-path>/restore/etc/krb5.conf` into `/etc/krb5.conf`.
3. (Conditional) If you perform the upgrade from a Non - FIPS environment and the `isCheckValidationRequired` parameter is not enabled in the destination, to configure the SFTP destination:
   a. SSH to the Warehouse Connector host and submit the following commands:
      ```
      cd /root/.ssh/
       mv id_dsa id_dsa.old
      OWB_FORCE_FIPS_MODE_OFF=1 openssl pkcs8 -topk8 -v2 des3 -in id_dsa.old -out id_dsa
      ```
      You are prompted for the pass phrase.
   b. Enter the Encryption password.
   c. Run the following command.
      ```
      chmod 600 id_dsa
      ```
4. Install the Warehouse Connector.
   See the *NetWitness Suite Warehouse Connector Configuration Guide* for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 30 - Refresh Warehouse Connector Lockbox and Start Stream

Note: If the streams have auto start turned on in 10.6.5.x, there will be a small delay before you will see the Warehouse Connector service in the NetWitness Suite User Interface.

1. Refresh the Lockbox of Warehouse Connector.
2. SSH to the Warehouse Connector and log in with root credentials.
3. Restart the service.
   ```
   service nwwarehouseconnector restart
   ```

4. (Conditional) If the auto start was not enabled in 10.6.5.x, you must start the stream manually after the service restarts.

Backup

Task 31 - Remove Backup-Related Files from Host Local Directories

Caution: 1) You must retain a copy of all backup files on an external host. 2) Validate that you have all your data from your backup restored in 11.1. before you remove the backup-related files from the local directories on your 11.1. hosts.

Backup `.tar` Files

After all the hosts are upgraded to 11.1, you must remove:

- the backup files from the local directories on the hosts.
- all the files from `nw-backup` and `restore` directories on the hosts.

Host	Backup Path	Restore Path
Malware	`/var/lib/rsamlware/nw-backup`	`/var/netwitness/malware_analytics_server/nw-backup/restore`
Event Stream Analysis	`/opt/rsa/database/nw-backup`	`/var/netwitness/database/nw-backup/restore`
NW Server	`/var/netwitness/database/nw-backup`	`/var/netwitness/restore`
All Other Hosts	`/var/netwitness/database/nw-backup`	`/var/netwitness/database/nw-backup/restore`

Appendix A. Troubleshooting

There two sections in this appendix.

- Section 1 - General Troubleshooting Information
- Section 2 - Hardware-Related Troubleshooting Information

Section 1 - General Troubleshooting information

This section describes solutions to problems that you may encounter during installations and upgrades. In most cases, NetWitness Suite creates log messages when it encounters these problems.

Note: If you cannot resolve an upgrade issue using the following troubleshooting solutions, contact Customer Support (https://community.rsa.com/docs/DOC-1294) .

This section has troubleshooting documentation for the following services, features, and processes.

- Command Line Interface (CLI)
- Backup Script
- Event Stream Analysis
- Log Collector Service (`nwlogcollector`)
- NW Server
- Reporting Engine

Command Line Interface (CLI)

Error Message	Command Line Interface (CLI) displays: "Orchestration failed." `Mixlib::ShellOut::ShellCommandFailed: Command execution failed. STDOUT/STDERR suppressed for sensitive resource in/var/log/netwitness/config-management/chef-solo.log`
Cause	Entered the wrong `deploy_admin` password in `nwsetup-tui`.
Solution	Retrieve your `deploy_admin` password password. 1. SSH to the NW Server host. `security-cli-client --get-config-prop --prop-hierarchy nw.security-client --prop-name deployment.password`

SSH to the host that failed.

2. Run the `nwsetup-tui` again using correct `deploy_admin` password.

Error Message	`ERROR com.rsa.smc.sa.admin.web.controller.ajax.health.AlarmsController - Cannot connect to System Management Service`
Cause	NetWitness Suite sees the Service Management Service (SMS) as down after successful upgrade even though the service is running.
Solution	Restart SMS service. `systemctl restart rsa-sms`

Backup (`nw-backup` script)

Error Message	`WARNING: Incorrect ESA Mongo admin password for host <hostname>.`
Cause	ESA Mongo admin password contains special characters (for example, '!@#$%^qwerty').
Solution	Change the ESA mongo admin password back to the original default of 'netwitness' before running backup. See "ESA Config: Change MongoDB Password for admin Account" the *Event Stream Analysis Configuration Guide. Go to the* Master Table of Contents *for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.*

Error	Backup errors caused by the `immutable` attribute setting. Here is an example of an error that can be displayed: Cause	If you have any files that have the immutable flag set (to keep the Puppet process from overwriting a customized file), the file will not be included in the backup process and an error will be generated.
Solution	On the host that contains the files with the immutable flag set, run the following command to remove the immutable setting from the files: `chattr -i <filename>`

Error	Error creating Network Configuration Information file due to duplicate or bad entries in primary network configuration file: `/etc/sysconfig/network-scripts/ifcfg-em1` Verify contents of `/var/netwitness/logdecoder/packetdb/nw-backup/2018-02-23/S5-BROK-36-10.25.53.36-network.info.txt`
Cause	There are incorrect or duplicate entries for any one of the following fields: DEVICE, BOOTPROTO, IPADDR, NETMASK or GATEWAY, that were found from reading the primary Ethernet interface configuration file from the host being backed up.

Solution	Manually create a file at the backup location on the external backup server, as well as the backup location local to the host where other backups have been staged. The file name should be of the format `<hostname>-<hostip>-network.info.txt`, and should contain the following entries:
	`DEVICE=<devicename> ; # from the host's primary ethernet interface config file`
	`BOOTPROTO=<bootprotocol> ; # from the host's primary ethernet interface config file`
	`IPADDR=<value> ; # from the host's primary ethernet interface config file`
	`NETMASK=<value> ; # from the host's primary ethernet interface config file`
	`GATEWAY=<value> ; # from the host's primary ethernet interface config file`
	`search <value> ; # from the host's /etc/resolv.conf file`
	`nameserver <value> ; # from the host's /etc/resolv.conf file`

Event Stream Analysis

Problem	ESA service crashes after you upgrade to 11.1.0.0 from a FIPS enabled setup.
Cause	ESA service is pointing to an invalid keystore.

Solution	1. SSH to the ESA Primary host and log in.
	2. In the `/opt/rsa/esa/conf/wrapper.conf` file, replace the following line:
	`wrapper.java.additional.5=-Djavax.net.ssl.keyStore=/opt/rsa/esa/../carlos/keystore`
	with:
	`wrapper.java.additional.5=-Djavax.net.ssl.keyStore=/opt/rsa/carlos/keystore`
	3. Submit the following command to restart ESA.
	`systemctl restart rsa-nw-esa-server`
	Note: If you have multiple ESA hosts and you encounter that same problem, repeat steps 1 through 3 inclusive on each secondary ESA host.

Log Collector Service (`nwlogcollector`)

Log Collector logs are posted to `/var/log/install/nwlogcollector_install.log` on the host running the `nwlogcollector` service.

Error Message	`<timestamp>.NwLogCollector_PostInstall: Lockbox Status : Failed to open lockbox: The lockbox stable value threshold was not met because the system fingerprint has changed. To reset the system fingerprint, open the lockbox using the passphrase.`
Cause	The Log Collector Lockbox failed to open after the update.
Solution	Log in to NetWitness Suite and reset the system fingerprint by resetting the stable system value password for the Lockbox as described in the "Reset the Stable System Value" topic under "Configure Lockbox Security Settings" topic in the *Log Collection Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Error Message	`<timestamp> NwLogCollector_PostInstall: Lockbox Status : Not Found`
Cause	The Log Collector Lockbox is not configured after the update.
Solution	(Conditional) If you use a Log Collector Lockbox, log in to NetWitness Suite and configure the Lockbox as described in the"Configure Lockbox Security Settings" topic in the *Log Collection Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Error Message	`<timestamp>: NwLogCollector_PostInstall: Lockbox Status : Lockbox maintenance required: The lockbox stable value threshold requires resetting. To reset the system fingerprint, select Reset Stable System Value on the settings page of the Log Collector.`
Cause	You need to reset the stable value threshold field for the Log Collector Lockbox.
Solution	Log in to NetWitness Suite and reset the stable system value password for the Lockbox as described in "Reset the Stable System Value" topic under "Configure Lockbox Security Settings" topic in the *Log Collection Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Problem	You have prepared a Log Collector for upgrade and no longer want to upgrade at this time.
Cause	Delay in upgrade.
Solution	Use the following command string to revert a Log Collector that has been prepared for upgrade back to resume normal operation. `# /opt/rsa/nwlogcollector/nwtools/prepare-for-migrate.sh --revert`

NW Server

These logs are posted to `/var/netwitness/uax/logs/sa.log` on the NW Server Host.

Problem	After upgrade, you notice that Audit logs are not getting forwarded to the configured Global Audit Setup; or, The following message seen in the `sa.log`. `Syslog Configuration migration failed. Restart jetty service to fix this issue`
Cause	NW Server Global Audit setup migration failed to migrate from 10.6.5.x to 11.1.0.0.
Solution	1. SSH to the NW Server. 2. Submit the following command. `orchestration-cli-client --update-admin-node`

Reporting Engine Service

Reporting Engine Update logs are posted to to`/var/log/re_install.log` file on the host running the Reporting Engine service.

Error Message	`<timestamp> : Available free space in /var/netwitness/re-server/rsa/soc/reporting-engine [ ><existing-GB ] is less than the required space [ <required-GB> ]`
Cause	Update of the Reporting Engine failed because you do not have enough disk space.
Solution	Free up the disk space to accommodate the required space shown in the log message. See the "Add Additional Space for Large Reports" topic in the *Reporting Engine Configuration Guide* for instructions on how to free up disk space. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

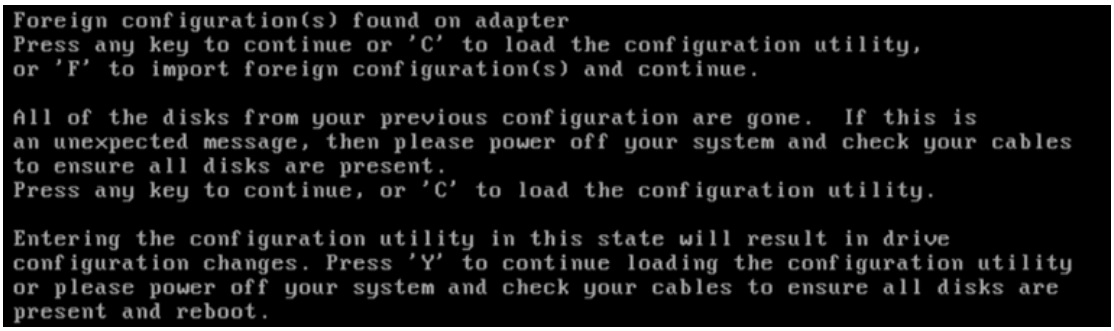
Section 2 - Hardware-Related Troubleshooting Information

Import Foreign Config for Series 4 Appliance with External Storage

If you upgrade a host with an external storage (for example, a DAC) to 11.1 and try to restart the appliance, the system may recognize it as having a foreign configuration. If you receive this error, complete the following steps.

1. Restart the appliance with external storage.

   The following messages are displayed.



2. Press the **F** key and restart the appliance.

   If this successfully imports the configuration and restarts the appliance, you are finished. If it does not work, go to step 3.

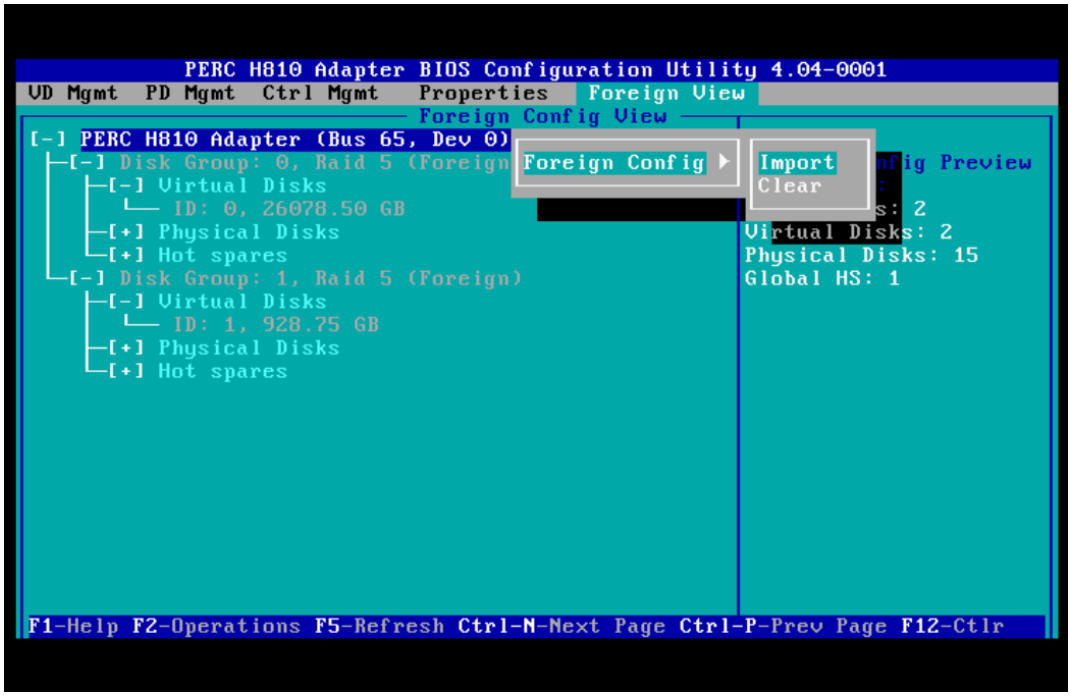
3. Press **C** to start the Configuration utility.

   a. Select the **PERC H8x0 Adapter**.

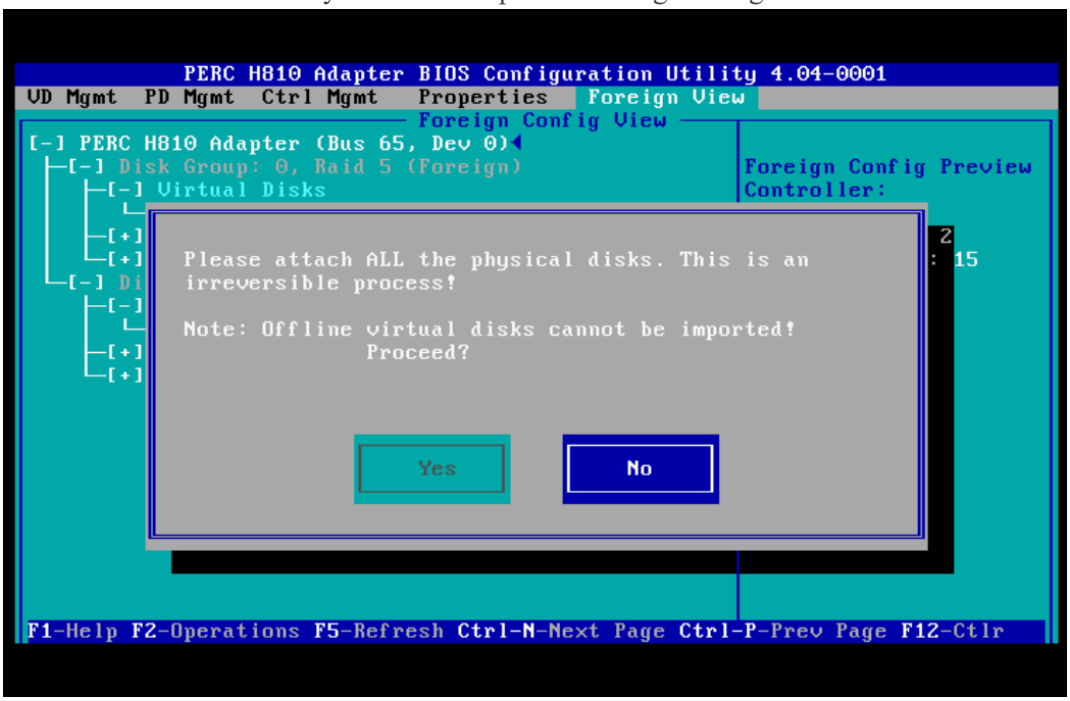
   b. Highlight the top row [for example, **PERC H810 Adapter (Bus 65, Dev 0)**].

   c. Select **Foreign View** from the menu bar.

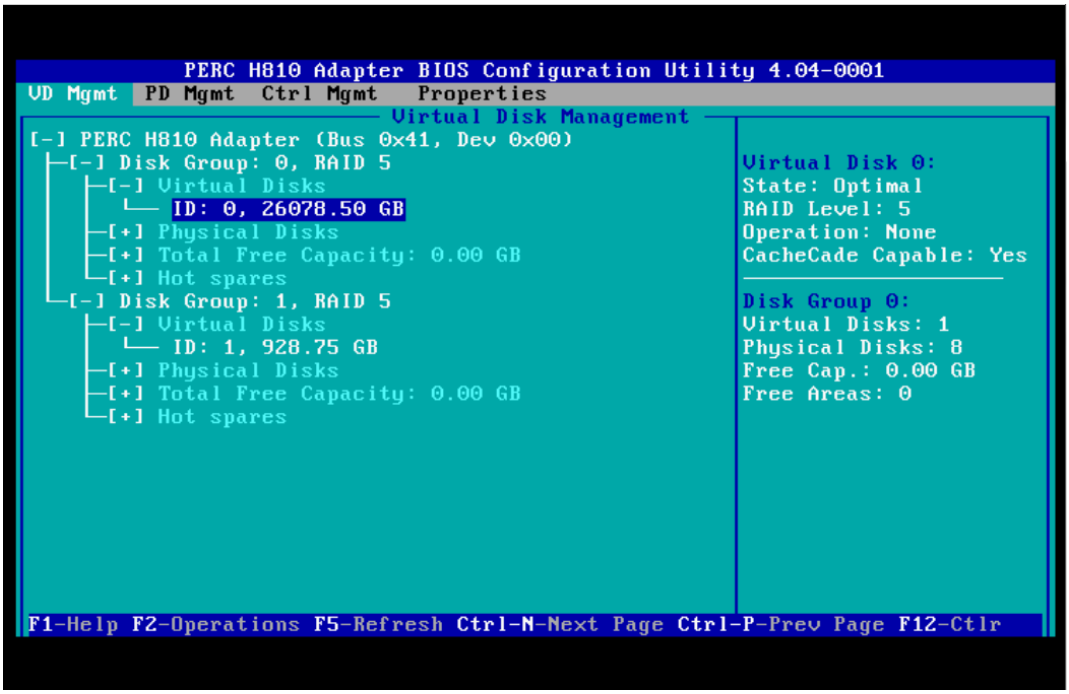
   d. Press **F2** to display the **Foreign Config** drop down menu and select **Import**.



e. Select **Yes** to confirm that you want to import the foreign config.

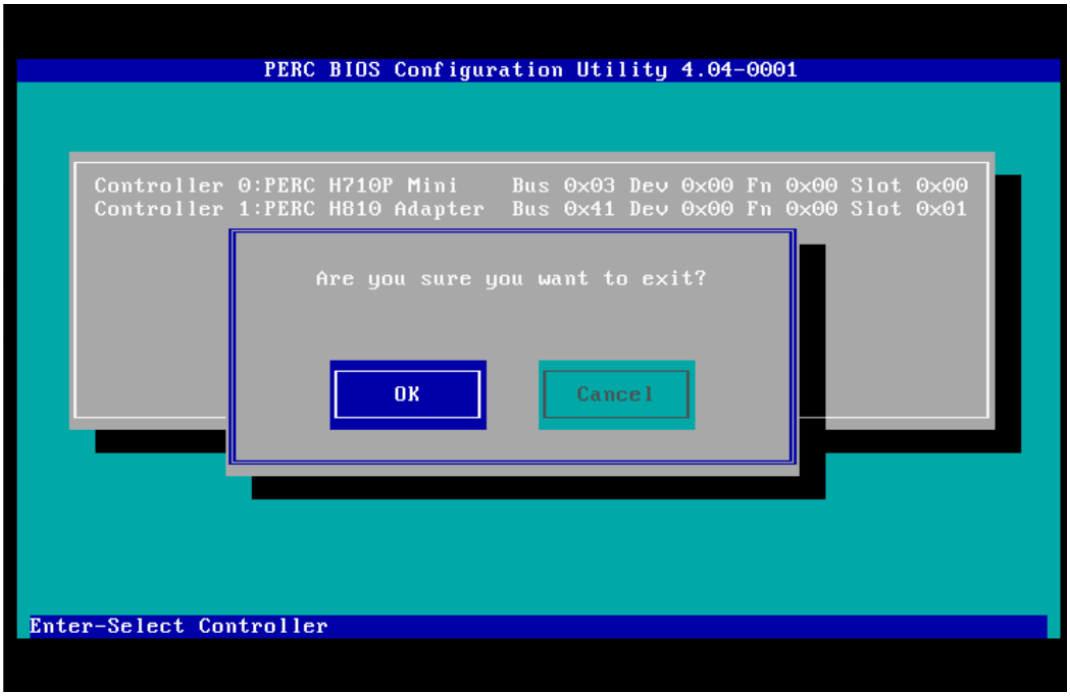


f. Verify that there are no more foreign configs present on the system.



g. Press the **Esc** key to exit.

h. Select **Yes** to confirm that you want to exit.



4. Press **Ctrl-Alt-Delete** to restart (reboot) the appliance.

Caution: If the foreign config fails, Contact Customer Support (https://community.rsa.com/docs/DOC-1294).

Restore Files for 10G Decoder

If you use the 10G Decoder hardware driver and you customized the `/etc/init.d/pf_ring` script to use MTU from the `/etc/pf_ring/mtu.conf` file, you must restore `mtu.conf` and `pf_ring` files from the `./etc/init/pfring_bkup` directory.

1. Restore the `pf_ring` file to /etc/init.d/ directory in 11.1.
   `/etc/init.d/pf_ring`
2. Restore the `mtu.conf` file to `/etc/pf_ring/` directory in 11.1.
   `/etc/pf_ring/mtu.conf`

Appendix B. Stopping and Restarting Data Capture and Aggregation

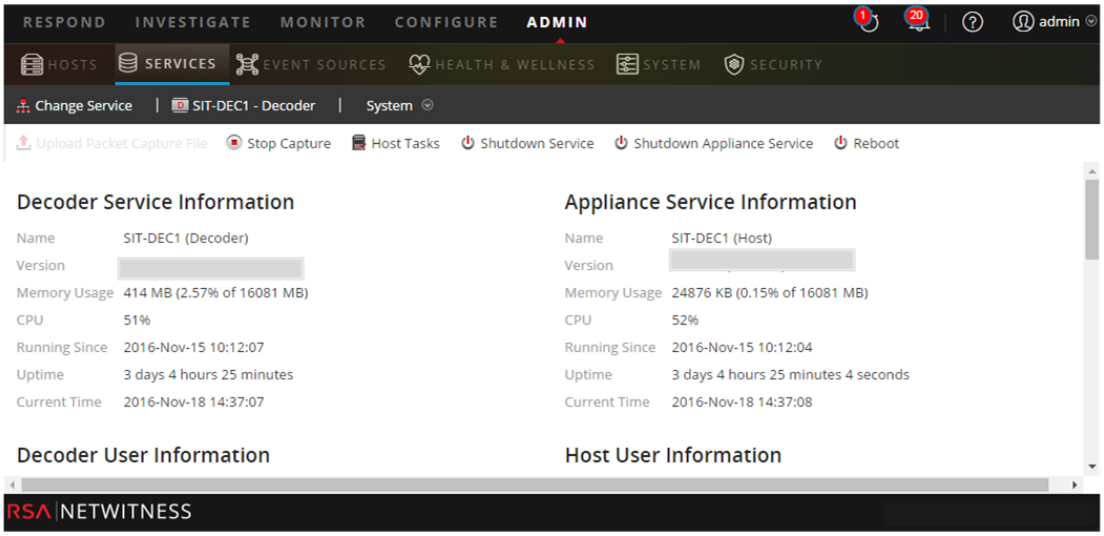
RSA recommends that you stop packet and log capture and aggregation before upgrading a Decoder, Concentrator, and Broker host to 11.1.0.0. If you do this, you must restart packet and log capture and aggregation after updating these hosts.

Stop Data Capture and Aggregation

Stop Packet Capture

To stop packet capture:

1. Log in to NetWitness Suite and go to **ADMIN** > **Services**.
   The Services view is displayed.
2. Select each **Decoder** service.



3. Under (actions), select **View** > **System**.
4. In the toolbar, click

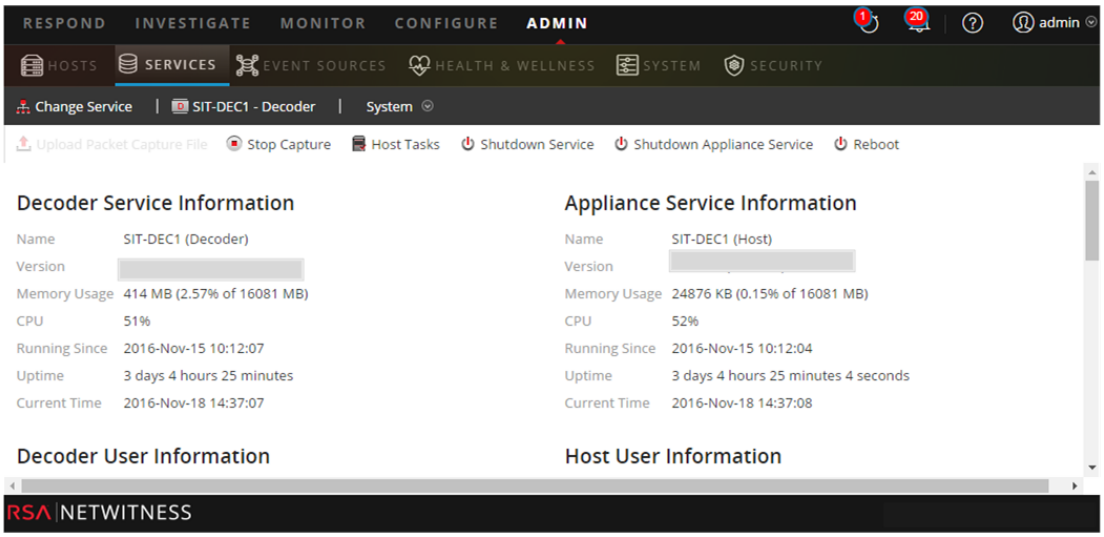
.

Stop Log Capture

To stop log capture:

1. Log in to NetWitness Suite and go to **ADMIN** > **Services**.
   The Services view is displayed.

2. Select each **Log Decoder** service.



3. Under (actions), select **View** > **System**.

4. In the toolbar, click

.

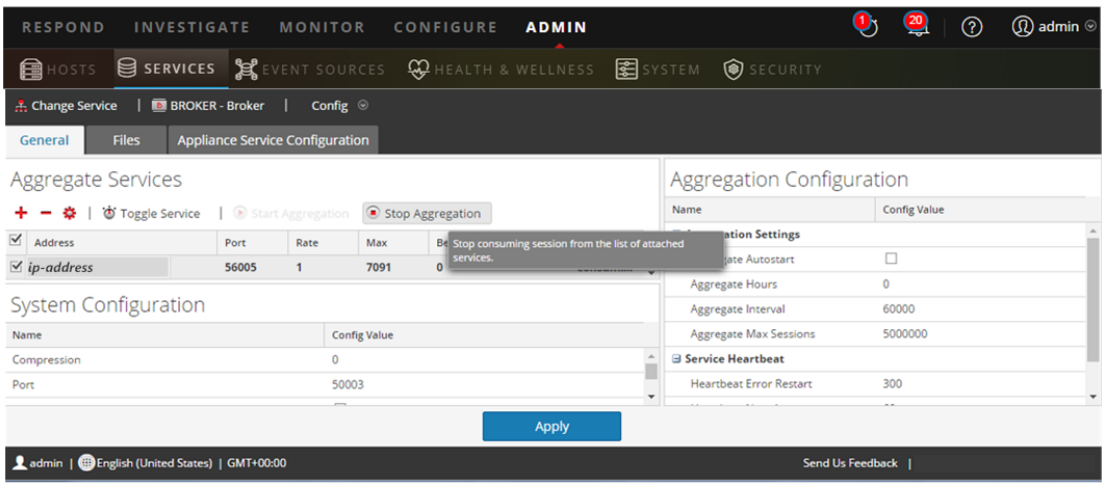
Stop Aggregation

1. Log in to NetWitness Suite and go to **ADMIN** > **Services**.

2. Select the **Broker** service.

3. Under (actions), select **View** > **Config**.

4. The **General** tab is displayed.



5. Under **Aggregated Services** click

.

Start Data Capture and Aggregation

Restart packet and log capture and aggregation after updating to 11.1.0.0.

Start Packet Capture

To start packet capture:

1. In the **NetWitness Suite** menu, select **ADMIN** > **Services**.
   The Services view is displayed.
2. Select each **Decoder** service.
3. Under (actions), select **View** > **System**.
4. In the toolbar, click .

Start Log Capture

To start log capture:

1. In the **NetWitness Suite** menu, select **ADMIN** > **Services**.
   The Services view is displayed.
2. Select each **Log Decoder** service.
3. Under (actions), select **View** > **System**.
4. In the toolbar, click .

Start Aggregation

To start aggregation:

1. In the **NetWitness Suite** menu, select **ADMIN** > **Services**.
   The Services view is displayed.
2. For each Concentrator and Broker service.
   a. Select the service.
   b. Under (actions), select **View** > **Config**.
   c. In the toolbar, click .

Appendix C. Using iDRAC

Many customers have remote sites with limited physical access and limited bandwidth from the administrator's desktop. If this the case, you may want to use iDRAC with the ISO Image shared out from an NFS share that is local to the devices being upgraded or installed. This also gives you the ability to use an existing NetWitness device as the sharing host.

For example, you have:

- a Concentrator and Decoder at a site in a remote geographic location.
- the bandwidth is relatively low to that site from the administrator's site.
- shipping a USB stick and arranging to have person to go plug it into the boxes while you upgrade is not practical.

In this situation, you can:

1. Install the nfs-utils rpm.
2. Configure the NFS share.
3. Configure iDRAC to connect to that share.
   Make sure that you update your iDRAC firmware Supported Windows and Linux Operating Systems. You do this by downloading and running the Dell Update Packages for supported Windows and Linux operating systems from Dell Support website at http://www.support.dell.com. For more information, see the Dell Update Package User's Guide available on the Dell Support website at http://topics-cdn.dell.com/pdf/dell-update-packages-v17.10.00_User's%20Guide_en-us.pdf.
4. Boot to the virtual media that contains the ISO file and continue with the upgrade.

Configure NFS Server - NFS Server config File

1. Install NFS and it’s common utilities using yum.
   ```
   yum install nfs-utils
   ```
2. Configure the NFS service to run at boot.
   ```
   chkconfig nfs on
   ```
3. Configure the rpcbind service to run at boot.
   This service is required by NFS and must be running before NFS can be started.
   ```
   chkconfig rpcbind on
   ```

4. Start the rpcbind service.
   `service rpcbind start`
5. Start the NFS service.
   `service nfs start`
6. Create a directory for our first export.
   `mkdir /exports/files`
7. Open the NFS exports file into a text editor.
   `vi /etc/exports`
8. To export the directory to everyone with read-only access, add the following line.
   `/exports/files *(ro)`
9. Save your changes and exit the editor.
   `:wq!`
10. Export the directory defined above.
    `exportfs -a`
11. Disable firewall rules while performing upgrades.
    `service iptables stop`
12. Copy install media that contains the ISO file to `/exports/files` directory.

Boot iDRAC to NFS Configuration

Note: You must verify idrac firmware is at least 1.57.57 for Series 4 (R620).

1. Log into iDRAC interface.
2. Attach media via Remote File Share.
   `<server ip>:/export/files/11.1.0.0.iso`
   For example: `10.10.10.10:/exports/files/rsa-11.1.0.0.1948.el7-usb.iso`
3. Click **Connect**.
4. Launch **Console**.
5. From **next boot** menu select **Virtual DVD/CD**.
6. Reboot device.

Appendix D. Create External Repository

Complete the following procedure to set up an external repository (Repo).

Note: 1.) You need an unzip utility installed on the host to complete this procedure. 2.) You must know how to create a web server before you complete the following procedure.

1. Log in to the web server host.
2. Create directory to host the NW repository (`netwitness-11.1.0.0.zip`), for example `ziprepo` under `web-root` of the web server. For example, `/var/netwitness` is the `web-root`, submit the following command string.
   `mkdir -p /var/netwitness/<your-zip-file-repo>`
3. Create the 11.1.0.0 directory under `/var/netwitness/<your-zip-file-repo>`.
   `mkdir -p /var/netwitness/<your-zip-file-repo>/11.1.0.0`
4. Create the `OS` and `RSA` directories under `/var/netwitness/<your-zip-file-repo>/11.1.0.0`.
   `mkdir -p /var/netwitness/<your-zip-file-repo>/11.1.0.0/OS`
   `mkdir -p /var/netwitness/<your-zip-file-repo>/11.1.0.0/RSA`
5. Unzip the `netwitness-11.1.0.0.zip` file into the `/var/netwitness/<your-zip-file-repo>/11.1.0.0` directory.
   `unzip netwitness-11.1.0.0.zip -d /var/netwitness/<your-zip-file-repo>/11.1.0.0`
   Unzipping `netwitness-11.1.0.0.zip` results in two zip files (`OS-11.1.0.0.zip` and `RSA-11.1.0.0.zip`) and some other files.
6. Unzip the:
   a. `OS-11.1.0.0.zip` into the `/var/netwitness/<your-zip-file-repo>/11.1.0.0/OS` directory.
      `unzip /var/netwitness/<your-zip-file-repo>/11.1.0.0/OS-11.1.0.0.zip -d /var/netwitness/<your-zip-file-repo>/11.1.0.0/OS`
      The following example illustrates how the Operating System (OS) file structure will appear after you unzip the file.

10.6.5.x to 11.1 Physical Host Upgrade Checklist

RSA NETWITNESS® SUITE

Task	Description	√
Prepare for Upgrade		
1.	Download **RSANW-11.1-PhysUpgradeGde.pdf** from RSA Link and review it.	
2.	Carefully read the sections on Event Stream Analysis (ESA) Upgrade Considerations and Investigate in Mixed Mode.	
3.	Be aware of the hardware, deployments, services, and features not supported in 11.1.	
4.	Perform the upgrade preparation tasks for the features you use. **Caution:** Make sure that you implement and test the new ports so that upgrade does not fail due to missing ports.	
5.	Create CentOS 6 external host to save backup tar files.	
6.	Download the `nw-backup-v4.0.zip` file from RSA Link (https://community.rsa.com/docs/DOC-81514) to external host.	
7.	Execute `get-all-systems.sh` and `ssh-propagate.sh` script from external host.	
8.	Preserve a copy of the `get-all-systems-master` file for future reference.	
9.	Execute `nw-backup.sh` in `TEST` mode to evaluate the space requirements from external host (for example: `nw-backup -t -l -D`).	
10.	Review the back up options for `nw-backup.sh` by displaying the help menu (`nw-backup.sh -h`) .	

Task	Description	√
Phase 1 - Upgrade SA Server, ESA, Malware Analysis, and Broker/Concentrator Hosts		
11.	Update the contents of the `all-systems` so they consist of SA, ESA's, MA and Broker/Concentrator backup data.	
12.	Reset the Mongo Database admin password to 'netwitness' if it contains special characters .	
13.	Execute `nw-backup.sh` with `-u` flag for all Phase 1 hosts and confirm that it completes with no errors.	
14.	If your environment has multiple ESA appliances, designate a primary ESA (Where the Context Hub service is running) and copy `mongodb.tar.gz.*` files from the secondary ESAs to designated primary ESA default backup path.	
15.	Confirm that backup tar files are saved locally and remotely.	
16.	Attach media (media that contains the ISO file, for example a build stick) to the SA Server host. See **RSANW-11.x-BuildStickInstr.1.pdf** for instructions on how to get ISO and prepare it. **Caution:** You must use the build stick labeled “OEMDRV”.	
17.	Create base image on the host from the attached media.	
18.	Upgrade the host to 11.1 by running the `nwsetup-tui` program on the host.	
19.	Repeat steps 17., 18., and 19 on the: a. ESA Primary host (and other ESA hosts if you have any). b. Malware Analysis host. c. Broker or Concentrator host.	
20.	Install the ESA, Malware Analysis, and Broker or Concentrator services in the NetWitness 11.1User Interface.	

Task	Description	√
Phase 2 - Upgrade All Other Hosts		
21.	Update the contents of the `all-systems` so they consist of Phase 2 host backup data.	
22.	Execute `nw-backup.sh` in `TEST` mode to evaluate the space requirements from external host (for example: `nw-backup -t -l -D`).	
23.	Execute `nw-backup.sh` with `-u` flag for all Phase 2 hosts and confirm that it completes with no errors.	
24.	Confirm that backup tar files are saved locally and remotely.	
25.	For all other hosts: a. Attach media (that is Build Stick or DVD ISO) to the SA Server host. See **RSANW-11.x-BuildStickInstr.pdf** for instructions on how to get ISO and prepare it. b. Create base image on the host from the attached media. c. Upgrade the 10.6.5.x host to 11.1 by running the `nwsetup-tui` program on the host. d. Install the host service in the NetWitness 11.1 User Interface:	
Preform Post Upgrade Adjustments		
26.	Perform the post upgrade tasks for the features you use.

Upgrade Preparation Tasks **16**

Global 16

Task 1 - Review Core Ports and Open Firewall Ports 16

Task 2 - Record Your 10.6.5.x admin user Password 17

Task 3 - Create a Backup of /etc/fstab File 17

Respond 18

Task 4 - Check Aggregation Rules Match Conditions for “Domain” or “Domain for Suspected C&C” 18

Reporting Engine 19

(Conditional) Task 5 - Unlink External Storage 19

Backup Instructions **20**

Task 1 - Set up an External Host for Backing up Files 21

Task 2 - Create a List of Hosts to Back up 23

Troubleshooting Information 25

Task 3 - Set up Authentication Between Backup and Target Hosts 27

Task 4 - Check for Backup Requirements for Specific Types of Hosts 27

For All Host Types 27

For ESA Hosts with Mongo Databases 28

For Decoder, Concentrator, or Broker Hosts: Stop Data Capture and Aggregation 28

Log Collectors (LC) and Virtual Log Collectors (VLCs): Run prepare-for-migrate.sh 28

For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint: List RabbitMQ Usernames and Passwords 30

For Bluecoat Event Sources 30
Task 5 - Check for Adequate Space for the Backup 30
Task 6 - Back up Your Host Systems 31
Post Backup Tasks 35
Task 1 - Save a Copy of the all-systems File and the Backup Tar files 35
Task 2 - Ensure Required Backup Files Were Generated 35
Task 3 - (Conditional) For Multiple ESA Hosts, Copy mongodb tar files to Primary ESA Host 36
Task 4 - Ensure All Required Backup Files are on Each Host 36

Migrate Disk Drives from 10.6.5.x to 11.1 39

Task 1 - Back Up Data in 10.6.5.x VMs 40
Task 2 - Deploy Same 10.6.5.x VM Stack in 11.1 40
Task 3 - Copy VMDK Files and Add Them as Hard Disk to New VMs 41
Task 4 - Retain MAC Address of Upgraded SA Server VM 46
Task 5 - Restore Backup Data in 10.6.5.x to 11.1 VMs 49

Set Up Virtual Hosts in 11.1 54

Phase 1 - Set Up NW Server, Event Stream Analysis, Malware Analysis, and Broker or Concentrator Hosts 54
Task 1 - Set Up 11.1 NetWitness Server 54
Task 2 - Set Up 11.1 ESA 54
Task 3 - Set Up 11.1 Malware Analysis 54
Task 4 - Set Up 11.1 Broker or Concentrator 55
Phase 2 - Set Up The Rest of the Component Hosts 55
Decoder and Concentrator Hosts 55
Log Decoder Host 55
Virtual Log Collector Host 55
Set Up 11.1 NW Server Host 57
Set Up 11.1 Non-NW Server Host 62

Update or Install Legacy Windows Collection 68

Post Upgrade Tasks 69

NW Server 69
Task 1 - Migrate Active Directory (AD) 69
Task 2 - Modify Migrated AD Configuration to Upload Certificate 70
Task 3 - Reconfigure Pluggable Authentication Module (PAM) in 11.1 70

Task 4 - Restore NTP Servers 70
Task 5 - Restore Licenses for Environments without FlexNet Operations-On Demand Access 70
Task 6 - Remap Virtual NW Server License to 10.6.5.x MAC Address 71
(Conditional) Task 7 - If You Disabled Standard Firewall Config - Add Custom IPtables 71
(Conditional) Task 8 - Specify SSL Ports If You Never Set Up Trusted Connections 71
Task 9 - (Conditional) Correct Audit Log Templates That Are Not Updated in Logstash Output Conf File 72
RSA NetWitness® Endpoint 73
Task 10 - Reconfigure Recurring Feed Configured from Legacy Endpoint Because Java Version Changed 73
RSA NetWitness® Endpoint Insights 73
(Optional) Task 11 - Install Endpoint Hybrid or Endpoint Log Hybrid 73
Task 12 - Reconfigure Endpoint Alerts Via Message Bus 73
Event Stream Analysis Tasks (ESA) 74
Task 13 - Reconfigure Automated Threat Detection for ESA 74
Task 14 - For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint Configure Mutually Authenticated SSL 75
Task 15 - Enable Threat - Malware Indicators Dashboard 75
Investigate 75
Task 16 - Make Sure User Roles Have Customized User Roles Have Investigate-server Permissions for Event Analysis Access 75
Log Collection 76
Task 17 - Reset Stable System Values for Log Collector after Upgrade 76
(Optional for Upgrades from 10.6.5.x with FIPS enabled for Log Collectors, Log Decoders and Packet Decoders)Task 18 - Enable FIPS Mode 77
Reporting Engine 77
Task 19 - Restore the CA certificates for External Syslog Servers for Reporting Engine .. 77
(Conditional) Task 20 - Restore External Storage for Reporting Engine 78
Respond 78
(Conditional) Task 21 - Restore Custom Analysts Roles 78
Task 22 - Restore Respond Service Custom Keys 78
Task 23 - Restore Customized Respond Service Normalization Scripts 79
Task 24 - Add Respond Notification Settings for Custom Roles 79
Task 25 - Manually Configure Respond Notification Settings 80
Task 26 - Update Default Incident Rule Group By Values 81

Task 27 - Add Group By Field to Incident Rules 82
Task 28 - Update Incident Rules Identified in the Domain in the Matching Conditions Upgrade Preparation Task 83
RSA NetWitness® SecOps Manager 84
Task 29 - Reconfigure NW SecOps Manager Integration 85
Backup 85
Task 30 - Remove Backup-Related Files from Host Local Directories 85
Appendix A. Troubleshooting 86
Command Line Interface (CLI) 86
Backup (nw-backup script) 88
Event Stream Analysis 90
Log Collector Service (nwlogcollector) 91
NW Server 93
Reporting Engine Service 93
Appendix B. Stopping and Restarting Data Capture and Aggregation 94
Stop Data Capture and Aggregation 94
Start Data Capture and Aggregation 96
Appendix C. Using iDRAC 97
Configure NFS Server - NFS Server config File 97
Boot iDRAC to NFS Configuration 98
Appendix D. Create External Repository 99
Revision History 102

Introduction

The instructions in this guide apply to the upgrade of virtual hosts to RSA NetWitness Suite11.1 exclusively. See the *RSA NetWitness Suite Physical Host Upgrade Guide* for instructions on how to upgrade your 10.6.5.x physical hosts to 11.1. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

NetWitness Suite 11.1 is a major release that affects all products in the NetWitness Suite. The components of the suite are the NetWitness Server (Admin server, Config server, Integration server, Investigate server, Orchestration server, Respond server, and Security sever), Archiver, Broker, Concentrator, Context Hub, Decoder, Endpoint Hybrid, Endpoint Log Hybrid, ESA Primary, ESA Secondary, Log Collector, Log Decoder, Malware Analysis, Reporting Engine, Warehouse Connector, and Workbench.

Refer to the *RSA NetWitness Suite Getting Started Guide* to become familiar with the major changes to the 11.x User interface. Refer to the *RSA NetWitness Suite Deployment Guide* to become familiar with the major platform changes in 11.x.

Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Note: The Reporting Engine is installed on the NW Server host, Workbench is installed on the Archiver host, Warehouse Connector can be installed on the Decoder host or Log Decoder host.

CentOS6 to CentOS7 Upgrade

NetWitness Suite 11.1 is a major release that involves upgrading to a newer version of the operating system (CentOS6 to CentOS7). In addition, the 11.1 platform environment has been improved greatly to accommodate current and future physical and virtual deployment types. These changes require an upgrade to the new environment and an upgrade of the functionality.

RSA NetWitness® Suite 11.1 Upgrade Path

The earliest supported Upgrade path for RSA NetWitness® Suite 11.1 is Security Analytics 10.6.5.x. If you are running a version of NetWitness Suite that is prior to 10.6.5.x, you must update to 10.6.5.x before you can upgrade to 11.1. See the *RSA Security Analytics 10.6.5 Update Guide* (https://community.rsa.com/docs/DOC-85119) on RSA Link.

Supported Host Upgrade Path

You must upgrade a host to the same host type:

- Same Series RSA Physical Appliance to Same Series RSA Physical Appliance (that is, Series 4 to Series 4, Series 5 to Series 5).
  RSA does not support third-party physical hosts in 11.1.
- On-Prem Virtual to On-Prem Virtual

Caution: The 11.1 upgrade does not support mixed-platform upgrades (for example, it does not support physical to virtual).

Hardware, Deployments, Services, and Features Not Supported in 11.1

RSA does not support upgrade of the following hardware, deployments, services, and features to 11.1.

- RSA All-in-One (AIO) Appliance
- Multiple NetWitness Server Deployment
- IPDB service
- Malware Analysis service co-located on the SA Server (Upgrade of Malware Analysis Enterprise is supported in 11.1.)
- Standalone Warehouse Connector service (Upgrade of a co-located Warehouse Connector is supported in 11.1.)
- Custom Health & Wellness policy in 10.6.x for the Context Hub Service
  After you upgrade to NetWitness 11.1, your custom policy is not present. In its place, there is the out-of-the-box Context hub Server Monitoring Policy in the user interface, which is specific for version 11.1.

- Defense Information Strategic Agency-Security Technical Information Guide (DISA-STIG) hardened deployments.
- Warehouse Analytics (Data Science)

Event Stream Analysis (ESA) Upgrade Considerations

In RSA NetWitness® Suite 11.1, RSA changed how ESA Correlation Rules store and transmit the alerts the system generates. In 11.1, ESA sends all alerts to a central Alert system. The local mongo storage in ESA 10.6.5.x has been removed.

Caution: If you do not use Incident Management in 10.6.5.x, carefully consider whether or not to upgrade to version 11.1.

The following guidelines should help you determine whether or not to upgrade your ESA hosts to 11.1.

In your 10.6.5.x deployment, if you have:

- One ESA host, with or without Incident Management configured, upgrade to 11.1.
- Multiple ESA hosts configured to use Incident Management – The system will continue to aggregate alerts centrally. If the system is correctly sized and operating as intended in 10.6.5.x, you can upgrade to version 11.1.
- Multiple ESA hosts without configuration to use Incident Management and you are connecting to individual ESA hosts to view alerts, do not upgrade to version 11.1.

Note: If you did not use Incident Management in 10.6.5.x, you cannot view the 10.6.5.x ESA alerts in the 11.1 Respond component without running a migration script. Use the ESA Alert Migration script to migrate these alerts to the location in 11.1 that will allow Respond to view them. See the *ESA Alert Migration Instructions* knowledge base article (https://community.rsa.com/docs/DOC-81680) in RSA Link for instructions on how to run this script.

Upgrade Phases

RSA recommends that you stagger host upgrades as described in this section. The update to CentOS7 and the need of a physical or iDRAC access cause the 11.1 upgrade to take more time than most upgrades.

Caution: If you stagger the upgrade, you:
• must upgrade the hosts in Phase 1 first, in the order shown.
• may not have all the features operational until you update your entire deployment.
• will not have service administrative features available until you upgrade all the hosts in your deployment.

Phase 1

You perform Phase 1 first and you must upgrade the hosts in the following order:

1. Security Analytics Server host
2. Event Stream Analysis hosts
3. Malware Analysis hosts
4. Broker hosts (if you do not have a Broker, upgrade your Concentrator hosts)
   The 11.1 NW Server cannot communicate with 10.6.5.x core services for the new Investigate functionality. This is why you must upgrade the Broker or Concentrator hosts in Phase 1.

Phase 2

Upgrade the rest of your hosts.

RSA recommends that you follow the order in Phase 2 to reduce:

- functionality loss during investigation.
- downtime that results in the loss of packet and log capture.

Note: Other than Log Collection hosts with downstream event destinations, there is no technical reason to upgrade your hosts in the order shown in Phase 2.

This is the Phase 2 host upgrade order recommended by RSA.

1. Decoder hosts
2. Concentrator hosts
3. Archiver hosts
4. Log Collection hosts - Log Collectors on Log Decoder hosts (LDs), Virtual Log Collectors (VLCs) and Legacy Windows Collectors (LWCs)
   Before you upgrade a log collection host, you must prepare it for the upgrade. Part of this preparation ensures that no event data remains in the queues. This requires you to keep the downstream destinations of event data (Log Collectors, Virtual Log Collectors and Log Decoders) up and functioning properly.

If you have event data destinations downstream from the Log Decoder, you must prepare and upgrade log collectors in the following order.

a. LDs (one LD at a time)

b. VLCs and LWCs

If you do not have event data destinations downstream from the Log Decoder, you can prepare and upgrade multiple LDs, VLCs, and LWCs together.

5. All other hosts

See "Running in Mixed Mode" under "The Basics" in the *RSA NetWitness Suite Hosts and Services Getting Started Guide* for:

- Functionality gaps encountered while running in this mode.
- Examples of staggered upgrades.

Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Investigate in Mixed Mode

Mixed mode occurs when some services are upgraded to 11.1 and some are still on 10.6.5. This happens when you upgrade to 11.1 in phases.

Note: You must follow the host upgrade sequence as shown in Upgrade Phases to ensure complete Investigate functionality. The 11.1 Investigate server is installed when you upgrade the SA Server, but Broker hosts need to be upgraded to 11.1 to access the Event Analysis View. If the Broker is not upgraded, analysts see a warning icon next to the Broker and no data aggregated to that Broker can be displayed.

After you upgrade all services to 11.1, when an analyst conducts an investigation, Role-Based Access Control (RBAC) of downloads works consistently to limit access to restricted data.

In mixed mode (that is, some services are upgraded to 11.1 and some are still at 10.6.5), when an analyst conducts an investigation, RBAC is not applied uniformly to viewing and downloads.

If the `sdk.packets` setting has not been disabled on the 10.6.x services, analysts with SDK meta and roles permissions in place to restrict viewing and reconstructing an event's content can download the PCAP of an event that has content restrictions. Other types of downloads appear to be successful, then generate errors due to insufficient permissions, and the data is still protected.

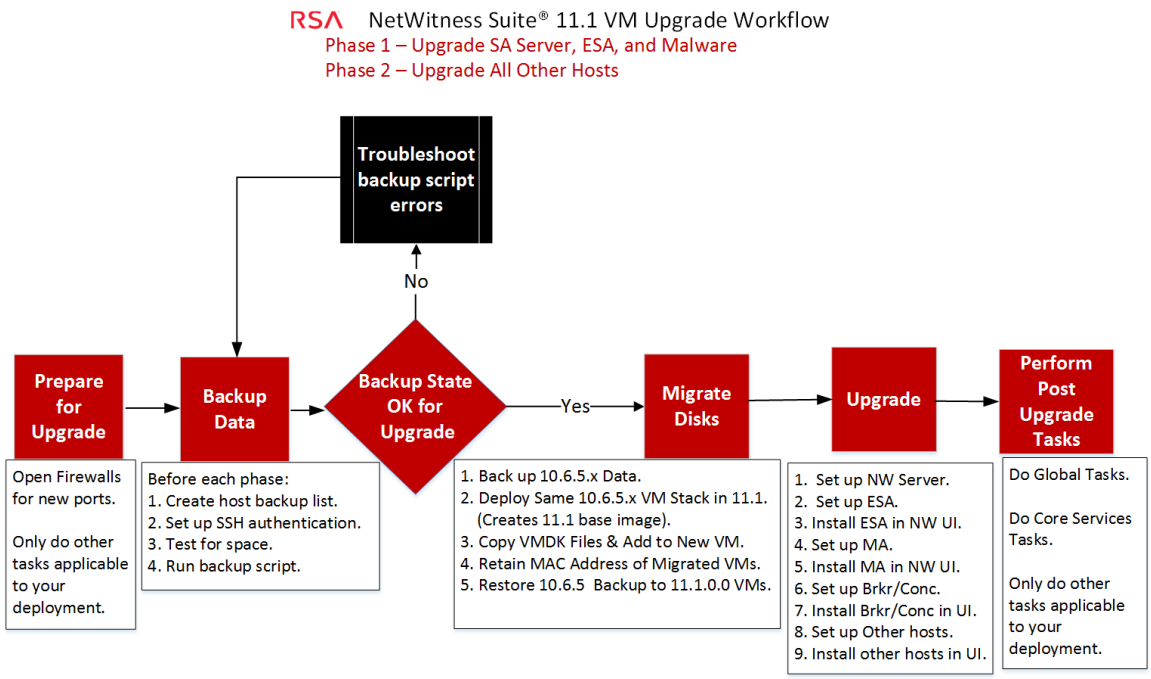
During a phased update, you can disable the `sdk.packets` setting on 10.6.x services to limit the analyst from downloading any PCAPs or logs during mixed mode. After you update all services to 11.1 and re-enable `sdk.packets`, RBAC works consistently across all services.

This table identifies what you can see and download in Investigate when your NW Server at version 11.1 is connected to services at a lower version.

Connecting Service Version	Affected View	User Role With Restricted Content	Can See	Can Download Restricted Content Successfully	Can Download Restricted Content with Errors
11.1 Broker -> 10.6.5.x Concentrator -> 10.6.5.x Packet Decoder/Log Decoder	Events View	Analyst	RBAC permitted items	PCAP	File archive is downloaded but cannot unzip
	Event Reconstruction View	Analyst	RBAC permitted items	PCAP	File archive is downloaded but cannot unzip
	Event Analysis View	Analyst	RBAC permitted items	PCAP	Error Retrieving Payload from Service for Payload, Request Payload, Response Payload

Connecting Service Version	Affected View	User Role With Restricted Content	Can See	Can Download Restricted Content Successfully	Can Download Restricted Content with Errors
11.1 Broker -> 11.1 Concentrator ->11.1 Decoder/Log Decoder	Event Reconstruction View	Analyst and Data Privacy Officer	RBAC permitted items	PCAP	Files archive is downloaded but cannot unzip PCAPs and logs are downloaded as zero bytes

Connecting Service Version	Affected View	User Role With Restricted Content	Can See	Can Download Restricted Content Successfully	Can Download Restricted Content with Errors
11.1 Broker -> 11.0.0.x Concentrator -> 11.0.0.x Packet Decoder/Log Decoder	Events View	Analyst	RBAC permitted items	None	Files archive is downloaded but cannot unzip PCAPs and logs are downloaded as zero bytes
	Event Reconstruction View	Analyst	RBAC permitted items	None	File archive is downloaded but cannot unzip PCAPs and logs are downloaded as zero bytes
	Event Analysis View	Analyst	RBAC permitted items	None	Error Retrieving Payload from Service for Payload, Request Payload, Response Payload PCAPs and logs are downloaded as zero bytes



Contact Customer Support

Refer to the Contact RSA Customer Support page (https://community.rsa.com/docs/DOC-1294) in RSA Link for instructions on how to get help on RSA NetWitness Suite 11.1.

Upgrade Preparation Tasks

Complete the following tasks to prepare for the upgrade to NetWitness Suite 11.1. These tasks are organized by the following categories.

- Global
- Respond
- Reporting Engine

Global

You must complete these tasks regardless of how you deploy NetWitness Suite and which components you use.

Task 1 - Review Core Ports and Open Firewall Ports

The following tables lists new ports in 11.1.

Caution: Make sure that the new ports are implemented and tested before upgrading so that upgrade does not fail due to missing ports.

NW Server Host

Source Host	Destination Host	Destination Ports	Comments
NW Hosts	NW Server	TCP 4505, 4506	Salt Master Ports
NW Hosts	NW Server	TCP 27017	MongoDB

ESA Host

Source Host	Destination Host	Destination Ports	Comments
NW Server, NW Endpoint, ESA Secondary	ESA Primary	TCP 27017	MongoDB

Endpoint Hybrid or Endpoint Log Hybrid

Source Host	Destination Host	Destination Ports	Comments
Endpoint Hybrid or Endpoint Log Hybrid	NW Server	TCP 5672	Message Bus

Source Host	Destination Host	Destination Ports	Comments
Endpoint Server	NW Server	TCP 27017	MongoDB

All NetWitness Suite core ports are listed in the "Network Architecture and Ports" topic in the *RSA NetWitness® SuiteDeployment Guide* in case you need to reconfigure NetWitness Suite services and firewalls. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 2 - Record Your 10.6.5.x `admin user` Password

Record your 10.6.5.x `admin user` password. You will need it to complete the upgrade.

Task 3 - Create a Backup of `/etc/fstab` File

Copy the `/etc/fstab` file from all VMs to your local machine (backup host or remote machine).

Note: You need this file to restore a VM with external storage mounts.

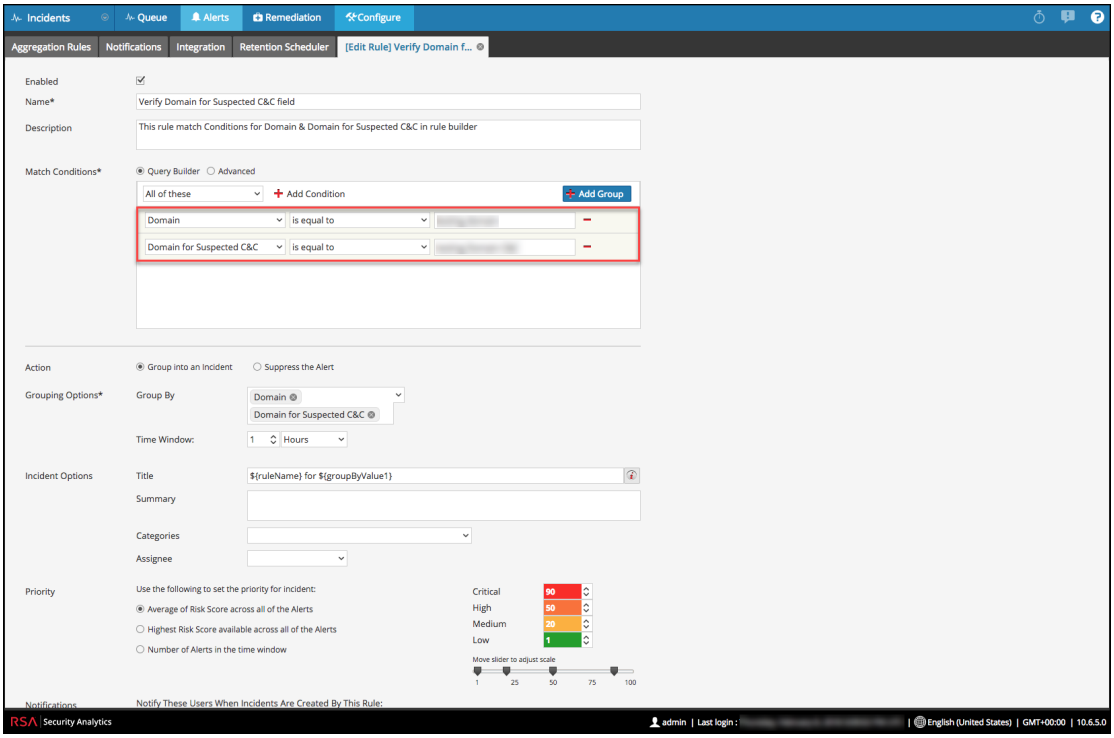
Respond

Task 4 - Check Aggregation Rules Match Conditions for “Domain” or “Domain for Suspected C&C”

Make a note of any Incident Management aggregation rules that have match conditions using Domain or Domain for Suspected C&C in the drop-down list in the rule builder. In NetWitness Suite 11.1, you will need to modify these rules to use Domain after you upgrade to 11.1 as described in the Respond Post Update Tasks.

Check the following for each aggregation rule:

1. In the Security Analytics 10.6.5.x menu, select **Incidents** > **Configure** > **Aggregation Rules** tab and edit the rules to view the matching conditions.
2. In the **Match Conditions** section, look for **Domain** or **Domain for Suspected C&C** listed in the drop-down lists for the conditions.



3. Make a note of the rule name and the entire condition that uses **Domain** or **Domain for Suspected C&C**, including operators and values.

Reporting Engine

(Conditional) Task 5 - Unlink External Storage

If the Reporting Engine has external storage [such as Storage Area Network (SAN) or Network Attached Storage (NAS) for storing reports] you must perform the follow steps to unlink the storage.

In these steps:

- `/home/rsasoc/rsa/soc/reporting-engine/` is the Reporting Engine home directory.
- `/externalStorage/` is where the external storage is mounted.

1. SSH to the Reporting Engine host and log in with your `root` credentials.
2. Stop the Reporting Engine service.
   ```
   stop rsasoc_re
   ```
3. Switch to `rsasoc` user.
   ```
   su rsasoc
   ```
4. Change to the Reporting Engine the home directory.
   ```
   cd /home/rsasoc/rsa/soc/reporting-engine/
   ```
5. Unlink the `resultstore` directory mounted to external storage.
   ```
   unlink /externalStorage/resultstore
   ```
6. Unlink the `formattedReports` directory mounted to external storage.
   ```
   unlink /externalStorage/formattedReports
   ```

Backup Instructions

Backing up your configuration data for all your hosts from 10.6.5.x is the first step in upgrading from Security Analytics 10.6.5.x releases to NetWitness Suite 11.1.

Note: It is important that you place Custom Certificate files and any other certificate authority (CA) files in the `/root/customcerts` folder to ensure that these certificate files are backed up. Your custom certificate files that are placed in this directory will be automatically restored during the upgrade process. After upgrading to 11.1, your custom certificate files will be located in `/etc/pki/nw/trust/import`. For more information about backing up these types of files, see step 1 in For All Host Types.

Caution: These services are not supported in the 10.6.5.x backup and upgrade process.
- IPDB
- All in One servers
- Malware Analysis Co-Located on the Security Analytics Server
- Standalone Warehouse Connector
- Warehouse Analytics (Datascience)

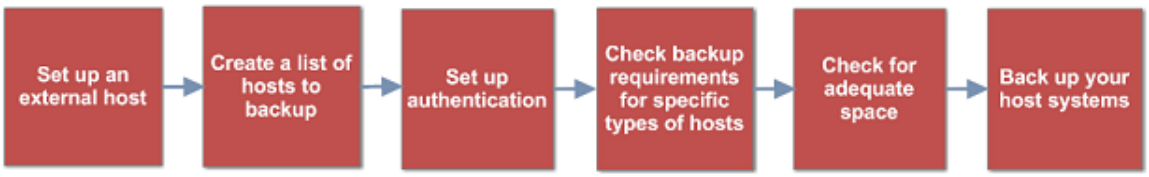
The following types of hosts can be backed up and are automatically restored during the upgrade process:

- **Security Analytics Admin Server** (may include Malware Analysis, Incident Management, Health and Wellness, and Reporting Engine)
- **Malware Analysis** (standalone)
- **Archiver**
- **Broker**
- **Event Stream Analysis** (including Context Hub and Incident Management database)
- **Concentrator**
- **Log Decoder** (including Local Log Collector and Warehouse Connector, if installed)
- **Log Hybrid**
- **Packet Decoder** (including Warehouse Connector, if installed)
- **Packet Hybrid**
- **Virtual Log Collector**

The following types of files are automatically backed up but must be restored manually after the upgrade process:

- PAM configuration files: For information about restoring the PAM configuration files, refer to "Task 5 - Reconfigure Plugable Authentication Module (PAM) in 11.1.", in the "Global" section of the **Post Upgrade Tasks**.
- `/etc/pfring/mtu.conf` and `/etc/init.d/pf_ring`: To restore these files you must manually retrieve them. The `/etc/pfring/mtu.conf` files will be located in `/var/netwitness/database/nw-backup/restore/etc/pfring/mtu.conf`, and the `/etc/init.d/pf_ring` files will be located in `/var/netwitness/database/nw-backup/restore/etc/init.d/pf_ring`. For information about how to restore these files, see "(Conditional) Task 2 - Restore Files for 10G Decoder" in the "Hardware Related Tasks" section of **Post Upgrade Tasks**.

The following diagram shows the high-level task flow of the steps you perform to back up your hosts.



The following sections describe each of these tasks:

- Task 1 - Set up an External Host for Backing up Files
- Task 2 - Create a List of Hosts to Back up
- Task 3 - Set up Authentication Between Backup and Target Hosts
- Task 4 - Check for Backup Requirements for Specific Types of Hosts
- Task 5 - Check for Adequate Space for the Backup
- Task 6 - Back up Your Host Systems
- Post Backup Tasks

Task 1 - Set up an External Host for Backing up Files

You must set up an external host to use for backing up files. The host must be running CentOS 6 with connectivity through SSH to the Security Analytics stack of hosts.

Note: If you are not able to use an external host for backing up files, contact RSA Customer Support (https://community.rsa.com/docs/DOC-1294) for assistance.

Ensure that the host names for the systems to be backed up are resolvable on the backup host machine, either by DNS or listed in the `/etc/hosts` file.

Note: These scripts are designed to run on CentOS 6 only. You must execute these scripts on CentOS 6 machines.

There are several scripts that you run during the backup process. You must download the zip file that contains the scripts (`nw-backup-v4.0.sh`) from RSA Link at this location: https://community.rsa.com/docs/DOC-81514 and copy it over to your CentOS 6 backup system. Extract the zip file to access the scripts. The scripts are:

- `get-all-systems.sh`: Creates the `all-systems` file, which contains a list of all your Security Analytics Servers and host systems to be backed up.
- `ssh-propagate.sh`: Automates sharing keys between the systems you are backing up and the backup host system so that you are not prompted for passwords multiple times.
- `nw-backup.sh`: Performs the backup of your hosts.
- `azure-mac-retention.ps1`: Applies only if you are using AZURE. See the *AZURE Deployment Guide* on for more information. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

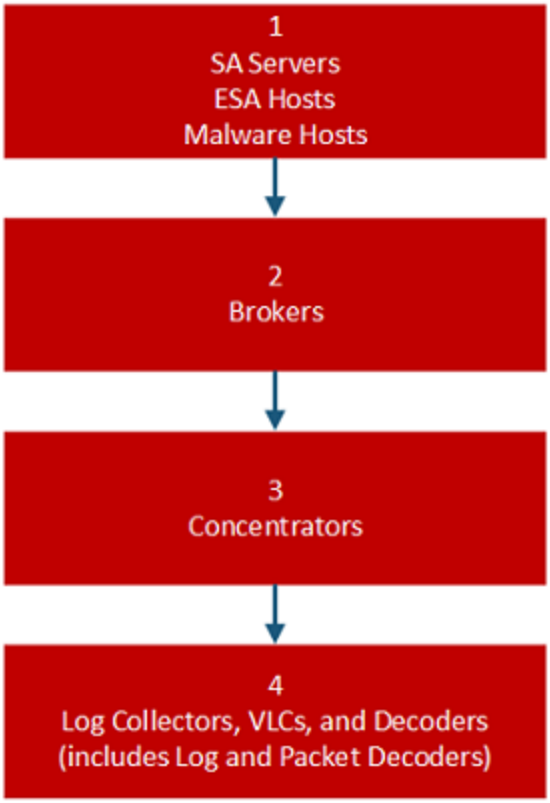
Note: If you have used the 10.6.x versions of the backup and restore scripts on your 10.6.5 hosts, you must still run all the scripts listed here.

Note: Do NOT use the scripts in the `nw-backup-v4.0.zip` file for regular backups. These scripts are specifically designed for upgrading from 10.6.5.x to 11.1.

Note: The backup scripts do not support backing up data for STIG-hardened hosts.

Task 2 - Create a List of Hosts to Back up

The script that you use to back up your files depends on the `all-systems` and `all-systems-master-copy` files, which contain a list of the hosts that you want to back up. The `all-systems-master-copy` file contains a list of all your hosts. The `all-systems` file is used for each backup session, and contains only those hosts which are being backed up for a particular session. You run the `get-all-systems.sh` script to generate these files. RSA recommends that you back up your hosts in groups, and not all at once. The recommended order and grouping of hosts for backup sessions is shown in the following diagram:



Limit each backup session to five hosts to ensure that you do not run out of space for the backup files. You create `all-systems` files for your backup sessions by using the `all-systems-master-copy` file as a reference and then manually editing the `all-systems` file to contain specific hosts.

To generate the `all-systems` and the `all-systems-master-copy` files:

1. From the host on which you are running the backup process, make the `get-all-systems.sh` script executable by running the following command:
   ```
   chmod u+x get-all-systems.sh
   ```
2. At the root level, run the `get-all-systems.sh` script:
   ```
   ./get-all-systems.sh <IP-Address-of-SA-Admin-Server>
   ```
   You will be prompted for the password for each host system once per host.

This script saves the `all-systems` file and the `all-systems-master-copy` file to `/var/netwitness/database/nw-backup/`.

3. Validate that the `all-systems` and `all-systems-master-copy` files were generated and that they contain the right hosts.
4. Edit the `all-systems` file to contain only the systems you are backing up. You can do this by using the `all-systems-master-copy` file as a reference, and then opening the `all-systems` file in an editor (such as vi) and modifying it to include only the systems you want to back up. RSA recommends that you comment out the hosts that you do not want to back up (add the number sign (#) to the beginning of the line that contains the host that will not be backed up).
   The following examples shows how to comment out the 10.6.5 Security Analytics Server:
   `loghybrid,loghyb,172.16.0.1,45fe9de1-1a82-49d7-9bb1-7ac5fa1d18d8,10.6.5.0`
   `#nwserver,nwserv106,172.31.255.23,67a9a0eb-1300-4fba-838f-7be4d8cf5e65,10.6.5.0`

   Note: If you use vi, be sure to include the path to the location of the `all-systems` file.

Here is an example of an `all-systems-master-copy` file:

```
nwserver,my-nw-server,10.0.0.1,af922b9f-cd61-49cd-afdc-a48e558cec3e,10.6.5.0
archiver,my-nw-archiver,10.0.0.2,a65c1236-5e46-4117-8529-8ea837074bd0,10.6.5.0
concentrator,my-nw-concentrator,10.0.0.3,dc620e94-bcf5-4d51-83fe-c003cdfcd7a6,10.6.5.0
esa,my-nw-esa,10.0.0.4,8b608c0d-a7f9-40c0-baee-8407dec774ab,10.6.5.0
logdecoder,my-nw-logdecoder,10.0.0.5,c8be5d45-e19e-4a8d-90ce-1cb2fe60077a,10.6.5.0
malwareanalysis,my-nw-malwareanalysis,10.0.0.6,2edc9585-7081-48c3-8f8c-e0d02aa0a2fd,10.6.5.0
packetdecoder,my-nw-packetdecoder,10.0.0.7,a8f2f574-3dd0-4b65-9cf7-d8141b78a192,10.6.5.0
vlc,my-nw-vlc,10.0.0.8,3ffefc4e-0b31-4951-bb77-dea5869fa98c,10.6.5.0
broker,my-nw-broker,10.0.0.9,0b65e7ce-61d5-4177-9647-c56ccfb0f737,10.6.5.0
```

And here is an example of an `all-systems` file that could be used in the first backup session, where only the Security Analytics Server, ESA host, and Malware Analysis host are backed up:

```
nwserver,my-nw-server,10.0.0.1,af922b9f-cd61-49cd-afdc-
a48e558cec3e,10.6.5.0
#archiver,my-nw-archiver,10.0.0.2,a65c1236-5e46-4117-8529-
8ea837074bd0,10.6.5.0
#concentrator,my-nw-concentrator,10.0.0.3,dc620e94-bcf5-4d51-83fe-
c003cdfcd7a6,10.6.5.0

c56ccfb0f737,10.6.5.0
```

Troubleshooting Information

- Be sure to save copies of the `all-systems` and `all-systems-master-copy` files in a safe location. Follow these recommendations:
  - Do not edit the `all-systems-master-copy` file.
  - If you create several different versions of the `all-systems` file (for example, for several backup sessions), be sure that each version of the file lists only those hosts that are currently being backed up, and the other hosts are commented out.
    For more information, see Post Backup Tasks.
- If any host systems are down while you are running the `get-all-systems.sh` script, the script creates a list of hosts for which it cannot find information. After the script completes and the `all-systems` file is created, you must edit the `all-systems` file manually and add the missing information for these hosts.
- The `get-all-systems.sh` script generates a list of hosts that were defined in the Security Analytics user interface. Ensure that all hosts and services are provisioned properly. If any hosts or services are not provisioned properly, they will not be backed up. RSA recommends that when you add hosts and services to Security Analytics, you use the Security Analytics user interface to ensure that they are provisioned properly. However, if there are any hosts or services that were not defined in the user interface, you must add them to the `all-systems` file manually.

- At the end of the `get-all-systems.sh` script, the script will check for any differences between the systems that the Security Analytics Server has listed, and the ones for which the script was able to find all the required information. If any Node ID's or system names are listed as missing, verify the existence of those systems, that their services are all running, and that they are properly communicating with the Security Analytics Server. (Any Windows Legacy Collectors or AWS Cloud Collectors will not be added to the `all-systems` file, and may account for discrepancies. **DO NOT add these items to the `all-systems` file manually**.)
- If the syntax in the `all-systems` file is incorrect, the script will fail. For example, if there is an extra space at the beginning or the end of a host entry, the script will fail.

Task 3 - Set up Authentication Between Backup and Target Hosts

RSA recommends that you run the `ssh-propagate.sh` script to automate sharing keys between the backup host and the host systems.

Note: If you have SSH keys that are protected with pass phrases, you can use `ssh-agent` to save time. For more information, refer to the man page for `ssh-agent`.

1. On the external backup host system, make the `ssh-propagate.sh` script executable by running the following command:
   `chmod u+x ssh-propagate.sh`
2. At the root directory, run the following command, where `<path-to-all-systems-file>` is the path to the directory where the `all-systems` file is stored:
   `ssh-propagate.sh <path-to-all-systems-file>`
3. You are prompted for the password once per host, but you will not need to enter it repeatedly later during the backup process.

Task 4 - Check for Backup Requirements for Specific Types of Hosts

After you create the `all-systems` file to use for backup, you must check to see if any of the hosts listed in the file have requirements that must be met before you run the backup process.

For All Host Types

Perform the following steps for all host types:

1. On the Security Analytics Server, place Custom Certificate files and any other certificate authority (CA) files in the `/root/customcerts` folder to ensure that these certificate files are backed up. Your custom certificate files that are placed in this directories will be automatically restored during the upgrade process. After upgrading to 11.1., your custom certificate files will be located in `/etc/pki/nw/trust/import`.
   You can convert CA certificates and keys to different formats to make them compatible with specific types of servers or software using OpenSSL. For example, you can convert a normal PEM file that would work with Apache to a PFX (PKCS#12) file and use it with Tomcat or IIS. To convert the files, SSH to the Security Analytics Server and run the following command strings to perform the conversions listed.
   Convert a DER file (.crt .cer .der) to PEM
   `openssl x509 -inform der -in certificate.cer -out certificate.pem`
   Convert a PEM file to DER

```
openssl x509 -outform der -in certificate.pem -out certificate.der
```

Convert a PEM Certificate File and a Private Key to PKCS#12 (.pfx .p12)

```
openssl pkcs12 -export -out certificate.pfx -inkey privateKey.key -in
certificate.crt -certfile CACert.crt
```

Convert a PKCS#12 File (.pfx .p12) Containing a Private Key and Certificates to PEM

```
openssl pkcs12 -in keyStore.pfx -out keyStore.pem -nodes
```

> **Note:** Add the following qualifier to the command string to:
> `-nocerts` convert private keys exclusively.
> `-nokeys` convert certificates exclusively.

2. Manually record any custom configurations made to CentOS 6 (for example, driver customizations) for restoration after you update to CentOS 7. Custom configurations to CentOS 6 are not automatically backed up and restored.

For ESA Hosts with Mongo Databases

The default 10.6.x Mongo database password is `netwitness`. If you have customized this password, you could encounter an error while running the backup script. You can either use your custom Mongo database password during the backup, or you could change that password back to `netwitness` before running the `nw-backup.sh` script.

1. Find out if the Mongo database password is `netwitness` or if it has been modified.
2. If it has been modified, either change it back to `netwitness`, or be sure you know what the customized password is so that you can enter it during the backup.

See "ESA Config: Change MongoDB Password for admin Account" in the *NetWitness Suite Event Stream Analysis Configuration Guide* for more information. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

For Decoder, Concentrator, or Broker Hosts: Stop Data Capture and Aggregation

In addition to the tasks described in For All Host Types, for Decoder, Concentrator, or Broker hosts, stop data capture and aggregation on all the systems that you are backing up. For instructions, refer to Appendix B. Stopping and Restarting Data Capture and Aggregation

Log Collectors (LC) and Virtual Log Collectors (VLCs): Run `prepare-for-migrate.sh`

> **Caution:** This task stops log collection so you must perform this step immediately before you upgrade to minimize the loss of event collection. Complete this task in accordance with the backup and upgrade tasks in this guide.

Prerequisites

You need the following information before you prepare LCs and VLCs for upgrade.

- If Lockbox was initialized on the LC and VLC, you must know the Lockbox password. It is required to reconfigure the Lockbox after upgrade.
- If you set the password for `logcollector` user for RabbitMQ, you must know the password so you can set it again after the upgrade.

Prepare LCs and VLCs for Upgrade

1. SSH to the Log Collector.
2. Submit the following command string.

   ```
   # /opt/rsa/nwlogcollector/nwtools/prepare-for-migrate.sh --prepare
   ```

   This command:

   - Stops the Puppet Agent service.
   - Disables the file collection accounts ("sftp" and all users in the group "upload") used for uploading log files to the Log Collector. The log files accumulate on the event sources until the Log Collector has been upgrade to 11.1.
   - Stops all the collection protocols in the Log Collector service.
   - Saves the list of Plugin accounts and RabbitMQ accounts.
   - Configures the RabbitMQ server so that new events cannot be published to it any longer. Consumers of events in the queues, such as shovels and Log Decoder Event Processors, will continue to run.
   - Waits until the Log Collector queues are empty.
   - Stops the Log Collector service.
   - Creates a marker file indicating that the Log Collector has been successfully prepared for upgrade.

Troubleshooting Information

The `prepare-for-migrate.sh` script:

- Sends informational, warning, and error messages to the console.
- Saves a session log in the `/var/log/backup/` directory.

You must fix any of the following errors and resume the preparation. Contact RSA Customer Support (https://community.rsa.com/docs/DOC-1294) for assistance.

- Log Collector queues with events but without consumers are found.
- Unable to stop the Puppet Agent service.
- Unable to stop a collection protocol in the Log Collector service.
- Unable to block event publishers to the RabbitMQ server.
- Unable to or taking too long for queue events to be consumed. The script makes 30 attempts waiting for the events to be consumed. After each attempt, it sleeps for 30 seconds.
- Unable to stop the Log Collector service.

For more information about troubleshooting, see Appendix A. Troubleshooting.

For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint: List RabbitMQ Usernames and Passwords

On the 10.6.5.x host, on the Security Analytics Server host, you must get a list of all RabbitMQ usernames and passwords so that after you perform the 11.1. upgrade, you can restore RabbitMQ user accounts.

To get a list of RabbitMQ usernames and passwords, run the following command:

```
rabbitmqctl list_users >> /root/rabbitmq_users.txt
```

To restore RabbitMQ user accounts, refer to *Task 2 - For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint Configure Mutually Authenticated SSL* in **Post Upgrade Tasks**.

For Bluecoat Event Sources

Bluecoat ProxySG event sources use FTPS protocol to upload log files to the Log Collector (LC) and Virtual Log Collector (VLC). The event source documentation contains the steps to configure VSFTPD service on the LC and VLC.

- If key material exists in `/root/vsftpd/` directory in 10.6.5.x, this material area will be backed up and restored. **If the material was in another location, you must back it up and restore it manually.**
- If the `/etc/vsftpd/vsftpd.conf` file exits in 10.6.5.x, it is backed up and restored.

Task 5 - Check for Adequate Space for the Backup

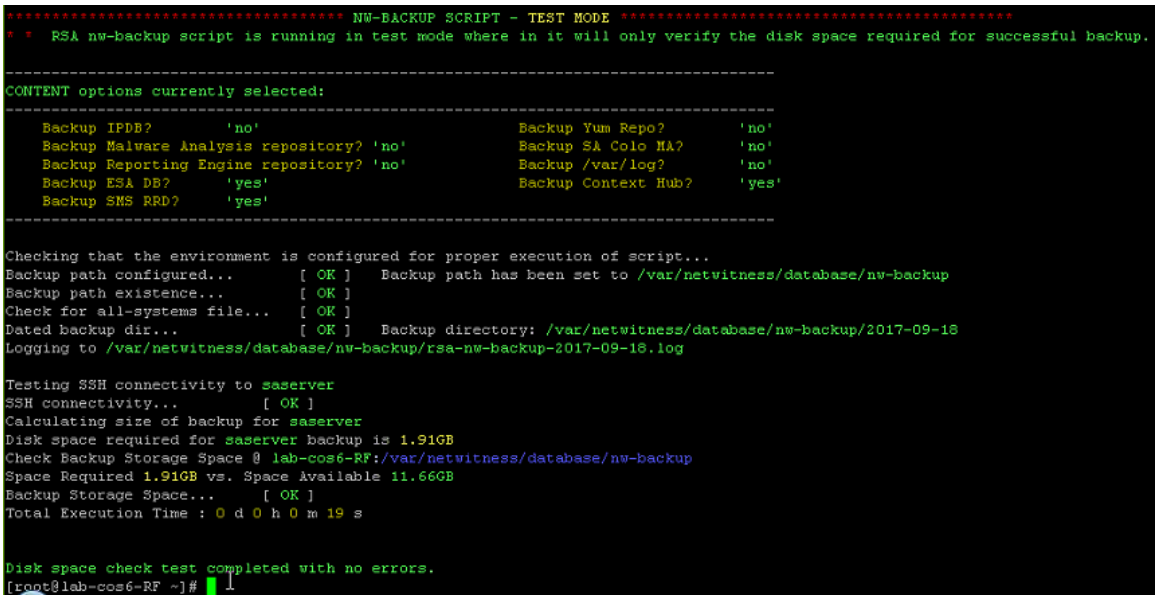
You can run the backup test script to check the amount of disk space that is required for the backup using the `-t` option described in Test Options. You run the script without actually backing up files or stopping any services. RSA recommends that you perform this step to ensure that you provide adequate space for the backup so that the backup captures all your data.

To check for adequate disk space:

1. Make the backup script executable by running the following command:
   `chmod u+x nw-backup.sh`
2. Run the following command at the root directory level:
   `./nw-backup.sh -t`
   The output displays the amount of disk space that is required for the backup.

> **Note:** The `./nw-backup.sh -t` command runs with the `-d` option by default. However, if you are looking for more accurate disk space results, you can override the `-d` option by using `-D`. Using the `-D` option will show how much space is required on each host for the data that will be backed up, but does not show how much space is available. If there is not enough space available, the `-D` option will throw an error. If you want to know how much space is available on the target host, you must run the `df -h` command on the host.

The following figure shows an example of the output from using the `-t` option.



Task 6 - Back up Your Host Systems

Before you run the backup script to do the actual backup, be sure that you have plenty of space. To back up your hosts, you run the `nw-backup.sh` script using the `-u` option. This option is required for upgrading to 11.1.

> **Note:** The script will stop services as it runs. However, you can stop services manually before you run the script if needed.

When you run the backup script, you can choose from several options that are described in the following sections.

Usage:
`./nw-backup.sh [-u -t -d -D -l -x -e] <external-mnt> -b <backup file path>`

General Options

`-u : This option is required for upgrading to 11.1. Enables the upgrade flag to run backup for upgrading to 11.1. It also enables disk space check (-d), backing up reporting engine reports (-r) and stores backup content locally (-l). Default: (no)`

`-d : enables disk space check in 'fast' mode (quick estimate of space using uncompressed data). Default: (no)`

`-D : enables disk space check in 'full' mode (estimate of space using compressed data, ~10X slower). Default: (no)`

`-l : stores backup content locally on each host (automatically set if -u is used). Default: (no)`

`-e <path to mount point> : copies backup files of all devices onto an external mount point. Default: (/mnt/external_backup)`

`-x : move all backup files to an external mount point. Default: (no) - COPY`

`-b <path to write backups> : path to the location for storing backup files on a backup server.` **`For upgrading to 11.1, please use the default location!`** `Default: (/var/netwitness/database/nw-backup)`

Note: Do **not** change the backup path in upgrade (-u) mode.

Note: When you run a backup with the `-u` option, all services are stopped. If you need to continue to use the 10.6.x machine after running the backup, reboot the 10.6.x system so that services are restarted.

Advanced Content Selection Options

`-c : back up Colocated Malware Analysis on SA servers. Default: (no)`

`-i : back up IPDB data (/var/netwitness/ipdbextractor). Default: (no)`

`-m : back up Malware Analysis File Repository. Default: (no)`

`-r : back up Reporting Engine Report Repository (automatically set if -u is used). Default: (no)`

`-v : back up system logs (/var/log). Default: (no)`

`-y : back up YUM Web Server & RPM Repository. Default: (no)`

`-S : If set: DISABLES back up of SMS RRD files. Default: (not-set)`

-C : If set: DISABLES back up of Context-Hub configuration and database. Default: (not-set)

-E : If set: DISABLES back up of ESA Mongo database. Default: (not-set)

Test Options

-t : performs script test run for disk space check only. Services are not stopped and excludes execution of backup. Can be combined with (-d) or (-D) and other flags. Default: (-t)

For example, the command:
`./nw-backup.sh`
would run the backup with options as set in the Header of the script itself.
OR, the command:
`./nw-backup.sh -ue /mnt/external_backup`
would run a normal backup using the backup path defined in the script, with the following options:

-u : enables the upgrade flag to run backup for upgrading to 11.1. It also enables disk space check (-d), backing up reporting engine reports (-r) and stores backup content locally (-l). Default: (no)

-e : Copy the backup files to external mount point, mounted on /mnt/external_backup

For Help: ./nw-backup.sh -h

When you run the script, the following text is displayed at the top of the script:

Caution: RSA nw-backup script backs up configuration files, data, and logs on the options provided in the script. It tars the content, with options to store the backup files on the backup server, move or copy them to external storage on a mount point (USB/NFS/SMB), or SCP them back to the target host.
This backup script has been qualified on the following versions of Security Analytics:
10.6.5.x
Use of this script on any other versions of the product may not give expected results and may not be supported by RSA Customer Service.Note: All non-RSA custom files, scripts, Cronjobs and other important files should be placed in /root, /home/'user', OR /etc to be included in the backup.

To run the backup script to back up your hosts:

1. Ensure that the `all-systems` file contains only the hosts to back up. For information, see Task 2 - Create a List of Hosts to Back up.
2. Make the backup script executable by running the following command:
   `chmod u+x nw-backup.sh`
3. Begin the backup process by running the following command at the root directory level:

```
./nw-backup.sh -u
```

Note: You must use the `-u` option so that your files will be restored correctly during the upgrade to 11.1. Do NOT make any changes to the header of the backup script for the backup path because the path is specific to the upgrade, and that data needs to be in a specific place.

When the text "`Backup completed with no errors`" is displayed, the backup has completed successfully.

A log file, with a name similar to the following example, is created in the backup directory which provides information on the files being backed up:
`rsa-nw-backup-2017-03-15.log`

4. When the backup has completed, to ensure that the intended files were backed up, you can run the following command to see a list of all the files that were backed up:

   `tar -tzvf hostname-ip-address-backup.tar.gz`

   The following archive files are created:

   For all hosts:

   `<hostname-IPaddress>-root.tar.gz`

   `<hostname-IPaddress>-backup.tar.gz`

   `tar checksum` files

   `<hostname-IPaddress>-network.info.txt`

   For Security Analytics Servers:

   `<hostname-IPaddress>-root.tar.gz`

   `<hostname-IPaddress>-backup.tar.gz`

   `<hostname-IPaddress>-mongodb.tar.gz`

   `tar checksum` files

   `<hostname-IPaddress>-network.info.txt`

   For ESA Hosts:

   `<hostname-IPaddress>-root.tar.gz`

   `<hostname-IPaddress>-backup.tar.gz`

   `<hostname-IPaddress>-mongodb.tar.gz`

   `<hostname-IPaddress>-controldata-mongodb.tar.gz`

   `tar checksum` files

   `<hostname-IPaddress>-network.info.txt`

The archived files are located in the `/var/netwitness/database/nw-backup` directory. If any of the tar files appear smaller than expected, open them to be sure that the files were properly backed up.

Post Backup Tasks

Task 1 - Save a Copy of the `all-systems` File and the Backup Tar files

Make copies of the `all-systems` file, the `all-systems-master-copy` file, and the backup tar files and put the copies in a secure location. You cannot regenerate these files after you upgrade the Security Analytics Server (specifically the Admin service) to 11.1.

Task 2 - Ensure Required Backup Files Were Generated

After you run the backup scripts, several files are generated. These files are required for the 11.1. upgrade process. Before you begin the upgrade process, you must ensure that the required backup files are on the hosts that you are upgrading, and that you perform the following tasks.

The following files are generated on all hosts by the backup scripts:

- `all-systems`
- `all-systems-master-copy`
- `appliance_info`
- `service_info`
- `<hostname>-<host-IP-address>-backup.tar.gz`
- `<hostname>-<host-IP-address>-backup.tar.gz.sha256`
- `<hostname>-<host-IP-address>-root.tar.gz`
- `<hostname>-<host-IP-address>-root.tar.gz.sha256`
- `<hostname>-<host-IP-address>-network.info.txt`

In addition to the files listed above, the following files will be generated on the Security Analytics Server and ESA hosts:

- `<hostname>-<host IP address>-mongodb.tar.gz`
- `<hostname>-<host IP address>-mongodb.tar.gz.sha256`

The backup script will also generate the following `controldata-mongodb.tar.gz` files.

Note: The backup script copies the following files from all ESA hosts to the Security Analytics Server's backup path .

- `<esa hostname>-<esa hostip>-controldata-mongodb.tar.gz`
- `<esa hostname>-<esa hostip>-controldata-mongodb.tar.gz.sha256`

Task 3 - (Conditional) For Multiple ESA Hosts, Copy `mongodb tar` files to Primary ESA Host

If you have multiple ESA host systems in your enterprise, copy the following two files from each ESA host to the `/opt/rsa/database/nw-backup/` directory on the Primary ESA host system (the host that has the ContextHub service running on it) :

- `<hostname>-<host-IP-address>-mongodb.tar.gz`
- `<hostname>-<host-IP-address>-mongodb.tar.gz.sha256`

Task 4 - Ensure All Required Backup Files are on Each Host

Before you upgrade to 11.1., ensure that the appropriate files exist on the hosts that you are upgrading as described in the following lists.

There should be note here mentioning default backup path locations for that user knows where to go and check these files.

Note: The default paths for backup files are:
- Security Analytics Servers:`/var/netwitness/database/nw-backup`
- ESA hosts:`/opt/rsa/database/nw-backup`
- Malware hosts: `/var/lib/rsamalware/nw-backup`

Required Files for NetWitness Servers

- `all-systems-master-copy`
- `<hostname>-<host-IP-address>-backup.tar.gz`
- `<hostname>-<host-IP-address>-backup.tar.gz.sha256`
- `<hostname>-<host-IP-address>-root.tar.gz`
- `<hostname>-<host-IP-address>-root.tar.gz.sha256`
- `<hostname>-<host-IP-address>-network.info.txt`
- `<hostname>-<host-IP-address>-mongodb.tar.gz`
- `<hostname>-<host-IP-address>-mongodb.tar.gz.sha256`
- `<esa-hostname>-<esa-host-IP-address>-controldata-mongodb.tar.gz`
- `<esa-hostname>-<esa-host-IP-address>-controldata-mongodb.tar.gz.sha256`

Required Files for ESA Hosts

- all-systems-master-copy
- <hostname>-<host-IP-address>-backup.tar.gz
- <hostname>-<host-IP-address>-backup.tar.gz.sha256
- <hostname>-<host-IP-address>-root.tar.gz
- <hostname>-<host-IP-address>-root.tar.gz.sha256
- <hostname>-<host-IP-address>-network.info.txt
- <hostname>-<host-IP-address>-mongodb.tar.gz
- <hostname>-<host-IP-address>-mongodb.tar.gz.sha256

Required Files for All Other Hosts

- all-systems-master-copy
- <hostname>-<host-IP-address>-backup.tar.gz
- <hostname>-<host-IP-address>-backup.tar.gz.sha256
- <hostname>-<host-IP-address>-root.tar.gz
- <hostname>-<host-IP-address>-root.tar.gz.sha256
- <hostname>-<host-IP-address>-network.info.txt

Note: The following files are located in the <hostname>-<host-IP-address>-backup.tar.gz tar on all hosts:
appliance_info
service_info

Note: The paths to the location of the backup and restore files for iptables, NAT configurations, user accounts, and crontab entries are shown in the following list:
Backup paths:
`BUPATH=/opt/rsa/database/nw-backup` for the ESA Correlation Engine
`BUPATH=/var/lib/rsamalware/nw-backup` for the Malware Service
`BUPATH=/var/netwitness/database/nw-backup` for all other services
Restore locations:
`BUPATH/restore/etc/sysconfig` for Iptable rules
`BUPATH/restore/etc/sysconfig` for NAT configurations
`BUPATH/restore/etc` for Crontab entries
`BUPATH/restore/etc` for User Accounts (users are located in the `passwd` file, and groups are located in the `group` file. These are not restored during the upgrade process but can be restored manually.
`BUPATH/restore/etc/ntp.conf` for NTP configurations (must be restored using the NetWitness Suite UI)

Migrate Disk Drives from 10.6.5.x to 11.1

These instructions tell you how to upgrade virtual hosts from 10.6.5.x to 11.1.

Caution: 1) You cannot perform the migration if you have a snapshot for your VM.
2). Run the backup immediately before you upgrade hosts for each phase so that the data is not out-dated.
3.) This guide applies to virtual host upgrades exclusively. If have both physical and virtual hosts in your deployment, see the *RSA NetWitness® Suite 11.1 Physical Host Upgrade Instructions* for the steps you must complete to upgrade physical hosts. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Note: The machines must be in VMware ESX.

There are five tasks you must complete to migrate your Virtual Machine (VM) deployment disk drives from 10.6.5.x to 11.1:

Task 1 - Back up data in your 10.6.5.x VMs.

Task 2 - Deploy the same VM Stack in 11.1 as you have in 10.6.5.x.

Task 3 - Copy the VMDK Files and add them as a hard disk to the new VMs.

Task 4 - Retain MAC address of upgraded SA Server VM.

Task 5 - Restore backup data in 10.6.5.x to 11.1 VMs.

Task 1 - Back Up Data in 10.6.5.x VMs

1. Prepare Log Collector for the migration:
   a. Log in to the Log Collector using root credentials.
   b. Go to the `/opt/rsa/nwlogcollector/nwtools/` directory and run the following command.
      `sh prepare-for-migrate.sh --prepare`
      See Virtual Log Collector Host (VLC) for detailed instructions on how to upgrade the VLC.
2. Download the `.zip` file that contains the 10.6.5.x backup scripts from RSA Link https://community.rsa.com/docs/DOC-81514)) to the external backup host.

   Note: You must set up an external host to use for backing up files. The host must be running CentOS 6 with connectivity through SSH to the NetWitness Suite stack of hosts.
3. Run the following commands from the `nw-backup/scripts` directory (see Backup Instructions for a detailed descriptions of the backup scripts).
   `./get-all-systems.sh <SA-IP>`
   `./ssh-propagate.sh <path-to-backup-directory/all-systems>`
   `./nw-backup.sh -u`
   (if you have a Malware VM, substitute `-m -u` for `-u` in this command string (for example, `./nw-backup.sh -m -u`).

Task 2 - Deploy Same 10.6.5.x VM Stack in 11.1

You must set up the same virtual host stack in 11.1 that you had in 10.6.5.x. See the *RSA NetWitness® Suite 11.1 Virtual Host Installation Guide* for instructions.Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

The following steps are the high-level steps on how to deploy an OVA host in the ESXi environment.

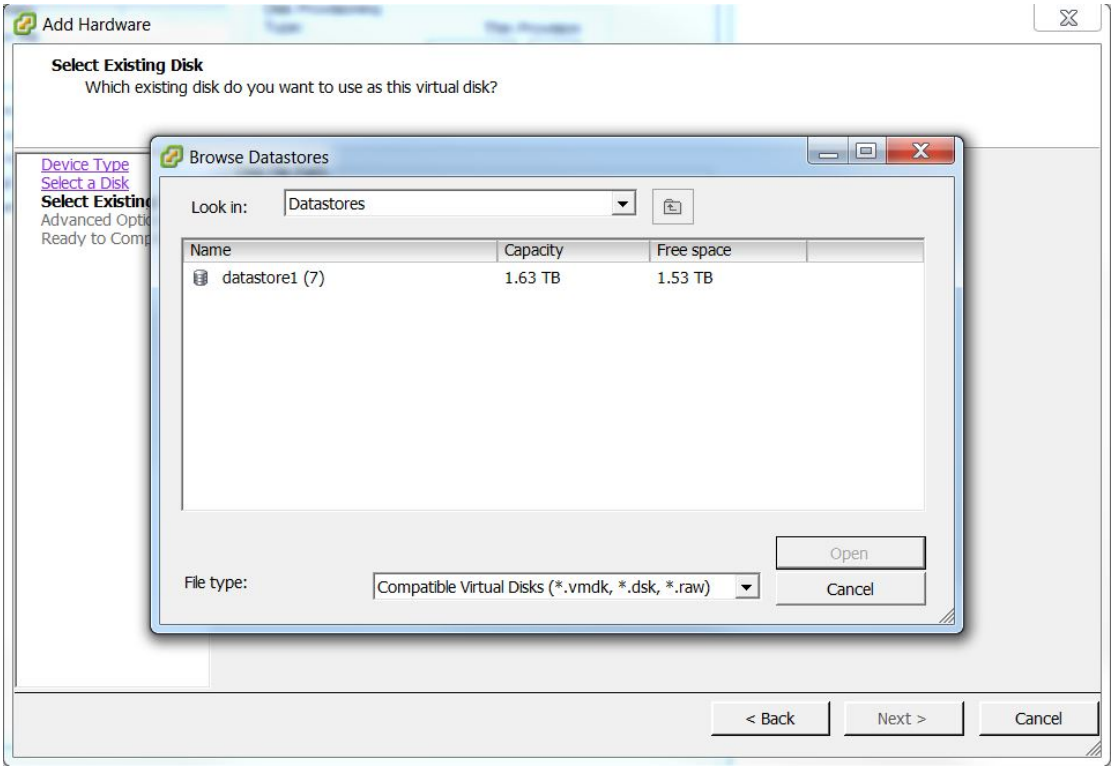
Download the 11.1 OVA, from RSA Link Download Central to a local directory.

1. Log on to the ESXi environment.
2. In the **File** drop-down, select **Deploy OVF Template**.
   The Deploy OVA Template dialog is displayed.
3. Browse your local directory for the 11.1 OVAs you downloaded.
4. Select the to deploy in the virtual environment , and click **Next**.

5. Select the appropriate Configuration for the VM and click **Next**.
6. Power on the VM, go to Console, and log in to the machine.
   The VM now has the 11.1 base image required to run the Setup Program (that is, `nwsetup-tui`).

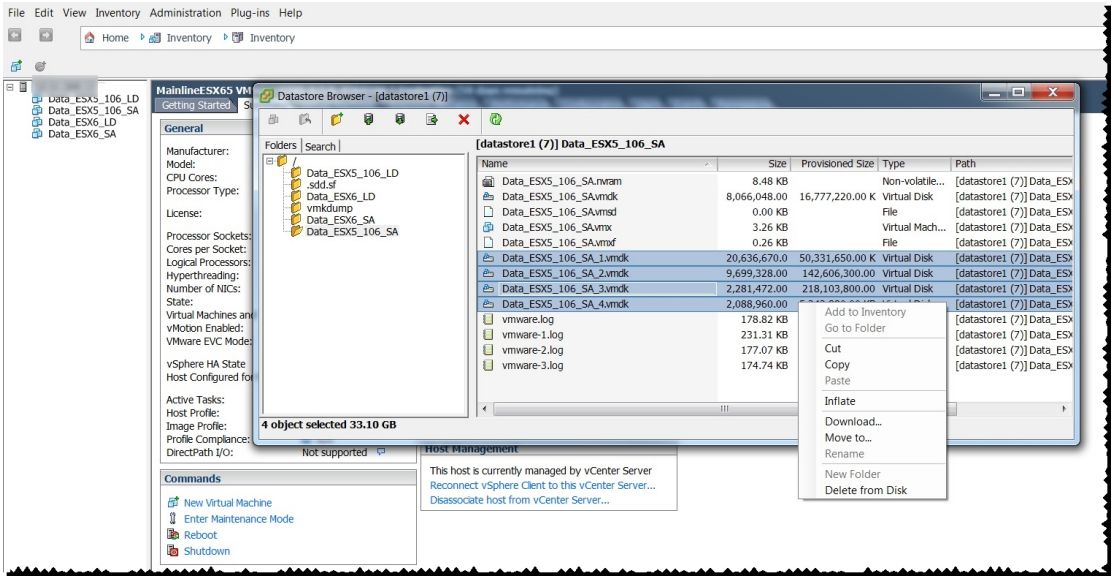
Task 3 - Copy VMDK Files and Add Them as Hard Disk to New VMs

1. Power off both the 10.6.5.x and 11.1 VMs.
2. Go to the desired ESX server, click the **Configuration** tab > **Storage**.
3. Right-click the required datastore and click **Browse Datastore**.



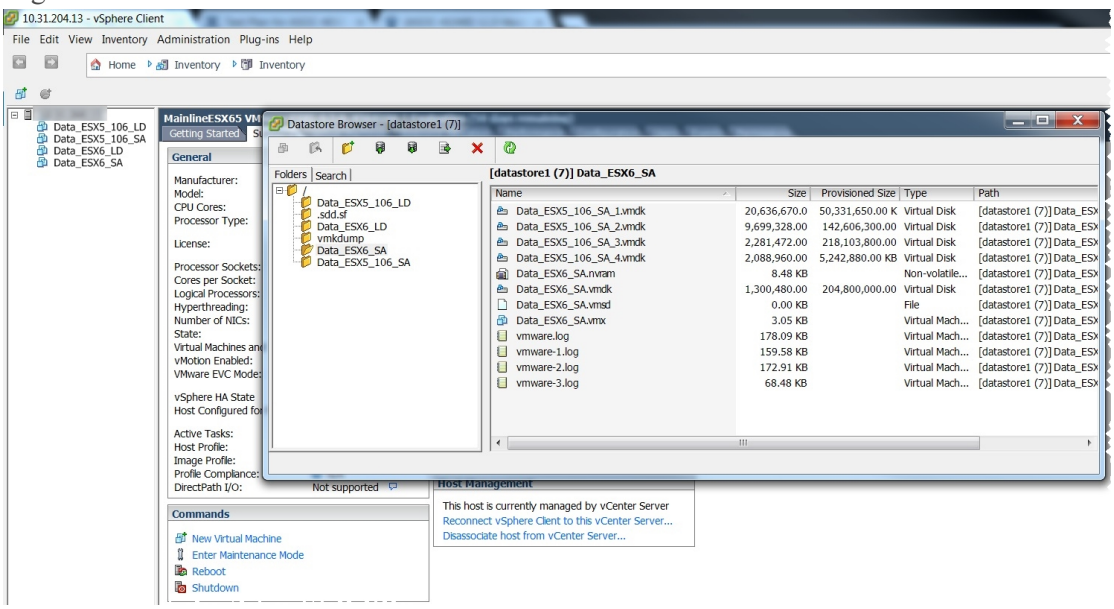
4. Navigate to the existing 10.6.5.x VM in the datastore.
5. Select all the VMDK files in the datastore, right-click, and click **Copy**.

> **Caution:** Do not copy the base VMDK file (for example, `Data_106_SA`) because it contains CentOS6.
>
> You must copy all the numbered VMDK files. For example, if the 10.6.5.x VM name is `Data_106_SA`, you would copy all the `Data_106_SA_1`, `Data_106_SA_2`, `Data_106_SA_3`, etc files.



6. Navigate to the new 11.1 VM in the datastore.

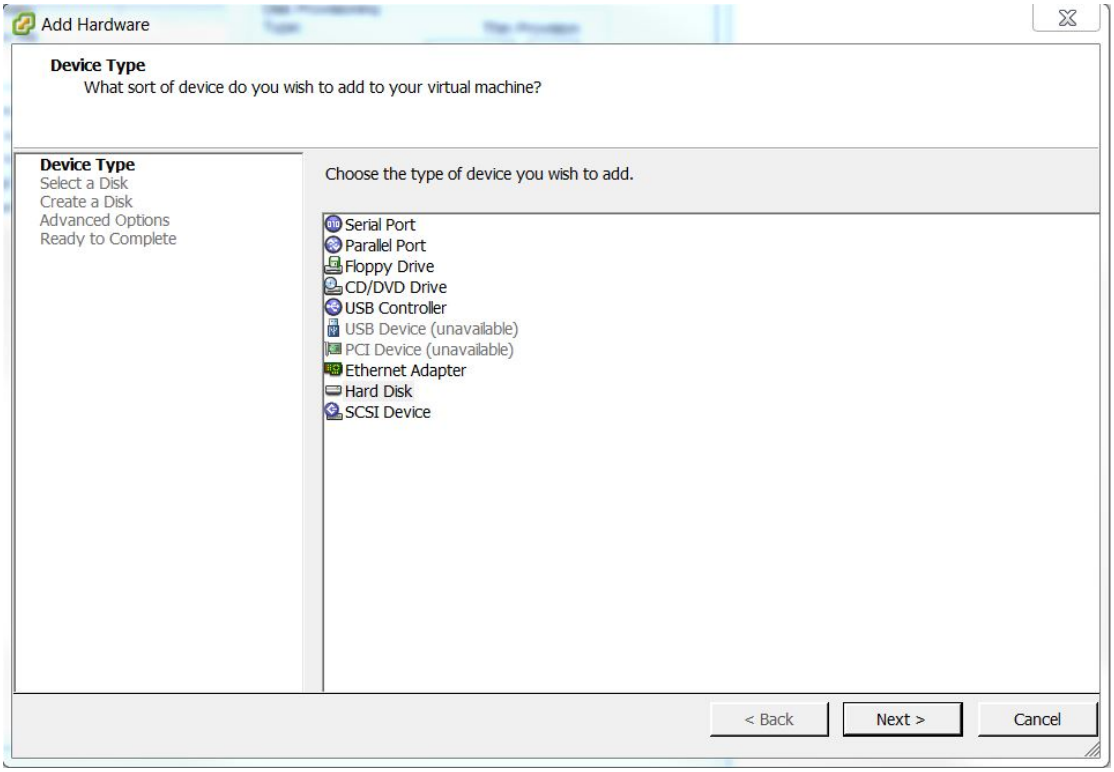
7. Right-click and click **Paste**.



> **Note:** You must wait until all the VMDK files from the previous VM are completely copied into the datastore of the new VM.

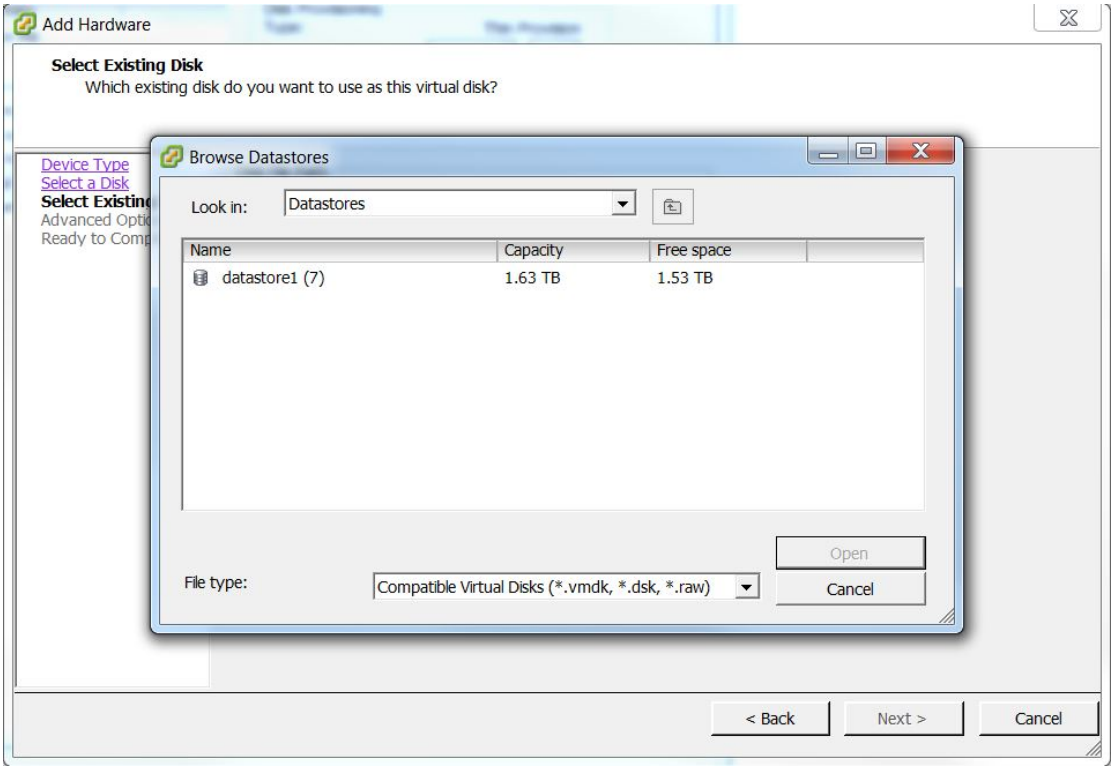
8. Select the 11.1 VM, click **Edit Settings** > **Add**.

9. In the dialog box, click **HardDisk** > **Next**.

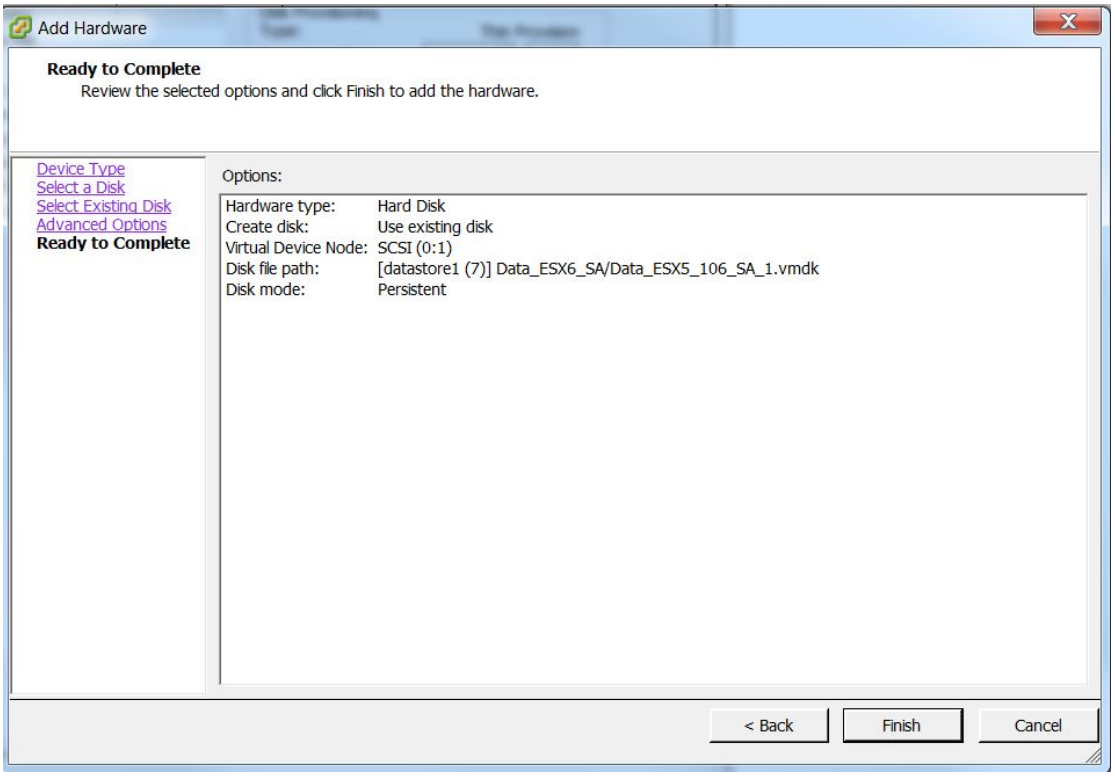


10. Click **Already existing hard disk** > **Next**.

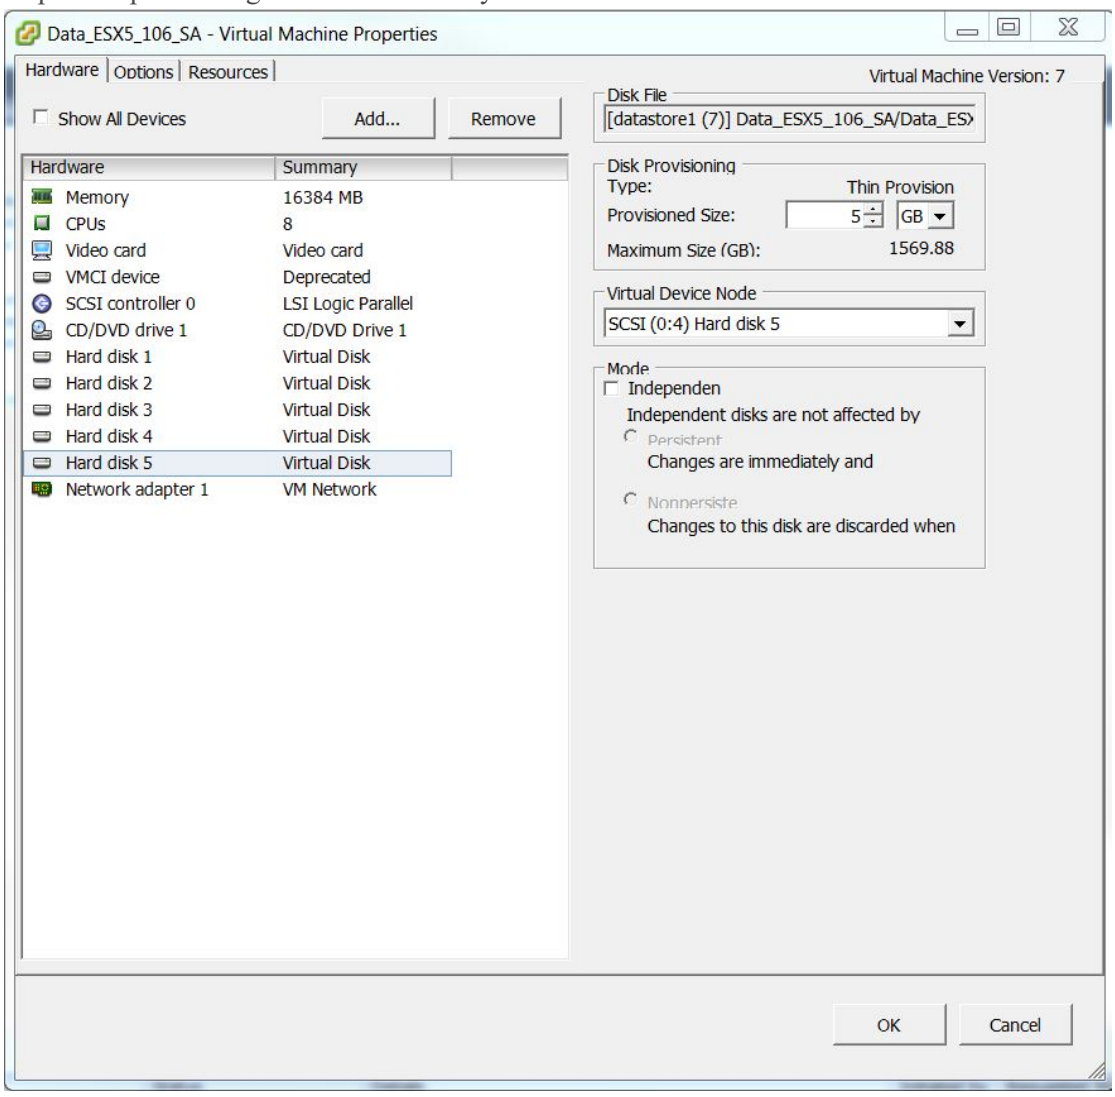
11. Click **Browse** and browse to the datastore location to which you copied the vmdk files.



12. Select the VMDK file from the 11.1 VM that you want to add as a disk.



13. Repeat steps 8 through 12 for each disk you want to add.



14. Click **OK**.

Task 4 - Retain MAC Address of Upgraded SA Server VM

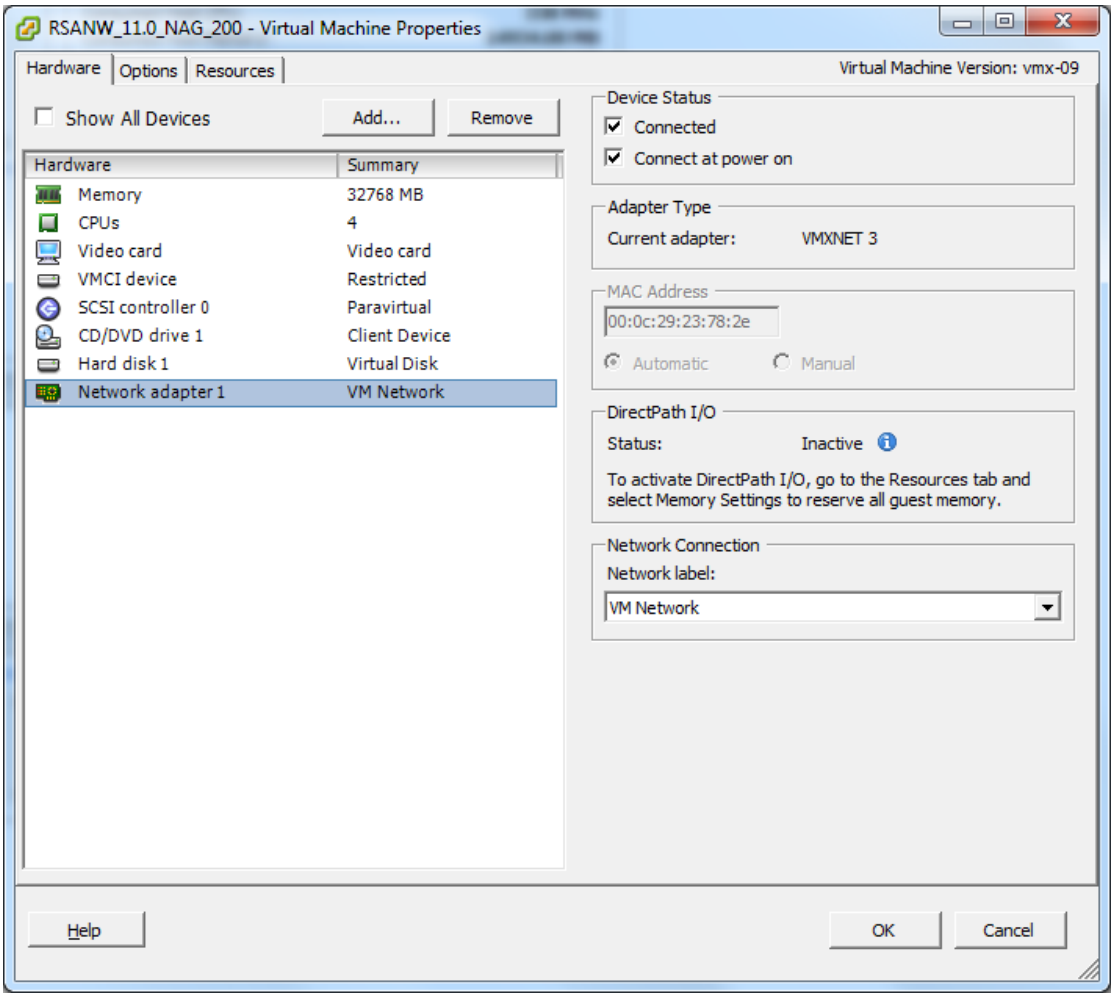
To retain the MAC address of migrated Security Analytics (SA) Server Virtual Machine (VM):

Note: These steps apply to the SA Server VM (created with "Automatic" MAC address assignment selected) to the 11.1 NetWitness Server. For VMs with a Static MAC address, you can change the MAC address by going to Edit Settings for a VM and typing in the MAC address.

1. Log in to vCenter server.

   Note: The supported versions of vCenter is 5.5 through 6.5 inclusive.

2. (Conditional) If they are powered on, **Power Off** both VMs (NetWitness 10.6.5.x and 11.1).
3. Click **Summary** tab, right-click **Datastore** and browse for the datastore location.
4. Go to the VM folder and download the `.vmx` file of 10.6.5.x and 11.1 to the local repository. By default, the VM generated with the MAC address is created in the format (as shown in the below figure).



Note: 00:0c:29:XX:YY:ZZ – 00:0c:29 is the unique identifier for an automatically generated MAC address. **00:50:56:XX:YY:ZZ – 00:50:56** is the unique identifier for a static or manually generated MAC address. This is valid only if the vCenter is not deployed. If vCenter is deployed, this MAC address denotes the unique identifier for an automatically generated MAC address.

5. Using a text editor, copy the `uuid.location` and `ethernet0.generatedAddress` values from 10.6.5.x **.vmx** file into the 11.1 **.vmx** file.

   Note: If you deployed the 10.6.5.x stack on the ESX server directly (not through VCenter), you must copy the value for `uuid.bios` in addition to `uuid.location` and `ethernet0.generatedAddress` from 10.6.5.x **.vmx** file into the 11.1 **.vmx** file.

6. Remove both the 10.6.5.x and the 11.1 VMs from inventory.

   a. Navigate to the vCenter server.

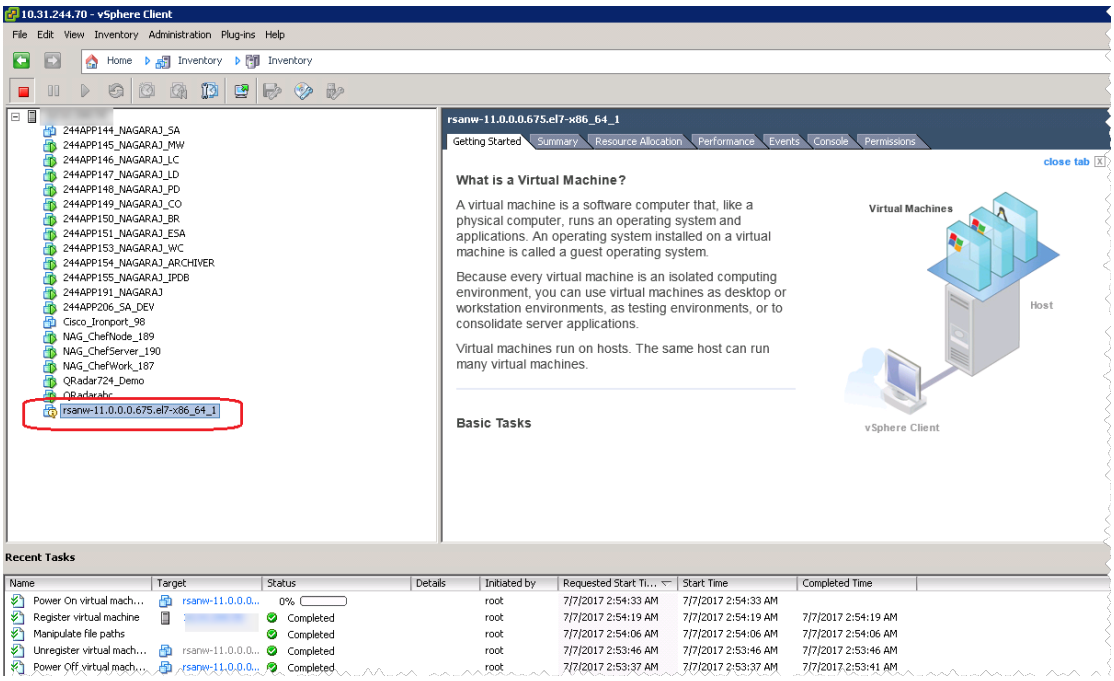
   b. Right-click both the 10.6.5.x and the 11.1 VMs.

c. Select Remove from Inventory.

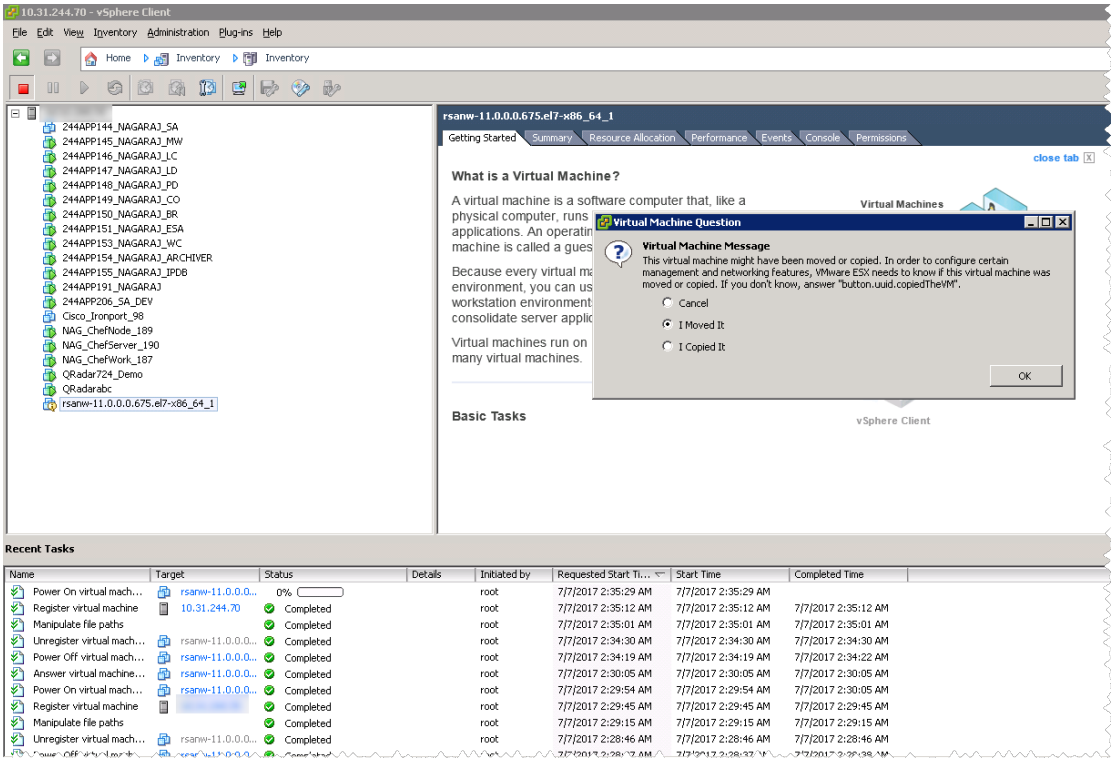
7. Upload the modified 11.1 **.vmx** file to the datastore location by replacing it with the existing **.vmx** file.

8. From the datastore, right- click the 11.1 **.vmx** file and select Add to Inventory.

9. Navigate to the vCenter server and **Power On** the 11.1 VM.
The following message is displayed.
The virtual machine might have been moved or copied. In order to configure certain management and networking features, VMware ESX needs to know if this virtual machine was moved or copied. If you don't know, answer "I Copied it."



10. Right-click the VM and select **Guest** > **Answer Question**.
    The following figure is displayed.



11. Select **I Moved It**.
12. Click **OK**.
    The MAC address is retained to the MAC address from 10.6.5.x to 11.1.

Task 5 - Restore Backup Data in 10.6.5.x to 11.1 VMs

Complete the following steps to **Power On** the 11.1 VM.

1. Copy backed-up data from the `nw-backup` directory to the 11.1 VMs.
   - For the NW Server (SA Server in 10.6.5.x):

     Note: See Virtual Log Collector Host (VLC) for detailed instructions on how to upgrade the VLC.

     a. Create the `nwhome` directory under `/tmp`.

     b. Mount `VolGroup00-nwhome` on `/tmp/nwhome/`.
     ```
     mount /dev/mapper/VolGroup00-nwhome /tmp/nwhome/
     ```

     c. Copy the contents of `/tmp/nwhome/` directory to `/var/netwitness/`.
     ```
     cp -r /tmp/nwhome/* /var/netwitness/
     ```

d. Mount `VolGroup02-redb` on `/var/netwitness/database`.
```
mount /dev/mapper/VolGroup02-redb /var/netwitness/database/
```

> **Note:** Make sure that the `/var/netwitness/database/nw-backup` directory exists with backup tarballs of the appliance.

e. Unmount `VolGroup00-nwhome` from `/tmp/nwhome/`.
```
umount /tmp/nwhome
```

- For the Archiver, Broker, Concentrator, Log Decoder/Log Collector, and Packet Decoder:

> **Note:** If your 10.6.5.x Decoder or Log Decoder had multiple network interfaces:
> 1. **Power Off** the 11.1 VM 11.1 Decoder or Log Decoder VM.
> 2. Go to **Edit Settings** for the VM and add the required number of Ethernet Adapters.
> 3. **Power On** the VM.
> 4. Add the ethernet adapters before restoring the backup data.

a. Create the `nwhome` directory under `/tmp`.

b. Create a temporary mount `VolGroup00-nwhome` on `/tmp/nwhome/`.
```
mount /dev/mapper/VolGroup00-nwhome /tmp/nwhome/
```

c. Copy the contents of `/tmp/nwhome/` directory to `/var/netwitness/`.
```
cp -r /tmp/nwhome/* /var/netwitness/
```

d. Unmount `VolGroup00-nwhome` from `/tmp/nwhome/`.
```
umount /tmp/nwhome
```

- For Malware Analysis (Co-located Malware Not Supported in 11.1 Upgrade):

a. Create the `apps` directory under `/tmp/`.

b. Create a temporary mount `VolGroup01-apps` on `/tmp/apps/`.
```
mount /dev/mapper/VolGroup01-apps /tmp/apps/
mkdir /var/netwitness/database
```

c. Copy the `nw-backup` directory to `/var/netwitness/`.
```
cp -r /tmp/apps/nw-backup /var/netwitness/database
```

d. Unmount `VolGroup01-apps` from `/tmp/apps/`.
```
umount /tmp/apps
```

- For Event Stream Analysis:

a. Create the `apps` directory under `/tmp/`

b. Create a temporary mount `VolGroup01-apps` on `/tmp/apps/`.
```
mount /dev/mapper/VolGroup01-apps /tmp/apps/
mkdir /var/netwitness/database
```

c. Copy the `nw-backup` directory to `/var/netwitness`.
```
cp -r /tmp/apps/nw-backup /var/netwitness/database
```

d. Unmount `VolGroup01-apps` from `/tmp/apps/`.
```
umount /tmp/apps
```

2. Mount the disks.

Note: If you have configured any external mount points on the VMs in the stack for any of the following directories, re-mount the external mount points in place of the following mounts.

- For the NW Server:
```
mount /dev/mapper/VolGroup01-ipdbext /var/netwitness/ipdbextractor/
mount /dev/mapper/VolGroup02-redb /var/netwitness/database/
```

Note: Make sure that the `/var/netwitness/database/nw-backup` directory exists with backup tarballs of the appliance.

- For the Log Decoder/Log Collector:

Note: The following mounts are not required for the Virtual Log Collector.

```
mount /dev/mapper/VolGroup01-decoroot /var/netwitness/logdecoder
mount /dev/mapper/VolGroup01-index /var/netwitness/logdecoder/index
mount /dev/mapper/VolGroup01-sessiondb
/var/netwitness/logdecoder/sessiondb
mount /dev/mapper/VolGroup01-metadb /var/netwitness/logdecoder/metadb
mount /dev/mapper/VolGroup01-logcoll /var/netwitness/logcollector
mount /dev/mapper/VolGroup01-packetdb
/var/netwitness/logdecoder/packetdb
```

- For the Packet Decoder:
```
mount /dev/mapper/VolGroup01-decoroot /var/netwitness/decoder
mount /dev/mapper/VolGroup01-sessiondb
/var/netwitness/decoder/sessiondb
mount /dev/mapper/VolGroup01-index /var/netwitness/decoder/index
mount /dev/mapper/VolGroup01-metadb /var/netwitness/decoder/metadb
mount /dev/mapper/VolGroup01-packetdb
/var/netwitness/decoder/packetdb
```

- For the Concentrator:
```
mount /dev/mapper/VolGroup01-concroot /var/netwitness/concentrator
mount /dev/mapper/VolGroup01-sessiondb
/var/netwitness/concentrator/sessiondb
mount /dev/mapper/VolGroup01-index /var/netwitness/concentrator/index
```

```
mount /dev/mapper/VolGroup01-metadb
/var/netwitness/concentrator/metadb
```

- For the Archiver:
  ```
  mount /dev/mapper/VolGroup01-archiver /var/netwitness/archiver
  mount /dev/mapper/VolGroup02-workbench /var/netwitness/workbench
  ```
- For the Broker:
  ```
  mount /dev/mapper/VolGroup01-broker /var/netwitness/broker
  ```

8. Add the following mount entries to `/etc/fstab`.
   - For the NW Server:
     ```
     /dev/mapper/VolGroup01-ipdbext /var/netwitness/ipdbextractor/ xfs
     defaults,noatime,nosuid 1 2
     /dev/mapper/VolGroup02-redb /var/netwitness/database/ xfs
     defaults,noatime,nosuid 1 2
     ```
   - For the Log Decoder/Log Collector:

     Note: The following mounts are not required for the Virtual Log Collector.

     ```
     /dev/mapper/VolGroup01-decoroot /var/netwitness/logdecoder ext4
     defaults,noatime,nosuid 1 2
     /dev/mapper/VolGroup01-index /var/netwitness/logdecoder/index xfs
     defaults,noatime,nosuid 1 2
     /dev/mapper/VolGroup01-sessiondb
     /var/netwitness/logdecoder/sessiondb xfs defaults,noatime,nosuid 1
     2
     /dev/mapper/VolGroup01-metadb /var/netwitness/logdecoder/metadb xfs
     defaults,noatime,nosuid 1 2
     /dev/mapper/VolGroup01-logcoll /var/netwitness/logcollector xfs
     defaults,noatime,nosuid 1 2
     /dev/mapper/VolGroup01-packetdb /var/netwitness/logdecoder/packetdb
     xfs defaults,noatime,nosuid 1 2
     ```
   - For the Packet Decoder:
     ```
     /dev/mapper/VolGroup01-decoroot /var/netwitness/decoder ext4
     defaults,noatime,nosuid 1 2
     /dev/mapper/VolGroup01-sessiondb /var/netwitness/decoder/sessiondb
     xfs defaults,noatime,nosuid 1 2
     /dev/mapper/VolGroup01-index /var/netwitness/decoder/index xfs
     defaults,noatime,nosuid 1 2
     /dev/mapper/VolGroup01-metadb /var/netwitness/decoder/metadb xfs
     defaults,noatime,nosuid 1 2
     ```

```
/dev/mapper/VolGroup01-packetdb /var/netwitness/decoder/packetdb
xfs defaults,noatime,nosuid 1 2
```

- For the Concentrator:

```
/dev/mapper/VolGroup01-concroot /var/netwitness/concentrator ext4
defaults,noatime,nosuid 1 2
/dev/mapper/VolGroup01-sessiondb
/var/netwitness/concentrator/sessiondb xfs defaults,nosuid,noatime
1 2
/dev/mapper/VolGroup01-index /var/netwitness/concentrator/index xfs
defaults,noatime,nosuid 1 2
/dev/mapper/VolGroup01-metadb /var/netwitness/concentrator/metadb
xfs defaults,noatime,nosuid 1 2
```

- For the Archiver:

```
/dev/mapper/VolGroup01-archiver /var/netwitness/archiver xfs
defaults,nosuid,noatime 1 2
/dev/mapper/VolGroup02-workbench /var/netwitness/workbench xfs
defaults,nosuid,noatime 1 2
```

- For the Broker:

```
/dev/mapper/VolGroup01-broker /var/netwitness/broker xfs
defaults,nosuid,noatime 1 2
```

Set Up Virtual Hosts in 11.1

There two phases to set up your 11.1 virtual stack that you must complete in the order shown.

- Phase 1 - Set Up NW Server, Event Stream Analysis, Malware Analysis, and Broker or Concentrator Hosts

  Note: For Event Stream Analysis, if you had C2 modules enabled in 10.6.5.x, the modules will enter a warm-up after you upgrade the Event Stream Analysis service to 11.1 and they will not be available until the warm up completes.

- Phase 2 - Set Up The Rest of the Component Hosts

Phase 1 - Set Up NW Server, Event Stream Analysis, Malware Analysis, and Broker or Concentrator Hosts

Task 1 - Set Up 11.1 NetWitness Server

Follow the instructions under Set Up 11.1 NW Server Host.

Task 2 - Set Up 11.1 ESA

Caution: If you had C2 modules enabled in 10.6.5.x, the modules will enter a warm-up after you upgrade the Event Stream Analysis service to 11.1 and they will not be available until the warm up completes.

Follow the instructions under Set Up 11.1 Non-NW Server Host to set up your ESA hosts.

1. Set up your primary ESA host through the Setup program and install **ESA Primary** on the host in the user interface on the **Admin Hosts** view.

   Note: If you have multiple ESA hosts in your enterprise, you must upgrade the ESA Primary host, where all the `mongodb` (Mongo Database) backup tar files are located, first, before you upgrade ESA Secondary hosts.

2. (Conditional) If you have a secondary ESA host, set it up through the Setup program and install **ESA Secondary** on the host in the user interface on the **Admin Hosts** view.

Task 3 - Set Up 11.1 Malware Analysis

Follow the instructions under Set Up 11.1 Non-NW Server Host.

Task 4 - Set Up 11.1 Broker or Concentrator

Follow the instructions under Set Up 11.1 Non-NW Server Host.

Note: If you do not have a Broker, upgrade your Concentrator hosts. The 11.1 NW Server cannot communicate with 10.6.5.x core services for the new Investigate functionality. This is why you must upgrade the Broker or Concentrator hosts in Phase 1.

Phase 2 - Set Up The Rest of the Component Hosts

See Appendix B. Stopping and Restarting Data Capture and Aggregation for instructions on how to stop and restart data capture and aggregation when upgrading the Decoder, Concentrator, and Log Collection hosts.

Decoder and Concentrator Hosts

1. Stop data capture and aggregation.
2. Complete the steps in Set Up 11.1 Non-NW Server Host.
3. Restart data capture and aggregation.

Log Decoder Host

1. Make sure you have prepared the Log Collector as described in the "Log Collectors (LC) and Virtual Log Collectors (VLCs): Run prepare-for-migrate.sh" in the **Backup Instructions**.
2. Stop data capture on the Log Decoder.
3. Complete the steps in Set Up 11.1 Non-NW Server Host.
4. Restart data capture on Log Decoder.

Note: After you upgrade, you will restart log collection after completing the Task 28 - Update Incident Rules Identified in the Domain in the Matching Conditions Upgrade Preparation Task in the **Post Upgrade Tasks**

Virtual Log Collector Host

1. Make sure you have prepared the Virtual Log Collector as described in the "Log Collectors (LC) and Virtual Log Collectors (VLCs): Run prepare-for-migrate.sh" in the **Backup Instructions**.
2. Back up your 10.6.5.x VLC by editing the `all-systems` file on host where you performed the backup.

a. Make sure your `all-systems` file contents has this information before you perform this step.

```
vlc,<host-name>,<IP-address>,<UUID>,10.6.5.x
```

b. Run the following command to create backup.

```
./nw-backup.sh -u
```

See Backup Instructions for detailed procedures on how to back up the host.

3. Make sure the backup host contains the VLC backup in the following format.

```
<hostname>-<IPaddress>-root.tar.gz
<hostname>-<IPaddress>-root.tar.gz.sha256
<hostname>-<IPaddress>-backup.tar.gz
<hostname>-<IPaddress>-backup.tar.gz.sha256
<hostname-IPaddress>-network.info.txt
all-systems-master-copy
```

4. Power off the 10.6.5.x VLC so that a new 11.1 VM can be created with the same network configuration.
5. Deploy a fresh Non-NW Server host using the 11.1 NetWitness Suite ova.
6. Connect to the VM console of the new VLC.
7. Update the network configuration to be the same as the 10.6.5.x VLC.
This information is stored in the `<hostname-IPaddress>-network.info.txt` 10.6.5.x VLC backup file.

Note: Make sure IPv6 is disabled.

a. Edit the `/etc/sysconfig/network-scripts/ifcfg-eth0` file and update the settings. Contents of `ifcfg-eth0` should be as follows.

```
TYPE=Ethernet
DEFROUTE=yes
NAME=eth0
UUID=<uuid>
DEVICE=eth0
DNS1=<nameserver from <hostname>-<ipaddress>-network-info.txt>
DNS2=<nameserver from <hostname>-<ipaddress>-network-info.txt>
BOOTPROTO=static
IPADDR=<ipaddress from <hostname>-<ipaddress>-network-info.txt>
NETMASK=<netmask from <hostname>-<ipaddress>-network-info.txt>
GATEWAY=<gateway from <hostname>-<ipaddress>-network-info.txt>
NM_CONTROLLED=no
ONBOOT=yes
```

b. Submit the following command string.

```
systemctl restart network.service
```

8. Create the backup directory.

```
# mkdir -p /var/netwitness/database/nw-backup/
```

9. Copy the backup from the backup host from `/var/netwitness/database/nw-backup` to the new VLC in the `/var/netwitness/database/nw-backup` directory.
10. Complete the steps 2 through 12 inclusive in Set Up 11.1 Non-SA Server Host for the rest of the NetWitness Suite components . Make sure that you select **Log Collector** for the service in step 12.

Set Up 11.1 NW Server Host

Make sure that you have backed up 10.6.5.x data for the SA Server host. **You must follow the instructions in Backup Instructions to back up the host**.

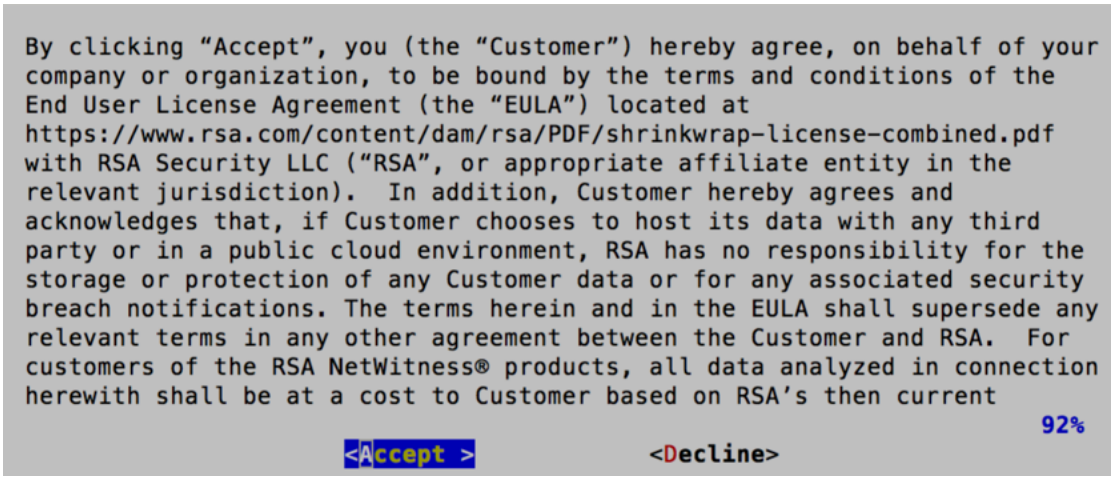
Caution: Run the backup immediately before upgrading the SA Server to 11.1 so that the data is as recent as possible. You must create the **all-systems** file before you upgrade the SA Server because you cannot do this after the SA Server has been upgraded to 11.1.

Complete the following steps to set up the 11.1 NW Server host.

1. Log in to 11.1 NW Server VM's console and run the `nwsetup-tui` command.
   This initiates the Setup program and the EULA is displayed.

   Note: 1.) When you navigate through the Setup program prompts, use the down and up arrows to move among fields, use Tab key to move to and from commands (such as **<Yes>**, **<No>**, **<OK>**, and **<Cancel>**. Press the Enter key to register your command response and move to the next prompt.
   2.) The Setup program adopts the color scheme of the desktop or console you use access the host.

2. Tab to **Accept** and press **Enter**.



The **Is this the host you want for your 11.1 NW Server** prompt is displayed.

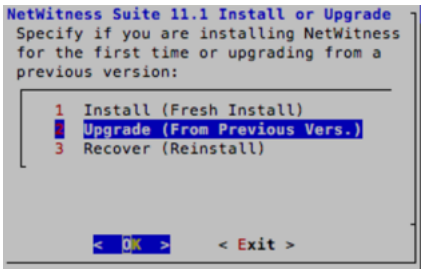
Caution: If you choose the wrong host for the NW Server and complete the upgrade, you must repeat steps 1 through 11 of Set Up 11.1 NW Server Host to correct this error.

3. Tab to **Yes** and press **Enter**.

Choose **No** if you already upgraded the NW Server to 11.1.

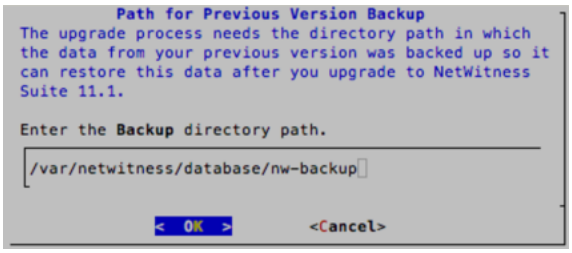
The **Install or Upgrade** prompt is displayed.

4. Use down arrow to select **2 Upgrade (From Previous Vers.)**, tab to **OK**, and press **Enter**.



The **Backup** path prompt is displayed.

5. Tab to **OK** and press **Enter** if want to keep this path. If not, edit the path, tab to **OK** and press **Enter** to change it.



This table lists the backup and restore paths by host/service.

Host	Backup Path	Restore Path
Malware	/var/lib/rsamlware/nw-backup	/var/netwitness/malware_analytics_server/nw-backup/restore
Event Stream Analysis	/opt/rsa/database/nw-backup	/var/netwitness/database/nw-backup/restore
NW Server	/var/netwitness/database/nw-backup	/var/netwitness/restore
All Other Hosts	/var/netwitness/database/nw-backup	/var/netwitness/database/nw-backup/restore

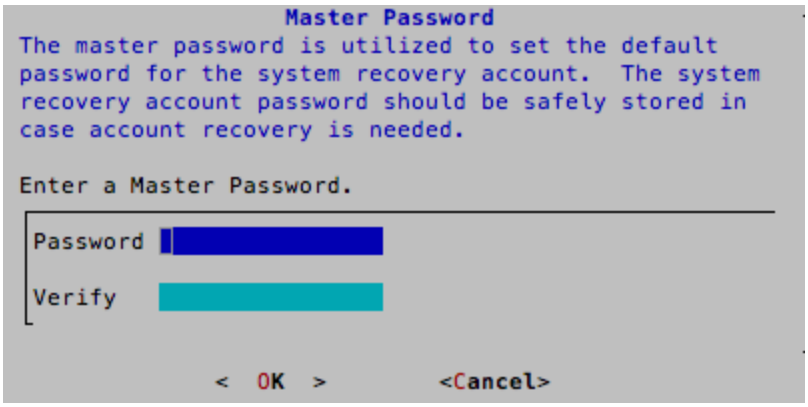
The **Master Password** prompt is displayed.

The following list of characters are supported for Master Password and Deployment Password:

- Symbols : ! @ # % ^ + ,
- Numbers : 0-9
- Lowercase Characters : a-z
- Uppercase Characters : A-Z

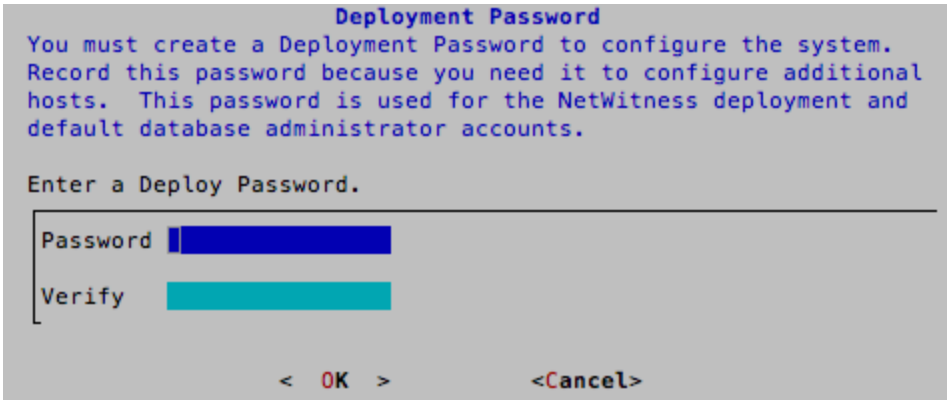
No ambiguous characters are supported for Master Password and Deployment Password. For example:
space { } [ ] ( ) / \ ' " ` ~ ; : . < > -

6. Type in the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.



The **Deployment Password** prompt is displayed.

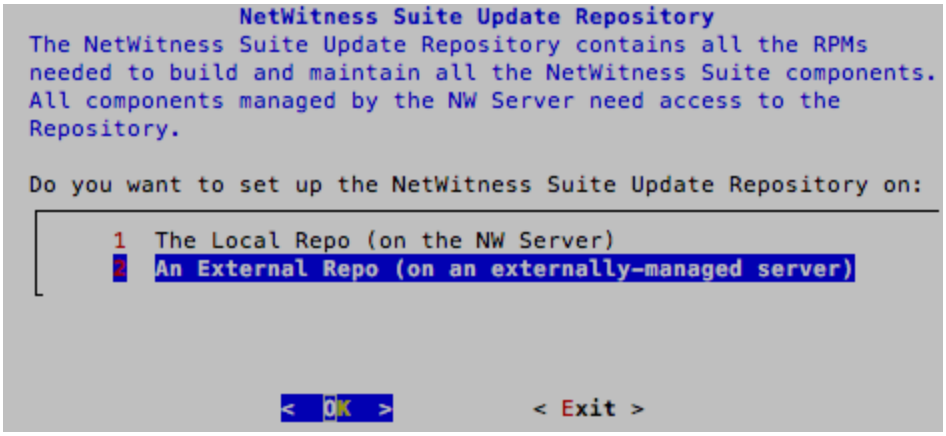
7. Type in the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.



The **Update Repository** prompt is displayed.

You must use the same repo that you used for the NW Server hosts for all hosts.

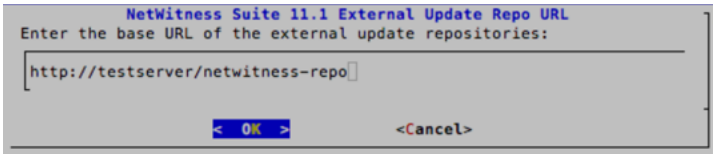
8. Use the down and up arrows to select **2 An External Repo (on an externally-managed server)**.



The **External Update Repo URl** prompt is displayed.

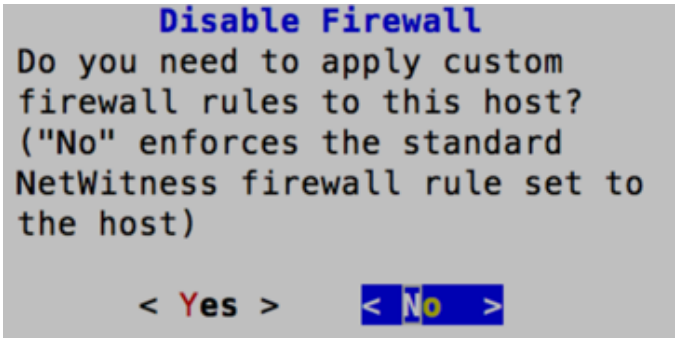
Refer to Appendix D. Create External Repository for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

9. Enter the base URL of the NetWitness Suite external repo (for example, **http:/testserver/netwitness-repo**)and click **OK**.

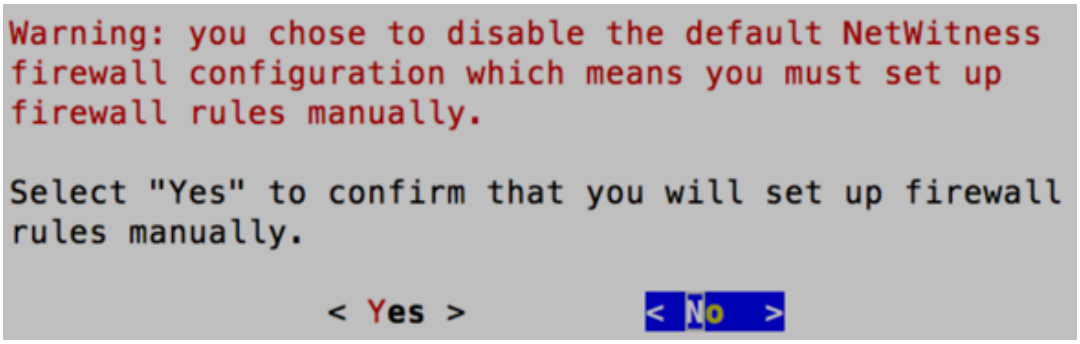


The **Disable** or use standard **Firewall** configuration prompt is displayed.

10. Tab to **No** (default), and press **Enter** to use the standard firewall configuration. Tab to **Yes**, and press **Enter** to disable the standard firewall configuration.

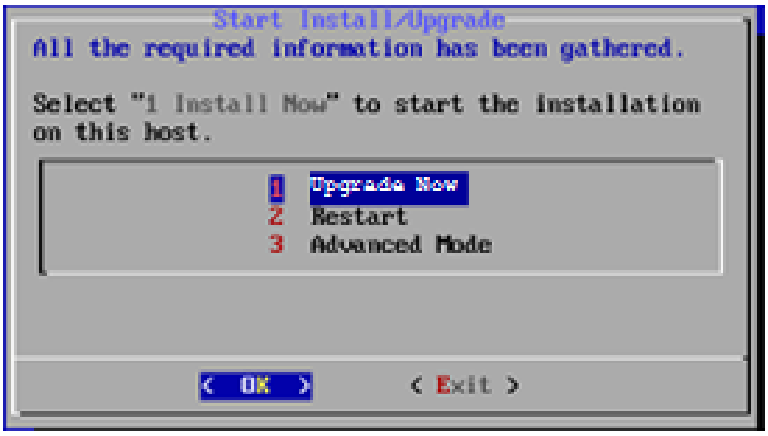


- If you select **Yes**, confirm your selection or **No** to use the standard firewall configuration.



The **Install** or **Upgrade** prompt is displayed (**Recover** does not apply to the installation. It is for 11.1 Disaster Recovery).

11. Select 1 **Upgrade Now**, tab to **OK**, and press Enter.



When **Installation complete** is displayed, you have upgraded the 10.6.5.x SA Server to the 11.1 NW Server.

Note: Ignore the hash code errors similar to the errors shown in the following screen shot that are displayed when you initiate the `nwsetup-tui` command. Yum does not use MD5 for any security operations so they do not affect the system security.

```
ValueError: error:3207A06D:lib(50):B_HASH_init:cr new
Checksum type 'md5' disabled
 (skipped due to only_if)
    * file[/etc/yum.repos.d/CentOS-Base.repo] action delete (up to date)

    f(usedforsecurity=False)
```

12. Complete the NW Server before you upgrade any of the non-SA Server hosts to 11.1.

Set Up 11.1 Non-NW Server Host

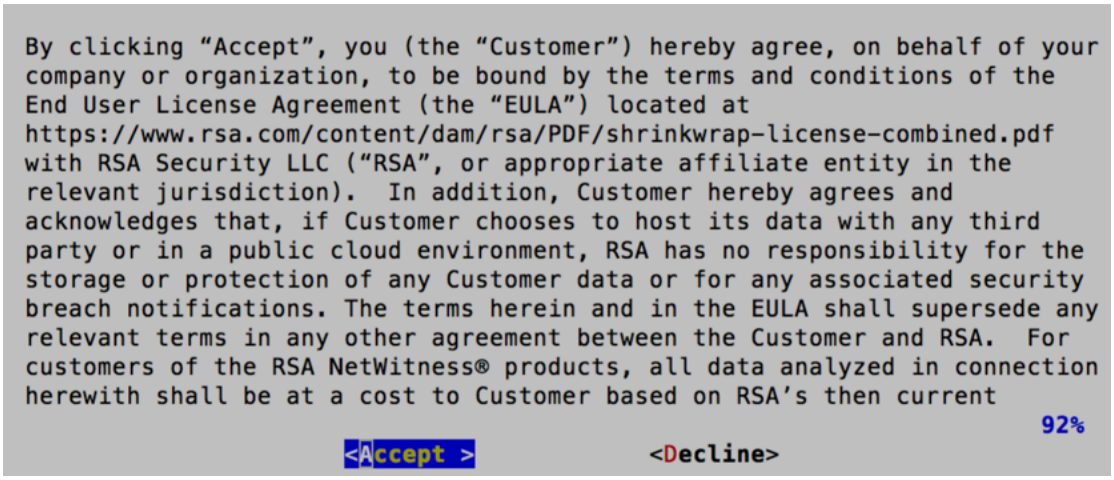
Make sure that you Back up your 10.6.5.x data for the host. **You must follow the instructions in Backup Instructions to back up the host.**

Caution: Run the backup immediately before upgrading the host to 11.1 so that the data is as recent as possible.

Complete the following steps to set up an 11.1 Non-NW Server host.

1. Log in to 11.1 non-NW Server VM console and run the `nwsetup-tui` command.
   This initiates the Setup program and the EULA is displayed.

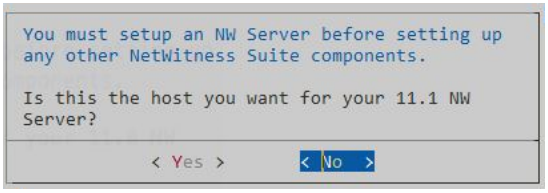
2. Tab to **Accept** and press **Enter**.



The **Is this the host you want for your 11.1 NW Server** prompt is displayed.

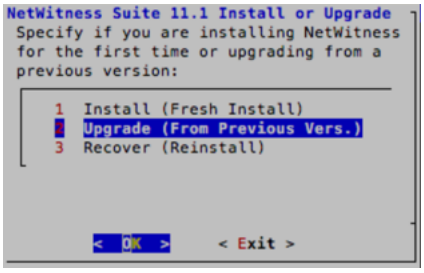
Caution: If you choose the wrong the host for the NW Server and complete the upgrade, you must repeat steps 1 through 11 of Set Up 11.1 NW Server Host to correct this error.

3. Tab to **No** and press **Enter**.



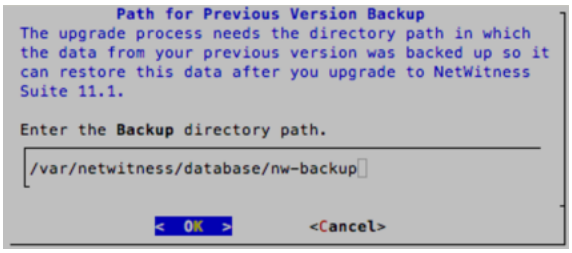
The **Install** or **Upgrade** prompt is displayed (**Recover** does not apply to the installation. It is for 11.1 Disaster Recovery).

4. Use down arrow to select **2 Upgrade (From Previous Vers.)**, tab to **OK**, and press **Enter**.



The **Backup** path prompt is displayed.

5. Tab to **OK** and press **Enter** if want to keep this path. If not, edit the path, tab to **OK** and press **Enter** to change it.



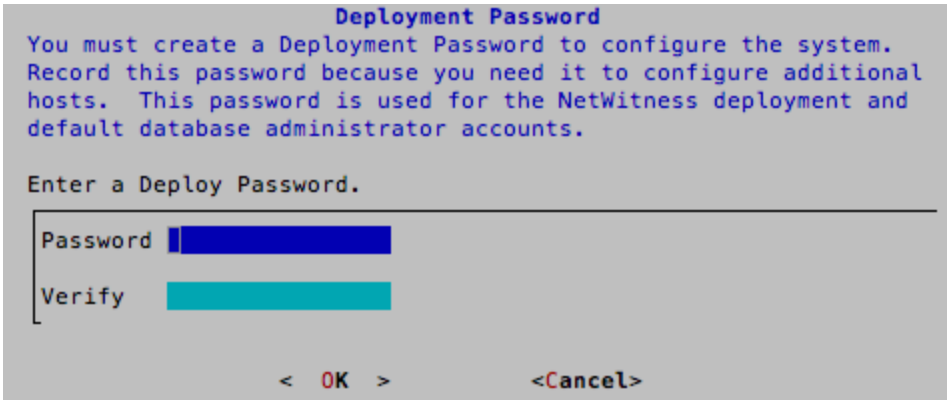
This table lists the backup and restore paths by host/service.

Host	Backup Path	Restore Path
Malware	/var/lib/rsamlware/nw-backup	/var/netwitness/malware_analytics_server/nw-backup/restore
Event Stream Analysis	/opt/rsa/database/nw-backup	/var/netwitness/database/nw-backup/restore
NW Server	/var/netwitness/database/nw-backup	/var/netwitness/restore
All Other Hosts	/var/netwitness/database/nw-backup	/var/netwitness/database/nw-backup/restore

The **Deployment Password** prompt is displayed.

Note: You must use the same deployment password that you used when you upgraded the NW Server.

6. Type in the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.



The **Update Repository** prompt is displayed.

7. Use the down and up arrows to select **2 An External Repo (on an externally-managed server)**, tab to **OK**, and press **Enter**.

   The **External Update Repo URL** prompt is displayed.
   The repositories give you access RSA updates and CentOS updates.

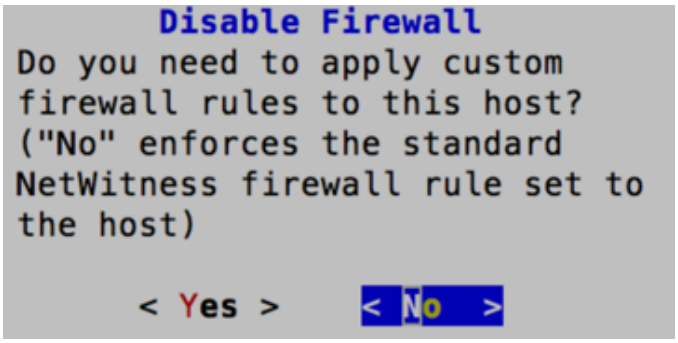
8. Enter the base URL of the NetWitness Suite external repo (for example, **http://testserver/netwitness-repo**)and click **OK**. Refer to Appendix D. Create External Repository for instructions on how to create this repo and its external repo URL so you can enter it in the following prompt.

   The **NW Server IP Address** is displayed.

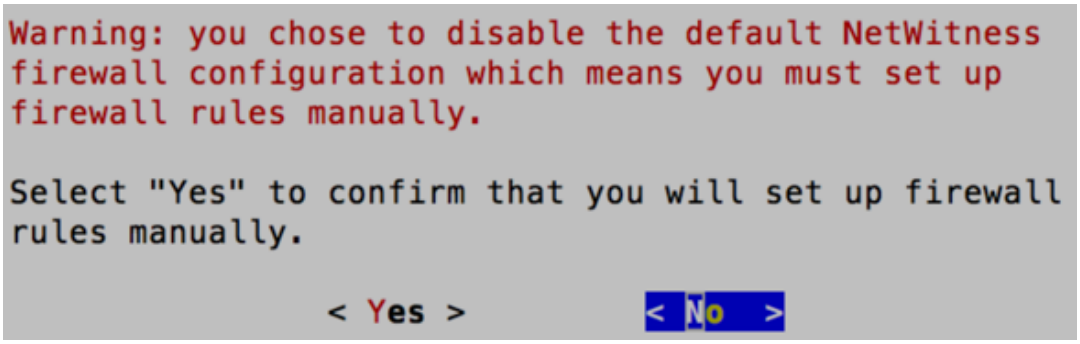
9. Type the IP address of the NW Server, tab to **OK**, and press **Enter**.

   The **Disable** or use standard **Firewall** configuration prompt is displayed.

10. Tab to **No** (default), and press Enter to use the standard firewall configuration. Tab to **Yes**, and press **Enter** to disable the standard firewall configuration.



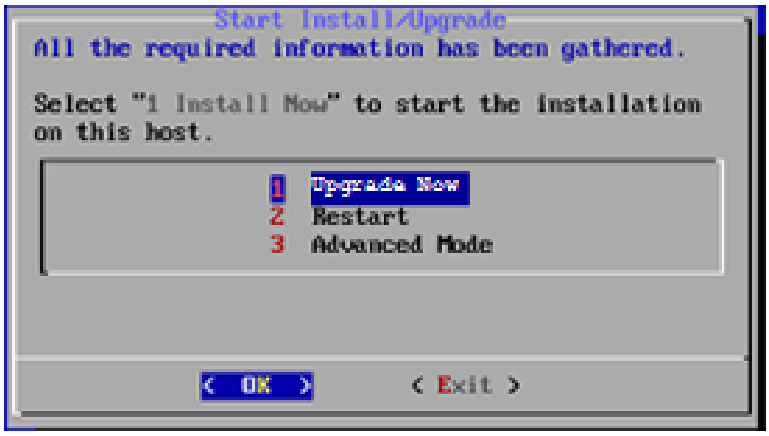
- If you select **Yes**, confirm your selection.



- If you select **No**, the standard firewall configuration is applied.

The **Install** or **Upgrade** prompt is displayed (**Recover** does not apply to the installation. It is for 11.1 Disaster Recovery).

11. Select 1 **Upgrade Now**, tab to **OK**, and press **Enter**.



When **Installation complete** is displayed, you have upgraded the host to the 11.1.

12. Install the service on this host:

    a. Log into NetWitness Suite and click **ADMIN** > **Hosts**.

    The **New Hosts** dialog is displayed with the **Hosts** view grayed out in the background.

Note: If the **New Hosts** dialog is not displayed, click **Discover** in the Hosts view toolbar.

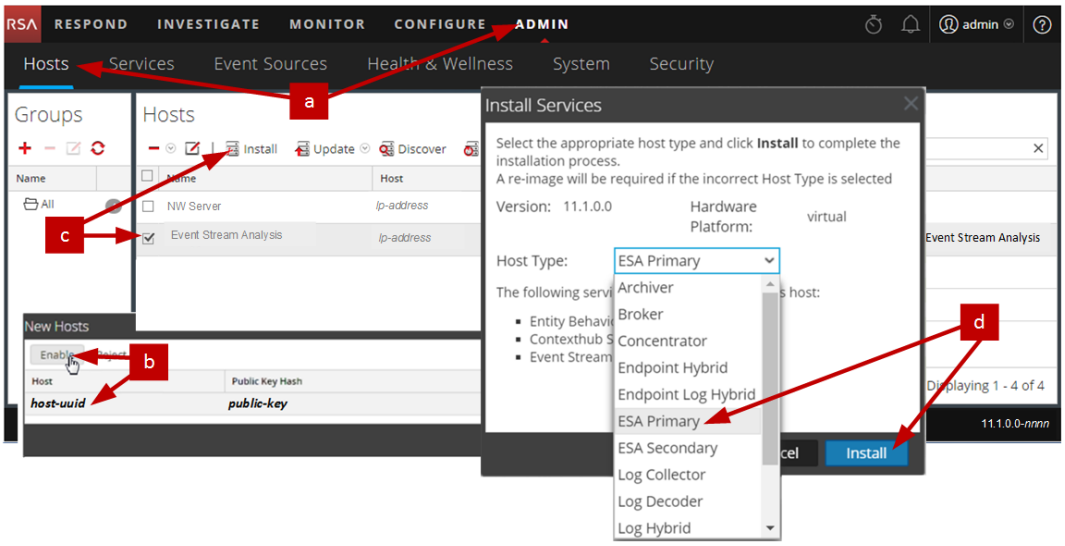
b. Click on the host in the **New Hosts** dialog and click **Enable**.

The **New Hosts** dialog closes and the host is displayed in the **Hosts** view.

c. Select that host in the **Hosts** view (for example, **Event Stream Analysis**) and click Install

The **Install Services** dialog is displayed.

d. Select the appropriate service (for example, **ESA Primary**) and click **Install**.



You have completed the upgrade of the non-NW Server host in NetWitness Suite

Note: When you upgrade a Respond host from 10.6.5.x to 11.1, it takes a period of time for Respond to come back online. This is caused by Respond indexing data while it is restored. The size of the data in the Mongo database will determine the time.

Update or Install Legacy Windows Collection

Refer to the *RSA NetWitness Legacy Windows Collection Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Note: After you update or install Legacy Windows Collection, reboot the system to ensure that Log Collection functions correctly.

Post Upgrade Tasks

This topic contains the tasks you must complete after you upgrade your hosts from 10.6.5.x to 11.1. These tasks are organized by the following categories.

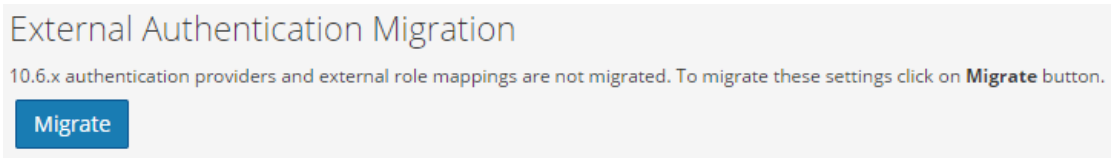
- NW Server
- RSA NetWitness® Endpoint
- RSA NetWitness® Endpoint Insights
- Event Stream Analysis
- Investigate
- Log Collection
- Reporting Engine
- Respond
- RSA NetWitness® SecOps Manager
  (RSA Archer Security Incident Management, RSA Archer Security Operations & Breach Management and RSA Archer Issues Management)
- Backup

NW Server

Task 1 - Migrate Active Directory (AD)

The first time you log into the NetWitness Suite 11.1 User Interface, you must click on the Migrate button to complete the migration of AD.

1. Log in to NetWitness Suite 11.1 with your `admin user` credentials.
2. In the **NetWitness Suite** 11.1 menu, select **ADMIN** > **SECURITY** and click the **Settings** tab.
   The following dialog is displayed.

3. Click **Migrate**.
   The migration is complete and the dialog closes.

Task 2 - Modify Migrated AD Configuration to Upload Certificate

If you authenticated through Active Directory (AD) server, and enabled SSL for the AD connection in 10.6.5.x, you must modify the migrated AD configuration to upload the Active Directory server certificate.

Complete the following procedure to modify the migrated AD configuration to upload the certificate.

1. In the **NetWitness Suite** 11.1 menu, select **ADMIN** > **Security** and click the **Settings** tab.
2. Under **Active Directory Settings**, select an AD configuration and click .

   The Edit Configuration dialog is displayed.
3. Go to the **Certificate File** field, click **Browse**, and select a certificate from your network.
4. Click **Save**.

Task 3 - Reconfigure Pluggable Authentication Module (PAM) in 11.1

You must reconfigure PAM after you upgrade to 11.1. See "Configure PAM Login Capability" in the *RSA NetWitness® Suite System Security and User Management Guide* for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

You can refer to your 10.6.5.x PAM configuration files in the **/etc** directory in the your 10.6.5.x backup data for guidance.

Task 4 - Restore NTP Servers

You must use the NetWitness Suite 11.1 user interface to restore NTP server configurations. NTP server configuration information is located in `$BUPATH/restore/etc/ntp.conf`. Use the NTP server name and hostname from the `/var/netwitness/restore/etc/ntp.conf` file. See "Configure NTP Servers" in the *RSA NetWitness® Suite System Configuration Guide* for detailed instructions on how to add NTP servers. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 5 - Restore Licenses for Environments without FlexNet Operations-On Demand Access

If your environment does not have access to FlexNet Operations-On Demand, you need to re-download your NetWitness Suite licenses. Refer to "Step 1. Register the NetWitness Server" in the *RSA NetWitness Suite Licensing Management Guide* for instructions on how to re-download licenses. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 6 - Remap Virtual NW Server License to 10.6.5.x MAC Address

If you are upgrading a Security Analytics server running on a virtual machine, change the 11.1 NW Server virtual host to the 10.6.5.x MAC address to retain licensing. Refer to "Licensing: Step 1. Register the NetWitness Server" in the *RSA NetWitness Suite Licensing Management Guide* for instructions on remapping a license to a new MAC address." Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

(Conditional) Task 7 - If You Disabled Standard Firewall Config - Add Custom IPtables

During the upgrade, you have the option of using these rules or disabling them. If you disabled them, follow these instructions as a baseline to create a user-managed firewall rule sets on all the hosts for which you disabled the standard firewall configuration.

Note: You can refer to the `$BUPATH/restore/etc/sysconfig/iptables` and `$BUPATH/restore/etc/sysconfig/ip6tables` in the restore folder of the backup to update the `ip6tables` and `iptables` files. The `/etc/netwitness/firewall.cfg` file contains the standard `iptables` firewall rules.

1. SSH to each host and log in with your root credentials.
2. Update the following `ip6tables` and `iptables` files with the custom firewall rules.
   ```
   /etc/sysconfig/iptables
   /etc/sysconfig/ip6tables
   ```
3. Reload the `iptables` and `ip6tables` services.
   ```
   service iptables reload
   service ip6tables reload
   ```

(Conditional) Task 8 - Specify SSL Ports If You Never Set Up Trusted Connections

Complete this task only if you never set up Trusted Connections. You would not have set up Trusted Connections if you:

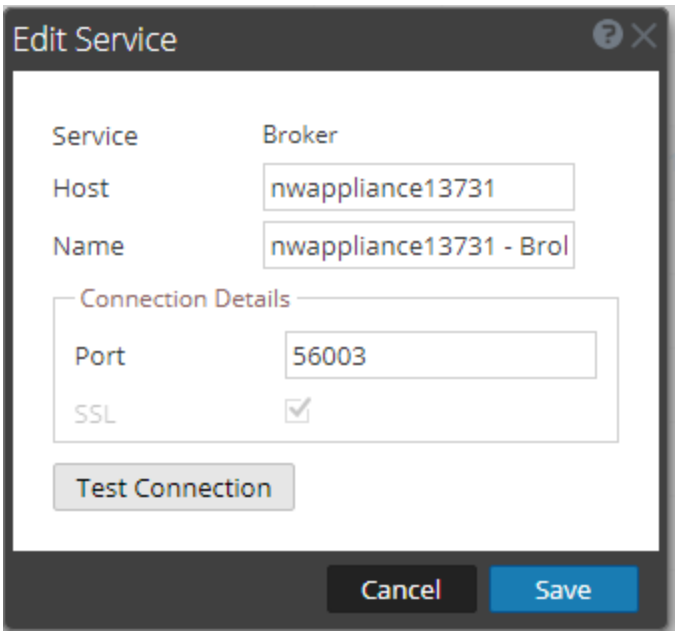
- Used the base ISO image for 10.3.2 or earlier.
- Updated the system using RPMs exclusively to get to 10.6.5.

NetWitness Suite 11.1 cannot communicate with the core services for these customers because they are using a non-SSL port 500XX. You must update the Core service ports to an SSL port in the Edit Service dialog.

1. In the **NetWitness Suite** 11.1 menu, select **ADMIN** > **Services**.
2. Select each core service and change there ports from Non-SSL to SSL ports.

Service	Non-SSL	SSL
Broker	50003	56003
Concentrator	50005	56005
Decoder	50004	56004
Log Decoder	50002	56002

3. Click (Edit) from the **Services** view toolbar.
   The Edit Service dialog is displayed.
4. Change the port from Non-SSL to SSL as shown in the table and click **Save** (for example, change the Broker port from 50003 to 56003).



Task 9 - (Conditional) Correct Audit Log Templates That Are Not Updated in Logstash Output Conf File

Problem: When a user updates from 10.6.5 to 11.1 and 11.0.0.0 to 11.1, if they have a global auditing set up, audit log templates are not getting updated in Logstash output conf file.

Workaround: If global auditing is configured, you need to edit one of the syslog entries in the Global notifications servers and click save to apply the latest Audit log configuration.

If you had global auditing configured in 11.0.x, you must complete the following procedure to apply the latest Global Auditing configuration.

1. In the **NetWitness Suite** 11.1 menu, select **ADMIN** > **System** > **Global Notifications**.
   The **Global Notifications** view is displayed.
2. Click the **Servers** tab, select any syslog server.
3. Click (edit icon) and click **Save**.

RSA NetWitness® Endpoint

Task 10 - Reconfigure Recurring Feed Configured from Legacy Endpoint Because Java Version Changed

You must reconfigure the Legacy Endpoint recurring feed due to the change in Java version. Complete the following step to fix this problem.

1. Import the NetWitness Endpoint CA certificate into the NetWitness Suite Trusted store as described in "Export the NetWitness Endpoint SSL Certificate" under the "Configure Contextual Data from Endpoint via Recurring Feed" topic in the *RSA NetWitness Endpoint Integration Guide* to import the certificate.
   Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

RSA NetWitness® Endpoint Insights

(Optional) Task 11 - Install Endpoint Hybrid or Endpoint Log Hybrid

See:

RSA NetWitness Suite 11.1 Physical Host Installation Guide for instructions for installation on a physical host.

RSA NetWitness Suite 11.1 Virtual Host Installation Guide for instructions for installation on a virtual host.

Task 12 - Reconfigure Endpoint Alerts Via Message Bus

1. On the NetWitness Endpoint Server, modify the virtual host configuration in the `C:\Program Files\RSA\ECAT\Server\ConsoleServer.exe` file to reflect the following configuration.
   ```
   <add key="IMVirtualHost" value="/rsa/system" />
   ```

Note: In NetWitness Suite 11.1, the virtual host is `/rsa/system`. For 10.6.5.x and earlier versions, the virtual host is `/rsa/sa`.

2. Restart the API Server and Console Server.
3. SSH to the NW Server and log in with `root` credentials.
4. Submit the following command to add all certificates to the truststore.
   `orchestration-cli-client --update-admin-node`
5. Submit the following command to restart the RabbitMQ server.
   `systemctl restart rabbitmq-server`
   The NetWitness Endpoint account should automatically be available on RabbitMQ.
6. Import the `/etc/pki/nw/ca/nwca-cert.pem` and `/etc/pki/nw/ca/ssca-cert.pem` files from the NW Server and add them to the Trusted Root Certification stores in the Endpoint Server.

Event Stream Analysis Tasks (ESA)

Task 13 - Reconfigure Automated Threat Detection for ESA

If you used Automated Threat Detection in 10.6.5.x, you must complete the following steps to reconfigure it using the ESA Analytics service in 11.1.

1. In the **NetWitness Suite** 11.1 menu, select **ADMIN** > **System** > **ESA Analytics**.
   The Suspicious Domains modules, Command and Control (C2) for Packets and C2 for Logs, require a whitelist named "**domains_whitelist**".
2. Conditional - If your previous Automated Threat Detection whitelist appears on the **Lists** tab of the Context Hub service:
   a. Click **ADMIN** > **Services**, select the Context Hub service, in the action commands ( ) drop-down menu, click **View** > **Config** > **Lists** tab).
   b. Rename your old Automated Threat Detection whitelist to "`domains_whitelist`" for the Suspicious Domains module.

For more information, see the *NetWitness Suite Automated Threat Detection Guide* and the "Configure ESA Analytics" section of the *NetWitness Suite ESA Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 14 - For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint Configure Mutually Authenticated SSL

If you integrate with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint, you must configure Mutually Authenticated SSL on each integrated system so that the application can authenticate itself when connecting to the RabbitMQ message bus.

Note: Use the RabbitMQ usernames and passwords that were obtained when you backed up your 10.6.5.x data (see Backup Instructions).

1. Create a user on the host system that is integrating with NetWitness Suite by logging into the host and running the following `rabbitmqctl` command.

   ```
   > rabbitmqctl add_user <username> <password>
   ```

   For example:

   ```
   > rabbitmqctl add_user wtd-incidents incidents
   ```

2. Set permissions for users by running the following command (use the username from step 1):

   ```
   > rabbitmqctl set_permissions -p /rsa/system <username> ".*", ".*",
   ".*"
   ```

   For example:

   ```
   > rabbitmqctl set_permissions -p /rsa/system wtd-incidents ".*",
   ".*", ".*"
   ```

Task 15 - Enable Threat - Malware Indicators Dashboard

In 11.1.0, the 10.6.5.x **Threat -Indicators Dashboard** was renamed to **Threat - Malware Indicators Dashboard**. If you used this dashboard in 10.6.5.x, you must:

1. Enable the **Threat - Malware Indicators Dashboard** in 11.1.
2. Set datasource for new dashlets.

   See "Dashlets" in RSA Link (https://community.rsa.com/docs/DOC-81463) for a description of Dashlets in the context of NetWitness Suite.

Investigate

Task 16 - Make Sure User Roles Have Customized User Roles Have `Investigate-server` Permissions for Event Analysis Access

After you upgrade to 11.1.0.0, any customized user role does not have `investigate-server.*` permission enabled by default. Complete the following procedure to make sure that the appropriate user roles have permission to access Event Analysis.

1. Log in to NetWitness Suite 11.1.0.0 as an `Admin` user.
2. In the **NetWitness Suite** 11.1 menu, select **ADMIN** > **Security** .
3. Click the **Roles** tab.
4. Select the roles that need `investigate-server.*` permissions and click (edit icon).
5. Select the **Investigate-server** tab under under **Permissions**.
6. If investigate-server checkbox is not checked, check it for the users that require Event Analysis access.

7. Click **Save**.

Log Collection

Task 17 - Reset Stable System Values for Log Collector after Upgrade

Complete the following tasks to reset stable system values for the Log Collector after you upgrade it to 11.1 to ensure that all collection protocols resume normal operation.

Reset Stable System Values for the Lockbox

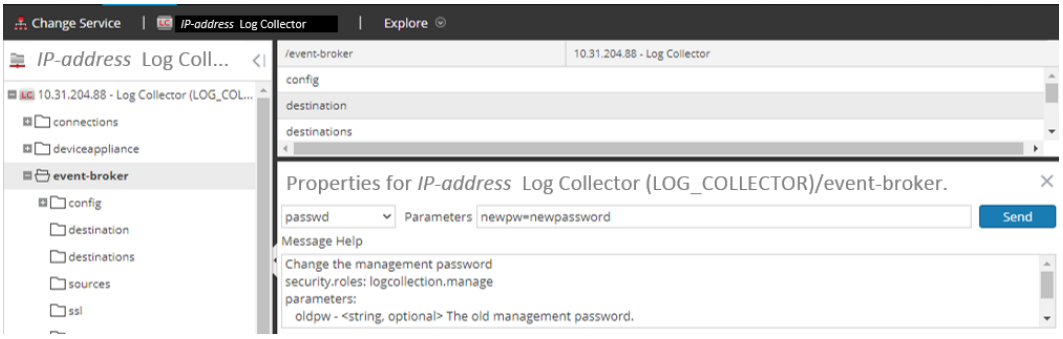
The Lockbox stores the key for encrypting event source and other passwords for the Log Collector. The Log Collector service cannot open the Lockbox because of the stable system value changes. As a result, you must Reset Stable System Values for the Lockbox . See "Log Collection: Step 3. Set Up a Lockbox" in the *RSA NetWitness® SuiteLog Collection Configuration Guide* for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Update Log Collector Service RabbitMQ User Account Password

If the logcollector service RabbitMQ user account password was changed, you must reenter it after the 11.1 upgrade.

1. In the **NetWitness Suite** 11.1 menu, select **ADMIN > Services**.
2. Select the Log Collector service.
3. Click (Actions) > **View** > **Explore**.
4. Right click `event-broker` > **Properties**.

5. Select `passwd` from the drop-down list, enter `newpw=><newpassword>` in Parameters (where `<newpassword>` is the RabbitMQ user account password), and click **Send**.



(Optional for Upgrades from 10.6.5.x with FIPS enabled for Log Collectors, Log Decoders and Packet Decoders)

Task 18 - Enable FIPS Mode

FIPS is enabled on all services except Log Collector, Log Decoder, and Decoder. FIPS cannot be disabled on any services except Log Collector, Log Decoder, and Decoder. For information about how to enable FIPS for these services, see the "Sys Maintenance: Activate or Deactivate FIPS" topic in the *RSA NetWitness® SuiteSystem Maintenance Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Reporting Engine

Task 19 - Restore the CA certificates for External Syslog Servers for Reporting Engine

You must restore CA certificates after the upgrade from the back up you made prior to the upgrade. The Backup script backs up the 10.6.5.x CA certificates into the `/usr/lib/jvm/java-1.8.0-openjdk-1.8.0.111-0.b15.el6_8.x86_64/jre/lib/security/cacerts` directory.

Complete the following procedure to restore the CA certificates in 11.1.

1. SSH to the NW Server host.
2. Export the CA certificates.
   ```
   keytool -export -alias <alias_name> -keystorepath_to_keystore_file -rfc -file path_to_certificate_file
   ```
3. Copy the CA pem into `/etc/pki/nw/trust/import` directory.

(Conditional) Task 20 - Restore External Storage for Reporting Engine

If you have external storage for the Reporting Engine (such as SAN or NAS for storing reports), you must restore the mount you unlinked before the upgrade. See "Reporting Engine: Add Additional Space for Large Reports" in the *RSA NetWitness® Suite Reporting Engine Configuration Guide* for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Respond

(Conditional) Task 21 - Restore Custom Analysts Roles

If you had custom analyst roles in 10.6.5.x, you must reinstate them in 11.1. See "Add a Role and Assign Permissions" in the *RSA NetWitness Suite System Security and User Management Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 22 - Restore Respond Service Custom Keys

In 10.6.5.x, if you added custom key for use in the **groupBy** clause, the `alert_rules.json` file was modified. The `alert_rules.json` file contains aggregation rule schema. RSA moved the `alert_rules.json` file to the following new location: `/var/lib/netwitness/respond-server/scripts`

1. Copy the custom keys from `/opt/rsa/im/fields/alert_rules.json` file in the backup directory.

   This directory is where the `alert_rules.json` file is restored from the 10.6.5.x backup.

2. Go to the `/var/lib/netwitness/respond-server/data/aggregation_rule_schema.json` in 11.1.

   This is the new file for 11.1.

3. Edit the `/var/lib/netwitness/respond-server/data/aggregation_rule_schema.json` to include the custom keys you copied in step one.

Task 23 - Restore Customized Respond Service Normalization Scripts

RSA re-factored the Respond service normalization scripts in 11.1 and moved them to the following new location:
`/var/lib/netwitness/respond-server/scripts`
If you customized these scripts in 10.6.5.x, you must:

1. Go to the to the `/opt/rsa/im/scripts` directory.
   This directory is where the following Respond service normalization scripts are restored from the 10.6.5.x backup.
   `data_privacy_map.js`
   `normalize_alerts.js`
   `normalize_core_alerts.js`
   `normalize_ecat_alerts.js`
   `normalize_ma_alerts.js`
   `normalize_wtd_alerts.js`
   `utils.js`
2. Copy any custom logic from the 10.6.5.x scripts.
3. Go to the `/var/lib/netwitness/respond-server/scripts` directory.
   This directory is where NetWitness Suite 11.1 stores the re-factored scripts.
4. Edit the new scripts to include the custom logic you copied in step 2 from the 10.6.5.x scripts.
5. Copy any custom logic from `/opt/rsa/im/fields/alert_rules.json` file.
   The `alert_rules.json` file contains aggregation rule schema.

Task 24 - Add Respond Notification Settings for Custom Roles

Respond Notification Setting permissions enable Respond Administrators, Data Privacy Officers, and SOC Managers to access Respond Notification Settings (**CONFIGURE** > **Respond Notifications**), which enable them to send email notifications when incidents are created or updated.

To access these settings, you will need to add additional permissions to your existing built-in NetWitness Suite user roles. You will also need to add permissions to your custom roles. See the "Respond Notification Settings Permissions" topic in the *NetWitness Respond Configuration Guide*. For detailed information about user permissions, see the *System Security and User Management Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 25 - Manually Configure Respond Notification Settings

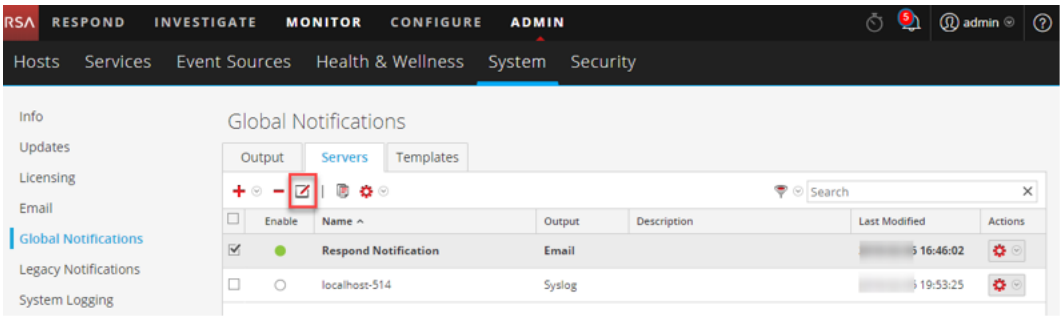
The Incident Management notification settings in NetWitness Suite 10.6.5.x to 11.1 are different from the Respond notification settings available in 11.1, so your existing 10.6.5.x to 11.1 settings will not migrate to 11.1.

NetWitness Respond notification settings enable email notifications to be sent to SOC Managers and the Analyst assigned to an incident when an incident is created or updated.

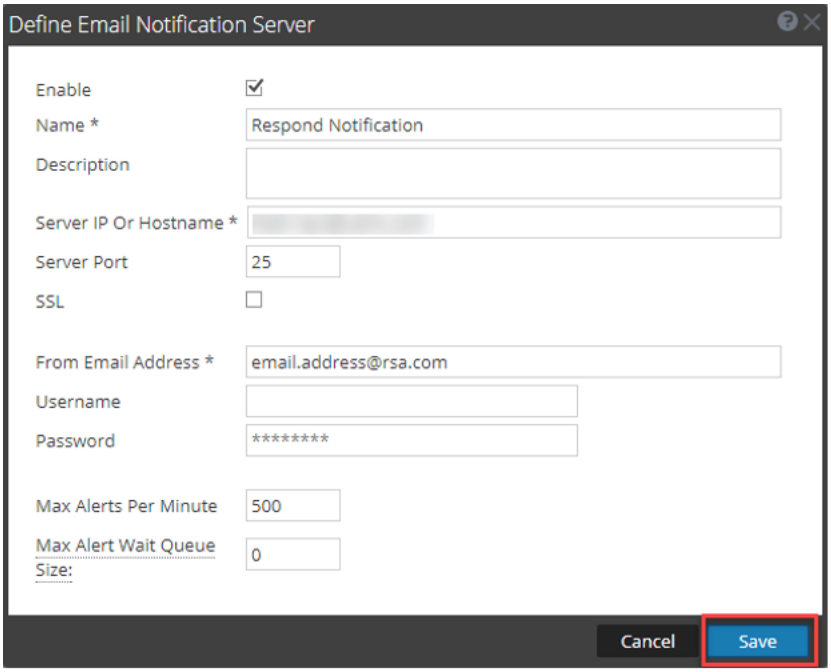
To manually configure the Respond Notification Settings, go to **CONFIGURE** > **Respond Notifications.** See the "Configure Respond Email Notification Settings" procedure in the *NetWitness Respond Configuration Guide*.

Notification Servers from 10.6.5.x to 11.1 will not display in the Email Server drop-down list. The email servers must be edited and saved in the Global Notification Servers panel (**ADMIN** > **System** > **Global Notifications** > **Server** tab).

1. In the **NetWitness Suite** 11.1 menu, select **ADMIN** > **System** > **Global Notifications** > **Server** tab.
2. Go to **CONFIGURE** > **Respond Notifications**. The Respond Notifications Settings view is displayed.
3. Notice that the email notification servers do not appear in the EMAIL SERVER drop-down list.
4. Click the **Email Server Settings** link. You will see the Global Notifications panel.
5. Click the **Servers** tab.
6. For each of your email notification servers:
   a. Select the Email notification server and click .



b. In the Define Email Notification Server dialog, click **Save**.



7. Go back to **CONFIGURE** > **Respond Notifications**. Your servers will appear in the **EMAIL SERVER** drop-down list.
   Custom Incident Management notification templates cannot be migrated to 11.1. No custom templates are supported in 11.1.

Task 26 - Update Default Incident Rule Group By Values

Four of the default incident rules now use ”Source IP Address” as the Group By value. To update the default rules, change the Group By value of the following default rules to “Source IP Address”:

- High Risk Alerts: Reporting Engine
- High Risk Alerts: Malware Analysis
- High Risk Alerts: NetWitness Endpoint
- High Risk Alerts: ESA

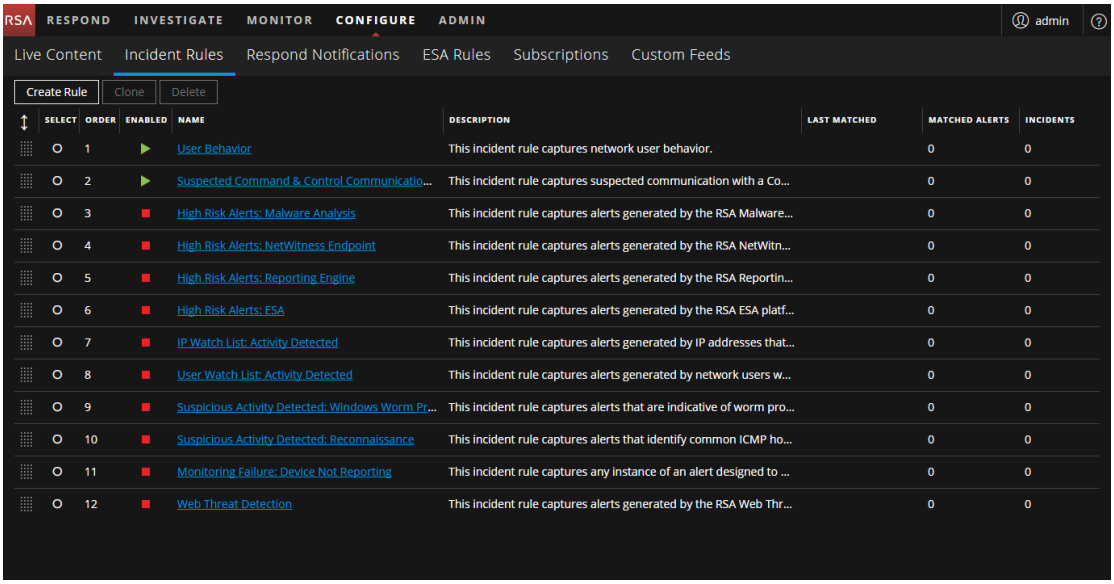
1. Go to **CONFIGURE** > **Incident Rules** and click the link in the **Name** column for the rule that you want to update. The Incident Rule Details view is displayed.
2. In the **Group By** field, select the new Group By value.
3. Click **Save** to update the rule.

Task 27 - Add Group By Field to Incident Rules

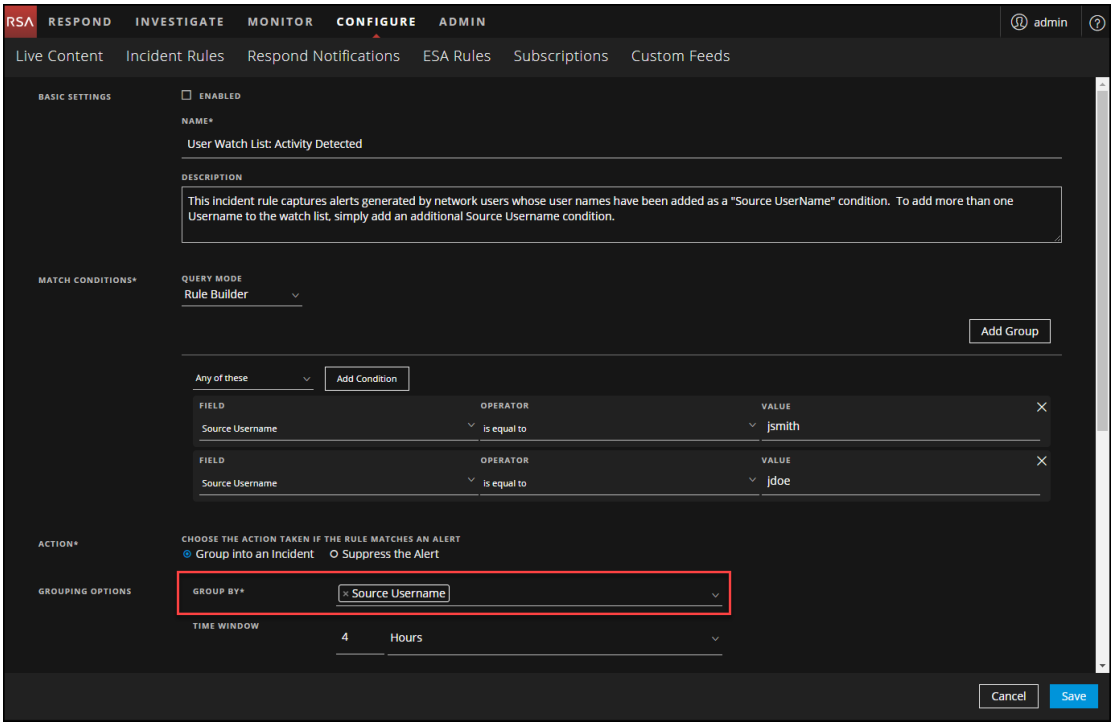
The **Group By** field is not required in 10.6.5, but it is required in 11.1. After you upgrade to 11.1, some incident rules will not have a **Group By** field, so you must add them to the rules or the rules will not work and they will not create incidents.

Complete the following steps for each incident rule:

1. In the **NetWitness Suite** 11.1 menu, select Go to **CONFIGURE** > **Incident Rules** and click the link in the Name column for the rule that you want to update.



2. In the Group By field, verify that a Group By value is selected. If not, select a Group By value.



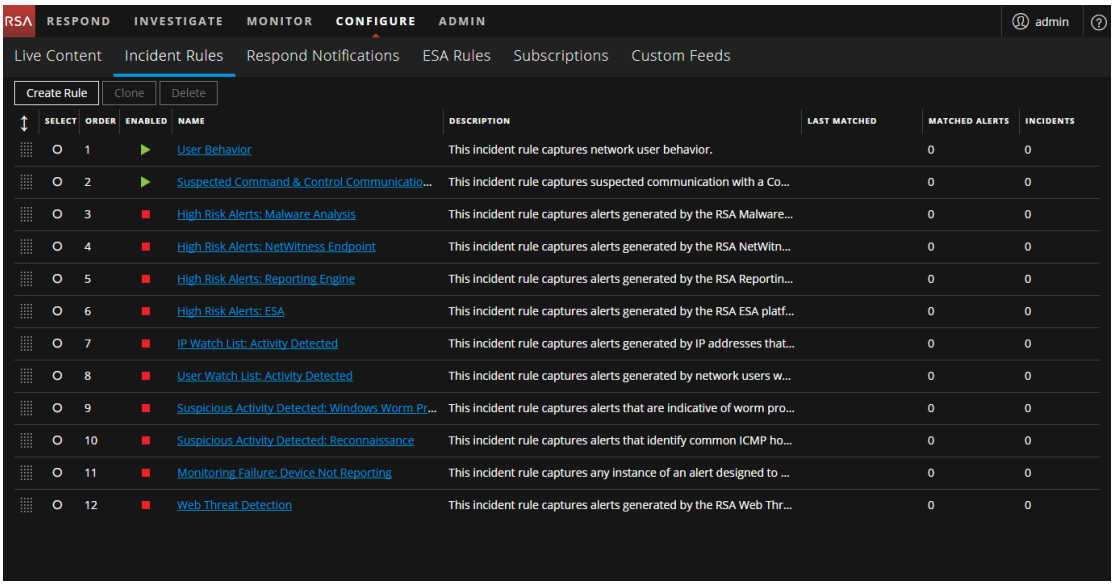
3. Click **Save** to update the rule.
   For information about incident rules, see the *NetWitness Respond Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 28 - Update Incident Rules Identified in the Domain in the Matching Conditions Upgrade Preparation Task

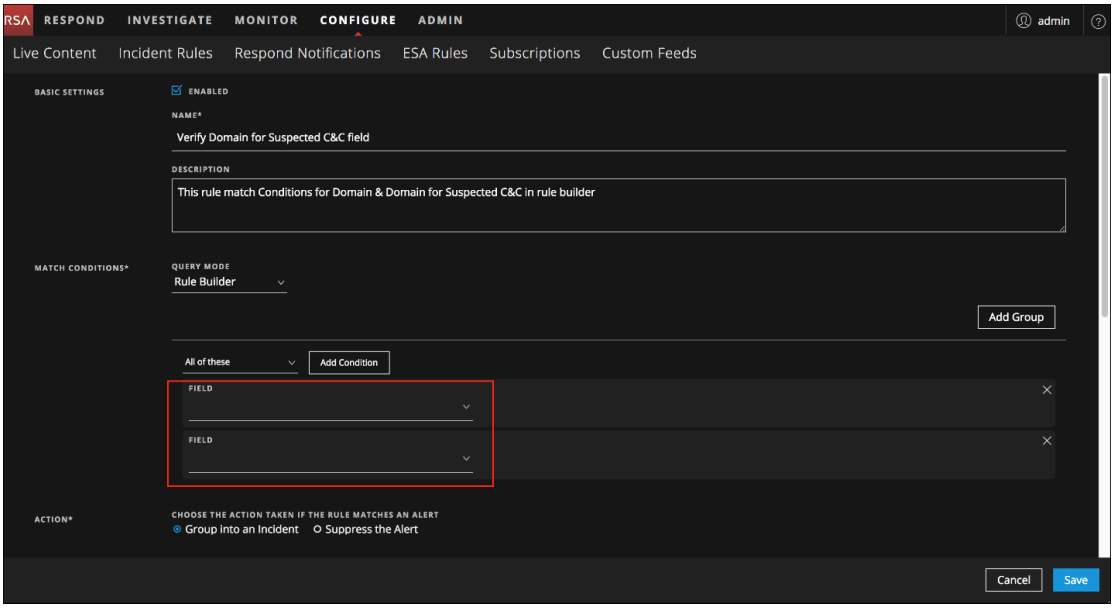
Modify the incident rules that you identified in the Task 4 - Check Aggregation Rules Match Conditions for "Domain" or "Domain for Suspected C&C" upgrade preparation task, which contained Domain or Domain for Suspected C&C in the matching conditions in rule builder, to use only Domain.

For each rule that you previously identified:

1. In the **NetWitness Suite** 11.1 menu, select **CONFIGURE** > **Incident Rules** and click the link in the Name column for the rule that you want to update.



2. In the **Match Conditions** section, in the blank fields, select **Domain** in the drop-down list and then select the conditions that you previously identified in the pre-upgrade tasks.



3. Click **Save** to update the rule.
   For information about incident rules, see the *NetWitness Respond Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

RSA NetWitness® SecOps Manager

(RSA Archer Security Incident Management, RSA Archer Security Operations & Breach Management and RSA Archer Issues Management)

Task 29 - Reconfigure NW SecOps Manager Integration

For information on how to reconfigure NW SecOps for Event Stream Analysis, Reporting Engine, and Respond, see *RSA Archer Integration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Backup

Task 30 - Remove Backup-Related Files from Host Local Directories

Caution: 1) You must retain a copy of all backup files on an external host. 2) Validate that you have all your data from your backup restored in 11.1 before you remove the backup-related files from the local directories on your 11.1 hosts.

Backup `.tar` Files

After all the hosts are upgraded to 11.1, you must remove:

- the backup files from the local directories on the hosts.
- all the files from `nw-backup` and `restore` directories on the hosts.

Host	Backup Path	Restore Path
Malware	`/var/lib/rsamlware/nw-backup`	`/var/netwitness/malware_analytics_server/nw-backup/restore`
Event Stream Analysis	`/opt/rsa/database/nw-backup`	`/var/netwitness/database/nw-backup/restore`
NW Server	`/var/netwitness/database/nw-backup`	`/var/netwitness/restore`
All Other Hosts	`/var/netwitness/database/nw-backup`	`/var/netwitness/database/nw-backup/restore`

Appendix A. Troubleshooting

This section describes solutions to problems that you may encounter during installations and upgrades. In most cases, NetWitness Suite creates log messages when it encounters these problems.

Note: If you cannot resolve an upgrade issue using the following troubleshooting solutions, contact Customer Support (https://community.rsa.com/docs/DOC-1294) .

This section has troubleshooting documentation for the following services, features, and processes.

- Command Line Interface (CLI)
- Backup Script
- Event Stream Analysis
- Log Collector Service (`nwlogcollector`)
- NW Server
- Reporting Engine

Command Line Interface (CLI)

Error Message	Command Line Interface (CLI) displays: "Orchestration failed." `Mixlib::ShellOut::ShellCommandFailed: Command execution failed. STDOUT/STDERR suppressed for sensitive resource in/var/log/netwitness/config-management/chef-solo.log`
Cause	Entered the wrong `deploy_admin` password in `nwsetup-tui`.
Solution	Retrieve your `deploy_admin` password password. 1. SSH to the NW Server host. `security-cli-client --get-config-prop --prop-hierarchy nw.security-client --prop-name deployment.password` SSH to the host that failed. 2. Run the `nwsetup-tui` again using correct `deploy_admin` password.

Error Message	`ERROR com.rsa.smc.sa.admin.web.controller.ajax.health.AlarmsController - Cannot connect to System Management Service`
Cause	NetWitness Suite sees the Service Management Service (SMS) as down after successful upgrade even though the service is running.
Solution	Restart SMS service. `systemctl restart rsa-sms`

Backup (`nw-backup` script)

Error Message	`WARNING: Incorrect ESA Mongo admin password for host <hostname>.`
Cause	ESA Mongo admin password contains special characters (for example, '!@#$%^qwerty').
Solution	Change the ESA mongo admin password back to the original default of 'netwitness' before running backup. See "ESA Config: Change MongoDB Password for admin Account" the *Event Stream Analysis Configuration Guide. Go to the* Master Table of Contents *for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.*

Error	Backup errors caused by the `immutable` attribute setting. Here is an example of an error that can be displayed: Cause	If you have any files that have the immutable flag set (to keep the Puppet process from overwriting a customized file), the file will not be included in the backup process and an error will be generated.
Solution	On the host that contains the files with the immutable flag set, run the following command to remove the immutable setting from the files: `chattr -i <filename>`

Error	Error creating Network Configuration Information file due to duplicate or bad entries in primary network configuration file: `/etc/sysconfig/network-scripts/ifcfg-em1` Verify contents of `/var/netwitness/logdecoder/packetdb/nw-backup/2018-02-23/S5-BROK-36-10.25.53.36-network.info.txt`
Cause	There are incorrect or duplicate entries for any one of the following fields: DEVICE, BOOTPROTO, IPADDR, NETMASK or GATEWAY, that were found from reading the primary Ethernet interface configuration file from the host being backed up.

Solution	Manually create a file at the backup location on the external backup server, as well as the backup location local to the host where other backups have been staged. The file name should be of the format `<hostname>-<hostip>-network.info.txt`, and should contain the following entries:
	`DEVICE=<devicename> ; # from the host's primary ethernet interface config file`
	`BOOTPROTO=<bootprotocol> ; # from the host's primary ethernet interface config file`
	`IPADDR=<value> ; # from the host's primary ethernet interface config file`
	`NETMASK=<value> ; # from the host's primary ethernet interface config file`
	`GATEWAY=<value> ; # from the host's primary ethernet interface config file`
	`search <value> ; # from the host's /etc/resolv.conf file`
	`nameserver <value> ; # from the host's /etc/resolv.conf file`

Event Stream Analysis

Problem	ESA service crashes after you upgrade to 11.1.0.0 from a FIPS enabled setup.
Cause	ESA service is pointing to an invalid keystore.

Solution	1. SSH to the ESA Primary host and log in.
	2. In the `/opt/rsa/esa/conf/wrapper.conf` file, replace the following line:
	`wrapper.java.additional.5=-Djavax.net.ssl.keyStore=/opt/rsa/esa/../carlos/keystore`
	with:
	`wrapper.java.additional.5=-Djavax.net.ssl.keyStore=/opt/rsa/carlos/keystore`
	3. Submit the following command to restart ESA.
	`systemctl restart rsa-nw-esa-server`
	Note: If you have multiple ESA hosts and you encounter that same problem, repeat steps 1 through 3 inclusive on each secondary ESA host.

Log Collector Service (`nwlogcollector`)

Log Collector logs are posted to `/var/log/install/nwlogcollector_install.log` on the host running the `nwlogcollector` service.

Error Message	`<timestamp>.NwLogCollector_PostInstall: Lockbox Status : Failed to open lockbox: The lockbox stable value threshold was not met because the system fingerprint has changed. To reset the system fingerprint, open the lockbox using the passphrase.`
Cause	The Log Collector Lockbox failed to open after the update.
Solution	Log in to NetWitness Suite and reset the system fingerprint by resetting the stable system value password for the Lockbox as described in the "Reset the Stable System Value" topic under "Configure Lockbox Security Settings" topic in the *Log Collection Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Error Message	`<timestamp> NwLogCollector_PostInstall: Lockbox Status : Not Found`
Cause	The Log Collector Lockbox is not configured after the update.
Solution	(Conditional) If you use a Log Collector Lockbox, log in to NetWitness Suite and configure the Lockbox as described in the"Configure Lockbox Security Settings" topic in the *Log Collection Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Error Message	`<timestamp>: NwLogCollector_PostInstall: Lockbox Status : Lockbox maintenance required: The lockbox stable value threshold requires resetting. To reset the system fingerprint, select Reset Stable System Value on the settings page of the Log Collector.`
Cause	You need to reset the stable value threshold field for the Log Collector Lockbox.
Solution	Log in to NetWitness Suite and reset the stable system value password for the Lockbox as described in "Reset the Stable System Value" topic under "Configure Lockbox Security Settings" topic in the *Log Collection Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Problem	You have prepared a Log Collector for upgrade and no longer want to upgrade at this time.
Cause	Delay in upgrade.
Solution	Use the following command string to revert a Log Collector that has been prepared for upgrade back to resume normal operation. `# /opt/rsa/nwlogcollector/nwtools/prepare-for-migrate.sh --revert`

NW Server

These logs are posted to `/var/netwitness/uax/logs/sa.log` on the NW Server Host.

Problem	After upgrade, you notice that Audit logs are not getting forwarded to the configured Global Audit Setup; or, The following message seen in the `sa.log`. `Syslog Configuration migration failed. Restart jetty service to fix this issue`
Cause	NW Server Global Audit setup migration failed to migrate from 10.6.5.x to 11.1.0.0.
Solution	1. SSH to the NW Server. 2. Submit the following command. `orchestration-cli-client --update-admin-node`

Reporting Engine Service

Reporting Engine Update logs are posted to to`/var/log/re_install.log` file on the host running the Reporting Engine service.

Error Message	`<timestamp> : Available free space in /var/netwitness/re-server/rsa/soc/reporting-engine [ ><existing-GB ] is less than the required space [ <required-GB> ]`
Cause	Update of the Reporting Engine failed because you do not have enough disk space.
Solution	Free up the disk space to accommodate the required space shown in the log message. See the "Add Additional Space for Large Reports" topic in the *Reporting Engine Configuration Guide* for instructions on how to free up disk space. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Appendix B. Stopping and Restarting Data Capture and Aggregation

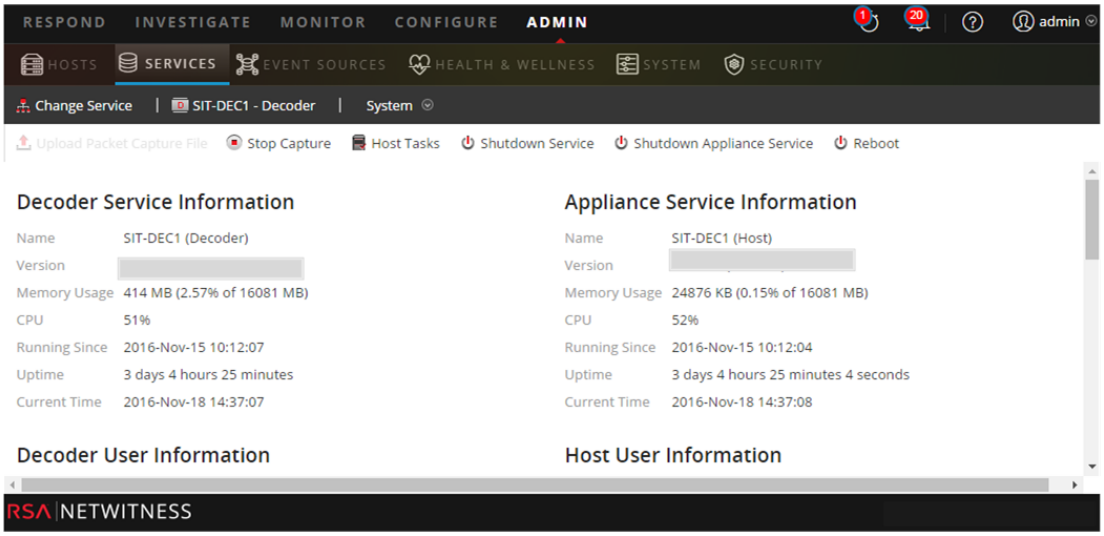
RSA recommends that you stop packet and log capture and aggregation before upgrading a Decoder, Concentrator, and Broker host to 11.1.0.0. If you do this, you must restart packet and log capture and aggregation after updating these hosts.

Stop Data Capture and Aggregation

Stop Packet Capture

To stop packet capture:

1. Log in to NetWitness Suite and go to **ADMIN** > **Services**.
   The Services view is displayed.
2. Select each **Decoder** service.



3. Under (actions), select **View** > **System**.
4. In the toolbar, click

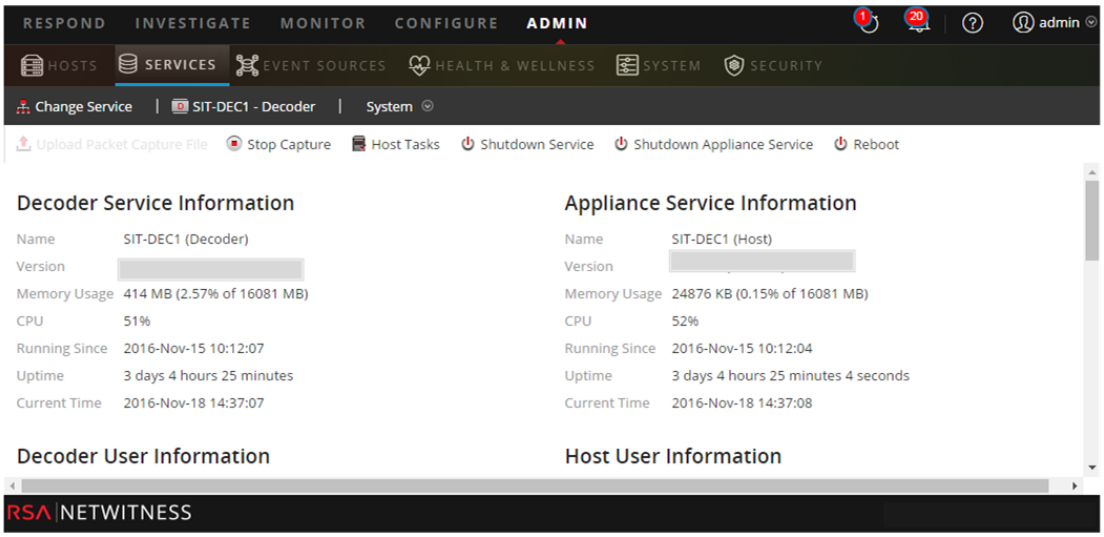
.

Stop Log Capture

To stop log capture:

1. Log in to NetWitness Suite and go to **ADMIN** > **Services**.
   The Services view is displayed.

2. Select each **Log Decoder** service.



3. Under (actions), select **View** > **System**.

4. In the toolbar, click

.

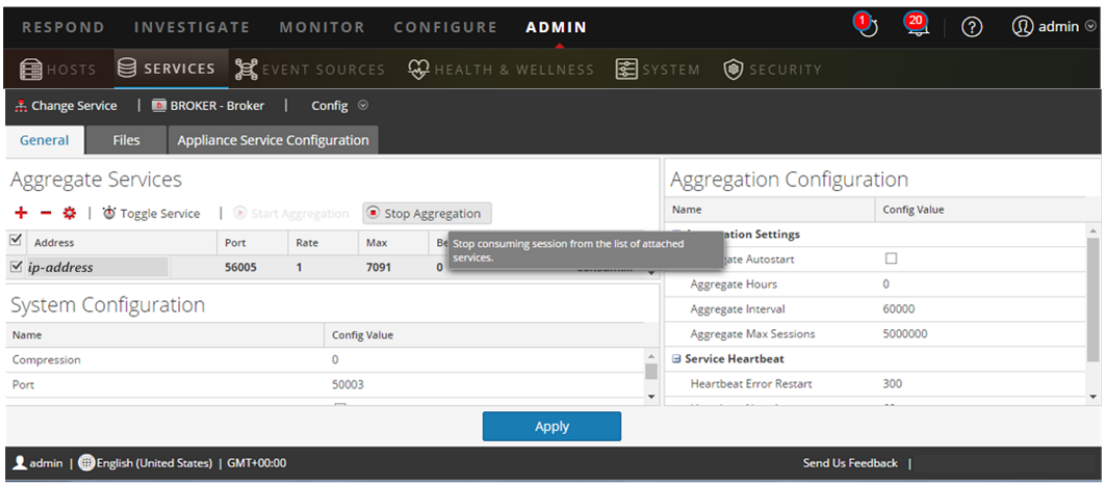
Stop Aggregation

1. Log in to NetWitness Suite and go to **ADMIN** > **Services**.

2. Select the **Broker** service.

3. Under (actions), select **View** > **Config**.

4. The **General** tab is displayed.



5. Under **Aggregated Services** click

.

Start Data Capture and Aggregation

Restart packet and log capture and aggregation after updating to 11.1.0.0.

Start Packet Capture

To start packet capture:

1. In the **NetWitness Suite** menu, select **ADMIN** > **Services**.
   The Services view is displayed.
2. Select each **Decoder** service.
3. Under (actions), select **View** > **System**.
4. In the toolbar, click .

Start Log Capture

To start log capture:

1. In the **NetWitness Suite** menu, select **ADMIN** > **Services**.
   The Services view is displayed.
2. Select each **Log Decoder** service.
3. Under (actions), select **View** > **System**.
4. In the toolbar, click .

Start Aggregation

To start aggregation:

1. In the **NetWitness Suite** menu, select **ADMIN** > **Services**.
   The Services view is displayed.
2. For each Concentrator and Broker service.
   a. Select the service.
   b. Under (actions), select **View** > **Config**.
   c. In the toolbar, click .

Appendix C. Using iDRAC

Many customers have remote sites with limited physical access and limited bandwidth from the administrator's desktop. If this the case, you may want to use iDRAC with the ISO Image shared out from an NFS share that is local to the devices being upgraded or installed. This also gives you the ability to use an existing NetWitness device as the sharing host.

For example, you have:

- a Concentrator and Decoder at a site in a remote geographic location.
- the bandwidth is relatively low to that site from the administrator's site.
- shipping a USB stick and arranging to have person to go plug it into the boxes while you upgrade is not practical.

In this situation, you can:

1. Install the nfs-utils rpm.
2. Configure the NFS share.
3. Configure iDRAC to connect to that share.
   Make sure that you update your iDRAC firmware Supported Windows and Linux Operating Systems. You do this by downloading and running the Dell Update Packages for supported Windows and Linux operating systems from Dell Support website at http://www.support.dell.com. For more information, see the Dell Update Package User's Guide available on the Dell Support website at http://topics-cdn.dell.com/pdf/dell-update-packages-v17.10.00_User's%20Guide_en-us.pdf.
4. Boot to the virtual media that contains the ISO file and continue with the upgrade.

Configure NFS Server - NFS Server config File

1. Install NFS and it’s common utilities using yum.
   ```
   yum install nfs-utils
   ```
2. Configure the NFS service to run at boot.
   ```
   chkconfig nfs on
   ```
3. Configure the rpcbind service to run at boot.
   This service is required by NFS and must be running before NFS can be started.
   ```
   chkconfig rpcbind on
   ```

4. Start the rpcbind service.
   `service rpcbind start`
5. Start the NFS service.
   `service nfs start`
6. Create a directory for our first export.
   `mkdir /exports/files`
7. Open the NFS exports file into a text editor.
   `vi /etc/exports`
8. To export the directory to everyone with read-only access, add the following line.
   `/exports/files *(ro)`
9. Save your changes and exit the editor.
   `:wq!`
10. Export the directory defined above.
    `exportfs -a`
11. Disable firewall rules while performing upgrades.
    `service iptables stop`
12. Copy install media that contains the ISO file to `/exports/files` directory.

Boot iDRAC to NFS Configuration

Note: You must verify idrac firmware is at least 1.57.57 for Series 4 (R620).

1. Log into iDRAC interface.
2. Attach media via Remote File Share.
   `<server ip>:/export/files/11.1.0.0.iso`
   For example: `10.10.10.10:/exports/files/rsa-11.1.0.0.1948.el7-usb.iso`
3. Click **Connect**.
4. Launch **Console**.
5. From **next boot** menu select **Virtual DVD/CD**.
6. Reboot device.

Appendix D. Create External Repository

Complete the following procedure to set up an external repository (Repo).

Note: 1.) You need an unzip utility installed on the host to complete this procedure. 2.) You must know how to create a web server before you complete the following procedure.

1. Log in to the web server host.
2. Create directory to host the NW repository (`netwitness-11.1.0.0.zip`), for example `ziprepo` under `web-root` of the web server. For example, `/var/netwitness` is the `web-root`, submit the following command string.
   `mkdir -p /var/netwitness/<your-zip-file-repo>`
3. Create the 11.1.0.0 directory under `/var/netwitness/<your-zip-file-repo>`.
   `mkdir -p /var/netwitness/<your-zip-file-repo>/11.1.0.0`
4. Create the `OS` and `RSA` directories under `/var/netwitness/<your-zip-file-repo>/11.1.0.0`.
   `mkdir -p /var/netwitness/<your-zip-file-repo>/11.1.0.0/OS`
   `mkdir -p /var/netwitness/<your-zip-file-repo>/11.1.0.0/RSA`
5. Unzip the `netwitness-11.1.0.0.zip` file into the `/var/netwitness/<your-zip-file-repo>/11.1.0.0` directory.
   `unzip netwitness-11.1.0.0.zip -d /var/netwitness/<your-zip-file-repo>/11.1.0.0`
   Unzipping `netwitness-11.1.0.0.zip` results in two zip files (`OS-11.1.0.0.zip` and `RSA-11.1.0.0.zip`) and some other files.
6. Unzip the:
   a. `OS-11.1.0.0.zip` into the `/var/netwitness/<your-zip-file-repo>/11.1.0.0/OS` directory.
      `unzip /var/netwitness/<your-zip-file-repo>/11.1.0.0/OS-11.1.0.0.zip -d /var/netwitness/<your-zip-file-repo>/11.1.0.0/OS`
      The following example illustrates how the Operating System (OS) file structure will appear after you unzip the file.

10.6.5.x to 11.1 VirtualHost Upgrade Checklist

RSA NETWITNESS® SUITE

Task	Description	√
Prepare for Upgrade		
1.	Download **RSANW-11.1-VirtUpgradeGde.pdf** from RSA Link and review it. a. Be aware of the unsupported components and services in 11.x. b. Carefully read the sections on Event Stream Analysis (ESA) Upgrade Considerations and Investigate in Mixed Mode. c. Review the new required ports .	
2.	Be aware of the hardware, deployments, services, and features not supported in 11.1.	
3.	Perform the upgrade preparation tasks for the features you use. **Caution:** Make sure that you implement and test the new ports so that upgrade does not fail due to missing ports.	
4.	Create CentOS 6 external host to save backup tar files.	
5.	Download the `nw-backup-v4.0.zip` file from RSA Link (https://community.rsa.com/docs/DOC-81514) an extract the files to an external host.	
6.	Execute `get-all-systems.sh` and `ssh-propagate.sh` script from external host.	
7.	Preserve a copy of the `get-all-systems-master` file for future reference.	
8.	Execute `nw-backup.sh` in `TEST` mode to evaluate the space requirements from external host (for example: `nw-backup -t -l -D`).	
9.	Review the back up options for `nw-backup.sh` by displaying the help menu (`nw-backup.sh -h`) .	

Task	Description	√
Migrate Disk Drives		
10.	Back up data in 10.6.5.x virtual machines (VMs).	
11.	Download 11.1 OVA from RSA Link.	
12.	Deploy the same 10.6.5.x VM stack in 11.1.	
13.	Power off both 10.6.5 VM and 11.1 VM .	
14.	Copy VMDK files from the 10.6.5 and add them to 11.1 OVA deployed in step 12.	
15.	Retain the MAC Address of upgraded SA Server VM.	
16.	Remove 10.6.5 VM from inventory (Do not delete the VM).	
17.	Power on 11.1 VM.	
18.	Mount the file system from VMDK.	
19.	Restore Backup data in 10.6.5.x to 11.1 VMs.	
Phase 1 - Set Up NW Server, Event Stream Analysis, Malware Analysis, and Broker or Concentrator Hosts		
20.	Update the contents of the `all-systems` so they consist of SA, ESA's, MA and Broker/Concentrator backup data.	
21.	Reset the Mongo Database admin password to 'netwitness' if it contains special characters .	
22.	Execute `nw-backup.sh` with `-u` flag for all Phase 1 hosts and confirm that it completes with no errors.	
23.	If your environment has multiple ESA appliances, designate a primary ESA (Where the Context Hub service is running) and copy `mongodb.tar.gz.*` files from the secondary ESAs to designated primary ESA default backup path.	
24.	Confirm that backup tar files are saved locally and remotely.	
25.	Set up the 10.6.5.x SA Server host to 11.1 NW Server host by running the `nwsetup-tui` program on the host.	
26.	Install the ESA, Malware Analysis, and Broker or Concentrator services in the NetWitness 11.1 User Interface.	

Task	Description	√
Phase 2 - Upgrade All Other Hosts		
27.	Update the contents of the `all-systems` so they consist of Phase 2 host backup data.	
28.	Execute `nw-backup.sh` in `TEST` mode to evaluate the space requirements from external host (for example: `nw-backup -t -l -D`).	
29.	Execute `nw-backup.sh` with `-u` flag for all Phase 2 hosts and confirm that it completes with no errors.	
30.	Confirm that backup tar files are saved locally and remotely.	
31.	Set up the all othe hosts host to 11.1 NW Server host by running the `nwsetup-tui` program on the host.	
32.	Install the host service in the NetWitness 11.1 User Interface:	
Preform Post Upgrade Adjustments		
33.	Perform the post upgrade tasks for the features you use.

CentOS6 to CentOS7 Upgrade 9

RSA NetWitness® Suite 11.1 Upgrade Path 10

Hardware, Deployments, Services, and Features Not Supported in 11.1 10

Event Stream Analysis (ESA) Upgrade Considerations 10

User Attribute and Role Changes Affecting Investigate 11

Contact Customer Support 12

Upgrade Preparation Tasks **13**

Global 13

Task 1 - Review Core Ports and Open Firewall Ports 13

Task 2 - Record Your 10.6.5.x admin user Password 14

Task 3 - Create a Backup of /etc/fstab File 14

Reporting Engine 14

(Conditional) Task 4 - Unlink External Storage 14

Respond and Incident Management 15

(Conditional) Task 5 – Disable Incident Management Data Retention 15

Backup Instructions **16**

Task 1 - Set up an External Host for Backing up Files 17

Task 2 - Create a List of Hosts to Back up 19

Troubleshooting Information 20

Task 3 - Set up Authentication Between Backup and Target Hosts 22

Task 4 - Check for Backup Requirements for Specific Types of Hosts 22

For All Host Types 22

For Decoder, Concentrator, or Broker Hosts: Stop Data Capture and Aggregation 23

Log Collectors (LC) and Virtual Log Collectors (VLCs): Run prepare-for-migrate.sh 23

For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint: List RabbitMQ Usernames and Passwords 25

For Bluecoat Event Sources 25

Task 5 - Check for Adequate Space for the Backup 25

Task 6 - Back up Your Host Systems 26

Post Backup Tasks 29

Task 1 - Save a Copy of the all-systems File and the Backup Tar files 29
Task 2 - Ensure Required Backup Files Were Generated 29
Task 3 - (Conditional) For Multiple ESA Hosts, Copy mongodb tar files to Primary ESA Host 30
Task 4 - Ensure All Required Backup Files are on Each Host 30

Migrate Disk Drives from 10.6.5.x to 11.1 33

Task 1 - Backup the 10.6.5.x EC2 appliance 33
(Optional)Task 2 - Run the backup script to take backup data of 10.6.5.x instance 34
Task 3 - Stop the instances and detach volumes from 10.6.5.x instances 35
Task 4 - Note the IP addresses of 10.6.5.x instances and then terminate the EC2 instances 37
Task 5 - (IP retention) Create 11.1 instances using 11.1 AMI. 37
Task 6 - Attach volumes to the corresponding 11.1 instance 38
Task 7 - Restore backup data in 10.6.5.x to 11.1 Instances (Data Restoration) 39
Task 8 Run nwsetup-tui script. 41

Set Up Virtual Hosts in 11.1 42

Phase 1 - Set Up NW Server, Event Stream Analysis, Malware Analysis, and Broker or Concentrator Hosts 42
Task 1 - Set Up 11.1 NetWitness Server 42
Task 2 - Setup 11.1 ESA 42
Task 3 - Set Up 11.1 Malware Analysis 42
Task 4 - Set Up 11.1 Broker or Concentrator 43
Phase 2 - Set Up The Rest of the Component Hosts 43
Decoder and Concentrator Hosts 43
Log Decoder Host 43
Virtual Log Collector Host 43
Set Up 11.1 NW Server Host 45
Set Up 11.1 Non-NW Server Host 50

Update or Install Legacy Windows Collection 55

Post Upgrade Tasks 56

Global Tasks 56
Task 1 - Remove Backup-Related Files from Host Local Directories 56
Task 2 - Restore NTP Servers 57
Task 3 - Restore Licenses for Environments without FlexNet Operations-On Demand Access 57

(Conditional) Task 5 - If You Disabled Standard Firewall Config - Add Custom IPtables 57
(Conditional) Task 6 - Specify SSL Ports If You Never Set Up Trusted Connections 58
NetWitness Endpoint 59
Task 7 - Reconfigure Endpoint Alerts Via Message Bus 59
Event Stream Analysis Tasks (ESA) 60
Task 8 - Reconfigure Automated Threat Detection for ESA 60
Task 9 - For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint Configure Mutually Authenticated SSL 60
Task 10 - Enable Threat - Malware Indicators Dashboard 61
Log Collection 61
Task 11 - Reset Stable System Values for Log Collector after Upgrade 61
(Optional for Upgrades from 10.6.5.x with FIPS enabled for Log Collectors, Log Decoders and Packet Decoders) Task 12 - Enable FIPS Mode 62
Reporting Engine 62
Task 13 - Restore the CA certificates for External Syslog Servers for Reporting Engine .. 62
(Conditional) Task 14 - Restore External Storage for Reporting Engine 63
Respond 63
Task 15 - Restore Respond Service Custom Keys 63
Task 16 - Restore Customized Respond Service Normalization Scripts 64
(Conditional) Task 17 - Enable Disabled 10.6.5.x Incident Management Data Retention .64
(Conditional) Task 18 - Restore Custom Analysts Roles 65
NetWitness SecOps Manager 65
Task 19 -Reconfigure NW SecOps Manager Integration 65
Security 65
Task 20 - Migrate Active Directory (AD) 65
Task 21 - Modify Migrated AD Configuration to Upload Certificate 65
Task 22. Address Authentication Failure in 11.1 66
Task 23 - Reconfigure Pluggable Authentication Module (PAM) in 11.1 66

Appendix A. Troubleshooting 67

Log Collector Service (nwlogcollector) 71
NW Server 73
Reporting Engine Service 73

Appendix B. Stopping and Restarting Data Capture and Aggregation ... 74

Stop Data Capture and Aggregation ... 74

Start Data Capture and Aggregation ... 75

Revision History ... 77

Introduction

The instructions in this guide apply to the upgrade of AWS for RSA NetWitness Suite 10.6.5.x to 11.1.0.0 exclusively. See the *RSA NetWitness Suite Physical Host Upgrade Guide* for instructions on how to upgrade your 10.6.5.x physical hosts to 11.1. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents. This document assumes that the appliances are in AWS cloud.

NetWitness Suite 11.1 is a major release that affects all products in the NetWitness Suite suite. The components of the suite are the NetWitness Server (NW Server), Archiver, Broker, Concentrator, Context Hub, Decoder, Entity Behavior Analytics, Event Stream Analysis, Investigate, Log Collector, Log Decoder, Malware Analysis, Reporting Engine, Response, and Workbench.

CentOS6 to CentOS7 Upgrade

NetWitness Suite 11.1 is a major release that involves upgrading to a newer version of the operating system (CentOS6 to CentOS7). In addition, the 11.1 platform environment has been improved greatly to accommodate current and future physical and virtual deployment types. These changes require an upgrade to the new environment and an upgrade of the functionality.

RSA NetWitness® Suite 11.1 Upgrade Path

The supported Upgrade path for RSA NetWitness® Suite 11.1 is Security Analytics 10.6.5.x. If you are running a version of NetWitness Suite that is prior to 10.6.5.x, you must update to 10.6.5.x before you can upgrade to 11.1. See the *RSA Security Analytics 10.6.5 Update Guide* on RSA Link.

Caution: There is a known issue if you have Active Directory users configured in 10.6.5.x. You have two options to address this issue:
• Apply the 10.6.4.2 patch before you back up your data for the 11.1 upgrade.

Note: If you are updating from 11.0 to 11.1, see to the *Update Guide for Version 11.01 to 11.1* on RSA link.

Hardware, Deployments, Services, and Features Not Supported in 11.1

RSA does not support upgrade of the following hardware, deployments, services, and features to 11.1.

- RSA All-in-One (AIO) Appliance
- Multiple NetWitness Server Deployment
- Malware Analysis service co-located on the SA Server (Upgrade of Malware Analysis Enterprise is supported in 11.0.)
- Custom Health & Wellness policy in 10.6.x for the Context Hub Service
  After you upgrade to NetWitness 11.1, your custom policy is not present. In its place, there is the out-of-the-box Context hub Server Monitoring Policy in the user interface, which is specific for version 11.1.
- Defense Information Strategic Agency-Security Technical Information Guide (DISA-STIG) hardened deployments.
- Warehouse Analytics (Data Science)

Event Stream Analysis (ESA) Upgrade Considerations

In RSA NetWitness® Suite 11.1, RSA changed how ESA Correlation Rules store and transmit the alerts the system generates. In 11.0, ESA sends all alerts to a central Alert system. The local mongo storage in ESA 10.6.4.x has been removed.

Caution: If you do not use Incident Management in 10.6.4.x, carefully consider whether or not to upgrade to version 11.0.

The following guidelines should help you determine whether or not to upgrade your ESA hosts to 11.1.

In your 10.6.4.x deployment, if you have:

- One ESA host, with or without Incident Management configured, upgrade to 11.0.
- Multiple ESA hosts configured to use Incident Management – The system will continue to aggregate alerts centrally. If the system is correctly sized and operating as intended in 10.6.4.x, you can upgrade to version 11.0.
- Multiple ESA hosts without configuration to use Incident Management and you are connecting to individual ESA hosts to view alerts, do not upgrade to version 11.0.

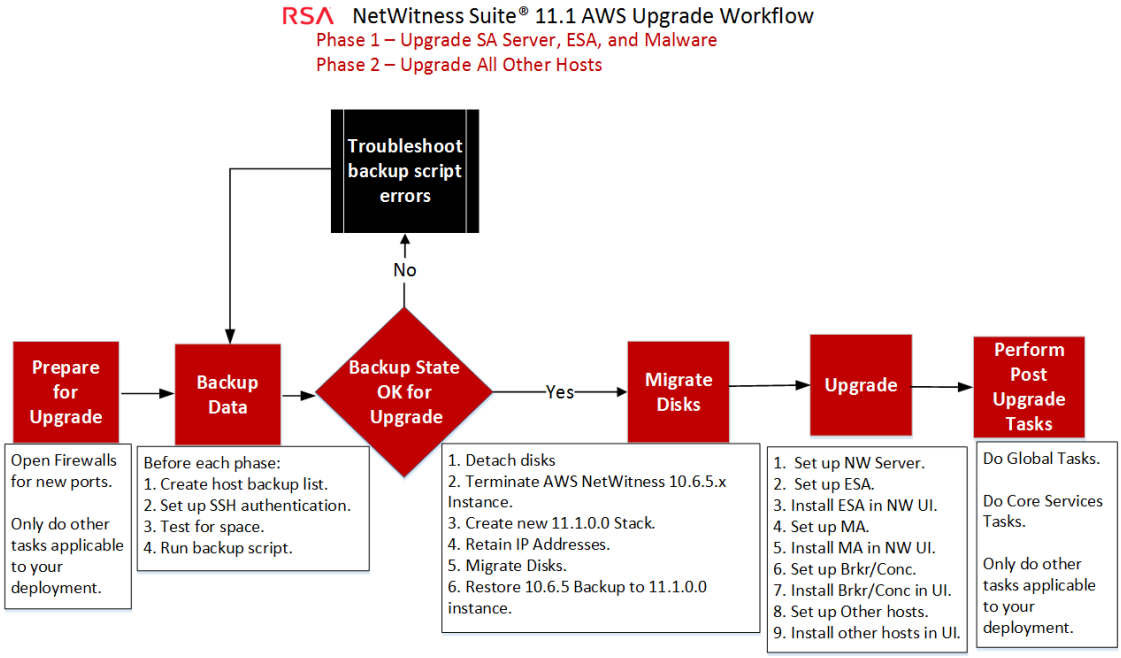
Note: If you did not use Incident Management in 10.6.4.x, you cannot view the 10.6.4.x ESA alerts in the 11.0 Respond component without running a migration script. Use the ESA Alert Migration script to migrate these alerts to the location in 11.0 that will allow Respond to view them. See the *ESA Alert Migration Instructions for 10.6.4.x to 11.0* knowledge base article (https://community.rsa.com/docs/DOC-81680) in RSA Link for instructions on how to run this script.

User Attribute and Role Changes Affecting Investigate

The following changes affect how NetWitness Suite 11.1 handles user and role attributes in the Investigate component.

- User Attributes
  When you upgrade to 11.1, the user attributes (query prefix, session timeout, and query threshold) available in SA 10.6.5.x no longer exist. The same attributes are available at the role level for use.
- User and Role Attributes (Query Prefix) is not applicable to Investigate Event Analysis. The user and role attributes, most importantly the query prefix, do not apply to the new Investigate Event Analysis. Any user can modify the URL in browser to access data that should be

restricted from viewing even when query prefix is applied.



Contact Customer Support

Refer to the Contact RSA Customer Support page (https://community.rsa.com/docs/DOC-1294) in RSA Link for instructions on how to get help on RSA NetWitness Suite 11.1.

Upgrade Preparation Tasks

Complete the following tasks to prepare for the upgrade to NetWitness Suite 11.1. These tasks are organized by the following categories.

- Global
- Reporting Engine
- Respond and Incident Management

Global

You must complete these tasks regardless of how you deploy NetWitness Suite and which components you use.

Task 1 - Review Core Ports and Open Firewall Ports

The following table lists new ports in 11.1.

Caution: Make sure that the new ports are implemented and tested before upgrading so that upgrade does not fail due to missing ports.

NW Server Host

Source Host	Destination Host	Destination Ports	Comments
NW Hosts	NW Server	TCP 4505, 4506	Salt Master Ports
NW Hosts	NW Server	TCP 27017	MongoDB

ESA Host

Source Host	Destination Host	Destination Ports	Comments
NW Server, NW Endpoint, ESA Secondary	ESA Primary	TCP 27017	MongoDB

All NetWitness Suite core ports are listed in the "Network Architecture and Ports" topic in the *RSA NetWitness® Suite Deployment Guide* in case you need to reconfigure NetWitness Suite services and firewalls. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 2 - Record Your 10.6.5.x `admin user` Password

Record your 10.6.5.x `admin user` password. You will need it to complete the upgrade.

Task 3 - Create a Backup of `/etc/fstab` File

Copy the `/etc/fstab` file from all VMs to your local machine (backup host or remote machine).

Note: You need this file to restore a VM with external storage mounts.

Reporting Engine

(Conditional) Task 4 - Unlink External Storage

If the Reporting Engine has external storage [such as Storage Area Network (SAN) or Network Attached Storage (NAS) for storing reports] you must perform the following steps to unlink the storage.

In these steps:

- `/home/rsasoc/rsa/soc/reporting-engine/` is the Reporting Engine home directory.
- `/externalStorage/` is where the external storage is mounted.

1. SSH to the Reporting Engine host and log in with your `root` credentials.
2. Stop the Reporting Engine service.
   ```
   stop rsasoc_re
   ```
3. Switch to `rsasoc` user.
   ```
   su rsasoc
   ```
4. Change to the Reporting Engine the home directory.
   ```
   cd /home/rsasoc/rsa/soc/reporting-engine/
   ```
5. Unlink the `resultstore` directory mounted to external storage.
   ```
   unlink /externalStorage/resultstore
   ```
6. Unlink the `formattedReports` directory mounted to external storage.
   ```
   unlink /externalStorage/formattedReports
   ```

Respond and Incident Management

(Conditional) Task 5 – Disable Incident Management Data Retention

Complete the following procedure to disable Incident Management data retention jobs in 10.6.5.x

1. Log in to RSA Security Analytics 10.6..x.
2. Go to **Incident Management** > **Configure** > **Retention Scheduler**.
3. Uncheck the **Enable data retention scheduler** checkbox and click **Apply**.

Backup Instructions

Backing up your configuration data for all your hosts from 10.6.5.x is the first step in upgrading from 10.6.5.x releases to 11.1.0.0.

Note: It is important that you place Custom Certificate files and any other certificate authority (CA) files in the `/root/customcerts` folder to ensure that these certificate files are backed up. Your custom certificate files that are placed in this directory will be automatically restored during the upgrade process. After upgrading to 11.1.0.0, your custom certificate files will be located in `/etc/pki/nw/trust/import`. For more information about backing up these types of files, see step 1 in For All Host Types

Caution: 1) These services are not supported in the 10.6.5.x backup and upgrade process.
- IPDB
- All in One servers
- Malware Analysis Co-Located on the NetWitness Server
- Standalone Warehouse Connector

2) There is a known issue if you have Active Directory users configured in 10.6.5.x. You have two options to address this issue:
• Apply the 10.6.5.2 patch before you back up your data for the 11.1 upgrade.
• If you failed to apply the 10.6.5.2 patch, you can apply the 11.0.0.1 patch immediately after you upgrade to 11.1.

The following types of hosts can be backed up and are automatically restored during the upgrade process:

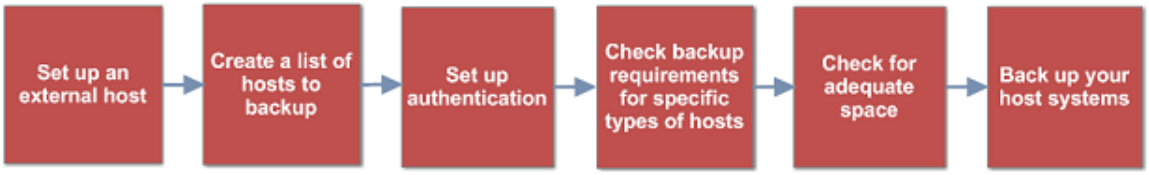
- **NetWitness Server** (may include Malware Analysis, NetWitness Respond, Health and Wellness, and Reporting Engine)
- **Archiver**
- **Broker**
- **Event Stream Analysis** (including Context Hub and NetWitness Respond database)
- **Concentrator**
- **Log Decoder**
- **Packet Decoder**
- **Virtual Log Collector**

The following types of files are automatically backed up but must be restored manually after the upgrade process:

- PAM configuration files: For information about restoring the PAM configuration files, refer to "Task 5 - Reconfigure Plugable Authentication Module (PAM) in 11.1.0.0", in the "Global" section of the Post Upgrade Tasks.
- `/etc/pfring/mtu.conf` and `/etc/init.d/pf_ring`: To restore these files you must manually retrieve them. The `/etc/pfring/mtu.conf` files will be located in `/var/netwitness/database/nw-backup/restore/etc/pfring/mtu.conf`, and the `/etc/init.d/pf_ring` files will be located in `/var/netwitness/database/nw-backup/restore/etc/init.d/pf_ring`. For information about how to restore these files, see "(Conditional) Task 2 - Restore Files for 10G Decoder" in the "Hardware Related Tasks" section of Post Upgrade Tasks.

Note: If you have problems during the backup or upgrade processes and you lose data, you can recover the data and start the process again. For information about recovering lost data, see "Recover Data After System Failure" in the *System Maintenance Guide*.

The following diagram shows the high-level task flow of the steps you perform to back up your hosts.



The following sections describe each of these tasks:

- Task 1 - Set up an External Host for Backing up Files
- Task 2 - Create a List of Hosts to Back up
- Task 3 - Set up Authentication Between Backup and Target Hosts
- Task 4 - Check for Backup Requirements for Specific Types of Hosts
- Task 5 - Check for Adequate Space for the Backup
- Task 6 - Back up Your Host Systems
- Post Backup Tasks

Task 1 - Set up an External Host for Backing up Files

You must set up an external host to use for backing up files. The host must be running Centos 6 with connectivity through SSH to the NetWitness Suite stack of hosts.

Ensure that the host names for the systems to be backed up are resolvable on the backup host machine, either by DNS or listed in the `/etc/hosts` file.

Note: These scripts are designed to run on CentOS 6 only. You must execute these scripts on CentOS 6 machines.

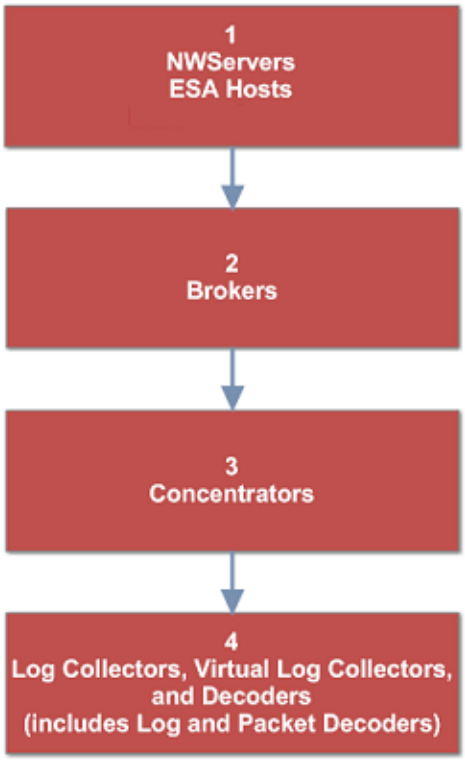
There are several scripts that you run during the backup process.You must download the zip file that contains the scripts `(nw-backup-v4.0.sh)` from RSA Link at this location: https://community.rsa.com/docs/DOC-81514 and copy it over to your CentOS 6 backup system. Extract the zip file to access the scripts. The scripts are:

- `get-all-systems.sh`: Creates the `all-systems` file, which contains a list of all your NetWitness Servers and host systems to be backed up.
- `ssh-propagate.sh`: Automates sharing keys between the systems you are backing up and the backup host system so that you are not prompted for passwords multiple times.
- `nw-backup.sh`: Performs the backup of your hosts.

Note: The backup scripts do not support backing up data for STIG-hardened hosts.

Task 2 - Create a List of Hosts to Back up

The script that you use to back up your files depends on the `all-systems` and `all-systems-master-copy` files, which contain a list of the hosts that you want to back up. The `all-systems-master-copy` file contains a list of all your hosts. The `all-systems` file is used for each backup session, and contains only those hosts which are being backed up for a particular session. You run the `get-all-systems.sh` script to generate these files. RSA recommends that you back up your hosts in groups, and not all at once. The recommended order and grouping of hosts for backup sessions is shown in the following diagram:



Limit each backup session to five hosts to ensure that you do not run out of space for the backup files. You create `all-systems` files for your backup sessions by using the `all-systems-master-copy` file as a reference and then manually editing the `all-systems` file to contain specific hosts.

To generate the `all-systems` and the `all-systems-master-copy` files:

1. From the host on which you are running the backup process, make the `get-all-systems.sh` script executable by running the following command:
   ```
   chmod u+x get-all-systems.sh
   ```
2. At the root level, run the `get-all-systems.sh` script:
   ```
   ./get-all-systems.sh <IP-Address-of-NetWitness-Admin-Server>
   ```
   You will be prompted for the password for each host system once per host.

This script saves the `all-systems` file and the `all-systems-master-copy` file to `/var/netwitness/database/nw-backup/`.

3. Validate that the `all-systems` and `all-systems-master-copy` files were generated and that they contain the right hosts.
4. Edit the `all-systems` file to contain only the systems you are backing up. You can do this by using the `all-systems-master-copy` file as a reference, and then opening the `all-systems` file in an editor (such as vi) and modifying it to include only the systems you want to back up.

> **Note:** If you use vi, be sure to include the path to the location of the `all-systems` file.

Here is an example of an `all-systems-master-copy` file:

```

c56ccfb0f737,10.6.5.0
```

And here is an example of an `all-systems` file based on the `all-systems-master-copy` file that could be used in the first backup session:

```
saserver,my-nw-server,10.0.0.1,af922b9f-cd61-49cd-afdc-
a48e558cec3e,10.6.5.0
esa,my-nw-esa,10.0.0.4,8b608c0d-a7f9-40c0-baee-8407dec774ab,10.6.5.0
malwareanalysis,my-nw-malwareanalysis,10.0.0.6,2edc9585-7081-48c3-8f8c-
e0d02aa0a2fd,10.6.5.0
```

Troubleshooting Information

- Be sure to save copies of the `all-systems` and `all-systems-master-copy` files in a safe location. Follow these recommendations:

  - Do not edit the `all-systems-master-copy` file.
  - If you create several different versions of the `all-systems` file (for example, for several backup sessions), be sure to remove pre-existing entries from the file so that the file contains only those hosts that are currently being backed up.
    For more information, see Post Backup Tasks.

- If any host systems are down while you are running the `get-all-systems.sh` script, the script creates a list of hosts for which it cannot find information. After the script completes and the `all-systems` file is created, you must edit the `all-systems` file manually and add the missing information for these hosts.

- The `get-all-systems.sh` script generates a list of hosts that were defined in the NetWitness Suite user interface. Ensure that all hosts and services are provisioned properly. If any hosts or services are not provisioned properly, they will not be backed up. RSA recommends that when you add hosts and services to NetWitness Suite, you use the NetWitness Suite user interface to ensure that they are provisioned properly. However, if there are any hosts or services that were not defined in the user interface, you must add them to the `all-systems` file manually.

- At the end of the `get-all-systems.sh` script, the script will check for any differences between the systems that the NetWitness Server has listed, and the ones for which the script was able to find all the required information. If any Node ID's or system names are listed as missing, verify the existence of those systems, that their services are all running, and that they are properly communicating with the NetWitness Server. (Any Windows Legacy Collectors or AWS Cloud Collectors will not be added to the `all-systems` file, and may account for discrepancies. **DO NOT add these items to the `all-systems` file manually**.)
- If the syntax in the `all-systems` file is incorrect, the script will fail. For example, if there is an extra space at the beginning or the end of a host entry, the script will fail.

Task 3 - Set up Authentication Between Backup and Target Hosts

RSA recommends that you run the `ssh-propagate.sh` script to automate sharing keys between the backup host and the host systems.

Note: If you have SSH keys that are protected with pass phrases, you can use `ssh-agent` to save time. For more information, refer to the man page for `ssh-agent`.

1. On the external backup host system, make the `ssh-propagate.sh` script executable by running the following command:
   `chmod u+x ssh-propagate.sh`
2. At the root directory, run the following command, where `<path-to-all-systems-file>` is the path to the directory where the `all-systems` file is stored:
   `ssh-propagate.sh <path-to-all-systems-file>`
3. You are prompted for the password once per host, but you will not need to enter it repeatedly later during the backup process.

Task 4 - Check for Backup Requirements for Specific Types of Hosts

After you create the `all-systems` file to use for backup, you must check to see if any of the hosts listed in the file have requirements that must be met before you run the backup process.

For All Host Types

Perform the following steps for all host types:

1. On the NetWitness Server, place Custom Certificate files and any other certificate authority (CA) files in the `/root/customcerts` folder to ensure that these certificate files are backed up. Your custom certificate files that are placed in this directories will be automatically restored during the upgrade process. After upgrading to 11.1.0.0, your custom certificate files will be located in `/etc/pki/nw/trust/import`.
   You can convert CA certificates and keys to different formats to make them compatible with specific types of servers or software using OpenSSL. For example, you can convert a normal PEM file that would work with Apache to a PFX (PKCS#12) file and use it with Tomcat or IIS. To convert the files, SSH to the NetWitness Server and run the following command strings to perform the conversions listed.
   Convert a DER file (.crt .cer .der) to PEM
   `openssl x509 -inform der -in certificate.cer -out certificate.pem`
   Convert a PEM file to DER

```
openssl x509 -outform der -in certificate.pem -out certificate.der
```

Convert a PEM Certificate File and a Private Key to PKCS#12 (.pfx .p12)

```
openssl pkcs12 -export -out certificate.pfx -inkey privateKey.key -in
certificate.crt -certfile CACert.crt
```

Convert a PKCS#12 File (.pfx .p12) Containing a Private Key and Certificates to PEM

```
openssl pkcs12 -in keyStore.pfx -out keyStore.pem -nodes
```

> **Note:** Add the following qualifier to the command string to:
> `-nocerts` convert private keys exclusively.
> `-nokeys` convert certificates exclusively.

2. Manually record any custom configurations made to CentOS 6 (for example, driver customizations) for restoration after you update to CentOS 7. Custom configurations to CentOS 6 are not automatically backed up and restored.

For Decoder, Concentrator, or Broker Hosts: Stop Data Capture and Aggregation

In addition to the tasks described in For All Host Types, for Decoder, Concentrator, or Broker hosts, stop data capture and aggregation on all the systems that you are backing up. For instructions, refer to Appendix B. Stopping and Restarting Data Capture and Aggregation

Log Collectors (LC) and Virtual Log Collectors (VLCs): Run `prepare-for-migrate.sh`

> **Caution:** This task stops log collection so you must perform this step immediately before you upgrade to minimize the loss of event collection. Complete this task in accordance with the backup and upgrade tasks in this guide.

Prerequisites

You need the following information before you prepare LCs and VLCs for upgrade.

- If Lockbox was initialized on the LC and VLC, you must know the Lockbox password. It is required to reconfigure the Lockbox after upgrade.
- If you set the password for `logcollector` user for RabbitMQ , you must know the password so you can set it again after the upgrade.

Prepare LCs and VLCs for Upgrade

1. SSH to the Log Collector.
2. Submit the following command string.

   ```
   # /opt/rsa/nwlogcollector/nwtools/prepare-for-migrate.sh --prepare
   ```

   This command:

- Stops the Puppet Agent service.
- Disables the file collection accounts ("sftp" and all users in the group "upload") used for uploading log files to the Log Collector. The log files accumulate on the event sources until the Log Collector has been upgrade to 11.1.0.0.
- Stops all the collection protocols in the Log Collector service.
- Saves the list of Plugin accounts and RabbitMQ accounts.
- Configures the RabbitMQ server so that new events cannot be published to it any longer. Consumers of events in the queues, such as shovels and Log Decoder Event Processors, will continue to run.
- Waits until the Log Collector queues are empty.
- Stops the Log Collector service.
- Creates a marker file indicating that the Log Collector has been successfully prepared for upgrade.

Troubleshooting Information

The `prepare-for-migrate.sh` script:

- Sends informational, warning, and error messages to the console.
- Saves a session log in the `/var/log/backup/` directory.

You must fix any of the following errors and resume the preparation. Contact RSA Customer Support (https://community.rsa.com/docs/DOC-1294) for assistance.

- Log Collector queues with events but without consumers are found.
- Unable to stop the Puppet Agent service.
- Unable to stop a collection protocol in the Log Collector service.
- Unable to block event publishers to the RabbitMQ server.
- Unable to or taking too long for queue events to be consumed. The script makes 30 attempts waiting for the events to be consumed. After each attempt, it sleeps for 30 seconds.
- Unable to stop the Log Collector service.

For more information about troubleshooting, see Appendix A. Troubleshooting

For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint: List RabbitMQ Usernames and Passwords

On the 10.6.5.x host, on the NetWitness Server host, you must get a list of all RabbitMQ usernames and passwords so that after you perform the 11.1.0.0 upgrade, you can restore RabbitMQ user accounts.

To get a list of RabbitMQ usernames and passwords, run the following command:

```
rabbitmqctl list_users >> /root/rabbitmq_users.txt
```

To restore RabbitMQ user accounts, refer to *Task 2 - For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint Configure Mutually Authenticated SSL* in Post Upgrade Tasks.

For Bluecoat Event Sources

Bluecoat ProxySG event sources use FTPS protocol to upload log files to the Log Collector (LC) and Virtual Log Collector (VLC). The event source documentation contains the steps to configure VSFTPD service on the LC and VLC.

- If key material exists in `/root/vsftpd/` directory in 10.6.5.x, this material area will be backed up and restored. **If the material was in another location, you must back it up and restore it manually.**
- If the `/etc/vsftpd/vsftpd.conf` file exits in 10.6.5.x, it is backed up and restored.

Task 5 - Check for Adequate Space for the Backup

You can run the backup test script to check the amount of disk space that is required for the backup using the `-t` option described in Test Options. You run the script without actually backing up files or stopping any services. RSA recommends that you perform this step to ensure that you provide adequate space for the backup so that the backup captures all your data.

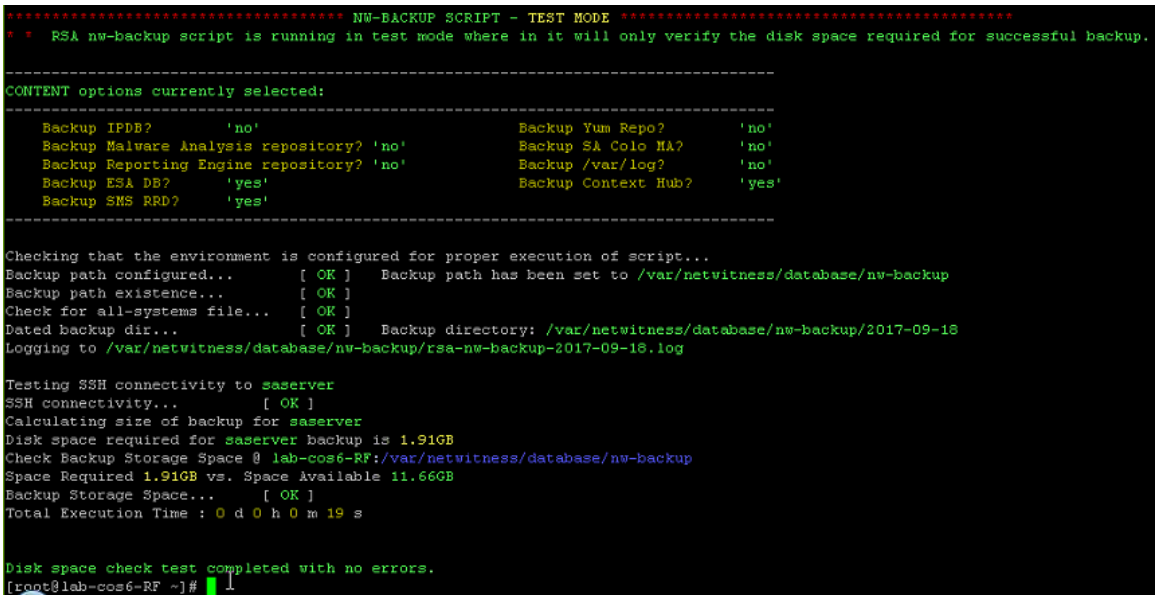
To check for adequate disk space:

1. Make the backup script executable by running the following command:
   ```
   chmod u+x nw-backup.sh
   ```
2. Run the following command at the root directory level:
   ```
   ./nw-backup.sh -t
   ```
   The output displays the amount of disk space that is required for the backup.

   Note: The `./nw-backup.sh -t` command runs with the `-d` option by default. However, if you are looking for more accurate disk space results, you can override the `-d` option by using `-D`. Using the `-D` option will show how much

space is required on each host for the data that will be backed up, but does not show how much space is available. If there is not enough space available, the `-D` option will throw an error. If you want to know how much space is available on the target host, you must run the `df -h` command on the host.

The following figure shows an example of the output from using the `-t` option.



Task 6 - Back up Your Host Systems

Before you run the backup script to do the actual backup, be sure that you have plenty of space. To back up your hosts, you run the `nw-backup.sh` script using the `-u` option. This option is required for upgrading to 11.1.0.0.

Note: The script will stop services as it runs. However, you can stop services manually before you run the script if needed.

When you run the backup script, you can choose from several options that are described in the following sections.

Usage:
`./nw-backup.sh [-u -t -d -D -l -x -e] <external-mnt> -b <backup file path>`

General Options

`-u : This option is required for upgrading to 11.1. Enables the upgrade flag to run backup for upgrading to 11.1. It also enables disk space check (-d), backing up reporting engine reports (-r) and stores backup content locally (-l). Default: (no)`

-d : enables disk space check in 'fast' mode (quick estimate of space using uncompressed data). Default: (no)

-D : enables disk space check in 'full' mode (estimate of space using compressed data, ~10X slower). Default: (no)

-l : stores backup content locally on each host (automatically set if -u is used). Default: (no)

-e <path to mount point> : copies backup files of all devices onto an external mount point. Default: (/mnt/external_backup)

-x : move all backup files to an external mount point. Default: (no) -COPY

-b <path to write backups> : path to the location for storing backup files on a backup server. **For upgrading to 11.1, please use the default location!** Default: (/var/netwitness/database/nw-backup)

Note: Do **not** change the backup path in upgrade (-u) mode.

Advanced Content Selection Options

-c : back up Colocated Malware Analysis on SA servers. Default: (no)

-i : back up IPDB data (/var/netwitness/ipdbextractor). Default: (no)

-m : back up Malware Analysis File Repository. Default: (no)

-r : back up Reporting Engine Report Repository (automatically set if -u is used). Default: (no)

-v : back up system logs (/var/log). Default: (no)

-y : back up YUM Web Server & RPM Repository. Default: (no)

-S : If set: DISABLES back up of SMS RRD files. Default: (not-set)

-C : If set: DISABLES back up of Context-Hub configuration and database. Default: (not-set)

-E : If set: DISABLES back up of ESA Mongo database. Default: (not-set)

Test Options

-t : performs script test run for disk space check only. Services are not stopped and excludes execution of backup. Can be combined with (-d) or (-D) and other flags. Default: (-t)

For example, the command:
`./nw-backup.sh`
would run the backup with options as set in the Header of the script itself.
OR, the command:
`./nw-backup.sh -ue /mnt/external_backup`
would run a normal backup using the backup path defined in the script, with the following options:

```
-u : enables the upgrade flag to run backup for upgrading to 11.1. It
also enables disk space check (-d), backing up reporting engine reports
(-r) and stores backup content locally (-l). Default: (no)

-e : Copy the backup files to external mount point, mounted on
/mnt/external_backup

For Help: ./nw-backup.sh -h
```

When you run the script, the following text is displayed at the top of the script:

Caution:
```
RSA nw-backup script backs up configuration files, data, and
logs on the options provided in the script. It tars the content, with
options to store the backup files on the backup server, move or copy
them to external storage on a mount point (USB/NFS/SMB), or SCP them
back to the target host.
This backup script has been qualified on the following versions of
Security Analytics:
10.6.5.x
Use of this script on any other versions of the product may not give
expected results and may not be supported by RSA Customer
Service.Note: All non-RSA custom files, scripts, Cronjobs and other
important files should be placed in /root, /home/'user', OR /etc to be
included in the backup.
```

To run the backup script to back up your hosts:

1. Ensure that the `all-systems` file contains only the hosts to back up. For information, see Task 2 - Create a List of Hosts to Back up.
2. Make the backup script executable by running the following command:
   ```
   chmod u+x nw-backup.sh
   ```
3. Begin the backup process by running the following command at the root directory level:
   ```
   ./nw-backup.sh -u <additional options as needed>
   ```

   Note: You must use the `-u` option so that your files will be restored correctly during the upgrade to 11.1.0.0.

   When the text "`Backup completed with no errors`" is displayed, the backup has completed successfully.

   A log file, with a name similar to the following example, is created in the backup directory which provides information on the files being backed up:
   ```
   rsa-nw-backup-2017-03-15.log
   ```
4. When the backup has completed, to ensure that the intended files were backed up, you can run the following command to see a list of all the files that were backed up:
   ```
   tar -tzvf hostname-ip-address-backup.tar.gz
   ```
   The following archive files are created:

   For all hosts:

<hostname-IPaddress>-root.tar.gz

<hostname-IPaddress>-backup.tar.gz

tar checksum files

<hostname-IPaddress>-network.info.txt

For NetWitness Servers:

<hostname-IPaddress>-root.tar.gz

<hostname-IPaddress>-backup.tar.gz

<hostname-IPaddress>-mongodb.tar.gz

tar checksum files

<hostname-IPaddress>-network.info.txt

For ESA Hosts:

<hostname-IPaddress>-root.tar.gz

<hostname-IPaddress>-backup.tar.gz

<hostname-IPaddress>-mongodb.tar.gz

<hostname-IPaddress>-controldata-mongodb.tar.gz

tar checksum files

<hostname-IPaddress>-network.info.txt

The archived files are located in the /var/netwitness/database/nw-backup directory. If any of the tar files appear smaller than expected, open them to be sure that the files were properly backed up.

Post Backup Tasks

Task 1 - Save a Copy of the all-systems File and the Backup Tar files

Make copies of the all-systems file, the all-systems-master-copy file, and the backup tar files and put the copies in a secure location. You cannot regenerate these files after you upgrade the NetWitness Server (specifically the Admin service) to 11.1.0.0.

Task 2 - Ensure Required Backup Files Were Generated

After you run the backup scripts, several files are generated. These files are required for the 11.1.0.0 upgrade process. Before you begin the upgrade process, you must ensure that the required backup files are on the hosts that you are upgrading, and that you perform the following tasks.

The following files are generated on all hosts by the backup scripts:

- all-systems
- all-systems-master-copy

- appliance_info
- service_info
- <hostname>-<host-IP-address>-backup.tar.gz
- <hostname>-<host-IP-address>-backup.tar.gz.sha256
- <hostname>-<host-IP-address>-root.tar.gz
- <hostname>-<host-IP-address>-root.tar.gz.sha256
- <hostname>-<host-IP-address>-network.info.txt

In addition to the files listed above, the following files will be generated on NetWitness Server and ESA hosts:

- <*hostname*>-<*host IP address*>-mongodb.tar.gz
- <*hostname*>-<*host IP address*>-mongodb.tar.gz.sha256

The backup script will also generate the following controldata-mongodb.tar.gz files.

Note: The backup script copies the following files from all ESA hosts to the NetWitness Server host's backup path .

- <esa hostname>-<esa hostip>-controldata-mongodb.tar.gz
- <esa hostname>-<esa hostip>-controldata-mongodb.tar.gz.sha256

Task 3 - (Conditional) For Multiple ESA Hosts, Copy mongodb tar files to Primary ESA Host

If you have multiple ESA host systems in your enterprise, copy the following two files from each ESA host to the /opt/rsa/database/nw-backup/ directory on the Primary ESA host system (the host that has the ContextHub service running on it) :

- <hostname>-<host-IP-address>-mongodb.tar.gz
- <hostname>-<host-IP-address>-mongodb.tar.gz.sha256

Task 4 - Ensure All Required Backup Files are on Each Host

Before you upgrade to 11.1.0.0, ensure that the appropriate files exist on the hosts that you are upgrading as described in the following lists.

There should be note here mentioning default backup path locations for that user knows where to go and check these files.

Note: The default paths for backup files are:
- NetWitness Server hosts:`/var/netwitness/database/nw-backup`
- ESA hosts:`/opt/rsa/database/nw-backup`
- Malware hosts: `/var/lib/rsamalware/nw-backup`

Required Files for NetWitness Servers

- `all-systems-master-copy`
- `<hostname>-<host-IP-address>-backup.tar.gz`
- `<hostname>-<host-IP-address>-backup.tar.gz.sha256`
- `<hostname>-<host-IP-address>-root.tar.gz`
- `<hostname>-<host-IP-address>-root.tar.gz.sha256`
- `<hostname>-<host-IP-address>-network.info.txt`
- `<hostname>-<host-IP-address>-mongodb.tar.gz`
- `<hostname>-<host-IP-address>-mongodb.tar.gz.sha256`
- `<esa-hostname>-<esa-host-IP-address>-controldata-mongodb.tar.gz`
- `<esa-hostname>-<esa-host-IP-address>-controldata-mongodb.tar.gz.sha256`

Required Files for ESA Hosts

- `all-systems-master-copy`
- `<hostname>-<host-IP-address>-backup.tar.gz`
- `<hostname>-<host-IP-address>-backup.tar.gz.sha256`
- `<hostname>-<host-IP-address>-root.tar.gz`
- `<hostname>-<host-IP-address>-root.tar.gz.sha256`
- `<hostname>-<host-IP-address>-network.info.txt`
- `<hostname>-<host-IP-address>-mongodb.tar.gz`
- `<hostname>-<host-IP-address>-mongodb.tar.gz.sha256`

Required Files for All Other Hosts

- `all-systems-master-copy`
- `<hostname>-<host-IP-address>-backup.tar.gz`
- `<hostname>-<host-IP-address>-backup.tar.gz.sha256`
- `<hostname>-<host-IP-address>-root.tar.gz`
- `<hostname>-<host-IP-address>-root.tar.gz.sha256`
- `<hostname>-<host-IP-address>-network.info.txt`

Note: The following files are located in the `<hostname>-<host-IP-address>-backup.tar.gz` tar on all hosts:
`appliance_info`
`service_info`

Note: The paths to the location of the backup and restore files for iptables, NAT configurations, user accounts, and crontab entries are shown in the following list:
Backup paths:
`BUPATH=/opt/rsa/database/nw-backup` for the ESA Correlation Engine
`BUPATH=/var/lib/rsamalware/nw-backup` for the Malware Service
`BUPATH=/var/netwitness/database/nw-backup` for all other services
Restore locations:
`BUPATH/restore/etc/sysconfig` for Iptable rules
`BUPATH/restore/etc/sysconfig` for NAT configurations
`BUPATH/restore/etc` for Crontab entries
`BUPATH/restore/etc` for User Accounts (users are located in the `passwd` file, and groups are located in the `group` file. These are not restored during the upgrade process but can be restored manually.
`BUPATH/restore/etc/ntp.conf` for NTP configurations (must be restored using the NetWitness Suite UI)

Migrate Disk Drives from 10.6.5.x to 11.1

These instructions tell you how to upgrade virtual hosts from 10.6.5.x to 11.1.

Caution: 1.) Run the backup immediately before you upgrade hosts for each phase so that the data is not out-dated.
2.) This guide applies to AWS host upgrades exclusively. If have physical and virtual hosts in your deployment, see the *RSA NetWitness® Suite 11.0 Physical Host Upgrade Instructions* for the steps you must complete to upgrade physical hosts. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

There are five tasks you must complete to migrate from 10.6.5.x to 11.1:

Task 1 - Backup the 10.6.5.x EC2 appliance

(Optional)Task 2 - Run the backup script to take backup data of 10.6.5.x instance

Task 3 - Stop the instances and detach volumes from 10.6.5.x instances

Task 4 - Note the IP addresses of 10.6.5.x instances and then terminate the EC2 instances

Task 5 - (IP retention) Create 11.1 instances using 11.1 AMI.

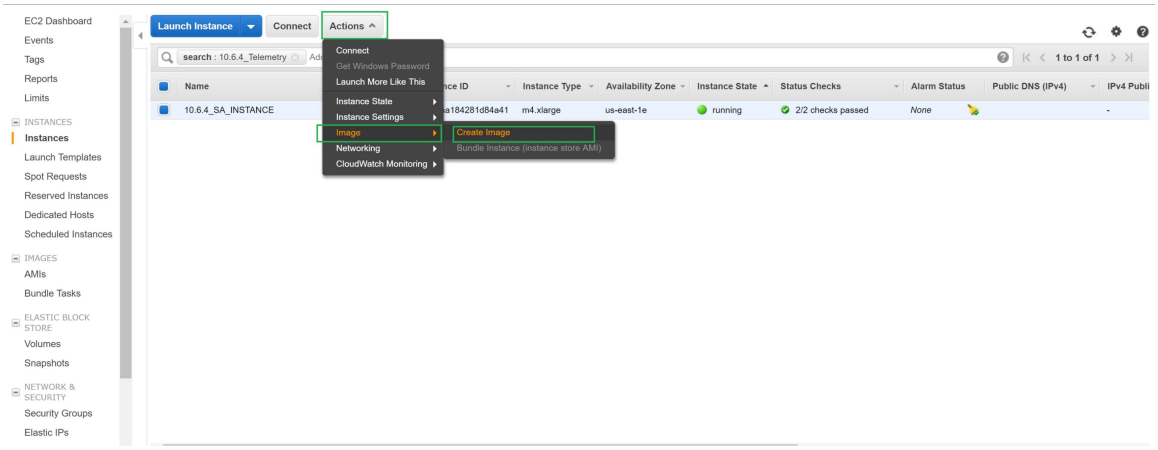
Task 6 - Attach volumes to the corresponding 11.1 instance

Task 7 - Restore backup data in 10.6.5.x to 11.1 Instances (Data Restoration)

Task 8 Run nwsetup-tui script.

Task 1 - Backup the 10.6.5.x EC2 appliance

Select the 10.6.5.x EC2 Instance and navigate to Actions. Click Image and then select Create Image.



(Optional)Task 2 - Run the backup script to take backup data of 10.6.5.x instance

Note: If you have not taken a backup of the 10.6.5.x instance, follow these steps, otherwise skip to Task 3 - Stop the instances and detach volumes from 10.6.5.x instances.

If the stack contains Log Collector then prepare **Log Collector** for the migration:

1. Navigate to `/opt/rsa/nwlogcollector/nwtools/` and run the below command:

```
sh prepare-for-migrate.sh --prepare
```

2. Download backup scripts from GitHub: https://github.rsa.lab.emc.com/asoc/nw-backup (maintenance-11.0) and place it anywhere in a computer running an RPM-based Linux distribution (RHEL or CentOS for example) with a large amount of free hard drive space. In many cases the SA server will suffice. Now, navigate to `scripts` directory inside '`nw-backup-master`' and run the following commands:

```
./get-all-systems.sh <SA server-IP>
```

```
./ssh-propagate.sh <path-to-backup-directory/all-systems>
```

```
./nw-backup.sh -u
```

Its safe to copy a backup of the tar balls created at `/var/netwitness/database`, in some safe location (not mandatory).

Before starting the restore process, if you have ESA deployment then copy the files `<hostname>-<IP>-controldata-mongodb.tar.gz` & `<hostname>-<IP>-controldata-mongodb.tar.gz.sha256` from the location `/opt/rsa/database/nw-backup` of ESA VM to `/var/netwitness/database/nw-backup/` of SA VM.

```
root@ip-172-24-184-59 ~]# ./nw-backup.sh -u
------------------------------------------------------------------------
Starting execution of NW-BACKUP script in UPGRADE backup mode
------------------------------------------------------------------------
WARNING: For UPGRADE backups, services must be stopped and all externally mounted disks (DACs) must be unmounted.
         If you prefer to stop the services and unmount the external partions manually, exit out of the script by typing
         (CTRL-C) within 30 seconds, otherwise the services will be automatically stopped, all externally mounted
         filesystems will be unmounted, and the script will proceed with the UPGRADE backup process.

NOTE: The easiest way to remount and restart the services on a host is to perform a reboot of the host.

The script will continue in 30 seconds...

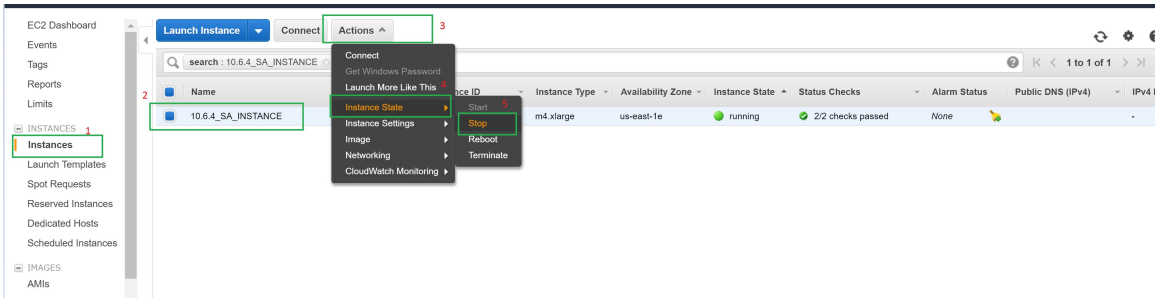
********************** NW-BACKUP SCRIPT - UPGRADE MODE ******************************
******** UPGRADE IS ONLY SUPPORTED FOR SA VERSION 10.6.4.0 AND HIGHER***************** *
*  RSA nw-backup script backs up configuration files, data, and logs based           * *
*  on the options provided in the script.  It tars the content and leaves a          * *
*  copy of tars on the host for consumption by the upgrade process.  It also         * *
*  provides an option to back up the tars to an external mount point (USB/NFS).      * *
*                                                                                    * *
*    NOTE: The following systems and services are NOT supported for restore          * *
*    for the 11.0.0.0 upgrade:                                                       * *
*              - Malware-Analysis (Co-located on SA server)                          * *
*              - IPDB Extractor (Co-located on SA Server & Standalone)               * *
*              - Warehouse Connector (Standalone)                                    * *
*              - All-in-one Servers                                                  * *
*                                                                                    * *
*  Note: All non-RSA custom files, scripts, Cronjobs and other important files       * *
*  should be placed in /root, /home/'user', OR /etc to be included in the backup.    * *
************************************************************************************ *
**************************************************************************************
```

Task 3 - Stop the instances and detach volumes from 10.6.5.x instances

Note: If detach fails, do a forced detach on the volume.

Select the 10.6.5.x EC2 instance and navigate to Actions and then click Stop.



Click on Volumes and then select the 10.6.5.x instance volumes to detach Actions and then select Detach Volume.

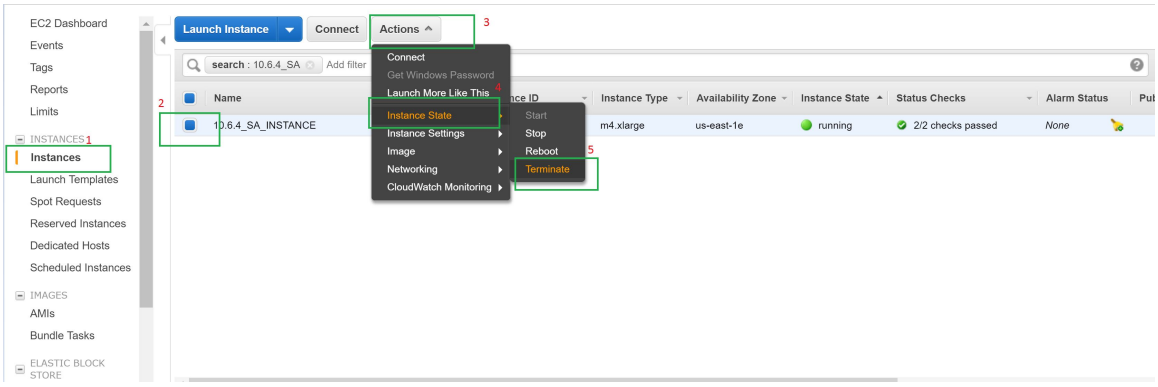
Task 4 - Note the IP addresses of 10.6.5.x instances and then terminate the EC2 instances

Note: Termination is required to free the IP address.

1. Click on Instances and then select the Instance.
2. Click Actions and navigate to Instance State.
3. Click Terminate

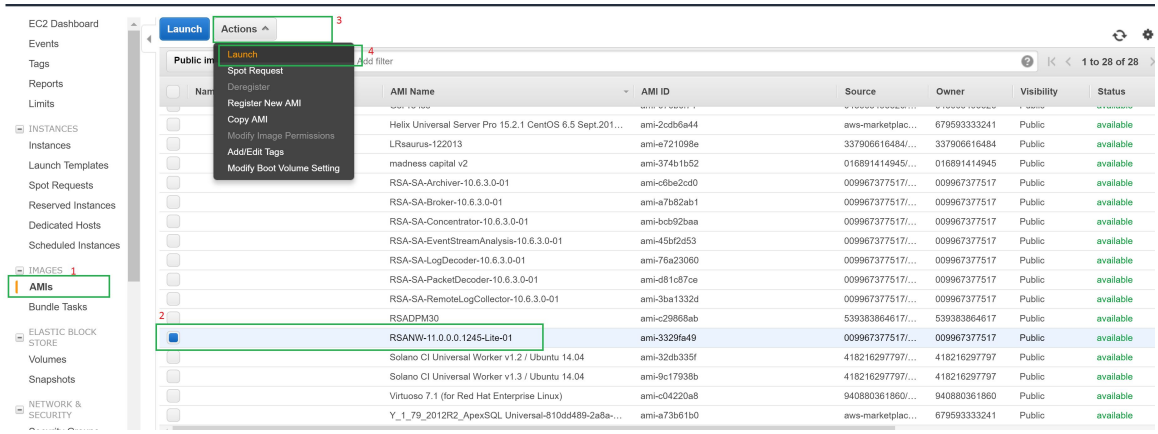


Task 5 - (IP retention) Create 11.1 instances using 11.1 AMI.

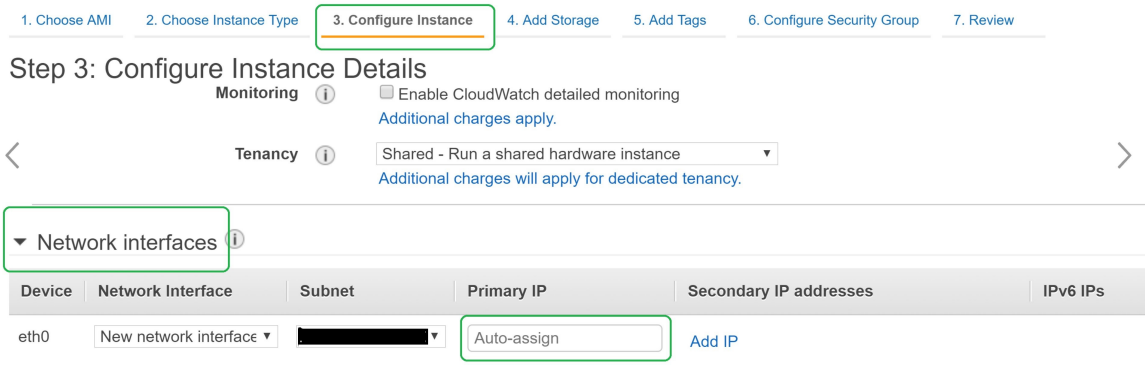
1. During the creation of EC2 instance, provide the IP address from task4. Click on AMIs and select 11.0 AMI.

Note: Refer to the *AWS Deployment Guide for version 11.0* for installing RSA NetWitness Suite11.0.0.0

2. Click Actions and then click Launch.



3. Assign the retained IP for the appropriate instances (IP retention). For example, If 10.6.1.xSA instance IP is 172.24.184.63 . Then assign the same IP(172.24.184.63) for 11.1 Instance.



Note: To deploy components other than NW, select the image(RSANW-11.0.0.0.1245-Lite-01) which is available under community AMIs section.

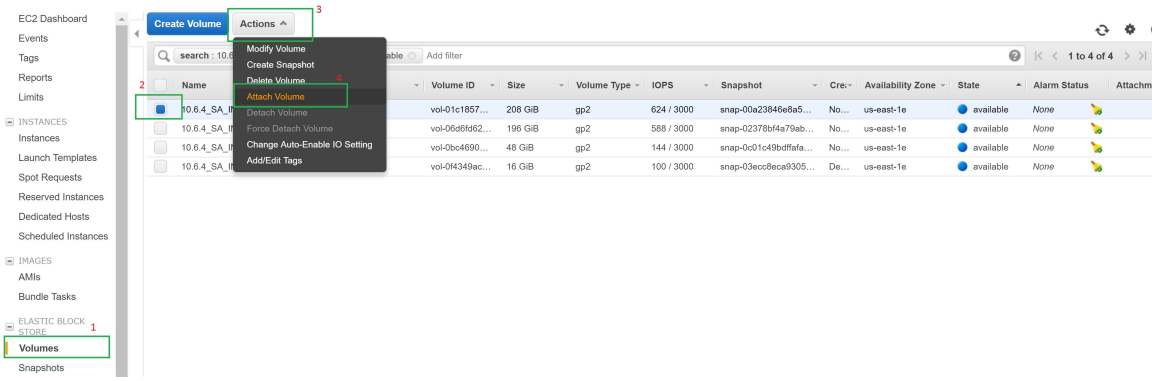
Task 6 - Attach volumes to the corresponding 11.1 instance

After NW 11.1 instance is deployed, stop the 11.0 instance and attach the available 10.6.1.x volumes (except the 'OS disk') to 11.1 instances.

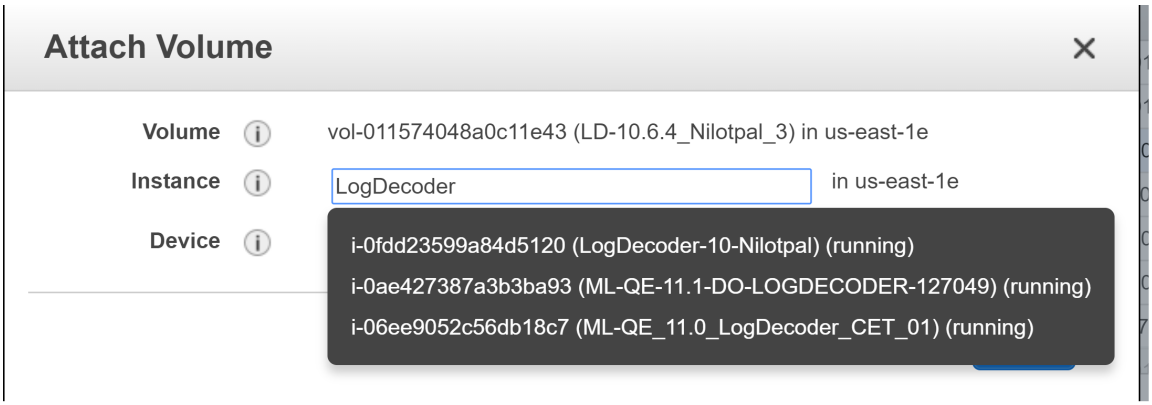
1. Click on Volumes.

2. Select the 10.6.5.x instance volume to attach.

3. Click Actions and then select Attach Volume.



4. Enter the 11.1 instance ID to which the volume has to be attached.



5. Power ON all the 11.1 instances once all the disks are attached.

Task 7 - Restore backup data in 10.6.5.x to 11.1 Instances (Data Restoration)

Execute the following steps for copying the backup data on SA, LD/LC, PD, Concentrator, Archiver, Broker:

1. Create a directory under `/tmp/` by the name `nwhome`.
2. Mount `VolGroup00-nwhome` on `/tmp/nwhome/` and make sure `/var/netwitness/database/` directory is present.

```
mount /dev/mapper/VolGroup00-nwhome /tmp/nwhome/
```

3. Copy the contents of `/tmp/nwhome/` directory to `/var/netwitness/`.
4. Unmount `VolGroup00-nwhome` from `/tmp/nwhome/`

```
umount /dev/mapper/VolGroup00-nwhome /tmp/nwhome/
```

Follow these steps for **ESA**:

1. Create a directory under `/tmp/` by the name `apps`.
2. Mount `VolGroup01-apps` temporarily on `/tmp/apps/`

```
mount /dev/mapper/VolGroup01-apps /tmp/apps/
```

3. Copy nw-backup directory from here to `/var/netwitness`

```
cp -r /tmp/apps/database/nw-backup /var/netwitness
```

4. Unmount VolGroup01-apps from `/tmp/apps/`

umount /tmp/apps

5. Add the following entries in `/etc/fstab` for `mounts`:(Disk Mounting) and then run mount -a

For SA:

/dev/mapper/VolGroup01-ipdbext /var/netwitness/ipdbextractor/ xfs defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup02-redb /var/netwitness/database/ xfs defaults,noatime,nosuid 1 2

For LogDecoder/LogCollector:

/dev/mapper/VolGroup01-decoroot /var/netwitness/logdecoder ext4 defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-index /var/netwitness/logdecoder/index xfs defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-sessiondb /var/netwitness/logdecoder/sessiondb xfs defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-metadb /var/netwitness/logdecoder/metadb xfs defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-logcoll /var/netwitness/logcollector xfs defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-packetdb /var/netwitness/logdecoder/packetdb xfs defaults,noatime,nosuid 1 2

For PacketDecoder:

dev/mapper/VolGroup01-decoroot /var/netwitness/decoder ext4 defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-sessiondb /var/netwitness/decoder/sessiondb xfs defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-index /var/netwitness/decoder/index xfs defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-metadb /var/netwitness/decoder/metadb xfs defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-packetdb /var/netwitness/decoder/packetdb xfs defaults,noatime,nosuid 1 2

For Concentrator:

/dev/mapper/VolGroup01-concroot /var/netwitness/concentrator ext4 defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-sessiondb /var/netwitness/concentrator/sessiondb xfs defaults,nosuid,noatime 1 2

/dev/mapper/VolGroup01-index /var/netwitness/concentrator/index xfs defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-metadb /var/netwitness/concentrator/metadb xfs defaults,noatime,nosuid 1 2

For Archiver:

/dev/mapper/VolGroup01-archiver /var/netwitness/archiver xfs defaults,nosuid,noatime 1 2

/dev/mapper/VolGroup02-workbench /var/netwitness/workbench xfs defaults,nosuid,noatime 1 2

For Broker:

/dev/mapper/VolGroup01-broker /var/netwitness/broker xfs defaults,nosuid,noatime 1 2

6. Then run mount command

   ```
   mount -a
   ```

Task 8 Run nwsetup-tui script.

Note: Please provide appropriate host names for all the 11.1 instances after launching. (for 10.6.5.x instance names refer all-systems-master-copy file, which contains 10.6.5.x instance names with IP address)

Execute the command to set the hostname: `hostnamectl set-hostname <hostname>`

Login to SA Sever CLI and run `nwsetup-tui` script for rest of the process completion.

Run 'nwsetup-cli' on rest of the components for Bootstrap and Orchestration. For more information, refer to the Set Up Virtual Hosts in 11.1 section.

Set Up Virtual Hosts in 11.1

There two phases to set up your 11.1 virtual stack that you must complete in the order shown.

- Phase 1 - Set Up NW Server, Event Stream Analysis, Malware Analysis, and Broker or Concentrator Hosts

  Note: For Event Stream Analysis, if you had C2 modules enabled in 10.6.5.x, the modules will enter a warm-up after you upgrade the Event Stream Analysis service to 11.5 and they will not be available until the warm up completes.

- Phase 2 - Set Up The Rest of the Component Hosts

Phase 1 - Set Up NW Server, Event Stream Analysis, Malware Analysis, and Broker or Concentrator Hosts

Task 1 - Set Up 11.1 NetWitness Server

Follow the instructions under Set Up 11.1 NW Server Host.

Task 2 - Setup 11.1 ESA

Caution: If you had C2 modules enabled in 10.6.4.x, the modules will enter a warm-up after you upgrade the Event Stream Analysis service to 11.0 and they will not be available until the warm up completes.

Follow the instructions under Set Up 11.1 Non-NW Server Host to set up your ESA hosts.

1. Set up your primary ESA host through the Setup program and install **ESA Primary** on the host in the user interface on the **Admin Hosts** view.

   Note: If you have multiple ESA hosts in your enterprise, you must upgrade the ESA Primary host, where all the `mongodb` (Mongo Database) backup tar files are located, first, before you upgrade ESA Secondary hosts.

2. (Conditional) If you have a secondary ESA host, set it up through the Setup program and install **ESA Secondary** on the host in the user interface on the **Admin Hosts** view.

Task 3 - Set Up 11.1 Malware Analysis

Follow the instructions under Set Up 11.1 Non-NW Server Host.

Task 4 - Set Up 11.1 Broker or Concentrator

Follow the instructions under Set Up 11.0 Non-NW Server Host.

Note: If you do not have a Broker, upgrade your Concentrator hosts. The 11.1 NW Server cannot communicate with 10.6.5.x core services for the new Investigate functionality. This is why you must upgrade the Broker or Concentrator hosts in Phase 1.

Phase 2 - Set Up The Rest of the Component Hosts

See Appendix B. Stopping and Restarting Data Capture and Aggregation for instructions on how to stop and restart data capture and aggregation when upgrading the Decoder, Concentrator, and Log Collection hosts.

Decoder and Concentrator Hosts

1. Stop data capture and aggregation.
2. Complete the steps in Set Up 11.1 Non-NW Server Host.
3. Restart data capture and aggregation.

Log Decoder Host

1. Make sure you have prepared the Log Collector as described in the *Log Collectors (LC) and Virtual Log Collectors (VLCs): Run prepare-for-migrate.sh* in the **Backup Instructions**.
2. Stop data capture on the Log Decoder.
3. Complete the steps in Set Up 11.1 Non-NW Server Host.
4. Restart data capture on Log Decoder.

Note: After you upgrade, you will restart log collection after completing the Task 11 - Reset Stable System Values for Log Collector after Upgrade in the **Post Upgrade Tasks**

Virtual Log Collector Host

1. Make sure you have prepared the Virtual Log Collector as described in the *Log Collectors (LC) and Virtual Log Collectors (VLCs): Run prepare-for-migrate.sh*.
2. Back up your 10.6.5.x VLC by editing the `all-systems` file on host where you performed the backup.
   a. Make sure your `all-systems` file contents has this information before you perform this step.
   `vlc,<host-name>,<IP-address>,<UUID>,10.6.5.0`

b. Run the following command to create backup.

```
./nw-backup.sh -u
```

See Backup Instructions for detailed procedures on how to back up the host.

3. Make sure the backup host contains the VLC backup in the following format.

```
<hostname>-<IPaddress>-root.tar.gz
<hostname>-<IPaddress>-root.tar.gz.sha256
<hostname>-<IPaddress>-backup.tar.gz
<hostname>-<IPaddress>-backup.tar.gz.sha256
<hostname-IPaddress>-network.info.txt
all-systems-master-copy
```

4. Power off the 10.6.5.x VLC so that a new 11.1 VM can be created with the same network configuration.
5. Deploy a fresh Non-NW Server host using the 11.0 NetWitness Suite ova.
6. Connect to the VM console of the new VLC.
7. Update the network configuration to be the same as the 10.6.5.x VLC.
This information is stored in the `<hostname-IPaddress>-network.info.txt` 10.6.5.x VLC backup file.

Note: Make sure IPv6 is disabled.

a. Edit the `/etc/sysconfig/network-scripts/ifcfg-eth0` file and update the settings. Contents of `ifcfg-eth0` should be as follows.

```
TYPE=Ethernet
DEFROUTE=yes
NAME=eth0
UUID=<uuid>
DEVICE=eth0
DNS1=<nameserver from <hostname>-<ipaddress>-network-info.txt>
DNS2=<nameserver from <hostname>-<ipaddress>-network-info.txt>
BOOTPROTO=static
IPADDR=<ipaddress from <hostname>-<ipaddress>-network-info.txt>
NETMASK=<netmask from <hostname>-<ipaddress>-network-info.txt>
GATEWAY=<gateway from <hostname>-<ipaddress>-network-info.txt>
NM_CONTROLLED=no
ONBOOT=yes
```

b. Submit the following command string.

```
systemctl restart network.service
```

8. Create the backup directory.

```
# mkdir -p /var/netwitness/database/nw-backup/
```

9. Copy the backup from the backup host from `/var/netwitness/database/nw-backup` to the new VLC in the `/var/netwitness/database/nw-backup` directory.
10. Complete the steps 2 through 12 inclusive in Set Up 11.1 Non-SA Server Host for the rest of the NetWitness Suite components . Make sure that you select **Log Collector** for the service in step 12.

Set Up 11.1 NW Server Host

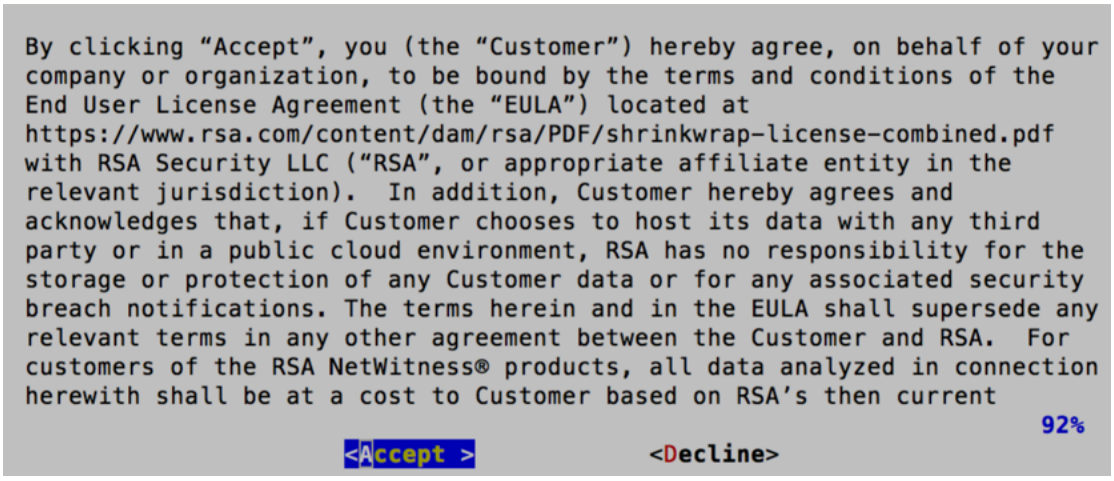
Make sure that you have backed up 10.6.5.x data for the SA Server host. **You must follow the instructions in** Backup Instructions **to back up the host.**

Caution: Run the backup immediately before upgrading the SA Server to 11.1 so that the data is as recent as possible. You must create the **all-systems** file before you upgrade the SA Server because you cannot do this after the SA Server has been upgraded to 11.1.

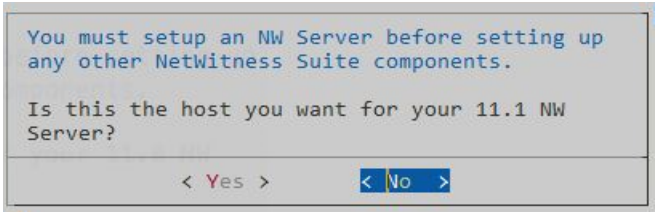
Complete the following steps to set up the 11.1 NW Server host.

1. Power on the NW Server VM and run the `nwsetup-tui` command.
   This initiates the Setup program and the EULA is displayed.

   Note: 1.) When you navigate through the Setup program prompts, use the down and up arrows to move among fields, use Tab key to move to and from commands (such as **<Yes>**, **<No>**, **<OK>**, and **<Cancel>**. Press the Enter key to register your command response and move to the next prompt.
   2.) The Setup program adopts the color scheme of the desktop or console you use access the host.

2. Tab to **Accept** and press **Enter**.
   The "Is this the NW Server" prompt is displayed.

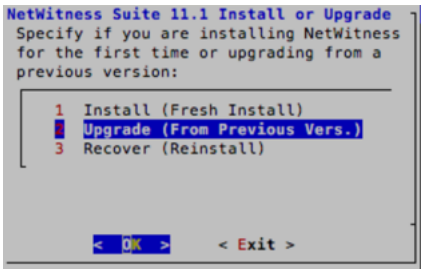


Caution: If you choose the wrong host for the NW Server and complete the upgrade, you must repeat steps 1 through 11 of Set Up 11.1 NW Server Host to correct this error.

3. Tab to **Yes** and press **Enter**.

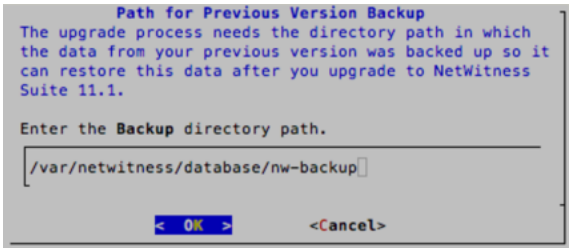
   Choose No if you already upgraded the NW Server to 11.1.

   The Install or Upgrade prompt is displayed.



4. Use down arrow to select **2 Upgrade (From Previous Vers.)**, tab to **OK**, and press **Enter**.

   The backup path prompt is displayed.



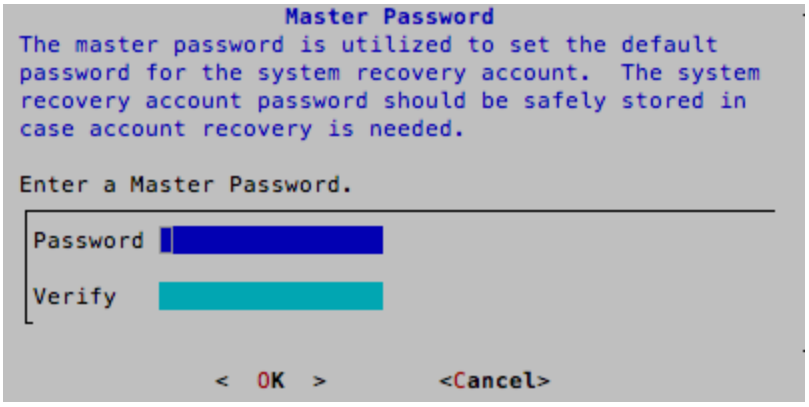
5. Tab to **OK** and press **Enter** if want to keep this path. If not, edit the path, tab to **OK** and press **Enter** to change it.

   The Master Password prompt is displayed.

   The following list of characters are supported for Master Password and Deployment Password:

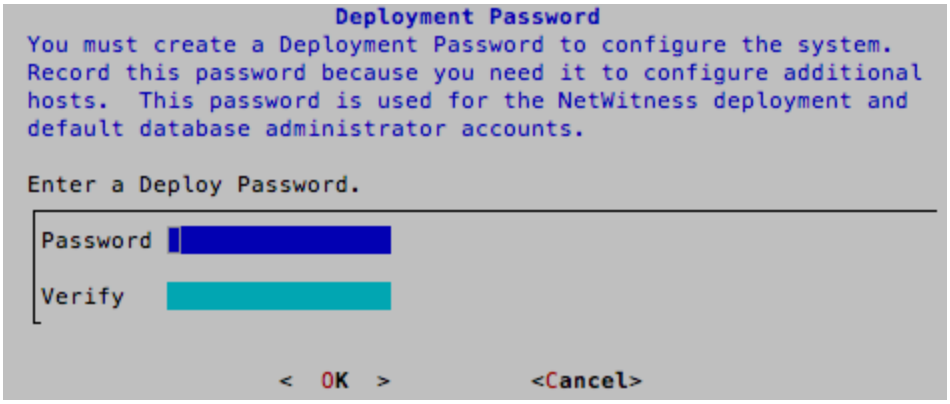
   - Symbols : ! @ # % ^ + ,
   - Numbers :0-9
   - Lowercase Characters : a-z
   - Uppercase Characters : A-Z

No ambiguous characters are supported for Master Password and Deployment Password (for example: space { } [ ] ( ) / \ ' " ` ~ ; : . < > -.



6. Type in the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.

   The Deployment Password prompt is displayed.

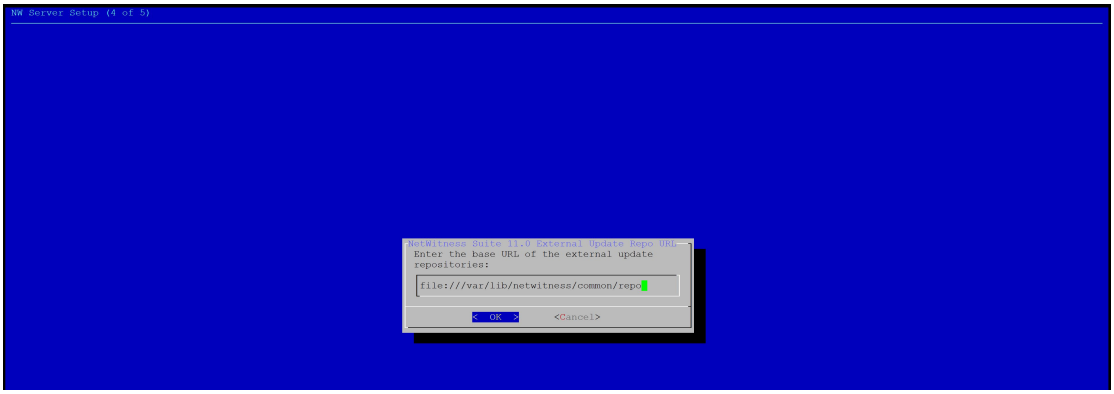


7. Type in the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.

   The Update Repo prompt is displayed.

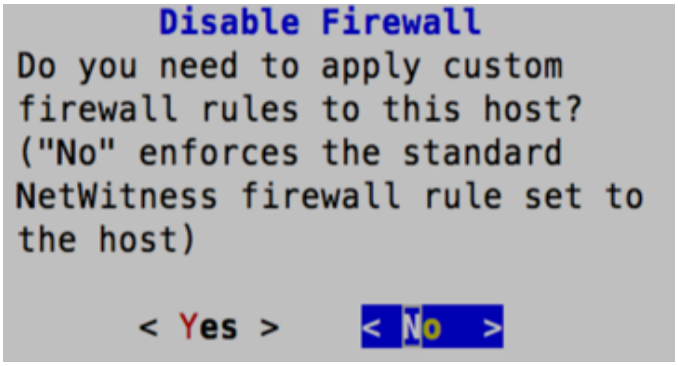
   You must use the same repo that you used for the NW Server hosts for all hosts.

8. Use the down and up arrows to select **2 An External Repo (on an externally-managed server)**, the UI prompts you for a URL.



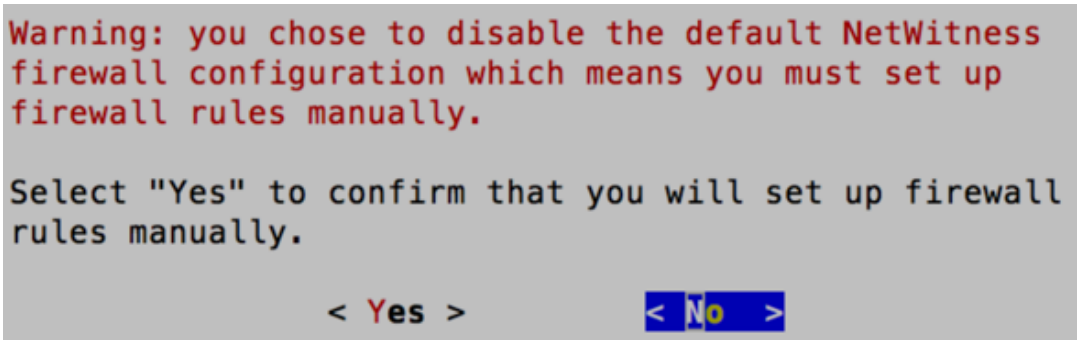
See "Set Up an External Repository with RSA and OS Updates" under "Hosts and Services Procedures" in the *Hosts and Services Getting Started Guide for Version 11.1* for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

9. Enter the base URL of the NetWitness Suite external repo and click **OK**.
The disable or use standard firewall configuration prompt is displayed.



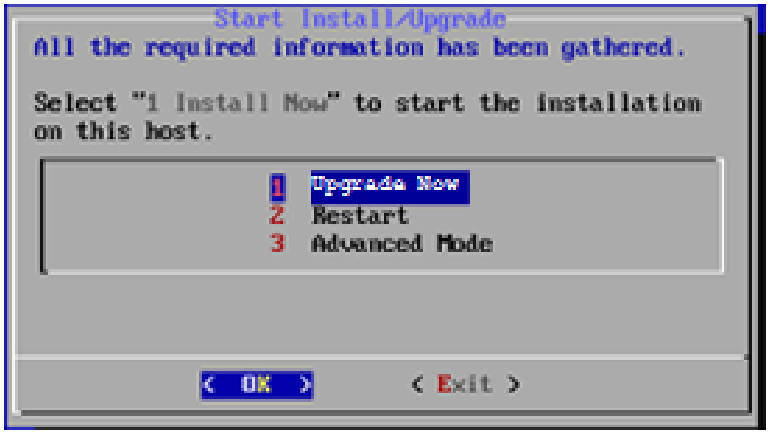
10. Tab to **No**, and press **Enter** to use the standard firewall configuration. Tab to **Yes**, and press **Enter** to disable the standard firewall configuration.

- If you select Yes, confirm your selection.



- If you select No, the standard firewall configuration is applied.

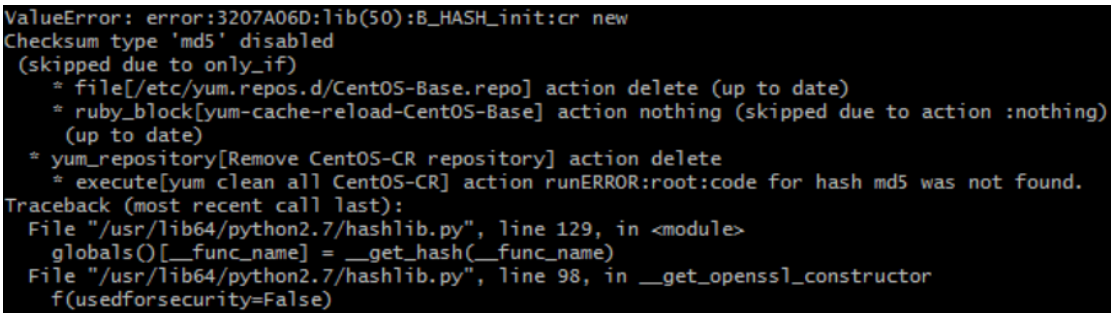
The start upgrade prompt is displayed.



11. Select 1 **Upgrade Now**, tab to **OK**, and press Enter.

When "Installation complete" is displayed, you have upgraded the 10.6.5.x SA Server to the 11.1 NW Server.

Note: Ignore the hash code errors similar to the errors shown in the following screen shot that are displayed when you initiate the `nwsetup-tui` command. Yum does not use MD5 for any security operations so they do not affect the system security.



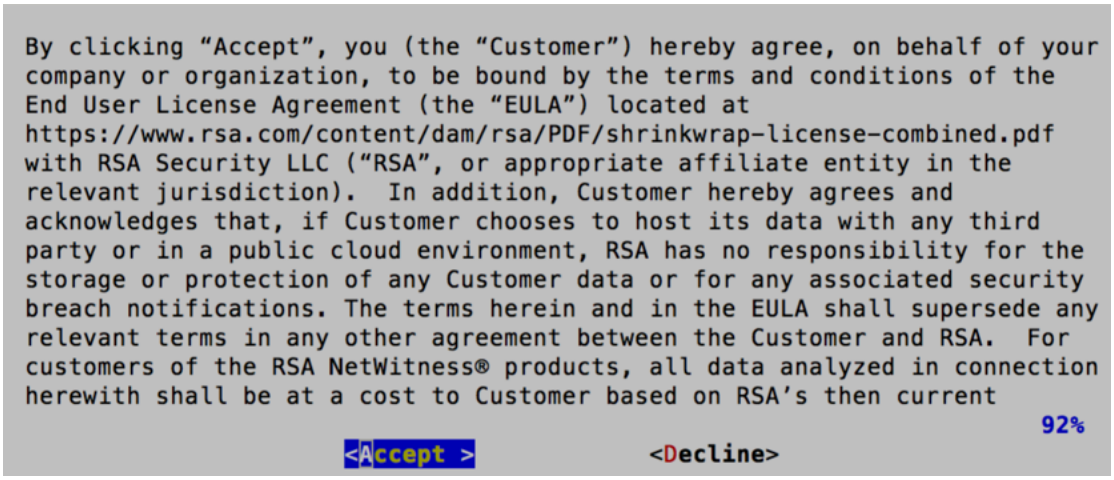
Set Up 11.1 Non-NW Server Host

Make sure that you Back up your 10.6.5.x data for the host. You must follow the instructions in Backup Instructions to back up the host.

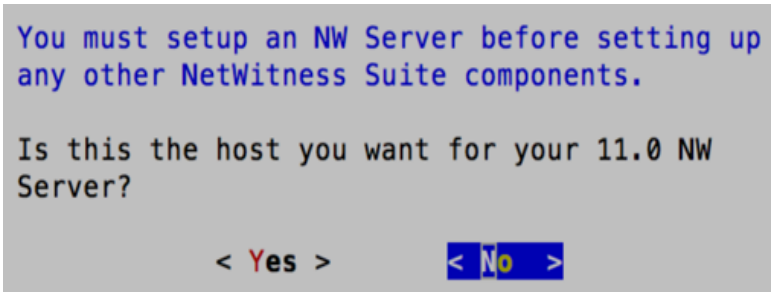
Caution: Run the backup immediately before upgrading the host to 11.1 so that the data is as recent as possible.

Complete the following steps to set up an 11.1 Non-NW Server host.

1. **Power On** the non-NW Server VM and run the `nwsetup-tui` command.
   This initiates the Setup program and the EULA is displayed.

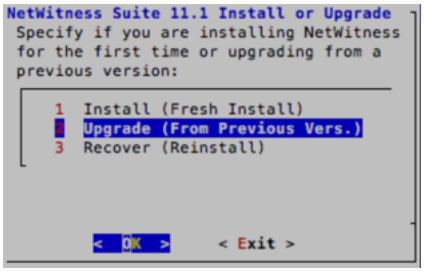


2. Tab to **Accept** and press **Enter**.
   The "Is this the NW Server" prompt is displayed.

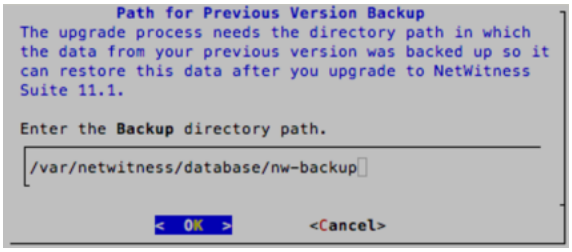


Caution: If you choose the wrong the host for the NW Server and complete the upgrade, you must repeat steps 1 through 11 of Set Up 11.1 NW Server Host to correct this error.

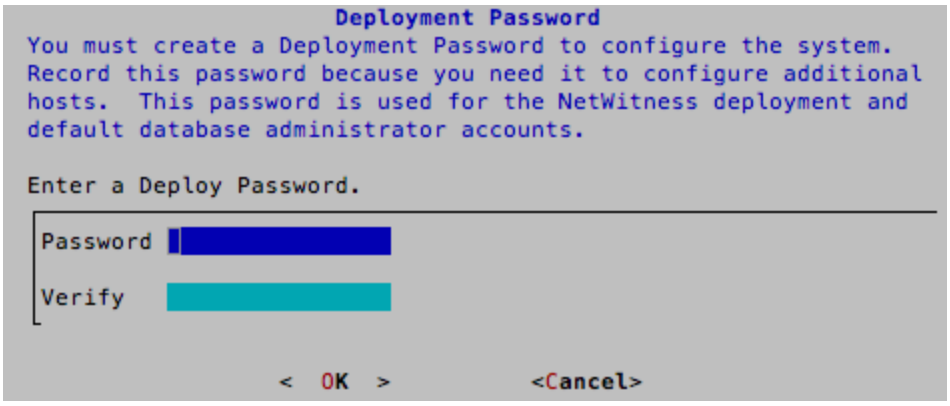
3. Tab to **No** and press **Enter**.
   The Install or Upgrade prompt is displayed.



4. Use down arrow to select **2 Upgrade (From Previous Vers.)**, tab to **OK**, and press **Enter**.
   The backup path prompt is displayed.



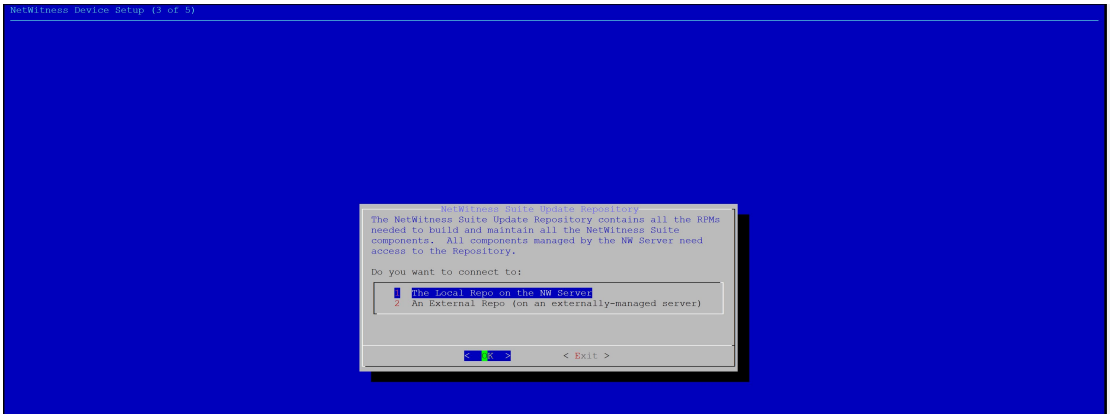
5. Tab to **OK** and press **Enter** if want to keep this path. If not, edit the path, tab to **OK** and press **Enter** to change it.
   The Deployment Password prompt is displayed.



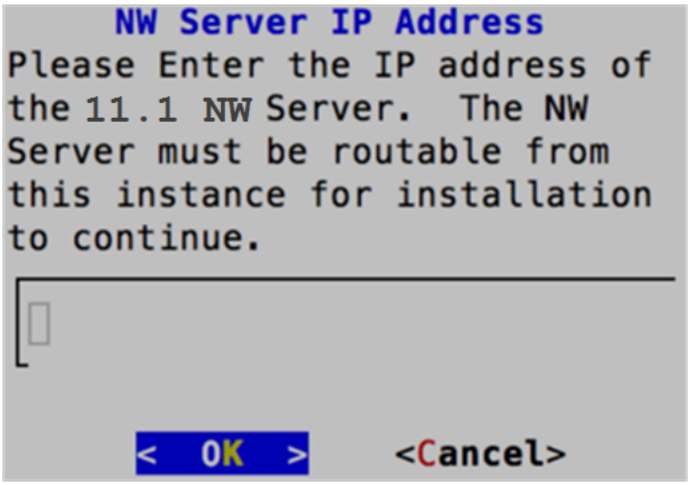
> **Note:** You must use the same deployment password that you used when you upgraded the NW Server.

6. Type in the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.

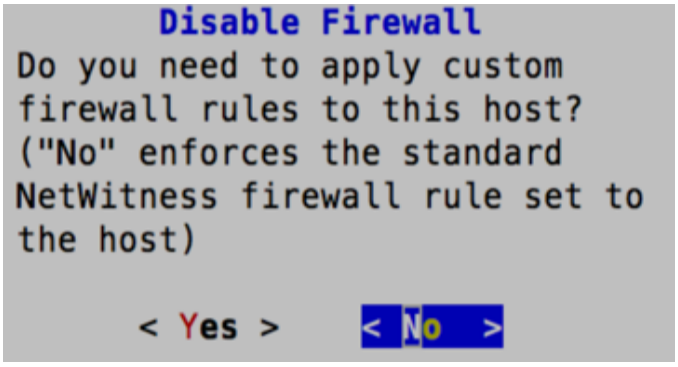
The Update Repo prompt is displayed.



7. Use the down and up arrows to select **1 The Local Repo on the NW Server**, tab to **OK**, and press **Enter**.
8. The NW Server IP Address is displayed.



9. Type the IP address of the NW Server, tab to **OK**, and press **Enter**.
   The disable or use standard firewall configuration prompt is displayed.

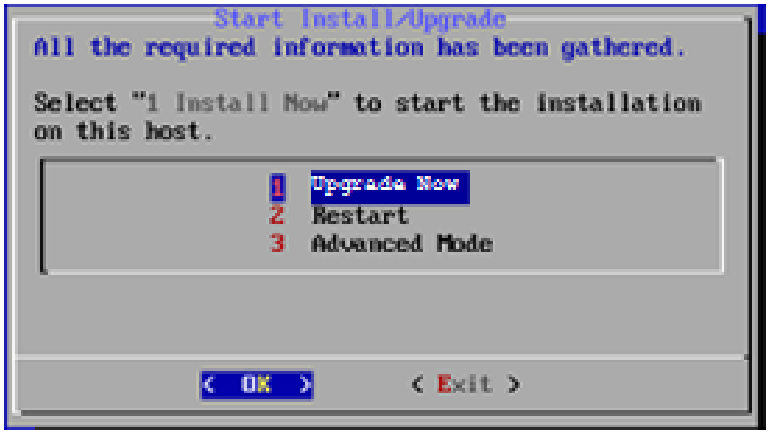


10. Tab to **No**, and press Enter to use the standard firewall configuration. Tab to **Yes**, and press **Enter** to disable the standard firewall configuration.

    - If you select **Yes**, confirm your selection.

    
    - If you select **No**, the standard firewall configuration is applied.

    The start upgrade prompt is displayed.

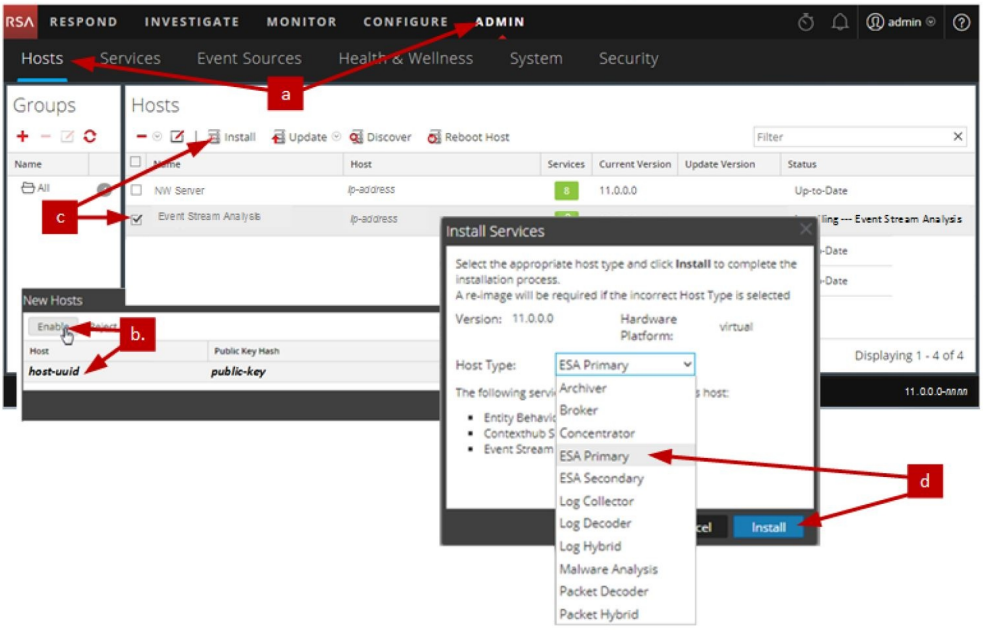
11. Select 1 **Upgrade Now**, tab to **OK**, and press **Enter**.
    When "Installation complete" is displayed, you have upgraded the host to the 11.1.

Once 'nwsetup-cli' script ran successfully on all the components, follow the below steps to complete NW 11.1 Upgrade or Migration:

1. Log into NetWitness Suite. (Type `https://<NW-Server-IP-Address>/login` in your browser to get to the NetWitness Suite Login screen)
2. Click ADMIN > Hosts. The New Hosts dialog is displayed with the Hosts view grayed out in the background. Note: If the New Hosts dialog is not displayed, click Discover in the Hosts view toolbar.
3. Click on the host in the New Hosts dialog and click Enable. The New Hosts dialog closes and the host is displayed in the Hosts view.

4. Select that host (for example, ESA Primary) and click The Install Services dialog is displayed.

   e. Select the appropriate service (for example, **ESA Primary**) and click **Install**.



Update or Install Legacy Windows Collection

Refer to the *RSA NetWitness 11.1 Legacy Windows Collection Guide* on RSA Link (https://community.rsa.com/docs/DOC-75593) for details about how to install or update Legacy Windows collection.

Note: After you update or install Legacy Windows Collection, reboot the system to ensure that Log Collection functions correctly.

Post Upgrade Tasks

This topic contains the tasks you must complete after you upgrade your hosts from 10.6.5.x to 11.1. These tasks are organized by the following categories.

- Global
- NetWitness Endpoint
  RSA supports NetWitness Endpoint versions 4.3.0.4, 4.3.0.5, and 4.4 only for NetWitness Suite 11.1.
- Event Stream Analysis
- Log Collection
- Reporting Engine
- Respond
- NetWitness SecOps Manager
- Security

Global Tasks

Task 1 - Remove Backup-Related Files from Host Local Directories

Caution: 1) You must retain a copy of all backup files on an external host. 2) Validate that you have all your data from your backup restored in 11.1 before you remove the backup-related files from the local directories on your 11.1 hosts.

Backup `.tar` Files

After all the hosts are upgraded to 11.1, you must remove:

- the backup files from the local directories on the hosts.
- all the files from `nw-backup` and `restore` directories on the hosts.

Host	Backup Path	Restore Path
Malware	`/var/lib/rsamlware/nw-backup`	`/var/netwitness/malware_analytics_server/nw-backup/restore`

Host	Backup Path	Restore Path
Event Stream Analysis	/opt/rsa/database/nw-backup	/var/netwitness/database/nw-backup/restore
NW Server	/var/netwitness/database/nw-backup	/var/netwitness/restore
All Other Hosts	/var/netwitness/database/nw-backup	/var/netwitness/database/nw-backup/restore

Task 2 - Restore NTP Servers

You must use the NetWitness Suite 11.1 user interface to restore NTP server configurations. NTP server configuration information is located in `$BUPATH/restore/etc/ntp.conf`. Use the NTP server name and hostname from the `/var/netwitness/restore/etc/ntp.conf` file. See "Configure NTP Servers" in the *RSA NetWitness® Suite 11.1 System Configuration Guide* for detailed instructions on how to add NTP servers. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 3 - Restore Licenses for Environments without FlexNet Operations-On Demand Access

If your environment does not have access to FlexNet Operations-On Demand, you need to re-download your NetWitness Suite licenses. Refer to "Step 1. Register the NetWitness Server" in the *RSA NetWitness Suite Licensing Management Guide* for instructions on how to re-download licenses. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

(Conditional) Task 5 - If You Disabled Standard Firewall Config - Add Custom IPtables

During the upgrade, you have the option of using these rules or disabling them. If you disabled them, follow these instructions as a baseline to create a user-managed firewall rule sets on all the hosts for which you disabled the standard firewall configuration.

Note: You can refer to the `$BUPATH/restore/etc/sysconfig/iptables` and `$BUPATH/restore/etc/sysconfig/ip6tables` in the restore folder of the backup to update the `ip6tables` and `iptables` files. The `/etc/netwitness/firewall.cfg` file contains the standard `iptables` firewall rules.

1. SSH to each host and log in with your root credentials.
2. Update the following `ip6tables` and `iptables` files with the custom firewall rules.
   ```
   /etc/sysconfig/iptables
   /etc/sysconfig/ip6tables
   ```
3. Reload the `iptables` and `ip6tables` services.
   ```
   service iptables reload
   service ip6tables reload
   ```

(Conditional) Task 6 - Specify SSL Ports If You Never Set Up Trusted Connections

Complete this task only if you never set up Trusted Connections. You would not have set up Trusted Connections if you:

- Used the base ISO image for 10.3.2 or earlier.
- Updated the system using RPMs exclusively to get to 10.6.5.

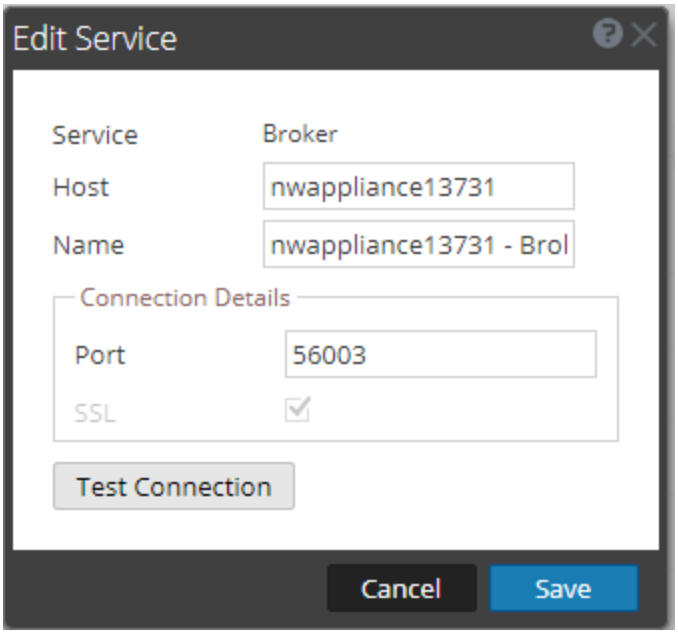
NetWitness Suite 11.1 cannot communicate with the core services for these customers because they are using a non-SSL port 500XX. You must update the Core service ports to an SSL port in the Edit Service dialog.

1. Log in to NetWitness Suite
2. Go to **ADMIN** > **Services**.
3. Select each core service and change there ports from Non-SSL to SSL ports.

Service	Non-SSL	SSL
Broker	50003	56003
Concentrator	50005	56005
Decoder	50004	56004
Log Decoder	50002	56002

4. Click (Edit) from the **Services** view toolbar.
   The Edit Service dialog is displayed.

5. Change the port from Non-SSL to SSL as shown in the table and click **Save**(for example, change the Broker port from 50003 to 56003).



NetWitness Endpoint

Task 7 - Reconfigure Endpoint Alerts Via Message Bus

1. On the NetWitness Endpoint Server, modify the virtual host configuration in the `C:\Program Files\RSA\ECAT\Server\ConsoleServer.exe` file to reflect the following configuration.
   `<add key="IMVirtualHost" value="/rsa/system" />`

   Note: In NetWitness Suite 11.1, the virtual host is `/rsa/system`. For 10.6.5.x and earlier versions, the virtual host is `/rsa/sa`.

2. Restart the API Server and Console Server.
3. SSH to the NW Server and log in with `root` credentials.
4. Submit the following command to add all certificates to the truststore.
   `orchestration-cli-client --update-admin-node`
5. Submit the following command to restart the RabbitMQ server.
   `systemctl restart rabbitmq-server`
   The NetWitness Endpoint account should automatically be available on RabbitMQ.

6. Import the `/etc/pki/nw/ca/nwca-cert.pem` and `/etc/pki/nw/ca/ssca-cert.pem` files from the NW Server and add them to the Trusted Root Certification stores in the Endpoint Server.

Event Stream Analysis Tasks (ESA)

Task 8 - Reconfigure Automated Threat Detection for ESA

If you used Automated Threat Detection in 10.6.5.x, you must complete the following steps to reconfigure it using the ESA Analytics service in 11.1.

1. Log in to NetWitness Suite 11.1
2. Click **ADMIN** > **System** > **ESA Analytics**.
   The Suspicious Domains modules, Command and Control (C2) for Packets and C2 for Logs, require a whitelist named "**domains_whitelist**".
3. Conditional - If your previous Automated Threat Detection whitelist appears on the **Lists** tab of the Context Hub service:
   a. Click **ADMIN**> **Services**, select the Context Hub service, in the action commands ( ) drop-down menu, click **View** > **Config** > **Lists** tab).
   b. Rename your old Automated Threat Detection whitelist to "`domains_whitelist`" for the Suspicious Domains module.

For more information, see the *NetWitness Suite Automated Threat Detection Guide* and the "Configure ESA Analytics" section of the *NetWitness Suite ESA Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 9 - For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint Configure Mutually Authenticated SSL

If you integrate with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint, you must configure Mutually Authenticated SSL on each integrated system so that the application can authenticate itself when connecting to the RabbitMQ message bus.

Note: Use the RabbitMQ usernames and passwords that were obtained when you backed up your 10.6.5.x data (see Backup Instructions).

1. Create a user on the host system that is integrating with NetWitness Suite by logging into the host and running the following `rabbitmqctl` command.

```
> rabbitmqctl add_user <username> <password>
```

For example:

```
> rabbitmqctl add_user wtd-incidents incidents
```

2. Set permissions for users by running the following command (use the username from step 1):
   ```
   > rabbitmqctl set_permissions -p /rsa/system <username> ".*", ".*",
   ".*"
   ```
   For example:
   ```
   > rabbitmqctl set_permissions -p /rsa/system wtd-incidents ".*",
   ".*", ".*"
   ```

Task 10 - Enable Threat - Malware Indicators Dashboard

In 11.1.0, the 10.6.5.x **Threat -Indicators Dashboard** was renamed to **Threat - Malware Indicators Dashboard**. If you used this dashboard in 10.6.5x, you must:

1. Enable the **Threat - Malware Indicators Dashboard** in 11.1.
2. Set datasource for new dashlets.

   See "Dashlets" in the RSA Link (https://community.rsa.com/docs/DOC-81463).

Log Collection

Task 11 - Reset Stable System Values for Log Collector after Upgrade

Complete the following tasks to reset stable system values for the Log Collector after you upgrade it to 11.1 to ensure that all collection protocols resume normal operation.

Reset Stable System Values for the Lockbox

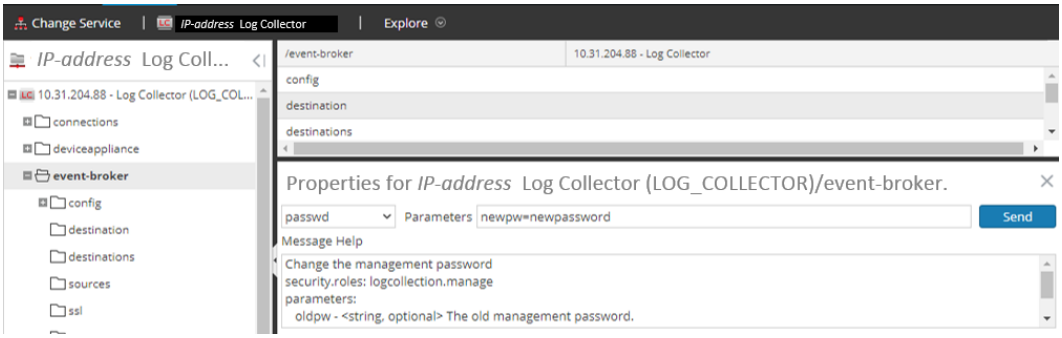
The Lockbox stores the key for encrypting event source and other passwords for the Log Collector. The Log Collector service cannot open the Lockbox because of the stable system value changes. As a result, you must Reset Stable System Values for the Lockbox . See "Log Collection: Step 3. Set Up a Lockbox" in the *RSA NetWitness® SuiteLog Collection Configuration Guide* for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Update Log Collector Service RabbitMQ User Account Password

If the logcollector service RabbitMQ user account password was changed, you must reenter it after the 11.1 upgrade.

1. Log in to NetWitness Suite.
2. Go to **ADMIN > Services**.
3. Select the Log Collector service.
4. Click (Actions) > **View** > **Explore**.

5. Right click `event-broker` > **Properties**.
6. Select `passwd` from the drop-down list, enter `newpw=><newpassword>` in Parameters (where `<newpassword>` is the RabbitMQ user account password), and click **Send**.



(Optional for Upgrades from 10.6.5.x with FIPS enabled for Log Collectors, Log Decoders and Packet Decoders) Task 12 - Enable FIPS Mode

FIPS is enabled on all services except Log Collector Log Decoder, and Decoder. FIPS cannot be disabled on any services except Log Collector, Log Decoder, and Decoder. For information about how to enable FIPS for these services, see the "Sys Maintenance: Activate or Deactivate FIPS" topic in the *RSA NetWitness® SuiteSystem Maintenance Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Reporting Engine

Task 13 - Restore the CA certificates for External Syslog Servers for Reporting Engine

You must restore CA certificates after the upgrade from the back up you made prior to the upgrade. The Backup script backs up the 10.6.5.x CA certificates into the `/usr/lib/jvm/java-1.8.0-openjdk-1.8.0.111-0.b15.el6_8.x86_64/jre/lib/security/cacerts` directory.

Complete the following procedure to restore the CA certificates in 11.1.

1. SSH to the NW Server host.
2. Export the CA certificates.
   ```
   keytool -export -alias <alias_name> -keystorepath_to_keystore_file -rfc -file path_to_certificate_file
   ```
3. Copy the CA pem into `/etc/pki/nw/trust/import` directory.

(Conditional) Task 14 - Restore External Storage for Reporting Engine

If you have external storage for the Reporting Engine (such as SAN or NAS for storing reports), you must restore the mount you unlinked before the upgrade. See "Reporting Engine: Add Additional Space for Large Reports" in the *RSA NetWitness® Suite Reporting Engine Configuration Guide* for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Respond

Task 15 - Restore Respond Service Custom Keys

In 10.6.5.x, if you added custom key for use in the groupBy clause, the `alert_rules.json` file was modified. The `alert_rules.json` file contains aggregation rule schema. RSA moved the `alert_rules.json` file to the following new location: `/var/lib/netwitness/respond-server/scripts`

1. Copy the custom keys from `/opt/rsa/im/fields/alert_rules.json` file in the backup directory.

   This directory is where the `alert_rules.json` file is restored from the 10.6.5.x backup.

2. Go to the `/var/lib/netwitness/respond-server/data/aggregation_rule_schema.json` in 11.1.

   This is the new file for 11.1.

3. Edit the `/var/lib/netwitness/respond-server/data/aggregation_rule_schema.json` to include the custom keys you copied in step one.

Task 16 - Restore Customized Respond Service Normalization Scripts

RSA re-factored the Respond service normalization scripts in 11.1 and moved them to the following new location:
`/var/lib/netwitness/respond-server/scripts`
If you customized these scripts in 10.6.5.x, you must:

1. Go to the to the `/opt/rsa/im/scripts` directory.
   This directory is where the following Respond service normalization scripts are restored from the 10.6.5.x backup.
   `data_privacy_map.js`
   `normalize_alerts.js`
   `normalize_core_alerts.js`
   `normalize_ecat_alerts.js`
   `normalize_ma_alerts.js`
   `normalize_wtd_alerts.js`
   `utils.js`
2. Copy any custom logic from the 10.6.5.x scripts.
3. Go to the `/var/lib/netwitness/respond-server/scripts` directory.
   This directory is where NetWitness Suite 11.1 stores the re-factored scripts.
4. Edit the new scripts to include the custom logic you copied in step 2 from the 10.6.5.x scripts.
5. Copy any custom logic from `/opt/rsa/im/fields/alert_rules.json` file.
   The `alert_rules.json` file contains aggregation rule schema.

(Conditional) Task 17 - Enable Disabled 10.6.5.x Incident Management Data Retention

Complete the following procedure to enable the Incident Management data retention jobs you disabled prior to upgrade.

1. Log in to RSA NetWitness® Suite.
2. Go to **ADMIN** > **Services** and select the **Respond server**.
3. Click the (Actions), **View** > **Explore**.
4. Go to the `respond/dataretention` node.
5. Set the `enable` parameter to `true`.

(Conditional) Task 18 - Restore Custom Analysts Roles

If you had custom analyst roles in 10.6.5.x, you must reinstate them in 11.1. See *Adding Roles and Assigning Permissions for the Roles* in the *RSA NetWitness Suite Warehouse Analytics Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

NetWitness SecOps Manager

Task 19 -Reconfigure NW SecOps Manager Integration

For information on how to reconfigure NW SecOps for Event Stream Analysis, Reporting Engine, and Respond, see *RSA Archer Integration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

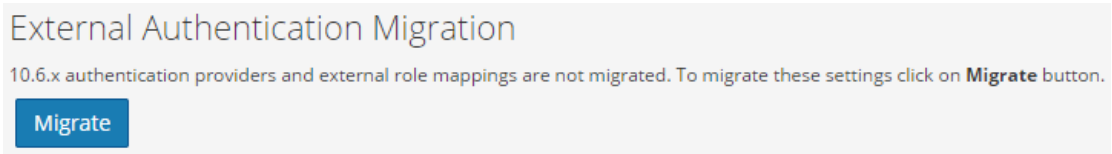
Security

Task 20 - Migrate Active Directory (AD)

The first time you log into the NetWitness Suite 11.1 User Interface, you must click on the Migrate button to complete the migration of AD.

Caution: If you did not upgrade from 10.6.4.2, you must apply the 11.0.0.1 patch immediately before you first log into NetWitness Suite 11.1 and migrate Active Directory. You do not need to apply the 11.0.0.1 patch if you upgraded to 11.1 from 10.6.4.2.

1. Log in to NetWitness Suite with your `admin user` credentials.
2. Click **ADMIN** > **SECURITY** and click the **Settings** tab.
   The following dialog is displayed.



3. Click **Migrate**.
   The migration is complete and the dialog closes.

Task 21 - Modify Migrated AD Configuration to Upload Certificate

If the you used a self-signed certificate in Active Directory (AD) server, and enabled SSL for the AD connection in 10.6.4.x, you must modify the migrated AD configuration to upload the certificate (either the self-signed cert or the CA cert).

Complete the following procedure to modify the migrated AD configuration to upload the certificate (either the self-signed cert or the CA cert).

1. Log in to NetWitness Suite.
2. Go to **ADMIN** > **Security** and click the **Settings** tab.
3. Under **Active Directory Settings**, select an AD configuration and click .
   The Edit Configuration dialog is displayed.
4. Go to the **Certificate File** field, click **Browse**, and select a certificate from your network.
5. Click **Save**.

Task 22. Address Authentication Failure in 11.1

Users cannot log in to NetWitness Suite User Interface after you upgrade to 11.1 because the Interface cannot retrieve user account information from MongoDB.

- Apply the 11.0.0.1 patch to fix this issue immediately after you upgrade to 11.1.

Task 23 - Reconfigure Pluggable Authentication Module (PAM) in 11.1

You must reconfigure PAM after you upgrade to 11.1. See "Configure PAM Login Capability" in the *RSA NetWitness® Suite System Security and User Management Guide*for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

You can refer to your 10.6.5.x PAM configuration files in the **/etc** directory in the your 10.6.5.x backup data for guidance.

Appendix A. Troubleshooting

This section describes problems that you may encounter during the upgrade with solutions. In most cases, NetWitness Suite creates log messages when it encounters these problems.

Note: If you cannot resolve any upgrade issue using the following troubleshooting solutions, contact Customer Support (https://community.rsa.com/docs/DOC-1294)

This section has troubleshooting documentation for the following services, features, and processes.

- 11.1 Setup Program (`nwsetup-tui`)
- Backup
- Event Stream Analysis
- General
- Log Collector Service (`nwlogcollector`)
- NW Server
- Reporting Engine

11.1 Setup Program (nwsetup-tui)

Problem	Host Setup Program (nwsetup-tui) exits and creates the following error message in /var/log/netwitness/bootstrap/launch/security-server/security-server.log: <yyyy-mm-dd hh:mm:ss,nnn> [main] ERROR SystemOperation|Service startup failed. Running in safe mode org.h2.jdbc.JdbcSQLException: The database is read only [90097-193] at org.h2.message.DbException.getJdbcSQLException(DbException.java:345) ... at org.springframework.jdbc.datasource.AbstractDriverBasedDataSource.getConnection(AbstractDriverBasedDataSource.java:159) at com.rsa.asoc.security.upgrade.legacy.MigrationDatabase.<init>(MigrationDatabase.java:113)
Cause	The H2 database needs write permission to complete the host setup.
Solution	From the NW Server command line, provide write permission to H2.db, restart the NW Server, and restart nwsetup-tui Setup Program. chmod o+w /var/lib/netwitness/uax/db/platform.h2.db systemctl restart rsa-nw-security-server.service nwsetup-tui

Backup (`nw-backup` script)

Message	`WARNING: Incorrect ESA Mongo admin password for host <hostname>.`
Cause	ESA Mongo admin password contains special characters (for example, '!@#$%^qwerty').
Solution	Change the ESA mongo admin password back to the original default of 'netwitness' before running backup. See "ESA Config: Change MongoDB Password for admin Account" the the *RSA NetWitness® Suite Event Stream Analysis Configuration Guide. Go to the* Master Table of Contents *for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.*

Event Stream Analysis

Problem	ESA service crashes after you upgrade to 11.1 from a FIPS enabled setup.
Cause	ESA service is pointing to an invalid keystore.

Solution	1. SSH to the ESAPrimary host and log in.
	2. In the `/opt/rsa/esa/conf/wrapper.conf` file, replace the following line:
	`wrapper.java.additional.5=-Djavax.net.ssl.keyStore=/opt/rsa/esa/../carlos/keystore`
	with:
	`wrapper.java.additional.5=-Djavax.net.ssl.keyStore=/opt/rsa/carlos/keystore`
	3. Submit the following command to restart ESA .
	`systemctl restart rsa-nw-esa-server`
	Note: If you have multiple ESA hosts and you encounter that same problem, repeat steps 1 through 3 inclusive on each secondary ESA host.

General

Logs referred to in this section are posted to `/var/log/install/install.log` on the NW Server Host.

Message	`ERROR com.rsa.smc.sa.admin.web.controller.ajax.health.AlarmsController - Cannot connect to System Management Service`
Cause	NetWitness Suite sees the Service Management Service (SMS) as down after successful upgrade even though the service is running.
Solution	Restart SMS service using below command. `systemctl restart rsa-sms`

Message	`<timestamp> <host>: SMS_PostInstall: INFO: Free disk space on /opt is nGB` `<timestamp> <host>: SMS_PostInstall: WARN: Disk space check failed on /opt. The available disk space nGB is less than the recommended minimum disk space of 10GB.`
Cause	Low or insufficient disk space allocated for the SMS service.
Solution	RSA recommends that you provide a minimum of 10 GB of disk space for the SMS service to run optimally.

Problem	After you run the Setup Program for a non-NW Server host, you must go in to the UI, enable the host, and install the service on the host from the Hosts View. If you see "Install error View Details" in the **Status** column of the Hosts view, the host lost connectivity due to network issues.
Solution	Re-install the service on the host from the Hosts view.

Log Collector Service (`nwlogcollector`)

Log Collector logs are posted to `/var/log/install/nwlogcollector_install.log` on the host running the `nwlogcollector` service.

Message	`<timestamp>.NwLogCollector_PostInstall: Lockbox Status : Failed to open lockbox: The lockbox stable value threshold was not met because the system fingerprint has changed. To reset the system fingerprint, open the lockbox using the passphrase.`
Cause	The Log Collector Lockbox failed to open after the update.
Solution	Log in to NetWitness Suite and reset the system fingerprint by resetting the stable system value password for the Lockbox as described in the "Reset the Stable System Value" topic under "Configure Lockbox Security Settings" topic in the *Log Collection Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Message	*timestamp* `NwLogCollector_PostInstall: Lockbox Status : Not Found`
Cause	The Log Collector Lockbox is not configured after the update.
Solution	(Conditional) If you use a Log Collector Lockbox, log in to NetWitness Suite and configure the Lockbox as described in the"Configure Lockbox Security Settings" topic in the *Log Collection Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents..

Message	`<timestamp>: NwLogCollector_PostInstall: Lockbox Status : Lockbox maintenance required: The lockbox stable value threshold requires resetting. To reset the system fingerprint, select Reset Stable System Value on the settings page of the Log Collector.`
Cause	You need to reset the stable value threshold field for the Log Collector Lockbox.
Solution	Log in to NetWitness Suite and reset the stable system value password for the Lockbox as described in "Reset the Stable System Value" topic under "Configure Lockbox Security Settings" topic in the *Log Collection Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Problem	You have prepared a Log Collector for upgrade and no longer want to upgrade at this time.
Cause	Delay in upgrade.
Solution	Use the following command string to revert a Log Collector that has been prepared for upgrade back to resume normal operation. `# /opt/rsa/nwlogcollector/nwtools/prepare-for-migrate.sh --revert`

NW Server

These logs are posted to `/var/netwitness/uax/logs/sa.log` on the NW Server Host.

Problem	After upgrade, you notice that Audit logs are not getting forwarded to the configured Global Audit Setup; or, The following message seen in the sa.log. `Syslog Configuration migration failed. Restart jetty service to fix this issue`
Cause	NW Server Global Audit setup migration failed to migrate from 10.6.5 to 11.1.
Solution	1. SSH to the NW Server. 2. Submit the following command. `orchestration-cli-client --update-admin-node`

Reporting Engine Service

Reporting Engine Update logs are posted to to`/var/log/re_install.log` file on the host running the Reporting Engine service.

Message	`<timestamp> : Available free space in /home/rsasoc/rsa/soc/reporting-engine [ existing-GB ] is less than the required space [ required-GB ]`
Cause	Update of the Reporting Engine failed because you do not have enough disk space.
Solution	Free up the disk space to accommodate the required space shown in the log message. See the "Add Additional Space for Large Reports" topic in the *Reporting Engine Configuration Guide* for instructions on how to free up disk space. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Appendix B. Stopping and Restarting Data Capture and Aggregation

RSA recommends that you stop packet and log capture and aggregation before upgrading a Decoder, Concentrator, and Broker host to 11.1. If you do this, you must restart packet and log capture and aggregation after updating these hosts.

Stop Data Capture and Aggregation

Stop Packet Capture

To stop packet capture:

1. Log in to NetWitness Suite and go to **ADMIN** > **Services**.
   The Services view is displayed.
2. Select each **Decoder** service.
   
3. Under (actions), select **View** > **System**.
4. In the toolbar, click

   .

Stop Log Capture

To stop log capture:

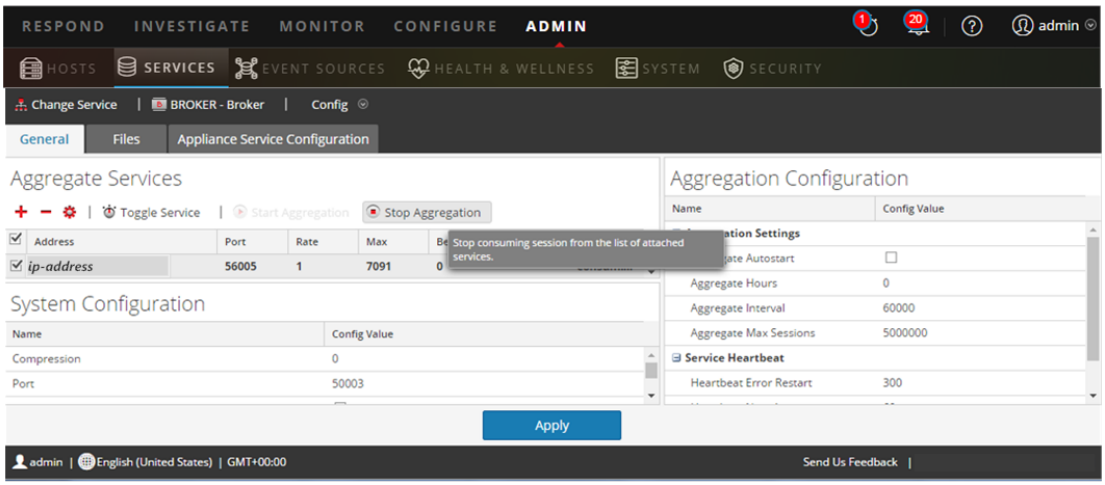
1. Log in to NetWitness Suite and go to **ADMIN** > **Services**.
   The Services view is displayed.
2. Select each **Log Decoder** service.
   
3. Under (actions), select **View** > **System**.
4. In the toolbar, click

   .

Stop Aggregation

1. Log in to NetWitness Suite
2. Go to **ADMIN** > **Services**.

3. Select the **Broker** service.
4. Under (actions), select **View** > **Config**.
5. The **General** tab is displayed.



6. Under **Aggregated Services** click

.

Start Data Capture and Aggregation

Restart packet and log capture and aggregation after updating to 11.1.

Start Packet Capture

To start packet capture:

1. Login to **NetWitness Suite**.
2. Go to **ADMIN** > **Services**.
   The Services view is displayed.
3. Select each **Decoder** service.
4. Under (actions), select **View** > **System**.
5. In the toolbar, click

.

Start Log Capture

To start log capture:

1. In the **NetWitness Suite** menu, select **ADMIN** > **Services**.
   The Services view is displayed.

2. Select each **Log Decoder** service.
3. Under (actions), select **View** > **System**.
4. In the toolbar, click

.

Start Aggregation

1. Log in to **.**NetWitness Suite.
2. Go to **ADMIN** > **Services**.
3. Select the **Broker** service.
4. Under (actions), select **View** > **Config**.
5. The **General** tab is displayed.
6. Under **Aggregated Services** click 
.

CentOS6 to CentOS7 Upgrade 7

RSA NetWitness® Suite 11.1 Upgrade Path 8

Hardware, Deployments, Services, and Features Not Supported in 11.1 8

Event Stream Analysis (ESA) Upgrade Considerations 9

Upgrade Phases 9

Investigate in Mixed Mode 10

Contact Customer Support 13

Upgrade Preparation Tasks **14**

Global 14

Task 1 - Review Core Ports and Open Firewall Ports 14

Task 2 - Record Your 10.6.5.x admin user Password 15

Task 3 - Create a Backup of /etc/fstab File 15

Reporting Engine 15

(Conditional) Task 4 - Unlink External Storage 15

Backup Instructions **16**

Task 1 - Set up an External Host for Backing up Files 17

Task 2 - Create a List of Hosts to Back up 19

Troubleshooting Information 20

Task 3 - Set up Authentication Between Backup and Target Hosts 22

Task 4 - Check for Backup Requirements for Specific Types of Hosts 22

For All Host Types 22

For Concentrator, or Broker Hosts: Stop Data Capture and Aggregation 23

Log Collectors (LC) and Virtual Log Collectors (VLCs): Run prepare-for-migrate.sh 23

For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint: List RabbitMQ Usernames and Passwords 25

For Bluecoat Event Sources 25

Task 5 - Check for Adequate Space for the Backup 25

Task 6 - Back up Your Host Systems 26

Post Backup Tasks 29

Task 1 - Save a Copy of the all-systems File and the Backup Tar files 29

Task 2 - Ensure Required Backup Files Were Generated 29
Task 3 - (Conditional) For Multiple ESA Hosts, Copy mongodb tar files to Primary ESA Host 30
Task 4 - Ensure All Required Backup Files are on Each Host 30

Migrate Disk Drives from 10.6.5.x to 11.1 33

Prerequisites: 33
Task 1 - Deploy NW 11.1 VM 35
Task 2 - Delete Virtual Machine and OS disk resource of NW 10.6.5 VM 35
Task 3 - Install Azure PowerShell modules on a local Windows machine 37
Task 4 - IP Retention: Run the PowerShell script 37
Task 5 - Perform Disk Migration 39
Task 6 - Data Restoration 40
Task 7 - Delete all NW 11.1 Deployment 'Network interface' Resources 42

Set Up Virtual Hosts in 11.1 43

Phase 1 - Set Up NW Server, Event Stream Analysis, and Broker or Concentrator Hosts 43
Task 1 - Set Up 11.1 NetWitness Server 43
Task 2 - Setup 11.1 ESA 43
Task 3 - Set Up 11.1 Broker or Concentrator 43
Phase 2 - Set Up The Rest of the Component Hosts 44
Concentrator Hosts 44
Log Decoder Host 44
Virtual Log Collector Host 44
Set Up 11.1 NW Server Host 46
Set Up 11.1 Non-NW Server Host 51

Update or Install Legacy Windows Collection 56

Post Upgrade Tasks 57

Global Tasks 57
Task 1 - Remove Backup-Related Files from Host Local Directories 57
Task 2 - Restore NTP Servers 58
Task 3 - Restore Licenses for Environments without FlexNet Operations-On Demand Access 58
Task 4 - Remap Virtual NW Server License to 10.6.5.x MAC Address 58
(Conditional) Task 5 - If You Disabled Standard Firewall Config - Add Custom IPtables 58
(Conditional) Task 6 - Specify SSL Ports If You Never Set Up Trusted Connections 59

NetWitness Endpoint 60
Task 7 - Reconfigure Endpoint Alerts Via Message Bus 60
Event Stream Analysis Tasks (ESA) 61
Task 8 - Reconfigure Automated Threat Detection for ESA 61
Task 9 - For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint Configure Mutually Authenticated SSL 61
Task 10 - Enable Threat - Malware Indicators Dashboard 62
Log Collection 62
Task 11 - Reset Stable System Values for Log Collector after Upgrade 62
(Optional for Upgrades from 10.6.5.x with FIPS enabled for Log Collectors, Log Decoders and Packet Decoders) Task 12 - Enable FIPS Mode 63
Reporting Engine 63
Task 13 - Restore the CA certificates for External Syslog Servers for Reporting Engine ..63
(Conditional) Task 14 - Restore External Storage for Reporting Engine 64
Respond 64
Task 15 - Restore Respond Service Custom Keys 64
Task 16 - Restore Customized Respond Service Normalization Scripts 65
(Conditional) Task 18 - Restore Custom Analysts Roles 65
NetWitness SecOps Manager 65
Task 19 -Reconfigure NW SecOps Manager Integration 65
Security 66
Task 20 - Migrate Active Directory (AD) 66
Task 21 - Modify Migrated AD Configuration to Upload Certificate 66
Task 23 - Reconfigure Pluggable Authentication Module (PAM) in 11.1 66

Appendix A. Troubleshooting 68

11.1 Setup Program (nwsetup-tui) 69
Backup (nw-backup script) 70
Event Stream Analysis 70
General 71
Log Collector Service (nwlogcollector) 72
NW Server 74
Reporting Engine Service 74

Appendix B. Stopping and Restarting Data Capture and Aggregation ..75

Stop Data Capture and Aggregation 75
Start Data Capture and Aggregation 77

Revision History **78**

Introduction

The instructions in this guide apply to the upgrade of Azure for RSA NetWitness Suite 10.6.5.x to 11.1.0.0 exclusively. See the *RSA NetWitness Suite Physical Host Upgrade Guide* for instructions on how to upgrade your 10.6.5.x physical hosts to 11.1. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents. This document assumes that the appliances are in Azure cloud.

NetWitness Suite 11.1 is a major release that affects all products in the NetWitness Suite in Azure. The components of the suite are the NetWitness Server (NW Server), Archiver, Broker, Concentrator, Context Hub, Entity Behavior Analytics, Event Stream Analysis, Investigate, Log Collector, Log Decoder, Malware Analysis, Reporting Engine, Response, and Workbench.

CentOS6 to CentOS7 Upgrade

NetWitness Suite 11.1 is a major release that involves upgrading to a newer version of the operating system (CentOS6 to CentOS7). In addition, the 11.1 platform environment has been improved greatly to accommodate current and future, physical and virtual deployment types. These changes require an upgrade to the new environment and an upgrade of the functionality.

RSA NetWitness® Suite 11.1 Upgrade Path

The supported Upgrade path for RSA NetWitness® Suite 11.1 is Security Analytics 10.6.5.x. If you are running a version of NetWitness Suite that is prior to 10.6.5.x, you must update to 10.6.5.x before you can upgrade to 11.1. See the *RSA Security Analytics 10.6.5 Update Guide* (https://community.rsa.com/docs/DOC-85119) on RSA Link.

For updating from RSA NetWitness® Suite 11.0.0.0 to RSA NetWitness® Suite 11.1.0.0, please see the *Update Guide from 11.0.x to 11.1.0.0 Guide*.

Hardware, Deployments, Services, and Features Not Supported in 11.1

RSA does not support upgrade of the following hardware, deployments, services, and features to 11.1.

- RSA All-in-One (AIO) Appliance
- Multiple NetWitness Server Deployment
- IPDB service
- Malware Analysis service co-located on the SA Server (Upgrade of Malware Analysis Enterprise is supported in 11.1.)
- Standalone Warehouse Connector service (Upgrade of a co-located Warehouse Connector is supported in 11.1.)
- Custom Health & Wellness policy in 10.6.x for the Context Hub Service
  After you upgrade to NetWitness 11.1, your custom policy is not present. In its place, there is the out-of-the-box Context hub Server Monitoring Policy in the user interface, which is specific for version 11.1.
- Defense Information Strategic Agency-Security Technical Information Guide (DISA-STIG) hardened deployments.
- Warehouse Analytics (Data Science)
- Malware Analysis
- Packet Decoder

Event Stream Analysis (ESA) Upgrade Considerations

In RSA NetWitness® Suite 11.1, RSA changed how ESA Correlation Rules store and transmit the alerts the system generates. In 11.1, ESA sends all alerts to a central Alert system. The local mongo storage in ESA 10.6.5.x has been removed.

Caution: If you do not use Incident Management in 10.6.5.x, carefully consider whether or not to upgrade to version 11.1.

The following guidelines should help you determine whether or not to upgrade your ESA hosts to 11.1.

In your 10.6.5.x deployment, if you have:

- One ESA host, with or without Incident Management configured, upgrade to 11.1.
- Multiple ESA hosts configured to use Incident Management – The system will continue to aggregate alerts centrally. If the system is correctly sized and operating as intended in 10.6.5.x, you can upgrade to version 11.1.
- Multiple ESA hosts without configuration to use Incident Management and you are connecting to individual ESA hosts to view alerts, do not upgrade to version 11.1.

Upgrade Phases

RSA recommends that you stagger host upgrades as described in this section. The update to CentOS7 and the need of a physical or iDRAC access cause the 11.1 upgrade to take more time than most upgrades.

Caution: If you stagger the upgrade, you:
• must upgrade the hosts in Phase 1 first, in the order shown.
• may not have all the features operational until you update your entire deployment.
• will not have service administrative features available until you upgrade all the hosts in your deployment.

Phase 1

You perform Phase 1 first and you must upgrade the hosts in the following order:

1. Security Analytics Server host
2. Event Stream Analysis hosts
3. Broker hosts (if you do not have a Broker, upgrade your Concentrator hosts)
   The 11.1 NW Server cannot communicate with 10.6.5.x core services for the new Investigate functionality. This is why you must upgrade the Broker or Concentrator hosts in Phase 1.

Phase 2

Upgrade the rest of your hosts.

In Phase 2, (other than Log Collection hosts with downstream event destinations) there is no technical reason to upgrade your hosts in the following order. RSA recommends that you follow the order in Phase 2 to reduce:

- functionality loss during investigation.
- downtime that results in the loss of packet and log capture.

1. Concentrator hosts
2. Archiver hosts
3. Log Collection hosts - Log Collectors on Log Decoder hosts (LDs), Virtual Log Collectors (VLCs) and Legacy Windows Collectors (LWCs)
   Before you upgrade a log collection host , you must prepare it for the upgrade. Part of this preparation ensures that no event data remains in the queues. This requires you to keep the downstream destinations of event data (Log Collectors, Virtual Log Collectors and Log Decoders) up and functioning properly.

   If you have event data destinations downstream from the Log Decoder, you must prepare and upgrade log collectors in the following order.

   a. LDs (one LD at a time)

   b. VLCs and LWCs

   If you do not have event data destinations, downstream from the Log Decoder, you can prepare and upgrade multiple LDs, VLCs, and LWCs together.
4. All other hosts

See "Running in Mixed Mode" under "The Basics" in the RSA 11.1 *NetWitness Suite Hosts and Services Getting Started Guide* for:

- Functionality gaps encountered while running in this mode.
- Examples of staggered upgrades.

Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Investigate in Mixed Mode

Mixed mode occurs when some services are upgraded to 11.1 and some are still on 10.6.x. This happens when you upgrade to 11.1 in phases.

Note: You must follow the host upgrade sequence as shown in Upgrade Phases to ensure complete Investigate functionality. The 11.1 Investigate server is installed when you upgrade the SA Server, but Broker hosts need to be upgraded to 11.0 to access the Event Analysis View.

After you upgrade all services to 11.1, when an analyst conducts an investigation, Role-Based Access Control (RBAC) of downloads works consistently to limit access to restricted data.

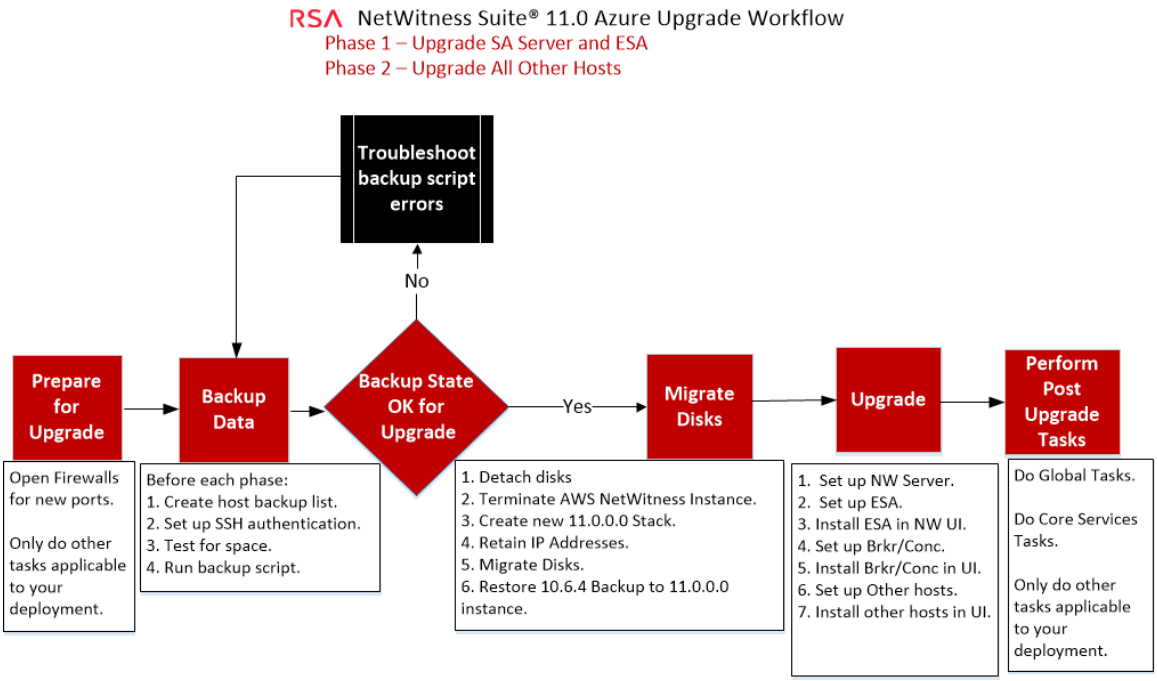
In mixed mode (that is, some services are upgraded to 11.1 and some are still on 10.6.x), when an analyst conducts an investigation, RBAC is not applied uniformly to viewing and downloads.

If the `sdk.packets` setting has not been disabled on the 10.6.x services, analysts with SDK meta and roles permissions in place to restrict viewing and reconstructing an event's content can download the PCAP of an event that has content restrictions. Other types of downloads appear to download, then generate errors due to insufficient permissions, and the data is still protected.

During a phased update, you can disable the `sdk.packets` setting on 10.6.x services to limit the analyst from downloading any PCAPs or logs during mixed mode. After you update all services to 11.1, RBAC works consistently across all services.

This table identifies what you can see and download in Investigate when your NetWitness Server is on version 11.1 connected to services at a lower version.

Connecting Service Version	Affected View	User Role	Can See	Can Download Successfully	Can Download with Errors
11.1 Broker -> 10.x Concentrator	Events View	Analyst		PCAP	File archive is downloaded but cannot unzip
	Event Reconstruction View	Analyst		PCAP	File archive is downloaded but cannot unzip
	Event Analysis View	Analyst		PCAP	Error Retrieving Payload from Service for Payload, Request Payload, Response Payload
	Event Reconstruction View	Admin			Files archive is downloaded but cannot unzip
11.1 Broker -> 11.1 Concentrator	Event Reconstruction View	Analyst and Data Privacy Officer	RBAC permitted items		Files archive is downloaded but cannot unzip
	Event Reconstruction View				PCAPs and logs are downloaded as zero bytes



Contact Customer Support

Refer to the Contact RSA Customer Support page (https://community.rsa.com/docs/DOC-1294) in RSA Link for instructions on how to get help on RSA NetWitness Suite 11.1.

Upgrade Preparation Tasks

Complete the following tasks to prepare for the upgrade to NetWitness Suite 11.1. These tasks are organized by the following categories.

- Global
- Reporting Engine
- Respond and Incident Management

Global

You must complete these tasks regardless of how you deploy NetWitness Suite and which components you use.

Task 1 - Review Core Ports and Open Firewall Ports

The following table lists new ports in 11.1.

Caution: Make sure that the new ports are implemented and tested before upgrading so that upgrade does not fail due to missing ports.

NW Server Host

Source Host	Destination Host	Destination Ports	Comments
NW Hosts	NW Server	TCP 4505, 4506	Salt Master Ports
NW Hosts	NW Server	TCP 27017	MongoDB

ESA Host

Source Host	Destination Host	Destination Ports	Comments
NW Server, NW Endpoint, ESA Secondary	ESA Primary	TCP 27017	MongoDB

All NetWitness Suite core ports are listed in the "Network Architecture and Ports" topic in the *RSA NetWitness® Suite Deployment Guide* in case you need to reconfigure NetWitness Suite services and firewalls. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 2 - Record Your 10.6.5.x `admin user` Password

Record your 10.6.5.x `admin user` password. You will need it to complete the upgrade.

Task 3 - Create a Backup of `/etc/fstab` File

Copy the `/etc/fstab` file from all VMs to your local machine (backup host or remote machine).

Note: You need this file to restore a VM with external storage mounts.

Reporting Engine

(Conditional) Task 4 - Unlink External Storage

If the Reporting Engine has external storage [such as Storage Area Network (SAN) or Network Attached Storage (NAS) for storing reports] you must perform the follow steps to unlink the storage.

In these steps:

- `/home/rsasoc/rsa/soc/reporting-engine/` is the Reporting Engine home directory.
- `/externalStorage/` is where the external storage is mounted.

1. SSH to the Reporting Engine host and log in with your `root` credentials.
2. Stop the Reporting Engine service.
   ```
   stop rsasoc_re
   ```
3. Switch to `rsasoc` user.
   ```
   su rsasoc
   ```
4. Change to the Reporting Engine the home directory.
   ```
   cd /home/rsasoc/rsa/soc/reporting-engine/
   ```
5. Unlink the `resultstore` directory mounted to external storage.
   ```
   unlink /externalStorage/resultstore
   ```
6. Unlink the `formattedReports` directory mounted to external storage.
   ```
   unlink /externalStorage/formattedReports
   ```

Backup Instructions

Backing up your configuration data for all your hosts from 10.6.5.x is the first step in upgrading from 10.6.5.x releases to 11.1.0.0.

Note: It is important that you place Custom Certificate files and any other certificate authority (CA) files in the `/root/customcerts` folder to ensure that these certificate files are backed up. Your custom certificate files that are placed in this directory will be automatically restored during the upgrade process. After upgrading to 11.1.0.0, your custom certificate files will be located in `/etc/pki/nw/trust/import`. For more information about backing up these types of files, see step 1 in For All Host Types

Caution: 1) These services are not supported in the 10.6.5.x backup and upgrade process.
- IPDB
- All in One servers
- Malware Analysis Co-Located on the NetWitness Server
- Standalone Warehouse Connector

The following types of hosts can be backed up and are automatically restored during the upgrade process:

- **NetWitness Server** (may include Malware Analysis, NetWitness Respond, Health and Wellness, and Reporting Engine)
- **Archiver**
- **Broker**
- **Event Stream Analysis** (including Context Hub and NetWitness Respond database)
- **Concentrator**
- **Log Decoder** (including Local LogCollector and Warehouse Connector, if installed)
- **Virtual Log Collector**

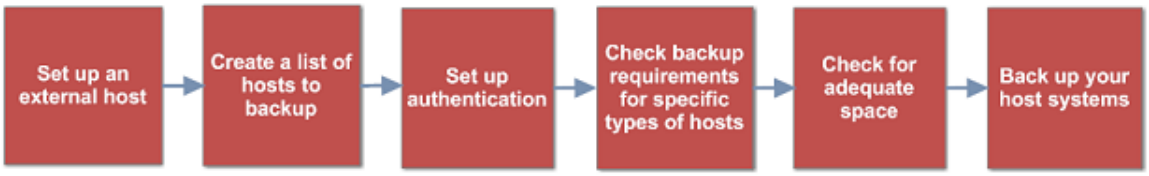
The following types of files are automatically backed up but must be restored manually after the upgrade process:

- PAM configuration files: For information about restoring the PAM configuration files, refer to "Task 5 - Reconfigure Plugable Authentication Module (PAM) in 11.1.0.0", in the "Global" section of the Post Upgrade Tasks.
- `/etc/pfring/mtu.conf` and `/etc/init.d/pf_ring`: To restore these files you must manually retrieve them. The `/etc/pfring/mtu.conf` files will be located in `/var/netwitness/database/nw-backup/restore/etc/pfring/mtu.conf`, and the `/etc/init.d/pf_ring` files will be located in `/var/netwitness/database/nw-`

`backup/restore/etc/init.d/pf_ring`. For information about how to restore these files, see "(Conditional) Task 2 - Restore Files for 10G Decoder" in the "Hardware Related Tasks" section of Post Upgrade Tasks.

Note: If you have problems during the backup or upgrade processes and you lose data, you can recover the data and start the process again. For information about recovering lost data, see "Recover Data After System Failure" in the *System Maintenance Guide*.

The following diagram shows the high-level task flow of the steps you perform to back up your hosts.



The following sections describe each of these tasks:

- Task 1 - Set up an External Host for Backing up Files
- Task 2 - Create a List of Hosts to Back up
- Task 3 - Set up Authentication Between Backup and Target Hosts
- Task 4 - Check for Backup Requirements for Specific Types of Hosts
- Task 5 - Check for Adequate Space for the Backup
- Task 6 - Back up Your Host Systems
- Post Backup Tasks

Task 1 - Set up an External Host for Backing up Files

You must set up an external host to use for backing up files. The host must be running Centos 6 with connectivity through SSH to the NetWitness Suite stack of hosts.

Ensure that the host names for the systems to be backed up are resolvable on the backup host machine, either by DNS or listed in the `/etc/hosts` file.

Note: These scripts are designed to run on CentOS 6 only. You must execute these scripts on CentOS 6 machines.

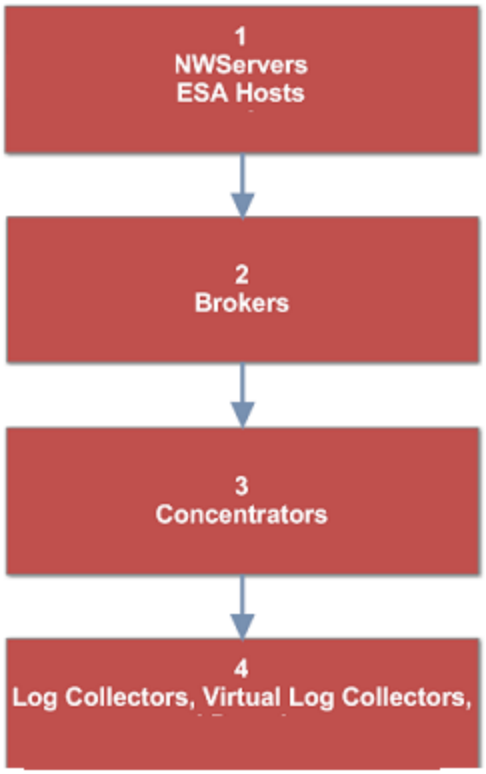
There are several scripts that you run during the backup process. You must download the zip file that contains the scripts (`nw-backup-v3.0.zip`) from RSA Link at this location: https://community.rsa.com/docs/DOC-81514 and copy it over to your CentOS 6 backup system. Click the **RSA NetWitness Logs & Packets 11.1 Backup Script (nw-backup-v3.0.sh)** link and extract the zip file to access the scripts. The scripts are:

- `get-all-systems.sh`: Creates the `all-systems` file, which contains a list of all your NetWitness Servers and host systems to be backed up.
- `ssh-propagate.sh`: Automates sharing keys between the systems you are backing up and the backup host system so that you are not prompted for passwords multiple times.
- `nw-backup.sh`: Performs the backup of your hosts.

Note: The backup scripts do not support backing up data for STIG-hardened hosts.

Task 2 - Create a List of Hosts to Back up

The script that you use to back up your files depends on the `all-systems` and `all-systems-master-copy` files, which contain a list of the hosts that you want to back up. The `all-systems-master-copy` file contains a list of all your hosts. The `all-systems` file is used for each backup session, and contains only those hosts which are being backed up for a particular session. You run the `get-all-systems.sh` script to generate these files. RSA recommends that you back up your hosts in groups, and not all at once. The recommended order and grouping of hosts for backup sessions is shown in the following diagram:



Limit each backup session to five hosts to ensure that you do not run out of space for the backup files. You create `all-systems` files for your backup sessions by using the `all-systems-master-copy` file as a reference and then manually editing the `all-systems` file to contain specific hosts.

To generate the `all-systems` and the `all-systems-master-copy` files:

1. From the host on which you are running the backup process, make the `get-all-systems.sh` script executable by running the following command:
   ```
   chmod u+x get-all-systems.sh
   ```
2. At the root level, run the `get-all-systems.sh` script:
   ```
   ./get-all-systems.sh <IP-Address-of-NetWitness-Admin-Server>
   ```
   You will be prompted for the password for each host system once per host.

This script saves the `all-systems` file and the `all-systems-master-copy` file to `/var/netwitness/database/nw-backup/`.

3. Validate that the `all-systems` and `all-systems-master-copy` files were generated and that they contain the right hosts.
4. Edit the `all-systems` file to contain only the systems you are backing up. You can do this by using the `all-systems-master-copy` file as a reference, and then opening the `all-systems` file in an editor (such as vi) and modifying it to include only the systems you want to back up.

> **Note:** If you use vi, be sure to include the path to the location of the `all-systems` file.

Here is an example of an `all-systems-master-copy` file:

```
nwserver,my-nw-server,10.0.0.1,af922b9f-cd61-49cd-afdc-
a48e558cec3e,10.6.4.0
archiver,my-nw-archiver,10.0.0.2,a65c1236-5e46-4117-8529-
8ea837074bd0,10.6.4.0
concentrator,my-nw-concentrator,10.0.0.3,dc620e94-bcf5-4d51-83fe-
c003cdfcd7a6,10.6.4.0
esa,my-nw-esa,10.0.0.4,8b608c0d-a7f9-40c0-baee-8407dec774ab,10.6.4.0
logdecoder,my-nw-logdecoder,10.0.0.5,c8be5d45-e19e-4a8d-90ce-
1cb2fe60077a,10.6.4.0
vlc,my-nw-vlc,10.0.0.8,3ffefc4e-0b31-4951-bb77-dea5869fa98c,10.6.4.0
broker,my-nw-broker,10.0.0.9,0b65e7ce-61d5-4177-9647-
c56ccfb0f737,10.6.4.0
```

And here is an example of an `all-systems` file based on the `all-systems-master-copy` file that could be used in the first backup session:

```
saserver,my-nw-server,10.0.0.1,af922b9f-cd61-49cd-afdc-
a48e558cec3e,10.6.4.0
esa,my-nw-esa,10.0.0.4,8b608c0d-a7f9-40c0-baee-8407dec774ab,10.6.4.0
```

Troubleshooting Information

- Be sure to save copies of the `all-systems` and `all-systems-master-copy` files in a safe location. Follow these recommendations:
  - Do not edit the `all-systems-master-copy` file.
  - If you create several different versions of the `all-systems` file (for example, for several backup sessions), be sure to remove pre-existing entries from the file so that the file contains only those hosts that are currently being backed up.
    For more information, see Post Upgrade Tasks.

- If any host systems are down while you are running the `get-all-systems.sh` script, the script creates a list of hosts for which it cannot find information. After the script completes and the `all-systems` file is created, you must edit the `all-systems` file manually and add the missing information for these hosts.
- The `get-all-systems.sh` script generates a list of hosts that were defined in the NetWitness Suite user interface. Ensure that all hosts and services are provisioned properly. If any hosts or services are not provisioned properly, they will not be backed up. RSA recommends that when you add hosts and services to NetWitness Suite, you use the NetWitness Suite user interface to ensure that they are provisioned properly. However, if there are any hosts or services that were not defined in the user interface, you must add them to the `all-systems` file manually.
- At the end of the `get-all-systems.sh` script, the script will check for any differences between the systems that the NetWitness Server has listed, and the ones for which the script was able to find all the required information. If any Node ID's or system names are listed as missing, verify the existence of those systems, that their services are all running, and that they are properly communicating with the NetWitness Server. (Any Windows Legacy Collectors or Azure Cloud Collectors will not be added to the `all-systems` file, and may account for discrepancies. **DO NOT add these items to the `all-systems` file manually**.)
- If the syntax in the `all-systems` file is incorrect, the script will fail. For example, if there is an extra space at the beginning or the end of a host entry, the script will fail.

Task 3 - Set up Authentication Between Backup and Target Hosts

RSA recommends that you run the `ssh-propagate.sh` script to automate sharing keys between the backup host and the host systems.

Note: If you have SSH keys that are protected with pass phrases, you can use `ssh-agent` to save time. For more information, refer to the man page for `ssh-agent`.

1. On the external backup host system, make the `ssh-propagate.sh` script executable by running the following command:
   `chmod u+x ssh-propagate.sh`
2. At the root directory, run the following command, where `<path-to-all-systems-file>` is the path to the directory where the `all-systems` file is stored:
   `ssh-propagate.sh <path-to-all-systems-file>`
3. You are prompted for the password once per host, but you will not need to enter it again later during the backup process.

Task 4 - Check for Backup Requirements for Specific Types of Hosts

After you create the `all-systems` file to use for backup, you must check to see if any of the hosts listed in the file have requirements that must be met before you run the backup process.

For All Host Types

Perform the following steps for all host types:

1. On the NetWitness Server, place Custom Certificate files and any other certificate authority (CA) files in the `/root/customcerts` folder to ensure that these certificate files are backed up. Your custom certificate files that are placed in this directories will be automatically restored during the upgrade process. After upgrading to 11.1.0.0, your custom certificate files will be located in `/etc/pki/nw/trust/import`.
   You can convert CA certificates and keys to different formats to make them compatible with specific types of servers or software using OpenSSL. For example, you can convert a normal PEM file that would work with Apache to a PFX (PKCS#12) file and use it with Tomcat or IIS. To convert the files, SSH to the NetWitness Server and run the following command strings to perform the conversions listed.
   Convert a DER file (.crt .cer .der) to PEM
   `openssl x509 -inform der -in certificate.cer -out certificate.pem`
   Convert a PEM file to DER

```
openssl x509 -outform der -in certificate.pem -out certificate.der
```

Convert a PEM Certificate File and a Private Key to PKCS#12 (.pfx .p12)

```
openssl pkcs12 -export -out certificate.pfx -inkey privateKey.key -in
certificate.crt -certfile CACert.crt
```

Convert a PKCS#12 File (.pfx .p12) Containing a Private Key and Certificates to PEM

```
openssl pkcs12 -in keyStore.pfx -out keyStore.pem -nodes
```

> **Note:** Add the following qualifier to the command string to:
> `-nocerts` convert private keys exclusively.
> `-nokeys` convert certificates exclusively.

2. Manually record any custom configurations made to CentOS 6 (for example, driver customizations) for restoration after you update to CentOS 7. Custom configurations to CentOS 6 are not automatically backed up and restored.

For Concentrator, or Broker Hosts: Stop Data Capture and Aggregation

In addition to the tasks described in For All Host Types, for Concentrator, or Broker hosts, stop data capture and aggregation on all the systems that you are backing up. For instructions, refer to Appendix B. Stopping and Restarting Data Capture and Aggregation

Log Collectors (LC) and Virtual Log Collectors (VLCs): Run `prepare-for-migrate.sh`

> **Caution:** This task stops log collection so you must perform this step immediately before you upgrade to minimize the loss of event collection. Complete this task in accordance with the backup and upgrade tasks in this guide.

Prerequisites

You need the following information before you prepare LCs and VLCs for upgrade.

- If Lockbox was initialized on the LC and VLC, you must know the Lockbox password. It is required to reconfigure the Lockbox after upgrade.
- If you set the password for `logcollector` user for RabbitMQ , you must know the password so you can set it again after the upgrade.

Prepare LCs and VLCs for Upgrade

1. SSH to the Log Collector.
2. Submit the following command string.
   ```
   # /opt/rsa/nwlogcollector/nwtools/prepare-for-migrate.sh --prepare
   ```
   This command:

- Stops the Puppet Agent service.
- Disables the file collection accounts ("sftp" and all users in the group "upload") used for uploading log files to the Log Collector. The log files accumulate on the event sources until the Log Collector has been upgrade to 11.1.0.0.
- Stops all the collection protocols in the Log Collector service.
- Saves the list of Plugin accounts and RabbitMQ accounts.
- Configures the RabbitMQ server so that new events cannot be published to it any longer. Consumers of events in the queues, such as shovels and Log Decoder Event Processors, will continue to run.
- Waits until the Log Collector queues are empty.
- Stops the Log Collector service.
- Creates a marker file indicating that the Log Collector has been successfully prepared for upgrade.

Troubleshooting Information

The `prepare-for-migrate.sh` script:

- Sends informational, warning, and error messages to the console.
- Saves a session log in the `/var/log/backup/` directory.

You must fix any of the following errors and resume the preparation. Contact RSA Customer Support (https://community.rsa.com/docs/DOC-1294) for assistance.

- Log Collector queues with events but without consumers are found.
- Unable to stop the Puppet Agent service.
- Unable to stop a collection protocol in the Log Collector service.
- Unable to block event publishers to the RabbitMQ server.
- Unable to or taking too long for queue events to be consumed. The script makes 30 attempts waiting for the events to be consumed. After each attempt, it sleeps for 30 seconds.
- Unable to stop the Log Collector service.

For more information about troubleshooting, see Appendix A. Troubleshooting

For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint: List RabbitMQ Usernames and Passwords

On the 10.6.5.x host, on the NetWitness Server host, you must get a list of all RabbitMQ usernames and passwords so that after you perform the 11.1.0.0 upgrade, you can restore RabbitMQ user accounts.

To get a list of RabbitMQ usernames and passwords, run the following command:

```
rabbitmqctl list_users >> /root/rabbitmq_users.txt
```

To restore RabbitMQ user accounts, refer to *Task 2 - For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint Configure Mutually Authenticated SSL* in Post Upgrade Tasks.

For Bluecoat Event Sources

Bluecoat ProxySG event sources use FTPS protocol to upload log files to the Log Collector (LC) and Virtual Log Collector (VLC). The event source documentation contains the steps to configure VSFTPD service on the LC and VLC.

- If key material exists in `/root/vsftpd/` directory in 10.6.5.x, this material area will be backed up and restored. **If the material was in another location, you must back it up and restore it manually.**
- If the `/etc/vsftpd/vsftpd.conf` file exits in 10.6.5.x, it is backed up and restored.

Task 5 - Check for Adequate Space for the Backup

You can run the backup test script to check the amount of disk space that is required for the backup using the `-t` option described in Test Options. You run the script without actually backing up files or stopping any services. RSA recommends that you perform this step to ensure that you provide adequate space for the backup so that the backup captures all your data.

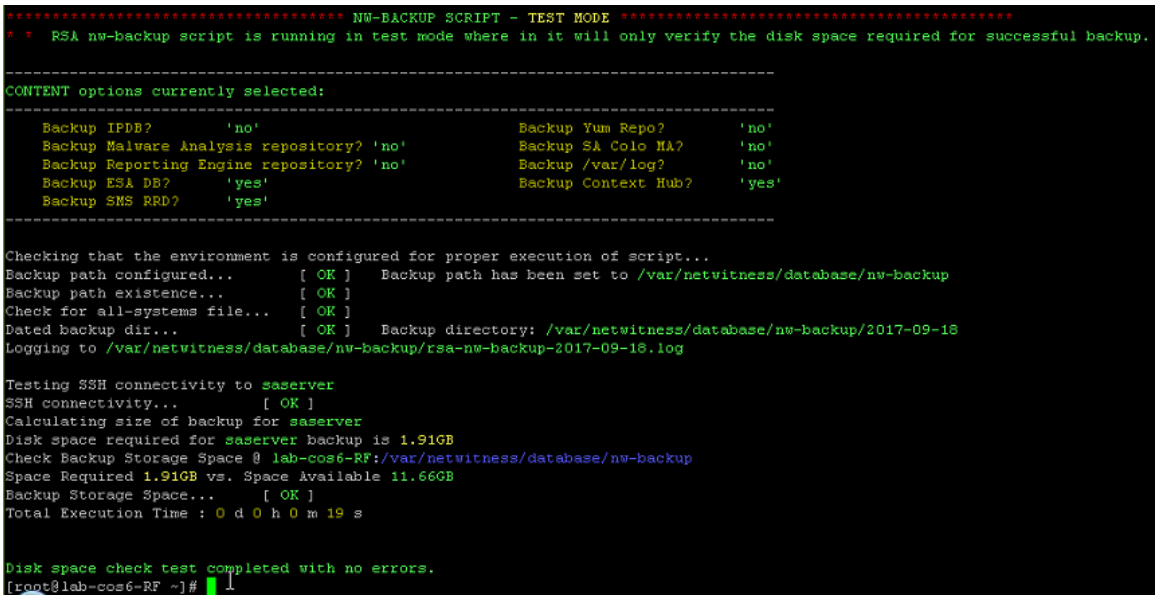
To check for adequate disk space:

1. Make the backup script executable by running the following command:
   ```
   chmod u+x nw-backup.sh
   ```
2. Run the following command at the root directory level:
   ```
   ./nw-backup.sh -t
   ```
   The output displays the amount of disk space that is required for the backup.

   Note: The `./nw-backup.sh -t` command runs with the `-d` option by default. However, if you are looking for more accurate disk space results, you can override the `-d` option by using `-D`. Using the `-D` option will show how much

space is required on each host for the data that will be backed up, but does not show how much space is available. If there is not enough space available, the `-D` option will throw an error. If you want to know how much space is available on the target host, you must run the `df -h` command on the host.

The following figure shows an example of the output from using the `-t` option.



Task 6 - Back up Your Host Systems

Before you run the backup script to do the actual backup, be sure that you have plenty of space. To back up your hosts, you run the `nw-backup.sh` script using the `-u` option. This option is required for upgrading to 11.1.0.0.

Note: The script will stop services as it runs. However, you can stop services manually before you run the script if needed.

When you run the backup script, you can choose from several options that are described in the following sections.

Usage:

```
./nw-backup.sh [-u -t -d -D -u -l -x -e <external-mnt> -b <backup file path>
```

General Options

`-u : This option is required for upgrading to 11.1. Enables the upgrade flag to run backup for upgrading to 11.1. It also enables disk space check (-d), backing up reporting engine reports (-r) and stores backup content locally (-l). Default: (no)`

-d : enables disk space check in 'fast' mode (quick estimate of space using uncompressed data). Default: (no)

-D : enables disk space check in 'full' mode (estimate of space using compressed data, ~10X slower). Default: (no)

-l : stores backup content locally on each host (automatically set if -u is used). Default: (no)

-e <path to mount point> : copies backup files of all devices onto an external mount point. Default: (/mnt/external_backup)

-x : move all backup files to an external mount point. Default: (no) -COPY

-b <path to write backups> : path to the location for storing backup files on a backup server. **For upgrading to 11.0, please use the default location!** Default: (/var/netwitness/database/nw-backup)

Note: Do **not** change the backup path in upgrade (-u) mode.

Advanced Content Selection Options

-c : back up Colocated Malware Analysis on SA servers. Default: (no)

-i : back up IPDB data (/var/netwitness/ipdbextractor). Default: (no)

-m : back up Malware Analysis File Repository. Default: (no)

-r : back up Reporting Engine Report Repository (automatically set if -u is used). Default: (no)

-v : back up system logs (/var/log). Default: (no)

-y : back up YUM Web Server & RPM Repository. Default: (no)

-S : If set: DISABLES back up of SMS RRD files. Default: (not-set)

-C : If set: DISABLES back up of Context-Hub configuration and database. Default: (not-set)

-E : If set: DISABLES back up of ESA Mongo database. Default: (not-set)

Test Options

-t : performs script test run for disk space check only. Services are not stopped and excludes execution of backup. Can be combined with (-d) or (-D) and other flags. Default: (-t)

For example, the command:
`./nw-backup.sh`
would run the backup with options as set in the Header of the script itself.
OR, the command:
`./nw-backup.sh -ue /mnt/external_backup`
would run a normal backup using the backup path defined in the script, with the following options:

```
-u : enables the upgrade flag to run backup for upgrading to 11.1. It
also enables disk space check (-d), backing up reporting engine reports
(-r) and stores backup content locally (-l). Default: (no)

-e : Copy the backup files to external mount point, mounted on
/mnt/external_backup

For Help: ./nw-backup.sh -h
```

When you run the script, the following text is displayed at the top of the script:

```
Caution: RSA nw-backup script backs up configuration files, data, and
logs on the options provided in the script. It tars the content, with
options to store the backup files on the backup server, move or copy
them to external storage on a mount point (USB/NFS/SMB), or SCP them
back to the target host.
This backup script has been qualified on the following versions of
Security Analytics:
10.6.3.x and 10.6.4.x
Use of this script on any other versions of the product may not give
expected results and may not be supported by RSA Customer
Service.Note: All non-RSA custom files, scripts, Cronjobs and other
important files should be placed in /root, /home/'user', OR /etc to be
included in the backup.
```

To run the backup script to back up your hosts:

1. Ensure that the `all-systems` file contains only the hosts to back up.
2. Make the backup script executable by running the following command:
   `chmod u+x nw-backup.sh`
3. Begin the backup process by running the following command at the root directory level:
   `./nw-backup.sh -u <additional options as needed>`

   Note: You must use the `-u` option so that your files will be restored correctly during the upgrade to 11.1.0.0.

   When the text "`Backup completed with no errors`" is displayed, the backup has completed successfully.

   A log file, with a name similar to the following example, is created in the backup directory which provides information on the files being backed up:
   `rsa-nw-backup-2017-03-15.log`
4. When the backup has completed, to ensure that the intended files were backed up, you can run the following command to see a list of all the files that were backed up:

   `tar -tzvf hostname-ip-address-backup.tar.gz`

   The following archive files are created:

   For all hosts:

   `<hostname-IPaddress>-root.tar.gz`

<hostname-IPaddress>-backup.tar.gz

tar checksum files

<hostname-IPaddress>-network.info.txt

For NetWitness Servers:

<hostname-IPaddress>-root.tar.gz

<hostname-IPaddress>-backup.tar.gz

<hostname-IPaddress>-mongodb.tar.gz

tar checksum files

<hostname-IPaddress>-network.info.txt

For ESA Hosts:

<hostname-IPaddress>-root.tar.gz

<hostname-IPaddress>-backup.tar.gz

<hostname-IPaddress>-mongodb.tar.gz

<hostname-IPaddress>-controldata-mongodb.tar.gz

tar checksum files

<hostname-IPaddress>-network.info.txt

The archived files are located in the /var/netwitness/database/nw-backup directory. If any of the tar files appear smaller than expected, open them to be sure that the files were properly backed up.

Post Backup Tasks

Task 1 - Save a Copy of the all-systems File and the Backup Tar files

Make copies of the all-systems file, the all-systems-master-copy file, and the backup tar files and put the copies in a secure location. You cannot regenerate these files after you upgrade the NetWitness Server (specifically the Admin service) to 11.1.0.0.

Task 2 - Ensure Required Backup Files Were Generated

After you run the backup scripts, several files are generated. These files are required for the 11.1.0.0 upgrade process. Before you begin the upgrade process, you must ensure that the required backup files are on the hosts that you are upgrading, and that you perform the following tasks.

The following files are generated on all hosts by the backup scripts:

- all-systems
- all-systems-master-copy
- appliance_info

- service_info
- <hostname>-<host-IP-address>-backup.tar.gz
- <hostname>-<host-IP-address>-backup.tar.gz.sha256
- <hostname>-<host-IP-address>-root.tar.gz
- <hostname>-<host-IP-address>-root.tar.gz.sha256
- <hostname>-<host-IP-address>-network.info.txt

In addition to the files listed above, the following files will be generated on NetWitness Server and ESA hosts:

- <*hostname*>-<*host IP address*>-mongodb.tar.gz
- <*hostname*>-<*host IP address*>-mongodb.tar.gz.sha256

The backup script will also generate the following controldata-mongodb.tar.gz files.

Note: The backup script copies the following files from all ESA hosts to the NetWitness Server host's backup path .

- <esa hostname>-<esa hostip>-controldata-mongodb.tar.gz
- <esa hostname>-<esa hostip>-controldata-mongodb.tar.gz.sha256

Task 3 - (Conditional) For Multiple ESA Hosts, Copy mongodb tar files to Primary ESA Host

If you have multiple ESA host systems in your enterprise, copy the following two files from each ESA host to the /opt/rsa/database/nw-backup/ directory on the Primary ESA host system (the host that has the ContextHub service running on it) :

- <hostname>-<host-IP-address>-mongodb.tar.gz
- <hostname>-<host-IP-address>-mongodb.tar.gz.sha256

Task 4 - Ensure All Required Backup Files are on Each Host

Before you upgrade to 11.1.0.0, ensure that the appropriate files exist on the hosts that you are upgrading as described in the following lists.

There should be note here mentioning default backup path locations for that user knows where to go and check these files.

Note: The default paths for backup files are:
- NetWitness Server hosts:/var/netwitness/database/nw-backup
- ESA hosts:/opt/rsa/database/nw-backup

Required Files for NetWitness Servers

- all-systems-master-copy
- <hostname>-<host-IP-address>-backup.tar.gz
- <hostname>-<host-IP-address>-backup.tar.gz.sha256
- <hostname>-<host-IP-address>-root.tar.gz
- <hostname>-<host-IP-address>-root.tar.gz.sha256
- <hostname>-<host-IP-address>-network.info.txt
- <hostname>-<host-IP-address>-mongodb.tar.gz
- <hostname>-<host-IP-address>-mongodb.tar.gz.sha256
- <esa-hostname>-<esa-host-IP-address>-controldata-mongodb.tar.gz
- <esa-hostname>-<esa-host-IP-address>-controldata-mongodb.tar.gz.sha256

Required Files for ESA Hosts

- all-systems-master-copy
- <hostname>-<host-IP-address>-backup.tar.gz
- <hostname>-<host-IP-address>-backup.tar.gz.sha256
- <hostname>-<host-IP-address>-root.tar.gz
- <hostname>-<host-IP-address>-root.tar.gz.sha256
- <hostname>-<host-IP-address>-network.info.txt
- <hostname>-<host-IP-address>-mongodb.tar.gz
- <hostname>-<host-IP-address>-mongodb.tar.gz.sha256

Required Files for All Other Hosts

- all-systems-master-copy
- <hostname>-<host-IP-address>-backup.tar.gz
- <hostname>-<host-IP-address>-backup.tar.gz.sha256
- <hostname>-<host-IP-address>-root.tar.gz

- `<hostname>-<host-IP-address>-root.tar.gz.sha256`
- `<hostname>-<host-IP-address>-network.info.txt`

Note: The following files are located in the `<hostname>-<host-IP-address>-backup.tar.gz` tar on all hosts:
`appliance_info`
`service_info`

Note: The paths to the location of the backup and restore files for iptables, NAT configurations, user accounts, and crontab entries are shown in the following list:
Backup paths:
`BUPATH=/opt/rsa/database/nw-backup` for the ESA Correlation Engine
`BUPATH=/var/lib/rsamalware/nw-backup` for the Malware Service
`BUPATH=/var/netwitness/database/nw-backup` for all other services
Restore locations:
`BUPATH/restore/etc/sysconfig` for Iptable rules
`BUPATH/restore/etc/sysconfig` for NAT configurations
`BUPATH/restore/etc` for Crontab entries
`BUPATH/restore/etc` for User Accounts (users are located in the `passwd` file, and groups are located in the `group` file. These are not restored during the upgrade process but can be restored manually.
`BUPATH/restore/etc/ntp.conf` for NTP configurations (must be restored using the NetWitness Suite UI)

Migrate Disk Drives from 10.6.5.x to 11.1

These instructions tell you how to upgrade Azure NetWitness VMs from 10.6.5.x to 11.1.0.0 on Azure Cloud Platform.

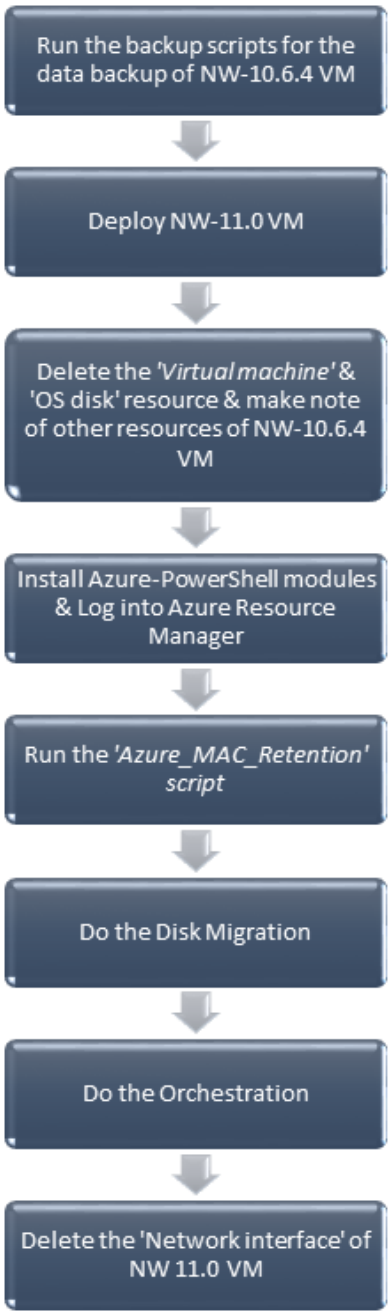
Prerequisites:

- Download and install the latest version of Azure PowerShell from https://github.com/Azure/azure-powershell/releases on a Windows machine.
- Upload the same latest version of Azure modules in automation account. [https://docs.microsoft.com/en-us/azure/automation/automation-update-azure-modules]

Note: Azure PowerShell 4.4.1 was used for qualification.

Note: Both versions of VMs must be on the same Virtual Network and Resource Group for the migration.

Caution: 1) You cannot perform the migration if you have a snapshot for your VM.
2). Run the backup immediately before you upgrade hosts for each phase so that the data is not out-dated.
3.) This guide applies to virtual host upgrades exclusively. If have physical and virtual hosts in your deployment, see the *RSA NetWitness® Suite Physical Host Upgrade Instructions* for the steps you must complete to upgrade physical hosts. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.



Complete the following tasks to migrate your Virtual Machine (VM) deployment disk drives from 10.6.5.x to 11.1:

Task 1 - Deploy NW 11.1 VM

Task 2 - Delete Virtual Machine and OS disk resource of NW 10.6.5 VM

Task 3 - Install Azure PowerShell modules on a local Windows machine

Task 4 - IP Retention: Run the PowerShell script

Task 5 - Perform Disk Migration

Task 6 - Data Restoration

Task 1 - Deploy NW 11.1 VM

1. Deploy NW 11.1 VMs. [Refer to the Azure deployment guide for v 11.1.0.0.
2. Power OFF all the NW 10.6.5 and 11.1 VMs.
3. In the Azure Portal, navigate to Virtual machines.
4. Click on the <Name_of_the_VM>.
5. Click Overview and then click Stop.

Task 2 - Delete Virtual Machine and OS disk resource of NW 10.6.5 VM

Note the other resources like Data disks and Network Interface.

1. Delete the ‘Virtual machine’ and the 'OS disk' (usually disk1 of VM) resource of NW 10.6.5 VM and make a note of these Network interface and Data disks.

Note: Delete only these 2 resources and retain all other resources of NW 10.6.5 VMs like 'Network interface', 'Network security group' and 'Data disks') and make a note of these 'Network interface' and 'Data disks'.

2. In the Azure Portal, navigate to All resources. Select the Name_of_NW_10.6.5_VM.
3. Click Delete.

Azure now supports additional premium disk sizes: 32 GiB (P4), 64 GiB (P6), 2048 GiB (P40), and 4095 GiB (P60). Disks created be
15, 2017 retain their existing performance and billing rates.
Azure now supports premium disk size 256 GiB (P15). Managed disks (<=256 GiB) created before October 1, 2017 will retain the
P20 tier performance and billing rates.

Task 3 - Install Azure PowerShell modules on a local Windows machine

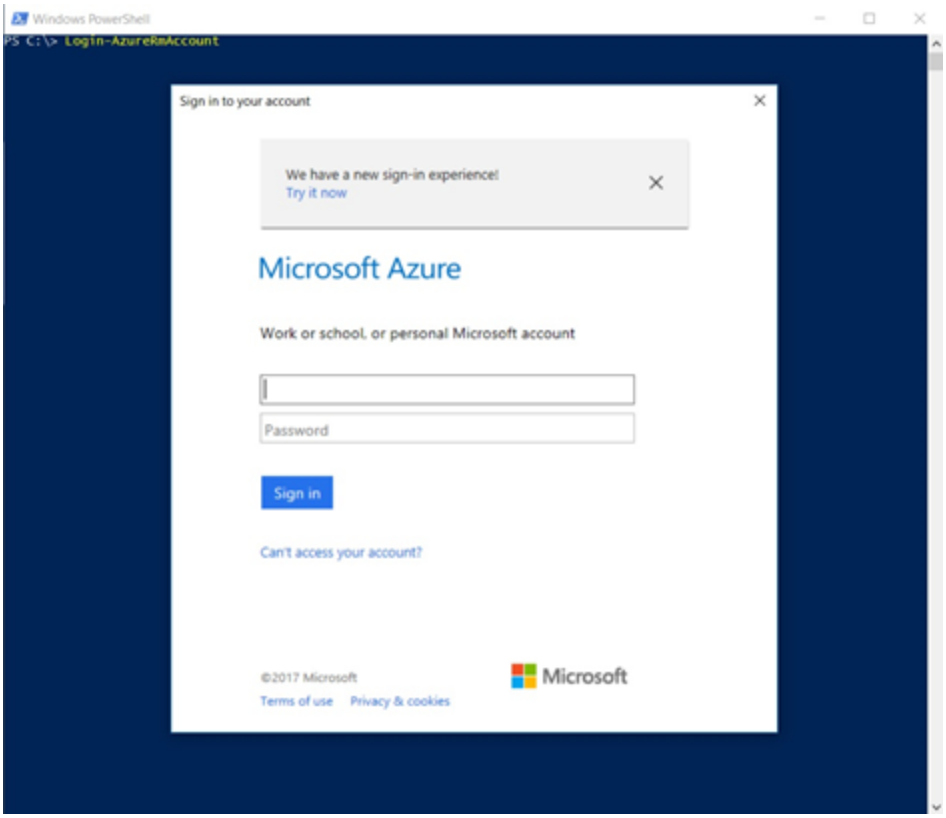
Install the Azure PowerShell modules on a local Windows machine and Login to Azure Resource Manager.

Navigate to Azure PowerShell on the Windows machine where you have installed the Azure PowerShell modules and log in to Azure Resource Manager using the below command

Note: Make sure you have followed the steps mentioned in the Prerequisites section above before executing the below command.

```
Login-AzureRmAccount
```

Login using the Azure credentials in the window that appears.



Task 4 - IP Retention: Run the PowerShell script

Run the PowerShell script for MAC retention for all NW Components. MAC address and IP retention:

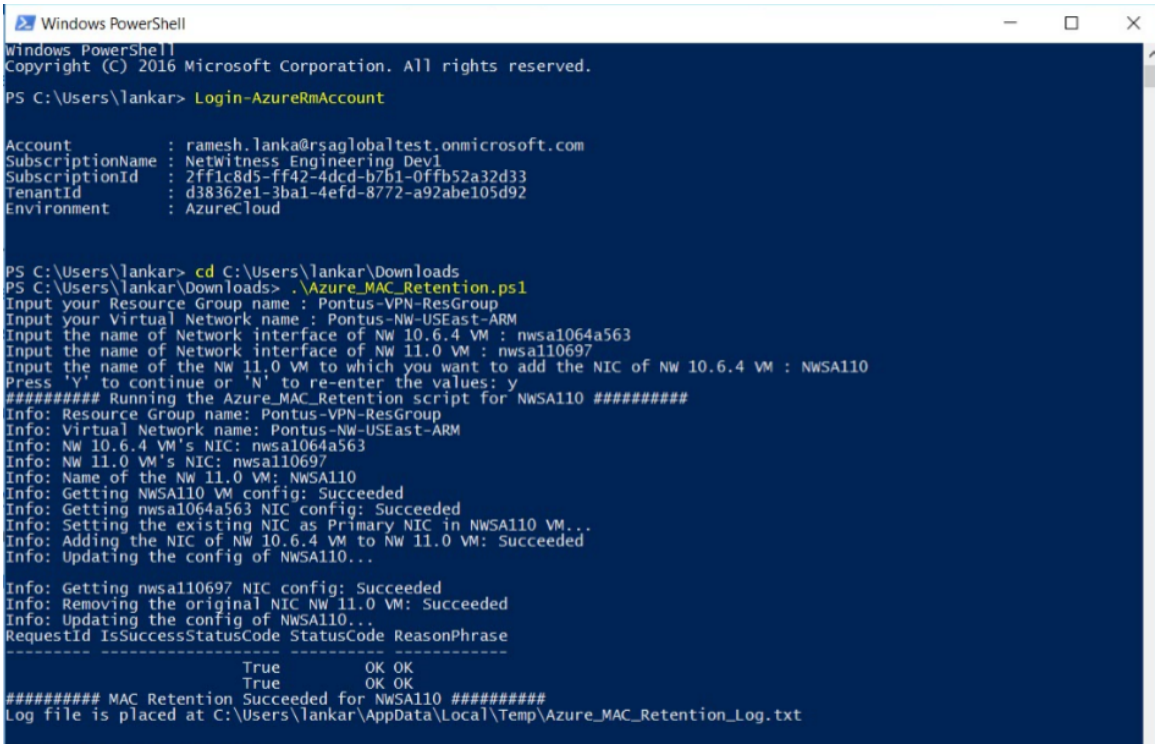
MAC address and IP are bound to the 'Network interface' resource of a VM.

The Azure portal doesn't allow us to

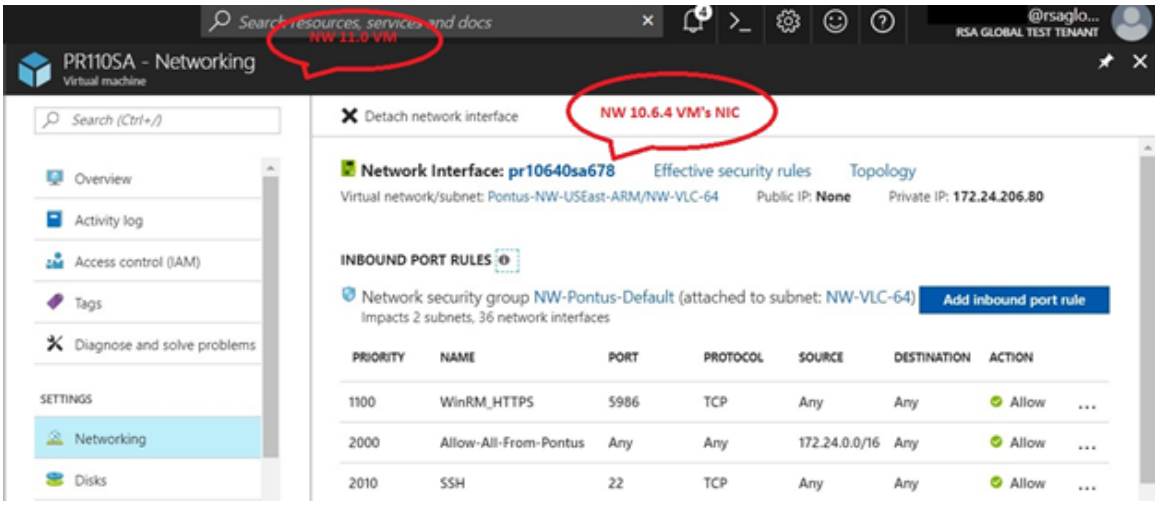
- Specify an existing network interface to add when creating the VM
- Create a VM with multiple network interfaces
- Specify a name for the network interface (the portal creates the network interface with a default name)

This can be achieved using the Azure PowerShell. [https://docs.microsoft.com/en-us/azure/virtual-network/virtual-network-network-interface-vm]

Click here to download and run the script by providing the requested parameters on the Windows machine installed with Azure PowerShell to retain the 'Network interface' from NW 10.6.5 VM to 11.1 VM.



You should be able to see NW 10.6.5 VM's NIC attached to 11.1 VM under 'Networking' settings after successful execution of the script.

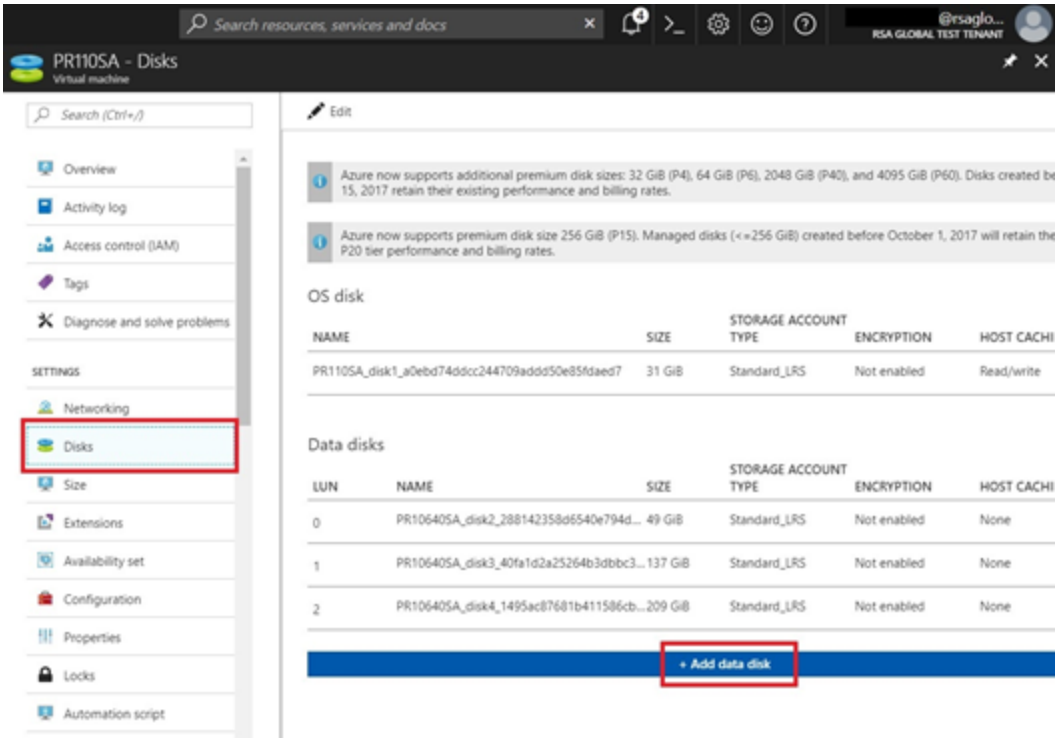


Task 5 - Perform Disk Migration

Add all the disks (except the 'OS disk') of NW 10.6.5 VM to the corresponding NW 11.1 VM under the ‘Disks’ settings.

In Azure Portal, navigate to Virtual machines and then Name_of_the_11.1_VM. Click **Disks** and then click + **Add data disk**. Select all disks of corresponding NW-10.6.5 VM which you had noted down earlier in the dropdown list that appears.

Click **Save**.



Power ON the NW 11.1 VM and login with the credentials provided during VM deployment and set the root password as netwitness.

Task 6 - Data Restoration

Copy NW 10.6.5 VM's backed up data (nw-backup) to NW 11.1 VM.

Note: Do the Data Restoration for SA Server first followed by other components

For SA, LD/LC, Virtual Log Collector, Concentrator, Archiver, Broker:

1. Create a directory under `/tmp/` by the name `nwhome`.
2. Mount `VolGroup00-nwhome` on `/tmp/nwhome/`.

```
mount /dev/mapper/VolGroup00-nwhome /tmp/nwhome/
```

3. Copy the contents of `/tmp/nwhome/` directory to `/var/netwitness/`

```
cp -R /tmp/nwhome/* /var/netwitness/
```

4. Unmount `VolGroup00-nwhome` from `/tmp/nwhome/`

```
umount /dev/mapper/VolGroup00-nwhome /tmp/nwhome/
```

For ESA:

1. Create a directory under `/tmp/` by the name apps.
2. Mount `VolGroup01-apps` temporarily on `/tmp/apps/`

```
mount /dev/mapper/VolGroup01-apps /tmp/apps/
```

3. Copy `nw-backup` directory from here to `/var/netwitness`

```
cp -r /tmp/apps/database/nw-backup /var/netwitness
```

4. Unmount `VolGroup01-apps` from `/tmp/apps/`

```
umount /tmp/apps/
```

Perform disk mounting by running the below commands:

For NW Server:

```
mount /dev/mapper/VolGroup01-ipdbext /var/netwitness/ipdbextractor/
mount /dev/mapper/VolGroup02-redb /var/netwitness/database/
```

Add below entries for these mounts in `/etc/fstab`:

```
/dev/mapper/VolGroup01-ipdbext /var/netwitness/ipdbextractor/ xfs defaults,noatime,nosuid 1 2
/dev/mapper/VolGroup02-redb /var/netwitness/database/ xfs defaults,noatime,nosuid 1 2
```

For LogDecoder/LogCollector:

```
mount /dev/mapper/VolGroup01-decoroot /var/netwitness/logdecoder
mount /dev/mapper/VolGroup01-index /var/netwitness/logdecoder/index
```

mount /dev/mapper/VolGroup01-sessiondb /var/netwitness/logdecoder/sessiondb

mount /dev/mapper/VolGroup01-metadb /var/netwitness/logdecoder/metadb

mount /dev/mapper/VolGroup01-logcoll /var/netwitness/logcollector

mount /dev/mapper/VolGroup01-packetdb /var/netwitness/logdecoder/packetdb

Add below entries for these mounts in `/etc/fstab`:

/dev/mapper/VolGroup01-decoroot /var/netwitness/logdecoder ext4 defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-index /var/netwitness/logdecoder/index xfs defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-sessiondb /var/netwitness/logdecoder/sessiondb xfs defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-metadb /var/netwitness/logdecoder/metadb xfs defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-logcoll /var/netwitness/logcollector xfs defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-packetdb /var/netwitness/logdecoder/packetdb xfs defaults,noatime,nosuid 1 2

For Virtual LogCollector:

mount /dev/mapper/VolGroup01-logcoll /var/netwitness/logcollector

Add below entry for these mounts in `/etc/fstab`:

```
/dev/mapper/VolGroup01-logcoll /var/netwitness/logcollector xfs defaults,noatime,nosuid 1 2
```

For Concentrator:

mount /dev/mapper/VolGroup01-concroot /var/netwitness/concentrator

mount /dev/mapper/VolGroup01-sessiondb /var/netwitness/concentrator/sessiondb

mount /dev/mapper/VolGroup01-index /var/netwitness/concentrator/index

mount /dev/mapper/VolGroup01-metadb /var/netwitness/concentrator/metadb

Add below entries for these mounts in `/etc/fstab`:

/dev/mapper/VolGroup01-concroot /var/netwitness/concentrator ext4 defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-sessiondb /var/netwitness/concentrator/sessiondb xfs defaults,nosuid,noatime 1 2

/dev/mapper/VolGroup01-index /var/netwitness/concentrator/index xfs defaults,noatime,nosuid 1 2

/dev/mapper/VolGroup01-metadb /var/netwitness/concentrator/metadb xfs defaults,noatime,nosuid 1 2

For Archiver:

mount /dev/mapper/VolGroup01-archiver /var/netwitness/archiver

mount /dev/mapper/VolGroup02-workbench /var/netwitness/workbench

Add below entries for these mounts in `/etc/fstab`:

/dev/mapper/VolGroup01-archiver /var/netwitness/archiver xfs defaults,nosuid,noatime 1 2

/dev/mapper/VolGroup02-workbench /var/netwitness/workbench xfs defaults,nosuid,noatime 1 2

For Broker:

mount /dev/mapper/VolGroup01-broker /var/netwitness/broker

Add below entry for these mounts in `/etc/fstab`:

```
/dev/mapper/VolGroup01-broker /var/netwitness/broker xfs
defaults,nosuid,noatime 1 2
```

Task 7 - Delete all NW 11.1 Deployment 'Network interface' Resources

1. In Azure Portal, go to All resources.
2. Click on <Name_of_NW_11.1_Network_interface> and select Delete.

Set Up Virtual Hosts in 11.1

There two phases to set up your 11.1 virtual stack that you must complete in the order shown.

- Phase 1 - Set Up NW Server, Event Stream Analysis, and Broker or Concentrator Hosts

  Note: For Event Stream Analysis, if you had C2 modules enabled in 10.6.5.x, the modules will enter a warm-up after you upgrade the Event Stream Analysis service to 11.1 and they will not be available until the warm up completes.

- Phase 2 - Set Up The Rest of the Component Hosts

Phase 1 - Set Up NW Server, Event Stream Analysis, and Broker or Concentrator Hosts

Task 1 - Set Up 11.1 NetWitness Server

Follow the instructions under Set Up 11.1 NW Server Host.

Task 2 - Setup 11.1 ESA

Caution: If you had C2 modules enabled in 10.6.5.x, the modules will enter a warm-up after you upgrade the Event Stream Analysis service to 11.1 and they will not be available until the warm up completes.

Follow the instructions under Set Up 11.1 Non-NW Server Host to set up your ESA hosts.

1. Set up your primary ESA host through the Setup program and install **ESA Primary** on the host in the user interface on the **Admin Hosts** view.

   Note: If you have multiple ESA hosts in your enterprise, you must upgrade the ESA Primary host, where all the `mongodb` (Mongo Database) backup tar files are located, first, before you upgrade ESA Secondary hosts.

2. (Conditional) If you have a secondary ESA host, set it up through the Setup program and install **ESA Secondary** on the host in the user interface on the **Admin Hosts** view.

Task 3 - Set Up 11.1 Broker or Concentrator

Follow the instructions under Set Up 11.1 Non-NW Server Host.

Note: If you do not have a Broker, upgrade your Concentrator hosts. The 11.1 NW Server cannot communicate with 10.6.5.x core services for the new Investigate functionality. This is why you must upgrade the Broker or Concentrator hosts in Phase 1.

Phase 2 - Set Up The Rest of the Component Hosts

See Appendix B. Stopping and Restarting Data Capture and Aggregation for instructions on how to stop and restart data capture and aggregation when upgrading the Decoder, Concentrator, and Log Collection hosts.

Concentrator Hosts

1. Stop data capture and aggregation.
2. Complete the steps in Set Up 11.1 Non-NW Server Host.
3. Restart data capture and aggregation.

Log Decoder Host

1. Make sure you have prepared the Log Collector as described in the Log Collectors (LC) and Virtual Log Collectors (VLCs): Run prepare-for-migrate.sh.
2. Stop data capture on the Log Decoder.
3. Complete the steps in Set Up 11.1 Non-NW Server Host.
4. Restart data capture on Log Decoder.

   Note: After you upgrade, you will restart log collection after completing the Task 11 - Reset Stable System Values for Log Collector after Upgrade in the **Post Upgrade Tasks**

Virtual Log Collector Host

1. Make sure you have prepared the Virtual Log Collector as described in the Log Collectors (LC) and Virtual Log Collectors (VLCs): Run prepare-for-migrate.sh.
2. Back up your 10.6.5.x VLC by editing the `all-systems` file on host where you performed the backup.

   a. Make sure your `all-systems` file contents has this information before you perform this step.

   ```
   vlc,<host-name>,<IP-address>,<UUID>,10.6.5.0
   ```

   b. Run the following command to create backup.

```
./nw-backup.sh -u
```

See Backup Instructions for detailed procedures on how to back up the host.

3. Make sure the backup host contains the VLC backup in the following format.

```
<hostname>-<IPaddress>-root.tar.gz
<hostname>-<IPaddress>-root.tar.gz.sha256
<hostname>-<IPaddress>-backup.tar.gz
<hostname>-<IPaddress>-backup.tar.gz.sha256
<hostname-IPaddress>-network.info.txt
all-systems-master-copy
```

4. Power off the 10.6.5.x VLC so that a new 11.1 VM can be created with the same network configuration.
5. Deploy a fresh Non-NW Server host using the 11.1 NetWitness Suite ova.
6. Connect to the VM console of the new VLC.
7. Update the network configuration to be the same as the 10.6.5.x VLC.
   This information is stored in the `<hostname-IPaddress>-network.info.txt` 10.6.5.x VLC backup file.

   Note: Make sure IPv6 is disabled.

   a. Edit the `/etc/sysconfig/network-scripts/ifcfg-eth0` file and update the settings. Contents of `ifcfg-eth0` should be as follows.

```
TYPE=Ethernet
DEFROUTE=yes
NAME=eth0
UUID=<uuid>
DEVICE=eth0
DNS1=<nameserver from <hostname>-<ipaddress>-network-info.txt>
DNS2=<nameserver from <hostname>-<ipaddress>-network-info.txt>
BOOTPROTO=static
IPADDR=<ipaddress from <hostname>-<ipaddress>-network-info.txt>
NETMASK=<netmask from <hostname>-<ipaddress>-network-info.txt>
GATEWAY=<gateway from <hostname>-<ipaddress>-network-info.txt>
NM_CONTROLLED=no
ONBOOT=yes
```

   b. Submit the following command string.

```
systemctl restart network.service
```

8. Create the backup directory.

```
# mkdir -p /var/netwitness/database/nw-backup/
```

9. Copy the backup from the backup host from `/var/netwitness/database/nw-backup` to the new VLC in the `/var/netwitness/database/nw-backup` directory.
10. Complete the steps 2 through 12 inclusive in Set Up 11.1 Non-SA Server Host for the rest of the NetWitness Suite components . Make sure that you select **Log Collector** for the service in step 12.

Set Up 11.1 NW Server Host

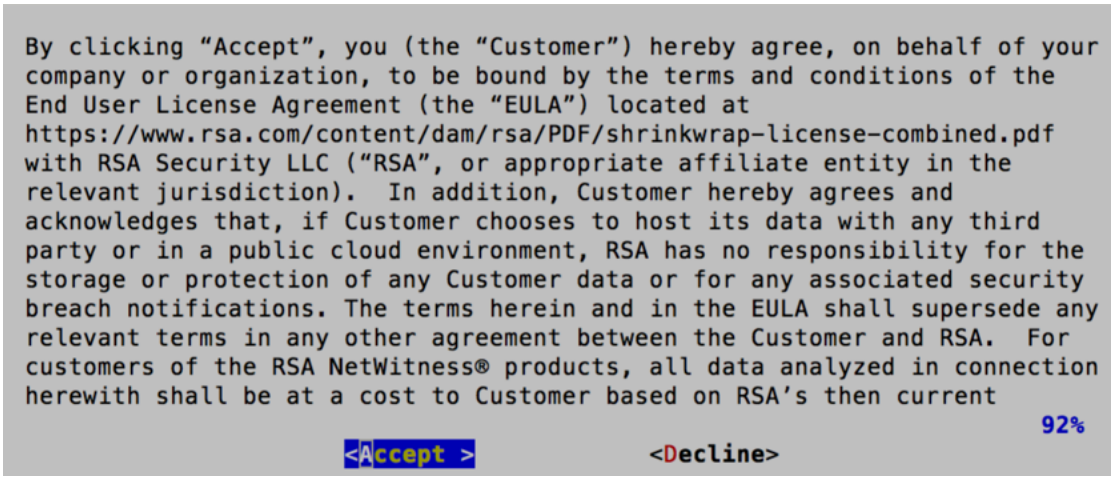
Make sure that you have backed up 10.6.5.x data for the SA Server host. **You must follow the instructions in** Backup Instructions **to back up the host.**

Caution: Run the backup immediately before upgrading the SA Server to 11.1 so that the data is as recent as possible. You must create the **all-systems** file before you upgrade the SA Server because you cannot do this after the SA Server has been upgraded to 11.1.

Complete the following steps to set up the 11.1 NW Server host.

1. Power on the NW Server VM and run the `nwsetup-tui` command.
   This initiates the Setup program and the EULA is displayed.

   Note: 1.) When you navigate through the Setup program prompts, use the down and up arrows to move among fields, use Tab key to move to and from commands (such as **<Yes>**, **<No>**, **<OK>**, and **<Cancel>**. Press the Enter key to register your command response and move to the next prompt.
   2.) The Setup program adopts the color scheme of the desktop or console you use access the host.

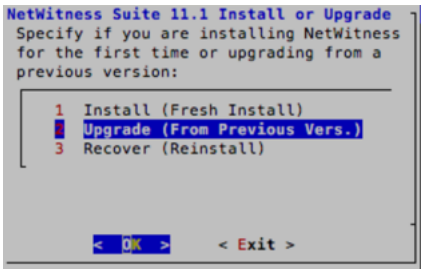
2. Tab to **Accept** and press **Enter**.
   The "Is this the NW Server" prompt is displayed.

Caution: If you choose the wrong host for the NW Server and complete the upgrade, you must repeat steps 1 through 11 of Set Up 11.1 NW Server Host to correct this error.

3. Tab to **Yes** and press **Enter**.

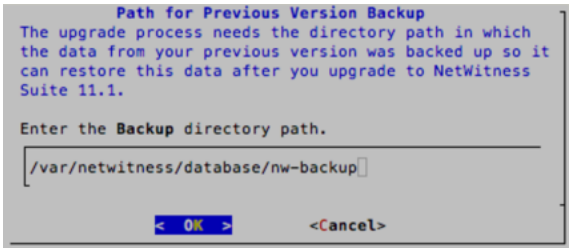
   Choose No if you already upgraded the NW Server to 11.1.

   The Install or Upgrade prompt is displayed.



4. Use down arrow to select **2 Upgrade (From Previous Vers.)**, tab to **OK**, and press **Enter**.

   The backup path prompt is displayed.



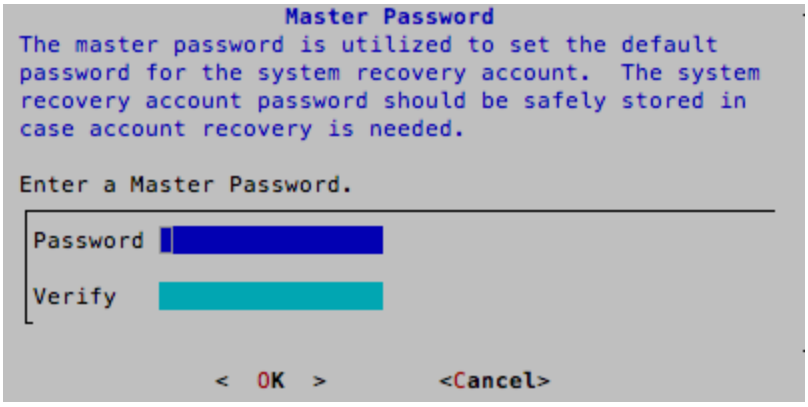
5. Tab to **OK** and press **Enter** if want to keep this path. If not, edit the path, tab to **OK** and press **Enter** to change it.

   The Master Password prompt is displayed.

   The following list of characters are supported for Master Password and Deployment Password:

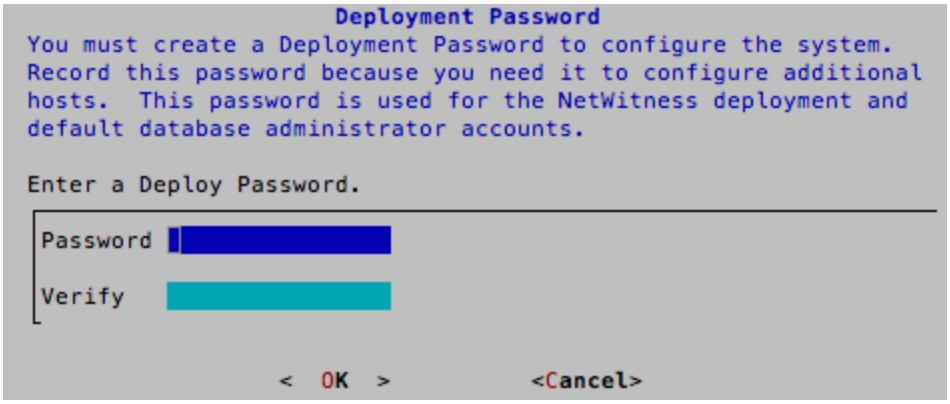
   - Symbols : ! @ # % ^ +,
   - Numbers :0-9
   - Lowercase Characters : a-z
   - Uppercase Characters : A-Z

No ambiguous characters are supported for Master Password and Deployment Password (for example: space { } [ ] ( ) / \ ' " ` ~ ; : . < > -).



6. Type in the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.

   The Deployment Password prompt is displayed.

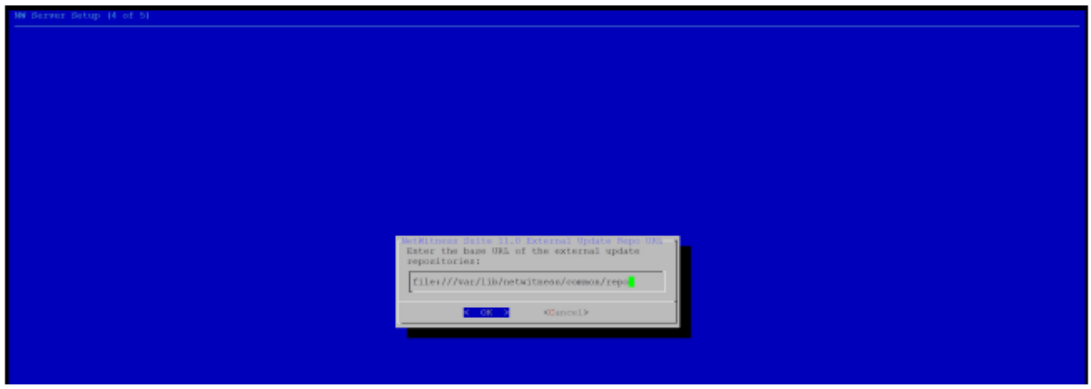


7. Type in the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.

   The Update Repo prompt is displayed.

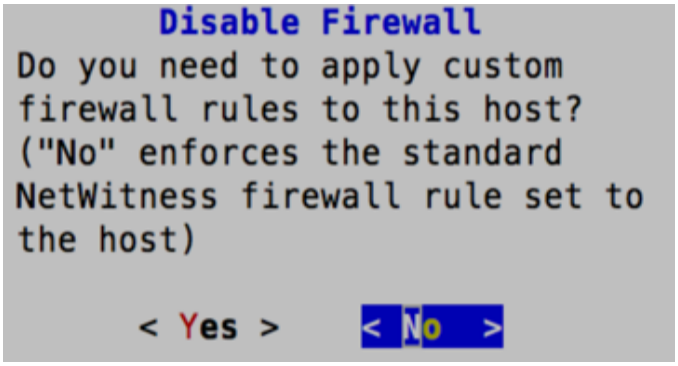
   You must use the same repo that you used for the NW Server hosts for all hosts.

8. Use the down and up arrows to select **2 An External Repo (on an externally-managed server)**, the UI prompts you for a URL.



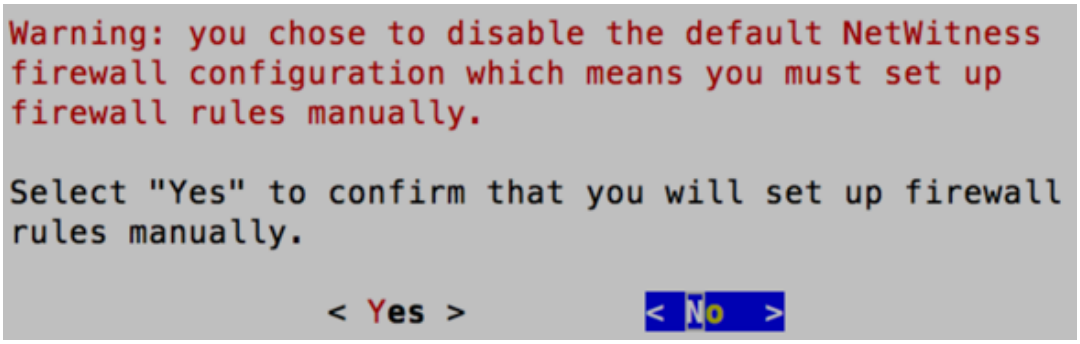
See "Set Up an External Repository with RSA and OS Updates" under "Hosts and Services Procedures" in the *RSA NetWitness Suite 11.1 Hosts and Services Getting Started Guide* for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

9. Enter the base URL of the NetWitness Suite external repo and click **OK**.
The disable or use standard firewall configuration prompt is displayed.



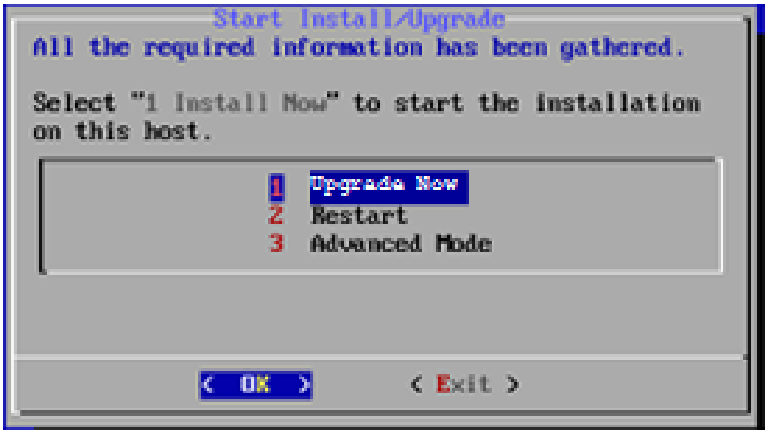
10. Tab to **No**, and press **Enter** to use the standard firewall configuration. Tab to **Yes**, and press **Enter** to disable the standard firewall configuration.

- If you select Yes, confirm your selection.



- If you select No, the standard firewall configuration is applied.

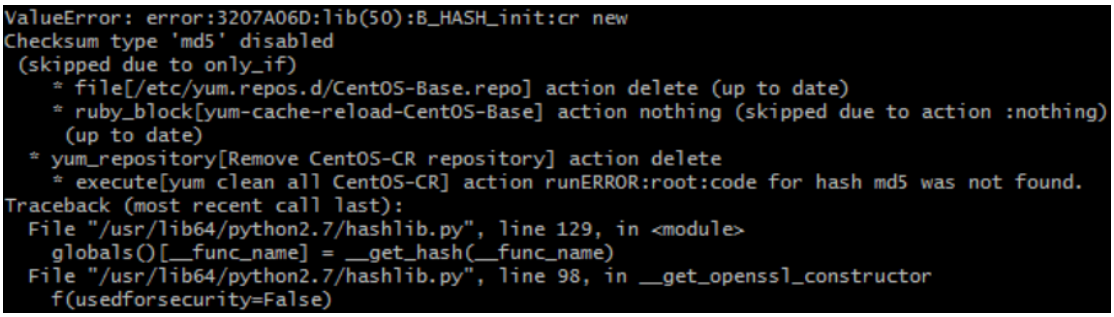
The start upgrade prompt is displayed.



11. Select 1 **Upgrade Now**, tab to **OK**, and press Enter.

    When "Installation complete" is displayed, you have upgraded the 10.6.5.x SA Server to the 11.1 NW Server.

> **Note:** Ignore the hash code errors similar to the errors shown in the following screen shot that are displayed when you initiate the `nwsetup-tui` command. Yum does not use MD5 for any security operations so they do not affect the system security.



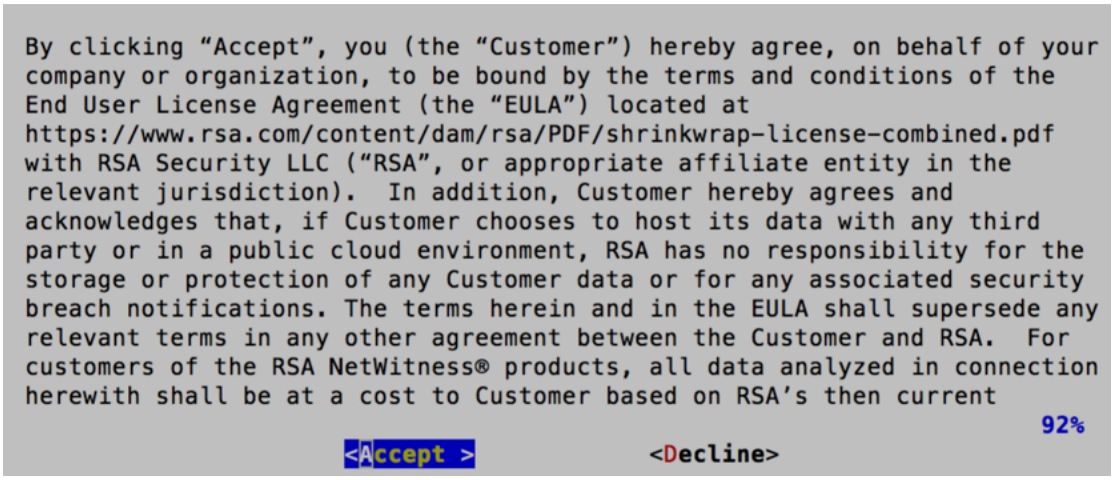
Set Up 11.1 Non-NW Server Host

Make sure that you Back up your 10.6.5.x data for the host. **You must follow the instructions in** Backup Instructions **to back up the host.**

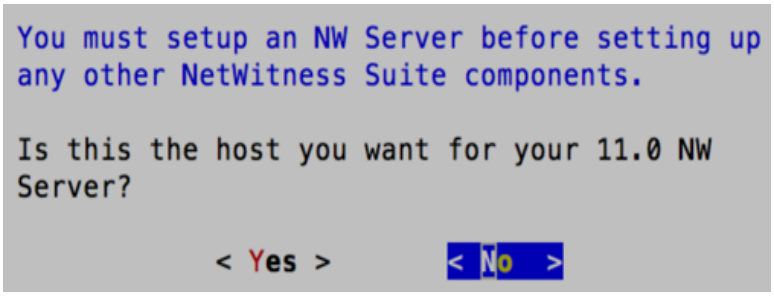
Caution: Run the backup immediately before upgrading the host to 11.1 so that the data is as recent as possible.

Complete the following steps to set up an 11.1 Non-NW Server host.

1. **Power On** the non-NW Server VM and run the `nwsetup-tui` command.
   This initiates the Setup program and the EULA is displayed.

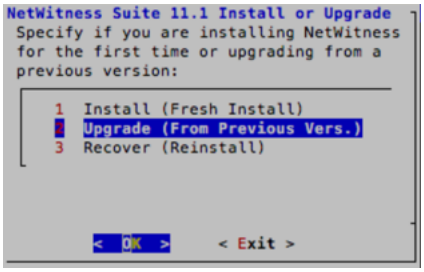


2. Tab to **Accept** and press **Enter**.
   The "Is this the NW Server" prompt is displayed.

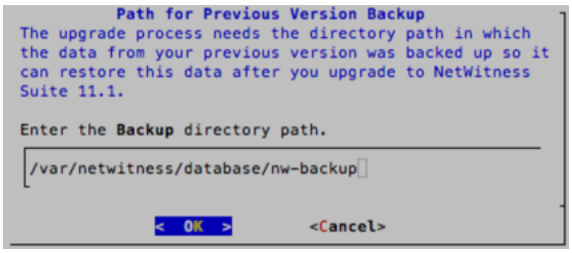


Caution: If you choose the wrong the host for the NW Server and complete the upgrade, you must repeat steps 1 through 11 of Set Up 11.1 NW Server Host to correct this error.

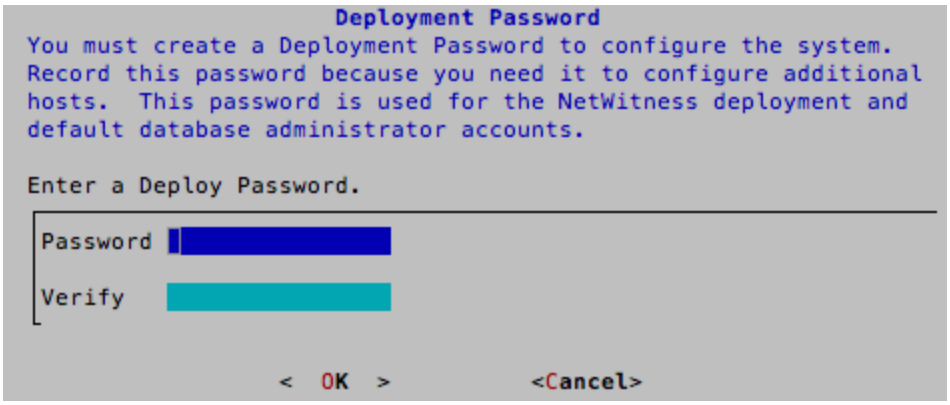
3. Tab to **No** and press **Enter**.
   The Install or Upgrade prompt is displayed.



4. Use down arrow to select **2 Upgrade (From Previous Vers.)**, tab to **OK**, and press **Enter**.
   The backup path prompt is displayed.



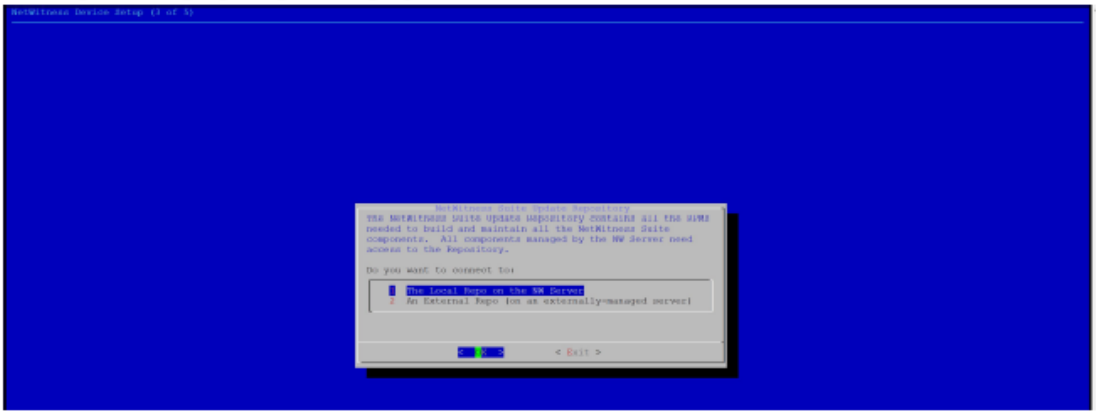
5. Tab to **OK** and press **Enter** if want to keep this path. If not, edit the path, tab to **OK** and press **Enter** to change it.
   The Deployment Password prompt is displayed.



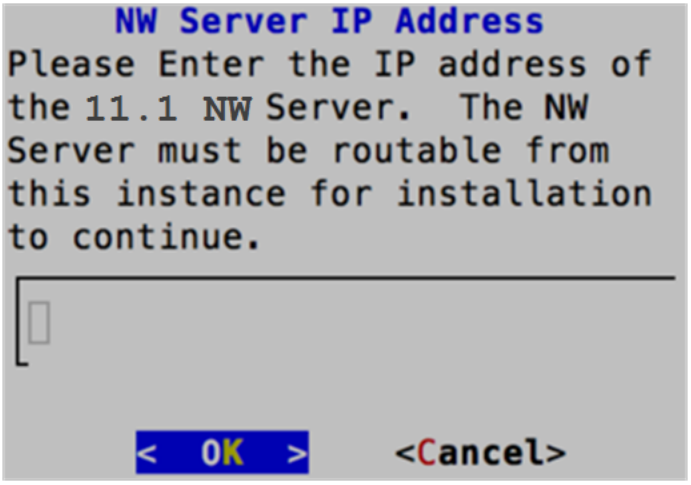
> **Note:** You must use the same deployment password that you used when you upgraded the NW Server.

6. Type in the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.

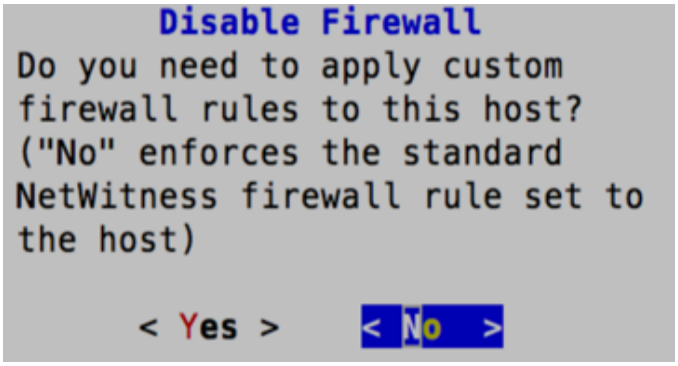
The Update Repo prompt is displayed.



7. Use the down and up arrows to select the **2 The Local Repo (on the NW Server)**, tab to **OK**, and press **Enter**.
8. Enter the base URL of the NetWitness Suite external repo and click **OK**.
   The NW Server IP Address is displayed.



9. Type the IP address of the NW Server, tab to **OK**, and press **Enter**.
   The disable or use standard firewall configuration prompt is displayed.

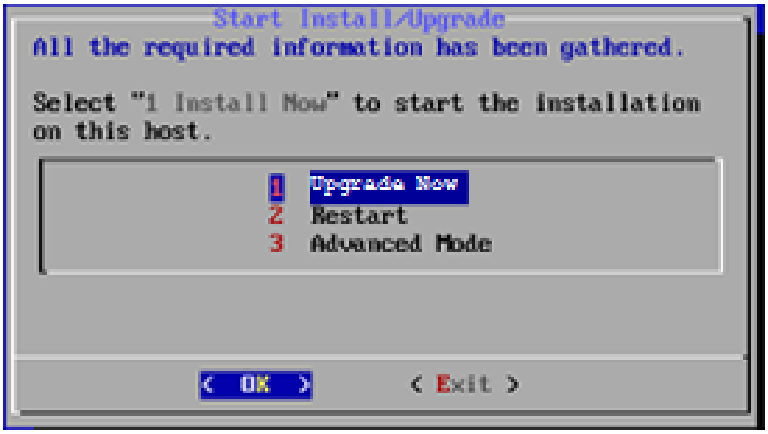


10. Tab to **No**, and press Enter to use the standard firewall configuration. Tab to **Yes**, and press **Enter** to disable the standard firewall configuration.

    - If you select **Yes**, confirm your selection.

    
    - If you select **No**, the standard firewall configuration is applied.

    The start upgrade prompt is displayed.

11. Select 1 **Upgrade Now**, tab to **OK**, and press **Enter**.
    When "Installation complete" is displayed, you have upgraded the host to the 11.1.

12. Install the service on this host:

    a. Log into NetWitness Suite.
    Type `https://<NW-Server-IP-Address>/login` in your browser to get to the NetWitness Suite Login screen

    b. Click **ADMIN** > **Hosts**.
    The **New Hosts** dialog is displayed with the **Hosts** view grayed out in the background.

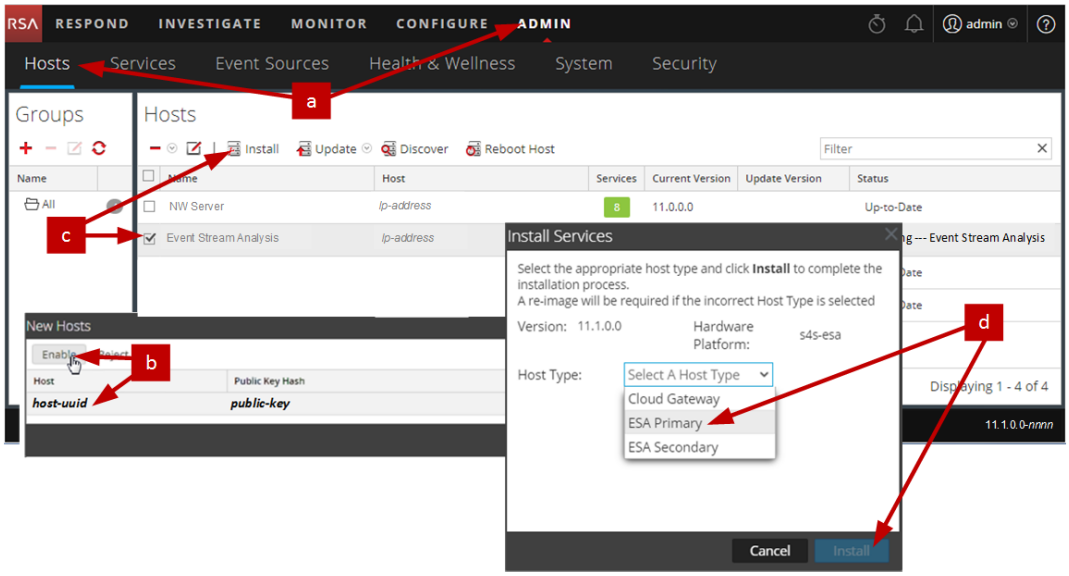
    > **Note:** If the **New Hosts** dialog is not displayed, click **Discover** in the Hosts view toolbar.

    c. Click on the host in the **New Hosts** dialog and click **Enable**.
    The **New Hosts** dialog closes and the host is displayed in the **Hosts** view.

d. Select that host (for example, **Event Stream Analysis**) and click Install

The **Install Services** dialog is displayed.

e. Select the appropriate service (for example, **ESA Primary**) and click **Install**.



You have completed the upgrade of the non-NW Server host in NetWitness Suite

Update or Install Legacy Windows Collection

Refer to the *RSA NetWitness 11.1 Legacy Windows Collection Guide* on RSA Link (https://community.rsa.com/docs/DOC-75593) for details about how to install or update Legacy Windows collection.

Note: After you update or install Legacy Windows Collection, reboot the system to ensure that Log Collection functions correctly.

Post Upgrade Tasks

This topic contains the tasks you must complete after you upgrade your hosts from 10.6.5.x to 11.1. These tasks are organized by the following categories.

- Global
- NetWitness Endpoint
  RSA supports NetWitness Endpoint versions 4.3.0.4, 4.3.0.5, and 4.4 only for NetWitness Suite 11.1.
- Event Stream Analysis
- Log Collection
- Reporting Engine
- Respond
- NetWitness SecOps Manager
- Security

Global Tasks

Task 1 - Remove Backup-Related Files from Host Local Directories

Caution: 1) You must retain a copy of all backup files on an external host. 2) Validate that you have all your data from your backup restored in 11.1 before you remove the backup-related files from the local directories on your 11.1 hosts.

Backup `.tar` Files

After all the hosts are upgraded to 11.1, you must remove:

- the backup files from the local directories on the hosts.
- all the files from `nw-backup` and `restore` directories on the hosts.

Host	Backup Path	Restore Path
Event Stream Analysis	`/opt/rsa/database/nw-backup`	`/var/netwitness/database/nw-backup/restore`

Host	Backup Path	Restore Path
NW Server	`/var/netwitness/database/nw-backup`	`/var/netwitness/restore`
All Other Hosts	`/var/netwitness/database/nw-backup`	`/var/netwitness/database/nw-backup/restore`

Task 2 - Restore NTP Servers

You must use the NetWitness Suite 11.1 user interface to restore NTP server configurations. NTP server configuration information is located in `$BUPATH/restore/etc/ntp.conf`. Use the NTP server name and hostname from the `/var/netwitness/restore/etc/ntp.conf` file. See "Configure NTP Servers" in the *RSA NetWitness® Suite 11.1 System Configuration Guide* for detailed instructions on how to add NTP servers. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 3 - Restore Licenses for Environments without FlexNet Operations-On Demand Access

If your environment does not have access to FlexNet Operations-On Demand, you need to re-download your NetWitness Suite licenses. Refer to "Step 1. Register the NetWitness Server" in the *RSA NetWitness Suite Licensing Management Guide* for instructions on how to re-download licenses. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 4 - Remap Virtual NW Server License to 10.6.5.x MAC Address

If you are upgrading a Security Analytics server running on a virtual machine, change the 11.1 NW Server virtual host to the 10.6.5.x MAC address to retain licensing. Refer to "Licensing: Step 1. Register the NetWitness Server" in the *RSA NetWitness Suite Licensing Management Guide* for instructions on remapping a license to a new MAC address." Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

(Conditional) Task 5 - If You Disabled Standard Firewall Config - Add Custom IPtables

During the upgrade, you have the option of using these rules or disabling them. If you disabled them, follow these instructions as a baseline to create a user-managed firewall rule sets on all the hosts for which you disabled the standard firewall configuration.

Note: You can refer to the `$BUPATH/restore/etc/sysconfig/iptables` and `$BUPATH/restore/etc/sysconfig/ip6tables` in the restore folder of the backup to update the `ip6tables` and `iptables` files. The `/etc/netwitness/firewall.cfg` file contains the standard `iptables` firewall rules.

1. SSH to each host and log in with your root credentials.
2. Update the following `ip6tables` and `iptables` files with the custom firewall rules.
   ```
   /etc/sysconfig/iptables
   /etc/sysconfig/ip6tables
   ```
3. Reload the `iptables` and `ip6tables` services.
   ```
   service iptables reload
   service ip6tables reload
   ```

(Conditional) Task 6 - Specify SSL Ports If You Never Set Up Trusted Connections

Complete this task only if you never set up Trusted Connections. You would not have set up Trusted Connections if you:

- Used the base ISO image for 10.3.2 or earlier.
- Updated the system using RPMs exclusively to get to 10.6.5.

NetWitness Suite 11.1 cannot communicate with the core services for these customers because they are using a non-SSL port 500XX. You must update the Core service ports to an SSL port in the Edit Service dialog.

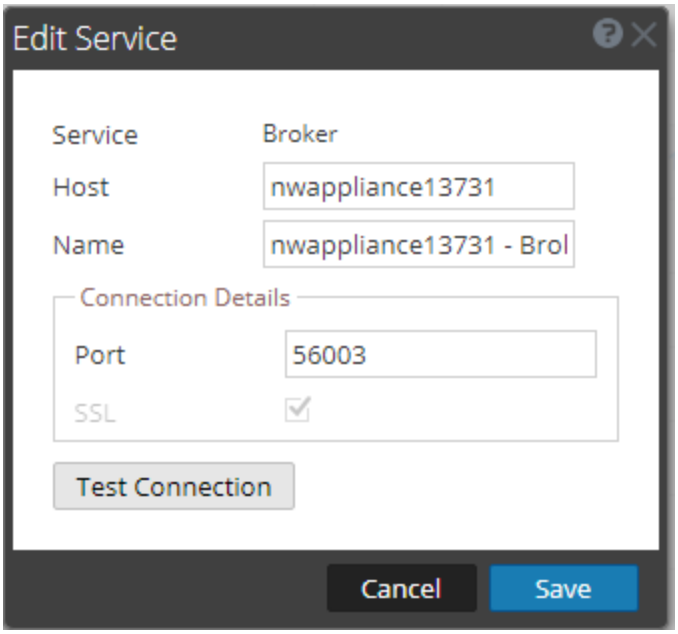
1. Log in to NetWitness Suite
2. Go to **ADMIN** > **Services**.
3. Select each core service and change there ports from Non-SSL to SSL ports.

Service	Non-SSL	SSL
Broker	50003	56003
Concentrator	50005	56005
Decoder	50004	56004
Log Decoder	50002	56002

4. Click (Edit) from the **Services** view toolbar.

   The Edit Service dialog is displayed.

5. Change the port from Non-SSL to SSL as shown in the table and click **Save**(for example, change the Broker port from 50003 to 56003).



NetWitness Endpoint

Task 7 - Reconfigure Endpoint Alerts Via Message Bus

1. On the NetWitness Endpoint Server, modify the virtual host configuration in the `C:\Program Files\RSA\ECAT\Server\ConsoleServer.exe` file to reflect the following configuration.
   `<add key="IMVirtualHost" value="/rsa/system" />`

   Note: In NetWitness Suite 11.1, the virtual host is `/rsa/system`. For 10.6.5.x and earlier versions, the virtual host is `/rsa/sa`.

2. Restart the API Server and Console Server.
3. SSH to the NW Server and log in with `root` credentials.
4. Submit the following command to add all certificates to the truststore.
   `orchestration-cli-client --update-admin-node`
5. Submit the following command to restart the RabbitMQ server.
   `systemctl restart rabbitmq-server`
   The NetWitness Endpoint account should automatically be available on RabbitMQ.

6. Import the `/etc/pki/nw/ca/nwca-cert.pem` and `/etc/pki/nw/ca/ssca-cert.pem` files from the NW Server and add them to the Trusted Root Certification stores in the Endpoint Server.

Event Stream Analysis Tasks (ESA)

Task 8 - Reconfigure Automated Threat Detection for ESA

If you used Automated Threat Detection in 10.6.5.x, you must complete the following steps to reconfigure it using the ESA Analytics service in 11.1.

1. Log in to NetWitness Suite 11.1
2. Click **ADMIN** > **System** > **ESA Analytics**.
   The Suspicious Domains modules, Command and Control (C2) for Packets and C2 for Logs, require a whitelist named "**domains_whitelist**".
3. Conditional - If your previous Automated Threat Detection whitelist appears on the **Lists** tab of the Context Hub service:
   a. Click **ADMIN**> **Services**, select the Context Hub service, in the action commands ( ) drop-down menu, click **View** > **Config** > **Lists** tab).
   b. Rename your old Automated Threat Detection whitelist to "`domains_whitelist`" for the Suspicious Domains module.

For more information, see the *NetWitness Suite Automated Threat Detection Guide* and the "Configure ESA Analytics" section of the *NetWitness Suite ESA Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 9 - For Integrations with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint Configure Mutually Authenticated SSL

If you integrate with Web Threat Detection, NetWitness SecOps Manager or NetWitness Endpoint, you must configure Mutually Authenticated SSL on each integrated system so that the application can authenticate itself when connecting to the RabbitMQ message bus.

Note: Use the RabbitMQ usernames and passwords that were obtained when you backed up your 10.6.5.x data (see Backup Instructions).

1. Create a user on the host system that is integrating with NetWitness Suite by logging into the host and running the following `rabbitmqctl` command.

```
> rabbitmqctl add_user <username> <password>
```

For example:

```
> rabbitmqctl add_user wtd-incidents incidents
```

2. Set permissions for users by running the following command (use the username from step 1):
   ```
   > rabbitmqctl set_permissions -p /rsa/system <username> ".*", ".*",
   ".*"
   ```
   For example:
   ```
   > rabbitmqctl set_permissions -p /rsa/system wtd-incidents ".*",
   ".*", ".*"
   ```

Task 10 - Enable Threat - Malware Indicators Dashboard

In 11.0, the 10.6.5.x **Threat -Indicators Dashboard** was renamed to **Threat - Malware Indicators Dashboard**. If you used this dashboard in 10.6.5.x, you must:

1. Enable the **Threat - Malware Indicators Dashboard** in 11.1.
2. Set datasource for new dashlets.

   See "Dashlets" in the RSA Link (https://community.rsa.com/docs/DOC-81463).

Log Collection

Task 11 - Reset Stable System Values for Log Collector after Upgrade

Complete the following tasks to reset stable system values for the Log Collector after you upgrade it to 11.0 to ensure that all collection protocols resume normal operation.

Reset Stable System Values for the Lockbox

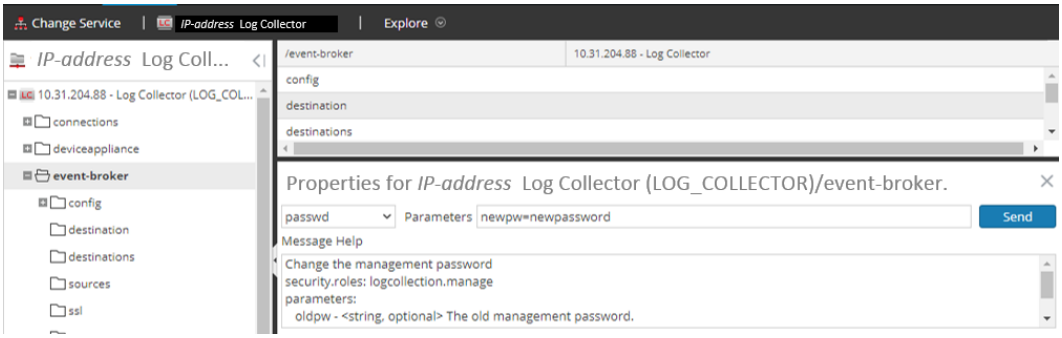
The Lockbox stores the key for encrypting event source and other passwords for the Log Collector. The Log Collector service cannot open the Lockbox because of the stable system value changes. As a result, you must Reset Stable System Values for the Lockbox . See "Log Collection: Step 3. Set Up a Lockbox" in the *RSA NetWitness® SuiteLog Collection Configuration Guide* for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Update Log Collector Service RabbitMQ User Account Password

If the logcollector service RabbitMQ user account password was changed, you must reenter it after the 11.0 upgrade.

1. Log in to NetWitness Suite.
2. Click **ADMIN > Services**.
3. Select the Log Collector service.
4. Click (Actions) > **View** > **Explore**.

5. Right click `event-broker` > **Properties**.
6. Select `passwd` from the drop-down list, enter `newpw=><newpassword>` in Parameters (where `<newpassword>` is the RabbitMQ user account password), and click **Send**.



(Optional for Upgrades from 10.6.5.x with FIPS enabled for Log Collectors, Log Decoders and Packet Decoders) Task 12 - Enable FIPS Mode

FIPS is enabled on all services except Log Collector Log Decoder, and Decoder. FIPS cannot be disabled on any services except Log Collector, Log Decoder, and Decoder. For information about how to enable FIPS for these services, see the "Sys Maintenance: Activate or Deactivate FIPS" topic in the *RSA NetWitness® SuiteSystem Maintenance Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Reporting Engine

Task 13 - Restore the CA certificates for External Syslog Servers for Reporting Engine

You must restore CA certificates after the upgrade from the back up you made prior to the upgrade. The Backup script backs up the 10.6.5.x CA certificates into the `/usr/lib/jvm/java-1.8.0-openjdk-1.8.0.111-0.b15.el6_8.x86_64/jre/lib/security/cacerts` directory.

Complete the following procedure to restore the CA certificates in 11.1.

1. SSH to the NW Server host.
2. Export the CA certificates.
   `keytool -export -alias <alias_name> -keystorepath_to_keystore_file -rfc -file path_to_certificate_file`
3. Copy the CA pem into `/etc/pki/nw/trust/import` directory.

(Conditional) Task 14 - Restore External Storage for Reporting Engine

If you have external storage for the Reporting Engine (such as SAN or NAS for storing reports), you must restore the mount you unlinked before the upgrade. See "Reporting Engine: Add Additional Space for Large Reports" in the *RSA NetWitness® Suite Reporting Engine Configuration Guide* for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Respond

Task 15 - Restore Respond Service Custom Keys

In 10.6.5.x, if you added custom key for use in the groupBy clause, the `alert_rules.json` file was modified. The `alert_rules.json` file contains aggregation rule schema. RSA moved the `alert_rules.json` file to the following new location:
`/var/lib/netwitness/respond-server/scripts`

1. Copy the custom keys from `/opt/rsa/im/fields/alert_rules.json` file in the backup directory.

   This directory is where the `alert_rules.json` file is restored from the 10.6.5.x backup.

2. Go to the `/var/lib/netwitness/respond-server/data/aggregation_rule_schema.json` in 11.0.

   This is the new file for 11.0.

3. Edit the `/var/lib/netwitness/respond-server/data/aggregation_rule_schema.json` to include the custom keys you copied in step one.

Task 16 - Restore Customized Respond Service Normalization Scripts

RSA re-factored the Respond service normalization scripts in 11.0 and moved them to the following new location:
`/var/lib/netwitness/respond-server/scripts`
If you customized these scripts in 10.6.5.x, you must:

1. Go to the to the `/opt/rsa/im/scripts` directory.
   This directory is where the following Respond service normalization scripts are restored from the 10.6.5.x backup.
   `data_privacy_map.js`
   `normalize_alerts.js`
   `normalize_core_alerts.js`
   `normalize_ecat_alerts.js`
   `normalize_ma_alerts.js`
   `normalize_wtd_alerts.js`
   `utils.js`
2. Copy any custom logic from the 10.6.5.x scripts.
3. Go to the `/var/lib/netwitness/respond-server/scripts` directory.
   This directory is where NetWitness Suite 11.0 stores the re-factored scripts.
4. Edit the new scripts to include the custom logic you copied in step 2 from the 10.6.5.x scripts.
5. Copy any custom logic from `/opt/rsa/im/fields/alert_rules.json` file.
   The `alert_rules.json` file contains aggregation rule schema.

(Conditional) Task 18 - Restore Custom Analysts Roles

If you had custom analyst roles in 10.6.5.x, you must reinstate them in 11.1. See *Adding Roles and Assigning Permissions for the Roles* in the *RSA NetWitness Suite Warehouse Analytics Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

NetWitness SecOps Manager

Task 19 -Reconfigure NW SecOps Manager Integration

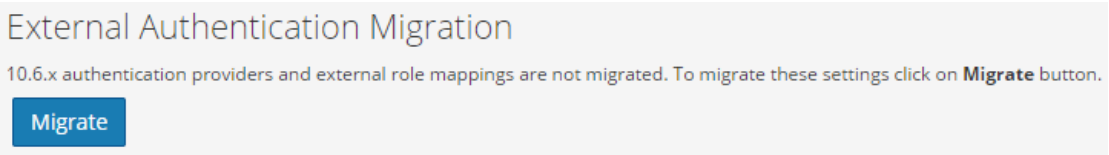
For information on how to reconfigure NW SecOps for Event Stream Analysis, Reporting Engine, and Respond, see *RSA Archer Integration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Security

Task 20 - Migrate Active Directory (AD)

The first time you log into the NetWitness Suite 11.1 User Interface, you must click on the Migrate button to complete the migration of AD.

1. Log in to NetWitness Suite with your `admin user` credentials.
2. Click **ADMIN** > **SECURITY** and click the **Settings** tab.
   The following dialog is displayed.



3. Click **Migrate**.
   The migration is complete and the dialog closes.

Task 21 - Modify Migrated AD Configuration to Upload Certificate

If the you used a self-signed certificate in Active Directory (AD) server, and enabled SSL for the AD connection in 10.6.5.x, you must modify the migrated AD configuration to upload the certificate (either the self-signed cert or the CA cert).

Complete the following procedure to modify the migrated AD configuration to upload the certificate (either the self-signed cert or the CA cert).

1. Log in to NetWitness Suite.
2. Click **ADMIN** > **Security** and click the **Settings** tab.
3. Under **Active Directory Settings**, select an AD configuration and click .
   The Edit Configuration dialog is displayed.
4. Go to the **Certificate File** field, click **Browse**, and select a certificate from your network.
5. Click **Save**.

Task 23 - Reconfigure Pluggable Authentication Module (PAM) in 11.1

You must reconfigure PAM after you upgrade to 11.1. See "Configure PAM Login Capability" in the *RSA NetWitness® Suite System Security and User Management Guide*for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

You can refer to your 10.6.5.x PAM configuration files in the **/etc** directory in the your 10.6.5.x backup data for guidance.

Appendix A. Troubleshooting

This section describes problems that you may encounter during the upgrade with solutions. In most cases, NetWitness Suite creates log messages when it encounters these problems.

Note: If you cannot resolve any upgrade issue using the following troubleshooting solutions, contact Customer Support (https://community.rsa.com/docs/DOC-1294)

This section has troubleshooting documentation for the following services, features, and processes.

- 11.1 Setup Program (`nwsetup-tui`)
- Backup
- Event Stream Analysis
- General
- Log Collector Service (`nwlogcollector`)
- NW Server
- Reporting Engine

11.1 Setup Program (nwsetup-tui)

Problem	Host Setup Program (nwsetup-tui) exits and creates the following error message in /var/log/netwitness/bootstrap/launch/security-server/security-server.log: <yyyy-mm-dd hh:mm:ss,nnn> [main] ERROR SystemOperation|Service startup failed. Running in safe mode org.h2.jdbc.JdbcSQLException: The database is read only [90097-193] at org.h2.message.DbException.getJdbcSQLException(DbException.java:345) ... at org.springframework.jdbc.datasource.AbstractDriverBasedDataSource.getConnection(AbstractDriverBasedDataSource.java:159) at com.rsa.asoc.security.upgrade.legacy.MigrationDatabase.<init>(MigrationDatabase.java:113)
Cause	The H2 database needs write permission to complete the host setup.
Solution	From the NW Server command line, provide write permission to H2.db, restart the NW Server, and restart nwsetup-tui Setup Program. chmod o+w /var/lib/netwitness/uax/db/platform.h2.db systemctl restart rsa-nw-security-server.service nwsetup-tui

Backup (`nw-backup` script)

Message	`WARNING: Incorrect ESA Mongo admin password for host <hostname>.`
Cause	ESA Mongo admin password contains special characters (for example, '!@#$%^qwerty').
Solution	Change the ESA mongo admin password back to the original default of 'netwitness' before running backup. See "ESA Config: Change MongoDB Password for admin Account" the the *RSA NetWitness® Suite Event Stream Analysis Configuration Guide. Go to the* Master Table of Contents *for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.*

Event Stream Analysis

Problem	ESA service crashes after you upgrade to 11.1 from a FIPS enabled setup.
Cause	ESA service is pointing to an invalid keystore.

Solution	1. SSH to the ESAPrimary host and log in.
	2. In the `/opt/rsa/esa/conf/wrapper.conf` file, replace the following line:
	`wrapper.java.additional.5=-Djavax.net.ssl.keyStore=/opt/rsa/esa/../carlos/keystore`
	with:
	`wrapper.java.additional.5=-Djavax.net.ssl.keyStore=/opt/rsa/carlos/keystore`
	3. Submit the following command to restart ESA .
	`systemctl restart rsa-nw-esa-server`
	Note: If you have multiple ESA hosts and you encounter that same problem, repeat steps 1 through 3 inclusive on each secondary ESA host.

General

Logs referred to in this section are posted to `/var/log/install/install.log` on the NW Server Host.

Message	`ERROR com.rsa.smc.sa.admin.web.controller.ajax.health.AlarmsController - Cannot connect to System Management Service`
Cause	NetWitness Suite sees the Service Management Service (SMS) as down after successful upgrade even though the service is running.
Solution	Restart SMS service using below command. `systemctl restart rsa-sms`

Message	`<timestamp> <host>: SMS_PostInstall: INFO: Free disk space on /opt is nGB` `<timestamp> <host>: SMS_PostInstall: WARN: Disk space check failed on /opt. The available disk space nGB is less than the recommended minimum disk space of 10GB.`
Cause	Low or insufficient disk space allocated for the SMS service.
Solution	RSA recommends that you provide a minimum of 10 GB of disk space for the SMS service to run optimally.

Problem	After you run the Setup Program for a non-NW Server host, you must go in to the UI, enable the host, and install the service on the host from the Hosts View. If you see "Install error View Details" in the **Status** column of the Hosts view, the host lost connectivity due to network issues.
Solution	Re-install the service on the host from the Hosts view.

Log Collector Service (`nwlogcollector`)

Log Collector logs are posted to `/var/log/install/nwlogcollector_install.log` on the host running the `nwlogcollector` service.

Message	`<timestamp>.NwLogCollector_PostInstall: Lockbox Status : Failed to open lockbox: The lockbox stable value threshold was not met because the system fingerprint has changed. To reset the system fingerprint, open the lockbox using the passphrase.`
Cause	The Log Collector Lockbox failed to open after the update.
Solution	Log in to NetWitness Suite and reset the system fingerprint by resetting the stable system value password for the Lockbox as described in the "Reset the Stable System Value" topic under "Configure Lockbox Security Settings" topic in the *Log Collection Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Message	*timestamp* `NwLogCollector_PostInstall: Lockbox Status : Not Found`
Cause	The Log Collector Lockbox is not configured after the update.
Solution	(Conditional) If you use a Log Collector Lockbox, log in to NetWitness Suite and configure the Lockbox as described in the"Configure Lockbox Security Settings" topic in the *Log Collection Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents..

Message	`<timestamp>: NwLogCollector_PostInstall: Lockbox Status : Lockbox maintenance required: The lockbox stable value threshold requires resetting. To reset the system fingerprint, select Reset Stable System Value on the settings page of the Log Collector.`
Cause	You need to reset the stable value threshold field for the Log Collector Lockbox.
Solution	Log in to NetWitness Suite and reset the stable system value password for the Lockbox as described in "Reset the Stable System Value" topic under "Configure Lockbox Security Settings" topic in the *Log Collection Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Problem	You have prepared a Log Collector for upgrade and no longer want to upgrade at this time.
Cause	Delay in upgrade.
Solution	Use the following command string to revert a Log Collector that has been prepared for upgrade back to resume normal operation. `# /opt/rsa/nwlogcollector/nwtools/prepare-for-migrate.sh --revert`

NW Server

These logs are posted to `/var/netwitness/uax/logs/sa.log` on the NW Server Host.

Problem	After upgrade, you notice that Audit logs are not getting forwarded to the configured Global Audit Setup; or, The following message seen in the sa.log. `Syslog Configuration migration failed. Restart jetty service to fix this issue`
Cause	NW Server Global Audit setup migration failed to migrate from 10.6.5 to 11.1.
Solution	1. SSH to the NW Server. 2. Submit the following command. `orchestration-cli-client --update-admin-node`

Reporting Engine Service

Reporting Engine Update logs are posted to to`/var/log/re_install.log` file on the host running the Reporting Engine service.

Message	`<timestamp> : Available free space in /home/rsasoc/rsa/soc/reporting-engine [ existing-GB ] is less than the required space [ required-GB ]`
Cause	Update of the Reporting Engine failed because you do not have enough disk space.
Solution	Free up the disk space to accommodate the required space shown in the log message. See the "Add Additional Space for Large Reports" topic in the *Reporting Engine Configuration Guide* for instructions on how to free up disk space. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Appendix B. Stopping and Restarting Data Capture and Aggregation

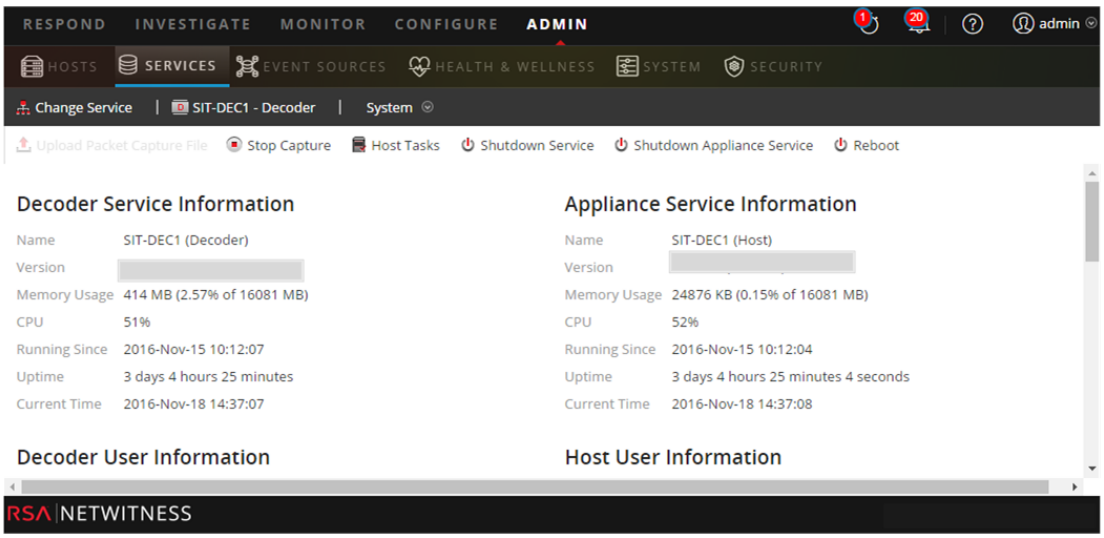
RSA recommends that you stop packet and log capture and aggregation before upgrading a Decoder, Concentrator, and Broker host to 11.1. If you do this, you must restart packet and log capture and aggregation after updating these hosts.

Stop Data Capture and Aggregation

Stop Packet Capture

To stop packet capture:

1. Log in to NetWitness Suite and go to **ADMIN** > **Services**.
   The Services view is displayed.
2. Select each **Decoder** service.



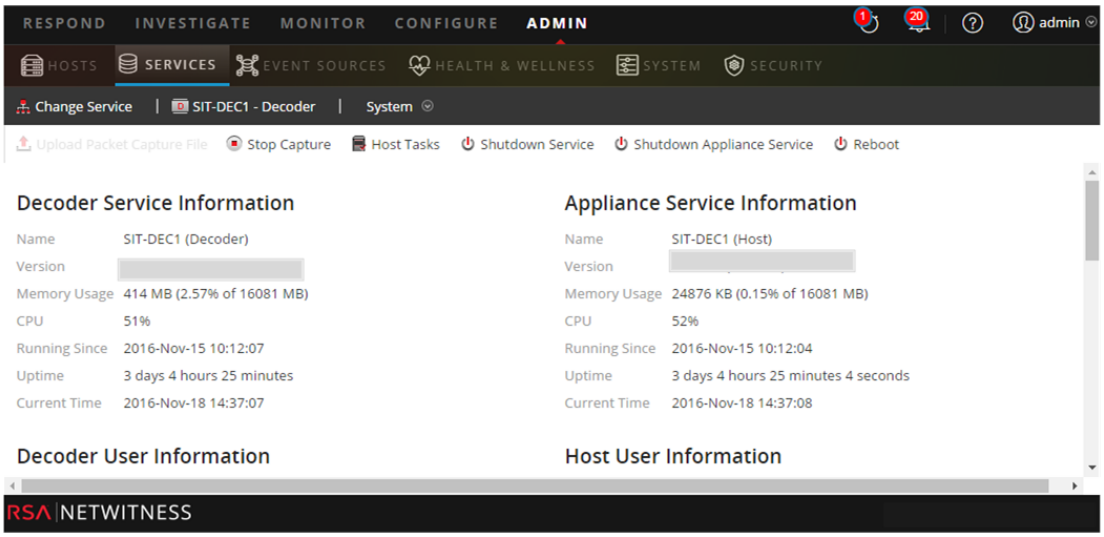
3. Under (actions), select **View** > **System**.
4. In the toolbar, click  .

Stop Log Capture

To stop log capture:

1. Log in to NetWitness Suite and go to **ADMIN** > **Services**.
   The Services view is displayed.

2. Select each **Log Decoder** service.



3. Under (actions), select **View** > **System**.

4. In the toolbar, click

.

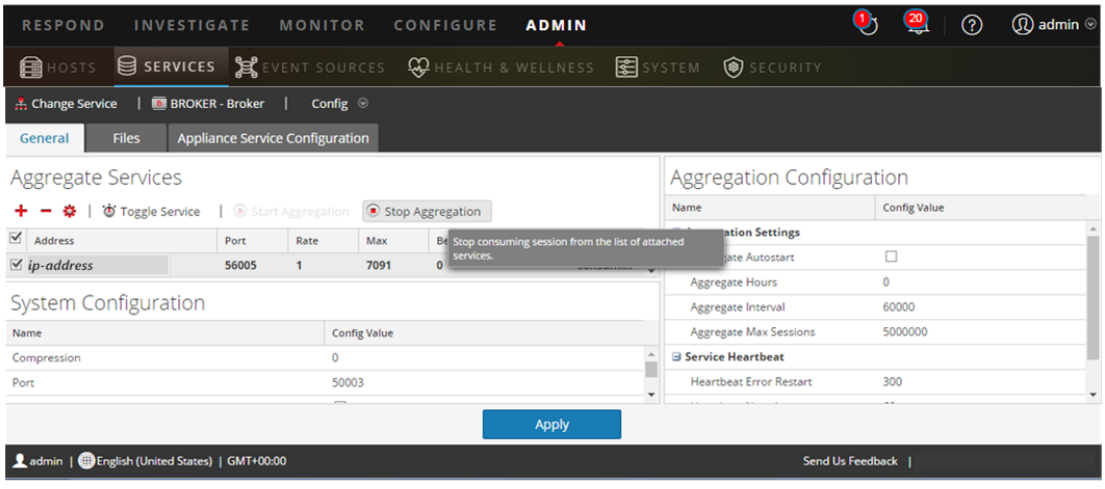
Stop Aggregation

1. Log in to NetWitness Suite and go to **ADMIN** > **Services**.

2. Select the **Broker** service.

3. Under (actions), select **View** > **Config**.

4. The **General** tab is displayed.



5. Under **Aggregated Services** click

.

Start Data Capture and Aggregation

Restart packet and log capture and aggregation after updating to 11.1.

Start Packet Capture

To start packet capture:

1. In the **NetWitness Suite** menu, select **ADMIN** > **Services**.
   The Services view is displayed.
2. Select each **Decoder** service.
3. Under (actions), select **View** > **System**.
4. In the toolbar, click .

Start Log Capture

To start log capture:

1. In the **NetWitness Suite** menu, select **ADMIN** > **Services**.
   The Services view is displayed.
2. Select each **Log Decoder** service.
3. Under (actions), select **View** > **System**.
4. In the toolbar, click .

Start Aggregation

During the upgrade from 10.6.5.x to 11.1, the Broker Service is restarted and this automatically starts aggregation.

Revision History 38

Introduction

RSA NetWitness® Suite11.1.0.0 provides fixes for all products in the suite. The components of the suite are the NetWitness Server (Admin server, Config server, Integration server, Investigate server, Orchestration server, Respond server, and Security sever), Archiver, Broker, Concentrator, Context Hub, Decoder, Endpoint Hybrid, Endpoint Log Hybrid, ESA Primary, ESA Secondary, Log Collector, Log Decoder, Malware Analysis, Reporting Engine, Warehouse Connector, and Workbench.

Note: The Reporting Engine is installed on the NW Server host, Workbench is installed on the Archiver host, Warehouse Connector can be installed on the Decoder host or Log Decoder host.

The instructions in this guide apply to both physical and virtual hosts (including AWS and Azure Public Cloud) unless stated to the contrary.

Update Path

The following update paths are supported for NetWitness Suite 11.1.0.0:

- 11.0.0.0 to 11.1.0.0
- 11.0.0.1 to 11.1.0.0
- 11.0.0.2 to 11.1.0.0
- 10.6.5.x to 11.1.0.0

  Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

  See the *RSA NetWitness Suite 10.6.5.x to 11.1 Physical Host Upgrade Guide* and *RSA NetWitness Suite 10.6.5.x to 11.1 Virtual Host Upgrade Guide* for instructions on how to upgrade 10.6.5.x to 11.1.0.0.

Running in Mixed Mode

Running in mixed mode occurs when some services are updated to the latest version and some services are on older versions. See "Running in Mixed Mode" in the *RSA NetWitness Suite Hosts and Services Getting Started Guide* for further information.

Update Preparation Tasks

Complete the following tasks to prepare for the update to NetWitness Suite 11.1.0.0. These tasks are organized by the following categories.

General

Reporting Engine

Respond

General

Task 1 - Review Core Ports and Open Firewall Ports

The following tables lists new ports in 11.1.0.0.

Caution: Make sure that the new ports are implemented and tested before updating so that update does not fail due to missing ports.

Endpoint Hybrid or Endpoint Log Hybrid

Source Host	Destination Host	Destination Ports	Comments
Endpoint Hybrid or Endpoint Log Hybrid	NW Server	TCP 5672	Message Bus
Endpoint Server	NW Server	TCP 27017	MongoDB

Task 2- Back Up Malware Analysis Configuration File to Another Directory

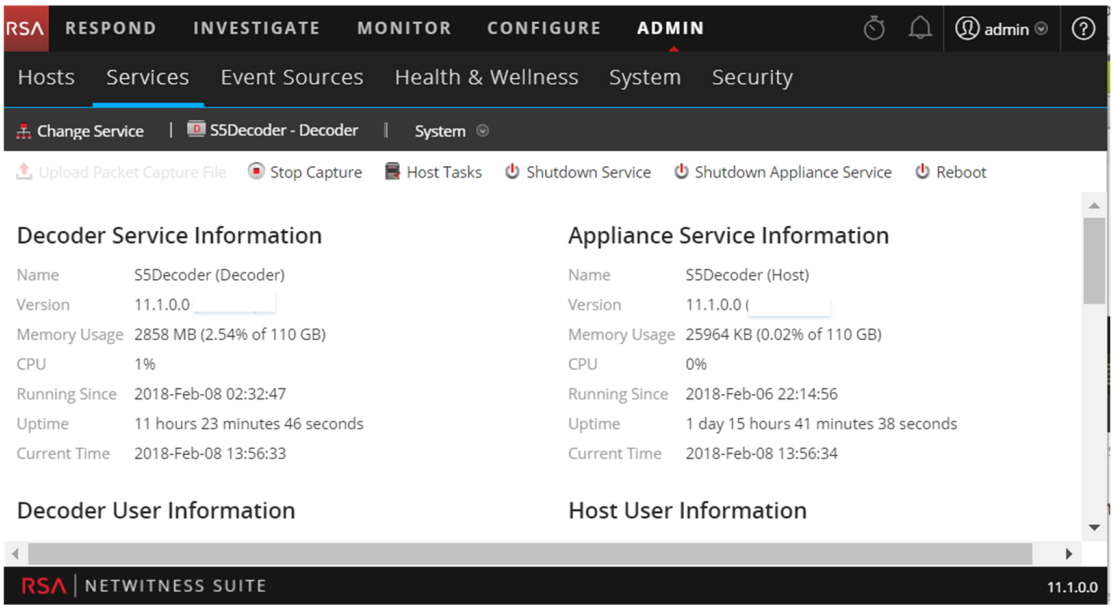
1. Make a backup of the following file to another, safe directory.
   `/var/lib/netwitness/malware-analytics-server/spectrum/conf/malwareCEFDictionaryConfiguration.xml`
   You need to retrieve your custom parameter values from this backup after you update the Malware Analysis host to 11.1.0.0. The update creates a new configuration file with all the parameters set to the default values.
2. Delete the following file.
   `/var/lib/netwitness/malware-analytics-server/spectrum/conf/malwareCEFDictionaryConfiguration.xml`

Task 3 - Stop Data Capture and Aggregation

Stop Packet Capture

To stop packet capture:

1. Log in to NetWitness Suite 11.0.x and go to **ADMIN** > **Services**.
   The Services view is displayed.
2. Select each **Decoder** service.



3. Under (actions), select **View** > **System**.
4. In the toolbar, click

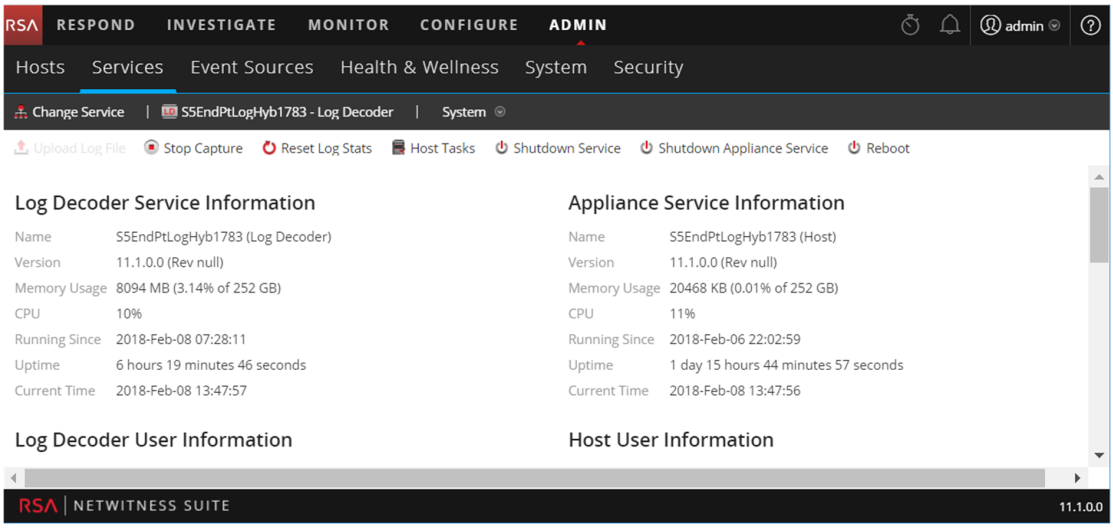
.

Stop Log Capture

To stop log capture:

1. Log in to NetWitness Suite 11.0.x and go to **ADMIN** > **Services**.
   The Services view is displayed.

2. Select each **Log Decoder** service.



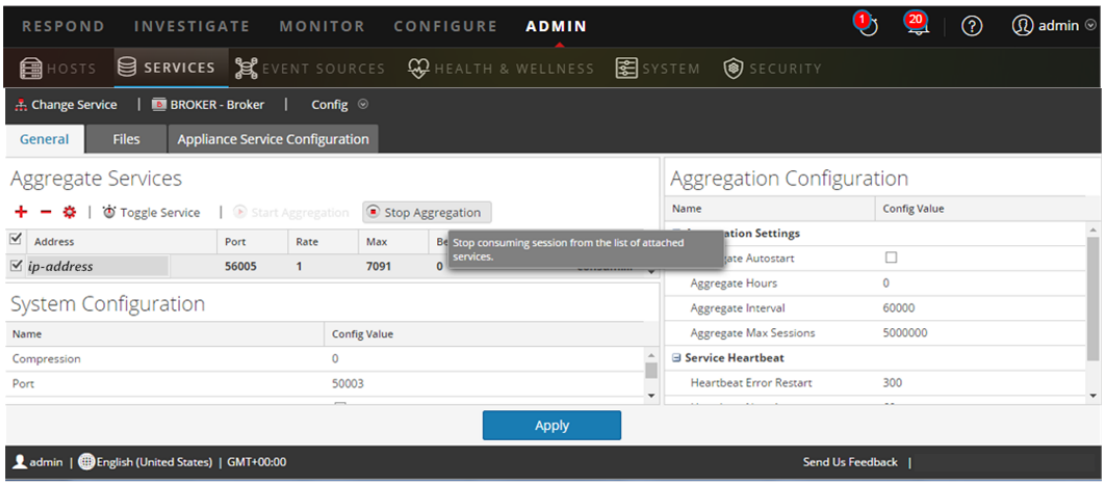
3. Under (actions), select **View** > **System**.

4. In the toolbar, click

.

Stop Aggregation

1. Log in to NetWitness Suite 11.0.x and go to **ADMIN** > **Services**.
2. Select the **Broker** service.
3. Under (actions), select **View** > **Config**.
4. The **General** tab is displayed.



5. Under **Aggregated Services** click 
.

Task 4 - Make Sure That `deploy_admin` User Credentials Are Still Valid (Not Expired)

You must have valid (not exipred) `deploy_admin` user credentials to update to 11.1.

Part I. Verify Expiration Status of `deploy_admin` User Credentials

Complete the following procedure to determine if the `deploy_admin` user credentials have expired.

1. In the NetWitness Suite menu, select **ADMIN** > **Security** > **Users** tab.
2. Make sure that the `deploy_admin` has not expired.
   - If they are still valid, you can proceed with the update.
   - If they have expired , complete Part II of this task.

(Conditional) Part II. Reset Expired `deploy_admin` User Credentials

Complete the following procedure to reset expired `deploy_admin` user credentials.

1. Select the `deploy_admin` and click **Reset Password**.
2. (Conditional) If NetWitness Suite allows you to enter the expired `deploy_admin` password in the **Reset Password** dialog, complete the following steps.
   a. Enter the expired `deploy_admin` password.
   b. Uncheck the Force password change on next login checkbox.
   c. Click **Save**.
3. (Conditional) If NetWitness Suite does not allow you to enter the expired `deploy_admin` password in the Reset Password dialog, complete the following steps.
   a. Reset `deploy_admin` to use a new password.
   b. On all the NW Server host and all other hosts on 11.x, run the following command using the new `deploy_admin` password.
   `/opt/rsa/saTools/bin/set-deploy-admin-password`
   c. On the host that failed installation/orchestration, run the nwsetup-tui and use the new `deploy_admin` password.

Reporting Engine

Task 5 - Configure Reporting Engine for Out-of-the-Box Charts

For Out-of-the-Box charts to run after the update, you must configure the default data source on the Reporting Engine Configuration page before you perform the update. If you do not perform this task, you must manually set up the data source after the update. For more information on Reporting Engine data sources, see the *NetWitness Suite11.1 Reporting Engine Configuration Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

At this point, you can proceed to the update instructions.

Respond

Task 6 - (Conditional) Restore Respond Service Custom Keys

If you added custom keys in `var/lib/netwitness/respond-server/data/aggregation_rule_schema.json` for use in the groupBy Clause in 11.0, copy and save the custom keys in a file.

Task 7 - Back Up Customized Respond Service Normalization Scripts

RSA re-factored Respond service normalization scripts are stored in the `/var/lib/netwitness/respond-server/scripts` directory in 11.1.0.0. You need to back them up in 11.0.x before you update to 11.1.0.0 so you can restore them in 11.1.0.0 as described in the Respond Post Update Tasks.

1. Go to the `/var/lib/netwitness/respond-server/scripts` directory.
2. Back up the following files:

   ```
   data_privacy_map.js
   normalize_alerts.js
   normalize_core_alerts.js
   normalize_ecat_alerts.js
   normalize_ma_alerts.js
   normalize_wtd_alerts.js
   utils.js
   ```

3. (Conditional) If you have any custom logic added in 11.0.x or any previous release, copy and save this logic from the backed up scripts so you can restore it in 11.1.0.0.

Task 8 - (Conditional - For Azure Stack)

Populate the Repo with the additional packages.

1. If using a local repository, extract the Azure Zip from the following steps on the Admin server:

a. Run as root: `mkdir -p /var/lib/netwitness/common/repo/11.1.0.0/OS/other`

b. Unzip to the above directory: `unzip nw-azure-11.1-extras.zip -d /var/lib/netwitness/common/repo/11.1.0.0/OS/other`

2. If you are using external repo, follow these steps:

a. After setting up the 11.1.0.0 content on the external repo, unzip the nw-azure-11.1-extras.zip to the external repo directory's <base-directory>11.1.0.0/OS/other folder.

b. Run createrepo from the external repository's 11.1.0.0/OS directory.

Update Tasks

Complete the following tasks to update NetWitness Suite 11.0.x.x to 11.1.0.0.

There are two methods you can use to apply version updates to a host.

Note: If you plan to use an update repository (repo) for NetWitness Suite 11.1.0.0 that is different from the repo you have set up now for 11.0.x.x , refer to Appendix C. Set Up External Repo for instructions.

- Apply updates from the Host view (Web Access)
- Apply update from the command line (No Web Access)

Apply Updates from the Hosts View (Web Access)

There are two tasks you must complete to apply updates from the Hosts view:

- Task 1. Populate Local Repo or Set Up an External Repo - make sure that you have the latest version updates .
- Task 2. Apply updates from the Hosts View to each host.

Task 1. Populate Local Repo or Set Up an External Repo

When you set up your NW Server in 11.1.0.0, you select the Local Repo or an external repo. The Hosts view retrieves version updates from the repo you selected.

If you selected the Local Repo, you do not need to set it up, but you must make sure that it is populated with the latest version updates. See Appendix B. Populate Local Repo for instructions on how populate it with version update.

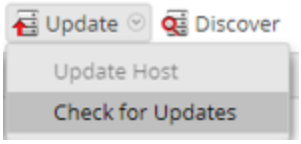
If you selected an External Repo, you must set it up. See Appendix C. Set Up External Repo for instructions on how to set up an external repo.

Task 2. Apply Updates from the Hosts View to Each Host

The Hosts view displays the software version updates available in your Local Update Repository and you choose and apply the updates you want from the Host view.

This procedure tells you how to update a host to a new version of NetWitness Suite.

1. Log in to NetWitness Suite.
2. Go to **ADMIN > HOSTS**.
3. (Conditional) Check for the latest updates.

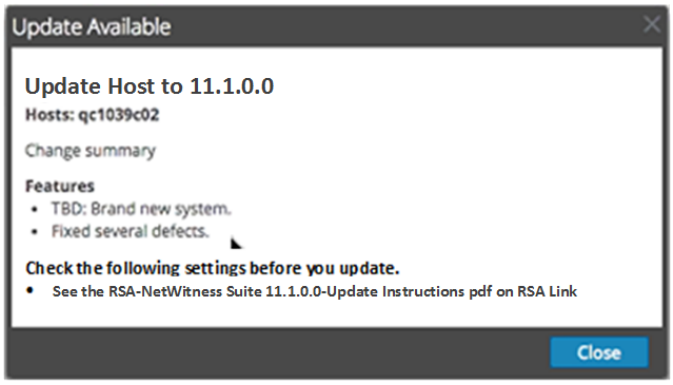


4. Select a host or hosts.
   You must update the NW Server to latest version first. You can update the other hosts in any sequence you prefer, but RSA recommends that you follow the guidelines in "Running in Mixed Mode" in the *RSA NetWitness Suite Hosts and Services Getting Started Guide* for further information.
   Update Available is displayed in the **Status** column if you have a version update in your Local Update Repository for the selected hosts.
5. Select the version you want to apply from the **Update Version** column.

   If you:

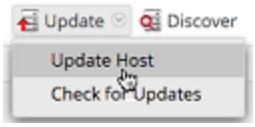
   - Want to update more than one host to that version, after you update the NW Server host, select the checkbox to the left of the hosts. Only currently supported update versions are listed.
   - Want to view a dialog with the major features in the update and information on the updates click the information icon ( ) to the right of the update version number. The

following is an example of this dialog.

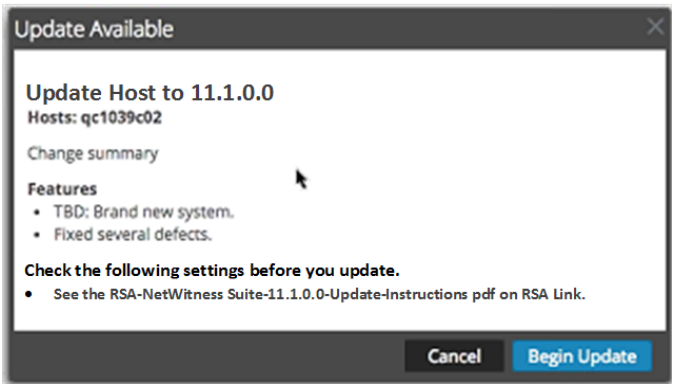


- Cannot find the version you want, select **Update > Check for Updates** to check the repository for any available updates. If an update is available, the message "New updates are available" is displayed and the **Status** column updates automatically to show Update Available. By default, only supported updates for the selected host are displayed.

6. Click **Update > Update Host** from the toolbar.



A dialog is displayed with information on the selected update. Click **Begin Update**.



The **Status** column tells you what is happening in each of the following stages of the update:

- Stage 1 - **Downloading update packages** - downloads the repository artifacts to the NW Server applicable to the services on the host you chose.
- Stage 2 - **Configuring update packages** - configures update files in to correct format.
- Stage 3 - **Update in progress** - updates host to new version.

7. When you see **Update in progress**, refresh the browser.
   This may send you to the NetWitness Log In screen. If this happens, log in and navigate

back to the Host view.

After the host is updated, NetWitness Suite prompts you to **Reboot Host**.

8. Click **Reboot Host** from the toolbar.

   NetWitness Suite shows the status as **Rebooting...** until the host comes back online. After the host comes back online, the **Status** shows **Up-to-Date**. Contact Customer Care if the host does not come back online.

Note: If you have DISA STIG enabled, opening Core Services can take approximately 5 to 10 minutes. This delay is caused by the generating of new certificates.

Apply Updates from the Command Line (No Web Access)

If your RSA NetWitness Suite deployment does not have Web access, complete the following procedure to apply a version update.

1. Download `.zip` update package for the version you want (for example, `netwitness-11.1.0.0.zip`) from RSA Link to a local directory.
2. SSH to the NW Server host.
3. Make a `tmp/upgrade/<version>` staging directory for the version you want (for example, `tmp/upgrade/11.1.0.0`).
   ```
   mkdir -p /tmp/upgrade/11.1.0.0
   ```
4. Unzip the package into the staging directory you created (for example, `tmp/upgrade/11.1.0.0`).
   ```
   cd /tmp/upgrade/11.1.0.0
   unzip /tmp/upgrade/11.1.0.0/netwitness-11.1.0.0.zip
   ```
5. Initialize the update on the NW Server.
   ```
   upgrade-cli-client --init --version 11.1.0.0 --stage-dir
   /tmp/upgrade/
   ```
6. Apply the update to the NW Server.
   ```
   upgrade-cli-client --upgrade --host-addr <NW Server IP> --version
   11.1.0.0
   ```
7. Log in to NetWitness Suite and reboot the NW Server host in the Host View.
8. Apply update to each non-NW Server host.
   ```
   upgrade-cli-client --upgrade --host-addr <non-NW Server IP address> -
   -version 11.1.0.0
   ```
   The update is complete when the polling is completed.
9. Log in to NetWitnesss Suite and reboot the host in the Host View.
   You can verify the version applied to the host with the following command:
   ```
   upgrade-cli-client --list
   ```

Update or Install Legacy Windows Collection

Refer to the *RSA NetWitness Legacy Windows Collection Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Note: After you update or install Legacy Windows Collection, reboot the system to ensure that Log Collection functions correctly.

Post Update Tasks

Complete the following tasks after you update to NetWitness Suite 11.1.0.0.

- General
- NW Server
- RSA NetWitness® Endpoint
- RSA NetWitness® Endpoint Insights
- Event Stream Analysis
- Respond

General

These tasks apply to all NetWitness Suite 11.1.0.0 customers.

Task 1 - Start Data Capture and Aggregation

Restart packet and log capture and aggregation after updating to 11.1.0.0.

Start Packet Capture

To start packet capture:

1. In the **NetWitness Suite** menu, select **ADMIN** > **Services**.
   The Services view is displayed.
2. Select each **Decoder** service.
3. Under (actions), select **View** > **System**.
4. In the toolbar, click

.

Start Log Capture

To start log capture:

1. In the **NetWitness Suite** menu, select **ADMIN** > **Services**.
   The Services view is displayed.
2. Select each **Log Decoder** service.

3. Under (actions), select **View** > **System**.

4. In the toolbar, click 
.

Start Aggregation

To start aggregation:

1. In the **NetWitness Suite** menu, select **ADMIN** > **Services**.
   The Services view is displayed.
2. For each Concentrator and Broker service.
   a. Select the service.
   b. Under (actions), select **View** > **Config**.
   c. In the toolbar, click

.

NW Server

Task 2 - (Conditional) Correct Audit Log Templates That Are Not Updated in Logstash Output Conf File

Problem: When a user updates from 11.0.0.0 to 11.1.0.0, if they have global auditing set up, audit log templates are not getting updated in Logstash output conf file.

Workaround: If global auditing is configured, you need to edit one of the syslog entries in the Global notifications servers and click save to apply the latest Audit log configuration.

If you had global auditing configured in 11.0.x, you must complete the following procedure to apply the latest Global Auditing configuration.

1. In the **NetWitness Suite** menu, select **ADMIN** > **System** > **Global Notifications**.
   The **Global Notifications** view is displayed.
2. Click the **Servers** tab, select any syslog server.
3. Click (edit icon) and click **Save**.

(Conditional) Task 3 - Reconfigure PAM Radius Authentication

If you configured PAM Radius authentication in 11.0.x.x using the `pam_radius` package, you must reconfigure it in 11.1.0.0 using the `pam_radius_auth package` to achieve better performance. See "Configure PAM Login Capability" in the *RSA NetWitness® Suite 11.1 System Security and User Management Guide* for instructions. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

RSA NetWitness® Endpoint

Task 4 - Reconfigure Recurring Feed Configured from Legacy Endpoint Because Java Version Changed

You must reconfigure the Legacy Endpoint recurring feed due to the change in Java version. Complete the following step to fix this problem.

- Import the NetWitness Endpoint CA certificate into the NetWitness Suite Trusted store as described in "Export the NetWitness Endpoint SSL Certificate" under the "Configure Contextual Data from Endpoint via Recurring Feed" topic in the *RSA NetWitness 11.1 Endpoint Integration Guide* to import the certificate.
  Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

RSA NetWitness® Endpoint Insights

(Optional) Task 5 - Install Endpoint Hybrid or Endpoint Log Hybrid

See:

RSA NetWitness Suite 11.1 Physical Host Installation Guide for instructions for installation on a physical host.

RSA NetWitness Suite 11.1 Virtual Host Installation Guide for instructions for installation on a virtual host.

Event Stream Analysis

These tasks apply to NetWitness Suite 11.1.0.0 customers using Event Stream Analysis.

(Conditional) Task 6 - Reconfigure the "Suspected Command and Control Communication By Domain" Aggregation Rule for Automated Threat Detection

In 11.0, the "Suspected Command & Control Communication By Domain" aggregation rule Group By condition "Domain by Suspected C&C" was not functioning as expected and had to be changed to "Domain" to aggregate alerts and enable incidents to be created for "Suspected C&C." The "Domain by Suspected C&C" condition works correctly in 11.1.0.0 and should be used as the Group By condition for the "Suspected Command & Control Communication By Domain" aggregation rule (known as incident rule in 11.1.0.0).

If you changed the "Suspected Command & Control Communication By Domain" aggregation rule Group By condition to "Domain" for 11.0, you will need to change it back to "Domain by Suspected C&C" for 11.1.0.0.

1. Log in to NetWitness Suite 11.1.0.0.
2. Go to **CONFIGURE** > **Incident Rules**.
3. In the Incident Rules list, locate the Suspected Command & Control Communication by Domain rule and click the link in the NAME field to open it.
4. In the Incident Rule Details view Grouping Options section, set the Group By field to Domain for Suspected C&C and click Save.

For more information, see the NetWitness Suite Automated Threat Detection Guide and the

"Configure ESA Analytics" section of the NetWitness Suite ESA Configuration Guide. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Respond

Task 7 - (Conditional) Get the Latest Version of the Aggregation Rule Schema and Restore any Respond Service Custom Keys

Complete the following procedure to get the latest version of the Aggregation Rule Schema and restore any Respond service custom keys.

1. Delete the `/var/lib/netwitness/respond-server/data/aggregation_rule_schema.json` file.
2. Restart the Respond server to get the latest version of the `/var/lib/netwitness/respond-server/data/aggregation_rule_schema.json` file.
   ```
   systemctl restart rsa-nw-respond-server
   ```
3. If you added custom keys in `var/lib/netwitness/respond-server/data/aggregation_rule_schema.json` file for use in the groupBy clause for 11.0, modify the `/var/lib/netwitness/respond-server/data/aggregation_rule_schema.json` file and add the custom keys that you previously saved as an Update Preparation task.

Note: New Group By fields have been added to Respond in 11.1.0.0. The new Group By fields will not be visible in the NetWitness Suite user interface if you do not get the latest version of the file from the server.

Task 8 - Get the Latest Version of the Respond Service Normalization Scripts and Restore any Customized Respond Service Normalization Scripts

RSA re-factored Respond service normalization scripts in the `/var/lib/netwitness/respond-server/scripts` directory in 11.1.0.0. You must replace the old versions.

Before the update to 11.1.0.0, you backed up the following files from the `/var/lib/netwitness/respond-server/scripts` directory.

```
data_privacy_map.js
normalize_alerts.js
normalize_core_alerts.js
normalize_ecat_alerts.js
normalize_ma_alerts.js
normalize_wtd_alerts.js
utils.js
```

Complete the following procedure to get the latest version of the normalization scripts.

1. After backing up the files listed above, delete the `/var/lib/netwitness/respond-server/scripts` directory and its contents.
2. Restart the Respond server.

   ```
   systemctl restart rsa-nw-respond-server
   ```

3. (Conditional) Edit the new files to include any custom logic from the 11.0 scripts that were backed up.

Note: The following files changed with the 11.1.0.0 release:

```
normalize_alerts.js
normalize_core_alerts.js
normalize_ma_alerts.js
```

Task 9 - Add Respond Notification Settings Permissions

Respond Notification Setting permissions enable Respond Administrators, Data Privacy Officers, and SOC Managers to access Respond Notification Settings (**CONFIGURE** > **Respond Notifications**), which enable them to send email notifications when incidents are created or updated.

To access these settings, you will need to add additional permissions to your existing built-in NetWitness Suite user roles. You will also need to add permissions to your custom roles. See the "Respond Notification Settings Permissions" topic in the *NetWitness Respond Configuration Guide*. For detailed information about user permissions, see the *System Security and User Management Guide*. Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

Task 10 - Update Default Incident Rule Group By Values

Four of the default incident rules now use “Source IP Address” as the Group By value. To update the default rules, change the Group By value of the following default rules to “Source IP Address”:

- High Risk Alerts: Reporting Engine
- High Risk Alerts: Malware Analysis
- High Risk Alerts: NetWitness Endpoint
- High Risk Alerts: ESA

1. Go to **CONFIGURE** > **Incident Rules** and click the link in the **Name** column for the rule that you want to update. The Incident Rule Details view is displayed.
2. In the **Group By** field, select the new Group By value.
3. Click **Save** to update the rule.

Appendix A. Troubleshooting Version Installations and Updates

This section describes the error messages displayed in the **Hosts** view when it encounters problems updating host versions and installing services on hosts in the **Hosts** view. If you cannot resolve an update or installation issue using the following troubleshooting solutions, contact Customer Support (https://community.rsa.com/docs/DOC-1294).

Error Message	Problem	When you select an update version and click **Update** > **Update Host**, the download process is successful, but the update process fails.

Solution	1. **Try to apply the version update to the host again**.
	Often this is all you need to do.
	2. If you still cannot apply the new version update:
	a. Monitor the following logs on NW Server as it progresses (for example, use submit the `tail -f` command string from the command line'):
	`/var/netwitness/uax/logs/sa.log`
	`/var/log/netwitness/orchestration-server/orchestration-server.log`
	`/var/log/netwitness/deployment-upgrade/chef-solo.log`
	`/var/log/netwitness/config-management/chef-solo.log`
	`/var/lib/netwitness/config-management/cache/chef-stacktrace.out`
	The error will appear in one or more of these logs.

b. Try to resolve the issue and reapply the version update.

- Cause 1 - `deploy_admin` password has expired.
  Solution - Reset your `deploy_admin` password .
  Complete the following steps to resolve Cause 1.

  1. In the NetWitness Suite menu, select **ADMIN** > **Security** > **Users** tab.
  2. Select the `deploy_admin` and click **Reset Password**.
  3. (Conitional) If NetWitness Suite does not allow you to expired `deploy_admin` password in the **Reset Password** dialog, complete the following steps.

     a. Reset `deploy_admin` to use a new password.

     b. On all non-NW Server hosts on 11.x , run the following command using the matching `deploy_admin` password from NW Server host.
     `/opt/rsa/saTools/bin/set-deploy-admin-password`

- Cause 2 -The `deploy_admin` password was changed on NW Server host but not changed on non-NW Server hosts.
  Complete the following step to resolve Cause 2.

  - On all non-NW Server hosts on 11.x , run the following command using the matching `deploy_admin` password from NW Server host.
    `/opt/rsa/saTools/bin/set-deploy-admin-password`

3. If you still cannot apply the update, gather the logs from step 2 and contact Customer Support (https://community.rsa.com/docs/DOC-1294).

Error Message	Problem	When you select a host and click **Install** the install service process fails.

Solution	1. **Try to install the service again.**.
	Often this is all you need to do.
	2. If you still cannot install the service:
	a. Monitor the following logs on NW Server as it progresses (for example, submit the `tail -f` command string from the command line'):
	`/var/netwitness/uax/logs/sa.log`
	`/var/log/netwitness/orchestration-server/orchestration-server.log`
	`/var/log/netwitness/deployment-upgrade/chef-solo.log`
	`/var/log/netwitness/config-management/chef-solo.log`
	`/var/lib/netwitness/config-management/cache/chef-stacktrace.out`
	The error will appear in one or more of these logs.
	b. Try to resolve the issue and reinstall the service.
	• Cause 1 - Entered the wrong`deploy_admin` password in the nwsetup-tui.
	Solution - Retrieve your `deploy_admin` password.
	Complete the following steps to resolve Cause 1.
	1. In the NetWitness Suite menu, select **ADMIN** > **Security** > **Users** tab.
	2. Select the `deploy_admin` and click **Reset Password**.

3. (Conitional) If NetWitness Suite does not allow you to expired `deploy_admin` password in the **Reset Password** dialog, complete the following steps.
   a. SSH to the NW Server host.
      ```
      security-cli-client --get-config-prop --prop-hierarchy
      nw.security-client --prop-name
      platform.deployment.password -quiet
      ```
   b. SSH to the host that failed installation/orchestration.
   c. Run the nwsetup-tui again using correct `deploy_admin` password.

- Cause 2 -The `deploy_admin` password has expired.
  Complete the following step to resolve Cause 2.
  1. In the NetWitness Suite menu, select **ADMIN** > **Security** > **Users** tab.
  2. Select the `deploy_admin` and click **Reset Password**.
  3. (Conditional) If NetWitness Suite allows you enter the expired `deploy_admin` password in the **Reset Password** dialog, complete the following steps.
     a. Enter the expired `deploy_admin` password.
     b. Uncheck the Force password change on next login checkbox.
     c. Click **Save**.
  4. (Conditional) If NetWitness Suite does not allow you to enter the expired `deploy_admin` password in the Reset Password dialog, complete the following steps.
     a. Reset `deploy_admin` to use a new password.
     b. On all the NW Server host and all other hosts on 11.x, run the following command using the new `deploy_admin` password.
        ```
        /opt/rsa/saTools/bin/set-deploy-admin-password
        ```
     c. On the host that failed installation/orchestration, run the nwsetup-tui and use the new `deploy_admin` password.

3. If you still cannot apply the update, gather the logs from step 2 and contact Customer Support (https://community.rsa.com/docs/DOC-1294).

Error Message	Problem	When you select an update version and click **Update** >**Update Host**, the download starts but fails to complete.
Cause	Version download files can be large and take a long time to download. If there are communication issues during the download it will fail.
Solution	1. Try to download it again. 2. If the download still fails, try to download it outside of NetWitness Suite as described in Apply Updates from the Command Line (No Web Access). 3. If you still cannot download the update file, contact Customer Support (https://community.rsa.com/docs/DOC-1294).

Error Message	Cause	The `deploy_admin` user password has expired.
Solution	Reset your `deploy_admin` password password. 1. In the NetWitness Suite menu, select **ADMIN** > **Security** > **Users** tab. 2. Select the **deploy_admin** and click **Reset Password**. • If NetWitness Suite allows you to enter the expired `deploy_admin` password in the **Reset Password** dialog, complete the following steps. a. Enter the expired `deploy_admin` password. b. Uncheck the **Force password change on next login** checkbox. c. Click **Save** • If NetWitness Suite does not allow you to enter the expired `deploy_admin` password in the **Reset Password** dialog. a. On the NW Server host and all other hosts on 11.x , run the following command using the new `deploy_admin` password. `/opt/rsa/saTools/bin/set-deploy-admin-password` b. On the host that failed installation/orchestration, run the nwsetup-tui and use the new `deploy_admin` password.

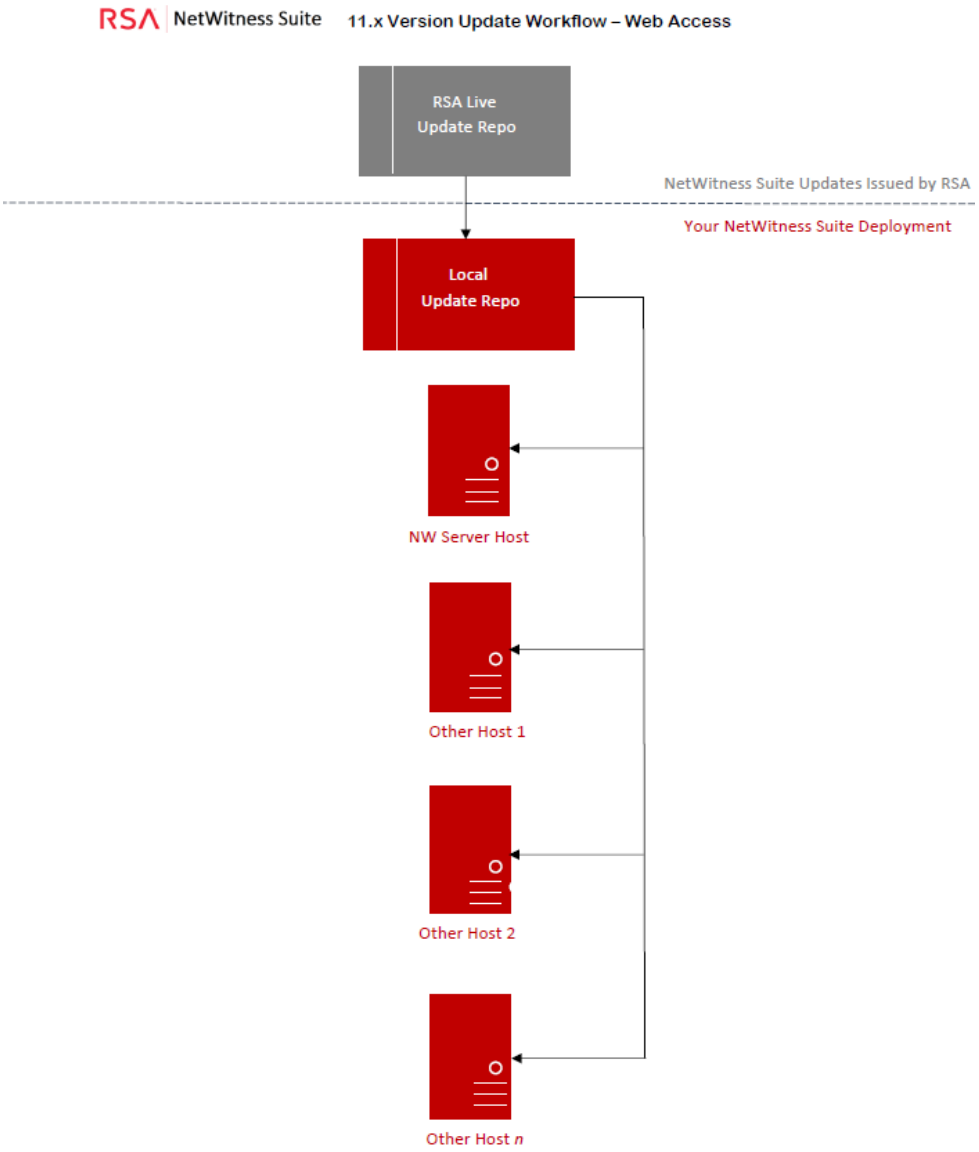
Error Message	The `/var/log/netwitness/orchestration-server/orchestration-server.log` has an error similar to the following error: `API|Failure /rsa/orchestration/task/update-config-management [counter=10 reason=IllegalArgument Exception::Version '11.0.0.n' is not supported`
Problem	After you update the NW Server host to 11.1, the only update path for the non-NW Server hosts is 11.1. If you try to update any non-NW Server host to an 11.0.0.n patch (for example from 11.0.0.0 to 11.0.0.3), you will get this error.

Solution	You have two options: • Update the non-NW Server host to 11.1, or • Do not update the non-NW Server host (keep it at its current version).

Appendix B. Populate Local Repo

NetWitness Suite sends version updates to the Local Update Repository from the Live Update Repository. Access to the Live Update Repository requires and uses the Live Account credentials configured under **ADMIN > SYSTEM > Live**. In addition, you must check the `Automatically download information about new updates every day` checkbox under **ADMIN > SYSTEM > Updates** to populate the Local Repo daily.

The following diagram illustrates how you obtain version updates if your NetWitness Suite deployment has Web Access.



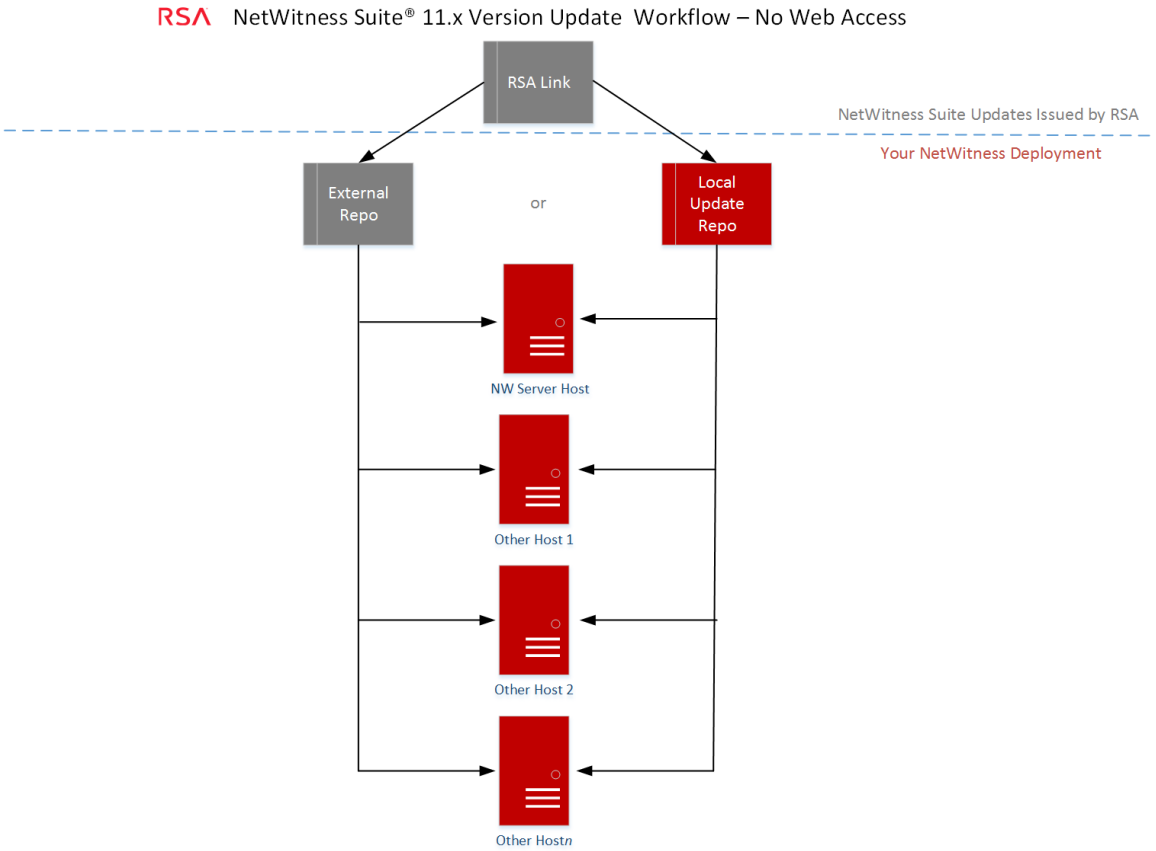
Note: When you make the initial connection with the Live Update Repository, you will be accessing all the CentOS 7 system packages and the RSA Production packages. This download of over 2.5GB of data will take an indeterminate amount of time depending on your NW Server Internet connection and the traffic of the RSA Repository. It is NOT mandatory to use the Live Update Repository. Alternatively you can use an External Repo as described in "Set Up an External Repo."

To connect to the Live Update Repository, Navigate to the **ADMIN > SYSTEM** view, select **Live** in the options panel and ensure that credentials are configured (**Connection** light should be green). If it is not green, click **Sign In** and connect.

Note: If you need to use proxy to reach out to the Live Update Repository, you can configure the Proxy Host, Proxy Username, and Proxy Password. Refer to "Configure Proxy forNetWitness Suite" in the *NetWitness Suite 1.1 System Configuration Guide*.Go to the Master Table of Contents for NetWitness Logs & Packets 11.x to find all NetWitness Suite 11.x documents.

See "Apply Updates from Command Line" if your NetWitness Suite deployment does not have Web Access.

The following diagram illustrates how you obtain version updates if your NetWitness Suite deployment does not have Web Access.



Appendix C. Set Up External Repo

Complete the following procedure to set up an external repository (Repo).

Note: 1.) You need an unzip utility installed on the host to complete this procedure. 2.) You must know how to create a web server before you complete the following procedure.

1. (Conditional) Complete this step If you have an external repo and you want to override it.
   - Case 1: You bootstrapped the host from an external repo and you want to upgrade using a local repo on the Admin Server.
     a. Create the `/etc/netwitness/platform/repobase` file.
        `vi /etc/platform/netwitness/repobase`
     b. Edit the `repobase` file so that the only information in the file is the following URL.
        `https://nw-node-zero/nwrpmrepo`
     c. Complete the instructions on how to run the upgrade using the `upgrade-cli-client` tool.
        See for the instructions.
   - Case 2: You bootstrapped the host from local repo on the Admin server (NW Server host) and you want to use an external repo for the upgrade.
     a. Create the `/etc/netwitness/platform/repobase` file.
        `vi /etc/platform/netwitness/repobase`
     b. Edit the `repobase` file so that the only information in the file is the following URL.
        `https://<webserver-ip>/<alias-for-repo>`
     c. Complete the instructions on how to run the upgrade using the `upgrade-cli-client` tool.
        The instructions are in the "Apply Updates from the Command Line" under topic.
2. Set up the external repo.
   a. Log in to the web server host
   b. Create directory to host the NW repository (`netwitness-11.1.0.0.zip`), for example `ziprepo`under `web-root` of the web server. For example, /var/netwitness is the web-root, submit the following command string.
      `mkdir -p /var/netwitness/<your-zip-file-repo>`
   c. Create the 11.1.0.0 directory under `/var/netwitness/<your-zip-file-repo>`.
      `mkdir -p /var/netwitness/<your-zip-file-repo>/11.1.0.0`

d. Create the `OS` and `RSA` directories under `/var/netwitness/<your-zip-file-repo>/11.1.0.0`.

```
mkdir -p /var/netwitness/<your-zip-file-repo>/11.1.0.0/OS
mkdir -p /var/netwitness/<your-zip-file-repo>/11.1.0.0/RSA
```

e. Unzip the `netwitness-11.1.0.0.zip` file into the `/var/netwitness/<your-zip-file-repo>/11.1.0.0` directory.

```
unzip netwitness-11.1.0.0.zip -d /var/netwitness/<your-zip-file-repo>/11.1.0.0
```

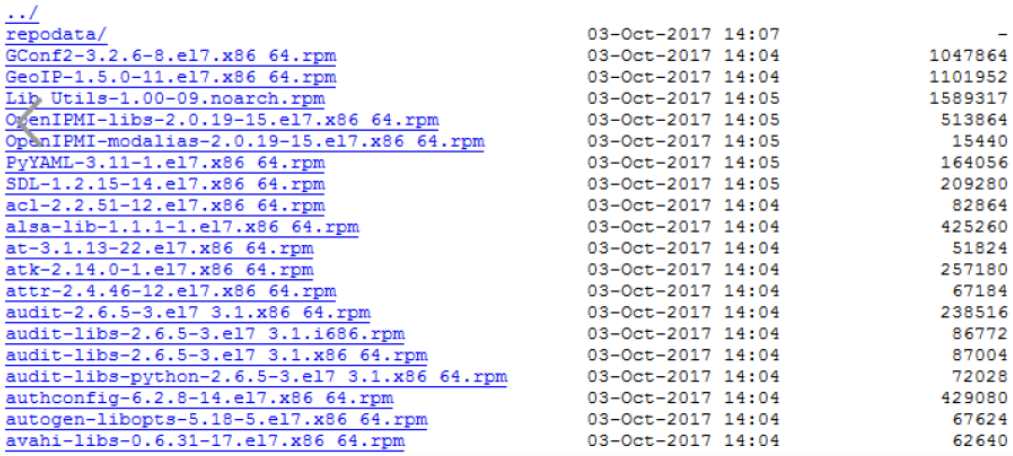
Unzipping `netwitness-11.1.0.0.zip` results in two zip files (`OS-11.1.0.0.zip` and `RSA-11.1.0.0.zip`) and some other files.

f. Unzip the:

1. `OS-11.1.0.0.zip` into the `/var/netwitness/<your-zip-file-repo>/11.1.0.0/OS` directory.

```
unzip /var/netwitness/<your-zip-file-repo>/11.1.0.0/OS-11.1.0.0.zip -d /var/netwitness/<your-zip-file-repo>/11.1.0.0/OS
```

The following example illustrates how the Operating System (OS) file structure will appear after you unzip the file.



../

NetWitness Legacy Windows Collection Update & Installation Instructions

The RSA NetWitness® Suite Legacy Windows collection collects event data from multiple Windows Event Source domains.

It supports collection from:

- Windows 2003 and earlier event sources
- NetApp ONTAP host evt files

This document contains the following sections:

- Setup Requirements
- Update the RSA NetWitness® Suite Legacy Windows Collector from 10.6.x to 11.x
- Fresh Install 11.x Legacy Windows Collector
- Troubleshooting for Fresh or Upgrade Install
- (Optional) Backup and Restore Legacy Windows Collector
- Add a Windows Legacy Collector Host and Service in RSA NetWitness® Suite

Setup Requirements

This section provides the RSA NetWitness® Suite Legacy Windows Collector Setup requirements.

Caution: If you are installing or updating to version 11.x, in order to use the Security Analytics Legacy Windows Collector with NetWitness, you need to first install the following windows updates:

• KB2919355
• KB2919442
• KB2999226
• KB3173424

If these updates are not installed, you will get an error message, and the Legacy Windows Collector will not be installed.

To set up the RSA NetWitness ® Suite Legacy Windows Collector, you need:

- Any physical or virtual Windows 2008 R2 SP1 64-Bit Server that can reach the Windows 2003 event source domains.
- A minimum of 20% free disk space. For example, you need at least 20 GB of free space if your system drive is 100 GB in size.

Important! Do not install the Legacy Windows Collector on a domain controller.

Update the RSA NetWitness® Suite Legacy Windows Collector from 10.6.x to 11.x

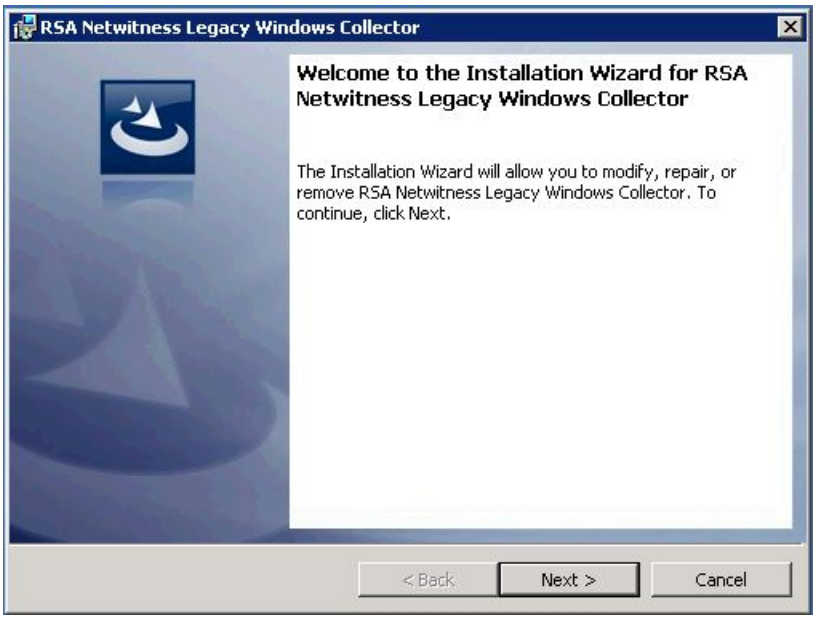
This section tells you how to update RSA NetWitness Suite 10.6.x Legacy Windows Collector to 11.

To update the RSA NetWitness® Suite 10.6.x Legacy Windows Collector to 11 on a Windows 2008 R2 SP1 64-Bit server:

1. Navigate to https://community.rsa.com/docs/DOC-83034 on RSA link. Click **RSA NetWitness Logs & Packets 11.x - Legacy Windows Collector** to download the ZIP archive.
2. Unzip the downloaded file.
3. Log on to a Windows 2008 machine.
4. Copy **NWLegacyWindowsCollector-*version-number*.exe** to the Windows 2008 server.
5. Right click on **NWLegacyWindowsCollector-*version-number*.exe** and select **Run As Administrator**.

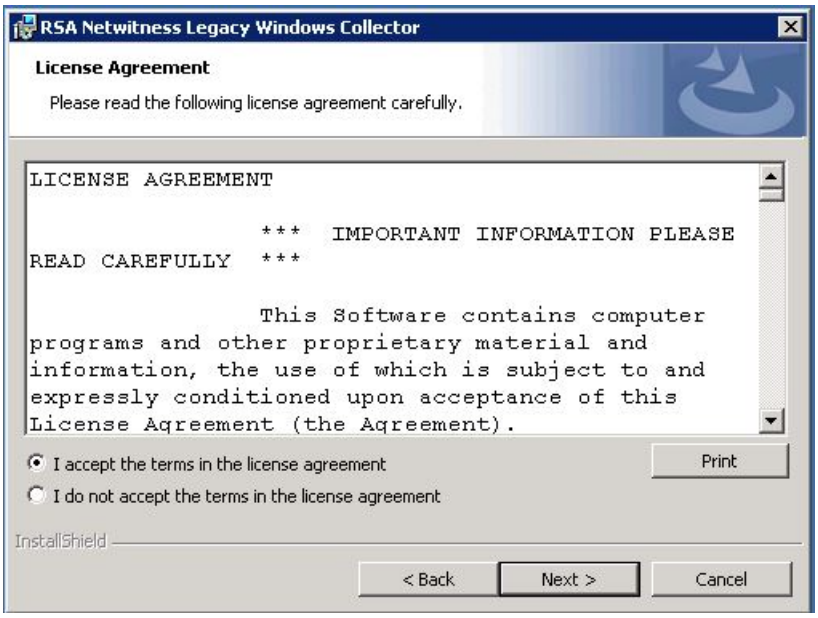
   The Preparing to Install…. page of update installation wizard is displayed.

   After the update installation program extracts RSA NetWitness® Suite Legacy Windows Collector installation files, the **Welcome** page is displayed.



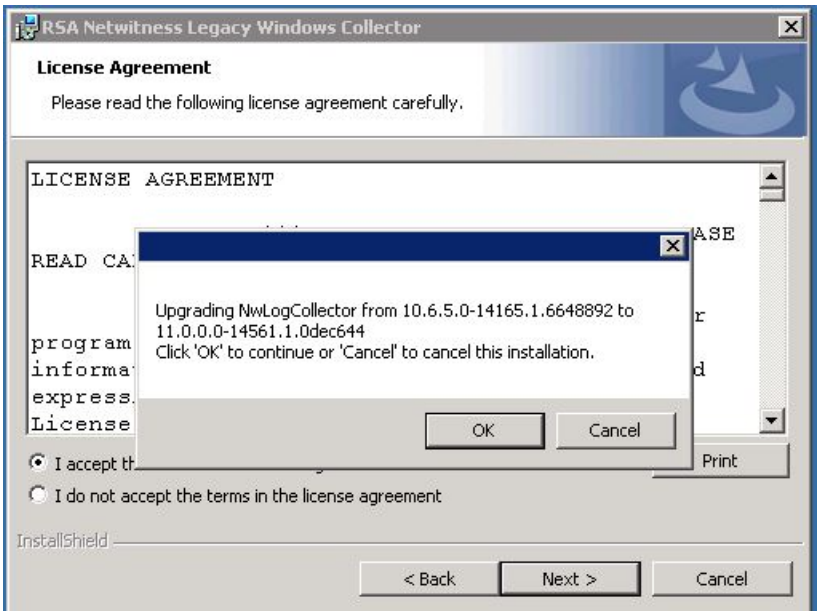
6. Click **Next**.

   The License Agreement page is displayed.



7. Read the License agreement carefully, select the **I accept the terms in the license agreement** radio button, and click **Next**.

   Before it starts the update, the wizard asks if you want to continue or cancel the installation of the update.



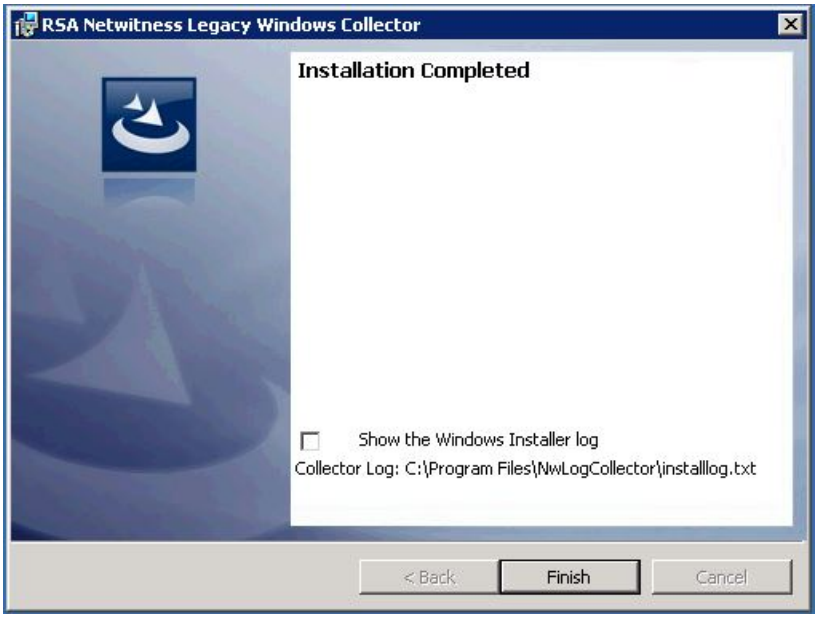
8. Click **OK** to continue installing the update.
9. Click Install.

   The Installation screens for the Legacy Windows Collector page is displayed.

After the update installation completes, the **Next** button becomes active.

10. Click **Next**.

    The Installation Completed page is displayed.



11. (Optional) If you want to review a log of the update installation, select the **Show the Windows Installer** log checkbox.
12. Click **Finish**.
13. Reboot the machine.

This completes the update of the Legacy Windows Collector to RSA NetWitness Suite 11.x.

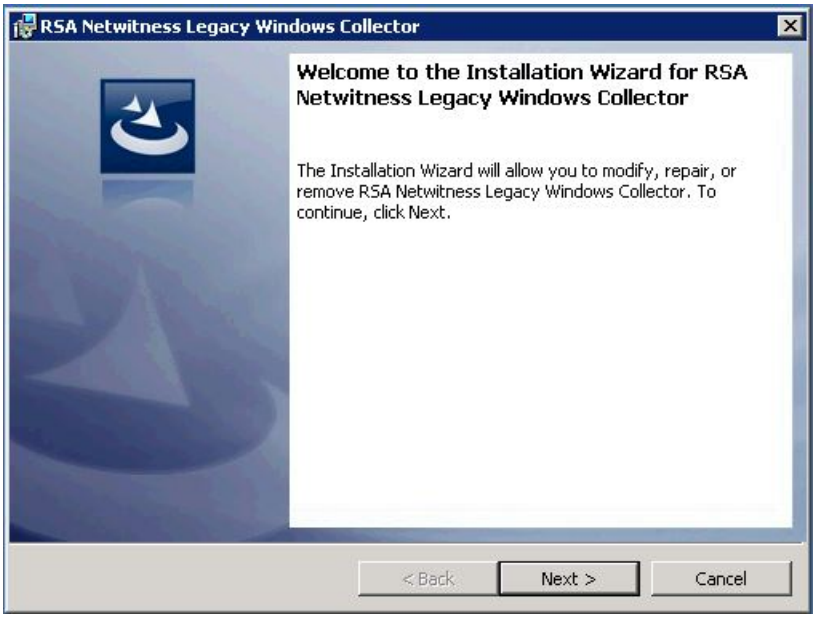
Fresh Install 11.x Legacy Windows Collector

This section describes how to install the 11.x Legacy Windows Collector on a Windows 2008 R2 SP1 64-Bit server

To install the RSA NetWitness Suite Legacy Windows Collector on a Windows 2008 R2 SP1 64-Bit server:

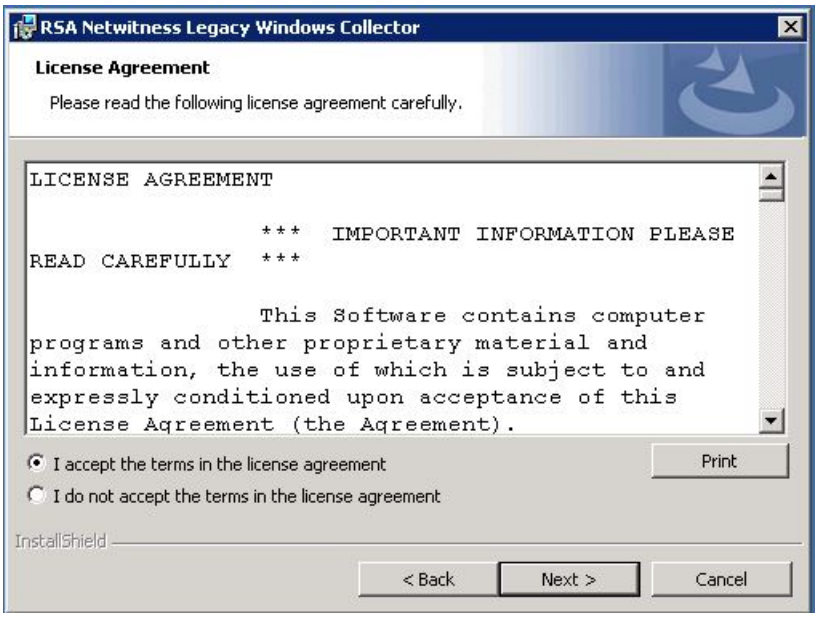
1. Navigate to https://community.rsa.com/docs/DOC-83034 on RSA link. Click **RSA NetWitness Logs & Packets 11.x - Legacy Windows Collector** to download the ZIP archive.
2. Unzip the downloaded file.
3. Copy the **NWLegacyWindowsCollector-*version-number*.exe** to the Windows 2008 server.
4. Right click on the **NWLegacyWindowsCollector-*version-number*.exe** and select **Run As Administrator**.

   The **Welcome** page of installation wizard is displayed.



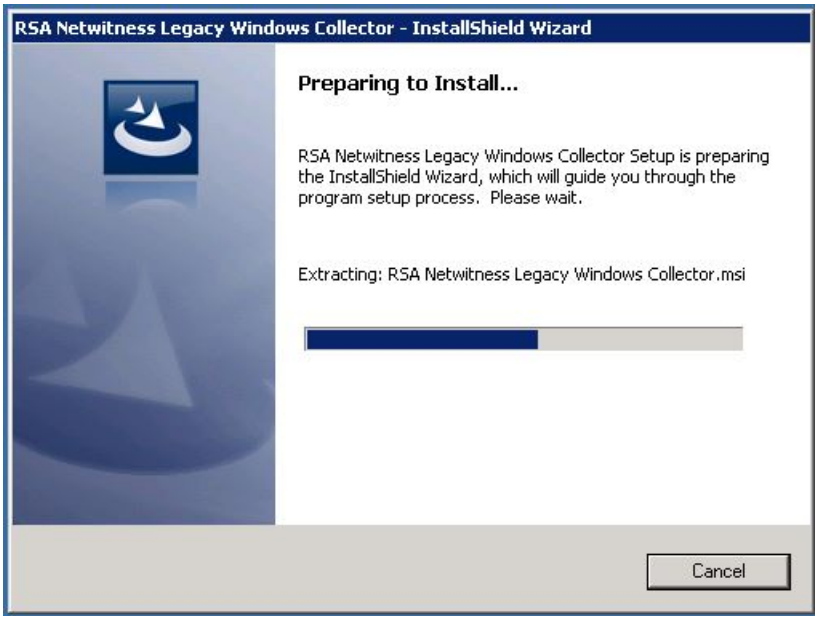
5. Click **Next**.

   The License Agreement page is displayed.



6. Read the License agreement carefully, select the **I accept the terms in the license agreement** radio button, and click **Next**.

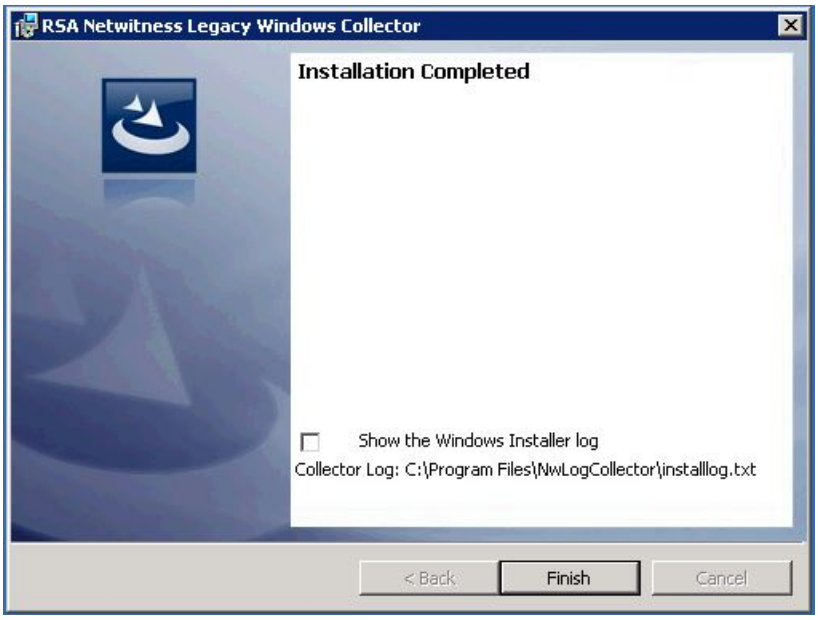
   The Ready to Install the Program page is displayed.



7. Click **Install**.

   The Installation screens for the Legacy Windows Collector page are displayed.

The Installation Completed page is displayed.



8. (Optional) If you want to review a log of the installation, select the **Show the Windows Installer** log checkbox.
9. Click **Finish**.
10. Reboot the machine.

This completes the installation of the 11.x Legacy Windows Collector. Please refer to the **Windows Legacy and NetApp Collection Configuration Guide** on RSA Link for instructions on how to configure Legacy Windows collection in RSA NetWitness Suite.

Troubleshooting for Fresh or Upgrade Install

Logs to Examine for Information

Refer to the following log files if you need to troubleshoot problems:

- `%systemDrive%\Netwitness\ng\logcollector\MessageBroker.log`
- `%systemDrive%\Program Files\NwLogCollector\installlog.txt`

Run `C:\Program Files\NwLogCollector\ziplogfiles.vbs` to generate the ***hostname***`_WLCversion_timestamp.zip` that contains all the log files and other information needed for troubleshooting.

Issues with the Lockbox

When you create a lockbox password on a new Windows Legacy Collector, you might see the following error:

failed to set secure storage password: failed to create lockbox: The Lockbox or cryptography library could not be found.

This can occur if you are running Windows Legacy Collector version 11.x.

If you encounter this issue, download and install both of the following redistributable packages:

- Visual C++ 2010: https://www.microsoft.com/en-us/download/details.aspx?id=14632
- Visual C++ 2012: https://www.microsoft.com/en-us/download/details.aspx?id=30679

(Optional) Backup and Restore Legacy Windows Collector

This section tells you how to backup and restore the Legacy Windows Collector.

Note: You only need to do this if you are changing the Windows VM where you run the Windows Legacy Collector.

For Version 10.6.4

For the 10.6.4 version of the RSA NetWitness Suite Legacy Windows Collector, there are manual scripts provided for performing backup and install:

- WLC-Backup.bat
- WLC-Restore.bat

These files are available for download from RSA Link at the following location: https://community.rsa.com/docs/DOC-71397.

Backup

To backup the Legacy Windows Collector:

1. Download the backup and restore scripts from RSA Link to the Windows Legacy Collector.
2. On the Windows Legacy Collector, open a command prompt window, and navigate to the folder where you saved the scripts.
3. Run the command for creating a backup:
   - Backup configuration files: `WLC-Backup.bat config`
   - Backup run-time files: `WLC-Backup.bat runtime`

   Note: Only backup the run-time files if you have already started collection.

   The backup folders are created in **C:\Program Files\NwLogCollector**.

   The file names are as follows:

   - Config-bkup_***timestamp***.zip
   - Runtime-bkup_***timestamp***.zip

Restore

To restore a previously created backup for the Legacy Windows Collector:

1. On the Windows Legacy Collector, open a command prompt window, and navigate to the folder where you saved the scripts.
2. Run the following command for restoring a backup:
   - Backup configuration files: `WLC-Restore.bat "Config-bkup_timestamp.zip"`
   - Backup run-time files: `WLC-Restore.bat "Runtime-bkup_timestamp.zip"`
3. Once the restore is completed, set the lockbox SSV to use the password that you created during 10.6.4 setup.
   a. In the **Security Analytics** menu, select **Services**, then select your Windows Legacy Collector and choose **Explore**.
   b. From the left navigation pane, expand **logcollection** > **properties** > **crypto**.
   c. Run the following command: `op=setssv pw=password_for_10.6.x_lockbox`, and hit **Send**.

For Upgrading from 10.6.4 to NetWitness 11.x

During upgrade to RSA NetWitness Suite 11.x, the backup script for the Windows Legacy Collector is invoked automatically, and creates the 10.6.4 configuration and run-time backups. After the 11.x installation is completed, run the Restore script to restore the configuration and run-time files for the updated Windows Legacy Collection.

Restore the Windows Legacy Collection Backup after Upgrade

To restore the Windows Legacy Collection setup on a newly upgraded RSA NetWitness Suite 11 platform:

1. On the Windows Legacy Collector, open a command prompt window.
2. Navigate to **C:\Program Files\NwLogCollector**, where the scripts are stored.
3. Run the following commands for restoring a backup:
   - Backup configuration files: `WLC-Restore.bat "Config-bkup_timestamp.zip"`
   - Backup run-time files: `WLC-Restore.bat "Runtime-bkup_timestamp.zip"`
4. Once the restore is completed, set the lockbox SSV to use the password that you created during 10.6.4 setup.

a. In the **Security Analytics** menu, select **Services**, then select your Windows Legacy Collector and choose **Explore**.

b. From the left navigation pane, expand **logcollection > properties > crypto**.

c. Run the following command: `op=setssv pw=`***`password_for_10.6.x_lockbox`***, and hit **Send**.

Revert Windows Legacy Collection from 11.x Back to 10.6.4

To revert the Windows Legacy Collection setup from 11.x back to 10.6.4:

1. Uninstall the 11.x Setup. Note the location of the backup folder created by the system during the uninstall procedure.
2. Install the 10.6.4 version of the Windows Legacy Collector.
3. Navigate to **C:\Program Files\NwLogCollector**, where the scripts are stored.
4. Run the Restore script from backup folder present in **C:\Program Files\NwLogCollector** to restore the configuration and run-time setup on the 10.6.4 Windows Legacy Collector.
   - Backup configuration files: `WLC-Restore.bat "Config-bkup_`***`timestamp`***`.zip"`
   - Backup run-time files: `WLC-Restore.bat "Runtime-bkup_`***`timestamp`***`.zip"`
5. Once the restore is completed, set the lockbox SSV to use the password that you created during 10.6.4 setup.

   a. In the **Security Analytics** menu, select **Services**, then select your Windows Legacy Collector and choose **Explore**.

   b. From the left navigation pane, expand **logcollection > properties > crypto**.

   c. Run the following command: `op=setssv pw=`***`password_for_10.6.x_lockbox`***, and hit **Send**.

Add a Windows Legacy Collector Host and Service in RSA NetWitness® Suite

For this version of the Windows Legacy Collector, RSA has provided a script that replaces the manual steps of adding a Windows Legacy Collector host and service in the NetWitness UI.

To create a Windows Legacy Collector Host and Service in NetWitness:

1. SSH to your NetWitness server.
2. Run the following command:

   wlc-cli-client --host-display-name ***hostDisplayName*** --service-display-name **serviceDisplayName** --host ***WLChostIPAddress*** --port 50101 --use-ssl false

   The parameters are explained below:

   - **--host-display-name**: the name for the host as it is displayed in the NetWitness Hosts page
   - ***--service-display-name***: the name for the host as it is displayed in the NetWitness Services page
   - **--host**: the IP address for the Windows Legacy Collector
   - **--port**: the port NetWitness uses to communicate with the Windows Legacy Collector. The recommended value is 50101.
3. You will be prompted to supply the following information:
   - **Windows Log Collector REST Username** and **Windows Log Collector REST Password**: you must supply admin credentials for the Windows Legacy Collector.
   - **Security Server Username** and **Security Server Password**: you must supply admin credentials for RSA NetWitness Suite.

When you complete this procedure, you should see the Windows Legacy Collector Host and Service as shown in the following screenshots.
