Explanation	To fix the issue, you need to perform the following actions: 1. Go to  (Admin) > **Services**. 2. In the **Services** list, select the Reporting Engine Service. 3. Click  > **Start**.

Insufficient Permissions

Message	I see the following error message while generating a report: `You do not have the required permissions to generate a report. Contact your administrator to request access.`
Issue	This scenario occurs when an analyst tries to create or schedule a report without the required permissions.

Explanation	**Note:** By default, only administrators will have access. To fix the issue, analysts must contact their administrators to request access permissions. Once the permissions are provided, the analysts can try generating the report later. For more information, see Configure Data Source Permissions in the *NetWitness Reporting Configuration Guide*.

Unsupported Custom Columns

Message	I see the following error message while generating a report: `The following custom columns are not supported to generate a report. Remove them and try again.` • `<column name 1>` • `<column name 2>`
Issue	This scenario occurs because the Reporting Engine Service does not support a few custom columns for generating the report on the **Investigate** > **Events** page.
Explanation	Perform the following actions to remove the custom columns from the list. 1. In the **Events** view, click the () **Settings** icon. An available list of custom columns is displayed in a pop-up window. 2. Unselect the unsupported custom columns from the list and try generating a new report.

Datasource is not Configured or Unavailable

Message	I see the following error message while generating a report: `The datasource <service name> is not configured in the Reporting Engine. Add the datasource and try again.`
Issue	This scenario occurs when you select a datasource that is not configured in the Reporting Engine. **Note:** When the name of the datasource on the Investigate page differs from the name on the reporting page, an error message is displayed.
Explanation	To fix the issue, perform the following steps: 1. Go to  (Admin) > **Services**. 2. In the **Services** list, select the Reporting Engine service. 3. Click  > **View** > **Config**.

The Services Config View of Reporting Engine is displayed.

4. Select the **Sources** tab.
5. Click  and select **Available Services**.

   The Available Services dialog is displayed.
6. Select the required service (for example, Log Decoder) and click **OK**.

   The service authentication dialog box is displayed.

   Note: The services with the Trust Model enabled must be added individually. You are prompted to provide a username and password for the selected service.
7. Enter the Username and Password for the service.
8. Click **OK**.

   The selected service is listed in the Aggregate Services pane.

Investigate Reference Materials

This section provides is intended to help you understand the purpose and application of NetWitness Investigate views. For each view, there is a brief introduction and a What Do You Want To Do table with links to related procedures. In addition some of the reference materials include workflows and Quick Looks to highlight important features in the user interface.

Add Events to an Incident Dialog

In the Add Events to an Incident dialog, analysts can add alerts to an existing incident so that incident responders look at the associated events as part of an incident response. To access this dialog while investigating a service in the Events view and the Legacy Events view, see Add Events to an Incident in the Events View and Add Events to an Incident in the Legacy Events View.

Quick Look

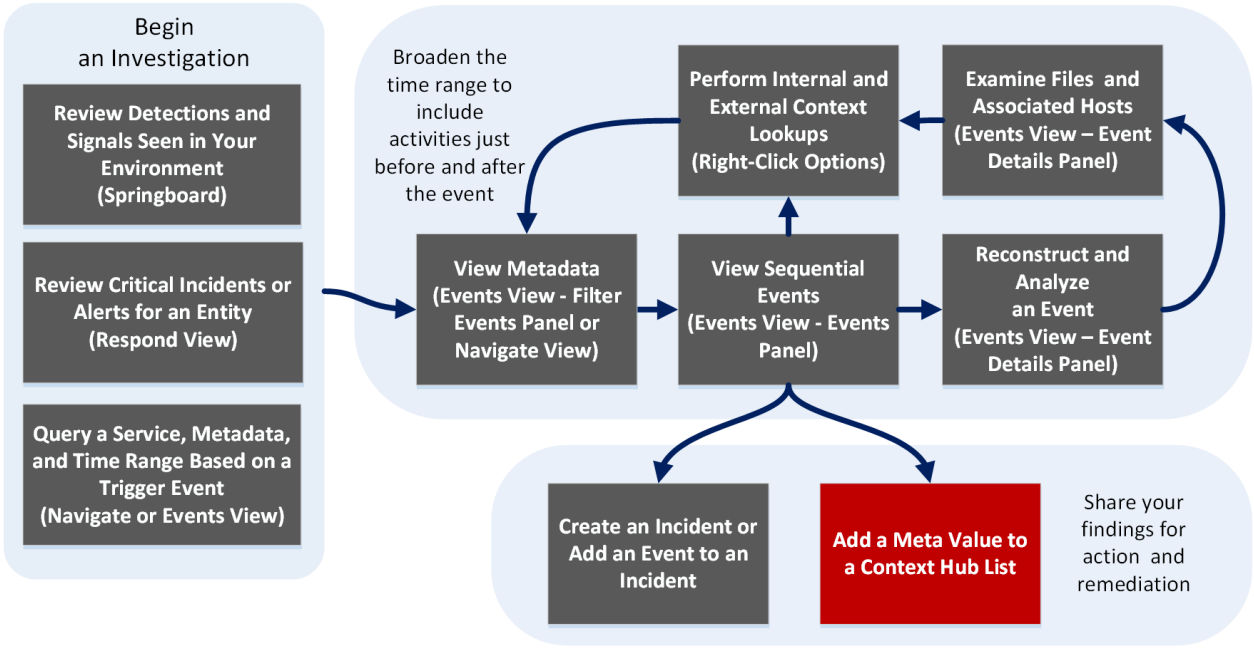
The following figure is an example of the Add Events to an Incident dialog in the Legacy Events. The table describes the information and options in the Add Events to an Incident dialog .

Feature	Description
Alert Summary	The Alert Summary field is filled by the query that produced the select alerts, which you selected to create this incident. The Severity field reflects the Severity of the selected alert, an integer between 1 and 100.
Search	Allows you to search for an existing event.
ID	The ID of the incident. You can sort IDs in ascending or descending order.
Name	The incident name. You can sort the Name in ascending or descending order.
Date Created	Displays the date and time the incident was created. You can sort the dates in ascending or descending order.
Priority	Displays the priority of the incident: either low or critical.
Cancel	Closes the dialog without saving changes.
Add to Incident	Adds the alerts to the incident. A dialog confirms that alerts are successfully added

The following figure is an example of the Add to Incident dialog in the Events view. The table describes the information and options in the Add to Incident dialog.

Feature	Description
Alert Summary	The Alert Summary field is filled by the query that produced the select alerts, which you selected to create this incident.
Severity	The Severity field reflects the Severity of the selected alert, an integer between 1 and 100.
Search Open Incidents	Allows you to search for an existing incidents.
ID	The ID of the incident.
Name	The incident name.
Created	Displays the date and time the incident was created.
Assignee	Displays the team member currently assigned to the incident
Cancel	Closes the dialog without saving changes.
OK	Adds the alerts to the incident. A confirmation message is displayed after the incident is successfully added

Add/Remove from List Dialog



The Add/Remove from List dialog allows you to add an entity or meta value to an existing Context Hub list, remove an entity or meta value, or create a new Context Hub list containing the entity or meta value. When you look up an IP address or other entity and you find it suspicious or interesting, you can add it to a list that has been added as a data source. An example of a commonly used list is a white list or black list. This improves the visibility of the suspicious IP addresses and reduces false positives that do not need further investigation.

You can add entities or meta values to more than one list. For example, you can add them to one list for suspected domains related to command and control connections and to another list for Trojan connection IP addresses related to remote access. If a list is not available, you can create a list.

The dialog is available in NetWitness Investigate and in NetWitness Respond. When working in Investigate, in the Navigate view, Legacy Events view, or Events view, you can add meta values for the `Source IP`, `Destination IP`, or `Username` meta keys to an existing context hub list or you can create a new list containing the meta values. When you add meta values to a list, you can look up additional context on those meta values.

- To display the dialog in the Navigate view or the Legacy Events view, right-click a meta value under `Source IP`, `Destination IP`, or `Username`) and select **Add/Remove from List** in the context menu.
- To display the dialog in the Events view, hover over a value and select **Add/Remove from List** in the Actions section of the context tooltip.

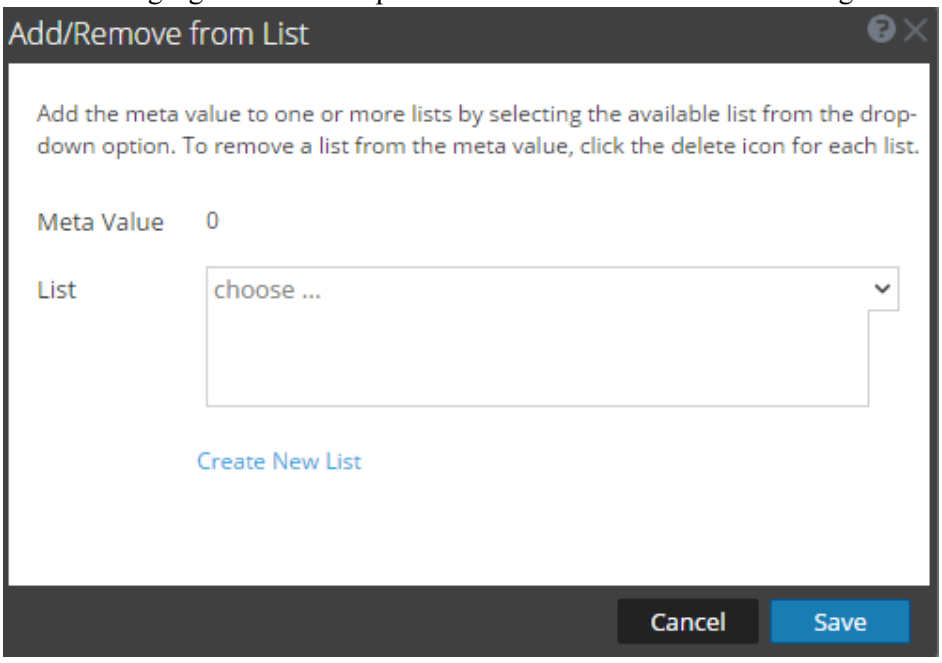
Quick Look in the Events View

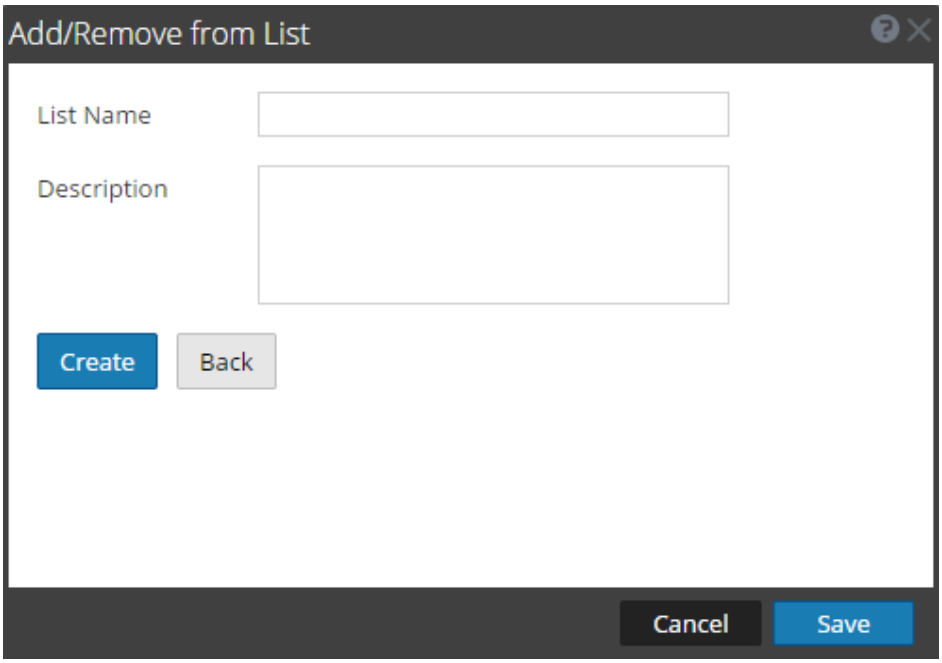
The following is an example of the **Add/Remove from List** dialog in the Events view.

1 Entities or meta values to be added or removed.
2 Create a new list using the selected meta.
3 Select any of the tabs: All, Selected, or Unselected.
4 Search using the list name or description.
5 Cancel the action.
6 Save to update lists or create a new list.



The following table shows the options in the Add/Remove from List dialog.

Option	Description
Meta Value	Displays the selected entity or meta value that needs to be added to or removed from one or more lists. You can also a create a new list using the selected value.



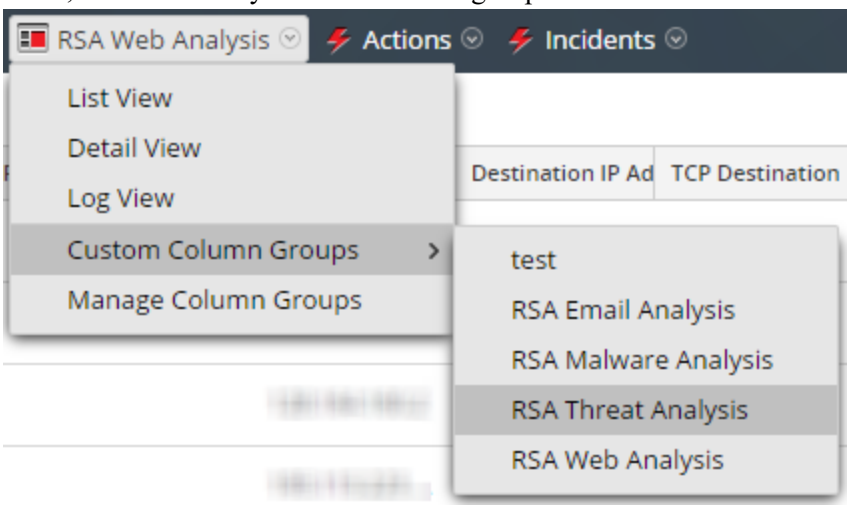
Option	Description
Create New List	Displays a dialog to create a new list using the selected meta value.
All	Shows all of the available Context Hub lists. The lists that contain the selected entity or meta value are selected. Select a checkbox to add an entity or meta value to a list. Clear a checkbox to remove it from the list.
Selected	Shows only the lists that contain the selected entity or meta value. (All lists are selected.)
Unselected	Shows only the lists that do not contain the selected entity or meta value. (All lists are unselected.)
Filter Results	Enter the name or description of a specific list to search from multiple lists.
List	Displays the name of all the lists.
Description	Displays information about the selected list. The description that you provide when creating a list appears in this dialog. For example: This list contains all of the blacklisted IP addresses.
Cancel	Cancels the operation.
Save	Saves the changes.

Quick Look in the Navigate and Legacy Events Views

The following figure is an example of the Add/Remove from List dialog when initially opened.

The following figure shows the dialog when you select Create New List.

The following table describes the features of the Add/Remove from List and Create New List dialogs.



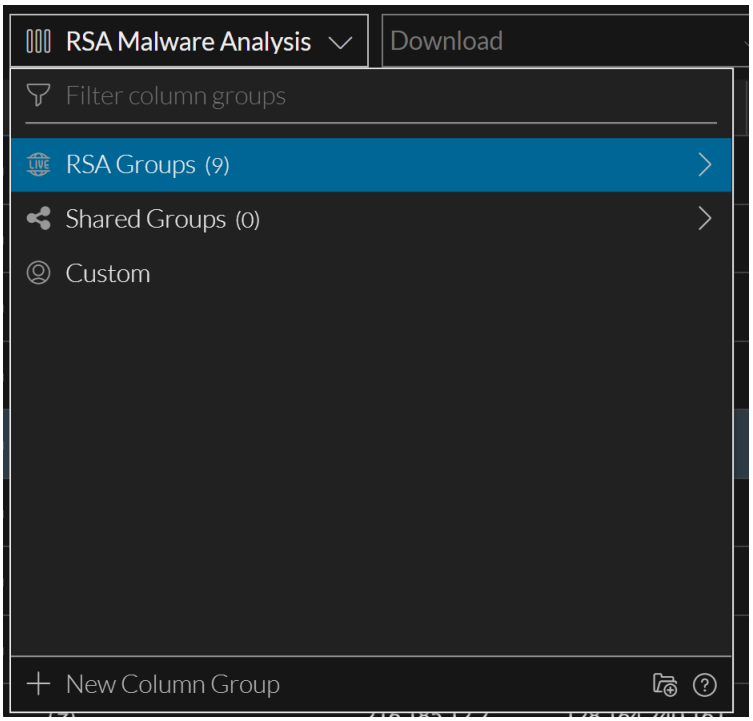
Feature	Description
Meta Value	The selected meta value to be added to the existing or new list.
List	The list to which the selected meta value must be added. A drop-down menu provides a list of available lists to which you can add the meta value.
Create New List	Opens a new dialog in which you can create a new list for the selected meta value.
List Name	The name of the new list.
Description	The description of the new list.
Create	Creates a new list after entering the required fields.
Back	In the new list mode, cancels the new list creation and returns to the original dialog.
Cancel	Cancels the addition of the meta value to a list and closes the dialog.
Save	Saves the changes made to the lists and closes the dialog.

Column Groups Dialogs

Column groups allow you to format the events list to include only the relevant meta keys in the Events view and Legacy Events view (see Use Columns and Column Groups in the Events List). When the events list in Investigate is populated with events, each column lists the values returned for a meta key. Changing the meta keys displayed in the events list is a useful method of narrowing the focus of your investigation. For example, the default column group includes columns for **Collection Time**, **Type**, **Theme**, **Size**, and **Summary**. These are just the basic information, not specialized in any way. The NetWitness Email Analysis list has only that contain information useful when investigating email.

The column group definition includes the meta keys to use as column titles, the position of the column in the list, and the default width of the column. You can add, delete, import, export, and edit column groups. At fresh installation, built-in column groups are available. The built-in column groups are prefixed with NetWitness and can be duplicated but cannot be edited or deleted. You can also create custom column groups.

- The Create Column Group dialog is for the 11.4 and later Events view. To access this dialog, select **Column Group > New Column Group** in the **Events** view toolbar.
- The Column Group Details dialog is for the 11.4 and later Events view. To access this dialog, select **Column Group** in the **Events** view toolbar, then click the edit icon ( ) next to a custom column group name.
- The Manage Column Groups dialog is for the Legacy Events view (Version 11.4) , and the Events view (Version 11.4 and earlier). The Manage Column Groups dialog has these features that are not yet available in the Create Column Group dialog: set column width, import, and export. To access this dialog, go to **Investigate > Legacy Events** and in the **View** drop-down list select **Manage Column Groups**. The **View** option is named for the current value, for example, Detail View, List View, Log View, or the currently selected column group.



After column groups are defined, you can use them in other Investigate views. In the Navigate view, Query Profiles allow you to select a column group to use when the profile is applied. In the Events view and the Legacy Events view, you can select a column group to apply to the Events panel.

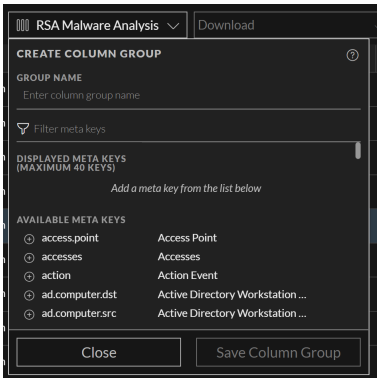
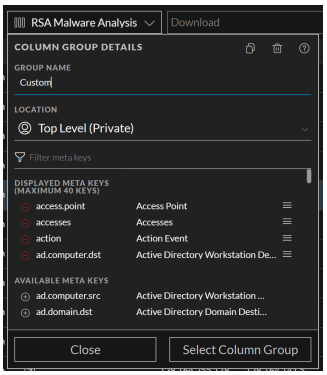
Quick Look - Column Group Menu, Create Column Group Dialog, and Column Group Details Dialog



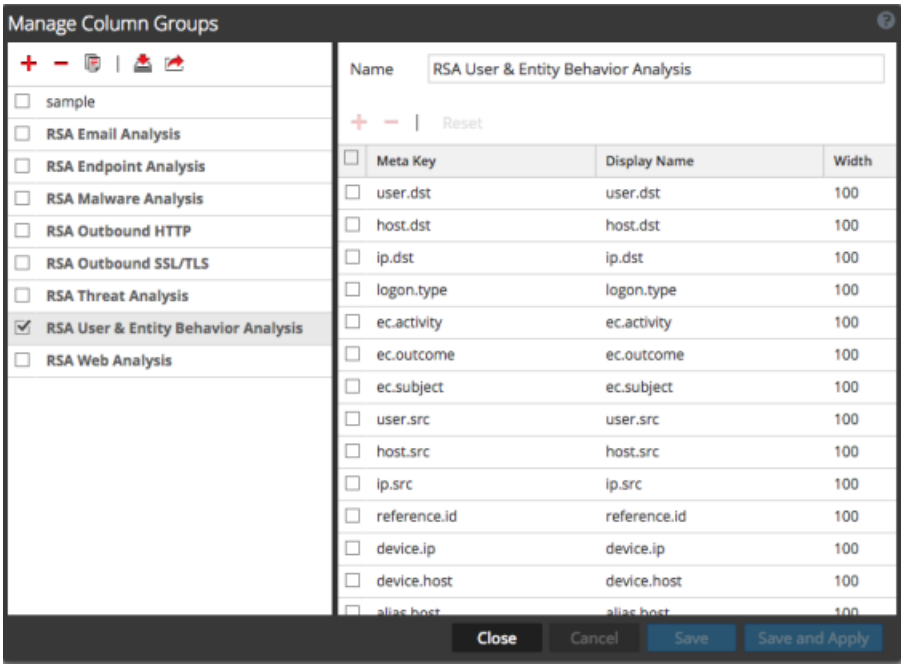
This section introduces the Column Group Menu, Create Column dialog, and the Column Group Details dialog. The following figure is example of the Column Group menu. The table describes the options.



Feature	Description
Visibility Options	(Version 11.5 and later) Control the types of column groups that are visible in the list, using any combination of the visibility options (blue = selected, black = not selected): **Private** = display private groups that only you can manage **Shared** = display shared groups that anyone in your organization can manage **RSA** = display built-in groups that only RSA can manage The visibility options work together with the Filter Column Groups field. If the visibility option is hiding built-in groups (which include "RSA" in the group name) and you search for a name that contains "RSA," the list is empty.

Feature	Description
Filter Column Groups	Filters the list of column groups as you type text so that only group names that contain that text are displayed.
Column Group List	The list of column groups consists of custom and built-in groups, which are distinguished by the icons that precede the name. In Version 11.5 and later, custom groups can be shared or private. The RSA column groups are built-in column groups. The icons distinguish the private custom groups, shared custom groups, and built-in groups.
New Column Group	Displays the Create Column Group dialog, where you can create a custom column group.

The Create Column Group dialog, shown in the figure on the left, allows you to define a custom column group. The figure on the right illustrates the Column Group Details dialog, in which you can edit a custom column group. The table describes the fields and options in the dialogs.



Feature	Description
	Deletes the custom column group in the Column Group Details dialog. This action is irreversible and applies globally; the column group is no longer available to anyone who is using it on this service.
Group Name	Displays the name of the column group. The name must be unique and contain fewer than 64 characters. You can type in this field to edit the name in a custom column group.
Sharing	In Version 11.5 and later, you can create column groups that are shared or private. This setting is available when you first create the group. After it is created, you cannot change a shared column group to private, or a private column group to shared.
Filter Meta Keys	Filters the Displayed Meta Keys and Available Meta Keys based on the text that you type. Only meta keys that contain the typed text are displayed.
Displayed Meta Keys	Displays a scrollable list of meta keys that are selected for use in the custom column group. You can add meta keys in the Available Meta Keys list to this list, remove meta keys from this list , and drag meta keys up or down to change the order in this list ().

Feature	Description
Available Meta Keys	Displays a scrollable list of meta keys that are available (on the service) for use in the custom column group. You can add them to the Available Meta Keys list. Clicking next to the meta key name adds it to the Displayed Meta Keys list.
Close button	Closes the dialog.
Save Column Group	For the Create Column Group dialog only, saves the new column group.
Reset	For the Column Group Details dialog only, reverts the edited column group to the last saved state.
Update Column Group	For the Column Group Details dialog only, applies changes to an edited column group.
Select Column Group	Applies the column group.

Quick Look - Manage Column Groups Dialog

The Manage Column Groups dialog has two panels: Groups and Settings. At the bottom of this dialog are four buttons: Close, Cancel, Save, and Save and Apply.

The left panel is the Groups panel. This is where you can add, delete, import, or export column groups. At the top of the panel is a toolbar. Below the toolbar is a list of added column groups, where you can select one or more groups.

The following table lists the actions in the toolbar.

Action	Description
	Adds a column group. Clicking this button highlights the Settings panel on the right, where you can name the column group and add or delete meta keys. At least one meta key is required to add a group.
	Deletes a column group. A confirmation dialog is displayed before the selected group is deleted. OOTB column groups cannot be deleted.
	Creates a copy of the selected column group.
	Displays the Import Column Groups dialog, where you can select a file to upload.
	Exports one or more selected groups to your local file system.

The right panel is the Settings panel. This is where you can create and edit column groups. This panel contains the Name field, a toolbar, and a list. The following table describes the features of the Settings panel.

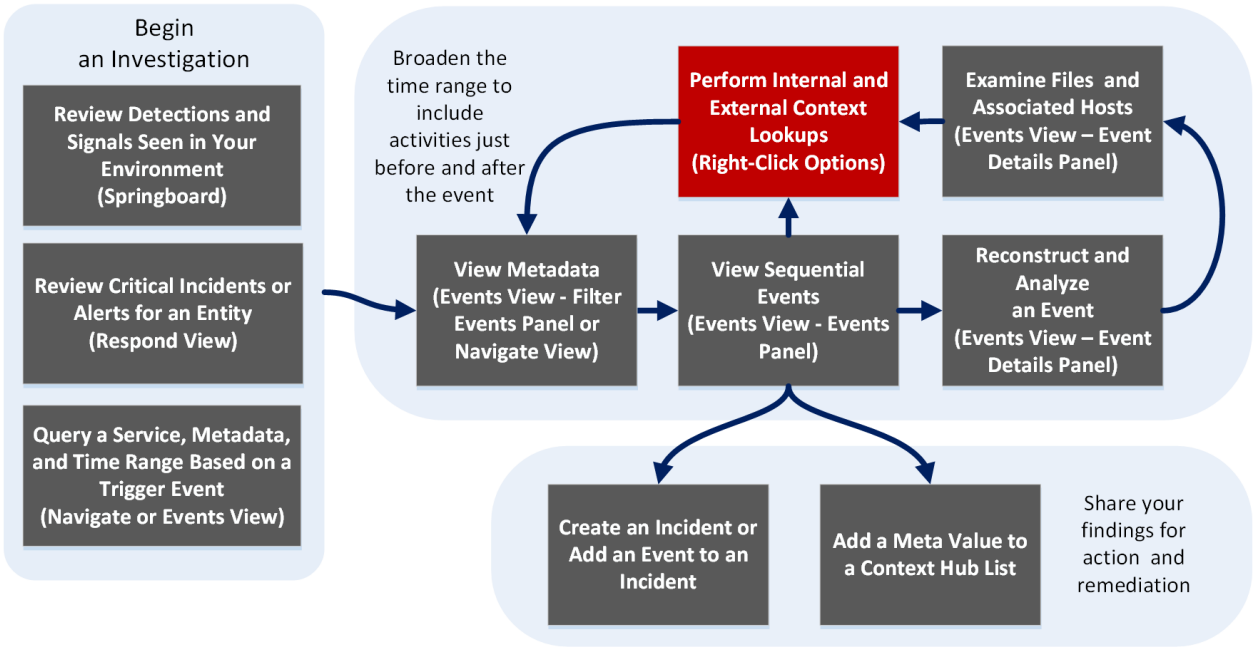
Feature	Description
Name	The name of the selected column group.
	Adds a new row to the list of meta keys, where you can open a drop-down menu to select a new meta key.
	Deletes one or more selected meta keys. Displays a confirmation dialog before deleting.
Reset	Returns the column group to its most recently saved settings.
Meta Key	Lists the meta keys added to the selected column group.
Display Name	Lists the names of the meta keys as they are displayed in the Navigate, Events, and Event Analysis views.
Width	Specifies the width of each meta key's column. The width can be set between **10** and **1000**. The default width is **100**.

The following table provides descriptions of the action buttons.

Feature	Description
Close	Closes the dialog without saving.
Cancel	Cancels all unsaved changes.

Feature	Description
Save	Saves all changes without closing the dialog.
Save and Apply	Saves and applies all changes immediately, closing the dialog.

Context Lookup Panel



After an administrator configures the Context Hub service, you can view the contextual information for the meta values in the Navigate view, Legacy Events view, and Events view (Version 11.2 and later). The Context Hub service is pre-configured with a default meta type and meta key mapping. For information about mapping of the context hub meta value with investigation meta key, see "Manage Meta Type and Meta Key Mapping" in the *Context Hub Configuration Guide*.

The Context Lookup panel is displayed on the right side of the Navigate view, Legacy Events view, or Events view. Meta values that have been added to a Context Hub list are highlighted in gray in the Navigate view or Legacy Events view results. In the Events view, they are marked by an underscore. When you right-click a highlighted value and select **Context Lookup** in the resulting context menu, the lookup results are displayed in the Context Lookup panel for configured sources for the selected meta value. You can select a source in the Context Lookup panel icon bar to view the contextual information.

There are some differences between the appearance and contents of the Context Lookup panel when open in the Navigate view or Events view and when open in the Events view.

Note: The **contexthub-server.contextlookup.read** permission is enabled only for Administrators, Analysts, Malware Analysts, SOC Managers and Respond Administrators. Administrators can enable this permission for other roles in the **Investigate > Events** view to view context lookup for meta values and perform the Add/Remove from List actions. For more information, see the "Role Permissions" topic in the *System Security and User Management Guide*.

Quick Look (in the Navigate and Legacy Events Views)

The following figure is an example of the Context Lookup panel as it appears in the Navigate view. Controls and features are described in the table.

Feature	Description
Source Options Bar	Displays the icons for the available sources: Endpoint, Incidents, Alerts, and Lists.
Source Name	Displays the source name based on the selected icon: • Endpoint • Incidents • Alerts • Lists
Sort	Provides a drop-down of sort options for the listed context information. Possible sort options are Severity - High to Low, Severity Low to High, Date - Oldest to Newest. and Date - Newest to Oldest. The sorting options vary by source type.
	Refreshes the lookup results.

Feature	Description
<n items> (First <n> Results)	The footer provides a count of results currently displayed and the total number of results. For example, 5 Alerts (First 50 Results).

Incidents

Incidents are displayed based on time first (Newest to Oldest) and then priority status. The following information is displayed for incident lookups:

- Incident Name and ID
- Priority status of the incidents
- Risk Score value of the incidents
- Date when the incident was created
- Status of the incident
- Assignee for the incident
- Last Updated: Indicates when contextual data was last fetched from data source and updated to cache.
- Time window: This is based on the value that is set for the "Query Last (Days)" field in the Configure Respond window. For details, see the "Configure Respond as a Data Source" topic in the *Context Hub Configuration Guide*.
- Sort: This drop-down field provides options to change the sorting of result based on time or priority.

Alerts

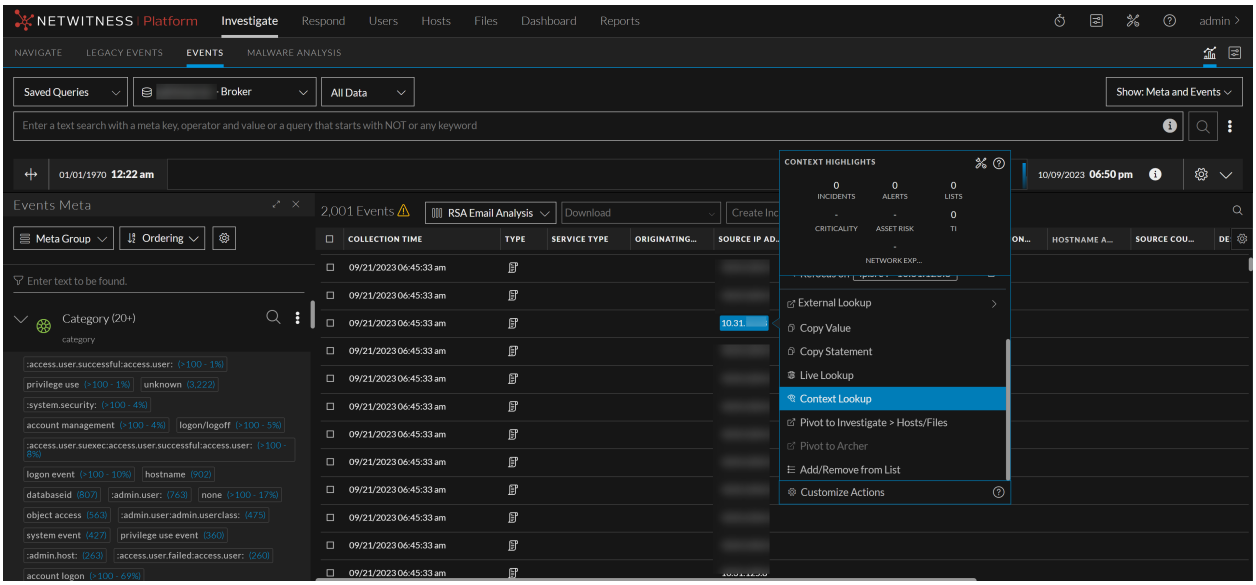
Alerts are displayed based on the Severity. ;The following information is displayed for alert lookups:

- Alert Name
- Severity value of the alerts
- Date when the alert was created
- Incident ID: This is the ID of the incident that the alert is associated with (If any).
- Sources: Event source name
- Number of events associated with the alert.
- Last Updated: Indicates when contextual data was last fetched from data source and updated to cache.
- Time window: This is based on the value that is set for the "Query Last (Days)" field in the Configure Respond window. For details, see the "Configure Respond as a Data Source" topic in the *Context Hub Configuration Guide*
- Sort: This drop-down field provides option to change the sorting of result based on time or priority.

Lists

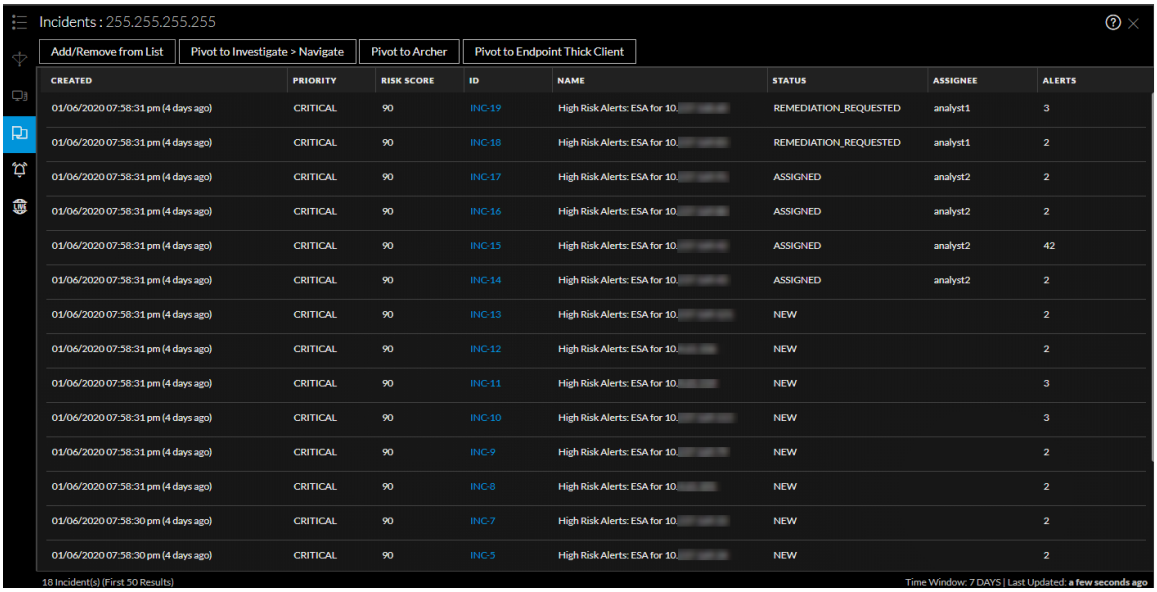
The following information is displayed for list lookups.

- List Name (user defined)
- Description of the list (user defined)
- Header
- Value
- Owner who created the list
- Created Date
- Last Updated Date



Endpoint

The following information is displayed for Endpoint lookups.



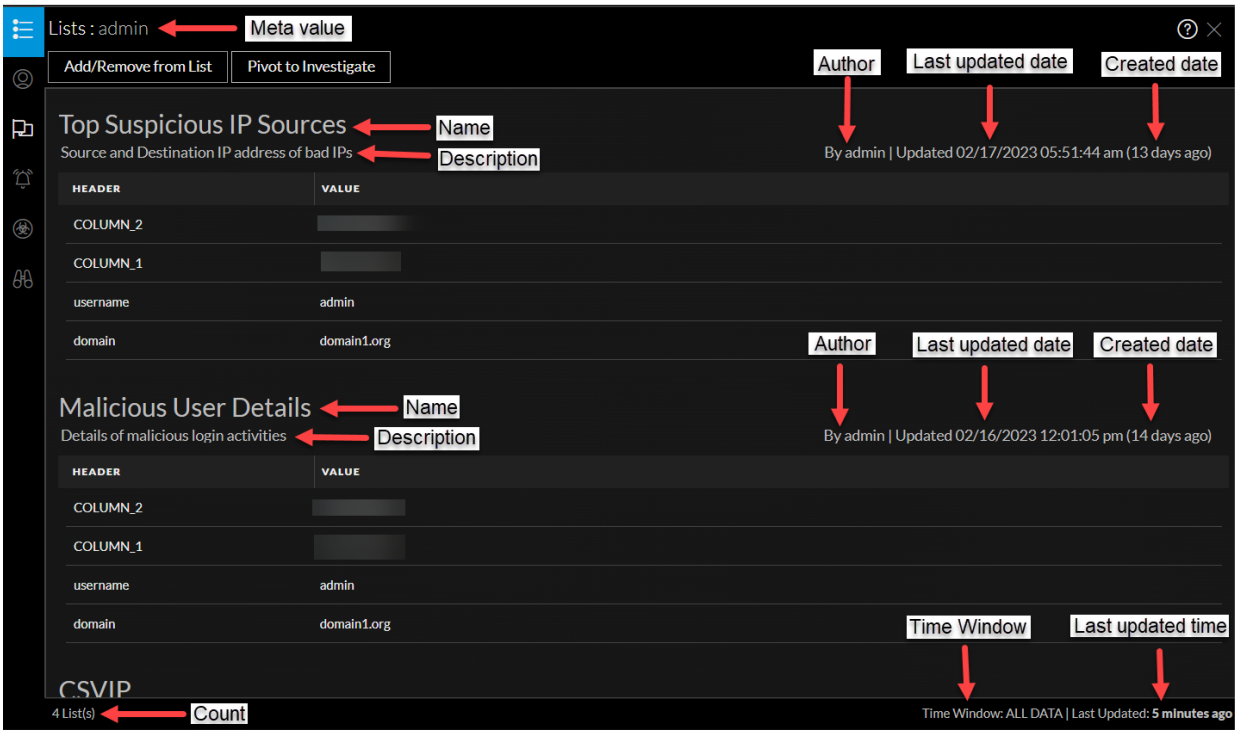
- Machine name and IP address of the machine.
  By clicking on the IP or Endpoint machine name, you will be navigated to Endpoint UI to perform further investigation.
- Last Updated: Indicates when contextual data was last fetched from data source and updated to cache.
- Machine Score: A machine IIOC score is aggregated based on the module scores.
- Number of modules: Number of active files for the selected machine.
- Last Updated: Indicates when the scan results were last updated in Endpoint database.
- Last Login User
- Machine MAC Address
- Operating System Version
- Admin Notes (if any)
- Admin Status (if any)
- Top Suspicious Modules (Modules that have an IIOC score > 500). This is based on the value set for "Minimum IIOC Score" field in the Configure Endpoint window. The default value for "Minimum IIOC Score" is 500.
- Machine IIOC Levels

Quick Look in the Events View

The following figure is an example of the Context Lookup panel as it appears in the Events view.

The contextual information or query results displayed in the Context Lookup panel depends on the selected entity and the associated data sources. The Context Lookup panel has separate tabs for each of the data sources. The tabs are: List data source, Archer, Active Directory, Endpoint, Incidents, Alerts, and REST API. The following figure shows the Context Lookup panel for a selected entity in the Incident Details view.

The following table describes the data available on each tab and the supported entities.



Tab	Description	Supported Entities
 (Lists)	Displays all of the list data associated with the selected entity or meta value. The result is sorted by the last updated list.	All entities

Tab	Description	Supported Entities
 (Archer)	Displays asset information along with criticality ratings using the Archer data source.	IP, Host, and Mac
 (Active Directory)	Displays all user information for the selected user.	User
 (NetWitness Endpoint)	Displays the NetWitness Endpoint data source information for the selected entity or meta value, which includes the Machines, Modules, and IIOC levels. Modules are by highest IOC score to lowest IIOC score and IIOC levels are sorted by highest IOC levels to lowest IOC levels.	IP, MAC address, and Host
 (Incidents)	Displays the list of incidents associated with the selected entity or meta value. The result is sorted by newest incidents to oldest incidents.	All entities
 (Alerts)	Displays the list of alerts associated with the selected entity or meta value. The result is sorted by newest alerts to oldest alerts.	All entities
 (Live Connect)	Displays information related to Live Connect.	IP, Domain, and Filehash
 (File Reputation)	Displays file reputation status for Filehash entities.	Filehash entities
 TI	Displays information for STIX data sources.	IP address, email address, domain, filename, URL's, and file hash. **Note:** The context lookup for email address and URL will be displayed only if these metas are mapped. Navigate to  (Admin) > System > Investigation > Context Lookup.

Tab	Description	Supported Entities
REST API	Displays the list of REST APIs (enabled in Context Hub) associated with selected the entity.	All entities

Lists Tab

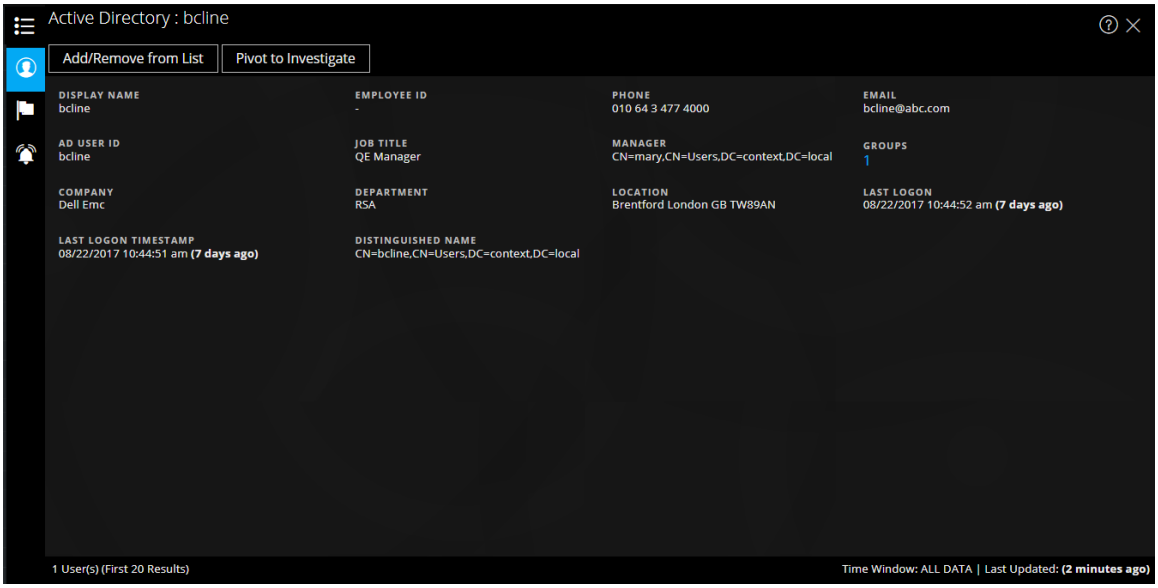
The Context Lookup panel for Lists shows one or more lists associated with the selected entity or meta value. The following figure is an example of the Context Panel for Lists, and the table describes the fields.

Field	Description
Name	The name of the list (defined while creating the list).
Description	The description of the list (defined while creating the list).
Header	Displays the metas available for the list.
Value	Displays the values for each meta in the list.
Author	The owner who created the list.
Created	The date when the list was created.
Updated	The date when the list was last updated or modified.
Count	The number of lists in which the selected entity or meta value is available.

Field	Description
Time Window	The time window based on the value set for the "Query Last" field in the Configure Responses dialog. By default, all Lists data is fetched.
Last Updated	The time when Context Hub fetched and stored the lookup data in cache.

Archer Tab

The Context Lookup panel for Archer displays asset information along with criticality ratings using the Archer data source for IP, Host, and Mac entities. The following figure is an example of the Context Lookup panel for Archer, and the table describes each field.



Field	Description
Criticality Rating	The device operational criticality based on the applications it supports. The criticality ratings can be set as Not Rated, Low, Medium-Low, Medium, Medium-High, or High.
Risk Rating	The calculated risk rating for the device based on the most recent assessment and the average risk rating of facilities using the device. The risk rating can be set as Severe, High, Medium, Low, or Minimal.
Device Name	The unique name of the device.
Host Name	The host name of the device.
IP Address	The primary internal IP address of the device.
Device ID	The automatically populated value that uniquely identifies the record across all applications within the system.
Type	The device type, for example, server, laptop, desktop, and others.
Facilities	Links to records in the Facilities application that are related to this device.

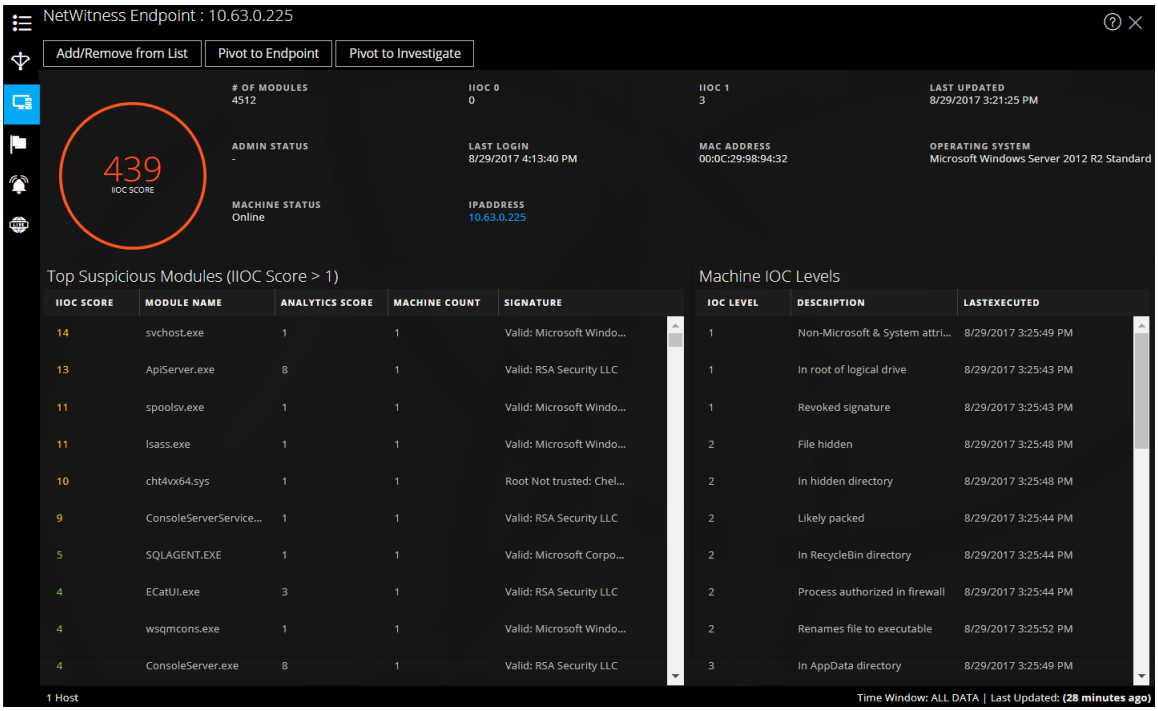
Field	Description
Business Unit	Links to records in the Business Unit application that are related to this device. For more than three business unit values, you can hover over the field to view the values.
Device Owner	The person who is responsible for the device and receives read and update rights of the record.
Count	The number of assets available.
Time Window	The time window based on the value that is set for the "Query Last" field in the Configure Responses dialog. By default, all data for Archer is fetched.
Last Updated	The time when Context Hub fetched and stored the lookup data in cache.

Note: In the localized versions, only these twelve fields are displayed: Criticality Rating, Risk Rating, Device Owner, Business Unit, Host Name, MAC Address, Facilities, IP Address, Type, Device ID, Device Name, and Business Processes.

Active Directory Tab

The following figure is an example of a Context Lookup panel for Active Directory.

The Context Lookup panel for Active Directory displays all the related information, incidents, and alerts for a user. You can perform a look up using the following formats:



- userPrincipalName
- Domain\UserName
- sAMAccountName

The following information is displayed for Active Directory.

Field	Description
Display Name	The name of the user.
Employee ID	The employee ID of the user.
Phone	The phone number of the user.
Email	The email ID of the user.
AD User ID	The unique identification of the user within an organization.
Job Title	The designation of the user.
Manager	The name of the user's manager.
Groups	The list of groups of which the user is a member.
Company	The name of the user's company.
Department	The department name to which the user belongs within the organization.
Location	The location of the user.
Last Logon	The time when the user logged into the system, only if the Global Catalogue is defined.
Last Logon TimeStamp	The time when the user logged into the system.
Distinguished Name	The unique name assigned to the user.
Count	The number of users.
Time Window	The time window based on the value that is set for the "Query Last" field in the Configure Data Source Settings dialog. By default, all data for Active Directory is fetched.
Last Updated	The time when Context Hub fetched and stored the lookup data in cache.

NetWitness Endpoint Tab

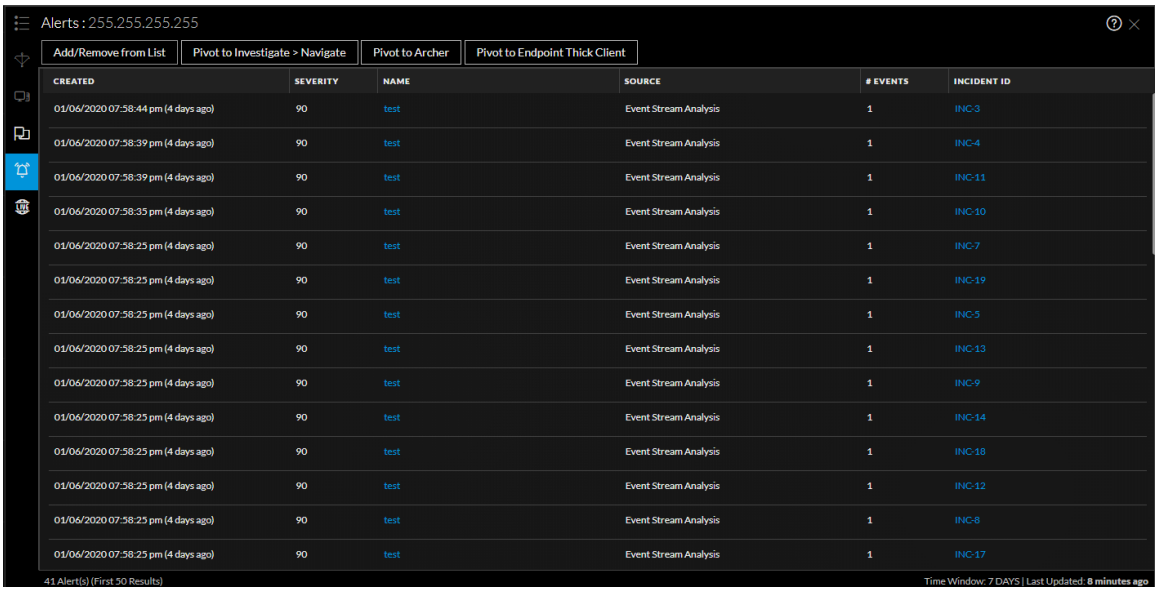
The following figure is an example of the Context Lookup panel for NetWitness Endpoint.

The following information displayed for IIOCs.

Field	Description
# Of Modules	The number modules that are looked up.
Admin Status	The admin status (if any).
Last Updated	The time when the data was last refreshed.
Last Login	The time when the user last logged in.
MAC Address	The Machine MAC Address.
Operating System	The Version of the Operating System used by the NetWitness Endpoint machine.
Machine Status	The state of the module being viewed: Online, Offline, Active, or Inactive.
IP Address	The IP address of the specific module.

The following information is displayed for modules.

Field	Description
IIOC Score	A machine IIOC score is an aggregated score based on the module scores. This is based on the value set for Minimum IIOC Score field in the Context Hub Data Source Settings dialog. The default value for Minimum IIOC Score is 500. See "Configure Context Hub Data Source Settings" in the *Context Hub Configuration Guide*.



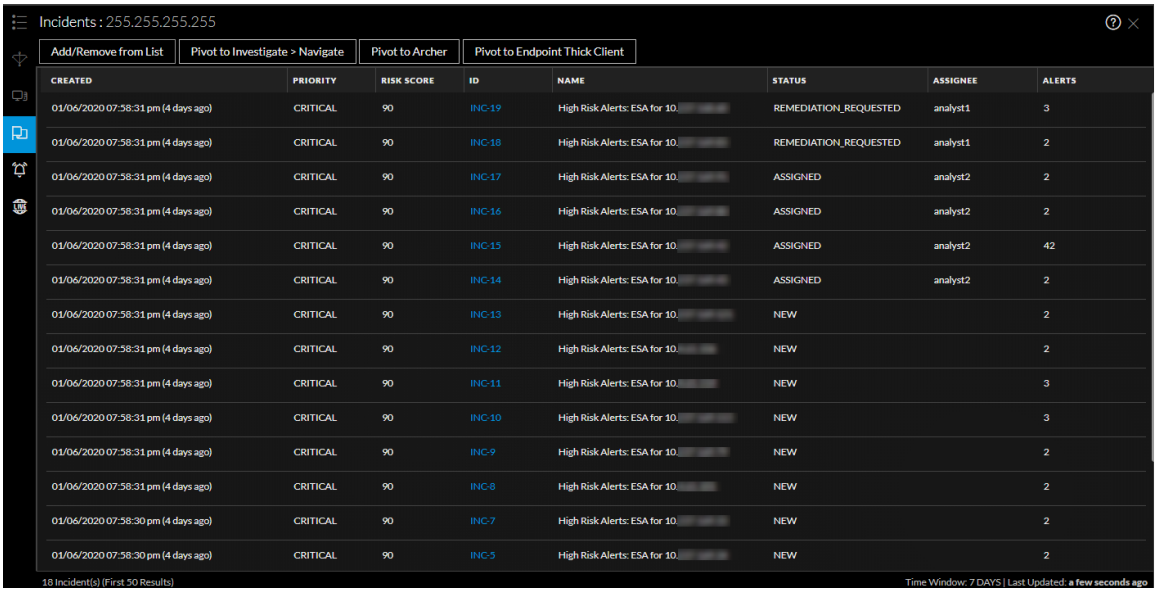
Field	Description
Module Name	The name of the module that is being looked up.
Analytic Score	The number of active files for the selected machine.
Machine Count	The number of machines on which that particular IOC got triggered.
Signature	Indicator of whether the file is signed or unsigned, valid or invalid, and signatory information. For example, Google, Apple, and so on.

The following information is displayed for machines.

Field	Description
IOC Levels	The IOC levels.
Description	The description for he IOC level if available.
Last executed	The time when the action was executed.
Count	The number of hosts that are being looked up.
Time Window	The time window based on the value set for the Query Last field in the Configure Data Source Settings dialog. By default, all data for NetWitness Endpoint is fetched.
Last Updated	The time when scan results were last updated in NetWitness Endpoint database.

Alerts Tab

The following figure is an example of Context Panel for Alerts that is displayed based on time first (Newest to Oldest) and then severity.

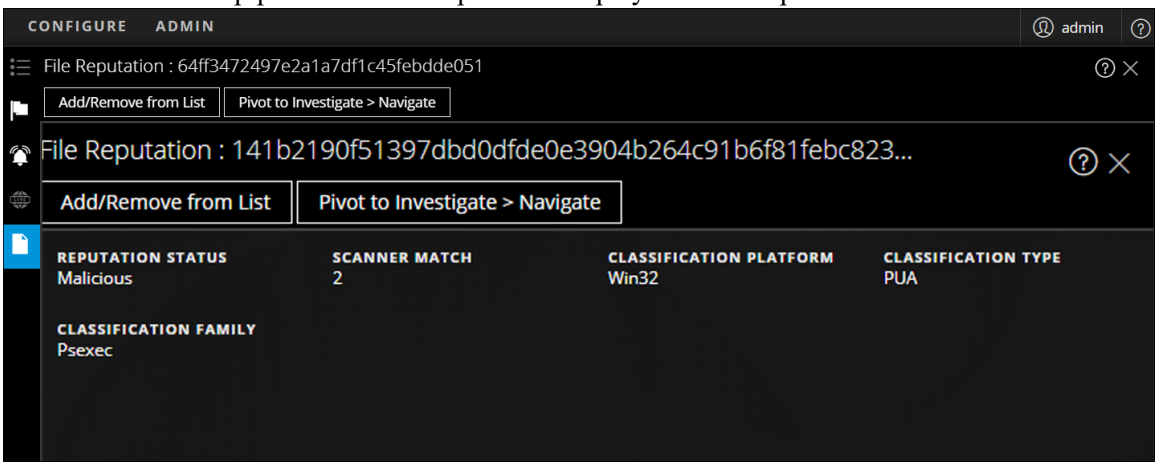


The following information is displayed in the Context Lookup panel for Alerts.

Field	Description
Created	The date and time when the alert was created.
Severity	The severity value of the alerts.
Name	The name of the alert. You can click the name to view the details of a specific alert.
Source	The alert source name from which the alert is triggered.
#Events	The number of events associated with the alert.
Incident ID	The ID of the incident (if any) with which the alert is associated. You can click the ID to view the details of a specific alert.
Count	The number of alerts. By default only the first 100 alerts are displayed. For more information on how to configure the settings, see "Configure Context Hub Data Source Settings" in the *Context Hub Configuration Guide*.
Time Window	The time window based on the value set for the Query Last field in the Configure Data Source Settings dialog. By default, the alert data for last 7 days is fetched.
Last Updated	The time when contextual data was last fetched from data source.

Incidents Tab

The following figure is an example of the Context Panel for Incidents, which is based on time first (Newest to Oldest) and then priority status.

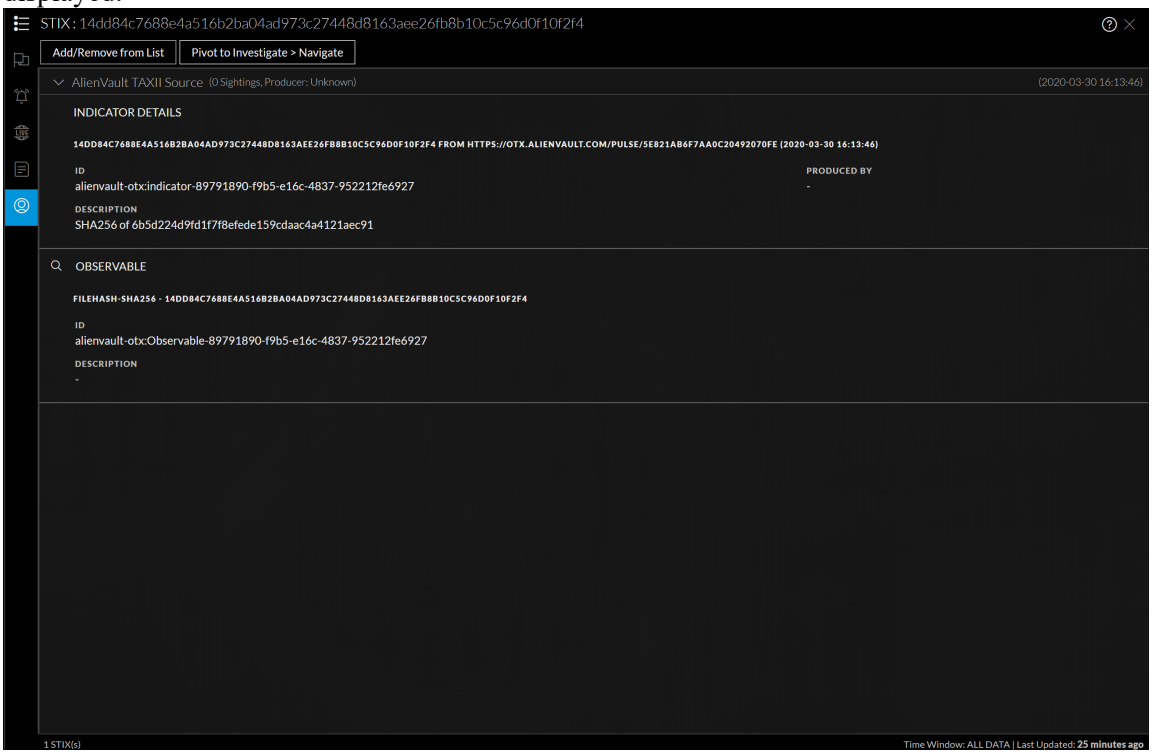


The following information is displayed in the Context Lookup panel for Incidents.

Field	Description
Created	The date when the incident was created.
Priority	The priority status of the incidents.
Risk Score	The risk score of the incidents.
ID	The Incident ID of the incident. You can click on the ID to display further details about the incident.
Name	The incident name.
Status	The status of the incident
Assignee	The current owner of the incident.
Alerts	The number of alerts associated with the incident.
Count	The number of incidents. By default only the first 100 incidents are displayed. For more information on how configure the settings, see "Configure Context Hub Data Source Settings" in the *Context Hub Configuration Guide*.
Time Window	The time window based on the value set for the Query Last field in the Configure Data Source Settings dialog. By default, the alert data for last 7 days is fetched.
Last Updated	The time when contextual data was last fetched from data source.

File Reputation Tab

The Context Lookup panel for File Reputation displays the file reputation status of a file.



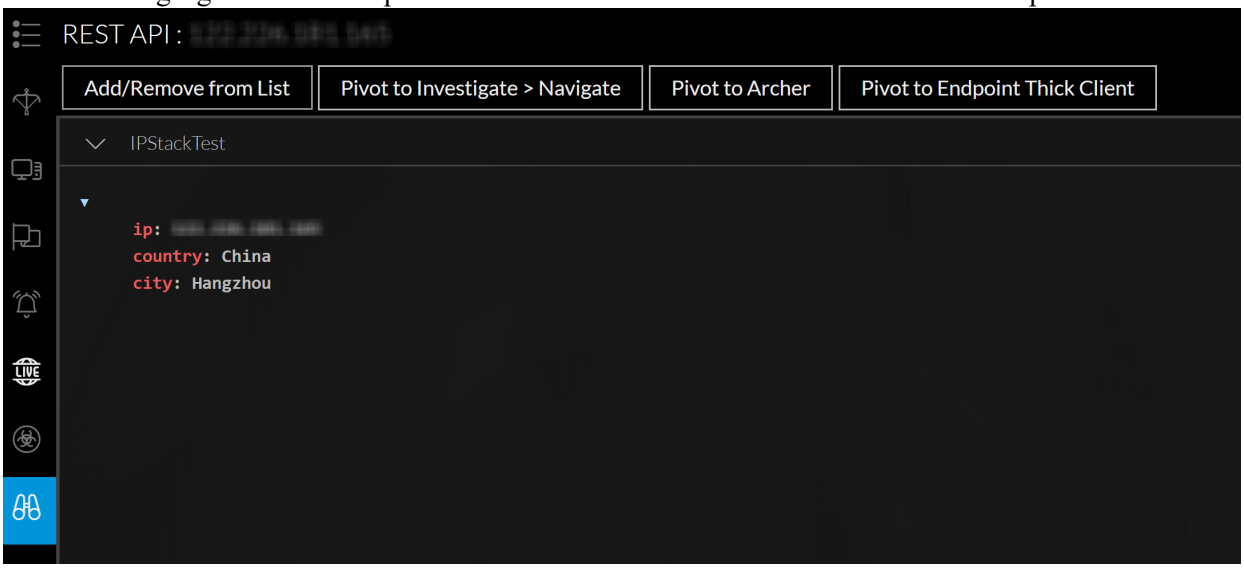
Field	Description
Reputation Status	Reputation Status of filehash. For more information about reputation status, see "View Reputation of files" in the *UEBA User Guide*.

Field	Description
Scanner Match	Number of scanners that detected malware or suspicious activity in the last scan.
Classification Platform	Classification for the queried filehash based on the platform. For example, the platform can be Win 32.
Classification Type	Classification for the queried filehash based on the type.
Classification Family	Classification for the queried filehash based on the malware family name.

TI Tab

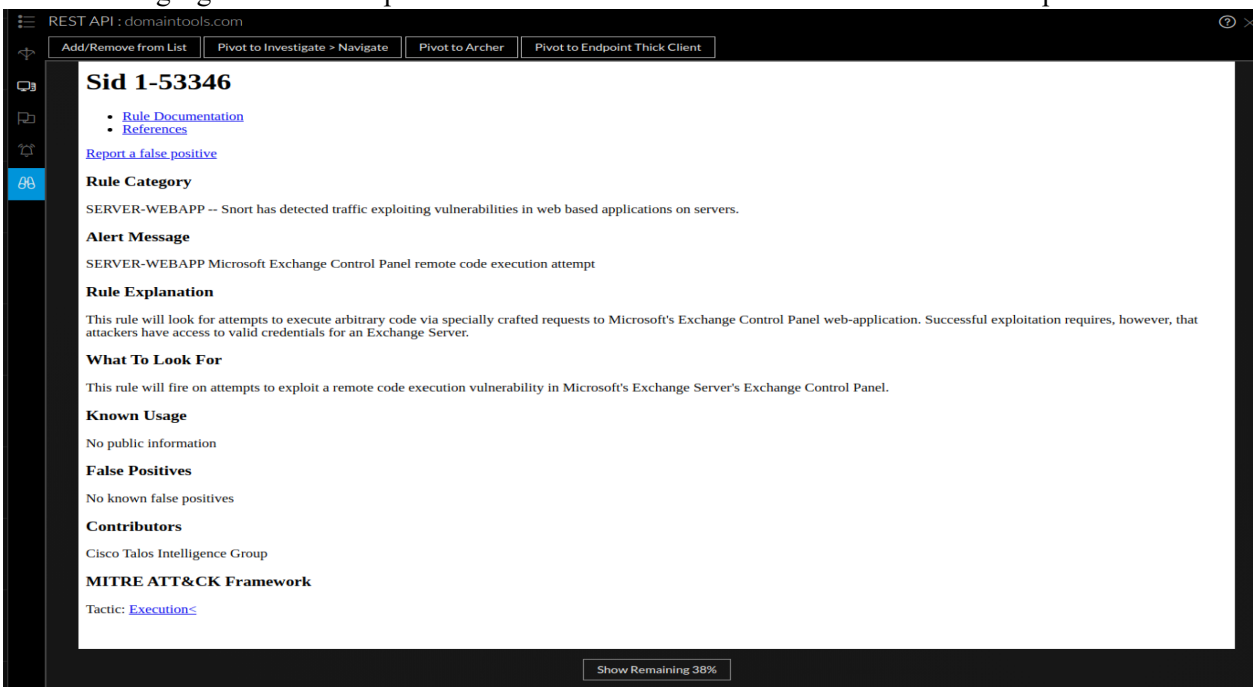
The following figure is an example of a Context Panel for TI, and the table describes the information displayed.

Field	Description
Data Source name	Displays the STIX data source name from where the data is retrieved.
Timestamp	The time when the event was created.



Field	Description
Indicator Details	Indicator Title: Displays the details that contains a pattern that can be used to detect suspicious or malicious cyber activity. ID: Displays the ID of the selected indicator. Produced by: Displays the user role who requested for the STIX data. Description: Displays details about the selected IP address which are being watch listed.
Observable	Observable Title: Displays and conveys information about cyber security related entities such as files, systems, and networks using the STIX Cyber-observable Objects (SCOs). ID: Displays the ID of the selected observable.
(Optional) SightingsREST	Sightings Title: Displays the name of the sighting source. Confidence: Displays the criticality of the sighting. Reference: Displays the reference URL of the sighting source.

REST API Tab

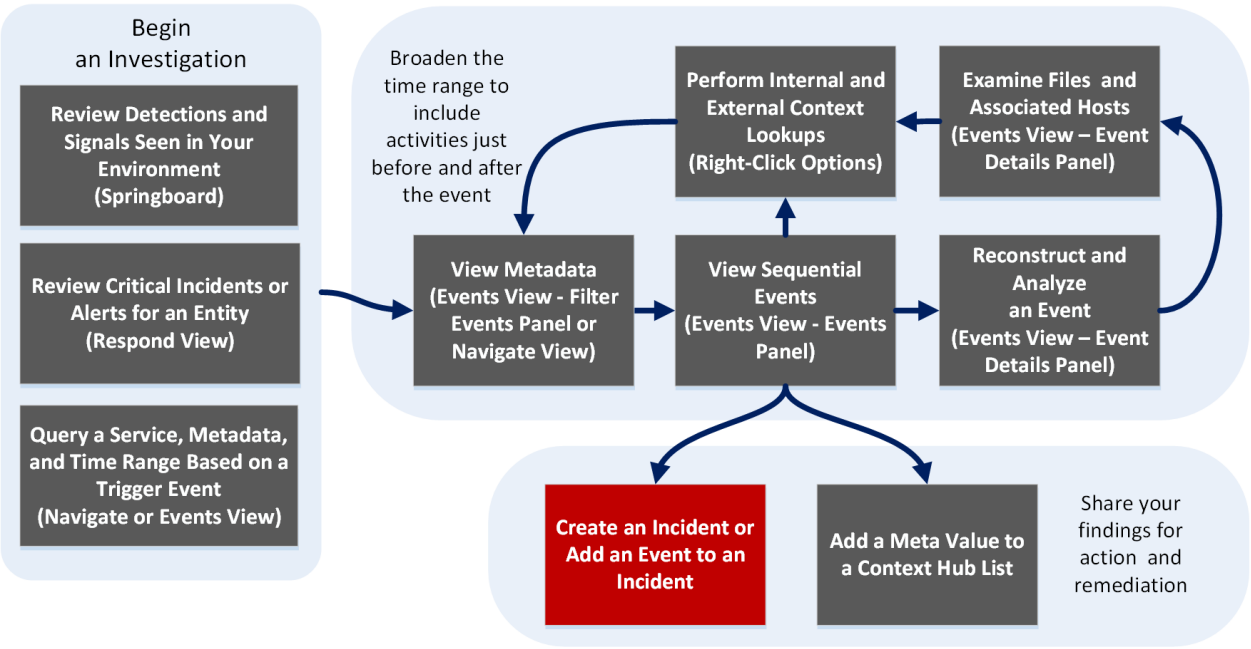


The Context Lookup panel for REST API shows HTML or JSON response (based on the response type configured) associated with the selected entity or meta value.

Note: For JSON response type, the fields that are mapped with friendly names (during REST API configuration) are only displayed for context Lookup. If you have not mapped any fields, all fields are displayed for context lookup.

The following figure is an example of the Context Panel for REST API with JSON response:

The following figure is an example of the Context Panel for REST API with HTML response:



Create an Incident Dialog

In the Create an Incident dialog, analysts can create an incident from selected events in the Events view. The incident is then available to incident responders working in Respond.

To access this dialog, while investigating a service in the **Investigate** > **Events** view, select **Incidents** > **Create New Incident** from the toolbar.

Workflow

What do you want to do?

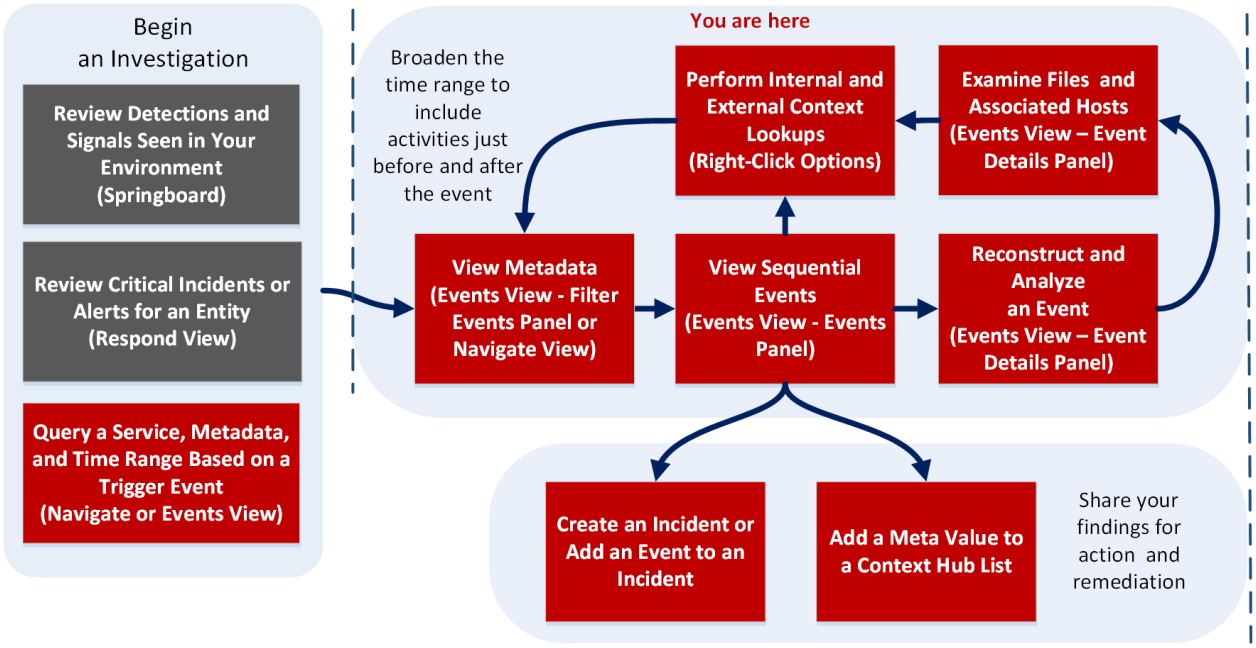
Quick Look

The following figure is an example of the Create an Incident Dialog, and the features are described in the table.



Feature	Description
Create Summary from These Events	The Alert Summary field is filled by the query that produced the select alerts, which you selected to create this incident. The Severity field reflects the Severity of the selected alert, an integer between 1 and 100.
Name	(Required) Specifies a name to identify the incident. In the example, the name is Sample Incident. You can provide a name that clearly identifies the nature of events that will be added to this incident
Summary	(Optional) Specifies a description for the incident. A good summary clearly identifies the incident for other analysts and responders.
Assignee	(Optional) Assigns the incident to a user in the SOC. Clicking Assignee opens a drop-down list showing the user names of SOC personnel who respond to incidents.
Categories	(Optional) Identifies categories of incidents. Clicking Categories, opens a drop-down list of Incident categories and subcategories. You can select one or more categories to which the incident belongs. Categories fall into these major groups: Environmental, Error, Hacking, Malware, Misuse, and Social.
Priority	Identifies the priority for the incident. Clicking Priority opens a drop-down list of priorities: Critical, High, Medium, or Low displayed in the drop-down list.
Cancel	Closes the dialog without saving changes.
Save	Saves the incident and closes the dialog. A message confirms that the incident was created successfully.

Events View

In the Events view analysts can view a sequential list of network, log and endpoint events, select an event for reconstruction and analysis, and view the raw event and metadata with interactive features that enhance the ability to see meaningful patterns in the data. In Version 11.5 and later, you can drill into metadata for the listed events. The Events view offers packet, file, host, text, log, and email reconstruction. When you open a web reconstruction of an event, the same web reconstruction used in the Legacy Events view is displayed.

Workflow

The following figure is a high-level workflow illustrating the tasks you can do in NetWitness Investigate, with the Events view tasks highlighted in red.

What do you want to do?

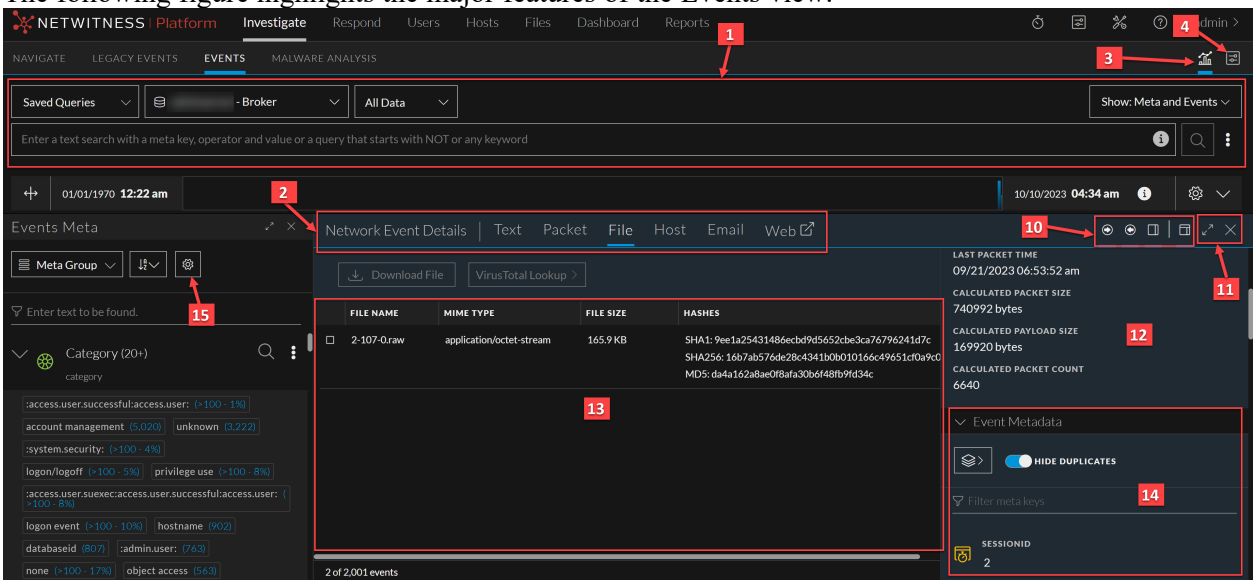
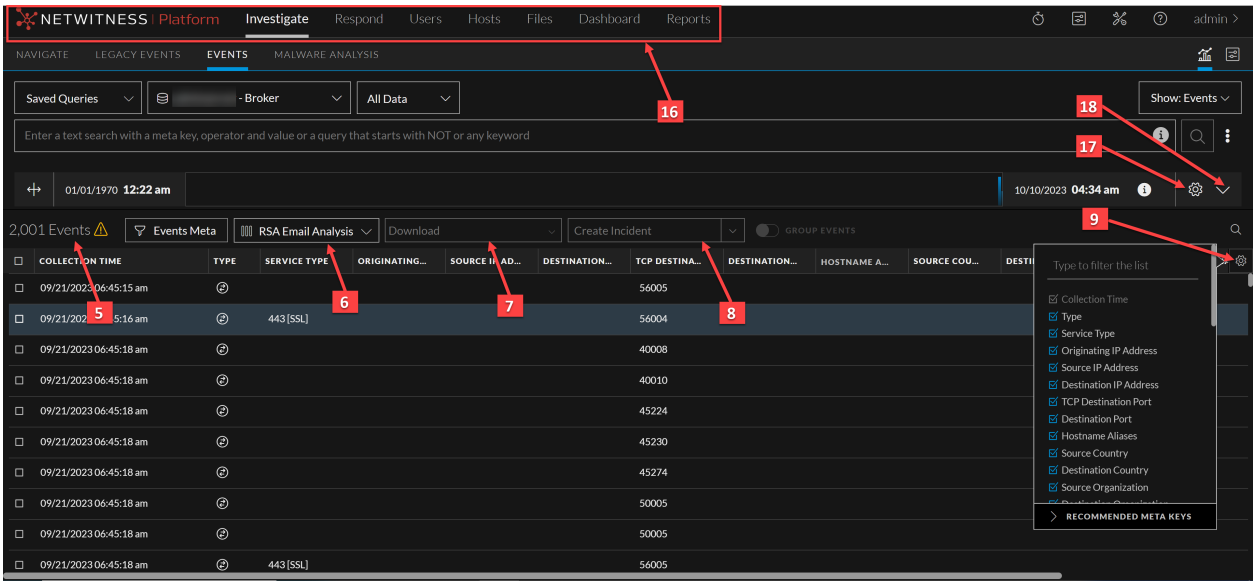
- Events View - Host Tab

Quick Look



There are multiple access points to this view, which are described in Begin an Investigation in the Events View. If you access the Events view from the Respond view, you can see the analysis for a selected event in an incident. The options are a subset of the options available when you open an event from within the Investigate view. To get complete functionality and examine other events, you can go to the Event view directly (INVESTIGATE > Event).



The Events view lists events in ascending order by time in the Events panel. The events displayed can be results for the drill point in the Navigate view or Legacy Events view, or results for a query entered in the Events view query bar.

Input fields for a query are displayed so that you can select a service and time range, and type an optional query. When you submit a query, the service being investigated counts the results up to a limit of 10,000 events, and 10,000 network, log, and endpoint events are loaded in the Events panel. Different columns are displayed, depending on the selected column group. You can rearrange and resize the columns, choose a built-in or custom column group, and choose individual columns that you want to see. When you find an event of interest, clicking the event opens the reconstruction in a new panel (Packet, Text , or File).

Note: For versions earlier than 11.3, the first 100 events are loaded. You can scroll through the list and click **Show Next 100 Events** at the bottom of the list. If the next page contains fewer than 100 events, the button changes to reflect the number of remaining events.

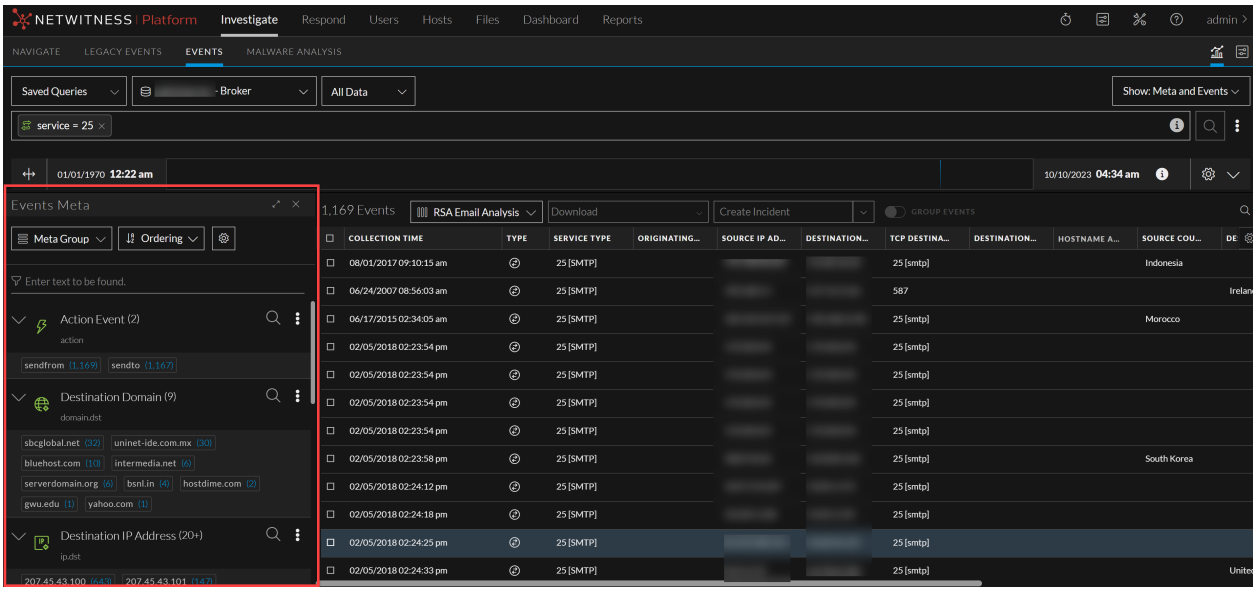
The following figure highlights the major features of the Events view.

1	**Query Bar**: When a service is selected, displays the service selector, time range selector, and the queries you have entered. You can select a service as described in Begin an Investigation in the Events View and refine the query as described in Filter Results in the Events View. Clicking submits the query and sends a request to the selected service to load the data. In Version 11.3 and later, clicking the ( ) > **Query Console** **Current Query** tab, detailed status of the current query is provided (see Events View below).
2	The type of event being analyzed and the type of reconstruction are reflected in the heading. • These are the event types: **Network Event Details**, **Log Event Details**, or **Endpoint Event Details**. • The types of analysis available for the event type are Text, Packet, File, Host, Email, and Web. Network events can use all types of analysis: text, packet, file, and email (Version 11.4.1 and later). Log and endpoint events use only text analysis. The email (Version 11.4.0.x and earlier) type and web type open the current event as an email or web reconstruction in the Events view. For details, see Examine Event Details in the Events View.
3	Reopens the Events panel if you have closed it. For details, see Analyze Events in the Events View.
4	Sets preferences for the Event view (see Configure the Events View).
5	The Events panel title. • In Version 11.3 and later, the Events panel title is slightly different than the title in prior versions, and a row number indicator has been added. The title lists the number of events and sort order; for example, **40,000 Events (Asc)** means that 40,000 events were found and they are listed in ascending order by time. If more than 10,000 events are found, only the oldest 10,000 events are displayed in ascending order, and an amber triangle highlights the fact that not all events were loaded. This may indicate that you need to refine the query. For more information about refining the events listed here, see Filter Results in the Events View.

	• Versions prior to 11.3 simply list the number of events found, and you can load 100 of them at a time. In Version 11.4 and later, clicking  opens the Find Text in Table dialog.
6	The Column Group drop-down lists built-in and custom column groups that you can apply to the Events panel. Built-in column groups are sometimes updated between one version and the next. Some examples of built-in column groups are Email, Endpoint Analysis, Malware Analysis, Outbound HTTP, Outbound SSL/TLS, and Summary List. Summary List is the default column group. For details, see Use Columns and Column Groups in the Events List.
7	The Download drop-down menu lists the available options for downloading event data. The options are Log, Visible Meta, and Network (see Downloading and Acting Upon Results. You can change the preferred format of the event type data in the Event Preferences dialog (see Configure the Events View).
8	The Create Incident button enables you to create incidents from events. The Add to Incident button enables you to add selected events to an open and existing incident (see Add Events to an Incident in the Events View and Add Events to an Incident in the Legacy Events View).
9	Displays the column selection settings to select the individual columns displayed in the Events panel. For details, see Use Columns and Column Groups in the Events List.
10	Controls to show or hide the Overview panel, show or hide requests and responses, and open the Event Meta panel. For details, see Analyze Events in the Events View.
11	Controls to change the size of the panel and close the panel. For details, see Analyze Events in the Events View.
12	The Overview panel provides summary information about the event you are currently analyzing. The selected event is highlighted in the Events panel with a blue background. The summary information is different for the different event types (packet, log, and endpoint). In Version 11.5, the redundant NW Service is removed.
13	The event data for the event you are currently analyzing.
14	The Event Meta panel is redesigned in Version 11.5, but has the same functions as in Version 11.4. The Event Meta panel lists the meta keys and values found in the data. This data can be sorted in two ways - Alphabets or Sequence. Some metadata are searchable; they have a binoculars icon, which you can click to see the associated data highlighted in the event data (see Analyze Events in the Events View). • For a packet, the data is called a payload and is displayed in the form of a request and response. • For a log event, the data is a line of text from the raw log. • For an endpoint event, the event data is relevant to data from the NetWitness Endpoint agents running on hosts in the network. It may be a single process, driver, DLL, file (executable), service, or autorun, and information related to logged-in users. (See the *NetWitness Endpoint User Guide* for complete information about endpoint event data.)
15	The Version 12.3 introduces new Meta Settings panel. This panel allows analysts to configure the number of sessions required for the specific meta key value within the Events view.
16	The Version 11.5 main menu for NetWitness Platform has relocated Hosts, Files, and Users (Entities) options for easier access.
17	The Version 12.3 introduces new Timeline Settings panel. Analysts can use the Timeline Settings option to change the Y-axis data dimension (Count or Size) and view the data

presented on the timeline. Click the (info) button to the right of the Mini Timeline to know the representation of the timeline's event data (like what information is shown on the Y-axis).

18 The Expand Timeline feature helps you interact with the event's result based on your search query. The expanded timeline view shows the total number of events for the selected date and time range. On the expanded timeline, X-axis shows the Time and the Y-axis shows either the Total number of events that occurred or the File Size recorded by the services at a specific time on the timeline.

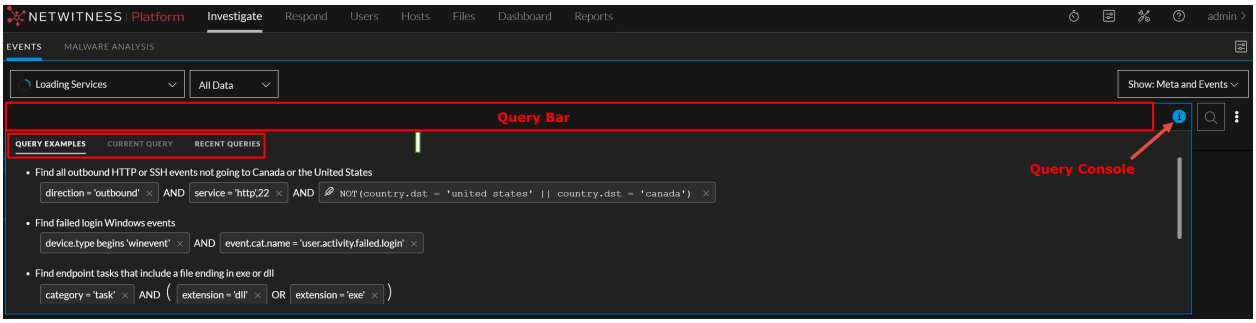


Events Meta Panel

The Events Meta panel is a feature added from Version 11.5. Clicking the Events Meta button (

) in the Events panel, opens the panel to provide a view of meta keys and meta values found in the data set. (Version 11.6) By default, the Events Meta panel is open in the Events view. The user preference (open, closed, or fully expanded) is saved across sessions and logins. See Drill into Metadata in the Events View for more information about drilling into metadata.

Note: (Version 11.6) By default, the Events Meta panel is open in the Events view. The last used state of the panel (narrow or fully expanded) is saved throughout the session and across logins. Also, the Events Meta panel provides additional contrast between meta keys, meta values, and meta counts to improve readability.



Meta Groups Menu

With the Filter Events panel open, you can select a meta group to define the meta keys displayed in the Filter Events panel.The Default Meta Keys meta group is in effect the first time you log in. If you selected a different meta group the last time you logged in, it remains in effect until browser cache is cleared. See Use Meta Groups to Focus on Relevant Meta Keys for details about meta groups.

Ordering Menu	With the Filter Events panel open, you can look at two parameters for each value: the event count or the event size. Each meta key entry includes either the event count or the event size in parentheses after the value. In both cases, there are four options for ordering: • By default, the meta keys are displayed using the Event Count > Descending by Total Count method. When showing the event count for each value, you can order by Descending by Total Count, Ascending by Total Count, Ascending by Value, and Descending by Value. • When you prefer to see the size of the event that contains the value, you can use one of the four Event Size ordering options: Descending by Total Size, Ascending by Total Size, Ascending by Value, and Descending by Value.
Meta Key options button (⋮)	The Meta Key options button offers actions that you can take on an individual meta key. In Version 11.5, the only action is to copy all of the visible meta values for a meta key.
Meta Key List	An icon before each meta key name identifies the indexing method for the key. The indexing method determines the types of interactions and queries possible using that meta key. • This meta key is indexed by value: Action Event [action] (40+). The green color indicates that the all available interactions and queries are supported. You can see the available interactions in the context menu by right-clicking the meta value. • This meta key is indexed by meta key: Bytes Sent [bytes.src]. The yellow color is a clue that a subset of available interactions is supported, and queries on this meta key may take longer than meta keys that are indexed by value. You can see the available interactions in the context menu by right-clicking the meta value. • This meta key is not indexed: MAC Alias Record [alias.mac]. Values for non-indexed meta keys cannot be used to query. If you want to query a meta key that is not indexed, your administrator needs to edit the index file for the service to index the meta key by value or meta key.
Meta Settings	This Meta Settings panel allows analysts to configure the number of sessions required for the specific meta key value within the Events view.

Query Console

Clicking  (the console icon) opens the query console, where Query Examples, Current query, and Recent Query details are provided.

Query Examples

In the **Query Console** > **Query Examples** tab, you can see the example query list to help you understand the query construction.

Current Query

In the **Query Console** > **Current Query** tab, you can see which service, time range, and metadata was queried as well as real-time information about the status of the query and the services being queried. A progress bar indicates the query's completion percentage at the bottom of the console. The statuses let you know details about what is happening; for example, you can tell when the query is executing, queued, reading the index file for the queried service, retrieving events, and complete. All statuses and non-fatal messages are displayed as they come in, and the border color changes if a non-fatal error occurs. View Status of a Query provides additional details on this subject.

Several messages that may be displayed in the query console require additional explanation.

Message: Maximum value limit (`valueMax`) of %1% reached on meta key %2% in index slice %3%

Explanation: The `valueMax` property on the specified meta key has been reached in the index being queried. An administrator configures this inside the index files available in `ADMIN > Services > [Service Name] > Files > index-[service type].xml` or `index-[service type]-custom.xml`. As an example, the statement below from the index file states the meta key called `client` has a limit of 250,000 values by default.

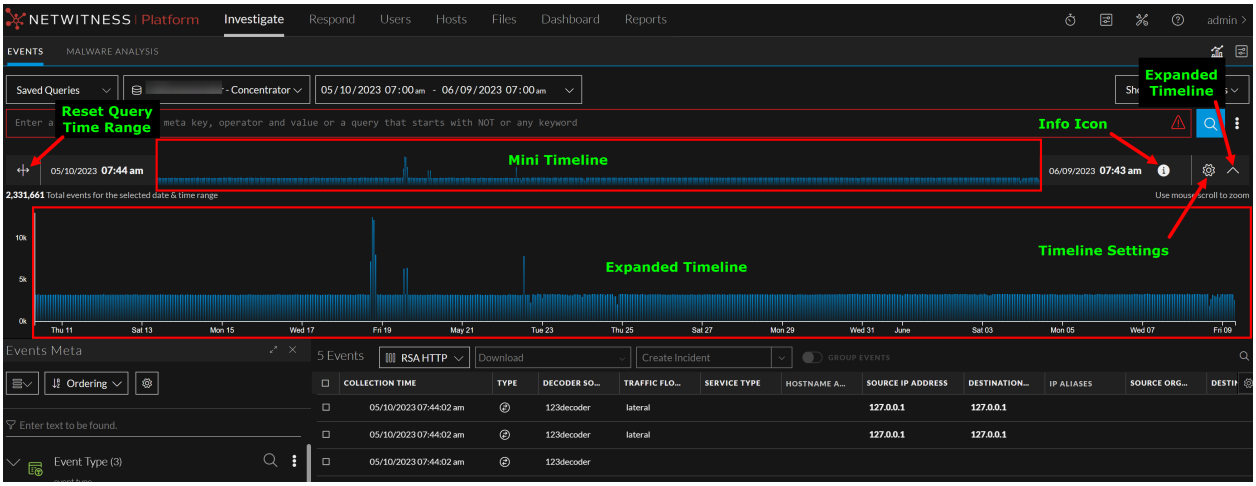
```
<key description="Client Application" level="IndexValues" name="client"
format="Text" valueMax="250000" />
```

Message: The query on channel %2% was auto-canceled by the system for exceeding time usage limits. Check timeout values.

The server has a per-operation limit on execution time, and the requested operation exceeded the limit. To avoid this error, split the operation into smaller pieces, such as smaller time ranges.

Memory limit of %1% reached, controlled by setting max.query.memory

The server has a per-operation limit on memory utilization, and the requested operation exceeded the limit. The limit is related to the amount of memory in the server, which an administrator can adjust in (Admin) **Admin > Services > [Service Name] > sdk > config**. To avoid this error, split the operation into smaller pieces, such as smaller time ranges.



Recent Queries

In the **Query Console** > **Recent Queries** tab, up to 100 recent queries are displayed. Use the scroll wheel on the mouse to move through the recent query list. You can click on  at the start of the query to select that query and directly insert it into the query bar.

When you select a recent query, the query is displayed as per your preferences set to the query bar (Guided or Advanced Mode). Click  to initiate the selected query.

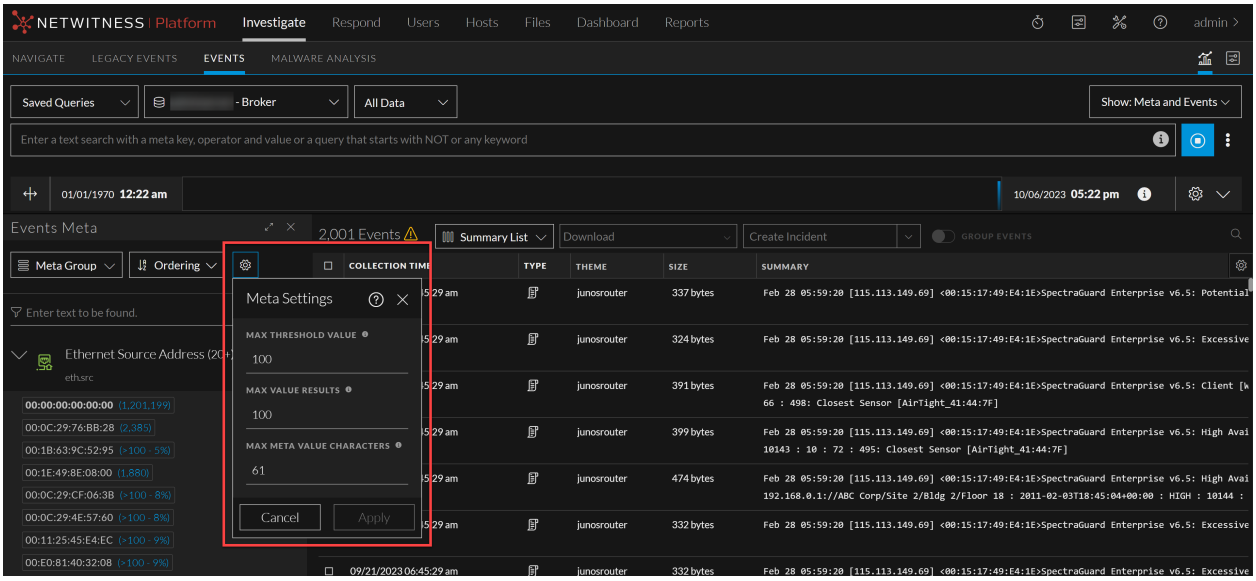
Timeline

The timeline visualizes the events count that occurs at a specific instance. The timeline provides event counts so that you can see if the number of events increases drastically at a given point in time. The timeline displays activity for the specified service and time range as a bar chart.

The following are some key features of the timeline:

- The start time and end time are displayed on either side of the timeline to depict the matching events over the duration of the query. The timezone is also displayed on the right side of the timeline by showing the offset from UTC.
- The section of the timeline that matches the event data is highlighted. The data is highlighted up to the specified threshold. If the data is not sorted using time, the entire timeline is highlighted. Also, if the data is not sorted in a specific order, it might highlight the individual bars in the timeline as events are not ordered using time.
- The query results that exceed the threshold are displayed in grey color. If events are sorted using time, the threshold highlight shifts from left (ascending) to right (descending) depending on your sort preference.
- Hover over the timeline to display the total number of events that occurred in the queried time duration. You can hover over the individual bars in the timeline to get the total number of events that occurred at a specific time.
- When you sort the events, the timeline does not refresh. You must run the query again to refresh the timeline.

- All capabilities of the timeline work when user is querying using the collection time (`time`) or when the preference is set to use the event time (`event.time`).



For more information, see *Investigate on Timeline* topic in Begin an Investigation in the Events View.

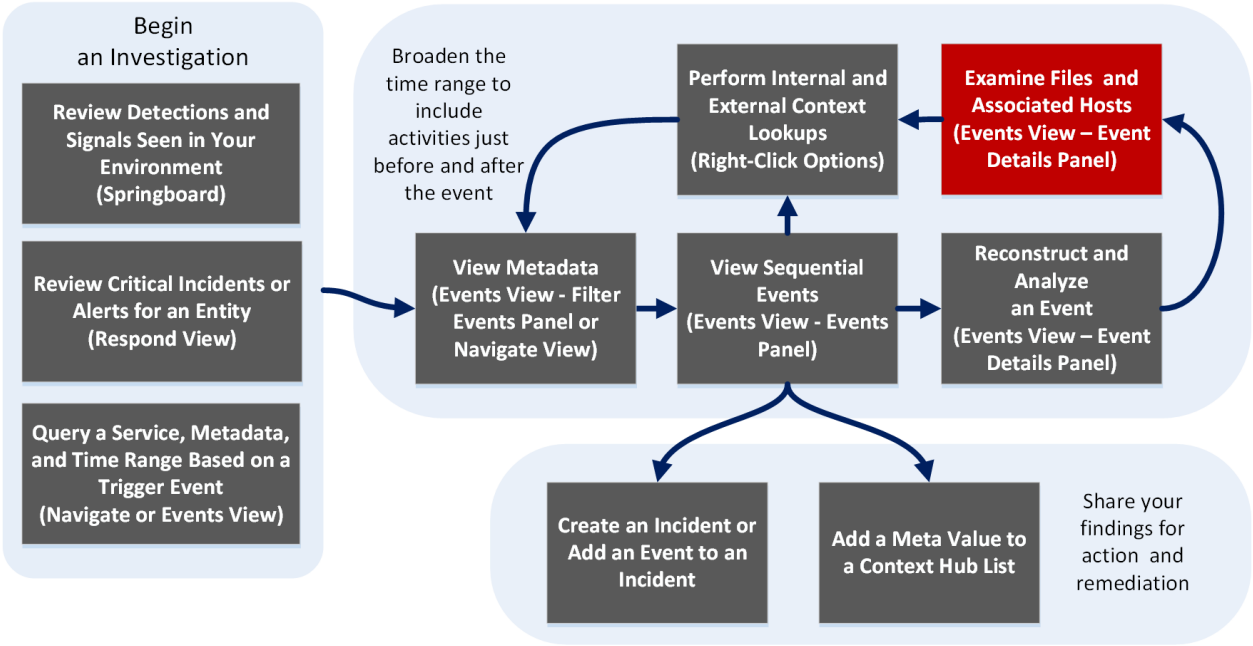
Meta Settings Panel

From the 12.3 or later version, NetWitness introduces the new **Meta Settings** panel under the **Investigate** > **Events** view. This panel allows analysts to configure the number of sessions required for the specific meta key value within the Events view.

Quick Look - Meta Settings Panel

This is an example of the Meta Settings dialog.

The following table describes the fields in the Meta Settings Panel .



Feature	Description
Max Threshold Value	Sets the threshold for the maximum number of sessions loaded for a meta key value in the Values panel. A higher threshold allows accurate counts for a value, and also causes longer load times. The Max Threshold Value should be between **1-2147483647**. The default value is **100,000**.
Max Value Results	Sets the maximum number of values to load in the Navigate view when the Max Results option is selected in the Meta Key menu for an open meta key. The Max Value Results should be between **100-100000**. The default value is **1000**.
Max Meta Value Characters	Set the maximum number of characters in a meta value name displayed in the Events Meta panel. The Max Meta Value Characters should be between **60-512**. The default value is **60**
Apply	Applies the settings immediately and they are visible the next time you load values. The same changes are also applied in the Profiles view.

Feature	Description
Cancel	Cancels the editing operation and closes the dialog, leaving the settings unchanged.
X	Closes the Meta Settings dialog.

Events View - Email Tab

The Email tab is in the Event Details panel. Here you can view a list of email received and associated attachments for an event.

Workflow

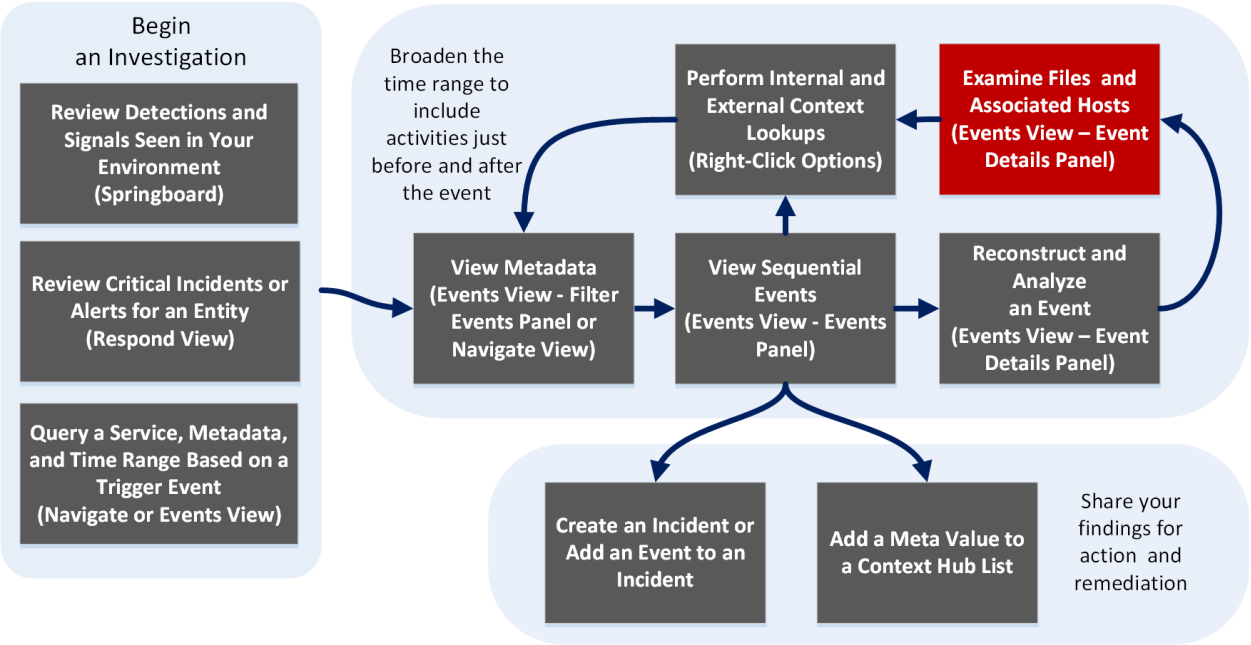
Quick Look

The Email panel displays a list of emails associated with a network event. When an analyst opens the email, the email reconstruction is displayed along with the associated attachments and additional header details, if any.
The following figure is an example of an email reconstruction.



The following table describes all the fields within an email.

Field	Description
From	Displays the email address of the sender of the email.
To	Displays the email addresses of the recipients of the email.
CC (Carbon Copy)	Displays email addresses of additional recipients of the email. The field is displayed only if the sent email has any value and the email addresses are visible to the recipient.
BCC	Displays email addresses of additional recipients privately. This field is displayed only if the sent email has any value and the email addresses are not visible to the recipient.
Reply to	Displays the address designated to receive replies, the sender address.
Subject	Displays the subject of the email.
Attachments	Displays any files shared by the sender that can be downloaded by the recipient. This field is displayed only if email contains attachments. See Download Data in the Events View for details about downloading email attachments.
Additional Header Details	Provides additional details of the email event such as Received, Sender, Message-ID and others.

Events View - File Tab

The File tab is in the Event Details panel. Here you can safely view a list of files and download one or more files in an event.

- Events View - File Tab
- Events View - Email Tab
- Events View - Host Tab

Quick Look

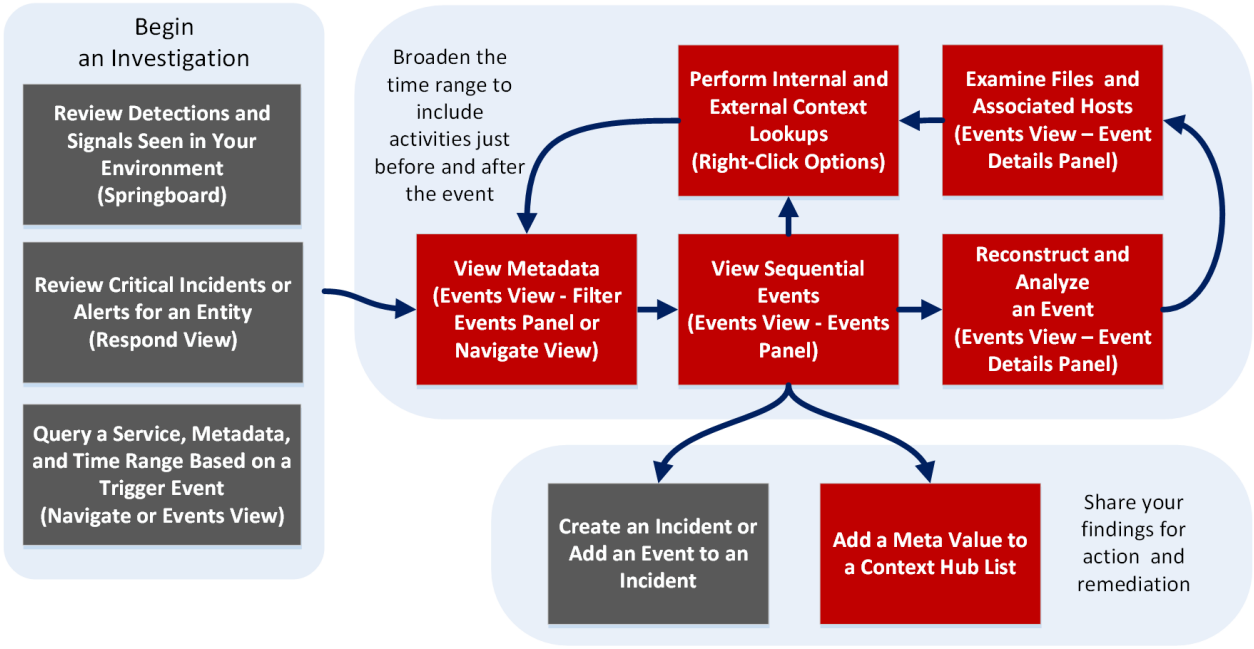
Only network events can be analyzed in the Packet panel. The Packet panel lists each packet in the event. The list of packets is scrollable. When you scroll, the packet or text identification information as well as the Request and Response labels remain visible rather than scrolling out of view.

In Version 11.1 and later, you can use pagination controls to go backward and forward through the pages, go to a specific page, and select the number of packets to display per page (50, 100, 300, or 500).

Each packet is displayed with shading and highlighting to help identify common file patterns: significant header and payload bytes, hexadecimal and ascii bytes, and common file signatures. In addition, you can adjust the request/response display, and display or hide the packet summary.

Below is an example of the Packet panel (formerly known as Packet Analysis) with labels to identify features. For details and examples of each feature, see Analyze Events in the Events View.



1	Options for exporting a network event. You can export a PCAP, all payloads, request payloads, or response payloads for deeper analysis and to share with others.
2	The option to identify common file signatures is disabled by default and you can enable them . Common file signatures are highlighted in orange; hovering over the highlight reveals the file type.
3	The Shade Bytes option adds shading to identify the different hexadecimal bytes (00 to FF) using degrees of highlighting.
4	The option to display payloads only hides the packet headers, leaving more space for the payload.
5	The Overview panel information.
6	Significant bytes are highlighted in a blue background; as you move the cursor over the highlighting the meta data is displayed in a hover box.
7	(Version 11.1 and later) Packet pagination controls allow more flexibility in paging through a list of packets. When a control is unavailable, the image is dimmed; for example, when you are viewing page 1, the ⟪ and ⟨ controls are dimmed. ⟪ - Go to the first page ⟨ - Go to the previous page 1 of 206 - Go to a specific page ⟩ - Go to the next page ⟫ - Go to the last page  - Select the number of packets per page. If you are reconstructing large packets, lowering this limit can improve performance.

Events View - Text Tab

The Text tab is in the Event Details panel. Here you can safely view and analyze the raw text payload of an event. The Text reconstruction includes features that can show decompressed or compressed text, expand truncated entries, perform URL and Base64 encoding and decoding, and download network events, logs, and endpoint events. The text reconstruction is available for all types of events: network, log, and endpoint.

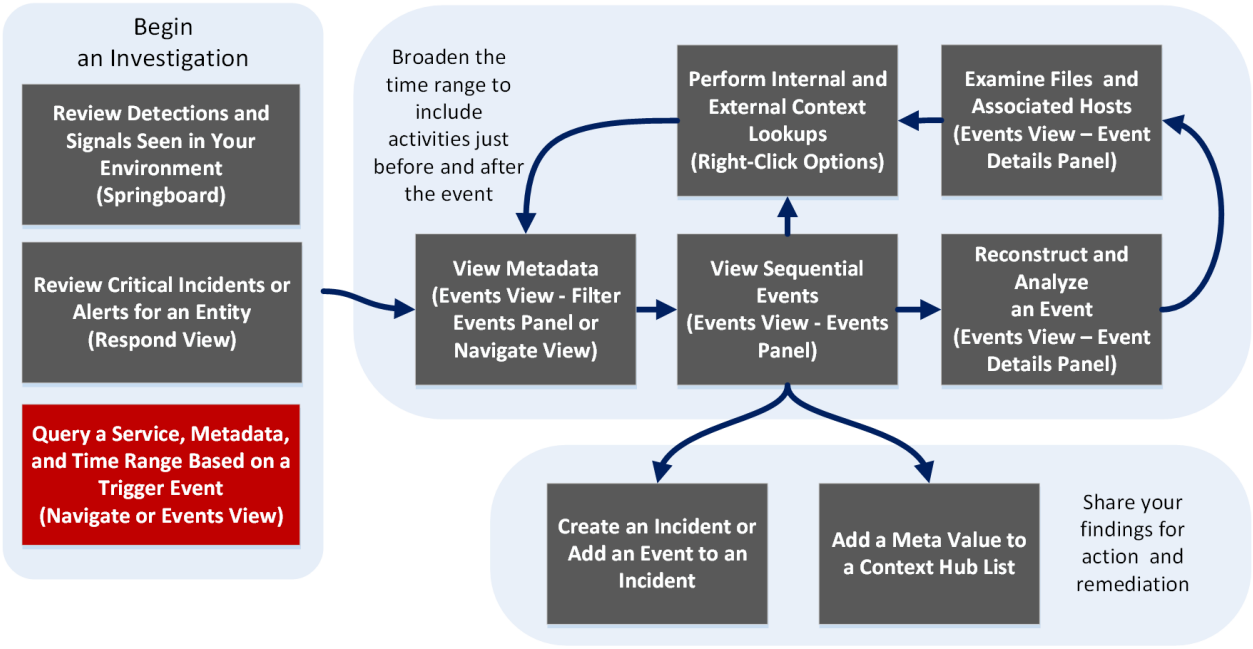
Quick Look

The Events view displays the text of a single event in the Text panel (formerly known as Text Analysis). When you click an event in the Event list panel, the adjacent panel shows the text reconstruction. Only the raw log for log events and endpoint events is shown in the Text panel. For network events, the direction of the packet (Request or Response) and contents of each packet are provided in text format. For more examples of the Text, see Reconstructing and Analyzing Events. For detailed procedures, see Analyze Events in the Events View.



1	Options for exporting a log, a PCAP, or files for deeper analysis and to share with others. This download menu is for network data.
2	The Overview panel information.
3	The payload for a network event includes requests and responses. This is the request side of the packet.
4	This is the response side of the packet.
5	Event pagination controls allow more flexibility in paging through a list of events. When a control is unavailable, the image is dimmed; for example, when you are viewing page 1, the ⏪ and ◀ controls are dimmed. ⏪ - Go to the first page ◀ - Go to the previous page ▶ - Go to the next page ⏩ - Go to last page (Only available after last page has already been navigated to)

Investigate Dialog

In the Investigate dialog, analysts can select a service or a collection to investigate. The dialog is automatically displayed when you first go to the Navigate view or Legacy Events view and have not selected a default service to investigate. To access the dialog from a current investigation, select the current service name in the toolbar.

Quick Look

The Investigate dialog has two tabs: Services and Collections.

Note: Collections are also known as workbench collections. You can only view workbench collections that you have created, and only administrators can create a workbench collection.

The Services tab includes a list of services available for investigation, and three buttons. All features are described in the following table.

Feature	Description
Default Service	Clicking this button sets or clears the default service to investigate. When a service has been set as the default service, the word (Default) is appended to the service name.
Name	The name of the service.
Address	The IP address of the service.
Type	The type of service.
Cancel	Closes the dialog.
Navigate	Opens the selected service in the Navigate or Legacy Events view.

The Collections tab has two buttons and two panels: Workbench and Collections.

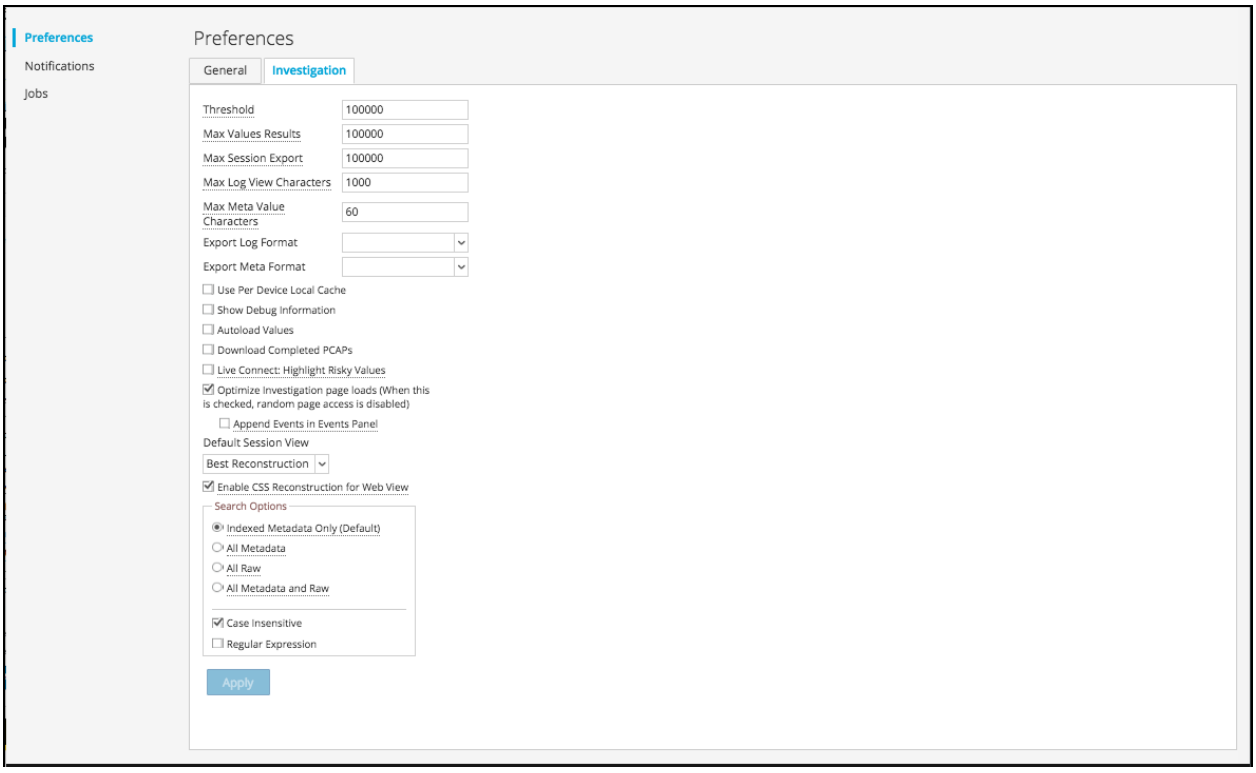
The Workbench panel lists available Workbench services by name. After a Workbench service is selected, you can select a collection from the Collections panel.

The Collections panel lists available collections to investigate. After a collection is selected, you can click Navigate to view the collection.

The following table describes the features of the Collections panel.

Feature	Description
Name	The name of the collection.
Type	The type of collection.
Size	The size of the collection.
Data Type	The type of data within the collection.
Date Created	The date the collection was created.

Investigation Tab - User Preferences Panel



In the Profile view > Preferences panel > Investigation tab, users can set several preferences that affect the performance and behavior of NetWitness when analyzing data, viewing events, and reconstructing events in NetWitness Investigate. To access this tab, select > Profile from the Navigate view or the Legacy Events view. When the Profile view is displayed, select **Preferences > Investigation**. You can change user preferences at any time when you are working in NetWitness.

Quick Look

This figure is an example of the Investigation tab, and the following table describes the preferences that affect Investigate. There are slight differences between the 11.1 search settings and later versions of the search settings and these are explained in Search for Text Patterns in the Navigate and Legacy Events Views.

Feature	Description
Threshold	This setting controls the count shown for a meta key value in the Navigate view during the load. A higher threshold allows more accurate counts for a value. However, a higher threshold causes longer load times. When the threshold is reached, NetWitness displays the count and the percentage of time used to reach the count in comparison to the time necessary to load all sessions with that value. For example, **(>100000 - 18%)** indicates that the threshold was set at 100000 and this load took only 18% of the time it would have taken with no threshold set. The default value is **100000**.
Max Values Results	This setting controls the maximum number of values to load in the Navigate View when the Max Results option is selected in the Meta Key Menu for an open meta key. The default value is **1000**.
Max Session Export	This setting controls the maximum number of sessions that can be exported. The default value is **100000**.
Max Log View Characters	This setting controls the maximum number of characters to be displayed on **Investigate > Legacy Events > Log Text**. The default value is **1000**.
Export Log Format	This setting specifies the default format for exporting logs from Investigate. Available options are **Text**, **XML**, **CSV**, and **JSON**. There is no default value for the log export format. If you do not select a format for logs here, NetWitness displays a selection dialog when you invoke export of logs. When you select one of the options from the Export Log Format drop-down menu and click Apply, the setting goes into effect immediately.
Export Meta Format	This setting specifies the default format for exporting meta values from Investigate. Available options are Text, XML, CSV, and JSON. There is no default value for the meta export format. If you do not select a format for exporting meta values here, NetWitness displays a selection dialog when you invoke export of meta values. When you select one of the options from the Export Meta Format drop-down menu and click Apply, the setting goes into effect immediately. **Note:** If you upgrade to version 11.5.2, the **Export Meta Format** preference is not retained and is reset to blank. You must re-configure this value after you upgrade to version 11.5.2.
Use Per Device Local Cache	Allows you to specify the use of locally cached data from the selected service. By default, this checkbox is cleared (Off), which means that Investigate sends a fresh query to the database rather than displaying cached data in the Investigate views after the initial load. If the option is set, Investigate uses the data from local cache.
Show Debug Information	When this option is set, NetWitness displays the `where` clause beneath the breadcrumb in the Navigate view. For each meta value load, the load time is displayed. If the service is a Broker, the elapsed time for each aggregated service is reported. The default value is **Off.**

Feature	Description
Append Events in Events Panel	When this option is set, the events displayed in the **Events Panel** are added incrementally rather than overwriting the currently displayed events. Each time you click the next page icon, the additional events are appended to the previous events; 1 -25, then 1 -50, then 1 -75 and so on. **Note:** This option is available only if the Optimize Investigation Page Loads option is enabled.
Autoload Values	When this option is set, the service values are automatically loaded in the Navigate view. When not set, NetWitness displays a **Load Values** button, allowing the user the opportunity to modify the options. The default value is **Off**.
Download Completed PCAPs	This setting automates the downloading of extracted PCAPs in the Investigate so that you do not have to manually download and open extracted PCAP files in an application, such as Wireshark, that can handle viewing data in a PCAP format.
Live Connect: Highlight Risky Values	If you want NetWitness Platform to highlight and display only IP addresses that are considered to be risky by the NetWitness community, set this option. When not enabled, NetWitness Platform displays all IP addresses. By default, this option is cleared (Off).
Optimize Investigation Page Loads	This option is enabled by default (checked) and controls how the Legacy Events view retrieves events. When enabled, results are returned as quickly as possible, but you cannot go to a specific page in the event list. Clearing the checkbox changes the Events list pagination to allow you to go to a specific page in the list (or to the last page). Being able to go to any page in the list costs additional overhead to determine the events in advance.
Default Session View	This setting selects the default reconstruction type for the initial reconstruction view. By default events are reconstructed using the reconstruction type most appropriate to the event.
Enable CSS Reconstruction for Web View	This setting controls how web content reconstruction is performed. If enabled, the web reconstruction includes cascaded style sheet (CSS) styles and images so that its appearance matches the original view in a web browser. This includes scanning and reconstructing related events, and searching for stylesheets and images used in the target event. The option is enabled by default. Clear the checkbox if there are problems viewing specific websites. **Note:** The appearance of the reconstructed content may not match the original web page perfectly if related images and stylesheets could not be found or were loaded from the web browser's cache. Also, any layout or styling that is performed dynamically via client side javascript does not render in the reconstruction because all client side javascript is removed for security purposes.

Feature	Description
Search Options	This setting specifies the default search options to apply to a search in the Navigate and Legacy Events views. Search for Text Patterns in the Navigate and Legacy Events Views provides detailed information.
Apply	Saves your preferences and puts them into effect immediately.

Investigate View

The Investigate view is the primary entry point to NetWitness Investigate. In Version 11.5, several of the Investigate submenus are moved to the main menu for easier access. Prior to Version 11.5, the Investigate view had six submenus, which opened different views that allow you to analyze events from different perspectives. The submenus that remain under Investigate are: Navigate, Legacy Events, Events (formerly Event Analysis), and Malware Analysis. The Hosts, Files, and Users views (formerly Entitites) are available from the main menus to improve the workflow for analysts.

Note: In Version 11.4 and later, the Legacy Events is no longer needed and it is hidden unless the administrator enables it. By default only the Events view appears in the menu, but when the Legacy Events view is enabled, both the Events view and the Legacy Events view are visible in the menu bar.

How NetWitness Investigate Works provides an introduction to all of the capabilities available in the Investigate view.

Legacy Event Reconstruction View

The Event Reconstruction view is deprecated in favor of the Events view. The Legacy Events view provides a reconstruction of a selected event from the Legacy Events view. By default, NetWitness displays the best reconstruction for the event determined by the event content, or the default reconstruction that you have selected in the Default Session View setting for Investigate. You can use the options in the Event Reconstruction toolbar to change the reconstruction method, view top-to-bottom or side-by-side results, select request and response views, export an event, export meta values, extract files, open an email attachment, and open the event in a new tab.

To access this view, do one of the following:

- In any Legacy Events view, double-click an event.
- In the Legacy Events view with Detail View selected, right-click **Events** at the end of the event, and select **Event Reconstruction**.
- In the Event Reconstruction toolbar of previewed reconstruction, click **Open Event in New Tab**.
- In the Navigate view, select **Actions** > **Go to event in Event Reconstruction**, and enter an event ID.

Quick Look

This figure is an example of the Event Reconstruction view. The following table describes the toolbar options.

Feature	Description
Request & Response	Displays a drop-down menu for selecting whether the view displays: • Request & Response • Request • Response
Organization	Displays a drop-down menu for selecting whether the information is displayed top to bottom or side by side.
Reconstruction View	Displays a drop-down menu for selecting what information is displayed. By default, Best Reconstruction is selected. Other options are: • View Meta • View Text • View Hex • View Packets • View Web • View Mail • View Files
Actions	Displays a drop-down menu with the actions available in the Event Reconstruction view (Export PCAP, Extract Files, and Export Meta).

Feature	Description
Open Event in New Tab	Opens the event in a new browser tab.
Event Analysis	Open the event in the Event Analysis view.

Beneath the toolbar is a list of meta keys and values. Some of the keys offer a drop-down menu with available actions.

The bar at the bottom of the view offers several options.

Feature	Description
	Displays the previous event.
	Displays the next event.
Show Reconstruction Log	Displays the reconstruction log at the bottom of the view. Once you click this button, it changes to Hide Reconstruction Log.

Legacy Events View

The Legacy Events view is deprecated in favor of the Events view. In the Legacy Events view a list of events associated with a session is available; this view is optimized for viewing raw events in sequence by time. You can display the events list in several forms, filter events, search for events, and open a reconstruction of an event.

There are two ways to display the Legacy Events view:

- Go to **Investigate** > **Legacy Events.** NetWitness runs a default query on the last three hours for the default service (if one is set) or displays a dialog in which you can select a service and then runs the default query. The default query selects all events and the Legacy Events view displays events on the selected service, with the oldest events first.
- From within the **Navigate** view, double-click an event. The Legacy Events view displays the events on the selected service based on the drill point in the Navigate view.

Note: The Legacy Events view was the original Events view (11.0 to 11.3.x.x). The Legacy Events is no longer needed and it is hidden unless the administrator enables it. By default only the Events view appears in the menu, but when the Legacy Events view is enabled, both the Events view and the Legacy Events view are visible in the menu bar.

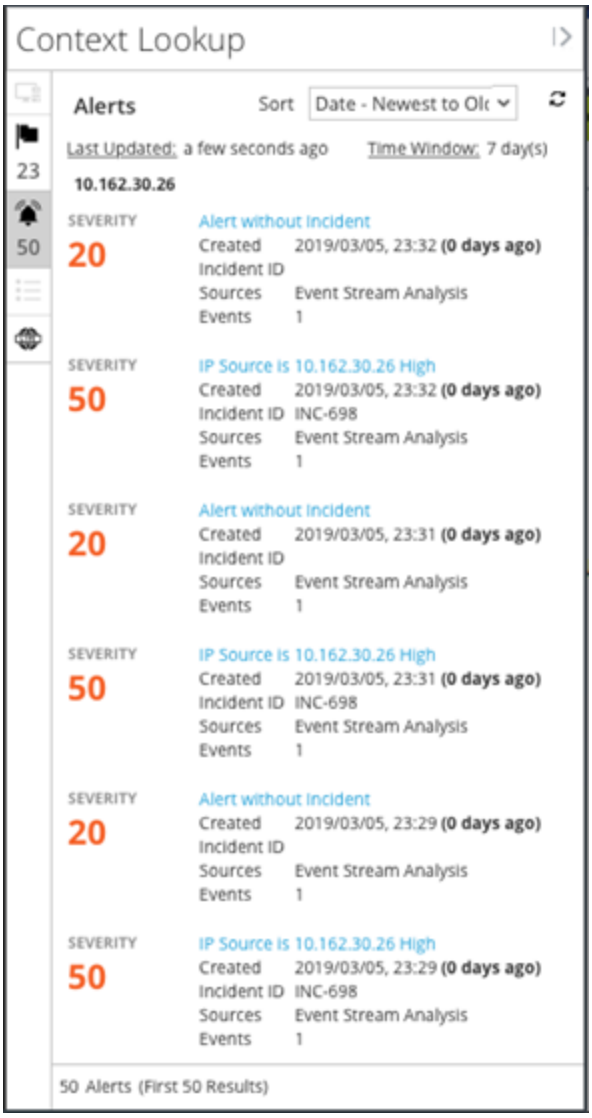
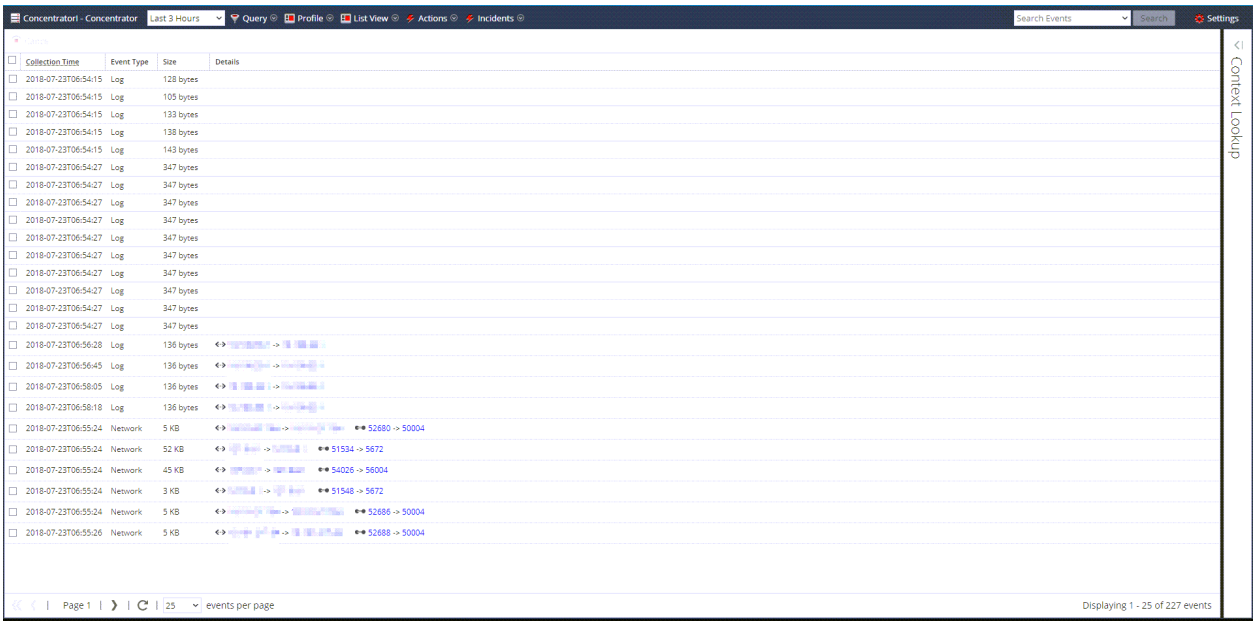
Related Topics

- How NetWitness Investigate Works
- Filter Results in the Legacy Events View
- Downloading and Acting Upon Results



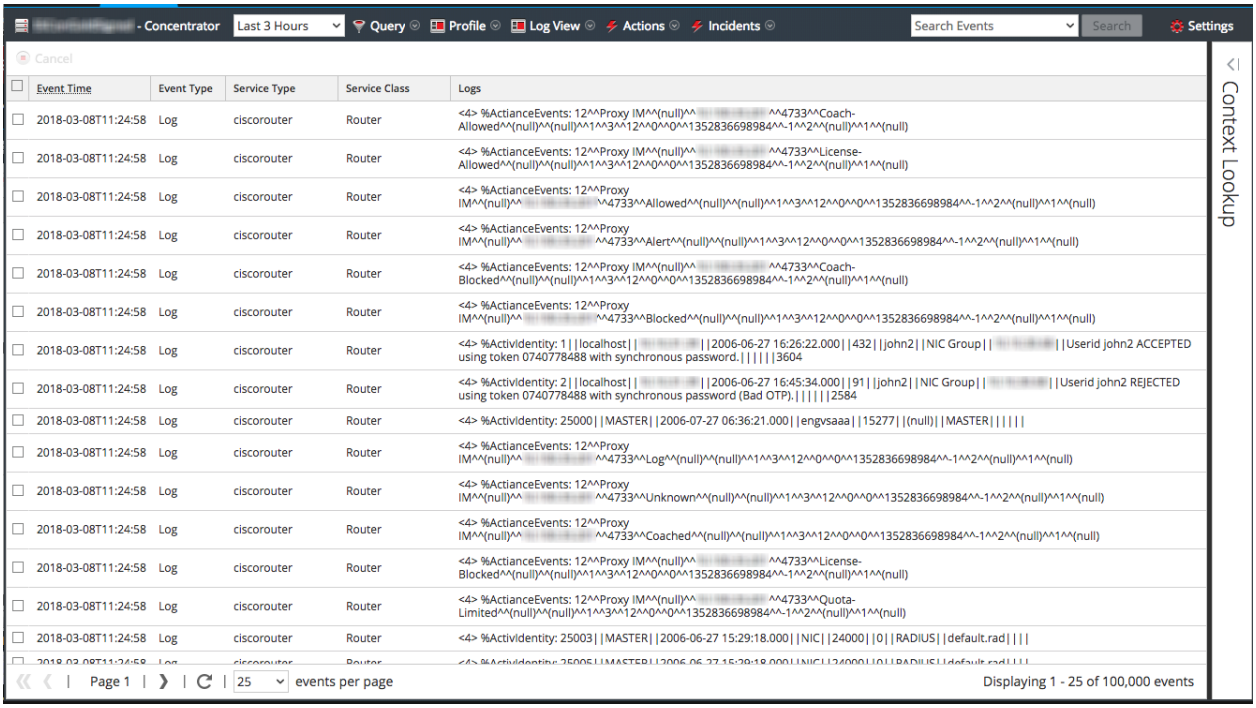
Quick Look

The Legacy Events view provides three built-in presentations of event data: the Detail view, the List view, and the Log view. The List view and Detail view provide more information for each event including the timestamp, event type, event theme, and size.

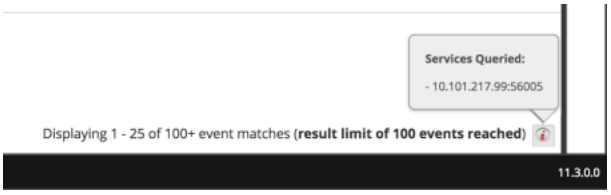


- The List View shows corresponding source and destination address and port information for events in summary form in a grid.
- The Detail View shows all metadata collected for the event in a paged view.
- The Log View is optimized for viewing log and endpoint information, and provides more information for each log including the timestamp, event type, service type, service class, and the logs.

You can use queries, the time range setting, and profiles to filter the events listed in the Legacy Events view. From any view type in Legacy Events view, you can extract files; export network events, endpoint events, logs, and meta values, and open the Event Reconstruction panel. In the Detail View you can also open the event in the Events view.



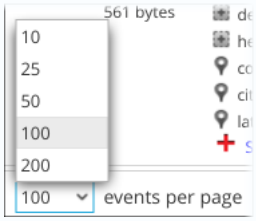
The following figure is an example of events in the Detail View. The Context Lookup panel is visible only if the Context Hub service is configured.



The following figure is an example of events in the List View.

The following figure is an example of the Log View.

The following figure shows the information added to the footer for Version 11.3 and later.



Detailed Description

The Legacy Events view has a toolbar at the top with the following options.

Feature	Description
Select Service	Displays the selected service name next to the icon. Opens the Investigate dialog, in which you can select a service for which the event list is displayed.
Time Range	Displays a drop-down menu for selecting the time range to apply to the event list. You can choose one of the standard options or specify a custom time range.
Query	Displays the Query dialog, in which you can enter a custom query directly instead of drilling down the data (see Create a Query in the Navigate and Legacy Events Views).
Profile	Displays the Profile menu; the currently selected profile is displayed in the toolbar. The menu options include built-in (Default) profiles and custom profiles, as well as an option to manage profiles. Each profile can include a meta group, a column group, and a beginning query that is applied to the Navigate view (meta groups and queries) and the Legacy Events view (column groups and queries) as you investigate events. (see Use Saved Queries to Encapsulate Common Areas for Investigation).
View Type Drop-down	Displays a drop-down menu for selecting the event view type. • Detail View shows events in a paged format with detailed information for each event. • List view shows the events in table form with a summary of each event in a separate row. • Log View shows a log-oriented events grid with a summary of each log in a separate row. • Custom Column Groups displays the event list using a column group selected from a drop-down list of custom column groups. • Manage Column Groups displays the dialog for creating and editing custom column groups.
Actions	Displays a drop-down menu with actions in the Legacy Events view: • Export an events as PCAP files, export logs, export endpoint events, or export meta values. • View an event reconstruction in a popup window or in a new tab. • Reset all filters in the Legacy Events view.
Incidents	Create a new incident in Respond and add the selected events, or add selected events to an existing incident in Respond.

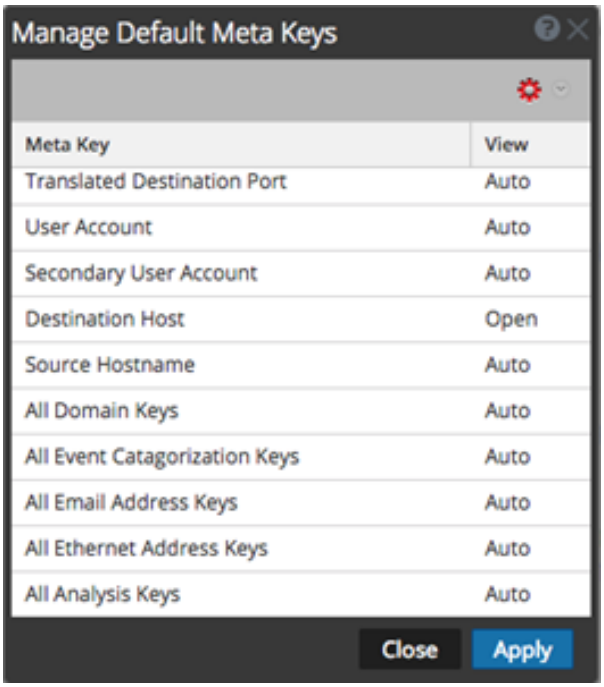
Feature	Description
Search	Displays the Search Events options, which allow you to specify the export log and export meta value format with additional options explained in Search for Text Patterns in the Navigate and Legacy Events Views.
Settings	Displays the Investigation settings for the Legacy Events view (which are also available in the Profile view) so that you can change Investigation settings without navigating away from the Legacy Events view. When you change a setting In the Legacy Events view, the setting is also changed in the Profile view (see Configure the Navigate View and Legacy Events View).

Other features of the Legacy Events view are described in this table.

Feature	Description
Show Additional Meta (in the Detail View of an event)	Displays the rest of the metadata for the event.
Event Analysis (in the Detail View of an event)	Opens the selected event in the Events view.
 (in the footer)	Pagination controls allow more flexibility in paging through a list of events. When a control is unavailable, the image is dimmed; for example, when you are viewing page 1, the « and ‹ controls are dimmed. « - Go to the first page ‹ - Go to the previous page 3 Page 3 - Go to a specific page › - Go to the next page » - Go to the last page  - Select the number of packets per page When you select a number of events per page, the setting is saved in browser cache so that you do not have to select your preferred number of events each time you log in. The setting applies to all views: Log View, List View, and Details View.

Feature	Description
Displaying 1-100 of 100,000 events (in the footer) Displaying 1-25 of 100+ event matches (result limit of 100 events reached) (in the footer)	Displays the count of events displayed versus the total number of matching events. In Version 11.3 and later, the footer includes a notification if the results limit configured by the administrator has been reached to let you know that more results are available but not viewable. To view the additional results, you need to refine the filter to get fewer results. Clicking the information icon in the footer displays the IP address and connecting port number for all services queried.

Manage Default Meta Keys Dialog



In the Manage Default Meta Keys dialog, analysts can specify the meta keys to be displayed in the Navigate view > Values panel (see Manage and Apply Default Meta Keys in an Investigation. This can help you find the desired data more quickly and prevents the loading of meta keys that are not of interest. To access this dialog, in the **Navigate** view toolbar, select **Meta** > **Manage Default Meta Keys**.

Related Topics

- How NetWitness Investigate Works
- Use Meta Groups to Focus on Relevant Meta Keys

Quick Look

The following figure illustrates the Manage Default Meta Keys dialog, which has a list of meta keys, toolbar, Close button, and Apply button. In the list, you can view, sort, and manage default meta keys. If you click and drag meta keys, you can rearrange their order. The following table describes columns in the list.

Column	Description
Meta Key	This column displays the meta keys available for the service. In Version 11.1 and later, default meta entities are also included, for example All Domain Keys and All Email Address Keys.

Column	Description
View	This column displays the type of view assigned to each meta key. By clicking on the view in each row, you can assign the meta key a different default view. There are four views: • Auto: Reverts to the default view for meta keys as specified in the service index file. • Close: The values of this meta key are closed by default, and can be opened manually. • Hidden: These meta keys are hidden by default, and are not shown in Investigation at all. • Open: The values of this meta key are displayed by default. When you modify the default meta keys for a non-indexed meta key, you cannot set the key to **Open**. If you change the default view for a group of meta keys to **Open** and some of the meta keys are non-indexed, the non-indexed meta keys revert to **Auto**. As a result, the meta key is automatically loaded only if it is indexed, and non-indexed meta keys are **Closed** until opened manually.

The following table describes the toolbar options and buttons.

Feature	Description
	Displays a drop-down menu that allows you change the default view of all the meta keys. There are four views: • Auto: Reverts to the default view for meta keys as specified in the service index file. • Close: The values of this meta key are closed by default. • Hidden: The values of this meta key are hidden by default. • Open: The values of this meta key are displayed by default.
Close	Closes the dialog. Any unsaved changes are lost.
Apply	Applies the changes, and they become effective immediately.

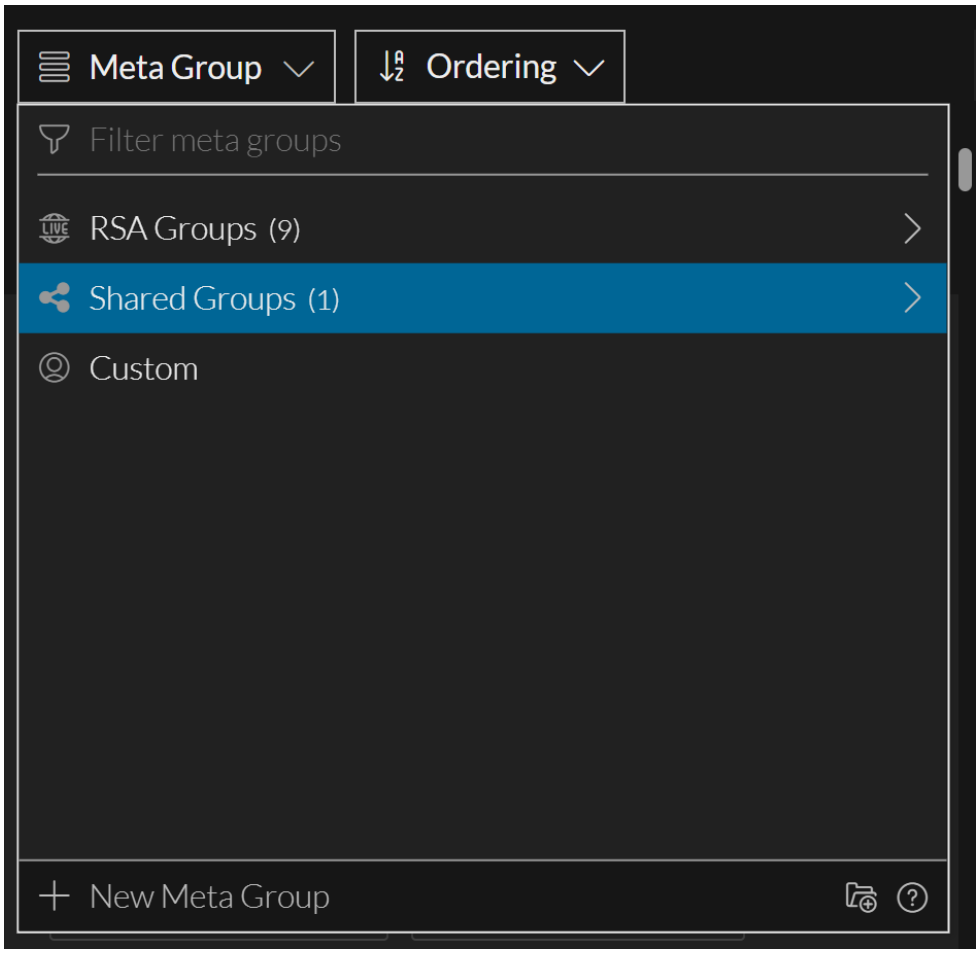
Meta Groups Dialogs

You can use meta groups to filter data displayed in an investigation. A fresh installation of NetWitness includes built-in meta groups to help you find interesting data sets in Investigate. The built-in meta groups are prefixed with RSA for identification and can be duplicated but cannot be edited or deleted. You can create your own groups and you can duplicate and edit a built-in group to create a custom group. With a meta group in effect during an investigation, the information in the Navigate view and Events view includes only the meta keys in the selected group.

While the functionality of meta groups is similar in the Navigate view and the Events view, the user interface and some of the procedures are different.

Using options in the Events view Meta Groups menu (Version 11.5 and later) , you can:

- Select a meta group to apply.
- See the details of a meta group.
- Create, edit, and delete custom meta groups.
- Clone and edit the clone of a built-in or custom meta group.



Using options In the Navigate view Manage Meta Groups dialog, you can do all of the above as well as import and export a meta group. Refer to Use Meta Groups to Focus on Relevant Meta Keys for detailed information.

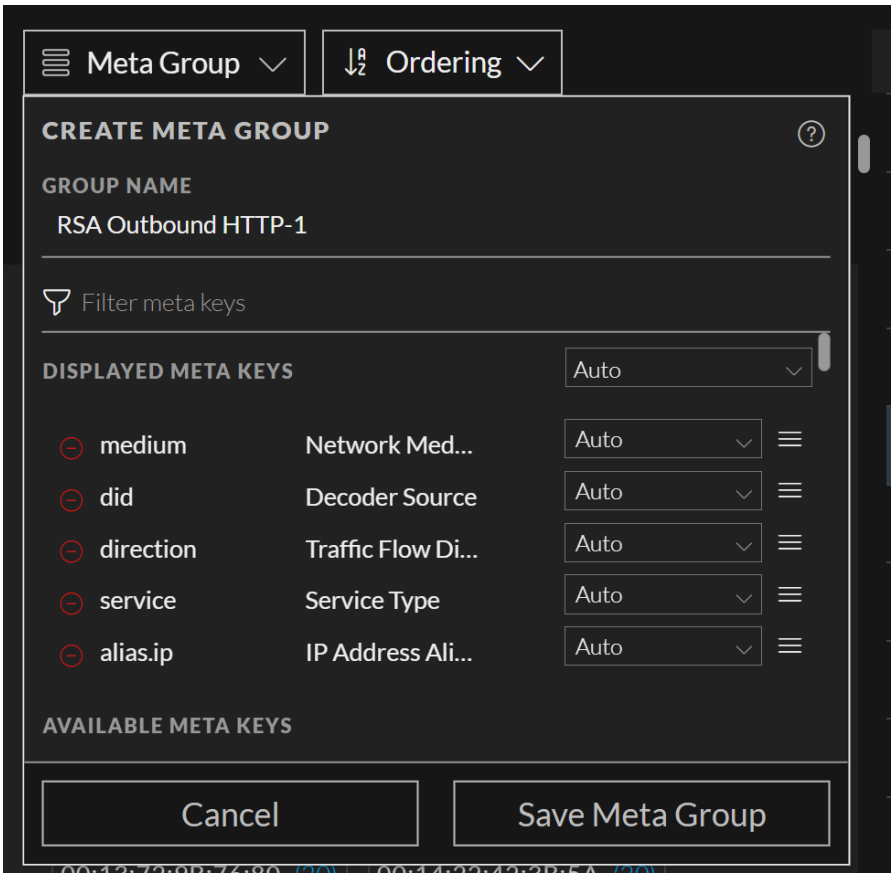
Quick Look - Meta Groups Menu, Create Meta Group Dialog, and Meta Group Details Dialog

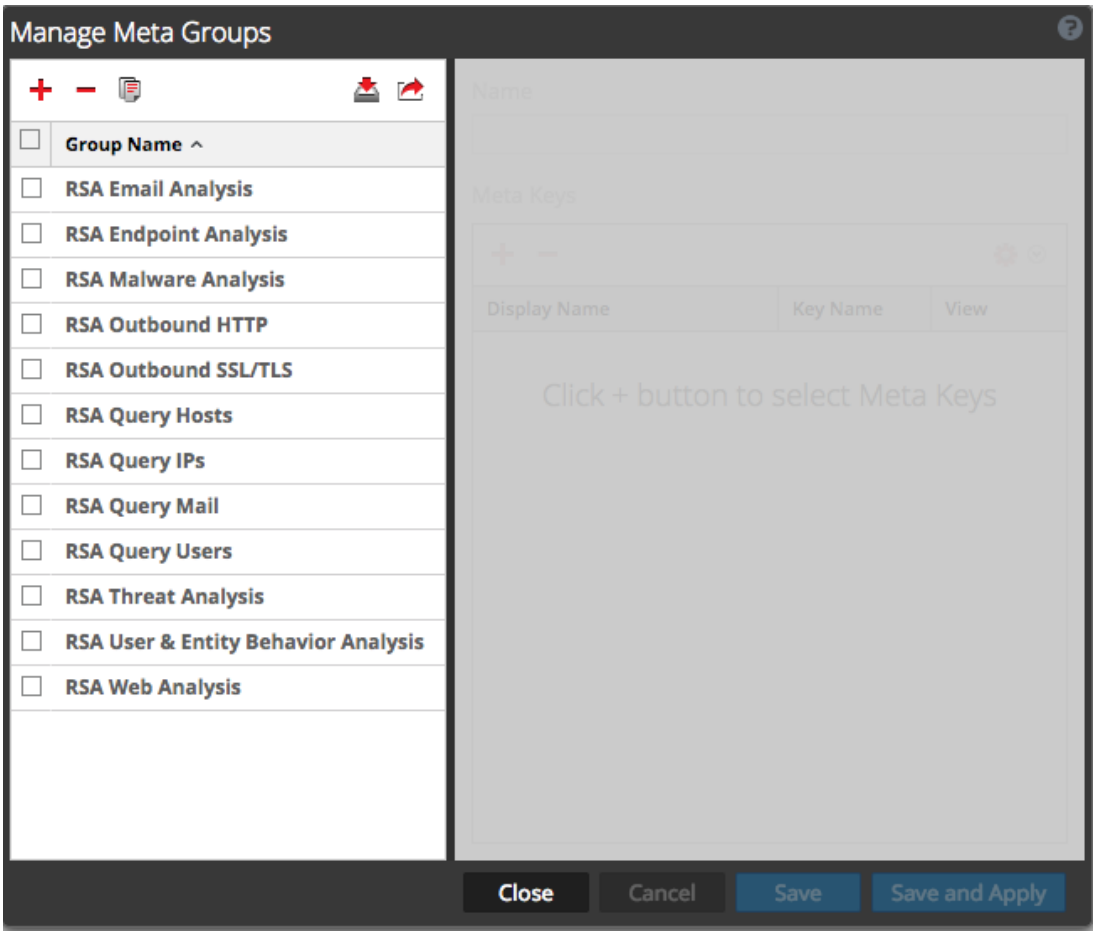


This section introduces the Meta Groups Menu, Create Meta Group dialog, and the Meta Group Details dialog. The following figure is an example of the Meta Group menu. The table describes the options.

Feature	Description
Visibility Options	Control the types of meta groups that are visible in the list. You can use any combination of the visibility options: **Private**, **Shared**, or **RSA** (blue = selected, black = not selected). Initially none of the buttons are selected and all meta group types are visible. This is the same result as if all three buttons are selected. The visibility options work together with text in the Filter Meta Groups field. If the visibility option is hiding built-in groups (which include "RSA" in the group name) and you search for a name that contains "RSA," the list is empty. Private = display private groups that only you can manage Shared = display shared groups that anyone in your organization can manage RSA = display built-in groups that only RSA can manage
Filter Meta Groups	Filters the list of meta groups as you type text so that only group names that contain the typed text are displayed.
Meta Group List	The list of meta groups consists of custom and built-in groups. Custom meta groups can be shared or private. The RSA meta groups are built-in meta groups; you cannot edit or delete these, but you can make a copy and edit the copy. Icons preceding the meta group name distinguish the private groups, shared groups, and built-in groups.

Feature	Description
New Meta Group	Displays the Create Meta Group dialog, where you can create a custom meta group.

The Create Meta Group dialog, shown in the figure on the left, allows you to define a custom meta group. The figure on the right illustrates the Meta Group Details dialog, in which you can edit a custom meta group. The table describes the fields and options in the dialogs.



Feature	Description
	Creates a copy of the meta group so that you can edit a copy. This is useful if you want your own copy of a built-in group, a shared copy of a private group, or a private copy of a shared group.
	Deletes the custom meta group that you are currently editing. This action is irreversible and applies globally. If the meta group is a shared group, it is no longer available to anyone.
Group Name	Displays the name of the meta group. The name must be unique and contain fewer than 64 characters. You can type in this field to edit the name in a custom meta group.
Sharing	Specifies whether the meta group is shared or private. This setting is available when you first create the group. After it is created, you cannot change a shared column group to private, or a private column group to shared.

Feature	Description
Filter Meta Keys	Filters the Displayed Meta Keys and Available Meta Keys based on the text that you type. Only meta keys that contain the typed text are displayed.
Displayed Meta Keys	Displays a scrollable list of meta keys that are selected for use in the custom meta group. You can add meta keys in the Available Meta Keys list to this list, remove meta keys from this list, and drag meta keys up or down to change the order in this list ( ). Drag and Drop is disabled when text is typed in the Filter Meta Keys field. For each displayed meta key you can choose:
Available Meta Keys	Displays a scrollable list of meta keys that are available (on the service) for use in the custom column group. You can add them to the Available Meta Keys list. Clicking next to the meta key name adds it to the Displayed Meta Keys list. You can also set the initial view of each meta key: Open, Closed, Hidden, or Auto (the default setting).
Initial View Option	For each meta key, you can set the initial view option: -When set to Auto, the meta key is automatically loaded only if it is indexed, and non-indexed meta keys are Closed until opened manually. If you change the default view for a group of meta keys to Open and some of the meta keys are non-indexed, the non-indexed meta keys revert to Auto. -Open meta keys are listed in the Filter Events panel, and the values are loaded. -Closed meta keys are listed in the Filter Events panel, but the meta values are not loaded until you open the meta key. -Hidden meta keys are not listed in the Filter Events panel at all. This is useful if you are using a single meta group for multiple purposes instead of creating several meta groups; you can turn off certain keys off without removing them from the meta group. You can also use the Hidden view when testing out some new keys or if you want to prepare a meta group with some new meta keys that are not yet available and would error out if in an Auto, Open, or Closed state.
	Allows you to drag and drop meta keys in the Displayed Meta Keys list so that you can see the data in the order you prefer.
Close button	Closes the dialog.
Save Meta Group	For the Create Meta Group dialog only, saves the new meta group.
Reset	For the Meta Group Details dialog only reverts the edited meta group to the last saved state.
Update Meta Group	For the Meta Group Details dialog only, applies changes to an edited meta group.
Select Meta Group	Applies the meta group. The Filter Events panel is refreshed to display only the meta keys in the selected meta group.

Quick Look - Manage Meta Groups Dialog

The following figure is an example of the Manage Meta Groups dialog.

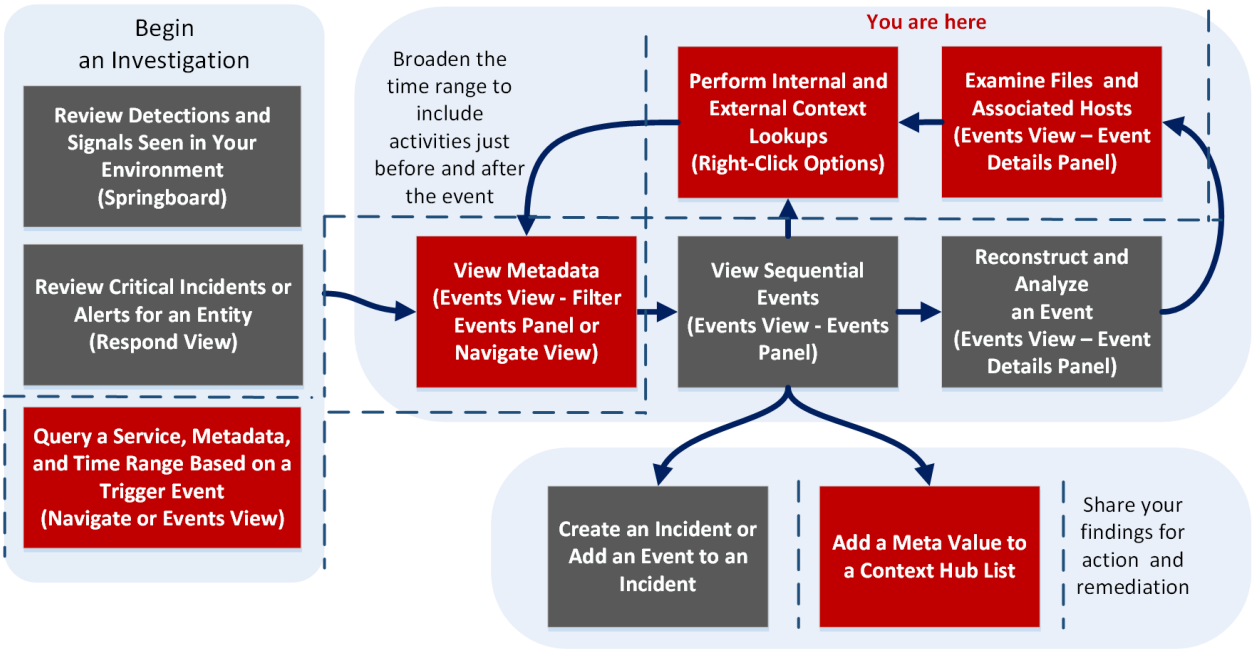
The Meta Groups panel is on the left side of the Manage Meta Groups dialog. This is where you can add, delete, import, and export meta groups. The following table describes the features of the Meta Groups panel.

Feature	Description
	Adds a meta group using the Settings panel on the right side of the Manage Meta Groups dialog.
	Deletes the selected meta group. A confirmation dialog is displayed before the meta group is deleted.
	Creates a copy of the selected meta group.
	Displays the Meta Group Import dialog, where you can upload a file.
	Exports the selected meta group to your computer.
Group Name	Lists all meta group names.

The Settings panel is on the right side of the Manage Meta Groups dialog. This is where you create and edit meta groups. Below the Name field is the Meta Keys list. The following table describes the features of the Settings panel.

Feature	Description
Name	Displays the name of the selected meta group.
	Displays the Available Meta Keys dialog, where you can select meta keys to add to the group.
	Deletes the selected meta keys.
	Displays a drop-down menu, where you can select the view for all meta keys. There are four options based on the possible values for the `defaultAction` property used to define a key in the custom index file for the service: • Hidden: These meta keys are hidden by default, and are not shown in Investigation at all. • Open: The values of this meta key are displayed by default. • Close: The values of this meta key are closed by default, and can be opened manually. • Auto: Reverts to the default view for meta keys as specified in the service index file.
Display Name	Indicates the name that is displayed for the key in Investigate views, and is defined by the `description` property for the key in the custom index file for the service..
Key Name	Indicates the `name` of the meta key as defined in the custom index file for the service.
View	Indicates the view to which the meta key is set. You can change: • Change the view for all meta keys by clicking  in the View column header, then selecting a view from the drop-down menu. • Change the view for a single meta key by clicking a single meta key in the View column, then  and selecting a view from the drop-down menu.

The following table describes the buttons at the bottom of the dialog.



Feature	Description
Close	Closes the dialog.
Cancel	Cancels all changes.
Save	Saves all changes.
Save and Apply	Saves and immediately applies all changes.

Navigate View

The Navigate view (**Investigate** > **Navigate**) displays event metadata--the meta keys and meta values--that were found in captured data for the selected service. The data is filtered and displayed in accordance with the options you set for profile, time range, meta group, and query. You can also drill into the data by clicking meta keys and meta values.

Note: By default, the Navigate view is disabled in Version 11.6 as the Filter Events Panel in the Events view provides this functionality. To enable the Navigate view, see Configure the Navigate View and Legacy Events View.

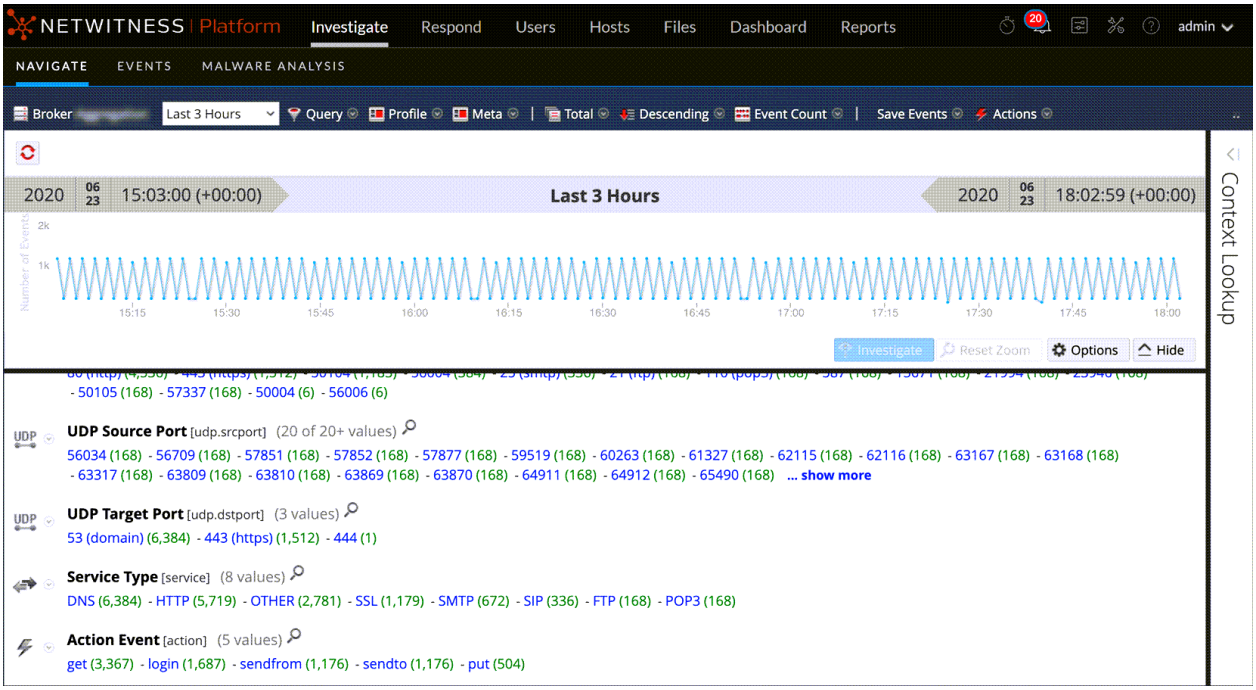
Workflow

In the Navigate view, you can:

- View metadata for events in the Values panel.
- Visualize events in a timeline or parallel coordinates chart.
- Save events, go to an event using the event ID, visualize an event, and print an event.
- View additional contextual data for meta keys and values.
- Open a drill point or an event in the Legacy Events or the Events view.

What do you want to do?

User Role	I want to ...	Show me how
Incident Responder or Threat Hunter	review detections and signals seen in my environment	*NetWitness Platform Getting Started Guide*
Incident Responder	review critical incidents or alerts	*NetWitness Respond User Guide*
Threat Hunter	query a service, metadata, and time range*	Begin an Investigation in the Events View Begin an Investigation in the Navigate or Legacy Events View
Threat Hunter	view metadata*	Filter Results in the Navigate View Drill into Metadata in the Events View
Threat Hunter	view sequential events	Filter Results in the Events View Filter Results in the Legacy Events View
Threat Hunter	reconstruct and analyze an event	Examine Event Details in the Events View Reconstruct an Event in the Legacy Events View
Threat Hunter	examine files and associated hosts*	Download Data in the Events View Export or Print a Drill Point in the Navigate View Export Events in the Legacy Events View
Threat Hunter	perform lookups*	Look Up Additional Context for Results Launch a Lookup of a Meta Key
Threat Hunter	create an incident or add to an incident	Add Events to an Incident in the Legacy Events View Add Events to an Incident in the Events View
Threat Hunter	add a meta value to a Context Hub list*	Look Up Additional Context for Results



*You can perform this task in the current view.

- Events View

Quick Look

This figure illustrates the Version 11.5 Navigate view.

The Navigate view consists of these features:

- Toolbar
- Pause/reload button and breadcrumb
- Time banner
- Optional debug information.
- Collapsible Visualization panel
- Values panel
- Context Lookup panel
- Context menus

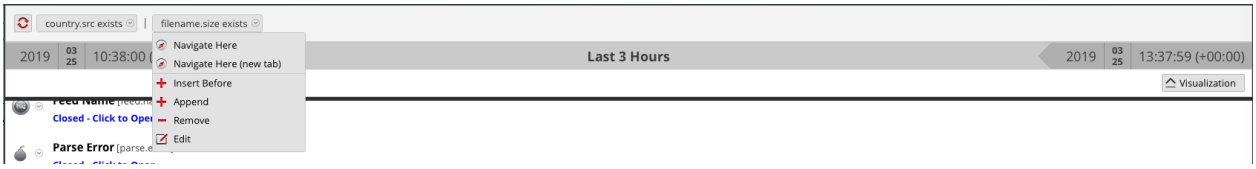
Toolbar

The following figure is an example of the toolbar. The toolbar provides a way to:

- Change the service being investigated.
- Control the range of data displayed: You can select use profiles, set a time range, use meta groups, and create queries to apply to the data.
- Set the quantification method and sorting method for data in the Values panel.

- Perform actions on the results. You can export and print results, open an event for which you have an event ID in the Legacy Events view or Events view, and pass a query to Informer.
- Configure Investigate settings without navigating away from the Investigate views.

Some of the toolbar options are labeled with the default value or the selected value rather than displaying the name of the option. For example, the time range option in the example above is labeled **Last 5 Minutes** to reflect the currently selected value. These are the toolbar options.



Option	Description
	Displays the selected service name next to the icon. Clicking the icon opens the Investigate a Service dialog, in which you can select a service to investigate and set the default service to investigate (see Begin an Investigation in the Navigate or Legacy Events View). Changing the service does not cause a reload of the data.
Time Range	Displays the Time Range options; the currently selected option is displayed in the toolbar (see Filter Results in the Navigate View). Possible choices are: • All Data • Last 5, 10, 15, or 30 Minutes • Last Hour, Last 3, 6, 12, or 24 Hours • Last 2 or 5 Days • Early Morning • Morning • Afternoon • Evening • All Day • Yesterday • This Week • Last Week • Custom **Note:** If you specify custom start or end times in seconds, the value for start time in seconds always defaults to :00, and the value for end time in seconds always defaults to :59. For example, if you are using time to drill down into an issue, the drill time will be interpreted as `HH:MM:00 - HH:MM:59`. Seconds display in this format in Investigate functions.
Query	Displays the Query dialog, in which you can enter a custom query directly instead of drilling down the data. See Query Dialog for a description of the dialog.

Option	Description
Profile	Displays the Profile menu; the currently selected profile is displayed in the toolbar. A profile allows you to manage and use profiles that can include custom meta groups, a default column group, and a beginning query. The Profiles apply to the Navigate view (meta groups and queries), the Legacy Events view, and the Events view (column groups and queries). See Use Saved Queries to Encapsulate Common Areas for Investigation for more information.
Meta	Displays the Meta Group menu. You can use Default Meta Keys or a custom Meta Group. You also have the option to make changes to both group types (see Use Meta Groups to Focus on Relevant Meta Keys).
Sort Field	Displays the Sort Field menu; the currently selected option is displayed in the toolbar. The menu has two options: Order by Total and Order by Value. The Sort Field is a complement to the Sort Order option; the data for each meta key is ordered based on the total (green number) or the meta value (blue text) (see Filter Results in the Navigate View).
Sort Order	Displays the Sort Order menu; the currently selected option is displayed in the toolbar. The menu has two options: Sort in Ascending Order and Sort in Descending. The Sort Order is a complement to the Sort Field option; the selected sort field for each meta key is ordered in ascending or descending order (see Filter Results in the Navigate View).
Quantification Method	Displays the Quantification Method menu; the currently selected option is displayed in the toolbar. The Quantification Method only applies to the meta key results in the Values panel. It does not apply to the timeline. The drop-down menu contains three options for calculating the quantity (green number in parentheses) for a meta value: Quantify by Event Count, Quantify by Event Size, and Quantify by Packet Count (see Filter Results in the Navigate View). These are applied differently depending on the type of data in view. For packet data: • Quantify by Event Count shows the number of sessions. • Quantify by Event Size shows the size in bytes. • Quantify by Packet Count shows the number of packets. For log data: • Quantify by Event Count shows the number of logs. • Quantify by Event Size shows the size in bytes. • Quantify by Packet Count shows the number of logs.
Save Events	Displays the Save Events menu, in which you can use options to: extract files associated with an event, export the current drill point as a PCAP file, and export the current drill point as a log file (see Export a Drill Point).

Option	Description
Actions	The Actions menu includes actions that you can perform in the Navigate view (see Refining the Results Set). In Version 11.1 and later, the options are Visualize, Go to event in Event Reconstruction, Go to event in Events view, and Print).
Search Events	Enables you to search for text patterns within the current set of events. If you click in the Search field, it shows a drop-down menu with search options. If you click Apply, it saves the selected options and also updates the search options in the Legacy Events view and the Investigations profile (see Search for Text Patterns in the Navigate and Legacy Events Views).
Settings	Displays the settings for the Navigate view (which are also editable in the Profile view) so that you can change Investigate settings without navigating away from the Navigate view. When you change a setting In the Navigate view the setting is also changed in the Profile view (see Configure the Navigate View and Legacy Events View).

Pause/Reload Button and Breadcrumb

The breadcrumb tracks each query as you drill down through the metadata for the service. The following figure is an example of the breadcrumb.

Each query is listed with a drop-down menu in a pipe separated string. The last point is the current point, also called the tip. The icon in front of the breadcrumb allows you to pause the loading of meta values and to reload meta values. The breadcrumb does not include the service name and appears only if a query is in effect. If too many drill points exist for display, the overflow is shown as double angle brackets, >>, at the end of the breadcrumb. Each drop-down menu in the breadcrumb is the same, with slight variation based on the position of the crumb.

The following table describes the controls and menu options in the breadcrumb.

Feature	Description
Pause	Pause and Reload button. Controls the loading of data in the view. It has three possible functions: pause loading, continue loading, and reload.
Navigate Here	Opens the selected drill point in the current Values panel.
Navigate Here (new tab)	Opens the selected drill point in a new tab.
Insert Before	Inserts a query before the current drill point. The Create Filter dialog opens and you can define a custom query to insert in the breadcrumb (see Create a Query in the Navigate and Legacy Events Views).

Feature	Description
Append	Appends a query after the current drill point. The Create Filter dialog opens and you can define a custom query to append to the end of the breadcrumb (see Create a Query in the Navigate and Legacy Events Views).
Remove	Removes the selected drill point from the breadcrumb.
Edit	Opens the selected drill point in the Create Filter dialog so that you can edit the query.
>>	Clicking the angle brackets displays a drop-down menu of the breadcrumb overflow.

(Optional) Debug Information

If you have activated the Show Debug Information setting and the service you are navigating is a Broker, NetWitness, displays the debug information beneath the breadcrumb.

The debug information is the `where` clause from the current query. The only time there is no `where` clause is when the time range is all data and there are no drill points. If the Broker has at least one aggregate service that is offline, the debug information also lists the offline service.

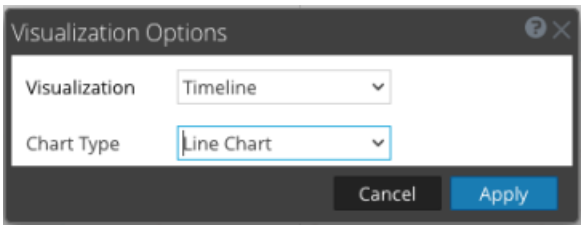
For example:

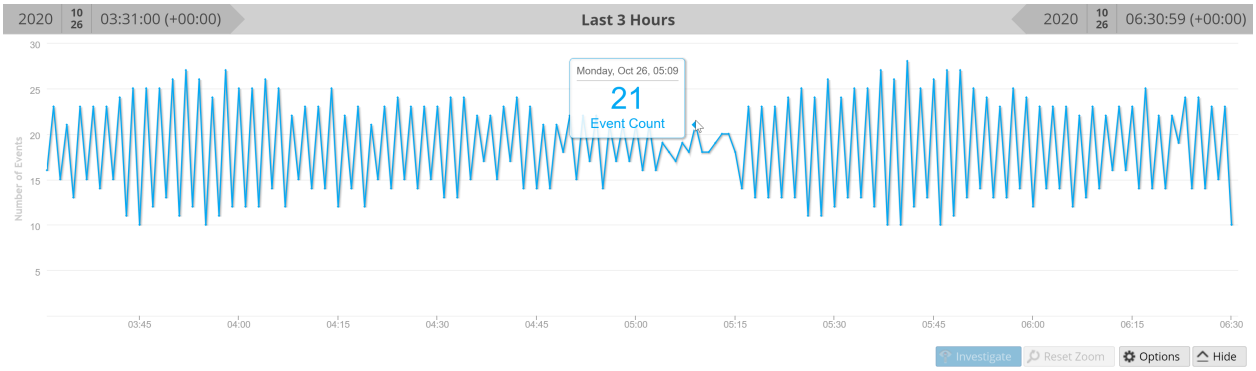
```
(attachment exists)&&(tcp.dstport = '80')&&(risk.info exists)$$time='2014-05-04 18:50:00"-"2014-05-09 18:59:59(attachment exists) && (tcp.dstport = '80') && (risk.info exists) && time="2014-05-04 18:50:00"-"2014-05-09 18:50:59"
```

In addition, the time taken to load is displayed at the end of each meta key in the Values panel.

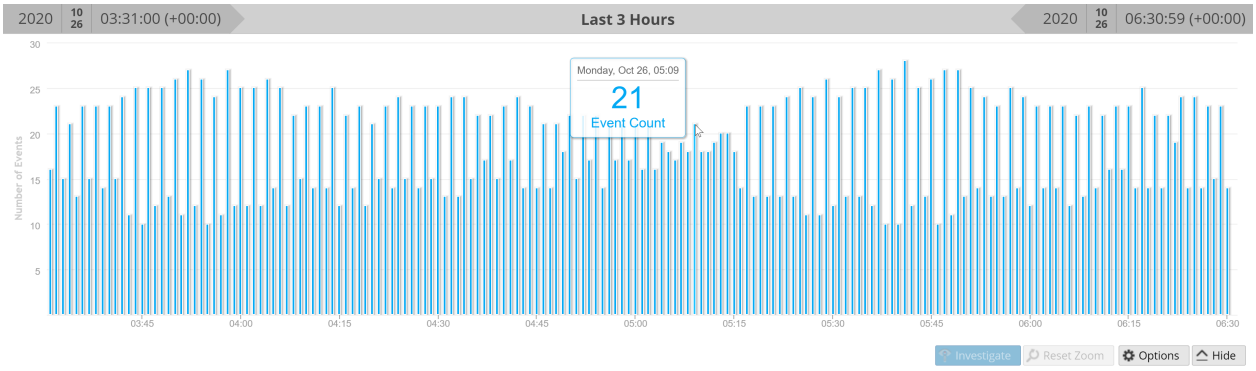
Time Banner

Just below the breadcrumb and debug information (if present), the time banner shows the time range used to create the chart. The following figure is an example of the time banner.





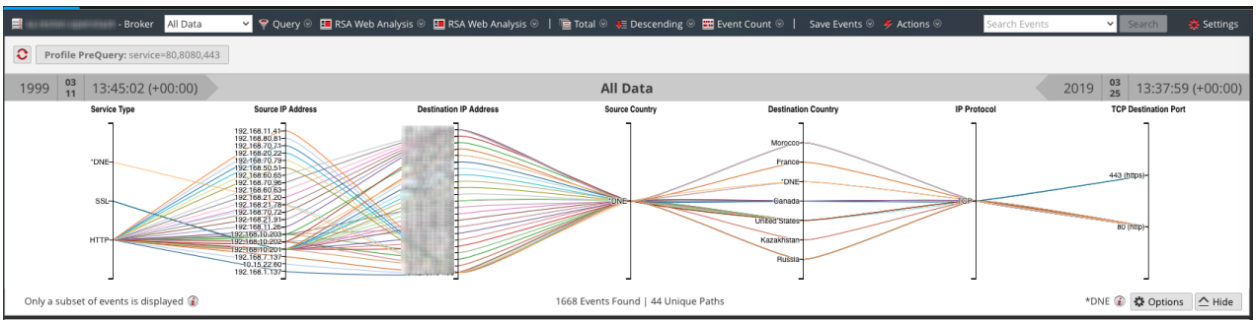
Visualizations



At the top of the Navigate view is a visualization of the current drill point. You can use this to drill into data from the Visualization panel (see Filter Results in the Navigate View). You can show or hide the visualization, and choose one of thevisualization options: Timeline or Coordinates. The Visualization opens initially to the last saved Visualization.

Timeline Chart

The timeline is the count of the number of events that occur at a specific instance. The timeline provides event counts so that you can see if the number of events increases drastically at a given point in time. The timeline displays activity for the specified service and time range as a line chart or a bar chart based on your choice in the Options menu. The second figure illustrates a line chart and third figure illustrates a bar chart.



The timeline displays activity for the specified service and time range, as a line chart or a bar chart based on your choice in the Options menu.

Feature	Description
Number of Events (Timeline)	The Y axis of the chart based on thousands of events.
Time Line (Timeline)	The X axis of the chart based on the time the events occurred.
Event point (Timeline)	If you want to explore a specific section, simply select the range from the chart. The new time range will be reflected in the chart.
Investigate (Timeline)	Displays the meta values for the selected subset.
Reset Zoom (Timeline)	To return to the original time range, click Reset Zoom.

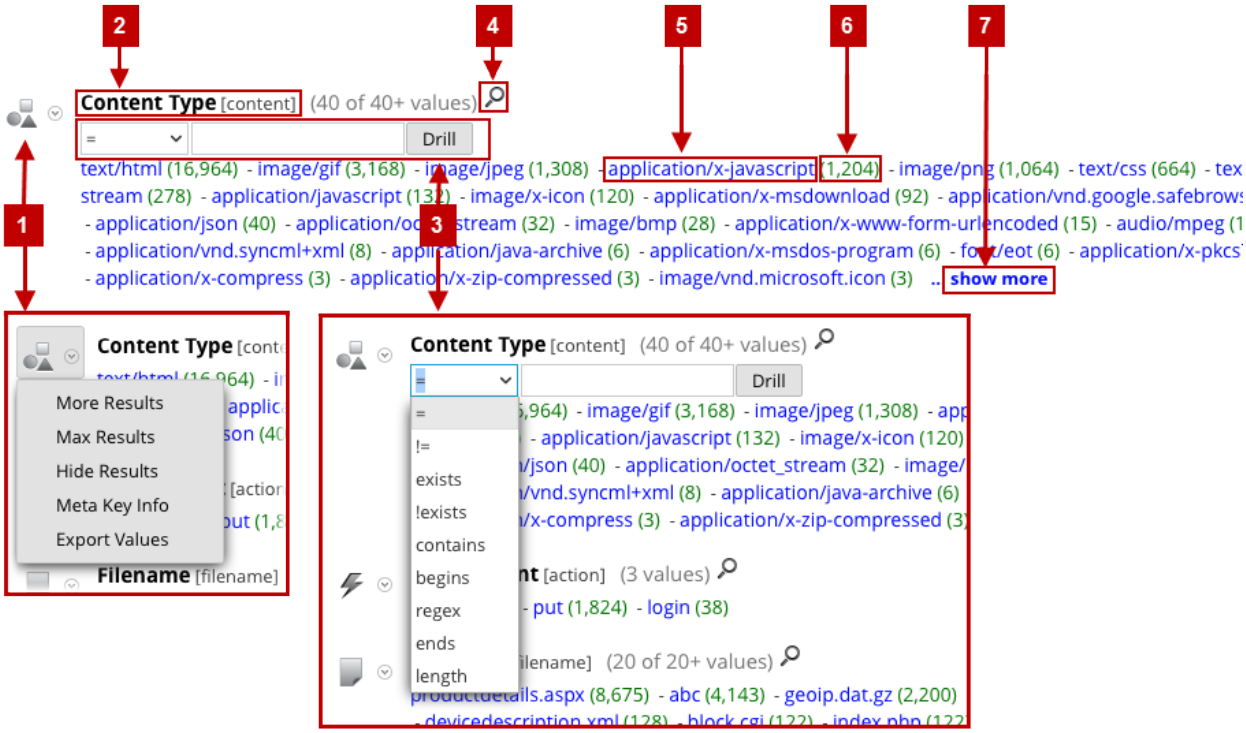
Feature	Description
Options	Displays the Visualization Options dialog. Data points can be displayed as a Line chart (default), a Bar chart, or Coordinates chart. When a chart type is select, the relevant options are displayed.
Hide	Collapses the chart.

Parallel Coordinates Chart

The Parallel Coordinates chart is one of the choices in the Options menu for visualizing the current drill point. With Coordinates selected in the Visualization Options dialog, you can select the meta data to be displayed (see Visualize Metadata as Parallel Coordinates). An easy way to view a useful Parallel Coordinates chart is to choose a profile group as shown in the following figure.

Feature	Description
Axes	Each axis is a meta key. The number of meta keys affects the load time for the chart. All meta keys are loaded, but it there the number of events per meta key is limited.
Lines	Lines represent events and they connect values on the axes to show the correlation between multiple meta keys.
Options	Displays the Visualization Options dialog. Data points can be displayed as a Line chart (default), a Bar chart, or Coordinates chart. When a chart type is select, the relevant options are displayed.
Only a subset of events is displayed.	This message is a notification that not all events in the values panel are drawn in the chart. Removing axes or filtering the data in the Values panel can help to display all events.
Events Found | Unique Paths	Displays the total number of events charted versus the number of unique paths charted. Setting the All Meta Keys Must Exist in an Event option redraws the chart so that it is more targeted and legible.
DNE	Indicates that there is no values for this meta key in the event.

In the Visualization Options dialog for Coordinates, you can select the meta keys to chart.



Feature	Description
Visualization selection	Displays a drop-down list of visualization types: Timeline and Coordinates
All Meta Keys Must Exist in an Event	Limits the data represented in the visualization to only those events that include all selected meta keys. This can result in a cleaner, more targeted visualization.
	Displays the Add Keys to Parallel Coordinates Visualization dialog so that you can add axes to the visualization. This is useful if you are looking for relationships between the default meta keys and some additional ones.
	Deletes the selected keys so that they do not appear as axes in the visualization. This can help to make the visualization less cluttered and allow for more data points to be included in the visualization.
	Reverts to the default meta keys for visualization, which consist of all meta keys in the current drill point.
	Controls the display of additional information about the number of selected axes versus the recommended count. This helps to make you aware of possible performance improvements by removing axes.
Axes	Lists the meta keys selected as axes in the visualization.
Cancel	Cancels any changes made to the visualization options.
Apply	Saves the changes made to the visualization options and applies to the current visualization.

In the Add Keys to Parallel Coordinates Visualization dialog, you can select the meta keys or meta groups to use as axes the Parallel Coordinates visualization.

Feature	Description
Visualization selection	Select Keys: Two options for selecting meta keys are: • From Default Meta Keys • From Meta Groups Each option offers a drop-down list from which to select.
With the Selected Meta Keys...	The options for the method of adding meta keys allow you to: • Replace the current list of keys • Append to the current list of keys • Insert at beginning of the current list of keys
Cancel	Closes the dialog and does not add any keys.
Add	Closes the dialog and adds the selected keys as specified.

Values Panel

The major feature of the Navigate view is the Values panel, which presents meta keys and meta values found in the service being investigated. Procedures for analyzing data in the Values panel are provided in Filter Results in the Navigate View.

Note: Title, values, and counts for non-indexed meta keys are not drillable; the Values and counts are shown in black.

1 The meta keys in the Values panel have drop-down menus, which offer actions that can apply to that meta key. You can use these to change the way the results for the meta key are displayed in the current view. Changes made to meta keys are displayed in the current view and persist until you refresh the page or select a new service in the Navigate view toolbar. See Drill into Data in the Values Panel

Refresh reverts to the current view of meta keys as defined in the Manage Default Meta Keys dialog (see Manage and Apply Default Meta Keys in an Investigation). If you have never made modifications in the Manage Default Meta Keys dialog, NetWitness, a refresh restores the default meta keys from the core service.

- More Results
- Max Results
- Hide Results
- Meta Key Info

	• Export Value
2	The name of the meta key for which values are listed. In Version 11.3 and later, the user friendly name of the meta key is displayed with the index file name of the meta key following in brackets. For example **Content Type [content]** gives the user friendly name of the `content` meta key with the index file name in parentheses. For meta groups, the name of the group is given in plain English with the meta group name following in parentheses. This is an example of a meta group name as it would appear in the Values panel: **All User Keys [users.all]**.
3 and 4	Clicking 🔍 on an indexed meta key opens the Search dialog in which you can enter a filter for the current meta key. The search function is not available for non-indexed meta keys, and is based on the actual meta value rather than the alias. Drilling in the Search dialog using aliases is not supported. NOTE: Check with your administrator to obtain a list of aliases used for a meta key in Investigation. When an alias is used, this search dialog does not provide results. Instead, you must query the meta key using the Right-click query capability or the Query dialog.
5	The meta value associated with the found meta key. These are listed in order by meta value name or by the count of events in which the meta value was found, according to your preference.
6	The number of events that include the meta value.
7	The number or values rendered is specified by the Render Threads value in the Investigation Preference settings. In the example above, the meta key is **Content Type**, and 40 of 40+ values are currently displayed. You can display additional values by clicking **...show more**. The number of instances found for a particular meta in the session.

Values Panel Loading Behavior

The default view is for the last 3 hours of collection, using the default meta keys and non-indexed meta keys closed. The meta keys within the meta groups are displayed in the order that NetWitness queries the keys. As the data loads into the Values panel, NetWitness is optimized to show partial results, loading progress, and service status as the data loads.

The loading behavior is determined by several configuration settings. The highest level settings are configured by the administrator for each user. These are:

- The maximum amount of time allowed for this user to run a query (Query Timeout).
- The limit at which NetWitness stops counting the number of meta values in a session (Session Threshold). If a threshold is set for a session, the Navigate view shows that the threshold was reached and the percentage of results loaded. Any session that does not show a percentage is accurate and was processed to completion. If there is a percentage, that reflects how much processing was completed. The percentage displayed is estimated by extrapolating from the value at the time processing finished, considering the amount of work remaining. Larger percentages are generally more accurate because they require less extrapolating
- The limit at which NetWitness stops counting the number of meta values in a session (Session Threshold). If a threshold is set for a session, the Navigate view shows that the threshold was reached and the percentage of query time used to reach the threshold.

Note: The values for non-indexed meta keys take longer to load in the Values panel. To optimize loading, NetWitness does not open non-indexed meta keys by default. Refer to Manage and Apply Default Meta Keys in an Investigation for a detailed description of non-indexed meta keys in Investigation.

When you have launched an investigation of a service, NetWitness displays results in the Values panel.

1. NetWitness loads meta keys and meta values in the Values panel. For each meta key load, the stages of load are:
   a. **Waiting to Be Loaded** or **Closed**. If Closed, no data for that key is loaded.
   b. **Loading**
      i. **Loading progress**: NetWitness is receiving and displaying progress messages.
      ii. **Partial results**: NetWitness is receiving values messages and partial results are displayed in the Values panel.
   c. **Load Complete**: All results are finished loading.
2. As each meta key load is completed, and final values are displayed, the next meta key is started. The number or values rendered for each meta key is specified by the Render Threads value in the Investigation Preference settings. Loading continues until all keys to be loaded have finished.
3. If **Show Debug Information** is active and the service you are navigating is a 10.4 or later Broker, NetWitness displays load time information beneath the values for each meta key and displays additional load details for the aggregated services. NetWitness also displays the debug information beneath the breadcrumb.

Iterative results

Iterative results provide feedback on the status of queries within the interfaces to provide additional context for how long the data load will take and if any service data is missing. For example, if you are querying a Broker that is aggregating from two Concentrators, NetWitness starts displaying the results from the first Concentrator as soon as it is available, even if the second Concentrator is still waiting for results.

Iterative results also include a notification that service data is missing because the service is unreachable.

Partial results

When partial values from the Core service are returned but not completed, a message at the end of the meta key listing shows the progress of values loaded. For example, Currently looking at 38 ip.src values 71% indicates that loading of values for the meta key is 71% complete.

Debug Information

If the Show Debug Information setting is in effect, a field at the end of the values displays the status for the different systems against which you are querying within NetWitness. For example, when you are querying against a 10.4 broker pulling from multiple concentrators, NetWitness displays the status of the query on each of the Concentrators, which provides insight into the relative speed of data loading from each of the Concentrators. Each service that participated in the query is listed with the total elapsed time for the query.

Each service that participated in the query is listed with the total elasped time for the query. In the example above, two services returned in 3.207 seconds, localhost:50005 took 2 seconds to return the results. In addition, the where clause of the query is displayed below the breadcrumb. You can copy this syntax directly into an application rule or Reporting where clause of a rule.

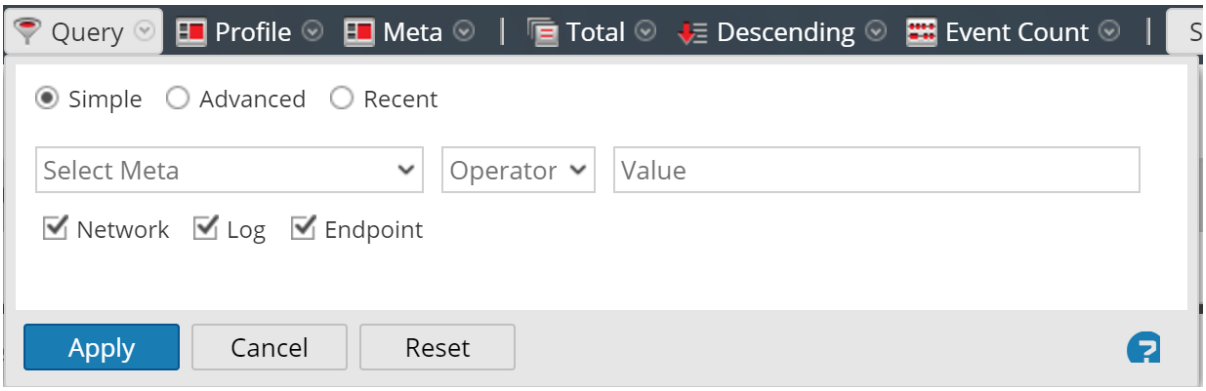
Load Complete

For each meta key, there is a list of values (blue text) and counts (green text) found in the current drill point. When you click a value to drill down into a subset of the currently selected data, the display is updated and the new drill point is recorded in the breadcrumb. You can specify the sorting and quantification methods for the values list using the option in the toolbar.

Query Dialog

In the Navigate view or Legacy Events view, you can create a query rather than clicking through the meta keys and values to drill down into the meta data. The dialogs for creating a query offer syntax help with drop-down lists of applicable meta keys and operators. To access this dialog in the **Navigate** or **Legacy Events** view toolbar, select **Query**.

What do you want to do?



User Role	I want to ...	Show me how

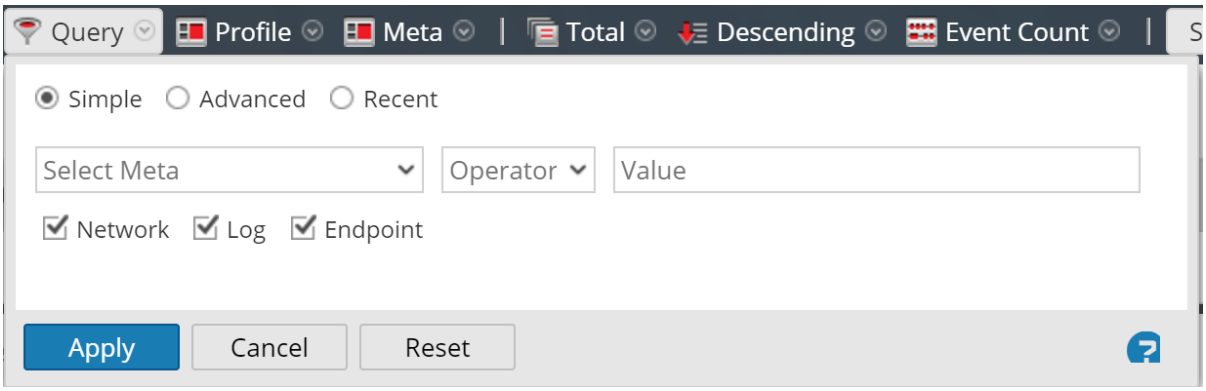
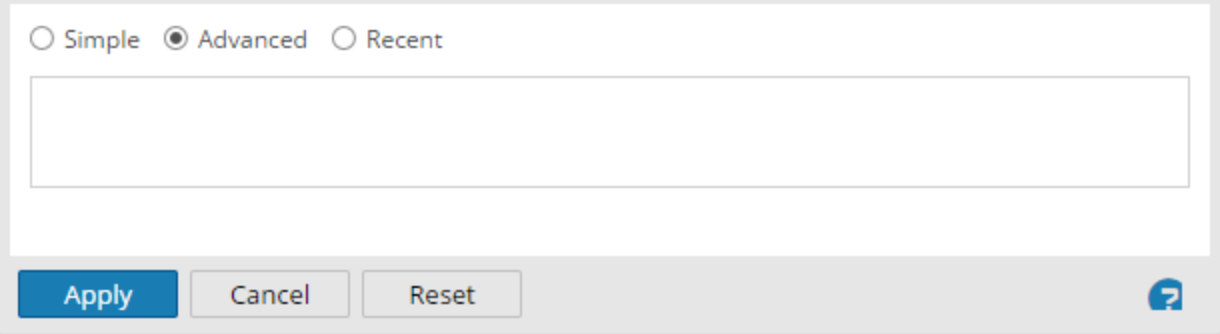
Quick Look

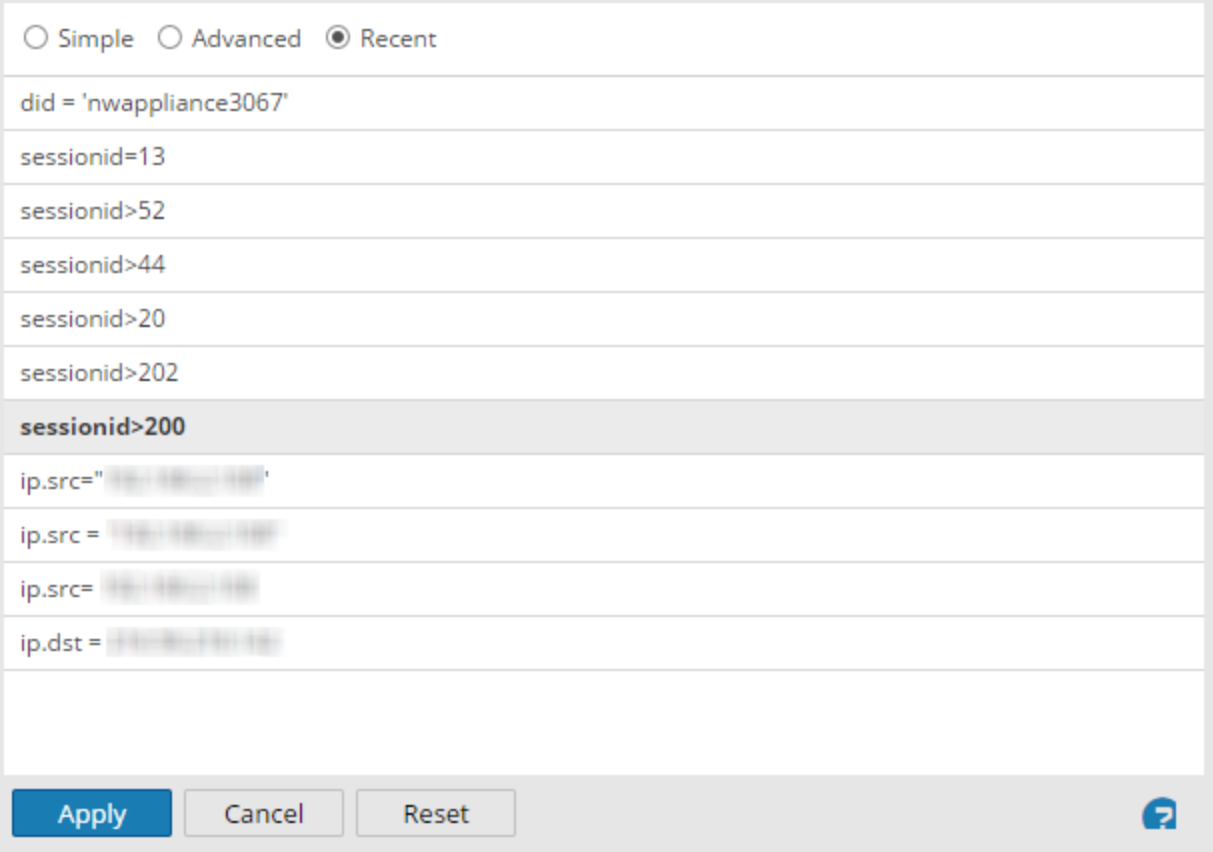


The Query dialog has three views:



- Simple
- Advanced
- Recent

In the Simple view, you can create a query using the options displayed in the dialog. In the Advanced view, you can create a query without guidance. In the Recent view, you can select a query from a drop-down list of recent queries.



Simple View

Advanced View

Recent View

The following table describes features of the Query dialogs.

Feature	Description
Select Meta	Displays a drop-down list of meta groups.
Operator	Displays a drop-down list of operators (=,NetWitness!=,NetWitnessexists,NetWitness!exists)

Feature	Description
Value	Allows you to enter a value to complete the query.
Network	Limits the query to packets if Log is not selected.
Log	Limits the query to logs if Network is not selected.
Query box	Allows you to enter a query in the Advanced view. When you begin typing, a drop-down list of available meta keys for the service is displayed, then a drop-down of operators is displayed as you type. If the expression currently entered in the query box is invalid, a warning appears near the box. When the query is valid, the warning is removed.
Query list	Allows you to select a query from a list of recent queries in the Recent view. Double-clicking a query automatically applies it.
Apply	Applies the new query to the current Investigation view.
Cancel	Closes the dialog without applying changes.
Reset	Resets all fields.

Saved Queries Dialogs

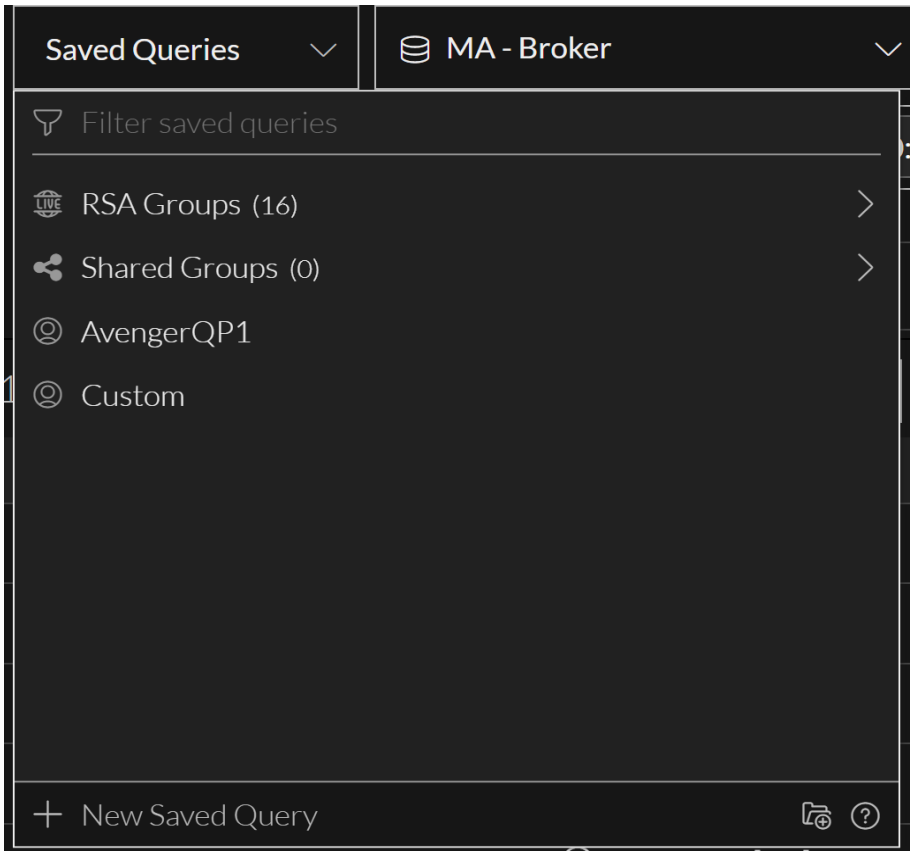
Saved Queries offer a quick and easy way to define a meta group, column group, and a limiting filter (pre-query condition) that you can apply in the Navigate view, the Events view, and the Legacy Events view (see Use Saved Queries to Encapsulate Common Areas for Investigation). The same saved queries are shared between all views, and they are available in the Springboard (Version 11.5) for use in panels. Private saved query created in the Events view are only available in the Events view for the analyst who created them.

Each saved query specifies a meta group, column group, and sometimes includes a pre-query condition appropriate for the type of investigation.

In a saved query:

- The meta group defines the meta keys that are queried (see Use Meta Groups to Focus on Relevant Meta Keys).
- The column group defines which meta keys from the meta group are displayed as columns in the Events list. (see Use Columns and Column Groups in the Events List).
- When the saved query is in effect, the optional pre-query conditions add a limiting filter in the query bar. You can edit or delete the limiting filter and then create additional filters for your query (see Filter Results in the Events View)

You can manage query profiles in the Manage Profiles dialog, the Create Saved Query dialog and the Saved Query Details dialog.



- The Manage Profiles dialog is for the Navigate view, the Legacy Events view (Version 11.4 and later) , and the Events view (Version 11.3 and earlier). To access this dialog, select **Profile** > **Manage Profiles** in the **Navigate** or **Legacy Events** view toolbar.
- The Create Saved Query dialog is for the Events view. To access this dialog, select **Saved Queries** > **New Saved Query** in the **Events** view query bar.
- The Saved Query Details dialog is for the Events view. To access this dialog, select **Saved Queries** in the **Events** view query bar, then click the edit icon () next to a custom saved query name.

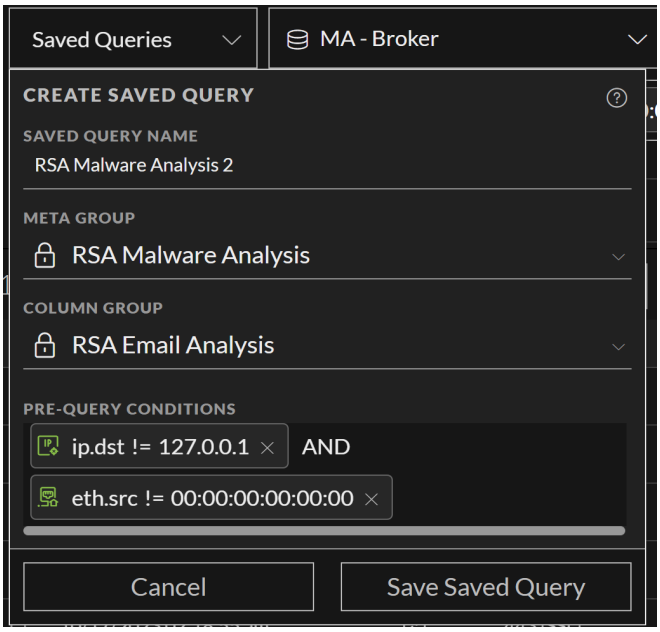
Quick Look - Saved Queries Menu, Create Saved Query Dialog, and Saved Query Details Dialog

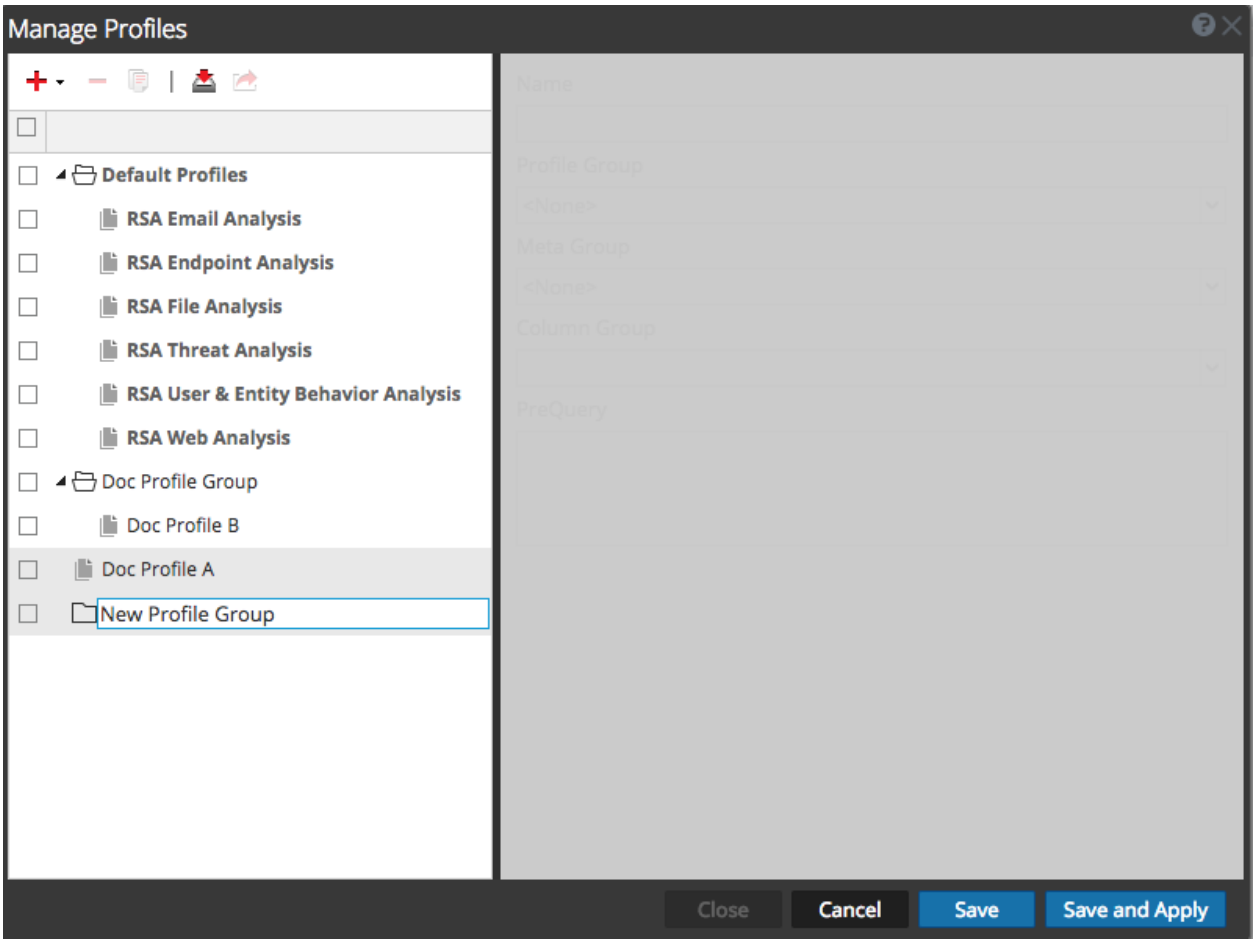


This section introduces the Saved Queries menu, Create Saved Query dialog, and the Saved Query Details dialog. The following figure is an example of the Saved Queries menu and the table describes the options. The example on the left has built-in saved query highlighted so that the information icon is visible.

Feature	Description
Visibility Options	Control the types of saved queries that are visible in the list. You can use any combination of the visibility options: **Private**, **Shared**, or **RSA** (blue = selected, black = not selected). Initially none of the buttons are selected and all query types are visible. This is the same result as if all three buttons are selected. The visibility options work together with text in the Filter saved queries field. If the visibility option is hiding built-in saved queries (which include "RSA" in the name) and you search for a name that contains "RSA," the list is empty. Private = display private groups that only you can manage Shared = display shared groups that anyone in your organization can manage RSA = display built-in groups that only RSA can manage
Filter saved queries	Filters the list of saved queries as you type text so that only saved query profile names that contain that text are displayed.

Feature	Description
Saved Query List	The list of queries consists of custom and built-in saved queries, which are distinguished by the icons that precede the name. In the example, RSA Email Analysis-1 and RSA Email Analysis-2 are custom saved queries. The RSA Email Analysis is a built-in saved query.
New Saved Query	Displays the Create Saved Query dialog, where you can create a custom query.

The Create Saved Query dialog, shown in the figure on the left, allows you to define a custom saved query. The figure illustrates the Saved Query Details dialog, in which you can edit a custom saved query. The table describes the fields and options in the dialogs.



Feature	Description
	Creates a clone of the meta group so that you can edit a copy. This is useful if you want your own copy of a built-in group, a shared copy of a private group, or a private copy of a shared group.

Feature	Description
	Deletes the custom profile in the Saved Query Details dialog. This action is irreversible and applies globally; the profile is no longer available to anyone who is using the profiles on this service.
Saved Query Name	Displays the name of the query profile. The name must be unique and contain fewer than 64 characters. You can edit the name in a custom query.
Column Group	Displays a drop-down menu listing available column groups, with the currently selected column group from the Events list already selected. You can change the column group in a custom query.
Pre-Query Conditions	Defines a limiting filter for results in the Events view. If you had a query active in the query bar when you began to create the new saved query, the active query is added to the pre-Query field. In a custom query, you can delete the prepopulated pre-query condition and type additional text for a text search or additional filters in the Pre-Query Conditions field. This is an example of a pre-query condition: `'service=80,25,110'`.
Close button	Closes the dialog.
Save Saved Query	For the Create Saved Query dialog only, saves the new query.
Reset	For the Saved Query Details dialog only, reverts the edited query to the last saved state.

Feature	Description
Update Saved Query	For the Saved Query Details dialog only, applies changes to an edited query.
Select Saved Query	Applies the saved query.

Quick Look - Manage Profiles Dialog

This is an example of the Manage Profiles dialog showing several profile groups.

The Profile panel on the left side of the dialog displays available profiles and allows you to add, delete, import, and export profiles. The following table describes the fields in the Profile panel.

Field	Description
+	Adds a new profile using the Settings panel on the right side of the Manage Profiles dialog.

Field	Description
	Deletes the selected profile. A confirmation dialog is displayed before the profile is deleted.
	Creates a copy of the selected profile.
	Displays the Profile Import dialog, where you can upload a file.
	Exports the selected profile to your computer.
Profile Name	Lists all profile names.

The Settings panel on the right side of the dialog offers options to configure profiles. It can only be used when one profile is selected. The following table describes the fields in the Settings panel.

Feature	Description
Name	Displays the name of the profile.
Meta Group	Displays a drop-down menu listing available meta groups.
Column Group	Displays a drop-down menu listing available column groups. The OOTB column groups and these three groups are available by default: • List View • Detail View • Log View
PreQuery	Defines a limiting query for filtering Investigate results. This query is used when the associated profile is activated and the preQuery applies to any queries used in the Navigate and Events views. This is an example of a preQuery: `'service=80,25,110'`.

The following table describes the buttons.

Field	Description
Close	Closes the dialog.
Cancel	Cancels all changes.
Save	Saves all changes.
Save and Apply	Saves and applies all changes immediately.

Create Springboard Panel Dialog

In the Create Springboard Panel dialog, you can create a Springboard panel from selected query in the Events view. You can add any number of filters in the query search bar and convert them into Springboard panels. The Springboard panels are then available to analysts for detection and monitor the results.

To access this dialog, while investigating a service in the **Investigate** > **Events** view, add a query on the query search bar >  > **Create Springboard Panel** from the toolbar.

IMPORTANT: Ensure that you first create a custom private board in Springboard.

Quick Look - Create Springboard Panel Dialog

This is an example of the Create Springboard dialog.

The following table describes the fields in the Create Springboard Dialog view.

Feature	Description
Name	(Required) Specifies a name to identify the panel. In the example, the name is Sample Incident. You can provide a name that clearly identifies the nature of events that will be added to this incident
Meta Group	Displays the currently selected meta group from the filter query already selected.
Column Group	Displays the currently selected column group from the filter query already selected.
Location	Displays the location where the defined query is saved.
Pre-Query Conditions	Defines a limiting filter for results in the Events view. If you had a query active in the query bar when you began to create the new Springboard panel, the active query is added to the pre-Query field. This is an example of a pre-query condition: `'service=80,25,110'`.
Meta Key	Displays a drop-down listing meta keys available for the service.
Default Sorting	Displays a drop-down listing sorting options.
Visualization Type	Displays a drop-down listing Visualization type options: • **Donut** • **Bar**

Feature	Description
Visualization Color Theme	Displays a drop-down listing different color theme options: • **Blue** • **Teal** • **Orange** • **Fuchsia** • **Purple** • **Lime** • **Multiple** **Note:** The **Multiple** color option is available only for the Donut chart.
Visualization Metric	Displays a drop-down listing available Visualization metric options.
Cancel	Closes the dialog without applying changes.
Save	Saves the changes.

Create Future Alert Dialog

In the **Create Future Alert** dialog, Administrators and Analysts can create an application rule from the **Investigate** > **Events** page for any suspicious activity. You can create rules with a flexible query that covers a wide set of events and system information from your network, including suspected breach activities and misconfigured servers. Once the rule is applied to a matched policy with services (Decoders), it generates alerts whenever a match occurs and helps analysts with further investigation.

To access this dialog, while investigating a service in the **Investigate** > **Events** view, add a query on the query search bar >  > **Create Future Alert** from the toolbar.

IMPORTANT: The **Create Alert** option will be enabled for users only if the Decoder services are managed by Policy-based Centralized Content Management and the user has the **investigate-server.alert.manage** permission enabled.

Note: An administrator must enable **investigate-server.alert.manage** permission and **source-server.centralpolicy.manage** permission on the source server and **rules.manage** permission on the core devices to allow analysts to create the application rules.
For more information, see the "Role Permissions" topic in the *System Security and User Management Guide*.

Quick Look - Create Future Alert Dialog

This is an example of the Create Future Alert Dialog.

The following table describes the fields in the Create Future Alert view.

Feature	Description
Alert Name	Specify a descriptive Name to identify the alert or leave the default name automatically populated using **Query Based App Rule** format.
Select Policy	Displays a drop-down list of available policies for selection.

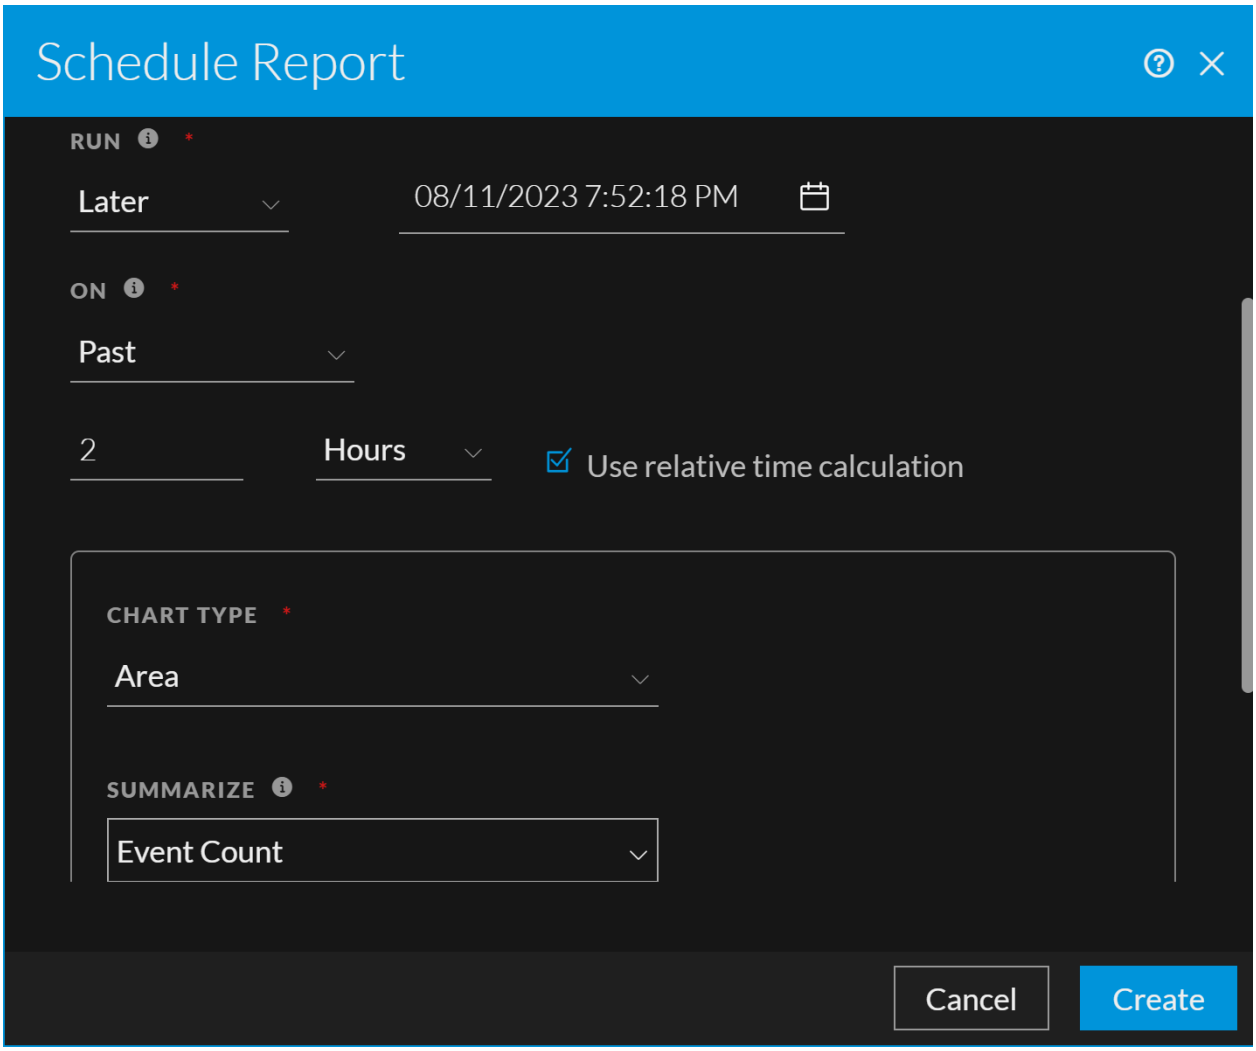
Feature	Description
Select Severity	Displays the level of severity for the alert to be generated. The options are listed below: • Low • Medium • High • Critical **Note:** By default, Low is selected as severity.
Create	Creates the Application rule and closes the dialog. A message confirms that the application rule was created successfully.
Cancel	Closes the dialog without applying changes.

Schedule Report Dialog from Events View

The **Schedule Report** dialog enables you to create a schedule for the report. Reports can be scheduled hourly, daily, weekly, or monthly. In order to schedule a report at a specific time or on a daily, weekly, or monthly basis, you must configure the scheduling options on the Schedule report dialog.

To access this dialog, while investigating a service in the **Investigate** > **Events** view, add a query on the query search bar >  > **Schedule Report** from the toolbar. Additionally, administrators and analysts can configure charts for reports. Using this feature, administrators and analysts can create various types of charts based on **Event Count**, **Session Size**, **Packet Count**, and **Meta Key**.

What do you want to do?



User Role	I want to ...	Show me how
Administrator / Analysts	Schedule Report	Generate Reports from Events View

Related Topics

- Use Saved Queries to Encapsulate Common Areas for Investigation
- Generate Reports from Events View

Quick Look - Schedule Report Dialog

This is an example of the Schedule Report Dialog.

The following table describes the fields in the **Schedule Report Dialog** view.

Feature	Description
Report Name	Specifies a name to identify the panel. In the example, the name is **Report on Investigate Query - 2023-04-25 10-18-26**. You can provide a name that clearly identifies the nature of events that will be added to this report.
Limit	A selection list for the maximum number of results to be displayed in the generated output. By default, the limit is 20 and you can specify a maximum number of 100 results.

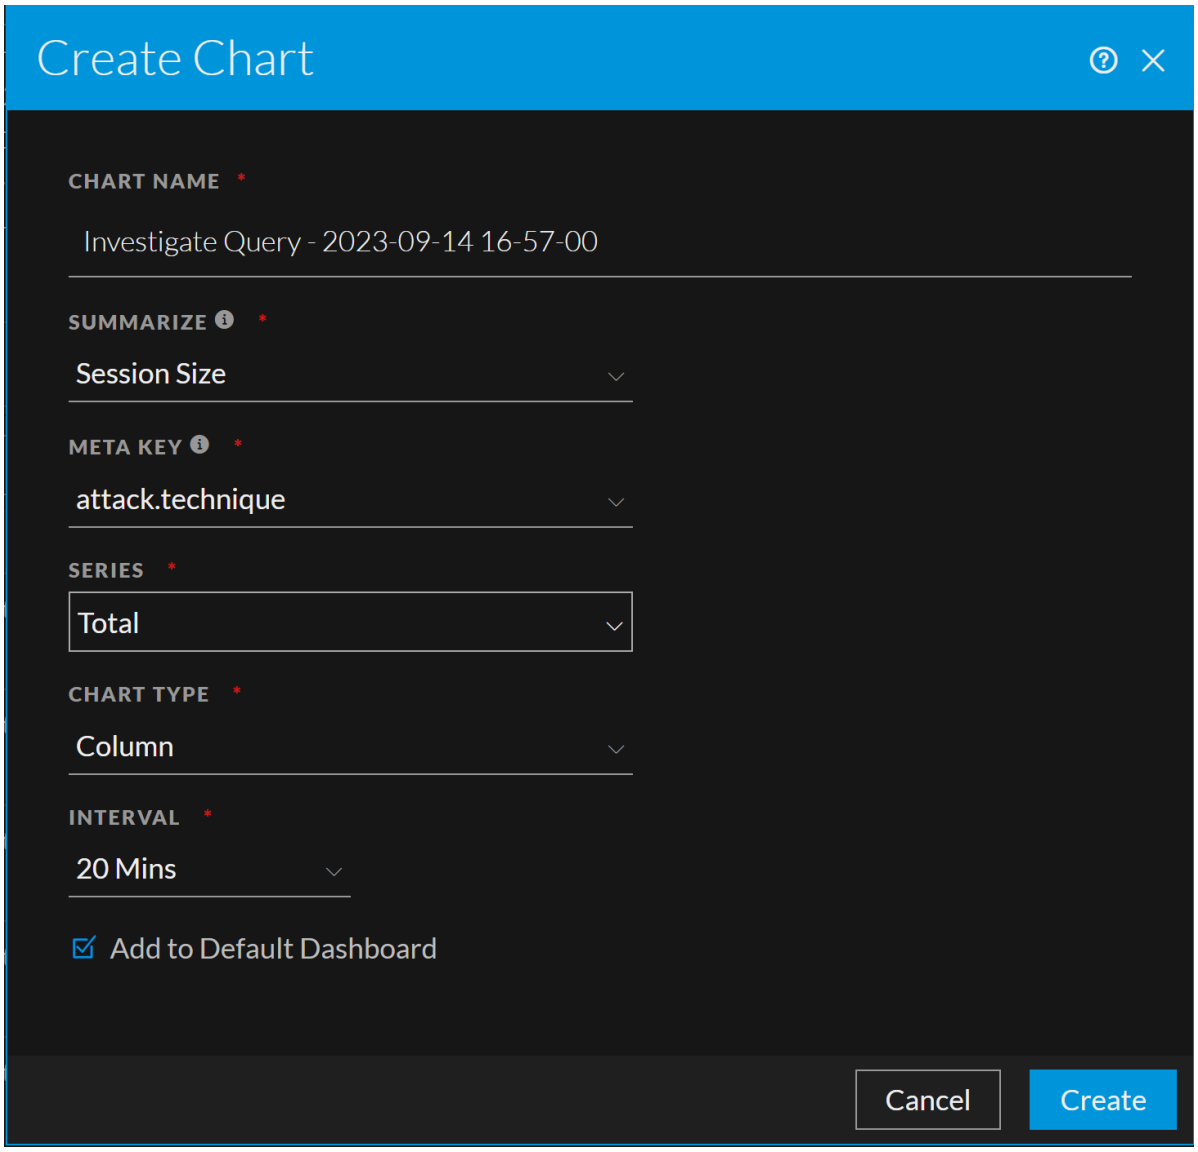
Feature	Description
Run	Time interval to use for running the scheduled job: • **Later**: Runs on specific date and time. • **Hourly**: Runs on a designated repeating interval. For example, if you schedule the report for 50 minutes, for every 50th minute, the report will be prepared. **Note:** A maximum of only 59 minutes can be selected. • **Daily**: Runs daily at a designated time. For example, if you schedule the report at 04:25, the report will be prepared at 04:25 AM every day. • **Monthly**: Runs on a monthly basis at a designated time and day of the month. For example, select 25 for the 25th day of the month. The report will be prepared on the 25th month of every month. **Note:** During the monthly report generation process, a message will appear if the day is greater than 28. This will notify the user that the report will be scheduled for the month containing that day.
ON	Set the frequency, duration, and time for running the report: • **Past**: You can schedule the report based on **Hours**, **Days**, **Weeks**, **Months**, and **Years**. • **Range(specific)**: You can schedule the report for a specific date and time range. **Note:** This field appears only if you select Later in the Run field. • **Range(generic)**: You can schedule the report for a generic date and time. **Note:** This field appears only if you select Later, Daily, Weekly, and Monthly in the Run field.
Use relative time calculation	The Use relative time calculation option is enabled by default, and it uses the relative time duration to schedule a report. For example, if you schedule a report to run over the past 1 hour –1h for the relative time, the time is exactly 1 hour from when the report is run. If the current time is 3 P.M., the events that occurred in the past 60 minutes or between 2 P.M. and 3 P.M. today.

Feature	Description
Chart Type	Displays a drop-down listing chart type options: • Tabular(Default) • Pie • Area • Bar • Bubble • Column • Line • Step line • Step Area • Spline Area • Spine
Summarize	Displays a drop-down listing different in-built aggregate meta options to obtain the desired summarized meta values: • **Event Count**: The total number of events that have occurred at a specific time. • **Session size**: The total size of the events recorded by services at a certain time. • **Packet Count**: The total number of packets that have been transmitted or received.
Meta Key	Displays a drop-down listing different meta key options. **Note:** You can select only one meta value at a time.
Email Output Action	Specify email addresses to send the report to, separated by commas.
Create	Creates the report and closes the dialog. A message confirms that the report was scheduled successfully.
Cancel	Closes the dialog without applying changes.

Create Chart Dialog from Events View

Administrators and analysts can create charts based on the real-time data from the **Investigate** > **Events** page. This enhancement enables them to create various types of charts based on **Event Count**, **Session Size**, **Packet Count**, and **Meta Key**. It provides an all-in-one solution for tracking trends for analysts. Additionally, analysts can add these real-time charts to their Default dashboard, allowing them to track critical data seamlessly within the organization.

What do you want to do?



User Role	I want to ...	Show me how
Administrators / Analysts	Configure Charts	Generate Reports from Events View

Related Topics

- Generate Reports from Events View

Quick Look - Create Chart Dialog from Events View

This is an example of the Create Chart Dialog from Events View

Feature	Description
Chart Name	Specifies a name to identify the chart. In the example, the name is **Investigate Query - 2023-09-14 16-57-00**. You can provide a name that clearly identifies the nature of events that will be added to this chart.
Summarize	Displays a drop-down listing different in-built aggregate meta options to obtain the desired summarized meta values: • **Event Count**: The total number of events that have occurred at a specific time. • **Session size**: The total size of the events recorded by services at a certain time. • **Packet Count**: The total number of packets that have been transmitted or received.
Meta Key	Displays a drop-down listing different meta key options. **Note:** You can select only one meta value at a time.
Series	Displays a drop-down listing different Series options for the chart. • **Total**: The chart displays a total for each aggregate value for the selected time. • **Value**: The chart displays the change in values for the selected time. **Note:** The option will only be available if you select the **Add to Default Dashboard** checkbox.

Feature	Description
Chart Type	Displays a drop-down listing chart type options: • Tabular(Default) • Pie • Area • Bar • Bubble • Column • Line • Step line • Step Area • Spline Area • Spine **Note:** - The option will only be available if you select the **Add to Default Dashboard** checkbox. - By default, column type chart is selected. - Based on the **Series** options selected, charts will be displayed accordingly. - For **Total** option: only **Pie** and **Column** charts are enabled. - For **Value** option: **Area**, **Column**, **Line**, **Step Line**, **Step Area**, **Spline Area**, and **Spline** charts are enabled.
Interval	Displays a drop-down listing time range options. The available interval ranges from 10 minutes to 180 minutes, with a 10-minute gap between each interval. **Note:** By default, the number of records (Top) displayed on each chart is **15**.
Add to Default Dashboard	Displays a checkbox option to add the chart under the **Dashboard** > **Default Dashboard** view.
Create	Creates the chart and closes the dialog. A message confirms that the chart was scheduled successfully.
Cancel	Closes the dialog without applying changes

Timeline Settings Panel

Analysts can use the **Timeline Settings** option to change the values based on the Spike Y-axis (Count and Size) and view the data presented on the timeline. This allows analysts to detect significant spikes that could indicate anomalies. Using the visual representation, analysts can conduct a more detailed investigation of the events that occurred during that specific period.

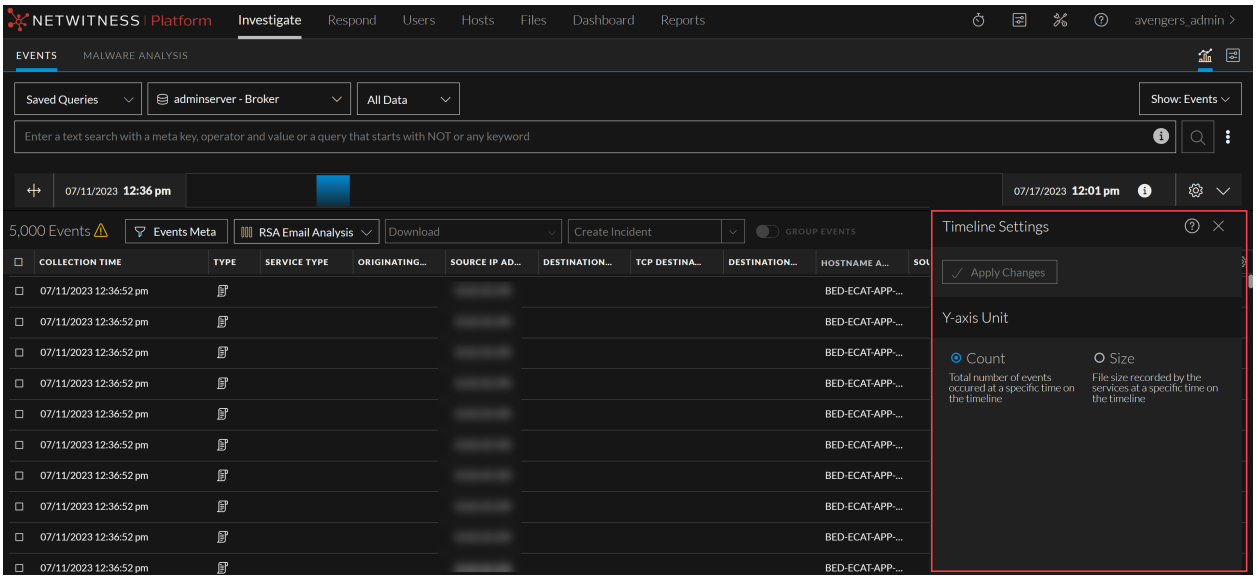
For more information on Timeline, see the section **Investigate on Timeline** in the topic Begin an Investigation in the Events View.

Note: To change the X-axis settings, you must change the Query Time options set within the Events Preferences panel. For more information on Query time, see Configure the Events View.

What do you want to do?

User Role	I want to ...	Show me how
Analysts	Configure Timeline Settings	Begin an Investigation in the Events View

To change the Timeline Settings



1. Log in to the NetWitness Platform.
2. Go to **Investigate** > **Events**.
3. Click () **Timeline Settings**.
4. Select the Spike (Y-axis) based on your preference:
   - **Count**: Displays the total number of events that have occurred at a specific time on the timeline.
   - **Size**: Displays the total size of the events recorded by services at a certain time on the timeline.
5. Click **Apply Changes**. The changes are reflected on the Timeline bar.
6. Click **X** to close the Timeline Settings.

Settings Dialogs for Investigate Views

NetWitnessVersion 11.0 has two settings dialogs, one for the Navigate view and one for the Legacy Events view. With the addition of the settings dialog for the Events view in Version 11.1, Investigate has three settings dialogs.

The settings in these dialogs are a subset of the Investigation settings made in the Profiles > Preferences panel > Investigation. Analysts can save time by editing these settings within the Investigate view. If you change a setting here, the same setting is changed in the Profiles view, and if you change a setting in the Profiles view, the same setting is changed here.

To access this dialog, go to the **Navigate** or **Legacy Events** view, and select the **Settings** option in the toolbar.

The settings in the Events view have no corresponding settings in the Profiles > Preferences panel.

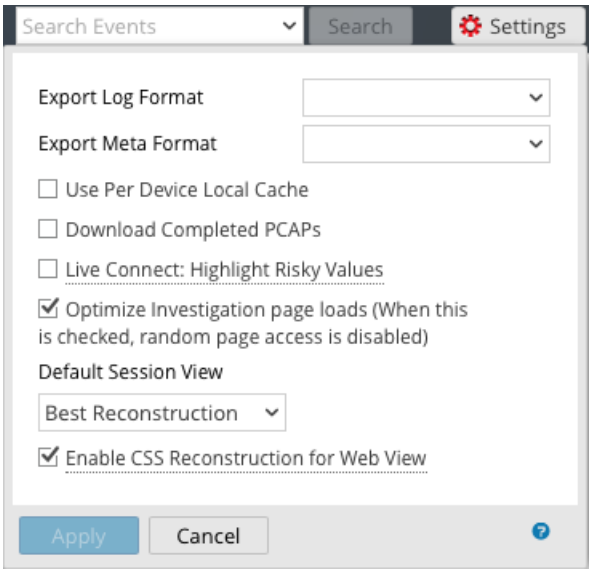
Quick Look

This is a quick look at the settings dialog for the Navigate view, Legacy Events view, and Events view.

Navigate View Settings Dialog

The following figure illustrates the Navigate view Settings dialog. The settings that influence performance when loading values in the Values panel have default values based on common usage, and individual analysts can adjust these settings for their own investigations. The following table describes the features.

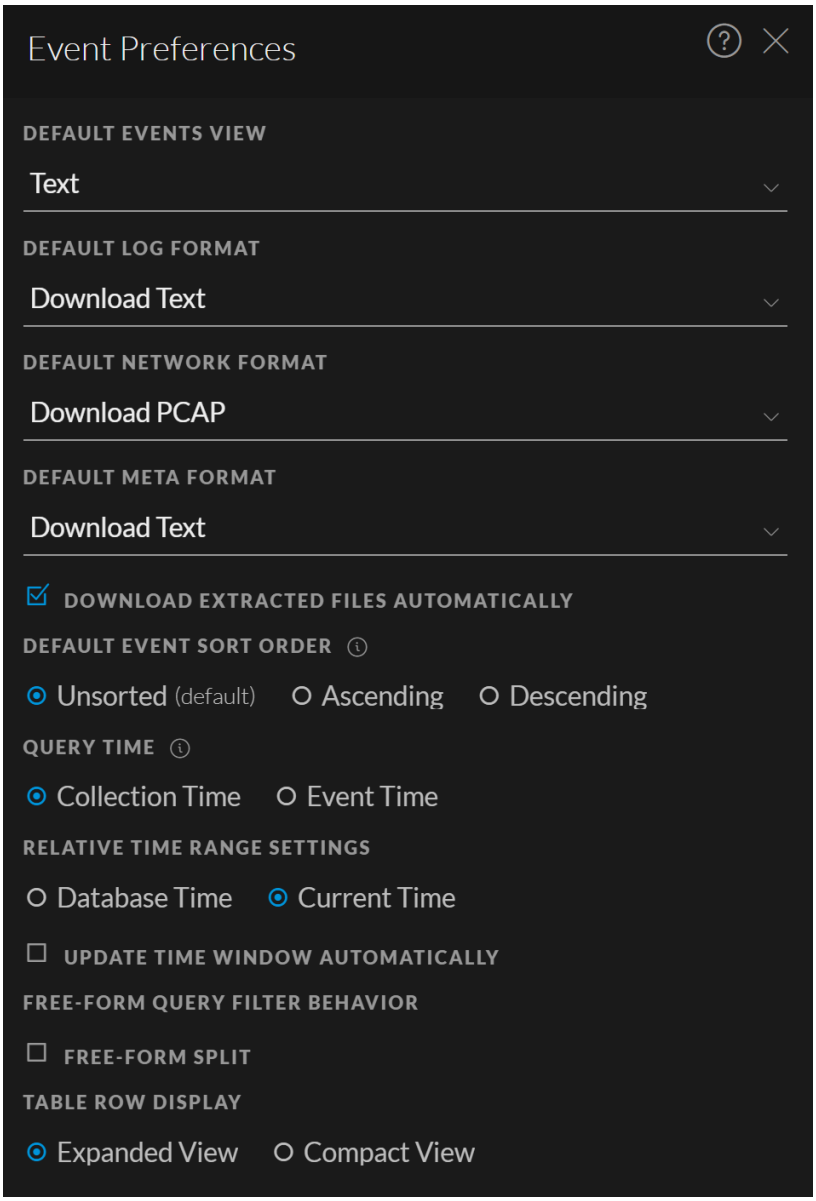


Feature	Description
Threshold	Sets the threshold for the maximum number of sessions loaded for a meta key value in the Values panel. A higher threshold allows accurate counts for a value, and also causes longer load times. The default value is **100000**.
Max Values Results	Sets the maximum number of values to load in the Navigate view when the Max Results option is selected in the Meta Key menu for an open meta key. The default value is **1000**.
Max Session Export	Sets the maximum number of sessions that can be exported. The default value is **100000**.
Export Log Format	Sets the file format of exported logs. There are four formats available: • **Text**: Raw log format. • **SML**: Structured Markup Language format. • **CSV**: Comma-separated values (CSV) format. • **JSON**: The JavaScript Object Notation (JSON) format.

Feature	Description
Export Meta Format	Sets the file format of exported meta values. There are four formats available: • **Text**: Raw log format. • **SML**: Structured Markup Language format. • **CSV**: Comma-separated values (CSV) format. • **JSON**: The JavaScript Object Notation (JSON) format. **Note:** If you upgrade to version 11.5.2, the **Export Meta Format** preference is not retained and is reset to blank. You must re-configure this value after you upgrade to version 11.5.2.
Use Per Device Local Cache	When the checkbox is cleared, Investigate sends a fresh query to the database rather than displaying cached data in the Investigate views after the initial load. If the checkbox is selected, Investigate uses the data from local cache.
Show Debug Information	This option controls the display of the `where` clause beneath the breadcrumb in the Navigate view and the elapsed load time for each aggregated service on a Broker. When the checkbox is selected, the debug information is displayed. The default value is **Off** (checkbox cleared).
Autoload Values	This option controls automatic loading of values for the selected service in the Navigate view. When the checkbox is selected, values are automatically loaded when you select a service to investigate. When the checkbox is cleared, Investigate displays a **Load Values** button, allowing the opportunity to modify options. The default value is **Off**.
Download Completed PCAPs	This setting automates the downloading of extracted PCAPs in Investigate so that you do not have to manually download and open extracted PCAP files in an application, such as Wireshark, that can handle viewing data in a PCAP form. When the checkbox is selected, the option is enabled. The default setting is disabled (checkbox is cleared).
Live Connect: Highlight Risky IPs	If the checkbox for this option is cleared, all the meta values that have context available in Live Connect are highlighted in the Navigate view Values panel. If the checkbox is selected, among the values that have context in Live Connect, only those values deemed Risky/Suspicious/Unsafe by the community are highlighted. By default this option is disabled (checkbox cleared).
Apply	Applies the settings immediately and they are visible the next time you load values. The same changes are also applied in the Profiles view.
Cancel	Cancels the editing operation and closes the dialog, leaving the settings unchanged.

Legacy Events View Settings Dialog

The following figure is an example of the Settings dialog for the Legacy Events view, and the table describes the features.



Feature	Description
Export Log Format	Sets the file format of exported logs. There are four formats available: • **Text**: Raw log format. • **SML**: Structured Markup Language format. • **CSV**: Comma-separated values (CSV) format. • **JSON**: The JavaScript Object Notation (JSON) format.
Export Meta Format	Sets the file format of exported meta values. There are four formats available: • **Text**: Raw log format. • **SML**: Structured Markup Language format. • **CSV**: Comma-separated values (CSV) format. • **JSON**: The JavaScript Object Notation (JSON) format.
Download Completed PCAPs	This setting automates the downloading of extracted PCAPs in Investigate so that you do not have to manually download and open extracted PCAP files in an application, such as Wireshark, that can handle viewing data in a PCAP form.
Live Connect: Highlight Risky IPs	When the checkbox is selected, Investigate uses a filter to fetch only IP addresses that are considered as risky by RSA community. When the checkbox is cleared, NetWitness displays all IP addresses. By default, this option is disabled (checkbox cleared).

Feature	Description
Optimize Investigation page loads	Sets a paging option. When optimized, results are returned as quickly as possible, sacrificing the original ability to go to a specific page in the event list. Clearing this checkbox changes the Events list pagination to allow you to go to a specific page in the list (or to the last page). The default value is enabled (checkbox selected).
Append Events in Event Panel	This option affects paging in the Legacy Events panel and in prior releases was located in the Navigate view settings dialog. When the checkbox is selected, the next group of events is appended to the already displayed events. When cleared, the previous page of events is replaced by the next page. The default value is Off (checkbox cleared).
Default Session View	Selects the default reconstruction type for the initial reconstruction in the Events view. The default value is **Best Reconstruction** in which events are reconstructed using the reconstruction method most appropriate to the event.
Enable CSS Reconstruction for Web View	This setting controls how web content reconstruction is performed. If enabled, the web reconstruction includes cascaded style sheet (CSS) styles and images so that its appearance matches the original view in a web browser. This includes scanning and reconstructing related events, and searching for style sheets and images used in the target event. The option is enabled by default. Clear the checkbox to disable this option if there are problems viewing specific websites.
Apply	Applies the settings immediately and they are visible the next time you view events. The same changes are also applied in the Profiles view.
Cancel	Cancels the editing operation and closes the dialog, leaving the settings unchanged.

Events View Preferences Dialog

Beginning with Version 11.1, the Events view has user preferences that you can configure in the Events view > Event Preferences dialog. These settings persist so that they are applied each time you log in and go to the Events view. The following figures are examples of the dialog for Version 11.3 and Version 11.6. The table below describes the options.

Feature	Description
Default Events View	Selects the default event analysis view that is displayed every time you open the Events view. For example, if you select File, the File Analysis panel is highlighted and displayed every time you investigate an event in the Events view. These are following options: • **Text** : View and analyze the raw text payload of an event. • **Packet** : View and interactively analyze the packets and payload of an event. • **File** : View a list of files and download one or more files in an event.

Feature	Description
Default Log Format	Selects the default format for downloading logs: • **Download Log** or **Download Text**: Raw log (log) format. • **Download CSV**: Comma-separated values (CSV) format. • **Download XML**: The Extensible Markup Language (XML) format. • **Download JSON**: The JavaScript Object Notation (JSON) format.
Default Packet Format or Default Network Format	Selects the default format for downloading packets. • **Download PCAP**: To download the entire event as a packet capture (*.pcap) file. • **Download All Payloads** or **Download Payloads**: To download the payload as a *.payload file. • **Download Request Payload**: To download the request payload as a *.payload1 file. • **Download Response Payload**: To download the response payload as a *.payload2 file.
Default Meta Format	Selects the default format for downloading metadata: • **Download CSV**: Comma-separated values (CSV) format. • **Download JSON**: The JavaScript Object Notation (JSON) format. • **Download Text**: Plain text format. • **Download TSV**: Tab-separated values (TSV) format.
Time Format for Query	The Events view can display results based on the database time or the current clock time. **Note:** (Version 11.6) **Current Time** is the default for **Relative Time Range Settings**. In previous versions, **Database Time** was the default value. Make a note that this may cause time range mismatch between **Events View** (using **Current Time** as default) and **Navigate View** (using **Database Time** as default). This change does not affect the existing users and is applicable only to the new users. When **Database Time** is selected, the start and end time for a query is based on the time that the event was captured (collection time). When **Current Time** (labeled **Wall Clock Time** in Version 11.3 and earlier) is selected, the query is executed using the end time based on the current browser time; the start time is calculated based on that end time and the time range.

Feature	Description
Event Sort Order (Version 11.4 and Later)	Sets the sort sequence by collection time for the events listed in the Events panel. If results exceed the events limit, not all events can be loaded. The portion of returned events loaded in the Events panel matches the sort order preference: the oldest portion of events is loaded when Ascending order is selected, and newest portion of events is loaded when Descending order is selected. A change to this setting becomes effective the next time you submit a query. **Unsorted**: Default sorting method for Version 11.4.1. To list events as processed by the Core services. Unsorted is faster because it streams back the events as soon as a match is found versus waiting for all Core services to respond and then displaying them in the chosen order. **Ascending**: Default sorting method for Version 11.4. To put the events with the earliest collection time first in the list. **Descending**: To put the events with the latest collection time first in the list. When investigating logs, you may want to change the sort sequence to latest collection time first.
Download Extracted Files Automatically	Enables the automatic download of files if they are in the selected default format in the **Default Log Format** and **Default Packet format** fields set in the Event Preferences dialog. Select the checkbox to enable downloading the selected format automatically to local file system. Otherwise, the download job goes to the job queue, and you can download it manually.
Update Time Window Automatically	(Version 11.3 and later) Enables automatic update of the time range window in the query bar when the service is polled (at one minute intervals) so that fresh results are sent. The default setting is disabled. When the checkbox is selected, as the time range is updated, the  (Submit Query) button is activated so you can click to get the fresh results. When the checkbox is cleared, the automatic update is disabled keeping the time range window in the breadcrumb synchronized with the current results.

Entitlement Capability Implementation

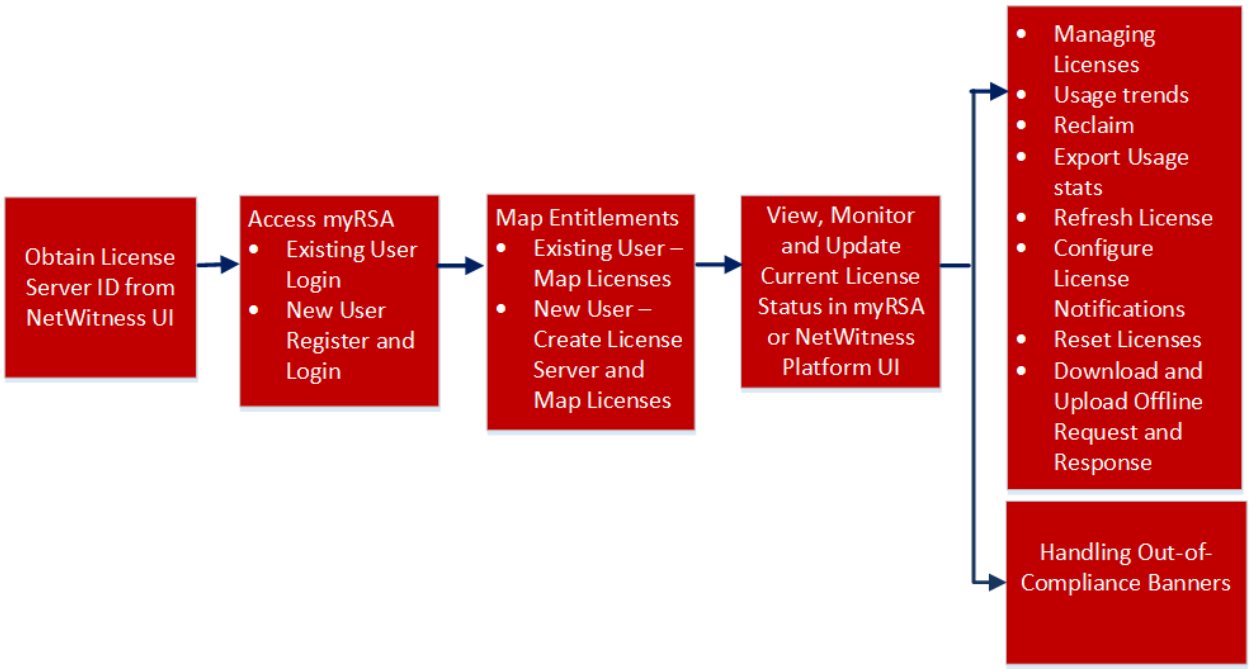
This topic describes how licensing of appliances and services is implemented in NetWitness. The entitlement capability leverages myRSA (https://my.rsa.com/) as the mechanism for entitlement delivery.

Key	Description
1	**Entitlements Created and Available to Customer.** After a customer order is processed, the entitlements (licenses) become available in myRSA. The entitlements are tied to an individual account.
2	**Register NetWitness Server on myRSA and Map Entitlements to the Local License Server (LLS).** • Customers log on to myRSA and view the entitlements to which they have access within their account. • Customers map entitlements to their Local License Server using the License Server ID (displayed in the NetWitness (Admin) **> System > Info** panel). The License Server ID is used only for mapping entitlements to a Local License Server and does not pertain to appliance activation.

Key	Description
3	**Synchronize the Server and Download Mapped Entitlements.** There are two methods for customers to synchronize with FlexNet Operations-On Demand (FNO-OD) and download the mapped entitlements to their LLS. • **Sites with Internet connectivity.** If the LLS has Internet connectivity, the LLS attempts to synchronize with FNO-OD every 24 hours over HTTP (TCP-80). Customers with Internet connectivity can also perform on-demand synchronization, using the **Refresh** option in the  (Admin) **> System > Licensing** panel on the NetWitness Server. For more information, see Register the Server (Online Registration). After the synchronization, endpoint entitlements that were mapped to the Local License Server on the NetWitness Platform appliance are synchronized on hourly basis by port 443. • **Sites in closed environments.** Customers can synchronize the mapped entitlements by downloading a capability request and importing it on the NetWitness Server. For more information, see Register the Server (Offline Capability Request). After the synchronization, entitlements that were mapped to the Local License Server on the NetWitness appliance are synchronized, but the entitlements have not been used in any way. For example, if you have purchased 10 Decoders and 10 Concentrators, 10 of 10 Decoder entitlements and 10 of 10 Concentrator entitlements would be available on the NetWitness Server.

Note: FNO-OD is the license server in the cloud on myRSA. The URL is rsasecurity.subscribenet.com. The customer's firewall must allow communications between this URL on port 80 (whatever it resolves to when using lookup or whois) and the NetWitness IP address.

NetWitness Platform Licensing Overview



After you have purchased the licenses and have received all the relevant email communications, perform the steps required to map entitlements in NetWitness. You must perform each step in the proper sequence.

This document is divided into three parts:

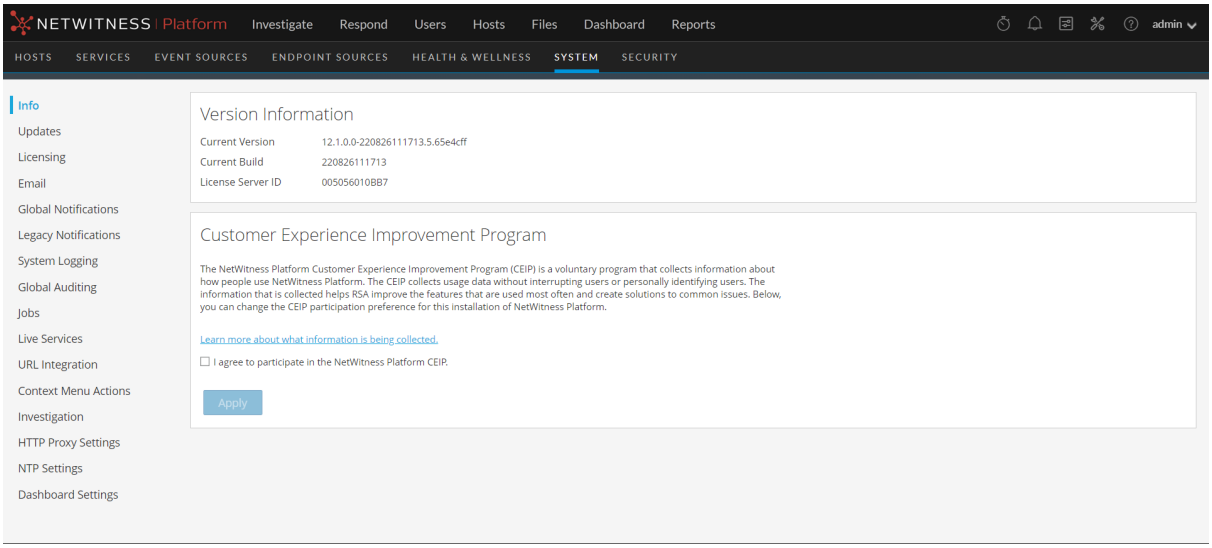
- How to obtain license information from myRSA and view in the NetWitness Platform UI
- Understanding License Types and its functionality
- Troubleshooting or maintenance information

Workflow

The following workflow illustrates the end-to-end licensing process after you have the NetWitness product installed .

Configuration Step	Description
Obtain License Server ID from NetWitness Platform User Interface	Before you begin the licensing process, you must ensure that you obtain the License Server ID displayed on the NetWitness User Interface.
Access myRSA	Your myRSA Welcome e-mail message contains system log in instructions to myRSA. Instructions for downloading your product licenses can be found in this document, as well as the myRSA website.

Configuration Step	Description
Register the Server (Online Registration)	Your NetWitness Server must be registered to myRSA and entitlements must be mapped. There are two methods of synchronizing NetWitness with myRSA: online and offline.



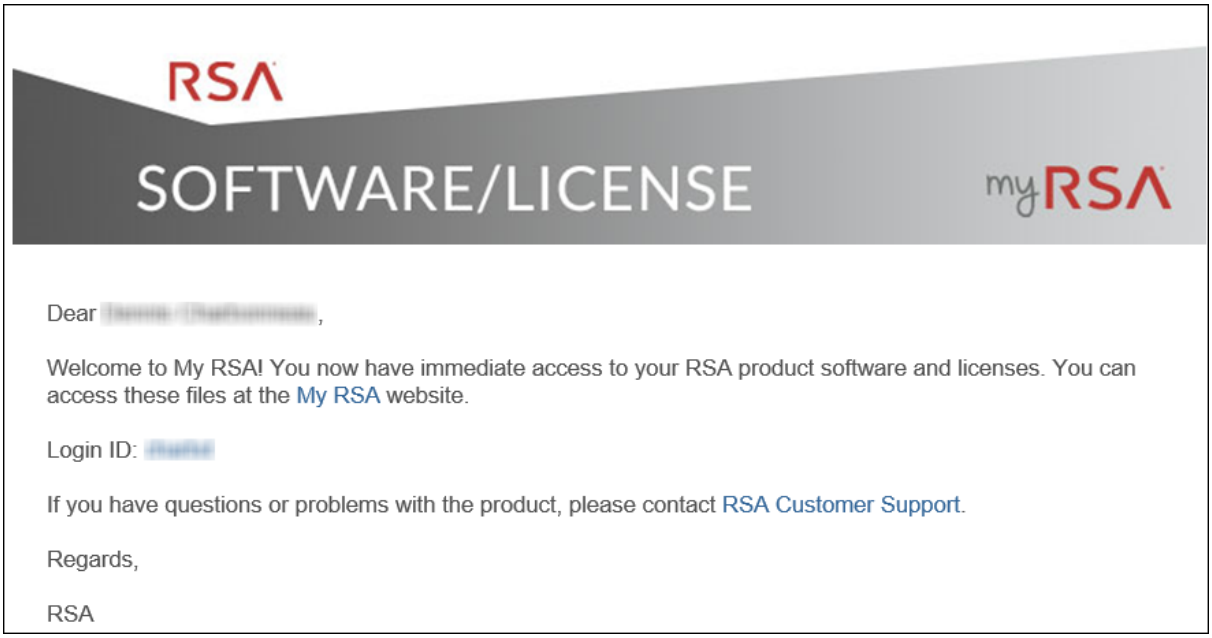
Obtain License Server ID from NetWitness Platform User Interface

Before you begin the licensing process, you must make sure that you obtain the License Server ID displayed in the NetWitness User Interface which is generated on the successful installation of the product.

To obtain the license service ID:

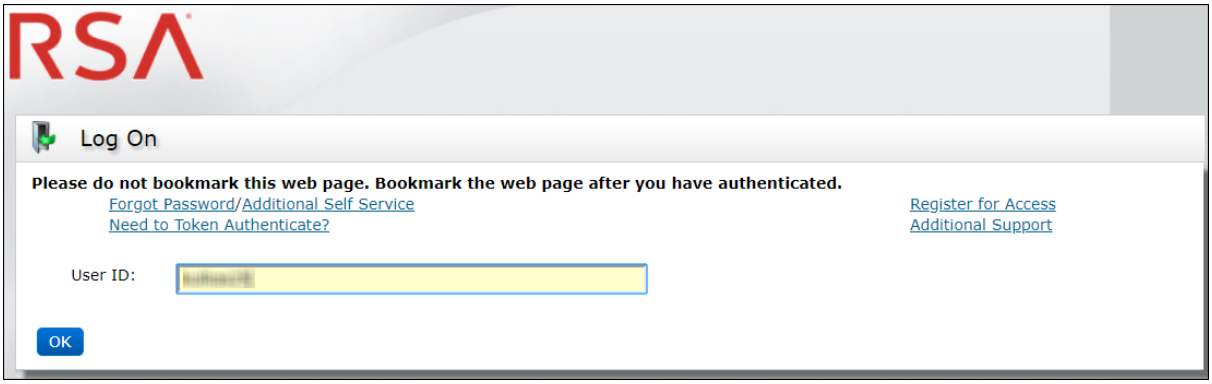
1. Log in to the NetWitness user interface.
2. Go to  **(Admin) > System**.

   The Admin System view opens to display the Version Information in the **Info** panel.



3. Under **Version Information**, locate the **License Server ID** and make a note.
   Log in to **myRSA** and enter the License Server ID to view your entitled license information. For more information, see Access myRSA.

Access myRSA



You will receive an order confirmation e-mail. Refer to your myRSA email for login information. If you are a new myRSA user, you also receive an e-mail containing instructions on how to create a new account. Your myRSA Welcome e-mail message contains system log in instructions to myRSA. This document provide you instructions on how to map your product licenses on the myRSA website.

1. The new users instruction e-mail contains a **Click Here** link. This link opens an Enrollment Portal, where the -Based Authentication (RBA) method must be configured for the account.
2. After the RBA method is enabled, a Confirmation e-mail message containing the User ID (which is your e-mail address), along with a temporary password is sent. After the first login, you are prompted to change the password. Once the password is changed, you are logged into myRSA.

Note: If you have a pre-existing account for the RSA Link or RSA Online websites, you receive only one e-mail on how to use your existing login credentials. You must log into myRSA with your existing User ID, password, and RSA method.

3. When you navigate to https://my.rsa.com/, the **RSA Secure Logon** screen is displayed.

4. Enter your User ID and click **OK**, which displays the **Password** field. When you enter the password, you are logged into myRSA.

   Your contact e-mail address is used to authenticate your User ID. If the Customer Authentication process is successful, the myRSA Software/License page displays a list of all the following products available which are associated to your site location:

   - RSA Products
   - Serial Numbers
   - Purchase Orders
   - Sales Orders

   Note: You may be prompted to verify your identity through your RBA method, if multiple log in failures occur in a row, or if you have not logged into myRSA within the past several months.

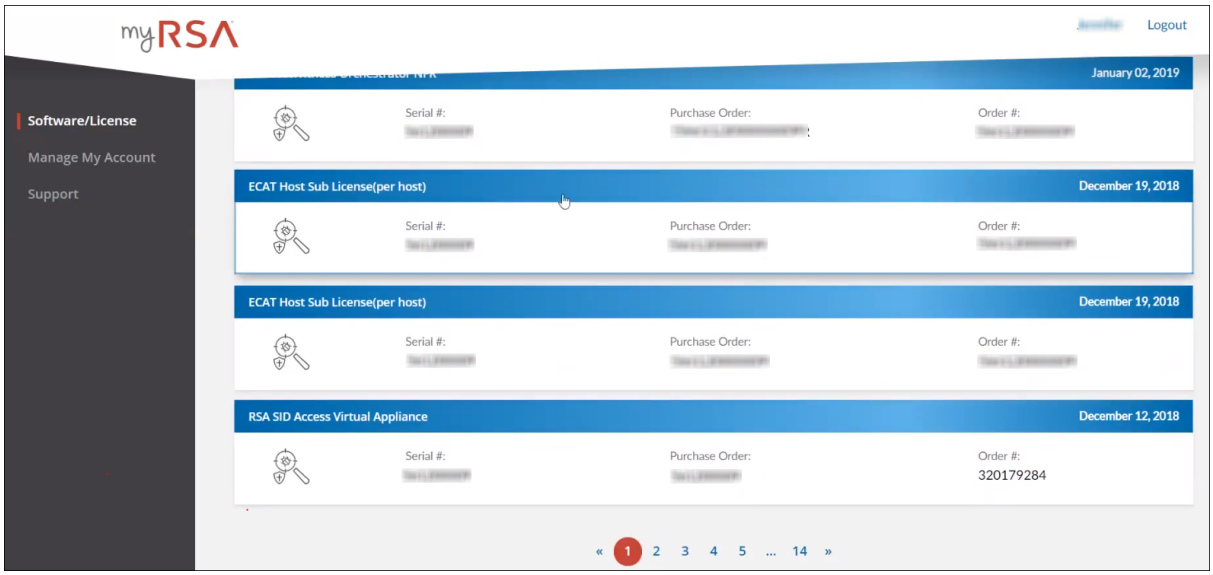
5. In the Sofware/License page, select the Order Location from the drop-down menu. The list of products, sales orders, and purchase orders are filtered and displayed.

   The **Order Detail** screen is displayed.

License for NetWitness Endpoint 4.4.0.x Agents

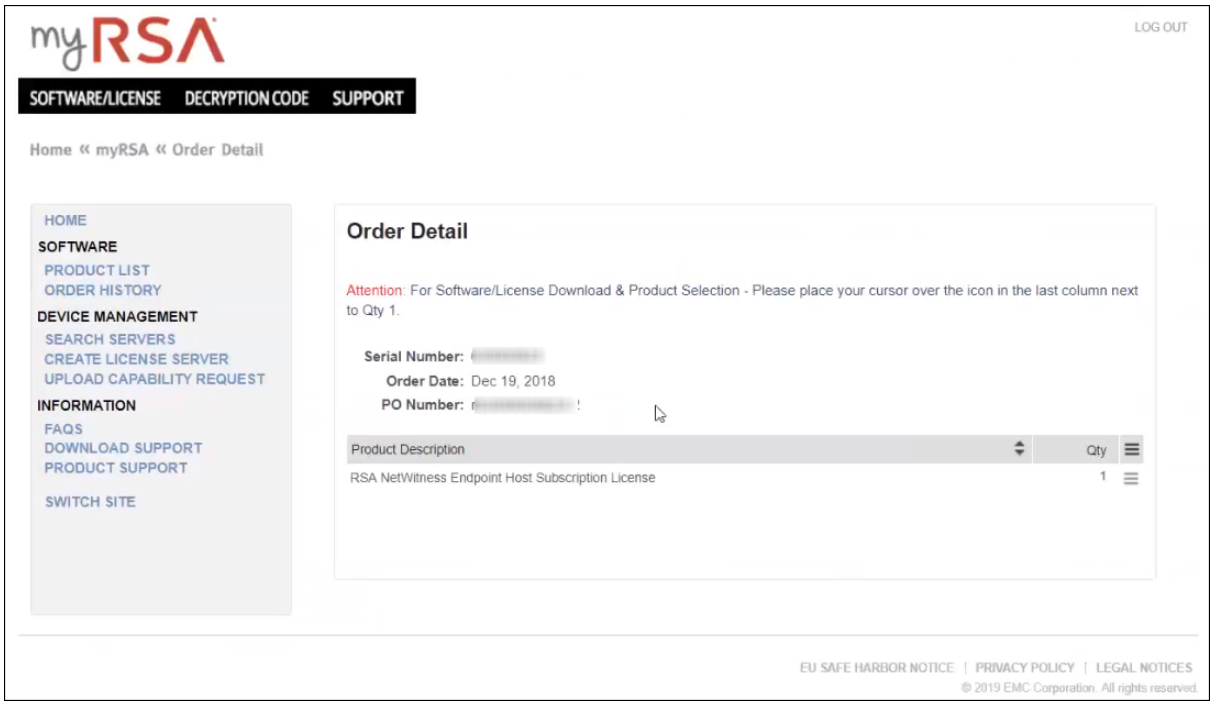
If you are an existing NetWitness Endpoint 4.4.0.x customer, who also has NetWitness Server, Log Hybrid and an ESA box, you receive licenses for NetWitness Endpoint 4.4 and 11.6 agents. You receive the following RSA Order Fulfillment Confirmation email which contains the license details for NetWitness Endpoint 4.4.0.x and NetWitness 11.6.

Note: If you are a new NetWitness 11.6 customer, the RSA Order Fulfillment Confirmation email contains the license details for the current 11.6 version only.



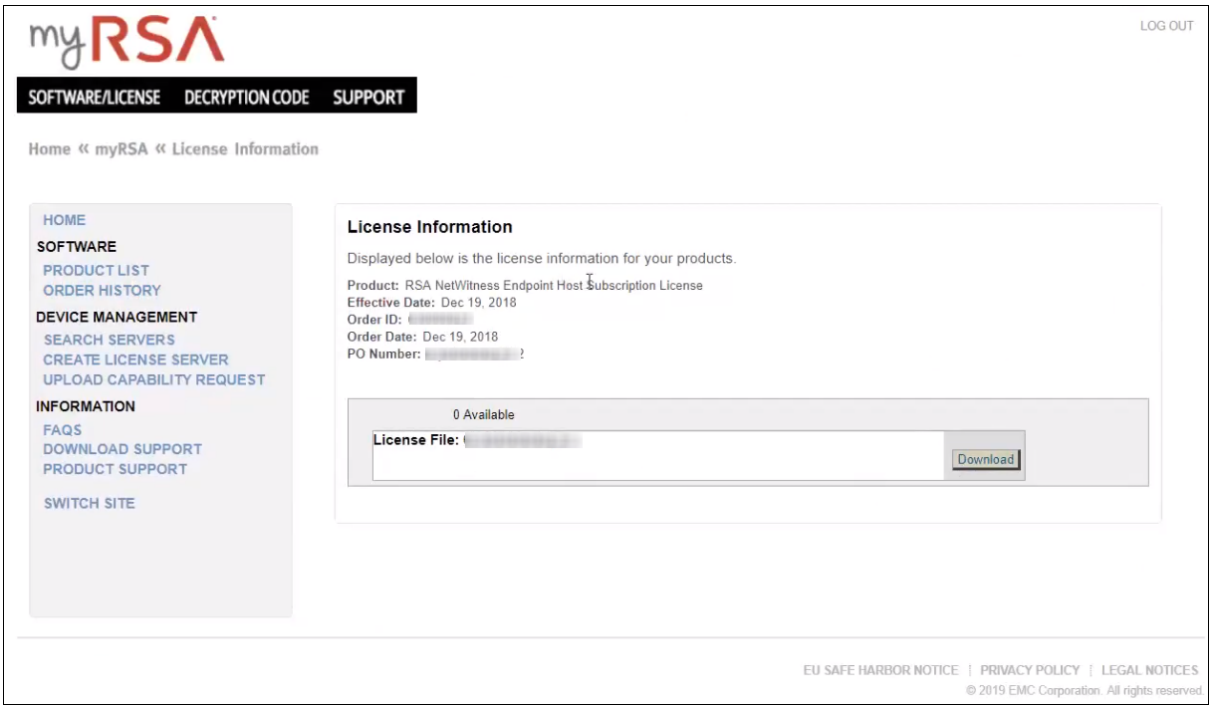
Part Number	Part Description	Quantity	Fulfillment Date
ECAT-SUB-T4	Tier4 RNWE Subsc p/Host 1001-2500 1Mo	1	February 7, 2019
# of License Months - 3 Billing Plan Type - Annual in advance License Duration - Term Sales Type - Upgrade Number of Hosts - 500			
Serial/License Number: [redacted]			
RSA-0015012	ECAT Host Sub License(per host)	1	February 7, 2019
# of License Months - 3 Billing Plan Type - Annual in advance License Duration - Term Sales Type - Upgrade Number of Hosts - 500			
Serial/License Number: [redacted]			

In the above screenshot, the part number with **RSA-0015012** indicates that it is aNetWitness Endpoint 4.4 license and the part number with **ECAT-SUB-T4** indicates that it is a NetWitness 11.6 license. You will get NetWitness 11.6 license and if you have NetWitness Endpoint 4.4 license, myRSA will upgrade the number of host for both licenses.



To download an Endpoint (ECAT) 4.4.x license, perform the following steps:

1. After you log in to myRSA, an ECAT Subscription Licenses option is displayed.



2. Click on ECAT Host Sub License (per host).

   The Order Detail page is displayed.

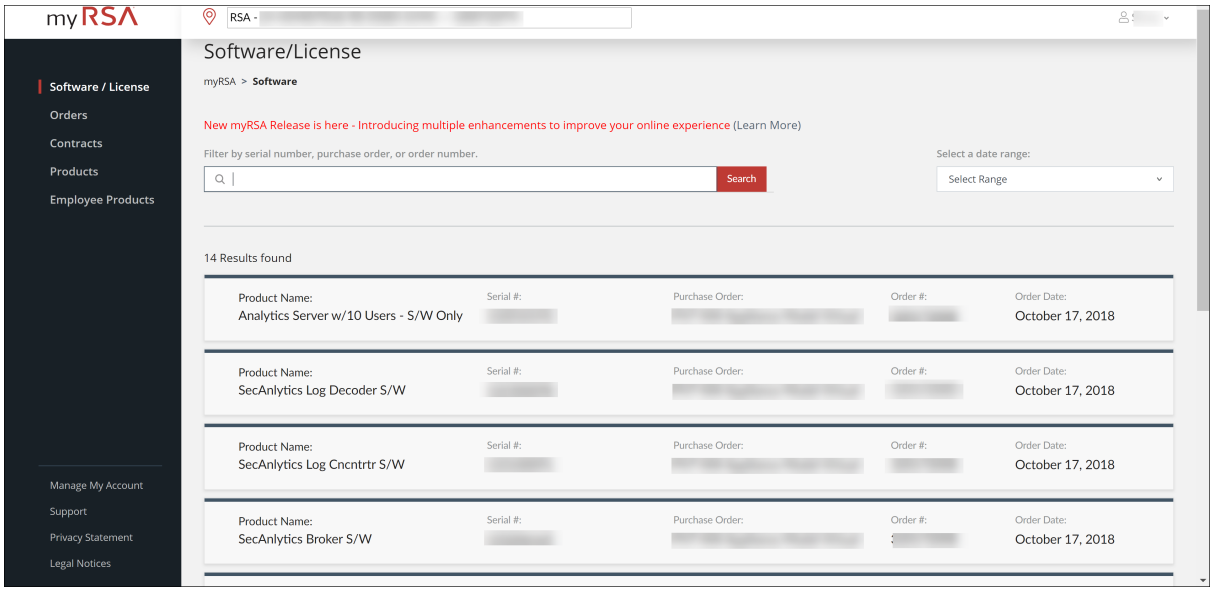
3. Click on **Product Description**.

   The License information page is displayed.

4. Click **Download** to download NetWitness Endpoint 4.4.0.x license.

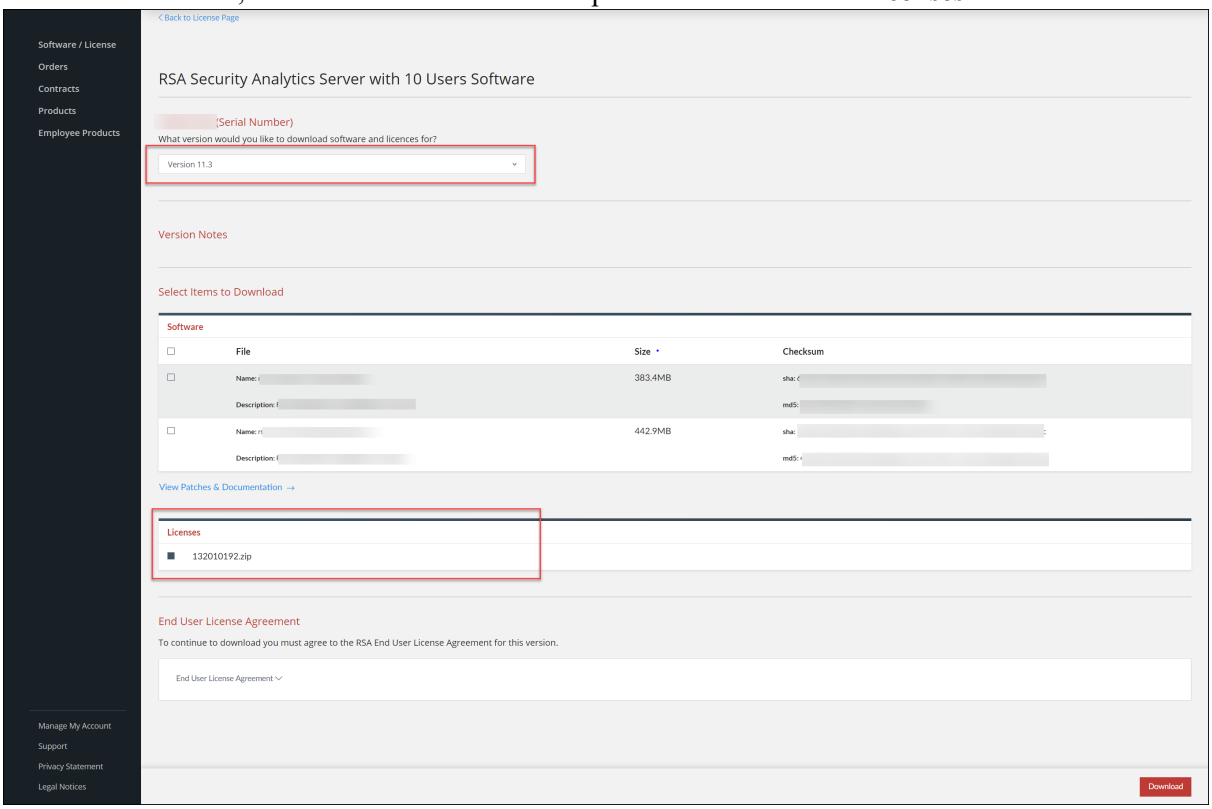
If you have an existing NetWitness Endpoint 4.4.0.x and do not have NetWitness Platform, then you must register to the license server. For more information. see Register the Server (Online Registration).

If you have an existing NetWitness Endpoint 4.4.0.x customer, and also NetWitness, then you can use the same license in NetWitness.



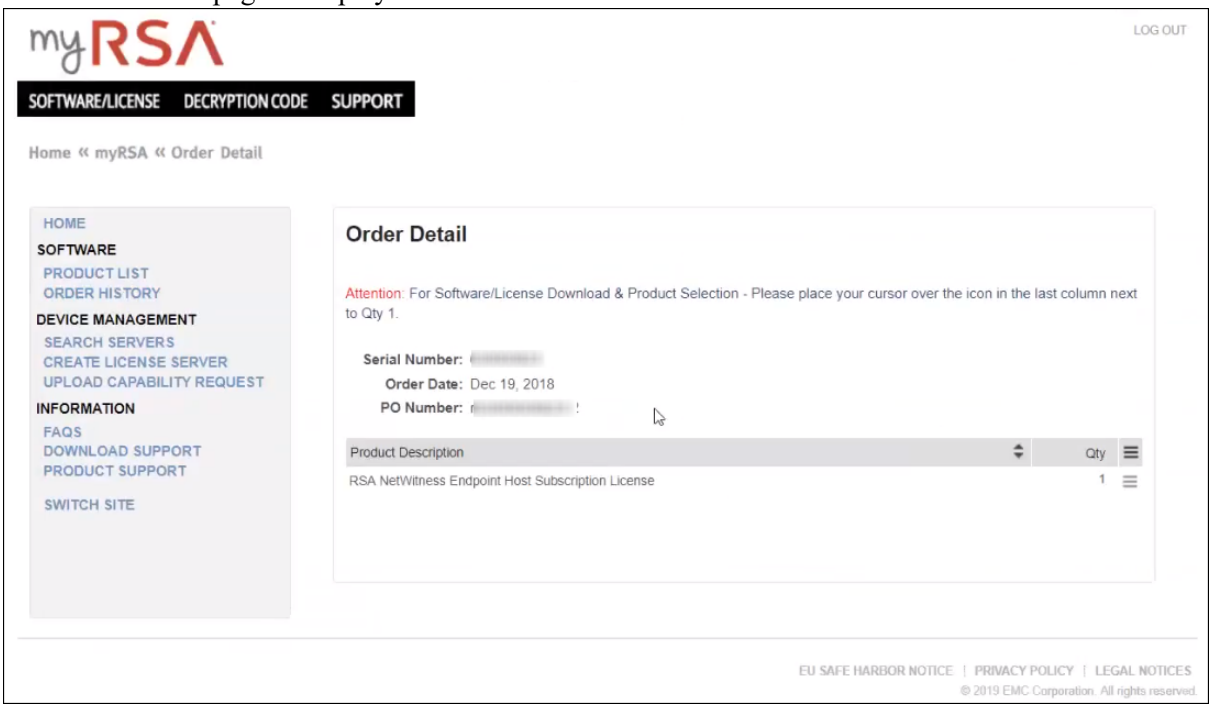
If you are new to NetWitness 11.6 , and have NetWitness Endpoint, then you can view the license only for the current version in NetWitness.

Register the Server (Online Registration)

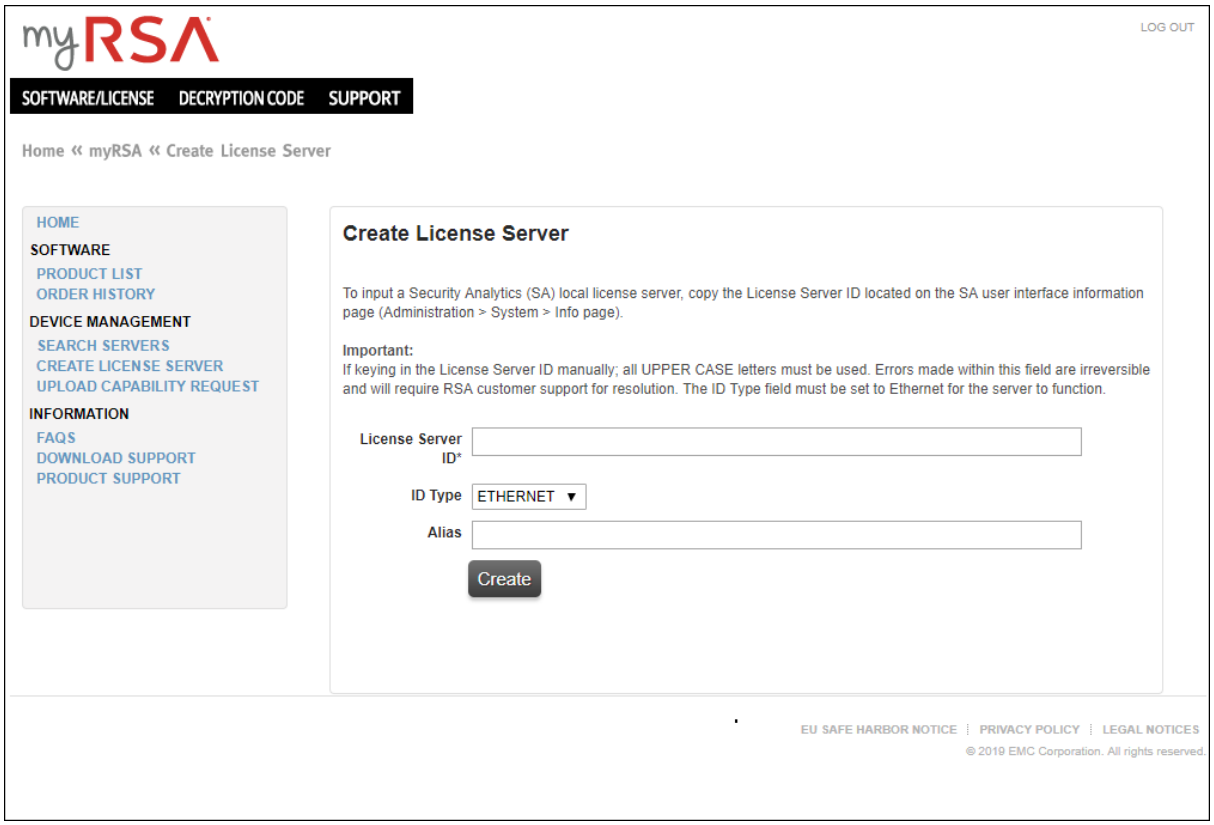


In the NetWitness entitlement process, you need to register the NetWitness Server and map the entitlements to the Local License Server (LLS). There are two methods of synchronizing NetWitness with myRSA: online and offline.

Note: By default NetWitness is configured to synchronize with myRSA at regular intervals hence manual synchronization is not required.

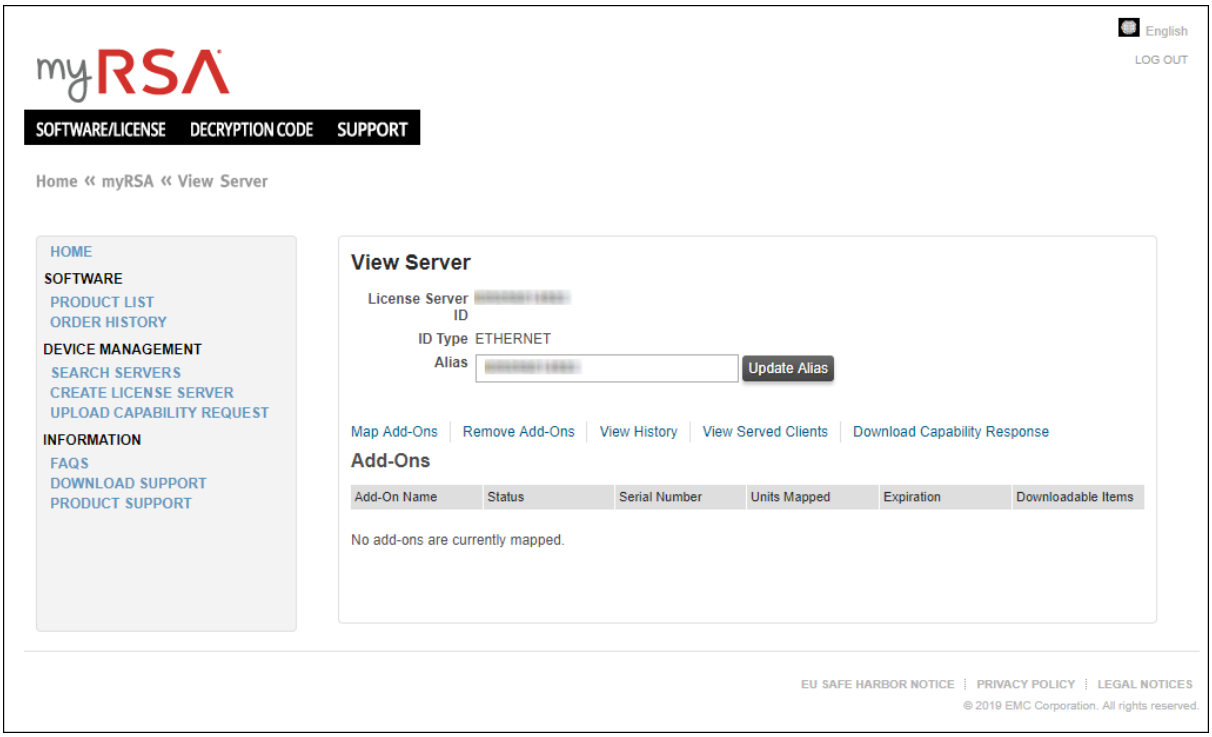


1. On the Sofware/License page, select the Order Location from the drop-down menu. The list of products, sales orders, and purchase orders are filtered and displayed.

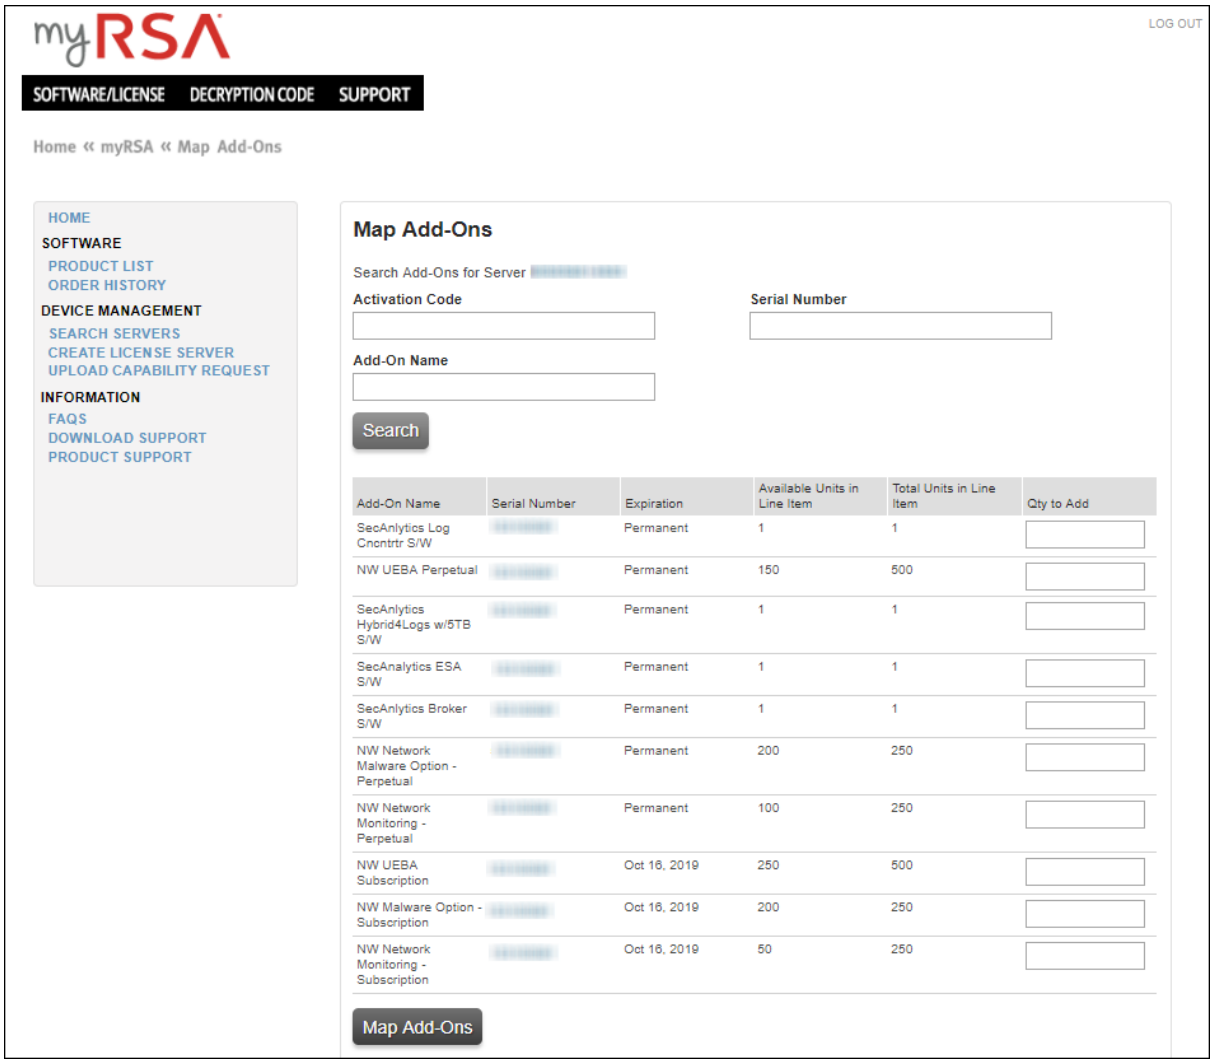


2. Click on a line item, select a version from the drop-down and select the **Licenses** checkbox.

3. Click **Download**.
The Order Detail page is displayed.



4. Click **Create License Server**.



5. Complete the following fields:
   - Copy or enter (in uppercase letters) the License Server ID in the License Server ID field.
   - In the **ID Type** drop-down, select **ETHERNET** (the default value).
   - In the **Type** drop-down, select **Ethernet** (the default value).
   - (Optional) In the **Alias** field, type an alias to your Appliance ID.
6. Click **Create**.

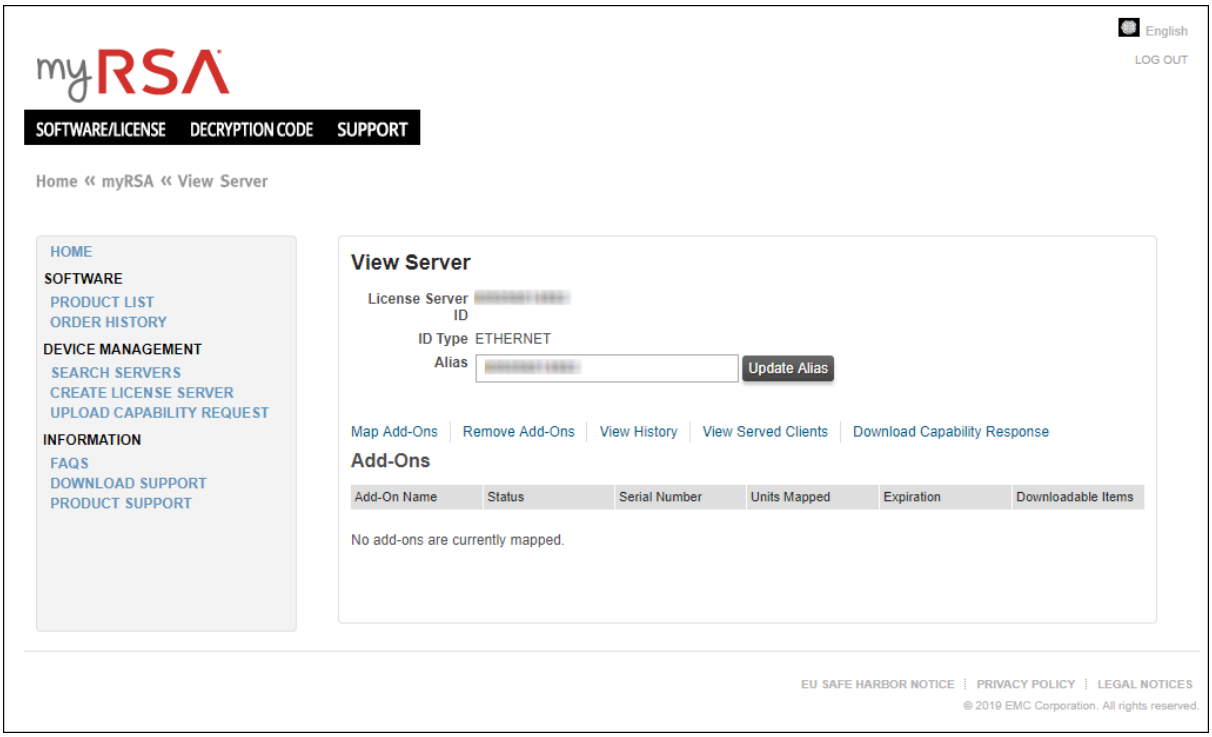
   The View Server page is displayed.

7. Click Map Add-Ons.

   The Map Add-Ons page is displayed.

8. After you have registered the license server and viewed the license details, you must map the entitlements. For more information, see Map Entitlements .

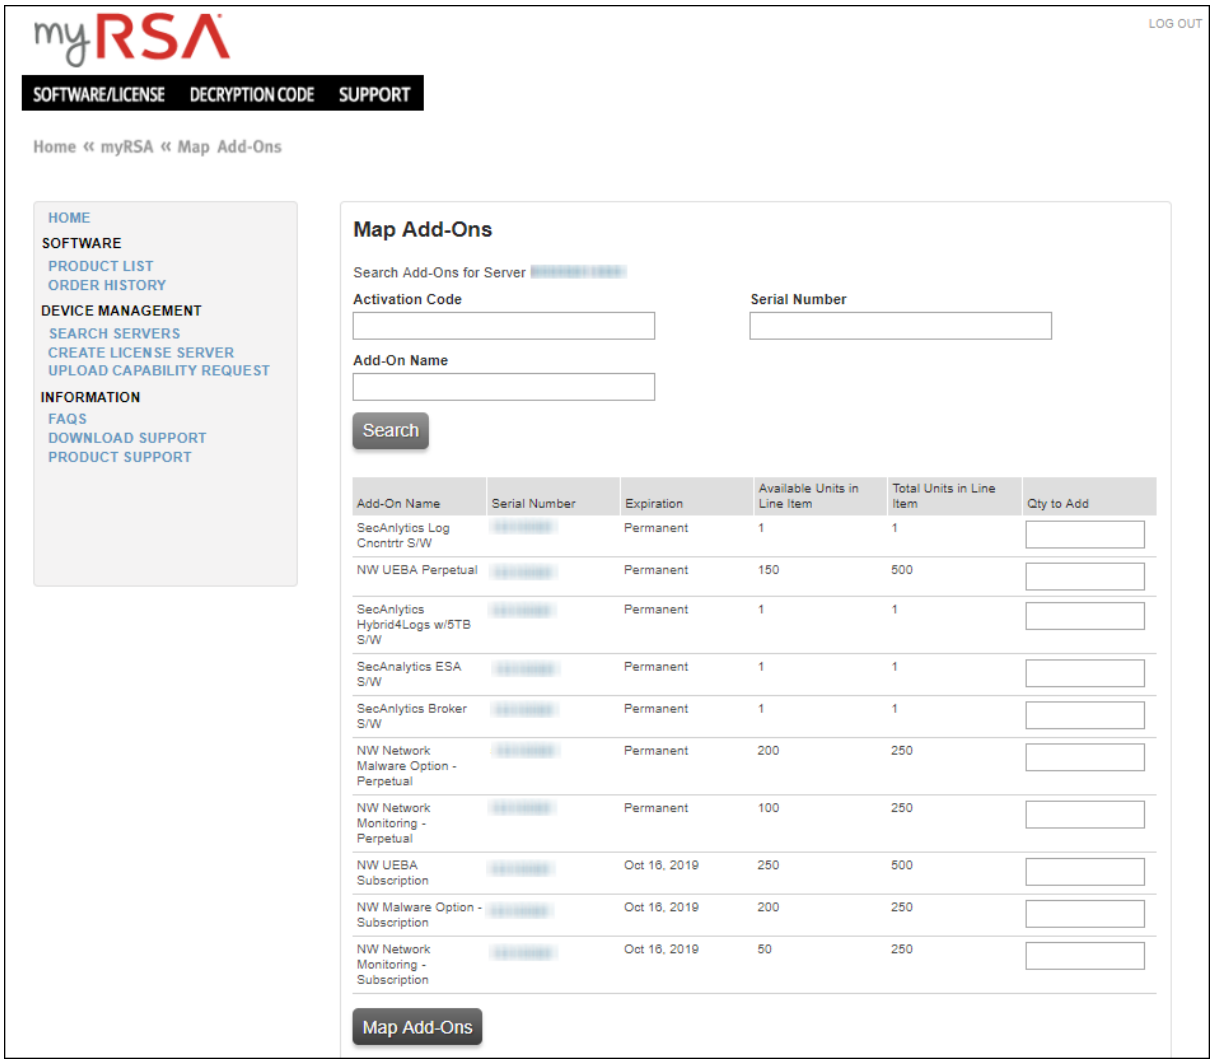
Note: By default NetWitness host is configured to synchronize with myRSA at regular intervals and also a designated nameserver (DNS). No action is required.



Note: In a multiple NetWitness deployment where the services are connected to both primary and secondary NetWitness hosts and the services are licensed only with the primary NetWitness, a license expiry message is shown for the same services on the secondary NetWitness. You can ignore the message and continue using the product.

Map Entitlements

Mapping entitlements involves choosing the quantity of available entitlements to pull to the NetWitness Server during synchronization.



To map appliance entitlements to the server:

1. Log in to myRSA.
2. Click on the **SEARCH SERVERS** and then click on the License Server ID to view the entitled Server Details.

3. Click **Map Add-Ons**s.

   The Map Add-Ons page is displayed.

The Add-On table lists all entitlements that are available for your account. The table has a row for each NetWitness product entitlement, with the following information:

- **Add-On Name**: The name of the entitlement; for example, SMC Concentrator or SMC Decoder.
- **Serial Number**: The serial number associated with a product.
- **Expiration**: For licenses that are not permanent, the expiration information is displayed. The value in this field is a specific date (for example, Oct 6, 2019) or a time range (for example, 90 days). If the value is a time range, the expiration period begins when the add-on is mapped to a server.
- **Available Units in Line Item**: The quantity of entitlements currently available for that license. This quantity is the difference between the Total Units and the entitlements that have been mapped to a NetWitness Server for licensing.
- **Total Units in Line Item**: The total quantity of entitlements tied to a specific license.
- **Quantity to Add**: The number of entitlements for a specific license.

4. To designate the quantity of entitlements to map to the NetWitness Server from a license, type a quantity in the **Units to Configure** column.
5. Click **Map Add-Ons**.

   The View Server page displays a message indicating that the entitlements were successfully mapped to the NetWitness Server.

   Entitlements are now dedicated and set aside from an accounts pool. The message **Waiting to add to appliance** is displayed in the **Status** for each entitlement. The entitlements are not yet synchronized with the server.
6. (Optional) If you want to add more entitlements, use the **Map Add-Ons** option.
7. (Optional) If you want to remove entitlements, use the **Remove Add-Ons** option.

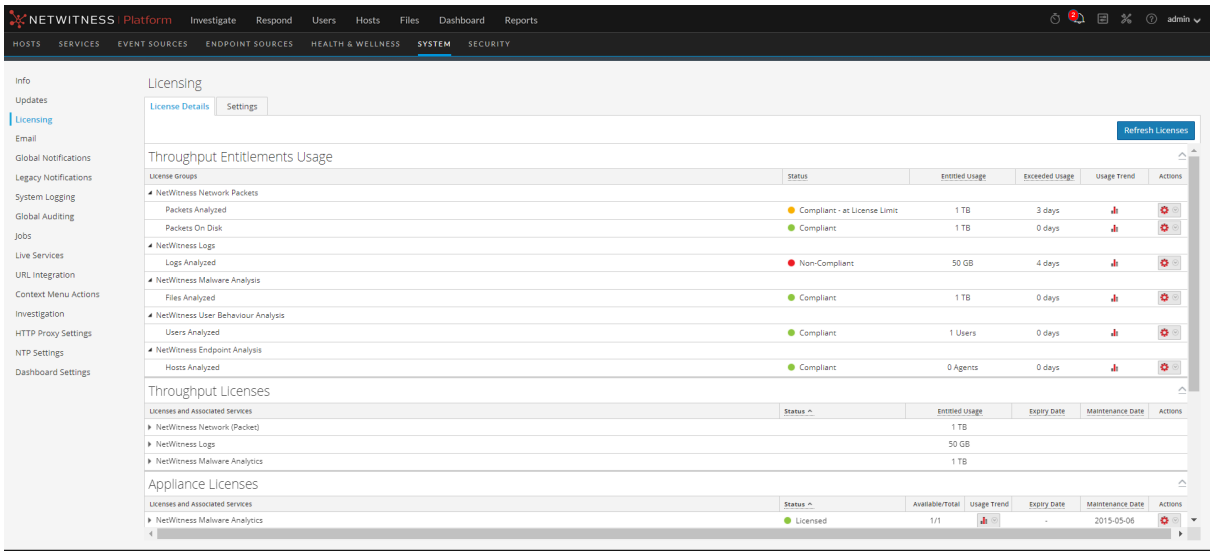
Now you can synchronize and pull down the mapped entitlements to the NetWitness Server

View Current Licenses

After you have completed the license process, you can view the current licensing status in the NetWitness UI.

Each NetWitness Server is a license server providing capabilities to entitle services connected to it. To make entitlements available for licensing services, the entitlements must be mapped to the Local License Server (LLS) on the NetWitness Server.

Note: If licensing a hybrid system, which has a Concentrator and Decoder on the same appliance, each component must be licensed separately.



View and Manage Licenses

In NetWitness, you can view and manage available licenses.

To view the licenses that are available on this instance of NetWitness:

1. Go to  **(Admin) > System.**
2. In the options panel, select **Licensing**.

   The **License Details** tab is displayed.

Each license is listed in the grid by license type. Information includes the status of the license indicated using color-coded circles and the related information.

Register the Server (Offline Capability Request)

NetWitness manages licensing through a Local License Server (LLS). Each client appliance is shipped with an installed LLS. This topic provides instructions for offline synchronization of the Local License Server (LLS) with the online repository. For more information on the functional description of the LLS, see Entitlement Capability Implementation.

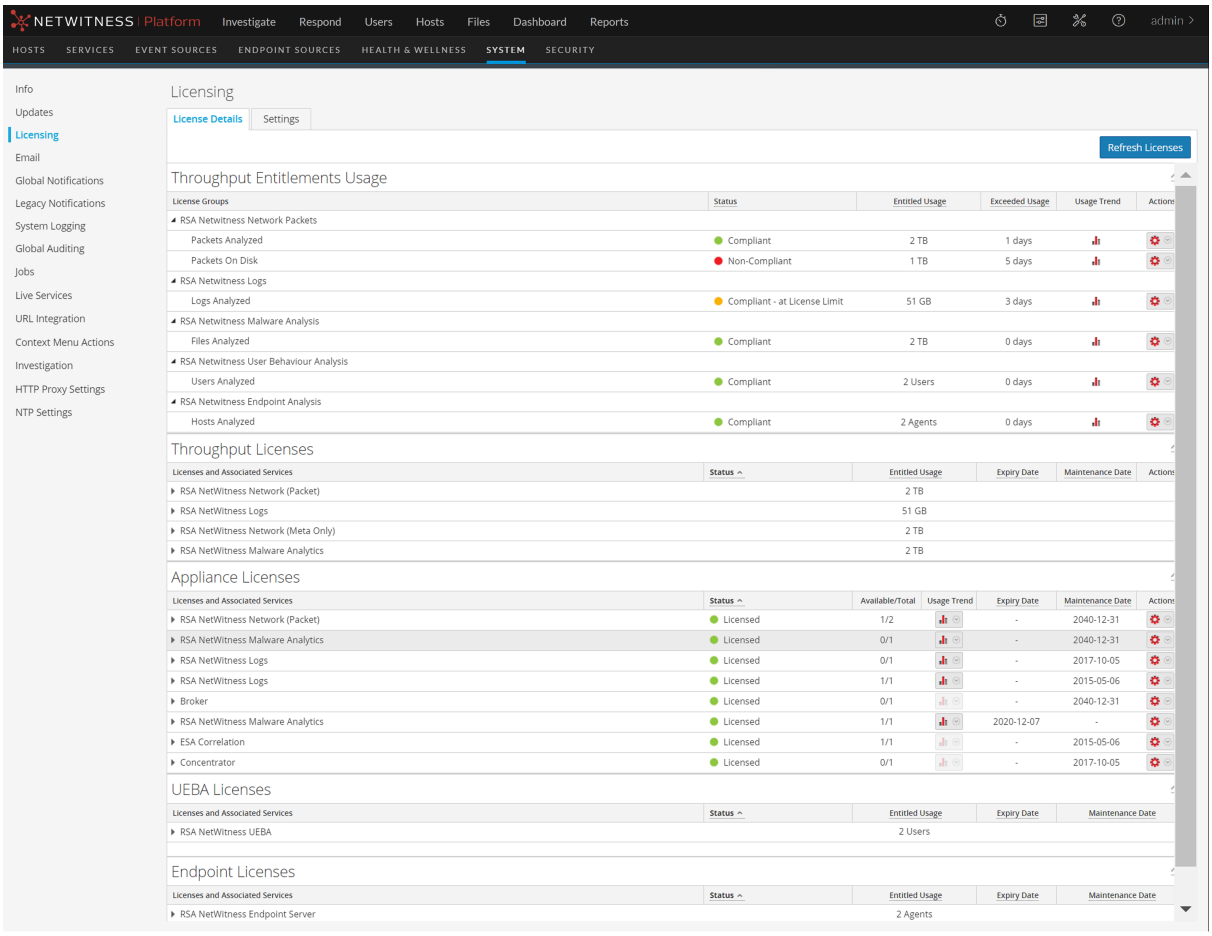
If you are unable to register the NetWitness Server online, you can download an offline capability request in NetWitness and upload that binary request to the myRSA Portal. If the NetWitness Server is not connected to the Internet, you can perform offline synchronization of entitlements through the View Server page in myRSA.

Prerequisites

Before implementing the NetWitness Platform entitlements capability offline, ensure the following

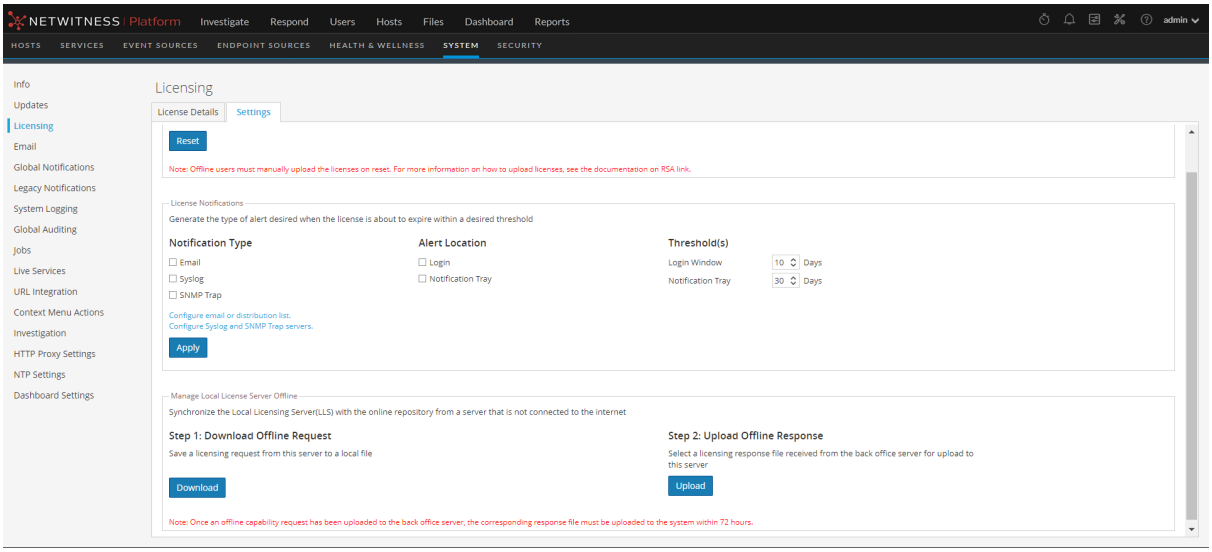
- The NetWitness Server is registered to myRSA (https://my.rsa.com/) and entitlements are mapped. Internet access is not required for offline synchronization.
- An Offline Capability Request has been downloaded from the NetWitness UI to be uploaded to myRSA.
- An Offline Response has been uploaded to NetWitness that was received from myRSA within 24 hours.

Here is a workflow that describes how to use the offline capability to acquire the licenses from myRSA and view them.



Download an Offline Request for Submission to myRSA

To register the server using an offline capability request:

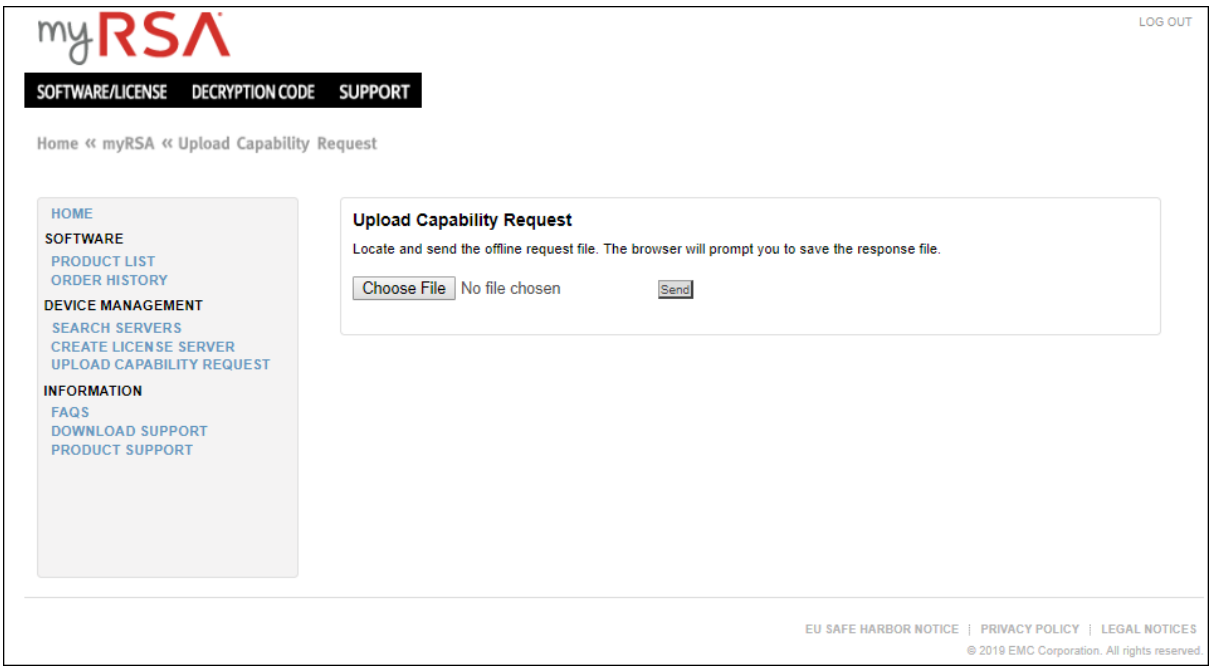


1. Go to  **(Admin) > System**.
2. Click **Licensing**.

   The License Details page is displayed.

3. Select the **Settings** tab.

   The Settings page is displayed.



4. In the **Step 1. Download Offline Request** panel, click **Download**.
   A file called **OfflineCapabilityRequest.bin** is downloaded to the local system.

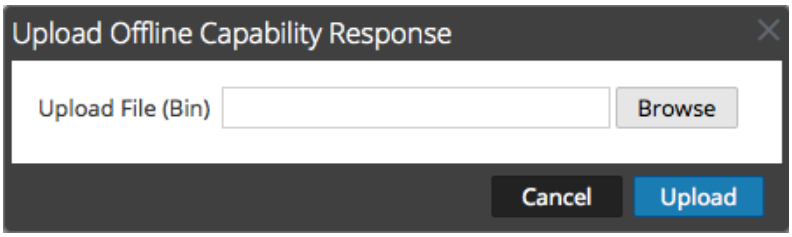
5. Login to the myRSA Portal at https://my.rsa.com/ with your user credentials.
6. Click on a service which needs to be licensed.

   Under **Device Management**, click **Upload Capability Request**.

   The **Upload Capability Request** dialog is displayed.

7. Click **Choose File** and browse the local file system to find the file downloaded from the NetWitness Server. Select **OfflineCapabilityRequest.bin**.

   The filename is displayed next to the **Choose File** button.



8. Click **Send**.
   The license data in a .bin file format is downloaded. The .bin file contains the data you entered as well as information about any entitlements that have been added to the NetWitness Server. If the server has just been added, there are no entries under **Add-Ons**. The server is registered and you can now map entitlements as described in the following sections.
9. After you download the .bin file from myRSA, login to NetWitness UI to upload the .bin file on the Settings page. For more information, see Upload an Offline Capability Response to NetWitness Platform.

Upload an Offline Capability Response to NetWitness Platform

If the NetWitness Server is not connected to the Internet, you can perform offline synchronization of entitlements through the View Server page in myRSA. To upload an offline capability response (**response.bin**) file saved to the local file system from myRSA:

1. Follow the steps 1 to 3 mentioned in the Download a Capability Request for Submission to myRSA procedure.
2. Login to the NetWitness user interface.
3. Go to **(Admin) > System** > **Licensing** > **Settings** tab.
4. In the **Upload Offline Response** section, click **Upload Response**.

   A dialog to upload the file is displayed.

5. Browse and select the **response.bin** file so that it is displayed in the Upload File (bin) field.
6. Click **Upload**.

   The entitlements are uploaded to NetWitness and the licenses added to the grid in the **Licensing Details** tab. They are available for licensing appliances.

   After you have uploaded the entitlements, you can verify the synchronization by performing any one of the following:

   - To view results in NetWitness, go to **(Admin) > System**>**Licensing** > **Licensing Details** tab. The individual product entitlements that have been pulled down to NetWitness are displayed in the **Available/Total** column.
   - Within the myRSA interface, you can see the status for entitlements changed to **In Sync**.

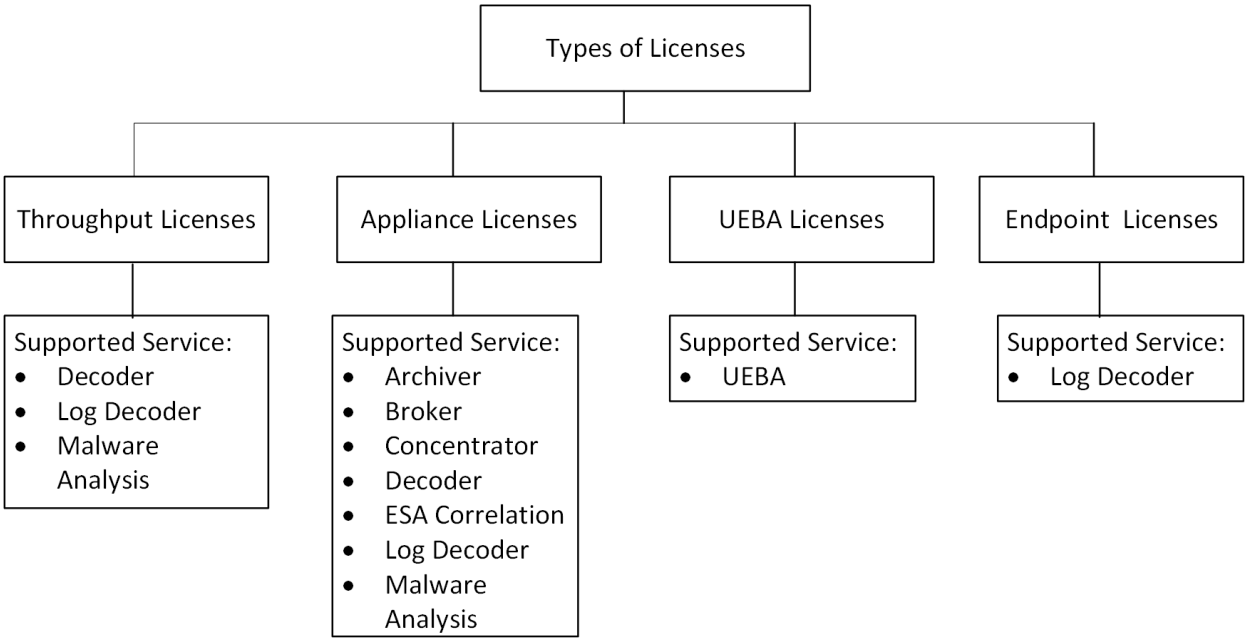
Refresh Licenses

When a new license is added, to map the view with the new license, click **Refresh Licenses.**

Refreshing your licenses performs the following behind-the-scenes tasks:

- Restarts the LLS server to ensure the latest licenses are pulled down from the central Flexera server.
- Associates any unlicensed service with a valid license (if available).
- Replaces expired or Out-of-the-Box license with valid licenses (if available).

License Types



After you have installed the NetWitness software and the required services, you need to acquire the relevant licenses for the each of the services or a group of services based on your requirements. NetWitnessentitlement uses a trust-based licensing model. Appliances continue to function as usual even when the license is out-of-compliance.

Choosing a License Type

The type of license you choose is based on your network requirements. The following types of licenses are available in RSA NetWitness:

- Throughput License
- Appliance License
- UEBA (User and Entity Behavior Analytics)
- Endpoint License

Here is a chart, followed by a description of each license type available for the NetWitness Platform products and services.

Throughput Licenses

Throughput license are based on the amount of data used per day for logs (SIEM), or network (packets) or malware.

The throughput per day is measured in Gigabytes per day for logs, and in Terabytes per day for packets. The total amount of throughput is selected based on the total amount of throughput per day that is being licensed across your entire enterprise deployment of NetWitness Platform. This license is measured as follows:

Service	Unit of Measurement	Increments	License Duration
Network Decoder	Terabytes (TB) per day	1 TB	Subscription or perpetual
Log Decoder	Gigabytes (GB) per day	50 GB	Subscription or perpetual
Malware	Terabytes (TB) per day of Files Analyzed by Malware Analysis	1 TB	Subscription or perpetual

Note: In version 11.5 and later, NetWitness Platform introduced Network Meta-Only license in addition to the Network Full Packet license.

Network Full Packet License captures, analyzes, and stores packet payloads and metadata and allows users to retain the packet payload for analysis or for session reconstruction. Network Full Packet License measures the bytes analyzed and the bytes written to the disk for Network Packets.

Network Meta-Only License captures and analyzes packet payloads and discards the packet payload data after analysis. Using this license, NetWitness Platform can be deployed in an environment where full packet capture is not required. This helps to optimally manage the storage space, and easily detect threats without the need to retain the full payload of the sessions. Network Meta-Only License measures the bytes analyzed for Network Packets and can be used with or without the Network Full Packet License.

When customers have both - Network Meta-Only License and Network Full Packet Licenses, the entitlement is aggregated and measured against the bytes analyzed for Network Packets. However, the entitlement for bytes written to disk for Network Packets will continue to be measured against the Network Full Packet Licenses. The following table is an example of how the license is used and analyzed.

Available Licenses	Network Full Packet License	Network Meta-Only License	Network Packet Bytes Analyzed	Network Packet Bytes Written to Disk
10TB of Network Full Packet	10TB	0TB	10TB	10TB
10TB of Network Meta-Only	0TB	10TB	10TB	0TB
10TB of Network Full Packet 5TB of Network Meta-Only	10TB	5TB	15TB	10TB
5TB of Network Full Packet 10TB of Network Meta-Only	5TB	10TB	15TB	5TB

For more information on the status of your license, usage and out of compliance licenses, see About Out-of-Compliance Banners.

Appliance Licenses

NetWitness Platform supports the Appliance license, which is applicable to all hosts that require a license. Other services do not require a license. Appliance licenses are measured as follows:

- Services are licensed automatically if you have a valid appliance based license for a specific service to be licensed.
- Appliance licenses can be purchased as a perpetual license that does not expire and will have a maintenance contract. If you purchase a subscription license, then it will expire if you do not renew the contract.

User and Entity Behavior Analytics Licenses

NetWitness Platform supports the User and Entity Behavior Analytics License (UEBA). This license is based on the number active of users.

NetWitness Platform supports the User and Entity Behavior Analytics License (UEBA). UEBA monitors the number of active users from the previous day and sends it to the licensing server. The entitlement is measured for logs and endpoint events for the number of active users and is checked against a user id. If a threshold is identified in a calendar month an appropriate banner is displayed. For more information on banners, see About Out-of-Compliance Banners.

Note: There is no change in the license for multiple UEBA servers, as the license is based on the number of users monitored by UEBA.

Endpoint Licenses

Endpoint license are entitled based on the number of active agents deployed.

There are two types of agents:

- **Advanced Agents**: The license for these agents is based on the number of advanced agents in your deployment. A 90-days trail license period is provided. After the 90-days trial period, a zero MB and zero Agent license is applied to the Log Decoder service and Endpoint service in the NetWitness Endpoint Log Hybrid. Once an Endpoint license is applied any Archivers, Brokers, Concentrators, and ESA are automatically licensed as a result. An usage exceeded banner is displayed when the license goes out-of-compliance in the following scenarios:

  a. If the number of active agents exceeds the number of licensed agents

  b. If the Endpoint Subscription is about to expire in near future or has already expired.

  For example, if you have purchased a license for 50,000 agents and if the number of agents exceeds more than 50,000, the banner is displayed.

  Or, if you have purchased a license for 50k agents but have mapped the entitlements for only 10k agents on myRSA, an out-of-compliance banner is displayed when your usage exceeds these 10k active agents.

- **Insights Agents** - There is no license required for these agents if they are used to collect only endpoint data.
- **Log Collection with Endpoint Agents** - All Endpoint agents (Advanced or Insights) can forward Windows Log data only to a licensed Log Decoder (or Hybrid). Windows Logs sent to a licensed Log Decoder (or Hybrid) will count against either the applied Throughput or Appliance license. Logs may be retained in the NetWitness Endpoint Log Hybrid as long as a Log (SIEM) Throughput license with available capacity is available. In either case, a license for Logs is required, irrespective of the Insights or Advanced agent.

NetWitness Endpoint **4.4.0.x License**

If you have a **NetWitness Endpoint** 4.4.0.x license, you can use the same amount of license on NetWitness 11.6. For example, if you have purchased a 50,000 license for NetWitness Endpoint 4.4.0.x, you will get a 50,000 license on NetWitness Endpoint 4.4.0.x as well as on NetWitness 11.6. For more information on how to get a license for **NetWitness Endpoint 4.4.0.x**, see License for NetWitness Endpoint 4.4.0.x Agents.

Out-of-the-Box Trial License

NetWitness Platform comes with an OOTB 90-days trial license.

For Endpoint metered license, you will be provided with 0MB Log Decoder license. The 0MB license from the Log Decoder will be utilized after the 90-days trial period is complete. If you are still within the 90-days trial period and if you have an Endpoint Metered license, then the Log Decoder uses the remaining trial license. The Log Decoder will apply the 0MB license only after the trial license completed.

Configure License Support For Multiple NetWitness Servers

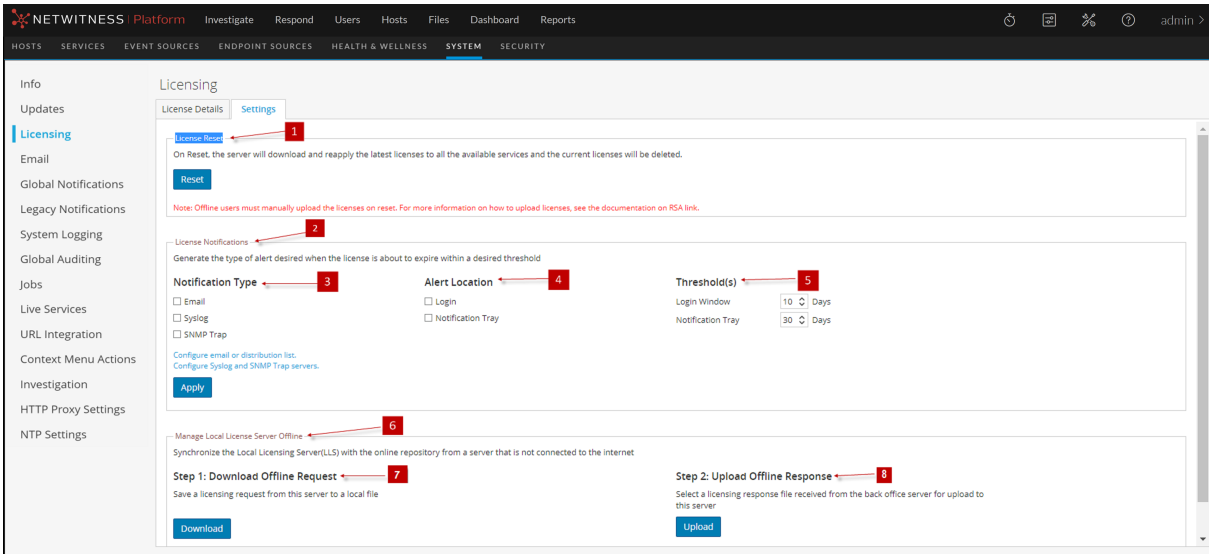
If you have multiple NetWitness servers deployed in your environment, and require license support, you must configure multiple Mac addresses.

To configure online:

1. Log in to the NetWitness Server console.
2. Navigate to /opt/netwitness/flexnetls.
3. Edit the local-configuration.yaml file and add the mac address of the back up or secondary host.
   For example, `backup-hostid: 685B3596A5F3` or `backup-hostid: "685B3596A5F3:785B3596A5F3"`.
4. Restart `systemctl restart flexnetls-RSALM`.
5. Obtain the instance details from `wget http://localhost:3333/api/1.0/instances` and set the `"failOverRole"` to `MAIN` to verify the failover.
   For example, `"failOverRole" : "MAIN"`.

To configure offline:

1. Perform the step 1 to step 6 from the online procedure .
2. Download the capability request from NetWitness UI.
3. Upload the request to FNO (myRSA).
4. Upload the response from FNO (myRSA) to the NetWitness UI.



Configure License Notifications

This topic provides instructions for configuring notification settings for the Local License Server (LLS). If you wish to receive alerts about the approaching license expiration date, you can configure NetWitness to send notifications. You can receive notification by email, syslog and SNMP. You can also view the notification during system log on and in the Notification Tray. You can also specify the number of days before expiration as a threshold for notification.

Note: In the Analyst UI, the license notifications will not be displayed in the notification tray or login window when the license goes out of compliance or when the license expires. This is displayed only on the Admin UI.

To configure the notification:

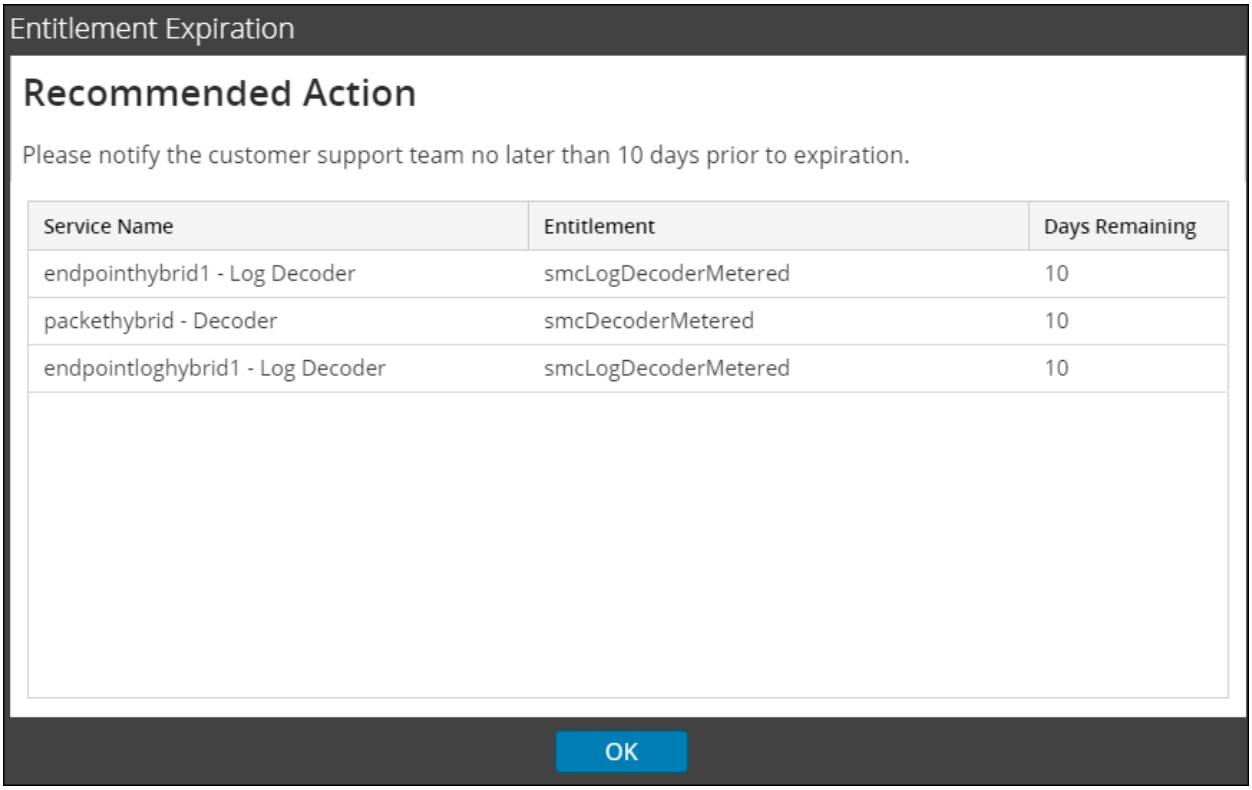
1. Go to  **(Admin) > System**.
2. Select **Licensing**.
3. Select the **Settings** tab.

4. Select each of the methods for NetWitness to use when sending a notification about the license status.
   a. To receive a notification at log on, select **Login** and specify the number of days before the license expires that you want to receive notification in the **Login Window Threshold** field.
   b. To receive a notification in the Notifications tray, select **Notification Tray** and specify the number of days before the license expires that you want to receive notification in the **Notification Tray Threshold** field.
   c. To receive an Email notification to a configured distribution list, select **Email** and select **Configure email or distribution list**. The Email panel is displayed in a separate tab, and you can

configure notifications in the Email Server Settings section. Refer to the *System Configuration Guide* for further details.

d. To receive syslog notifications, select **Syslog** and click **Configure Syslog and SNMP Trap servers**. The System Auditing panel opens in another tab and you can configure the system settings.

e. To receive notifications through SNMP Trap, select **SNMP Trap** and select **Configure Syslog and SNMP Trap servers.** The System Auditing panel opens in another tab and you can configure the SNMP auditing settings.



5. Click **Apply Notifications**.
   The settings are saved and go into effect immediately.

About Out-of-Compliance Banners

Banners let you know the status of your license and usage compliance.

Note: To help customers transition seamlessly to Throughput license for their network (packet) usage, NetWitness Platform provides a 45 days grace period. So, on upgrading to 11.6, you will not see the Out-of-Compliance notification or banner for 45 days from the day of upgrade for any network license usage. If you upgrade from 11.5.1 or later to 11.6, the available balance of the unused grace period will be applicable after the upgrade. For example
• If the grace period of 20 of the 45 days is used post upgrade to 11.5.1 or later then customers upgrading to 11.6 will get the remaining 25 days of the grace period.
• If the grace period of 45 days is used post upgrade to 11.5.1 or later the customers upgrading to 11.6 will not have any grace period left.

When a license for a specific service is about to expire, an **Entitlement Expiration** message is displayed with the list of services about to expire.

After you log on, either a red or yellow banner may be displayed, based on the license issue:

- A red banner is displayed if your license has expired, or exceeded the allotted usage, or if the license has internal errors.

Note: A red banner cannot be dismissed and the license issue must be resolved.

- A yellow banner is displayed if the license is approaching expiration or the license is nearing the allotted usage. The banner can be dismissed by clicking the **Reject** button.

Here is an of example of how the license usage is calculated and a way that you can resolve the license issues:

- Contracted daily usage can be exceeded three times in a calendar month. The fourth spike puts the system in an out-of-compliance state. If you are able to keep your usage within compliance for seven consecutive days until the end of calendar month, the Out-of-Compliance Red banner disappears.
- For example, if the fourth spike occurs on November 23, 2019, the Grace Period ends on December 31, 2019 and the Out-of-Compliance Red banner disappears.
- The breach period starts immediately after Grace Period ends. However, if your deployment is in a breach state, you can bring the state back to normal by keeping the usage in a compliant state for seven consecutive days.

Note: Even when the Red banner is displayed, there is no loss of functionality, all NetWitness appliances continue to work with full functionality. All other functionality is included in the license (ESA, storage, and so on).

Troubleshoot Licensing

This topic provides information about possible issues that NetWitness users may encounter when setting up licensing in NetWitness. You can look up explanations of issues and their solutions. NetWitness notifies users of issues using the popup notifications and the system log as described in the "Troubleshoot NetWitness" topic in the *System Maintenance Guide*.

Out-of-Compliance Banners

Problem	Possible Causes	Solutions
Yellow and Red Out-of-Compliance Banners	• A service is not licensed. • A license has expired, or is due to expire within the next two weeks. • Usage exceeds entitled limit. • Usage is approaching entitled limit.	• Contact Customer Support to buy or renew your license. • Reduce usage or • Adjust contracted usage amount

Common Log and Configuration Files

When troubleshooting licensing, the following files contain information that may help to diagnose the problem. Specific conditions for searching the files are described in the troubleshooting tables.

On the NetWitness Server, run `wget` for the following files after you ssh onto the NetWitness Server:

- `http://localhost:3333/api/1.0/features`
- `http://localhost:3333/api/1.0/instances`
- `http://localhost:3333//api/1.0/hostids`
- `http://localhost:3333/api/1.0/capability_request`

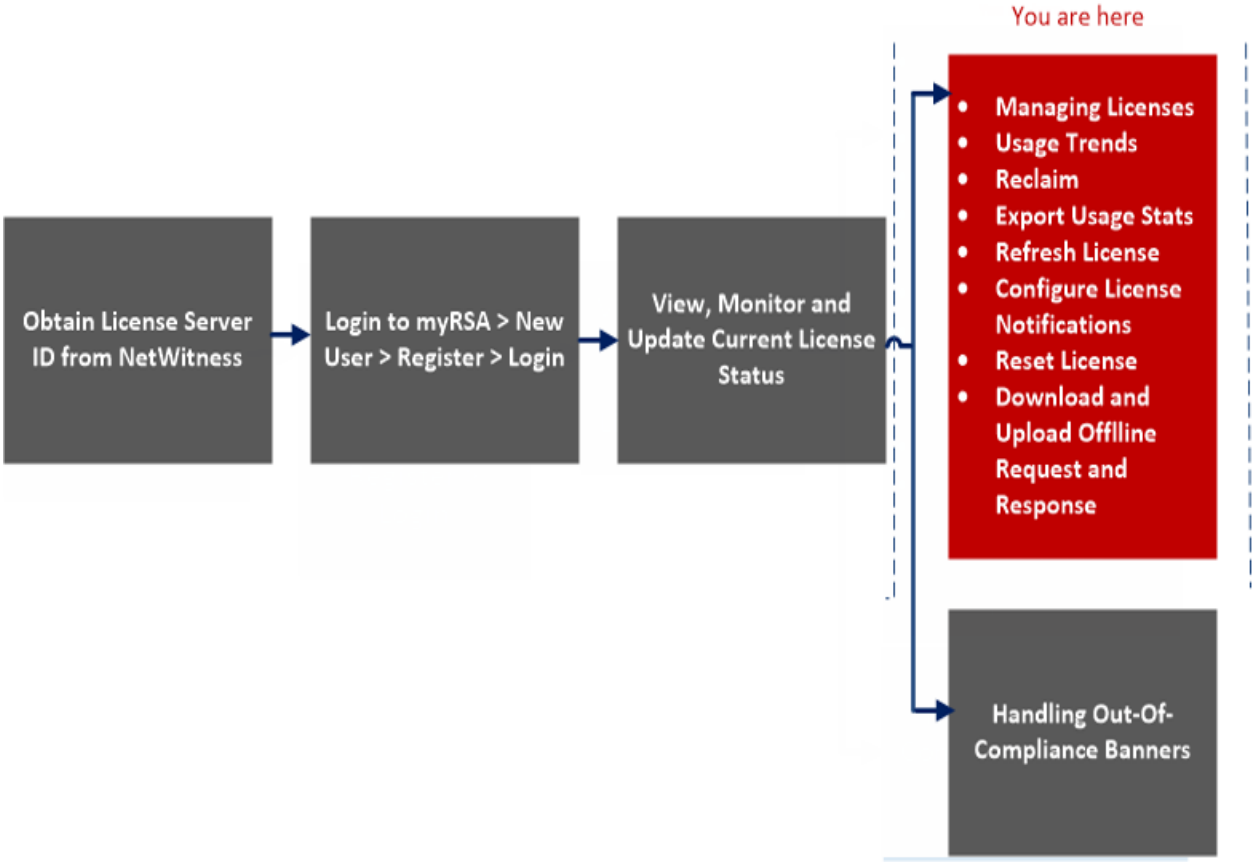
NetWitness Server Problems

This table lists possible problems with the NetWitness Server errors that can affect entitlements.

Problem	Possible Causes	Solutions
Some features have been mapped in the central Flexera server, but the NetWitness Server does not display them.	Ensure that the NetWitness Server is connected to the Internet.	To resolve the error execute a License Refresh as follows: 1. GSo to **(Admin) > Services > Licensing.** 2. In the License Details tab, click **Refresh Licenses**. **Note:** If the NetWitness Server is not connected to the Internet, try to synchronize offline. For more information, see Register the Server (Offline Capability Request)
NetWitness Platform Licensing page not showing any license information although there are services available.	Ensure that you have the required entitlements pulled down from the Central Flexera server.	To resolve the error execute a License Refresh as follows: 1. Go to **(Admin) > Services > Licensing**. 2. In the License Details tab, click **Refresh Licenses**.

Wrong License Mapping Issue

Problem	Possible Causes	Solution
Decoder license not available due to core appliances being removed from the NetWitness Server without releasing the license. Several core appliance licenses were not available for use.	Various possible causes.	Reset the license on NetWitness Server.



Problem	Possible Causes	Solution
Archiver DACs are not mapped to the license server with all other appliances' licenses.	Various possible causes.	1. Enter **1** in Quantity field to add for each license. 2. Select **Map Add-ons** at the bottom of the screen. 3. Click **Download Capability Request** and upload license to the Offline Capability Request in the User Interface under the **License** tab.
Two new appliances were installed: one Log Hybrid and one Log Archiver. Able to license the Log Hybrid, but the following error occurred when attempting to license the Archiver: "There is an issue with registering your product, please contact RSA Customer Support." Also, one of the Concentrators showed as a Trial license, and a separate Log Decoder showed as a Trial license when they should be licensed.	The new entitlements are not mapped to the license server.	Map add-ons to myRSA and upload the `.bin` file into the NetWitness User Interface.

License Details

This topic introduces the features of the System Licensing panel. NetWitness manages licensing through a Local License Server (LLS). Each client appliance is shipped with an installed LLS.

Workflow

This workflow shows the end-to-end licensing process.

What do you want to do?

Role	I want to...	Show me how...

Related Topics

- Settings
- View and Export Usage Stats

Note: On initial start up, the usage shown in the Licensing page displays zero usage for the initial one hour.

Quick Look

The following table describes the features of the License Details tab.

1 **Refresh Licenses**:Refreshes and maps the new licenses.

2 Displays the following details of the Throughput license or licenses.

- **License and Associated Service** - Displays the license and the services assigned to it.
- **Status** - Displays the status of the license such as Expired License, Over Usage Limit, Near Usage Limit, and Within Usage limit.
- **Entitled Usage** - Displays the entitled usage for aggregate as well as individual services .
- **Exceeded Usage** - Displays the number of days the usage exceeded the entitled usage in the last 30 days for each individual service.
- **Usage Trend** - Displays the trend of how the license usage has been for a period of time for aggregate as well as individual services.
- **Expiry Date** - Displays the expiry date of the customer subscription contract.
- **Maintenance Date** - Displays the maintenance expiration date for the permanent license or licenses and the date on which the license or licenses expire.
- **Actions** - Displays the Licensing Actions button that offers the following options:
  - **Export Usage Stats**: Exports license usage statistics for the selected service or license.
  - **Reassign to Another License**: Reassigns an extensively used Throughput license to another unused Throughput license. This is applicable only for Throughput and Appliance license.

3 Displays the following details of the Appliance license or licenses.

- **License and Associated Service** - Displays the license and the services assigned to it.
- **Status** - Displays the status of the license such as Expired License, Over Usage Limit, Near Usage Limit, and Within Usage limit.
- **Available/Total** - Displays the number of available license and the total number of licenses.
- **Usage Trend** - Displays the trend of how the license usage has been for a period of time for aggregate as well as individual services
- **Expiry Date** - Displays the renewal date of the customer subscription contract.
- **Maintenance Date** - Displays the maintenance expiration date for the permanent license or licenses and the date on which the license or licenses expire.
- **Actions** - Displays the Licensing Actions button that offers the following options:
  - **Export Usage Stats**: Exports license usage statistics for the selected service or license.
  - **Reassign to Another License**: Move the license from Appliance to Throughput license.
  - **Reclaim**: This option gets activated when any appliance service is down. When you click **Reclaim** the license becomes available in the pool of the specific license service. This is applicable only for Appliance license.

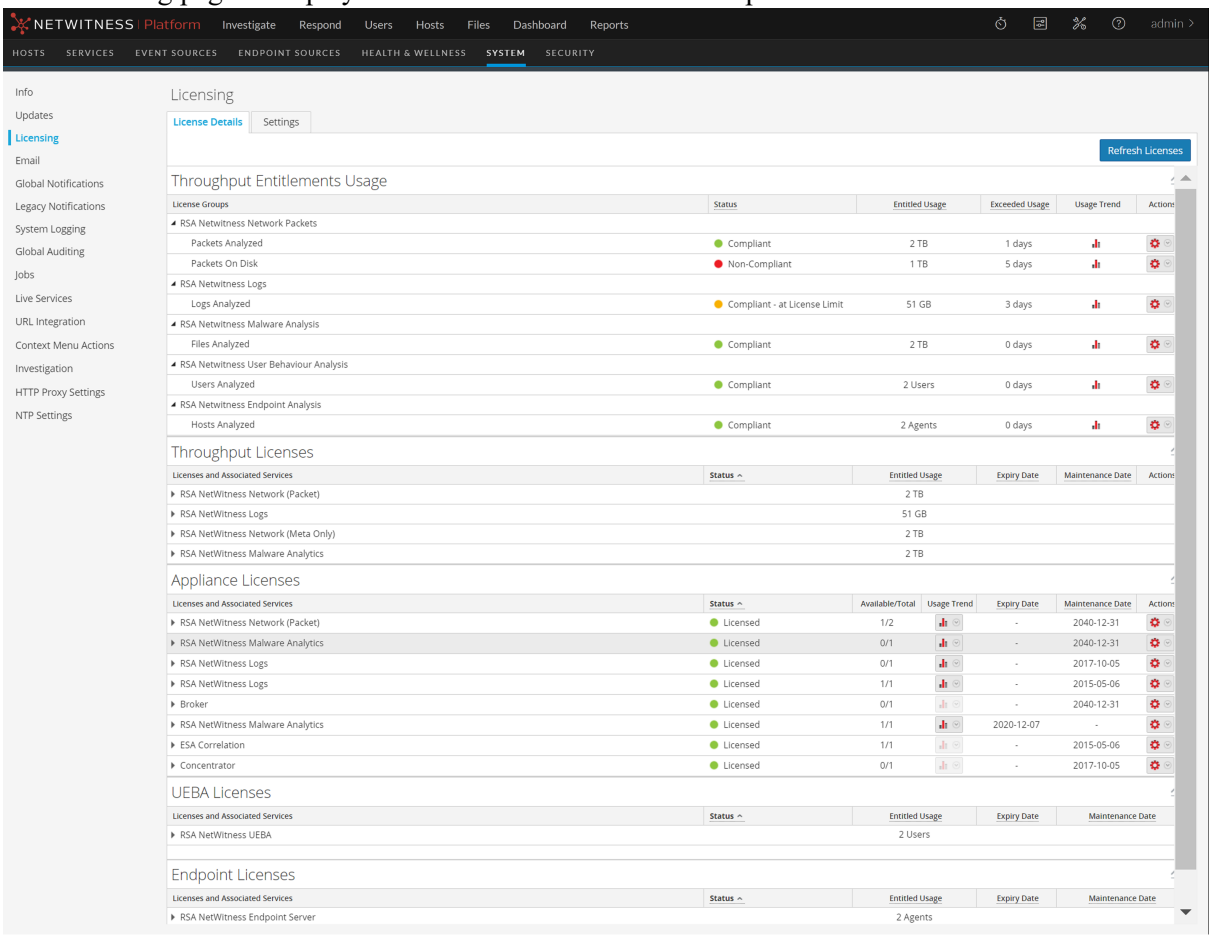
4 Displays the following details of UEBA license or licenses.

- **License and Associated Service** - Displays the license and the services assigned to it.
- **Status** - Displays the status of the license such as Expired License, Over Usage Limit, Near

Usage Limit, and Within Usage limit.

- **Entitled Usage** - Displays the number of entitled users.
- **Actual Usage** - Displays the daily active users.
- **Exceeded Usage** - Displays the number of days the usage exceeded the entitled usage in the last 30 days for each individual service.
- **Usage Trend** - Displays the trend of how the license usage has been for a period of time for aggregate as well as individual services
- **Expiry Date** - Displays the renewal date of the customer subscription contract.
- **Maintenance Date** - Displays the maintenance expiration date for the permanent license or licenses and the date on which the license or licenses expire.
- **Actions** - Displays the Licensing Actions button that offers the following options:
  - **Sort Ascending**
  - **Sort Descending**

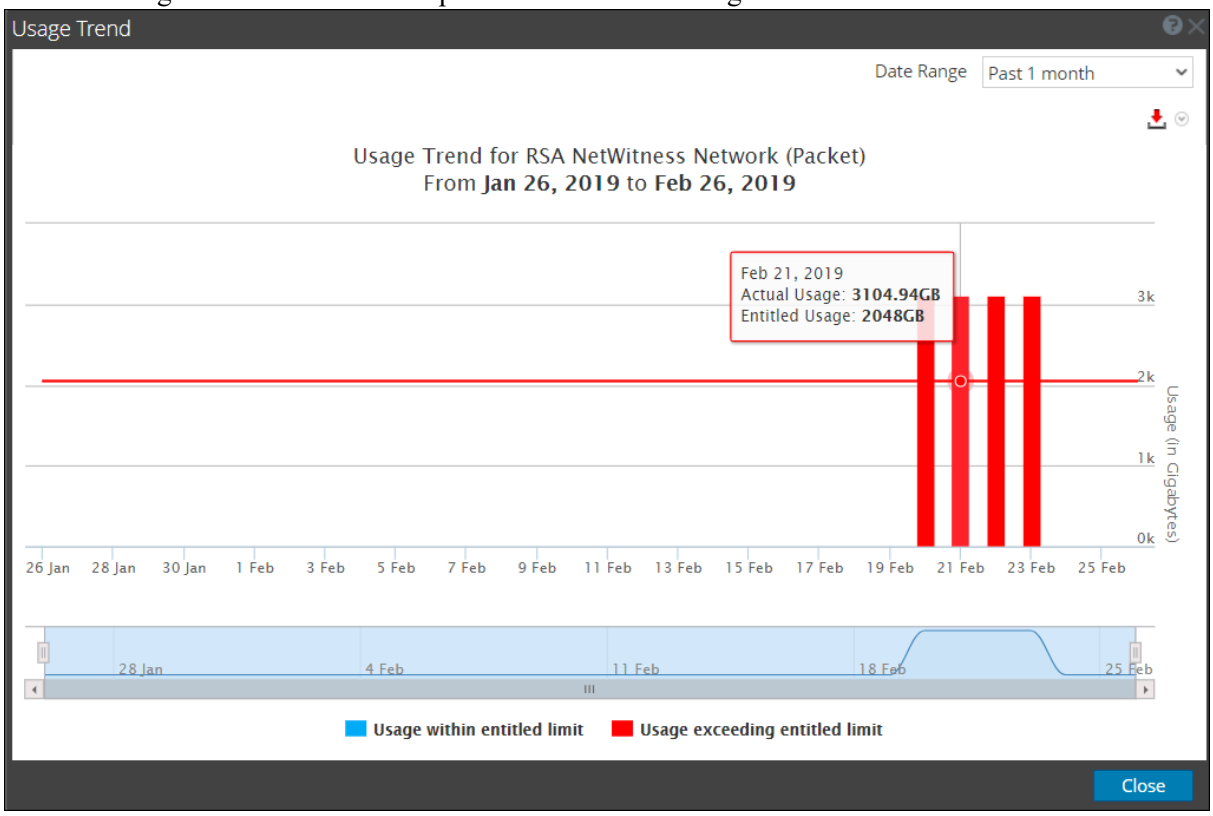
5 Displays the following details of Endpoint license or licenses.



- **License and Associated Service** - Displays the license and the services assigned to it. For example, Endpoint Hybrid or Endpoint Log Hybrid.
- **Status** - Displays the status of the license such as Expired License, Over Usage Limit, Near Usage Limit, and Within Usage limit.
- **Entitled Usage** - Displays the users of the entitled agents .
- **Actual Usage** - Displays the number of daily active agents .
- **Exceeded Usage** - Displays the number of days on which the actual number of agents exceeded the entitled threshold.
- **Usage Trend** - Displays the trend of how the license usage has been for a period of time.
- **Expiry Date** - Displays the renewal date of the customer subscription contract.
- **Maintenance Date** - Displays the maintenance expiration date for the permanent license or licenses and the date on which the license or licenses expire.
- **Actions** - Displays the Licensing Actions button that offers the following options:
  - **Sort Ascending**
  - **Sort Descending**

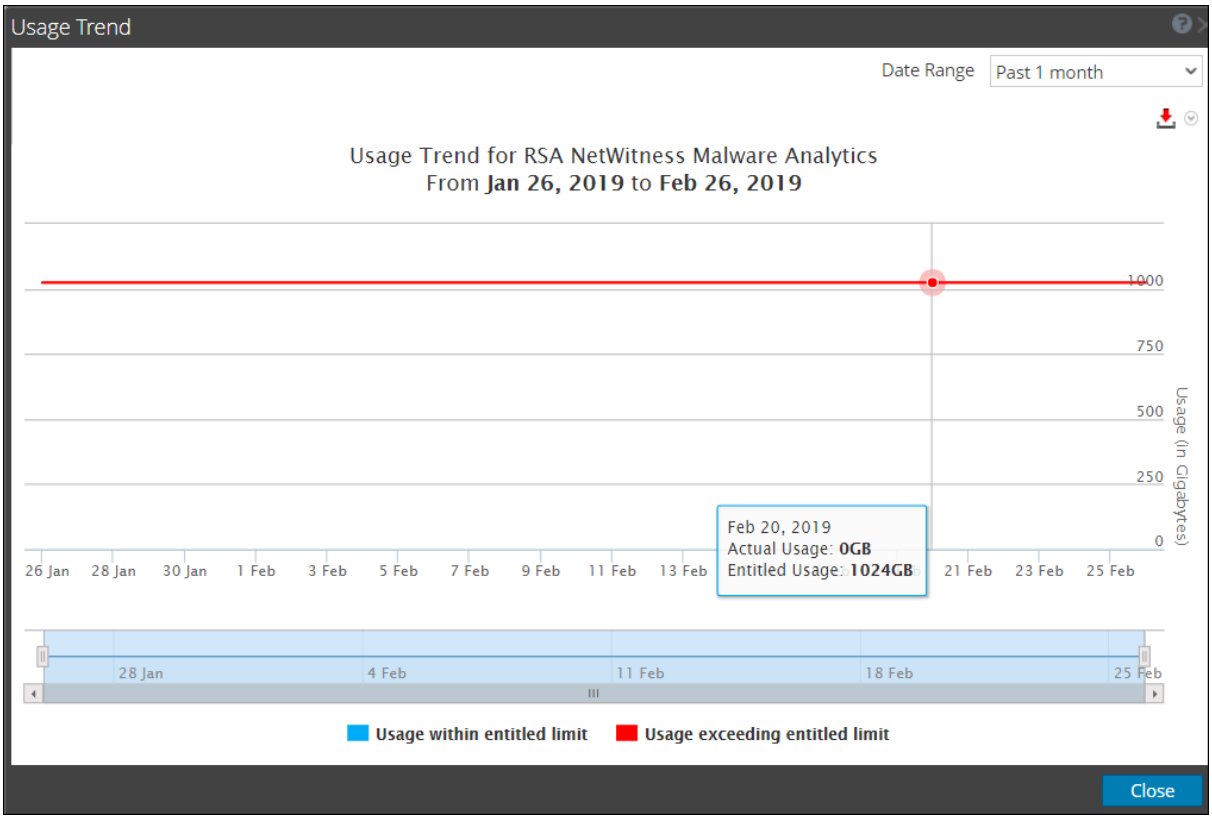
Usage Trends

You can view the usage trend for aggregate licenses as well as individual licenses. The data is displayed for each day. When you click the usage trend icon, it opens a new window and displays the usage data as a chart. The user can use this data to analyze the license usage in the deployment.

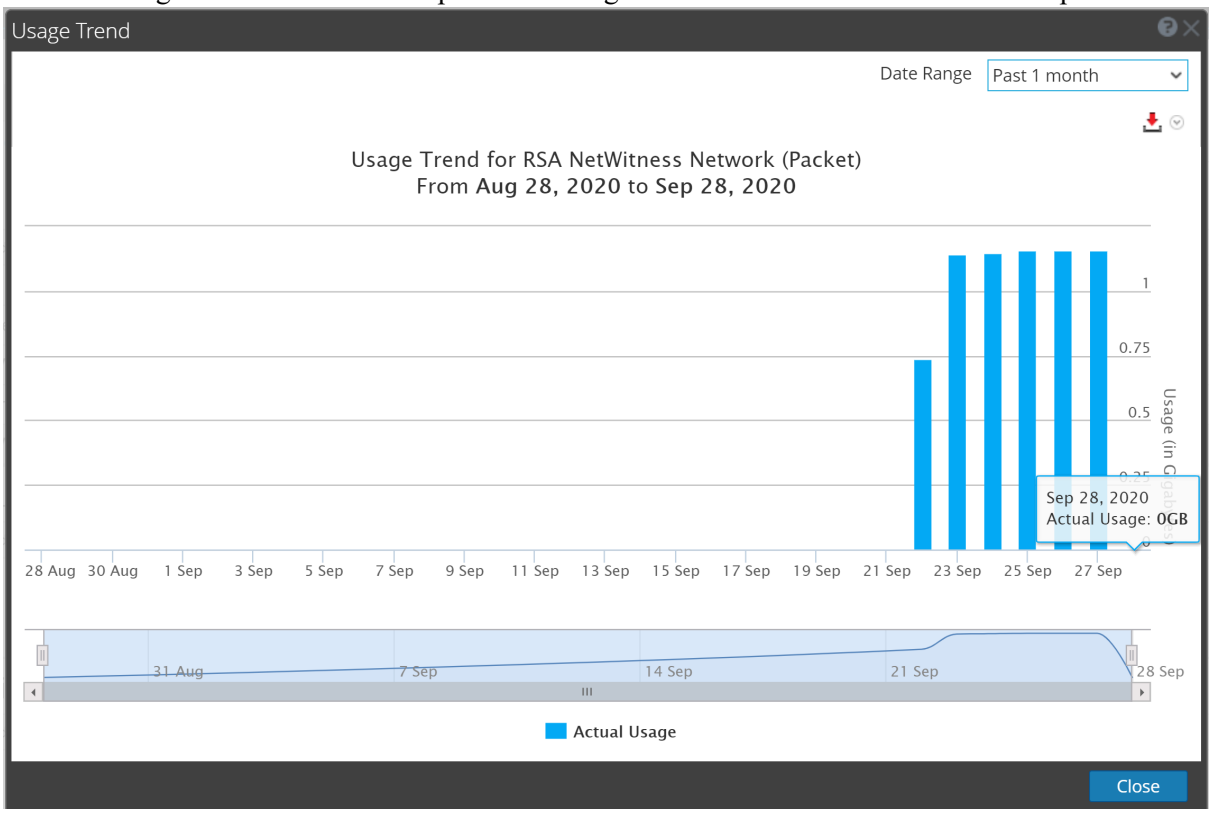


To access this view:

1. Go  (Admin) > **System** and select **Licensing**.
   The Licensing page is displayed with the License Details tab opens.



2. Select a service or license and click the  icon under the Usage Trend column.
   The Usage Trend window is displayed.



The following screenshot is an example of the Exceeded Usage Trend.

The following screenshot is an example of Within Limits Exceeded Usage Trend.

Usage exceeding entitled limit
Close

The following screenshot is an example of the Usage Trend chart for a license with multiple services.

The threshold limit is indicated as a horizontal red-dotted line across the chart. When actual data usage exceeds the entitled daily usage, those days are indicated by red colored bars.
The chart can be generated to collect data for 1 month, 3 months, 6 months, 12 months or custom date range.

These charts can be exported in CSV, and PDF formats by clicking the icon.

Note: The maximum range for which trend can be viewed is 12 months. The pan-zoom bar at the bottom of the chart can be used to narrow the chart to a smaller time range for better visibility in that range.

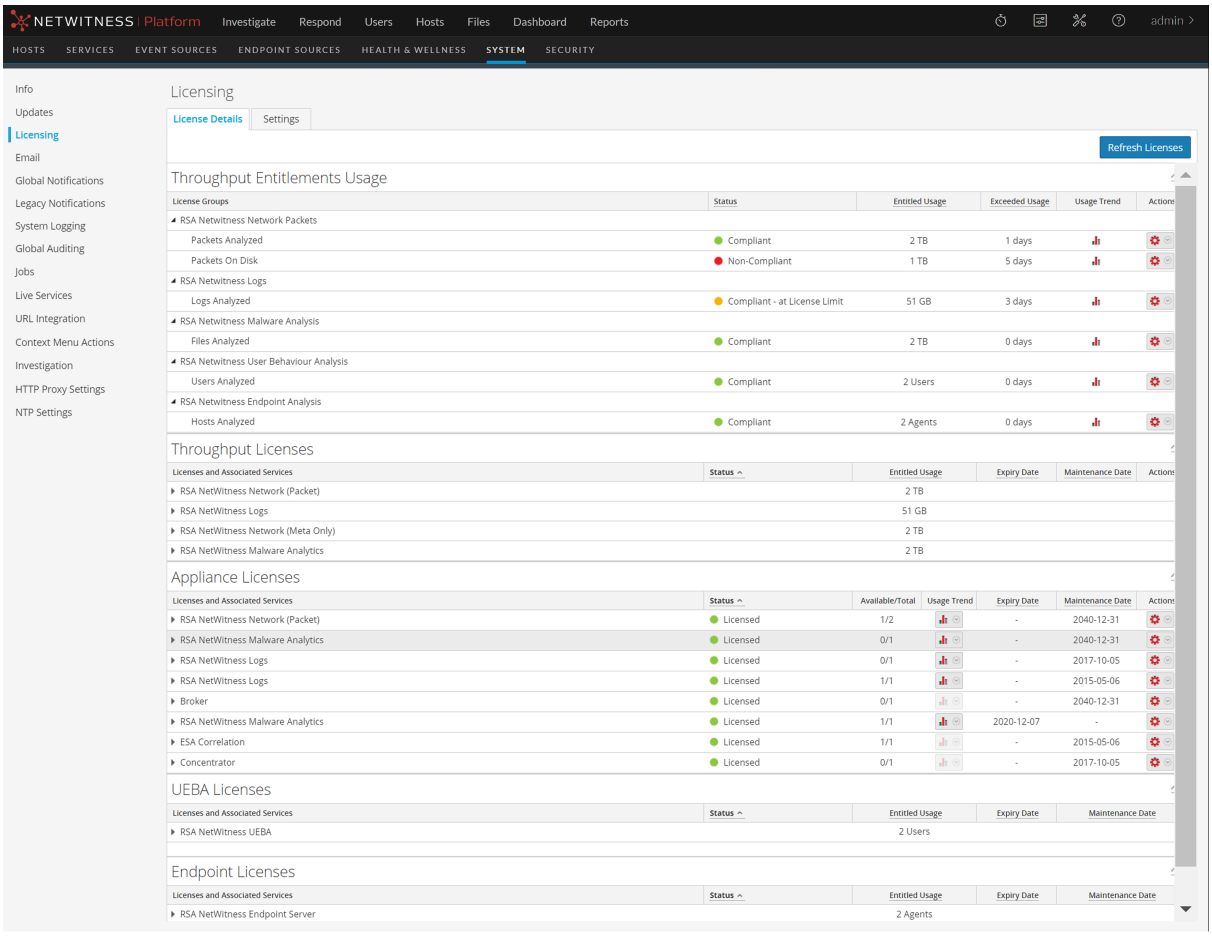
If the entitled limit exceeds the usage limit then an appropriate out-of-compliance banner is displayed. For more information, see About Out-of-Compliance Banners.

Reassign Service Licenses

You can move service between licenses only if a similar service license is available.

You can move the services between the following licenses.

- Throughput License to Throughput License
- Throughput License to Appliance License
- Appliance License to Throughput License
- Appliance License to Appliance License

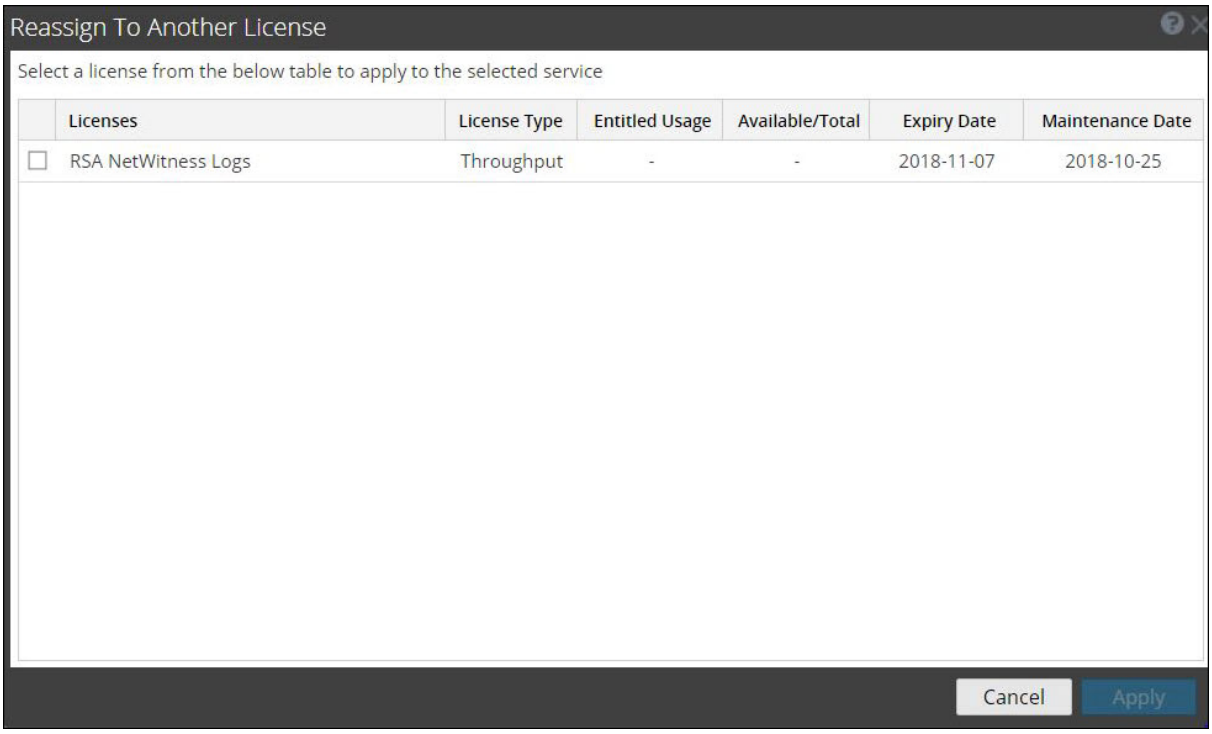


Note: If you want to change the licenses by moving between throughput and appliance, you can do this by selecting the license under the actions of each license. Trail licenses cannot be moved.

You can move the licenses for following reasons:

1. If the subscription based license has expired
2. If there are any unused available license for any service
3. If you want to reduce the usage of the service

To access this view:



1. Go  **(Admin) > System** and select **Licensing**.
   The License Details tab is displayed.

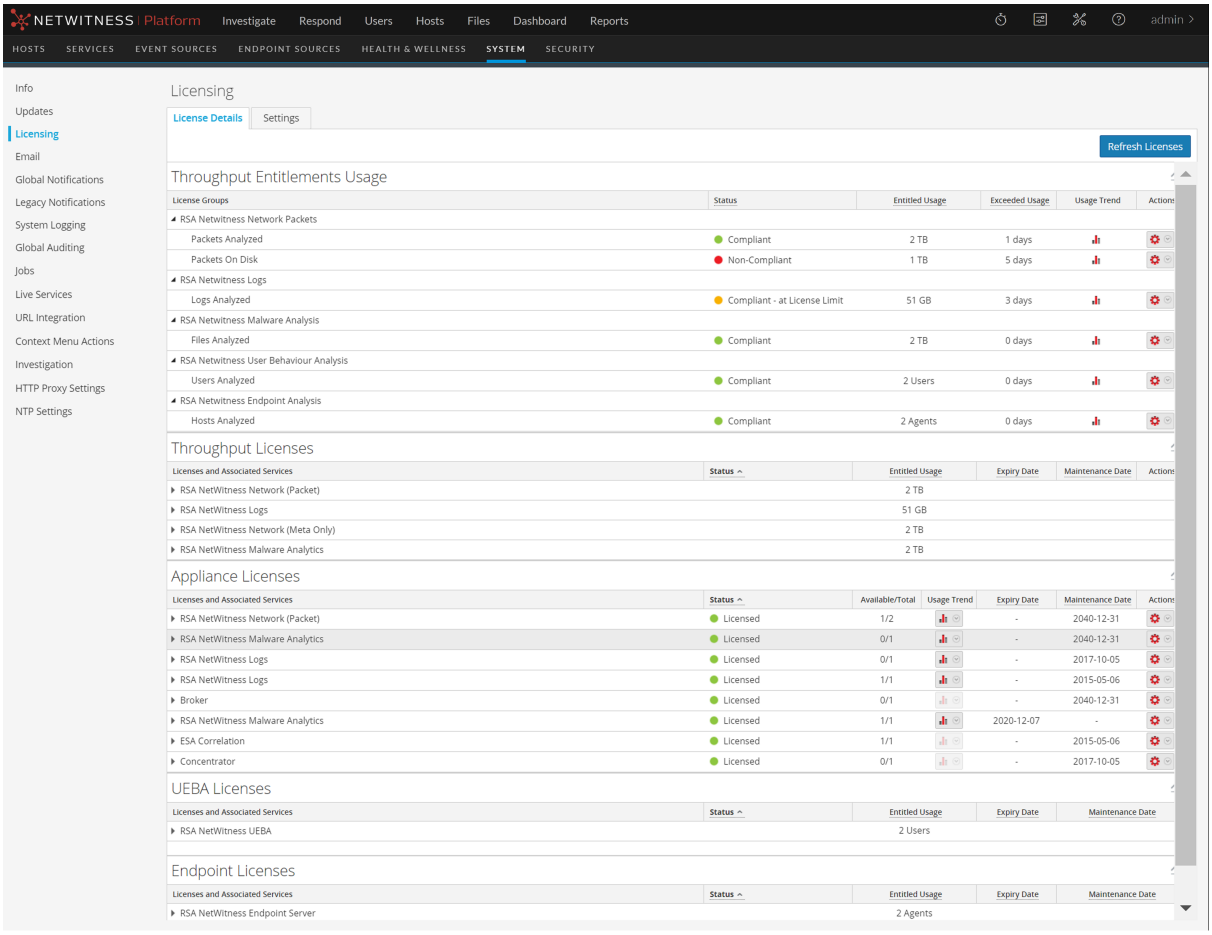
2. Select a service of which you want to move the license.

3. Click , and select the **Reassign to Another License** option.

   The Reassign To Another License dialog is displayed with a list of the available licenses that can be moved.

4. Select a license to be applied for the selected service.
5. Click **Apply**.

Note: The above procedure can be used to move both Throughput Licenses and Appliance Licenses. However, the UEBA and Endpoint licenses cannot be moved.



View and Export Usage Stats

NetWitness provides the ability for Administrators to view usage statistics of device types that are eligible for a Throughput , Appliance Licenses such as Log Decoder, Decoder, Malware, UEBA, and Endpoint Server licenses. An hourly usage statistics is captured for all supported services connected to the NetWitness Server and are made available in CSV, and PDF formats. Metrics can be tracked securely, allowing Administrators to save data locally on their systems to use in reporting usage compliance.

To access Export Usage Stats:

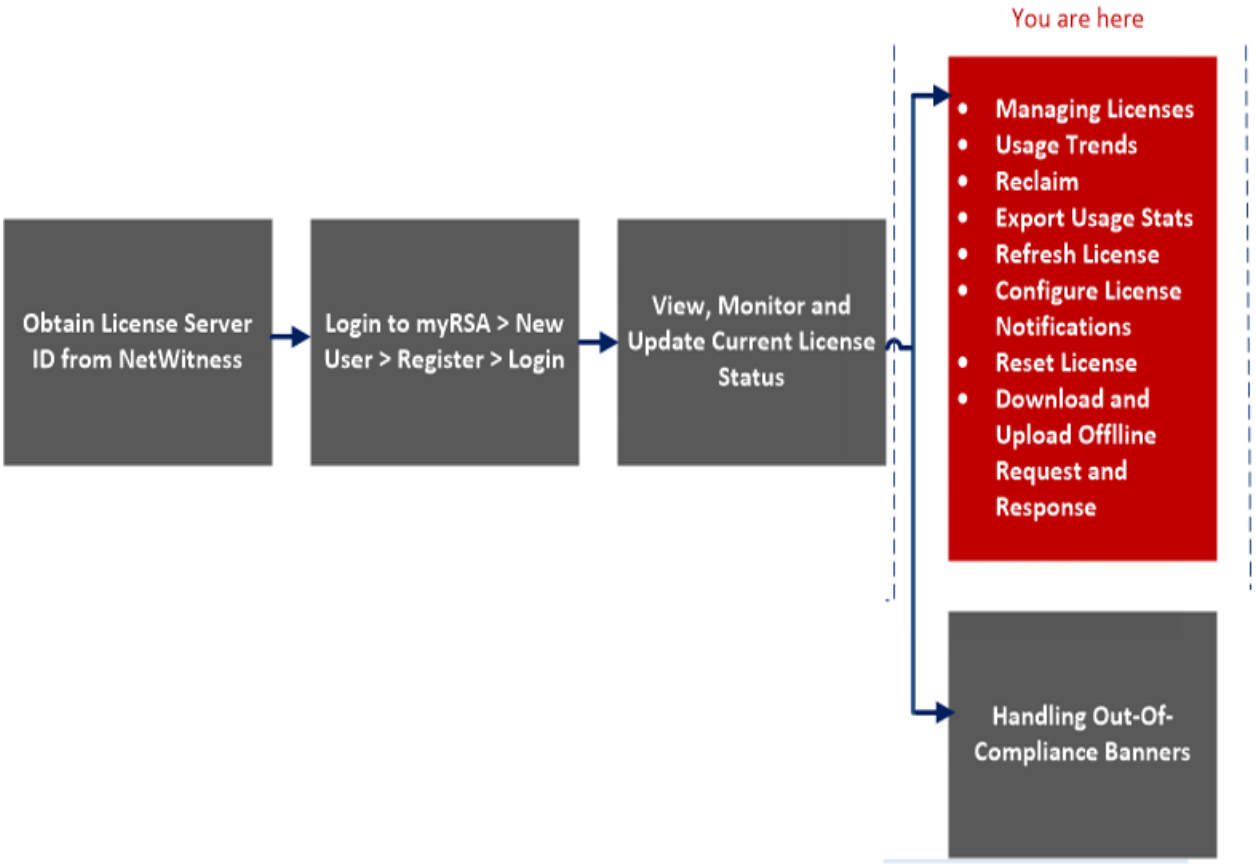
1. Go **(Admin) > System** and select **Licensing**.

   The License Details tab is displayed.

2. Select a service for which you want to export usage stats.

3. Click , and select the **Export Usage Stats** option.

   The **Export Usage Stats** dialog is displayed.



4. Select a **Preset Range**, **Date Range** (in case of custom range), **Format** and **Aggregation Type** to generate the report.
5. Click **Export** to export the report or click **Cancel** to return to the **License Details** tab.

Settings

This topic describes the notification settings for the NetWitness in the **Licensing panel** > **Settings** tab.

Workflow

This workflow illustrates the end-to-end licensing process.

What do you want to do?

Role	I want to...	Show me how...
Administrator	Register NetWitness Server	Obtain License Server ID from NetWitness Platform User Interface
Administrator	Synchronize NetWitness Server	Register the Server (Online Registration)
Administrator	Install product licenses from DLC.	Access myRSA
Administrator	Monitor and update current licenses.	View Current Licenses
Administrator	*Configure licensing notifications.	Configure License Notifications

Obtain License Server ID from NetWitness Platform User Interface

Configure License Notifications

Quick Look

From the **Settings** tab you can:

- Configure licensing notifications.
- Download an Offline Capability Request in NetWitness for submission to DLC.
- Within 72 hours, upload to NetWitness an Offline Response that was received from DLC.

The following table describes the **Settings** tab features.

1	Displays the **License Reset** panel which applies the default license settings.
2	Displays the **Licensing Notifications** panel.
3	Displays the **Notification Type**. There are three types of notifications: • **Email:** Checkbox to receive a notification of approaching license expiration in an email message. The email is sent to the configured email or distribution list. • **Syslog:** Checkbox to receive a notification of approaching license expiration in an syslog message. The syslog is generated in accordance with the settings in the Syslog Auditing Settings. • **SNMP Trap:** Checkbox to receive a notification of approaching license expiration in an SNMP trap. The trap is generated in accordance with the settings in the SNMP Auditing

	Settings.
4	Displays the type of **Alert Notification**. • **Login:** Select this checkbox to receive a notification of your approaching license expiration when you log on to NetWitness. The **Login Window Threshold** field specifies the number of days before the license expires to display the notification at log on. • **Notification Tray:** Select this checkbox to receive a notification of approaching license expiration in the Notifications tray.
5	Displays the **Threshold** field, which specifies the number of days before the license expires to send a notification to the Notifications tray.
6	Displays the **Manage Local License Server Offline** panel.
7	Displays the **Download Offline Request** button. This button enables you to download a request from the NetWitness Platform LLS into a local file for processing by a back-office server. The downloaded bin file should be uploaded to DLC to generate the offline response.
8	Displays the **Upload Offline Request** button. This button enables you to browse for an offline response that you received from the back-office server, and uploads the selected response to NetWitness. The file must be uploaded within 72 hours after receiving the file.

Out-of-Compliance Reference

This topic describes the workflow when your license is out of compliance.

Workflow

This workflow illustrates the end-to-end licensing process.

What do you want to do?

Role	I want to...	Show me how...
Administrator	Register NetWitness Server	Obtain License Server ID from NetWitness Platform User Interface
Administrator	Synchronize NetWitness Server	Register the Server (Online Registration)
Administrator	Install product licenses from DLC.	Access myRSA
Administrator	Monitor and update current licenses.	View Current Licenses
Administrator	Configure licensing notifications.	Configure License Notifications
Administrator	*View Out-of-Compliance banners.	About Out-of-Compliance Banners

*You can perform this task here.

Note: When throughput devices are under trial period, warning messages will not be displayed unless usage is observed on the corresponding device.

Out-of-Compliance State

The following sample banner is displayed when a license expires:

If your license has internal errors, the following banner is displayed:

In addition to a red banner being displayed during system log on, an Out of Compliance Acknowledgment dialog is also displayed. Click **Accept** to continue using your NetWitness product.

Licenses may become out-of-compliance due to reasons provided in the following table:

Red Banner Message	Possible Causes	Solutions
One or more services is not licensed.	Trial license period has expired. There are pre-11.0.0.0 services in the deployment that are not licensed.	Contact Sales team to procure a NetWitness license. Upgrade the services to NetWitness version 11.0.0.0 or later.
One or more licenses is expired.	Log ingestion usage has been observed after the date of renewal. The license is not valid anymore for the corresponding usage.	Contact Sales team to renew or resolve the license.
You have exceeded license usage limits.	If the allotted daily usage is exceeded on four or more occasions, the Grace Period begins. The Grace Period begins on the day of the fourth occurrence and ends at the end of the following calendar month. Seven continuous days of standard usage will end the Grace Period. If the daily allotted usage is still being exceeded at the end of the Grace Period, the 30-day Breach Period begins. Seven continuous days of standard usage will end the Breach Period.	Contact Sales to extend or increase your allotted usage by purchasing a NetWitness license.

Red Banner Message	Possible Causes	Solutions
Your Trial license has internal errors.	An internal licensing issue was reported during your Out-of-the-Box Trial period.	Contact Technical Support to resolve this issue.

Note: If a license has not been installed within 90 days, you must contact Sales to purchase a NetWitness license.

License Approaching Out-of-Compliance

When your license is approaching expiration, or it is nearing its allotted usage, a yellow banner with a brief description is displayed. A yellow banner is displayed 14 days before your license is due to expire. You will also see a yellow banner if you are approaching your allotted license usage. You can get rid of the yellow banner by clicking the **Dismiss** button.

The following sample banner is displayed in the NetWitness screen if your license is approaching its allotted usage:

The following table explains the messages that are displayed when you see a yellow banner.

Yellow Banner Message	Possible Causes	Solutions
You are nearing license usage limits.	One or more Throughput licenses has exceeded your allotted usage for three times during the current calendar month. The fourth time that you exceed your allotted usage during the current month will push the deployment into an Out-of-Compliance state.	Contact RSA Sales if your allotted usage spikes four times within a calendar month.
One or more licenses is expiring.	One or more licenses is due to expire within 14 days. Or Log ingestion usage has been observed. The license is not valid anymore for the corresponding usage.	Contact RSA Sales to purchase a new license.

Live Services Management

NetWitness Live is the gateway to a rich environment that offers access to feeds, tools, and other resources.

NetWitness Live

Live is the component of NetWitness that manages communication and synchronization between NetWitness services and a library of Live content available to NetWitness customers. Live provides a simple interface for browsing, selecting, and deploying content from the NetWitness Live Content Management System to NetWitness services and software. In addition to managing feeds from the CMS Library, Live allows users to deploy custom feeds and packages.

Note: Any customer with valid maintenance can access NetWitness Live.

The content management system (CMS) library (known as *Live*) is a valuable source of the latest internet security resources for NetWitness customers. It provides a view into the collective intelligence and analytical skills of the worldwide security community to ensure that users have the most current visibility into attack vectors.

Live gathers the best advanced threat intelligence and content in the global security community - the ideas, research, ongoing tracking, and analysis - and brings it directly into the user's security operations center to definitively classify computers associated with botnets, malware, and other malicious exploits. Live aggregates, consolidates, and illuminates only the most pertinent information relevant to an organization on a real-time basis.

NetWitness Feedback and Data Sharing

Live Feedback is intended to help improve NetWitness. Once you set up and configure a Live account, usage data is shared with RSA.

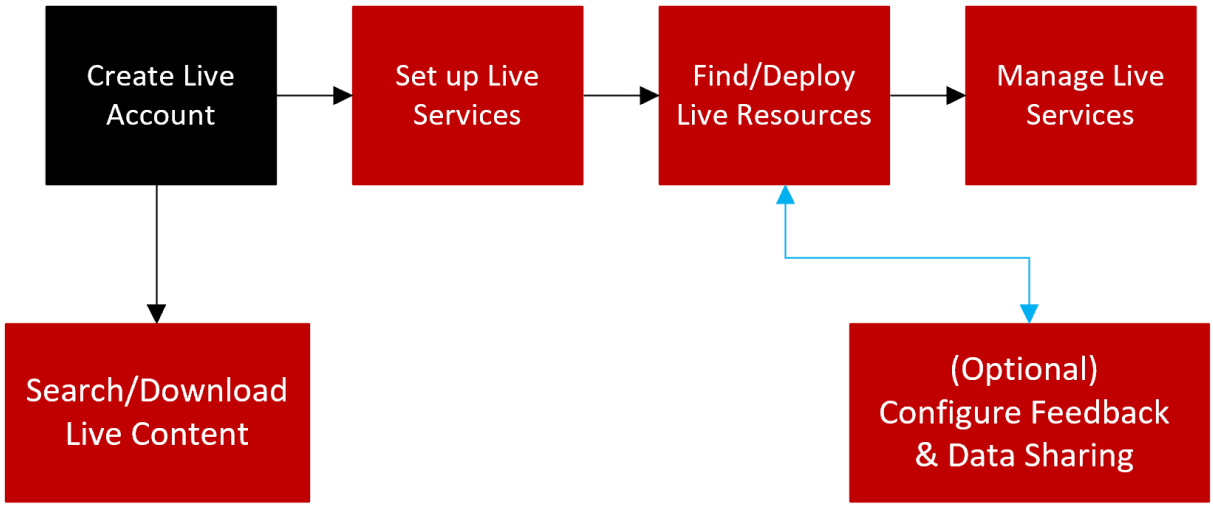
For more details, see NetWitness Feedback and Data Sharing.

For Debian Linux and NetWitness Endpoint Users

If you are upgrading to NetWitness 11.5 or later, and you are using NetWitness Endpoint and also have any Debian Linux endpoint systems, NetWitness recommends that you go to Live and download the following application rules:

- autorun debian package mismatch
- autorun file path not part of debian package
- debian package hash mismatch in important system directory
- debian package hash mismatch
- file path not part of debian package in important system directory
- file path not part of debian package

Deploy Content



This section explains the different ways available to deploy content:

- Deploy Content using Live Content UI
- Centrally Deploy Content using Policy UI

Create Live Account

Note: The NetWitness Live Registration Portal now has a new user interface and supports email verification.

You must create a Live account using the NetWitness Live Registration Portal (https://live.netwitness.com/registration/) on the Live server. Live Account is required to access all Live services including CMS. The CMS Library provides access to all NetWitness content in one place where you can view, search, deploy, and subscribe to NetWitness content.

Make sure the following are available to set up a NetWitness Live account:

- Active internet connection to access the portal.
- A valid and registered NetWitness License Server on the Flexera Server, before you can register for a Live account. You can view the License ID on the **(Admin) > System > Info** panel.

Note: If the License Server is not set up, contact NetWitness Customer Support.

To create a Live Account:

1. Access the NetWitness Cloud Services Live Registration Portal using the URL: https://live.netwitness.com/registration/

   The NetWitness Cloud Services Live sign up page is displayed.

2. Click **Sign Up For Live**.

   The End User License Agreement page is displayed.

   Read the Terms and Conditions carefully and click **Accept**.

3. In the **Sign Up for NetWitness Live Account** page, enter all the fields:
   - The **First Name** and **Last Name** of the user.
   - The **Company** for which the Live Account is being created.
   - The **Email address** you enter will be used to receive the verification code for your new Live account and other notifications related to the Live account.
   - The **License ID** can be viewed on  **(Admin) > System > Info** panel.

- The **Username** and **Password** for the Live Account.

4. Click **Create Account**.
   You will be directed to **Confirm Sign up** page.
5. Enter the **Confirmation Code** sent to your registered email address.
   Click **Confirm**.
   You can see the confirmation message for your NetWitness Live Account registration.

   Note: You cannot create more than one Live account for the same License ID. For additional license, contact NetWitness Customer Support.
6. Once the account is created, enter your credentials and click **Sign In** to access the NetWitness Cloud Services Live.
7. After you sign in, you can perform the following:
   - Search and Download Content from NetWitness Cloud Services Live
   - Share Telemetry Data to NetWitness

Reset the Password for Your Live Account

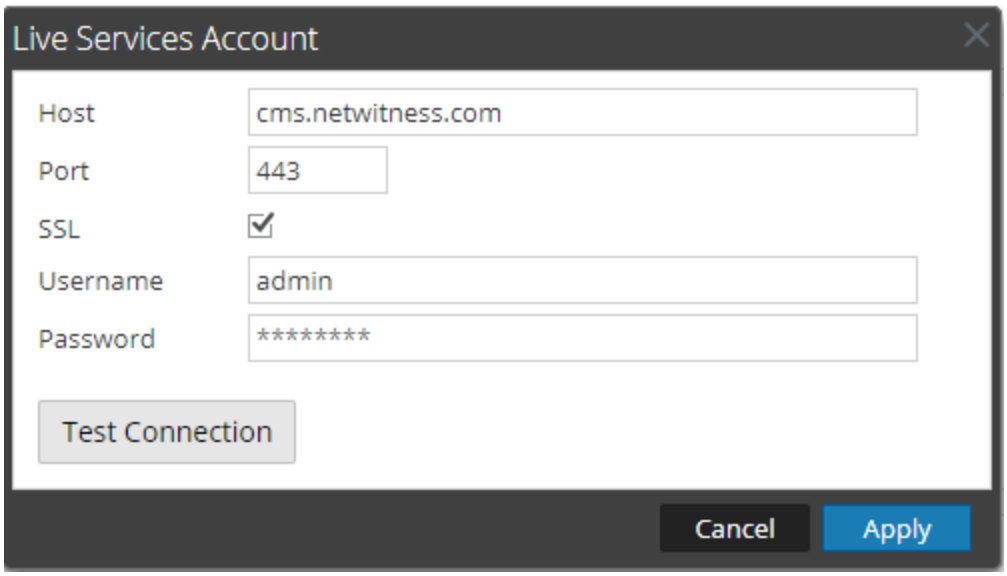
If you want to reset the password for your Live Account, do the following:

1. Access the NetWitness Cloud Services Live Registration Portal using the URL:

   https://live.netwitness.com/registration/

   The NetWitness Cloud Services Live sign up page is displayed.

2. On the Sign Up page, click **Forgot Password?**.
3. Enter your **Username** and click **Send Code**.
   A verification code will be sent to your registered email address.
4. Enter the **Verification Code** and **New Password** on the Reset Password page and click **Submit**.



Set Up Live Services on NetWitness Platform

To set up Live on NetWitness Platform, you configure the connection and synchronization between the CMS server and NetWitness. The user interface for this setup is the **(Admin) > System > Live Services** Configuration panel.

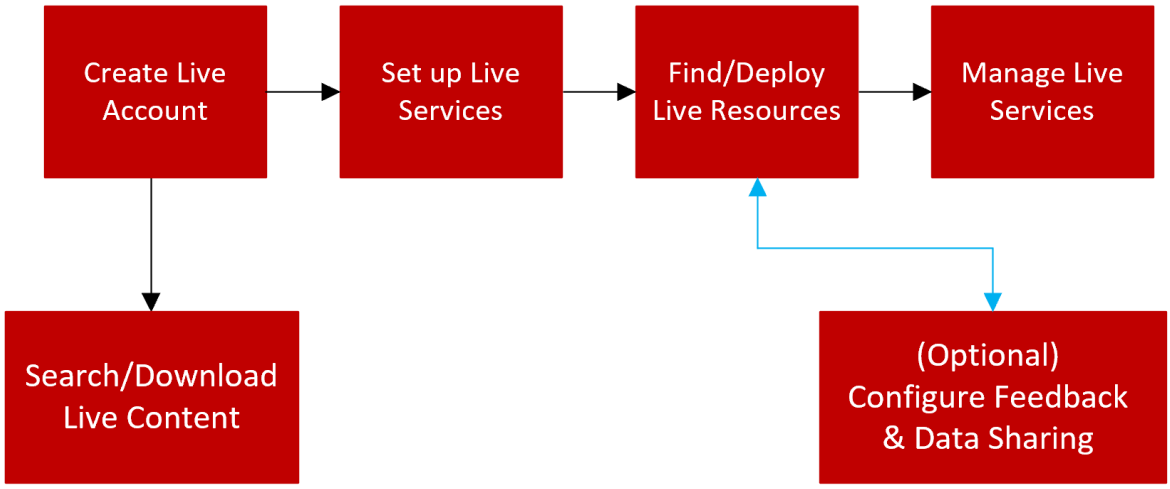
To configure the connection to the CMS Server:

1. Navigate to **(Admin) > System > Live Services**.
2. Click Sign In and enter your credentials in the Live Services Account dialog box.

3. Click Test Connection to make sure your connection is working.

4. If the test is successful, click **Apply**. If not, contact NetWitness Customer Support for help connecting to the Live server.
5. Configure the timing for synchronization of NetWitness Platform with updates from Cloud Services Live.

For more details, see the "Configure Live Services Settings" topic in the *System Configuration Guide*.

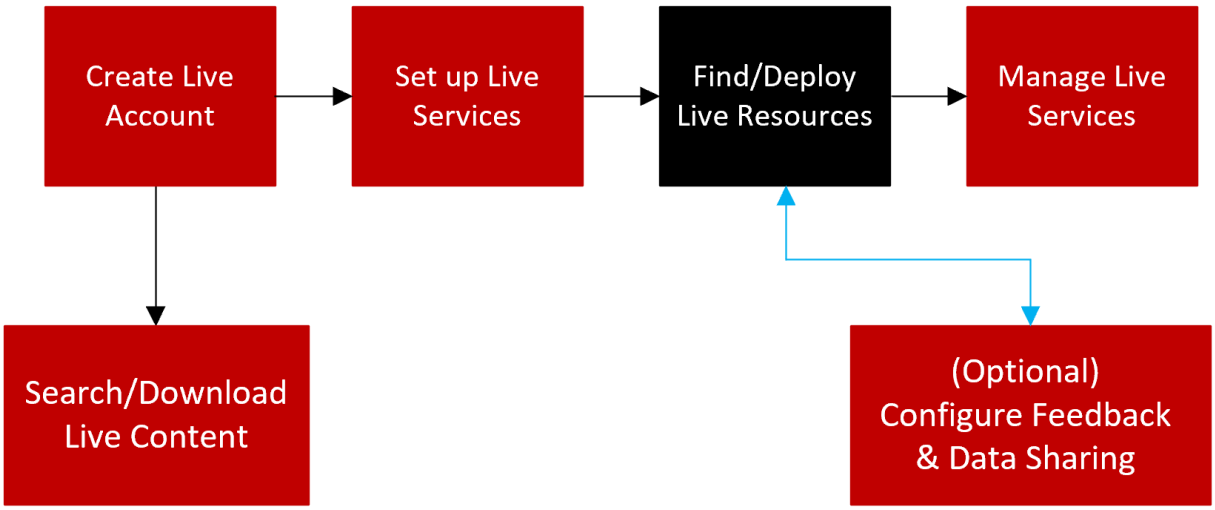


Deploy Content using Live Content UI

This topic explains the process of deploying the content using Live Content UI.

- Live Services Required Procedures
- Additional Procedures
- References
- Troubleshooting Live Services

Live Services Required Procedures

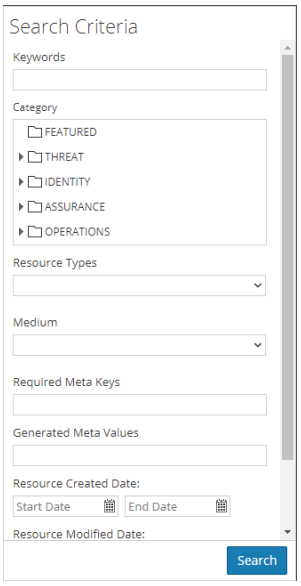


The following workflow describes the basic setup into four steps, which you perform individually.

Configuration Step	Description
Create Live Account	Create a Live Account on the Cloud Services Live Registration portal URL: https://live.netwitness.com/registration/.
Set Up Live Services on NetWitness Platform	Set Up Live Services on NetWitness Platform by configuring a connection with the CMS server.
Find and Deploy Live Resources	Search and browse for resources in the Live Search view, and then, deploy the selected resources.
Manage Live Resources	Procedures for administrators to search for, subscribe to, and deploy resources from Live.
Search and Download Content from NetWitness Cloud Services Live	Search and browse for content in the Cloud Services Live, and then, download the selected content.
NetWitness Feedback and Data Sharing	Describes the feedback and data sharing features provided in NetWitness, from Live Services. Participation is optional, but can help to provide useful threat intelligence for the community.

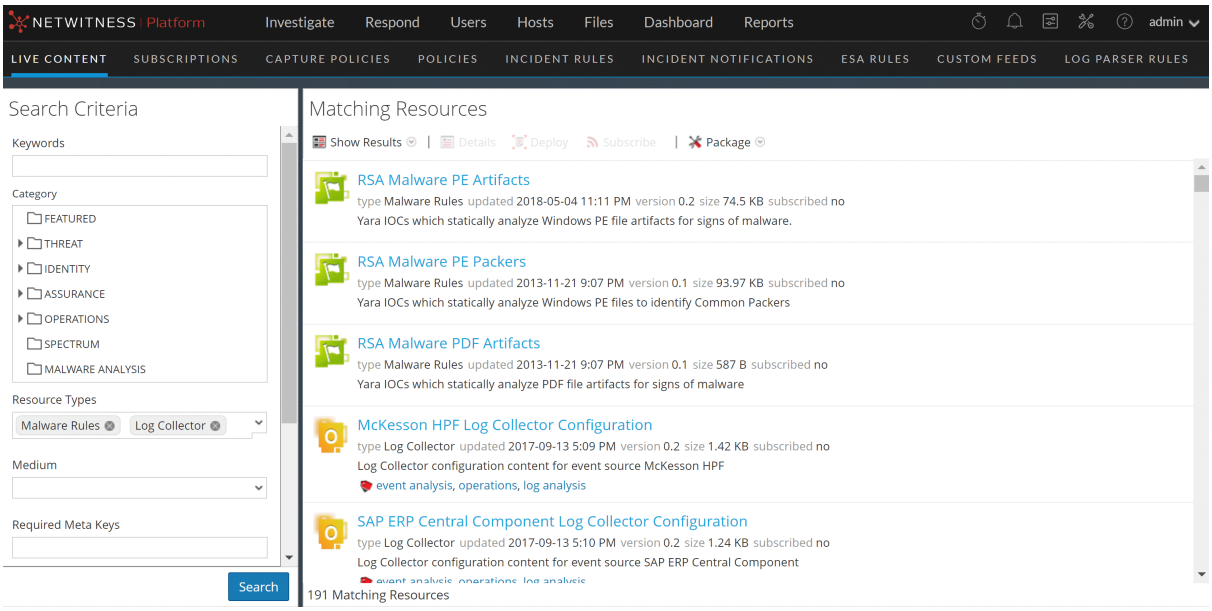
Find and Deploy Live Resources

Administrators can search for resources in the Live Search view, which is also the same as browsing the Live CMS for resources using the Search Criteria panel of the Live Search View.



Find Resources in Live

IMPORTANT: ESA Rules cannot be deployed manually via Live Services. By default, all the ESA rules are available in the ESA Rule library if Live Service is configured.



To find resources:

1. Navigate to **(Configure) > Live Content**.
2. In the **Search Criteria** panel, specify search criteria. Enter any or all of these: keyword, category, type of resource, medium, meta keys, meta values, date resource was created, and date resource was modified.

3. Click **Search**.

   The Matching Resources panel displays detailed results.

4. (Optional) To further narrow the results In the Matching Resources panel, click on a tag, meta key, medium or resource meta value in a result.

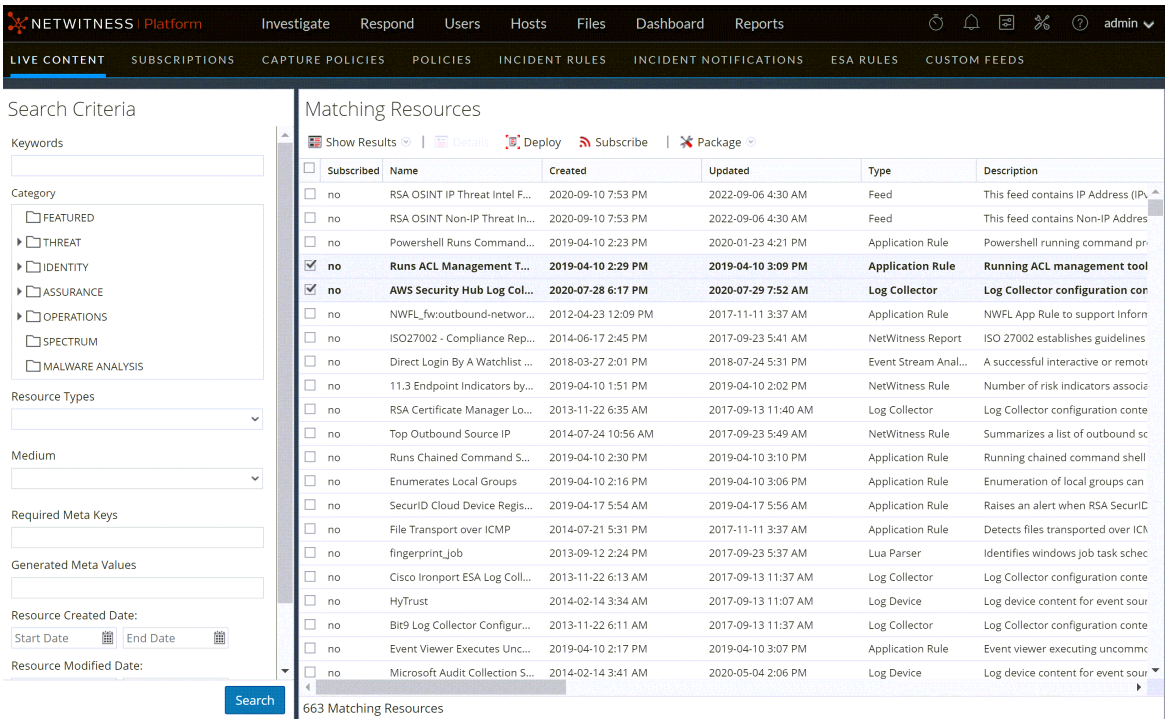
Deploy Resources in Live

In NetWitness, you can deploy selected resources manually, using the Deployment Wizard, or you can subscribe to a group of resources.

- When you have results from browsing resources in NetWitness Live, you can deploy resources manually to a service or a service group without subscribing to the resources. To deploy resources, select one or more from the list.
- Deploying resources manually deploys to services without taking advantage of the powerful resource management capabilities of NetWitness. If you want to receive notification and updates for updated resources and be able to easily remove resources from a service, you must subscribe to resources in the Live Search view and deploy them in the Live Configure View.
- If you have previously created and saved a resource package, you can deploy the package to services. Please refer to Resource Package Deployment Wizard for instructions on how to create a package.

Caution: For NetWitness 11.3, there is a new Content bundle for Endpoint, which contains approximately 400 application rules. Do not deploy this bundle (or the Endpoint application rules) onto any Log Decoder that is running an earlier version of NetWitness. The rules are only useful for 11.3 and newer, and would have major performance implications if deployed on Log Decoders that cannot process them.

To deploy resources manually:



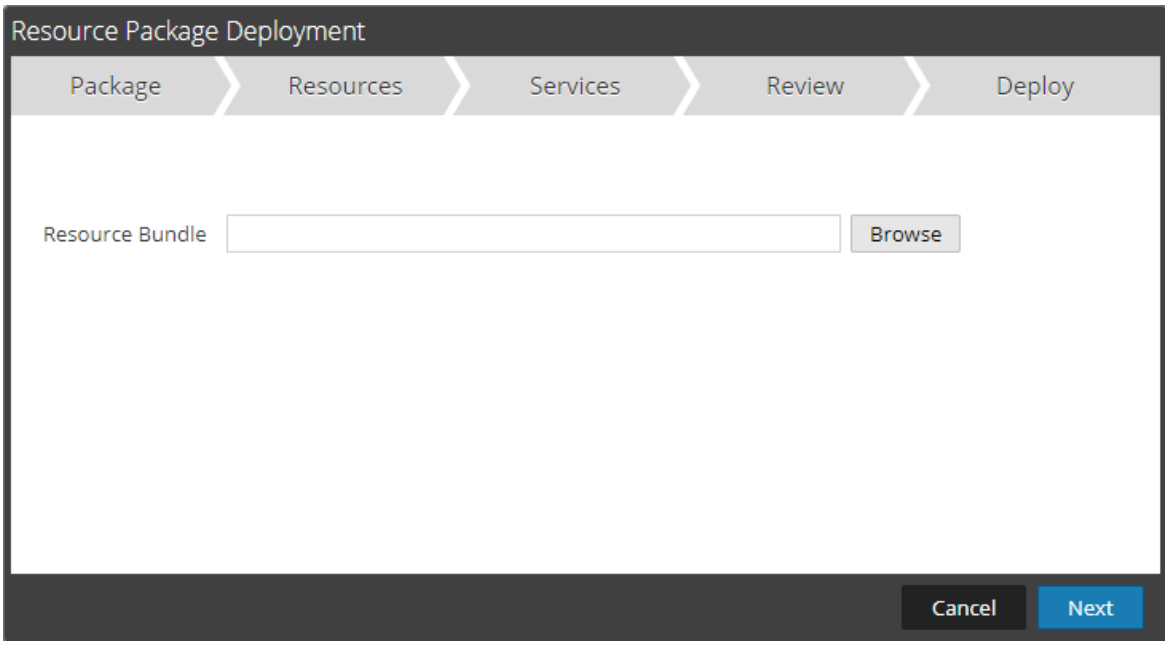
1. Go to  **(Configure) > Live Content**.
2. Select a group of resources, or a previously created resource package.

   To select a resource or group of resources:

   a. In the **Live Search View,** browse Live resources (for example, search for the **Log Collector** resource Type).

   b. In the **Matching Resources** panel, select **Show Results > Grid**.

   c. Select the checkbox to the left of the resources that you want to deploy.



d. In the Matching Resources toolbar, click Deploy.

3. To select a resource package to deploy:

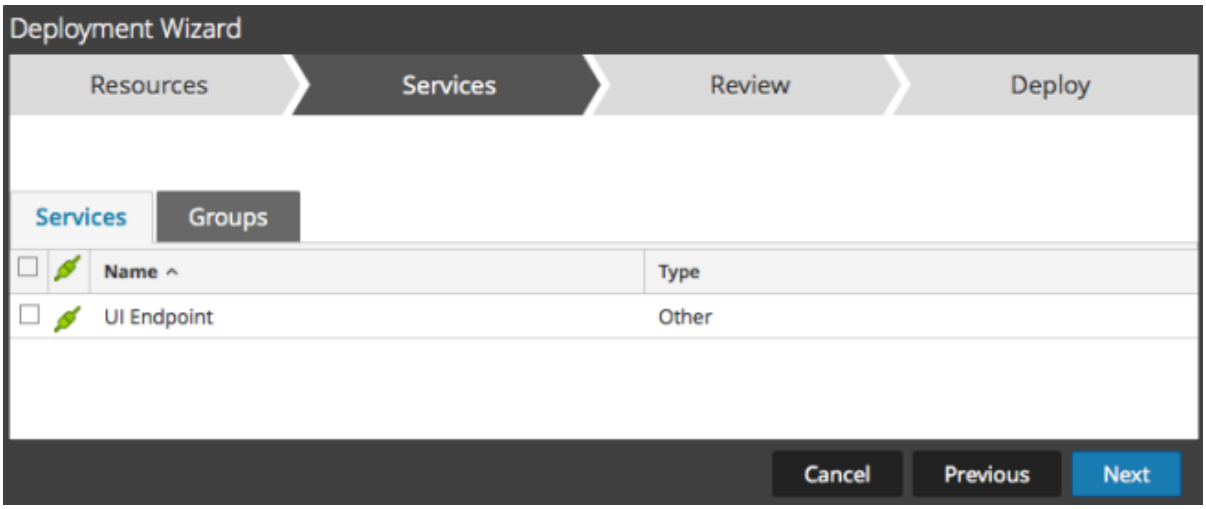
   a. In the **Live Search** view **- Matching Resources** toolbar, select **Package** > **Deploy** .

   The Package page of the Resource Package Deployment wizard is displayed.

b. Click Browse and select a package from your network (for example **resourceBundle-FeedsParsersContent.zip**).

c. Click **Open**.

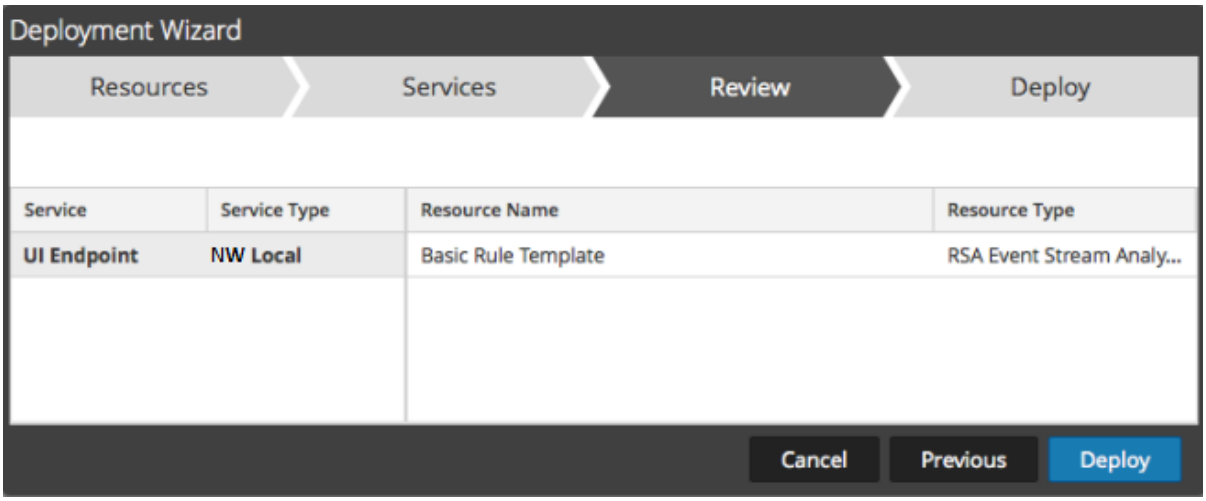
At this point, whether you are deploying a package or a group of resources, the **Deployment Wizard** opens, and the **Resources** page is displayed.



4. Click **Next**.

The **Services** page displayed has two tabs, **Services** and **Groups**, which provide a list of services and service groups that are configured in the **(Admin) > Services** view. The columns are a subset of the columns available in the Services view.

Note: The Live server is "smart" about deploying resources to Services. For example, it does not deploy resources that have a Medium of packets to any Log Decoders. This means that only applicable content resources are deployed to each Service.



5. Select the services on which you want to deploy the content. You can select any combination of services and service groups.

- Use the **Services** tab to select individual services, list of services, and service groups that are configured in the **(Admin) > Services** view.
- Use the **Groups** tab to select groups of services.

6. Click **Next**.

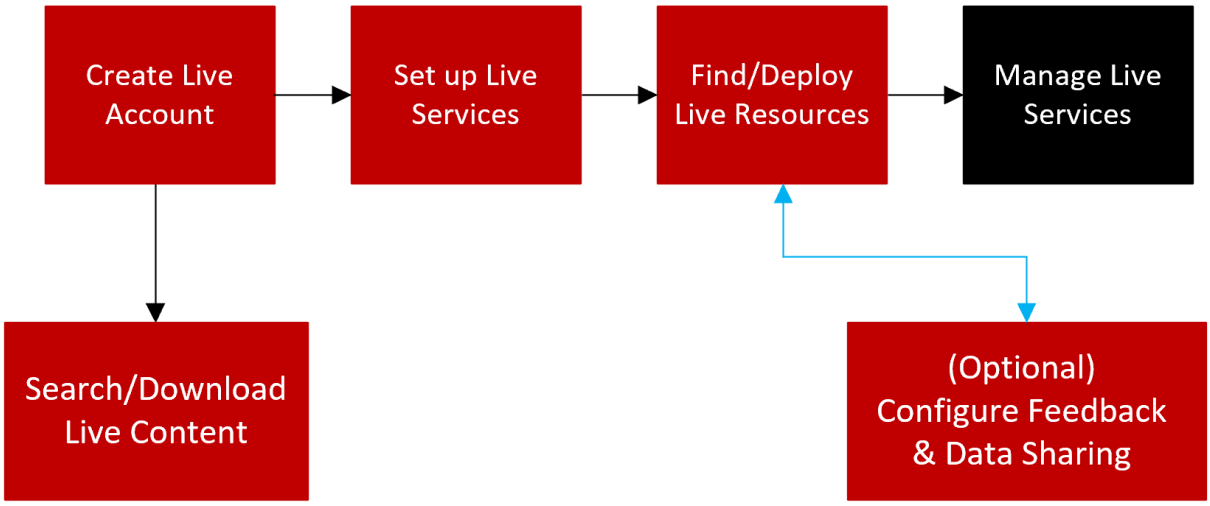
   The **Review** page is displayed.

   Make sure that you have selected correct resources and the services on which you want to deploy them.

7. Click **Deploy**.

   The **Deploy** page is displayed. The Progress bar turns green when you have successfully deployed the resources to the selected services.

If you try to deploy resources and services that are not compatible, NetWitness displays the Errors and Retry buttons, which you can click to review the errors and re-attempt the deployment.



8. Click **Close**.

Next steps

After deploying parsers to Decoders and Log Decoders, you must enable parsers on the individual services. For more information, see the *Decoder and Log Decoder Configuration Guide*.

Manage Live Resources

With a connection to the CMS server, you can search for, subscribe to, and deploy resources from Live in accordance with your subscription level. Once you have found resources, you deploy them to services and service groups that have been configured in the the **(Admin) > Services** view.

There are several workflows for deploying resources to services and managing those deployments. These include:

- Subscribe and deploy resources
- Deploy a resource bundle
- Remove deployments of resources
- Download resources
- Set up data feeds

Manage Subscription and Deployment

The subscription and deployment workflow takes advantage of the resource management tools available in Live. By subscribing to resources, you agree to receive updated resources in accordance with the synchronization configured in the **(Admin) > System > Live Services panel**.

By adding subscribed resources to the deployments list, you configure NetWitness to automatically push those resources to the selected services at the configured synchronization intervals. This method requires some planning of service groups and services where resources are deployed. In addition:

- You can remove a resource from the deployments list in the Deployments Tab.
- You can unsubscribe from a resource in the Subscriptions Tab and the Live Resource View.

To manage subscriptions and deployment:

1. In the **(Admin) > System > Live Services** panel, specify an interval at which NetWitness checks for updates to subscribed resources in Live and specify the email addresses of people to receive an email listing subscribed resources that have been updated.
2. In the **(Configure) > Live Content** search view, search for and subscribe to Live resources.
3. In the **(Configure) > Subscriptions > Deployments** tab, select subscribed resources and add them to the deployment list for services groups.
4. (Optional) In the **(Configure) > Subscriptions > Deployments** tab, click to deploy the resources listed in the Deployments tab immediately.
5. In the **(Configure) > Subscriptions > Deployments** tab, select deployed resources from a Group, and remove them from services.
6. In the **(Configure) > Subscriptions** tab, unsubscribe from resources.

Remove a Deployed Resource

Once deployed to a service, Live resources remain on the service until removed. It is a good practice to remove unused resources from services on which they are deployed.

To remove deployed resources:

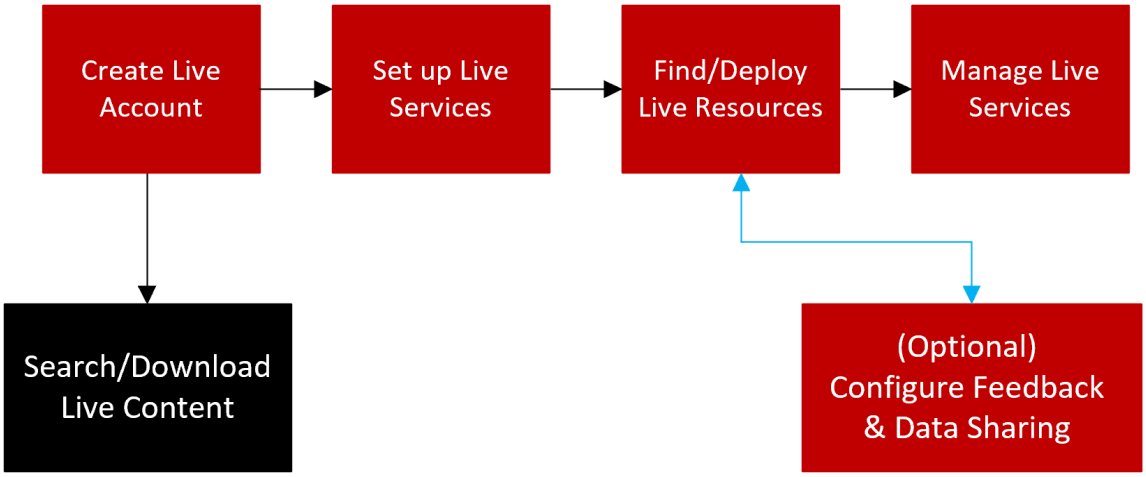
1. Go to the Live Resource View
2. Unsubscribe from a resource, and remove it from deployed services.

Deploy a Resource Bundle

To deploy a content package, use the Resource Package Deployment Wizard. You can deploy a content package created in Live to one or more services. NetWitness accepts packages in **.nwp** files or **.zip** files.

Download Resources

To download resources to your local file system, use the **Download** button in the Live Resource view.



Set Up Data Feeds

In the **Live** > **Feeds** view, you can set up and maintain Custom and Identify feeds.

Search and Download Content from NetWitness Cloud Services Live

Administrators can search for live content using the Search Content panel in the NetWitness Cloud Services Live, which is similar to browsing the live CMS content in the (Configure) > Live Content page on the NetWitness Platform.

Note: If Admin server is not connected to the Live Services, you can use the NetWitness Cloud Services Live to search and download the required content.

Prerequisites

- Ensure that you have created the Live account. For more information, see Create Live Account.

Quick Search for Content

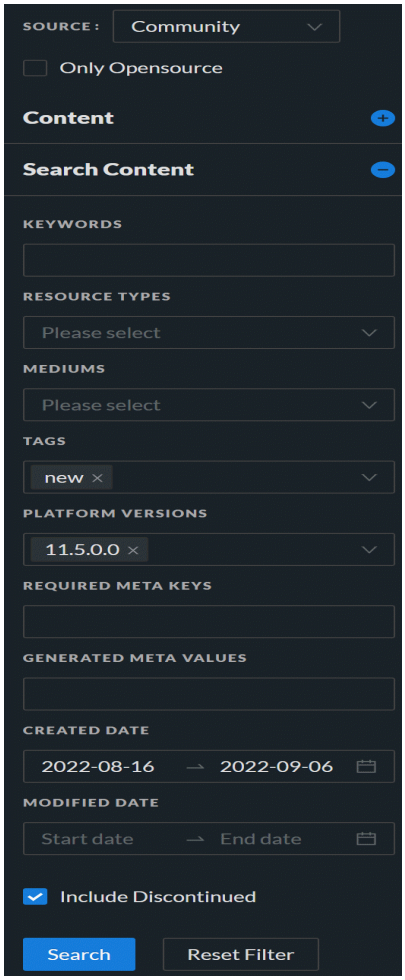
You can now select and view the content based on the Sources available in the Cloud Services Live. You can select either NetWitness or Community from the Source drop-down list.

- **NetWitness**: Displays all the content provided by NetWitness.
- **Community**: Displays the content collected and retrieved from third party and open source communities.

  Note: The **Only Opensource** option will appear under the Search Content panel only when the community is selected as the source. You can use this option to select and search open-source related content.

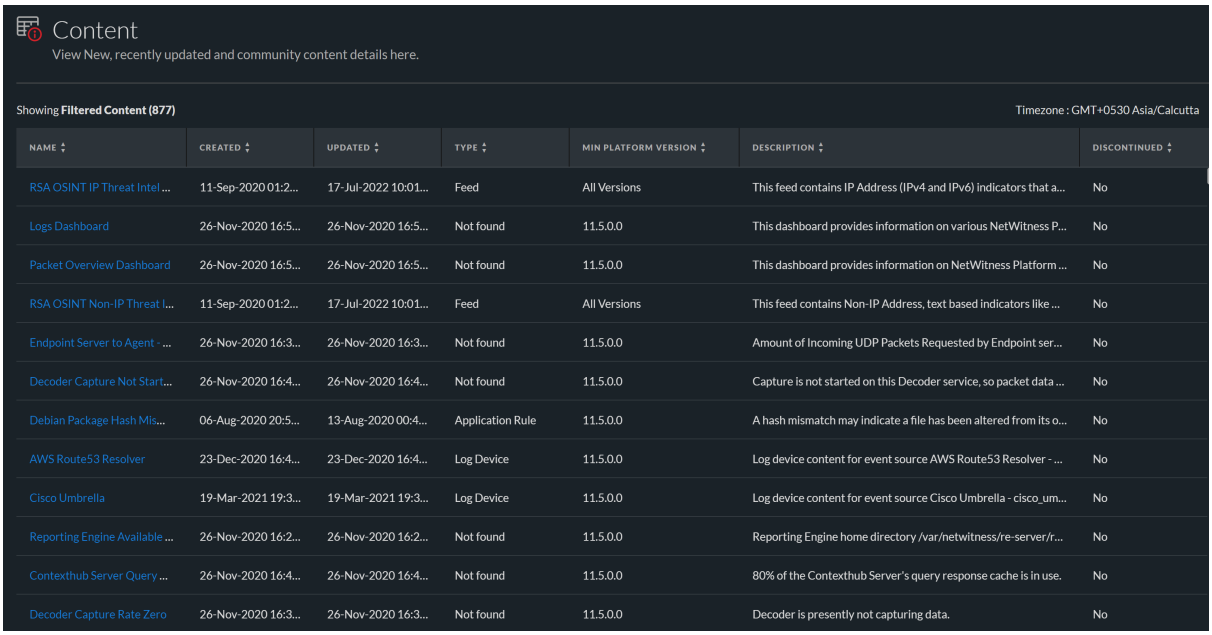
You can also quickly select and view the available content types under Content section.

Clicking expands the **Content** section and displays the following options:



- **New**: Displays the content which is created in the last 21 days.
- **Recently Updated**: Displays the content which is created or updated in the last 21 days.

Advanced Search for Content



You can search for the specific content in the Search Content view. For more information, see Live Search Content View.

To search the content:

1. Click to expand the **Search Content** section.
2. In the **Search Content**, specify the search criteria. Enter any or all of these: keyword, type of resource, medium, tag, platform versions, meta keys, meta values, date when content was created, date when content was modified, and (optional) discontinued content.

3. Click **Search**.
   The matching results are displayed on the right panel.

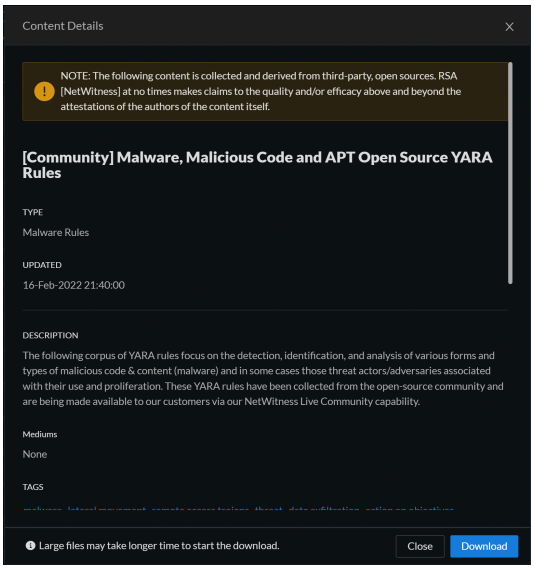
You can sort the content using the name, created, updated, type, or any of the column.

Note: Clicking **Reset Filter** removes the existing filters applied from the **Search Content**, and displays all the available content on the right panel.

Download Content



You can download the content from the results displayed in the right panel by performing the following steps:

Note:
- You cannot download a discontinued content.
- NetWitness provides no assurance related to the quality and accuracy of the content provided by the third parties and open source communities.

To download the content:

1. Click the name of the content that you want to download.

   The **Content Details** dialog is displayed.

2. Click **Download**.

   The content file is downloaded.

Additional Procedures

This topic explains the additional procedures an administrator could choose to follow which are not essential for the configuration or use of Live Services.

- Export Data to NetWitness
- Packaging Resources
- Manage Custom Feeds
  - Creating a Custom Feed
  - Create a STIX Custom Feed
  - Creating and Managing an Identity Feed
  - Editing a Feed
  - Removing a Feed
- Miscellaneous Live Services Procedures

Export Data to NetWitness

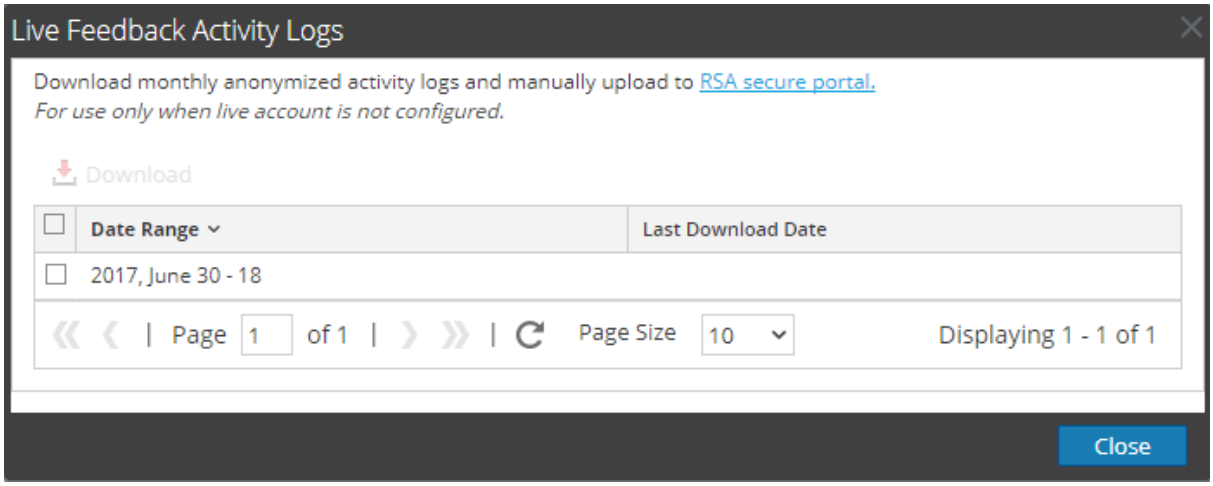
A NetWitness administrator can export the metrics in NetWitness for Live Feedback.

About Live Feedback

In the Live Services Configuration panel, there is a Live Feedback Activity Log which enables you to download the usage data required for Live Feedback. This is active regardless of the Live Account configuration.

If the Live Account is not configured, you can manually upload the usage data to NetWitness. For more information, see the "Configure Live Services Panel" topic in the *System Configuration Guide*.

You must first download the Live Feedback historical data, and then upload it to share with NetWitness.



Download Live Feedback Historical Data

To download the Live Feedback historical data:

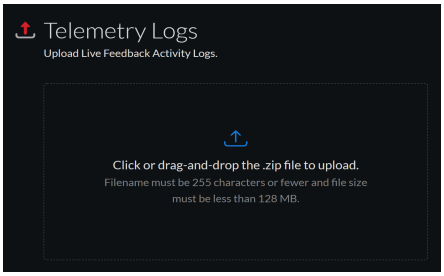
1. Go to  **(Admin) > System**.
2. In the options panel, select **Live Services**.

   The **Live Account** screen is displayed which consists of the **RSA Live Status**and Download **Live Feedback Activity Log**.
3. Click **Live Feedback Activity Log**.

   The **Live Feedback Activity Log** window opens which allows you to download the required Live Feedback historical data.

4. Select one or multiple entries by selecting the checkboxes and click **Download**.

   Note: If you select multiple entries in the history table, the Live Feedback data is downloaded into a ZIP archive, consisting of individual JSON files for each month.



Share Telemetry Data to NetWitness

After you download the Live Feedback data, you can then upload it using the following procedure.

Note:
- To download the Live Feedback data, see topic Download Live Feedback Historical Data.
- You can share data through NetWitness Cloud Services Live portal. For more information, Create Live Account.

To share the data to NetWitness

1. Log in to the NetWitness Cloud Services using your Live account credentials.
2. Click  on the left panel.
   The **Telemetry Logs** dialog is displayed.

Note:
- You can upload only .zip files.
- Filename must be 255 characters or less and file size must be less than 128 MB.

3. Click or drag-and-drop a file onto this area to upload.

Packaging Resources

The primary use for creating and subsequently deploying a resource package is for customers using an air gap network environment. In this case, you create a resource package on the network that is connected to the internet, and then deploy the resource package on a more secure network.

Create and Deploy Resource Package Use Case

The basic steps are as follows:

1. Access NetWitness Live Services using an instance that is connected to the internet.
2. Create a Resource package as described below, adding whichever content items you need.
3. Copy the ZIP archive of the packages to your secure NetWitness instance, by using a thumb drive or other manual copying process.
4. On the secure NetWitness instance, deploy the resource package. For more information, see Resource Package Deployment Wizard.

Prerequisites to Create a Resource Package

A prerequisite for creating resource packages is configuration of the connection and synchronization between the CMS server and NetWitness and the ability to search for resources in the User Interface.

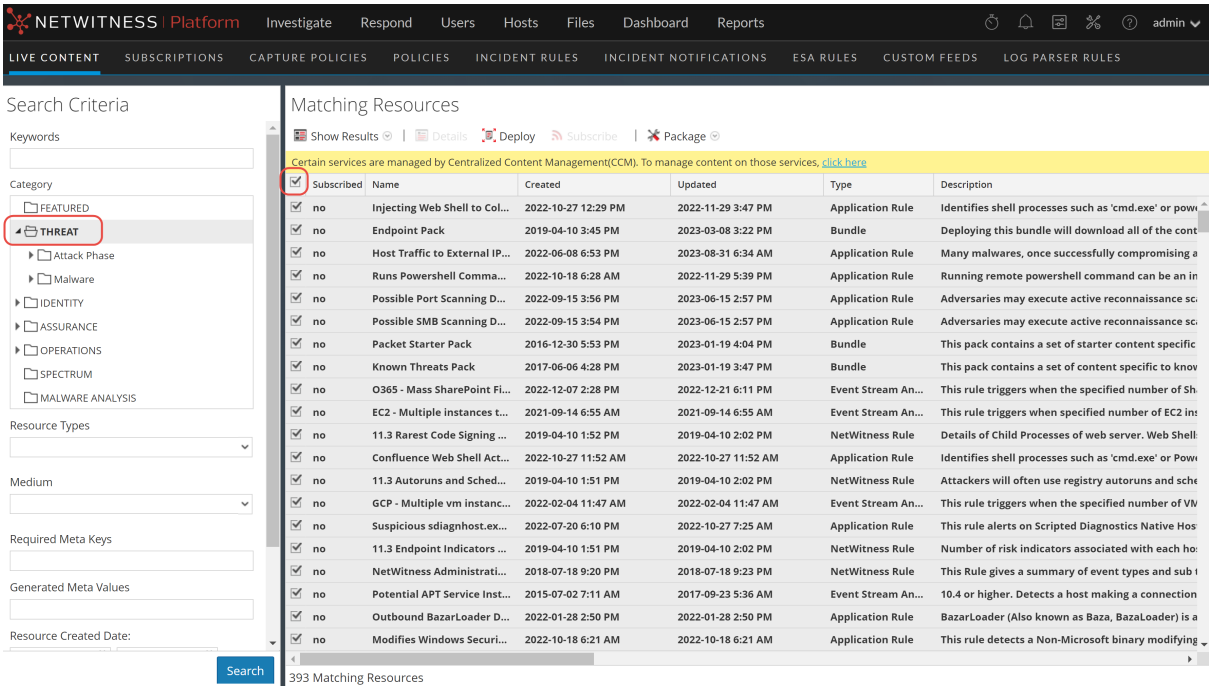
Creating a Resource Package

The following procedure describes how to create a resource package, as a ZIP archive and save it to your local file system.

To create a resource package:

1. Go to  **(Configure) > Live Content** from the NetWitness UI.
2. Select the resources that you want to package in the Matching Resources grid.
3. Select some or all the resources that are listed in the Matches Resources pane.
4. Select 

> **Create**.



NetWitness creates a **.zip** archive that contains the selected resources and downloads it to your default download folder. NetWitness gives the package a generic name. You should rename it when you save it so that it identifies the resources contained in the package.

Creating Threat Package

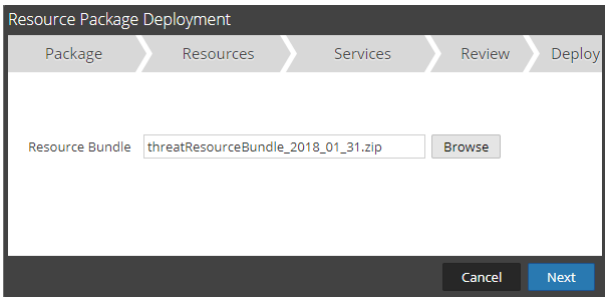
The following procedure describes how to create a resource package that contains all the content that is categorized as **Threat**. Then we rename it, using the type of content and date.

1. Go to  **(Configure) > Live Content**.
2. From the **Category** section, select **Threat**.

3. Select all items returned by clicking on the checkbox in the column header row of the **Matching Resources** pane.

4. Select Package > **Create**.

   A ZIP archive is saved to your Downloads folder. For example, **resourceBundle8740753704980701969.zip**.



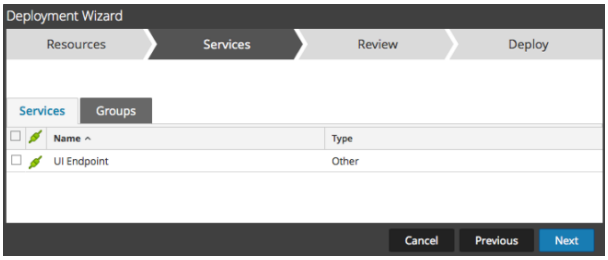
5. Rename the package to something meaningful. For example, in this case, you cold change the package name to **threatResourceBundle_2018_01_31.zip** (assuming today's date is January 31, 2018).

The resource package is now available for later deployment.

Deploying a Threat Package

This procedure assumes that you saved a package named **threatResourceBundle_2018_01_31.zip**, as described in the previous section. It describes how to deploy a saved resource package

1. Go to **(Configure) > Live Content**.
2. In the **Matching Resources** pane, select Package > **Deploy**.
3. Click **Browse** and navigate to the **threatResourceBundle_2018_01_31.zip** file that were created earlier.



4. Click **Next**.

   The **Resources** page displays details for the resources in the package.

5. Click **Next**.

   The **Services** page displays two tabs, **Services** and **Groups**, which provide a list of services and service groups that are configured in the **(Admin) > Services** view. The columns are a subset of the columns available in the Services view.

6. Select the services on which you want to deploy the content. You can select any combination of services and service groups.

7. Click **Next**.

   The **Review** page is displayed.

   Note: Make sure that you have selected correct resources and the services to which you want to deploy them.

8. Click **Deploy** to complete the deployment process. Alternatively, you can choose **Cancel** or **Previous** to either cancel the deployment or go back to the previous screen.

Manage Custom Feeds

The custom feed capability is implemented using the Custom Feed Wizard in NetWitness, allowing you to quickly populate Decoders with custom and identity feeds.

Custom Feed Creation

You can use the **Live > Custom Feeds > Setup Feed > Configure a Custom Feed** wizard to create and deploy Decoder feeds based on deterministic logic that offers the meta keys specific to the selected Decoders and Log Decoders. Although the wizard guides you through the process to create both on-demand and recurring feeds, you should understand the form and content of a feed file when you create a feed.

Feed file names in NetWitness are in the form `<filename>.feed`. To create a feed, NetWitness requires a feed **data** file in `.csv` or `.xml` (for STIX) format and a feed **definition** file in `.xml` format, which describes the structure of a feed data file. The Configure a Custom Feed wizard can create the feed definition file based on a feed data file, or based on a feed data file and the corresponding feed definition file.

The files that you use to create an on-demand feed must be stored on your local file system. The files used to create a recurring feed must be stored at an accessible URL, whence NetWitness can fetch the most current version of the file for each recurrence. After a NetWitness feed is created, you can download the feed to your local file system, edit the feed files, and edit the NetWitness feed to use the updated feed files.

Sample Feed Definition File

This is an example of a feed definition file named `dynamic_dns.xml`, which NetWitness creates based on your entries in the Feed wizards. It defines the structure of the feed data file named `dynamic_dns.csv`.

Note: The feed file path should be `.csv` regardless of the Feed Type (Default or STIX).

Sample Feed Definition File

```
<?xml version="1.0" encoding="utf-8"?>
<FDF xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:noNamespaceSchemaLocation="feed-definitions.xsd">
    <FlatFileFeed name="Dynamic DNS Domain Feed"
        path="dynamic_dns.csv"
        separator=","
        comment="#"
        version="1">

        <MetaCallback
            name="alias.host"
            valuetype="Text"
            apptype="0"
            truncdomain="true"/>

        <LanguageKeys>
            <LanguageKey name="threat.source" valuetype="Text" />
```

```
            <LanguageKey name="threat.category" valuetype="Text" />
            <LanguageKey name="threat.desc" valuetype="Text" />
        </LanguageKeys>

        <Fields>
            <Field index="1" type="index" key="alias.host" />
            <Field index="4" type="value" key="threat.desc" />
            <Field index="2" type="value" key="threat.source" />
            <Field index="3" type="value" key="threat.category" />
        </Fields>

    </FlatFileFeed>
</FDF>
```

Feed Definition Equivalents for Custom Feed Wizard Parameters

The NetWitness Feeds wizard provide options to define the structure of the data feed file. These correspond directly to attributes in the feed definition (.xml) file.

NetWitness Parameter	Feed Definition File Equivalent
	Define Feed tab
Feed Type	Select: **Default** - to define a feed based on a `.csv` formatted feed data file. **STIX** - to define a feed based on STIX formatted `.xml` file.
Feed Task Type	Select: **Adhoc** - to create an on-demand feed. **Recurring** - to create a feed that recurs automatically.
Name	Enter a custom feed name in the feed data file that corresponds to the `flatfeedfile name` attribute in the feed definition file; for example, `Dynamic DNS Test Feed`.
File/ Browse	Enter a name of the feed data file that corresponds to the `flatfeedfile path` attribute in the feed definition file; for example, `dynamic_dns.csv`.
(STIX, Recurring) **Trust All Certificate**	Select **Trust All Certificate**, if you do not want to validate the REST server certificate. This option is enabled by default (checked).
(STIX, Recurring) **Certificate/Browse**	For client authentication with the REST URL, in the **Certificate** field, click **Browse** and select the self signed certificate. The supported certificate formats are .cer, .crt with Base64 & DER encoded files.
	Define Feed tab - Advanced Options
XML Feed File	Enter a name of the feed definition file, for example, `dynamic_dns.xml`.
Separator	The separator character used to separate attributes in the feed data file. It corresponds to the **`flatfeedfile separator`** in the feed definition file; for example, a comma.

NetWitness Parameter	Feed Definition File Equivalent
Comment	The character used to identify a comment in the feed data file. It corresponds to the `flatfeedfile comment` attribute in the feed definition file; for example, #.
Remove STIX data older than	The number of days for which the STIX packages downloaded from TAXII server have to be stored. The STIX packages older than the specified number of days are deleted automatically. The default value is 180 days, which is also the maximum.
Select Services tab	Select the services to which you want to send the data feed.
(Define Columns tab, Define Index) **Type**	The type of lookup value in the index position of the feed data file. **IP** means that each row in the feed data file contains an IP address in the lookup value position. The IP value is in dotted-decimal format (for example, 10.5.187.42). **IP Range** means that each row in the feed data file contains a range of IP addresses in the lookup value position. The IP range is in CIDR format (for example, 192.168.2.0/24). **Non IP** means that the each row in the feed data file contains a metadata value other than IP address in the lookup value position. The Service Type and Truncate Domain, and Callback Keys fields become active for a Non IP index.
(Define Columns tab, Define Index) **CIDR**	Specifies that the IP value in the lookup position is in CIDR format. The **CIDR** attribute sets the IP address format in the field to Classless Inter-Domain Routing (CIDR) notation.
(Define Columns tab, Define Index) **Service Type**	For a Non IP index, the integer service type to filter meta lookups. It corresponds to **MetaCallback apptype** attribute in the feed definition file. A value of **0** indicates no filtering by service type.
(Define Columns tab, Define Index) **Truncate Domain**	For a Non IP index, for meta values that contain domain names (for example, hostnames), the system can strip off the host specific element in the data. Truncate Domain corresponds to the **MetaCallback truncdomain** attribute. If the value is www.example.com, it is truncated to example.com. A value of **False** selects no truncation, and **True** selects truncation.
(Define Columns tab, Define Index) **Ignore Case**	If this option checked, the feed will ignore the case.
(Define Columns tab, Define Index) **Callback Keys**	For a Non IP index, the available meta keys to match on instead of ip.src/ip.dst (the defaults for IP index type) are selectable from the drop-down list. The Callback Key corresponds to the **MetaCallback name** attribute, and the index column of the csv file must contain data that can match the chosen meta key. For example, if the username meta key is chosen, the index column of the csv file needs to be populated with users to be matched.

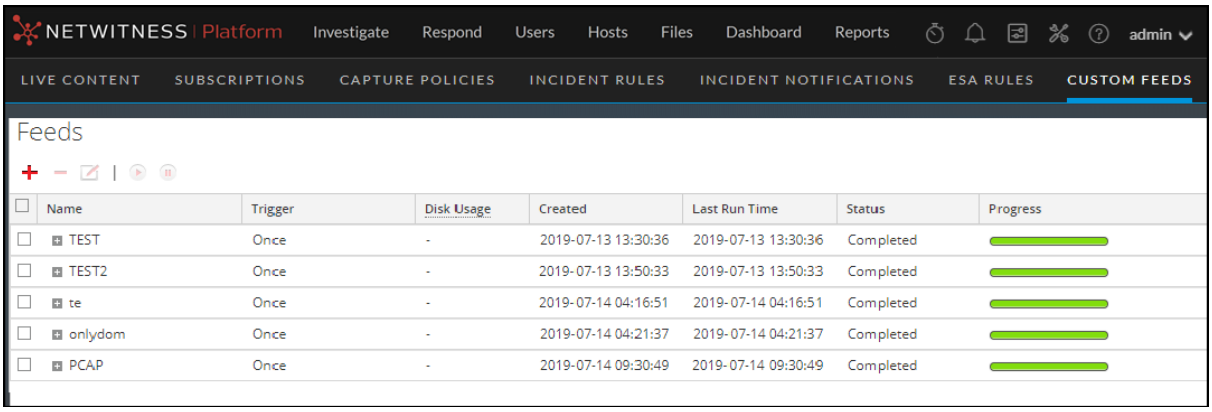
NetWitness Parameter	Feed Definition File Equivalent
(Define Columns tab, Define Index) **Index Column**	Identifies the column in the feed data file that provides the lookup value for the row. Each position in each row of the feed data file is identified by a **Field index** attribute in the feed definition file. A field with an index of **1** is the first entry in a row, the second field has an index of **2**, the third field has an index of **3**, and so on. You can select multiple index columns, if the **Feed Type** is **STIX** and **Index Type** is **Non IP**. When you select multiple index columns the values from all the selected columns are merged in the first index column that you selected.
(DEFINE VALUES) **Key**	The name of the **LanguageKey**, as defined in the feed definition file, for which meta is created from this row of the feed data file. It corresponds to the **Field key** attribute in the feed definition file. A key applies only to a field whose type is set to **value**. In the feed definition file, there is a list of LanguageKeys from **index.xml**, or a summary name if Source Name and Destination Name are used. For example, **reputation** is a summary name for **reputation.src** and **reputation.dst**). This value is referenced by the Field key attribute.

Creating a Custom Feed

This topic provides instructions for creating a custom feed using a .csv or STIX formatted feed data file in NetWitness. For more information about STIX and creating a STIX custom feed, see Create a STIX Custom Feed.

You can easily create a custom feed using the Custom Feed wizard. To complete this procedure, you need a feed data file in `.csv`or `.xml` format. If you also have an associated feed definition file in `.xml` format, which describes the structure of the feed data file, you can use the feed definition file to create a feed. The Custom Feed wizard can create the feed based on a feed data file, or based on a feed data file and corresponding feed definition file.

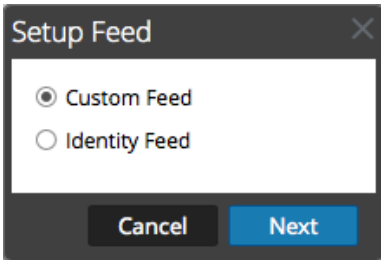
After completing this procedure, you will have created a custom feed.



The feed data file (`.csv` or STIX (`.xml`)) and optionally the feed definition file (`.xml`) must be available on the local file system for an on-demand custom feed. For a recurring custom feed, the files must be available at a URL that is accessible to the NetWitness server.

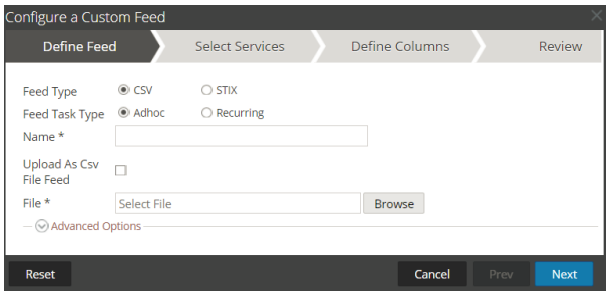
Note: Any feeds that are created in 11.2 release or prior will be automatically pushed to Context Hub as Lists. The lists can be looked up in the context lookup panel of the Respond and Investigate pages. If Context Hub is not configured or the service is down, then the feeds will be pushed to Context Hub the next time the server is available.

To create a custom feed:



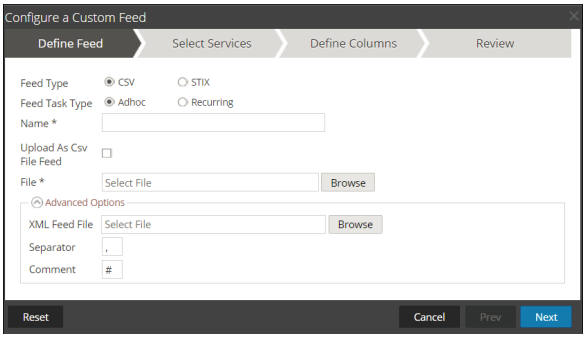
1. Go to **(Configure) > CUSTOM FEEDS**.

   The Custom Feeds view is displayed.



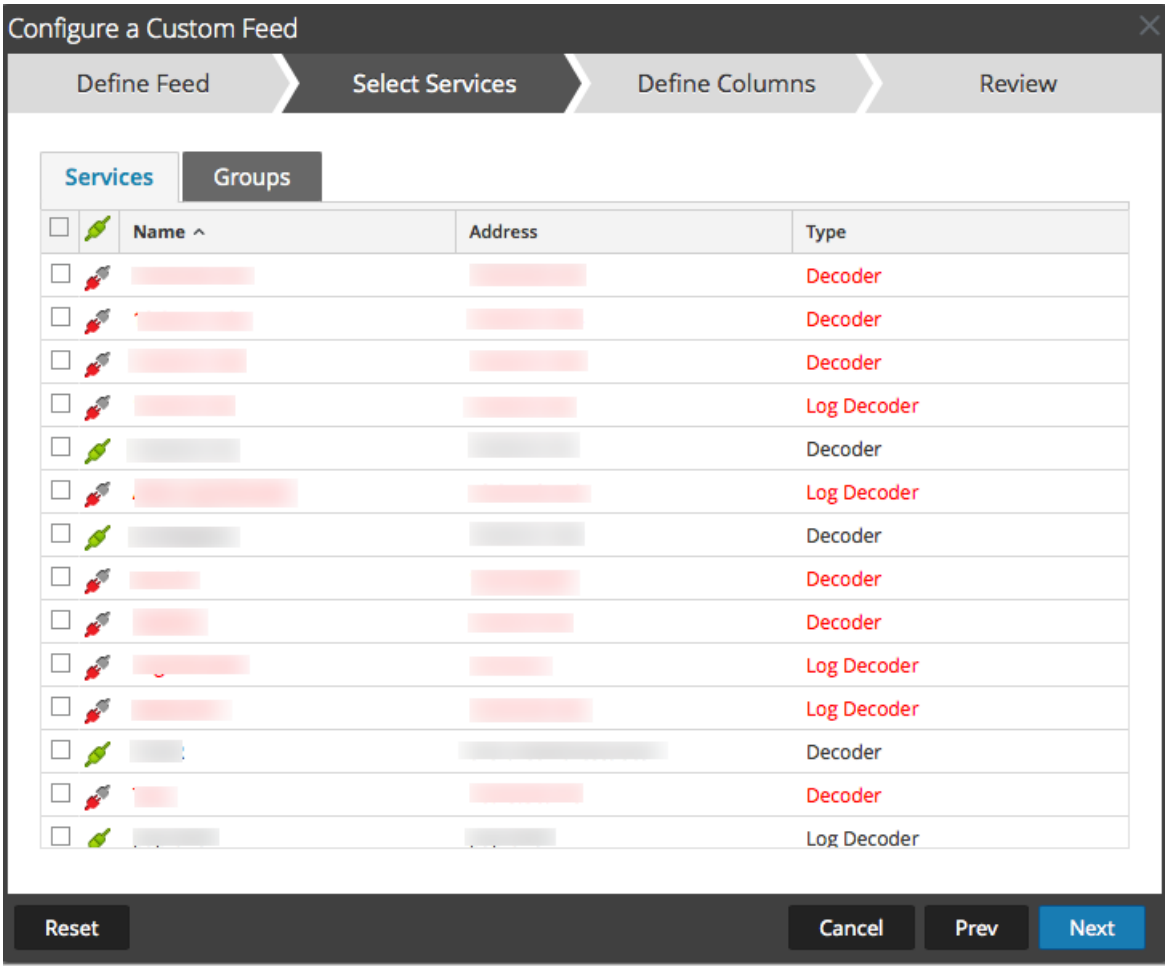
2. In the toolbar, click .

   The Setup Feed dialog is displayed.



3. To select the feed type, click **Custom Feed** and **Next**.

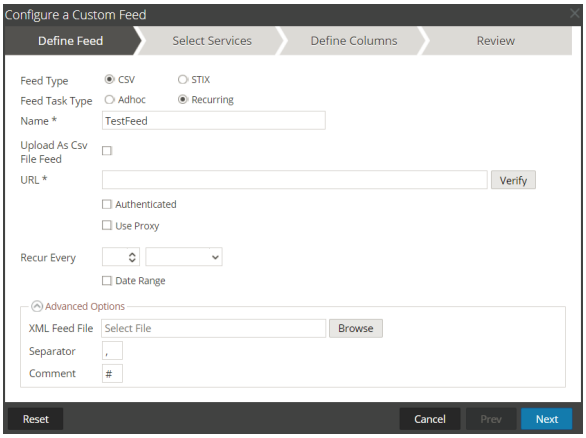
   The Configure a Custom Feed wizard is displayed, with the Define Feed form open.



4. To define a feed based on a `.csv` formatted feed data file, select **CSV** in the **Feed Type** field.
5. To define an on-demand feed task that executes once, select **Adhoc** in the **Feed Task Type** field and do one of the following:
   a. (Conditional) To define a feed based on a .csv formatted feed data file, type the feed **Name**.
   b. Select the checkbox **Upload As CSV File Feed**, if required.
   c. Select a .csv content **File** from the local file system, and click **Next**.
   d. (Conditional) To define a feed based on an XML feed file, select **Advanced Options**.

      The Advanced Options are displayed:

   e. Select an XML feed file from the local file system, choose the **Separator** (default is comma), and specify the **Comment** characters used in the feed data file (default is #), and click **Next**.
   f. The Select Services form is displayed. This is an example of the form for a feed based on a feed data file with no feed definition file. If you are defining a feed based on a feed definition file, the



Define Columns tab is not needed.

6. To define a recurring feed task that executes repeatedly at specified intervals, during a specified date range.

   a. Select **Recurring** in the **Feed Task Type** field.

   The Define Feed dialog includes the fields for a recurring feed.

b. In the **URL** field, enter the URL where the feed data file is located, for example, `http://<hostname>/<feeddatafile>.csv`, and click **Verify**.

   NetWitness verifies the location where the file is stored, so that NetWitness can check for the latest file automatically before each recurrence.

c. (Optional) If the URL has restricted access and requires authentication using your username and password, select **Authenticated**.

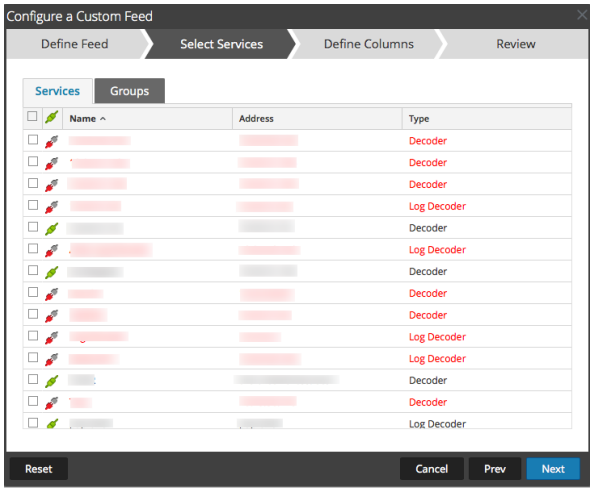
   NetWitness provides your user name and password for authentication to the URL.

d. If you want the NetWitness server to access the Feed URL through a proxy, select **Use Proxy**. For more information on configuring a proxy, see the **Configure Proxy for NetWitness** topic in the *System Configuration Guide*. By default, the **Use Proxy** checkbox is not selected.
   NOTE:
   If you are using an HTTPS based feed server, ensure that you import and install the certificates. For more information, see Import Certificates for HTTPS Service

e. To define the interval for recurrence, do one of the following:

   - Specify the number of minutes, hours, or days between recurrences of the feed.
   - Specify recurrence every week, and select the days of the week.

f. To define the date range for the execution of the feed to recur, specify the **Start Date** and time and the **End Date** and time.



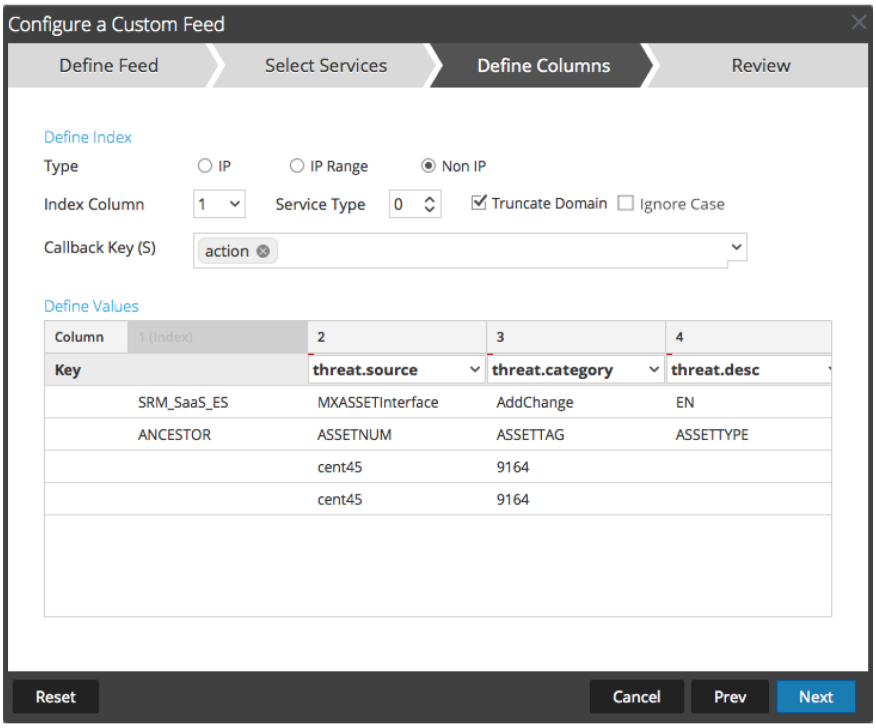
7. (Conditional) If you want to define a feed based on an XML feed file:

   - Type the feed **Name**, select **Advanced Options**.

     The Advanced Options fields are displayed.

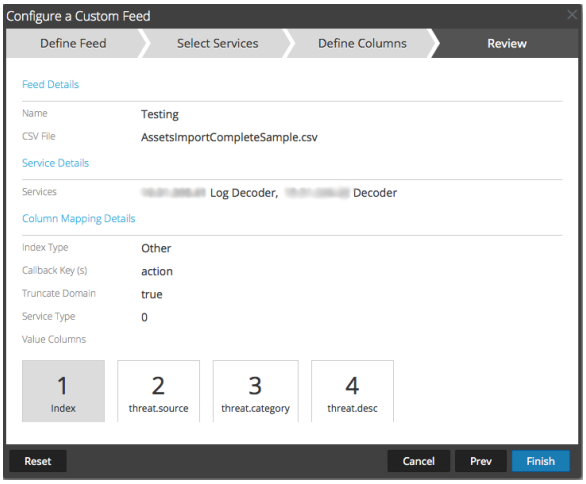
   - Select an XML feed file from the local file system, choose the **Separator** (default is comma), specify the **Comment** characters used in the feed data file (default is #) and click **Next**.

The Select Services dialog is displayed.



8. To identify services on which to deploy the feed, do one of the following:
   a. Select one or more Decoders and Log Decoders, and click **Next**.
   b. Click the **Groups** tab and select a group. Click **Next**.

      The Define Columns dialog is displayed.
9. To map columns in the Define Columns form:
   a. Define the Index type: **IP**, **IP Range**, or **Non IP**, and select the index column.
   b. (Conditional) If the index type is **IP** or **IP Range** and the IP address is in CIDR notation, select **CIDR.**
   c. (Conditional) If the index type is **Non IP**, additional settings are displayed. Select the service type and **Callback Keys,** and optionally select the **Truncate Domain** and **Ignore Case** option.



d. Select the language key to apply to the data in each column from the drop-down list. The meta displayed in the drop-down list is based on the meta available for the service define values. You can also add other meta based on advanced expertise.

Note: When a custom feed gets converted into a context hub list, you must map at least one meta key with one or more meta types by mapping a column header with a meta. However, you can add or edit the entity mapping of a list by clicking ⚙ in the Lists tab. For more information, see the *Context Hub Configuration Guide*.

e. Click **Next**.

The Review dialog is displayed.

10. Anytime before you click **Finish**, you can:
    - Click **Cancel** to close the wizard without saving your feed definition.
    - Click **Reset** to clear the data in the wizard.
    - Click **Next** to display the next form (if not viewing the last form).
    - Click **Prev** to display the previous form (if not viewing the first form)
11. Review the feed information, and if correct, click **Finish**.
12. Upon successful creation of the feed definition file, the Create Feed wizard closes, and the feed and corresponding token file are listed in the Feed grid and progress bar tracks completion. You can expand or collapse the entry to see how many services are included, and which services were successful.

Note: When you create a feed, and if there is no entity mapping done such as in case of custom meta, then those columns in the List will not have entity mappings in Context Hub. You have to manually map the entities from the List page.

Import Certificates for HTTPS Service

Import certificates to communicate with the HTTPS services:

1. SSH to the NW node and copy the CA certificate located in the following directory: */etc/pki/ca-trust/source/*
2. Execute the following command to update the certificates:
   `update-ca-trust`

3. Execute the following command to add the certificate to the java keystore:
   ```
   keytool -list -keystore /etc/pki/java/cacerts -storepass changeit |& head
   ```
4. Restart the service on the NW node.

Note: Perform the procedure for all the HTTPS servers.
Example: HTTPS proxy server and HTTPS feed server.

Create a STIX Custom Feed

You can create a custom feed using a .csv or STIX formatted feed data file in NetWitness.

Note: NetWitness supports Structured Threat Information Expression (STIX) 1.0, 1.1 and 1.2 versions only.

Structured Threat Information Expression (STIX™) is a structured language for describing cyber threat information so it can be shared, stored, and analyzed in a consistent manner. For more information about STIX, see https://oasis-open.github.io/cti-documentation/.

Caution: If STIX recurring feed is configured and you update Security Analytics from 10.6.x to NetWitness 11.0, you must re-configure the STIX recurring feed.

In NetWitness Platform, STIX feeds are supported. STIX content (with version 11.x) can be uploaded in an ".xml" format. The constructs such as Indicator Title and Description, Observable Title and Description, and Indicator Sightings information are parsed from STIX and pushed to the decoders or log decoders that are selected during feed configuration. Information such as IP addresses, File hashes, Domain names, URIs, and Email addresses are extracted from the STIX observable to be included in the feed.

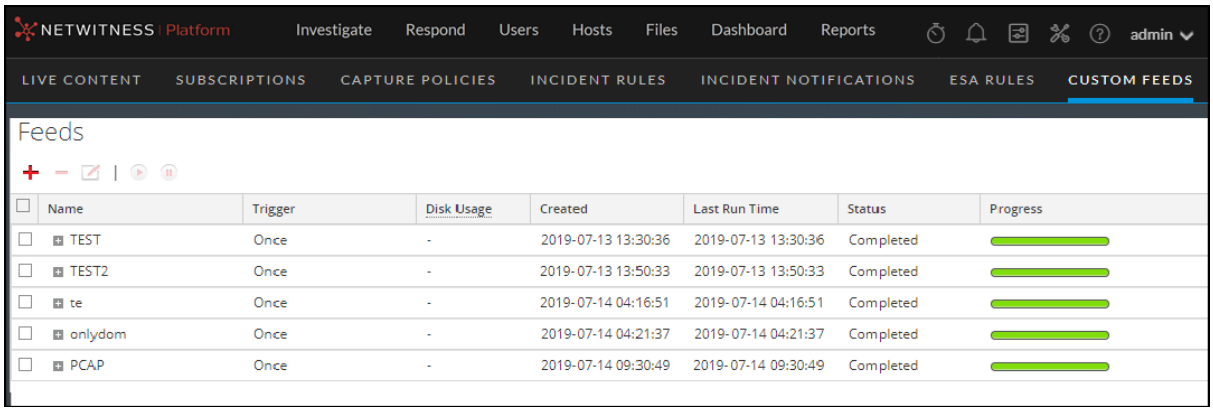
Make sure the following criteria are met before you upload the STIX file:

1. Only STIX Observables with property values in the "Equals" operator
2. The uploaded STIX xml file must have only one STIX_Package

TAXII (Trusted Automated eXchange of Indicator Information) is the main transport mechanism for cyber threat information represented in STIX. Using the TAXII services, organizations can share cyber threat information in a secure and automated manner.

The STIX and TAXII communities work closely together to ensure that they continue to provide a full stack for sharing threat intelligence.

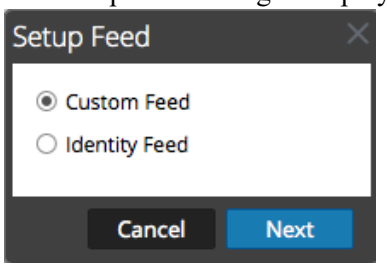
Apart from TAXII server, STIX data can also reside on REST server and you can fetch STIX file from the REST server by providing the URL of the REST server. For example, http://stixrestserver.internal.com.



The feed data file (`.csv` or STIX (`.xml`)) and optionally the feed definition file (`.xml`) must be available on the local file system for an on-demand custom feed. For a recurring custom feed, the files must be available at a URL that is accessible to the NetWitness server.

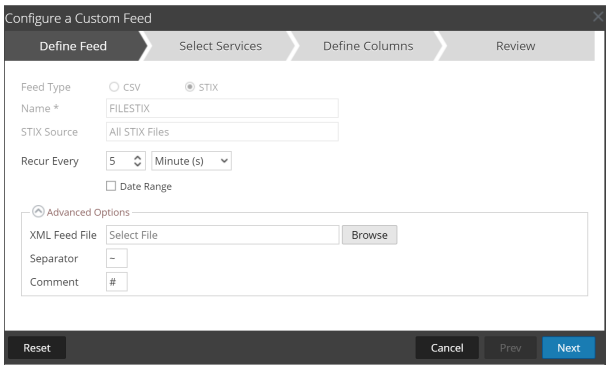
In NetWitness Platform, STIX (.xml) feed of type Indicators or Observable which contains the properties such as the IP addresses, File hashes, Domain names, URIs and Email addresses are supported. The properties values in the Equals operator is only supported. The STIX constructs that are parsed are Indicator Title and Description, Observable Title and description and Indicator Sightings information. The STIX (.xml) with a single STIX_Package is only supported."

To create a STIX custom feed:



1. Go to  **(Configure) > CUSTOM FEEDS**.

   The Custom Feeds view is displayed.



2. In the toolbar, click .

   The Setup Feed dialog is displayed.

3. To select the feed type, click **Custom Feed** and **Next**.

   The Configure a Custom Feed wizard is displayed, with the Define Feed dialog open.

4. Enter the following details:

   a. **Feed Type**: Select **STIX**, to define a feed based on a STIX formatted `.xml` file.

   b. **Name**: type the feed name, to define a feed based on STIX formatted `.xml` file.

   c. **STIX Source**:Select a STIX data source from the drop-down which is added in Context Hub.

   d. **Recur Every**: Specify a recurring feed task that executes repeatedly at specified intervals.

   Note: NetWitness verifies the connection to the server, so that NetWitness can check for the latest file automatically before each recurrence.

   e. **Date Range**: Select the checkbox and specify the date range for the feed task to recur.

5. (Optional) Select **Advanced Options**,to define a feed based on an XML feed file.
   a. **XML Feed file**: Browse and select an XML feed file from the local file system.
   b. **Separator**: Choose a separator (default is comma).
   c. **Comment**: Specify the comment characters used in the feed data file (default is #).
6. Click **Next**.
7. The Select Services dialog is displayed. This is an example of the form for a feed based on a feed data file with no feed definition file. If you are defining a feed based on a feed definition file, the Define Columns tab is not needed.

8. To identify services on which to deploy the feed, do one of the following:
   a. Select one or more Decoders and Log Decoders, and click **Next**.
   b. In case of STIX feed, Context Hub will be selected by default and you are not allowed to deselect it. In addition, you can select one or more Decoders and Log Decoders and click **Next** or Click the **Groups** tab and select a group. Click **Next**.

      If the data from the STIX server is large, the following message is displayed:

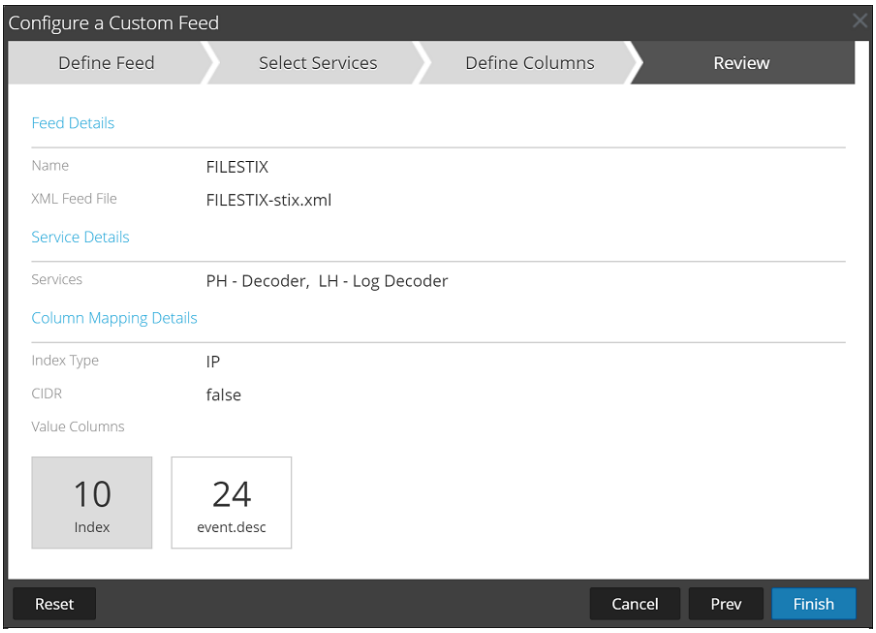
      - If you click **Continue to Wait**, it continues to wait till the sample data is fetched or timeout (10 minutes) whichever is sooner. In case of timeout no sample data is retrieved even after 10 minutes.
      - If you click **Map Without Sample data**, the mapping column is displayed without any sample data.

      The Define Columns dialog is displayed.
9. To map columns in the Define Columns form:

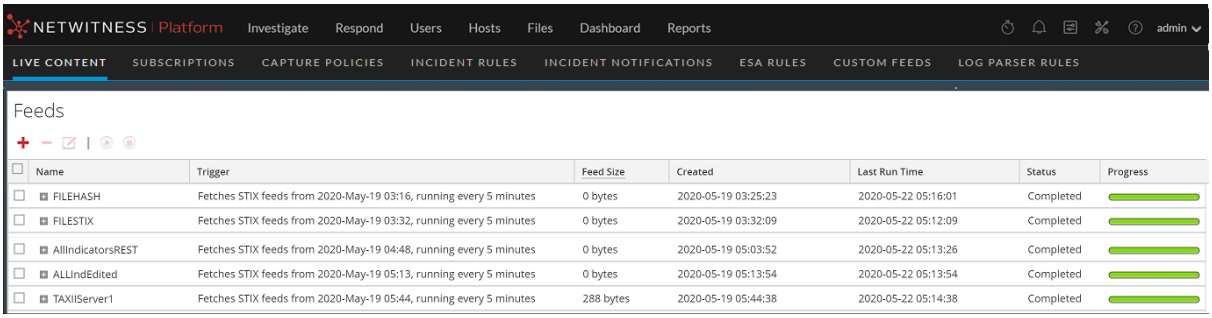
a. Define the Index type: **IP**, **IP Range**, or **Non IP**, and select the index column.

b. (Optional) If the index type is **IP** or **IP Range** and the IP address is in CIDR notation, select **CIDR**.

c. (Optional) If the index type is **Non IP**, additional settings are displayed. Select the service type and **Callback Keys,** and optionally select the **Truncate Domain** option.



Note:
- If the **Index Type** is Non IP, you can select multiple index columns in the **Index Column(S)**. The values from all the selected columns are merged in the first index column that you selected and the merged values are pushed to the Log Decoder for parsing. For example, in the **Index Column(S)** if you select 2,4,7 as index columns the values from the 2,4 and 7 columns are merged in the column 2 and the values are pushed to Log Decoder for parsing.
- Indexing cannot be done for the columns such as Indicator Title, Indicator Description, Observable Title, Observable Description, as the look up cannot be performed for those columns.



d. Select the language key to apply to the data in each column from the drop-down list. The meta displayed in the drop-down list is based on the meta available for the service define values. You can also add other meta based on advanced expertise.

e. Click **Next**.

The Review dialog is displayed.

10. Anytime before you click **Finish**, you can:
    - Click **Cancel** to close the wizard without saving your feed definition.
    - Click **Reset** to clear the data in the wizard.
    - Click **Next** to display the next dialog (if not viewing the last form).
    - Click **Prev** to display the previous dialog (if not viewing the first form)
11. Review the feed information, and if correct, click **Finish**.
12. Upon successful creation of the feed definition file, the Create Feed wizard closes, and the feed and corresponding token file are listed in the Feed grid and progress bar tracks completion. You can expand or collapse the entry to see how many services are included, and which services were successful.

Note: Health and Wellness raises alerts when the available heap memory of Context Hub server is critically low and the status displays as unhealthy due to low memory. For more information on how to troubleshoot the `OutOfMemoryError` on the Context Hub Server, see "Troubleshooting" in the *Live Services Management Guide*.

MetaCallback Feeds using CIDR Index Range for IPv4 and IPv6

You can use CIDR index ranges for IPv4 and IPv6 in custom MetaCallback feeds. As with other custom feeds, you must create feed data file in .csv format, and a feed definition file in .xml format.

Note: Using MetaCallback feeds with CIDR index ranges is supported only through the Advanced Configuration wizard or the REST interface.

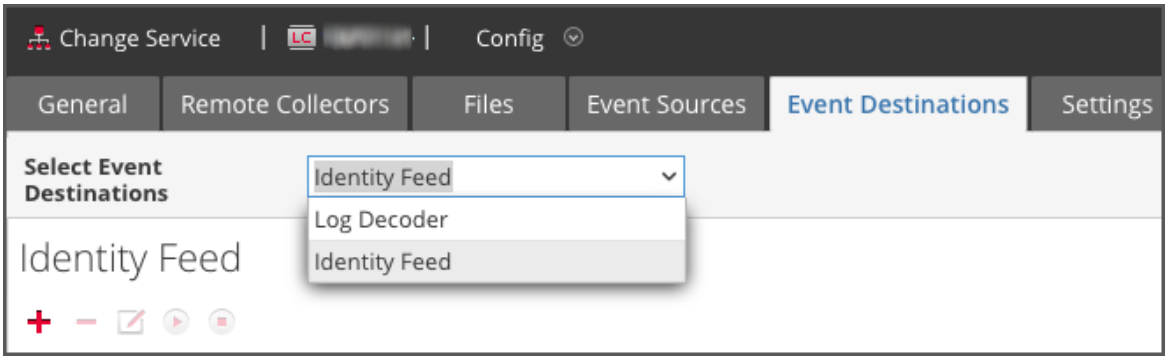
The following example shows the content of both a .csv file and an .xml file for a MetaCallback feed using CIDR index ranges for IPv4 or IPv6.

CSV File Content

```
192.168.0.0/24, Sydney
192.168.1.0/24, Melbourne
```

XML File Content

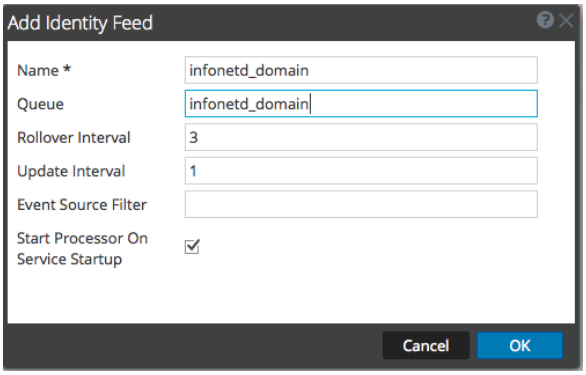
```
<?xml version="1.0" encoding="UTF-8"?><FDF
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:noNamespaceSchemaLocation="feed-definitions.xsd">
<FlatFileFeed name="ip_test" path="ip_test.csv" separator="," comment="#">
<MetaCallback name="DstIP" valuetype="IPv4" apptype="0" truncdomain="false">
<Meta name="ip.dst"/>
</MetaCallback>
<LanguageKeys>
<LanguageKey name="alert" valuetype="Text" />
</LanguageKeys>
<Fields>
<Field index="1" type="index" range="cidr"/>
<Field index="2" type="value" key="alert" />
</Fields>
</FlatFileFeed>
</FDF>
```



Note: To configure a CIDR index range for feeds with single or multiple MetaCallbacks of value type IPv4 or IPv6, the field of type index MUST contain a range attribute with range="cidr". Also, configuring "cidr" index ranges for feeds with MetaCallbacks of multiple different value types is not supported.

Creating and Managing an Identity Feed

You can easily create an Identity feed and populate it to selected Decoders and Log Decoders. After completing this procedure, you will have created an Identity feed.



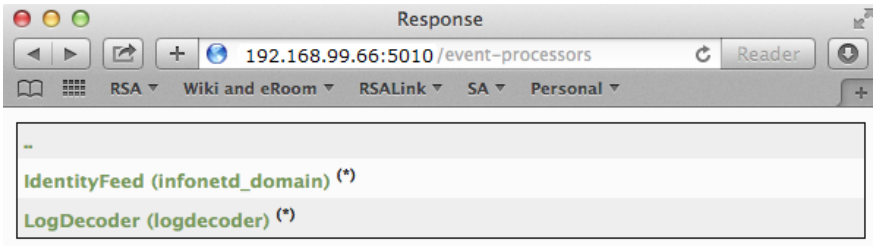
To create an identity feed:

1. Add a destination for the feed.
   a. Go to **(Admin) > Services** and in the **Services**.
   b. In the list of services, select a **Log Collector** service, and select **View > Config**.
   c. Select the **Event Destinations** tab.
   d. In the Select **Event Destinations** field, select **Identity Feed**.

   e. Click and enter a unique name for the feed.

      The Queue name identifies the feed within the Log Collector. Use the name of the feed for the Queue.

   f. Click **OK**.
2. Test generation of messages.
   a. Have users log into Windows boxes on the domain to generate the appropriate log messages on the domain controllers for testing.

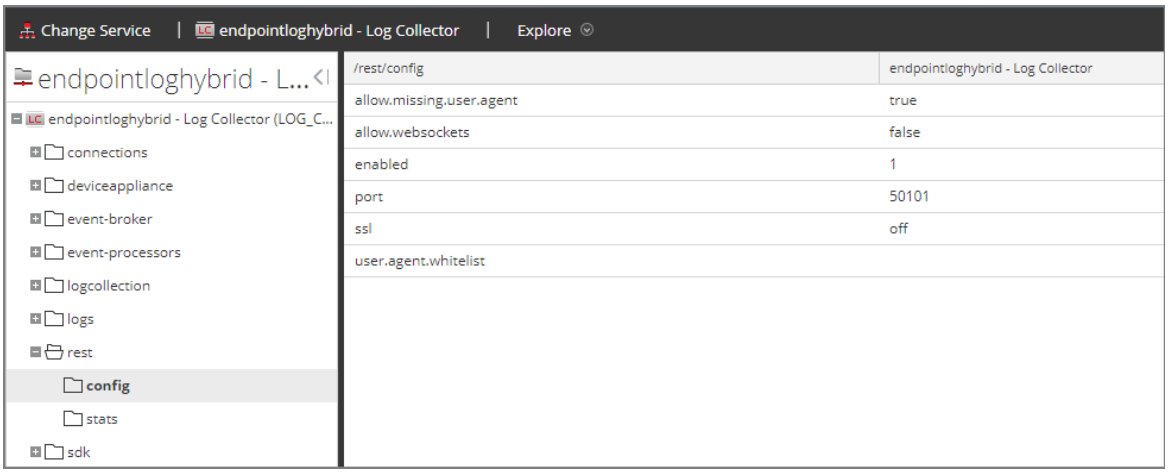


b. Verify that data is written to the feed files. SSH to the Log Decoder/Collector or Virtual Log Collector being configured. Navigate to `/var/netwitness/logcollector/runtime/identity-feed` and verify that the `Identity_deploy` files are getting populated with data.

c. Open up a web browser (Non-Internet Explorer browsers preferred) and log in to the REST interface of the Log Collector. Use administrative credentials when logging in. For example, if the IP address of your Log Collector is 192.168.99.66, the URL would be:

- SSL not enabled: **http://192.168.99.66:50101/event-processors**
- SSL enabled: **https://192.168.99.66:50101/event-processors**

The browser screen should look like this:

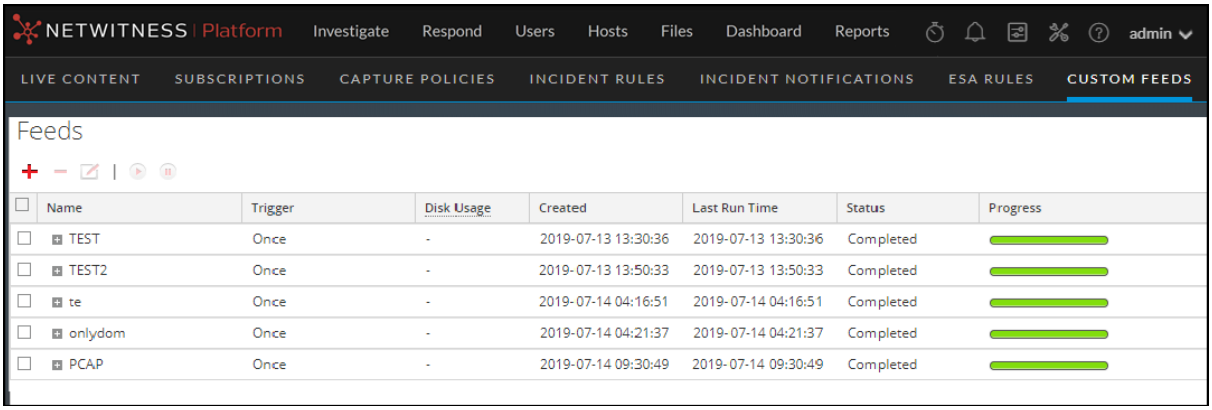


The screen contains the name of the identity feed you created earlier (`infonetd_domain`, in this example).

For the identity feed to function correctly, port 50101 must be active on the Log Collector, and you must determine whether SSL encryption is active.

d. Go to  **(Admin) > Services > <*Log Collector being setup*>**  **> View > Explore**.

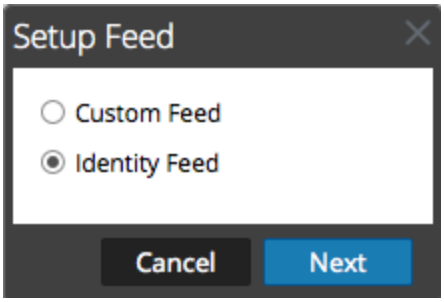
e. In the left pane, expand **rest > config**.



For REST to be active, **enabled** must be set to **1**.

f. Note the value for **ssl**. If SSL should be enabled for your environment, this must be set to **on**.

> **Note:** If you changed the setting for either the **enabled** or **ssl** option you must restart the Log Collector service before moving forward.

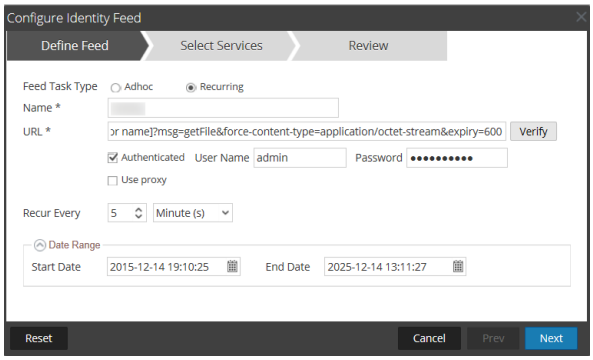


3. Go to **(Configure) > Custom Feeds**.

The Feeds dialog is displayed.

4. In the toolbar, click .

The Setup Feed dialog is displayed.



5. Make sure **Identity Feed** is selected and click **Next**.

The Configure Identity Feed panel opens with the **Define Feed** tab displayed.

6. (Conditional) You can create an on-demand or recurring feed.

   - To define an on-demand Identity feed task that executes once, select **Adhoc** in the **Feed Task Type** field, type the feed **Name**, and browse for and open the feed.
   - To define a recurring Identity Feed task that executes on a recurring basis, select **Recurring** in the **Feed Task Type** field.

     The **Define Feed** dialog includes the fields for a recurring feed.

Note: NetWitness verifies the location where the file is stored, so that NetWitness can check for the latest file automatically before each recurrence.

7. Enter a value and verify the URL field.

   a. In the **URL** field, enter the URL where the feed data file is located. This is the REST API interface that was setup earlier. Make sure you have the following information to construct the URL:

      - The IP address of the Log Collector being used to construct the Identity Feed file.
      - The identity queue name, as set in step 2c.
      - Whether or not SSL is enabled on the Log Collector REST port, as set in step 2f.

      You can construct this value as follows:

      - SSL enabled: `https://<LogCollector>:50101/event-processors/<ID Event processor name>?msg=getFile&force-content-type=application/octet-stream&expiry=600`
      - SSL not enabled: `http://<LogCollector>:50101/event-processors/<ID Event processor name>?msg=getFile&force-content-type=application/octet-stream&expiry=600`

      So, using the example from earlier, the complete value that you would enter into this field is as follows:

      ```
      http://192.168.99.66:50101/event-processors/infonetd_
      domain?msg=getFile&force-content-type=application/octet-
      stream&expiry=600?msg=getFile&force-content-type=application/octet-
      stream&expiry=600
      ```

b. For the URL verification to work correctly, it is important that the NetWitness UI server can access the Log Collector's REST API port (50101). This can be tested by going to the NetWitness UI server via SSH. Once there, run the following command:

- SSL enabled: `curl -vk https://<ip of log collector>:50101`
- SSL not enabled: `curl -v http://<ip of log collector>:50101`

If the `curl` command does not connect then there may be a network firewall or routing issue between the NetWitness UI server and the Log Collector.

Example of a bad connection:

```
* About to connect() to 192.168.99.66 port 50105 (#0)
* Trying 192.168.99.66... No route to host
* couldn't connect to host
* Closing connection #0
curl: (7) couldn't connect to host
```

Example of a good connection:

```
* About to connect() to 192.168.99.66 port 50105 (#0)
* Trying 192.168.99.66... connected
* Connected to 192.168.99.66 (192.168.99.66) port 50105 (#0)
> GET / HTTP/1.1
> User-Agent: curl/7.19.7 (x86_64-redhat-linux-gnu) libcurl/7.19.7
NSS/3.19.1 Basic ECC zlib/1.2.3 libidn/1.18 libssh2/1.4.2
> Host: 192.168.99.66:50105
> Accept: */*
>
< HTTP/1.1 401 Unauthorized
< Content-Length: 71
< Connection: Keep-Alive
< Pragma: no-cache
< Expires: -1
< Cache-Control: no-cache, no-store, must-revalidate
< WWW-Authenticate: Basic realm="NetWitness"
< Content-Type: text/xml; charset=utf-8
<

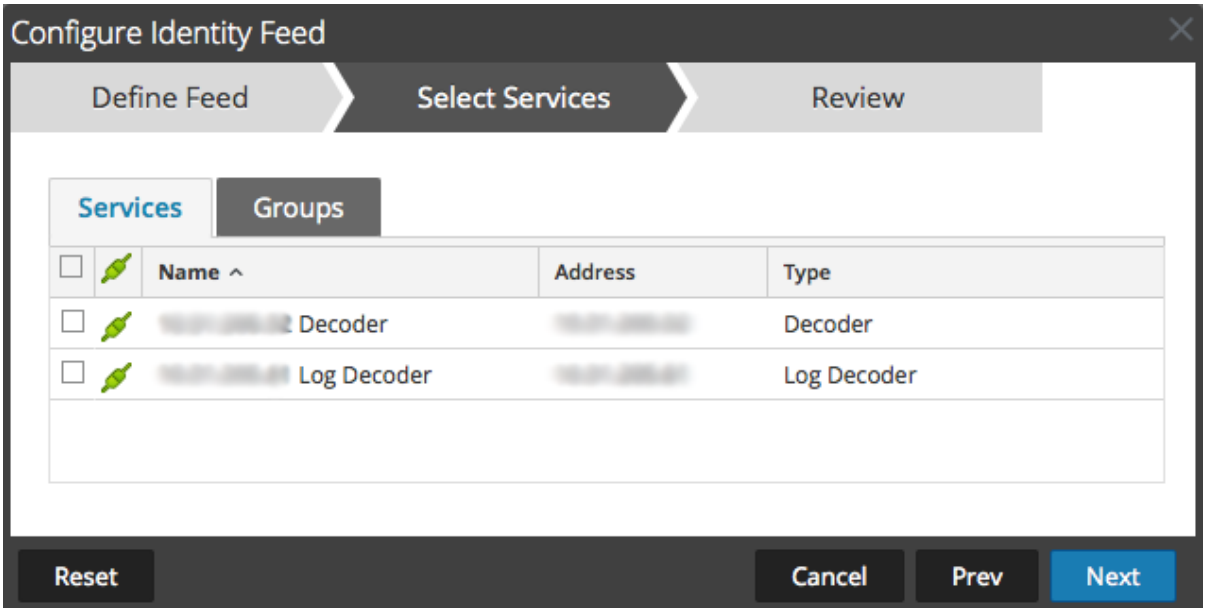
<?xml version="1.0" encoding="utf-8"?>
<error>401 Unauthorized</error>
* Connection #0 to host 192.168.99.66 left intact
* Closing connection #0
```

8. The REST API requires a username and password when attempting to pull the `identity_deploy.csv` file from the Log Collector. This can be any username and password that is available on the service itself. For more information, see the "Services Security View" topic in the *Hosts and Services Guide*.

   To see which accounts are available, go to  **(Admin) > Services > <log collector being setup> > Actions > View > Security**.

   Under the Users table, you see all the users that can be used in this step. It is suggested that a separate user account is created specifically for this setup, and is used nowhere else in the environment, for added security. For details, see "Add a User and Assign a Role" in the *System Security and User Management Guide*. (Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.)

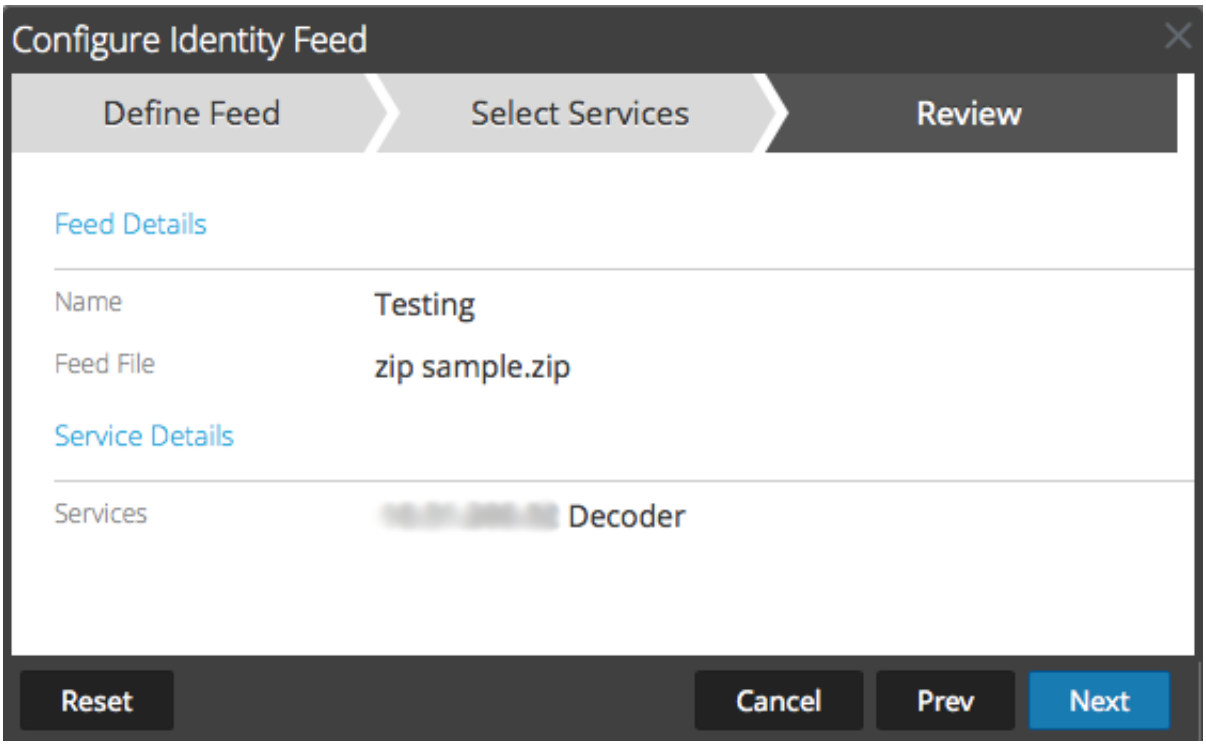
9. To define the recurrence interval, do one of the following:



- Specify the number of minutes, hours, or days between recurrences of the feed.
- Enter the date range for the execution of the feed to recur, specify the **Start Date** and time and the **End Date** and time.

10. If using SSL encryption, you need to install the REST API SSL certificate for the Log Collector into the NetWitness UI server. For more information, see Import the SSL Certificate.

    If, after importing the SSL certificate, the verification of the URL still fails, see Cannot Verify Identity Feed URL.



11. Click **Verify** to verify your identity feed configuration before you proceed to the Select Services dialog.
12. Click **Next**.

    The Select Services dialog is displayed.

13. To identify services on which to deploy the feed, select one or more Decoders and Log Decoders and click **Next**.
14. Click the **Groups** tab, select a group, and click **Next**.

    The Review dialog is displayed.

Note: If a group of devices with Decoders and Log Decoders is used to create recurring or custom feeds and this group is deleted, you can edit the feed and add a new group to the feed.

15. Anytime before you click **Finish**, you can:
    - Click **Cancel** to close the wizard without saving your feed definition.
    - Click **Reset** to clear the data in the wizard.
    - Click **Next** to display the next form (if not viewing the last form).
    - Click **Prev** to display the previous form (if not viewing the first form).
16. Review the feed information, and if correct, click **Finish**.

Upon successful creation of the feed definition file, the Create Feed wizard closes, and the feed and corresponding token file are listed in the Feed grid and progress bar tracks completion. You can expand or collapse the entry to see how many services are included, and which services were successful.

Import the SSL Certificate

If SSL is configured on the Identity feed's Log Collector, follow these steps to import the Log Collector's SSL certificate into the NetWitness UI server key store. If this certificate is not imported, the NetWitness UI server will be unable to pull the Identify feed file from the Log Collector.

1. To pull the SSL certificate off the Log Collector, SSH into the NetWitness UI server and run the following command:

   ```
   echo -n | openssl s_client -connect <HOST>:<PORT> | sed -ne '/-BEGIN CERTIFICATE-/,/-END CERTIFICATE-/p' > /tmp/<SERVERNAME>.cert
   ```

   This command saves the SSL certificate to `/tmp/<SERVERNAME>.cert`. For example:

   ```
   echo -n | openssl s_client -connect 192.168.99.66:50101 | sed -ne '/-BEGIN CERTIFICATE-/,/-END CERTIFICATE-/p' > /tmp/logcollector.cert
   ```

2. To import the SSL certificate into the NetWitness UI server, SSH into the UI server and run the following command:

   ```
   keytool -importcert -alias <name an alias for the cert> -file <the cert file pathname> -keystore /etc/pki/java/cacerts
   ```

   For example:

   ```
   keytool -importcert -alias logcollector01 -file /tmp/logcollector.cert -keystore /etc/pki/java/cacerts
   ```

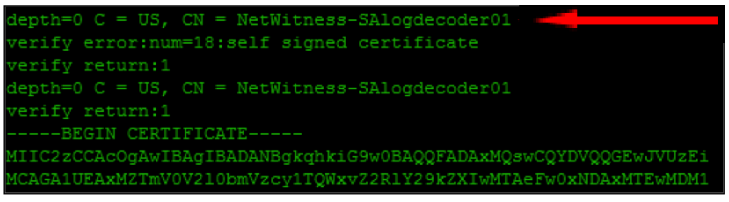
3. The system requests a password. Enter the password for the keystore on the NetWitness UI server, not for the jetty keystore. The default password is **changeit**.

4. Restart **jettysrv** to allow jetty to read the new certificate in the store.

Cannot Verify Identity Feed URL

If the Identity feed URL cannot be verified, and you are using SSL, make sure you followed the steps in Import the SSL Certificate.

If there are issues, it is possible that the internal name of the certificate does not match the hostname of the Log Collector. The following procedure checks this.



1. SSH to the NetWitness UI server.
2. Run the following command to output the CN name of the SSL cert:

   ```
   echo -n | openssl s_client -connect <log decoder>:50101 | sed -ne '/BEGIN CERTIFICATE-/,/-END CERTIFICATE-/p'
   ```

   For example:

   ```
   echo -n | openssl s_client -connect salogdecoder01:50101 | sed -ne '/BEGIN CERTIFICATE-/,/-END CERTIFICATE-/p'
   ```

3. Retrieve the CN name of the SSL certificate.

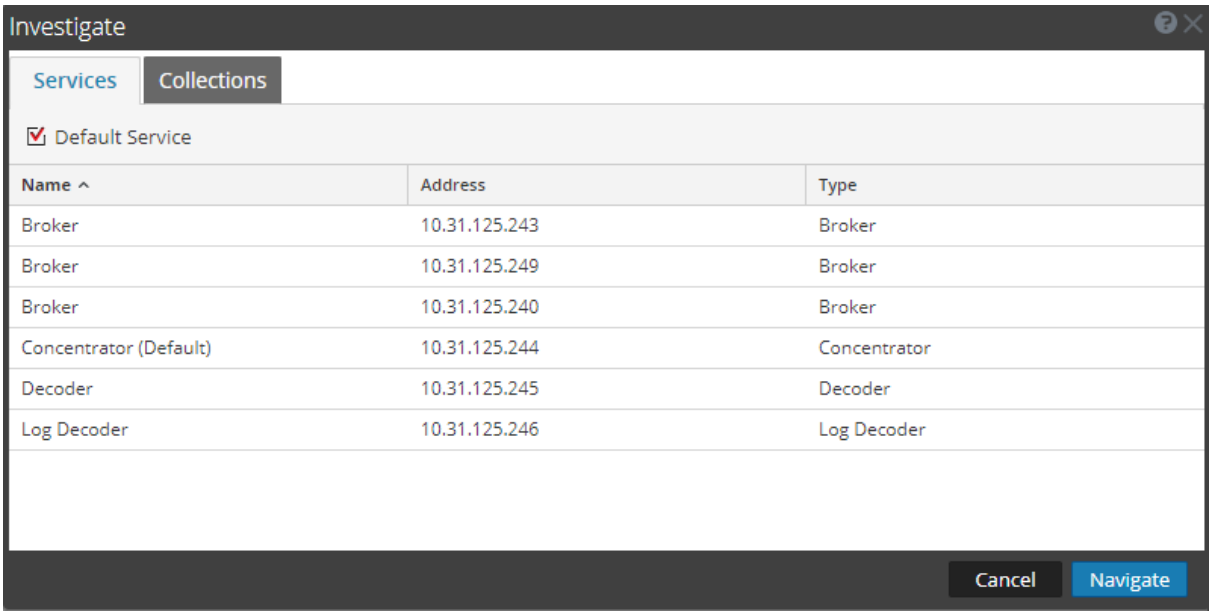
4. Edit the `/etc/hosts` file and add the IP address and CN name to the file.

5. Restart the network service on the appliance.
6. Confirm that the name placed in the **/etc/hosts** file is used instead of the FQDN or IP address in the Identity feed URL.
7. Re-verify the Identity feed URL.

Investigating an Identity Feed

An identity feed tracks interactive log on events from the Windows operating system. Identity feeds do not track interactive log off events.

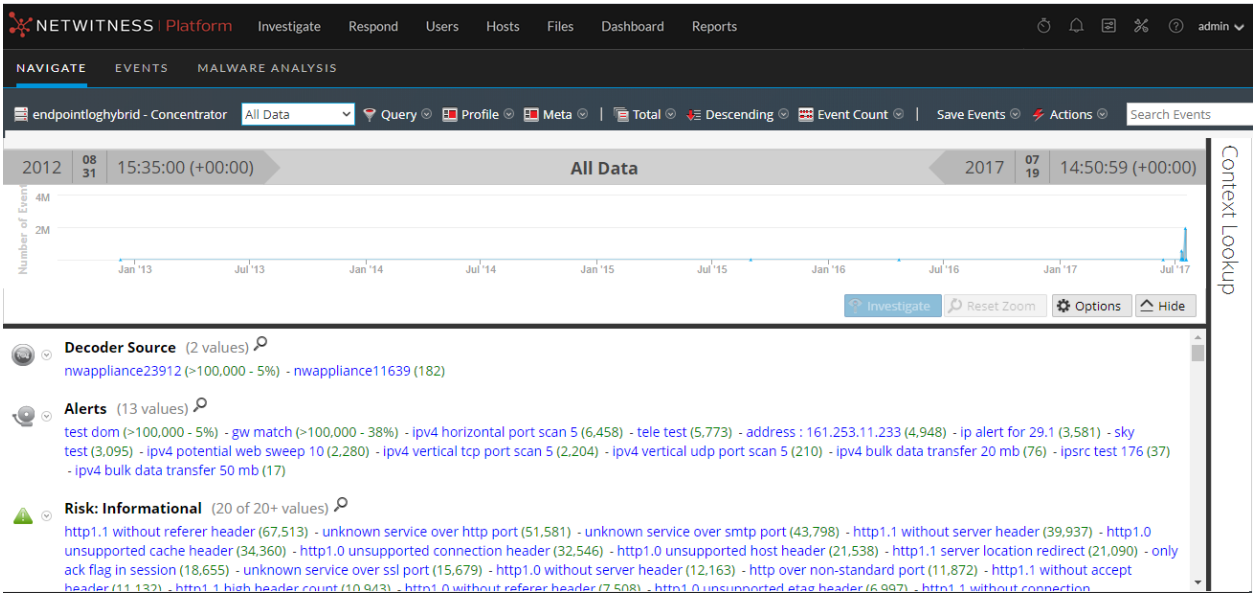
In order for an identity feed to process events and tag them, the events need to be collected using a Windows Log Collection module where an Active Domain Controller or non-Domain Controller is configured. Note that identity feeds can only be processed via an Identity Feed Event Processor.



Note: An identity feed only tracks one log in at a time. If two users log in to a system at the same time, the second user will overwrite the first user's data in the identity feed.

Once you have created an identity feed, you can view the results by investigating the feed.

To investigate a configured identity feed:



1. Go to **INVESTIGATE > Navigate**.

   If no default service is selected, the Investigate dialog is displayed.

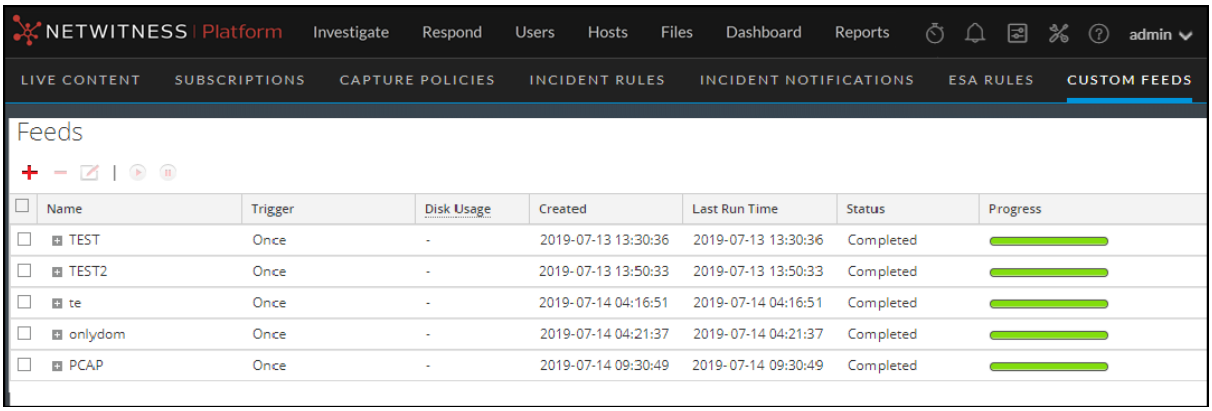
2. Select a service, usually a Concentrator, and click **Navigate**.
3. Select **Load Values** to retrieve meta data.

In the Values panel, scroll down to find the Meta Keys:

The identity feed provides information to selected Decoders and Log Decoders. It associates the Host IP data from the Windows operating system to the user logging into that Host in order to tag all logs associated with that IP and investigate.

Editing a Feed

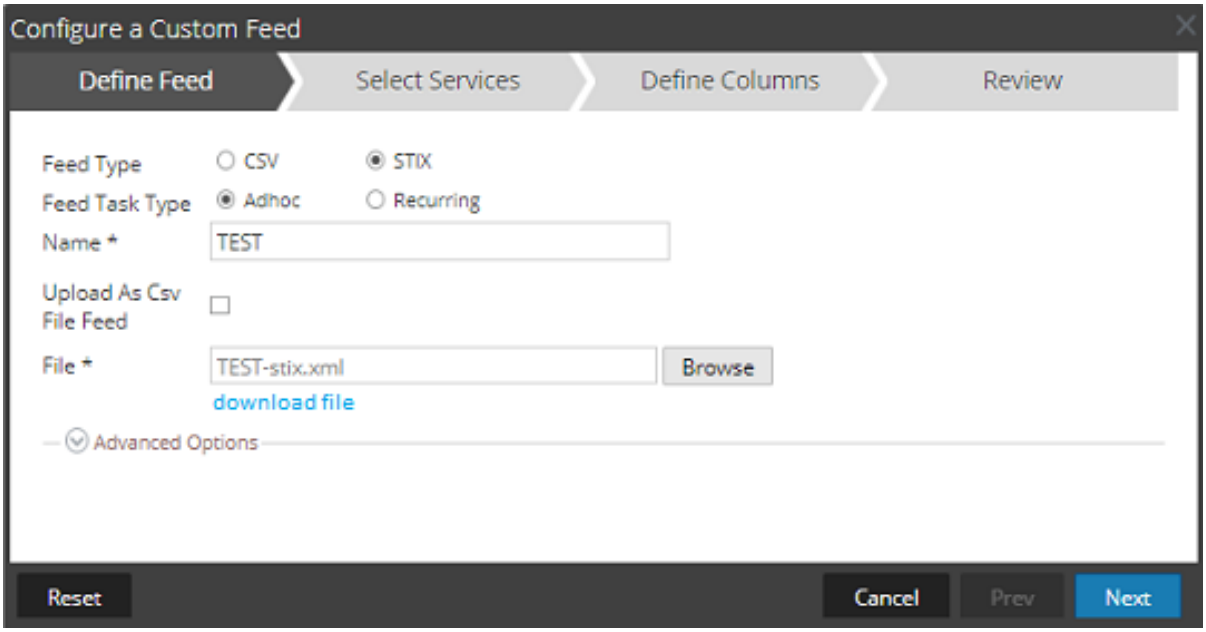
This topic provides instructions for editing a custom feed using the Custom Feed Wizard.



After you edit a feed:

- The feed (**.zip** format) or the file used to create the feed (**.csv** or **.xml**) has been downloaded and edited.
- The feed has been recreated with the updated file and new feed specifications.

To edit an existing feed:



1. Go to **(Configure) > CUSTOM FEEDS**.

   The Custom Feeds dialog is displayed.

2. In the toolbar, select a feed and click .

   The Configure Custom Feed or Configure Identity Feed panel opens in the Custom Feed wizard.

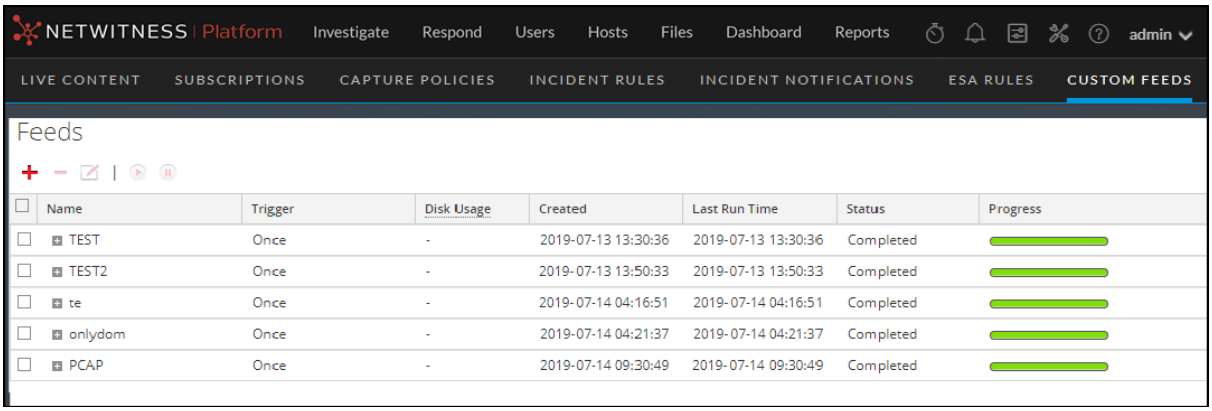
3. If you want to edit the feed file:
   a. Click **download file**.

      For an Identity feed, the .zip file is downloaded. For a custom feed, the .csv or .xml file is downloaded to your local file system.

   b. Edit and save the file.

   c. In the **Define Feed** tab, browse for and open the edited file.
4. Edit any other parameters in the **Define Feed** tab, **Select Services** tab, and **Define Columns** tab that apply to the type of feed.
5. Anytime before you click **Finish**, you can:
   - Click **Cancel** to close the wizard without saving your changes.
   - Click **Reset** to clear the data in the wizard.
   - Click **Next** to display the next form (if not viewing the last form).
   - Click **Prev** to display the previous dialog (if not viewing the first form).
6. In the **Review** tab, review the feed information, and if correct, click **Finish**.

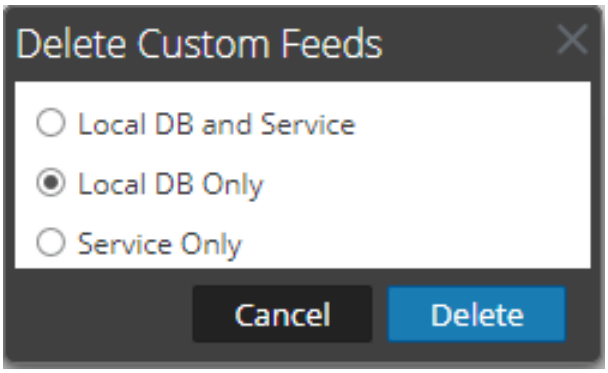
The feed is added to the feeds list and progress bar tracks completion. Upon successful creation of the feed definition file, the Create Feed wizard closes, and the feed and corresponding token file is listed in the Feeds list. You can expand or collapse the entry to see how many services are included, and which services are successful.



Removing a Feed

This topic provides instructions for removing a feed. You might want to remove a feed when some or all of the information in the feed is no longer useful for your organization.

To remove a feed:



1. Go to **(Configure) > CUSTOM FEEDS**.

   The Custom Feeds dialog is displayed.

2. In the toolbar, select a feed and click .

   The Delete Custom Feeds dialog is displayed.

   You can select one of the following options to delete the feed:

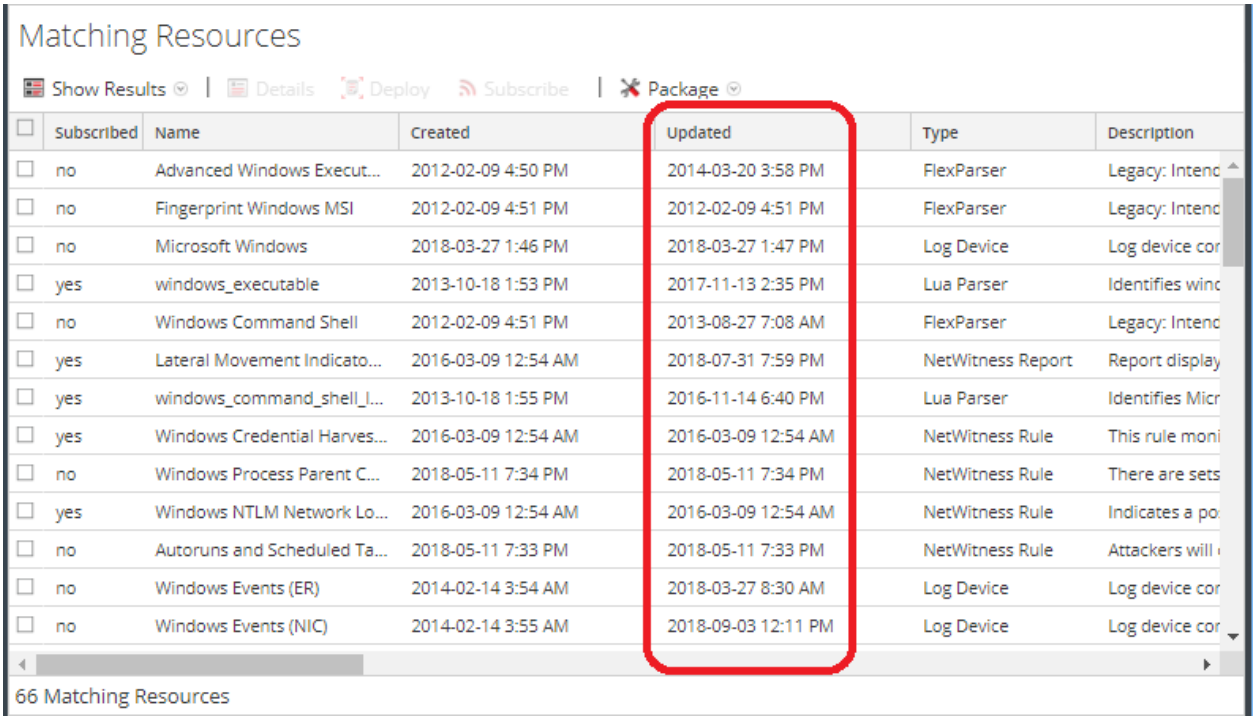
   - If you choose to delete the feed from **Local DB and Service**, the feed is deleted from both the service and the local NetWitness box. The deleted feed will no longer seen on the NetWitness user interface.
   - If you choose to delete the feed from **Local DB Only**, the feed is deleted from the local NetWitness box. The deleted feed will not be seen on the NetWitness user interface; however, the last deployed version of the feeds will be present on the service. The undeployed feeds will be deleted forever.
   - If you choose to delete the feed from **Service Only**, the feed is deleted from the service. The deleted feed will appear on the NetWitness user interface and can be deployed again

3. Select which feed you want to delete and click **Delete**.

   A warning dialog is displayed.

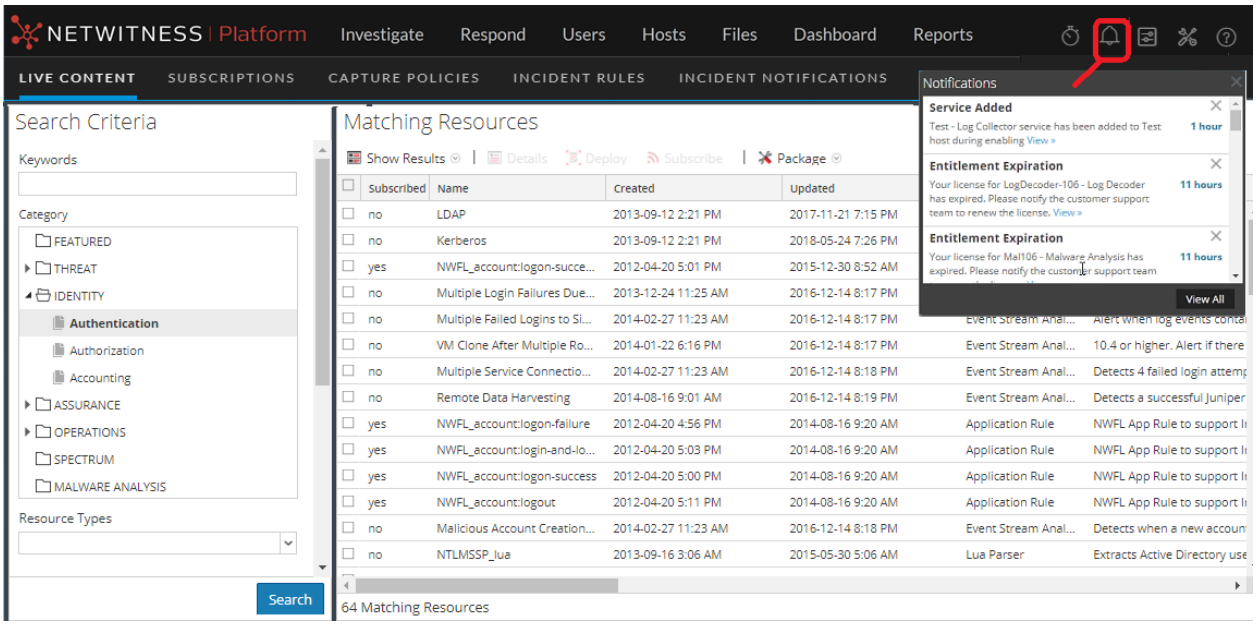
4. Click **yes** to confirm that you want to delete the feed from the selected areas.

Subscribing to Live Resources



This section describes subscriptions in Live.

Threats and the corporate landscape change over time. NetWitness periodically reviews existing content to determine whether it needs to be updated based upon current campaigns, or has become irrelevant due to changes in technology or attack techniques and tools.



You can discover new content by using the What's New dashlet within the Default Dashboard, or by searching through NetWitness Live by data range since last deployed. Be sure to subscribe to any content for which you want to receive update notifications.

Subscription Updates

When you view resources in the Matching Resources panel of the Live Content view, there is a column named **Updated**:

This value is also displayed when you select the detailed view for a resource. Every time a resource changes, its **Updated** value changes to match the specific update. If you are subscribed to a resource, and it gets updated, your system is automatically updated with the latest version, and you receive a notification. You can view your notifications by clicking the Notification icon, , from anywhere in the NetWitness UI.

You can also get email notifications when subscribed resources are updated. System Administrators can add email addresses in the **(Admin) > SYSTEM > Live Services** view. For more information, see the "Live Services Configuration Panel" topic in the *System Configuration Guide*.

Adding Subscribed Resources for Deployment to Services

1. Go to **(Configure) > Subscriptions > Deployments**.
2. In the **Groups** panel, select a group.
   Subscribed resources, if any, are listed in the Deployments tab Subscriptions panel.
3. In the **Subscriptions** panel, click .
   The Add Subscription dialog, which lists subscriptions available for deployment, is displayed.
4. Select the subscribed resources that you want to deploy to the services group.
5. Click **Save**.
   The dialog closes and the subscriptions are added to the listing in the Deployments tab, Subscriptions panel. This stages the resources for deployment at the next synchronization.
6. You can click the Synchronize icon, , to immediately synchronize your changes.

Deleting a Subscription

When you delete a subscription to a resource, deployed instances of the resource are not deleted. The deployed resource remains on services until explicitly removed, but the resource is no longer synchronized with the resource in NetWitness Live.

To delete a subscription:

1. Go to **(Configure) > Subscriptions**.
2. In the **Subscriptions** tab, select the subscriptions you want to delete.
3. Click , then choose **Delete** to delete your selected resources or **Delete All** delete all subscriptions.

   A dialog asks for confirmation that you want to delete the subscription.
4. To confirm removal, click **Yes**.

   Your selected subscriptions are deleted from the subscriptions list, but any deployed instances of the subscribed resource remain on the services.

Removing Subscribed Resources from the Deployments Subscriptions Grid

Subscriptions that are selected for deployment to a service group are deployed during synchronization.

You can remove subscriptions from the Live (Configure) > Subscriptions > Deployments panel, but any that have actually been deployed to services remain deployed until someone removes them.

To remove resources from the Deployments tab Subscriptions panel:

1. Go to **(Configure) > Subscriptions > Deployments**
2. In the **Groups** panel, select a group.

   Subscribed resources, if any, are listed in the Subscriptions panel.
3. In the Subscriptions panel, click .

   A dialog requests confirmation that you want to delete the resource from the service group. The resource is removed from the Deployments tab Subscriptions panel, but is not removed from services on which it is deployed.

Subscribe and Unsubscribe to a Resource

When you subscribe to resources, you will receive notification when new versions of the resources are available.

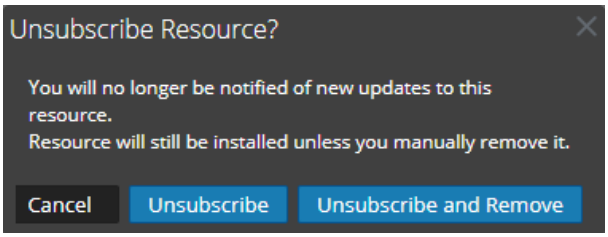
To subscribe to a resource:

1. Go to **(Configure) > Live Content**.
2. In the **Search Criteria** panel, specify search criteria and click **Search**.
3. Select one or more resources and click Subscribe.

   A confirmation dialog is displayed: **By subscribing to these resources, you are indicating that you wish to receive notification when new versions are available.**
4. To confirm that you want to subscribe to the resource, click **OK**.

   The resource is added to the subscriptions managed in the Subscriptions tab and is available for deployment in the Deployments tab.

When unsubscribing from a resource, you have the option to leave the resource on services on which it is deployed or to remove it from services.



To unsubscribe from a resource:

1. Open a detailed view of a resource in one of the following ways:
   - Perform a search, **(Configure) > Live Content** > enter search criteria, then select the resource in the Matching Resources panel, then click Details.
   - View subscriptions, **(Configure) > Subscriptions**, select the resource from the Subscriptions list, then click Details.

2. With the detailed view of a resource displayed. click Unsubscribe.

   A confirmation dialog is displayed.

3. Do one of the following:
   - To confirm that you want to unsubscribe from the resource and leave it on the services where it is deployed, click **Unsubscribe**.
   - To confirm that you want to unsubscribe from the resource and remove it from the services where it is deployed, click **Unsubscribe and Remove from Services**.
   - To close the dialog without unsubscribing, click **Cancel**.

   The selected action is applied.

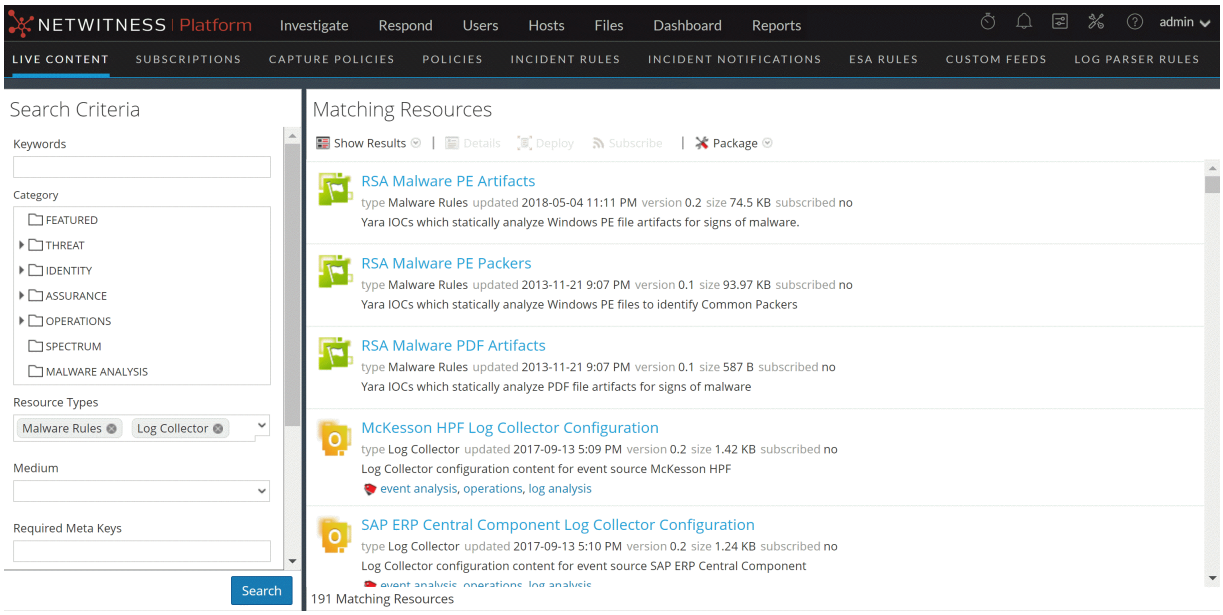
Viewing Subscribed Resources Selected to Deploy on Services

In the  **(Configure) > Subscriptions > Deployments** tab you can view subscribed resources that have been selected for deployment on services.

To view subscribed resources that have been selected for deployment on services:

In the **Groups** panel, select a group, and expand it to view services in the group. The resource subscriptions selected for deployment are listed in the Deployments tab Subscriptions panel.

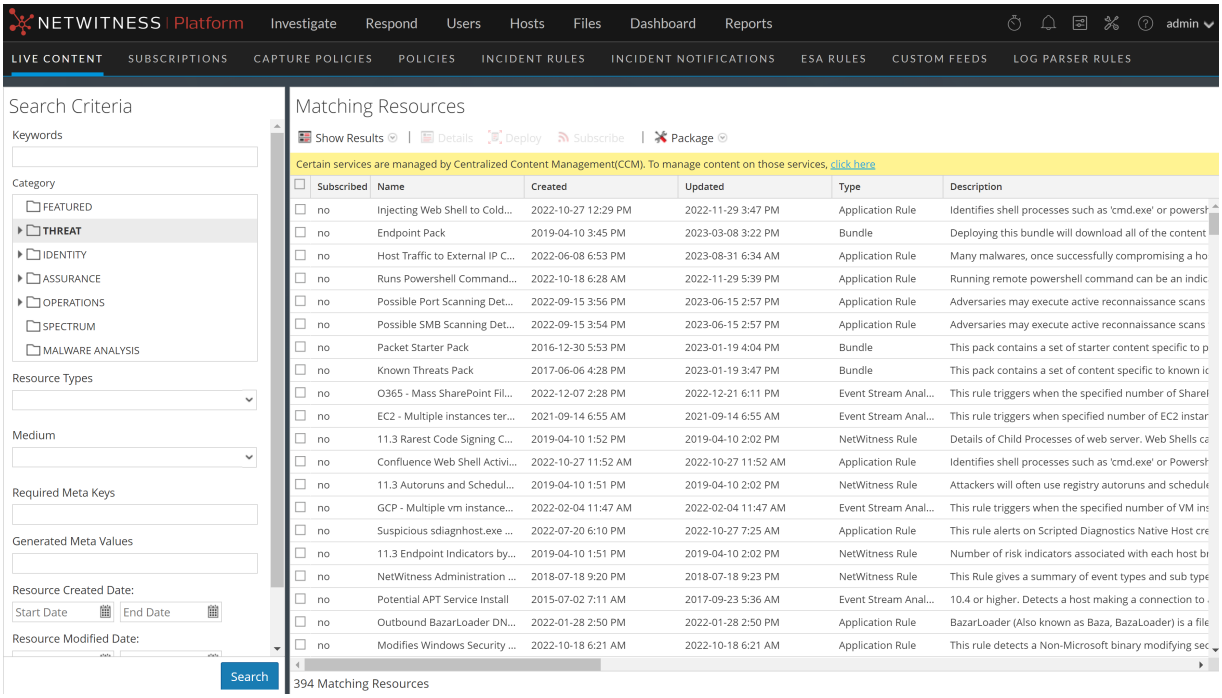
Miscellaneous Live Services Procedures



This section describes several other procedures.

Displaying Resource Details in Live Resource View

After you select a resource (in the Live Resource View), you can view its detailed information.



To open a separate tab in the Live Resource view with details of a selected resource, do one of the following:

- If you are viewing the results in **Show Results** > **Detailed view**, click the resource type icon or the resource name.

- If you are viewing the results in **Show Results** > **Grid view**, double-click a resource or select a

resource and click **Details**.

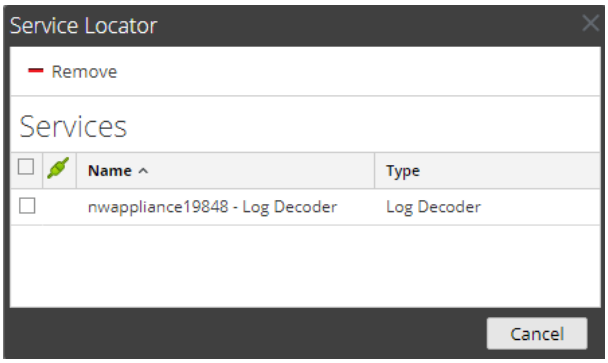
Downloading a Resource

You can download a single resource from the Live Resource View.

To download a resource:

1. Go to **(Configure) > Live Content**.
2. In the **Search Criteria** panel, enter the criteria needed to return the resource you want to download.
3. Select a single resource, then click Details.
4. Click Download.

The resource is saved as a ZIP archive to your local Downloads folder.



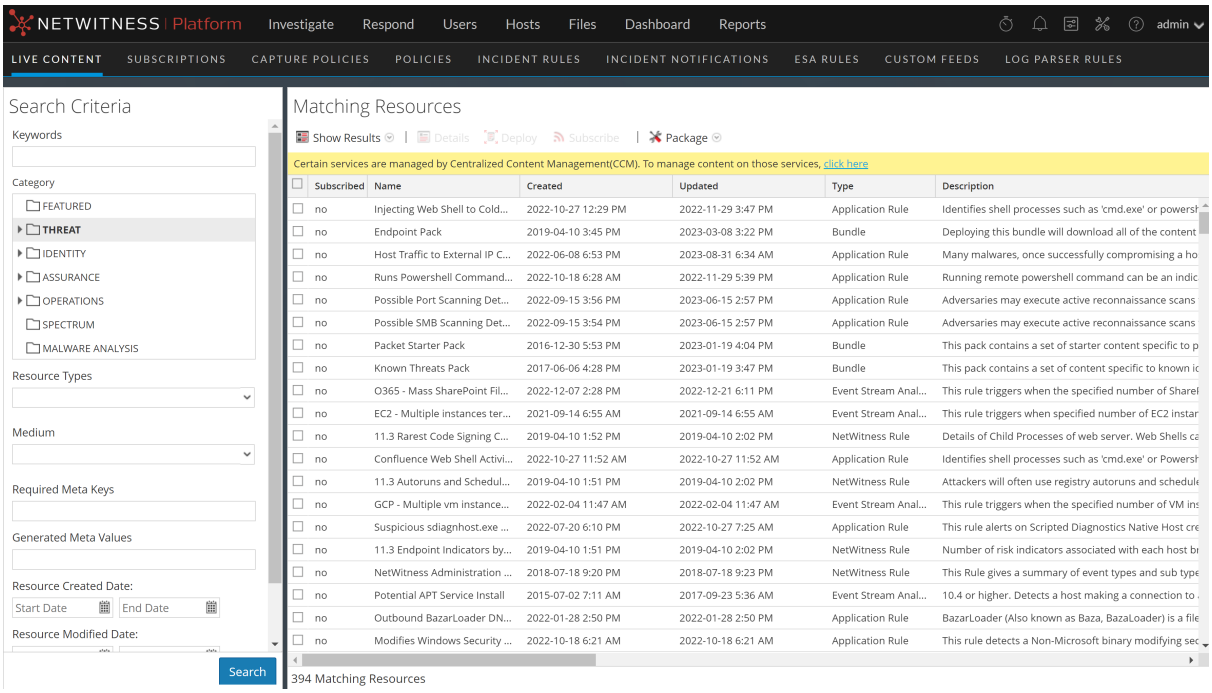
Locating and Removing a Deployed Resource from Services

You can locate and remove a deployed resource from services from the Live Resource View.

To view a list of services on which a resource is deployed:

1. With a resource displayed in the **Resource View**, click Service Locator.

   The Service Locator dialog is displayed.



2. Select one or more services in the **Services** list.
3. Click −.

   The resource is removed from the selected services.

Showing Results as a List or in Detail

1. Select **Show Results > Grid** to change to grid results when viewing detailed results.

2. Select **Show Results > Detailed** to change to detailed results when viewing grid results.

Viewing Resource Details

You can display detailed information about a subscribed resource in the Resource View.

To view details:

1. In the **Subscriptions** tab, select a single subscription.
2. Click Details .

   The details of the resource are displayed in the Resource View.

References

This topic is a collection of references, which describe the user interface and more detailed information about how Live works in NetWitness. These topics are presented in alphabetical order.

Live Configure View

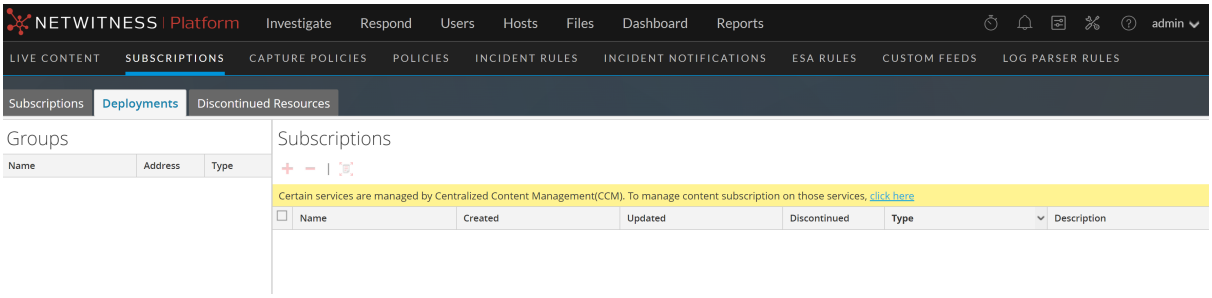
In the Live Configure view, NetWitness provides integrated tools for managing Live resources. You can manage resource subscriptions, deployments to services and discontinued resources. The required role to access this view is **Configure Live Resources**. For a high-level description of how to use the different views in NetWitness Live, please read Live Services Management.

To access this view, navigate to  **(Configure) > Subscriptions**. The view has three tabs: Deployments Tab, Subscriptions Tab, and Discontinued Resources Tab.

Deployments Tab

The Deployments tab provides a user interface in the Live Configure view for:

- Viewing subscribed resources that are selected for deployment on services in a service group.
- Selecting subscribed resources to deploy to services in a service group.
- Removing resources that are selected for deployment on services in a service group.



The resources listed here are not deployed immediately after adding to a service group. Instead the subscribed resources are pushed to the services when NetWitness synchronizes with NetWitness Live. The synchronization schedule is configured in the Live Configuration panel. Additionally, you can synchronize immediately in the **(Configure) > Subscriptions > Deployments** tab.

Likewise, resources deleted from the Deployments panel are not deleted from service where they have been deployed. To delete resources from services, delete them in the Live Resource View.

The required permission to access this view is **Manage Live Resources**.

To access this view:

1. Go to **(Configure) > Subscriptions**.
   The **Subscriptions** tab is displayed.
2. Click the **Deployments** tab.

The Deployments tab has two panels: **Groups** and **Subscriptions**.

Groups Panel

The Groups panel is a static display of configured service groups that were created in the Administration Services view. Selecting a group in the Groups panel populates the Subscriptions panel with a list of subscriptions that are selected for deployment on the services in the service group.

Feature	Description
Name	Displays the service group name. Clicking the plus sign displays a nested list of services in the group.
Address	Displays the IP address of each service in the group.
Type	Displays the type of service.

Subscriptions Panel

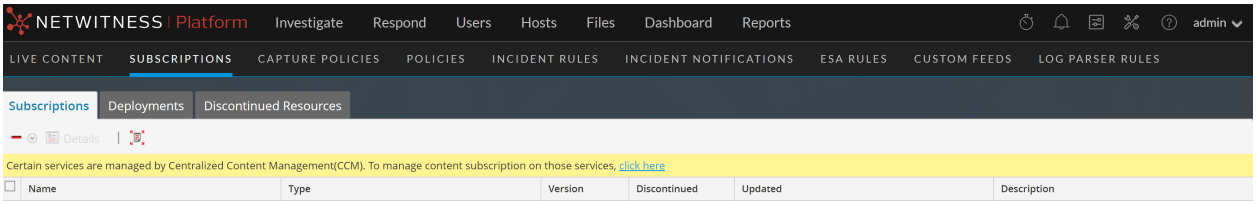
The following table describes the features in the Subscriptions panel.

Feature	Description
	Click  to open a dialog that lists subscriptions that were added in the Live Search view or in the Live Resource view and are available for deployment.
	Click to delete the selected subscriptions from the deployment list for service group.
	Click  to synchronize your resources to the latest versions available on Live.
Name	Displays name of the resource.
Created	Displays date and time that the resource was created.
Updated	Displays date and time that the resource was last updated.
Type	Displays type of resource.
Description	Displays description of the resource.

Subscriptions Tab

Subscriptions are NetWitness Live resources to which you subscribed in the Live Search view or Live Resource view. When you subscribe to a resource, you agree to receive updates on a regular basis from NetWitness Live. The choices made in the Live Configuration panel determine the synchronization frequency and also whether you receive update notifications through email. In addition, if you don't want to wait for the next update, you can force an immediate synchronization.

The Subscriptions tab provides a way to manage subscriptions. Each resource to which NetWitness is subscribed is listed in this tab.



In the Subscriptions tab, you can:

- View all resources to which this NetWitness instance is subscribed.
- Open a detailed view of a subscription in the Live Resource View.
- Delete a subscription.

Note: Subscribing to a resource does not deploy the resource to any services. To deploy one or more subscribed resources, go to the Deployments tab. To deploy a single resource manually, use the Deploy option in the Resource View.

The required permission to access this view is **Manage Live Resources**.

To access this view, in the main menu, select **(Configure) > Subscriptions**. The Subscriptions tab is displayed.

The **Subscriptions** tab has a toolbar and a grid.

Toolbar

This table describes the options available in the toolbar.

Feature	Description
	Deletes the selected subscriptions.
	Displays the details of a single subscribed resource in the Resource View.
	Check the Live Server for the latest discontinued resources.

Grid

Column	Description
☑	Selects subscribed resources to view in detail or delete. You can view details for a single resource. You can delete one or more resources from the subscribed resources, in effect unsubscribing.
Name	Displays name of the subscribed resource.
Type	Displays type of subscribed resource.
Version	Displays version of the subscribed resource.
Discontinued	Indicates the status of the discontinued resources for the subscribed resource. **Yes** - Resource is discontinued. **No** - Resource is not discontinued. **--** - The Live Server is not checked for the discontinued resources.
Updated	Displays date and time when the subscribed resource was last updated.
Description	Displays description of the subscribed resource.

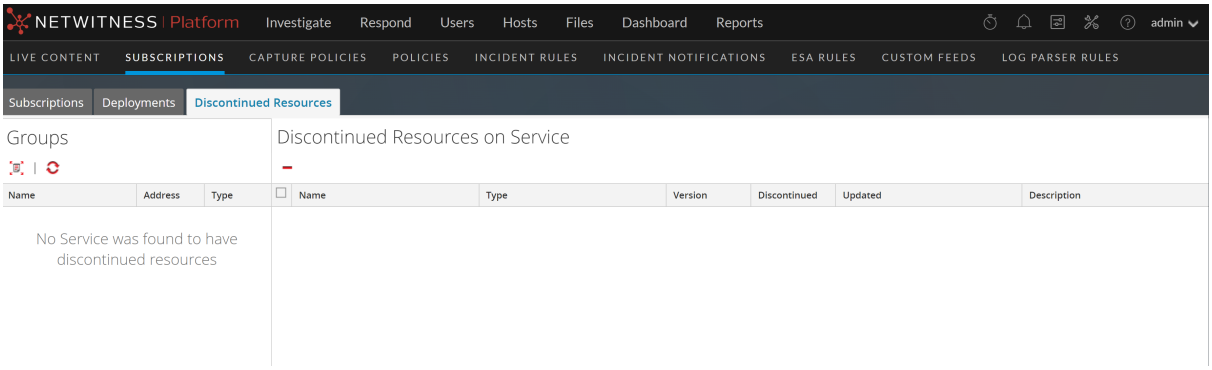
Discontinued Resources Tab

The Discontinued Resources tab provides a user interface in the Live Configure view:

- Scan the services for the discontinued resources.
- Remove the discontinued resources from any service or service group.

Note: Discontinued content still appears. With discontinued content there just won't be any updates, and users won't see these items when they search in Live, unless they check the **Include Discontinued Resources** box while searching.

In the RSA Content space on NetWitness Community, you can view the complete, up-to-date list of discontinued resources (Discontinued Content). For each resource, there is a description of why it was discontinued. Use these details to determine whether or not to remove a discontinued resource from your installation. .



The required permission to access this view is **Manage Live Resources**.

To access this view:

1. Go to  **(Configure) > Subscriptions**.

   The **Subscriptions** tab is displayed.
2. Click the **Discontinued Resources** tab.

   The Discontinued Resources tab is displayed.

The Discontinued tab has two panels: Groups and Discontinued Resources on Service.

Groups Panel

The Groups panel is a static display of configured service groups that were created in the Admin Services view. Selecting a group in the Groups panel populates the Discontinued Resources panel with a list of discontinued resources which are deployed on the selected service or service group.

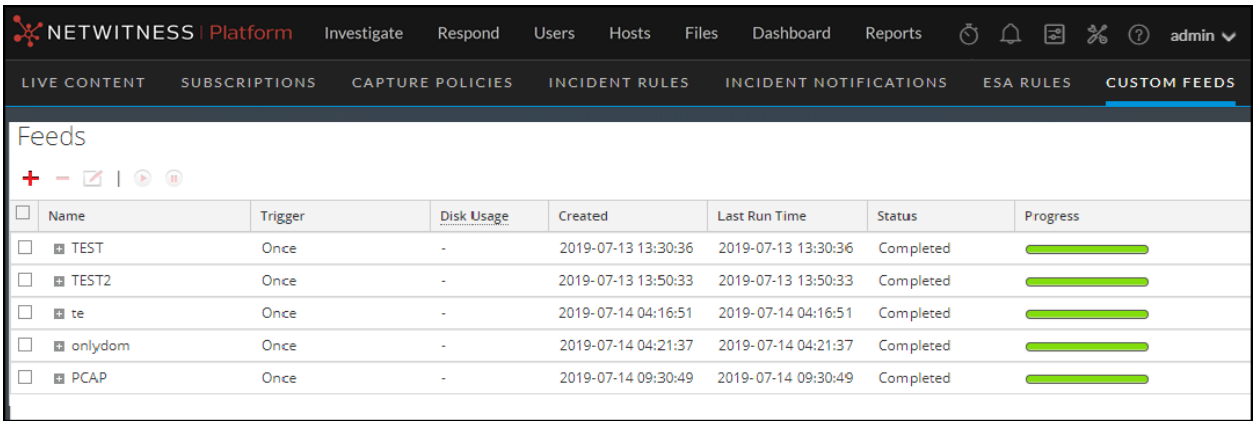
Feature	Description
	Click the button to scan the services for a discontinued resource.

Feature	Description
	Displays the current status of the discontinued resources on a service. **Note:** The status of a service may change while the services are being scanned.
Name	Displays service group name. Clicking the plus sign displays a nested list of services in the group.
Address	Displays IP address of each service in the group.
Type	Displays type of service.

Discontinued Resources on Service Panel

The following table describes the features in the Discontinued Resources on Service panel.

Feature	Description
	Click the button to delete the selected resources from the service or service group.
Name	This is the name of the resource.
Type	This is the type of resource.
Version	Version of the discontinued resource.
Discontinued	Indicates the status of the discontinued resources for the subscribed resource. **Yes** - The resource is discontinued. **No** - The resource is not discontinued. **--** - The Live Server is not checked for the discontinued resources.
Updated	Displays date and time that the resource was last updated.
Description	Displays description of the resource.

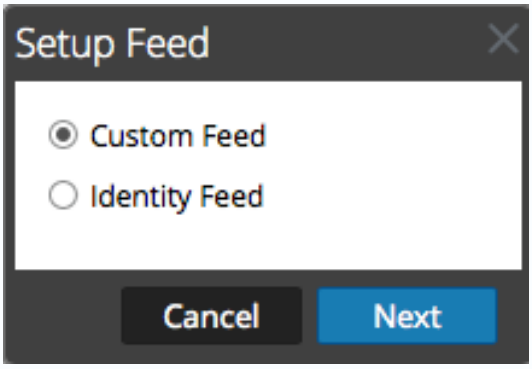


Live Feeds View

Use the Live Feeds View to:

- Create custom feeds.
- Create identity feeds.
- Edit feeds.

The required role to access this view is **Manage Devices**.



To access this view, navigate to **(Configure) > Custom Feeds**.
This is an example of the Feeds view.

The **Feeds** tab has a toolbar and a grid.

Toolbar

This table describes the options in the toolbar.

Feature	Description
	Initiates the creation of a custom or identify feed by displaying the **Setup Feed** dialog is displayed.  • Custom Feed opens the **Configure a Custom Feed** wizard. • Identity Feed opens the **Configure Identity Feeds** wizard.
	Deletes the feed that you selected.
	Opens the Configure Custom Feed or Configure Identity Feed wizard for the feed that you selected (see Editing a Feed.
	Start or resume data feed.
	Stop or pause data feed.

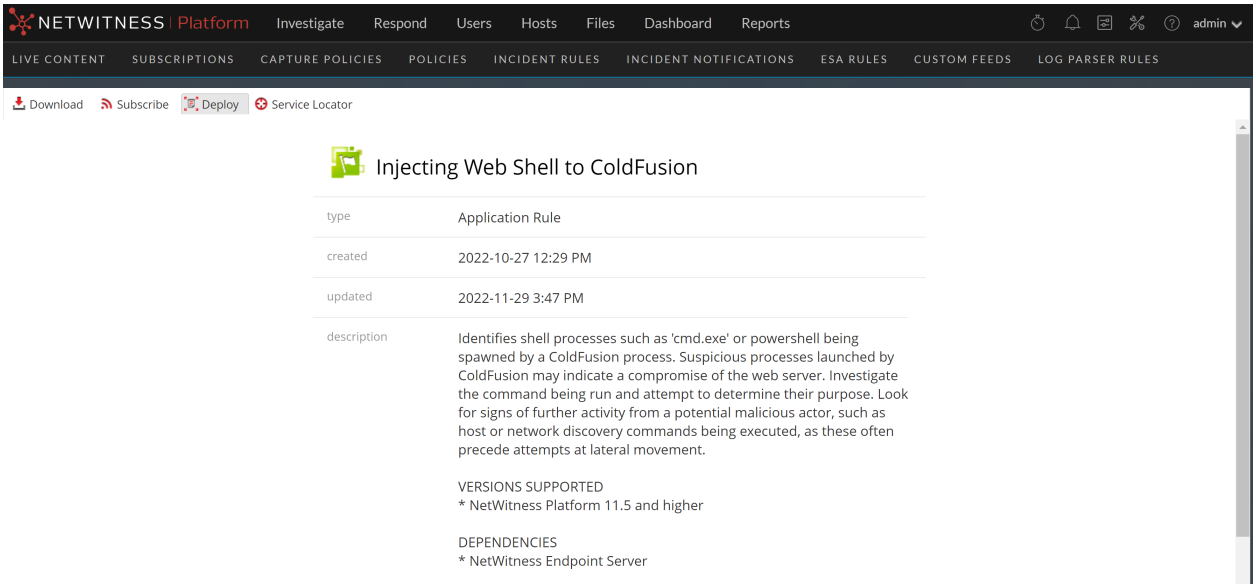
Feeds Grid

This table describes the columns in the grid.

Column	Description
	Selects a feed.
Name	Name of the feed. **Note:** You can now use special characters to define the name of the custom feed.
Trigger	Displays how often the feed runs which is determined by what you defined in **Feed Task Type** when the feed was created.
Created	Displays date and time when the feed was created.
Disk Usage	Displays the MongoDB storage size used by the TAXII feed.
Last Run Time	Displays date and time when the feed was last run.
Status	The status of the feed.
Progress	Progress bar.

Live Resource View

The Live Resource View shows a detailed view of a selected resource, and has the following options:



- Download the resource.
- Subscribe or unsubscribe the resource.
- Deploy the resource to services.
- Locate services on which the resource is deployed and remove the resource from services.

The required permission to access this view is View Live Resource Details.

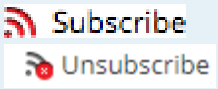
To access this view, do one of the following:

1. Go to **(Configure) > LIVE CONTENT > Search Criteria**.
2. In the Live Search view, **Detailed Results**, click the resource type icon or the resource name.
3. In the Live Search view, **Grid Results**, double-click a resource or select a resource and click **Details**.

This is an example of the Resource view.

The Live Resource View has a detailed view of a single resource and a toolbar.

Resource Details



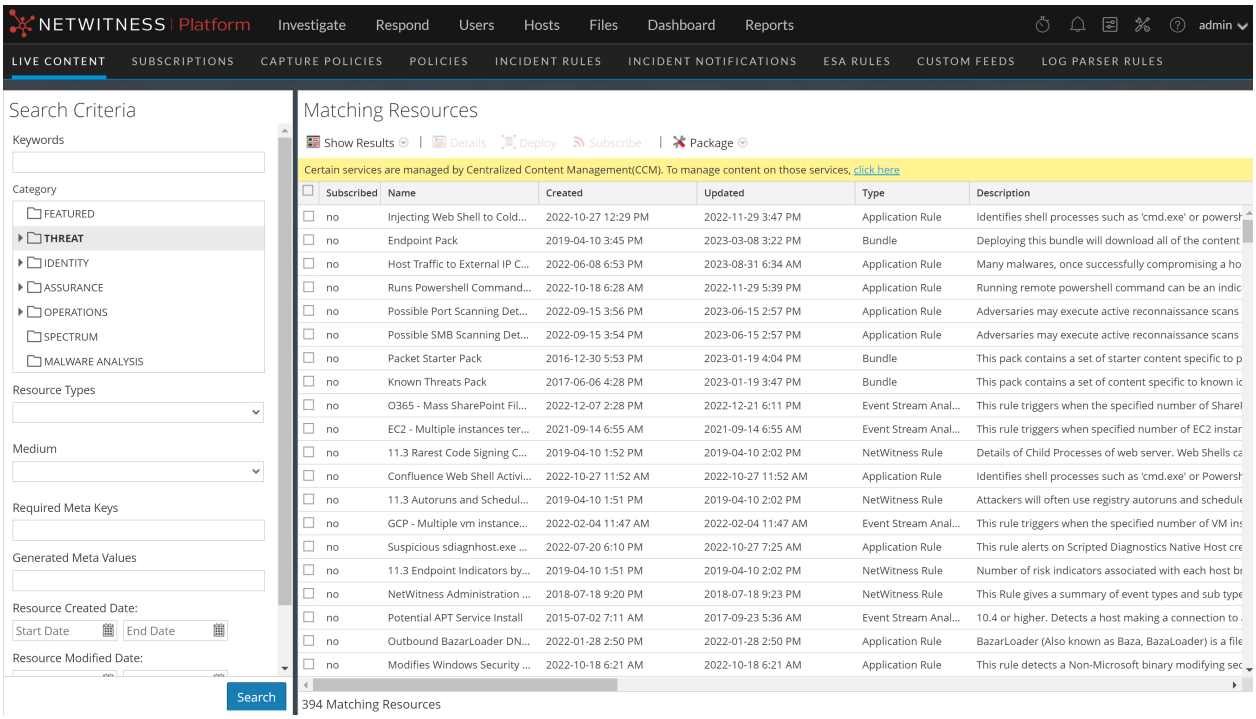
The following table describes the elements in the Resource Details section.

Feature	Description
Resource Type Icon	A graphic representation of the resource type, for example .

Feature	Description
Name	The name of the resource, for example, **fingerprint_office_lua**.
Type	The type of resource, for example, **RSA Lua Parser**.
Created	The date the resource was created, for example, **2013-09-15 02:16 PM**.
Updated	The date the resource was last updated, for example, **2013-09-15 02:16 PM**
Description	The description of the resource, for example, **Identifies Microsoft Office 95, 2007 Word, Excel, and PowerPoint documents**.
Version in production	The version of the resource, for example, **0.1**.
Size	The size of the resource, for example, **9.079 KB**.
Required Resources	A list of resources on which this resource depends, for example, **NetWitness Lua Library**. Clicking a resource replaces the currently displayed details with the details of the one you clicked.
Tagged as 	The tags that apply to the resource. In the example, the tags are **featured, informational**. Clicking a tag opens the Live Search View with the search narrowed to match resources with that tag.
Required Meta Keys	The meta keys  that apply to the resource. In the example, there are no meta keys required. Clicking a meta key opens the Live Search View with the search narrowed to match resources with that meta key.
Generates Meta Values	The meta values  that the resource generates. In the example, there are no meta values generated. Clicking a meta value opens the Live Search View with the search narrowed to match resources with that meta value.
Permissions	The permissions required for the resource.

Resource View Toolbar

This table describes the Live Resource view toolbar options.

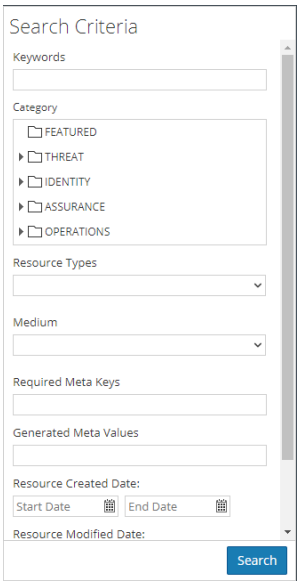


Feature	Icon	Description
Download		This option downloads the resource currently displayed in the Resource View.
Subscribe or Unsubscribe		This option subscribes to or unsubscribes from the resource currently displayed in the Resource View. • Clicking **Subscribe** opens a dialog notifying that you are agreeing to receive notification when the selected resources are updated. You can cancel or click **OK**. • Clicking **Unsubscribe** asks for confirmation that you want to stop receiving notification when the selected resources are updated. You can then choose to cancel or you can click **Unsubscribe** or **Unsubscribe and Remove**, which also removes the resource from services on which it is deployed.
Deploy		This option provides a way to deploy the resource currently displayed in the Resource View. Clicking **Deploy** opens the Manual Resource Deployment dialog.

Feature	Icon	Description
Service Locator		This option displays a list of services on which the currently displayed resource is deployed. You can remove the resource from all services or selected services.

Live Search View

The Live Search view provides the ability to browse the configured Live CMS for resources. Once matching resources are found, you can view details, subscribe to resources, and deploy resources to services and service groups.



This is an example of the Search view.

The Live Search view has a panel for specifying search criteria and a panel that displays matching resources. The Search Criteria panel is collapsible to provide more width for viewing the Matching Resources panel.

Search Criteria Panel

This is an example of the Search Criteria panel.

The following table provides descriptions of the Search Criteria panel features.

Feature	Description
Keyword(s)	Enter a keyword or keywords to browse for resources that have the keyword in the resource name or the resource description. You can use wildcards when you enter a keyword.
Category	The categories mirror the hierarchical Investigation Model that NetWitness uses to organize resources. The purpose of the Investigation model is to deliver an accurate path to information security incident response. For more information, see the Investigation Model topic in the NetWitness Content space on NetWitness Community.

Feature	Description
Resource Types	Select resources types from the drop-down list to filter resources by type of resource. Possible values are: • Advanced Analytics (Warehouse) • Application Rule • Bundle • Correlation Rule • Event Stream Analysis Rule • Feed • FlexParser • Investigation Column Group • Investigation Meta Group • Investigation Profile • Log Collector • Log Device • Lua Parser • Malware Rules • NetWitness List • NetWitness Report • NetWitness Rule • (Version 11.5 and later) Health and Wellness Dashboards • (Version 11.5 and later) Health and Wellness Monitors **Note:** Some rules that have been deployed to an earlier version of NetWitness may not deploy or execute on NetWitness 11.x. For more information, see the Troubleshooting Live Services.
Medium	Select one or more mediums from the drop-down list to search for content based on the meta data source. Available values for medium are as follows: • **endpoint**: for NetWitness 11.3 and later): applied to content that uses meta derived from endpoint agent and endpoint server data • **log**: applied to content that uses meta derived from log data • **packet**: applied to content that uses meta derived from network packets • **log and packet**: applied to content that correlates meta derived across log and packet data

Feature	Description
Tags	Select meta tags from the drop-down list to browse based on how the meta is tagged. For example, to browse resources for a Log Decoder, select the **netwitness for logs** tag. Alternatively, you can click a tag in the Matching Resources panel to insert that tag in this field.
Required Meta Key(s)	Enter a specific meta key; for example, **threat.source**. Alternatively, you can click a meta key in the Matching Resources panel to insert that tag in this field.
Generated Meta Value(s)	Enter a generated meta value; for example, **netwitness**. Alternatively, you can click a generated meta key in the Matching Resources panel to insert that tag in this field.
Research Created Date	Specify a date range during which resources were created. For example, to browse resources that were created between January 1 and January 4, you select January 1 as the start date and January 4 as the end date. You must enter dates in mm/dd/yyyy format or you click and pick dates from a calendar.
Research Modified Date	Specify a date range during which resources were modified. For example, to browse resources that were modified between January 1 and January 4, you select January 1 as the start date and January 4 as the end date. You must enter dates in mm/dd/yyyy format or you click and pick dates from a calendar.
Search	Click **Search** to send the search request to the Live server. More specific search criteria return matching resources more quickly.
Cancel	Click **Cancel** to cancel the search in progress.
Include Discontinued Resources	Check **Include Discontinued Resources** to include the discontinued resources in the search result. For an up-to-date list of resources that have been discontinued, see the Discontinued Content topic.

Matching Resources Panel

The Matching Resources panel displays search results based on the selections made in the Search Criteria panel. Results are initially displayed in a grid, but you can switch between two Show Results options: Detailed or Grid.

Detailed Results

In the detailed results, you can click a tag, meta key, or resource meta value to auto fill the Search Criteria panel and pivot the search results.

The following table describes the elements in the detailed results.

Feature	Description
Resource Type Icon	A graphic representation of the resource type. For example .
Name	The name of the resource, for example, **Group Management**. **Note:** (Discontinued) is displayed next to the resource name if a resource is discontinued.
Type	The type of the resource, for example, **Rule**.
Updated	The date when the resource was last updated, for example, **2015-09-15 4:27 PM**.
Version	The version of the resource, for example, **0.1**.

Feature	Description
Size	The size of the resource, for example, **153 B**.
Subscribed	Subscription status: • **yes**: This NetWitness instance is subscribed to this content resource. • **no**: This NetWitness instance has not subscribed to this content resource.
Description	The description of the resource, for example, **Compliance Rule-Group Management**.
Tags	The tags that apply to the resource. Clicking a tag narrows the search to resources with that tag. For example,  .
Meta Keys	The meta keys that apply to the resource. Clicking a meta key narrows the search to resources with that meta key. For example,  .
Resource Meta Values	The meta values generated by the resource. Clicking a meta value narrows the search to resources that generated the meta value. For example,  .

Grid Results

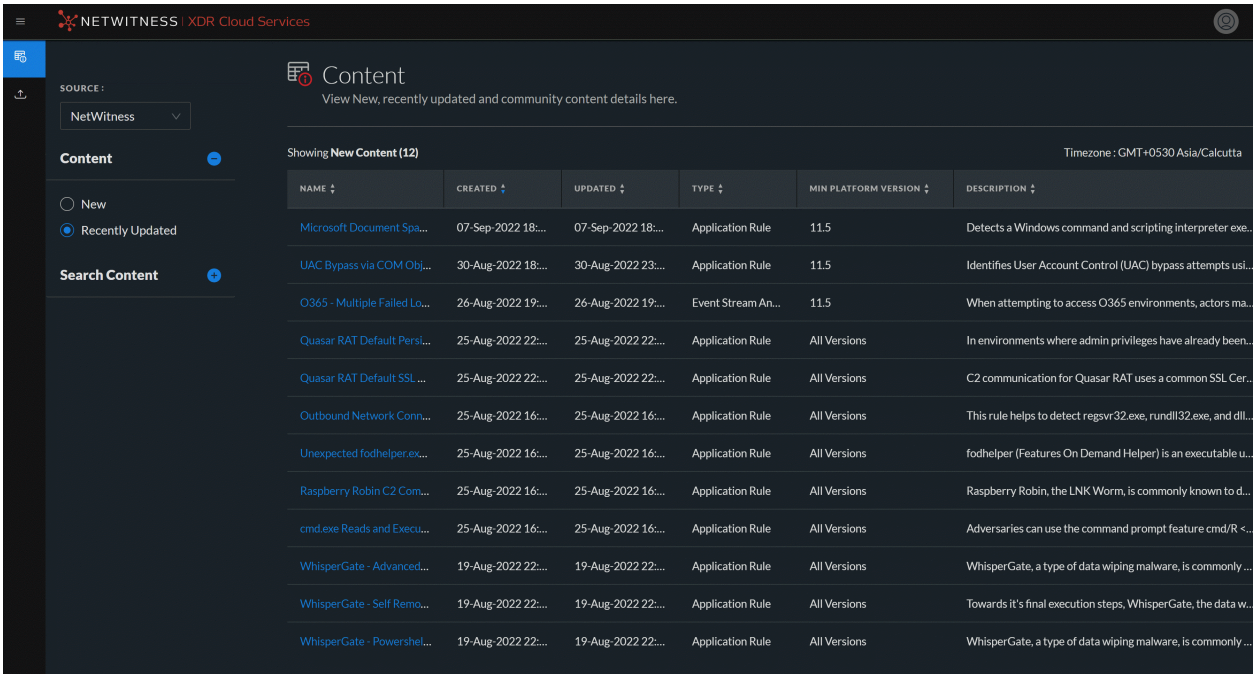
In the grid view, you can select one or more resources and use additional options in the toolbar to view the details of a single resource, subscribe to resources, and deploy resources.

The following table describes the elements in the grid results.

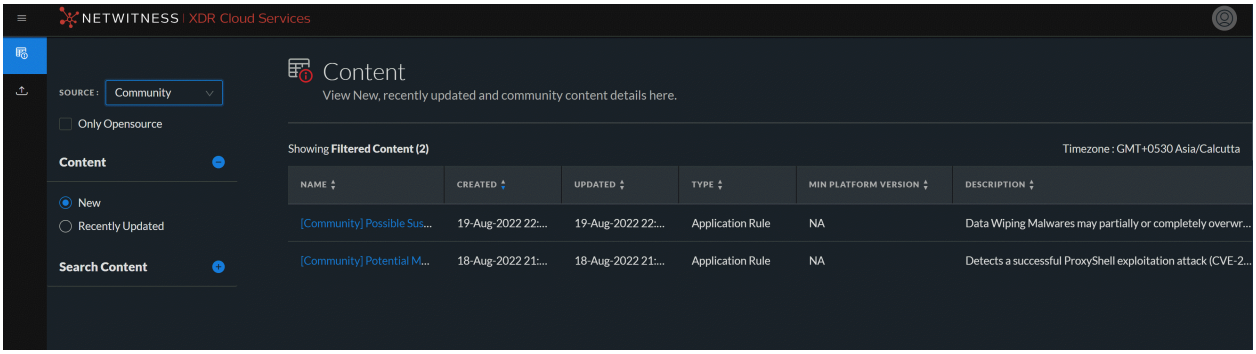
Feature	Description
Subscribed	Subscription status: • **yes**: This NetWitness instance is subscribed to this content resource. • **no**: This NetWitness instance has not subscribed to this content resource.
Name	The name of the resource, for example, **Group Management**. **Note:** The resource name is displayed in red color if it is discontinued.
Created	The date when the resource was created, for example, **2015-08-12 3:11 PM**.
Updated	The date when the resource was last updated, for example, **2015-09-15 4:27 PM**.
Type	The type of the resource, for example, **Rule**.
Discontinued	The status of the discontinued resources: • **yes**: The resource that matches the search criteria is discontinued • **no**: The resource is not discontinued • **--**: The Live Server is not checked for the discontinued resources
Description	The description of the resource, for example, **Compliance Rule-Group Management**.
Toolbar	

Feature	Description
	This menu offers two ways to view search results: **Detailed** and **Grid**.
	This option applies to a single selected resource. Clicking **Details** opens the selected resource in the Live Resource view.
	This option applies to one or more selected resources.
	This option applies to one or more selected resources. Clicking **Subscribe** opens a dialog that asks for confirmation that you want to receive notification when the selected resources are updated.

	This menu offers two packaging functions for the selected resources:
	• **Create**: creates a **resourceBundle.zip** file that contains the selected resources and opens a dialog in which you can either:
	  • open the file, or
	  • save the file for subsequent deployment.
	• **Deploy**: opens the Deployment Wizard, in which you can choose a **resourceBundle.zip** file and deploy it.



See Also



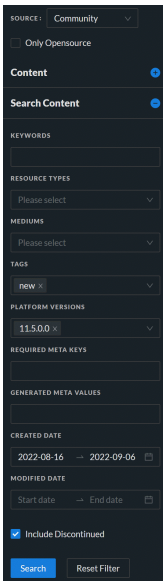
- For more information on Deployment (), see Find and Deploy Live Resources.
- For more information on Deploying a Package (), see the Resource Package Deployment Wizard,.

Live Search Content View

The Live Search Content view provides the ability to search the configured Live CMS for content. Once matching content are found, you can view the details, and download the content.

This is an example of the Search Content view.

The Live Search Content view has a panel for selecting the source and specifying search content. The matching content are displayed on the right panel.



The following table provides descriptions of the Live Search Content panel features.

Feature	Description
NetWitness	Select NetWitness from the Source drop-down menu to search for the content that is provided by NetWitness Platform Live.
Community	Select Community from the Source drop-down menu to search for the content collected and retrieved from third party and open source communities.

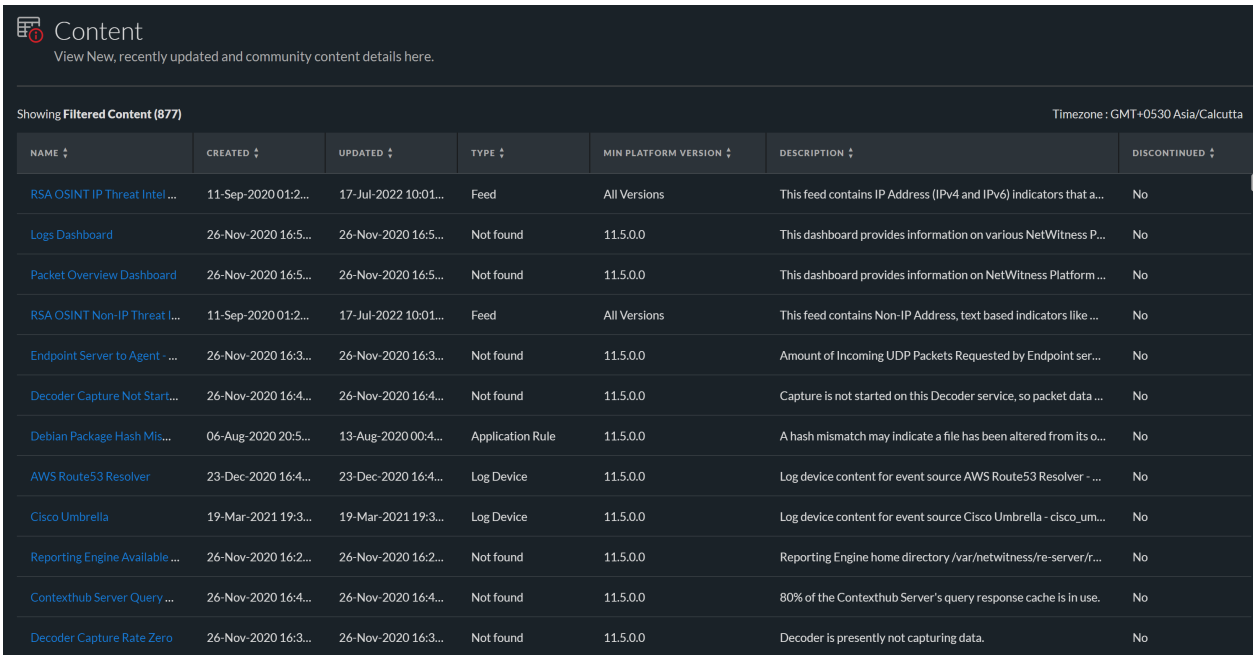
Feature	Description
Only Opensource	Select the Only Opensource checkbox to retrieve the content from the open-source communities. **Note:** When the community is selected as the source, the Only Opensource option will be displayed under the Search Content Panel to select and search for open source-related content.
New	Select New to retrieve the content which is created in the last 21 days.
Recently Updated	Select Recently Updated to retrieve the content which is updated in the last 21 days.

Search Content Panel

This is an example of the Search Content panel.

The following table provides descriptions of the Search Content panel features.

Feature	Description
Keywords	Enter a keyword or keywords to browse for content that have the keyword in the resource name or the resource description. You can use wildcards when you enter a keyword.



Feature	Description
Resource Types	Select resources types from the drop-down list to filter resources by type of resource. Possible values are: • Application Rule • Feed • Log Device • Correlation Rule • NetWitness Rule • NetWitness Report • Lua Parser • Log Collector • NetWitness List • Malware Rules • Event Stream Analysis Rule • Advanced Analytics (Warehouse) • Bundle • Health and Wellness Dashboards • Health and Wellness Monitors • Investigate Profile • Investigate Column Group • Investigate Meta Group
Mediums	Select one or more mediums from the drop-down list to search for content based on the meta data source. Available values for medium are as follows: • endpoint: for 11.3 and higher): applied to content that uses meta derived from endpoint agent and endpoint server data • log: applied to content that uses meta derived from log data • packet: applied to content that uses meta derived from network packets • log and packet: applied to content that correlates meta derived across log and packet data.
Tags	Select meta tags from the drop-down list to browse based on how the meta is tagged. For example, to browse content for a Log Decoder, select the **netwitness for logs** tag.

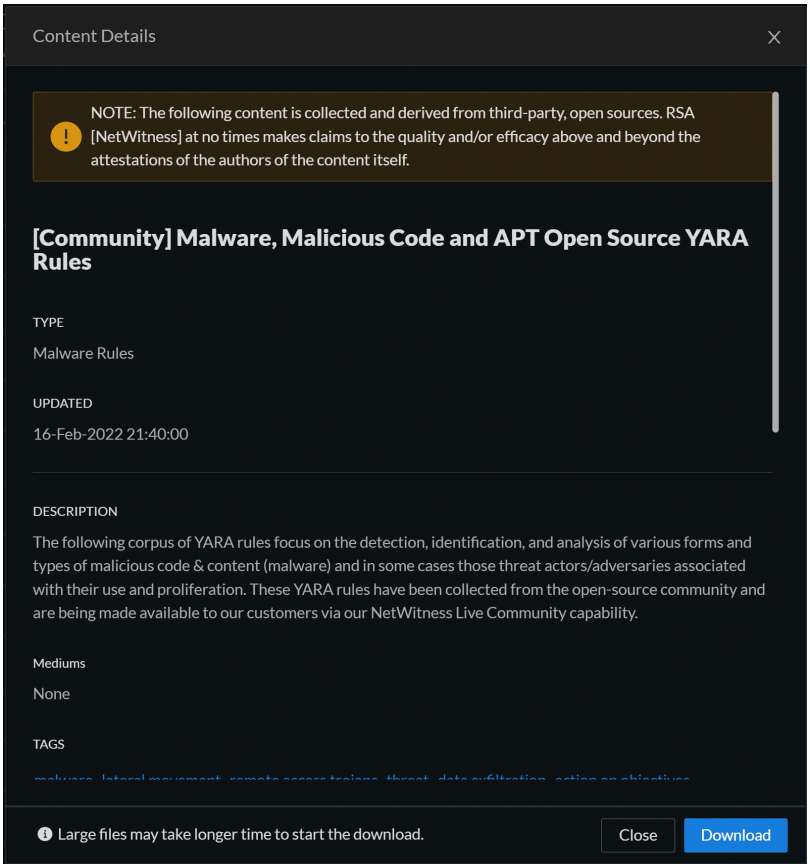
Feature	Description
Platform Versions	Select one or more platform versions from the drop-down list to search for content based on the versions. For example, **11.5**.
Required Meta Keys	Enter a specific meta key. For example, **threat.source**.
Generated Meta Values	Enter a generated meta value. For example, **rsa-firstwatch**.
Created Date	Specify a date range during which content were created. For example, to browse content that were created between January 1 and January 4, you select January 1 as the start date and January 4 as the end date. You must enter dates in yyyy/mm/dd format or you click and pick dates from a calendar.
Modified Date	Specify a date range during which content were modified. For example, to browse content that were modified between January 1 and January 4, you select January 1 as the start date and January 4 as the end date. You must enter dates in yyyy/mm/dd format or you click and pick dates from a calendar.
Search	Click **Search** to send the search request to the Live server. More specific search criteria return matching content more quickly.
Reset Filter	Click **Reset Filter** to reset the existing search results and displays all the content on the right panel.
Include Discontinued	Check **Include Discontinued** to include the discontinued content in the search result. For an up-to-date list of content that have been discontinued, see the Discontinued Content topic.

Search Results Panel

The Search Results panel displays search results based on the selections made in the Search Content panel.

This is an example of the Search Results panel.

The following table describes the elements in the search results panel.



Feature	Description
Name	The name of the content. For example, **Log Parser Pack**.
Created	The date when the content was created. For example, **04-Aug-2017 15:19:06**.
Updated	The date when the content was last updated. For example, **29-Sep-2020 20:27:14**.
Type	The type of the content. For example, **Bundle**.
Min Platform Version	Platform version that the content supports. For example, 11.5 and higher. **Note:** Min Platform Version is not applicable for Community content.
Description	The description of the content. For example, **Contains all parser files and log collection files**.
Discontinued	The status of the discontinued content: • **Yes**: The content that matches the search criteria is discontinued • **No**: The content is not discontinued

Content Details Panel

In the Search Results panel, you can select any content titles to view the details in the pop-up window and download the content.

Note: NetWitness provides no assurance related to the quality and accuracy of the content provided by the third parties and open source communities.

This is an example of the Content Details panel.

The following table describes the elements in the Content Details section.

Feature	Description
Name	The name of the content. For example, **Log Parser Pack**.
Type	The type of the content. For example, **Bundle**.
Created	The date when the content was created. For example, **04-Aug-2017 15:19:06**.
Updated	The date when the content was last updated. For example, **29-Sep-2020 20:27:14**.
Description	The description of the content. For example, **Contains all parser files and log collection files**.
Version on Production	The version of the content. For example, **0.5**.
Size	The size of the content. For example, **14.96 KB**.
Required Resources	A list of resources on which this resource depends. For example, **NetWitness Lua Library**. Clicking a resource replaces the currently displayed details with the details of the one you clicked in the pop-up window.

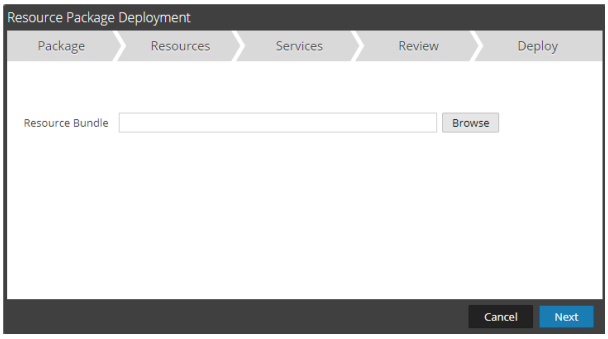
Feature	Description
Tags	The tags that apply to the content. For example, **threat**. Clicking a tag opens the Live Search Content view with the search narrowed to match content with that tag.
Required Meta Keys	The meta keys that apply to the content. For example, **Threat Category**. Clicking a meta key opens the Live Search Content view with the search narrowed to match content with that meta key.
Generated Meta Values	The meta values that the content generates. For example, **rsa-firstwatch**. Clicking a meta value opens the Live Search Content view with the search narrowed to match content with that meta value.
Discontinued	The status of the discontinued content: • **Yes**: The content that matches the search criteria is discontinued • **No**: The content is not discontinued

Resource Package Deployment Wizard

If you have created a package of resources and saved it on a network drive, you can use the Resource Package Deployment Wizard to deploy the resources manually to a service or a service group without subscribing to the resources. NetWitness accepts packages in **.nwp** files or **.zip** files.

Deploying resources manually deploys them directly to the services without taking advantage of the powerful resource management capabilities of NetWitness.

If you want to receive notification and updates for updated resources and be able to easily remove resources from a service, you must subscribe to resources in the Live Search view and deploy the resources in the **Live Configure** view.



Note: Use NetWitness Live to create resource bundles; this is a different application that is not part of NetWitness. Selecting **Package** > **Create** in the **Live Search - Matching Resources** toolbar displays the Content Package Tool window. You can choose resources to include in a package and save the package as a NetWitness Package File.

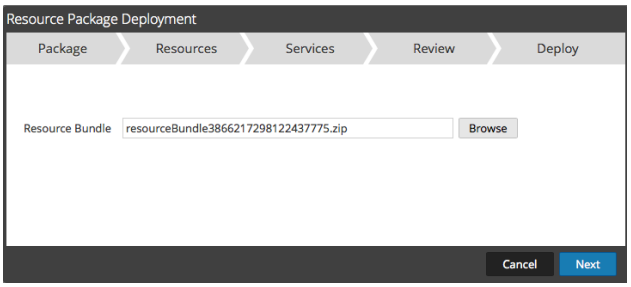
The required permission to access this view is **Deploy Live Resources**.

To access this view:

1. Go to **(Configure) > Live Content**.
2. In the **Live Search - Matching Resources** toolbar, select Package > **Deploy**.

   The Resource Package Deployment wizard is displayed.

Features



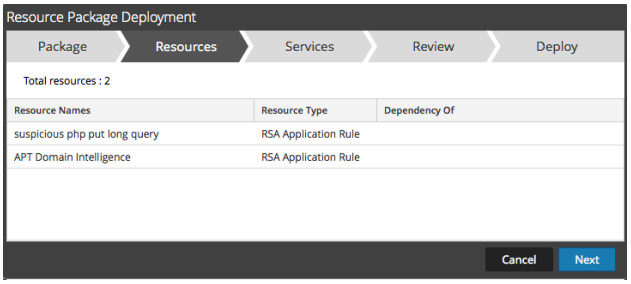
The Deployment Wizard has five tabs: **Package, Resources**, **Services**, **Review** and **Deploy**.
Use **Close** to exit before you complete the wizard.

When you complete the wizard, NetWitness returns to the Live Resources View.

Package Tab

You use this tab to select a resource bundle from your network in this page.

This is an example of the Package tab, with a resource bundle already selected.



The following table describes the elements in the Package tab.

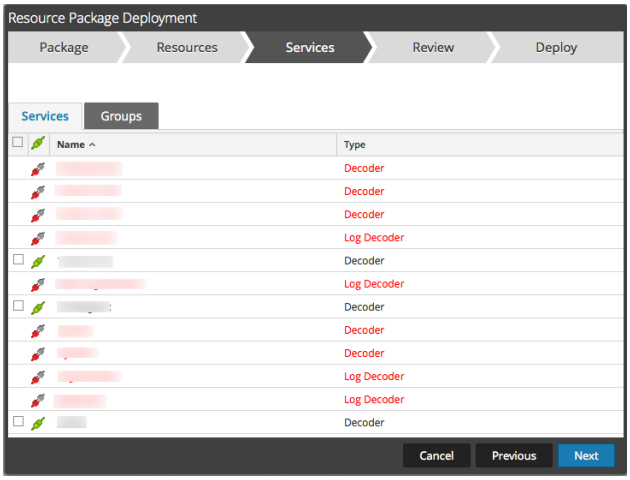
Column	Description
Resource Bundle	The input field to specify a resource bundle. You can type a path in this field or search using the Browse button.
	Command Buttons
Browse	This button opens a File Upload dialog in which you can browse the local file system and select a bundle.
Cancel	Cancels the deployment and closes the wizard.
Next	Displays the next tab of the wizard.

Resources Tab

This tab displays the resources contained in the bundle.

The following figure shows an example of the Resources tab.

The following table describes elements in the Resources tab.



Column	Description
Resource Name	Displays the name of the resources in the bundle (for example, **NetWitness Lua Library**).
Resource Type	Displays the resource types for the resources in the bundle (for example, **RSA Lua Parser**)
Dependency Of	Displays Resources on which the selected resource depends (for example, **AIM lua**).

Services Tab

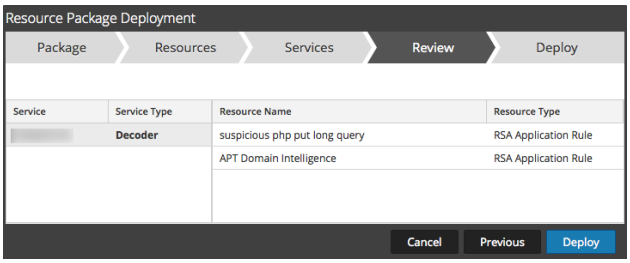
You select the services on which you want to deploy the resources in the bundle.

The Services tab has two tabs, **Services** and **Groups**. These provide a list of services and service groups that are configured in the **(Admin)** > **Services** view. The columns are a subset of the columns available in the Services view. You can select the services or the service groups on which you want to deploy the resources in the bundle.

This is an example of the Services tab.

The following table describes the elements in the Services tab.

Column	Description
	Services
	Selects services on which you want to deploy the content. You can select any combination of services and service groups.
Name	Displays the services in your environment on which you can deploy the content.
Host	Displays the name of the resource host.
Type	Displays the type of NetWitness service.
	Groups
	Selects service groups (if you have service groups defined in your environment).
Name	Displays the names of the service groups.



Review Tab

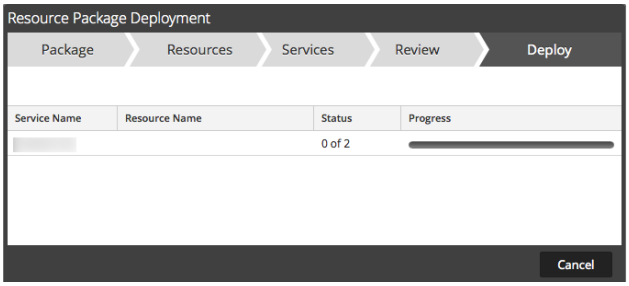
Displays the resources and services on which the resources will be deployed.

In this tab, you can do the following:

- Review the content and services before you deploy.
- Initiate the deployment of the resources.

The following figure shows an example of the Review tab.

The following table describes the elements in the Review tab.



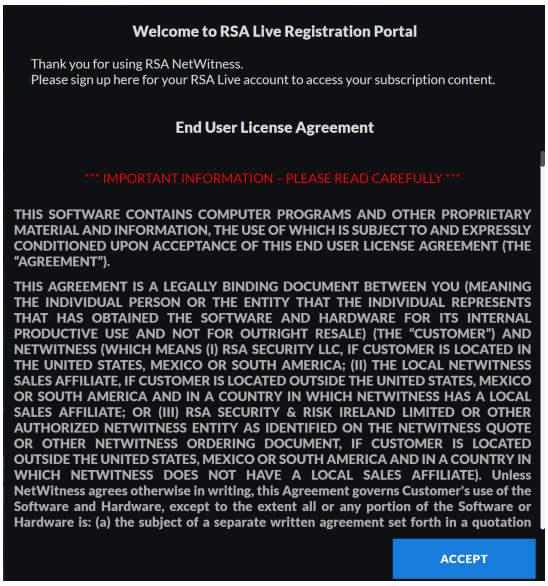
Column	Description
	Service Information
Service	Displays the services in your environment on which you can deploy the content.
Service Type	Displays the type of each NetWitness service (type of host or service).
	Resource Information
Resource Name	Displays the name of the resources you have selected (for example, **NetWitness Lua Library**).
Resource Type	Displays the resource types for the resources you have selected (for example, **RSA Lua Parser**).
Deploy	Initiates the deployment of the resources and displays the **Deploy** page (final page of the wizard).

Deploy Tab

This tab allows you to do the following:

- View the progress of the job
- Cancel the job

This is an example of the Deploy tab.



The following table describes the elements in the Deploy tab.

Feature	Description
Service Name	Name of the services to which resources are deployed.
Resource Name	Name of the resources.

Feature	Description
Status	Status of the manual deployment.
Progress	Progress of the manual deployment in a progress bar. When complete, the bar turns solid green.
Command Buttons	
Close	Closes the wizard.
Errors	Only displays if NetWitness encountered any errors. Click to display the errors.
Retry	Only displays if NetWitness encountered any errors. Click this button to try to deploy the resources again using the wizard.

NetWitness Live Registration Portal

The NetWitness Live Registration Portal is a self-service wizard in which customers can set up a Live account and change or reset the password. A Live account is required to get access to the feeds, parsers, rules, and other content in NetWitness Live library. To access the portal, go to the following URL: https://live.netwitness.com/registration/.

Click **Sign Up For Live**. The License Agreement page is displayed, once you agree to the Terms and Conditions, click **Accept**: the fields for setting up an account are displayed. These include Contact Information, and License ID.

The following table lists the contact information section fields and its descriptions:

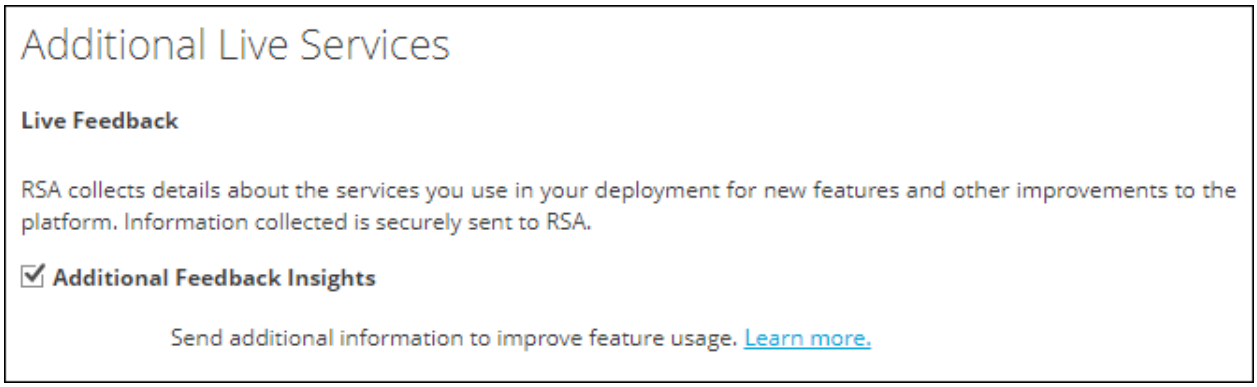
Parameter	Description
First Name	Your first name.
Last Name	Your last name.
Company	The name of your company.
Email	The email address where you want to receive notifications related to the Live account.

Parameter	Description
License ID	This is the License ID on the  (Admin) **> System > Info** page. **Caution:** The license ID on the NetWitness must be valid and must be registered on the Flexera Server. If not, contact NetWitness Customer Support.
Username	The username used to sign in to Cloud Services Live account. The username must contain a minimum of four characters and a maximum of 16 characters.
Password	The password for the Cloud Services Live account. The password must contain minimum of eight characters and the maximum length is 24, with at least one uppercase, one lowercase, one number, and one special character.

NetWitness Feedback and Data Sharing

The Live Feedback Activity Log enables you to download the usage data required for Live Feedback. After you download the Live Feedback data, you can then upload it to share with NetWitness.

The settings for these features are available in **(Admin) > System > Live Services** view, in the Additional Live Services section.



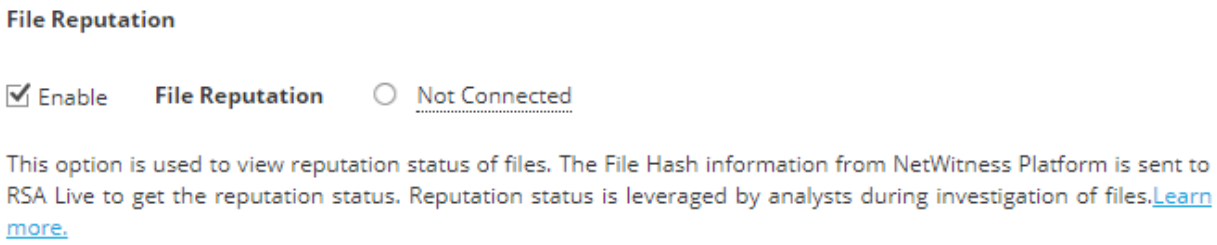
Additional Live Services

Participation in the Additional Live Services is configured in the **(Admin) > System > Live Services** view.

Live Feedback

Note: For NetWitness 11.4.1 and later, this section in the UI has been removed. As of 11.4.1, NetWitness has created the Customer Experience Improvement Program. For details, see "Configure the Customer Experience Improvement Program" in the *NetWitness System Configuration Guide*.

Live Feedback is intended to help improve NetWitness.



Once you set up and configure a Live account, usage data is automatically shared with NetWitness and is protected in accordance with the applicable license agreement. All such data shall be anonymized and shall not have any Personally Identifiable Information.

Before data is sent to NetWitness, all Personally Identifiable Information is removed. Thus, only anonymous usage data gets transferred to NetWitness.

For more information, see the "Live Feedback Overview" topic in the *System Configuration Guide*.

File Reputation

File Reputation service provides instant access to the latest signatures using the RSA Live feed so data is more relevant, with fewer false positives. With this service, users always have reliable data about the reputation of files in their NetWitness Endpoint system. In addition to the whitelisting service, it provides blacklisting information as well.

File Reputation
Enable
File Reputation
Not Connected
This option is used to view reputation status of files. The File Hash information from NetWitness Platform is sent to RSA Live to get the reputation status. Reputation status is leveraged by analysts during investigation of files.Learn more.

Troubleshooting Live Services

This section provides troubleshooting instructions for issues faced when using the Live Services module in NetWitness.

Some Rules Are Invalid for Version 11.x

The rules "NetWitness Incident Management - Alert Details" and "NetWitness Incident Management - Incident Summary" are not valid for NetWitness version 11.x. Do not deploy these rules to an 11.x system.

Note: Rules are updated frequently, and the documentation for them is available in the Content space on NetWitness Community. For the latest information on Rules, see RSA NetWitness Rules.

OutOfMemoryError on Context Hub Server

You may encounter an OutOfMemoryError on Context Hub server, and the service becomes unresponsive.

If there are any TAXII feeds configured, Health and Wellness raises alerts when the available heap memory of Context Hub server is critically low. If the status of Context Hub server is Unhealthy because of low memory, perform the following steps:

1. Make sure that the feeds **Start Date** is within 180 days.
2. Check if any TAXII feed is consuming too much disk space. A TAXII feed can consume maximum of 300 MB. If it consumes more disk space, you must reduce the value in the **Remove STIX data older than** field under **Advanced Options** in the **Custom Feed Creation Wizard** when you edit a TAXII feeds.

   Note: If the issue still persists, you must execute step 3.

3. To decrease the number of parallel threads available for processing STIX:

   a. Go to  **(Admin) > Services > Context Hub service > View > Explore**.

   b. In the tree panel, navigate to **enrichment/stix/ config**.

   c. In the right panel, set the **stix-query-scheduler-pool-size** field value to 2. By default the value is 5. This setting controls how many number of threads are allowed to process queries for STIX data at the same time.

   d. Set the **taxii-poll-scheduler-pool-size** field value to 2. By default the value is 5. This setting controls how many number of threads are allowed to poll TAXII servers at the same time.

   e. Restart the Context Hub server.

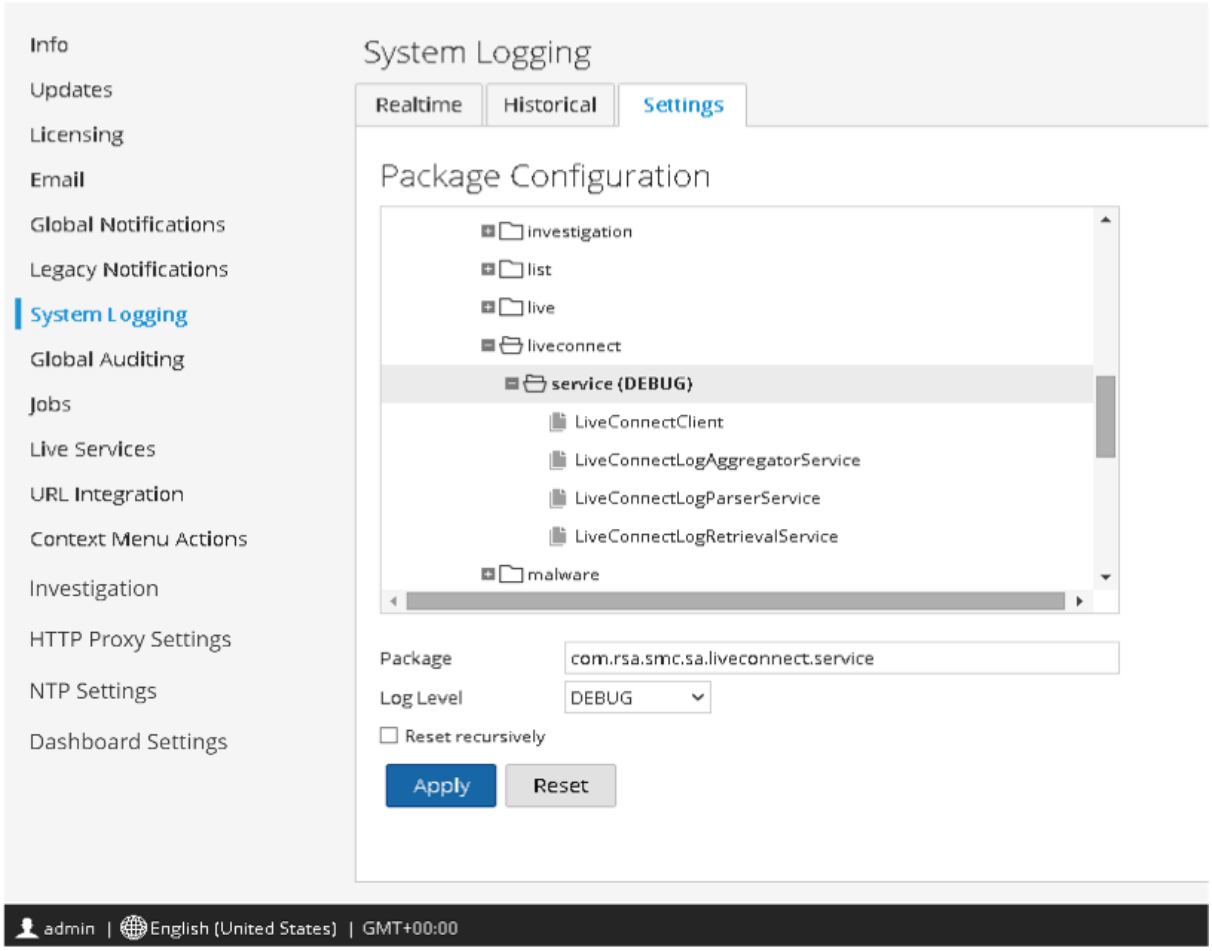
Troubleshooting Live Connect Threat Data Sharing

This section discusses troubleshooting Live Connect Threat Data Sharing.

Query Log Retrieval Sample

To retrieve a sample of threat intelligence data sent to Live Connect, you must construct a URL by setting the following parameters:

- **sendReport**: value is **true** or **false**: true to send this report to the Live Connect server. False to just create the report for viewing. The value defaults to false.
- **hashValues**: value is **true** or **false**: true to hash the values as md5/sha256. False to show values in clear text – should use only for manual viewing. Defaults to false.
- **startDate / endDate**: Dates for time boundaries for log entries. Format: YYYY-MM-DD HH:mm:ss



The following is an example of the URL used to retrieve query logs:

```
https://<server>/admin/liveconnect/force_aggregation?startDate=2016-01-18%2000:00:00&endDate=2016-01-19%2010:10:00&sendReport=false&hashValues=true
```

System Logging: Debug

To access debug information:

1. Go to  **(Admin) > System > System Logging**.
2. Select the **Settings** tab.
3. In the Package Configuration section, select **com > netwitness > platform > server > liveconnect > service (DEBUG)**.

About Log Collection

This guide describes the high-level steps and subtasks for setting up and configuring log collection for event sources that include:

- What Log Collection does, how it works from a high level, and provides high-level deployment diagrams.
- How to start collecting events.
- Where to find instructions to set up more complex deployments.
- How to start any collection protocol.
- Which tools to use to troubleshoot Log Collection issues and lists global troubleshooting instructions.
- How to fine tune and customize Log Collection in your environment.
- How to configure individual collection protocols. Instructions are in the individual Log Collection sections.

Workflow

This workflow depicts the basic tasks needed to start collecting events through Log Collectors.

High-Level Procedures

At a high level, these are the procedures you must follow for log collection:

I. Add local and remote collectors to NetWitness.

   Set up a Log Collector locally on a Log Decoder (that is a Local Collector). You can also set up Log Collectors in as many remote locations (that is Remote Collectors) as you need for your enterprise. For details, see Basic Implementation.

II. Download the latest content from NetWitness Live. You must perform this task periodically, as the content provided on NetWitness Live is updated regularly.

   Log Collection content is marked as one of the following resource types:

   - **NetWitness Log Collector** - content enabling the collection of event source types.
   - **NetWitness Log Device** - the latest supported event source parsers.

   You can also subscribe to content on Live. For details, see the *Live Services Management Guide*.

III. Configure Settings: set up the lockbox and Certificates.

   For details, see Set Up a Lockbox and Configure Certificates.

IV. Configure Event Sources.

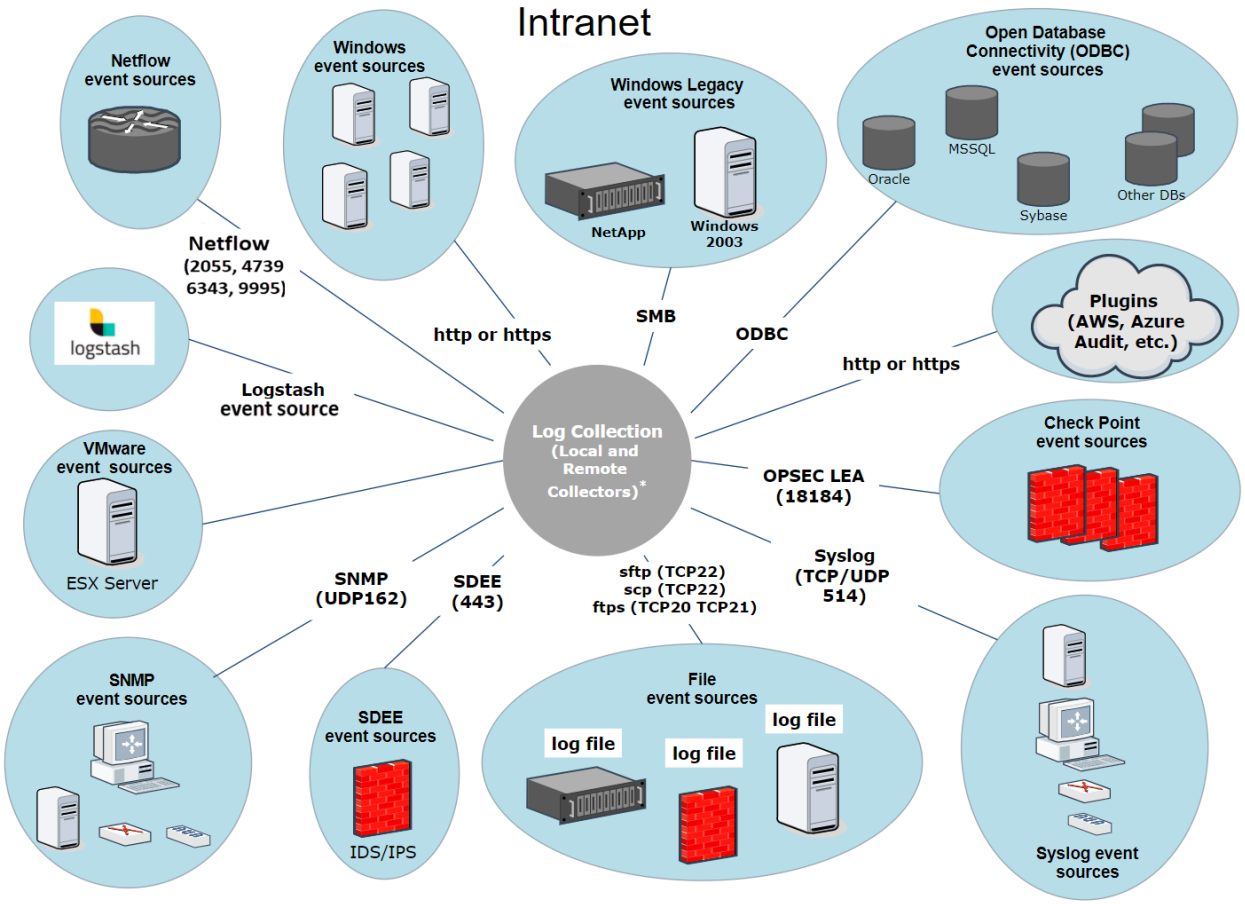
   You configure all the event sources on your network to send their log information to NetWitness. Whenever you add new event sources, you need to perform this procedure as well. All event source configuration guides are found in the NetWitness Supported Event Sources space in NetWitness Link.

V. Start and stop services for configured protocols. Occasionally, you may be required to stop and restart services, based on new event sources that you add to NetWitness.

VI. Verify that Log Collection is working.

   Whenever you set up a new event source or add a new collection protocol, you should verify that the correct logs are being sent to NetWitness.

Log Collection Architecture



This topic describes how NetWitness performs log collection.

How to Deploy Log Collection

You can deploy Log Collection according to needs and preferences of your enterprise. This includes deploying Log Collection across multiple locations and collecting data from varying sets of event sources. You do this by setting up a Local Collector with one or many Remote Collectors.

Components of Log Collection

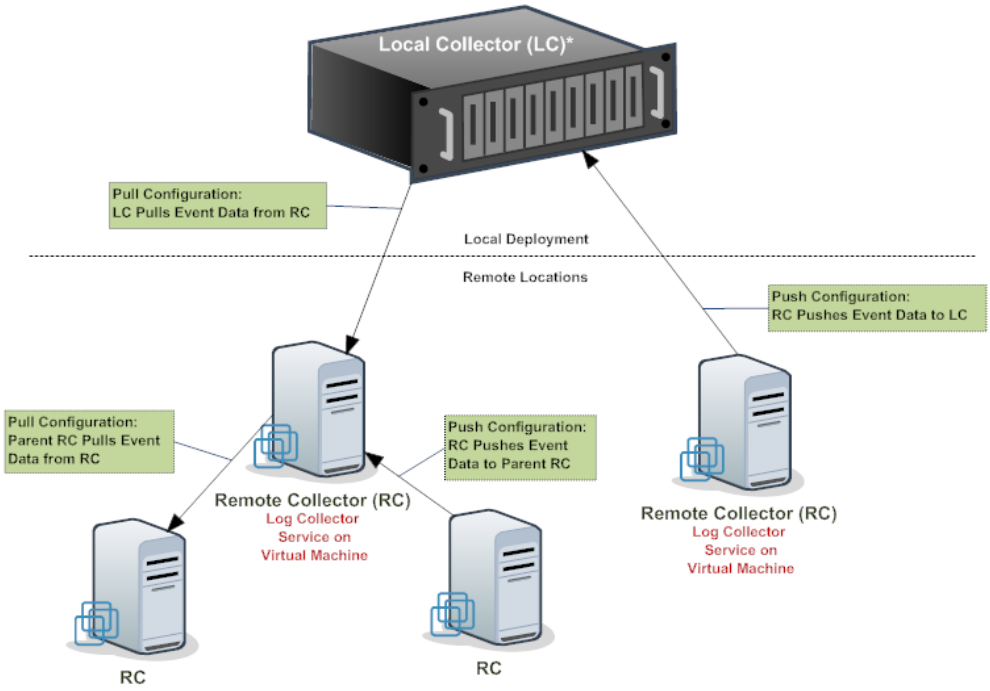
The following figure shows all the components involved in event collection through the NetWitness Log Collector.

*In Log Collection, Remote Collectors send events to the Local Collector and the Local Collector sends events to the Log Decoder.

Local and Remote Collectors

In this scenario, log collection from various protocols like Windows, ODBC, and so on, is performed through both the Remote Collector and Log Collector service. If the log collection is done by the Local Collector, it is forwarded to the Log Decoder service, just like the local deployment scenario. If the log collection is done by a Remote Collector, there are two methods in which these are transferred to the Local Collector:

- **Pull Configuration** - From a Local Collector, you select the Remote Collectors from which you want to pull events.
- **Push Configuration** - From a Remote Collector, you select the Local Collector to which you want to push events.



Note: Typically, the Push configuration is used. Pull is available if you have a DMZ in your environment. Less secure network segments are not allowed to make connections to more secure network segments. With Pull, the Log Collector (or Virtual Log Collector) in the secure network initiates the connection to the VLC in the less secure network, and the logs are then transferred without breaking the connection rules.

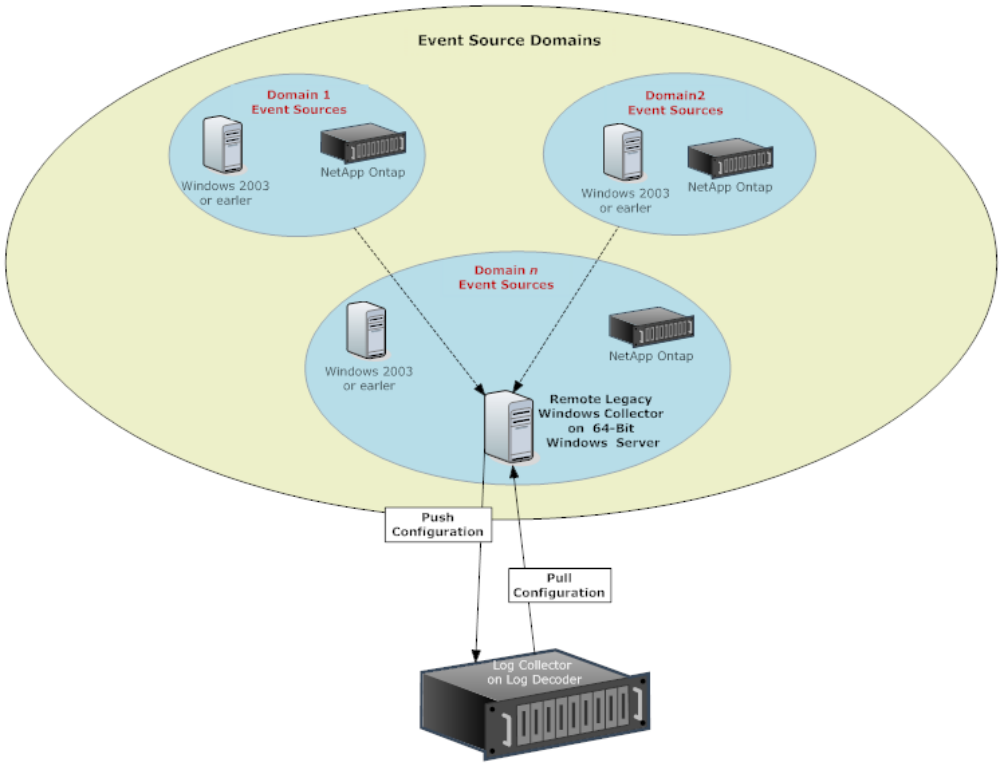
You can configure one or more Remote Collectors to push event data to a Local Collector, or you can configure a Local Collector to pull event data from one or more Remote Collectors.

Additionally, you can set up a chain of Remote Collectors for which you can configure:

- One or more Remote Collectors to push event data to a Remote Collector.
- A Remote Collector to pull event data from one or more Remote Collectors.

The following figure illustrates how the Local and Remote Collectors interact to collect events from all of your locations.

* The Local Collector (LC) is the Log Collector service on the Log Decoder appliance.



Windows Legacy Remote Collector

The NetWitness Windows Legacy Collector is a Microsoft Windows based remote log collector (RC) which can be installed on a Windows domain.

It supports collection from:

- Windows 2003 and earlier event sources
- NetApp ONTAP host evt files

The following figure illustrates the deployment required to collect events from Windows Legacy event sources.

Basic Implementation

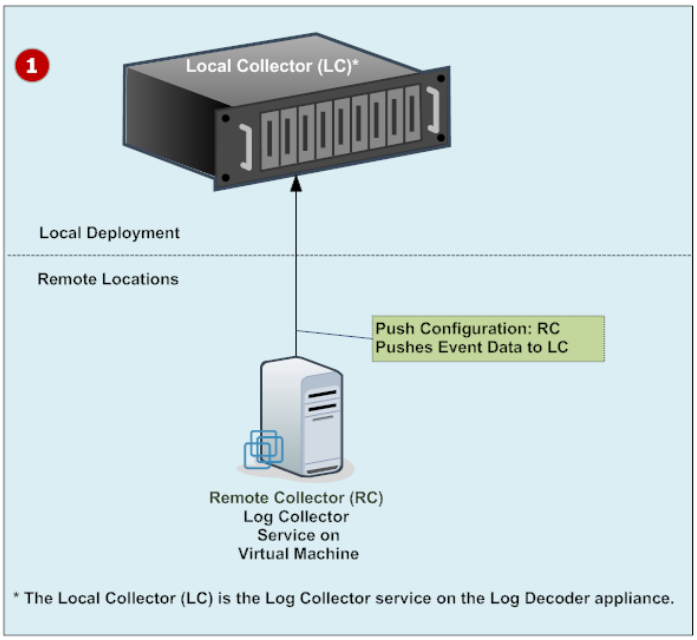
This topic tells how to perform the initial setup of Local Collectors and Remote Collectors.

Prerequisites

Verify that the Log Decoder is set up and:

- is capturing data.
- has the current content loaded.
- is properly licensed.

Roles of Local and Remote Collectors

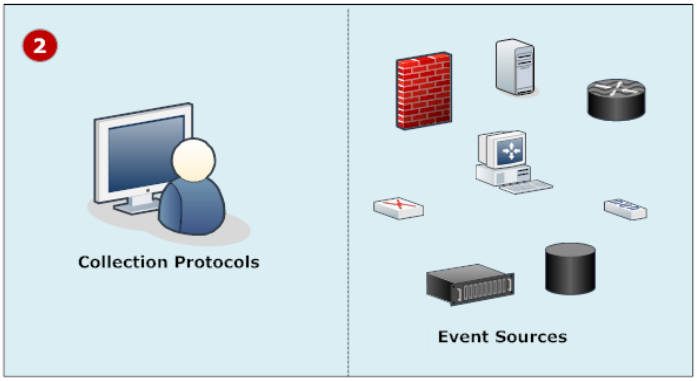


A Local Collector (LC) is a Log Collector service running on a Log Decoder host. In a local deployment scenario, the Log Collector service is deployed on a Log Decoder host, with the Log Decoder service. Log collection from various protocols like Windows, ODBC, and so on, is performed through the Log Collector service, and events are forwarded to the Log Decoder service. The Local Collector sends all collected event data to the Log Decoder service.

You must have at least one Local Collector to collect non-Syslog events.

A Remote Collector (RC), also referred to as a Virtual Log Collector (VLC), is a Log Collector service running on a stand-alone Virtual Machine. Remote Collectors are optional and they must send the events they collect to a Local Collector. Remote Collector deployment is ideal when you have to collect logs from remote locations. Remote Collectors compress and encrypt the logs before sending them to a Local Collector.

Deploying and Configuring Log Collection



The following diagram illustrates the basic tasks you must complete to deploy and configure Log Collection. To deploy Log Collection, you need to set up a Local Collector. You can also deploy one or more Remote Collectors. After you deploy Log Collection, you need to configure the events sources in NetWitness and on the events sources themselves. The following diagram shows the Local Collector with one Remote Collector that pushes events to the Local Collector.

1 Set up Local and Remote Collectors.

The Local Collector is the Log Collector service running on the Log Decoder host.

A Remote Collector is the Log Collector service running on a virtual machine or Windows server in a remote location.

2 Configure event sources:

- Configure collection protocols
- Configure each event source to communicate with the NetWitness Log Collector.

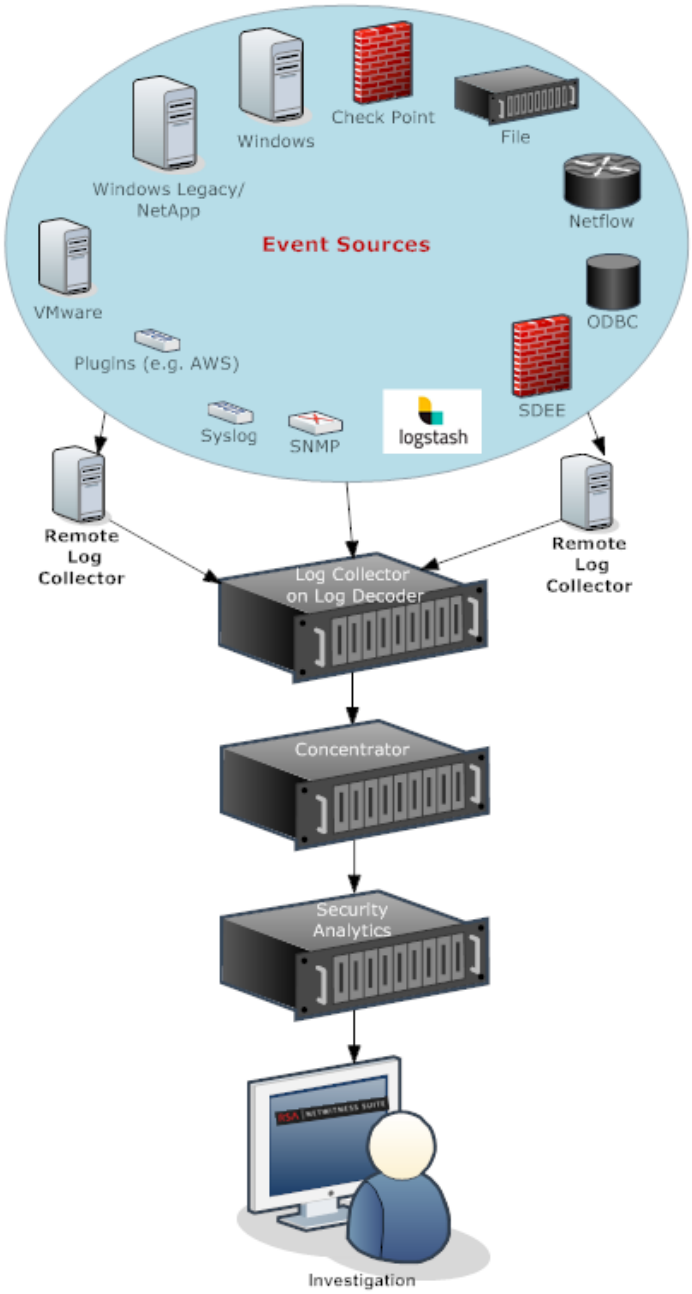
For details on these procedures, see Configure Collection Protocols and Event Sources.

Adding Local Collector and Remote Collector to NetWitness

To add a Local Collector and Remote Collector to NetWitness:

1. Go to **(Admin) > Services**.
2. Click and select **Log Collector** from the menu.
   The **Add Service** dialog box is displayed.
3. Define the details of the **Log Collection** service.
4. Select **Test Connection** to ensure that your Local or Remote Collector is added.

Configuring Log Collection



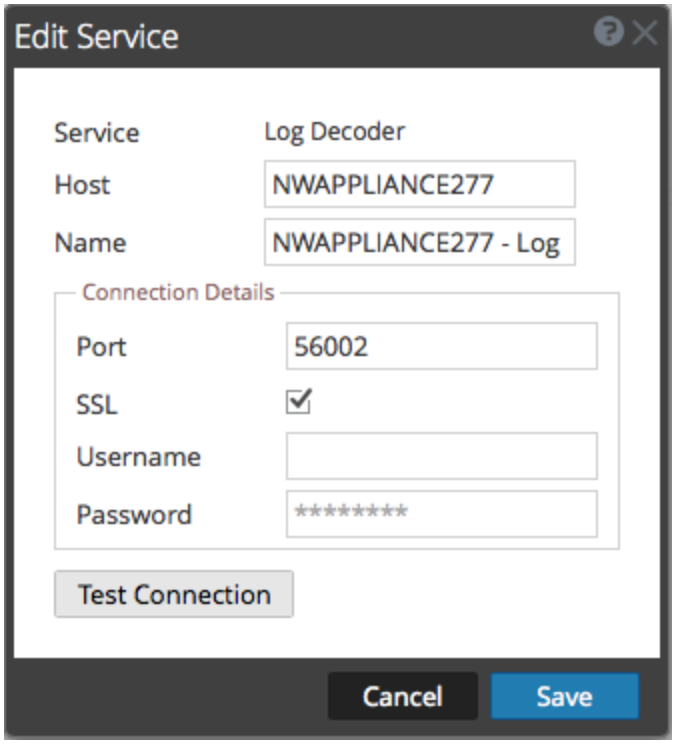
You choose the Log Collector—that is a Local Collector (LC) or Remote Collector (RC)—for which you want to define parameters in the Services view. The following figure shows how to navigate to the Services view, select a Log Collector service, and display the configuration parameter interface for that service.

To configure log collection:

1. Go to **(Admin) > Services**.
2. Select a Log Collection service.
3. Click **View > Config** to display the Log Collection configuration parameter tabs.
4. Define global Log Collection parameters in the **General** tab.
5. The UI presents tabs, depending on whether the current service is Local or Remote.
   - For a Local Collector, NetWitness displays the **Remote Collectors** tab. Select the Remote Collectors from which the Local Collector pulls events in this tab.
   - For a Remote Collector, NetWitness displays the **Local Collectors**. Select the Local Collectors to which the Remote Collector pushes events in this tab.
6. Edit configuration files as text files in the **Files** tab.
7. Define collection protocol parameters in the **Event Sources** tab.
8. Define the lockbox, encryption keys, and certificates in the **Settings** tab.
9. Define Appliance Service parameters in the **Appliance Service Configuration** tab.

Data Flow Diagram

You use the log data collected by the Log Collector service to monitor the health of your enterprise and to conduct investigations. The following figure shows you how data flows through NetWitness Log Collection to Investigation.



Provision Local Collectors and Remote Collectors

The NetWitness server verifies if an appliance has a Log Decoder service. If there is a Log Decoder service, it becomes a Local Collector. If a Log Decoder service is missing, it becomes a Remote Collector. A local Log Collector has an Event Destination and by default goes to the Local Log Decoder service. A Remote Collector does not have an Event Destination. The NetWitness Server identifies a Legacy Windows Collector as a Remote Collector.

To edit a Local Collector or Remote Collector:

1. Go to **(Admin) > Services**.
2. Select a Log Collector service.
3. In the **Services** view, select in the toolbar.

   The **Edit Service** dialog is displayed.

4. In the **Edit Service** dialog, provide the following information.

Field	Description
Service	Select Log Collector as the service type.
Host	Select a Log Decoder host.
Name	Type name you want to assign to the service.

Field	Description
Port	Default port is 50001 for clear text and 56001 for SSL encrypted.
SSL	Select **SSL** if you want NetWitness to communicate with the host using SSL. The security of data transmission is managed by encrypting information and providing authentication with SSL certificates.
(Optional) Username	Type the username of the Local Collector.
(Optional) Password	Type the password of the Local Collector.

5. Click **Test Connection** to determine if NetWitness connects to the service.
6. When the result is successful, click **Save**.

   If the test is unsuccessful, edit the service information and retry.

Configure Local and Remote Collectors

This topic describes how to configure Local and Remote Collectors.

When you deploy Log Collection, you must configure the Log Collectors to collect the log events from various event sources, and to deliver these events reliably and securely to the Log Decoder service, where the events are parsed and stored for subsequent analysis.

You can configure one or more Remote Collectors to push event data to a Local Collector, or you can configure a Local Collector to pull event data from one or more Remote Collectors.

This topic describes how to:

- **Configure Local Collector to Pull Events from Remote Collector**

  If you want a Local Collector to pull events from Remote Collector, you set this up in the Remote Collectors tab of the Local Collector's Configuration view.

- **Configure Remote Collector to Push Events to Local Collectors**

  If you want a Remote Collector to push events to a Local Collector, you set this up in the Local Collector tab of the Remote Collector's Configuration view. In the Push configuration, you can also:

  - **Configure Failover Local Collector for Remote Collector**

    You set up a destination made up of local collectors. When the primary Local Collector is unreachable, the Remote Collector attempts to connect to each Local Collector in this destination until it makes a successful connection.

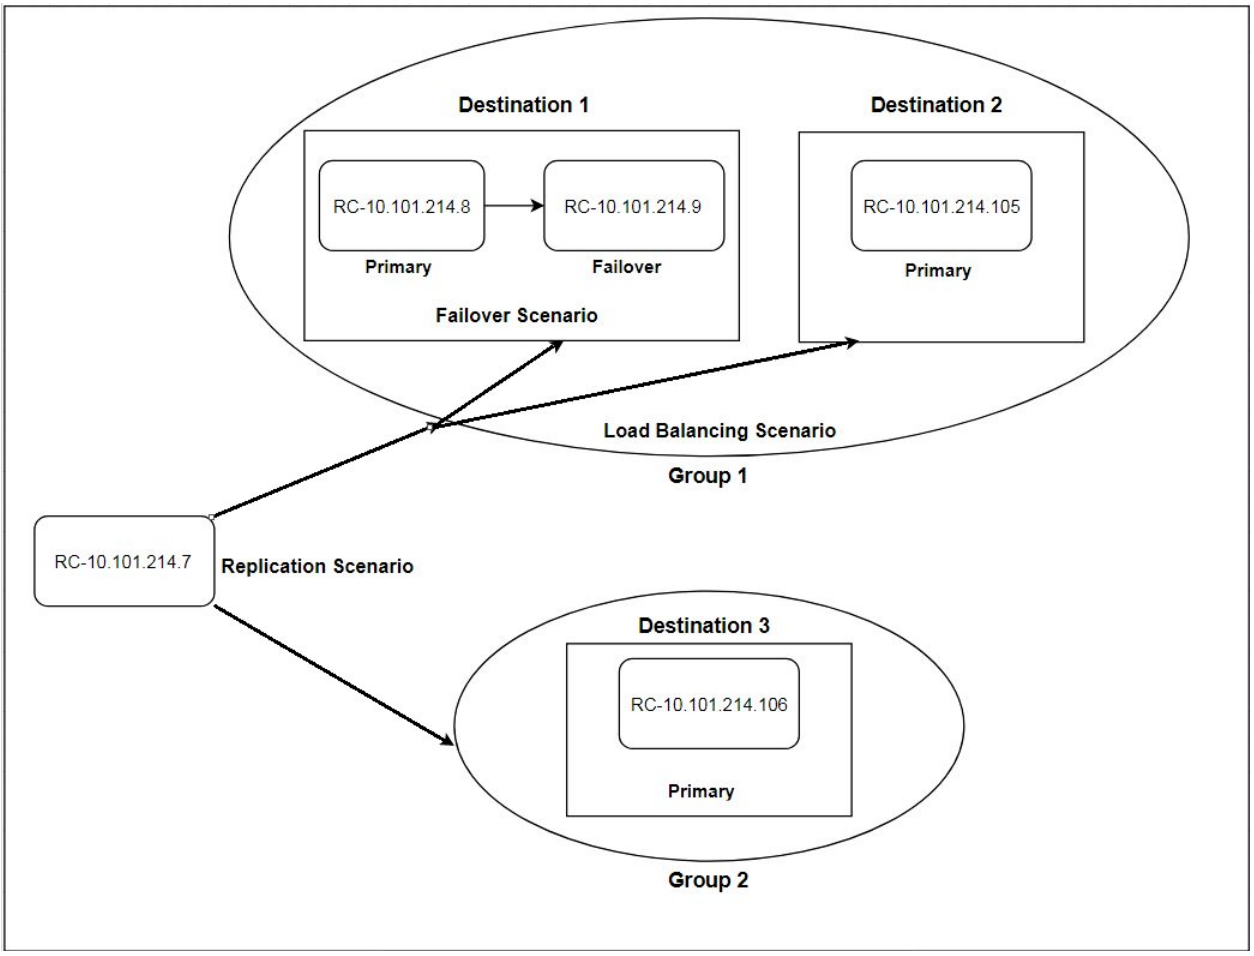
  - **Configure Replication**

    You set up multiple destination groups so that NetWitness replicates the event data in each group. If the connection to one of the destination groups fails, you can recover the required data because it is replicated in the other destination group.

  - **Configure Log Routing for Specific Protocols**

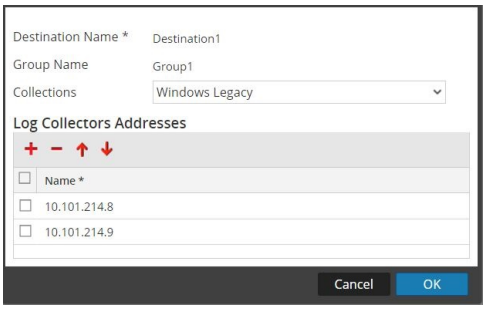
    You set up multiple destinations in a destination group to direct event data to specific locations according to protocol type.

- **Configure Chain of Remote Collectors**



You can set up a chain of Remote Collectors to push event data to a Local Collector, or you can configure a Local Collector to pull event data from a chain of Remote Collectors.

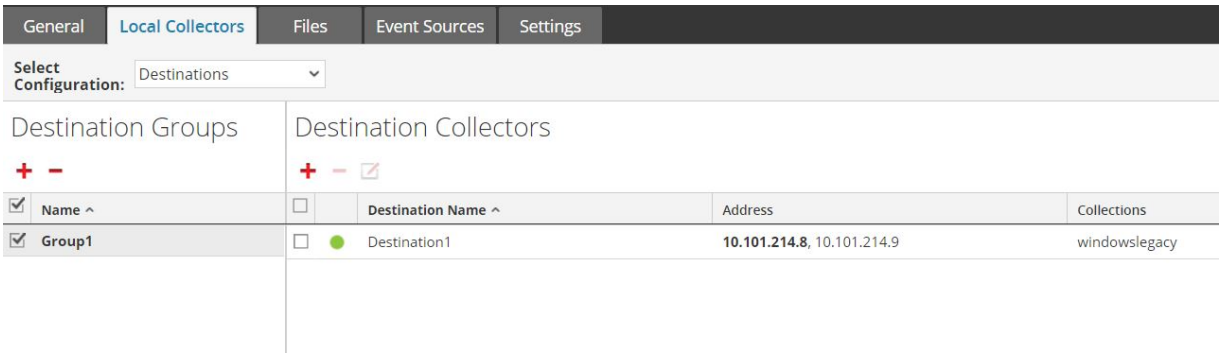
- You can configure one or more Remote Collectors to push event data to a Remote Collector.
- You can configure a Remote Collector to pull event data from one or more Remote Collectors.



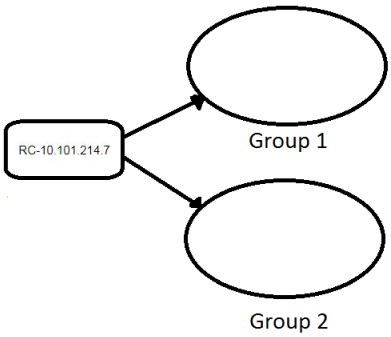
Failover, Replication and Load Balancing

This section describes failover, replication, and load balancing work in how NetWitness.

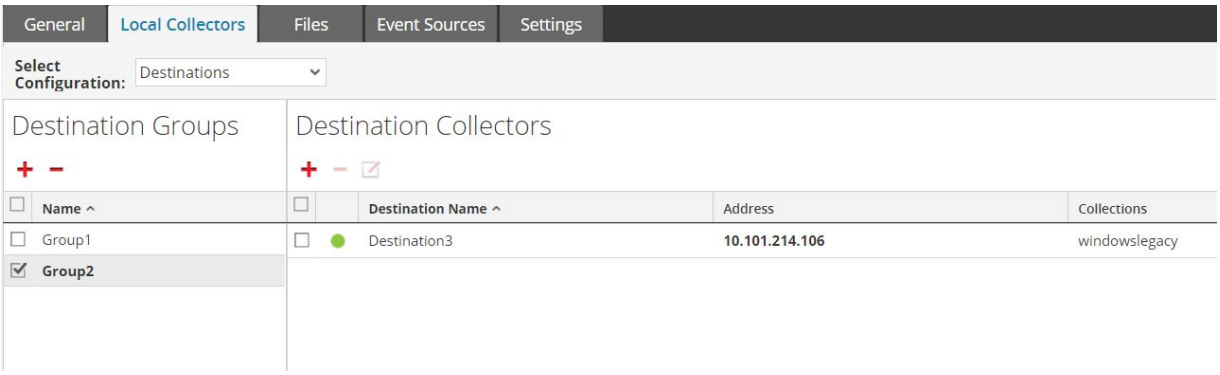
The following figure illustrates a Remote Collector configured for load balancing, failover and replication.



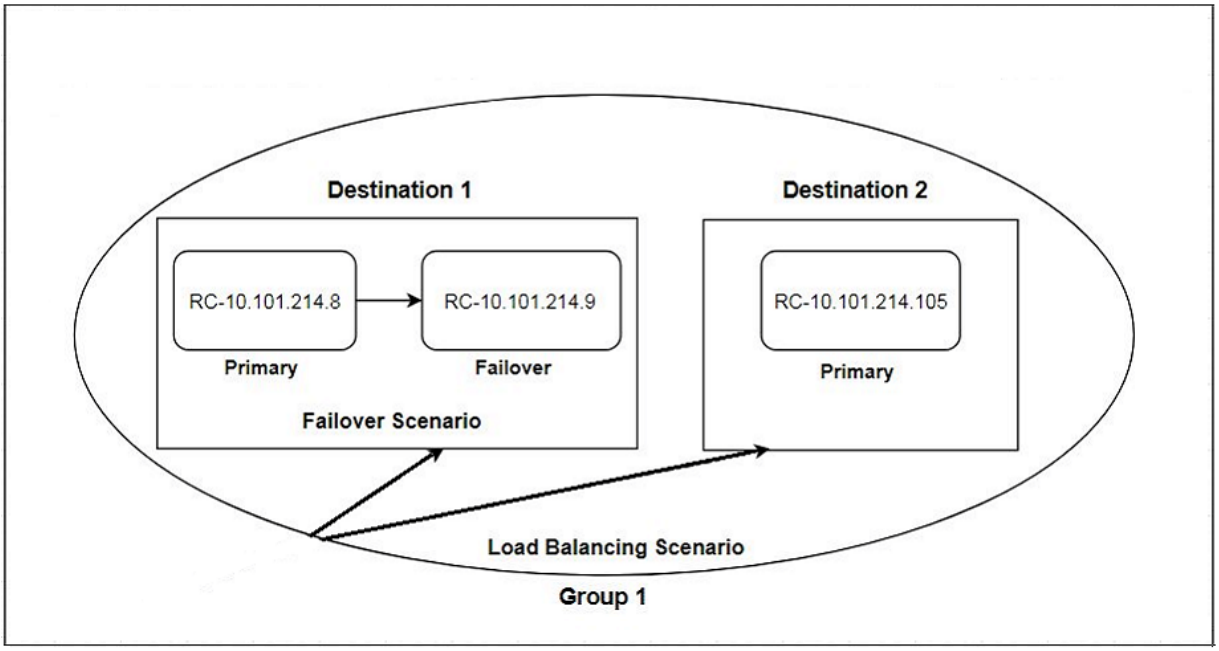
- **Failover** is achieved by setting up multiple collectors in the same Destination. Destination 1 has a primary Collector, and second, failover Collector. This is done in NetWitness by adding multiple Log Collectors to the same Destination.



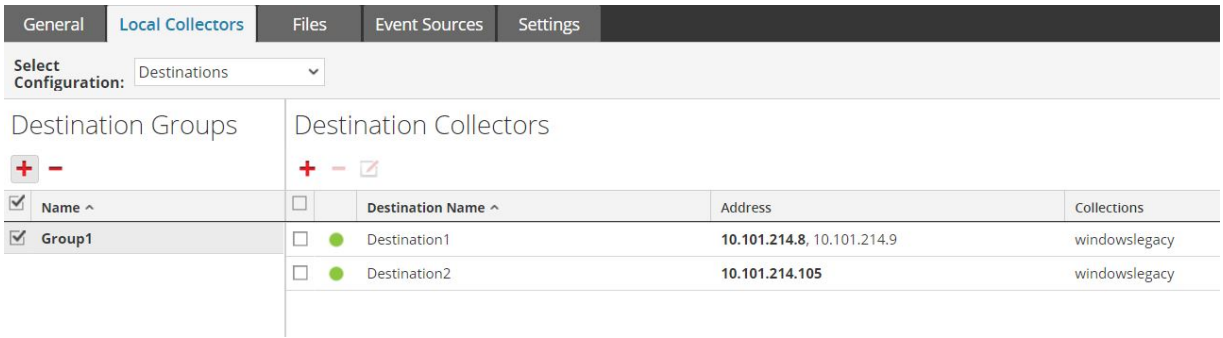
Since 10.101.214.8 is listed first, that becomes the primary collector, and 10.101.214.9 becomes the failover. To make 10.101.214.9 the primary, use the up arrow to change the order.



Below, you can see the two collectors both listed for Destination 1. The primary (10.101.214.8) is in bold.



- **Replication** is accomplished by having multiple Destination Groups: each group receive the entire set of message data.



In the following screen, you can see that message data is sent to the collectors in Group 1 *and* Group 2.

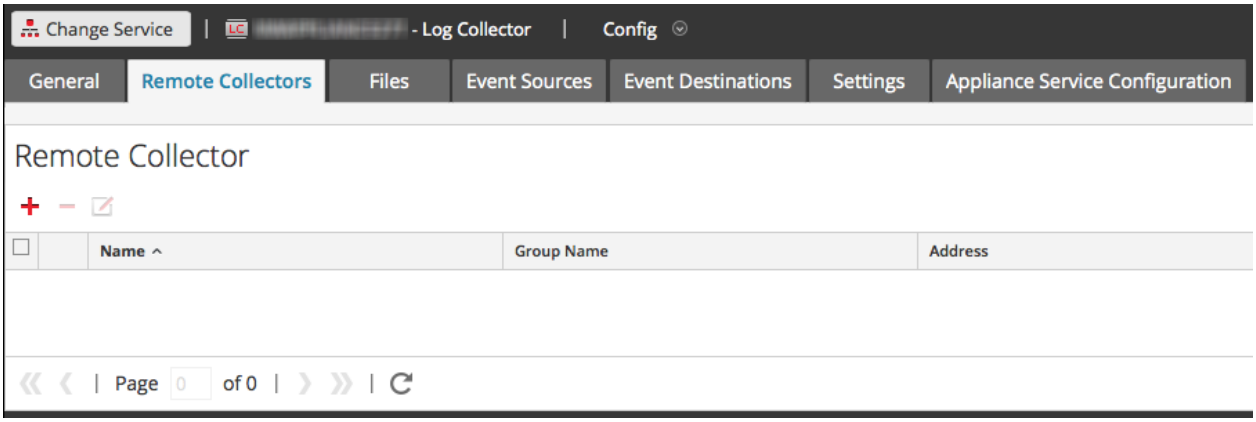
- **Load balancing** is achieved by setting up multiple Destinations within a Group.

In the following screen, you can see that Group 1 has two destinations, Destination 1 and Destination 2. The message data is divided up equally among the Destinations in the group.

With two Destinations, each destination receives half the message data. With three Destinations, each would receive 1/3 of the total message data. Keep adding Destinations to further reduce the load on the collectors in each destination.

Note: You can also set up log routing so that event data for specific protocols is sent to specific destinations.

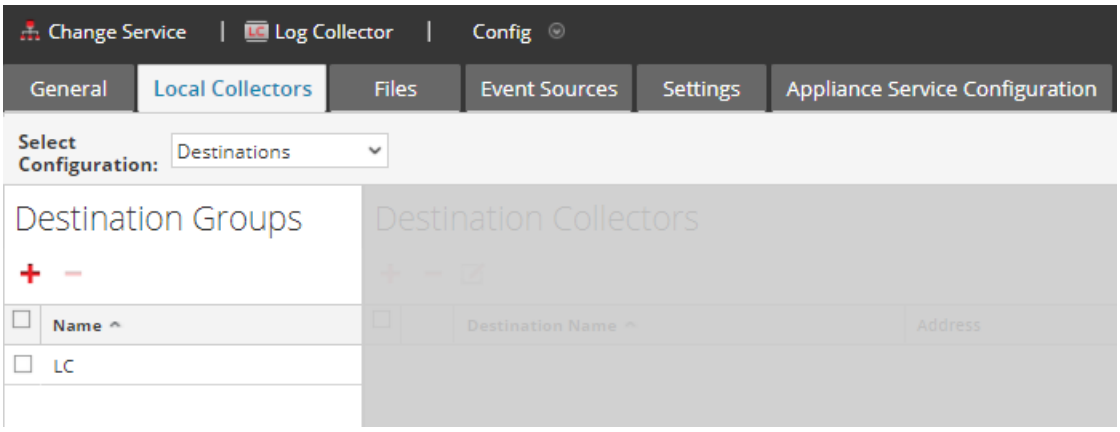
Configure a Local Collector or Remote Collector



You choose the Log Collector, that is a Local Collector (LC) or Remote Collector (RC), for which you want to define deployment parameters in the Services view. The following procedure shows you how to navigate to the Services view, select a Local or Remote Collector, and display the deployment parameter interface for that service.

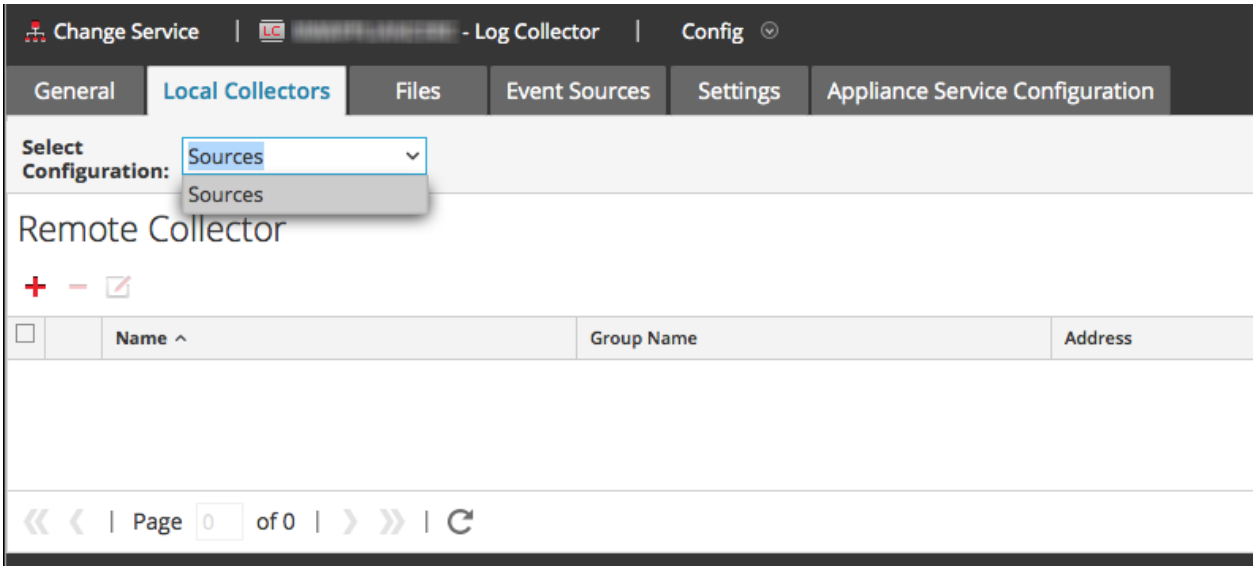
To configure a Local Collector or Remote Collector:

1. Go to **(Admin) > Services**.
2. Select a Local or Remote Log Collection service.
3. Under Actions, select **> View > Config** to display the Log Collection configuration parameter tabs.
4. Depending on your selection in step 2:
   - If you selected a Local Collector, the **Remote Collectors** tab is displayed. Select the Remote Collectors from which the Local Collector pulls events in this tab.
   - If you selected a Remote Collector, the **Local Collectors** are displayed. Select the Local Collectors to which the Remote Collector pushes events in this tab.



Remote Collectors Tab

The following figure depicts the **Remote Collectors** tab for a Local Collector that is configured to pull events from a Remote Collector. NetWitness displays this tab when you have selected a Local Collector in (Admin) > Services.



Local Collectors Tab for a Remote Collector

The following figure depicts a **Local Collectors** tab for a Remote Collector that is configured to push events to a Local Collector or another Remote Collector.

The following figure depicts the Local Collectors tab for a Remote Collector that is configured to pull events from a Remote Collector. NetWitness displays this tab when you have selected a Remote Collector in (Admin) > Services.

Parameters

Remote/Local Collectors Configuration Parameters

Configure Failover Local Collector

This topic tells you how to set up a Failover Local or Remote Collector.

Set up a Failover Local Collector

You can set up a Failover Local Collector that NetWitness will fail over to if your primary Local Collector stops operating for any reason.

1. Go to  **(Admin) > Services**.
2. In **Services**, select a Remote Collector service.
3. Click  **View > Config**.

   The Service Config view is displayed with the **Log Collector General** tab open.
4. Select the **Local Collectors** tab.
5. In the **Destination Groups** panel section, select .

   The Add Remote Destination dialog displays.
6. Set up a Destination Group and select a primary Local Collector (for example, **LC-PRIMARY**).
7. Select the Group (for example, **Primary_Standby_LCs**) in the Destination Groups panel and click .

   The Group you selected is displayed in the Local Collectors panel.
8. Add the Failover Local Collector (for example, **LC-STANDBY**).

   The following examples show the newly added primary and failover Local Collectors showing the primary Local Collector as **Active** and the Failover Local Collector as **Standby**. The active Local Collector is highlighted (for example, **LC-PRIMARY**).
9. (Optional) Add, delete, and change the order of Local Collectors to each Remote Destination.

   a. Click  to add a Log Collector as a failover Remote Destination.

   b. When connecting to a Remote Destination, the Remote Collector will attempt to connect to each Local Collector in this list in order, until it makes a successful connection.

   c. Select a Local Collector and use the up () and down () arrow buttons to change the order of connection.

   d. Select one or more Local Collectors and click to remove them from the list.

   The selected Local Collectors are added to the Log Collector section. When the Remote Collector starts collecting data, it pushes data to these Log Collectors.

Set up a Failover Remote Collector

You can set up a Failover Remote Collector that NetWitness will fail over to if your primary Remote Collector stops operating for any reason.

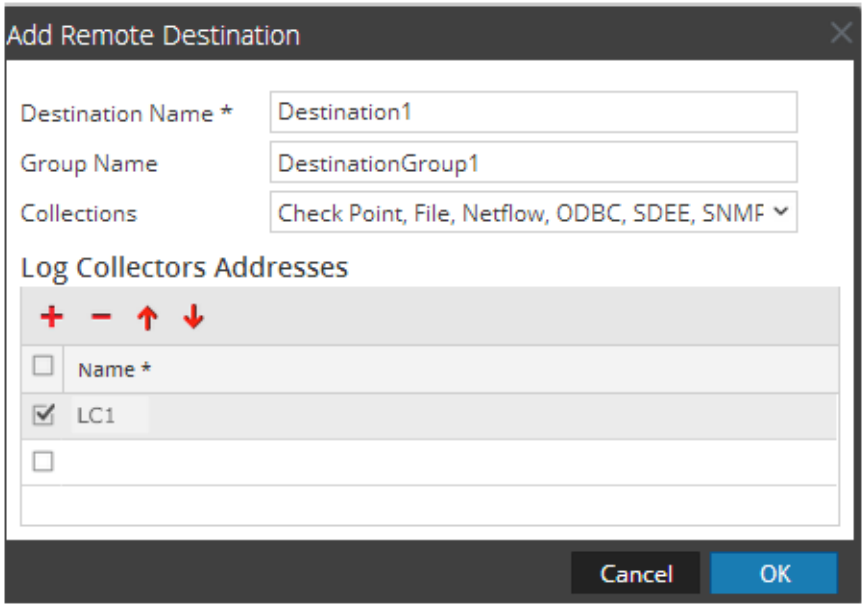
To set up a failover remote collector:

1. Go to  **(Admin) > Services**.
2. In **Services**, select a Remote Collector service.
3. Click  **View > Config**.

   The Service Config view is displayed with the **Log Collector General** tab open.

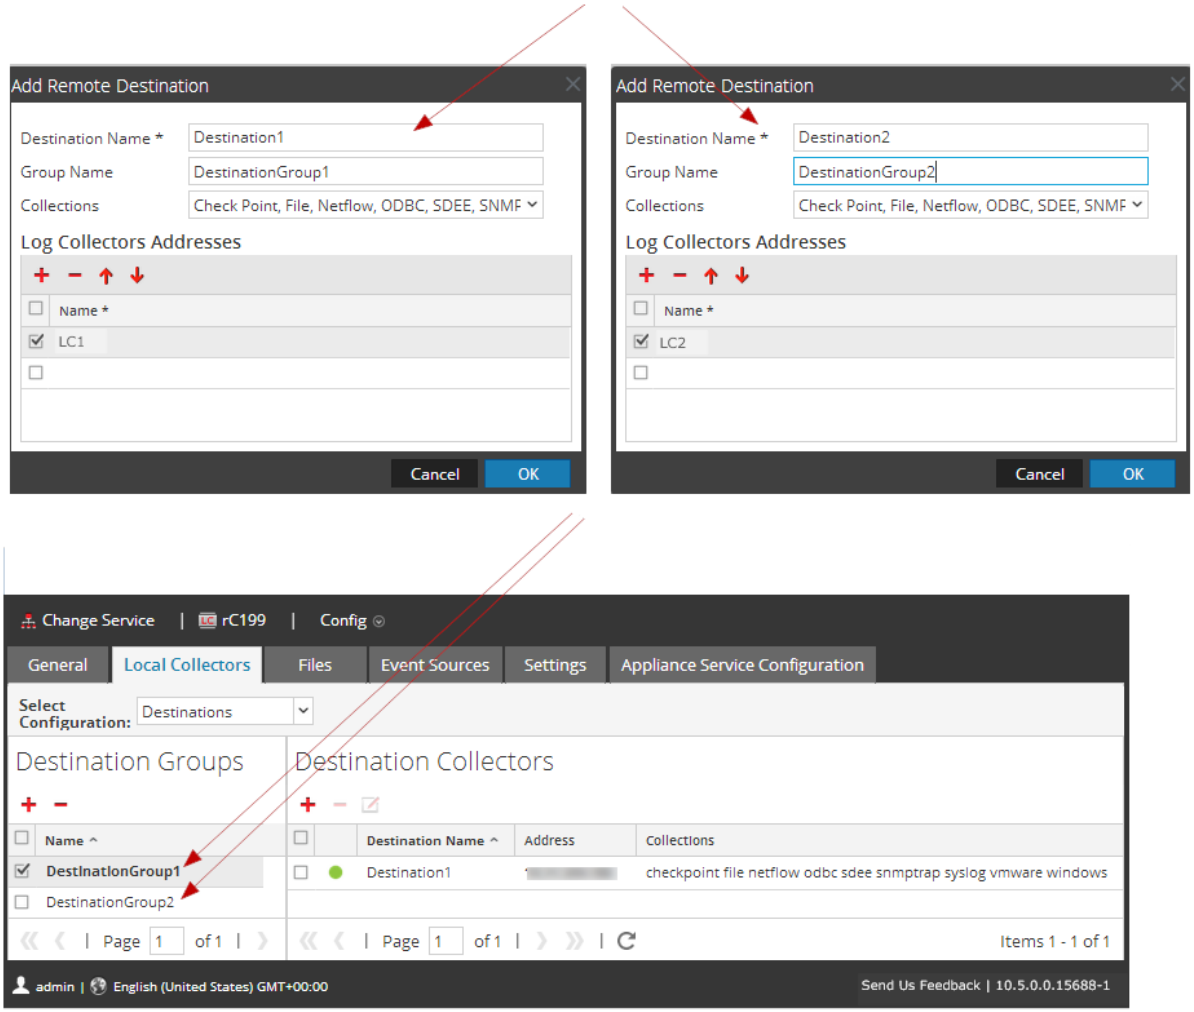
4. Select the **Local Collectors** tab.
5. Select **Sources** in **Select Configuration** drop-down menu.
6. Click + to display in **Add Source** dialog.
7. Define the failover Remote Collector and click **OK**.

Parameters



Remote/Local Collectors Configuration Parameters

Configure Replication



This topic tells you how to replicate event data sent by a Remote Collector.
You can specify multiple Destination Groups so that the event data is replicated to each group.

To replicate event data to multiple Local Collectors:

1. Go to **(Admin) > Services.**
2. Select a Remote Log Collection service.
3. Under Actions, select **> View > Config**.
   The Service Config view is displayed with the **Log Collector General** tab open.
4. Select the **Local Collectors** tab.
5. In the **Destination Groups** panel section, click +.
   The **Add Remote Destination** dialog is displayed.

6. Set up a separate Destination for each Local Collector and designate the protocols for which you want to push event messages to that Local Collector. The following examples shows the addition of two Destination Local Collectors (**Destination1** and **Destination2**) for the **Check Point**, **File**, **Netflow**, **ODBC**, **SDEE**, **SNMP**, **Syslog**, and **Windows** collection protocols:

   a. Type the **Destination Name**.

   b. Type the **Group Name**. If you do not type a Group Name, the Destination Name is taken as the Group Name.

   c. Select the collection protocols in the drop-down list.

   d. Select a Local Collector (for example, **LC1**).

   e. Click **OK**.

   f. Select the new group (for example, **DestinationGroup2**) group in the **Destination Groups** panel and click + in the **Local Collector** panel.

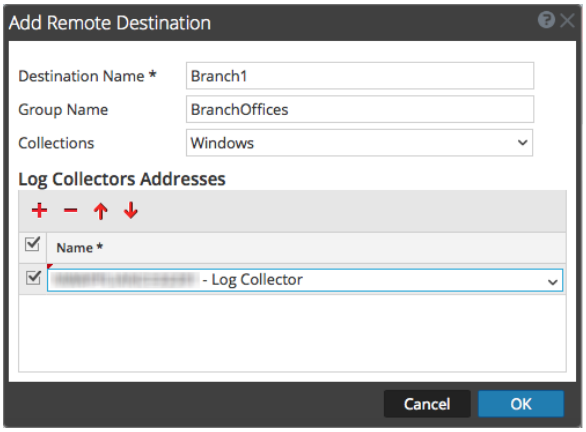
g. In the **Local Collector** panel, click + and complete the **Add Remote Destination** dialog as illustrated in the following figure.

The **Check Point**, **File**, **Netflow**, **ODBC**, **SDEE**, **SNMP**, **Syslog**, and **Windows** collection protocols are sent to two Local Collectors (**LC1** and **LC2**). Both Local Collectors are active and collecting event data.

Configure Chain of Remote Collectors

This topic describes how to chain Remote Collectors (also referred to as VLCs).

You can set up a chain of Remote Collectors to push event data to a Remote Collector, or you can configure a Remote Collector to pull event data from a chain of Remote Collectors.



- **Remote Collectors to push data.** Push data from a Remote Collector to other Remote Collectors or Local Collectors.
- **Remote Collector to pull data.** Use a Remote Collector to pull data from one or more Remote Collectors.

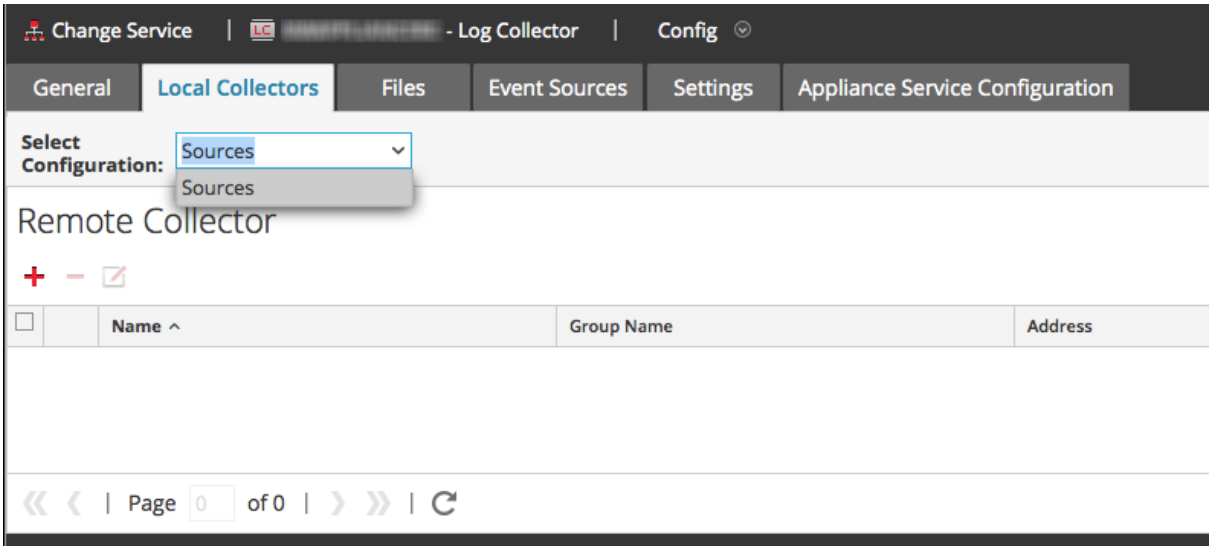
Configure Remote Collector to Push Event Data to Remote Collector

1. Go to **(Admin) > Services.**
2. In **Services**, select a **Remote Collector**.
3. Under Actions, select **> View > Config** to display the Log Collection configuration parameter tabs.

   The **Log Collector Service Config** view is displayed with the **Log Collector General** tab open.
4. Select the **Local Collectors** tab.
5. Select **Destinations** in the **Select Configurations** drop-down menu.
6. In the **Destination Groups** panel section, select .

   The **Add Remote Destination** dialog is displayed.
7. Set up a **Destination Group**:
   a. Enter a **Destination Name**.
   b. (Optional) **Enter a Group Name**. If you leave Group Name blank, NetWitness sets it to the value that you specified in Destination Name.
   c. Select one or more collection protocols in the **Collections** drop-down list.
   d. Under **Log Collectors Addresses**, click to select a Remote Collector.

Note: If you do not select a collection protocol, the Remote Collector pushes all collection protocols to the Remote Collectors.



Configure Remote Collector to Pull Event Data from a Remote Collector

1. Go to **(Admin) > Services.**
2. In **Services**, select a **Remote Collector**.

3. Under Actions, select  > **View** > **Config** to display the Log Collection configuration parameter tabs.

   The **Service Config** view is displayed with the **Log Collector General** tab open.

4. Select the **Local Collectors** tab.
5. Select **Sources** in the **Select Configurations** drop-down menu.

6. In the **Remote Collectors** panel, select +.

   The **Add Source** dialog is displayed.

7. In the **Add Source** dialog:

   a. Select one or more collection protocols.

      If you do not select a collection protocol, the Remote Collector pulls all collection protocols from the Remote Collector.

   b. Click **OK**.

   The Remote Collector is added to the Remote Collector section. When the Log Collector starts collecting data, it pulls event data from this Remote Collector.

Throttle Remote Collector to Local Collector Bandwidth

To improve performance, you can throttle the bandwidth to control the rate that the Remote Collector sends event data to Local Collector or between Message Brokers. To do this, you configure the Linux kernel's filtering and IPTable functionality.

This works for both push and pull Remote Collector configurations. The **set-shovel-transfer-limit.sh** shell script located on the **/opt/netwitness/bin** automates the configuration of the kernel filter and iptables related to this port.

This topic describes how to throttle Remote Collector to Local Collector bandwidth using the **set-shovel-transfer-limit.sh** shell script. It contains the following sections:

- The **set-shovel-transfer-limit.sh** shell script command line help.

  Note: The filter value that you need to set depends on the rate at which remote log collector is sending events to the Local Collector.

- An example that sets the Filter to 4096 kilobits per second.

Command Line Help for Set Shovel Transfer Limit Script

Issue the `-h` command to display help for `set-shovel-transfer-limit.sh` shell script.

```
cd /opt/netwitness/bin
./set-shovel-transfer-limit.sh
```

Usage:

```
set-shovel-transfer-limit.sh -s|-c|-d|[-i interface] [-r rate]
```

where:

- -c = clear existing
- -d = display filter
- -s = set new values
- -i = interface is the name of the network interface. Default value is **eth0**
- -r = rate is the bandwidth rate. Default value is **256kbps**

Bandwidths and rates can be specified in:

- **nolimit**: disables throttling
- **kbit**: Kilobits per second
- **mbit**: Megabits per second
- **kbps**: Kilobytes per second
- **mbps**: Megabytes per second
- **bps**: Bytes per second

Set the Filter to 4096 Kilobits per Second

This example sets the Filter to 4096 kilobits per second.

```
[root@<hostname> bin]#./set-shovel-transfer-limit.sh -s -r 4096kbit

RATE=4096kbit
 PORTNUMBER=5671
 DEVICE_INTERACE=eth0

Set Up a Lockbox

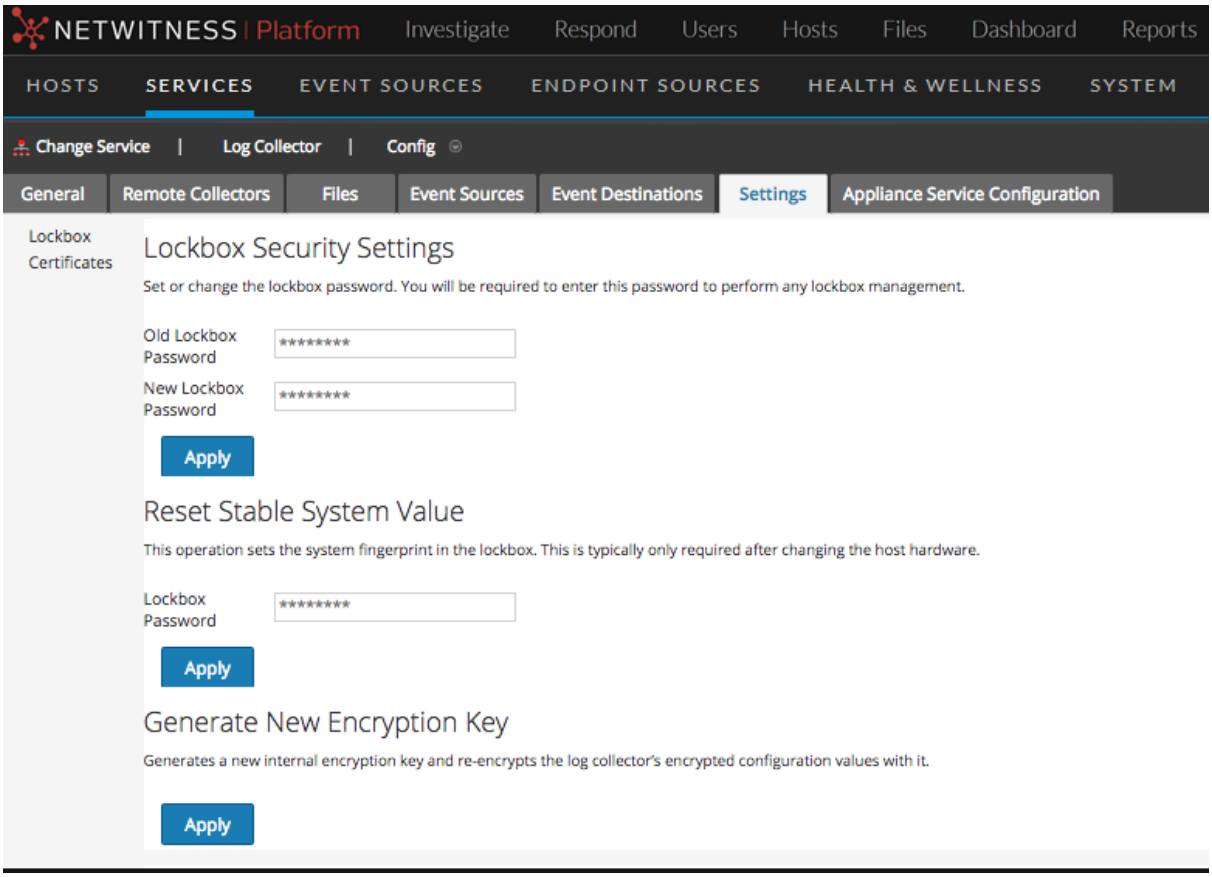
What Is a Lockbox

A lockbox is an encrypted file that you use to store confidential information about an application. The NetWitness Lockbox stores an encryption key for the Log Collector.

The encryption key is used to encrypt all event source passwords and the event broker password.

When you create the Lockbox, you need to define a password for the Lockbox.

The Log Collector operates the Lockbox in a mode during data collection that does not require you to specify the password (the Log Collector uses the host system fingerprint instead).



These are the lockbox security settings.

Feature	Description
Old Lockbox Password	When you set up a Lockbox for the first time, this field is blank. NetWitness populates this field after you enter a New Lockbox Password and click Apply.
New Lockbox Password	Initial or new lockbox password. To maximize lockbox security, specify a password that is eight or more characters in length with at least one numeric character, uppercase character, and non-alphanumeric character such as # or !
Apply	Click **Apply** to save the changes to the lockbox password.

Set Up a Lockbox

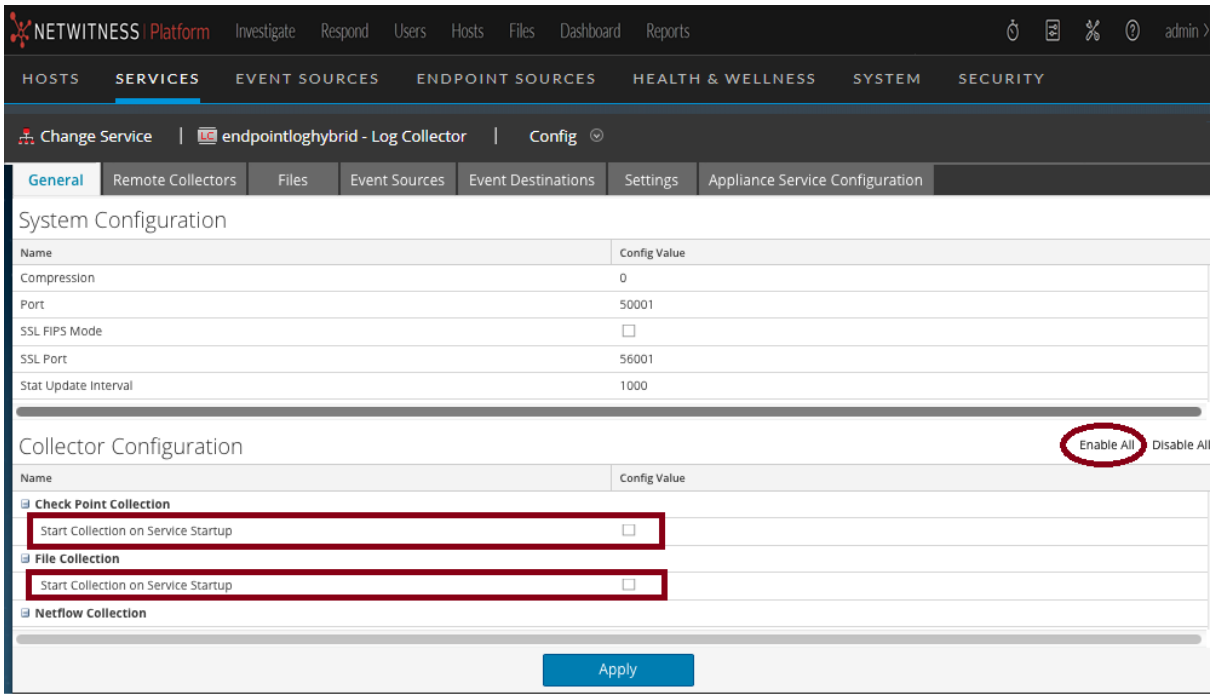
To set up a lockbox you need to set a password, as follows:

1. Go to **(Admin) > Services**.
2. Select a Log Collection service.
3. Under Actions, select **> View > Config** to display the Log Collection configuration parameter tabs.
4. Click the **Settings** tab.

5. In the options panel, select **Lockbox** to configure Lockbox settings.
6. Under **Lockbox Security Settings**, enter a password in the **New Lockbox Password** field and click **Apply**.

Start Collection Services

If a collection service stops, you may need to start it again. You can also enable the automatic start of collection services.



Start a Collection Service

1. Go to **(Admin) > Services**.
2. Select a Log Collector service and click under **Actions**.
3. Click **View** > **System**.
4. Click **Collection** > ***service*** (for example **File**) and click **Start**.

Enable Automatic Start of Collection Services

1. Go to **(Admin) > Services**.
2. Select a Log Collector service and click under **Actions**.
3. Click **View** > **Config**.

   The General tab is displayed.
4. In the Collector Configuration panel, select **Start Collection on Service Startup** for the individual collection services that you want to start automatically. Alternatively, select **Enable All** to automatically start all collection services.

5. Click **Apply** for your changes to take effect.

Verify That Log Collection Is Working

This topic tells you how to verify that you have set up Log Collection correctly.

The following methods verify that Log Collection is working.

- Verify that there is event activity the Event Source Monitoring tab of the **Administration > Health & Wellness** view.
- Verify that there are parsers in the **device.type** field in the **Details** column in the **Investigation > Events** view for the collection protocol you configured.

Please refer to the topics for each Collection Protocol for steps on how to verify that the protocol is set up correctly.

Configure Certificates

You manage certificates by creating trust stores on the Log Collector. The Log Collector refers to these trust stores to determine whether or not the event sources are trusted.

Note: You can configure custom certificates for one or more event sources: for details, see (Optional) Configure Custom Certificates on Log Collectors.

Add a Certificate

To add a certificate:

1. Go to  **(Admin) > Services**.
2. In the **Services** grid, select a **Log Collector** service.
3. Click  under **Actions** and select **View > Config**.
4. Click the **Settings** tab.
5. In the options panel, select **Certificates**.
6. Click  in the **Certificates** tool bar.
   The **Add Cert** dialog is displayed.
7. Click **Browse** and select a certificate (***.PEM**) from your network.
8. Specify a password (if required).
9. Click **Save**.

Certificates Panel

The following table describe the buttons and columns available in the Certificates panel.

Field	Description
	Opens the Add Cert dialog in which you can add a certificate and password.

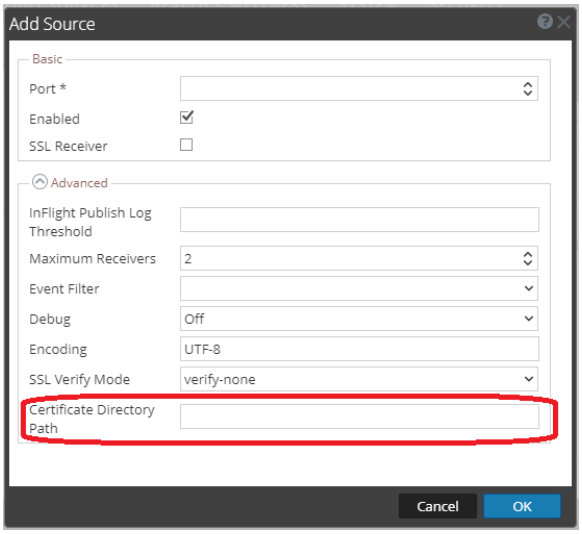
Field	Description
	Deletes the selected certificates.
	Selects certificates.
Trust Store Name	Displays the name of the trust store.
Certificate Distinguished Name	For Check Point event source only, displays the distinguished name for the certificate.
Certificate Password Name	For Check Point event source only, displays the password name for the certificate.

Add Cert Dialog

The following table describes the parameters available in the **Add Cert** dialog.

Field	Description
Trust Store Name	Enter a trust store name.
File	Click Browse to select a certificate (*.PEM file) file from your network
Password	Specify the password for this certificate.
Close	Closes the dialog without adding a certificate.
Save	Adds the certificate.

(Optional) Configure Custom Certificates on Log Collectors



You can configure custom certificates for the syslog listener on Log Collectors. This enables you to put your own trusted certificate in place on the syslog listener for specific event sources, while all other functionality uses the pre-installed certificates.

To configure custom certificates for an event source:

1. Upload the custom certificate and key files onto the Log Collector or Virtual Log Collector, and save them into a folder. You need to add this path information in step 4 below.
2. Go to **(Admin) > Services**, select a Log Collector service and **> View > Config**.
3. Select the **Event Sources** tab, then choose **Syslog** from the drop-down menu.
4. Add (or select) a **syslog-tcp** event source type.
5. In the **Sources** pane, add (or edit) a source.

   The Add Source dialog box is displayed.
6. In the Add Source dialog box, click the Advanced section toggle.

   The Advanced parameters are displayed.
7. For the **Certificate Directory Path**, enter the pathname for the folder that contains the certificate files.

   The Log Collector SSL syslog connections will use the `logcollector_cert.pem` and `logcollector_key.pem` files in the folder specified.
8. Press **OK** to save all parameters that you added or changed.
9. Restart syslog collection for the changes to take effect.

Note: More than one event source can use the same certificates: for each event source that shares the certificate, specify the same **Certificate Directory Path**. However, the specified path cannot contain more than one certificate (that is, one cert and one key file). To use a different custom certificate, you must specify a different **Certificate Directory Path**.

Log Collection Basics

How Log Collection Works

The Log Collector service collects logs from event sources throughout the IT environment in an organization and forwards the logs to other NetWitness components. The logs and the descriptive content are stored as meta data for use in investigations and reports.

Event sources are the assets on the network, such as servers, switches, routers, storage arrays, operating systems, and firewalls. In most cases, your Information Technology (IT) team configures event sources to send their logs to the Log Collector service and the NetWitness administrator configures the Log Collector service to poll event sources and retrieve their logs. As a result, the Log Collector receives all logs in their original form.

Collection Protocols

NetWitness can collect logs from a wide variety of event sources. When you are configuring log collection for a specific event source, you need to know, first and foremost, the protocol that is used to collect the logs.

Collection Protocol	Description
Check Point	Collects events from Check Point event sources using OPSEC LEA. OPSEC LEA is the Check Point Operations Security Log Export API that facilitates the extraction of logs. For details, see Configure Check Point Event Sources in NetWitness.
File	Collects events from log files. Event sources generate log files that are transferred using a secure file transfer method to the Log Collector service. For details, see Configure File Event Sources in NetWitness. **Note:** In NetWitness 11.4 and later, you can perform File Log collection for many event sources using Endpoint Agents, thus simplifying the collection process. For details, see the *NetWitness Endpoint Configuration Guide*. For a list of which event sources are supported, see the section "Currently Supported File Log Event Source Types."
Netflow	Accepts events from Netflow v5 and Netflow v9. For details, see Configure Netflow Event Sources in NetWitness.
ODBC	Collects events from event sources that store audit data in a database using the Open Database Connectivity (ODBC) software interface. For details, see Configure ODBC Event Sources in NetWitness.

Collection Protocol	Description
Plugins	The Plugins collection is a generic collection framework for collecting events using external scripts written in other languages. NetWitness currently provides collection for Amazon Web Services (AWS) CloudTrail and Microsoft Azure. • **AWS**: Collects events from Amazon Web Services (AWS) CloudTrail. Specifically CloudTrail records AWS API calls for an account. For details, see Configure AWS (CloudTrail) Event Sources in NetWitness • **Azure**: Collects events from Microsoft Azure. For details, see Configure Azure Event Sources in NetWitness. Customers can use this framework to develop their own collection protocols.
SDEE	Collects Intrusion Detection System (IDS) and Intrusion Prevention Service (IPS) messages. For details, see Configure SDEE Event Sources in NetWitness.
SNMP Trap	Accepts SNMP traps. For details, see Configure SNMP Event Sources in NetWitness.
Syslog	Accepts messages from event sources that issue syslog messages. For details, see Configure Syslog Event Sources. **Note:** You do not configure Syslog Collection for Local Log Collectors. You only need to configure Syslog Collection for Remote Collectors.
VMware	Collects events from a VMware virtual infrastructure. For details, see Configure VMware Event Sources in NetWitness.
Windows	Collects events from Windows machines that support the Microsoft Windows model. Windows 6.0 is an event logging and tracing framework included in the operating system beginning with Microsoft Windows Vista and Windows Server 2008. For details, see Configure Windows Event Sources in NetWitness.
Logstash	Utilize Logstash as a collection method, leveraging the various number of plugins supported by Logstash, such as: • Custom - This send the events from Logstash to NetWitness Platform. • Filebeat- This collects events from file. • Auditbeat - This collects audit events from an operating system (for example CentOS). • Export connector - This exports events from Decoder or Log Decoder to third party system. By default, Logstash version 7.10.0 is installed with all standard Logstash plugins (Beats, Export connector and so on) when Log collector is installed. For more information see, Configure Logstash Event Sources in NetWitness.

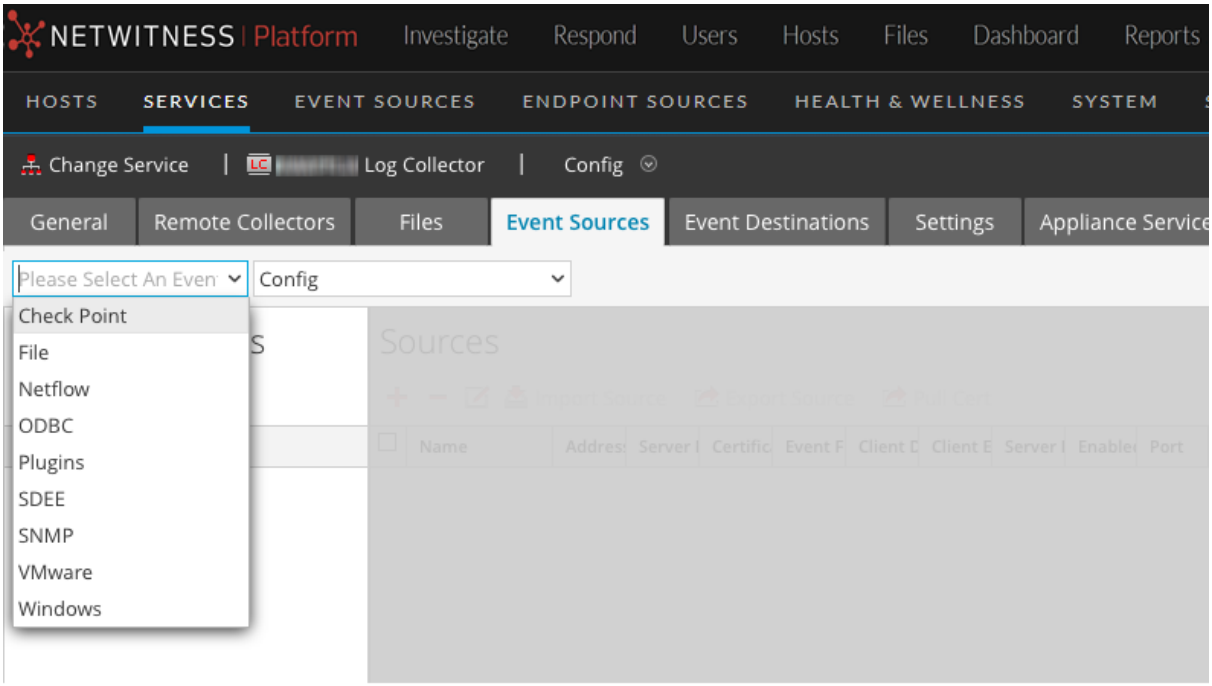
Collection Protocol	Description
Windows Legacy	Collects events from: • Older Windows versions such as Windows 2000 and Window 2003 and collects from Windows event sources that are already configured for enVision collection without having to reconfigure them. • NetApp ONTAP appliance event source so that you can now collect and parse NetApp evt files. • For more information, see.Windows Legacy and NetApp Collection Configuration. **Note:** You install the NetWitness Windows Legacy Collector on a physical or virtual Windows 2008 R2 SP1 64-Bit server using the **SALegacyWindowsCollector-*version-number.exe***.

Log Collection Basic Procedure for all Protocols

The basic procedure is the same for all of the supported Collection Protocols.

To configure collection for an event source:

1. **Set up your Event Source for collection.** Each supported event source has a configuration document available in the NetWitness Supported Event Sources space on NetWitness Link
   a. Navigate to the NetWitness Supported Event Sources space on NetWitness Link.
   b. Find the Instructions for your Event Source.
      The Overview page lists all of the currently supported Event Sources, as well as information about the collection method, device class, and supported versions.
   c. Download the configuration instructions for your event source, and follow them.
2. **Configure collection onNetWitness.** The event source configuration guide contains these instructions. However, this guide also provides these instructions, based on the collection method used by your event source. See Collection Protocols for details.
3. **Start the Service for your Collection Method.** Normally, you only need to do this for the first event source that uses this collection method. For example, the first time you configure an event source that uses File Collection, you may need to start the File Service in NetWitness.
4. **Verify that Collection is working for your Event Source.**



The remainder of this topic discusses steps 2, 3, and 4 in more detail.

Configure Collection in NetWitness

The process to configure event sources is dependent upon the collection method they use. Note, however, that they are very similar. The following procedure is generic: more details for individual collection methods are available in topics that cover the details for each specific collection method.

Basic procedure to configure an event source in NetWitness:

1. Go to **(Admin)** > **Services** from the NetWitness menu.
2. Select a Log Collection service.
3. Under Actions, select > **View** > **Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Sources** tab.

5. In the **Log Collector Event Sources** tab, select your collection method from the drop-down menu.
6. In the **Event Categories** panel toolbar, click .
   The Available Event Source Types dialog box is displayed.
7. Select an event source type and click **OK**.
   The newly added event source type is displayed in the Event Categories panel.
8. Select the new type in the **Event Categories** panel and click in the Sources toolbar.
   The **Add Source** dialog is displayed.
9. Enter values for the available parameters.

Refer to the Parameters section of the specific collection method that you are configuring.

10. Click **OK**.

Start the Service for your Collection Method

To start the service for your collection method:

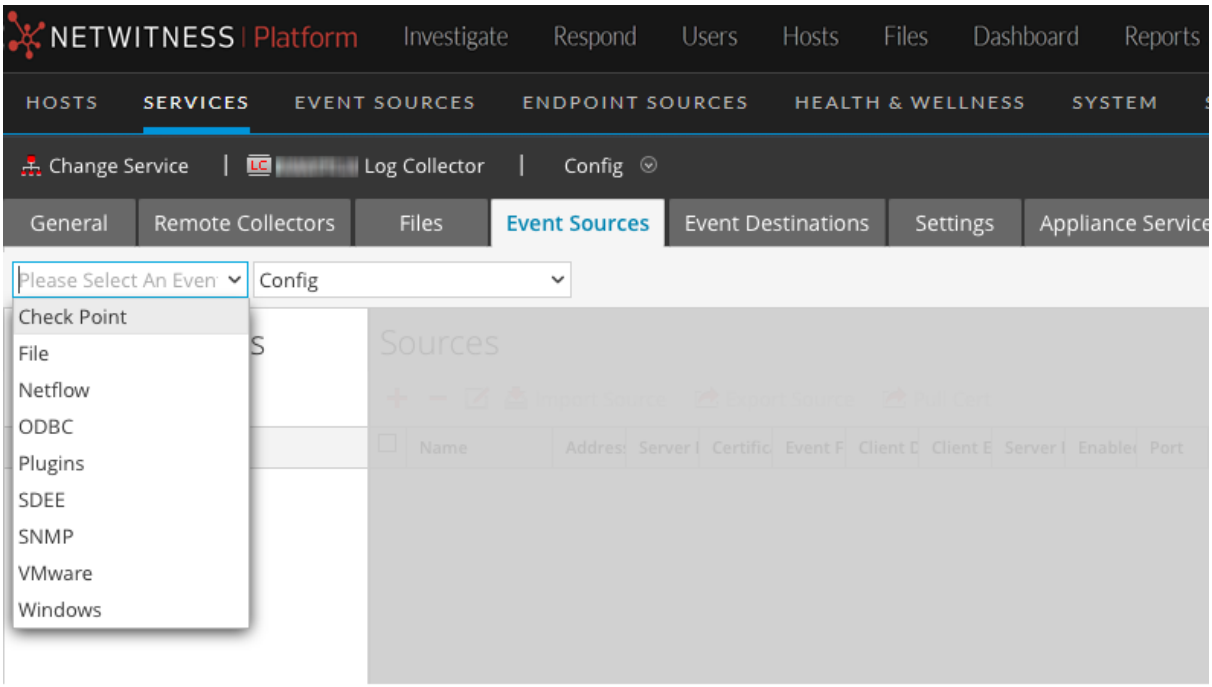
1. Go to **(Admin) > Services**.
2. Select a **Log Collector** and select **> View > System**.
3. Click **Collection > *protocol* > Start**

   where ***protocol*** is the protocol that you wish to start, for example **Netflow**.

Verify that Collection is working for your Event Source

You can verify that a collection method is working from the **(Admin) > Health & Wellness > Event Source Monitoring** tab.

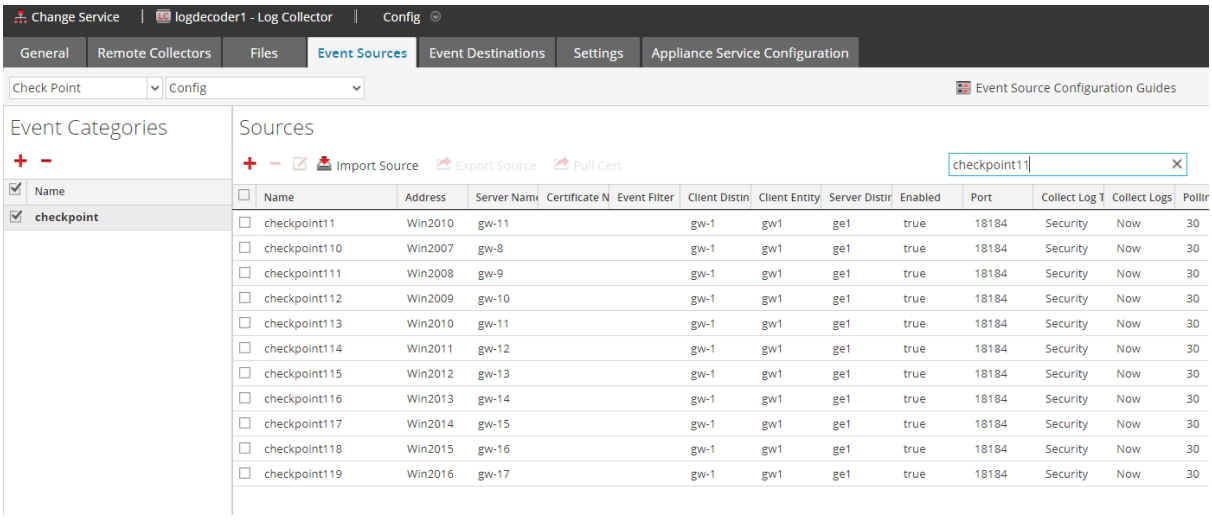
To verify that collection is working for an event source:



1. Go to **(Admin) > Health & Wellness**
2. Click the **Event Source Monitoring** tab.
3. In the grid, find the **Log Decoder**, **Event Source**, and **Event Source Type**.
4. Look for activity in the **Count** column for an event source to verify that collection is accepting events.

Search for Specific Event Sources

In some cases, your Log Collector may contain a lot of pre-configured event sources for a specific collection protocol (for example File). If so, you can quickly search for one or more event sources based on address (IP/hostname) or name.



To search for one or more specific event sources:

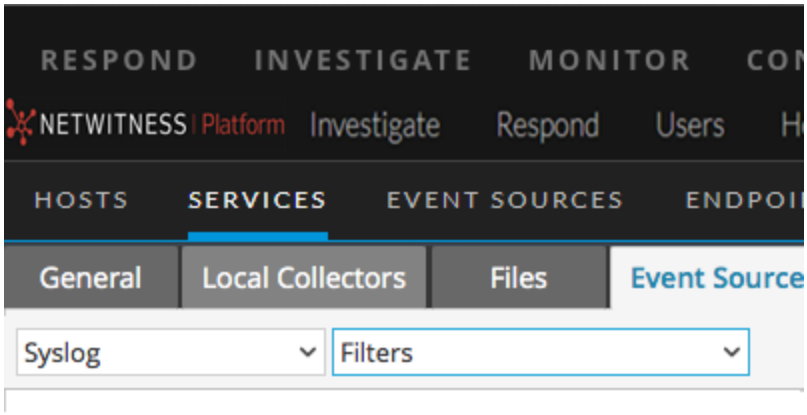
1. Go to **(Admin) > Services** from the NetWitness menu.
2. Select a Log Collection service.
3. Under Actions, select **> View > Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Sources** tab.
5. In the **Event Sources** tab, select any collection protocol/**Config** from the drop-down menu.

6. From the **Filter by Name / Address** text field, enter an IP address or hostname and click **Enter**.

   Event sources that match the information entered into the search box are returned. For example, the image below shows a list of Check Point event sources whose names match the string **checkpoint11**.

Configure Event Filters for a Collector

This topics tells you how to create and maintain Event filters across all collection protocols.



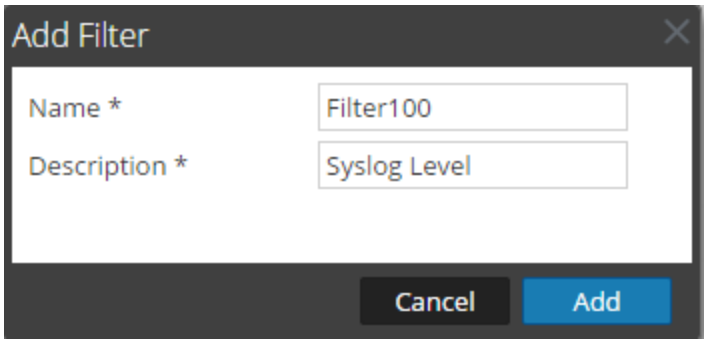
Note: Prior to 11.3, you could not configure Syslog Collection for Local Log Collectors. You ***can*** configure Syslog for local Log Collectors that are on version 11.3 or later.

Configure an Event Filter

To configure an event filter for an event source:

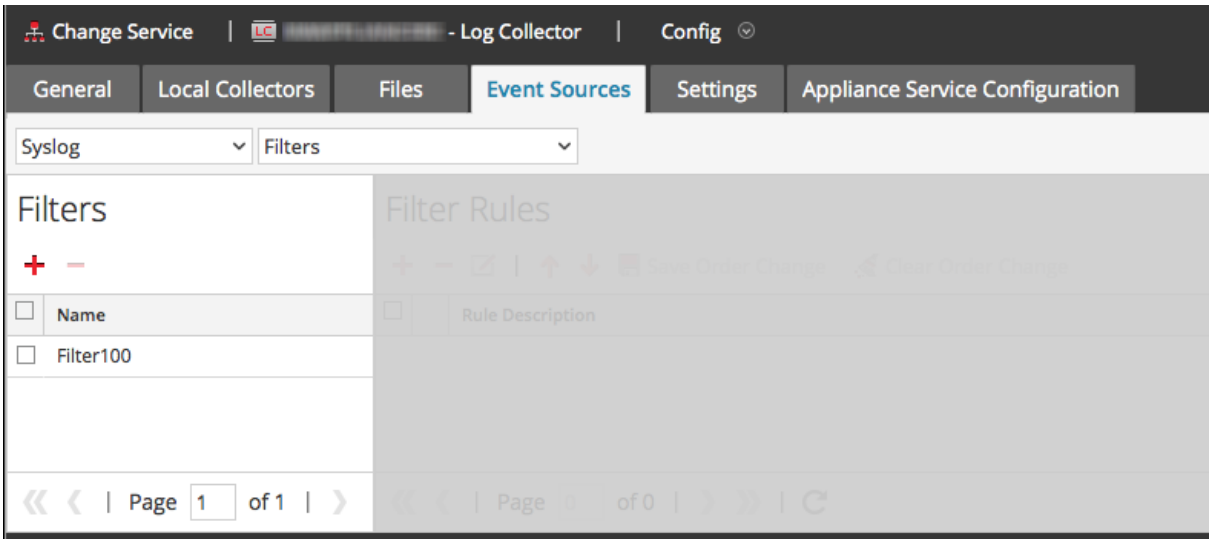
1. Go to **(Admin) > Services**.
2. Select a Log Collection service.
3. Under Actions, select **View > Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Sources** tab.
5. In the **Event Sources** tab, select any collection method / **Filter** from the drop-down menus.

   The following screen shows **Syslog** selected.



Note: Syslog configuration is only available on Remote Collectors prior to 11.3: if you are working with a Local Collector service, **Syslog** is not available from the drop-down menu for Log Collectors on version 11.0, 11.1, or 11.2.

   The **Filters** view displays the filters that are configured for the selected collection method, if any.



6. In the **Filters** panel toolbar, click .

   The **Add Filter** dialog displays.

7. Enter a name and description for the new filter and click **Add**.

   The new filter displays in the **Filter** panel.

8. Select the new filter in the **Filters** panel and click + in the **Filter Rules** panel toolbar.

   The **Add Filter Rule** dialog is displayed.

9. Click + under **Rule Conditions**.
10. Add the parameters for this rule and click **Update > OK**.

NetWitness updates the filter with the rule that you defined.

Note: Rules are processed in order from top down until an Action type aborts the processing, or the final rule is checked. Default behavior is to accept the rule if no matches are found.

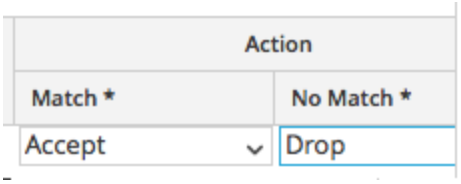
The following tables describe the parameters for adding a filter rule.

Event Filter Rule "Key" Parameter

The values for the Key field depend on the Collection method to which the filter applies.

Collection Method	Values for the *Key* Field
Checkpoint, File, Netflow, Plugin, SDEE SNMP and VMware	• All Data Fields • Event Source Type • Event Source Name • Source IP • Raw Event
ODBC	• All Data Fields • Event Source Type • Event Source Name • Source IP • Message ID • Message Level
Syslog	• All Data Fields • Event Source Type • Event Source Name • Source IP • Syslog level • Raw Event
Windows	• All Data Fields • Event Source Type • Event Source Name • Source IP • Event ID • Provider • Channel • Computer • UserName • DomainName

Collection Method	Values for the *Key* Field
Windows Legacy	• All Data Fields • Event Source Type • Event Source Name • Source IP • Event ID



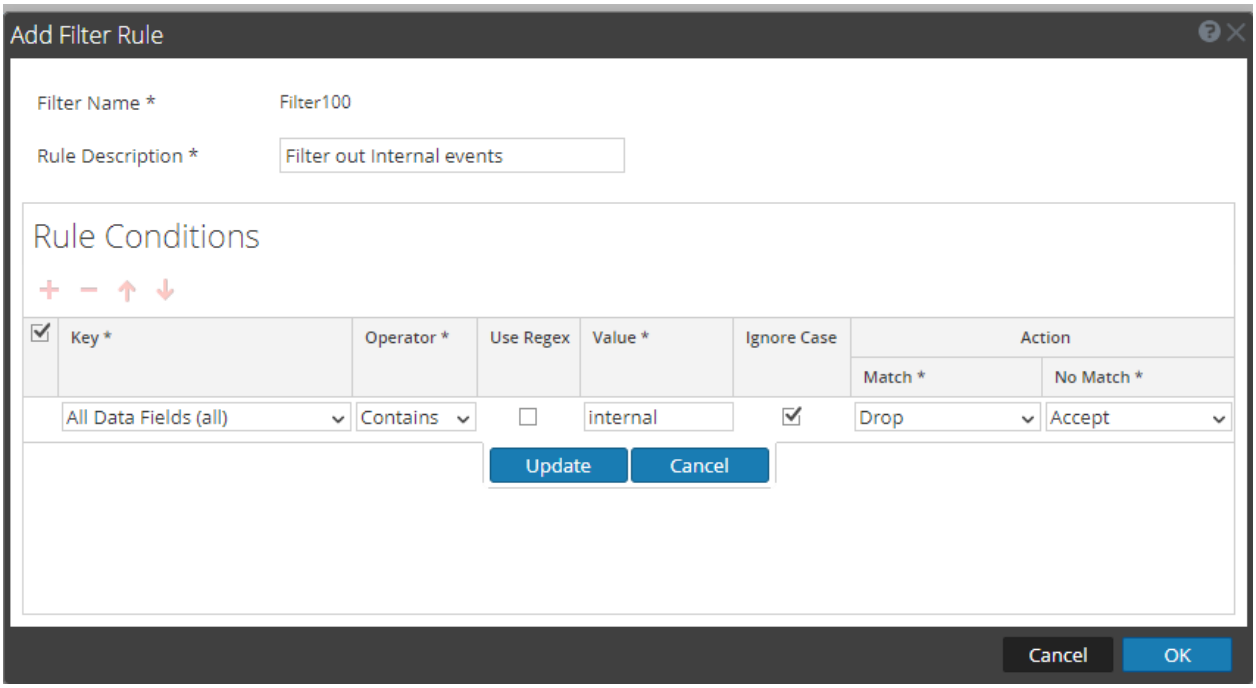
Other Event Filter Rule Parameters

The following table describes all the other available fields for creating an event filter rule.

Field	Description
Operator	Valid values are: • Contains • Equal
Use Regex	Optional. You can select this if you want to use Regex.
Value	Value depends on the key value you selected. For example if you choose **Syslog level** for Key, the value will be a number that denotes the syslog level.
Ignore case	Optional. Select this to ignore the case sensitivity.
Action	Choose actions for message data that matches a condition, or that does not match a condition. See below for more details.

Actions

You can choose a 'match' and 'no-match' action for each rule condition. This screenshot shows a condition that uses the **Accept** action on matches, and **Drop** action on events that do not match the condition.

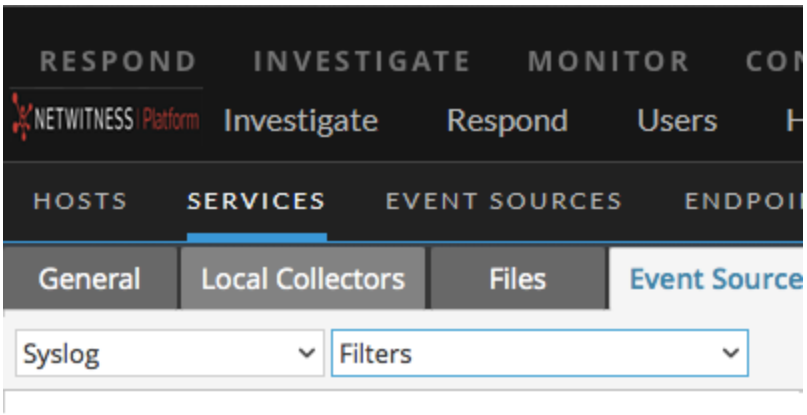


The available actions are as follows:

- **Accept**: the filtered event is included in event logs, and no further rule processing is done for the event: the event will display in the NetWitness user interface during Investigation.

- **Drop**: the filtered event will not be included in event logs, and no further rule processing is done for the event: the event will not display during Investigation.
- **Next condition**: the filtered event moves on to the next rule condition in the rule. If there are no more rule conditions in the current rule, it moves on to the next rule.
- **Next rule**: the filtered event moves on to the next rule. If there are no more rules in the filter, the filter event is included in event logs, and no further rule processing is done for the event (same as **Accept**).

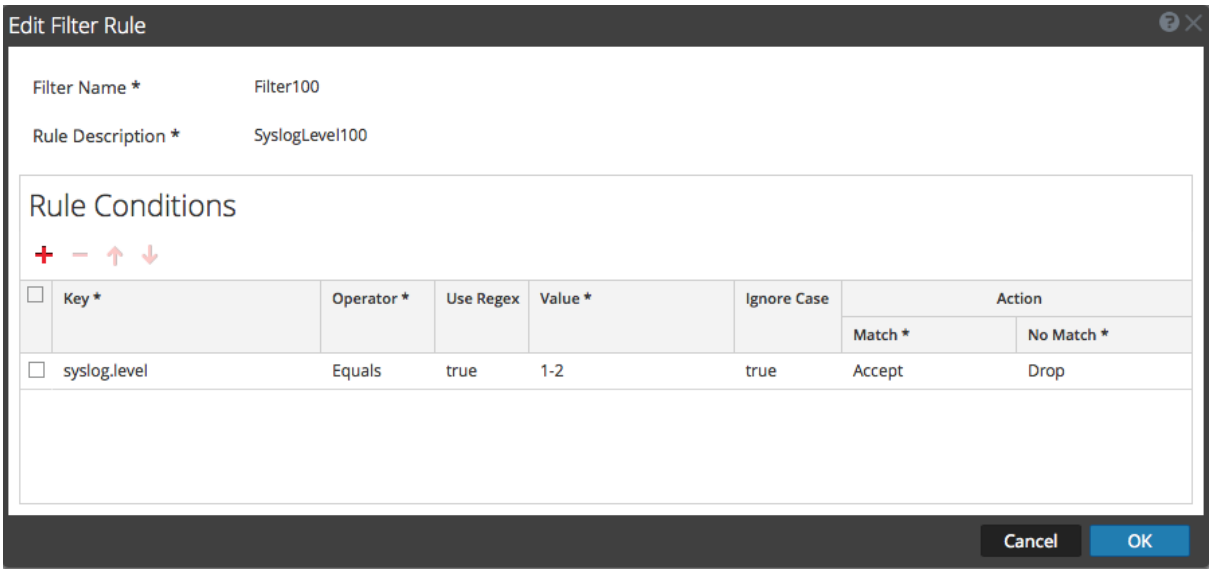
For example, consider the following condition:



In this condition, if the event log contains the string "internal," the event is not included in the event meta, nor is it displayed during Investigation. If the string is not found, the event is included and is displayed during Investigation.

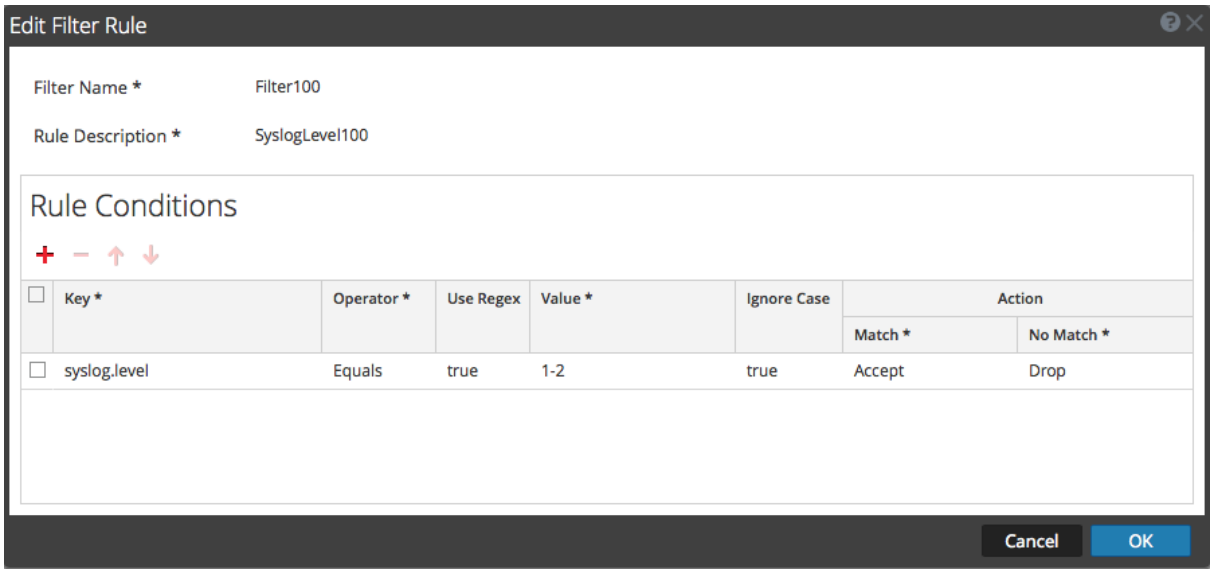
Modify Filter Rules

To modify existing filter rules:



1. Go to  **(Admin) > Services**.
2. Select a Log Collection service.
3. Under Actions, select **View > Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Sources** tab.
5. In the **Event Sources** tab, select any collection method / **Filter** from the drop-down menus.

   The screen shows **Check Point** selected.



The **Filters** view displays the filters that are configured for the selected collection method, if any.

6. In the **Filter Rules** list, select a rule and click .
   The **Edit Filter Rule** dialog is displayed.

7. Select the rule condition that you want to modify.

8. Modify the condition parameters that require changes and click **Update > OK**.

NetWitness applies the condition parameter changes to the selected filter rule.

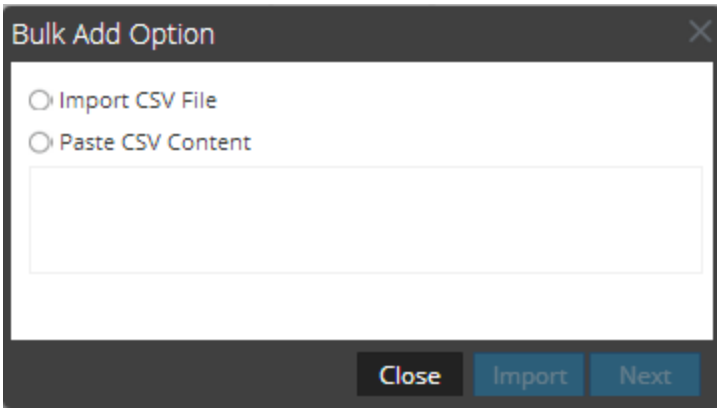
Import, Export, Edit, and Test Event Sources in Bulk

This topic describes how to import, export, edit, and test event sources in bulk.

You can use the bulk export option to export the event source details of your current set up and store it. This data can be imported in bulk when you face a problem with your current set up and require the event source data you had.

You can use the bulk edit feature when you have multiple event sources that need a specific modification. You can select all the sources and apply the edit option across them at a time and avoid applying the change one by one.

Import Event Sources in Bulk



Warning: When using a spreadsheet program to edit an exported event source CSV file, some data fields like numbers and dates can be re-formatted into the spreadsheet program's native field types. This can cause issues when re-importing this information, as some data fields may be garbled or formatted incorrectly. This can be avoided by importing the CSV file into the spreadsheet program, and specifying all data fields as text values.

To import multiple event sources at once:

1. Go to  **(Admin) > Services**.
2. Select a Log Collection service.
3. Under Actions, select  **> View > Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Sources** tab.

5. Select **Check Point**, **File**, **Netflow**, **Logstash**, **ODBC**, **Plugins**, **SDEE**, **(Syslog for Remote Collectors) only**, **VMware**, **Windows**, or **Windows Legacy** (SNMP does not have an Import function.).
6. In the **Sources** panel toolbar, click **Import Source**.

   The **Bulk Add Option** dialog is displayed.

7. Select either **Import CSV File** or **Paste CSV Content**. If you select:
   - Import CSV File:
     a. Click **Next**.

        The **Import dialog** is displayed.

     b. Click **Add** and select a **.csv** file from your network.

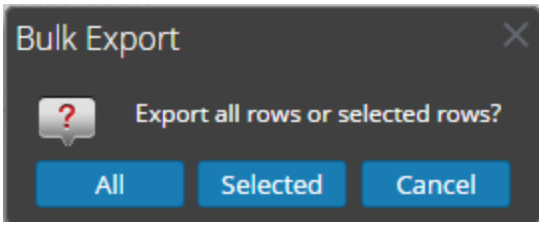
     c. Click **Import**.

        The event sources are added to the **Event Source** list.
   - Paste CSV Content

a. Copy the contents of the **.csv** file and paste them into the dialog.

b. Click **Import**.

The event sources are added to **Event Source List**.



Export Event Sources in Bulk

Warning: When using a spreadsheet program to edit an exported event source CSV file, some data fields like numbers and dates can be re-formatted into the spreadsheet program's native field types. This can cause issues when re-importing this information, as some data fields may be garbled or formatted incorrectly. This can be avoided by importing the CSV file into the spreadsheet program, and specifying all data fields as text values.

To export event source information:

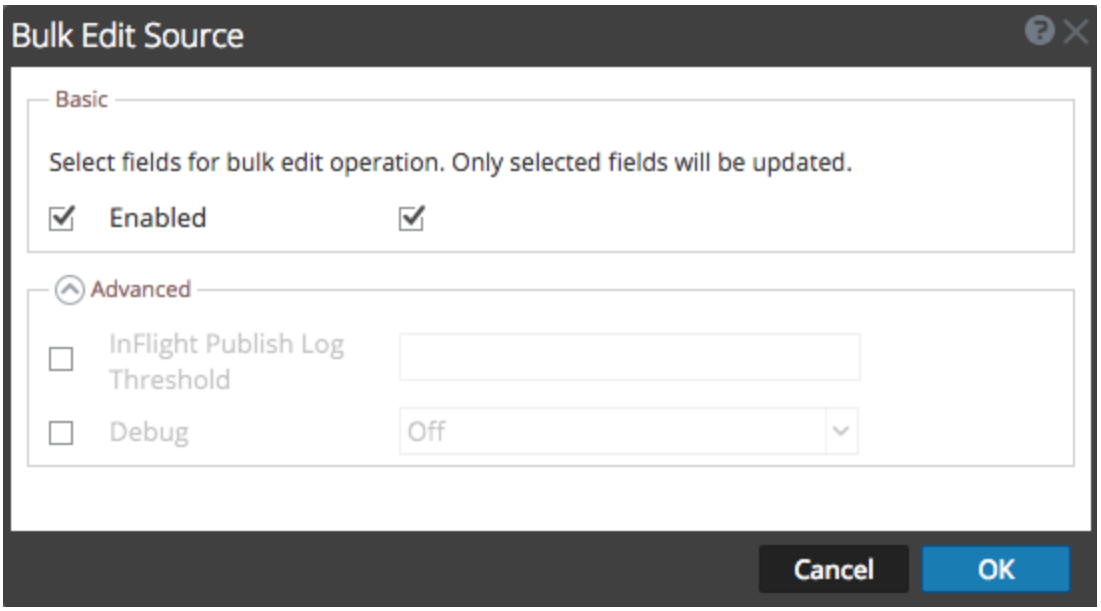
1. Go to **(Admin) > Services**.
2. Select a Log Collection service.
3. Select **> View > Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Sources** tab.
5. Select **Check Point**, **File**, **Netflow**, **Logstash**, **ODBC**, **Plugins**, **SDEE**, **(Syslog for Remote Collectors) only**, **VMware**, **Windows**, or **Windows Legacy** (SNMP does not have an Export function.).
6. In the **Sources** panel, select one or multiple event sources and click **Export Source**.

   The **Bulk Export** dialog is displayed.

7. Based on your selection:

- **All**: NetWitness exports all event sources to a time-stamped CSV file.
- **Selected**: NetWitness exports the event source or sources you selected to a time-stamped CSV file.
- **Cancel**: NetWitness cancels the export.

The following is an example of a time-stamped CSV file that gets created with the event sources that you selected from the list.



Edit Event Sources in Bulk

To edit multiple event sources at once:

1. On the **Log Collector Event Sources** tab, select **Check Point**, **File**, **Netflow**, **Logstash, ODBC**, **Plugins**, **SDEE**, **Syslog**, **VMware**, **Windows**, or **Windows Legacy** (SNMP does not have an Edit function.).
2. In the **Sources** panel, select multiple event sources and click .

   The appropriate **Bulk Edit** dialog for the selected event source is displayed. The following figure is an example of **Bulk Edit Source** dialog for File event source parameters.

3. Select the checkbox to the left of the fields that you want to modify (for example, **Debug**).
4. Modify the selected parameters (for example, change Debug from **Off** to **On**).
5. Click **OK**.

   NetWitness applies the same parameter value change to all of the selected event sources

Test Event Source Connections in Bulk

To test multiple event source connections at once:

1. Go to **(Admin) > Services**.
2. In the **Services** grid, select a **Log Collector** service.
3. Select **> View > Config** to display the Log Collection configuration parameter tabs.
4. Select the **Event Sources** tab, select **Plugins**, **ODBC**, **Logstash** or **Windows** (the other protocols do not have a bulk test connection function).
5. Select one or more:
   - sources from the **Sources** panel for **Plugins** or **ODBC**
   - hosts from **Hosts** panel for **Windows**

   The **Test Connection** button is enabled.

6. Click Test Connection .

   The **Bulk Test Connections** dialog is displayed showing the current status of the test for each source. The status can be waiting, testing, passed or failed.

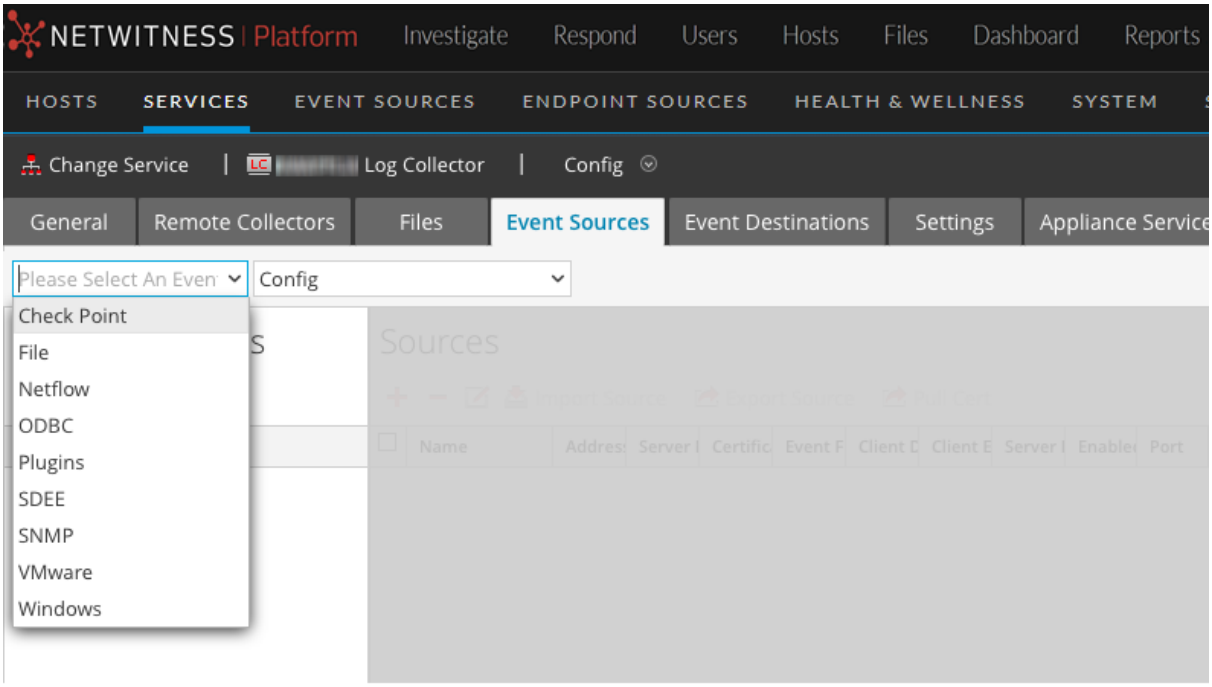
   If you choose to close the testing before it is completed, the testing stops and the **Bulk Test Connections** dialog closes.

After the testing is complete, the results are displayed in the **Bulk Test Connections** dialog.

See Also

You can use the **Event Sources** module ((Admin) > **Event Sources**) to create groups of event sources, typically imported from a CMDB, and to monitor event sources based on those groups. For details, see the following topics in the *Event Source Management Guide*:

- Import Event Sources
- Export Event Sources
- Bulk Edit Event Source Attributes



Configure Collection Protocols and Event Sources

This topic tells you how to configure collection protocols and the event sources using those protocols.

You configure the Log Collector to collect event data from your event sources in the Event Sources tab of the Log Collection parameter view.

To configure a collection protocol:

1. Go to **(Admin) > Services** from the NetWitness menu.
2. Select a Log Collection service.
3. Under Actions, select **> View > Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Sources** tab.

5. Select a collection protocol (for example, **File**) and select **Config**.
6. Click + and select an event source.
7. Select the newly added category and click +.
8. Specify the parameters for the event source. For details, see the individual collection protocol topics.

The following guides provide detailed instructions on how to configure the collection protocols and their associated event sources in NetWitness. Each guide includes an index to configuration instructions for the event sources supported for that collection protocol.

To configure individual collection protocols, see the following topics:

- Configure AWS (CloudTrail) Event Sources in NetWitness
- Configure Azure Event Sources in NetWitness
- Configure Check Point Event Sources in NetWitness
- Configure File Event Sources in NetWitness

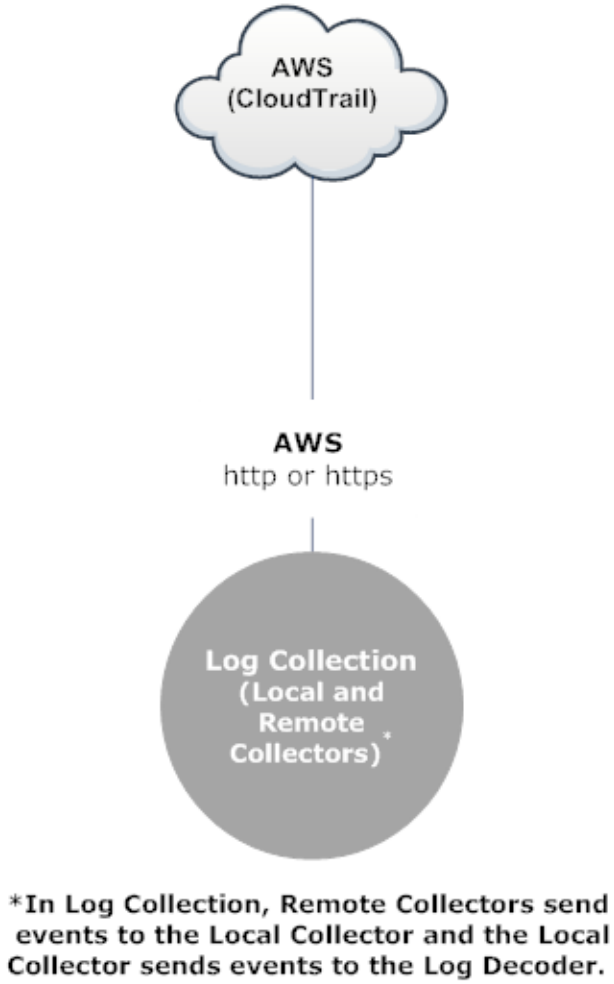
Configure AWS (CloudTrail) Event Sources in NetWitness

This topic tells you how to configure the AWS collection protocol, which collects events from Amazon Web Services (AWS) CloudTrail.



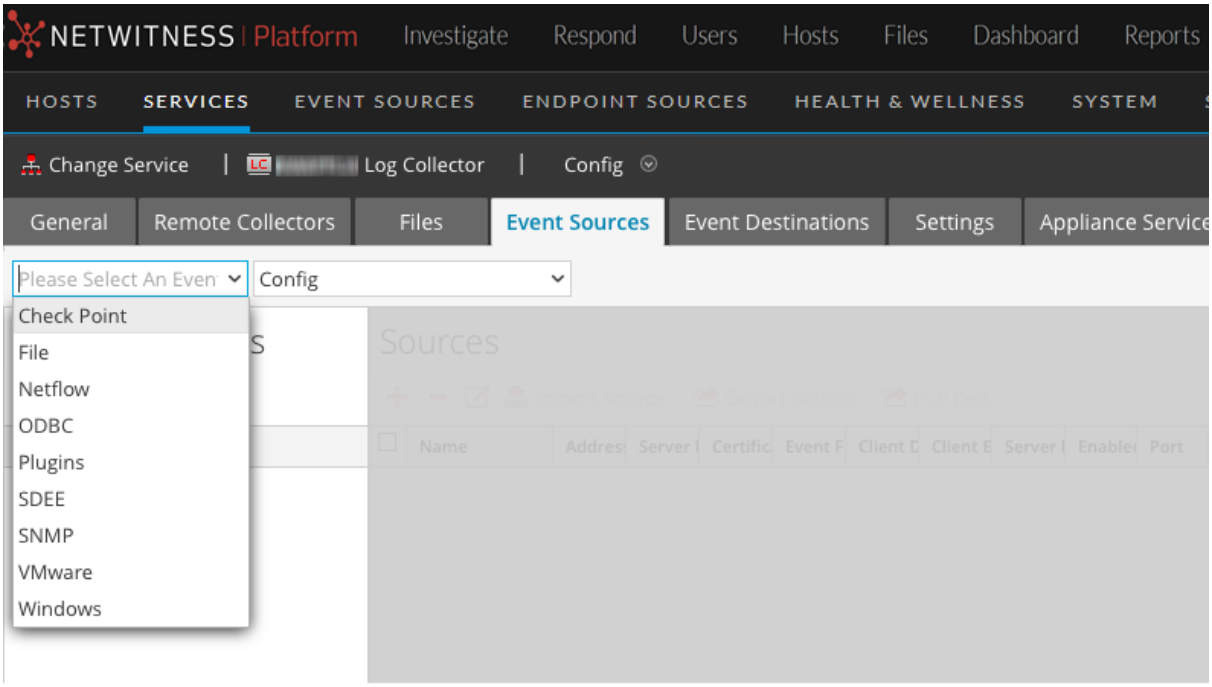
Note: The AWS plugin is meant only for collecting from AWS CloudTrail logs, and not for collecting from arbitrary logs in S3 buckets (under arbitrary directories). The AWS CloudTrail logs are sent in JSON format, as detailed in the AWS documentation here: http://docs.aws.amazon.com/awscloudtrail/latest/userguide/cloudtrail-event-reference.html.

How AWS Collection Works

The Log Collector service collects events from Amazon Web Services (AWS) CloudTrail. CloudTrail records AWS API calls for an account. The events contain the identity of the API caller, the time of the API call, the source IP address of the API caller, the request parameters, and the response elements returned by the AWS service. The AWS API call history provided by CloudTrail events enables security analysis, resource change tracking, and compliance auditing. CloudTrail uses Amazon S3 for log file storage and delivery. NetWitness copies the log files from the cloud (S3 bucket), and sends the events contained in the files to the Log Collector.

Deployment Scenario

The following figure illustrates how you deploy the AWS Collection Protocol in NetWitness.



Configuration

To configure an AWS (CloudTrail) Event Source:

1. Go to **(Admin) > Services** from the NetWitness menu.
2. Select a Log Collection service.
3. Select **> View > Config** to display the Log Collection configuration parameter tabs.

4. Click the **Event Sources** tab.

5. In the **Event Sources** tab, select **Plugins/Config** from the drop-down menu.
6. In the **Event Categories** panel toolbar, click .

   The **Available Event Source Types** dialog is displayed.
7. Select **cloudtrail**) and click **OK**.

   The newly added event source type is displayed in the **Event Categories** panel.
8. Select the new type in the **Event Categories** panel and click  in the **Sources** toolbar.

   The **Add Source** dialog is displayed.
9. Define parameter values. For details, see AWS Parameters below.
10. Click **Test Connection**.

    The result of the test is displayed in the dialog box. If the test is unsuccessful, edit the device or service information and retry.

    Log Collector takes approximately 60 seconds to return the test results. If it exceeds the time limit, the test times out and the NetWitness displays an error message.
11. If the test is successful, click **OK**.

    The new event source is displayed in the **Sources** panel.

AWS Parameters

The following table describes the **Basic** configuration parameter for AWS collection.

Note: Required parameters are marked with an asterisk. All other parameters are optional.

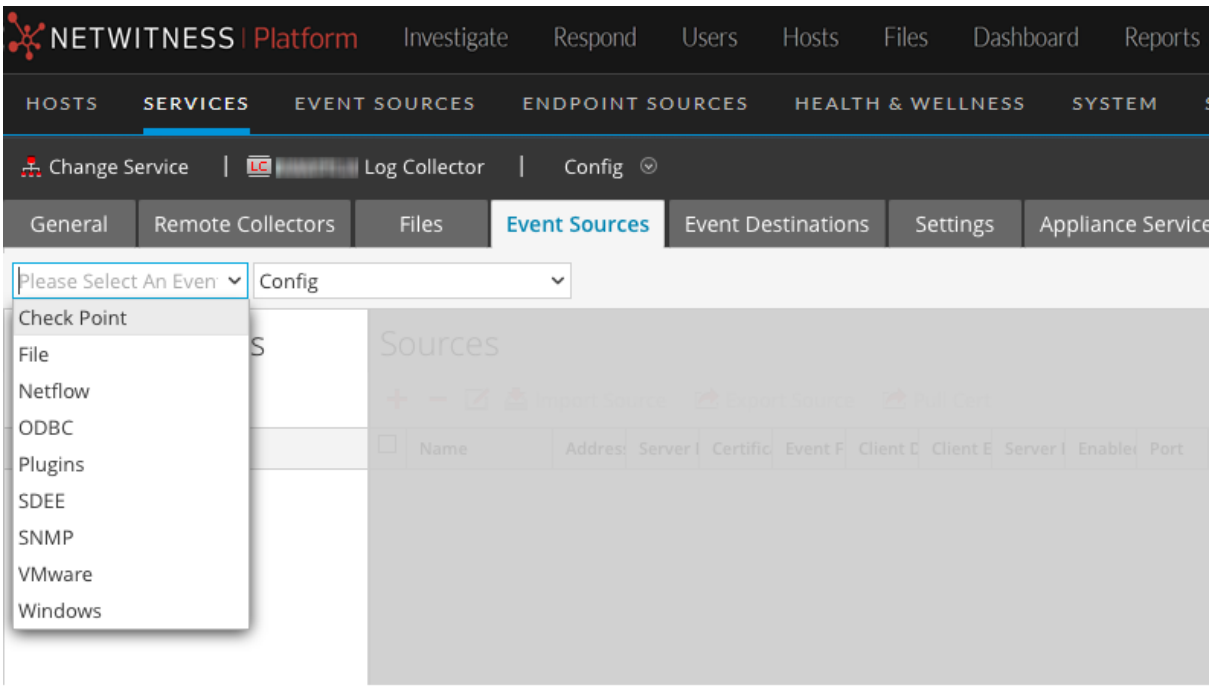
Parameter	Description
Name *	Name of the event source.
Enabled 	Select the check box to enable the event source configuration to start collection. The check box is selected by default.
Account Id *	Account Identification code of the S3 Bucket
S3 Bucket Name *	Name of the AWS (CloudTrail) S3 bucket. Amazon S3 bucket names are globally unique, regardless of the AWS (CloudTrail) region in which you create the bucket. You specify the name at the time you create the bucket. Bucket names should comply with DNS naming conventions. The rules for DNS-compliant bucket names are: • Bucket names must be at least three and no more than 63 characters long. • Bucket names must be a series of one or more labels. Adjacent labels are separated by a single period ".". Bucket names can contain lowercase letters, numbers, and hyphens. Each label must start and end with a lowercase letter or a number. • Bucket names must not be formatted as an IP address (for example, 192.168.5.4). The following examples are **valid** bucket names: • `myawsbucket` • `my.aws.bucket` • `myawsbucket.1` The following examples are **invalid** bucket names: • `.myawsbucket` - Do not start a Bucket Name with a period • `myawsbucket.` - Do not end a Bucket Name with a period • `my..examplebucket` - Only use one period between labels.
Access Key *	Key used to access the S3 bucket. Access Keys are used to make secure REST or Query protocol requests to any AWS service API. Please refer to Manage User Credentials on the Amazon Web Services support site for more information on Access Keys.
Secret Key *	Secret key used to access the S3 bucket.
Region *	Region of the S3 bucket. `us-east-1` is the default value.
Region Endpoint	Specifies the AWS CloudTrail hostname. For example, for an AWS public cloud for us-east region, the Region Endpoint would be s3.amazonaws.com. More information can be found at http://docs.aws.amazon.com/general/latest/gr/rande.html#s3_region. This parameter is necessary to collect CloudTrail logs from AWS Government or Private clouds.
Use Proxy	Enable **Use Proxy** to set proxy for AWS server. By default, it is disabled.
Proxy Server	Enter the proxy name you want to connect to access the AWS server.
Proxy Port	Enter the port number that connects to the proxy server to access the AWS server.
Proxy User	Enter the user name to authenticate with the proxy server.

Parameter	Description
Proxy Password	Enter the password to authenticate with proxy port.
Start Date *	Starts AWS (CloudTrail) collection from the specified number of days in the past, measured from the current timestamp. The default value is 0, which starts from today. The range is 0–89 days.
Log File Prefix	Prefix of the files to be processed. **Note:** If you set a prefix when you set up your CloudTrail service, make sure to enter the same prefix in this parameter.
Cancel	Closes the dialog without adding the AWS (CloudTrail).
OK	Adds the current parameter values as a new AWS (CloudTrail).

The following table describes the **Advanced** configuration parameter for AWS collection.

Parameter	Description
Debug	**Caution:** Only enable debugging (set this parameter to On or Verbose) if you have a problem with an event source and you need to investigate this problem. Enabling debugging will adversely affect the performance of the Log Collector. Enables or disables debug logging for the event source. Valid values are: • **Off** = (default) disabled **On** = enabled • **Verbose** = enabled in verbose mode - adds thread information and source context information to the messages. This parameter is designed to debug and monitor isolated event source collection issues. The debug logging is verbose, so limit the number of event sources to minimize performance impact. If you change this value, the change takes effect immediately (no restart required).
Command Args	Arguments added to the script.
Polling Interval	Interval (amount of time in seconds) between each poll. The default value is 60. For example, if you specify 60, the collector schedules a polling of the event source every 60 seconds. If the previous polling cycle is still underway, it will wait for it to finish that cycle. If you have a large number of event sources that you are polling, it may take longer than 60 seconds for the polling to start because the threads are busy.
SSL Enabled 	Select the check box to communicate using SSL. The security of data transmission is managed by encrypting information and providing authentication with SSL certificates. The check box is selected by default.
Test Connection	Validates the configuration parameters specified in this dialog are correct. For example, this test validates that: • NetWitness can connect with the S3 Bucket in AWS using the credentials specified in this dialog. • NetWitness can download a log file from the bucket (test connection would fail if there were no log files for the entire bucket, but this would be extremely unlikely).

Configure Azure Event Sources in NetWitness



This topic tells you how to configure the Azure collection protocol. Microsoft Azure is a cloud computing platform and infrastructure for building, deploying, and managing applications and services through a global network of Microsoft-managed data centers.

Configuration in NetWitness

For complete details about configuring Azure as an event source, see the Azure Event Source Configuration Guide, available on NetWitness Link.

To configure an Azure Event Source:

1. Go to **(Admin) > Services** from the NetWitness menu.
2. Select a Log Collection service.
3. Select **> View > Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Sources** tab.

5. In the **Event Sources** tab, select **Plugins/Config** from the drop-down menu.
6. In the **Event Categories** panel toolbar, click .
   The **Available Event Source Types** dialog is displayed.
7. Select **azureaudit**) and click **OK**.
   The newly added event source type is displayed in the **Event Categories** panel.

8. Select the new type in the **Event Categories** panel and click  in the **Sources** toolbar.

   The **Add Source** dialog is displayed.

9. Define parameter values. For details, see Azure Parameters below.
10. Click **Test Connection**.

    The result of the test is displayed in the dialog box. If the test is unsuccessful, edit the device or service information and retry.

    Log Collector takes approximately 60 seconds to return the test results. If it exceeds the time limit, the test times out and the NetWitness displays an error message.

11. If the test is successful, click **OK**.

    The new event source is displayed in the **Sources** panel.

Azure Parameters

This section describes the Azure event source configuration parameters.

Basic Parameters

Note: Required parameters are marked with an asterisk. All other parameters are optional.

Name	Description
Name *	Enter an alpha-numeric, descriptive name for the source. This value is only used for displaying the name on this screen.
Enabled	Select the checkbox to enable the event source configuration to start collection. The checkbox is selected by default.
Client ID *	The Client ID is found the Azure Application Configure tab. Scroll down until you see it.
Client Secret *	When you are configuring the event source, the client secret is displayed when you are creating a key, and you select a duration of validation. Make sure to save this, because you will only be able to see it once, and it cannot be retrieved later.
API Resource Base URL *	Enter `https://management.azure.com/`. Be sure to include the trailing slash (/).
Federation Metadata Endpoint *	In your Azure application, click the **View Endpoints** button (near the bottom of the pane). There are a lot of links that all begin with the same string. Compare the URLs and find the common string that begins most of them. This common string is the endpoint that you need to enter here.
Subscription ID *	You can find this in the Microsoft Azure dashboard: click on Subscriptions at the bottom of the list on the left.

Name	Description
Tenant Domain *	Go to the active directory and click on the directory. In the URL, the tenant domain is the string directly following **manage.windowsazure.com/**. The tenant domain is the string up to and including the **.com**.
Resource Group Names *	In Azure, select Resource groups from the left navigation pane, then select your group.
Start Date *	Choose the date from which to start collecting. Default's to the current date.
Test Connection	Checks the configuration parameters specified in this dialog to make sure they are correct.

Advanced Parameters

Click next to **Advanced** to view and edit the advanced parameters, if necessary.

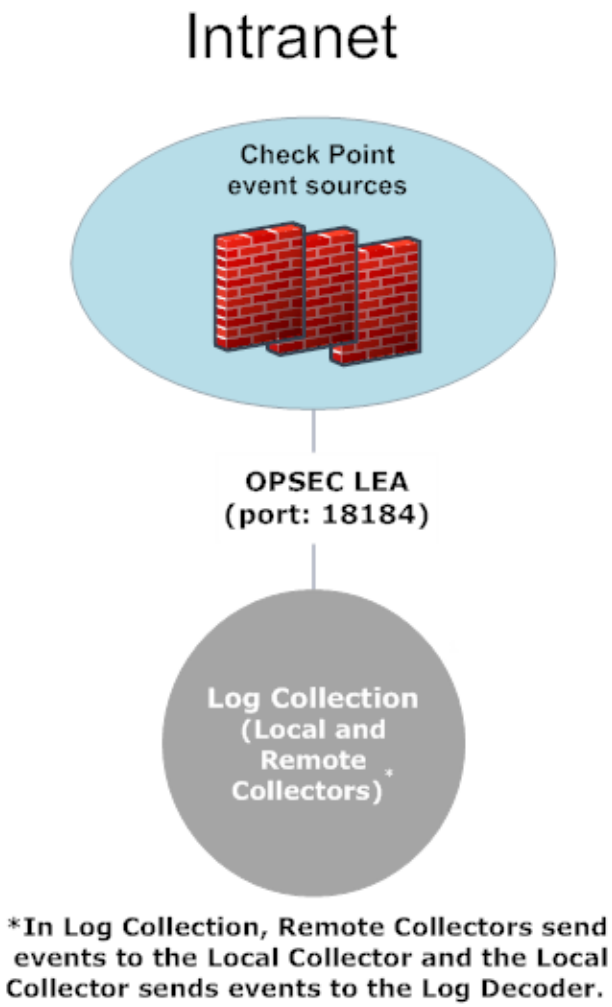
Name	Description
Polling Interval	Interval (amount of time in seconds) between each poll. The default value is **180**. For example, if you specify 180, the collector schedules a polling of the event source every 180 seconds. If the previous polling cycle is still underway, the collector waits for that cycle to finish. If you have a large number of event sources that you are polling, it may take longer than 180 seconds for the polling to start because the threads are busy.
Max Duration Poll	Maximum duration, in seconds, of a polling cycle. A zero value indicates no limit.
Max Events Poll	The maximum number of events per polling cycle (how many events collected per polling cycle).
Max Idle Time Poll	Maximum duration, in seconds, of a polling cycle. A zero value indicates no limit.
Command Args	Optional arguments to be added to the script invocation.

Name	Description
Debug	**Caution:** Only enable debugging (set this parameter to On or Verbose) if you have a problem with an event source and you need to investigate this problem. Enabling debugging will adversely affect the performance of the Log Collector. Enables or disables debug logging for the event source. Valid values are: • **Off** = (default) disabled • **On** = enabled • **Verbose** = enabled in verbose mode - adds thread information and source context information to the messages. This parameter is designed to debug and monitor isolated event source collection issues. If you change this value, the change takes effect immediately (no restart required). The debug logging is verbose, so limit the number of event sources to minimize performance impact.

Configure Check Point Event Sources in NetWitness

This topic tells you how to configure the Check Point collection protocol, which collects events from Check Point event sources.

This protocol collects events from Check Point event sources using OPSEC LEA. OPSEC LEA is the Check Point Operations Security Log Export API that facilitates the extraction of logs.



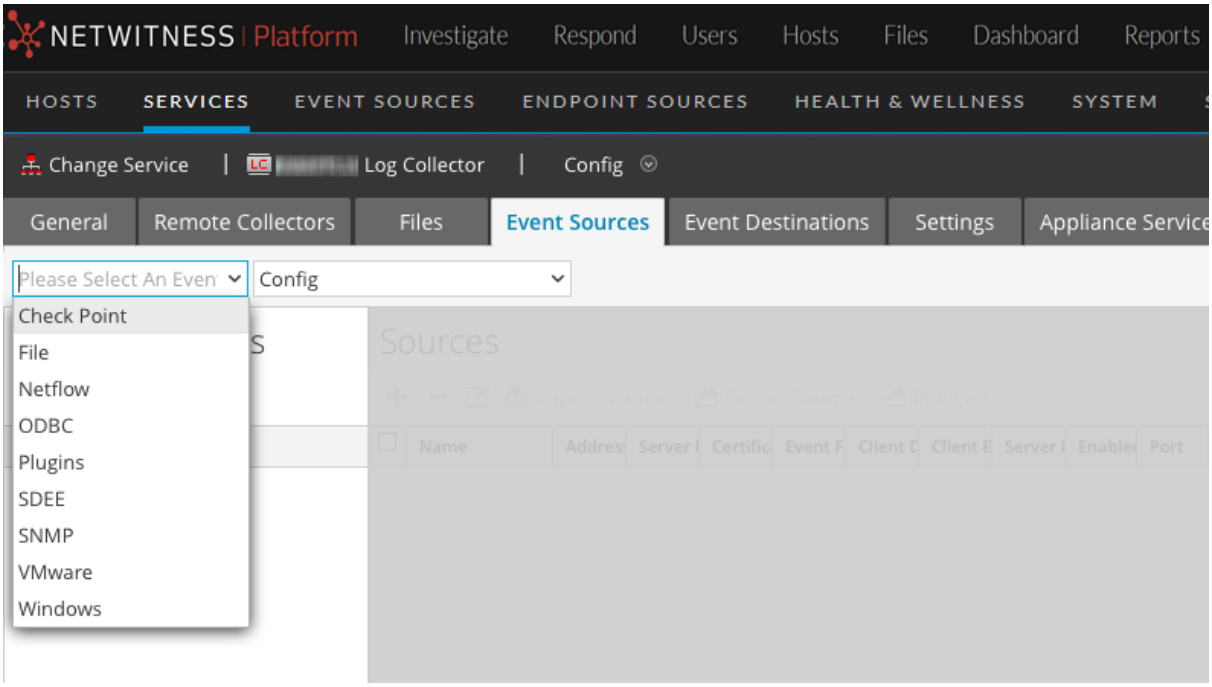
How Check Point Collection Works

The Log Collector service collects events from Check Point event sources using OPSEC LEA. OPSEC LEA is the Check Point Operations Security Log Export API that facilitates the extraction of logs.

Note: OPSEC LEA (Log Export API) supports extraction of logs from Check Point event sources configured with a SHA-256 or SHA-1 certificate.

Deployment Scenario

The following figure illustrates how you deploy the Check Point Collection Protocol in NetWitness.



Configuration in NetWitness

To configure a Check Point Event Source:

1. Go to **(Admin) > Services** from the NetWitness menu.
2. Select a Log Collection service.
3. Select **> View > Config** to display the Log Collection configuration parameter tabs.

4. Click the **Event Sources** tab.

5. In the **Event Sources** tab, select **Check Point/Config** from the drop-down menu.
6. In the **Event Categories** panel toolbar, click .

   The **Available Event Source Types** dialog is displayed.
7. Select a check point event source type and click **OK**.

   The newly added event source type is displayed in the **Event Categories** panel.
8. Select the new type in the **Event Categories** panel and click  in the **Sources** toolbar.

   The **Add Source** dialog is displayed.
9. Define parameter values. For details, see Check Point Parameters below.
10. Click **Test Connection**.

    The result of the test is displayed in the dialog box. If the test is unsuccessful, edit the device or service information and retry.

    Log Collector takes approximately 60 seconds to return the test results. If it exceeds the time limit, the test times out and the NetWitness displays an error message.
11. If the test is successful, click **OK**.

    The new event source is displayed in the **Sources** panel.

Check Point Parameters

This section describes the Check Point event source configuration parameters.

Basic Parameters

Parameter	Description
Name*	Name of the event source.
Address*	IP Address of the Check Point server.
Server Name*	Name of the Check Point server.
Certificate Name	Certificate name for secure connections to use when the transport mode is https. If set, the certificate must exist in the certificate trust store that you created using the Settings tab. Select a certificate from the drop-down list. The file naming convention for Check Point event source certificates is **checkpoint_*name-of-event-source***.
Client Distinguished	Enter the Client Distinguished Name from the Check Point server.
Client Entity Name	Enter the Client Entity Name from the Check Point server.
Server Distinguished	Enter the Server Distinguished Name from the Check Point server.
Enabled	Select the check box to enable the event source configuration to start collection. The check box is selected by default.
Pull Certificate	Select the checkbox to pull a certificate for first time. Pulling a certificate makes it available from the trust store.
Certificate Server Address	IP Address of the server on which the certificate resides. Defaults to the event source address.
Password	Only active when you select the Pull Certificate checkbox for first time. Password required to pull the certificate. The password is the activation key created when adding an OPSEC application to Check Point on the Check Point server.

Determine Advanced Parameter Values for Check Point Collection

You use less system resources when you configure a Check Point event source connection to stay open for a specific time and specific event volume (transient connection). NetWitness defaults to the following connection parameters that establish a transient connection:

- Polling Interval = **180** (3 minutes)
- Max Duration Poll = **120** (2 minutes)
- Max Events Poll = **5000** (5000 events per polling interval)
- Max Idle Time Poll = **0**

For very active Check Point event sources, it is a good practice to set up a connection that stays open until you stop collection (persistent connection). This ensures that Check Point collection maintains the pace of the events generated by these active event sources. The persistent connection avoids restart and connection delays and prevents Check Point collection from lagging behind event generation.

To establish a persistent connection for a Check Point event source, set the following parameters to the following values:

- Polling Interval = **-1**
- Max Duration Poll = **0**
- Max Events Poll = **0**
- Max Idle Time Poll = **0**

Parameter	Description
Port	Port on the Check Point server that Log Collector connects to. Default value is 18184.
Collect Log Type	Type of logs that you want to collect: Valid values are: • **Audit** - collects audit events. • **Security** - collects security events. If you want to collect both audit and security events, you must create a duplicate event source. For example, first you would create an event source with Audit selected pulling a certificate into the trust store for this event source. Next you would create another event source with the same values except that you would select Security for the Collect Log Type and you would select the same certificate in Certificate Name that you pulled when you set up the first set of parameters for this event source and you would make sure that Pull Certificate was not selected.
Collect Logs From	When you set up a Check Point event source, NetWitness collects events from the current log file. Valid values are: • **Now** - Start collecting logs now (at this point in time in the current log file). • **Start of Log** - Collect logs from the beginning of the current log file. If you choose "Start of Log" for this parameter value, you may collect a very large amount of data depending on how long the current log file has been collecting events. Note that this option is effective only for the first collection session.
Polling Interval	Interval (amount of time in seconds) between each poll. The default value is **180**. For example, if you specify 180, the collector schedules a polling of the event source every 180 seconds. If the previous polling cycle is still underway, it will wait for it to finish that cycle. If you have a large number of event sources that you are polling, it may take longer than 180 seconds for the polling to start because the threads are busy.
Max Duration Poll	The maximum duration of polling cycle (how long the cycle lasts) in seconds.

Parameter	Description
Max Events Poll	The maximum number of events per polling cycle (how many events collected per polling cycle).
Max Idle Time Poll	Maximum idle time, in seconds, of a polling cycle. 0 indicates no limit.**> 300** is the default value.
Forwarder	Enables or disables the Check Point server as a forwarder. By default it is disabled.
Log Type (Name Value Pair)	Logs from the event source in Name Value format. By default it is disabled.
Debug	**Caution:** Only enable debugging (set this parameter to "On" or "Verbose") if you have a problem with an event source and you need to investigate this problem. Enabling debugging will adversely affect the performance of the Log Collector. Enables and disables debug logging for the event source. Valid values are: • **Off** = (default) disabled • **On** = enabled • **Verbose** = enabled in verbose mode - adds thread information and source context information to the messages. This parameter is designed to debug and monitor isolated event source collection issues. The debug logging is verbose, so limit the number of event sources to minimize performance impact. If you change this value, the change takes effect immediately (no restart required).

Verify Check Point Collection is Working

The following procedure illustrates how you can verify that Check Point collection is working from the **Administration > Health & Wellness > Event Source Monitoring** tab.

To verify Check Point collection from the Event Source Monitoring tab:

1. Access the **Manage** tab from the  **(Admin) > Event Sources** view.
2. Find a checkpoint event source in the **Event Sources** column.
3. Look for activity in the **Total Count** column to verify that Check Point collection is accepting events.

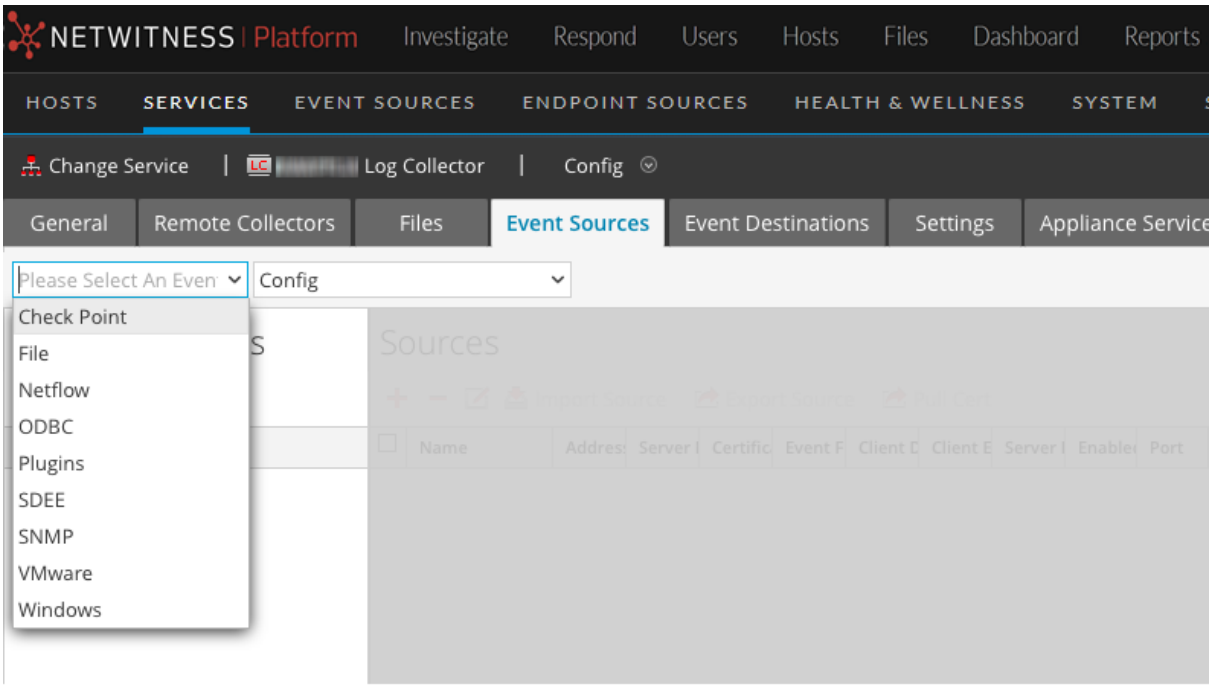
To verify Check Point collection from the Investigation > Events view:

The following procedure illustrates how you can verify that Check Point collection is working from the **Investigation > Events** view.

1. Access the **Investigation > Events** view.
2. Select the Log Decoder (for example, **LD1**) collecting Check Point events in the **Investigate a Device** dialog.
3. Look for a Check Point event source parser (for example, **checkpointfw1**) in the **device.type** field in the **Details** column to verify that Check Point collection is accepting events.

Note: If the logs from the VSX Checkpoint firewall server are collected by the Log Collector checkpoint service, to translate the VSX IP in the logs to **ip.orig** meta, you must add the VSX hostname and the VSX IP address to the `/etc/hosts` file in the Log Collector.

Configure File Event Sources in NetWitness



This topic tells you how to configure the File collection protocol:

Note: In NetWitness 11.4 and later, you can perform File Log collection for many event sources using Endpoint Agents, thus simplifying the collection process. For details, see the *NetWitness Endpoint Configuration Guide*. For a list of which event sources are supported, see the section "Currently Supported File Log Event Source Types."

Configure a File Event Source

To configure a File Event Source:

1. Go to  **(Admin) > Services** from the NetWitness menu.
2. Select a Log Collection service.
3. Under Actions, select  **> View > Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Sources** tab.

5. In the **Event Sources** tab, select **File/Config** from the drop-down menu.
6. In the **Event Categories** panel toolbar, click .
   The **Available Event Source Types** dialog is displayed.
7. Select a file event source type and click **OK**.
   The newly added event source type is displayed in the **Event Categories** panel.
8. Select the new type in the **Event Categories** panel and click  in the **Sources** toolbar.
   The **Add Source** dialog is displayed.
9. Add a **File Directory** name and modify any other parameters that require changes. For details, see File Collection Parameters below.
10. To get the public key and enter it into the dialog box, do the following:
    a. Select and copy the public key from the Event Source by running: `cat ~/.ssh/id_rsa.pub`
    b. Paste the public key in the **Eventsource SSH Key** field.
11. Click **OK**.

You need to restart file collection for your changes to take effect.

Stop and Restart File Collection

After you add a new event source that uses file collection, you must stop and restart the NetWitness File Collection service. This is necessary to add the key to the new event source.

File Collection Parameters

The following table provides descriptions of the File Collection source parameters.

The following table describes the **Basic** configuration parameter for File collection.

Note: Required parameters are marked with an asterisk. All other parameters are optional.

Name	Description
File Directory*	Collection directory (for example, **Eur_London100**) into which the File event source places its files. Valid value is a character string that is conforms to the following regular expression: **[_a-zA-Z][_a-zA-Z0-9]*** This means that the file directory must start with a letter followed by numbers, letters, and underscores. Do not modify this parameter after you start collecting event data. After you create the collection, the Log Collector creates the work, save, and error sub-directories under the collection directory.
Address*	IP address of the event source. Valid value is an **IPv4 address**, **IPv6 address**, or a **hostname** including a fully-qualified domain name.
File Spec	Regular expression. For example, **^.*$** = process everything.
File Encoding	Character encoding used by the syslog senders to this port. Defaults to UTF-8. **Note:** It is safe to leave this as UTF-8, since UTF-8 handles ASCII characters as well, and most senders have their encoding set to UTF-8. NetWitness has tested the following values: • EUC-KR • SJIS • GB3212/GBK • ISO_8859-1 (German) • ISO_8859-7 (Greek)
Cancel	Closes the dialog without making adding an event source type.
OK	Adds the parameters for the event source.

The following table describes the **Advanced** configuration parameter for File collection.

Name	Description
Ignore Encoding Conversion Errors	Select the check box to ignore encoding conversion errors and ignore invalid data. The check box is selected by default. **Caution:** This may cause parsing and transformation errors.

Name	Description
File Disk Quota	Determines when to stop saving files regardless of the **Save On Error** and **Save On Success** parameter settings. For example, a value of 10 indicates that when there is less than 10% available disk left, the Log Collector stops saving files to reserve enough space for your estimated normal collection processing. **Caution:** Available disk refers to a partition where the base collection directory is mounted. If the Log Decoder server has a 10TB disk size and 2TB is allocated to base collection directory, then setting this value to 10 causes log collection to stop when less than 0.2TB (10% of 2TB) of space is left. It does not mean 10% of 10TB. Valid value is a number in the **0** to **100** range. **10** is the default.
Sequential Processing	Sequential processing flag: • Select the check box (default) to process event source files in collection order. • Do not select the checkbox to process event source files in parallel.
Save On Error	Save on error flag. Check the checkbox to retain the **eventsource collection** file when the Log Collector it encounters an error. The check box is selected by default.
Save On Success	Save **eventsource collection** file after processing flag. Check the checkbox to save the eventsource collection file after processing it. The check box is not selected by default.
Eventsource SSH Key	SSH public key used to upload files for this event source. Please refer to the *Generate Key Pair on Event Source and Import Public Key to Log Collector* section in the Install and Update the SFTP Agent Guide for instructions on generating keys. **Note:** If File collection is stopped, NetWitness does not update the authorized_keys file with the SSH public key that you add or modify in this parameter. You must restart File collection to update the public key. You can add or modify the value of the public key in this parameter in multiple File event sources without File collection running, but NetWitness will not update the **authorized_keys** file until File collection is restarted.
Manage Error Files	By default, the Log Collector uses the **File Disk Quota** parameter to ensure that the disk does not fill up with error files. If you set this parameter to **true**, you can specify one of these: • Maximum space allotted to error files in the **Error Files Size** parameter. • Maximum number of error files allowed in **Error Files Count** parameter. A reduction percent is also specified, which tells the system how much to reduce when the maximum is reached. Select the check box to manage error files. The check box is not selected by default.

Name	Description
Error Files Size	Only valid if the **Manage Error Files** and **Save On Error** parameters are set to true. Specifies to what extent NetWitness saves error files. The value that you specify is the maximum total size of all the files in the error directory. Valid value is a number in **0** to **281474976710655** range. You specify these values in either **Kilobytes**, **Megabytes**, or **Gigabytes**. **100 Megabytes** is the default. If you change this parameter, the change does not take effect until you restart collection or restart the Log Collector service.
Error Files Count	Only valid if the **Manage Error Files** and **Save On Error** parameters are set to true. Maximum number of error files allowed in the error directory. Valid value is a number in **0** to **65536** range. **65536** is the default. If you change this parameter, the change does not take effect until you restart collection or restart the Log Collector service.
Error Files Reduction %	Percent amount by size or count of the error files that the Log Collector service removes when the maximum size or count has been reached. The service removes the oldest files first. Valid value is a number in the **0** to **100** range. **10** is the default.
Manage Saved Files	Select the check box to manage saved files. The check box is not selected by default. By default, the Log Collector uses the **File Disk Quota** parameter to ensure that the disk does not fill up with saved files. If check this check box, you can specify one of these: • Maximum space allotted to saved files in the **Saved Files Size** parameter. • Maximum number of saved files allowed in **Saved Files Count** parameter. A reduction percent is also specified, which tells the system how much to reduce when the maximum is reached.
Saved Files Size	Only valid if the **Manage Saved Files** and **Save On Success** parameters are set to true. Maximum total size of all the files in the save directory. Valid value is a number in the **0** to **281474976710655** range. You specify these values in either **Kilobytes**, **Megabytes**, or **Gigabytes**. **100 Megabytes** is the default. If you change this parameter, the change does not take effect until you restart collection or restart the Log Collector service.
Saved Files Count	Only valid if the **Manage Saved Files** and **Save On Success** parameters are set to true. Maximum number of saved files in the save directory. Valid value is a number in **0** to **65536** range. **65536** is the default. If you change this parameter, the change does not take effect until you restart collection or restart the Log Collector service.
Saved File Reduction %	Percent amount by size or count of the saved files that the Log Collector service removes when the maximum size or count has been reached. The service removes the oldest files first. Valid value is a number in the **0** to **100** range. **10** is the default.

Name	Description
Debug	**Caution:** Only enable debugging (set this parameter to **On** or **Verbose**) if you have a problem with an event source and you need to investigate this problem. Enabling debugging will adversely affect the performance of the Log Collector. Enables or disables debug logging for the event source. Valid values are: • **Off** = (default) disabled • **On** = enabled • **Verbose** = enabled in verbose mode - adds thread information and source context information to the messages. This parameter is designed to debug and monitor isolated event source collection issues. The debug logging is verbose, so limit the number of event sources to minimize performance impact. If you change this value, the change takes effect immediately (no restart required).

Configure Logstash Event Sources in NetWitness

You can configure the Logstash collection protocol.

IMPORTANT:
- Do not change logstash.yml file as it breaks the functionality.
- Do not change sincedb_path input configuration. If you change the sincedb_path, the back up and restore functionality breaks.
- Do not modify any pipeline configuration yml files.

To configure a Logstash Event Source:

1. Go to  **(Admin) > Services** from the NetWitness menu.
2. Select a Log Collection service.
3. Under Actions, select  **> View > Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Sources** tab.
5. In the **Event Sources** tab, select **Logstash/Config** from the drop-down menu.
6. In the **Event Categories** panel toolbar, click .
   The **Available Event Source Types** dialog is displayed.
7. Select the event source type and click **OK**.
   The newly added event source type is displayed in the **Event Categories** panel.

8. Select the new type in the **Event Categories** panel and click  in the **Sources** toolbar.

   The **Add Source** dialog is displayed.

9. Fill in the fields, based on the Logstash event source you are adding. General details about the available parameters are described below in Logstash Collection Parameters.

10. Click **OK**.

Logstash Collection Parameters

The following tables provides descriptions of the Logstash Collection source parameters.

Note: Items that are followed by an asterisk (*) are required.

Basic Parameters

Custom Event Source Parameters

The following table lists the custom event source parameters.

Name	Description
Name *	Enter an alpha-numeric, descriptive name for the source. This value is only used for displaying the name on this screen.
Enabled	Select the checkbox to enable the event source configuration to start collection. The checkbox is selected by default.
Description	Enter a text description for the event source.
Input Configuration *	An input plugin enables a specific source of events to be read by Logstash.
Filter Configuration *	A filter plugin performs intermediary processing on an event. Paste in any filter details for your Logstash event source.
Device Type *	Enter the device parser type used to parse the data. **Note:** - While saving an existing instance with no specified device type, enter the device type to enable **Ok**. Else, click **Cancel**. - The device type can have 3 to 30 characters of a-z, 1-9, or underscore and must start with a-z.
Source Address	Enter the IP address, host name or other identifier of the event source.
Message ID	Enter the message group ID used to bypass header parsing.
Message Prefix	Enter the prefix added to each message to assist parsing.

Name	Description
Event Destination *	Select the NetWitness Log Collector or Log Decoder to which event needs to be send from the drop-down list.
Test Configuration	Checks the configuration parameters specified in this dialog to make sure they are correct.

Beats Event Source Parameters

The following table lists the beats event source parameters.

Name	Description
Name *	Enter an alpha-numeric, descriptive name for the source. This value is only used for displaying the name on this screen.
Enabled	Select the check box to enable the event source configuration to start collection. The check box is selected by default.
Description	Enter a text description for the event source.
Port Number*	Enter the port number (for example, 5044) that you configured for your event sources.
Linux-Audit	Select the checkbox to enable processing for Linux audit.
Linux-System	Select the checkbox to enable processing for Linux system.
Ngnix	Select the checkbox to enable processing for Nginx.
Event Destination*	Select the NetWitness Log Collector or Log Decoder to which event needs to be send from the drop-down list.
Test Configuration	Checks the configuration parameters specified in this dialog to make sure they are correct.

Export Connector Event Source Parameters

The following table lists the custom export connector event source parameters.

Name	Description
Name *	Enter an alpha-numeric, descriptive name for the source. This value is only used for displaying the name on this screen.
Enabled	Select the check box to enable the event source configuration to start collection. The check box is selected by default.
Description	Enter a text description for the event source.

Name	Description
Host*	Select the hostname of the Decoder or Log Decoder for data aggregation from the drop-down list.
Username*	Username used to access the Decoder or Log Decoder for data aggregation.
Authentication	**Note:** If you upgrade from NetWitness Platform 11.6.0.0 to 11.6.1.0, automatic key is generated and stored in the key store management for the password set in Logstash pipeline configuration. You can view the key instead of password in the **Authentication** field. Select the authentication type used for data aggregation. By default, **SSL** field is enabled, if you select **trusted authentication**. **Note:** For trusted authentication, make sure you add the PEM file at `/etc/pki/nw/node/node-cert.pem` to the source Decoders REST APIs (`/sys/trustpeer` and `/sys/caupload`).
SSL	Select the check box to communicate using SSL. The security of data transmission is managed by encrypting information and providing authentication with SSL certificates. By default, SSL option is enabled, if you select **trusted authentication** type in the **Authentication** field.
Decoder Type*	Decoder Type is a read only field and it is auto populated when you select the Host.

Output Configuration*	Logstash pipeline output configuration to forward events received from input stream to a defined destination/s. The output plugin sends the processed event data to the data warehouse destinations. You can use the standard Logstash output plugins to send the data. To understand more, see Work Flow of NetWitness Export Connector.
	A basic sample Logstash output TCP plugin would look like below.
	`output {`
	`tcp {`
	`id => "nw-output-tcp"`
	`host => "10.10.1.2"`
	`port => 514`
	`}`
	`}`
	You can use any of the listed output plugins on Output plugins. We recommend you check with your respective vendor to know the input receiver type (such as TCP, HTTP) they support.

Test Configuration	Checks the configuration parameters specified in this dialog to make sure they are correct.

HTTP Receiver Event Source Parameters

The following table lists the HTTP receiver event source parameters.

Name	Description
Name *	Enter an alpha-numeric, descriptive name for the source. This value is only used for displaying the name on this screen.
Enabled	Select the checkbox to enable the event source configuration to start collection. The checkbox is selected by default.
Description	Enter a text description for the event source.
Port Number*	Enter the port number that you configured for your event sources. The default value of port number is 8080.
Device Type*	Enter the device parser type used to parse the data.
Message ID	Enter the message group ID used to bypass header parsing.
Message Prefix	Enter the prefix added to each message to assist parsing.
Event Destination*	Select the NetWitness Log Collector or Log Decoder to which event needs to be sent from the drop-down list.
HTTP Receiver SSL	Select the checkbox to communicate using HTTP receiver SSL. The security of data transmission is managed by encrypting information and providing authentication with HTTP receiver SSL certificates. This checkbox is not selected by default. **Note:** If you select the checkbox, the event source accepts SSL connections only. Also, if you change this setting, you must stop and restart Syslog collection for the change to become effective.
Certificate	Select the name of the HTTP receiver server's SSL certificate.
Key	Select the name of the HTTP receiver server's SSL key.

IPFIX Event Source Parameters

The following table lists the IPFIX event source parameters.

Name	Description
Name *	Enter an alpha-numeric, descriptive name for the source. This value is only used for displaying the name on this screen.
Enabled	Select the checkbox to enable the event source configuration to start collection. The checkbox is selected by default.
Description	Enter a text description for the event source.

Name	Description
Port Number	Enter the port number that you configured for your event source. The default value of port number is 4739.
Event Destination *	Select the NetWitness Log Collector or Log Decoder to which event needs to be sent from the drop-down list.
Test Configuration	Checks the configuration parameters specified in this dialog to ensure they are correct.

Kubernetes Event Source Parameters

The following table lists the Kubernetes receiver event source parameters.

Name	Description
Name *	Enter an alpha-numeric, descriptive name for the source. This value is only used for displaying the name on this screen.
Enabled	Select the checkbox to enable the event source configuration to start collection. The checkbox is selected by default.
Description	Enter a text description for the event source.
Port Number*	Enter the port number that you configured for your event sources. The default value of port number is 5044.
Event Destination*	Select the NetWitness Log Collector or Log Decoder to which event needs to be sent from the drop-down list.
Test Configuration	Checks the configuration parameters specified in this dialog to ensure they are correct.

JDBC Oracle 11g Auditing Event Source Parameters

The following table lists the JDBC Oracle 11g auditing event source parameters.

Name	Description
Name *	Enter an alpha-numeric, descriptive name for the source. This value is only used for displaying the name on this screen.
Enabled	Select the checkbox to enable the event source configuration to start collection. The checkbox is selected by default.
Description	Enter a text description for the event source.
Host ID*	Enter the IP address of the machine where the oracle 11g database server is installed.
Port Number*	Enter the port number that you configured for your event sources. The default value of port number is 1521.

Name	Description
Database Name*	Enter the name of the database where the audit tables exists.
User ID*	Enter the username of oracle 11g database.
Password*	Enter the password to log into the oracle 11g database.
Polling Interval*	Polling interval takes the input in minutes. Based on the minutes entered, the pipeline will pull the data from the database. For example, If the polling interval is 1, then the pipeline will pull the data from the database for every 1 minute. If the polling interval is 2, then the pipeline will pull the data from the database for every 2 minute. This filed takes the values between 1 to 60.
Event Destination*	Select the NetWitness Log Collector or Log Decoder to which event needs to be sent from the drop-down list.
Test Configuration	Checks the configuration parameters specified in this dialog to ensure they are correct.

JDBC Oracle 12c Auditing Event Source Parameters

The following table lists the JDBC Oracle 12c auditing event source parameters.

Name	Description
Name *	Enter an alpha-numeric, descriptive name for the source. This value is only used for displaying the name on this screen.
Enabled	Select the checkbox to enable the event source configuration to start collection. The checkbox is selected by default.
Description	Enter a text description for the event source.
Host ID*	Enter the IP address of the machine where the oracle 12c database server is installed.
Port Number*	Enter the port number that you configured for your event sources. The default value of port number is 1521.
Database Name*	Enter the name of the database where the audit tables exists.
User ID*	Enter the username of oracle 12c database.
Password*	Enter the password to log into the oracle 12c database.

Name	Description
Polling Interval*	Polling interval takes the input in minutes. Based on the minutes entered, the pipeline will pull the data from the database. For example, If the polling interval is 1, then the pipeline will pull the data from the database for every 1 minute. If the polling interval is 2, then the pipeline will pull the data from the database for every 2 minute. This filed takes the values between 1 to 60.
Event Destination*	Select the NetWitness Log Collector or Log Decoder to which event needs to be sent from the drop-down list.
Test Configuration	Checks the configuration parameters specified in this dialog to ensure they are correct.

JDBC Oracle 18c Auditing Event Source Parameters

The following table lists the JDBC Oracle 18c auditing event source parameters.

Name	Description
Name *	Enter an alpha-numeric, descriptive name for the source. This value is only used for displaying the name on this screen.
Enabled	Select the checkbox to enable the event source configuration to start collection. The checkbox is selected by default.
Description	Enter a text description for the event source.
Host ID*	Enter the IP address of the machine where the oracle 18c database server is installed.
Port Number*	Enter the port number that you configured for your event sources. The default value of port number is 1521.
Database Name*	Enter the name of the database where the audit tables exists.
User ID*	Enter the username of oracle 18c database.
Password*	Enter the password to log into the oracle 18c database.
Polling Interval*	Polling interval takes the input in minutes. Based on the minutes entered, the pipeline will pull the data from the database. For example, If the polling interval is 1, then the pipeline will pull the data from the database for every 1 minute. If the polling interval is 2, then the pipeline will pull the data from the database for every 2 minute. This filed takes the values between 1 to 60.
Event Destination*	Select the NetWitness Log Collector or Log Decoder to which event needs to be sent from the drop-down list.
Test Configuration	Checks the configuration parameters specified in this dialog to ensure they are correct.

JDBC Oracle 19c Auditing Event Source Parameters

The following table lists the JDBC Oracle 19c auditing event source parameters.

Name	Description
Name *	Enter an alpha-numeric, descriptive name for the source. This value is only used for displaying the name on this screen.
Enabled	Select the checkbox to enable the event source configuration to start collection. The checkbox is selected by default.
Description	Enter a text description for the event source.
Host ID*	Enter the IP address of the machine where the oracle 19c database server is installed.
Port Number*	Enter the port number that you configured for your event sources. The default value of port number is 1521.
Database Name*	Enter the name of the database where the audit tables exists.
User ID*	Enter the username of oracle 19c database.
Password*	Enter the password to log into the oracle 19c database.
Polling Interval*	Polling interval takes the input in minutes. Based on the minutes entered, the pipeline will pull the data from the database. For example, If the polling interval is 1, then the pipeline will pull the data from the database for every 1 minute. If the polling interval is 2, then the pipeline will pull the data from the database for every 2 minute. This filed takes the values between 1 to 60.
Event Destination*	Select the NetWitness Log Collector or Log Decoder to which event needs to be sent from the drop-down list.
Test Configuration	Checks the configuration parameters specified in this dialog to ensure they are correct.

JDBC IBMDB2 Event Source Parameters

The following table lists the JDBC IBMDB2 event source parameters.

Name	Description
Name *	Enter an alpha-numeric, descriptive name for the source. This value is only used for displaying the name on this screen.
Enabled	Select the check-box to enable the event source configuration to start collection. The check-box is selected by default.
Description	Enter a text description for the event source.

Name	Description
Host ID*	Enter the IP address of the machine where the jdbc_ibmdb2 server is installed.
Port Number*	Enter the port number that you configured for your event source. The default value of port number is 50000.
Database Name*	Enter the name of the database where the audit table exists.
User ID*	Enter the username of jdbc_ibmdb2 database.
Password*	Enter the password to log into the jdbc_ibmdb2 database.
Polling Interval*	Polling interval takes the input in minutes. Based on the minutes entered, the pipeline will pull the data from the database. For example, If the polling interval is 1, then the pipeline will pull the data from the database for every 1 minute. If the polling interval is 2, then the pipeline will pull the data from the database for every 2 minute. This filed takes the values between 1 to 60.
Event Destination*	Select the NetWitness Log Collector or Log Decoder to which event needs to be sent from the drop-down list.
Test Configuration	Checks the configuration parameters specified in this dialog to ensure they are correct.

JDBC Custom Event Source Parameters

The following table lists the JDBC Custom event source parameters.

Name	Description
Name *	Enter an alpha-numeric, descriptive name for the source. This value is only used for displaying the name on this screen.
Enabled	Select the check-box to enable the event source configuration to start collection. The check-box is selected by default.
Description	Enter a text description for the event source.
JDBC Driver Library*	Enter the JDBC driver library path to interact with a database.
JDBC Driver Class*	Enter the JDBC Driver class to interact with a database.
Host ID*	Enter the IP address of the machine where the Oracle server is installed.
Port Number*	Enter the port number that you configured for your event source. The default value of port number is 1521.

Name	Description
Database Name*	Enter the name of the database where the audit table exists.
User ID*	Enter the username of Oracle database.
Password*	Enter the password to log into the Oracle database.
Polling Interval*	Polling interval takes the input in minutes. Based on the minutes entered, the pipeline will pull the data from the database. For example, If the polling interval is 1, then the pipeline will pull the data from the database for every 1 minute. If the polling interval is 2, then the pipeline will pull the data from the database for every 2 minute. This filed takes the values between 1 to 60.
SQL Statement*	Enter the SQL statements based on the requirement. Here, the text area field will also supports the new custom query.
Device Type*	Enter the device type of the event source used for parsing.
Message ID	Enter the message group ID to bypass header parsing.
Message Prefix	Enter the prefix added to each message to assist parsing.
Event Destination*	Select the NetWitness Log Collector or Log Decoder to which event needs to be sent from the drop-down list.
Test Configuration	Checks the configuration parameters specified in this dialog to ensure they are correct.

Advanced Parameters

Click  next to **Advanced** to view and edit the advanced parameters, if necessary.

Name	Description
Debug	**Caution:** Only enable debugging (set this parameter to **On** or **Verbose**) if you have a problem with an event source and you need to investigate this problem. Enabling debugging will adversely affect the performance of the Log Collector. **Caution:** Enables or disables debug logging for the event source. Valid values are: • **Off** = (default) disabled • **On** = enabled • **Verbose** = enabled in verbose mode - adds thread information and source context information to the messages. This parameter is designed to debug and monitor isolated event source collection issues. If you change this value, the change takes effect immediately (no restart required). The debug logging is verbose, so limit the number of event sources to minimize performance impact.
Beats SSL (This option is applicable only for beats typespec)	Select this checkbox to communicate using beats SSL. The security of data transmission is managed by encrypting information and providing authentication with SSL certificates. This checkbox is not selected by default. **Note:** Ensure that you copy the server SSL certificate and the key (generated in your system) to `/etc/logstash/pki` on Log Collector, which is used during SSL connection. `/etc/logstash/pki` is a path in the Log Collector node.

Name	Description
Kubernetes SSL (This option is applicable only for Kubernetes typespec)	Select this checkbox to communicate using Kubernetes SSL. The security of data transmission is managed by encrypting information and providing authentication with SSL certificates. This checkbox is not selected by default. **Note:** Ensure that you copy the server SSL certificate and the key (generated in your system) to `/etc/logstash/pki` on Log Collector, which is used during SSL connection. `/etc/logstash/pki` is a path in the Log Collector node.
Certificate (This option is applicable only for beats and Kubernetes typespec)	Select the name of a server SSL certificate located at `/etc/logstash/pki`.
Key (This option is applicable only for beats and Kubernetes typespec)	Select the name of a server SSL key located at `/etc/logstash/pki`.
SSL Enabled	• For custom typespec - Select the checkbox to communicate using SSL. The security of data transmission is managed by encrypting information and providing authentication with SSL certificates. This checkbox is selected by default. • For beats typespec - Select the checkbox to communicate using SSL. The security of data transmission is managed by encrypting information and providing authentication with SSL certificates. This checkbox is selected by default. • For export connector typespec - Select the checkbox for Logstash to communicate with Packet Decoder and Log Decoder in SSL and Non-SSL mode. This checkbox is not selected by default.
Export Logs (This option is applicable only for export_ connector typespec)	Select the checkbox to export logs from Log Decoders.
Starting Session (This option is not applicable for export_connector typespec)	Specify the session ID from which you want to start the aggregation from instead of the default.

Name	Description
Include Metas (This option is not applicable for export_connector typespec)	Specify the list of metas separated by comma that you want to aggregate. The default metas such as time, did and sessionid are collected in addition to the metas you added for aggregation.
Exclude Metas (This option is not applicable for export_connector typespec)	Specify the list of metas separated by comma that you want to exclude from aggregration.
Query (This option is not applicable for export_connector typespec)	Specify the query so the data matching the query is only aggregated. For example, select `* where user.dst = 'john'`.
Enable Metrics Collection (This option is applicable only for export_ connector typespec)	Enables metrics collection in Elastic. **IMPORTANT:** If you enable the metrics collection, you must provide the Elastic host, username, and password.
Elastic Host (This option is applicable only for export_connector typespec)	Specify the Elastic host to forward metrics.
Elastic Port (This option is applicable only for export_ connector typespec)	Port number through which metrics are forwarded.
Elastic Username (This option is applicable only for export_ connector typespec)	Specify the name of the Elastic search.
Elastic Password (This option is applicable only for export_ connector typespec)	**Note:** If you upgrade from NetWitness Platform 11.6.0.0 to 11.6.1.0, automatic key is generated and stored in the key store management for the password set in Logstash pipeline configuration. You can view the key instead of password in the **Elastic Password** field. Specify the Elastic search password.
Minutes Back (This option is applicable only for export_ connector typespec)	Starts collecting data from last xx minutes. For example, if the value is set to 30 minutes, Log Collector starts collecting the logs and metas starting from last 30 minutes.
Persistent Queue (This option is applicable only for export_ connector typespec	Persistent queue stores the message queue on disk to avoid data loss. By default, this option is not enabled.

Name	Description
Additional Custom Configuration	Use this text box for any additional configuration, in case you have multiple inputs or another set of outputs to send somewhere in addition to a NetWitness Log Collector or Log Decoder. For example, you can configure the data to be sent to Elasticsearch. In this case each event that is sent to Netwitness Platform will also be send to Elasticsearch.
Required Plugins	Specify the required plugins in a comma separated list. **Note:** - Backup and restore is not supported for custom plugins. - If the test connection failed due to required plugin is not installed, you must install the required plugin, for more information, see Install or Manage Logstash Plugin.
Pipeline Workers	Number of pipeline worker threads allocated for logstash pipeline.
Ports (This option is only applicable for custom typespec and beats typespec)	Enter a port number (for example, 5000 or UDP:5000, TCP:5000), and ensure the checkbox is checked. This allows the plugins to collect logs over the network (For example, UDP, TCP). **IMPORTANT:** If you are configuring beats event source, ensure you provide beats event source port (For example, 5044) in the advance configuration even if you have updated the port in the basic parameters.
Required Ports (This option is not applicable for custom typespec and beats typespec)	Enter the list of ports required for external access.
Exclude Metas (This option is not applicable for export_connector typespec)	Specify the list of metas separated by comma that you want to exclude from aggregration.
Query (This option is not applicable for export_connector typespec)	Specify the query so the data matching the query is only aggregated. For example, select `* where user.dst = 'john'`.

Name	Description
Destination SSL (This option is only applicable for cutom typespec, http_receiver typespec, ipfix typespec, kubernetes typespec, jdbc_oracle_11g_auditing_typespec, jdbc_oracle_18c_auditing, jdbc_oracle_19c_auditing typespec, ibmdb2 typespec and jdbc_custom typespec)	Select the checkbox to communicate using destination SSL.
Custom SQL Statement (This field is applicable only for jdbc_oracle_18c_auditing typespec, jdbc_oracle_19c_auditing typespec, jdbc_oracle_11g_auditing_typespec and jdbc_oracle_12c_auditing_typespec)	By default, this is an empty text area field. This field also supports the new custom query.
Legacy Codec (This option is only applicable for custom typespec and beats typespec)	Select the check box to send events to Log Decoder using legacy format. When selected, Log Collector will send events to Log Decoder embedded in JSON encoded Logstash events. When not selected, Log Collector will send events in the collected format.

Note: You can monitor the health and throughput for Logstash pipeline using Logstash Input Plugin Overview dashboard. For more information, see "New Health and Wellness Dashboards" topic in the *System Maintenance Guide*.

Note: The JDBC pipelines are supported only from 12.3 version onwards.

View logstash collection in the Investigation > Events view

To view logstash collection in the Events view

1. Go to the **Investigation** > **Events view**.
2. Select a Log Decoder service (for example, LD1) which collects logstash events, from the drop-down list.
3. Select the time range.
4. Click .
5. Look for events with a device.type value that matches the one defined in the Logstash pipeline.

   Note: Though some meta are parsed by default, a custom parser or Log Parser Rules are required for full parsing.

Install or Manage Logstash Plugin

By default, Logstash related plugins are installed when Logstash is installed. In addition, you can add or customize the plugins based on your requirement.

List All Lostash Plugins

You can list all the Logstash plugins available on your environment using the following command:
`/usr/share/logstash/bin/logstash-plugin list --verbose`

Install New Logstash Plugin

You can install new plugin using the following command:

`/usr/share/logstash/bin/logstash-plugin install <plugin-name>`

For example, see the following command:

`/usr/share/logstash/bin/logstash-plugin install logstash-input-github`

Manage Logstash Plugin

You can manage the existing plugins using the following commands:

- To update all Logstash plugins:

  `/usr/share/logstash/bin/logstash-plugin update`

- To update specific Logstash plugin:

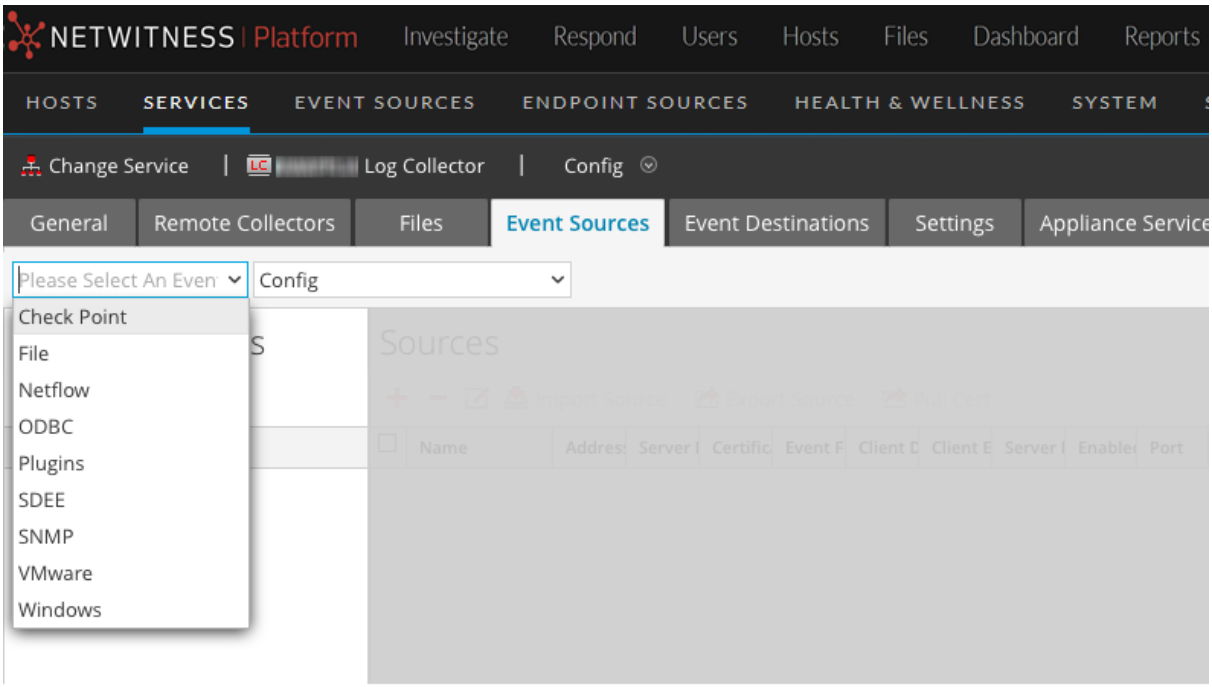
  `/usr/share/logstash/bin/logstash-plugin update <plugin-name>`

Configure Keystore Management

Keystore management allows you to securely store secret values (key and password). These keys are used as a placeholder for authentication credentials within a Logstash pipeline configuration.

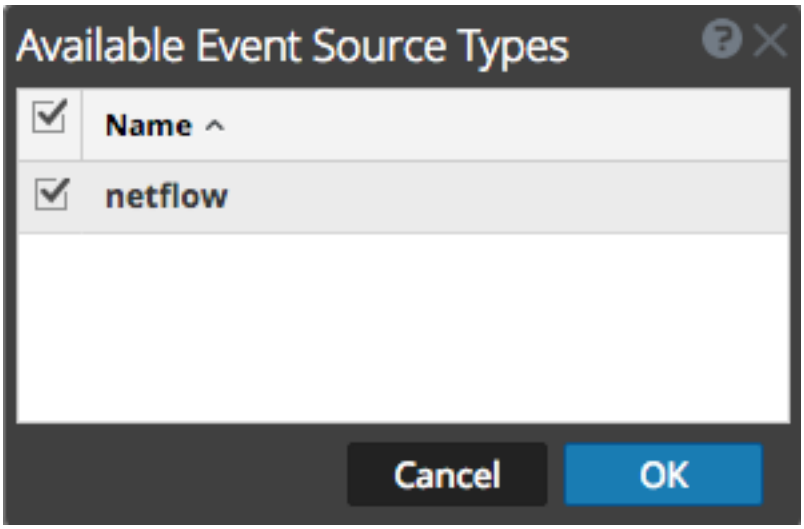
To configure keystore management:

1. Go to  (**ADMIN**) > **Services** from the NetWitness Platform menu.
2. Select a Log Collection service.
3. Under Actions, select  > **View** > **Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Sources** tab.
5. In the **Event Sources** tab, select **Logstash > Keystore management** from the drop-down menu.
6. Click .
7. In the **key** field, enter the name of the key.
8. In the **password** field, enter the password.
9. Click **Save**.



Configure Netflow Event Sources in NetWitness

This topic tells you how to configure the Netflow collection protocol.



Configure a Netflow Event Source

To configure a Netflow Event Source:

1. Go to  **(Admin)** > **Services** from the NetWitness menu.
2. Select a Log Collection service.
3. Select  > **View** > **Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Sources** tab.

5. In the **Event Sources** tab, select **Netflow/Config** from the drop-down menu.
6. In the **Event Categories** panel toolbar, click .
   The **Available Event Source Types** dialog is displayed.
7. Select the **netflow** event source type and click **OK**.

The newly added event source type is displayed in the **Event Categories** panel.

8. Select the new type in the **Event Categories** panel and click + in the **Sources** toolbar.
   The **Add Source** dialog is displayed.
9. Enter a port number in the **Port** field, and ensure the Enabled box is checked.

   Note: NetWitness opens the 2055, 4739, 6343, and 9995 ports on the firewall by default. You can open other ports for Netflow if required.

   For details of other parameters, see Netflow Collection Parameters below.
10. Click **OK**.

The new event source is displayed in the list.

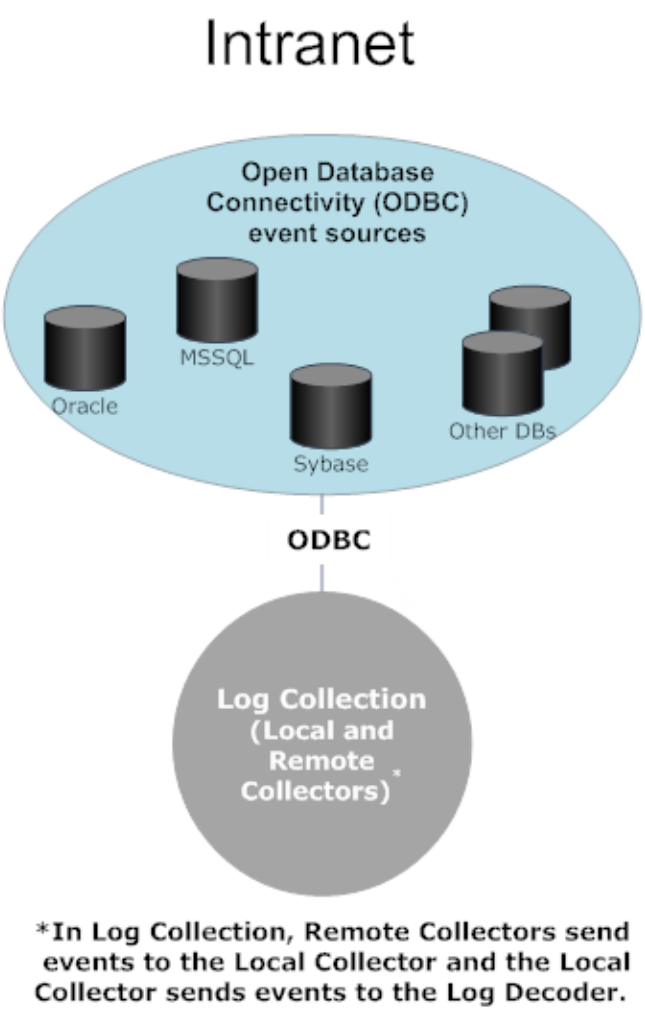
Netflow Collection Parameters

The following table provide descriptions of the basic Netflow Collection parameters.

Name	Description
Port	Specify the port number configured for the Netflow event source. NetWitness opens the 2055, 4739, 6343, and 9995 ports for Netflow by default. You can open other ports for Netflow if required.
Enabled	Select the check box to enable the event source configuration to start collection. The check box is selected by default.
Cancel	Closes the dialog without making adding an event source type.
OK	Adds the parameters for the event source.

The following table provide descriptions of the advanced Netflow Collection parameters.

Name	Description
InFlight Publish Log Threshold	Establishes a threshold that, when reached, NetWitness generates a log message to help you resolve event flow issues. The Threshold is the size of the netflow event messages currently flowing from the event source to NetWitness . Valid values are: • **0 (default)** - disables the log message. • **100-100000000** - generates a log message when this Log Collector has processed the specified number of netflow events. For example, if you set this value to 100, NetWitness generates a log message when 100 netflow events of the specific netflow version (v5 or v9) have been processed.
Debug	**Caution:** Only enable debugging (set this parameter to On or Verbose) if you have a problem with an event source and you need to investigate this problem. Enabling debugging will adversely affect the performance of the Log Collector . Enables or disables debug logging for the event source. Valid values are: • **Off** = (default) disabled • **On** = enabled • **Verbose** = enabled in verbose mode - adds thread information and source context information to the messages. This parameter is designed to debug and monitor isolated event source collection issues. The debug logging is verbose, so limit the number of event sources to minimize performance impact. If you change this value, the change takes effect immediately (no restart required).



ODBC

Configure ODBC Event Sources in NetWitness

This topic tells you how to configure ODBC collection protocol which collects events from event sources that store audit data in a database using the Open Database Connectivity (ODBC) software interface.

Deployment Scenario

The following figure illustrates how you deploy the ODBC Collection Protocol in NetWitness.

Configure an ODBC Event Source

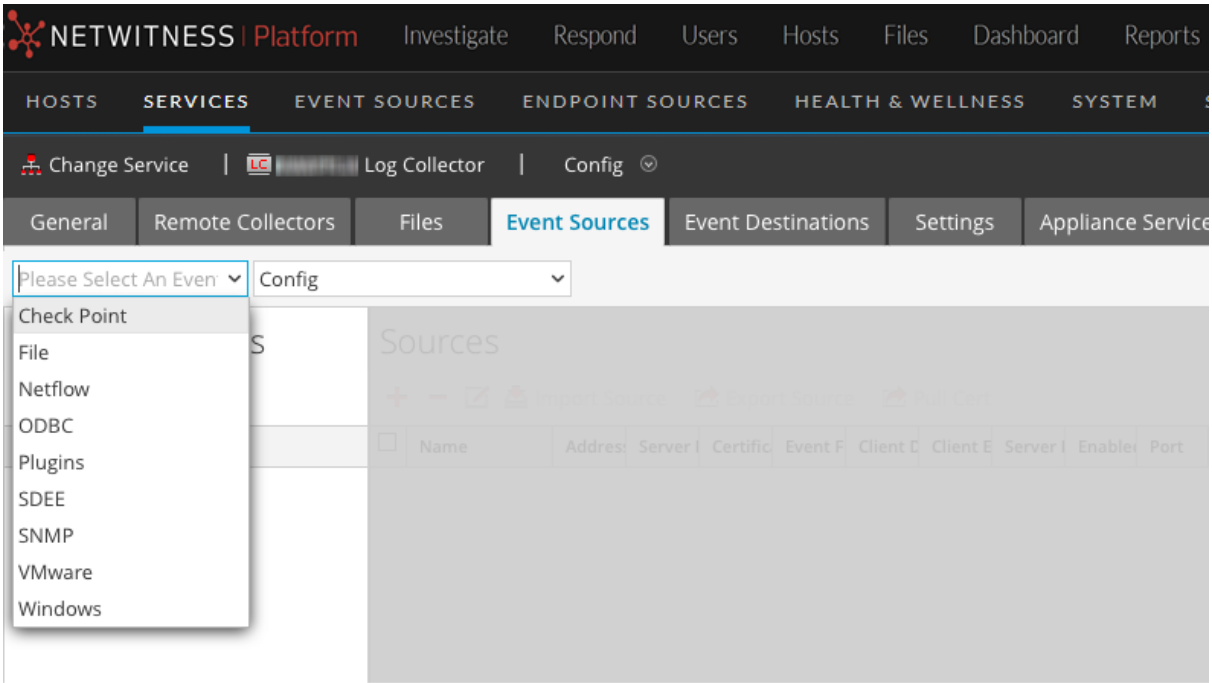
To configure an ODBC event source, you need to configure an event source type, and also choose a DSN template.

Configure a DSN

The following procedure describes how to add a DSN from an existing DSN template. For other procedures related to DSNs, see Configure Data Source Names (DSNs).

Configure a DSN (Data Source Name):

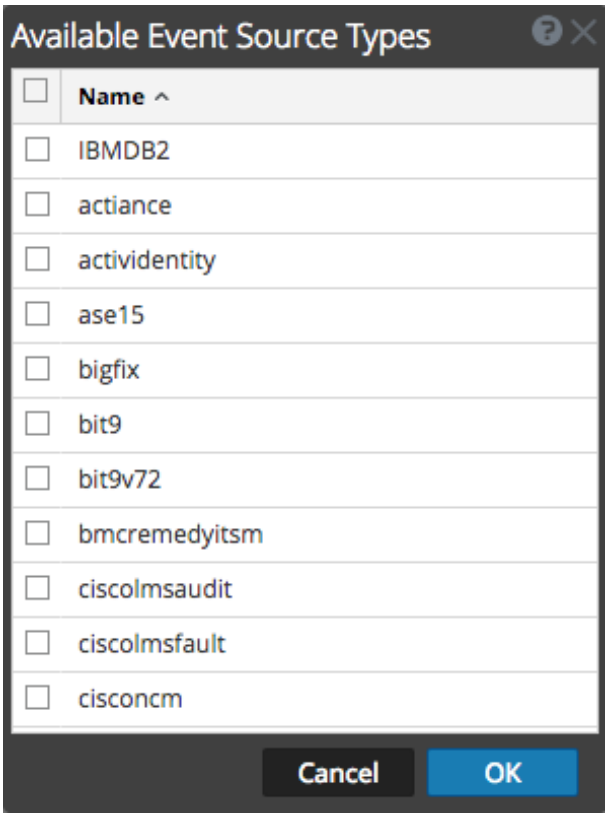
1. Go to **(Admin) > Services**.
2. In the **Services** grid, select a **Log Collector** service.
3. Click under **Actions** and select **View** > **Config**.
4. In the Log Collector **Event Sources** tab, select **ODBC/DSNs** from the drop-down menu.



5. The DSNs panel is displayed with the existing DSNs, if any.
6. Click  to open the **Add DSN** dialog.
7. Choose a DSN Template from the drop down menu and enter a name for the DSN. (You use the name when you set up the ODBC event source type.) If required, click Manage Templates to add or delete DSN templates.
8. Fill in the parameters and click **Save**.

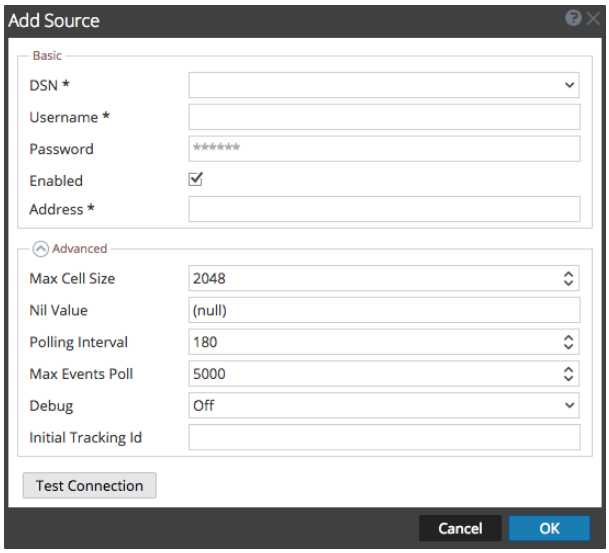
Add an Event Source Type

For details on parameters used in the following procedure, see ODBC Event Source Configuration Parameters.



To configure an ODBC Event Source Type:

1. Go to  **(Admin) > Services**.
2. Select a Log Collection service.
3. Under Actions, select  **> View > Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Sources** tab.



5. In the **Event Sources** tab, select **ODBC/Config** from the drop-down menu.

6. In the **Event Categories** panel toolbar, click .
   The **Available Event Source Types** dialog is displayed.

7. Select an event source category (for example **mssql** and click **OK**.
   The newly added event source type is displayed in the **Event Categories** panel.

8. Select the new type in the **Event Categories** panel and click  in the **Sources** toolbar.
   The **Add Source** dialog is displayed.

9. Select a DSN from the drop down list, specify or modify the other parameters as required, and click **OK**.
10. Click **Test Connection**.

    The result of the test is displayed in the dialog box. If the test is unsuccessful, edit the DSN information and retry.

    Note: Log Collector takes approximately 60 seconds to return the test results. If it exceeds the time limit, the test times out and the NetWitness server displays an error message.
11. If the test is successful, click **OK**.

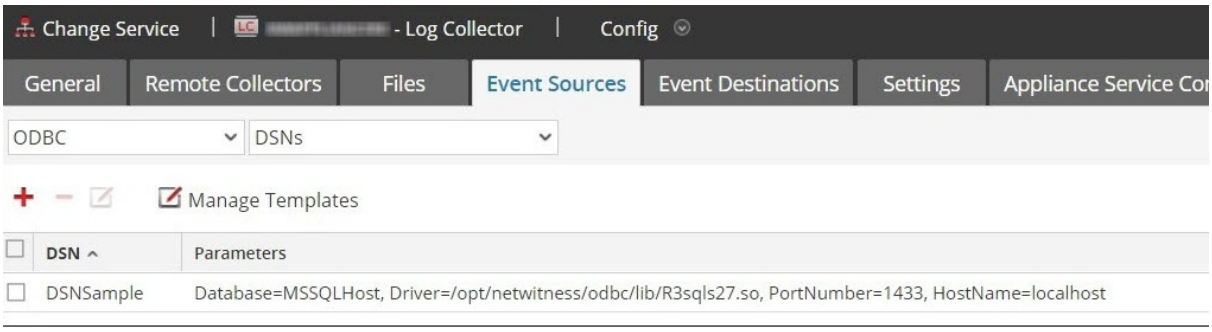
The newly defined DSN is displayed in the **Sources** panel.

Configure Data Source Names (DSNs)

This topic tells you how to create and maintain DSNs for ODBC Collection.

Context

Open Database Connectivity (ODBC) event sources require Data Source Names (DSNs) so you need to define DSNs with their associate value pairs for ODBC event source configuration.



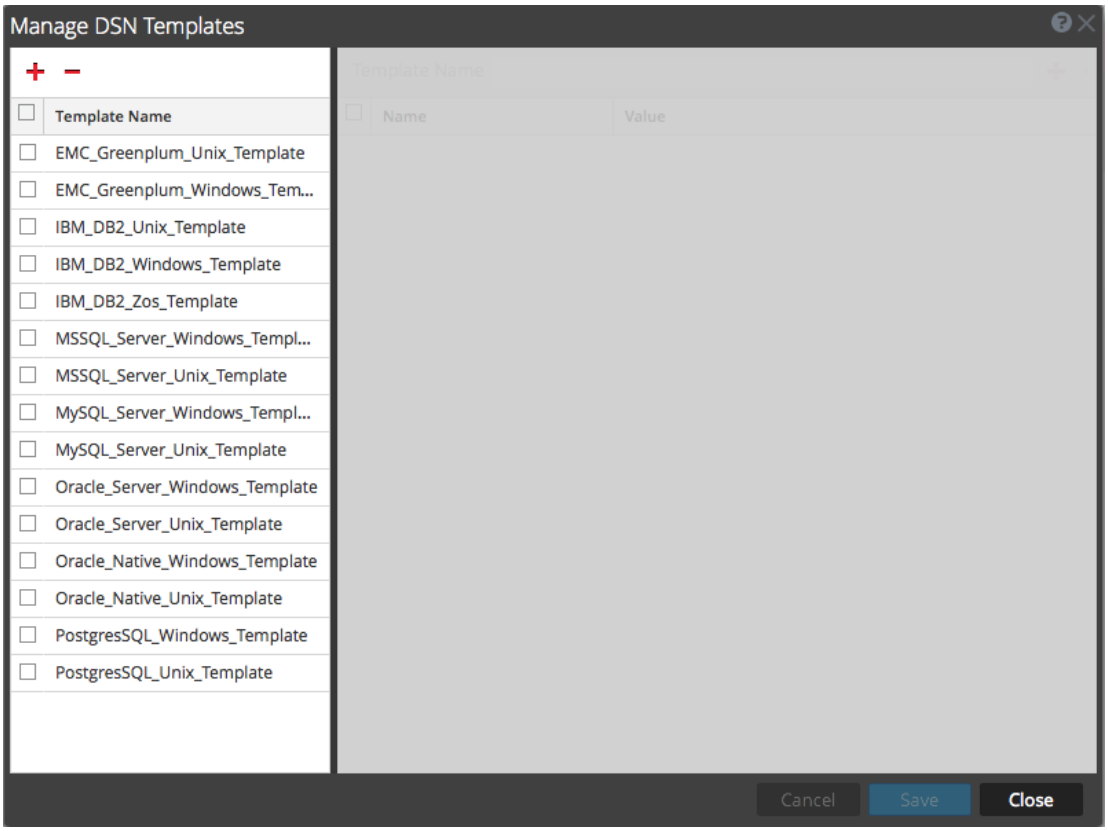
Navigate to the DSN Panel

To add or edit DSNs or DSN templates, first navigate to the appropriate screen.

To navigate to the DSN templates panel:

1. Go to  **(Admin) > Services**.
2. In the **Services** grid, select a **Log Collector** service.
3. Click  under **Actions** and select **View > Config**.

4. In the **Log Collector Event Sources** tab, select **ODBC/DSNs** from the drop-down menu.
   The **DSNs** panel is displayed with the DSNs that are added, if any.



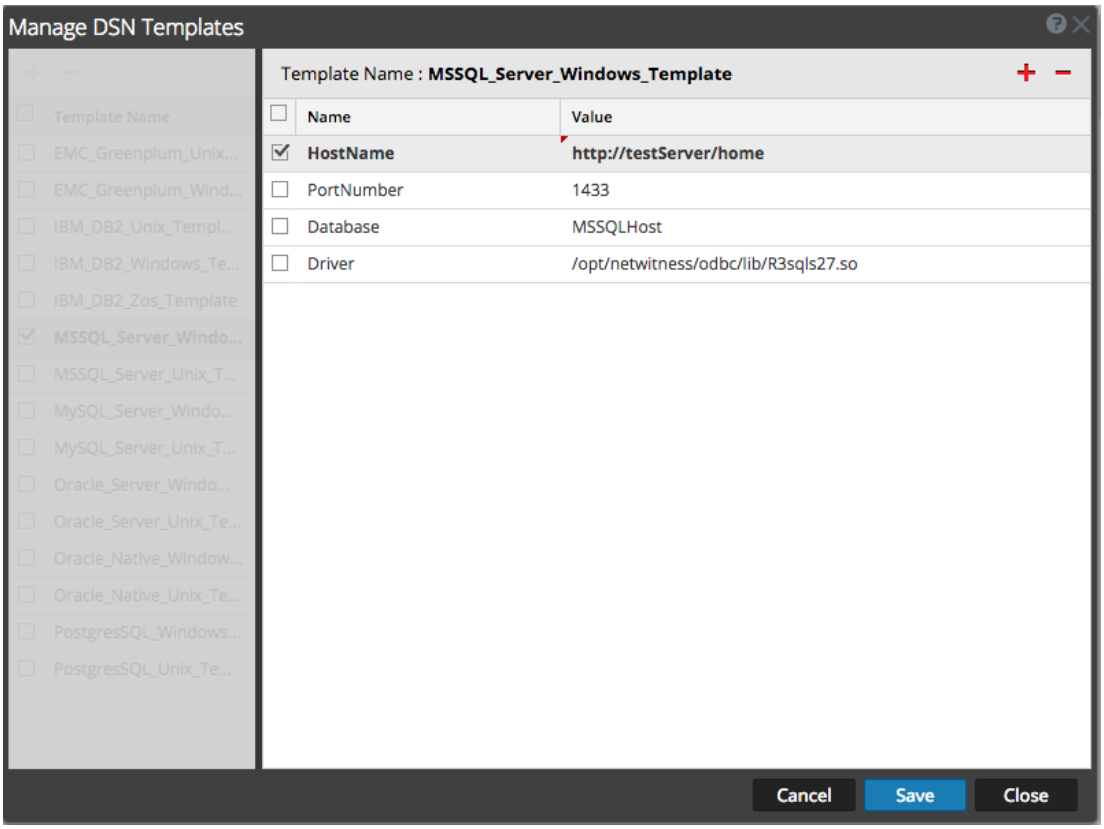
From this screen, you can perform the following actions:

- Add a new DSN template
- Add a DSN from an existing template
- Add a DSN by editing an existing DSN template
- Remove a DSN or DSN template

Add a New DSN Template

If none of the predefined DSN templates fit your needs, use this procedure to add a DSN template.

1. From the DSNs panel, click Manage Templates.
   The **Manage DSN Templates** dialog is displayed.



Note: NetWitness provides default templates on the left side panel that you can use while adding a new DSN.

2. Click  .

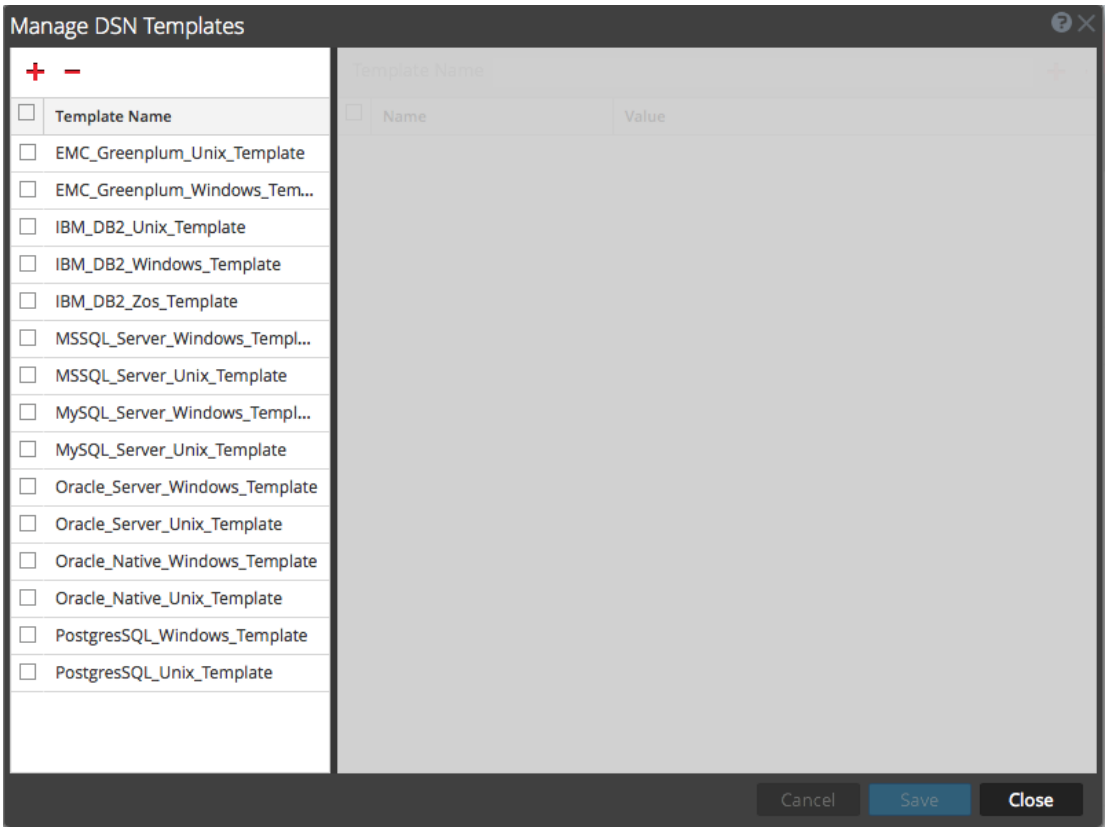
   The right panel is activated.

3. Specify a template name and click  on the right panel to add parameters.
4. Specify the parameters. Click **Save**.

The new DSN template is added in the **Manage DSN Templates** list.

Add a DSN from an existing template

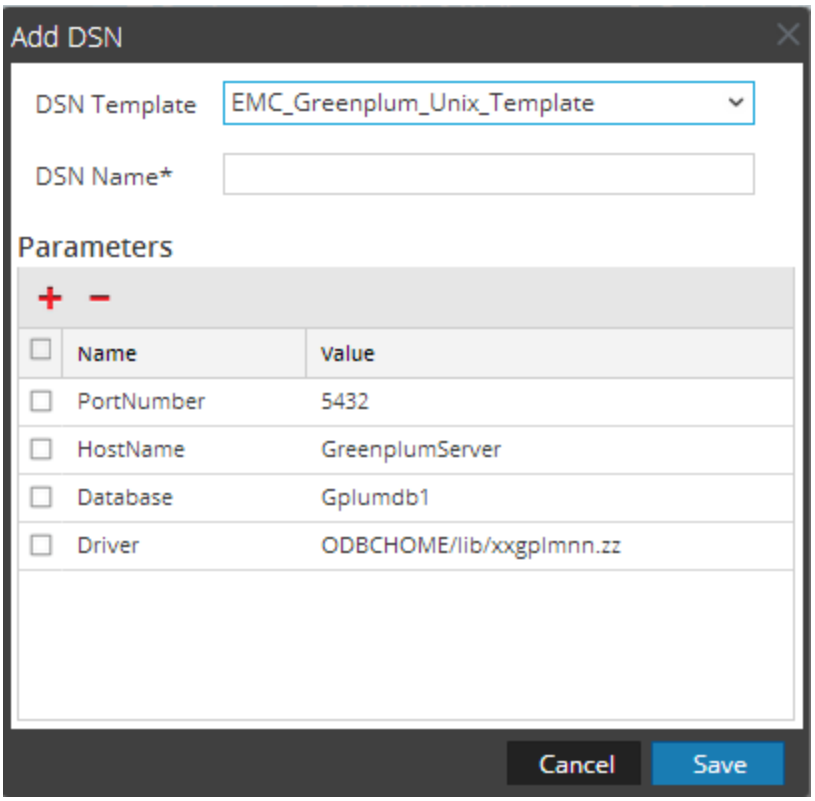
You can select an existing template, and fill in the parameters for your needs.



1. From the DSNs panel, click  to open the Add DSN dialog box.
   The **Add DSN** dialog is displayed with existing DSNs, if any
2. Choose a DSN Template from the drop down menu and enter a name for the DSN. (You use the name when you set up the ODBC event source type.)
3. Fill in the parameters and click **Save**.

Your DSN is added to the list of DSNs.

Add a New DSN by editing an existing DSN template



You can add a DSN by updating an existing DSN template to fit your needs.

1. From the DSNs panel, click .
   The **Manage DSN Templates** dialog is displayed.

2. Select the existing template that you want to modify.

   The right panel is activated, and the default parameters for the selected template are displayed.

3. Specify a name in the **DSN Name** field.
4. Add, delete or edit the default parameters.
5. Once you have the set of required parameters, click **Save**, then **Close**.
6. Choose the DSN Template that you updated from the drop down menu and enter a name for the DSN. (You use the name when you set up the ODBC event source type.)
7. Fill in the parameters and click **Save**.

Your DSN is added to the list of DSNs.

Remove a DSN or DSN template

If you no longer use a DSN or a DSN template, you can remove it from the system.

To remove an existing DSN:

1. From the DSNs panel, select an existing DSN.
2. Click —.

   A Warning message appears, asking whether you are sure you want to delete the DSN.
3. To delete the DSN, click **Yes**. Alternatively, to cancel the deletion, click **No**.

If you confirmed the deletion, the selected DSN is removed from the system.

To remove an existing DSN Template:

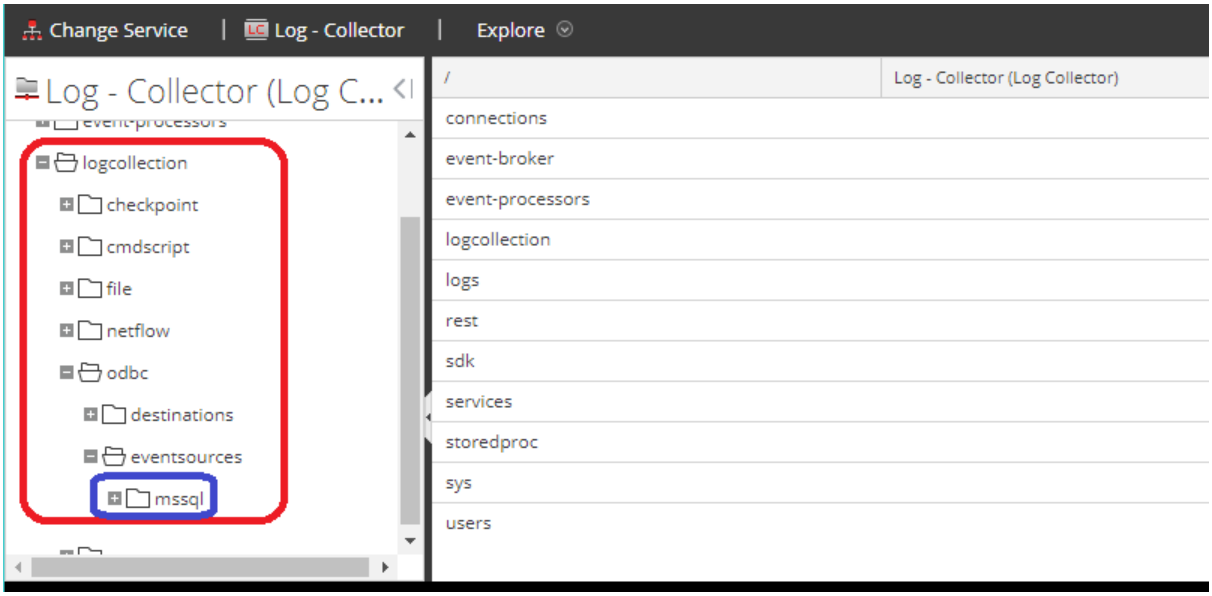
1. From the DSNs panel, click Manage Templates.

   The **Manage DSN Templates** dialog is displayed.

2. From the DSNs panel, select an existing DSN Template.
3. Click —.

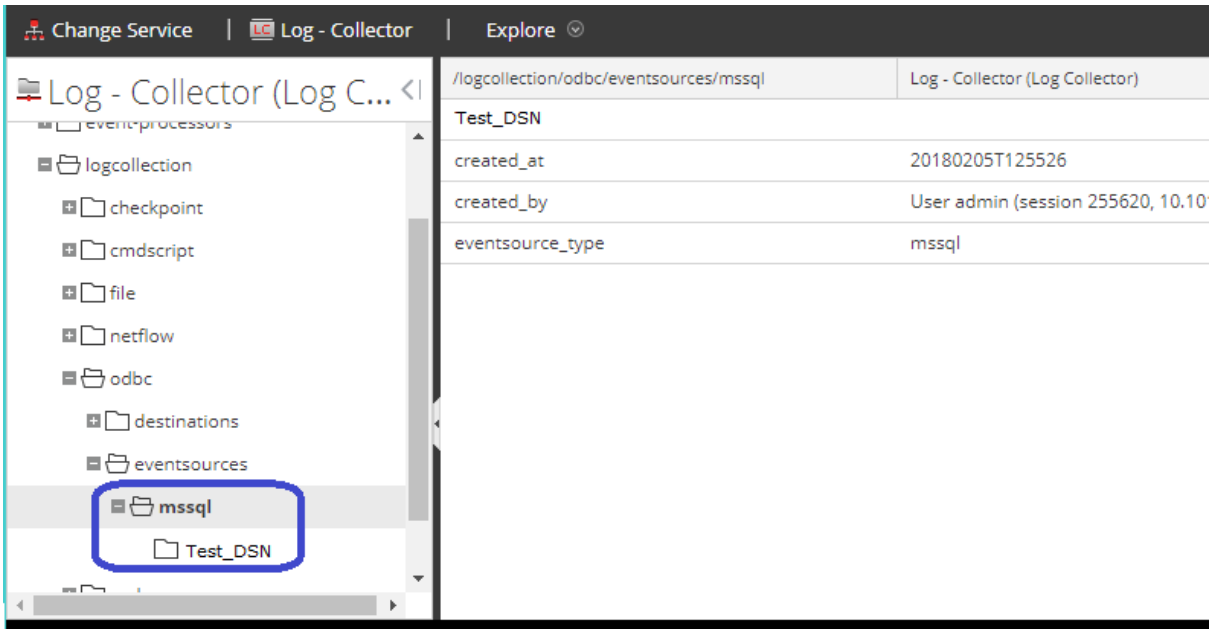
   A Confirmation message appears, asking whether you are sure you want to delete the DSN Template.
4. To delete the DSN Template, click **Yes**. Alternatively, to cancel the deletion, click **No**.

If you confirmed the deletion, the selected DSN Template is removed from the system.



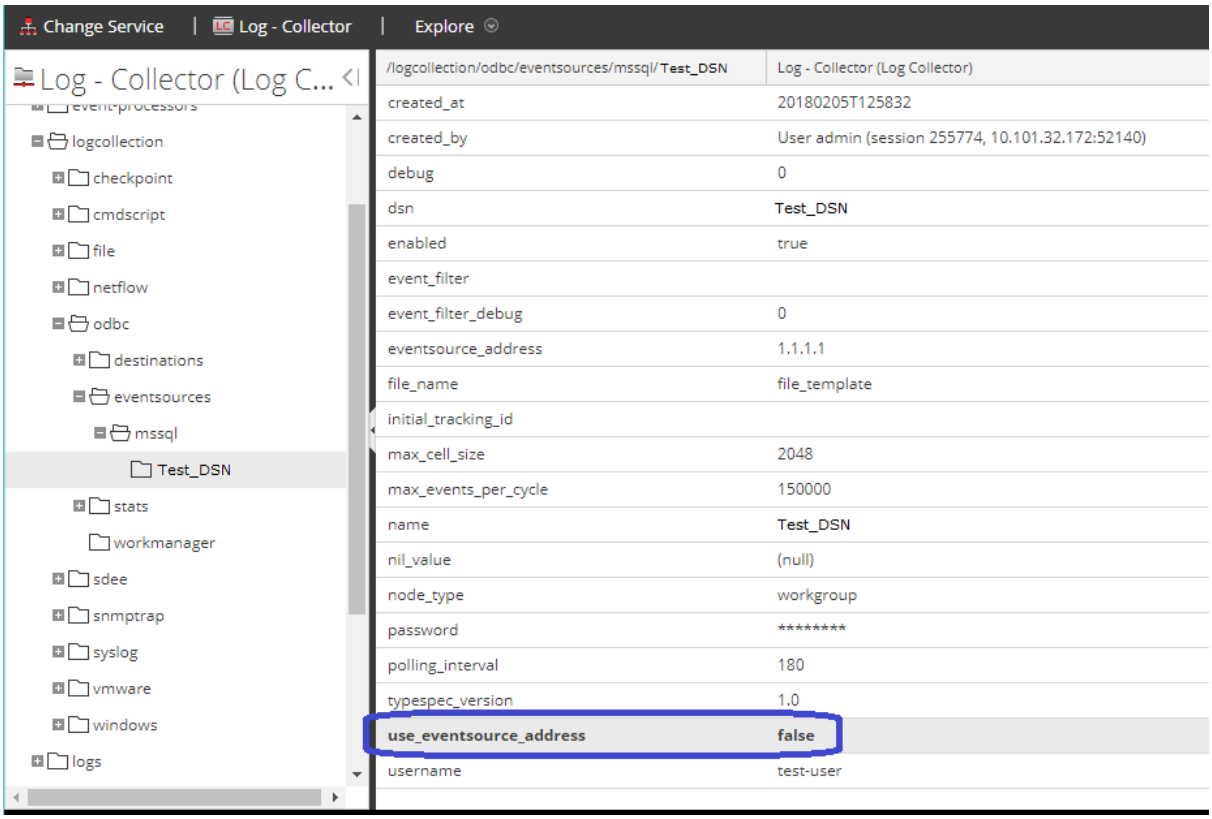
Configure device.ip meta for ODBC Data Source

For any ODBC event source, you can choose to have the ODBC collector populate the **device.ip** meta value with either the event source IP address or the actual source IP on which logs are being collected.



To view or set this parameter:

1. Go to **ADMIN > Services**.
2. In the **Services** grid, select a **Log Collector** service.
3. Click under **Actions** and select **View > Explore**.
4. Navigate to **logcollection > odbc > eventsources**.



There are entries for each ODBC event source that you have configured in NetWitness. For example, for this installation, the only ODBC event source currently configured is MS SQL:

5. Click + next to an event source to expand it and see its DSN entry.

6. Click the DSN entry (in this example **Test_DSN**) to show the parameters.
7. The **use_eventsource_address** parameter is listed.

- **False**: actual source IP address is used. This is the default value.
- **True**: event source IP address is used.

8. Click on the value (in this case **False**), and type in the new value.

> **Note:** If you type anything other than **true** or **false** (case does not matter), you receive an error saying that the value you entered cannot be set.

Any changes you make take effect immediately.

Create Custom Typespec for ODBC Collection

NetWitness uses type specification (typespec) files for ODBC and file collection. These files act on raw log files, and are used for two main purposes:

- Define where in the log file data resides. For instance, some log files contain header information that is not considered data to be parsed.
- Replace certain types of characters that the log parser cannot parse correctly. For instance, the tab character can sometimes cause problems.

This topic tells you how to create a custom typespec for the Log Collector. The topic includes:

- Create Custom typespec procedure
- ODBC Collection typespec syntax

- Sample ODBC Collection typespec files

Create Custom Typespec

To create a custom typespec file:

1. Open an SFTP client (for example, WinSCP) and connect to a Log Collector or remote Log Collector.
2. Navigate to `/etc/netwitness/ng/logcollection/content/collection/odbc`, and copy an existing file, for example **bit9.xml**.
3. Modify the file according to your requirements. See ODBC Collection Typespec Syntax for details.
4. Rename and save the file to the same directory.
5. Restart the Log Collector.

Note: You will not be able to see new Event Source type in NetWitness until you restart the Log Collector.

ODBC Collection Typespec Syntax

The following table describes the typespec parameters.

Parameter	Description
name	The display name of your ODBC event source (for example, **activeidentity**). NetWitness displays this name in the **Sources** panel of the **View > Config > Events Sources** tab. Valid value is an alphanumeric string. You cannot use - (dashes), _(underscores), or spaces. The name must be unique across all typespec files in the folder.
type	Event source type: **odbc**. Do not modify this line.
prettyName	User-defined name for the event source. You can use the same value as name (for example, apache) or use a more descriptive name.
version	Version of this typespec file. Default value is 1.0.
author	Person who created the typespec file. Replace author-name with your name.
description	Formal description of the event source. Replace formal-description with your description of the event source.
	<device> Section
parser	This optional parameter contains the name of the log parser. This value forces the Log Decoder to use the specified log parser when parsing logs from this event source. **Note:** Please leave the field blank when unsure of the log parser to be used.
name	Name your ODBC event source (for example, **ActivIdentity ActivCard AAA Server**).
maxVersion	The version number of the event source (for example, **6.4.1**).
description	Description of the event source.
	<collection> Section

Parameter	Description
odbc	The syntax under <odbc> is used for event collection and processing. You can provide multiple queries for the same event source type by adding <query> tags.
query	This section contains the details of the query used to collect information from the event source.
tag	The prefix tag you want to add to events during transformation (for example **ActivIdentity**).
outputDelimiter	Specify the delimiter to use to separate fields. Specify any of the following values: • || (piping) • ^ (caret) • , (comma) • : (colon) • **0x20** (to represent a space)
interval	Specify the number of seconds between events. Default value is **60**.
dataQuery	Specify the query to fetch data from the ODBC eventsource database for SQL-syntax. For example: `SELECT acceptedrejected, servername, serveripa, sdate, millisecond, suid, groupname, ipa, reason, info1, info2, threadid FROM A_AHLOG WHERE sdate > '%TRACKING%' ORDER BY sdate`
maxTrackingQuery	The query used on the initial pull of events to identify the starting point within the data set to begin pulling logs from. After the initial pull, this query is no longer used, unless the **maxTracking** value has been reset or altered. For example: `SELECT MAX(Event_Id) from ExEvents`
trackingColumn	The tracking column value used when the ODBC collector pulls a new set of events.

Sample ODBC Collection Typespec Files

The following sample is the typespec file for the IBM ISS SiteProtector event source.

```
<?xml version="1.0" encoding="UTF-8"?>
<typespec>

   <name>siteprotector4_x</name>
   <type>odbc</type>
   <prettyName>SITEPROTECTOR4_X</prettyName>
   <version>1.0</version>
   <author>Administrator</author>
   <description>Collects events from SiteProtector</description>

   <device>
      <name>Internet Security Systems, Inc. RealSecure SiteProtector v 2.0</name>
      <maxVersion>2.0</maxVersion>
```

```
      <description></description>
      <parser>iss</parser>
   </device>

   <configuration>
   </configuration>

   <collection>
      <odbc>
         <query>
            <tag></tag>
            <outputDelimiter></outputDelimiter>
            <interval></interval>
            <dataQuery></dataQuery>
            <maxTrackingQuery></maxTrackingQuery>
            <trackingColumn></trackingColumn>
            <levelColumn></levelColumn>
            <eventIdColumn></eventIdColumn>
            <addressColumn></addressColumn>
         </query>
      </odbc>
   </collection>
</typespec>
```

The following sample is the typespec file for the Bit9 Security Platform event source.

```
<?xml version="1.0" encoding="UTF-8"?>
<typespec>

   <name>bit9</name>
   <type>odbc</type>
   <prettyName>BIT9</prettyName>
   <version>1.0</version>
   <author>Administrator</author>
   <description>Bit9 Events</description>

   <device>
      <name>Bit9</name>
      <parser>bit9</parser>
   </device>

   <configuration>
   </configuration>
```

```
   <collection>
      <odbc>
         <query>
            <tag>BIT9</tag>
            <outputDelimiter>||</outputDelimiter>
            <interval>10</interval>
            <dataQuery>
            SELECT
            Timestamp,
            Event_Id,
            Computer_Id,
            File_Catalog_Id,
            Root_File_Catalog_Id,
            Priority,
            Type,
            Subtype,
            IP_Address,
            User_Name,
            Process,
            Description
            FROM
            ExEvents
            WHERE
            Event_Id > '%TRACKING%'
            </dataQuery>
            <trackingColumn>Event_Id</trackingColumn>
            <maxTrackingQuery>SELECT MAX(Event_Id) from ExEvents</maxTrackingQuery>
            <eventIdColumn></eventIdColumn>
         </query>
      </odbc>
   </collection>
</typespec>
```

Troubleshoot ODBC Collection

You can troubleshoot problems and monitor ODBC collection by reviewing the ODBC collector log informational, warning, and error messages to during execution of collection.

Each ODBC log messages includes the:

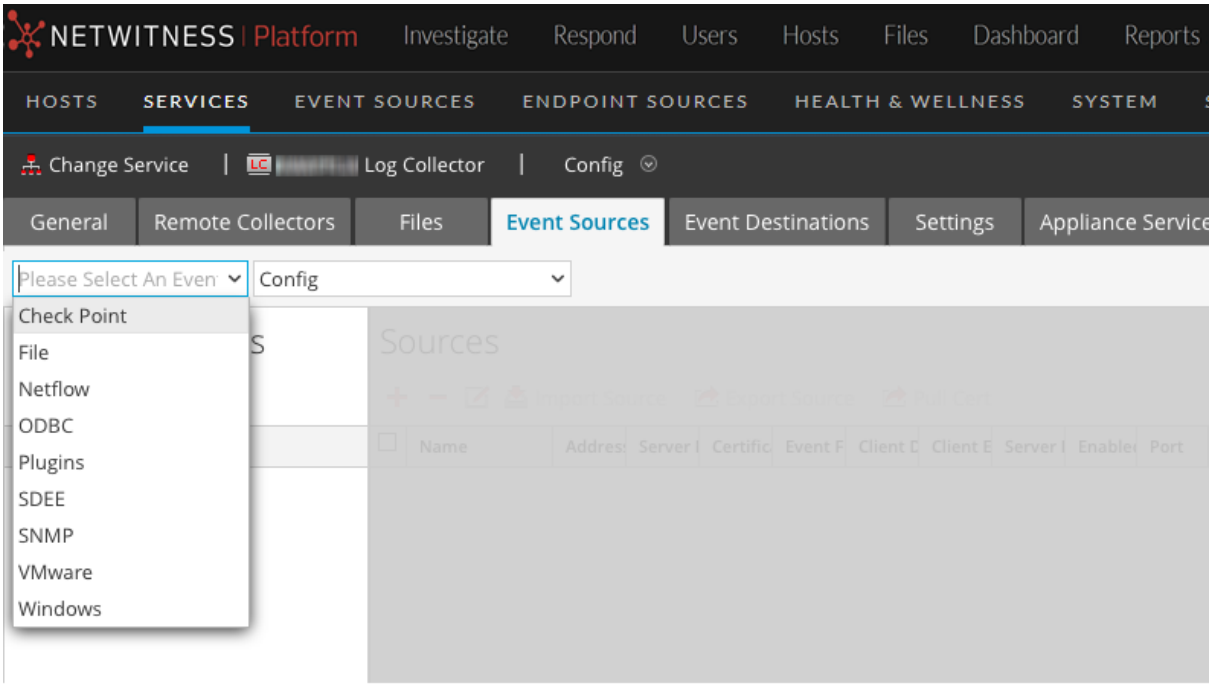
- Timestamp
- Category: `debug`, `info`, `warning`, or `failure`
- collection method = `OdbcCollection`
- ODBC event source type (GOTS-name) = Generic ODBC Type Specification name that you configured for the event source.
- collection function completed or attempted (for example, `[processing]`)
- ODBC event source name (DSN-name) = Data Source Name that you configured for the event source.
- description (for example, how many events the Log Collector collected)
- tracking ID = the Log Collector position in the target database table.

The following example illustrates the message you would receive upon successful collection of an ODBC event:

```
2014-July-25 17:21:25 info (OdbcCollection) : [event-source] [processing]
[event-source] Published 100 ODBC events: last tracking id: 2014-July-25
13:22:00.280
```

The following example illustrates a message you may receive upon unsuccessful collection of an ODBC event:

Log Message	`timestamp failure (OdbcCollection: [event-source] [processing] [event-source-type] Failed during doWork: Unable to prepare statement: state: S0002; error-code:208; description: [RSA] [ODBC-driver][event-source-type]Invalid object name 'object-name'.`
Possible Cause	ODBC collection failed while accessing the ODBC Driver or the target database.
Solutions	Validate the DSN value pairs for the events source.



Configure SDEE Event Sources in NetWitness

This topic tells you how to configure the SDEE collection protocol.

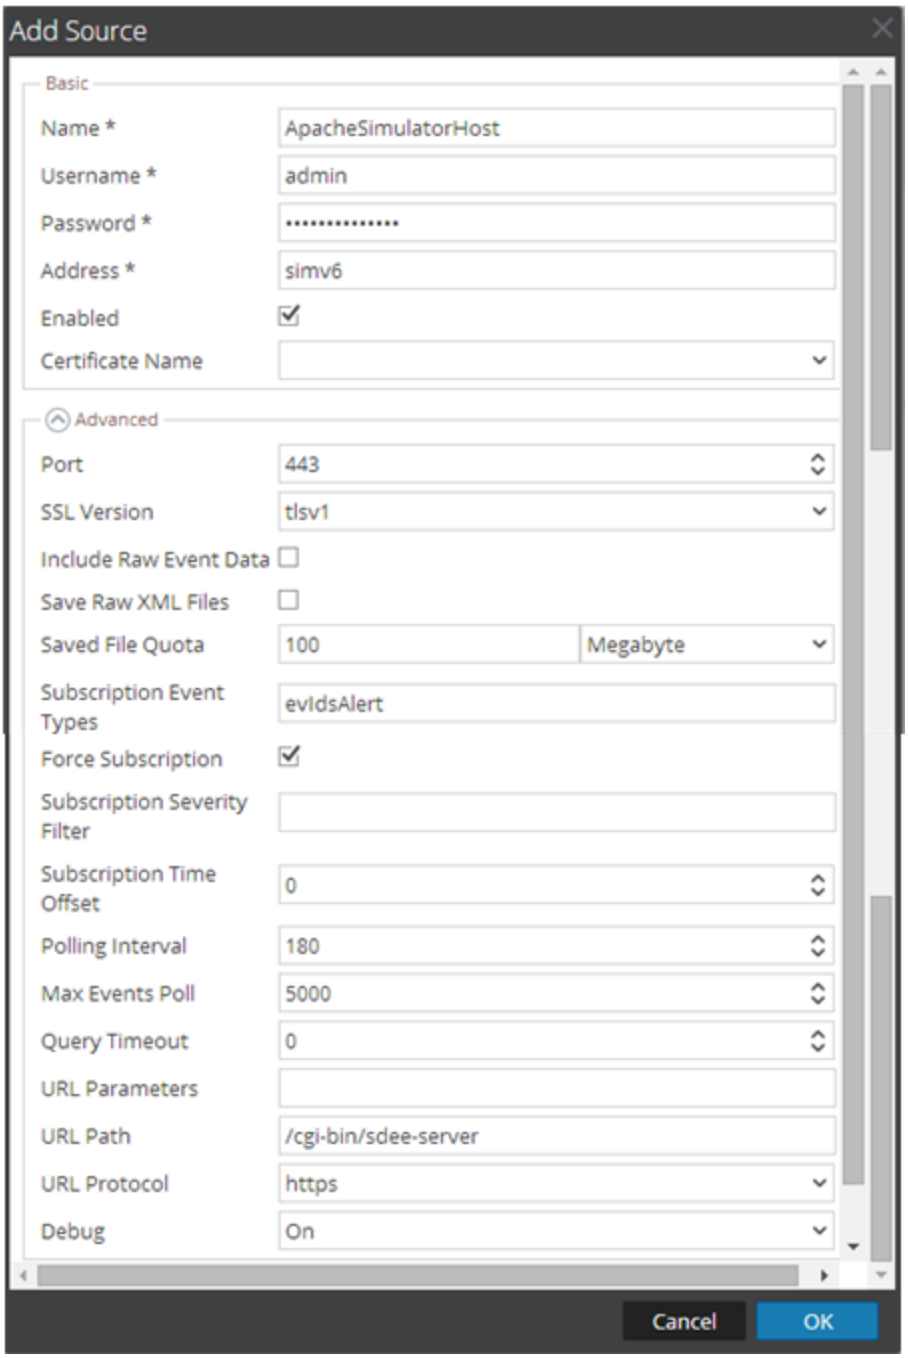
To add an SDEE Event Source:

1. Go to  **(Admin) > Services**.
2. Select a Log Collection service.
3. Under Actions, select  **> View > Config** to display the Log Collection configuration parameter tabs.

4. Click the **Event Sources** tab.

5. In the **Event Sources** tab, select **SDEE/Config** from the drop-down menu.

   The Event Categories panel displays the SDEE event sources that are configured, if any.



6. In the **Event Categories** panel toolbar, click .

   The **Available Event Source Types** dialog is displayed.

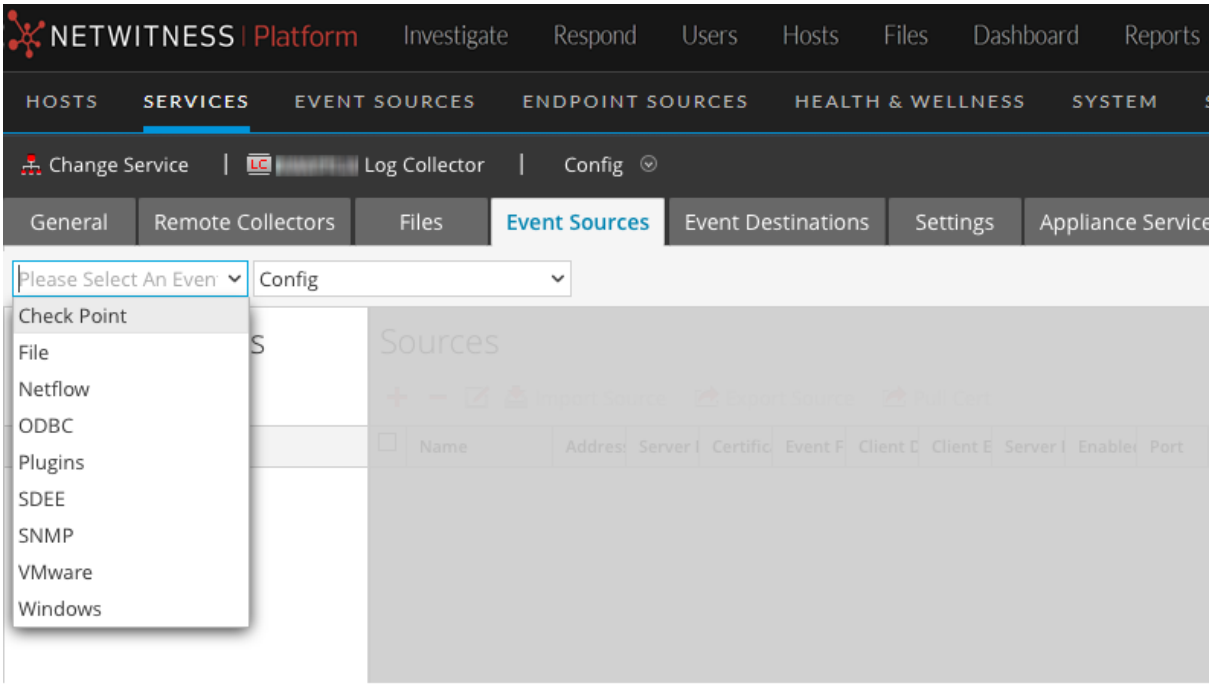
7. Select an event source type and click **OK**.

   The newly added event source type is displayed in the **Event Categories** panel.

8. Select the new type in the Event Categories panel and click  in the Sources panel toolbar. The Add Source dialog is displayed.

9. Add a Name, Username, Address, and Password, and modify any other parameters that require changes, and click **OK**.

Configure SNMP Event Sources in NetWitness



This topic tells you how to configure the SNMP collection protocol.

Configure the SNMP Trap Event Source

To add the SNMP Event Source:

Note: If you have previously added the **snmptrap** type, you cannot add it again. You can edit it, or manage users.

1. Go to **(Admin)** > **Services** from the NetWitness menu.
2. Select a Log Collection service.
3. Under Actions, select > **View** > **Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Sources** tab.

5. In the **Event Sources** tab, select **SNMP/Config** from the drop-down menu.
6. In the **Event Categories** panel toolbar, click .
   The **Available Event Source Types** dialog is displayed.
7. Select the **snmptrap** event source type and click **OK**.
   The newly added event source type is displayed in the **Event Categories** panel.

8. Select **snmptrap** in the Event Categories panel.
9. Select **snmptrap** in the Sources panel and then click the Edit icon, , to edit the parameters.
10. Update any of the parameters that you need to change and click **OK**.

(Optional) Configure SNMP Users

If you are using SNMPv3, follow this procedure to update and maintain the SNMP v3 users.

To configure SNMPv3 Users:

1. Go to **(Admin) > Services**.
2. In the **Services** grid, select a **Log Collector** service.
3. Click under **Actions** and select **View** > **Config**.
4. In the Log Collector **Event Sources** tab, select **SNMP/SNMP v3 User Manager** from the drop-down menu.

   The SNMPv3 User panel is displayed with the existing users, if any.

5. Click to open the **Add SNMP User** dialog.
6. Fill in the dialog with the necessary parameters. The available parameters are described below.

SNMP User Parameters

The following table describes the parameters that you need to enter when you create an SNMPv3 user.

Note: Required parameters are marked with an asterisk. All other parameters are optional.

Parameter	Description
Username *	User name (or more accurately in SNMP terminology, security name). NetWitness uses this parameter and the **Engine ID** parameter to create a user entry in the SNMP engine of the collection service. The **Username** and **Engine ID** combination must be unique (for example, **logcollector**).
Engine ID	(Optional) Engine ID of the event source. For all event sources sending SNMP v3 traps to this collection service, you must add the username and engine id of the sending event source. For all event sources sending SNMPv3 informs, you must add just the username with a blank engine id.

Parameter	Description
Authentication Type	(Optional) Authentication protocol. Valid values are as follows: • **None** (default) - only security level of **noAuthNoPriv** can be used for traps sent to this service • **SHA** - Secure Hash Algorithm • **MD5 - Message Digest Algorithm** **IMPORTANT:** DO NOT USE: do not select MD5, as it conflicts with the Log Collector running in FIPS mode.
Authentication Passphrase	Optional if you do not have the **Authentication Type** set. Authentication passphrase.
Privacy Type	(Optional) Privacy protocol. You can only set this parameter if Authentication Type parameter is set. Valid values are as follows: • **None** (default) • **AES** - Advanced Encryption Standard • **DES - Data Encryption Standard** **IMPORTANT:** DO NOT USE: do not select DES, as it conflicts with the Log Collector running in FIPS mode.
Privacy Passphrase	Optional if you do not have the **Privacy Type** set. Privacy passphrase.
Close	Closes the dialog without adding the SNMPv3 user or saving modifications to the parameters.
Save	Adds the SNMPv3 user parameters or saves modifications to the parameters.

Configure Syslog Event Sources

This topic tells you how to configure Syslog event sources for the Log Collector.

Note: Prior to NetWitness 11.3, you did not configure Syslog Collection for Local Log Collectors: syslog collection was only configurable for Remote Collectors. You ***can*** configure Syslog for local Log Collectors that are on version 11.3 or later.

Configure a Syslog Event Source

For Remote or Virtual Log Collectors, syslog listeners for UDP on port 514, TCP on port 514 and SSL on port 6514 are created by default. You should not change the SSL settings on the TCP and SSL listeners. If you need SSL certificate verification, create a new event source type to listen on a different port.

Note: For local Log Collectors, you cannot create syslog listeners on ports 514 and 6514: these ports are used by the Log Decoder service.

To configure the Log Collector for Syslog collection:

1. Go to  **(Admin) > Services**.
2. In the Services grid, select a Log Collector, and from the Actions menu, choose  **> View > Config**.
3. Select the **Event Sources** tab.
4. Select **Syslog/Config** from the drop-down menu.

   The Event Categories panel displays the Syslog event sources that are configured, if any.

   Note: For NetWitness, some Syslog event sources are available by default. In this case, you can proceed to step 6.

5. In the Event Categories panel toolbar, click .

   The Available Event Source Types dialog is displayed.
6. Select either **syslog-tcp**, **syslog-udp** or **syslog-lengthprefix-tcp**. You can set up either or all, depending on the needs of your organization. You can select **syslog-lengthprefix-tcp** when the logs have **Length prefix** field in the log.
7. Select the new type in the Event Categories panel and click  in the Sources panel toolbar.

   The Add Source dialog is displayed.
8. Enter the port number, and select **Enabled**. Optionally, configure any of the Advanced parameters as necessary.

   Click **OK** to accept your changes and close the dialog box.

Once you configure one or both syslog types, the Log Decoder or Log Collector collects those types of messages from all available event sources. So, you can continue to add Syslog event sources to your system without needing to do any further configuration in NetWitness.

Character Encodings

For each protocol (TCP, UDP), you need to instantiate a separate syslog listener for each character encoding.

For example, assume that you have legacy event sources sending syslog in UDP and TCP with EUC-KR and EUC-JP encodings. You would need to configure four listeners for the Log Collector, and configure the syslog event sources to send to separate ports as follows:

- UDP ***<port1>*** for EUC-KR
- UDP ***<port2>*** for EUC-JP

- TCP ***<port3>*** for EUC-KR
- TCP ***<port4>*** for EUC-JP

Alternatively, you could use separate Remote/Virtual Log Collectors, each using the default port 514.

Syslog Parameters

The following tables describe the available basic and advanced parameters for Syslog configuration.

Note: Required parameters are marked with an asterisk. All other parameters are optional.

Basic Parameters

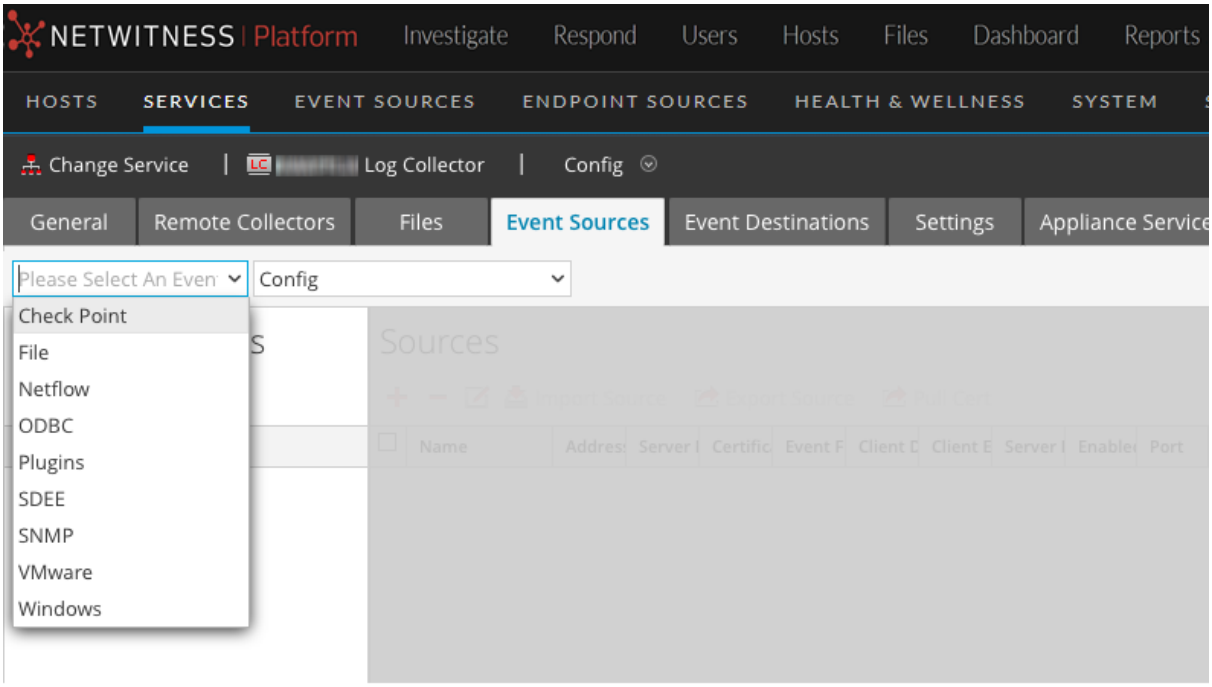
Name	Description
Port*	Enter the port number that you configured for your event sources.
Enabled	Select the check box to enable the event source configuration to start collection. The check box is selected by default.
SSL Receiver	**Note:** This parameter applies to NetWitness version 11.1 and later. This option is only available for the **syslog-tcp** and **syslog-lengthprefix-tcp** event categories. If you select the check box, the event source accepts SSL/TLS connections only. Also, if you change this setting, you must stop and restart Syslog collection for the change to become effective.

Advanced Parameters

Name	Description
Inflight Publish Log Threshold	Establishes a threshold that, when reached, NetWitness generates a log message to help you resolve event flow issues. The Threshold is the size of the syslog event messages currently flowing from the event source to NetWitness. Valid values are: • **0** (default) - disables the log message • **100-100000000** - generates log message when the syslog event messages currently flowing from the event source to NetWitness are within the 100 to 100000000 byte range.
Maximum Receivers	Maximum number of receiver resources used to process collected syslog events. The default value is **2**.
Event Filter	Select a filter. Refer to Configure Event Filters for a Collector for instructions on how to define filters.

Name	Description
Debug	**Caution:** Only enable debugging (set this parameter to "On" or "Verbose") if you have a problem with an event source and you need to investigate this problem. Enabling debugging will adversely affect the performance of the Log Collector. Enables or disables debug logging for the event source. Valid values are: • **Off** = (default) disabled • **On** = enabled • **Verbose** = enabled in verbose mode - adds thread information and source context information to the messages. This parameter is designed to debug and monitor isolated event source collection issues. The debug logging is verbose, so limit the number of event sources to minimize performance impact. If you change this value, the change takes effect immediately (no restart required).
Encoding	Character encoding used by the syslog senders to this port. Defaults to UTF-8. **Note:** It is safe to leave this as UTF-8, since UTF-8 handles ASCII characters as well, and most senders have their encoding set to UTF-8. NetWitness has tested the following values: • EUC-KR • SJIS • GB3212/GBK • ISO_8859-1 (German) • ISO_8859-7 (Greek)

Name	Description
SSL Verify Mode	**Note:** This parameter applies to NetWitness version 11.1 and later. This option is only available for the **syslog-tcp** and **syslog-lengthprefix-tcp** event categories. This setting is relevant only if the **SSL Receiver** setting is selected. If you change the SSL Verify Mode, you must stop and restart Syslog collection for the change to become effective. Available options: • **verify-none**: (default) The server does not verify the client's certificate, if any. A client can connect without presenting a certificate. • **verify-peer**: The server verifies the client's certificate, if any. A client can connect without presenting a certificate. **Note:** If verification fails, a warning is logged but the messages will still be accepted. • **verify-peer-fail-if-no-cert**: The client must present a certificate and the server will verify it. **Note:** If you use this mode, the client's CA certificate ***must*** be uploaded to the Log Collector's truststore using the REST API at `http://LC-ip-address:50101/sys/caupload`
Certificate Directory Path	You can configure custom certificates for the syslog listener on Log Collectors. For details, see (Optional) Configure Custom Certificates on Log Collectors. **Note:** This option is only available for the **syslog-tcp** and **syslog-lengthprefix-tcp** event categories.

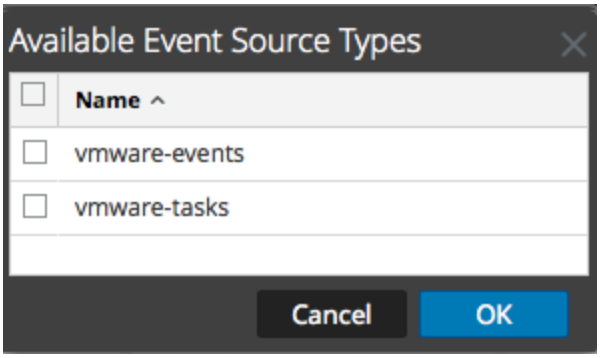


Configure VMware Event Sources in NetWitness

This topic tells you how to configure the VMware collection protocol.

To add a VMware Event Source:

1. Go to  **(Admin)** > **Services**.
2. Select a Log Collection service.
3. Under Actions, select  > **View** > **Config** to display the Log Collection configuration parameter tabs.



4. Click the **Event Sources** tab.

5. In the Log Collector **Event Sources** tab, select **VMware/Config** from the drop-down menu.

   The Event Categories panel displays the VMware event sources that are configured, if any.

6. Click + to open the **Available Event Source Types** dialog.

7. Select **vmware-events** or **vmware-tasks** from the Available Event Source Types dialog and click **OK**.

   The VMware available event source types are as follows:

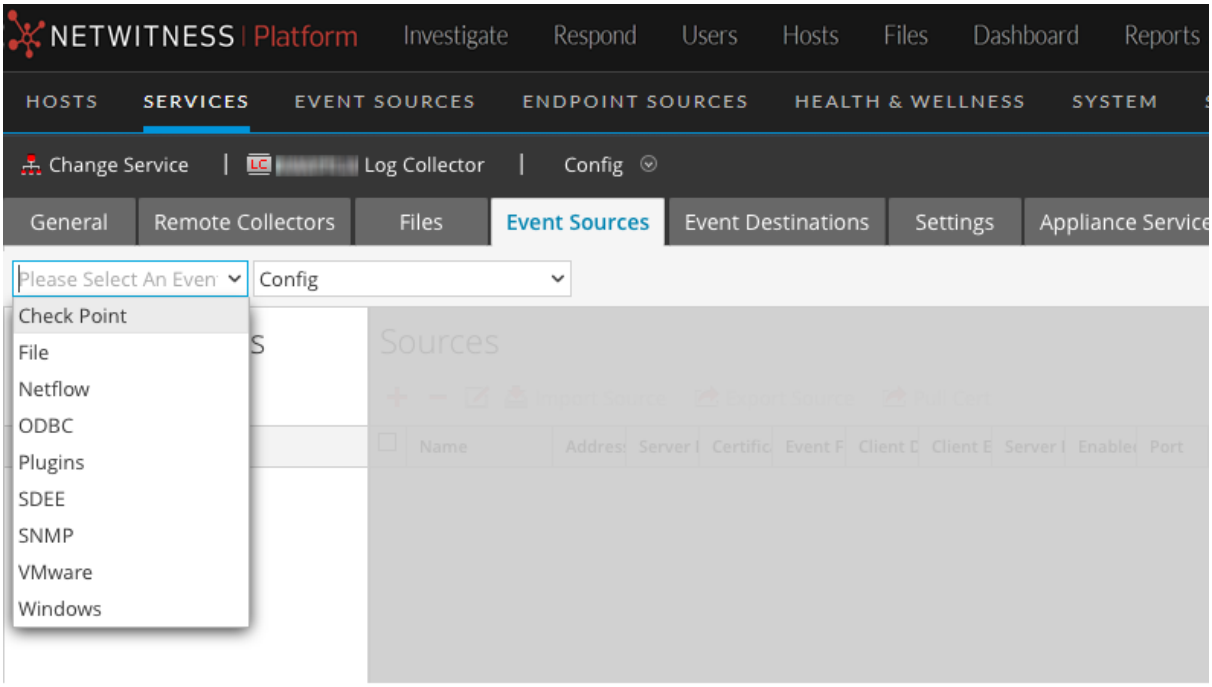
   - **vmware-events:** Setup vmware-events to collect events from vCenter Servers and ESX/ESXi servers.
   - **vmware-tasks:** (Optional) Setup vmware-tasks to collect tasks from vCenter Servers.

8. Select the new type in the Event Categories panel, and click + in the Sources toolbar.

9. Add a Name, Username and Password, and modify any other parameters that require changes.

   Caution: If you need to enter the domain name as part of the Username, you must use a double-backslash as a separator. For example, if the domain|username is corp\smithj, you must specify **corp\\smithj**.

10. Click **OK** to save your changes.



Configure Windows Event Sources in NetWitness

This topic tells you how to configure the Windows collection protocol.

In NetWitness, you need to configure the Kerberos Realm, and then add the Windows Event Source type.

To configure the Kerberos Realm for Windows collection:

1. Go to **(Admin) > Services**.
2. Select a Log Collection service.
3. Under Actions, select **> View > Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Sources** tab.

5. Select **Windows/Kerberos Realm** from the drop-down menu.
6. In the Kerberos Realm Configuration panel toolbar, click + to add a new realm.

The Add Kerberos Domain dialog is displayed.

7. Fill in the parameters, using the guidelines below.

Parameter	Details
Kerberos Realm Name	Enter the realm name, in all caps. For example, DSNETWORKING.COM. Note that the Mappings parameter is automatically filled with variations on the realm name.
KDC Host Name	Enter the name of the Domain Controller. ***Do not*** use a fully qualified name here: just the host name for the DC. **Note:** Make sure that the log collector is configured as a DNS client for the corporate DNS server. Otherwise, the Log Collector will not know how to find the Kerberos Realm.
Admin Server	(Optional) The name of the Kerberos Administration Server in FQDN format.
Mappings	This parameter is automatically filled after you enter the realm name.

8. Click **Save** to add the Kerberos domain.

To add a Windows Event Source:

1. Go to  **(Admin) > Services**.
2. Select a Log Collection service.
3. Under Actions, select  **> View > Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Sources** tab.
5. In the Log Collector **Event Sources** tab, select **Windows/Config** from the drop-down menu.

   The Event Categories panel displays the VMware event sources that are configured, if any.

Next, continue from the current screen to add a Windows Event Category and type.

To configure the Windows Event Type:

1. Select **Windows/Config** from the drop-down menu.
2. In the Event Categories panel toolbar, click  to add a source.

   The Add Source dialog is displayed.
3. Fill in the parameters, using the guidelines below.

Parameter	Details
Alias	The windows domain, referred to as Alias, is the configuration parameter that the Log Collector uses to group event sources. These event source type groups (for example, **domain2**, **domain3**, and **domain4**) categorize the event sources you have configured.

Parameter	Details
Authorization Method	The authentication method. Valid values are: • **Basic** (default) • **Negotiate** - Negotiates authentication between Kerberos and NTLM (Microsoft Windows NT LAN Manager). For security reasons, NetWitness supports Kerberos exclusively. Select this method.
Channel	For most event sources that use Windows collection, you want to collect from the **Security**, **System**, and **Application** channels. This is a comma-separated list of channels from which NetWitness collects events. The default value for this parameter is: `System, Application, Security` You can use parentheses to include and exclude event IDs. The exclude filter must have a ^ between the channel name and the event ID. You must separate event IDs with a |. For example, **Application^(211|300), System(1010|1012)** excludes the 211 and 300 Application events and includes the 1010 and 1012 System events. A channel is a named stream of events that transports them from an event publisher to an event log file. There are many predefined Windows channels. The following are examples of some of these channels: • **System** - applications that run under system service accounts (installed system services), drivers, or a component or application that has events that relate to the health of the system. • **Application** - all user-level applications. This channel is unsecured and it is open to any application. If an application has extensive information, you should define an application-specific channel for it. • **Security** - the Windows Audit Log (event log) used exclusively for the Windows Local Security Authority.
User Name	Enter the account name for the Windows user account that you set up earlier for communicating with NetWitness. Note that you need to enter the full account name, which includes the domain. For example, `rsalog@DSNETWORKING.COM`. **Note:** For negotiate authentication, this must be the Kerberos principal name in the name@kerberos_domain format. For example, **logcollector@LAB30.LOCAL**.
Password	Enter the correct password for the user account for the event source. The password is encrypted internally and is displayed in its encrypted form.
Read All Events	Select this box to read all historical event data from a channel. • **Unchecked** (default) - Log Collector does not collect from all historical event data for a specified channel. • **Checked** - Log Collector collects from all historical event data from a specified channel.
Max Events Per Cycle	(Optional). NetWitness recommends that you set this value to 0, which collects everything.
Polling Interval	(Optional). For most users, a value of **60** should work well.
Render Events	Select this box to request rendered events from the event source. • **Checked** (default) - Log Collector requests rendered events from the event source. • **Unchecked** - Log Collector does not request rendered events from the event source.

4. Click **OK** to add the source.

   The newly added Windows event source is displayed in the Event Categories panel.

5. Select the new event source in the Event Categories panel.

   The **Hosts** panel is activated.

6. Click  in the Hosts panel toolbar.

7. Fill in the parameters, using the guidelines below.

Parameter	Details
Event Source Address	Enter the IP address or host name for the Windows host.
Port	Accept the default value, **5985**.
Transport Mode	Enter **http**.
Enabled	Ensure the box is checked.

8. Click **Test Connection**.

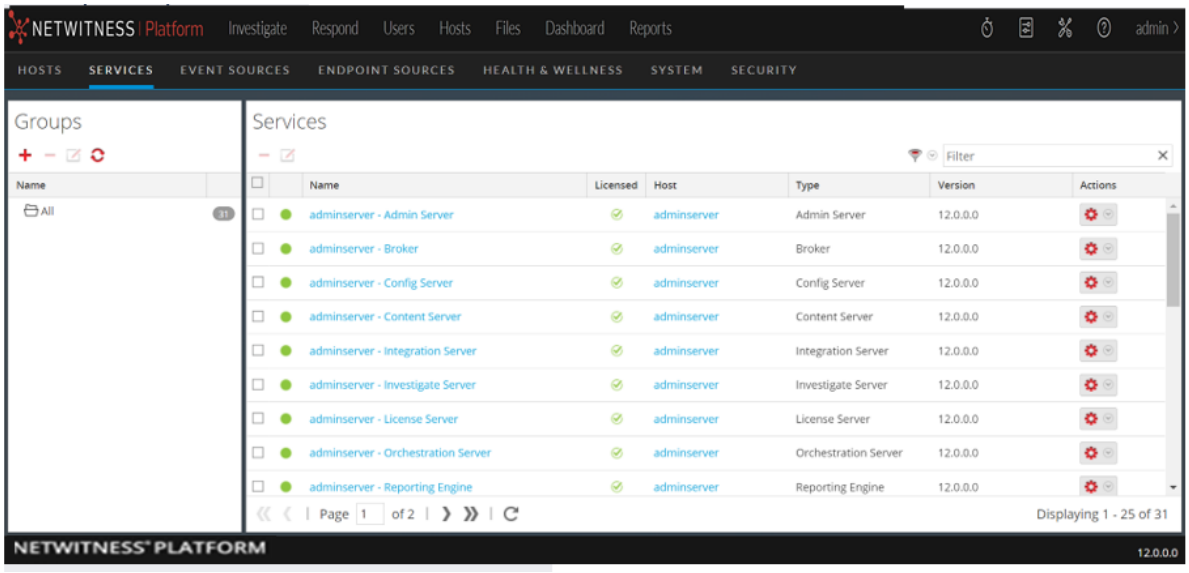
   Note: You should be able to successfully test the connection, even if the Windows service is not running.

For more information on any of the previous steps, see the following Help topics in the NetWitness User Guide:

- Configure Windows Collection
- Microsoft WinRM Configuration Guide
- Test and Troubleshoot Microsoft WinRM Guide

Configure RFC5424 Format

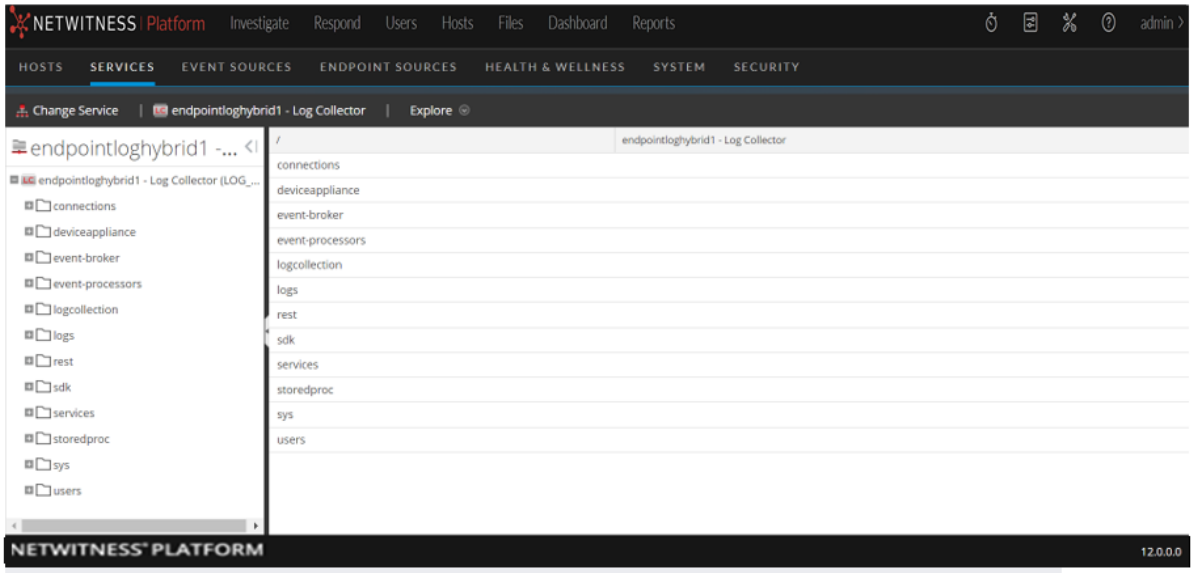
The RFC5424 format is supported for all event types. This format is enabled through the 'Enable RFC5424' flag. The default value of this flag is 'False'. It can be set to either 'True' or 'False' to enable or disable RFC5424 respectively.



Flag Value	Description
True	Log is sent to Log Decoder in RFC5424 format
False	Log is sent to Log Decoder in Z Connector format

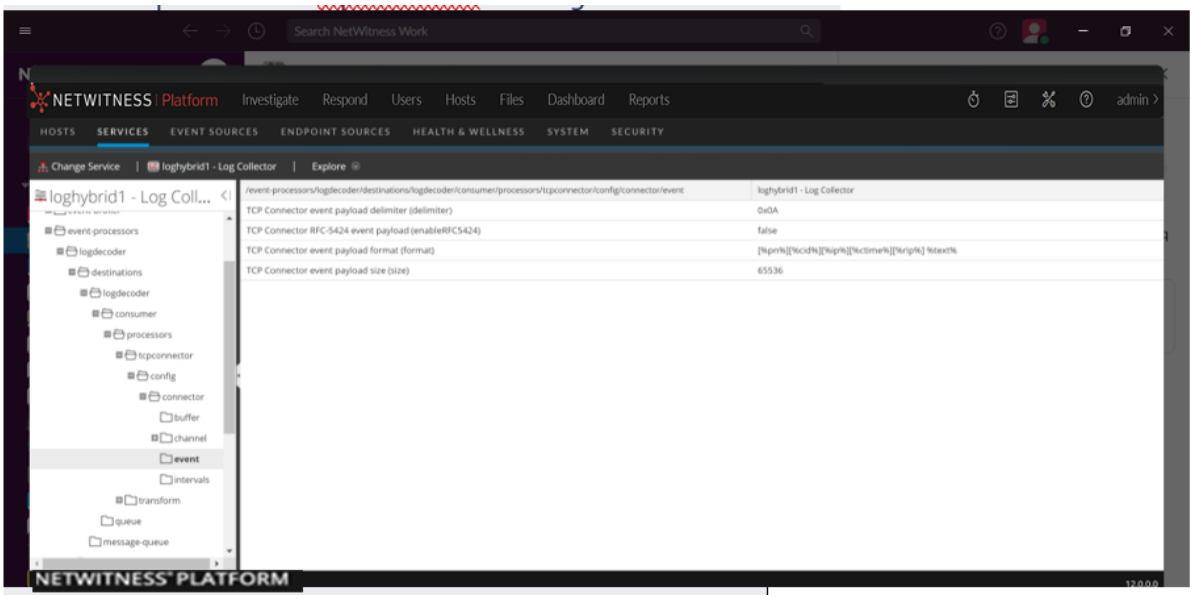
Note: When the log is sent to Log Decoder in RFC 5424 format, the disk utilization for Netwitness database is slightly higher and this may impact the data retention

To enable RFC5424 flag:



1. Go to  **(Admin) > Services** from the NetWitness menu.

   The Services panel displays the list of services.



2. Select a Log Collection service.

3. Click  > **View** > **Explore**.

4. On the left panel, go to **(event-processors)** > **logdecoder** > **destinations** > **logdecoder** > > > processors > **tcpconnector** > **config** > **connector** > **event**

5. Click **TCP connector RFC-5424 event payload (enable RFC2454)**.
6. Change the value to true to enable the flag.
7. Restart the **Log Collector** service.

Windows Legacy and NetApp Collection Configuration

This **Windows Legacy** protocol collects events from Windows Legacy (Windows 2003 or earlier event sources) and CIFS Auditing events from NetApp ONTAP event sources.

You must deploy Log Collection, that is set up a Local Collector and Windows Legacy Remote Collector, before you can configure the Windows Legacy collection protocol.

How Legacy Windows and NetApp Collection Works

You use the Windows Legacy collection protocol to configure NetWitnessto collection events from:

- Legacy Microsoft Windows event sources (Window 2003 and earlier event sources)
- NetApp event sources

Window 2003 and Earlier Event Sources

Legacy Windows event sources are older Windows versions (such as Windows 2000 and Window 2003). The Windows Legacy collection protocol collects from Windows event sources that are already configured for enVision collection without having to reconfigure them. You set up these event sources under the windows event source type.

NetApp Event Sources

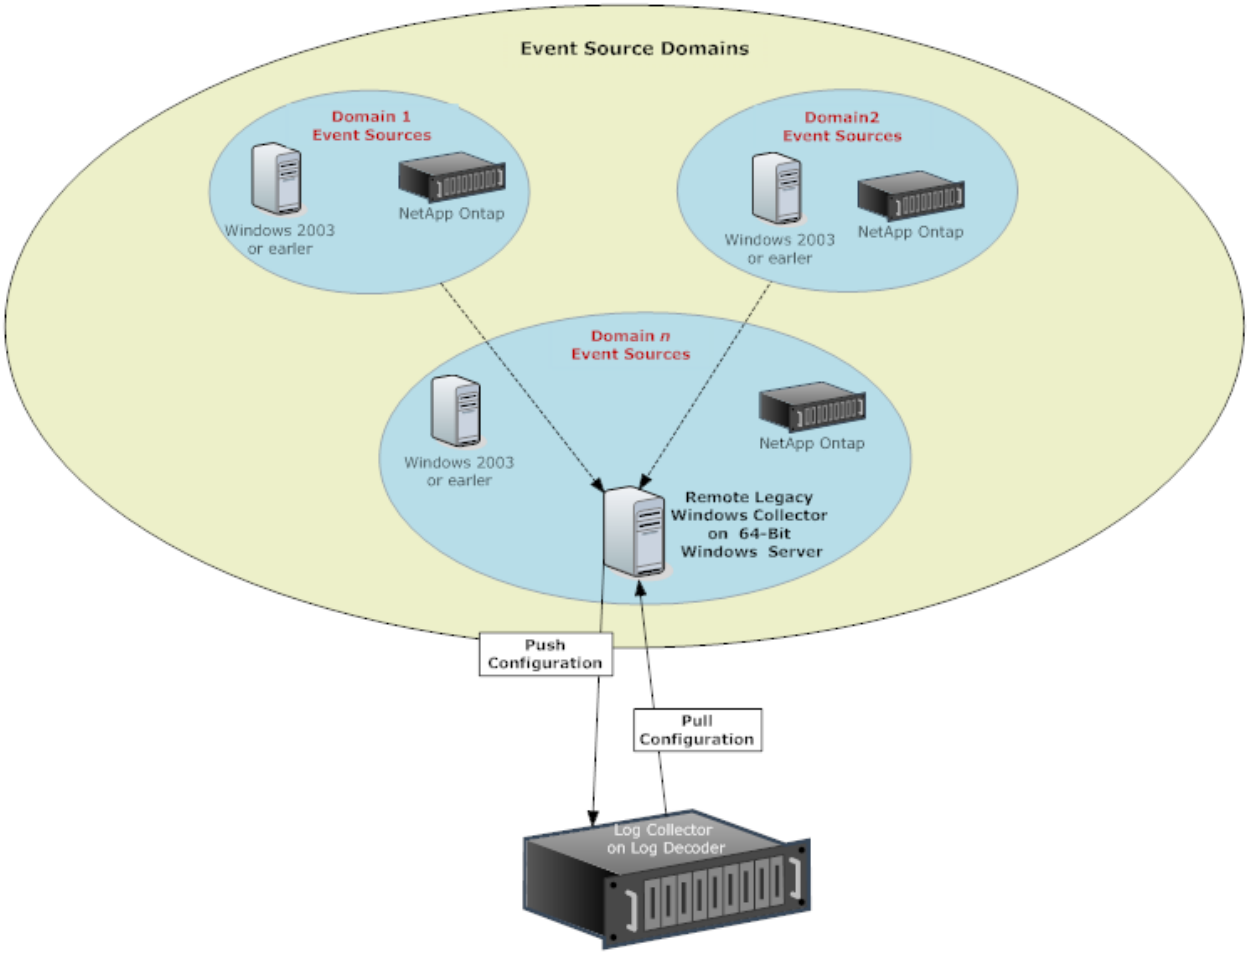
NetApp appliances running Data ONTAP support a native auditing framework that is similar to Windows Servers. When configured, this auditing framework generates and saves audit events in Windows.evt file format. The Windows Legacy collection protocol supports collection of events from such NetApp.evt files. You set up these event sources under the netapp_evt event source type.

The NetApp Data ONTAP appliance is configured to generate CIFS Auditing events and save them periodically as.evt files in a format that includes the timestamp in the filename. Refer to the Network Appliance Data ONTAP Event Source Configuration Guide on NetWitness Link for details. The collection protocol saves the timestamp of the last processed.evt filename to keep track of collection status.

Net App Specific Parameters

Most of the parameters that you maintain in Add/Edit Source dialog apply to both Windows Legacy and Net App events sources.

The following two parameters are unique to NetApp event sources.



- **Event Directory Path** - The NetApp appliance generates event data and saves it in.evt files in a shareable directory on the NetApp appliance. NetWitness requires you to specify this directory path in the Event Directory Path parameter
- **Event File Prefix** - Similar to the Event Directory Path, NetWitness requires you to specify the prefix (for example, adtlog.) of the event data.evt files so that NetWitness can process this data.

In each polling cycle, NetWitness browses the configured NetApp shared path for the **.evt** files that you identified with the Event Directory Path and Event File Prefix parameters. NetWitness:

- Sorts Files matching the event-file-prefix.YYMMDDhhmmss.evt format in ascending order.
- Uses the timestamp of the last file processed to determine the files that still need processing. If NetWitness finds a partially processed file, it skips the events already processed.

Deployment Scenario

The Windows Legacy collection protocol collects event data from Windows 2003 or earlier, and NetApp ONTAP appliance, event sources. The Windows Legacy Remote Collector is the SA Legacy Windows Collector installed on physical or virtual Windows 2008 64-bit server in your event source domain.

Set Up the Windows Legacy Collector

This topic tells you where to find the executable and instructions required to install or upgrade the Windows Legacy collector in your Windows Legacy domain or domains.

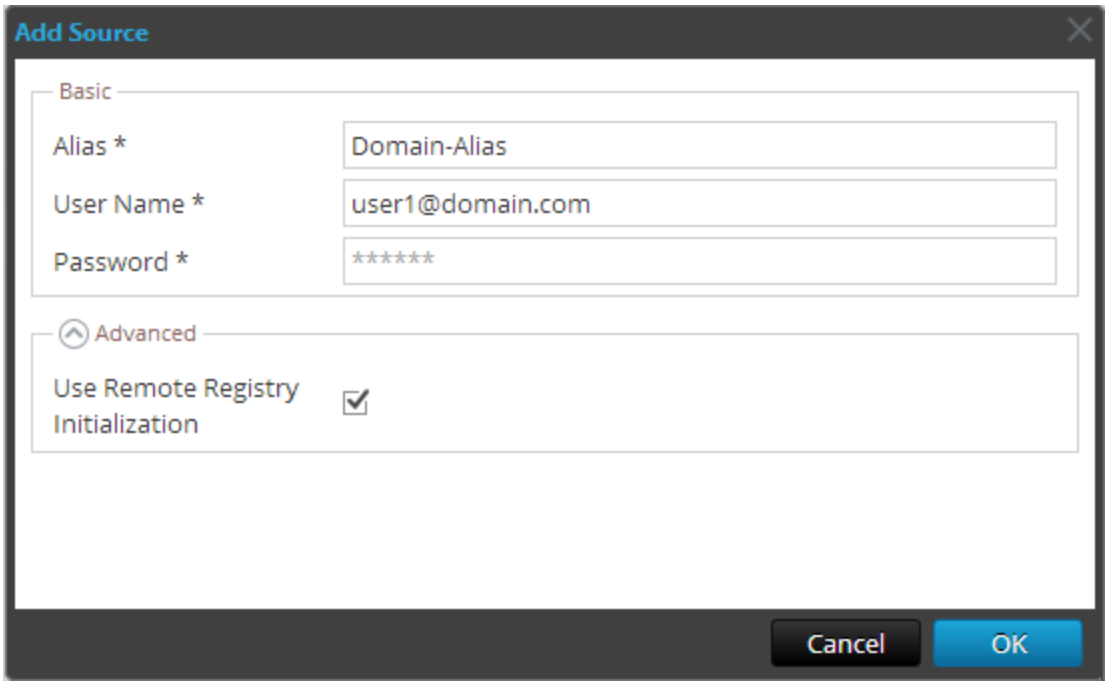
You install the NetWitness Windows Legacy collector on a physical or virtual Windows 2008 R2 SP1 64-Bit server using the **NWLegacyWindowsCollector-11.*version-number.exe***. You download the **NWLegacyWindowsCollector-11.*version-number.exe*** from NetWitness Link. Please refer to the *NetWitness 11.x Windows Legacy Collection Upgrade & Installation Instructions* for the details on how to install or upgrade Windows Legacy collection.

Note: The Microsoft Management Console (MMC) should be closed during the installation process.

Configure Windows Legacy and NetApp Event Sources

This topic tells you how to configure Windows Legacy event sources in NetWitness.

The Windows Legacy collection protocol collects event data from Windows 2003 or earlier event sources, and from NetApp event sources.



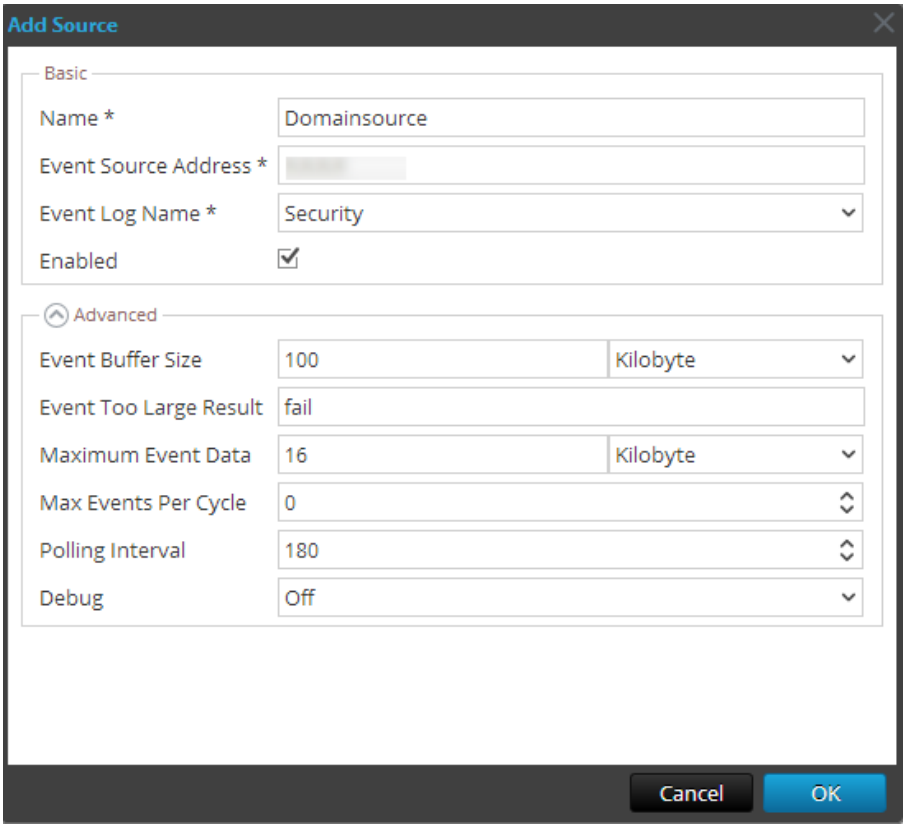
Prerequisites

Before you configure a Windows Legacy event source, make sure that you have:

1. Installed the NetWitness Windows Legacy Remote Collector on a physical or virtual Windows 2008 64-bit server.
2. Added this Windows Legacy Remote Collector to NetWitness.

Add a Windows Legacy Event Source

1. Access the Services view by selecting **(Admin) > Services** from the NetWitness menu.
2. In the **Services** grid, select a **Windows Legacy Log Decoder** service.
3. Under Actions, select **> View > Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Sources** tab.
5. In the **Event Sources** tab, select one of the following options from the drop-down menu.
   - Windows Legacy/Windows.
   - Windows Legacy/NetApp.
6. Configure the alias:
   a. Click in the **Event Categories** panel toolbar.
   The **Add Source** dialog is displayed.
   b. Specify values for the parameters and click **OK**.



Note: By default, **Remote Registry Initialization** is selected. For details, see Remote Registry Access below.

The newly added windows event source type is displayed in the **Event Categories** panel.

7. Add the event source:

   a. Select the new alias in the **Event Categories** panel and click + in the **Source** panel toolbar.
   The **Add Source** dialog is displayed.

   b. Specify values for the event source parameters and click **OK**.

For details, see Windows Legacy Configuration Parameters below.

The newly added Windows event source is displayed in the **Event Categories** panel.

Remote Registry Access

Windows Legacy Collector performs an initial verification of the event source before collecting data. By default, Windows Legacy Collector uses Windows Management Instrumentation (WMI) method to perform this initial verification. If you enable Remote registry access method, Windows Legacy Collector performs a remote registry query to verify the event source.

Configure Push or Pull between Log Collector and Windows Legacy Collector

You can configure the Windows Legacy Collector to push event data to a Local Collector, or you can configure a Local Collector to pull event data from the Windows Legacy Collector.

To configure a Local Collector or the Windows Legacy Collector:

1. Go to  **(Admin) > Services**.
2. Select a Local Collector or the Windows Legacy Collection service.
3. Under Actions, select  **> View > Config** to display the Log Collection configuration parameter tabs.
4. Depending on your selection in step 2:
   - If you selected a Local Collector, the **Remote Collectors** tab is displayed. Select the Windows Legacy Collector from which the Local Collector pulls events in this tab.
   - If you selected a Windows Legacy Collector, the **Local Collectors** are displayed. Select the Local Collectors to which the Windows Legacy Collector pushes events in this tab.

Windows Legacy Configuration Parameters

The following table describes the basic parameters for a Windows Legacy event source.

Note: Required parameters are marked with an asterisk. All other parameters are optional.

Feature	Description
Name*	The name of the event source. Valid value is a name in the **[_a-zA-Z] [_a-zA-Z0-9]*** range. You can use a dash "-" as part of the name.
Event Source Address*	IP address of the event source. Valid value is an IPv4 address, IPv6 address, or a hostname including a fully qualified domain name. NetWitness defaults to **127.0.0.1**. Log Collector converts the hostname to lower-case letters to prevent duplicate entries.
Event Log Name	The name of the event log from which to collect event data (for example, **System**, **Application**, or **Security**). The following are examples of some of these channels: • **System** - applications that run under system service accounts (installed system services), drivers, or a component or application that has events that relate to the health of the system. • **Application** - all user-level applications. This channel is unsecured and it is open to any application. If an application has extensive information, you should define an application-specific channel for it. • **Security** - the Windows Audit Log (event log) used exclusively for the Windows Local Security Authority.

Feature	Description
Enabled	Select this checkbox to collect from this event source. If you do not check this checkbox, the Log Collector does not collect events from this event source.
Event Directory Path	NetApp **.evt or.evtx** files directory path. This must be the UNC path. The NetApp generates event data and saves it in.evt or.evtx files in a shareable directory on the NetApp appliance. • In each polling cycle, Log Collector browses the configured NetApp shared path for the.evt files that you identified with the **Event Directory Path** and **Event File Prefix parameters**. Log Collector : ◦ sorts files that match the **event-file-prefix.YYMMDDhhmmss.evt** format in ascending order. ◦ uses the timestamp of the last file processed to determine the files that still need processing. If Log Collector finds a partially processed file, it skips the events already processed. • In each polling cycle, Log Collector browses the configured NetApp shared path for the **.evtx** files that you identified with the **Event Directory Path** and **Event File Prefix parameters**. Log Collector : ◦ sorts files that match the **event-file-prefix.YYMMDDhhmmssms.evtx** format in ascending order. ◦ uses the timestamp of the last file processed to determine the files that still need processing. If Log Collector finds a partially processed file, it skips the events already processed.
Event File Prefix	Prefix of the **.evt** files (for example, **adtlog**.) saved in the **Event Directory Path**.
Cancel	Closes the dialog without adding the Windows Legacy event source.
OK	Adds the current parameter values as a new event source

The following table describes the advanced parameters for a Windows Legacy event source.

Feature	Description
Event Buffer Size	Maximum size of the data the Log Collector pulls from the event source for each request. Valid value is a number in **0** to **511** Kilobytes range. You specify this value in **Kilobytes**.
Event Too Large Result	Tells Log Collector what to do if an event is too large for the event buffer.
Maximum Event Data	Maximum size of event data to include in the output. Valid value is a number in **0** to **511Kilobytes** range. You specify this value in **Kilobytes** or **Megabytes**. • 1 Kilobyte - 100 Megabytes • 0 = do not include event data in the output.
Max Events Per Cycle	The maximum number of events per polling cycle (how many events collected per polling cycle).
Polling Interval	Interval (amount of time in seconds) between each poll. The default value is **180**. For example, if you specify 180, the collector schedules a polling of the event source every 180 seconds. If the previous polling cycle is still underway, it will wait for it to finish that cycle. If you have a large number of event sources that you are polling, it may take longer than 180 seconds for the polling to start because the threads are busy.

Feature	Description
Debug	**Caution:** Only enable debugging (set this parameter to On or Verbose) if you have a problem with an event source and you need to investigate this problem. Enabling debugging will adversely affect the performance of the Log Collector. Enables or disables debug logging for the event source. Valid values are: • **Off** = (default) disabled • **On** = enabled • **Verbose** = enabled in verbose mode - adds thread information and source context information to the messages. This parameter is designed to debug and monitor isolated event source collection issues. If you change this value, the change takes effect immediately (no restart required). Limit the number of event sources for which you use Verbose debugging to minimize performance impact.

Troubleshoot Windows Legacy and NetApp Collection

This topic highlights possible problems that you may encounter with Windows Legacy Collection (LWC) and suggested solutions to these problems.

Note: In general, you receive more robust log messages by disabling SSL.

Protocol Restart Problems

Problem	Possible Causes	Solutions
You restart the Legacy Windows collection protocol, but NetWitness is not receiving events.	The logcollector service is stopped.	Restart the **logcollector** service. 1. Log on to the **Windows Legacy Remote Collector**. 2. Go to **Start > Administrative Tools > Task Scheduler** and click on **Task Scheduler Library**. 3. In the right panel, look for the **restartnwlogcollector** task and make sure that it is running. 4. If this is not the case, right-click **restartnwlogcollector** and select **Run**.

Installation Problems

If you see any of the following messages in the **MessageBroker.log**, you may have issues.

Log Messages	Any message that contains "rabbitmq"
Possible Cause	RabbitMQ service may not be running. Port **5671** may not be opened.
Solutions	Make sure that the RabbitMQ service is running. Make sure that port **5671** is open.
Log Messages	Error: Adding logcollector user account. Error: Adding administrator tag to logcollector account. Error: Adding logcollection vhost. Error: Setting permissions to logcollector account in all vhosts.
Possible Cause	**rabbitmq-server** was not running when installer tried to create users and vhosts.

Solutions	Make sure that the **RabbitMQ** service is running and run below commands manually.
	`rabbitmqctl -q add_user logcollector netwitness`
	`rabbitmqctl -q set_user_tags logcollector administrator`
	`rabbitmqctl -q add_vhost logcollection`
	`rabbitmqctl -q set_permissions -p / logcollector ".*" ".*" ".*"`
	`rabbitmqctl -q set_permissions -p logcollection logcollector ".*" ".*" ".*"`

Windows Legacy Federation Script Issues

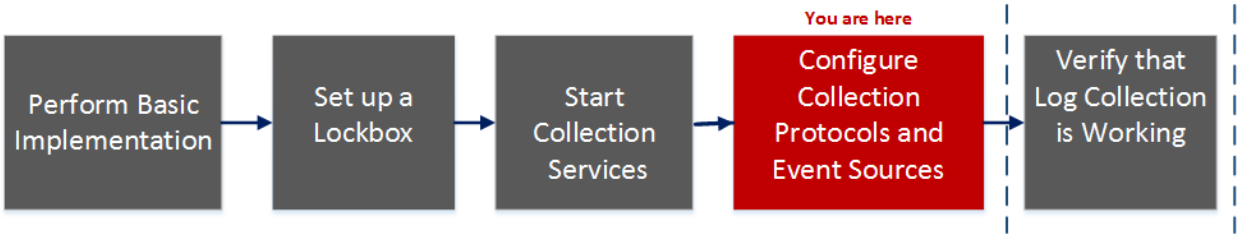
If you see any of the following messages in the federation script log, you may have issues.

Problem	Possible Symptoms	Solutions
Federation script started, but the LWC service went down.	NetWitness log shows connection failure exceptions with Windows Legacy Collector.	This issue is fixed automatically after restarting the Windows Legacy service.

Problem	Possible Symptoms	Solutions

LWC is running, but RabbitMQ service is down or restarting.	Federation log file at Windows Legacy side displays an error message about RabbitMQ service being down.
	The log file to look at is: **C:\NetWitness\ng\logcollector**
	The following error message is logged in case RabbitMQ is not running:
	`"Unable to connect to node logcollector@localhost: nodedown"`
	The following diagnostics messages are displayed:
	`attempted to contact: [logcollector@localhost]`
	`logcollector@localhost: * connected to epmd (port 4369) on localhost * epmd reports: node 'logcollector' not running at all other nodes on localhost: ['rabbitmqctl-4084'] * suggestion: start the node`
		Run the **federation.bat** script manually at LWC. To run the **federate.bat** script manually, perform the following steps:
		1. Go to folder C**:\Program Files\NwLogCollector** where the Windows Legacy instance is installed.
		2. Locate the file **federate.bat i**n this folder. Select the file and right click.
		3. Select **Run as Administrator**.
		4. To monitor the log file, navigate to **C:\NetWitness\ng\logcollector\federate.log** while the **federate.bat** script is being executed.
		Note: Make sure the log file does not show any errors while the script is being executed.

RabbitMQ service is down on the NetWitness side.	NetWitness User Interface pages do not work.	Restart RabbitMQ service.
Customer receives a Health and Wellness notification, or the following Health and Wellness Alarm is displayed: "Communication failure between Master NetWitness Host and a Remote Host" with LWC Host as the Remote IP.	**Federate.bat** script failed to run successfully.	If the **Federate.bat** script did not run correctly, run it manually as described previously.



Reference

AWS Parameters

This topic provides an overview of the AWS collection configuration parameters for deploying a remote log collection service (VLC) in an Amazon Web Services (AWS) environment.

Workflow

This workflow illustrates the basic tasks needed to start collecting events through Log Collection.

What do you want to do?

Role	I Want to...	Documentation
Administrator	Perform basic Log Collection implementation	Basic Implementation
Administrator	Set up a lockbox to maintain lockbox settings.	Set Up a Lockbox
Administrator	Start Log Collection services.	Start Collection Services
Administrator	*Configure Log Collection protocols and event sources.	Configure Collection Protocols and Event Sources
Administrator	Verify that Log Collection is working.	Verify That Log Collection Is Working

*You can perform this task here.

Related Topics

- Configure AWS (CloudTrail) Event Sources in NetWitness

The following table describes the **Basic** configuration parameter for AWS collection.

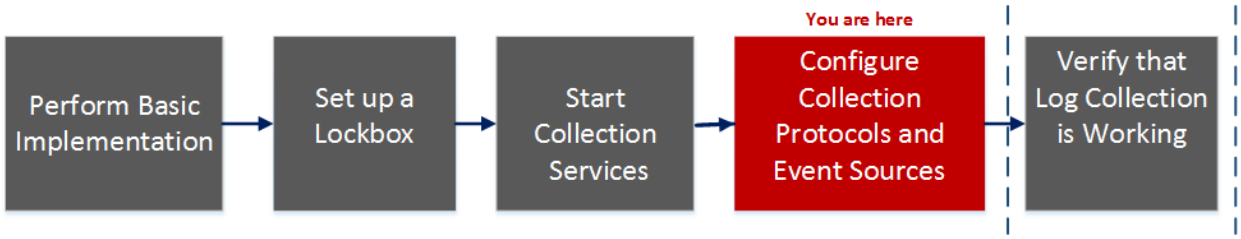
Note: Required parameters are marked with an asterisk. All other parameters are optional.

Parameter	Description
Name *	Name of the event source.
Enabled	Select the check box to enable the event source configuration to start collection. The check box is selected by default.
Account Id *	Account Identification code of the S3 Bucket

Parameter	Description
S3 Bucket Name *	Name of the AWS (CloudTrail) S3 bucket. Amazon S3 bucket names are globally unique, regardless of the AWS (CloudTrail) region in which you create the bucket. You specify the name at the time you create the bucket. Bucket names should comply with DNS naming conventions. The rules for DNS-compliant bucket names are: • Bucket names must be at least three and no more than 63 characters long. • Bucket names must be a series of one or more labels. Adjacent labels are separated by a single period ".". Bucket names can contain lowercase letters, numbers, and hyphens. Each label must start and end with a lowercase letter or a number. • Bucket names must not be formatted as an IP address (for example, 192.168.5.4). The following examples are **valid** bucket names: • `myawsbucket` • `my.aws.bucket` • `myawsbucket.1` The following examples are **invalid** bucket names: • `.myawsbucket` - Do not start a Bucket Name with a period • `myawsbucket.` - Do not end a Bucket Name with a period • `my..examplebucket` - Only use one period between labels.
Access Key *	Key used to access the S3 bucket. Access Keys are used to make secure REST or Query protocol requests to any AWS service API. Please refer to Manage User Credentials on the Amazon Web Services support site for more information on Access Keys.
Secret Key *	Secret key used to access the S3 bucket.
Region *	Region of the S3 bucket. `us-east-1` is the default value.
Region Endpoint	Specifies the AWS CloudTrail hostname. For example, for an AWS public cloud for us-east region, the Region Endpoint would be s3.amazonaws.com. More information can be found at http://docs.aws.amazon.com/general/latest/gr/rande.html#s3_region. This parameter is necessary to collect CloudTrail logs from AWS Government or Private clouds.
Use Proxy	Enable **Use Proxy** to set proxy for AWS server. By default, it is disabled.
Proxy Server	Enter the proxy name you want to connect to access the AWS server.
Proxy Port	Enter the port number that connects to the proxy server to access the AWS server.
Proxy User	Enter the user name to authenticate with the proxy server.
Proxy Password	Enter the password to authenticate with proxy port.
Start Date *	Starts AWS (CloudTrail) collection from the specified number of days in the past, measured from the current timestamp. The default value is 0, which starts from today. The range is 0–89 days.
Log File Prefix	Prefix of the files to be processed. **Note:** If you set a prefix when you set up your CloudTrail service, make sure to enter the same prefix in this parameter.

Parameter	Description
Cancel	Closes the dialog without adding the AWS (CloudTrail).
OK	Adds the current parameter values as a new AWS (CloudTrail).

The following table describes the **Advanced** configuration parameter for AWS collection.



Parameter	Description
Debug	**Caution:** Only enable debugging (set this parameter to On or Verbose) if you have a problem with an event source and you need to investigate this problem. Enabling debugging will adversely affect the performance of the Log Collector. Enables or disables debug logging for the event source. Valid values are: • **Off** = (default) disabled **On** = enabled • **Verbose** = enabled in verbose mode - adds thread information and source context information to the messages. This parameter is designed to debug and monitor isolated event source collection issues. The debug logging is verbose, so limit the number of event sources to minimize performance impact. If you change this value, the change takes effect immediately (no restart required).
Command Args	Arguments added to the script.
Polling Interval	Interval (amount of time in seconds) between each poll. The default value is 60. For example, if you specify 60, the collector schedules a polling of the event source every 60 seconds. If the previous polling cycle is still underway, it will wait for it to finish that cycle. If you have a large number of event sources that you are polling, it may take longer than 60 seconds for the polling to start because the threads are busy.
SSL Enabled 	Select the check box to communicate using SSL. The security of data transmission is managed by encrypting information and providing authentication with SSL certificates. The check box is selected by default.
Test Connection	Validates the configuration parameters specified in this dialog are correct. For example, this test validates that: • NetWitness can connect with the S3 Bucket in AWS using the credentials specified in this dialog. • NetWitness can download a log file from the bucket (test connection would fail if there were no log files for the entire bucket, but this would be extremely unlikely).

Azure Parameters

Microsoft Azure is a cloud computing platform and infrastructure for building, deploying, and managing applications and services through a global network of Microsoft-managed data centers.

Workflow

This workflow illustrates the basic tasks needed to start collecting events through Log Collection.

What do you want to do?

Role	I Want to...	Documentation
Administrator	Perform basic Log Collection implementation	Basic Implementation
Administrator	Set up a lockbox to maintain lockbox settings.	Set Up a Lockbox
Administrator	Start Log Collection services.	Start Collection Services
Administrator	*Configure Log Collection protocols and event sources.	Configure Collection Protocols and Event Sources
Administrator	Verify that Log Collection is working.	Verify That Log Collection Is Working

*You can perform this task here.

Related Topics

- Configure Azure Event Sources in NetWitness

Azure Event Source Configuration Parameters

This topic describes the Azure event source configuration parameters.

Basic Parameters

Note: Required parameters are marked with an asterisk. All other parameters are optional.

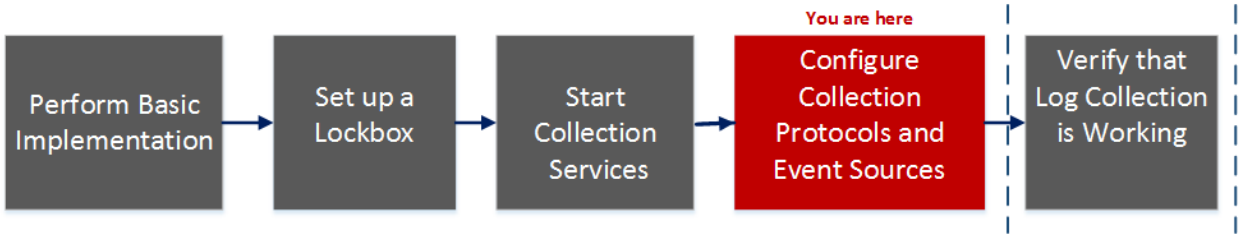
Name	Description
Name *	Enter an alpha-numeric, descriptive name for the source. This value is only used for displaying the name on this screen.

Name	Description
Enabled	Select the checkbox to enable the event source configuration to start collection. The checkbox is selected by default.
Client ID *	The Client ID is found the Azure Application Configure tab. Scroll down until you see it.
Client Secret *	When you are configuring the event source, the client secret is displayed when you are creating a key, and you select a duration of validation. Make sure to save this, because you will only be able to see it once, and it cannot be retrieved later.
API Resource Base URL *	Enter `https://management.azure.com/`. Be sure to include the trailing slash (/).
Federation Metadata Endpoint *	In your Azure application, click the **View Endpoints** button (near the bottom of the pane). There are a lot of links that all begin with the same string. Compare the URLs and find the common string that begins most of them. This common string is the endpoint that you need to enter here.
Subscription ID *	You can find this in the Microsoft Azure dashboard: click on Subscriptions at the bottom of the list on the left.
Tenant Domain *	Go to the active directory and click on the directory. In the URL, the tenant domain is the string directly following **manage.windowsazure.com/**. The tenant domain is the string up to and including the **.com**.
Resource Group Names *	In Azure, select Resource groups from the left navigation pane, then select your group.
Start Date *	Choose the date from which to start collecting. Default's to the current date.
Test Connection	Checks the configuration parameters specified in this dialog to make sure they are correct.

Advanced Parameters

Click next to **Advanced** to view and edit the advanced parameters, if necessary.

Name	Description
Polling Interval	Interval (amount of time in seconds) between each poll. The default value is **180**. For example, if you specify 180, the collector schedules a polling of the event source every 180 seconds. If the previous polling cycle is still underway, the collector waits for that cycle to finish. If you have a large number of event sources that you are polling, it may take longer than 180 seconds for the polling to start because the threads are busy.
Max Duration Poll	Maximum duration, in seconds, of a polling cycle. A zero value indicates no limit.



Name	Description
Max Events Poll	The maximum number of events per polling cycle (how many events collected per polling cycle).
Max Idle Time Poll	Maximum duration, in seconds, of a polling cycle. A zero value indicates no limit.
Command Args	Optional arguments to be added to the script invocation.
Debug	**Caution:** Only enable debugging (set this parameter to On or Verbose) if you have a problem with an event source and you need to investigate this problem. Enabling debugging will adversely affect the performance of the Log Collector. Enables or disables debug logging for the event source. Valid values are: • **Off** = (default) disabled • **On** = enabled • **Verbose** = enabled in verbose mode - adds thread information and source context information to the messages. This parameter is designed to debug and monitor isolated event source collection issues. If you change this value, the change takes effect immediately (no restart required). The debug logging is verbose, so limit the number of event sources to minimize performance impact.

Check Point Parameters

The Check Point Collection protocol collects events from Check Point event sources using OPSEC LEA. OPSEC LEA is the Check Point Operations Security Log Export API that facilitates the extraction of logs.

Workflow

This workflow illustrates the basic tasks needed to start collecting events through Log Collection.

What do you want to do?

Role	I Want to...	Documentation
Administrator	Perform basic Log Collection implementation	Basic Implementation
Administrator	Set up a lockbox to maintain lockbox settings.	Set Up a Lockbox
Administrator	Start Log Collection services.	Start Collection Services
Administrator	*Configure Log Collection protocols and event sources.	Configure Collection Protocols and Event Sources
Administrator	Verify that Log Collection is working.	Verify That Log Collection Is Working

*You can perform this task here.

Related Topics

- Configure Check Point Event Sources in NetWitness

Check Point Collection Configuration Parameters

Note: Required parameters are marked with an asterisk. All other parameters are optional.

Basic Parameters

Parameter	Description
Name*	Name of the event source.
Address*	IP Address of the Check Point server.

Parameter	Description
Server Name*	Name of the Check Point server.
Certificate Name	Certificate name for secure connections to use when the transport mode is https. If set, the certificate must exist in the certificate trust store that you created using the Settings tab. Select a certificate from the drop-down list. The file naming convention for Check Point event source certificates is **checkpoint_*name-of-event-source***.
Client Distinguished	Enter the Client Distinguished Name from the Check Point server.
Client Entity Name	Enter the Client Entity Name from the Check Point server.
Server Distinguished	Enter the Server Distinguished Name from the Check Point server.
Enabled	Select the check box to enable the event source configuration to start collection. The check box is selected by default.
Pull Certificate	Select the checkbox to pull a certificate for first time. Pulling a certificate makes it available from the trust store.
Certificate Server Address	IP Address of the server on which the certificate resides. Defaults to the event source address.
Password	Only active when you select the Pull Certificate checkbox for first time. Password required to pull the certificate. The password is the activation key created when adding an OPSEC application to Check Point on the Check Point server.

Determine Advanced Parameter Values for Check Point Collection

You use less system resources when you configure a Check Point event source connection to stay open for a specific time and specific event volume (transient connection). NetWitness defaults to the following connection parameters that establish a transient connection:

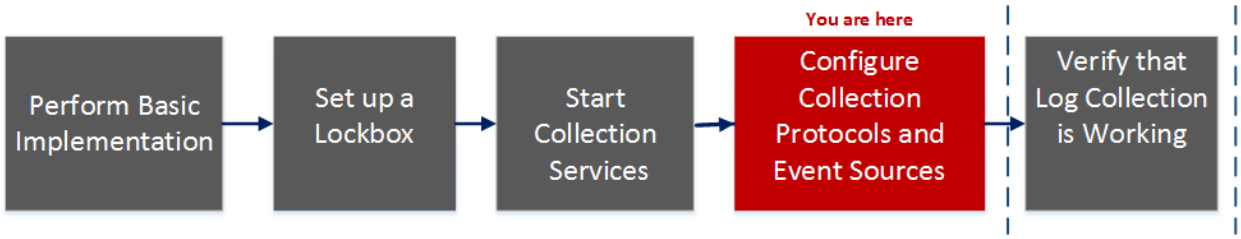
- Polling Interval = **180** (3 minutes)
- Max Duration Poll = **120** (2 minutes)
- Max Events Poll = **5000** (5000 events per polling interval)
- Max Idle Time Poll = **0**

For very active Check Point event sources, it is a good practice to set up a connection that stays open until you stop collection (persistent connection). This ensures that Check Point collection maintains the pace of the events generated by these active event sources. The persistent connection avoids restart and connection delays and prevents Check Point collection from lagging behind event generation.

To establish a persistent connection for a Check Point event source, set the following parameters to the following values:

- Polling Interval = **-1**
- Max Duration Poll = **0**
- Max Events Poll = **0**
- Max Idle Time Poll = **0**

Parameter	Description
Port	Port on the Check Point server that Log Collector connects to. Default value is 18184.
Collect Log Type	Type of logs that you want to collect: Valid values are: • **Audit** - collects audit events. • **Security** - collects security events. If you want to collect both audit and security events, you must create a duplicate event source. For example, first you would create an event source with Audit selected pulling a certificate into the trust store for this event source. Next you would create another event source with the same values except that you would select Security for the Collect Log Type and you would select the same certificate in Certificate Name that you pulled when you set up the first set of parameters for this event source and you would make sure that Pull Certificate was not selected.
Collect Logs From	When you set up a Check Point event source, NetWitness collects events from the current log file. Valid values are: • **Now** - Start collecting logs now (at this point in time in the current log file). • **Start of Log** - Collect logs from the beginning of the current log file. If you choose "Start of Log" for this parameter value, you may collect a very large amount of data depending on how long the current log file has been collecting events. Note that this option is effective only for the first collection session.
Polling Interval	Interval (amount of time in seconds) between each poll. The default value is **180**. For example, if you specify 180, the collector schedules a polling of the event source every 180 seconds. If the previous polling cycle is still underway, it will wait for it to finish that cycle. If you have a large number of event sources that you are polling, it may take longer than 180 seconds for the polling to start because the threads are busy.
Max Duration Poll	The maximum duration of polling cycle (how long the cycle lasts) in seconds.
Max Events Poll	The maximum number of events per polling cycle (how many events collected per polling cycle).
Max Idle Time Poll	Maximum idle time, in seconds, of a polling cycle. 0 indicates no limit.**> 300** is the default value.
Forwarder	Enables or disables the Check Point server as a forwarder. By default it is disabled.



Parameter	Description
Log Type (Name Value Pair)	Logs from the event source in Name Value format. By default it is disabled.
Debug	**Caution:** Only enable debugging (set this parameter to "On" or "Verbose") if you have a problem with an event source and you need to investigate this problem. Enabling debugging will adversely affect the performance of the Log Collector. Enables and disables debug logging for the event source. Valid values are: • **Off** = (default) disabled • **On** = enabled • **Verbose** = enabled in verbose mode - adds thread information and source context information to the messages. This parameter is designed to debug and monitor isolated event source collection issues. The debug logging is verbose, so limit the number of event sources to minimize performance impact. If you change this value, the change takes effect immediately (no restart required).

File Parameters

This topic describes the File Collection configuration parameters.

Workflow

This workflow illustrates the basic tasks needed to start collecting events through Log Collection.

What do you want to do?

Role	I Want to...	Documentation
Administrator	Perform basic Log Collection implementation	Basic Implementation
Administrator	Set up a lockbox to maintain lockbox settings.	Set Up a Lockbox
Administrator	Start Log Collection services.	Start Collection Services

- Configure File Event Sources in NetWitness

File Collection Event Source Parameters

The following table provides descriptions of the File Collection source parameters.

The following table describes the **Basic** configuration parameter for File collection.

Note: Required parameters are marked with an asterisk. All other parameters are optional.

Name	Description

Name	Description
File Directory*	Collection directory (for example, **Eur_London100**) into which the File event source places its files. Valid value is a character string that is conforms to the following regular expression: **[_a-zA-Z][_a-zA-Z0-9]*** This means that the file directory must start with a letter followed by numbers, letters, and underscores. Do not modify this parameter after you start collecting event data. After you create the collection, the Log Collector creates the work, save, and error sub-directories under the collection directory.
Address*	IP address of the event source. Valid value is an **IPv4 address**, **IPv6 address**, or a **hostname** including a fully-qualified domain name.
File Spec	Regular expression. For example, **^.*$** = process everything.
File Encoding	Character encoding used by the syslog senders to this port. Defaults to UTF-8. **Note:** It is safe to leave this as UTF-8, since UTF-8 handles ASCII characters as well, and most senders have their encoding set to UTF-8. NetWitness has tested the following values: • EUC-KR • SJIS • GB3212/GBK • ISO_8859-1 (German) • ISO_8859-7 (Greek)
Cancel	Closes the dialog without making adding an event source type.
OK	Adds the parameters for the event source.

The following table describes the **Advanced** configuration parameter for File collection.

Name	Description
Ignore Encoding Conversion Errors	Select the check box to ignore encoding conversion errors and ignore invalid data. The check box is selected by default. **Caution:** This may cause parsing and transformation errors.

Name	Description
File Disk Quota	Determines when to stop saving files regardless of the **Save On Error** and **Save On Success** parameter settings. For example, a value of 10 indicates that when there is less than 10% available disk left, the Log Collector stops saving files to reserve enough space for your estimated normal collection processing. **Caution:** Available disk refers to a partition where the base collection directory is mounted. If the Log Decoder server has a 10TB disk size and 2TB is allocated to base collection directory, then setting this value to 10 causes log collection to stop when less than 0.2TB (10% of 2TB) of space is left. It does not mean 10% of 10TB. Valid value is a number in the **0** to **100** range. **10** is the default.
Sequential Processing	Sequential processing flag: • Select the check box (default) to process event source files in collection order. • Do not select the checkbox to process event source files in parallel.
Save On Error	Save on error flag. Check the checkbox to retain the **eventsource collection** file when the Log Collector it encounters an error. The check box is selected by default.
Save On Success	Save **eventsource collection** file after processing flag. Check the checkbox to save the eventsource collection file after processing it. The check box is not selected by default.
Eventsource SSH Key	SSH public key used to upload files for this event source. Please refer to the *Generate Key Pair on Event Source and Import Public Key to Log Collector* section in the Install and Update the SFTP Agent Guide for instructions on generating keys. **Note:** If File collection is stopped, NetWitness does not update the authorized_keys file with the SSH public key that you add or modify in this parameter. You must restart File collection to update the public key. You can add or modify the value of the public key in this parameter in multiple File event sources without File collection running, but NetWitness will not update the **authorized_keys** file until File collection is restarted.
Manage Error Files	By default, the Log Collector uses the **File Disk Quota** parameter to ensure that the disk does not fill up with error files. If you set this parameter to **true**, you can specify one of these: • Maximum space allotted to error files in the **Error Files Size** parameter. • Maximum number of error files allowed in **Error Files Count** parameter. A reduction percent is also specified, which tells the system how much to reduce when the maximum is reached. Select the check box to manage error files. The check box is not selected by default.

Name	Description
Error Files Size	Only valid if the **Manage Error Files** and **Save On Error** parameters are set to true. Specifies to what extent NetWitness saves error files. The value that you specify is the maximum total size of all the files in the error directory. Valid value is a number in **0** to **281474976710655** range. You specify these values in either **Kilobytes**, **Megabytes**, or **Gigabytes**. **100 Megabytes** is the default. If you change this parameter, the change does not take effect until you restart collection or restart the Log Collector service.
Error Files Count	Only valid if the **Manage Error Files** and **Save On Error** parameters are set to true. Maximum number of error files allowed in the error directory. Valid value is a number in **0** to **65536** range. **65536** is the default. If you change this parameter, the change does not take effect until you restart collection or restart the Log Collector service.
Error Files Reduction %	Percent amount by size or count of the error files that the Log Collector service removes when the maximum size or count has been reached. The service removes the oldest files first. Valid value is a number in the **0** to **100** range. **10** is the default.
Manage Saved Files	Select the check box to manage saved files. The check box is not selected by default. By default, the Log Collector uses the **File Disk Quota** parameter to ensure that the disk does not fill up with saved files. If check this check box, you can specify one of these: • Maximum space allotted to saved files in the **Saved Files Size** parameter. • Maximum number of saved files allowed in **Saved Files Count** parameter. A reduction percent is also specified, which tells the system how much to reduce when the maximum is reached.
Saved Files Size	Only valid if the **Manage Saved Files** and **Save On Success** parameters are set to true. Maximum total size of all the files in the save directory. Valid value is a number in the **0** to **281474976710655** range. You specify these values in either **Kilobytes**, **Megabytes**, or **Gigabytes**. **100 Megabytes** is the default. If you change this parameter, the change does not take effect until you restart collection or restart the Log Collector service.
Saved Files Count	Only valid if the **Manage Saved Files** and **Save On Success** parameters are set to true. Maximum number of saved files in the save directory. Valid value is a number in **0** to **65536** range. **65536** is the default. If you change this parameter, the change does not take effect until you restart collection or restart the Log Collector service.
Saved File Reduction %	Percent amount by size or count of the saved files that the Log Collector service removes when the maximum size or count has been reached. The service removes the oldest files first. Valid value is a number in the **0** to **100** range. **10** is the default.

Name	Description
Debug	**Caution:** Only enable debugging (set this parameter to **On** or **Verbose**) if you have a problem with an event source and you need to investigate this problem. Enabling debugging will adversely affect the performance of the Log Collector. Enables or disables debug logging for the event source. Valid values are: • **Off** = (default) disabled • **On** = enabled • **Verbose** = enabled in verbose mode - adds thread information and source context information to the messages. This parameter is designed to debug and monitor isolated event source collection issues. The debug logging is verbose, so limit the number of event sources to minimize performance impact. If you change this value, the change takes effect immediately (no restart required).

Log Collection Service System View

A Log Collector is a service that runs on a Log Decoder host (referred to as a Local Collector) or sends events from a Remote Collector to a Local Collector, and is configured and managed in a similar way to a Log Decoder.

To access the Log Collection Service System view, go to (Admin) > Services and select a Log Collector service, then select View > System.

Workflow

This workflow illustrates the basic tasks needed to start collecting events through Log Collection.

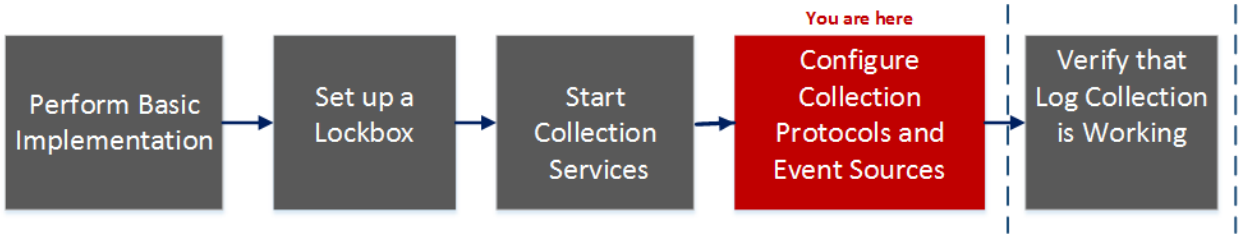
ODBC Event Source Configuration Parameters

This topic tells you how to configure ODBC collection protocol which collects events from event sources that store audit data in a database using the Open Database Connectivity (ODBC) software interface.



Access ODBC Configuration Parameters

To access the ODBC Event Source Configuration Parameters:

1. Go to  **(Admin) > Services** from the NetWitness menu.
2. Select a Log Collection service.
3. Select  **> View > Config** to display the Log Collection configuration parameter tabs.
   The **Service Config** view is displayed with the Log Collector **General** tab open.
4. Click the **Event Sources** tab, and select **ODBC/Config** from the drop-down menu.

Workflow

This workflow illustrates the basic tasks needed to start collecting events through Log Collection.

What do you want to do?

Role	I Want to...	Documentation
Administrator	Perform basic Log Collection implementation.	Basic Implementation
Administrator	Set up a lockbox to maintain lockbox settings.	Set Up a Lockbox
Administrator	Start Log Collection services.	Start Collection Services
Administrator	*Configure Log Collection protocols and event sources.	Configure Collection Protocols and Event Sources
Administrator	Verify that Log Collection is working.	Verify That Log Collection Is Working

*You can perform this task here.

- Create Custom Typespec for ODBC Collection

Data Source Name (DSN) Parameters

Use the Sources panel to review, add, modify, and delete Data Source Name (DSN) parameters.

Sources Panel

An ODBC DSN tells the Log Collector how to reach an ODBC endpoint. You refer to an ODBC DSN when you configure a data source name with information such as which ODBC driver to use or the host name and port of the ODBC endpoint.

An ODBC DSN is a sequence of name-value pairs. For information about the valid names for a given ODBC data source type, such as Sybase, Microsoft SQL Server, or Oracle, please download the *DataDirect Connect Series for ODBC User's Guide and DataDirect Connect Series for ODBC User's Guide* in the Progress DataDirect Document Library.

Toolbar

The following table provides descriptions of the toolbar options.

Option	Description
	Opens the Add DSN dialog in which you add an event source for the event source type you selected in the Event Categories panel.
	Deletes the selected event sources.
	Opens the Edit DSN dialog in which you modify the configuration parameters for the selected event source. When you select multiple event sources, this option opens the Bulk Edit Source dialog in which you can edit the parameters values for the selected file directories.
	Opens the Bulk Add Option dialog in which you can import DSN parameters in bulk from a comma-separated values (CSV) file. The Bulk Add Option dialog has the following two options: • Import CSV File • Paste CSV Content
	Creates a **.csv** file that contains the parameters for the selected DSNs.
	Validates the configuration parameters for the selected ODBC database.

Add or Edit DSN Dialog

In this dialog, you add or modify an event source for the selected event source.

Basic Parameters

Note: Required parameters are marked with an asterisk. All other parameters are optional.

Name	Description
DSN*	The data source name (DSN) that defines the database from which to collect events. Select an existing DSN from the drop-down list. For details, see ODBC DSNs Event Source Configuration Parameters.
Username*	User name that the data source name uses to connect to the database. You must specify a user name when you create the event source.
Password	Password that the data source name uses to connect to the database. **Caution:** The password is encrypted internally and is displayed in its encrypted form.
Enabled	Select the checkbox to enable the event source configuration to start collection. The checkbox is selected by default.
Address*	For ODBC, this field is not used. The Log Collector uses the address in the **ODBC.ini** file.

Advanced Parameters

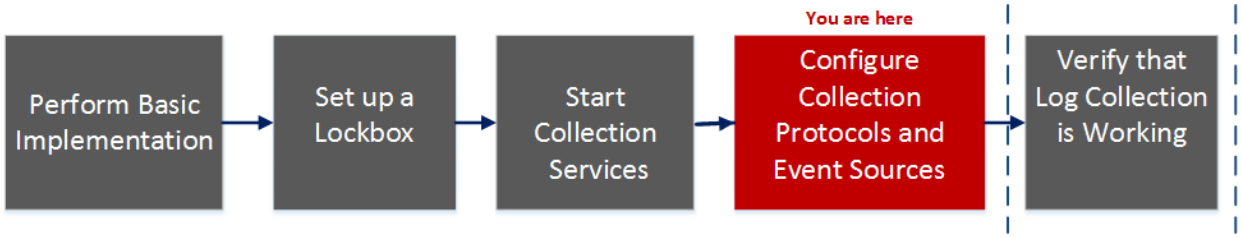
Name	Description
Max Cell Size	Maximum size in bytes of the data that the Log Collector can pull from one cell in the database. The default value is **2048**.
Nil Value	Character string that the Log Collector displays when NIL is returned for a cell in the database. Default value: “” (null).
Polling Interval	Interval (amount of time in seconds) between each poll. The default value is **180**. For example, if you specify 180, the collector schedules a polling of the event source every 180 seconds. If the previous polling cycle is still underway, the collector waits for that cycle to finish. If you have a large number of event sources that you are polling, it may take longer than 180 seconds for the polling to start because the threads are busy.
Max Events Poll	The maximum number of events per polling cycle (how many events collected per polling cycle).

Name	Description
Debug	**Caution:** Caution: Only enable debugging (set this parameter to On or Verbose) if you have a problem with an event source and you need to investigate this problem. Enabling debugging will adversely affect the performance of the Log Collector. Enables or disables debug logging for the event source. Valid values are: • **Off** = (default) disabled • **On** = enabled • **Verbose** = enabled in verbose mode - adds thread information and source context information to the messages. This parameter is designed to debug and monitor isolated event source collection issues. If you change this value, the change takes effect immediately (no restart required). The debug logging is verbose, so limit the number of event sources to minimize performance impact.
Initial Tracking Id	Initial identification code that the Log Collector assigns to this event source if collection is not started. If there is no value for this parameter, the Log Collector starts at the end of the table and only pulls rows after the end of the table as they are added. The default value is "" (null). For Example: `2020-11-11 05:05:11` **Note:** The Initial Tracking ID format varies based on the format of the tracking column used in the data query in the typespec. For Example: If the tracking column value is in epoch, the Initial Tracking ID must be in the epoch format.
Filename	For Microsoft SQL Server Event Sources only, the location of the trace files directory (for example, **C:\MyTraceFiles**). Refer to the NetWitness Microsoft SQL Server Event Source Configuration Guide, located on NetWitness Link.
Test Connection	Checks the configuration parameters specified in this dialog to make sure they are correct.
Cancel	Closes the dialog without adding or modifying DSN parameters.
OK	Adds or modifies the parameters for the DSN.

ODBC DSNs Event Source Configuration Parameters

Open Database Connectivity (ODBC) event sources require Data Source Names (DSNs) so you need to define DSNs with their associate value pairs for ODBC event source configuration.

Access ODBC Configuration Parameters



To access the ODBC Event Source Configuration Parameters:

1. Access the Services view by selecting  **(Admin) > Services** from the NetWitness menu.
2. Select a Log Collection service.
3. Under Actions, select  **View > Config** to display the Log Collection configuration parameter tabs.

   The **Service Config** view is displayed with the Log Collector **General** tab open.
4. Click the **Event Sources** tab, and select **ODBC/DSNs** from the drop-down menu.

Workflow

This workflow illustrates the basic tasks needed to start collecting events through Log Collection.

What do you want to do?

Role	I Want to...	Documentation
Administrator	Perform basic Log Collection implementation	Basic Implementation
Administrator	Set up a lockbox to maintain lockbox settings.	Set Up a Lockbox
Administrator	Start Log Collection services.	Start Collection Services
Administrator	*Configure Log Collection protocols and event sources.	Configure Collection Protocols and Event Sources

ODBC DSN Configuration Parameters

This topic describes the Data Source Names DSNs configuration parameters.

DSN Panel

In the DSNs panel, you can add, delete, or edit DSNs and the DSN name-value pairs for ODBC Event sources.

Feature	Description
	Displays the Add DSN dialog in which you define a DSN and its parameters.
	Deletes the selected DSNs.
	Displays the Edit DSN dialog in which you edit the name-value pairs for the selected DSN.
	Displays the Manage DSN Templates dialog in which you can add or delete DSN name-value pair templates.
	Selects DSNs.
DSN	Name of the DSN that you added.
Parameters	**<name-value for="" p="" pairs="" the=""> </name-value>**

Add or Edit DSN Dialog

In this dialog, you add or modify a file directory for the selected event source.

Note: Required parameters are marked with an asterisk. All other parameters are optional.

Feature	Description
DSN Template	Select a predefined DSN value name-value pairs template for the DSN.

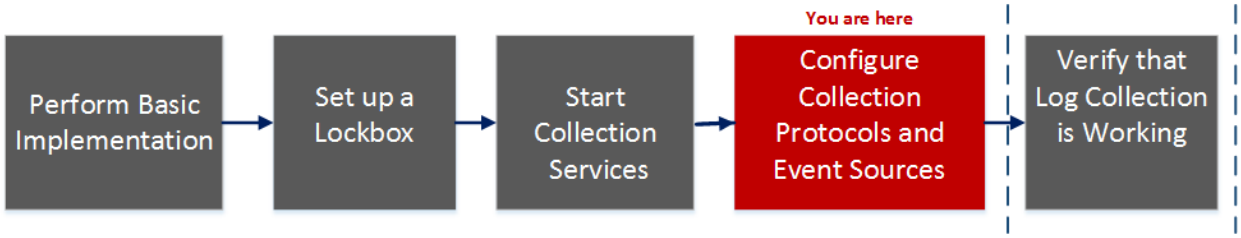
Feature	Description
DSN Name*	Add the name of the DSN. You cannot edit a DSN name after you add it. This value must correspond with a DSN entry in the ODBC.ini file. Valid value is a character string that is restricted to the following characters: `[_a-zA-Z][_a-zA-Z0-9]*` This means that the file directory must start with a letter followed by numbers, letters, and underscores (for example, **oracle_executive_compensation**).
Parameters	 Adds a row in which you can define a parameter name-value pair. Deletes the selected parameter name-value pair.  Selects parameter name-value pairs. Name - Enter or modify the parameter name. Value - Enter or modify the value associated with the parameter name.
Cancel	Closes the dialog without adding the DSN and its name-value pairs or saving modifications to the name-value pairs.
Save	Adds the DSN and its name-value pairs or saves modifications to the name-value pairs.

Manage DSN Templates Dialog

In this dialog, you can add or delete DSN name-value pair templates.

Feature	Description
	Template Selection Panel
	Opens the Add Template panel in which you can add a DSN name-value pair template.
	Deletes the selected template.
	Selects a template for deletion or modification.
	Add Template Panel
	Adds a value pair row.
	Deletes a value pair row.
	Selects a value pair row.

Feature	Description
Name	Enter the parameter name.
Value	Enter the value associated with the parameter name.
Cancel	Cancels any changes you made in the dialog.
Save	Adds the DSN and its name-value pairs or saves modifications to the name-value pairs.
Close	Closes the dialog without adding the DSN and its name-value pairs or saving modifications to the name-value pairs.



Remote/Local Collectors Configuration Parameters

When you deploy Log Collection, you must configure the Log Collectors to collect the log events from various event sources, and to deliver these events reliably and securely to the Log Decoder host, where the events are parsed and stored for subsequent analysis.

This topic introduces features of the Services Config view > Remote Collectors/Local Collectors tab.

Workflow

This workflow illustrates the basic tasks needed to start collecting events through Log Collection.

What do you want to do?

Role	I Want to...	Documentation
Administrator	Perform basic Log Collection implementation	Basic Implementation
Administrator	Set up a lockbox to maintain lockbox settings.	Set Up a Lockbox
Administrator	Start Log Collection services.	Start Collection Services
Administrator	*Configure Log Collection protocols and event sources.	Configure Collection Protocols and Event Sources
Administrator	Verify that Log Collection is working.	Verify That Log Collection Is Working

*You can perform this task here.

Related Topics

- Provision Local Collectors and Remote Collectors
- Configure Local and Remote Collectors

Services Config View

The Services Config view is the view on which you maintain all the Log Collection parameters. The tab in which you maintain the deployment parameters referred to in this guide is the **Remote/Local** Collectors tab:

- If you are configuring a Local Collector , NetWitness displays the **Remote Collectors** tab so that you can configure the Local Collector to pull events from Remote Collectors.

- If you are configuring a Remote Collector , NetWitness displays the **Local Collectors** tab so that you can configure the Remote Collector to push events to a Local Collector .

Remote Collectors Tab

On a Local Collector, the Remote Collectors panel provides a way to add or delete Remote Collectors from which the Local Collector pulls events.

Column	Description
	Displays the **Add Source** dialog in which you select the Remote Collectors from which you want the Local Collector to pull events.
	Deletes the Remote Collector from the Local Collector Remote Collectors panel.
	Displays the **Edit Source** dialog for the selected Remote Collector .
	Selects Remote Collectors.
Name	Names of the Remote Collectors from which the Local Collector currently pulls events.
Address	IP Addresses of the Remote Collectors from which the Local Collector currently pulls events.
Collections	Choose which collection protocols that the Remote Collector pushes to a Local Collector. You can select any combination of protocols. If you do not select a protocol, NetWitness selects all protocols.

Local Collector Tab

On a Remote Collector , the Local Collector panel provides a way to add or delete the Local Collectors to which you want to the Remote Collector to push events.

Select the **Destination** or **Source** in the **Select Configuration** drop-down menu.

- **Destination** displays the **Add Remote Destination** dialog.
- Source displays the **Add Source** dialog.

The following table describes the Add Source dialog.

Column	Description
	Displays the **Add Source** dialog in which you select the Remote Collectors from which you want the Local Collector to pull events.
	Deletes the Remote Collector from theLocal Collector Remote Collectors panel.

Column	Description
	Displays the **Edit Source** dialog for the selected Remote Collector .
	Selects Remote Collectors.
Name	Names of the Remote Collectors from which the Local Collector currently pulls events.
Address	IP Addresses of the Remote Collectors from which the Local Collector currently pulls events.

The following table describes the Local Collectors Panel.

Column	Description
	Displays the **Add Remote Destination** dialog for the Group that you selected. You add destination Local Collectors for this group to which you want the Remote Collector to push events.
	Deletes the destination Log Collector from the group.
	Displays the **Edit Remote Destination** dialog for the selected destination Local Collector .
	Selects a destination Local Collector .
Destination Name	Displays the name of the destination Local Collector .
Address	Displays the IP address of the destination Local Collector .
Collections	Choose which collection protocols that the Local Collector pulls from a Remote Collector. You can select any combination of protocols. If you do not select a protocol, NetWitness selects all protocols.

Log Collection Tabs

This topic describes the tabs available in the Log Collection view.

Access Log Collection View

To access the log collection view:

1. Go to  **(Admin) > Services** from the NetWitness menu.
2. Select a Log Collection service.

3. Under Actions, select **View > Config** to display the Log Collection configuration parameter tabs.

   The **Service Config** view is displayed with the Log Collector **General** tab open.

4. Select any of the available tabs to view or update the corresponding parameters.

Available Tabs

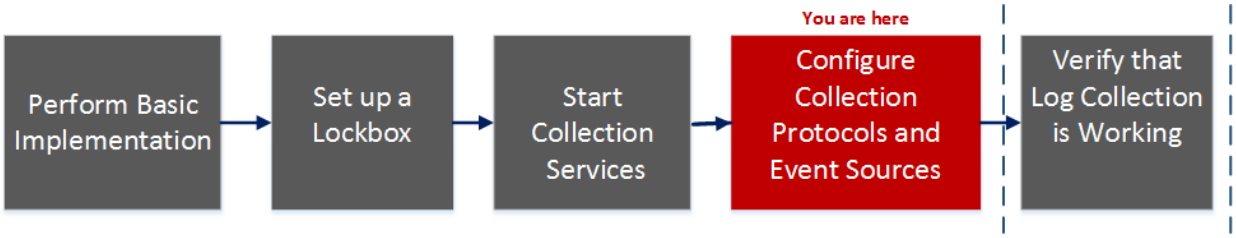
Use the  (Admin) > Services view to maintain Log Collection parameters. It has the following tabs:

- **General**: contains high-level parameters that govern the operation of the Log Collector service and each collection protocol. See Log Collection General Tab for details.
- **Remote Collectors**: use this tab to set up remote collectors. See Configure Local and Remote Collectors for details.
- **Files**: provides an interface for editing Log Collector configuration files.
- **Event Sources**: use this tab to configure collection for your event sources. See Log Collection Event Sources Tab for details.
- **Event Destinations**: Use the Event Destinations tab of the Log Collection service Config view to configure the destination of event data collected by the Log Collector. See Log Collection Event Destinations Tab for details.
- **Settings**: contains parameters for Lockbox security setup, and certificate management.
- **Appliance Service Configuration**: contains configuration parameters for the NetWitness Core Appliance service.

Please refer to the **Files** tab and the **Appliance Service Configuration** tab in the *Host and Services Configuration Guide* for information on the configuration parameters on these tabs.

Log Collection General Tab

This topic introduces features of the service Config view > General tab that relate specifically to Log Collector .



To access the Log Collection General tab:

1. Go to **(Admin) > Services** from the NetWitness menu.
2. Select a Log Collection service.
3. Click > **View > Config**.

   The **Service Config** view is displayed with the Log Collector **General** tab open.

Workflow

This workflow illustrates the basic tasks needed to start collecting events through Log Collection.

What do you want to do?

Role	I want to...	Documentation
Administrator	Perform basic Log Collection implementation.	Basic Implementation
Administrator	Set up a lockbox to maintain lockbox settings.	Set Up a Lockbox
Administrator	Start Log Collection services.	Start Collection Services
Administrator	Configure Log Collection protocols and event sources.	Configure Collection Protocols and Event Sources
Administrator	*Verify that Log Collection is working.	Verify That Log Collection Is Working

*You can perform this task here.

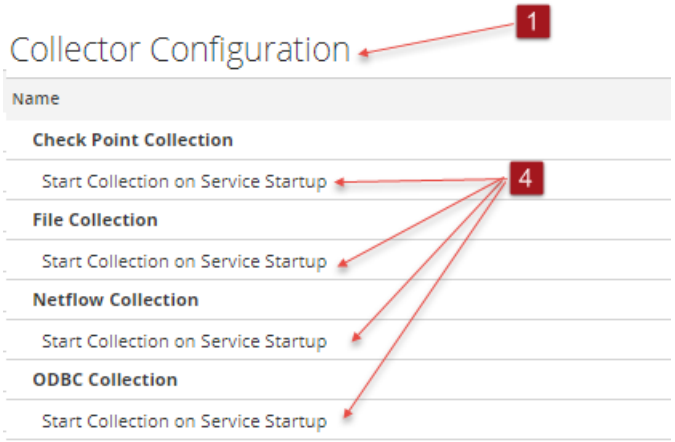
- Configure Syslog Event Sources
- Configure VMware Event Sources in NetWitness
- Configure Windows Event Sources in NetWitness
- Windows Legacy and NetApp Collection Configuration

Quick Look

The NetWitness administrator must configure event sources to send logs to the collectors. When event sources are configured they poll event sources, retrieve logs, and send the event data to NetWitness).

System Configuration Panel

The System Configuration panel manages service configuration for a NetWitness service. When a service is first added, default values are in effect. You can edit these values to tune performance. Refer to the **General** tab for a description of these parameters.



1	System Configuration Panel manages service configuration for a NetWitness service.
2	Compression: The minimum number of bytes that must be transmitted per response before compression. A setting of 0 disables compression. The default value is **0**. A change in value is effective immediately for all subsequent connections.
3	Port: The port on which the service listens. The ports are: • 50001 for Log Collectors • 50002 for Log Decoders • 50003 for Brokers • 50004 for Decoders • 50005 for Concentrators

	• 50007 for other services
4	SSL FIPS Mode: When enabled (**on**), the security of data transmission is managed by encrypting information and providing authentication with SSL certificates. The default value is **off**.
5	SSL Port: The NetWitness Core SSL port on which the service listens. The ports are: • 56001 for Log Collectors • 56002 for Log Decoders • 56003 for Brokers • 56004 for Decoders • 56005 for Concentrators • 56007 for other services
6	Stat Update Interval: The number of milliseconds between statistic updates on the system. Lower numbers cause more frequent updates and can slow down other processes. The default value is **1000**. A change in value is effective immediately.
7	Threads: The number of threads in the thread pool to handle incoming requests. A setting of 0 lets the system decide. The default value is 15. A change takes effect on service restart.

Collector Configuration Panel

The Collector Configuration panel provides a way to enable automatic start of log collection by event source type.

1	Collector Configuration Panel provides a way to enable automatic start of log collection by event source type.
2	Enable All enables the automatic collection for all event types. **Enable All** = start receiving events and collecting logs for all event types when the Log Collector service starts.
3	Disable all disables the automatic collection for all event types. **Disable All** = (default) do not receive event data for all event types until you explicitly start collection.

4 Start Collection on Service Startup enables automatic start, per event source type, of log collection when the Log Collector service starts. Valid values are:

- Selected = start collecting logs when the Log Collector service starts.
- Not selected = (default) do not collect event data until you explicitly start collection.

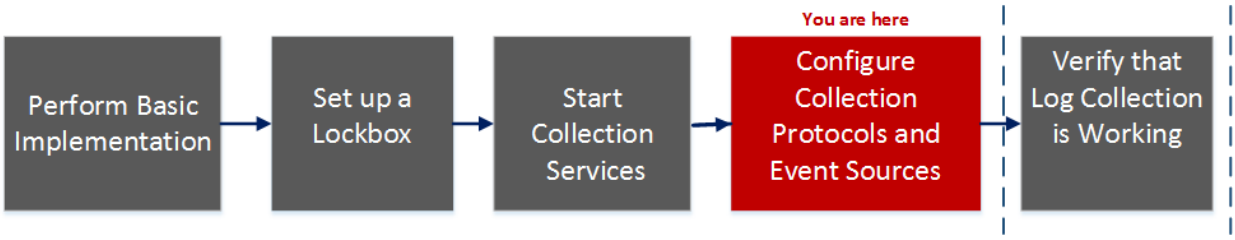
5 **Apply**: Click **Apply** to save the changes to the parameter values.

Log Collection Event Destinations Tab

Use the Event Destinations tab of the Log Collection service Config view to configure the destination of event data collected by the Log Collector :

- Log Decoders
- Identity Feed

Prerequisites



You must implement the following configuration to create an identity feed.

- A Log Collector service with an Identity Feed Event Processor
- A Log Collector service with Windows Collection configured and enabled

Note: See the "Create an Identity Feed" topic in the *Live Resource Management Guide* for more information on how to create and investigate on an identity feed.

Workflow

This workflow illustrates the basic tasks needed to start collecting events through Log Collection.

What do you want to do?

Role	I want to...	Documentation

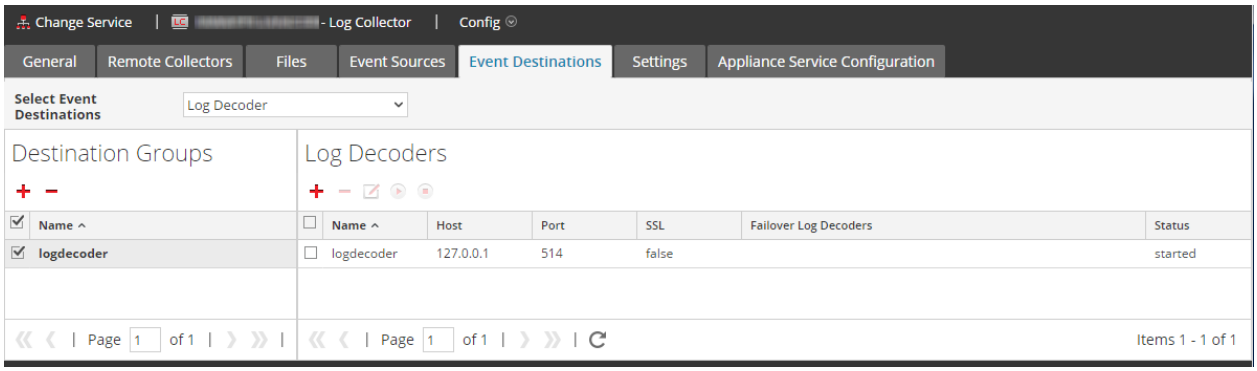
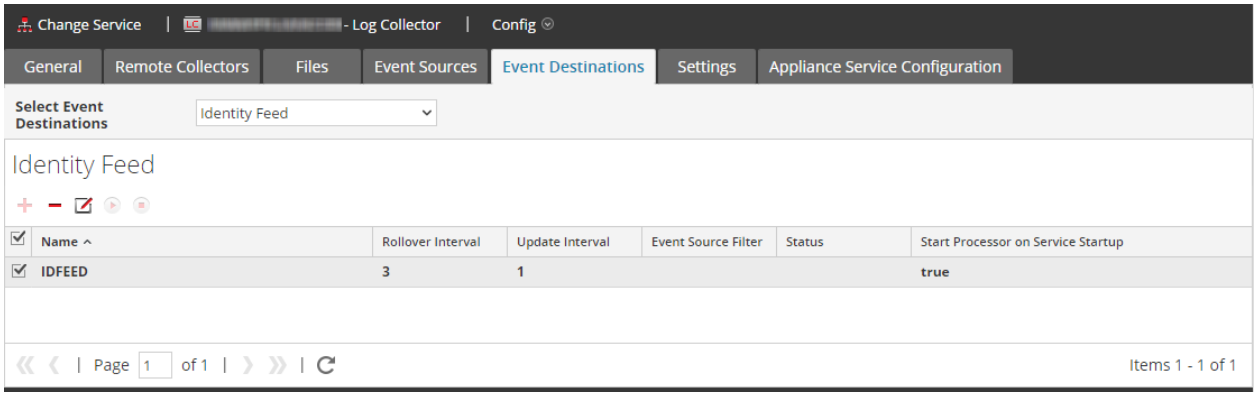
Quick Look

The Event Destinations tab of the Log Collection service Config view allows you to configure the destination of event data collected by the Log Collector.



The required permission to access this view is Manage Services.



To access the Event Destinations tab:

1. Go to  **(Admin) > Services** .
2. Select a Log Collection service.
3. Select  **> View > Config** to display the Log Collection configuration parameter tabs.
4. Click the **Event Destinations** tab.
5. In the **Select Event Destinations** drop-down menu:
   - Select **Log Decoder** to configure Log Decoder destinations for event data collected by the Log Collector.

     Note: You must select a Log Decoder service from the Add Log Decoder Destination dialog, but the remainder of the configuration is done automatically.

   - Select **Identity Feed** to configure an identity feed destination for event data collected by the Log Collector.

Log Collection Event Sources Tab

Use the Event Sources tab to configure the AWS (CloudTrail), Check Point, File, ODBC, SDEE, Logstash, SNMP, Syslog, SNMP, VMware, Windows, and Windows Legacy event sources.

To access the Event Sources tab, go to (Admin) > **Services** > select **Log Collection service** > **View** > **Config** > **Event Sources**) .

Workflow

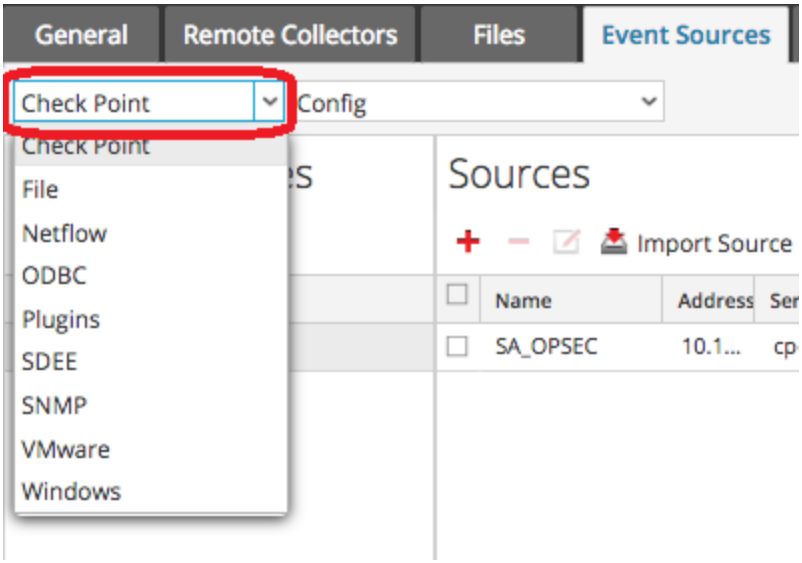
This workflow illustrates the basic tasks needed to start collecting events through Log Collection.

What do you want to do?

Role	I want to...	Documentation
Administrator	Perform basic Log Collection implementation.	Basic Implementation
Administrator	Set up a lockbox to maintain lockbox settings.	Set Up a Lockbox
Administrator	Start Log Collection services.	Start Collection Services
Administrator	*Configure Log Collection protocols and event sources.	Configure Collection Protocols and Event Sources
Administrator	Verify that Log Collection is working.	Verify That Log Collection Is Working

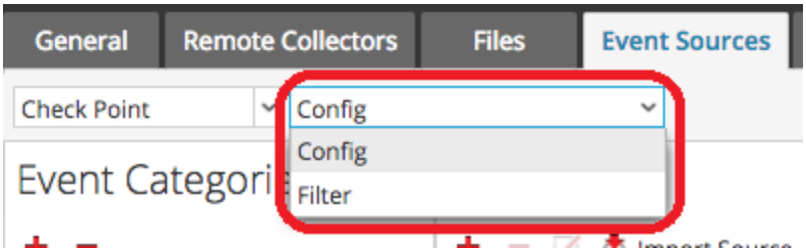
*You can perform this task here.

Related Topics



- Configure AWS (CloudTrail) Event Sources in NetWitness
- Configure Check Point Event Sources in NetWitness
- Configure File Event Sources in NetWitness
- Configure ODBC Event Sources in NetWitness
- Configure SDEE Event Sources in NetWitness
- Configure SNMP Event Sources in NetWitness

- Configure Syslog Event Sources
- Configure VMware Event Sources in NetWitness
- Configure Windows Event Sources in NetWitness
- Configure Logstash Event Sources in NetWitness
- Windows Legacy and NetApp Collection Configuration



Quick Look

The Config view has two drop-down menus:

- The left-most menu lists all of the available collection protocols.

- The right-most menu has two choices: **Config** and **Filter**.

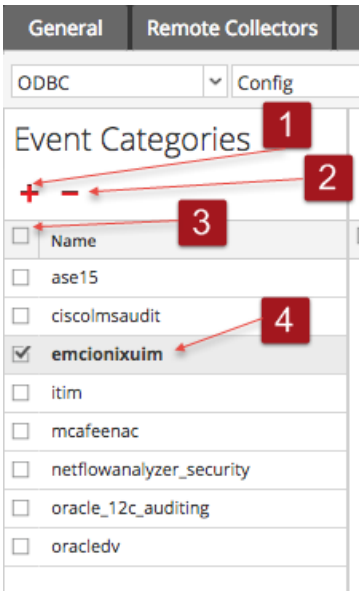
The Config view in the Event sources tab has two panels: Event Categories and Sources.

Note: For details on the Filter menu item, see Configure Event Filters for a Collector.

Event Source Types Menu

The Log Collector Event Sources tab has a two-box, drop-down menu in which you select the collection protocol and any supporting parameters for that protocol.

In the left box, you select one of the following protocols: Check Point, File, ODBC, Plugins, SDEE, SNMP, SNMP, VMware, Windows, and Windows Legacy.



In the right box, you select:

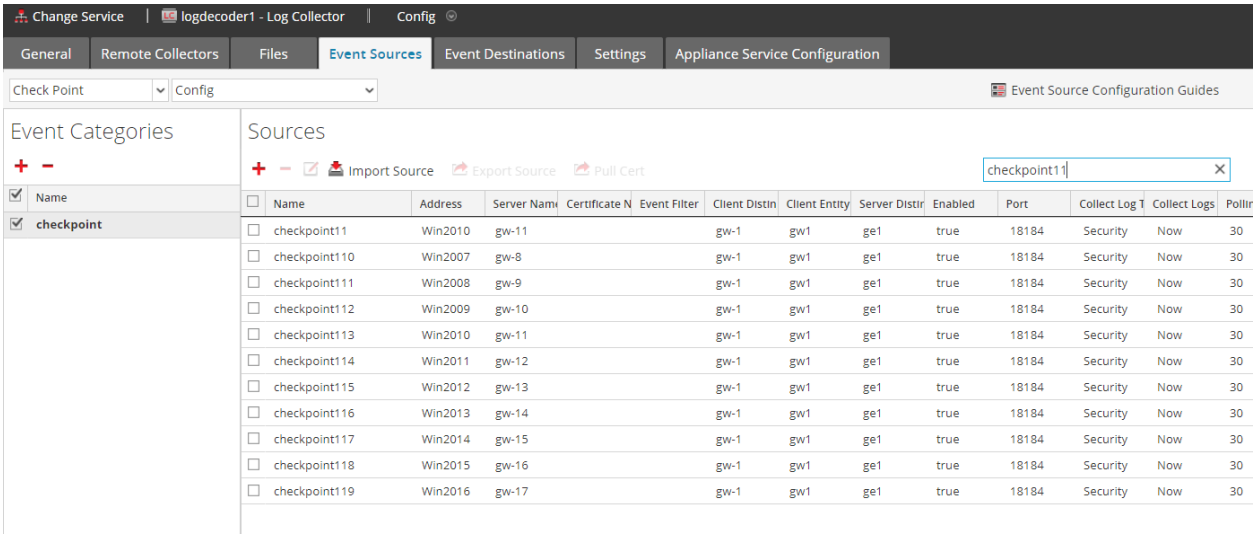
- Config to configure the generic event source parameters for the type you selected in the left drop-down. All generic Config panels have a toolbar with these options:
  - Add, Edit, and Delete
  - Import (also Import Source, Import DSN)
  - Export (also Export Source, Export DSN)
- For ODBC, SNMP, and Windows only:
  - For ODBC, DSNs to configure
  - For SNMP, SNMP v3 User Manager
  - For Windows, Kerberos Realm Configuration

Selecting an option displays a configuration panel where you configure the collection parameters for the event source. The configuration panels are slightly different for different event sources and are described separately.

Event Categories Panel

Once you select a collection protocol, the Event Categories panel is populated with all of the event sources that you have configured for that collection protocol. For example, the following image shows ODBC event sources that have been configured:

The Event Categories panel provides a way to add or delete event source types.



1	Displays the Available Event Source Types dialog from which you select the event source type for which you want to define parameters.
2	Deletes the selected event source types from the Event Categories panel.

3 Selects event source types.
4 Displays the name of the event source types that you have added.

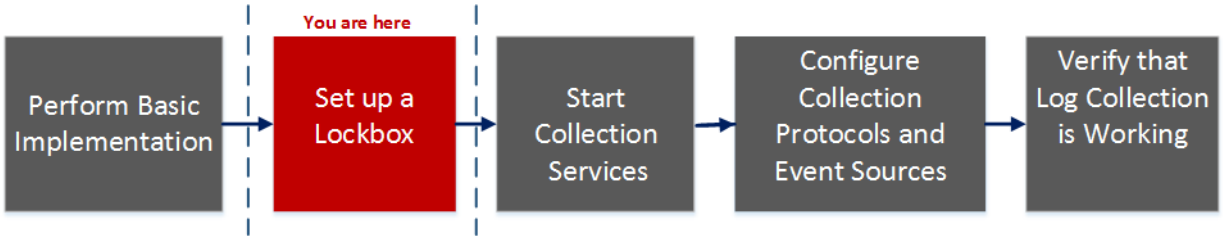
Sources Panel

The Sources panel lists the values of the parameters for the selected event source type. For details, see the individual collection protocol topics.

Below is an example of a list of Check Point event sources. Note that the result set has been limited to sources whose names contain the string **checkpoint11**.

Log Collection Settings Tab

Use the Settings tab to:



- Set up a lockbox
- Reset Stable System value
- Manage certificates

Caution: If the host name on which the Log Collector is installed is changed after installation, the Log Collector will fail to collect events from event sources. You must reset stable system values if the hostname changes.

To access the Log Collection Settings Tab, go to (Admin) > Services. In the Services grid, select a Log Collector Service. Click Actions menu cropped under Actions and select View > Config.

Workflow

This workflow illustrates the basic tasks needed to start collecting events through Log Collection.

What do you want to do?

Role	I want to...	Documentation
Administrator	Perform basic Log Collection implementation.	Basic Implementation
Administrator	*Set up a lockbox to maintain lockbox settings.	Set Up a Lockbox
Administrator	Start Log Collection services.	Start Collection Services
Administrator	Configure Log Collection protocols and event sources.	Configure Collection Protocols and Event Sources

- See the "Create an Identity Feed topic" in the *Live Resource Management Guide.*

Quick Look

This is an example of the Settings tab.

Troubleshoot Log Collection

This topic describes the format and content of Log Collection Troubleshooting. NetWitness informs you of Log Collector problems or potential problems in the following two ways.

- Log files.
- Health and Wellness Monitoring views.

Junk Syslog Messages

The remote log collector has been made looser in regards to how it handles syslog messages. This was done to reduce the number of dropped messages due to missing parts of the header, or for other minor formatting errors. However, this might also allow syslog event messages that contain junk to get through the parser. If you see such messages in the system, you can add a syslog collection filter to remove events that are sending these messages.

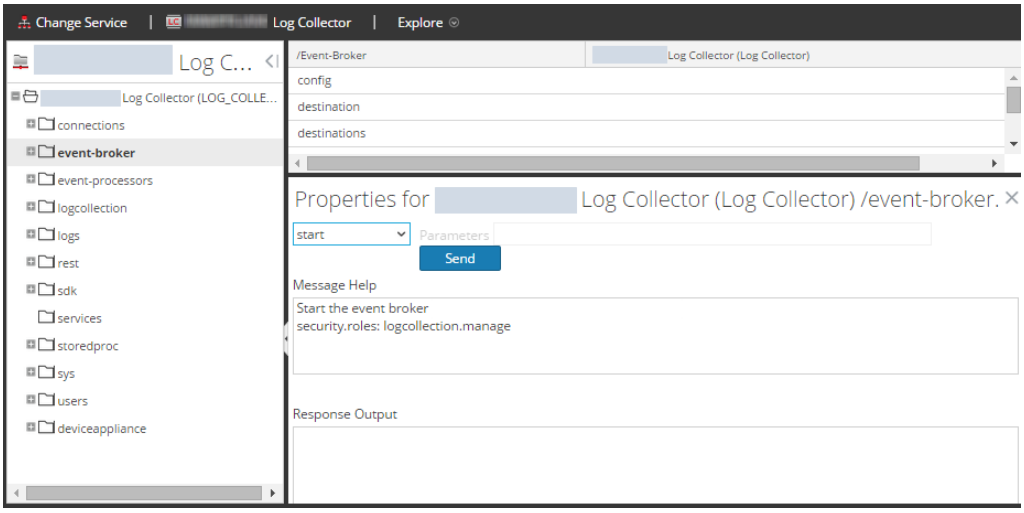
Log Files

If you have an issue with a particular event source collection protocol, you can review debug logs to investigate this issue. Each event source has a Debug parameter that you can enable (set parameter to On or Verbose) to capture these logs.

Caution: Only enable debugging if you have a problem with this event source and you need to investigate this problem. If you have Debug enabled all the time it will adversely affect the performance of the Log Collector.

Health and Wellness Monitoring

Health and Wellness monitoring makes you aware of potential hardware and software problems in a timely manner so that you can avoid to outages. NetWitness recommends that you monitor the Log Collector statistical fields to make sure that the service is operating efficiently and is not at or near the maximum values you have configured. You can monitor the following statistics (Stats) described in the  (Admin) > Health & Wellness view.



Sample Troubleshooting Format

NetWitness returns the following types of error messages in the log files for.

Log Messages	`timestamp failure (LogCollection) Message-Broker Statistics:...`
	`timestamp failure (AMQPClientBaseLogCollection):...`
	`timestamp failure (MessageBrokerLogReceiver):...`

Possible	The Log Collector cannot reach the Message Broker because the Message Broker:

Cause	• has stopped running • has erroneous connection settings

Solutions	1. `<use the="the" systemctl="systemctl" command="command" on="on" console="console" to="to" check="check" status="status" of="of" message="message" broker="broker" shell="shell" console.="console.">returns the following if the message broker is not running:</use>`
	`prompt$ systemctl status rabbitmq-server`
	`rabbitmq start/running, process 10916`
	2. Start the RabbitMQ Message Broker on event-broker node in the Explore view:
	

Troubleshooting Logstash

Issue	Unable to re-configure or edit the custom configuration in Logstash.
Possible Cause	While re-configuring the events source configuration, if you update the Event source host's IP and save it, Logstash still connects to the old IP. For example, suppose the Elasticsearch IP is not reachable due to some reason, and you updated the correct IP, but Logstash connects to the old IP (which is not reachable).
Solution	You must restart the Logstash service: `systemctl restart logstash`

Issue	NetWitness Export connector UI does not validate user aggregation permissions.
Possible Cause	Users without aggregation permission are also allowed to configure NetWitness Export Connector in the UI.
Solution	Make sure you configure the NetWitness Export Connector Event source with the right

	aggregation permissions.

Issue	NetWitness Export Connector UI does not validate user credentials.
Possible Cause	NetWitness Export Connector UI displays test configuration successful even if you have configured Export Connector without appropriate aggregation permissions.
Solution	Make sure you configure the NetWitness Export Connector Event source using the correct credentials.

Issue	Logstash event source test configuration fails with memory allocation an error "There is insufficient memory for JVM".
Possible Cause	Sometimes test configuration fails due to insufficient memory available for JVM.
Solution	You must change the JVM -xms to a lower value at `/etc/logstash/jvm.options`. Perform the following: 1. Go to `/etc/logstash/jvm.options` and change `-Xms8g` to a lower value as per the memory configuration of the appliance. 2. Restart the Logstash service using the following command: `service logstash restart`

Issue	Issue with Logstash Performance.
Possible Cause	If EPS is more than 25K, you must increase JVM to get better performance.
Solution	You must change the JVM -xmx to a higher value at `/etc/logstash/jvm.options`. Perform the following: 1. Go to `/etc/logstash/jvm.options` and update JVM to `-Xmx32g`. 2. Restart the Logstash service using the following command: `service logstash restart`

Log Parser Customization

Note: The JSON Mapping information in this guide applies to NetWitness Version 11.5 and later.

You use the Log Parser Rules view (available from the (Configure) view) to customize rules and to map meta for your log parsers.

The *default log parser* parses logs that do not match any installed log parsers. The information contained in such a log is processed against the default log parser's rules, and metadata is then extracted by those rules and is available for Enrichment, Investigation, Reporting, and Alerting. This provides immediate visibility into logs from custom or unsupported sources.

You can also add or extend a log parser. For example, you may need to parse certain fields differently than in the manner provided by the log parser for a particular event source. You can add rules that change the way meta information is extracted from the logs for the event source. And you can then map the extracted information to NetWitness meta keys.

Finally, you can view and test sample log messages and rules for your log parsers, including the default log parser.

To access this tab, go to **(Configure) > Log Parser Rules**. For more details, see Parser Rules Tab.

Dynamic Rules

The **Dynamic Rules** entry for a log parser displays the following information:

- The default log parser that parses logs that are not associated with a particular log parser
- Native XML-defined device parsers that have been extended with dynamic log parser rules, and
- User-created custom device parsers used to parse unsupported custom event sources

The dynamic parse rules are used to parse arbitrary values triggered by a literal token on the left hand side of the value in unstructured logs. Currently, this is used to parse name-value pairs.

Following are some examples (the token is in bold red):

```
src: 1.2.3.4
src = 1.2.3.4
src=1.2.3.4
Source address is 1.2.3.4
```

JSON Mapping

This allows you to parse JSON nodes from Logstash as well as Log Collection Plugins by mapping JSON nodes to an appropriate meta on which the value should be saved.

The **JSON Mappings** for a log parser displays the following information:

- Sample JSON Message - This allows you paste the log messages.
- The list of JSON Mappings: these are the names that represent the meta information.
- Details of each mapping: for each mapping, the display name, path, NetWitness meta key, and a text description.

The JSON mapping functionality is for strictly paring structured JSON logs, and mapping values from the log to meta or fine parsing. The parsing is not applied to arbitrary logs; only logs where we know the exact structure of the data.

For example:

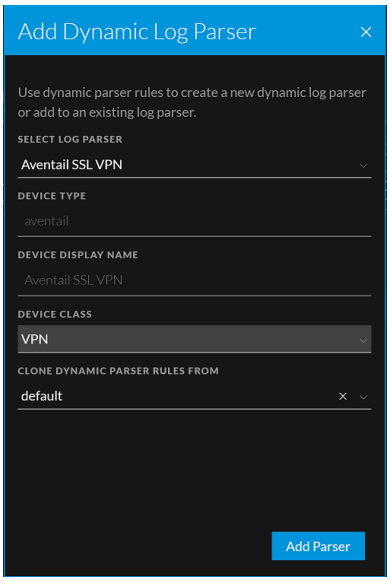
```
{ "event": { "source": { "address": "1.2.3.4", "port":8080 } } }
```

NetWitness knows the structure of logs when it knows the event source type, or when you add specific JSON mappings.

Add or Delete a Log Parser

Note: The information in this topic applies to NetWitness Version 11.2 and later.

For version 11.2, NetWitness has added the ability to add log parsers through the UI. You can also delete log parsers, as long as they have never been deployed to a Decoder. You can create a new log parser definition from scratch, or extend an existing one.



You can add a log parser to extend the functionality for an existing parser. For example, if you have some unknown messages for the Cisco Pix parser, you could add rules to match your unknowns.

IMPORTANT: If you are adding a new log parser, for example when onboarding an event source, you must map the event source IP to the new log parser in order for messages to be parsed. For details, see "Acknowledging and Mapping Event Sources" in the *Event Source Management User Guide*.

Add a Log Parser

1. In the NetWitness UI, navigate to **(Configure) > Log Parser Rules**.
2. From the **Log Parsers** pane, click **Add Parser**.

   The Add Dynamic Log Parser dialog box is displayed.

3. Fill in details for this dialog box. For details, see Add Dynamic Log Parser Parameters below.
4. Click **Save** to save the new log parser.

   This updates the definition file in the file system. It *does not* deploy the changes.
5. To deploy your changes to all of your Decoders, click **Deploy**.

Delete a Log Parser

You can use the UI to delete a log parser.

To delete a log parser:

1. In the NetWitness UI, navigate to **(Configure) > Log Parser Rules**.
2. From the **Log Parsers** pane, select a log parser, then click **Delete**.

   Delete Parser dialog box is displayed.
3. Click **Delete Parser** to remove the log parser from the system.

Note: If you have encounter any issues when you attempt to delete a parser, see the Troubleshooting section, Delete a Log Parser Manually.

Add Dynamic Log Parser Parameters

When you are adding a log parser, the following parameters are available.

Field	Details
SELECT LOG PARSER	Select NEW, or choose an existing log parser. By choosing an existing log parser, you can add rules to that parser, essentially extending its parsing capabilities. **Note:** If you select an existing log parser, the remaining fields are auto-filled based on the values for selected log parser.
DEVICE TYPE	Enter a string to define the device type. The name must be between 3 and 30 alphanumeric characters (including underscores), and must not match the name of any existing log parsers.
DEVICE DISPLAY NAME	Enter the display name for the log parser. **Note:** The display name must be 64 characters or fewer, and must not match the name of any other device display name.
DEVICE CLASS	Select a device class.
CLONE DYNAMIC PARSER RULES FROM	Leave blank to start with no rules, or select one of the existing log parsers to clone its rules.

Import or Export a Log Parser

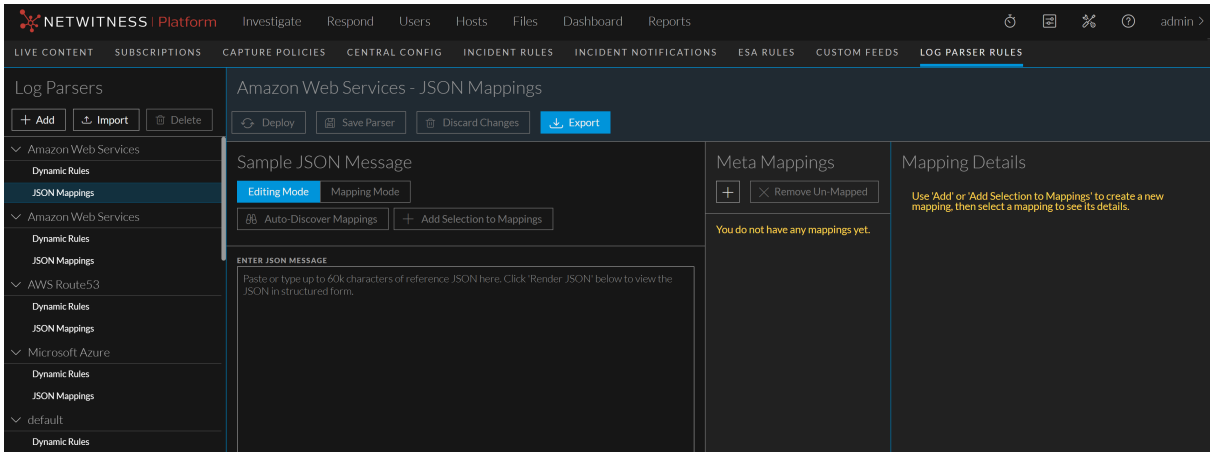
To import the log parser:

1. In the NetWitness UI, navigate to **(Configure) > Log Parser Rules**.
2. From the **Log Parsers** panel, click **Import**.

3. Select a log parser to import.
   The log parser is imported successfully. This will import the selected log parser rules along with the JSON mapping (if any).

To export the log parser:

1. In the NetWitness UI, navigate to  **(Configure) > Log Parser Rules**.
2. Select the log parser to export.
3. In the **Log Parsers** panel, click **Export**.
   The selected parser is exported successfully in a .json format. This will export the selected log parser rules along with the JSON mapping (if any).



JSON Mappings

JSON mappings is applicable from version NetWitness Platform 11.5 and Later.

View JSON Mappings

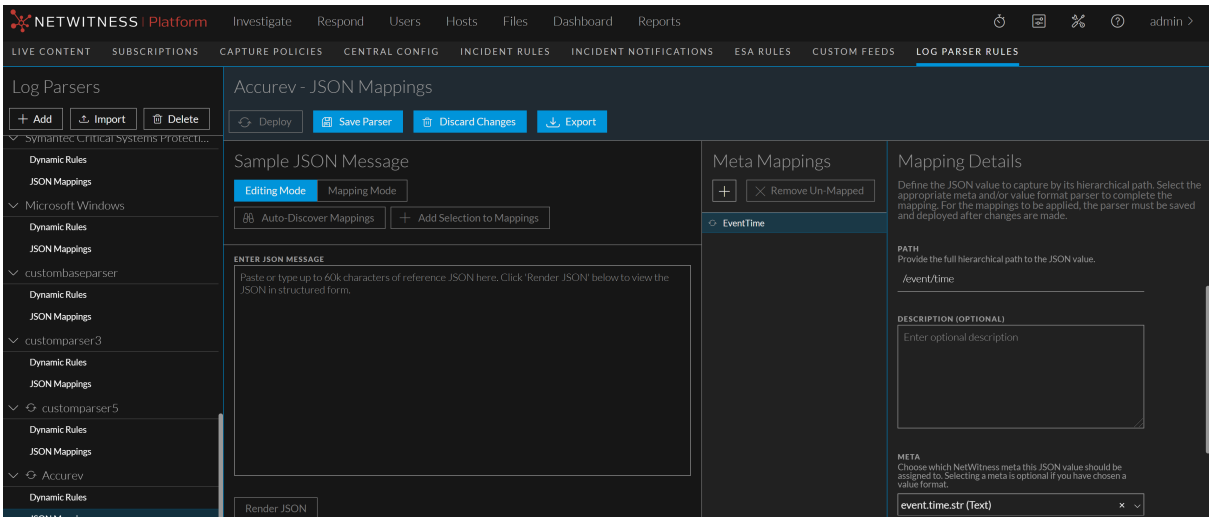
1. In the NetWitness UI, go to **(Configure) > Log Parser Rules**.
2. From the Log Parsers pane, select a parser, then click JSON Mappings.

   The JSON Mappings and Mapping Details are shown for the parser you selected.

The Mapping Details pane displays the following information.

Field	Details
DISPLAY NAME	This name corresponds to the name displayed in the JSON Mappings panel.
PATH	The path to where the values for this portion of the log are stored.
DESCRIPTION	Optionally, you can enter a text description for this mapping.
META	Select a meta key to which this value from the log is mapped. Select a value from the drop-down menu. Optional if you choose a Value Format.

Field	Details
VALUE FORMAT	Choose a value format parser onto which to pass this JSON value. You can either select an existing meta or **Custom Regex Type**. If you select custom regex type, you must define the regex and capture to *fine* parse the value in the meta. Optional if you choose a Meta.
CUSTOM REGEX TYPE	Select Custom Regex Type from the Value Format drop-down, which allows you to add new custom regex type.
REGEX PATTERN	Specify a regex to identify different pieces of data contained within a JSON node value.
FIRST CAPTURE	Select a meta key that should be captured first based on the value defined in the Regex pattern.
ADD A CAPTURE	New capture field is added. By default, it is loaded with meta keys in the drop-down. You can add maximum of 20 captures and this option will be disabled once it reaches maximum.



Note: You need to select a meta or enter a Value Format, but you do not need to fill in values for both settings.

Add a JSON Mapping

After you add a parser, as described in Add a Log Parser, you can then add JSON mappings.

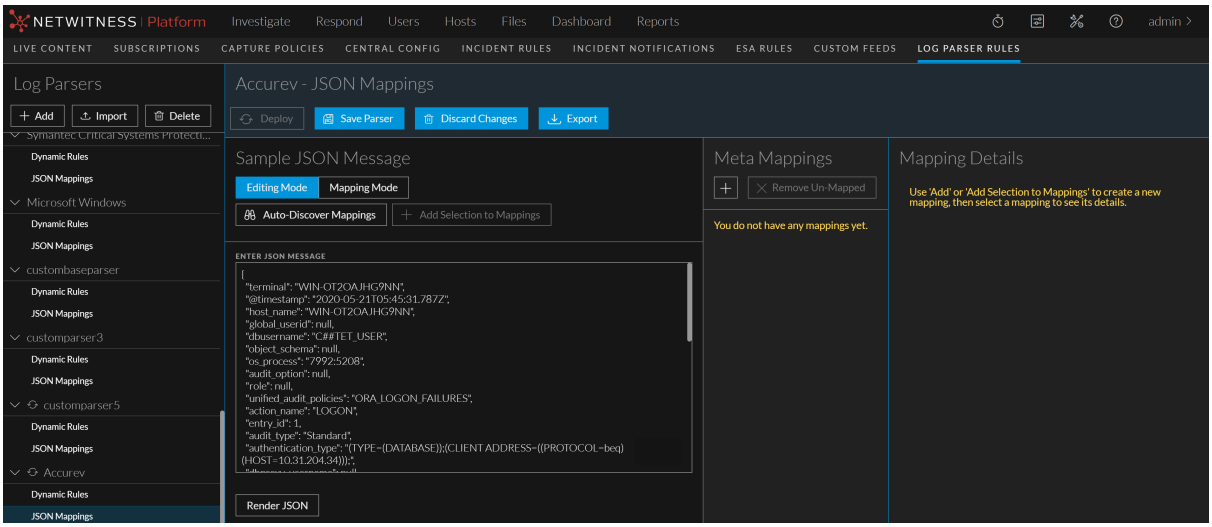
1. Follow the procedure to add a parser.
2. Select the **JSON Mappings** entry for the newly-added parser.

   The following screen shows an example where an Accurev is added:

3. Click **Add New** to begin adding a mapping.
4. Enter values for display name, path, meta or value format (or both), and (optionally) a description.
5. Click **Save Parser** to save your new mapping.

Auto Discover JSON Mappings

Beginning with NetWitness version 11.5.1, you can automatically create the mappings without the need to manually enter the name and path of the mapping.



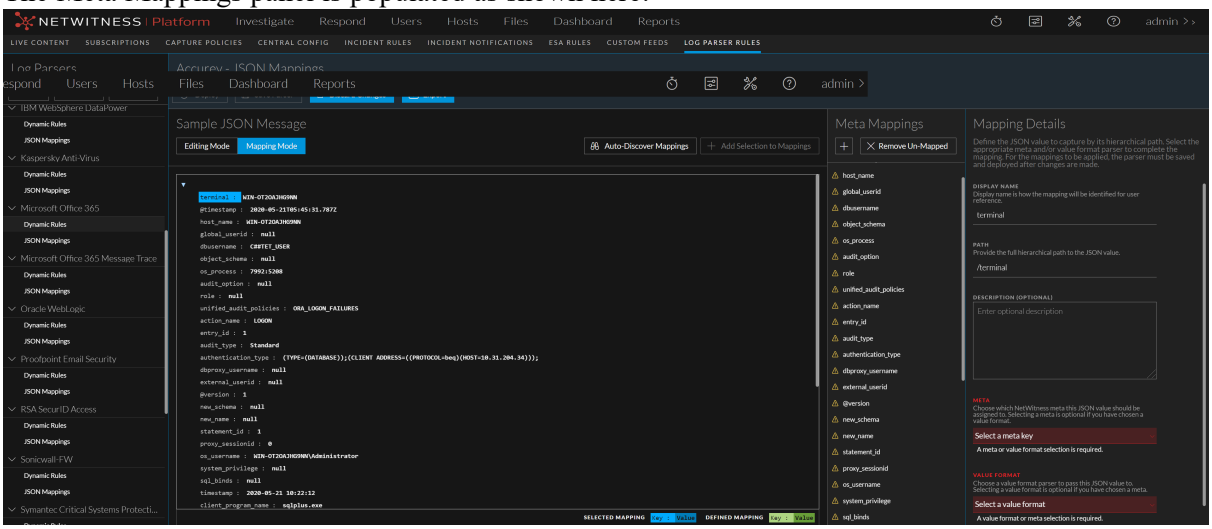
As an example, we are using the following JSON log:

```
{"terminal":"WIN-OT2OAJHG9NN","@timestamp":"2020-05-21T05:45:31.787Z","host_
name":"WIN-OT2OAJHG9NN","global_userid":null,"dbusername":"C##TET_
USER","object_schema":null,"os_process":"7992:5208","audit_
option":null,"role":null,"unified_audit_policies":"ORA_LOGON_
FAILURES","action_name":"LOGON","entry_id":1,"audit_
type":"Standard","authentication_type":"(TYPE=(DATABASE));(CLIENT ADDRESS=
((PROTOCOL=beq)(HOST=10.31.204.34)));","dbproxy_username":null,"external_
userid":null,"@version":"1","new_schema":null,"new_name":null,"statement_
id":1,"proxy_sessionid":0,"os_username":"WIN-
OT2OAJHG9NN\\Administrator","system_privilege":null,"sql_
binds":null,"timestamp":"2020-05-21 10:22:12","client_program_
name":"sqlplus.exe","sessionid":4125005309,"userhost":"WORKGROUP\\WIN-
OT2OAJHG9NN","rman_device_type":null,"object_name":null,"event_timestamp_
utc":"2020-05-20T23:22:12.452Z","system_privilege_used":null,"return_
code":1017,"version":"19.0.0.0.0","instance_name":"orcl","sql_
text":null,"target_user":null,"fga_policy_name":null,"rman_object_
type":null,"dbid":1566661212,"rman_operation":null}
```

To auto-discover JSON mappings:

1. Select the **JSON Mappings** entry for the appropriate parser.
2. Paste JSON formatted log message in to the **Sample JSON message** text box, and click **Render JSON**.

The screen looks like this:



Rendering JSON in Editing Mode allows you to view and edit (if needed) the logs in a pretty format. Additionally, if your text is not valid JSON, the text field is displayed in red.

3. Click **Mapping Mode**, to view the JSON in a collapsable tree format which also highlights the mapping.

Note: In **Mapping mode**, you cannot edit the sample Log.

4. Click **Auto-Discover Mappings** to discover the JSON nodes and create mappings.

   The Meta Mappings panel is populated as shown here:

5. After you auto-discover, note that all the mappings are invalid (preceded by this icon: ⚠). You cannot save your changes until all the mappings are valid (mapping is preceded by this icon: ↻) or removed.

Note:
The meta value is highlighted in blue if it matches the selected mapping including the regex (if used).
The meta value is highlighted in green if it matches any other mappings that are not selected.

6. To make a mapping valid, you need to select a **Meta Key** or **Value Format** for all the mappings that you want to parse and save.

Note: In the **Value Format** you can either select an existing meta or **Custom Regex Type**.

7. If you want to *fine* parse the value in the meta in the **Value Format** drop-down, select **Custom Regex Type** and enter the regex in the **Regex Pattern** field. For example,`\s*(\b(?:[0-9]{1,3}\.){3}[0-9]{1,3}\b):?(\d*).`

Note: The custom regex will be added to the database, when you **Save Parser**.

8. For a value in the Regex, you can select a meta key and store the capture as below:
   - **First capture**: The first portion of the string, up to the period character is stored to the meta key. For example, `ip.src`
   - To add more capture, click **Add Capture** and select the meta key.
     For more information on Regex, see Regex Values.
9. If there are mappings that you do not want to save, you can select the mapping and click **Delete**. Alternatively, after you complete all of the mappings that you want to keep, you can click **Remove Unmapped** to remove all mappings that you have not yet validated.
10. After you have either completed or removed all of your mappings, click **Save Parser** to save your new mappings. Note that the icon preceding each mapping is removed.

Deploy JSON Parser

You need to deploy a JSON parser so that logs coming in to any decoder are parsed appropriately and meta is generated and stored correctly.

To deploy a parser, select it from the list and click **Deploy**. The parser, its dynamic rules, and its mappings are sent to all Log Decoders.

Note: A JSON parser must have at least one rule or mapping to enable deployment.

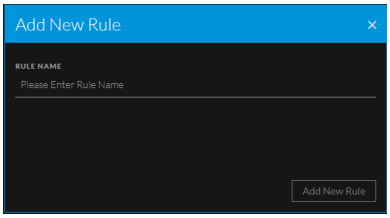
Add or Delete a Log Parser Rule

Note: The information in this topic applies to NetWitness Version 11.2 and later.

For version 11.2, NetWitness has added the ability to create custom rules for log parsers. You can create rules to change how meta values are parsed for a particular log parser. Prior to version 11.2, you could only view the out-of-the-box log parser rules.

About Log Parser Rules

Parsers are described within their XML files. Each log parser has an XML file that contains rules on how to parse messages for that parser. The out-of-the-box rules are contained within these XML files. For details, see the Log Parser Customization topic in the Link space for NetWitness Content.



Custom Log Parser Rules

When you create a new log parser rule, it is saved to another XML definition file for the parser. These files are known as token files. This is important, since the out-of-the-box rules are overwritten if you update the parser through Live, but any custom log parser rules are not overwritten, since Live does not update the token files for log parsers.

To create a custom log parser rule:

1. In the NetWitness UI, navigate to (Configure) > **Log Parser Rules**.
2. From the **Log Parsers** pane, select a log parser, then **Dynamic Rules**.
3. From the **Rules** pane, click **Add Rule**.

   The Add Rules dialog box is displayed.

IMPORTANT: If you click outside of the Add Rule dialog box before you save your rule, your changes will be lost.

4. Enter a name for the new rule, and click **Add New Rule**.
5. Add at least one meta key and a value to match, in order to create a valid rule.
6. Click **Save** to save your new rule.

   This updates the definition file in the file system. It *does not* deploy the changes.
7. To deploy your changes to all of your Decoders, click **Deploy**.

Guidelines for Custom Rules

When you are creating a custom rule, keep in mind the following:

- For the list of tokens that match strings from the log file, very short tokens are not useful. For example, a one- or two-character string can match more items than desired.
- Remember to add the delimiter (especially if it is a space) as part of the token. For example "domain=" or "email ".
- When constructing regular expressions, the more complexity you add, the more performance overhead added to the system to compare against the rule.
- To see examples of good tokens and regular expressions, examine the rules that are provided for the default log parser.

Default Log Parser and Log Parser Rules

Note: The information in this topic applies to NetWitness Version 11.1 and later.

This tab displays information about pattern matching and rules for the parsers in your system. The features on this tab apply to all log parsers, including the Default Log Parser.

Default Log Parser

The NetWitness default log parser is used to parse logs coming from the Log Decoder that do not match any of the configured log parsers. This default parser parses these logs by using a default set of rules and tokens.

You can view the default log parser and its details by going to **Admin > Event Sources > Log Parser Rules** and selecting **default** from the Log Parsers panel.

Note: If you do not see the default log parser and its rules, you might need to go to Live and deploy the Content to your log decoders. Additionally, you must have at least one Log Decoder at version 11.2 to view the default log parser.

You can view the default log parser and its details, depending on your version:

- For NetWitness version 11.1, go to **Admin > Event Sources > Log Parser Rules**, then select **default** from the Log Parsers panel.
- For NetWitness version 11.2 and later, go to **Configure > Log Parser Rules**, then select **default** from the Log Parsers panel.

Note: The list of log parsers is based on the first Log Decoder that is installed or registered by the Orchestration Server. If you have more than one Log Decoder, this tab only lists log parsers that have been configured on the first one.

This is a view of the Log Parser Rules tab, showing the **Default Log Parser** and **Any Domain** rule selected:

The Parser Rules Tab topic describes the items available for the Log Parsers tab.

Highlight Matching Patterns

You can paste logs into the Log Messages text box, and the system highlights the matching literals and patterns for the rules for the selected event source type. Use this feature to confirm that the parser is behaving as expected.

1. In the NetWitness UI, navigate as follows, depending on your version:
   - For NetWitness version 11.1, go to **Admin > Event Sources > Log Parser Rules**.
   - For NetWitness version 11.2 and later, go to  **(Configure) > Log Parser Rules**.
2. From the **Log Parsers** pane, select the **Dynamic Rules** entry for a log parser.

3. From the **Rules** pane, select a rule.

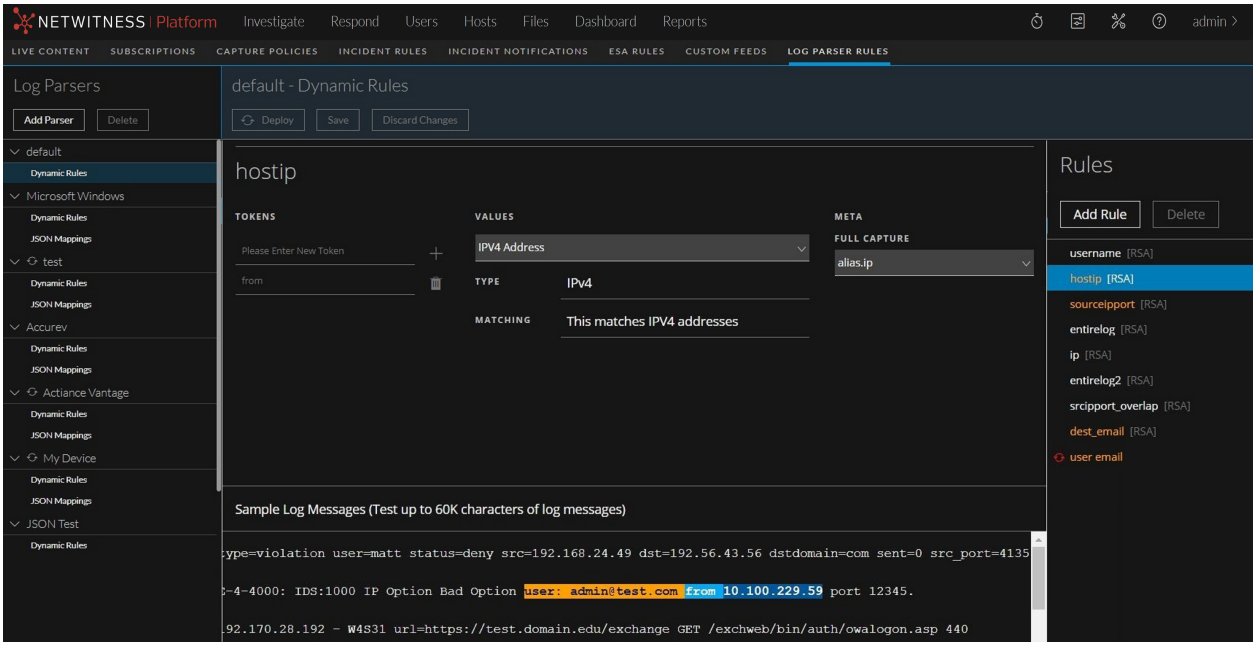
   For example, this screen shows the **Source Port** rule for the **Actiance Vantage** log parser:

4. Add text or paste in a sample log message.

Strings that match tokens for the selected rule are highlighted in blue. Strings that match other rules for the parser (and the rules themselves) are highlighted in orange.

For example, in the previous screen, note:

- The destination domain address, matching the **dstdomain** token, is highlighted in blue. The token is in dark blue, and the matching string is highlighted in light blue. This is because the **Destination Domain** is the currently selected Rule.
- The strings highlighted in orange match tokens for rules for **Username**, **Source IP or IP:Port**, **Destination IP or IP:Port**, **Source Port**, **Source Email Address**, and **Destination Email Address**. This is because they are in rules for the default parser that are not currently selected.



Highlight Overlapping Patterns

When you have patterns that overlap rules (that is, one pattern matches more than one rule), the behavior is as follows:

- The pattern is displayed in a single color (yellow)
- When you select one of the matching rules, the exactly-matched pattern is displayed in light and dark blue

For example, the pattern `user: admin@test.com from 10.100.229.59` matches several rules.

When you select the **hostip** rule, the highlighting that matches only this rule is shown in dark and light blue.

Use Cases

This topic describes the procedures you use to either on board a new event source, or to extend the parsing capabilities for an existing log parser.

Use Case 1: On Board a New Event Source

In this case, a customer has an event source and wants to add it into the NetWitness. Perform the following tasks:

I. For your event source, get examples of the logs.

II. In the **CONFIGURE > Log Parser Rules** view, add the Log Parser.

III. From your sample logs, paste applicable sections into the Sample Log Messages section of the **Log Parser Rules** screen.

IV. Use the sample area to understand which items are being parsed by the current parser, and note the items that are not being parsed.

V. For anything that is not currently being parsed, add rules.

- If the new rules apply to all parsers, you can add them to the Default parser.
- If not, add them only to the new log parser you are creating.

VI. Save the new rules, and deploy them to all Log Decoders.

VII. Map the IP address for the newly added event source to the newly-created log parser. For details, see "Acknowledging and Mapping Event Sources" in the *Event Source Management User Guide*.

Use Case 2: Modify an Existing Parser

In this case, a customer wants to parse some items from the logs that are not currently being parsed by the existing log parser. Perform the following tasks:

I. For your event source, get examples of the logs.

II. In the **CONFIGURE > Log Parser Rules** view, add the Log Parser.

III. From your sample logs, paste applicable sections into the Sample Log Messages section of the **Log Parser Rules** screen.

IV. Use the sample area to understand which items are being parsed by the current parser, and note the items that are not being parsed.

V. For anything that is not currently being parsed, add rules.

VI. Save the new rules, and deploy them to all Log Decoders.

For a detailed walk through of some of the steps in these use cases, see Extend an Existing Log Parser Example.

Extend an Existing Log Parser Example

Note: The information in this topic applies to NetWitness Version 11.2 and later.

Parse Rules can be used to parse unknown logs from existing devices. If a log is identified as a particular type (**device.type** is populated), and is not already being parsed (**msg.id** is not populated), then Parse Rules can be added to pull out relevant data from these logs.

If the neither **device.type** nor **msg.id** are populated for the logs from an existing device, then you need to map the device before Parse Rules can be processed against these logs.

Note: If a log message is already being parsed (**msg.id** is populated) then Parse Rules will not be processed against that log.

Task Overview

In this example, a customer wants to parse some items from the logs that are not currently being parsed by the existing log parser. Perform the following tasks:

I. For your event source, get examples of the logs.

II. In the CONFIGURE > Log Parser Rules view, Add the Log Parser

III. From your sample logs, paste applicable sections into the Sample Log Messages section of the **Log Parser Rules** screen.

IV. Use the sample area to understand which items are being parsed by the current parser, and note the items that are not being parsed.

V. For anything that is not currently being parsed, add rules as described in Add Rules and Deploy.

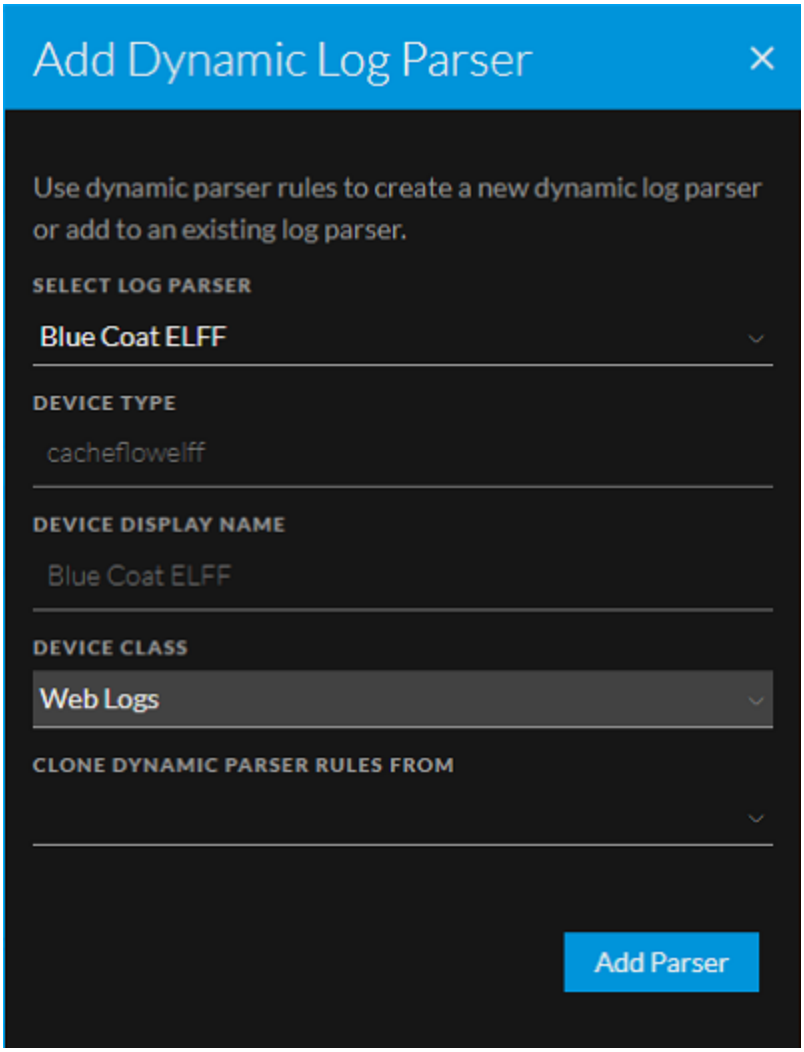
VI. Save the new rules, and deploy them to all Log Decoders.

Notes

Note: All the procedures in the topic use the CONFIGURE > Log Parser Rules view.

In the Log Parser Rules tab, you may see the Refresh icon () next to an item. This indicates that the item has undeployed changes.

Add the Log Parser



The first step in the process is to add a log parser, based on an existing log parser that you want to customize.

To add a log parser

1. In the NetWitness menu, navigate to **(Configure) > Log Parser Rules**.
2. In the Log Parsers panel, click **Add Parser**.

   The Add Dynamic Log Parser dialog box is displayed.
3. In the **SELECT LOG PARSER** field, select the existing parser to extend. In this example, we use Blue coat ELFF.

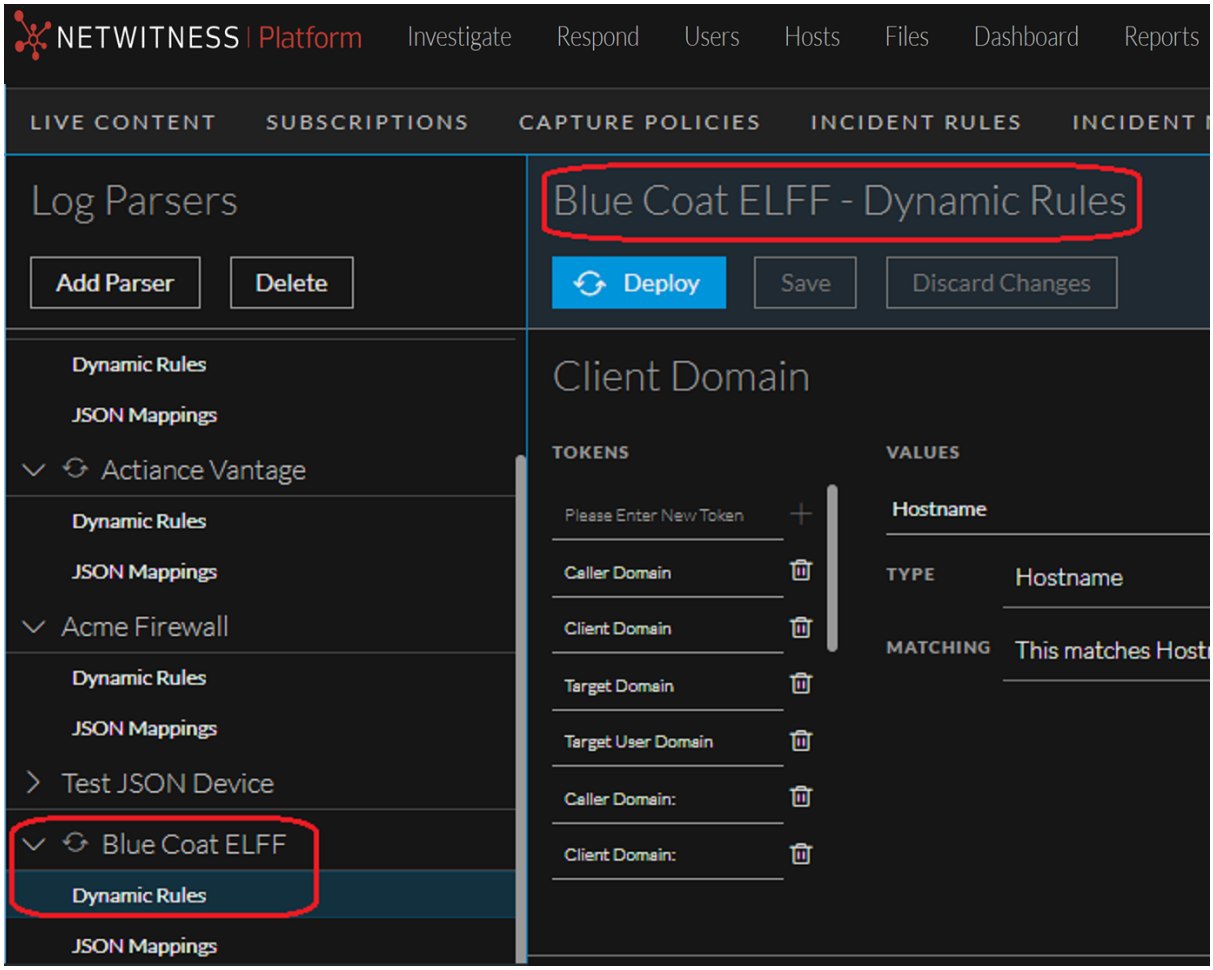
   Note: Values for Device Type, Device Display Name, and Device Class are filled in automatically, based on the log parser you selected.

   You can clone the rules from any of your existing parsers, including the **default** parser. For simplicity, in this example we leave this field blank: thus, only the rules we create are added to the new parser.
4. Click **Add Parser** to create the new parser.

The new parser is listed in the Log Parsers panel. Note the symbol next to the new parser—this indicates that your changes have not yet been saved.

About Custom Rules

When you create a new log parser rule, it is saved to an XML definition file for the parser. These files are known as token files. This is important, because the built-in rules are overwritten if you update the parser through Live, but any custom log parser rules are not overwritten, since Live does not update the token files for log parsers.



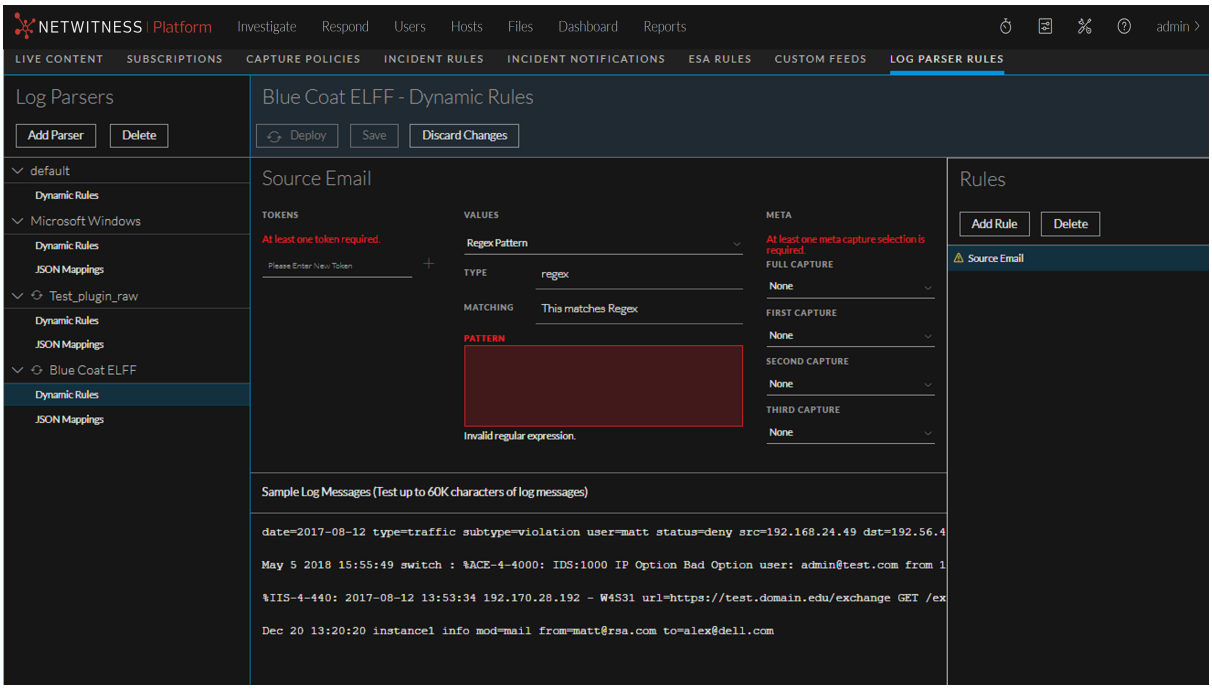
Add Rules and Deploy

After you have added the parser, the next step is to add one or more rules.

For example, you know that your log messages have some email addresses that follow a "source_mail" string. You could add the following rule to parse these strings:

IMPORTANT: If you click on another parser in the **Log Parsers** panel, before you save your rule, your changes are lost.

1. Make sure the Dynamic Rules entry for the Blue Coat ELFF parser is selected.



2. In the Rules panel, click **Add Rule**.

   The Add New Rule dialog box is displayed.

3. Enter a name for the rule, and click **Add New Rule**.

   The center panel is updated to reflect that you are working on a new rule.

In the TOKENS section, enter a string for the token that you want to match, then click +.

In this example, we entered **email** .

Note: Make sure to include a delimiter for your token. For example, in this case, the token consists of 6 characters: the string "email," and then a space. Some tokens might use a colon, semicolon, or some other character as the delimiter, but it can be easy to forget to add the space character when that is the delimiter.

4. You can enter more tokens, or continue to add values.
5. In the VALUES section, choose the value for the rule. If you choose to match a Regex Pattern, you need to enter the pattern in the PATTERN field. Other values do not require any options.

   In this example, we selected **Email Address**.
6. In the META section, click  to select a meta key to which the rule stores its information. Some notes:

   - Enter characters to filter the list of available meta keys.
   - For Regex values, you can select "pieces" of the value, and store each piece to its own meta key.

Note: If any new meta keys are added to the Log Decoder, they do not appear in the list of Meta immediately. They appear automatically after 24 hours, or you can restart the **content server** service to view them.

In this example, we selected the **email.src** meta key.

The following image shows an example rule:

7. Click **Save** to save the rule. Repeat this procedure to continue adding rules.
8. After you have added all of your rules, click **Deploy** to deploy the new parser to your Log Decoders. Some notes about deploying rules:
   - You deploy an entire set of rules for a parser. That is, you can continue adding rules for a specific parser until you have all of your rules, and then you can deploy them all at once.
   - After you deploy a custom parser, you can no longer delete it. You can only delete parsers that you have not yet deployed.

Note: In this example, we extended an existing log parser. However, if you are creating a new log parser for a new event source, make sure to map the new log parser to the IP address of the event source, as described in "Acknowledging and Mapping Event Sources" in the *Event Source Management User Guide*.

Regex Values

Custom Log Parser Rules can match regular expression patterns. If you select a Regex pattern for your Value, you can capture the entire matched token, or sections of it:

- Full capture: the entire matched string is stored to your selected meta key.
- First capture: the first portion of the string, up to the period character, is stored to the meta key.
- Second capture: the second portion of the string, starting after the first period character, is stored to the meta key.
- Third capture: the third portion of the string, starting after the second period character, is stored to the meta key.

You can choose any or all four of these captures, depending on the token you are matching.

For example, we examine the **Source IP or IP:Port** rule:

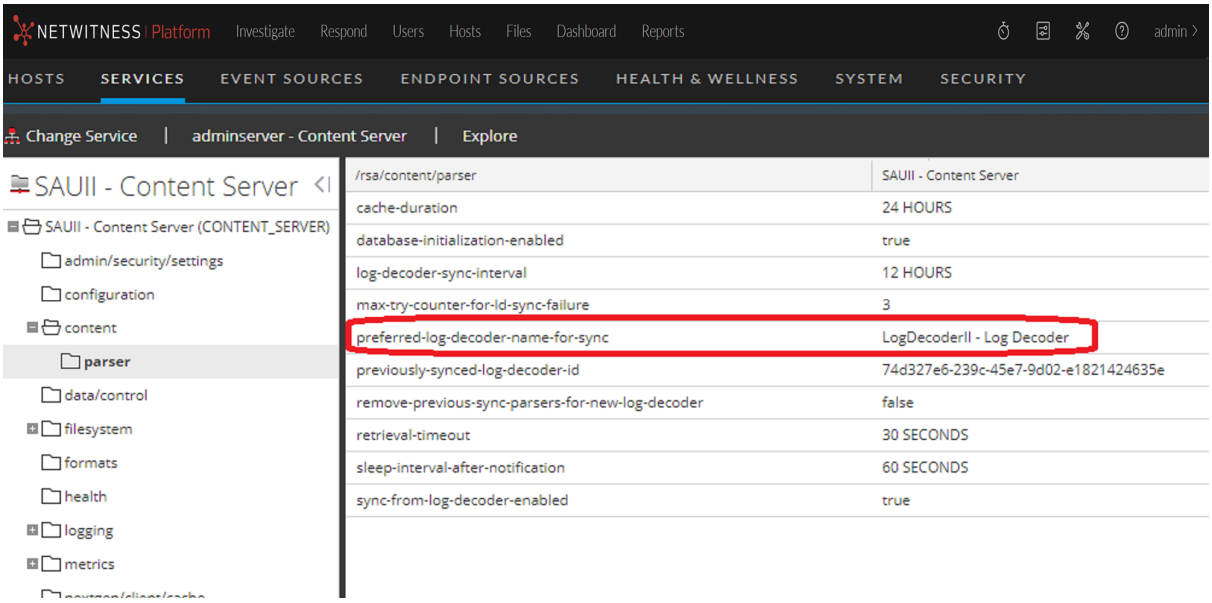
- Regex Pattern: \s*(\b(?:[0-9]{1,3}\.){3}[0-9]{1,3}\b):?(\d*)
- Full capture: none

- First capture: **ip.src**
- Second capture: **port.src**
- Third capture: none
- Assume example string of "src=192.168.24.4:8080", where **src** is one of the tokens defined for this rule:
  - **192.168.24.4** is saved to the **ip.src** meta key.
  - **8080** is saved to the **port.src** meta key.

For more details, see any online reference that describes PERL regular expressions. There are many tutorials available online.

IMPORTANT: Be careful when constructing regular expressions in your custom rules. Badly constructed regular expressions could impact your performance.

Appendix A: Select the Reference Log Decoder



For version 11.2, NetWitness has added the ability to add log parsers and log parsing rules through the UI, using the Log Parsers view. The Log Parsers tab is populated based on your reference Log Decoder. If you have more than one Log Decoder, you can select which acts as the reference one for populating the tab in the UI. This topic describes the procedure to do so.

Note: If you have previously set a reference log decoder, make sure that it is at NetWitness version 11.5 or later to get full functionality.

To change the reference log decoder:

1. In the NetWitness UI, navigate to **(Admin) > Services**.
2. For the **Content Server**, select **View > Explore**.
3. From the left navigation panel, expand **content > parser**.
4. To set the reference log decoder, enter a value for `preferred-log-decoder-name-for-sync`.

   Enter the name listed in the **Name** column on the **ADMIN > Services** screen for your preferred log decoder.

5. The change takes effect during the next system sync, based on the `log-decoder-sync-interval`. To sync sooner, you can do either of the following:

   - To sync immediately, restart the Content Sever: in the **(Admin) > Services** view, from the **Actions** menu for the Content Server, select **> Restart**.
   - Change the `log-decoder-sync-interval` parameter from its default of 12 hours to your preferred interval. Note that the minimum value for this parameter is **1 HOUR**.

Appendix B: Move Log Parsers to Production

You may have a development or test environment where you work on new and updated log parsers and log parser rules. In this case, at some point you need to move your new and updated log parsers into your production environment. This topic describes how to do this.

To move custom log parsers and log parser rules from development to production environment:

1. On the development system, do the following:
   a. SSH to the NetWitness Server
   b. Export the log parser information by running the following command:

      ```
      mongodump --host localhost --port 27017 --db "content-server" --username
      "deploy_admin" --password "netwitness" --authenticationDatabase admin
      ```

   c. Copy the "dump" folder to your production NetWitness Server.
2. On the production system, do the following:
   a. SSH to the NetWitness Server
   b. Drop the content-server table from Mongo by running below commands in the order listed:

      ```
      mongo --username deploy_admin --password netwitness --
      authenticationDatabase admin
      use content-server
      db.logDeviceParser.drop()
      db.patternFormatType.drop()
      exit
      ```

   c. Run the following restore command:

      ```
      mongorestore --host localhost --port 27017 --db "content-server" --
      username "deploy_admin" --password "netwitness" --authenticationDatabase
      admin PATH_TO_DUMP_FOLDER
      ```

      Make sure to replace *PATH_TO_DUMP_FOLDER* with the actual path to the "dump" folder.
   d. Restart the content-server by running the following command:

      ```
      systemctl restart rsa-nw-content-server
      ```

Appendix C: Troubleshooting and Limitations

This section describes some common issues that can occur when you customize log parsers and log parser rules.

Troubleshooting

You do not see any log parsing against a newly created parser.	You may have forgotten to map the new parser. To map a parser, go to **(Admin) > Event Sources > Discovery** tab. See the "Discovery Tab" topic in the *Event Source Management Guide* for details.
Deployment fails	If you click Deploy to deploy a new or updated log parser, and it fails, you should check the log for your reference log decoder. You access this log in the following location on the NetWitness Server: `/var/log/netwitness/content-server/content-server.log`

Delete a Log Parser Manually

If you have any issues when you attempt to remove a Log Parser through the UI, you can manually delete a log parser by using **NwConsole**.

To delete a log parser that has been deployed:

1. Access the NetWitness Console, using the **NwConsole** command. For details, see "Access NwConsole and Help" in the *NwConsole User Guide*.
2. Run the following command:

   ```
   [localhost:50002] /decoder/parsers> send . delete file=filename.xml
   type=device
   ```

   where ***filename*** is the name of the XML file for the log parser. For example, to delete the log parser for Oracle Access Manager, run the following command:

   ```
   [localhost:50002] /decoder/parsers> send . delete file=oracleam.xml
   type=device
   ```

Notes about the log parser filename:

- Log parser files are located on the Log Decoder in the following path:

  `/etc/netwitness/ng/envision/etc/devices`

- Each log parser has its own sub-folder. For example, the Cisco ASA parser files are in the following folder:

  `/etc/netwitness/ng/envision/etc/devices/ciscoasa`

- Some log parser file names begin with **v20_**, while others do not—the only way to tell is by examining the `devices` folders. For Cisco ASA, the log parser file name is **v20_ ciscoasamsg.xml**. However, in the previous command, when you specify the filename, do ***not*** use the **v20_** prefix.

NwLogPlayer

NwLogPlayer is a troubleshooting tool that simulates syslog traffic. `NwLogPlayer.exe` is a command line utility located on the Log Decoder host in `/usr/bin`.

At the command line, type `nwlogplayer.exe -h` to list the available options, as reproduced here:

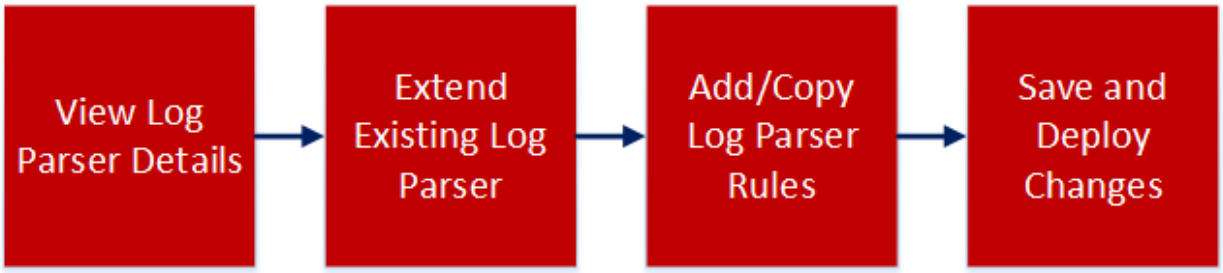
Option	Description
`--priority arg`	set log priority level
`-h [ --help ]`	show this message
`-f [ --file ] arg (=stdin)`	input message; defaults to **stdin**
`-d [dir ] arg`	input directory
`-s [ --server ] arg (=localhost)`	remote server; defaults to **localhost**
`-p [ --port ] arg (=514)`	remote port; defaults to **514**
`-r [ --raw ] arg (=0)`	Determines raw mode. • 0 = add priority mark (default) • 1= File contents will be copied line by line to the server. • 3 = auto detect • 4 = enVision stream • 5 = binary object
`-m [ --memory ] arg`	Speed test mode. Read up to 1 Megabyte of messages from the file content and replays.
`--rate arg`	Number of events per second. This argument has no effect if **rate** > eps that the program can achieve in continuous mode.
`--maxcnt arg`	maximum number of messages to be sent
`-c [ --multiconn ]`	multiple connection
`-t [ --time ] arg`	simulate time stamp time; format is `yyyy-m-d-hh:mm:ss`
`-v [ --verbose ]`	If **true**, output is verbose
`--ip arg`	simulate an IP tag
`--ssl`	use SSL to connect
`--certdir arg`	OpenSSL certificate authority directory
`--clientcert arg`	use this PEM-encoded SSL client certificate
`--udp`	send in UDP

Limitations

Please note the following limitations when using the Log Parser Rules tab:

- **Log Decoder must be at version 11.2:** For the functionality in the Log Parser Rules tab to work, your installation must have at least one Log Decoder running NetWitness version 11.2 or later.
- **JSON Mapping: Log Decoder must be at version 11.5:** For the JSON Mapping Beta functionality to work, your installation must have at least one Log Decoder running NetWitness version 11.5 or later.
- **Mixed Mode:** If any Log Decoders are at version 11.2 or later, and the NetWitness Server is at version 11.2 or later, the Log Decoders will have parseall rules enabled by default, and thus will begin to parse logs accordingly. However, the 11.2 NetWitness Server does not support Log Decoders with versions less than 11.2, so the Log Parser Rules tab in the UI stays blank.
- **Meta key fields list refresh:** If any new meta keys are added to the Log Decoder, they do not appear in the list of Meta in the Log Parser Rules tab immediately. They appear automatically after 24 hours, or you can restart the **content server** service to view them.
- **Field Restrictions:** Note the following field restrictions:
  - **Rule name** must be 64 characters or fewer.
  - **Parser Name** must be between 3 and 30 alphanumeric characters (including underscores), and must not match the name of any existing log parsers.
  - **Parser Display Name** must be 64 characters or fewer, and cannot match any other parser display name.
  - **Regex Expression** must be 1-255 characters, and a valid regex (closed capture list allowed).
  - **Tags** cannot be duplicates.
- **Deploy only to 11.2 Log Decoders:** The Deploy operation only deploys log parsers to version 11.2 or later Log Decoders.
- **Cannot Remove Deployed Parsers:** Once deployed, you cannot delete a log parser using the UI.
- **See log for errors:** Refer to content-server logs for more details on deploy failure details and log decoder names.

Parser Rules Tab



Note: The information in this topic applies to NetWitness Version 11.1 and later.

This tab contains details about the rules for the default log parser, as well as any other custom rules and log parsers that have been defined.

To access this tab, go to  **(Configure) > Log Parser Rules**.

Workflow

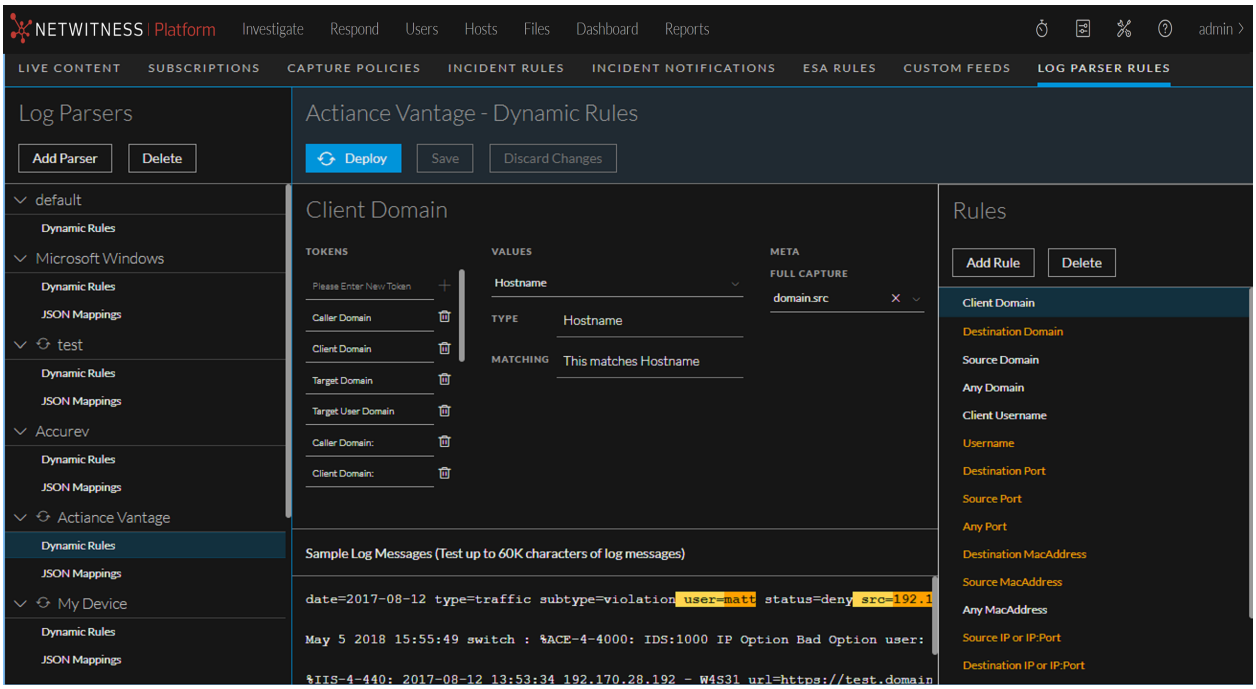
This workflow shows processes available from the Log Parser Rules view.

What do you want to do?

Role	I want to...	Documentation
Administrator	*View log parser rules.	Default Log Parser and Log Parser Rules
Administrator	*Add, edit or delete a log parser rule (version 11.2 and later)	Add or Delete a Log Parser Rule
Administrator	*Add or remove a log parser (version 11.2 and later)	Add or Delete a Log Parser

*You can perform this task here.

Related Topics

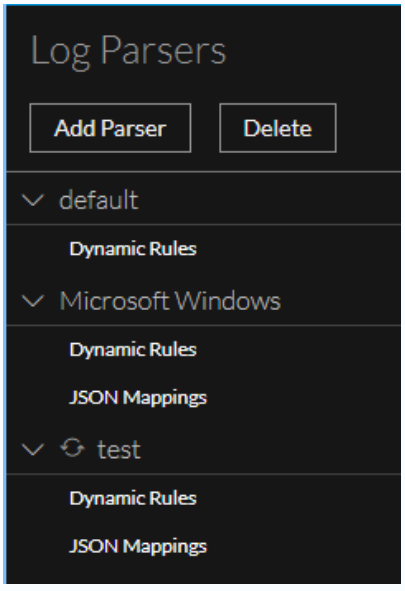


Default Log Parser and Log Parser Rules

Quick Look

Note: The list of log parsers is based on the first Log Decoder that is installed or registered by the Orchestration Server. If you have more than one Log Decoder, this tab only lists log parsers that have been configured on the first one.

The Log Parser Rules tab organizes and displays information about the configured log parsers in your system.

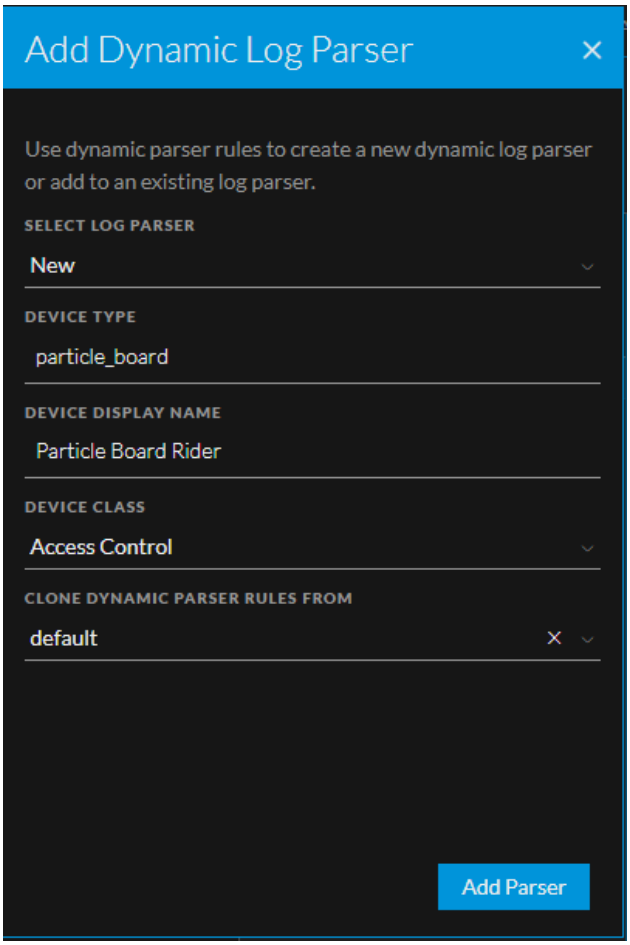


If you select the Dynamic Rules entry for a parser, the screen displays the dynamic rules:

Note: The  icon indicates that there is some uncompleted or unsaved work. For example, next to a parser name, it means that the parser has not yet been deployed.

If you select JSON Mappings, the screen displays JSON mappings for the parser.

Log Parsers Panel



The Log Parsers Panel lists the configured log parsers.

- Until you add rules to existing XML parsers on your reference Log Decoder, (or add a new, custom log parser) only the **default** parser is listed here.
- Select a specific log parser to view its details in the Details and Rules panels.
- Click **Add Parser** to open the Add Dynamic Log Parser dialog box.
- Click **Delete** to delete a log parser.

IMPORTANT: Once you deploy a log parser, you can no longer delete it through this interface. The **Delete** button is not available for deployed parsers. To manually delete a log parser, see Add or Delete a Log Parser.

The Add Dynamic Log Parser dialog box allows you to add a custom log parser.

When you are adding a log parser, the following parameters are available.

Field	Details
SELECT LOG PARSER	Select NEW, or choose an existing log parser. By choosing an existing log parser, you can add rules to that parser, essentially extending its parsing capabilities. **Note:** If you select an existing log parser, the remaining fields are auto-filled based on the values for selected log parser.
DEVICE TYPE	Enter a string to define the device type. The name must be between 3 and 30 alphanumeric characters (including underscores), and must not match the name of any existing log parsers.
DEVICE DISPLAY NAME	Enter the display name for the log parser. **Note:** The display name must be 64 characters or fewer, and must not match the name of any other device display name.
DEVICE CLASS	Select a device class.
CLONE DYNAMIC PARSER RULES FROM	Leave blank to start with no rules, or select one of the existing log parsers to clone its rules.

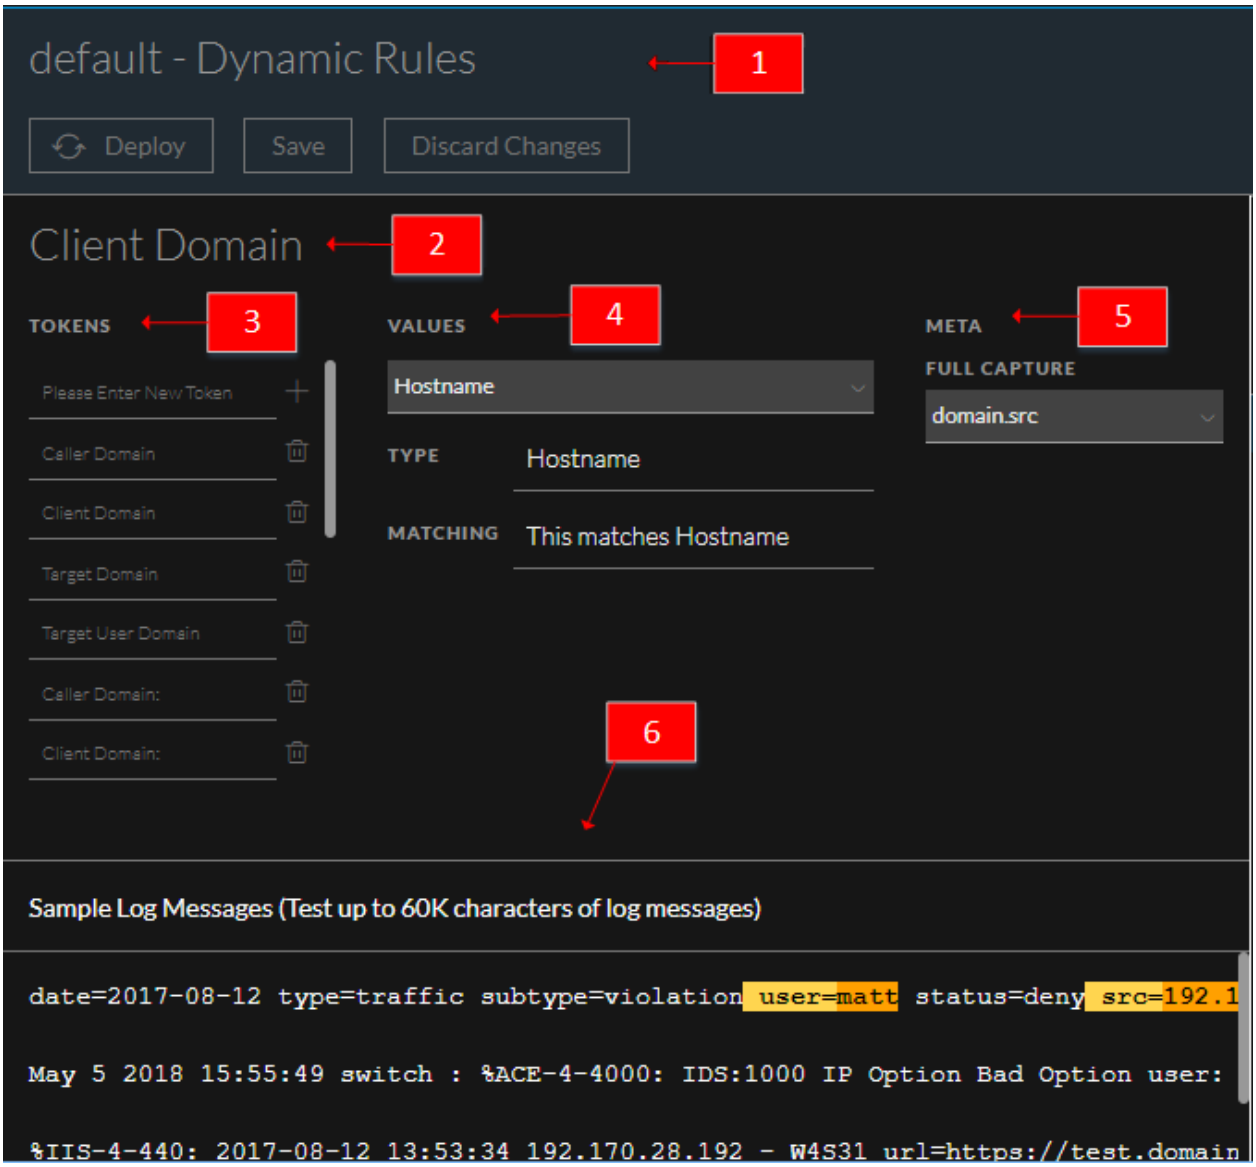
Dynamic Rules

If you select the Dynamic Rules entry for a parser, you see the following panes:

- Details
- Rules

Details Pane

The details pane shows the three pieces for the selected rule:



- **Tokens:** one or more tokens to match in the message. For example, the Any Port rule looks for the following strings to match against: **port** , **port:**, **port=**, and others.
- **Values:** the value that follows the token. This is a string that is captured as meta. For example, assume a log contains the following string:

  ```
  port 12345
  ```

  The Any Port rule has a token that matches "port ". When it encounters that string, it assigns the token value, "12345" to a meta key.
- **Meta:** the meta keys to which the value is mapped. For example, the Any Port rule maps the port value to the **port** meta key.

Essentially, a rule says, "when you are parsing a message, if you match one of my tokens, assign the value that follows the token to the meta key that I want it stored as."

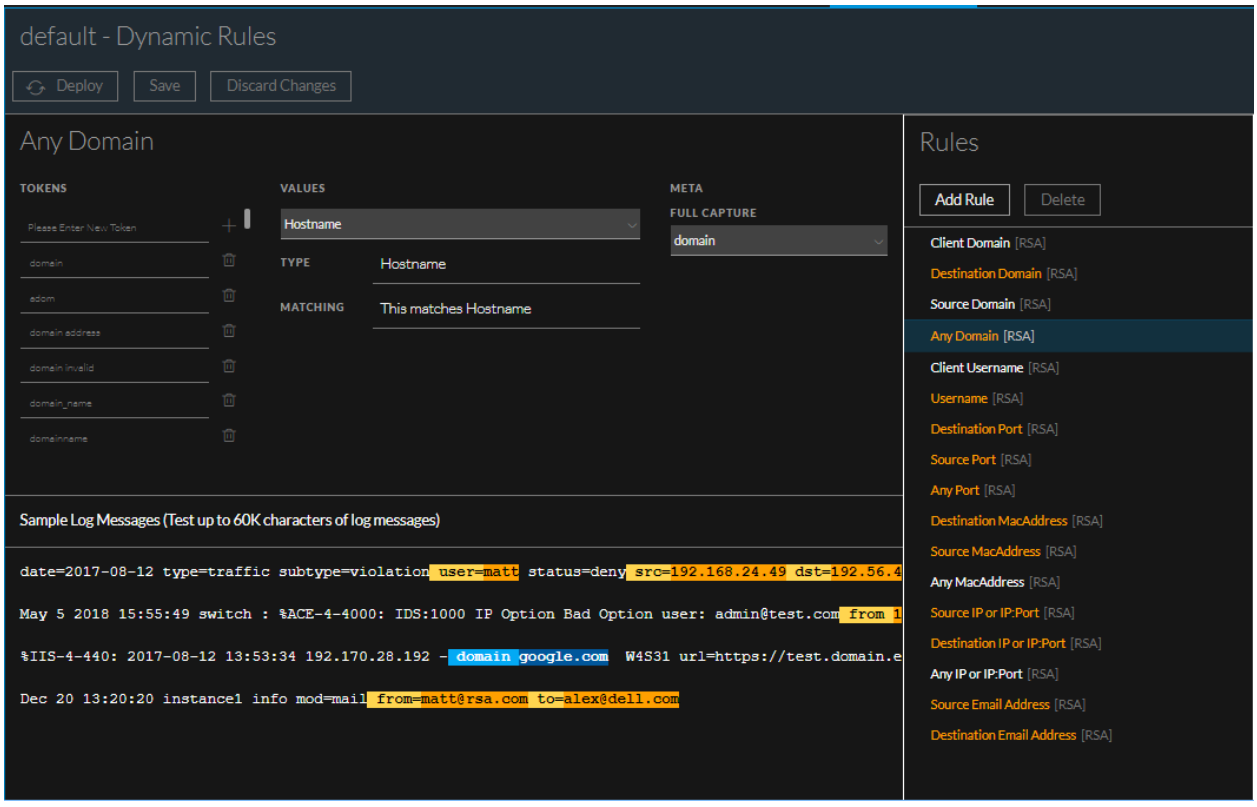
The bottom section of the Details panel contains sample log messages, and how they would be parsed for the selected log parser.

1	Displays the name of the selected log parser, and the buttons for deploying, saving, and discarding changes. This value changes when you select a different parser.
2	Displays the name of the selected rule. This value changes when you select a different rule for this parser.
3	Displays the list of tokens defined for the selected rule.
4	Displays the type and pattern of the value matching for the selected parser. The values here are determined by the type of the selected value. You can also use the Regex option to define a custom regular expression.
5	Displays the NetWitness meta to which the selected rule maps any matched tokens. The values here are determined by the selected Rule.
6	Displays a sample log message, and highlights strings that match tokens in the selected log parser. You can edit this field, and add in your own logs to preview how the selected parser will parse your logs. **Note:** The sample section refreshes whenever a rule is changed or updated, as well as when you

paste in samples from your logs.

For example, consider the following scenario:

- The **default** parser is selected.
- The **Any Domain** rule is selected.
- The Tokens matching list displays all of the tokens that are matched when found in a log message: **Domain**, **Domain Name**, **domain**, **ADMIN_DOMAIN**, and so on.
- The Meta list displays the NetWitness meta to which the value for the token is mapped: **domain**.



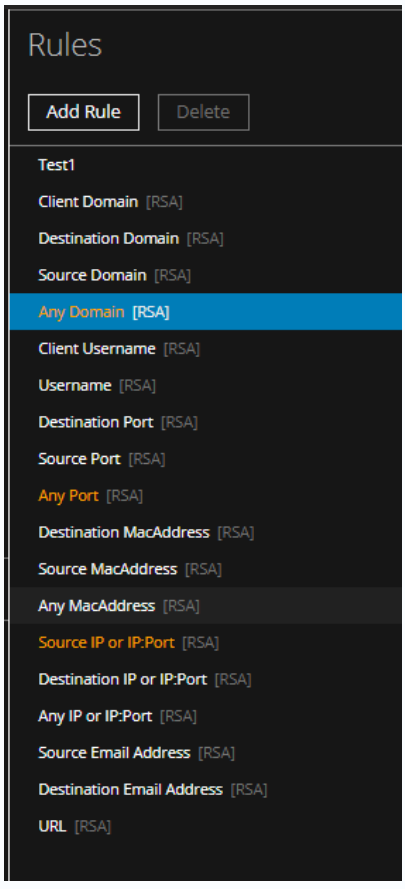
So, let's say the sample log message area has the following text:

```
Below are sample log messages:

May 5 2010 15:55:49 switch : %ACE-4-400000: IDS:1000 IP Option Bad Option
List by user admin@test.com from 10.100.229.59 to 224.0.0.22 on port 12345.

Apr 29 2010 03:15:34 pvg1-ace02: %ACE-3-251008: Health probe failed for
server 218.83.175.75:81, connectivity error: server open timeout (no SYN ACK)
domain google.com with mac 06-00-00-00-00-00.
```

In this case, the Sample Log Message area looks like this:



Note that some strings are highlighted, and that there are two "pairs" of highlight colors:

- Dark blue and light blue highlighting is applied to the strings that match the currently selected rule.
  - Dark Blue highlighted strings match a token in the selected rule. In this case, **domain** is the token that is matched for the **Any Domain** rule.
  - Light Blue highlighted strings are the values that correspond to the tokens in dark blue. For example, **google.com** is highlighted in light blue, because it corresponds to the **domain** token.
- Orange and yellow highlighting is applied to the strings that match rules for the current parser that are *not* currently selected.
  - Orange highlighted strings match a token in a rule that is not currently selected.
  - Yellow highlighted strings are the values that correspond to the tokens in orange. For example, the **user** token matches the **Username** rule (which is not currently selected).

In this example, the **domain** meta would be assigned a value of **google.com** for this log message, if it was parsed using the default log parser.

Rules Pane

The Rules pane displays the list of rules used by the selected log parser. When you select a rule, you change the values that are displayed in both the **Tokens** and **Values** areas of the panel.

Note the highlighted rules:

- The currently selected rule is highlighted in blue.
- Other rules that match tokens in the sample log message area are highlighted in orange.

Other notes for the Rules panel:

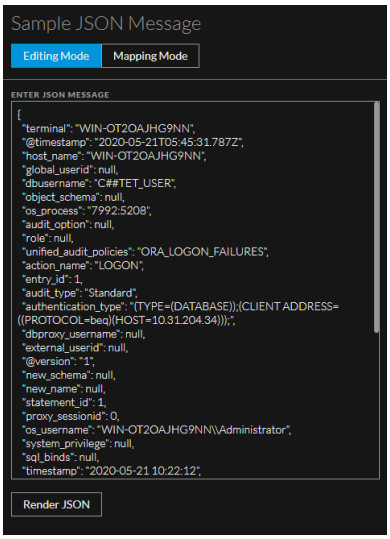
- RSA rules (the rules provided out-of-the-box for each log parser) are identified by **[RSA]** following the rule name.

  You can copy these rules when adding a new log parser, and then change them as needed.
- The **Delete** button is only available for custom rules; for RSA rules, it is greyed out.
- Use the **Add Rule** button to add a custom rule.

JSON Mappings

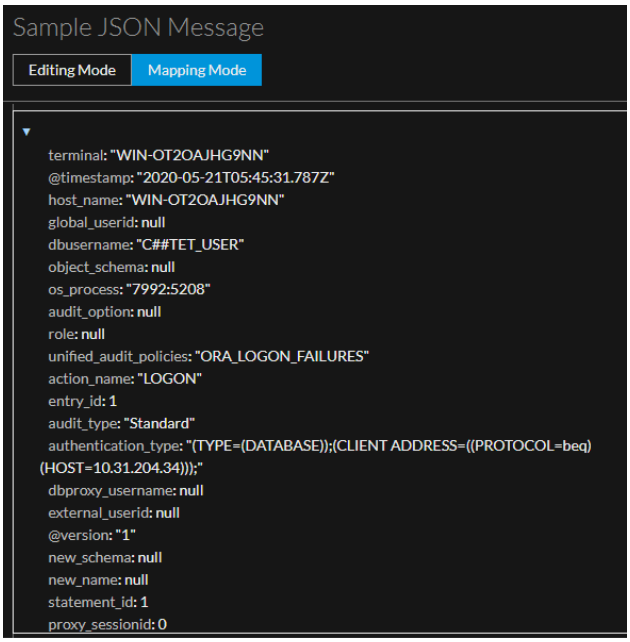
If you select the JSON Mappings entry for a parser, you see the following panes:

- Sample JSON Message
- Meta Mappings
- Mapping Details



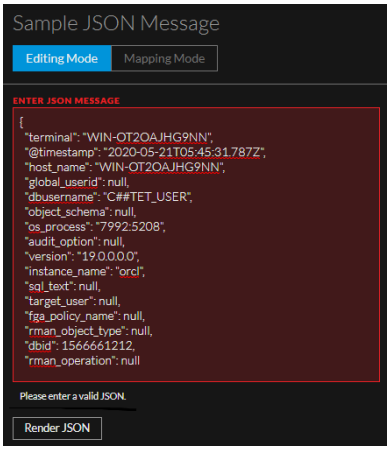
Sample JSON Message

You can enter or paste sample JSON text. Click the **Render JSON** button to automatically format the text into JSON code. If the text is not valid JSON, you receive a message and the text is not formatted.



The following screen shows the Sample JSON Message area with some JSON that has been pasted in:

Since this is valid JSON, clicking **Render JSON** produces the following:



Note that you can see the tree mode of the sample JSON if you click **Mapping Mode**:

Note: You can edit the sample JSON in Editing mode, but not in Mapping mode. Mapping mode is read only.

On the other hand, if you enter text that is not valid JSON, the screen looks as follows:

Auto Discover JSON Mappings

Beginning with NetWitness version 11.5.1, you can automatically create the mappings without the need to manually enter the name and path of the mapping. For details, see .Auto Discover JSON Mappings.

When the system auto discovers mappings, the path is filled in automatically, based on the structure of the mappings. For simple name-value pairs, this is straightforward. For example, for this pair, **"host_ name": "WIN-OT2OAJHG9NN"** , the path is set to `/host_name`.

However, the rules for nested mappings and arrays are as follows:

- For a nested structure, names are separated with a forward slash (/).

```
{
  "parent": {
    "child": "value"
  }
}
```

The path is set to `/parent/child`.

- Arrays are accessed by omitting the index.

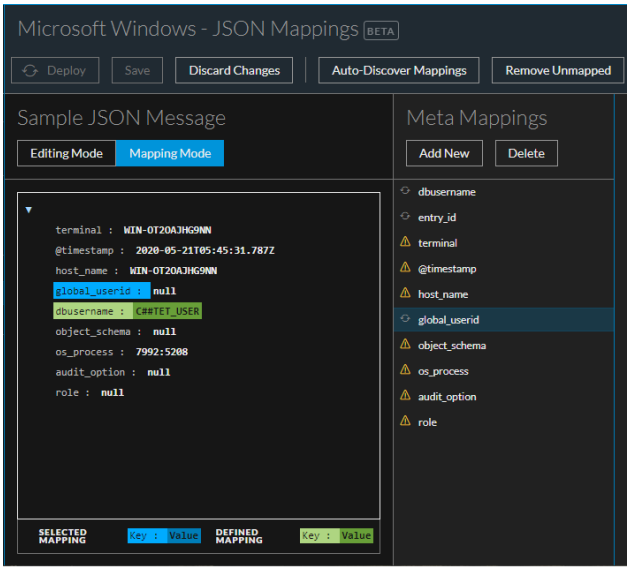
```
{
  "array": [
    "x",
    "y",
    "z"
  ]
}
```

The path is set to `/array/`.

```
{
  "array": [
    {
      "name": "value"
    }
  ]
}
```

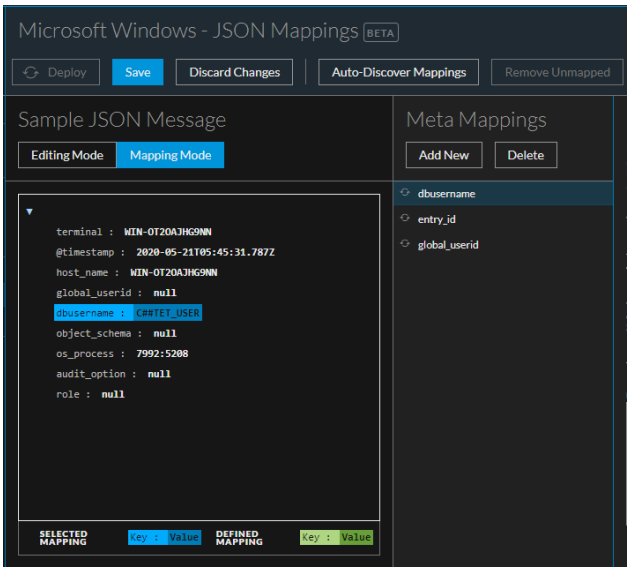
The path is set to `/array//name`.

- Variable names are accessed by omitting them from the path.



```
{
  "root": {
    "x": {
      "name": "value"
    },
    "y": {
      "name": "value"
    }
  }
}
```

The paths are set to `/root/x/name` and `/root/y/name`.



Remove Unmapped Entries

If there are mappings that you do not want to save, you can remove them. After you validate all of the mappings that you want to keep, you can click **Remove Unmapped** to remove all mappings that you have not yet validated.

For example, assume you have auto-discovered some mappings as shown here:

After you click **Remove Unmapped**, you can see that only mapped entries remain:

Note: You cannot save your work until all of the entries have either been mapped or removed from the list.

Meta Mappings

This panel lists the mappings that exist for this parser. You can add a mapping by using the **Add New** button, or delete an existing mapping by selecting it and clicking **Delete**.

Mapping Details

The Mapping Details pane displays the following information.

Field	Details
DISPLAY NAME	This name corresponds to the name displayed in the JSON Mappings panel.
PATH	The path to where the values for this portion of the log are stored.
DESCRIPTION	Optionally, you can enter a text description for this mapping.
META	Select a meta key to which this value from the log is mapped. Select a value from the drop-down menu. Optional if you choose a Value Format.
VALUE FORMAT	Choose a value format parser onto which to pass this JSON value. You can either select an existing meta or **Custom Regex Type**. If you select custom regex type, you must define the regex and capture to *fine* parse the value in the meta. Optional if you choose a Meta.
CUSTOM REGEX TYPE	Select Custom Regex Type from the Value Format drop-down, which allows you to add new custom regex type.
REGEX PATTERN	Specify a regex to identify different pieces of data contained within a JSON node value.
FIRST CAPTURE	Select a meta key that should be captured first based on the value defined in the Regex pattern.

Field	Details
ADD A CAPTURE	New capture field is added. By default, it is loaded with meta keys in the drop-down. You can add maximum of 20 captures and this option will be disabled once it reaches maximum.

Note: You need to select a meta or enter a Value Format, but you do not need to fill in values for both settings.

Disable log Parser Rules

You can disable log parser rules, so that none of them are processed by the Log Decoder. You might have your log parsers working as you like, and do not want any extra processing that you do not need.

You disable them from the reference Log Decoder.

1. Go to  **(Admin) > Services**.
2. In the **Administration Services view**, select the Decoder and  **> View > Config.**
   The Services Config view is displayed with the General tab open.
3. Under **Parsers Configuration**, look at the Config Value for **PARSERULESCAN**.
   If it is **Enabled**, log parser rules are processed. If it is **Disabled**, they are not processed.
4. If the rules are Enabled, click Enabled and select Disabled to disable the log parser rules.
   To save the changes, click **Apply**.

Add VARTYPE Support to CEF Parser

VARTYPE added in 11.0 and later versions provide type and pattern validation for variables. While the variables are parsed, NetWitness has added the ability to condition them to match a certain format.

CEF Parser format logs with **CEF:0** and will use CEF parsers without any further identification. Some CEF sources have structured data embedded in variables. This data requires further processing. To direct parse rules scanning of the data, support for scanned variables is required for the CEF parser. Scanned variables are supported during the VARTYPE implementation.

To add VARTYPE support to CEF parser:

1. Load VARTYPE from CEF parser (cef.xml and cef-custom.xml) successfully.
2. Load all existing CEF parsers and parse the data successfully.
3. Enable VARTYPE to validate the header information.
4. Enable VARTYPE to fine parse CEF variable (MetaName).
5. Ensure that VARTYPE is working fine with custom CEF parser.

Defining Log Decoder Parse Rules

A single rule is defined by the following XML elements:

- **RULE** (element, required) - Each rule is enclosed in a RULE element.
  - **id** (attribute, required) - A name associated with the rule.
  - **stop** (attribute, optional) - An attribute to stop the rule.
  - **order** (attribute, optional) - An attribute to order the rule.
- **LITERAL** (child of RULE, requires one or more) - The literal defines the string inside each log message for which Log Decoder will search. Multiple literals can be defined.
  - **value** (attribute, required) = The string value for which to search.
- **PATTERN** (child of RULE, requires exactly one) - A pattern is defined as either a **regex** or a **format**.
  - **regex** (attribute, optional) - A regular expression that can be used to extract one or more values from the matched string.
  - **format** (attribute, optional) - A built-in format type for which to scan and extract values (see **Built-In Format** below).
  - **range** (attribute, optional) - Determines the range to be searched for the pattern before and after the found LITERAL token. It supports the following values:

Value	Description
after	Applies regex after the anchor till the end of the log. This is the default value.
before	Applies regex from the beginning of the log till the starting position of the anchor.
all	Applies regex to entire log.
before, after	Applies regex to entire log.
Negative Integer (-X)	Applies regex to X or available characters before the found LITERAL token.
Positive Integer (+X)	Applies regex to X or available characters after the found LITERAL token.
-X, +Y (Combination of Positive and Negative Integers)	Applies regex to X or available characters before the found LITERAL token to Y or available characters after the found LITERAL token. - range=”-15,+12”
-X, after (Combination of Negative Character, and After)	Applies regex to X or available characters before the found LITERAL token to the end of the log. - range=”-15,after”

- **CAPTURE** (child of PATTERN, optional) - A capture is used when extracting data from the log that was captured by the regular expression defined in PATTERN.
  - **index** (attribute, required) - The index of the regex match to capture.
  - **key** (attribute, required) - The meta key into which to assign the captured value.
  - **format** (attribute, optional) - The NwType of the key to be created (For example, Text, IPv4, UInt32 and so on). Default is Text.
- **META** (child of RULE, optional) - A meta element defines meta values that get created when there is a match for the pattern.
  - **key** (attribute, required) - The meta key into which to store the value.
  - **value** (attribute, required) - The value to store.
  - **format** (attribute, optional) - The NwType of the key to be created (For example, Text, IPv4, UInt32 and so on). Default is Text.

Note: The **format** defined in the **CAPTURE** and **META** elements determines the meta type of the corresponding key. If this meta key is defined elsewhere in Log Decoder (in another parser, a language file and so on) and the types do not match, then an error will be generated and parse rule could potentially be disabled.

Built-In Formats

Log Decoder Parse Rules also offer several built-in formats for the more commonly used types. These formats are:

Format	Description	Example
IPv4	ipv4	192.168.1.1
IPv6	ipv6	2607:f0d0:1002:51::4
MAC	physical Mac address	01:23:45:67:89:ab
UInt8	unsigned 8-bit integer	0 to 255
UInt16	unsigned 16-bit integer	0 to 65535
UInt32	unsigned 32-bit integer	0 to 4294967295
UInt64	unsigned 64-bit integer	0 to 18446744073709551615
Int8	signed 8-bit integer	-128 to 127
Int16	signed 16-bit integer	-32768 to 32767
Int32	signed 32-bit integer	-2147483648 to 2147483647
Int64	signed 64-bit integer	-9223372036854775808 to 9223372036854775807
Float32	decimal numbers	2.71818
Float64	decimal numbers	2.71818

Format	Description	Example
Email	valid email address	bob@company.com
URI	universal resource identifier	http://www.google.com/path/script?query=param
Hostname	RFC-1123 compliant hostname	abc.xzy.com

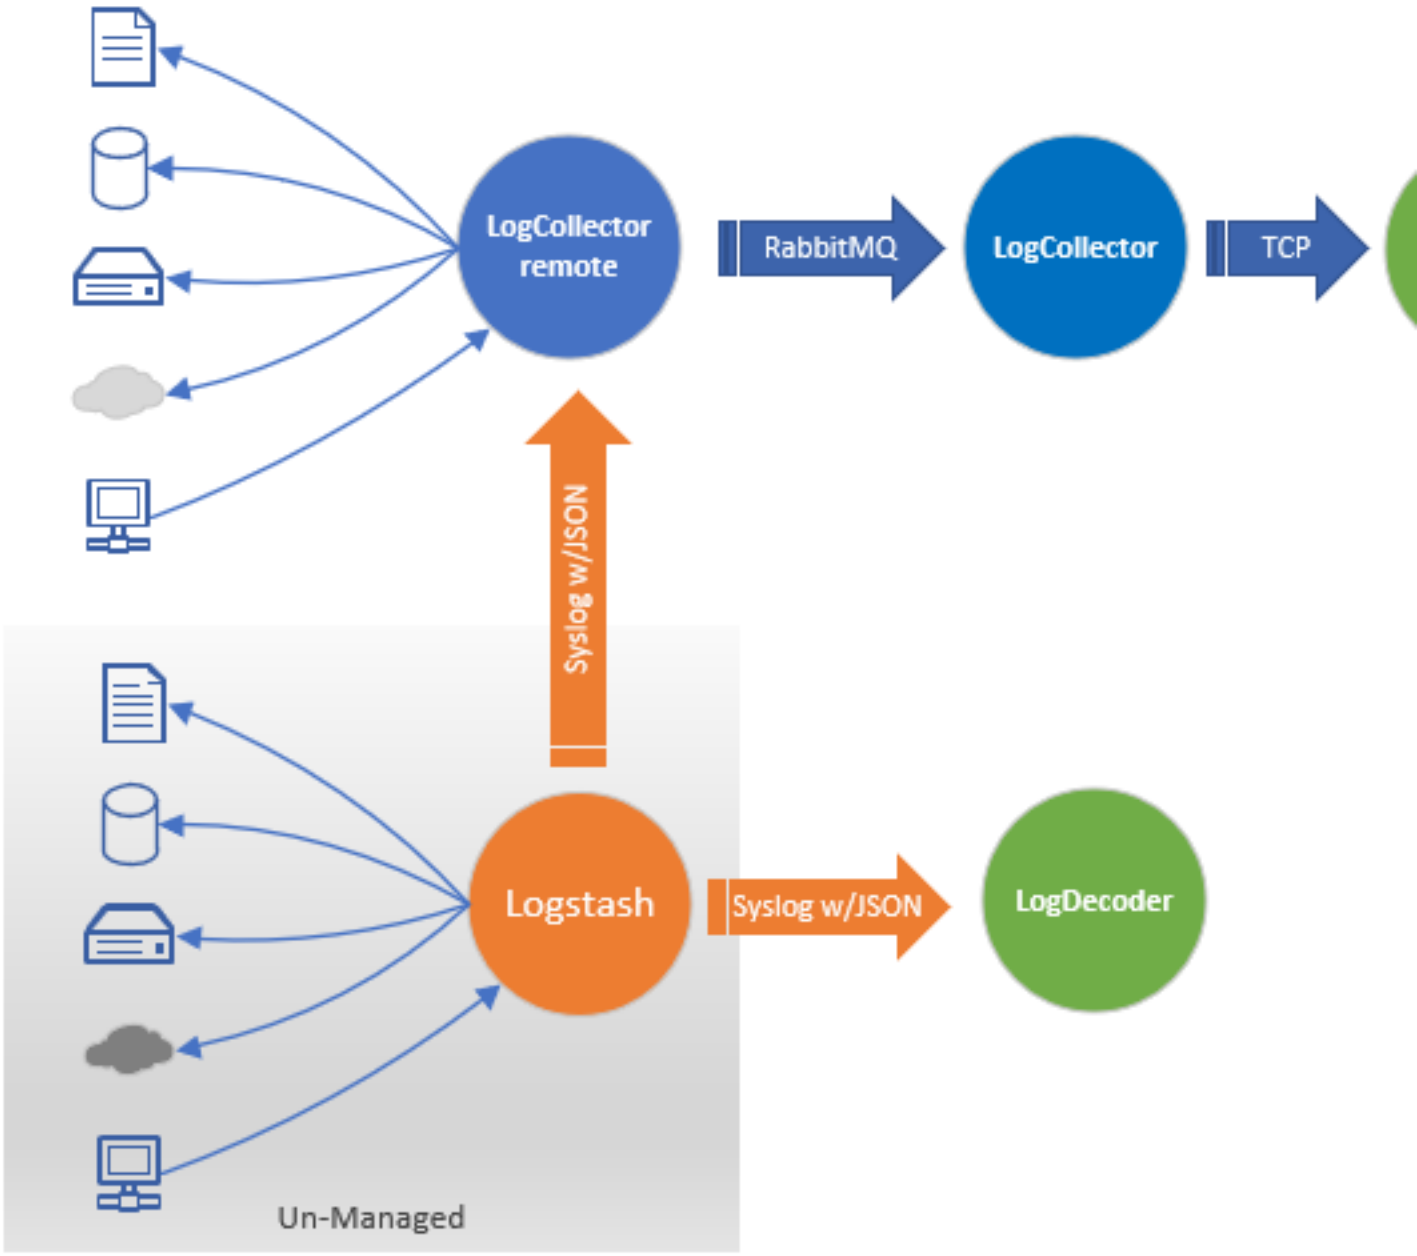
Overview

This document is intended to provide a general overview of Logstash and NetWitness integration. The intention is to provide enough implementation detail that users can have comfort using and troubleshooting these integrations on their own.

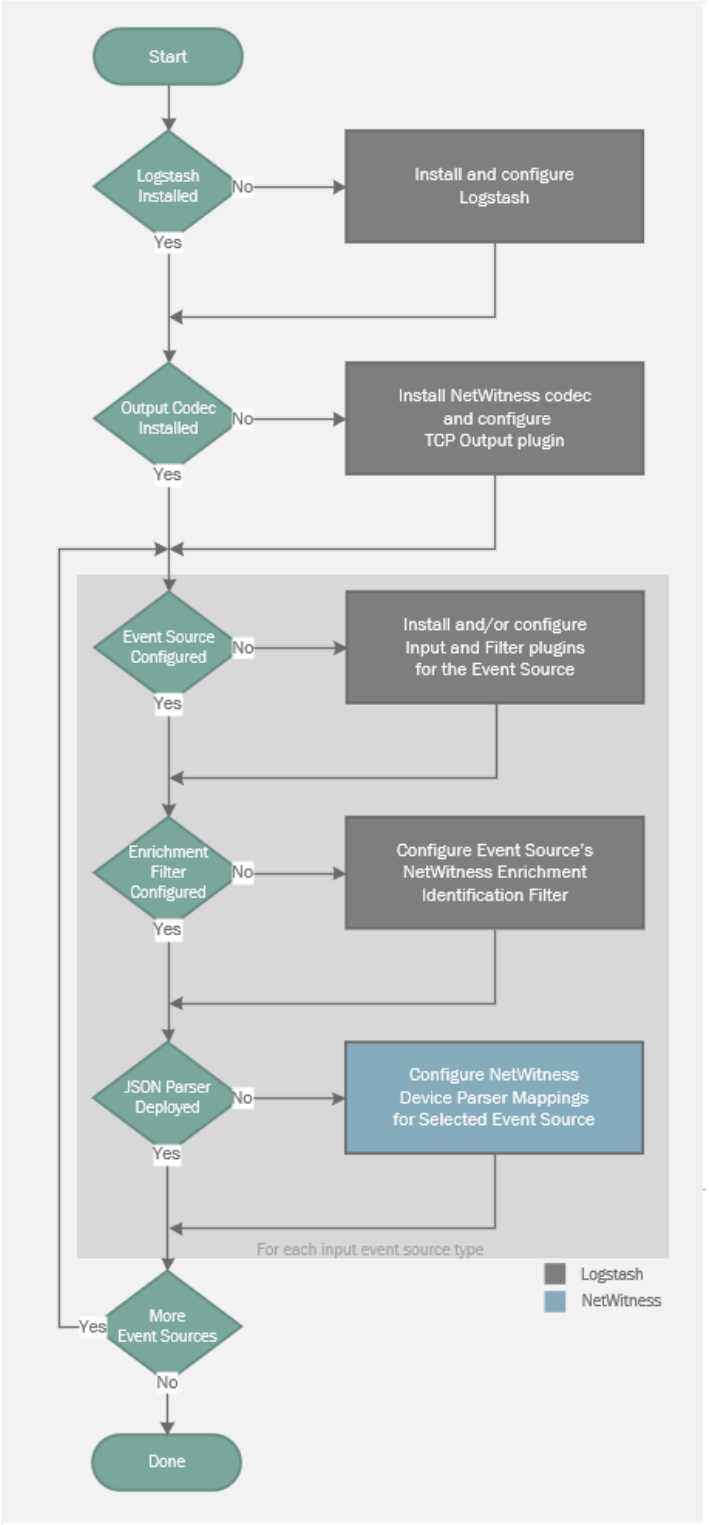
To describe Logstash, here is some introductory text from Logstash reference documentation:



> *Logstash is an open source data collection engine with real-time pipelining capabilities. Logstash can dynamically unify data from disparate sources and normalize the data into destinations of your choice…*

From a NetWitness standpoint, there are two basic use cases:

- For customers that have an event source for which NetWitness does not already provide an integration, or if you want a customized integration that is different from the one provided by NetWitness.
- For customers that already have an existing Logstash configuration, you can use Logstash to integrate as many of your event sources as you like. Integrating your event sources should be a matter of updating the destination for where you currently send the log information: either adding NetWitness as a destination, or changing your current output destination to NetWitness.



From 11.6 onwards, the Logstash server is packaged and supported along with the NetWitness Log Collector or Virtual Log Collector (VLC) service to provide easy access to Logstash. This is referred to as Managed Logstash and it eliminates the need for a separate Logstash server outside of the NetWitness Platform. For more information, see Configure Logstash Event Sources in NetWitness in the *Log Collection Configuration Guide*.

The following diagram displays a view of how Logstash integrates with the NetWitness.

Configuration Process

The following flowchart describes the steps customers take to integrate Logstash with NetWitness, depending on their prior familiarity with and use of Logstash.

The following sequence describes the data flow from an event until it becomes NetWitness meta in a Log Decoder.

1. An event source generates events.
2. The collection plugin (for example a Beats plugin) collects events from the event source.
3. Logstash processes the data from the events.
4. A NetWitness codec encodes the Logstash-processed data into a format that can be consumed by NetWitness.
5. An output plugin sends the processed event data to the NetWitness.
6. A JSON parser populates meta from the processed event data.

Install Logstash

Skip this section if you already have Logstash installed and configured.

Please ensure that you follow all the security-related best practices and guidelines outlined in the Logstash documentation to avoid any potential security risks.

You can install either the free, open source version of Logstash (OSS) or the paid version (Elastic).

Information on released versions of Logstash is available at Logstash Reference. Links in the following steps show an example of installing current version of Logstash on Linux.

1. Install the service: Installing Logstash (OSS free version)
2. Based on your OS, after installation do one of the following:
    - Linux: set Logstash to run as a service: Running Logstash
    - Windows: see Running Logstash on Windows
3. Next, enable Logstash to start when the system boots up:
    - For CentOS, see https://www.unix.com/man-page/centos/1/systemctl/
    - For Debian, see https://wiki.debian.org/systemd/documentation

    Those are 2 examples: adjust instructions according to your particular Operating System.

For Generic Troubleshooting Instructions for Logstash, follow this link: Logstash Troubleshooting

If you are using CentOS, note the following:

- Logstash logs are stored in /var/log/logstash/logstash-plain.log
- If you install logstash using rpm install, make sure it installs as logstash user and folders get created with the same user: **not** the root user.

Install and Configure the NetWitness Codec

To forward Logstash events to the NetWitness in RFC-5424 format, you need to install the NetWitness codec on your system and refer to it in your output plugin configuration.

To install or update the codec:

The following procedure can be performed on either Linux or Windows: instructions that are specific to an OS are noted.

1. Download offline installer from NetWitness Link in the following location: NetWitness Codec Installer
2. Copy the downloaded NetWitness ZIP archive to the system where Logstash runs.
3. Open a command prompt and change directory to Logstash home:
    - On Linux: cd /usr/share/logstash.
    - On Windows: cd: ***logstash_directory***

      For example: cd: c:\Logstash\
4. Stop the logstash service, if it is running.
    - On Linux, run the following command:

      systemctl stop logstash
    - On Windows, open the Services window (you can search for it or find it from the Start menu), then locate the Logstash service in the list and click **Stop the service**.
5. Run the following command and check to see if **logstash-codec-netwitness** is listed.
    - On Linux:

      bin/logstash-plugin list
    - On Windows:

      .\bin\logstash-plugin list
6. If it is listed, delete it by running the following command:
    - On Linux:

      bin/logstash-plugin remove logstash-codec-netwitness
    - On Windows:

      .\bin\logstash-plugin remove logstash-codec-netwitess
7. To install the latest package, run the following command:

- On Linux:

  bin/logstash-plugin install file:///***<path-to-file>***/logstash-codec-netwitness-offline-**<version>**.zip

- On Windows:

  .\bin\logstash-plugin install file:///***<path-to-file>***/logstash-codec-netwitness-offline-**<version>**.zip

  Make sure to use forward slashes (/) as a separator between Windows subfolders for the path to the logstash installation package.

If the codec is installed correctly, you receive a confirmation message. The following is an example:

Installing file: /usr/share/logstash/logstash-codec-netwitness-offline-1.0.0.zip

Install successful

8. Below are default paths for logstash configurations. All output, filter, and input configuration files are under these folders.

   we would go over those configuration files in later sections.

   - For Linux: /etc/logstash/conf.d/
   - For Windows: ***logstash_directory***/config/

   For details on output files, see "Configure Logstash Output Plugins" on page 13. For details on input and filter plugins, see "Logstash Input and Filter plugins" on page 19.

9. Start the logstash service:

   - On Linux, run the following command:

     systemctl start logstash

   - On Windows, open the Services window (you can search for it or find it from the Start menu), then locate the Logstash service in the list and click **Start the service**.

Configure Logstash Output Plugins

Logstash TCP Output

In order to send the events from Logstash to NetWitness, we use the TCP output plugin: https://www.elastic.co/guide/en/logstash/current/plugins-outputs-tcp.html

The TCP output is configured with the NetWitness codec, which formats the outgoing events to be consumable by a NetWitness Log Decoder or Virtual Log Collector (VLC).

The following is an example of a properly configured output block using TCP & the NetWitness codec:

Output Block

```
output {
  tcp {
    id => "nw-output-tcp"
    host => "10.10.1.2" #IP or Hostname of destination Log Decoder or VLC
    port => 514
    codec => netwitness
  }
}
```

Logstash TLS Output

The output block can be further configured to allow for TLS communication between Logstash and NetWitness. An example of a properly configured output block using TLS and the NetWitness codec:

TLS Output Block

```
output {
  tcp {
    id => "nw-output-tcp"
    host => "10.10.1.2" #IP or Hostname of destination Log Decoder or VLC
    port => 6514
    ssl_enable => true
    codec => netwitness
  }
}
```

TLS with Log Decoder (or Virtual Log Collector) Verification

TLS can also be set up to verify the Log Decoder or Virtual Log Collector (VLC) to which it will be communicating. To do this, the Root and Intermediate CA certificates need to be obtained and stored in a truststore for Logstash.

1. On the Log Decoder (or VLC) to which you will be sending events, run the following command:

   cat /etc/pki/nw/ca/nwca-cert.pem /etc/pki/nw/ca/ssca-cert.pem > nw-truststore.pem
2. Copy the nw-truststore.pem file to the Logstash machine and store it in a known location.
3. Create a certificate for the Logstash machine using a self-signed CA or your own CA.
4. Store the cert and private key files in a location of your choosing.

   You need to specify the locations of these files in your TLS output block.

The following code snippet shows an example of a properly configured output block using TLS and the NetWitness codec

Output Block with Verification

```
output {
  tcp {
    id => "nw-output-tcp"
    host => "10.10.1.2" #IP or Hostname of destination Log Decoder or VLC
    port => 6514
    ssl_enable => true
    ssl_verify => true
    ssl_cacert => "/path/to/certs/nw-truststore.pem"
    ssl_key => "/path/to/certs/privkey.pem"
    ssl_cert => "/path/to/certs/cert.pem"
    codec => netwitness
  }
}
```

Configure the Event Source

If you have logstash already install and configured to collect events from desired event-sources you can skip this section.

As a starting point, view the list of input plugins here: Input Plugins. This is not meant to be an exhaustive list, just as a starting point to view some of the available input plugins.

The remainder of this section describes some examples.

Collect Apache File Logs

Typically, Apache logs are written to files on the disk, so to collect events from file you could use the **Filebeat** plugin.

To install and configure Filebeat, see the following websites:

1. Install the Filebeat service on Linux. Refer to the following link: Filebeat Installation
2. Configure Filebeat to collect from specific logs. Refer to the following link: Filebeat Configuration
3. Configure Filebeat to send the output to Logstash. Refer to the following link: Filebeat Logstash Output

Collect CentOS Audit Logs

To collect audit events from an operating system (for example CentOS), you could use the **Auditbeat** plugin.

To install and configure Auditbeat, see the following websites:

1. Install the Auditbeat service on Linux. Refer to the following link: Auditbeat Installation
2. Configure Auditbeat to collect from specific logs. Refer to the following link: Auditbeat Configuration
3. Configure Auditbeat to send the output to Logstash. Refer to the following link: Auditbeat Logstash Output

Configure Parameters for Filebeat or Auditbeat

For Filebeat or Auditbeat plugin, make sure to configure input and output parameters. Modify /etc/filebeats/filebeat.yml as shown below.

To enable file collection, modify the **Filebeat inputs** section as shown in the following image:

```
#========================== Filebeat inputs =============================

filebeat.inputs:

# Each - is an input. Most options can be set at the input level, so
# you can use different inputs for various configurations.
# Below are the input specific configurations.

- type: log

  # Change to true to enable this input configuration.
  enabled: true

  # Paths that should be crawled and fetched. Glob based paths.
  paths:
    - /var/log/*.log
    #- c:\programdata\elasticsearch\logs\*
```

Modify the Outputs as follows:

- Comment out settings in the **Elasticsearch Output** section
- Uncomment **Logstash output** settings and provide logstash IP and Port.

Below is an example of the sections after changes are made:

```
#================================ Outputs =====================================

# Configure what output to use when sending the data collected by the beat.

#-------------------------- Elasticsearch output ------------------------------
#output.elasticsearch:
  # Array of hosts to connect to.
  # hosts: ["localhost:9200"]

  # Optional protocol and basic auth credentials.
  #protocol: "https"
  #username: "elastic"
  #password: "changeme"

#----------------------------- Logstash output --------------------------------
output.logstash:
  # The Logstash hosts
  hosts: ["localhost:5044"]

  # Optional SSL. By default is off.
  # List of root certificates for HTTPS server verifications
  #ssl.certificate_authorities: ["/etc/pki/root/ca.pem"]

  # Certificate for SSL client authentication
  #ssl.certificate: "/etc/pki/client/cert.pem"

  # Client Certificate Key
  #ssl.key: "/etc/pki/client/cert.key"
```

Configure Logstash Filters to Add NetWitness Meta

In order for an event to be processed in the Log Decoder as a specific data type, you need to add some meta key information to the event in Logstash.

- [@metadata][nw_type] — NetWitness device parser content name
- [@metadata][nw_msgid] — NetWitness message pattern to parse message
- [@metadata][nw_source_host] — Originating event source's IP or host value

The value for nw_type *must* match the device parser name. It should be composed of lowercase characters, numbers, or underscore and be less than 29 characters in length.

Optionally, you can add the following meta key:

[@metadata][nw_collection_host] — Collection system identifier (**lc.cid**)

By default, the NetWitness codec sends the complete JSON event as payload to the NetWitness Log Decoder. If the NetWitness nw_type device parser type has a custom payload format and failover payload format, the NetWitness codec plugin must be configured to use them. Please see the "Configure the Event Source" on page 15 section for more details.

The following code snippet contains an example of adding the required meta:

Code to Populate NetWitness Meta

```
filter {
  if ![@metadata][nw_type] {
    if [agent][type] == "filebeat" {
      mutate {
        add_field => {
          "[@metadata][nw_type]" => "linux"
          "[@metadata][nw_msgid]" => "LOGSTASH001"
          "[@metadata][nw_source_host]" => "%{[host][hostname]}"
        }
      }
    }
  }
}
```

Advanced NetWitness Configuration

Grok Filter Plugin

You can use Grok to parse incoming logs and extract valuable meta information. For details, see Grok filter plugin: match. The meta extracted using grok is part of the full event package sent to NetWitness, where it can be mapped to NetWitness meta.

Resources:

- List of Grok patterns: https://github.com/logstash-plugins/logstash-patterns-core/tree/master/patterns
- Grok debugger: https://grokdebug.herokuapp.com/

Logstash Input and Filter plugins

See the following URLs:

- Input Plugins
- Filter Plugins

You can use the beats input plugin for Logstash to receive events from beats sources, including Filebeat & Auditbeat: Beats Input Plugin

You can use the drop filter plugin for Logstash to filter out unwanted logs being passed through Logstash: Drop Filter Plugin

Filter out unwanted logs

You can also filter out unwanted logs using the drop-event processor for Filebeat & Auditbeat.

- Examples for Filebeat:

  Filebeat Reference: Filtering and Enhancing Data

  Filebeat Reference: Drop Events

- Examples for Auditbeat:

  Auditbeat Reference: Filter and Enhance the Exported Data

  Auditbeat Reference: Drop Events

Configure heartbeat plugin to send test logs to NetWitness

The **Heartbeat** plugin can be used to send a test message to verify connectivity between logstash and NetWitness. For details, see the Heartbeat Plugin configuration guide: Heartbeat Input Plugin.

Example of Heartbeat Plugin

```
...

heartbeat {
  id => "sample_plugin"
  #interval => 60
  count => 3
  message => "sequence"
  add_field => {
  "[@metadata][nw_type]" => "logstash_testlog"
  "msg" => "This is test log from some eventsource"
}

...
```

Configure logstash to persist events in case of failure (Recommended)

By default, Logstash uses in-memory queues to buffer events. The size of these in-memory queues is not configurable. If there is a machine failure, or if the service is forcibly stopped, the contents of these queues are lost. To protect against data loss in these situations, Logstash supports persistent queues that are stored on disk and thus can survive failures. For details, see Logstash Persistent Queues.

NetWitness Codec Advanced Configuration

By default, the NetWitness codec sends the complete JSON event as payload to the NetWitness Log Decoder. If the NetWitness nw_type device parser type has a custom payload format, you must configure the NetWitness codec plugin to recognize this custom format.

The payload_format and payload_format_failover mappings use nw_type as the key. The payload_format mapping is searched first for the device type (nw_type). If the device type is not set, or no format is specified for nw_type, or the system fails to make all configured variable substitutions, the complete JSON output is used as the payload. If the primary format from the payload_format mapping fails, the payload_format_failover mapping is tried. If that also fails, the complete JSON output is used as the payload. You can use The format can use Logstash event field syntax for this custom configuration.

The following code snippet shows example of adding meta with custom payload formats.

Add meta with custom payload formats

```
output {
   if [@metadata][nw_type] { # Only targeted NetWitness items
   tcp {
```

```
        id => "netwitness-tcp-output-conf-output"
        host => "127.0.0.1"
        port => 514
        ssl_enable => false
        codec => netwitness {
           # Payload format mapping by nw_type.
           # If nw_type is absent or formatting fails,
           # JSON event is used as the payload
           payload_format => {
              "apache" => "%APACHE-4-%{verb}: %{message}"
           }
           # Failover format, if above format fails
           # If nw_type is absent or formatting fails,
           # JSON event is used as the payload
           payload_format_failover => {
              "apache" => "%APACHE-4: %{message}"  # When verb is missing
              }
           }
        }
     }
  }
```

Troubleshoot Installation Issues

If you encounter any issues during installation of Logstash, see Logstash Installation and Setup.

Configure NetWitness to Collect Events

You need to start capture on the Log Decoder to which your are sending your Logstash data.

To start or restart network capture on a Log Decoder:

1. Log in to **NetWitness** and click the **ADMIN** icon > **Services**.
   The Services view is displayed.
2. Select a **Log Decoder** service.
3. Under  (actions), select **View** > **System**.
4. In the toolbar, click 

.

   If the toolbar is displaying the Stop Capture (

) icon, then capture has already been started.

By default, Log Decoders support events that are up to 32 KB in size. If your events are getting truncated on the Log Decoder, use the following procedure to change the event size:

1. Change LogDecoder REST config at **http://*LogDecoder_IP*:50102/-decoder/config**, where ***LogDecoder_IP*** is the IP address of your Log Decoder.
2. Set pool.packet.page.size to 64 KB.
3. Restart the Log Decoder: this is required after you change the pool.packet.page value.

If you are collecting events larger than 64 KB in size, follow instructions above in the "Filter out unwanted logs" on page 19 section. You can drop unwanted logs or fields for a specific event source, to reduce the size of the incoming data.

Linux Event Source Example

This section shows sample input, filters and output configuration to collect system and audit events from CentOS.

Input Plugin

An input plugin enables a specific source of events to be read by Logstash. The following code represents an example input plugin.

input-beats.conf

```
# Below input block collects events using beats plugins (e.g filebeats, auditbeats)
# Skip this block if it's already defined in another pipeline.
input {
    beats {
        port => 5044
    }
}
```

Make sure that port 5044 is open on the Logstash machine. As an example, if Logstash is on a CentOS system, run the following commands to open port 5044:

firewall-cmd --add-port=5044/tcp
firewall-cmd --add-port=5044/tcp --permanent
firewall-cmd --reload

Output Plugin

An output plugin sends event data to a particular destination. Outputs are the final stage in the event pipeline.

output-netwitness-tcp.conf

```
# Below is tcp output plugin with netwitness codec to tranform events in syslog and send
it to LogDecoder
# Only one of these configurations can be within the same pipeline.
output {
  #if [@metadata][nw_type] { # Only targeted Netwitness items
    tcp {
      id => "netwitness-tcp-output-conf-output"
      host => "10.10.100.100"  ## LogDecoder IP
      port => 514
      ssl_enable => false
      #ssl_verify => true
      #ssl_cacert => "/path/to/certs/nw-truststore.pem"
      #ssl_key => "/path/to/certs/privkey.pem"
      #ssl_cert => "/path/to/certs/cert.pem"
```

```
      codec => netwitness {
        # Payload format mapping by nw_type.
        # If nw_type is absent or formatting fails, JSON event is used as the payload
        payload_format => {
          "apache" => "%APACHE-4-%{verb}: %{message}"
        }
        # Failover format, if above format fails
        # If nw_type is absent or formatting fails, JSON event is used as the payload
        payload_format_failover => {
          "apache" => "%APACHE-4: %{message}"  # When verb is missing
        }
      }
    }
  #}
}
```

Filter Plugin

A filter plugin performs intermediary processing on an event. Below is a filter plugin configuration for system events collected from linux using the Filebeat plugin.

linux-system.conf

```
# Filters are often applied conditionally depending on the characteristics of the events.
# Requires these additional configurations within the same pipeline:
#   input-beats.conf
#   output-netwitness-tcp.conf

filter {
if ![@metadata][nw_type] {
  if [ecs][version] and [host][hostname] and [agent][type] == "filebeat" {
    if [event][module] == "system" {
      mutate {
        add_field => {
          "[@metadata][nw_type]" => "linux"
          "[@metadata][nw_msgid]" => "LOGSTASH001"
          "[@metadata][nw_source_host]" => "%{[host][hostname]}"
        }
      }
    }
  }
 }
}
```

Below is filter plugin configuration for audit events collected from linux using the Auditbeat plugin.

linux-audit.conf

```
filter {
    if ![@metadata][nw_type] { # Update Once
```

```
      if [ecs][version] and [host][hostname] and [agent][type] == "auditbeat" {
        if [event][module] == "audit" {
          mutate {
            add_field => {
              "[@metadata][nw_type]" => "linux"
              "[@metadata][nw_msgid]" => "LOGSTASH002"
              "[@metadata][nw_source_host]" => "%{[host][hostname]}"
            }
          }
        }
      }
    }
  }
```

Create a Pipeline

It is recommended to have one pipeline for each input type. For example, all beats collection should be in the same pipeline. To run collection as separate pipeline, create a directory and add above input, filters, and output configuration files to it.

Example Pipeline for Beats

```
/etc/logstash/pipeline1/
/etc/logstash/pipeline1/input-beats.conf
/etc/logstash/pipeline1/output-netwitness-tcp.conf
/etc/logstash/pipeline1/linux-system.conf
/etc/logstash/pipeline1/linux-audit.conf
```

Modify /etc/logstash/pipeline.yml and add the following entries:

Add to pipeline.yml

```
- pipeline.id: my-sample-pipeline-1
  path.config: "/etc/logstash/pipeline1/*.conf"
```

Build Custom JSON Parser

This section is intended for advanced programmers who want to build their own JSON parser. It describes how to build a Logstash parser for a sample device. We use the Linux device as an example throughout.

This chapter is optional: you do not need to build a custom JSON parser from scratch to input logs from Logstash to NetWitness.

Major sections in this document:

- Configure a filter by defining several required pieces of metadata.
- Examine a sample log message from the Linux device
- Walk through creating the parser, based on the sample log message
- View the parsed meta from the sample log message, as it appears on the Log Decoder

Sample JSON Log Received on Log Decoder

Let's examine a sample log and discuss its contents.

<13>1 - Centos7 linux - LOGSTASH001 [lc@36807 lc.ctime="1585886465037" lc.cid="Centos7" lc.ctype="logstash"] {"message": "msg='op=PAM:accounting grantors=pam_access,pam_unix,pam_localuser acct=root exe=/usr/sbin/crond hostname=? addr=? terminal=cron res=success'", "user":{ "email":"john.deaux@test.com", "username":"CORP\\deauxj" }, "host": { "name": "Centos7", "hostname": "Centos7", "containerized": false, "architecture": "x86_64", "id": "d1059ac783b24eb7bbde70a41fa572c9", "os": { "name": "CentOS Linux", "kernel": "3.10.0-1062.el7.x86_64", "version": "7 (Core)", "codename": "Core", "platform": "centos", "family": "redhat" } }, "@timestamp": "2020-04-03T04:01:05.037Z", "files": ["test1.log", "test2.log", "test3.log"],"machine_details" : { "1" : { "hostname" : "USXXLinux" }, "2" : { "hostname" : "USXXWindows" }}}

The first portion of the log is the RFC-5424 header:

<13>1 - **Centos7 linux** - **LOGSTASH001** [lc@36807 lc.ctime="1585886465037" lc.cid="Centos7" lc.ctype="logstash"]

This header contains the information that we used in setting our fields above:

- **nw_source_host**: Centos7 (Hostname)
- **nw_type**: linux (Device Type)
- **nw_msgid**: LOGSTASH001 (Message ID)

The remainder of the log is the JSON Payload.

JSON Payload

```
{
```

```
    "message": "msg='op=PAM:accounting grantors=pam_access,pam_unix,pam_localuser acct-
t=root exe=/usr/sbin/crond hostname=? addr=? terminal=cron res=success'",

    "user": {
        "email": "john.deaux@test.com",
        "username": "CORP\\deauxj"
    },

    "host": {
        "name": "Centos7",
        "hostname": "Centos7",
        "containerized": false,
        "architecture": "x86_64",
        "id": "d1059ac783b24eb7bbde70a41fa572c9",
        "os": {
            "name": "CentOS Linux",
            "kernel": "3.10.0-1062.el7.x86_64",
            "version": "7 (Core)",
            "codename": "Core",
            "platform": "centos",
            "family": "redhat"
        }
    },

    "@timestamp": "2020-04-03T04:01:05.037Z",

    "files": [
        "test1.log",
        "test2.log",
        "test3.log"
    ],

    "machine_details": {
        "1": { "hostname": "USXXLinux"},
        "2": { "hostname": "USXXWindows"}
    }

}
```

Create the JSON Parser for a Linux Device

Now that we have the sample log from the Linux device, we can construct a filter plugin for this device.

Initial Parser to Match Message ID and Device Type

The parser name should match the device type. We call this initial parser v20_linuxmsg.xml, which matches the message ID from the event. We set content to a variable, logstash_json_payload, which represents the JSON payload. We will parse the payload later in the process.

Message ID and Device Type Parsing

```
<?xml version="1.0" encoding="ISO-8859-1"?>
<DEVICEMESSAGES
    name="linux"
    displayname="Linux"
    group="Unix">
    <VERSION device="2.0"/>

    <MESSAGE
        id1="LOGSTASH001"
        id2="LOGSTASH001"
        content="&lt;logstash_json_payload&gt;" />

    <!-- Additional logic to parse JSON payload -->

</DEVICEMESSAGES>
```

Map Payload Contents to Datatypes

We create datatypes to map each element from the payload to meta that can be saved to the NetWitness database.

The entire payload is assigned to the **FileBeatsEvent** datatype.

```
<VARTYPE name="logstash_json_payload" dataType="FileBeatsEvent"/>
```

The timestamp is parsed an assigned to the **InternetTime** datatype.

```
<DataType name="InternetTime"dateTime="%W-%M-%DT%H:%T:%S.%V%E" />
```

Parse the Message String

Using the parser above, we parse (using the FineParse type defined above) the message string from the log file.

"message": "msg='**op**=PAM:accounting grantors=pam_access,pam_unix,pam_localuser **acct**=\"root\"
exe=\"/usr/sbin/crond\" hostname=? addr=? terminal=cron **res**=success'",

The following code extracts the values from the string and saves them to meta keys:

- **op** is saved to **operation.id**
- **acct** is saved to **service.account**
- **res** is saved to **result**
- **exe** is saved to **process.src**

Note that he **search** flag is set to **true** to parse key/value pars regardless of their order in the string.

Extract Values: save to Meta

```
<DataType name="TagValParse" regex="(?: |^)(?:exe=(\S+)|acct=(\S+)|res=(\S+)|op=(\S+))"
```

```
search="true">
    <Capture index="1" meta="process.src" />
    <Capture index="2" meta="service.account" />
    <Capture index="3" meta="result" />
    <Capture index="4" meta="operation.id" />
</DataType>
```

The following code:

- Assigns the whole key as **message** and maps it to the **FineParse** type.
- The **FineParse** type is then mapped to **TagValParse** type.

```
<DataType name="FineParse" regex="msg='(.*)'">
    <Capture index="1" type="TagValParse" />
</DataType>

<DataType name="FileBeatsEvent" type="ElasticCommonSchemaSubset">
    <Capture key="/message" type="FineParse" meta="message"/>
    <Capture key="/user/email" meta="email"    />
    <Capture key="/user/username" type="DomainUser"/>
    <Capture key="/files/" meta="sourcefile" />
    <Capture key="/machine_details//hostname"   meta="host.dst"/>
</DataType>
```

Give the previous string and the code above, the output on the Log Decoder is as follows:

message: msg='op=PAM:accounting grantors=pam_access,pam_unix,pam_localuser acct=root exe=/usr/sbin/crond
  hostname=? addr=? terminal=cron res=success'
service.account: root
process.src: /usr/sbin/crond
result: success
operation.id: PAM:accounting

Parse an Array in JSON

In our sample JSON log file from earlier, one section contained an array object:

```
"files": [
  "test1.log",
  "test2.log",
  "test3.log"
]
```

To fetch all the values of an array, you need to define a capture key enclosed in forward slashes to fetch all values, for example **/files/**.

```
<DataType name="FileBeatsEvent" type="ElasticCommonSchemaSubset">
   <Capture key="/files/" meta="sourcefile" />
```

```
  </DataType>
```

Using the code above on the sample array, the following would be the output on the Log Decoder:

sourcefile: test1.log
sourcefile: test2.log
sourcefile: test3.log

Parse a Nested JSON Object

Let's look at an example nested object from our sample log file from earlier:

```
"host": {
  "name": "Centos7",
  "hostname": "Centos7",
  "containerized": false,
  "architecture": "x86_64",
  "id": "d1059ac783b24eb7bbde70a41fa572c9",
  "os": {
    "name": "CentOS Linux",
    "kernel": "3.10.0-1062.el7.x86_64",
    "version": "7 (Core)",
    "codename": "Core",
    "platform": "centos",
    "family": "redhat"
  }
}
```

To fetch nested values, you need to build a path that contains the keys from each nested level. For example, to fetch the OS name from our example, you use the following code:

```
  <DataType name="ElasticCommonSchemaSubset">
     <Capture key="/host/os/name"> meta="OS" />
  </DataType>
```

Using the code above on the sample nested object, the following would be the output on the Log Decoder:

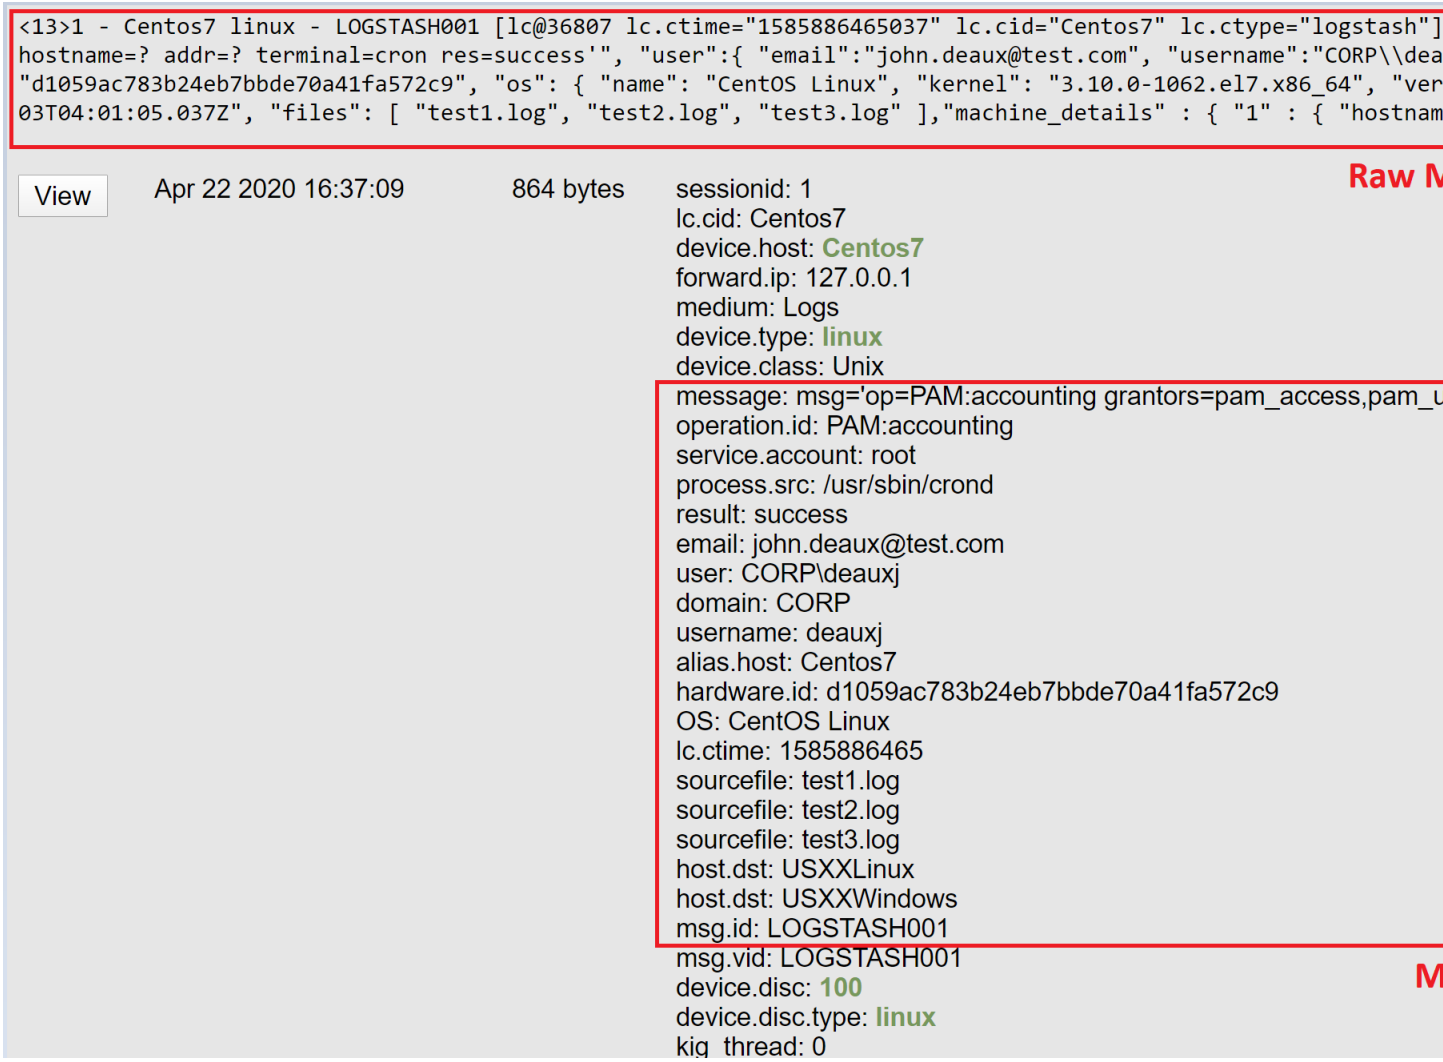
OS: CentOS Linux

Capture Data That Has Varying Parent Key

When capturing structured data types like JSON, instead of a numbered capture index, you can provide a field name path that uses the key attribute. For example, assume we want to capture the **hostname** from **machine_details** and ignore the indexed key:

```
"machine_details": {
  "1": { "hostname": "USXXLinux"},
  "2": { "hostname": "USXXWindows"}
}
```

To fetch the required values, which have a varying parent key name, we leave the parent key empty in the path:



```
<DataType name="FileBeatsEvent" type="ElasticCommonSchemaSubset">
   <Capture key="/machine_details//hostname">  meta="host.dst" />
</DataType>
```

Using the code above on the sample, the following would be the output on the Log Decoder:

host.dst: USXXLinux
host.dst: USXXWindows

The Parsed Example Event on the Log Decoder

Assuming the sample log message from the beginning of this document, and using the parser that we have built, the image below details the event as it would appear on the Log Decoder.

The following representation of the sample log has meta values highlighted.

<13>1 - Centos7 linux - **LOGSTASH001** [lc@36807 **lc.ctime="1585886465037"** lc.-cid="Centos7" lc.ctype="logstash"] {**"message":** "msg='**op=PAM:accounting** grantors=pam_access,pam_unix,pam_localuser **acct=root exe=/usr/sbin/crond** hostname=? addr=? terminal=cron **res=success**'", "user":{ **"email":"-john.deaux@test.com"**, **"username":"CORP\\deauxj"** }, "host": { "name": "Centos7", **"hostname": "Centos7"**, "containerized": false, "architecture": "x86_64", **"id": "d1059ac783b24eb7bbde70a41fa572c9"**, "os": { **"name": "CentOS Linux"**, "kernel": "3.10.0-1062.el7.x86_64", "version": "7 (Core)", "codename": "Core", "platform": "centos", "family": "redhat" } }, "@timestamp": "2020-04-03T04:01:05.037Z", "files": [**"test1.log", "test2.log", "test3.log"**],"machine_details" : { "1" : { **"hostname" : "USXXLinux"** }, "2" : { **"hostname" : "USXXWindows"** }} }

Example Parser Listing

The following code represents the complete parser, including the components we built earlier in this document.

Deploy JSON parser

After you have built or changed a JSON parser, you need to upload it to the NetWitness Log Decoder.

1. SSH to the Log Decoder system.
2. Copy the custom parser file to the following folder:

   /etc/netwitness/ng/envision/etc/devices/***eventsource***

   where ***eventsource*** is the name of the event source. You may need to create the folder if it doesn't already exist.

   For example, we need to create **linux** folder under /etc/net-witness/ng/envision/etc/devices directory and copy the **v20_linuxmsg.xml** parser file to /etc/netwitness/ng/envision/etc/devices/linux directory.
3. To get the new parser loaded into memory, you need to reload the parsers on the Log Decoder.

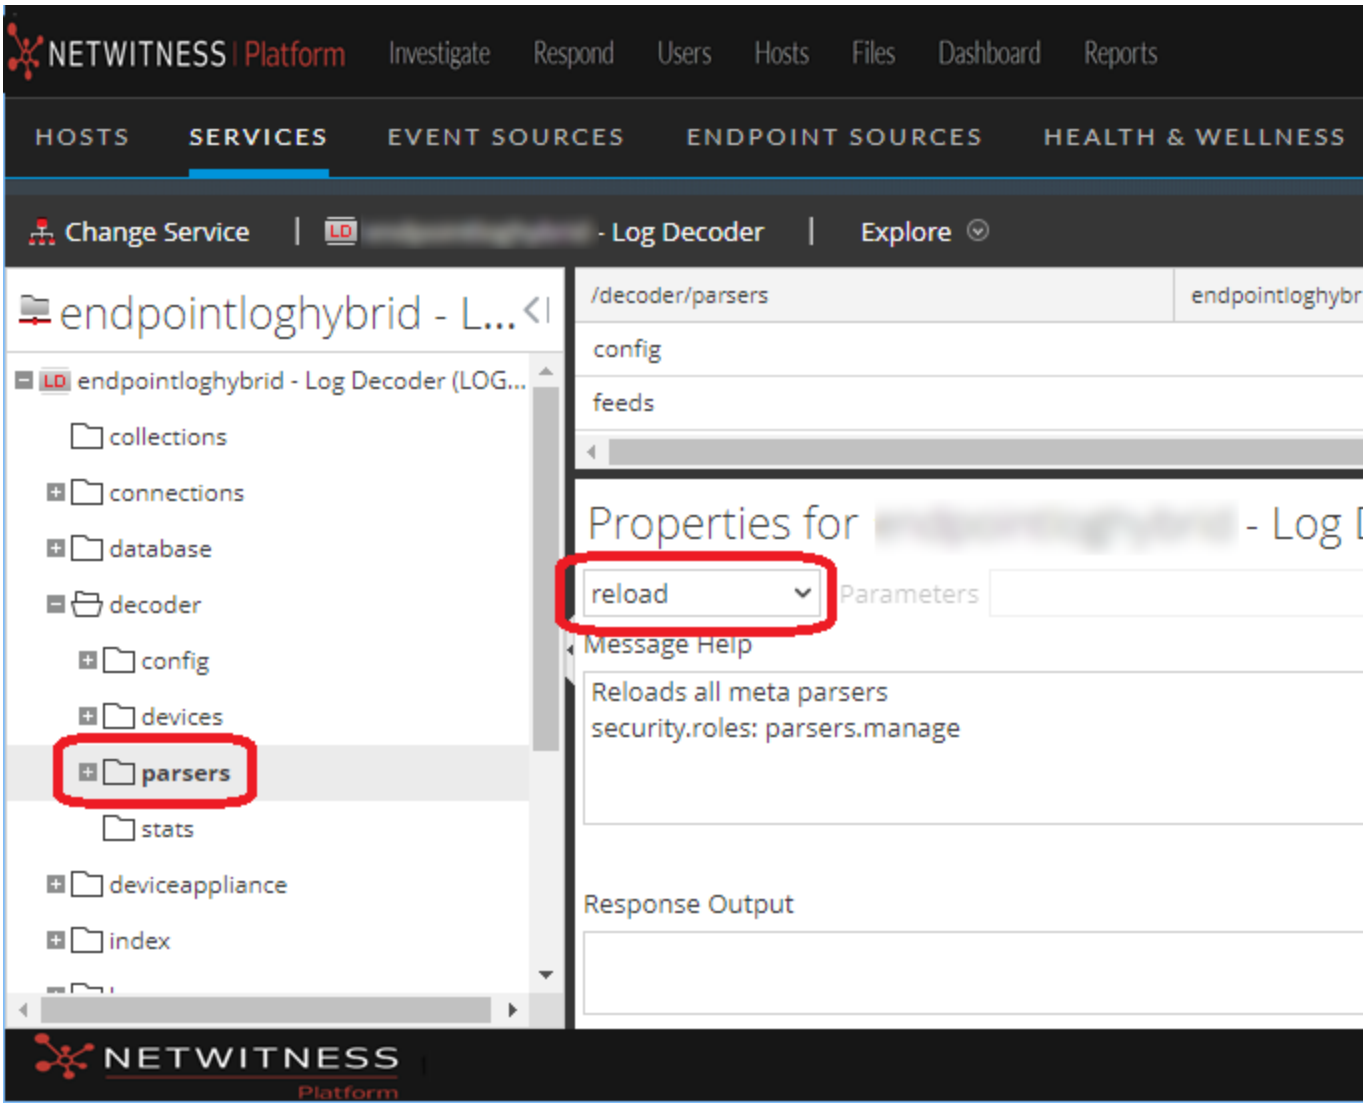
Reload Parsers from REST

From a browser, run the REST reload command by entering the following URL:

http://***<logdecoder_ip>***:50102/decoder/parsers?msg=reload

For example, if your Log Decoder IP address is **10.10.100.101**, use the following string:

http://10.10.100.101:50102/decoder/parsers?msg=reload



If the call is successful, you should see a REST response, "The parsers have been reloaded."

Reload Parsers from NetWitness UI

You can also reload your parsers from the UI as follows.

1. In the NetWitness UI, navigate to  (Admin) **> Services**.

   The Services view is displayed.
2. Select the Log Decoder to which your want to reload the parsers, and click **View > Explore**.
3. In the left pane, navigate to **decoder > parsers**.
4. Right-click **parsers** and select **Properties**.
5. From the drop-down menu in the Properties panel, select **reload**.

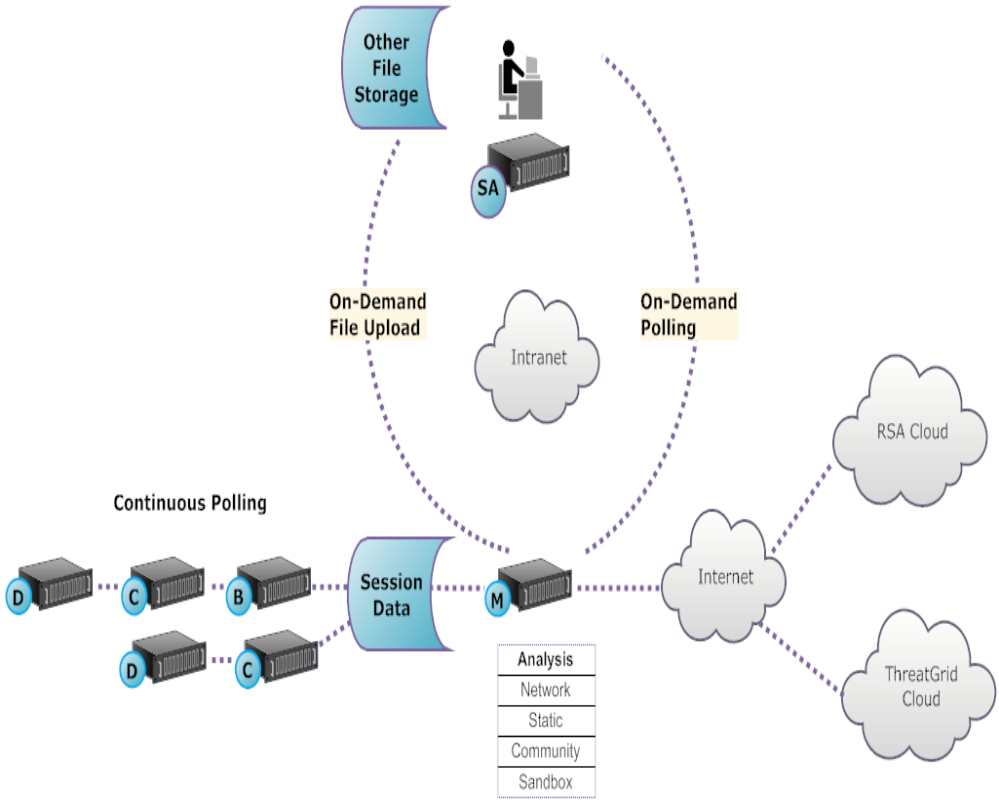
How Malware Analysis Works

NetWitness Malware Analysis is an automated malware analysis processor designed to analyze certain types of file objects (for example, Windows portable executable (PE), PDF, and MS Office) to assess the likelihood that a file is malicious.

Malware Analysis detects indicators of compromise using four distinct analysis methodologies:

- Network Session Analysis (network)
- Static File Analysis (static)
- Dynamic File Analysis (sandbox)
- Security Community Analysis (community)

Each of the four distinct analysis methodologies is designed to compensate for inherent weaknesses in the others. For example, Dynamic File Analysis can compensate for Zero-Day attacks that are not detected during the Security Community Analysis phase. By avoiding malware analysis that strictly focuses on one methodology, the analyst is more likely to be shielded from false negative results.



In addition to the built-in indicators of compromise, Malware Analysis supports indicators of compromise written in YARA. YARA is a rule language, which allows malware researchers to identify and classify malware samples. This allows Indicators of Compromise (IOC) authors to add detection capabilities to Netwitness Malware Analysis by authoring YARA rules and publishing them in Netwitness Live. These YARA-based IOCs in Netwitness Live will automatically be downloaded and activated on the subscribed host, to supplement the existing analysis that is performed in each analyzed file.

Malware Analysis also has features that support alerts for NetWitness Respond.

Functional Description

This figure depicts the functional relationship between the Core services (the Decoder, Concentrator, and Broker), the Malware Analysis service, and the NetWitness Server.

Daily Quota (Number of Files)	Free	Standard	Enterprise
Malware Analysis	100	unlimited	unlimited
ThreatGrid Analysis	5	1000	5000

The Malware Analysis service analyzes file objects using any combination of the following methods:

- **Continuous automatic polling of a Concentrator or Broker** to extract sessions identified by a parser as potentially carrying malware content.
- **On-demand polling of a Concentrator or Broker** to extract sessions identified by a malware analyst as potentially carrying malware content.
- **On-demand upload of files** from a user-specified folder.

When automatic polling of a Concentrator or Broker is enabled, the Malware Analysis service continuously extracts and prioritizes executable content, PDF documents, and Microsoft Office documents on your network, directly from data captured and analyzed by your Core service. Because the Malware Analysis service connects to a Concentrator or Broker to extract only those executable files that are flagged as possible malware, the process is both rapid and efficient. This process is continuous and does not require monitoring.

When on-demand polling of a Concentrator or Broker is chosen, the malware analyst uses Investigation to drill into captured data and choose sessions to be analyzed. The Malware Analysis service uses this information to automatically poll the Concentrator or Broker and to download the specified sessions for analysis.

On-demand upload of files provides a method for the analyst to review files captured external to the Core infrastructure. The malware chooses a folder location and identify one or more files to be uploaded and analyzed by Malware Analysis. These files are analyzed using the same methodology as files automatically extracted from network sessions.

Analysis Method

For the Network analysis, the Malware Analysis service looks for characteristics that seem to deviate from the norm, much as an analyst does. By looking at hundreds to thousands of characteristics and combining the results into a weighted scoring system, legitimate sessions that coincidentally have a few abnormal traits are dismissed, while the actual bad ones are highlighted. A user can learn patterns that indicate anomalous activity in the sessions as indicators that warrant further investigation, Indicators of Compromise.

The Malware Analysis service can perform Static analysis against suspicious objects it finds on the network and determine whether those objects contain malicious code. For Community analysis, new malware detected on the network is pushed to the Netwitness Cloud for checking against Netwitness's own malware analysis data and feeds from the SANS Internet Storm Center, SRI International, the Department of the Treasury and VeriSign. For Sandbox analysis, the services can also push data into major security, information and event management (SIEM) hosts (the ThreatGRID Cloud).

Malware Analysis has a unique method for analysis that is partnered with industry leaders and experts, so their technologies can enrich the Malware Analysis scoring system.

NetWitness Server Access to the Malware Analysis Service

The NetWitness Server is configured to connect to the Malware Analysis service and import tagged data for deeper analysis in Investigation. Access is based on three subscription levels.

- Free subscription: All NetWitness customers have a free subscription, with a free trial key for ThreatGRID analysis. The Malware Analysis service is rate-limited to 100 file samples per day. The number of samples (within the set of files from above) submitted to the ThreatGRID Cloud for sandbox analysis is limited to 5 per day. If one network session had 100 files in it, customers would hit the rate limit after processing the one network session. If 100 files were manually uploaded, that would cause the rate limit to be reached.
- Standard subscription tier: The number of submissions to the Malware Analysis service is unlimited. The number of samples submitted to the ThreatGRID Cloud for sandbox analysis is 1000 per day.
- Enterprise subscription tier: The number of submissions to the Malware Analysis service is unlimited. The number of samples submitted to the ThreatGRID Cloud for sandbox analysis is 5000 per day.

Scoring Method

By default, the Indicators of Compromise (IOC) are tuned to reflect industry best practices. During analysis, the IOCs that trigger cause the score to move upward or downward to indicate the likelihood that the sample is malicious. The tuning of IOCs is exposed in NetWitness so that the malware analyst can choose to override the assigned score or to disable an IOC from being evaluated. The analyst has the flexibility to either use the default tuning, or to completely customize the tuning to specific needs.

YARA-based IOCs are interleaved with the built-in IOCs within each built-in category and are not distinguished from native IOCs. When viewing IOCs in the Service Configuration view, administrators can select YARA from the Module selection list to see a list of YARA rules.

After a session is imported into NetWitness, all of the viewing and analysis capabilities in Investigation are available to further analyze Indicators of Compromise. When viewed in Investigation, YARA IOCs are distinguished from the built-in native IOCs by the tag `Yara rule`.

Deployment

The Malware Analysis service is deployed as a separate Netwitness Malware Analysis host. The dedicated Malware Analysis host has an onboard Broker which connects to the Core infrastructure (either another Broker or a Concentrator). Prior to this connection, a collection of parsers and feeds must be added to the Decoders that are connected to the Concentrators and Brokers from which the Malware Analysis service pulls data. This allows suspicious data files to be marked for extraction. These files are `malware analysis` tagged content available through the Netwitness Live content management system.

Scoring Modules

Netwitness NetWitness Malware Analysis analyzes and scores sessions and the embedded files within these sessions by scoring four categories: Network, Static Analysis, Community, and Sandbox. Each category comprises many individual rules and checks that are used to calculate a score between -100 and 100. The higher the score, the more likely the session is to be malicious and worthy of more in-depth follow-on investigation.

Malware Analysis can facilitate a historical investigation into events leading up to a network alarm or incident. If you know that a certain type of activity is taking place on your network, you can select only the reports of interest to examine the content of data collections. You can also modify behavior for each scoring category based on the scoring category or the file type (Windows PE, PDF, and Microsoft Office).

Once you become familiar with data navigation methods, you can explore the data more completely through:

- Searching for specific types of information
- Reviewing specific content in detail.

Category scores for Network, Static Analysis, Community, and Sandbox are maintained and reported independently. When events are viewed based on the independent scores, as long as one category detects malware, it is evident in the Analysis section.

Network

The first category examines each core network session to determine if the delivery of the malware candidates was suspicious. For example, benign software being downloaded from a well-known safe site, using proper ports and protocols, is considered less suspicious than downloading software known to be malicious from a known dubious download site. Sample factors used in the scoring of this criteria set may include sessions that:

- Contain threat feed information
- Connect to well-known bad sites
- Connect to high-risk domains/countries (for example, .cc domain)
- Use well-known protocols on non-standard ports
- Contain obfuscated JavaScript

Static Analysis

The second category analyzes each file in the session for signs of obfuscation in order to predict the likelihood of the file behaving maliciously if allowed to run. For example, software that links to networking libraries is more likely to perform suspicious network activity. Sample factors used in the scoring of this criteria set may include:

- Files found to be XOR encoded
- Files found embedded within non-EXE formats (for example, PE file found embedded in a GIF format)
- Files linking to higher risk import libraries
- Files highly deviating from the PE Format

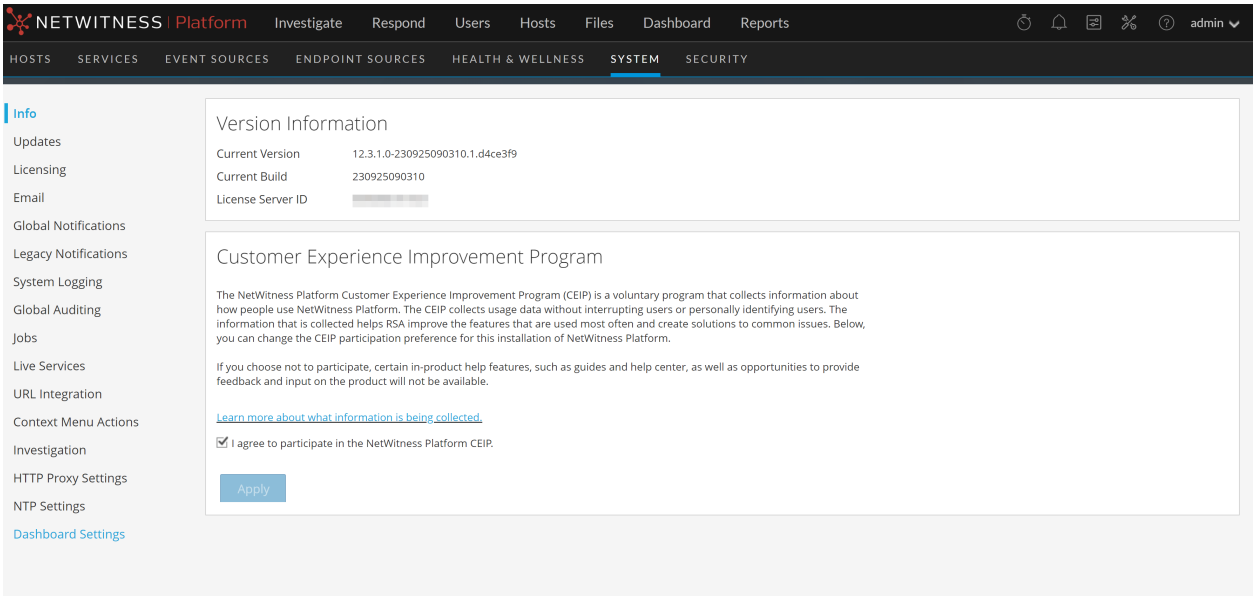
Community

The third category scores the session and files based on the collective knowledge of the security community. For example, files whose fingerprint/hash is already known to be good or bad by respected anti-virus (AV) vendors is scored accordingly. Files are also scored based on knowledge that a file was delivered from a site known to be good or bad by the security community.

Community scoring also indicates whether the AV on your network flagged the files as malicious. It does not indicate that the resident AV product acted to protect your system.

Sandbox

The fourth category examines the behavior of the software by actually running it in a sandbox environment. By running the software to watch its behavior, a score can be calculated by identifying well-known malicious activity. For example, software that configures itself to autostart on each reboot and make IRC connections would score higher than a file with no known bad behavior.



Roles and Permissions for Analysts

This topic identifies the user roles and permissions required for a user to conduct malware analysis in NetWitness. If you cannot perform an analysis task or see a view, the administrator may need to adjust the roles and permissions configured for you.

Required Roles and Permissions

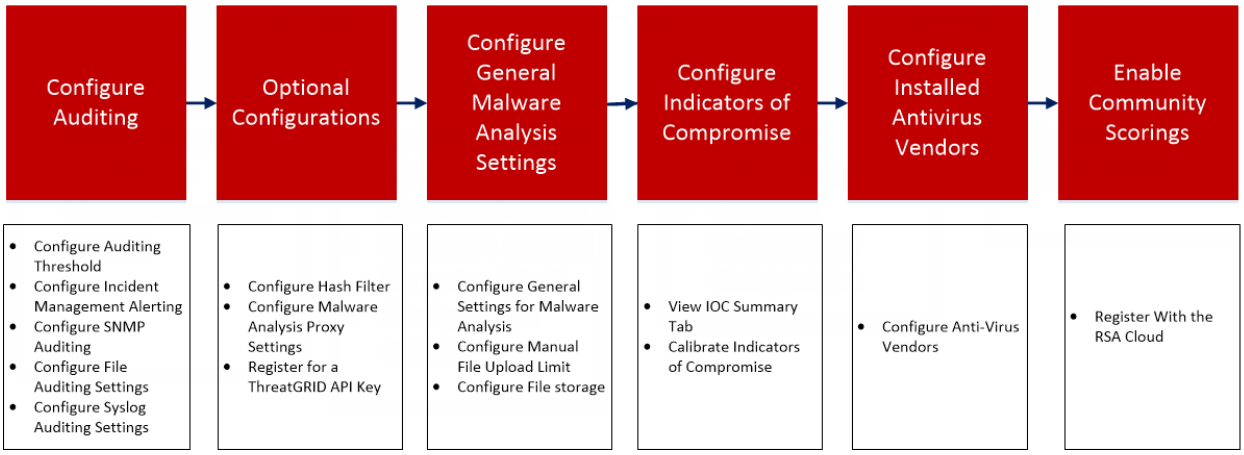
NetWitness manages security by providing access to views and functions using both system permissions and permissions on individual services.

On the system level, the user needs to be assigned a system role, in the (Admin) > System view, that provides access to specific views and functions.

The default `Malware_Analysts` role in NetWitness12.3.1.0 is assigned all of the permissions listed below. If necessary, an Administrator can create a custom role with some combination of the following permissions:

- Access Investigation Module (required)
- Investigation - Navigate Events
- Investigation - Navigate Values
- Access Incident Module
- View and Manage Incidents
- View Malware Events (to view events)
- File Download (to download files from the Malware Analysis service)
- Initiate Malware Scan (to initiate a one-time service scan or one-time file upload)

- Dashlet permissions for convenience: Dashlet - Investigate Top Values Dashlet, Dashlet - Investigate Service List Dashlet, Dashlet - Investigate Jobs Dashlet, Dashlet - Investage Shortcuts Dashlet.



A use case for creating a custom role would be a Junior Malware Analyst role, with limited permissions that do not include the File Download permission.

On specific services, a malware analyst needs to be a member of the **Analysts** group, or to a group that has the two default permissions assigned to the Analyst group: **sdk.meta** and **sdk.content**. Users who have these permissions can use specific applications, run queries, and view content for purpose of analysis on the service.

Basic Setup

Malware Analysis can operate as a service on a Decoder or as a service on a dedicated appliance. This guide includes instructions for setting up the operating environment and then configuring the Malware Analysis service. After this configuration is complete, analysts can conduct malware analysis.

These are the configuration steps for Malware Analysis, and also for editing the configuration. Perform the steps in the section in the sequence they are given.

Basic Configuration Checklist

The following checklist provides the sequence for tasks that are required to configure Malware Analysis that has been added to NetWitness in accordance with the *Hosts and Services Guide*.

Step	High-Level Task
Step 1 - (Optional) Configure Dedicated Appliance	(Optional) Configure Dedicated Appliance This topic describes the procedures for configuring the environment to connect to the Malware Analysis service.
Step 2 - Configure General Malware Analysis Settings	Configure General Malware Analysis Settings • Enable continuous polling. • Configure manual file upload limit. • Configure the file storage repository and database. • Calibrate the Static, Network, Community, and Sandbox scoring modules.

Step	High-Level Task
Step 3 - Configure Indicators of Compromise	Configure Indicators of Compromise Calibrate Indicators of Compromise that are applied for each scoring module (Static, Network, Community, Sandbox) and for YARA-based IOCs.
Step 4 - Configure Installed Antivirus Vendors	Configure Installed Antivirus Vendors
Step 5 - Enable Community Scoring	Enable Community Analysis Register with the Netwitness cloud and test connections to enable Community scoring.
Step 6 - Configure Auditing on Malware Analysis Host	(Optional) Configure Auditing on Malware Analysis Host Configure auditing thresholds and enable Syslog, SNMP, and file auditing.
Step 7 - Configure Hash Filter	(Optional) Configure Hash Filter Configure hash filtering to fine tune Malware Analysis event analysis based on known good or bad file hashes.
Step 8 - Configure Malware Analysis Proxy Settings	(Optional) Configure Malware Analysis Proxy Settings (Optional) Configure Malware Analysis to communicate with the Netwitness Cloud through a web proxy instead of directly.
Step 9 - Register for a ThreatGRID API key	(Optional) Register for a ThreatGRID API Key

(Optional) Configure Dedicated Appliance

You can configure the NetWitness operating environment to connect to a NetWitness Malware Analysis service.

Malware Analysis operates as a service on a dedicated Malware Analysis appliance. If your site is using a dedicated appliance, do one of the following:

- If your site is adding a new dedicated NetWitness Malware Analysis appliance, install the physical appliance in your network and configure the operating environment.
- If your site is upgrading a dedicated Spectrum appliance to a dedicated NetWitness Malware Analysis appliance, re-image the Spectrum appliance as a Malware Analysis appliance.

Malware Analysis is dependent on the Core infrastructure to operate. The following steps are necessary before Malware Analysis can successfully analyze data.

1. Configure the onboard Broker on the Malware Analysis appliance to connect another Broker or Concentrator in the existing Core infrastructure.

   Note: If no Core infrastructure exists, only manually uploaded files can be analyzed.

2. Use NetWitness Live to find all Live resources with the `malware analysis` tag and deploy these resources to each Decoder service that will be capturing traffic for Malware Analysis to analyze. NetWitness uses this proprietary set of parsers and feeds to find events that are likely to be malware.
3. Configure communications ports. Malware Analysis requires a number of different communications ports to be open, including TCP/443 for HTTPS. These are described below in Network Connections.
4. Configure the NextGen source to which Malware Analysis will connect. This is the Broker or the Concentrator.
   Malware Analysis is now ready to begin analyzing network traffic.

Network Connections

The inbound and outbound network connections must be configured for the Malware Analysis appliance to properly communicate with services, Netwitness sources for software updates, and other critical information.

Your network firewall must be configured to allow the Malware Analysis access to the internet. Proxy servers may be used to facilitate these connections, if necessary.

Inbound Connections

TCP/22 - Secure Shell access to the Malware Analysis server to review log files and troubleshoot. Access can be limited to IP addresses that will be managing Malware Analysis.

- TCP/443 - HTTPS web-based connection to access the Malware Analysis user interface.
- TCP/50008 - JMX port for performance troubleshooting, using an application such as JVisualVM. This is optional and access can be limited to IP addresses that will be managing Malware Analysis.

Outbound Connections

- TCP/443 - HTTPS connections to SSL-based web servers. Some features include Malware Analysis sending files or documents to servers for analysis, which require a secure connection. Use of a web proxy server is supported.
- (TCP/443 - SSL connection from Malware Analysis to the Netwitness Cloud. Use of a SOCKS proxy server is supported. Customer infrastructure changes may be required to ensure that 443 is open to cloud.netwitness.com.)
- TCP/50103 - REST API port used to communicate with a Broker. (NetWitness 10.3.x and earlier)
- TCP/50105 - REST API port used to communicate with a Concentrator. (NetWitness 10.3.x and earlier)
- TCP/50003 TCP/56003 - Ports used to communicate with a Broker. (NetWitness 10.4 and later)
- TCP/50005 TCP/56005 - Ports used to communicate with a Concentrator. (NetWitness 10.4 and later)

- ICMP - JMS connection from NetWitness to the Malware Analysis service to verify if the hostname and ip address entered is valid for a successful test connection.

Configure General Malware Analysis Settings

You can configure several basic settings required to enable and calibrate the consumption of sessions, manual file upload, and the different scoring modules that Malware Analysis uses to analyze data.

You can also set up file sharing with the data repository. Malware Analysis has three modes of consuming sessions and files. Any combination of the three choices may be used to initiate analysis in Malware Analysis. The choices are:

- **Continuous Polling of the Core service:** You can enable and configure continuous polling of the Core service. When enabled and configured, Malware Analysis continuously polls the Core service for sessions tagged for analysis. By default, continuous polling is disabled. You can enable Denial of Service (DOS) attack prevention for use during continuous polling. You can test the connection to the Malware Analysis service that is being continuously polled using an option in the Integration tab.

  Note: When adding a Core service as a service for continuous polling on 10.3.5 and earlier Malware Analysis, use the REST port; for example, add a Concentrator to 10.3.5 Malware Analysis with REST port (50105) instead of the native NexGen port (50005).

- **On-Demand Analysis of the Core service:** You can analyze sessions based on Investigations initiated directly in NetWitness. This method allows manually controlled consumption of Core sessions and allows tighter control over how files in those sessions are processed (for example, send to sandbox for processing). Document types can bypass the default restrictions and be sent to community or sandbox processing regardless of the configured setting.
- **Manual File Upload:** You can manually upload one or more files for analysis by navigating to a visible folder on your computer and selecting files to be uploaded. The maximum size for the uploaded files is configurable.

View the Basic Settings

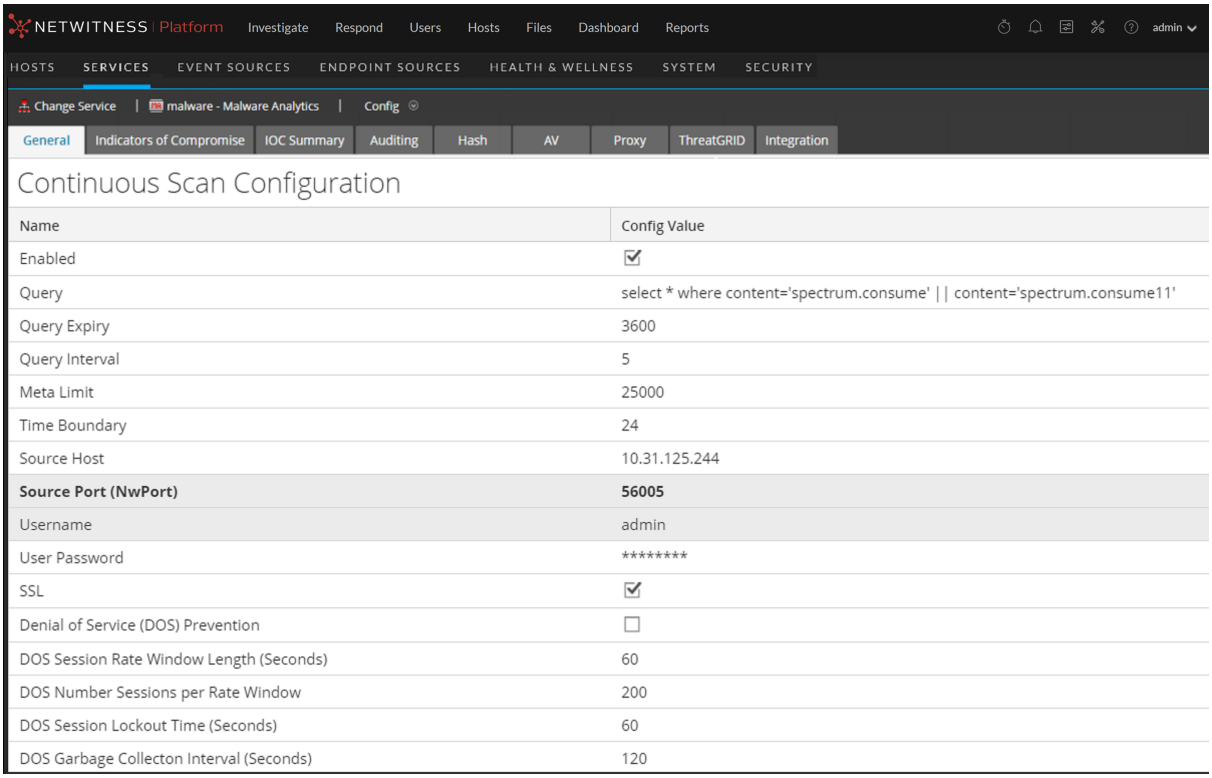
To view the basic settings:

1. Go to  **(Admin) > Services**.
2. In the **Services** grid, select a Malware Analysis service and click  **> View > Config**.
   The Service Config for the service is displayed with the **General** tab open.

Configure Continuous Polling

Malware Analysis is rate limited so that 1,000 files per day may be submitted to ThreatGRID's Cloud for sandbox processing. To optimize your use of the sandbox, Malware Analysis configuration allows you to choose which of several methods of consumption Malware Analysis uses; you can enable or disable continuous polling.

An important consideration when configuring continuous polling is the Denial of Service (DOS) Prevention parameters. By default this feature is disabled because you need to carefully consider the settings for your environment before enabling the feature.



When DOS Prevention is disabled, Malware Analysis analyzes the queued sessions in first-in first-out order. A DOS attack may rapidly fill the queue so that Malware Analysis is busy handling those sessions, while a malware attack is occurring in a later session. The later session with the actual attack may not reach the beginning of the queue and undergo analysis until after the attack has begun.

When DOS Prevention is enabled, Malware Analysis treats too many sessions from a single IP address as a DOS attack. If an IP address exceeds the Number of Sessions per Rate Window, Malware Analysis begins to disregard sessions from that address until the Session Lockout time is reached. Then Malware Analysis resumes analysis of the sessions from that IP address. The disregarded sessions from the IP address are not analyzed at all, so a malware attack may slip through during the Session Lockout period.

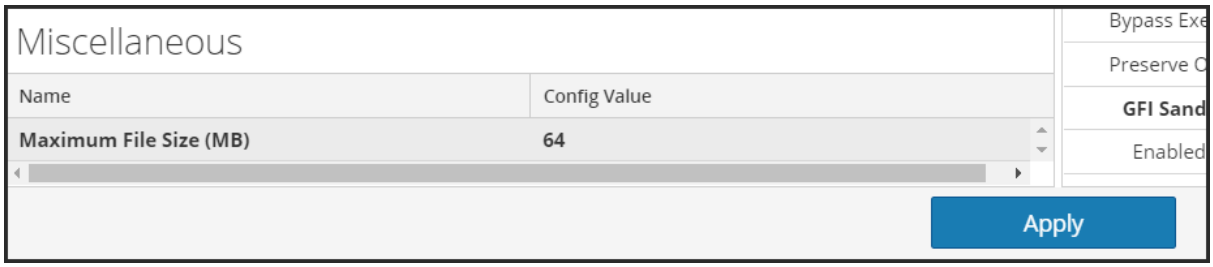
Using the DOS Garbage Collection Interval setting, Malware Analysis clears in-memory storage of an IP source after a specified number of seconds. IP addresses with little activity during this interval are cleared from memory. If an IP address is active at intervals that exceed the DOS Garbage Collection Interval, Malware Analysis may not identify it as a DOS attack.

To configure Malware Analysis for continuous polling, in the Continuous Scan Configuration section:

1. In the **General** tab, under **Continuous Scan Configuration** you can configure continuous polling.

2. To enable continuous polling, click **Enabled**.
3. (Optional) If you want to change the default values for querying, enter new values for the **Query Expiry**, **Query Interval**, **Meta Limit**, and **Time Boundary**.
4. To configure the Malware Analysis appliance that Malware Analysis queries to retrieve data for analysis, specify the **Source Host** and **Source Port (NwPort)**.
5. (Optional) If you want to change the default logon credentials for the Malware Analysis appliance, specify the **Username** and **User Password**.
6. If you want to use SSL for communication between the Malware Analysis appliance and the Core service, enable **SSL**.
7. (Optional) If you want to configure Denial of Service (DOS) prevention:
   a. Enable the **Denial of Service (DOS) Prevention** parameter.
   b. Set up the DOS prevention session limitations:
      - Specify the number of seconds of the time window during which Malware Analysis counts sessions for a single IP address (**DOS Session Rate Window Length**). The window is called a Rate Window and a counter is set when the first session is received from that IP source. The default value is 60 seconds.
      - Specify the number of sessions allowed per Rate Window in the **DOS Number Session per Rate Window**. The default value is 200 sessions. When the number of sessions is reached within the Rate Window; Malware Analysis begins disregarding sessions from the IP address

and the disregarded sessions from that IP are not analyzed at all. Malware Analysis continues to disregard sessions until the lockout time is reached.



- Specify the length of lockout time (during which sessions from the IP address are disregarded and not analyzed) in the **DOS Session Lockout Time (Seconds)**. The default value is 60 seconds. When the lockout duration has elapsed, Malware Analysis resumes analysis of sessions from that IP address.
- Specify the interval of inactivity for an IP address before NetWitness removes the in-memory object for the IP source in **DOS Garbage Collection Interval (Seconds)**. The default value is 120 seconds.

8. Click **Apply** to apply the changes.
   The applied changes become immediately effective as Malware Analysis receives new packets.
9. Test the connection of the Malware Analysis service to the Core service selected in the **Integration** tab by clicking the **Test Connection** button in the **Continuous Scan Connection Test** section.

Configure Manual File Upload Settings

To configure the maximum file size for manual file upload:

1. In the Miscellaneous section, type the maximum file size in Megabytes allowed for files uploaded manually for Malware Analysis scanning.

2. Click **Apply**.
   The changes become immediately effective.

Configure the Data Repository

Malware Analysis can store a finite number of files on the appliance. The data repository configuration has a file system retention period of 60 days. This setting determines how long files are retained in the Malware Analysis appliance. When old files are deleted, they cannot be recovered. Every day, Malware Analysis deletes files that exceed the file system retention period to ensure that there is no wasted disk space.

The File System Retention Period is the only setting that governs when files are deleted. Files are not deleted based on the amount of disk space being used. If the setting needs to be changed, the administrator must configure the retention period based on the anticipated space usage during the number of retention days specified.

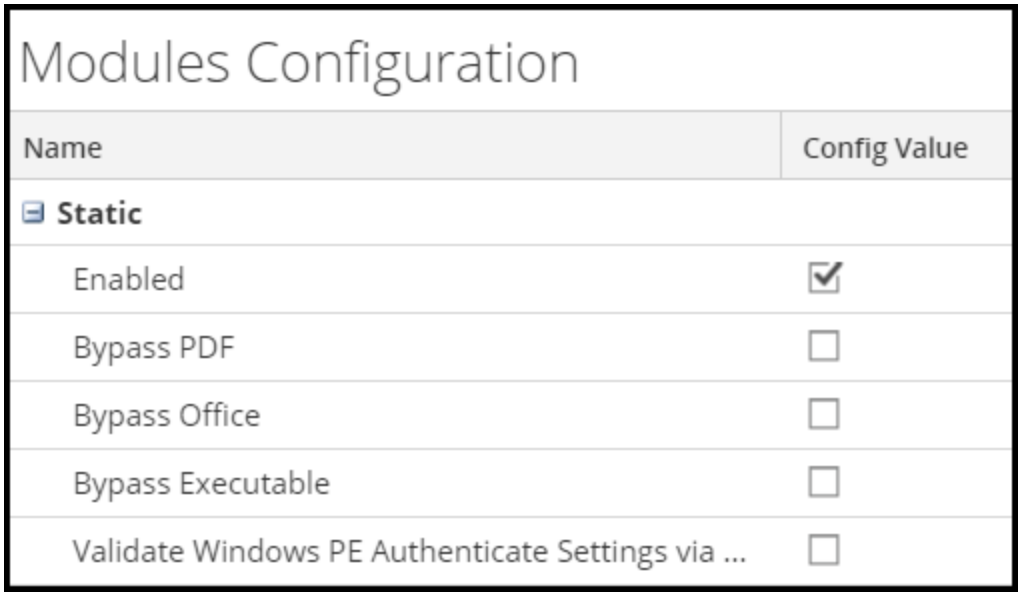
The visible data repository parameters in the NetWitness user interface are:

- The location of the repository is **/var/lib/netwitness/malware-analytics-server/spectrum**. Do not edit this value.
- The file sharing protocol, which allows access through one of the File Sharing Protocols to copy files from the Malware Analysis service.
- The file retention period in number of days.

To configure file sharing, in the Repository Configuration section:

1. Click on the File Sharing Protocol and select **FTP** or **SAMBA** or **None**.
2. Select the number of days that files are maintained in the repository before deletion.
3. Click **Apply.**

The changes become immediately effective.



Calibrate Scoring Modules

The Modules Configuration section helps configure the following components of Malware Analysis to:

- Completely disable any or all of three scoring modules (Static, Community, and Sandbox). Before disabling or enabling any scoring module, ensure that you understand what each scoring module detects.
- Malware Analysis tags sessions containing Microsoft Office, Windows PE, and PDF files for consumption by the Malware Analysis service. You can configure Malware Analysis to ignore Windows PE, Microsoft Office, and PDF documents entirely. If this is the case, a better option is to adjust your Core settings to ignore these files so they are not tagged for Malware Analysis consumption.

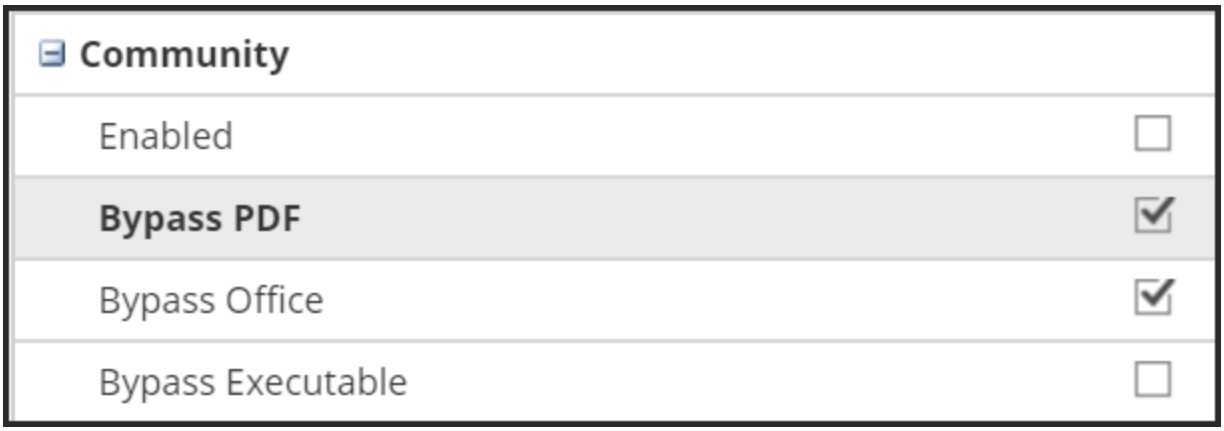
A sample application for using scoring module calibration is this: when setting up rule groups or analyzing system performance, you can test various scenarios in which PDF documents are not analyzed, but Microsoft Office and Windows PE documents are. You can test the scenario in each of the three scoring modules. If you see a measurable improvement in system performance, you can apply this knowledge on a broader scale.

Configure Static Analysis Scoring

To configure Static analysis scoring, in the **Modules Configuration** section:

1. By default the Static module is enabled. To enable or disable Static analysis entirely, click the **Enabled** checkbox.
2. To configure handling of PDF, Microsoft Office, and Windows PE files in a session, select any of the checkboxes **Bypass PDF**, **Bypass Office**, and **Bypass Executable**.
3. To configure your preference for Authenticode validation of digitally signed Windows PE files, click the **Validate Windows PE Authenticate Settings via Cloud** checkbox. If you want to prevent Windows PE files that are digitally signed from being transmitted to the Netwitness Cloud for validation, remove the check.
   When disabled, ALL static analysis is performed locally (skipping Authenticode validation). Regardless of this setting, PDF and MS Office documents are not subject to Authenticode validation and are not transmitted over the network during static analysis.
4. Click **Apply.**The changes become immediately effective as Malware Analysis receives new packets.

Configure Community Analysis Scoring



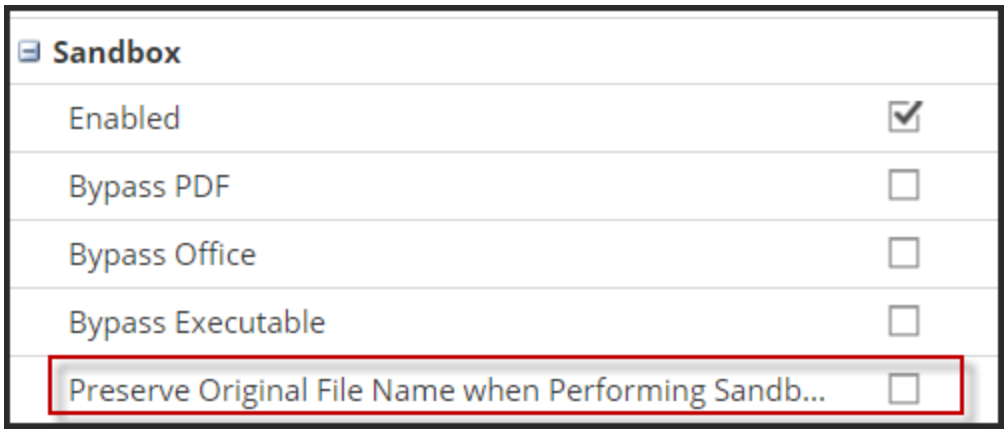
Once the Community module is enabled, the security community analyzes all documents not prevented from processing. This is achieved by sending network session and file attributes to the Netwitness Cloud for processing. The Netwitness Cloud then may make external connection to security community partners as needed to process the information.

The file content is never sent to the community for analysis. Instead, the MD5/SHA-1 hash of the file is sent for Anti-Virus detection and Blacklisting. Similarly, session Meta is harvested and analyzed as part of this process. Meta elements such as URL and Domain Name are examined and transmitted to the Netwitness Cloud to identify known bad URLs/Domains.

You can enable Community analysis and limit which document types are processed. There is no risk for the file content (except for a hash) being sent outside of your network.

Note: To gain access to the Netwitness Cloud where processing occurs, you must register your Malware Analysis service with Netwitness customer service. There are two methods: register the service using the options in the Integration tab or contact Netwitness Customer Care.

To configure Community analysis scoring, in the Modules Configuration section:

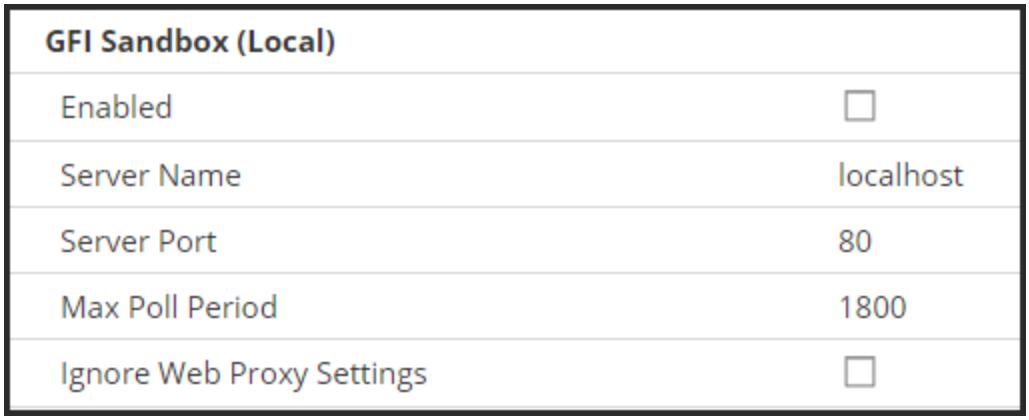


1. To enable or disable Community analysis entirely, click the **Enabled** checkbox. The default value is **Disabled**.
2. To configure handling of PDF, Microsoft Office, and Windows PE files in a session, select the specific checkboxes - **bypasspdf**, **bypass office, bypass executable.**
3. Click **Apply** to save the changes and put them into effect immediately as Malware Analysis receives new packets.

Configure Sandbox Analysis Scoring

By default, the sandbox module is disabled and MS Office and PDF files are prevented from being processed. The intent is to set to the most restrictive settings to force the user to specify whether or not potentially sensitive information is sent outside of the network for processing. If a document type is not prevented from being processed, the entire file (not just the hash) is sent to the destination sandbox server.

In addition, you can choose to preserve the original file name when performing sandbox analysis.



Note: If you do not specify the **Preserve Original File Name when Performing sandbox Analysis** parameter, NetWitness hashes the files.

When you enable the sandbox module, you must specify whether or not the sandbox processing is performed using a local GFI sandbox, a local ThreatGRID sandbox, or a cloud version of the ThreatGRID sandbox. The cloud version of the ThreatGRID sandbox is provided directly by ThreatGRID and requires an activation key to be obtained from ThreatGRID and configured in the ThreatGRID tab.

GFI Sandbox Settings

To use a locally installed GFI sandbox, you must enable GFI and supply the Server Name and Server Port of the GFI sandbox Server. The Max Poll Period and Polling Interval determine how long to wait for a submitted sample to finish processing and how often to check the status (in seconds). The Ignore Web Proxy Settings option allows you to indicate that you want Malware Analysis to bypass a web proxy when making this connection. If no Web Proxy has been configured in Malware Analysis, the setting is ignored.

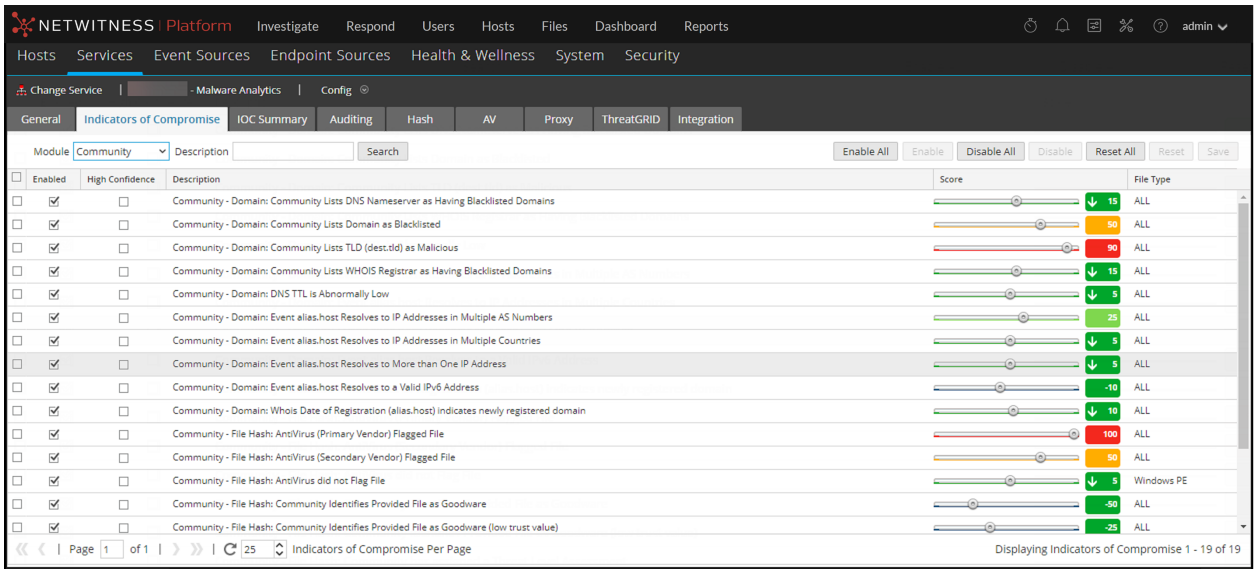
ThreatGRID Sandbox Settings

Note: Before enabling ThreatGRID scoring, a ThreatGRID-supplied Service Key must be configured so that ThreatGRID can recognize that samples submitted from this site are legitimate. Use NetWitness to register for a ThreatGRID API key, then you can enable and configure a locally installed ThreatGRID sandbox or the ThreatGRID Cloud sandbox. Refer to the following detailed task: Register for a ThreatGRID API Key.

The Ignore Web Proxy Settings allows you to indicate that you want Malware Analysis to bypass a web proxy when making this connection. If no Web Proxy has been configured in Malware Analysis, the setting is ignored.

To configure sandbox scoring, in the Modules Configuration section:

1. To enable or disable sandbox analysis entirely, click the **Enabled** checkbox. The default value is **Disabled**.
2. To configure handling of PDF, Microsoft Office, and Windows PE files in a session, select any of the three checkboxes **Bypass PDF**, **Bypass Office, Bypass Executable.**
3. Configure the active sandbox vendor. You have three options:
   a. To use a locally installed instance of the GFI sandbox, provide the Server Name and Server Port of the GFI sandbox Server, the Max Poll Period and Polling Interval, and optionally, select the **Ignore Web Proxy** checkbox.
   b. To use a locally installed instance of ThreatGRID, enable ThreatGRID scoring, provide the ThreatGRID Service Key and optionally, select the **Ignore Web Proxy** checkbox.
   c. To use the ThreatGRID Cloud, you must first register for a ThreatGRID API key. Then enable ThreatGRID scoring, provide the ThreatGRID Service Key, enter the URL for the ThreatGRID server (https://panacea.threatgrid.com), and optionally, select the **Ignore Web Proxy** checkbox.
4. Click **Apply**.
   The changes become immediately effective.



Configure Indicators of Compromise

The Indicators of Compromise (IOC) for the Malware Analysis scoring modules are configured since, each Malware Analysis scoring module -- Network, Static, Community, Sandbox, and YARA -- has a default set of Indicators of Compromise (IOCs) that it uses to evaluate the file and session data in order to assess the likelihood of malware being present.

Each IOC is assigned a numeric score weighting between -100 (good) and 100 (bad). When an IOC triggers, the numeric score weighting is factored into the total score for the session or file being analyzed. The individual score weightings for all matched IOCs are aggregated to produce the resulting score for each session or file. The aggregated score is adjusted to ensure that it does not exceed the valid score range (-100 through 100).

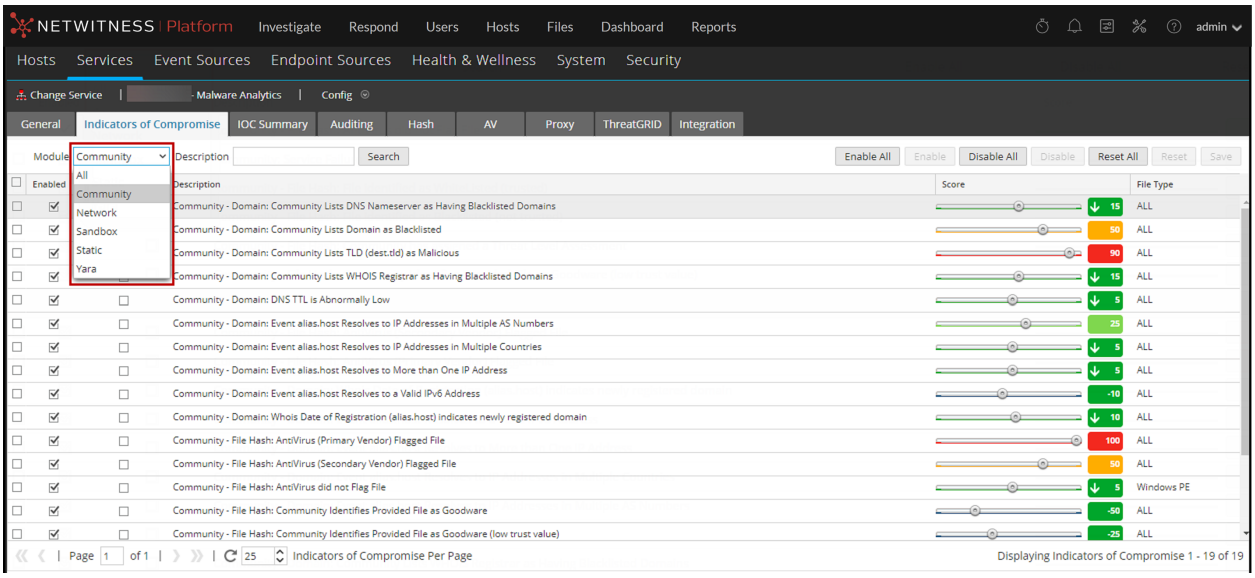
Note: The score weighting assigned to an IOC is not always the explicit score value that is aggregated (it is not a simple addition of score weights for each IOC that triggers). Instead, the IOC's score is a weighting or indicator of importance that is factored into calculating an overall score.

The Indicators of Compromise (IOC) configuration settings for Malware Analysis are in the Service Config view > Indicators of Compromise tab. Below is an example of the tab.

Using the **Community - File Hash: AntiVirus (Primary Vendor) Flagged File** IOC as an example, the IOC's score weighting could be set to 100. However, Malware Analysis dilutes this value based on the percentage of primary AV vendors that agree if the sample is malicious. The closer to 100% of the vendors who agree that the sample is malicious, the closer to the full 100 points are used in aggregating a score. As the percentage drops closer to 0%, the proportion of the full 100 points used in the aggregated score drops.

IOCs use logic implemented natively in Malware Analysis. You cannot adjust the logic. Instead, you can only adjust the IOC to increase or decrease its impact on scoring, to indicate a confidence setting, or to turn the IOC on or off. The typical scenario is to adjust a limited set of IOC score weighting values downward for IOCs that are inflating the final score and causing false positive analysis results. An extreme version of tuning would be to disable the IOCs entirely if they consistently contribute to false positive results. Additionally, the flexibility exists to allow you to disable all IOCs and to choose a select few to leave enabled. For example, all IOCs can be disabled with the exception of a select few IOCs that detect AntiVirus matches. Using Malware Analysis in this extremely limited configuration, you can reduce results in Malware Analysis such that only known A/V matches generate results.

You can configure this functionality in several ways:



- Disable IOCs so that they are not evaluated as part of the scoring module to which they are assigned.
- Adjust the score weight for an IOC such that its impact on the aggregated score is increased or decreased.
- Mark IOCs that you expect to be strong indicators of malware and display a high-confidence (HC) flag on sessions that triggered these IOCs in the Malware Analysis results.
- Customize score and confidence settings uniquely to the file type being analyzed. Each IOC is pre-assigned a file type to which it is applied. Possible values are **ALL**, **PDF**, **MS Office**, and **Windows PE**. The IOC with the most applicable file type is used during file-based analysis. For example, if a PDF is analyzed, an IOC with a file type set to **PDF** will be chosen rather than the same IOC with a file type set to **ALL.** If no file-type specific match is found, the IOC with a file type set to **ALL** is selected.
- Search for rules to display in the grid based on a match to the rule description.

Filter Displayed IOCs by Module

You can filter the displayed IOCs by scoring module: one of the four built-in modules or YARA. YARA-based IOCs are interleaved with the native IOCs with each category. Although the YARA IOCs are not identified as such in the other views, you can select YARA from the Module selection list to see a list of YARA rules.

To view the IOCs for one or the four scoring modules or for YARA:

1. Go to  **(Admin) > Services**.
2. Select a Malware Analysis service.
3. In the row, select  **> View > Config**.
4. Click the **Indicators of Compromise** tab.
5. In the **Module** selection list, select **All**, **NextGen**, **Static**, **Community**, **Sandbox**, or **YARA**.
   The configured rules and settings for the module are displayed.

Filter Displayed Modules to Show Only Modified Modules

The **Indicators of Compromise** tab visually identifies IOCs that are locally modified. When an IOC has been modified, for example, the score weight has been changed, and the name is displayed in red and includes a modification indicator appended to the IOC name. The modification indicator is ++ and can be used as a filtering mechanism when searching for IOCs.
To limit the display to locally modified IOCs:

1. In the **Description** field, enter ++.
2. Click **Search**.
   The view is filtered to show only modified IOCs.

Enable and Disable IOCs for a Scoring Module

When an IOC is disabled, it no longer impacts the aggregate score for the scoring module to which it belongs. If the IOC has multiple instances (differentiated only by file type), disabling a more file-type specific IOC results in use of the more file-type agnostic version of the IOC in scoring.
For example, if the same IOC exists as file type **ALL** and file type **Windows PE**, disabling the **Windows PE** instance of the IOC causes the **ALL** version to be used in scoring. In order to disable the IOC entirely for **Windows PE**, while leaving the IOC enabled for other file types, set the score weighting of the **Windows PE** instance of the IOC to a value of zero as described below. This leaves the IOC enabled for Windows PE files (although it has a zero weighting and is suppressed from being displayed in analysis results), while not affecting the other file types. The remaining file types will continue to use the **ALL** instance of the IOC.

To enable or disable an IOC so that it no longer factors into a scoring module:

1. Go to  **(Admin) > Services**.
2. Select a Malware Analysis service, and in the row select  > **View > Config**.
3. Click the **Indicators of Compromise** tab.
4. In the **Module** selection list, select a scoring module: **All**, **Community**, **Network**, **Sandbox**, **Static**, or **YARA**.
   The configured rules and settings for the module are displayed.
5. Do one of the following:
   a. Click the **Enabled** checkbox in the column next to a rule that you want to enable.
   b. Select one or more rules, and click **Enable** or **Disable** in the toolbar.
   c. To toggle between Enabled and Disabled for all rules displayed on the page, click the **Enabled** checkbox in the column title.
   d. To enable or disable all rules for the scoring module, click **Enable All** or **Disable All** in the toolbar.
6. To save the changes to the page, click **Save** in the toolbar.

> **Note:** Rules that have changed settings are displayed with a red corner. If you navigate to another page of rules before saving, all changes to this page are lost.

Adjust the Score Weight for an IOC

Adjusting the score weight for an IOC increases or decreases the IOC's overall impact on the aggregate score for the module in which it is configured. To raise or lower the overall impact of the IOC, reduce the current value to a new setting.

- Values ranging from -100 to -1 indicate that the session or file being analyzed is not likely to be malware (-100 being the least likelihood).
- Values ranging from 1 to 100 indicate a likelihood that the file or session being analyzed is malware (100 being the highest likelihood).
- Setting the value to zero leaves the IOC enabled, but causes the IOC to no longer impact the aggregate score and suppresses the IOC from being displayed in analysis results. Setting the value to zero is a method of disabling a file-type specific instance of an IOC while leaving the original file-type agnostic instance of the rule intact for scoring of the remaining file types.

To adjust the score weight:

1. Go to  **(Admin) > Services**.
2. Select a Malware Analysis service.
3. In the row, select  **> View > Config**.
4. Click the **Indicators of Compromise** tab.
5. In the **Module** selection list, select a scoring module: **All**, **Network**, **Static**, **Community**, **Sandbox** or **YARA**.
   The configured rules and settings for the module are displayed.
6. Do one of the following:
   a. Drag the score slider left or right to decrease or increase the score weight.
   b. Click directly on the displayed score weight and enter a new score weight.
7. To save the changes to the page, click **Save** in the toolbar.

Note: Rules that have changed settings are displayed with a red corner. If you navigate to another page of rules before saving, all changes to this page are lost.

Set the High Confidence Flag for an IOC

The High Confidence setting is used as a method of flagging specific IOCs as high confidence indicators that malware is present. As an example, the **Community - File Hash: AntiVirus (Primary Vendor) Flagged File** IOC has a low probability of being a false positive, combined with a high probability of being an accurate measurement of malware being present. By flagging this IOC (and others) as High Confidence, you can use a filter in the Malware Analysis results to limit display to only those sessions that include one or more high confidence rules. By doing so, the display is limited to a smaller subset of results whose accuracy is accorded a higher degree of confidence. Displaying results not limited to high confidence IOCs still allows you to review results that are more grey in nature. This provides for results that are less prone to false negative results. Choosing to filter or to not filter results based on confidence level has a valid use case in the NetWitness workflow.
To set the High Confidence flag:

1. In the **Indicators of Compromise** tab, select a scoring module from the **Module** selection list: **All**, **Network**, **Static**, **Community**, **Sandbox**, or **YARA**.
   The configured rules and settings for the module are displayed.
2. Click the **High Confidence** checkbox in the column next to a rule that you want to flag or unflag as highly likely to indicate the presence of malware in a session when matched.
3. To save the changes to the page, click **Save** in the toolbar.

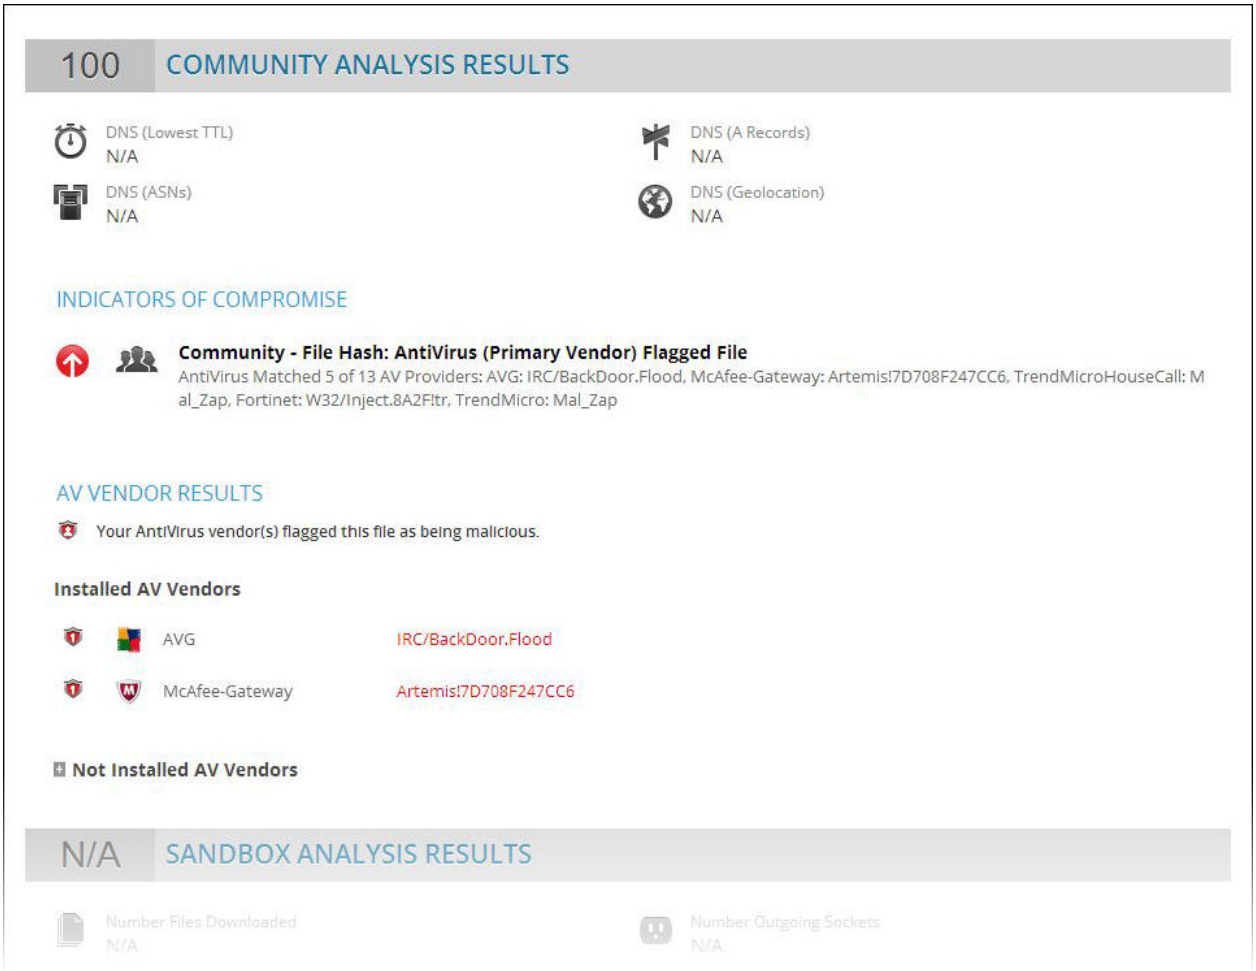
Note: Rules that have changed settings are displayed with a red corner. If you navigate to another page of rules before saving, all changes to this page are lost.

Reset IOCs to Default Settings

1. In the **Indicators of Compromise** tab, select a scoring module from the Module selection list: **All**, **Network**, **Static**, **Community**, **Sandbox**, or **YARA**.
   The configured rules and settings for the module are displayed.
2. If you want to reset all rules on the current page to their default settings, click **Reset** in the toolbar.
3. If you want to reset all rules for the selected scoring module to default settings, click **Reset All** in the

toolbar.

4. To save changes to the page, click **Save** in the toolbar.



Configure Installed Antivirus Vendors

You can compare file analysis results from your installed antivirus (AV) vendors versus community results from the Malware Analysis knowledge base. While a file is being analyzed by community analysis, Malware Analysis checks an antivirus knowledge base to determine if the sample is already known to be malicious. If the file is known to be malicious, NetWitness flags the file to indicate whether a primary antivirus vendor or a secondary antivirus vendor identified the sample. NetWitness classifies vendors as primary and secondary to indicate the level of reputation the vendors have in the industry, and Indicators of Compromise factor the reputation into scoring. For example, detection made solely by secondary antivirus vendors may score less than detection by primary vendors.

Note: When choosing AV vendor software to install on your network, it is highly recommended that you include at least one from NetWitness Primary Vendors list. For more information, please see the Supported Antivirus Vendors.

You can identify the antivirus vendors installed on your network to NetWitness. NetWitness compares the antivirus results during community analysis against the results from the installed vendors selected in the AV tab. If a match is detected, the file being analyzed is flagged to indicate that your locally installed primary or secondary antivirus software detected the sample.

The example below shows the community analysis results for a file that had a score of 100. Under **Indicators of Compromise**, you can see that the file was flagged by the listed AV vendors in the Community. Under **AV Vendor Results**, NetWitness indicates whether the AV vendors installed in your environment flagged the file as malicious. If your installed AV vendors detected the virus, the name of the malware is displayed. If your installed AV vendors did not detected the virus, **--Not detected--** is displayed next the AV vendor name. Under **Not Installed Vendors**, you can click + to expand the section and see if other vendors not installed on your system detected the virus.

Identify Installed AV Software

To identify Antivirus software installed on your network:

1. Go to **(Admin) > Services.**
2. Select a Malware Analysis service, and in the row select **> View > Config**.
3. In the **Service Config View**, select the **AV** tab.
4. Select the checkbox next to each antivirus vendor (primary and other) whose software is installed on your network.
5. To save the changes, click **Apply**.
   The Community Analysis results will indicate whether your software flagged an event.
6. (Optional) If you want to reset the list of installed AV software to the default value (none), click **Reset**.
   All selections are removed.
7. To save changes, click **Apply**.

Enable Community Analysis

An Administrator can enable community analysis. For Community analysis, new malware detected on the network is pushed to the Netwitness Cloud for checking against Netwitness's own malware analysis data and feeds from the SANS Internet Storm Center, SRI International, the Department of the Treasury and VeriSign. To enable Community analysis, you must register with the Netwitness cloud and test connection to the cloud, then to test the connection between the Netwitness cloud and the service you have configured for continuous scanning.

A complete description of analysis methods is provided in How Malware Analysis Works.

1. Go to  **(Admin) > Services.**
2. Select a Malware Analysis service, and in the row select  **> View > Config**.
3. In the **Service Config View**, select the **Integration** tab.
4. Scroll down to **Netwitness Cloud Connection Test and Registration**.

   NetWitness tests communications with the site at `https://cloud.netwitness.com`. If your company uses a proxy for outbound traffic, please check your Proxy settings. A valid connection is required in order to register with the Netwitness Community Service.
5. Enter your company name and contact email. Click **Register**.

   If all required fields are complete, your registration is completed. The label on the button used to register changes to Update.
6. To verify that the Malware Analysis Service can connect to the Core service selected for continuous scanning, click **Test Connection**.

   NetWitness initiates a check based on the Source Host, Source Port, Username, and User Password specified in the General tab. When the test executes successfully, analysts are able to see Community Scoring in Malware Analysis.

(Optional) Configure Auditing on Malware Analysis Host

This topic introduces the configurable features of the Malware Analysis auditing log and the procedures for configuring the features. Malware Analysis is capable of generating auditing alerts based on configured score module thresholds. Once the analysis score for a file in an analysis session meets or exceeds the configured threshold(s), an auditing alert is generated. Thresholding allows sessions and files that score high enough to be likely malware candidates to automatically generate an alert.

Alerts can be configured to be formatted as SNMP, Syslog or File entries. Supporting various audit formats provides a method for external systems to ingest auditing events based on their capability of parsing the supported formats.

In addition to auditing analysis sessions, the following events will trigger an audit alert:

- User login successes and failures
- Changes to system configuration settings

- Server restart
- Server version upgrade and install

The Auditing configuration settings for Malware Analysis are in the Service Config view > Auditing tab.

Configure the Auditing Threshold

The sole purpose of the thresholds is to specify the criteria that must be reached prior to an alert being generated for an analyzed session/file. If auditing is enabled, each scored file/session is examined to determine if the score in each score module meets or exceeds the configured auditing threshold. If so, an alert is generated using the configured audit alert format (e.g., SNMP, Syslog or File). For example, by configuring SNMP and setting the Community Threshold to 90, all sessions/files that score 90 or higher in the Community Score module generate an SNMP trap. If all of the thresholds are set to 90, then an alert is not generated unless a session or file scores 90 or higher in the Network, Static, Community and sandbox score modules.

To configure the auditing threshold:

1. Go to  **(Admin) > Services**.
2. Select a Malware Analysis service, and select  **> View > Config**.
3. In the **Services Config** view, click the **Auditing** tab.
4. In the **Auditing Thresholds** section:
   a. Set the threshold for the **Community**, **Static**, **Network**, and **Sandbox** by doing one of the following for each scoring module:
      - In the slider, click and drag the handle in either direction.
      - In the value field, type a number between 0 and 100, inclusive.
   b. (Optional for 10.3 SP2) Select one or more triggers to record a message and deliver it through all enabled auditing methods.
   c. Click **Apply**.
      - The threshold setting becomes effective immediately for all enabled auditing methods: SNMP, File, and Syslog.
      - The recorded messages are sent through all enabled auditing methods: SNMP, File, and Syslog.

Configure Incident Management Alerting

When enabled, Malware Analysis alerts feed into the NetWitness Respond workflow.

1. Go to  **(Admin) > Services**.
2. Select a Malware Analysis service, and select select  **> View > Config**.
3. In the **Services Config** view, select the **Auditing** tab.

4. In the **Respond Alerting** section, select the **Enabled** checkbox and click **Apply**.
   Alerting becomes effective immediately.

Configure SNMP Auditing

The Simple Network Management Protocol (SNMP) is an Internet-standard protocol for managing services on IP networks. When SNMP auditing is enabled, Malware Analysis can send an audit event as an SNMP trap to a configured SNMP trap host. In addition to the score and event ID, the alert includes all session meta as well as generated meta data. This is useful for users who want to feed event data to third-party systems.

To configure SNMP auditing:

1. Go to  **(Admin) > Services**.
2. Select a Malware Analysis service, and select  **> View > Config**.
3. In the **Services Config** view, select the **Auditing** tab.
4. In the **SNMP Auditing** section, click the checkbox to enable SNMP auditing.
5. Configure the SNMP server name and port.
6. Configure the SNMP version and trap OID for sending traps.
7. Configure the Malware Analysis community, and retry and timeout parameters when sending traps.
8. Click **Apply**.
   The SNMP auditing settings become effective immediately.

Configure File Auditing Settings

When file auditing is enabled, the audit log file is kept in the Malware Analysis Home Directory. The default location for this log file is:

`/var/lib/netwitness/malware-analytics-server/spectrum/logs/audit/audit.log`.

As each log reaches the maximum file size, it is archived and a new log is created. The size of these audit logs and their number are both configurable.

Caution: Avoid setting the max file size and archive file count too high, because it may have an adverse effect on the available disk space on the Malware Analysis appliance.

To configure the file auditing settings:

1. Go to  **(Admin) > Services**.
2. Select a Malware Analysis service, and select  **> View > Config**.
3. In the **Services Config** view, select the **Auditing** tab.
4. In the **File Auditing** section, click the checkbox to enable file auditing.
5. (Optional) Set the Archive File Count and Max File Size.
6. Click **Apply**.
   The file auditing settings become effective immediately.

Configure Syslog Auditing Settings

When enabled, Syslog provides auditing through the use of the RFC 5424 syslog protocol. Regulations, such as SOX, PCI DSS, HIPAA, and many others are requiring organizations to implement comprehensive security measures, which often include collecting and analyzing logs from many different sources. Syslog has proven to be an effective format to consolidate logs, as there are many open source and proprietary tools for reporting and analysis.

In addition to the score and event ID, the syslog includes all session meta as well as generated meta data. This is useful for users who want to feed event data to third-party systems.

To configure the syslog auditing settings:

1. Go to  **(Admin) > Services**.
2. Select a Malware Analysis service, and select  **> View > Config**.
3. In the **Services Config** view, select the **Auditing** tab.
4. In the **Syslog Auditing** section, click the checkbox to enable syslog auditing.
5. Configure the host where the target syslog process is running and the port on the host where the syslog process is listening.
6. Configure the facility, encoding, format, max length, and timestamp for outgoing syslog messages.

   Note: (Optional) Configure Identity String to prepend to syslog alerts.
   For CEF format, please refer to Create Custom Alert in CEF Format for additional considerations.

7. Click **Apply**.

   The syslog auditing settings become effective immediately.

(Optional) Configure Hash Filter

This topic introduces hash filters as a method of marking files in Malware Analysis that are known to be good or known to be bad. Hash filtering allows you to maintain a list of known good or known bad file hashes. In the Hash tab, you can fine tune Malware Analysis event analysis based on file hashes. When a file hash is marked as Good, Malware Analysis does not analyze the file the next time it is seen. When a file hash is marked as Bad, Malware Analysis automatically raises the file's community score by a large number of points. Malware Analysis still analyzes the file, just in case new information becomes available.

Note: If an event contains a single file and that file's hash is marked as Good, Malware Analysis filters the entire event and you do not see it in Malware Analysis results.

To add hash filters to the hash list, you can use either of these manual methods:

1. Context menu add in the Event Detail view: Right-click on a file, and a context menu allows marking of the hash for the selected file as Good (Normal) or Bad (Malicious).
2. Hash tab toolbar: Click **Add** in the Hash tab to add a file hash, file size, and optionally, mark the hash as trusted.

There is also an automated method to add hash filters to Malware Analysis by importing a hash list in bulk from the watched folder. Hashes imported through the watched folder do not appear in the hash list. With bulk importing and the watched directory (/var/netwitness/malware-analytics-server/spectrum/hashWatch) on the Malware Analysis server set up, copy a hash list into the watched folder to be automatically imported into the system. Hashes imported using the bulk import method overwrite hashes that were previously imported through the watched folder.

View the Hash List

To view the Hash List:

1. Go to  **(Admin) > Services**.
2. In the Services view, select a Malware Analysis service, and select  **> View > Config**.
3. Select the **Hash** tab.

   The hash list is displayed in the Hash tab. Only file hashes that have been added using one of the methods are displayed.

Add a File Hash to the Hash Filter

To add a file hash to the hash filter:

1. In the **Hash** tab, in the toolbar, click **Add**.

   The Add Hash dialog is displayed.
2. If the hash is trusted, select **Trusted**.
3. Enter the MD5 hash and the file size in bytes.
4. Click **Save**.

   The file hash is added to the hashes and used to perform hash filtering in Malware Analysis.

Mark a Hash as Trusted or Untrusted

To mark a file hash as trusted or untrusted:

1. In the **Hash** tab, to toggle between trusted and untrusted, click in the **Trusted** column for the hash.
2. In the toolbar, click **Save Edit**.

Delete a Hash from the Hash Filter

To delete a hash from the hash filter:

1. In the **Hash** tab, select one or more hashes that you want to remove from the hash filter.
2. In the toolbar, click **Delete**.

   A dialog requests confirmation and offers an opportunity to cancel.
3. To confirm the deletion, click **Yes**.

The file hash is deleted from the grid and no longer used to perform hash filtering in Malware Analysis.

Search for a File Hash

In the Hash tab, you can search for a file hash that is displayed in the grid. In the MD5 field, type the file hash for which you are searching, and click **Search**. The list of files that contain the hash is displayed in the grid.

Import a Hash List Using the Watched Folder

To import a hash list from the watched directory, the hash list must be in the specified format and must be sorted on md5. You can drop a file formatted as described below into a folder (/var/netwitness/malware-analytics-server/spectrum/hashWatch) on the Malware Analysis appliance, and it is automatically imported into the local hash database. This is the only way to import file hashes into. An additional use case is to allow a system administrator to expose the watched directory to some process that would push a file to this directory. This is a bulk import method designed to handle a high volume of hash imports.

This is a csv-formatted file with no spaces between the data in each row. The assumption with the data in the hash list is that there are no duplicates. Duplicates are ignored during processing. If duplicate hashes are encountered, the log file will display the following message to indicate the number of duplicate hashes contained in the file:

2013-08-09 09:46:00,674 [jobExecutor-2(HashFileWatch)] INFO com.netwitness.malware.core.scheduler.jobs.HashFileWatch - Processing - /var/lib/rsa>malware/hashWatch/test.csv
2013-08-09 09:47:56,619 [jobExecutor-2(HashFileWatch)] INFO com.netwitness.malware.core.services.file.hash.HashServiceImpl - Skipped 21 Duplicate Hashes Already on File
2013-08-09 09:48:06,638 [jobExecutor-2(HashFileWatch)] INFO com.netwitness.malware.core.scheduler.jobs.HashFileWatch - Processed - /var/lib/rsa>malware/hashWatch/test.csv

Below is an example of a hash list in the default file format.

```
[BeginFileExample]
392126E756571EBF112CB1C1cdEDF926,98865,True
0E53C14A3E48D94FF596A2824307B492,2226,True
176308F27DD52890F013A3FD80F92E51,42748,False
9B3702B0E788C6D62996392FE3C9786A,32768,False
937ADE76A75712B7FF339403B4FCB5A6,4821,False

E6CAF205E602CFA9A65663DB1A087874,704,False
680CA0BCE1FC7BC4136ADF4E210869C5,2075,False
[EndFileExample]
```

A NetWitness configuration file (**/var/netwitness/malware-analytics-server/spectrum/conf/hashFileWatchConfig.xml**) specifies the format and options in the hash list import process. Below is a listing of the configuration file.

```
<config>
 <enabled>true</enabled>
 <distributedCacheEnabled>true</distributedCacheEnabled>
 <watchDirectory>//var/lib/rsamalware/hashWatch</watchDirectory>

<processedDirectory>/
var/lib/rsamalware/hashWatch/processed</processedDirectory>

<erroredDirectory>/
var/lib/rsamalware/hashWatch/error</erroredDirectory>
 <md5Col>0</md5Col>
 <fileSizeCol>-1</fileSizeCol>
 <isTrustedCol>1</isTrustedCol>
 <isTrust>false</isTrust>
 <ignoreFirstLine>false</ignoreFirstLine>
 <frequencyInMinutes>1</frequencyInMinutes>
 <isGzipCompressed>false</isGzipCompressed>
 </config>
```

Line	Description
<md5Col>0</md5Col>	The location of the md5 hash in each entry. The default value is position **0**, or the first position.
<fileSizeCol>1</fileSizeCol>	The location of the hash size in each entry. The default value is position **1**, or the second position. If the hash size is not included in the csv file, the value must be **-1**.
<isTrustedCol>2</isTrustedCol>	The location of the Trusted Column in each entry. The default value is position **2**. If the Trusted parameter is not included in the csv file, the value must be **-1**.
<isTrust>false</isTrust>	The default assumption for **Trusted** in each entry is **false**.
<ignoreFirstLine>false</ignoreFirstLine>	The presence or absence of a header in the hash. The default value is **false**. If the hash has a header, the value must be set to **true**.
<frequencyInMinutes>1</frequencyInMinutes>	The interval between checks by NetWitness in the watched directory. The default value is **1** minute.
<isGzipCompressed>false</isGzipCompressed>	The hash is compressed using Gzip. The default value is **false**. If the hash is Gzip compressed, the value must be set to **true** here.

When the hash list has been imported, the system log has entries similar to this:

```
2013-04-11 03:22:00,597 [jobExecutor-9(HashFileWatch)] INFO
com.netwitness.malware.core.scheduler.jobs.HashFileWatch -
Processing - /var/lib/rsamalware/spectrum/hashWatch/simpleHash.csv
 2013-04-11 03:22:00,600 [jobExecutor-9(HashFileWatch)] INFO
com.netwitness.malware.core.scheduler.jobs.HashFileWatch - Processed
- /var/lib/rsamalware/spectrum/hashWatch/simpleHash.csv
```

If there is a problem loading the file, the system log has entries similar to this:

```
2013-04-11 03:17:00,597 [jobExecutor-4(HashFileWatch)] INFO
com.netwitness.malware.core.scheduler.jobs.HashFileWatch -
Processing - /var/lib/rsamalware/spectrum/hashWatch/simpleHash.csv
 ... Verbose log
 2013-04-11 03:17:00,632 [jobExecutor-4(HashFileWatch)] INFO
com.netwitness.malware.core.scheduler.jobs.HashFileWatch - Error
Processing - /var/lib/rsamalware/spectrum/hashWatch/simpleHash.csv
```

To import a hash list using the watched folder method:

1. Copy the hash lists that you want to import into the **/var/netwitness/malware-analytics-sever/spectrum/hashWatch** directory.
   Malware Analysis automatically watches this folder and processes files placed there.
   Malware Analysis adds every hash found in the hash lists to the hash filter.
   If there are processing errors, they are logged in **/var/netwitness/malware-analytics-sever/spectrum/hashWatch/error**
   Processed files are cataloged in **/var/netwitness/malware-analytics-sever/spectrum/hashWatch/processed**
   Processed files are not removed from the hashWatch directory.
2. After importing hashes in bulk, the System Administrator can use a cronjob to clean up old processed files.

(Optional) Configure Malware Analysis Proxy Settings

This topic describes the configuration of a web proxy for communicating with the Netwitness Cloud service and local ThreatGRID or GFI service. The settings in the Service Configuration view > Proxy tab set up communication by web proxy, which Malware Analysis can use to communicate with Netwitness Cloud for community analysis and sandbox analysis. Once the proxy is configured:

- Malware Analysis communicates via web proxy with the Netwitness Cloud for community analysis.
- Malware Analysis communicates via web proxy with the configured ThreatGRID or GFI sandbox service. Using a web proxy may negatively affect performance. ThreatGRID and GFI configuration sections in the General tab have an option to ignore the web proxy and communicate directly with the sandbox to improve performance.

Configure the Web Proxy

To configure the web proxy for Malware Analysis:

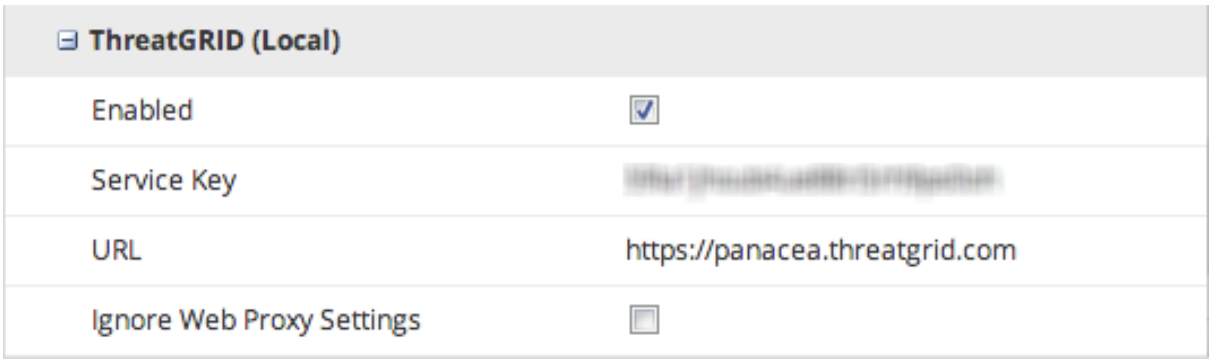
1. Go to  **(Admin) > Services** view.
2. Select a Malware Analysis service, and select  **> View > Config**.
3. In the **Services Config** view, select the **Proxy** tab.
4. To enable the proxy, select the **Enabled** checkbox.
5. (Optional) To automatically detect proxy settings for the NetWitness Server, select the checkbox.
   The proxy host and proxy port fields are autofilled.

6. If you want to use a different proxy, enter the **Proxy Host** and **Proxy Port**.
7. Enter the username and password used to log on to the proxy host.
8. (Optional) Select **SSL**, if the proxy host communicates over SSL.
9. Click **Apply**.
10. Restart the Malware service.

Note: Malware Analysis does not support NTML web proxy authentication.

(Optional) Register for a ThreatGRID API Key

This topic provides the procedure for obtaining a trial ThreatGRID API key for use in the ThreatGRID Cloud sandbox. Before enabling ThreatGRID as the sandbox service in the sandbox module, a ThreatGRID-supplied Service Key must be configured so that ThreatGRID can recognize that samples submitted from this site are legitimate.



If you do not have a ThreatGRID-supplied Service Key, you can obtain a key using this tab. The key is provided on a trial basis.

When you fill in your user information and click **Register**, a key is displayed in this tab, and automatically added to the ThreatGRID configuration in the **General** tab. In a few minutes, you will receive an email from ThreatGRID containing a link to their page where you can log on. After you agree to the license terms on the ThreatGRID page, you can submit files for analysis, and ThreatGRID will recognize files that Malware Analysis submits for sandbox analysis.

To obtain a Trial ThreatGRID API key:

1. Go to  **(Admin) > Services**.
2. Select a Malware Analysis service, and select  **> View > Config**.
3. In the **Services Config** view, select the **ThreatGRID** tab.
4. Enter your full name, job title, organization name, and email address.
5. In the User Id and Password field, create a user ID and password for logging on to ThreatGRID.
6. Click **Register**.

   Your registration is sent to ThreatGRID and an API key is displayed below the Register button. The key is automatically filled in the **General** tab.
7. Select the **General** tab to confirm that the ThreatGRID configuration now includes the API key.

8. When you receive an email from ThreatGRID with a link where you can log on, log on and accept the terms of the agreement.

   Your trial of ThreatGRID begins and Malware Analysis can send five files per day to the ThreatGRID Cloud for sandbox analysis.

Additional Procedures for Configuring Malware Analysis

This topic provides procedures that an Administrator may perform to accomplish an objective that is not part of basic Malware Analysis setup. After Malware Analysis is configured, administrators may want to fine-tune the service and implement advanced customization; an example of this is implementing custom YARA content.

- Create Custom Alert in CEF Format
- Enable Custom YARA Content

Create Custom Alert in CEF Format

This topic provides instructions for creating custom alerts in Common Event Format (CEF) to send to a service that ingests events as CEF. This is an advanced configuration task, which requires sufficient knowledge to manually edit the configuration file: `/var/netwitness/malware-analytics-server/spectrum/conf/malwareCEFDictionaryConfiguration.xml`. Before editing the file, you must stop the Malware Analysis service in the operating system. The CEF Alert becomes active when you restart the Malware Analysis service.

The CEF Template

To send events to a service ingesting events as CEF, NetWitness runs them through a configuration file that serves as a CEF template before feeding the events to a correlation technology. You can tune the configuration file, which specifies the sequence and mapping of syslog fields in each alert.

The following example syslog message shows the CEF fields in the extensions section of the alert (following the last '|' in the alert). Each field can be configured to indicate the sequence (described in the Example section below). Fields can be excluded entirely from the alert via a configuration setting.

```
CEF:0|NetWitness|Spectrum|10.3.0.7995.1.0|Suspicious Event|Detected
suspicious network event ID 4 session ID n/a|2|static=100.0 nextgen=25.0
community=100.0 sandbox=25.0 file.name=myFile.exe file.size=1234556
file.md5.hash=DEADBEEFBABECAFEDEADBEEFBABECAFE
event.source=spectrum://admin@0:0:0:0:0:0:0:1:64563 event.type=MANUAL_
UPLOAD event.id=0 country.dst.code=-- country.dst=Unavailable
ip.src=0:0:0:0:0:0:0:1 ip.dst=0:0:0:0:0:0:0:1 event.uuid=f7a6155a-31de-
4fa6-ba16-41fb9a8e5f26 ...
```

Understand a Syslog Auditing File Entry

The description of the file structure is based on the following sample.

```
Feb 6 10:02:28 10.10.10.125 SpectrumServer125

CEF: 0|NetWitness|Spectrum|1.2.1.130|Suspicious Event|Detected suspicious
 network event ID 857 session ID 73|2|

static=100.0 network=29.0 community=8.0 sandbox=N/R

file.name=-CVE-00_DOC_2010-05-13_attachment.doc file.size=0
file.md5.hash=20a29259c0e5958afb2f50c4177bb307
```

```

First Line

```
Feb 6 10:02:28 10.10.10.125 SpectrumServer125
```

Log Information	Description
Feb 6 10:02:28	The timestamp for the entry.
10.10.10.125	The source IP address for the event.
SpectrumServer125	The source hostname for the event.

Audit Common Event Format (CEF) Header

```
0|NetWitness|Spectrum|1.2.1.130|Suspicious Event|Detected suspicious network
event ID 857 session ID 73|2|
```

The audit CEF header is a pipe-separated listing of the following fields:

Log Information	Description
0	The ArcSight Common Event Format (CEF) version used for the audit syslog.
NetWitness	The service that created the syslog message.
Spectrum	Malware Analysis is the logger for the event.
1.2.1.130	Malware Analysis version.
event ID 857	Unique network event id for this event.
session ID 73	Core unique session id for the session that included this event.

Log Information	Description
2	Severity, an integer between 1 and 6 indicates the level of severity for the message. • 1 = INFORMATION_LEVEL • 2 = WARNING_LEVEL • 3 = ERROR_LEVEL • 4 = SUCCESS_LEVEL • 5 = FAILURE_LEVEL • 6 = AUDIT_FAILURE_LEVEL

Analysis Scores

The first entry in the audit CEF extension provides the four Malware Analysis scores for the event: Static, Network, Community, and Sandbox.

Log Information	Sample Value
static	100.0
network	29.0
community	8.0 A score of 0.0 can be a community score for the event or can indicate that no community services were enabled.

Log Information	Sample Value
sandbox	N/R N/R means not run. This indicates that the GFI sandbox was not enabled.

File Information

The next three entries provide file information: file name, size, and hash.

Log Information	Sample Value
file.name	-CVE-00_DOC_2010-05-13_attachment.doc
file.size	0
file.md5.hash	20a29259c0e5958afb2f50c4177bb307

Event Meta Data Retrieved by NextGen

The record continues with the Core meta data for the event. The meta data in the message depends on the event. The amount of data in the message is truncated to the maximum length in bytes configured in the Syslog Settings. The default value is 1024.

Log Information	Sample Value
com.netwitness.event.internal.id	73
com.netwitness.event.internal.uuid	37d2bad7-06bc-4b34-88e1-df43d9710204

Edit the Configuration File

1. Stop the Malware Analysis service.
2. Edit the configuration file as described in the Example.

3. Start the Malware Analysis service.

   The Malware Analysis service begins processing alerts through the configuration file and sending CEF alerts to designated services.

Example

The configuration file can be used to dictate which fields appear in the resulting alert as well as the label associated with each field and the order in which the data fields appear. The configuration file is composed of one or more XML `MalwareCefExtension` blocks as shown in the example below. The ordering of these blocks in the configuration file implies the order of the data fields in the CEF alert.

In the example below, the CEF alert would include two data fields, `ip.src` followed by `ip.dst`. The `customKey` is used to indicate the labeling of the data field in the alert. This allows the user to choose a custom label in order to force the alerting format to better match the expectations of the alert consumer. In other words, the format can be tuned to prevent unwanted changes to an existing alert parser. Lastly, the `isDisplay` setting determines if the field is included in the alert output. This allows the user to turn off data fields without having to physically delete the `MalwareCefExtension` block from the configuration.

```
 <config>
 <malwareExtensionList>
<com.netwitness.malware.core.cef.MalwareCefExtension>
   <customKey>ip.src</customKey>
   <malwareKey>ip.src</malwareKey>
   <isDisplay>true</isDisplay>
</com.netwitness.malware.core.cef.MalwareCefExtension>
<com.netwitness.malware.core.cef.MalwareCefExtension>
   <customKey>ip.dst</customKey>
   <malwareKey>ip.dst</malwareKey>
   <isDisplay>true</isDisplay>
</com.netwitness.malware.core.cef.MalwareCefExtension>
 </malwareExtensionList>
</config>
```

At the end of the configuration file are three additional settings that can be used to further tune the alert format. They are as follows:

Setting	Description
includesUnknownMeta	This true or false setting indicates if unknown data elements are included in the resulting alert. Any NextGen session meta can be considered for inclusion into a CEF alert. Because additional session meta can be introduced via authoring new NextGen parsers, meta that is not contained in the default configuration may be encountered. You can set includesUnknownMeta to true to include the unknown meta in the alert and label it using the NextGen meta key name. To force a custom key for the unknown meta, you must edit this file and add a new MalwareCefExtension to the dictionary. To omit unknown meta from the alert, set includesUnknownMeta to false.
displayNulls	This true or false setting indicates if values that are set to null are included in the alert. If displayNulls is set to false, the null value fields are omitted even if their MalwareCefExtension isDisplay property is turned on. This allows dynamic formatting of alerts to exclude null fields.
valueIfNull	This true or false setting allows you to specify a string placeholder (n/a by default) to be used as the value for any null valued fields. If displayNulls is set to true, then null valued fields are included in the alerts. Their value is set to the value specified in valueIfNull.

The following represents the default CEF configuration file. The default configuration file includes all default NextGen session meta.

```
<config>
  <malwareExtensionList>
   <com.netwitness.malware.core.cef.MalwareCefExtension>
   <customKey>static</customKey>
   <malwareKey>static</malwareKey>
   <isDisplay>true</isDisplay>

Enable Custom YARA Content

This topic provides instructions for enabling custom YARA content on the NetWitness host on which the Malware Analysis service is installed. In addition to the built-in Indicators of Compromise, Malware Analysis supports indicators of compromise written in YARA. YARA is a rule language that allows malware researchers to identify and classify malware samples. Netwitness makes built-in YARA-based Indicators of Compromise (IOCs) available in Netwitness Live; these are automatically downloaded and activated on subscribed appliances.

Customers with advanced skills and knowledge can add detection capabilities to Netwitness Malware Analysis by authoring YARA rules and publishing them in Live or placing YARA rules in a watched folder for the appliance to consume. This section provides instructions for the Administrator who configures appliances to enable the creation of custom YARA content.

Prerequisites

This is an advanced configuration task, which requires sufficient privilege and knowledge to set up a GNU Compiler Collection (GCC) and C++ Python development library to build YARA. In addition, you must be thoroughly familiar with the standard YARA documentation. The following components are required:

- The Perl-Compatible Regular Expression (PCRE) library: pcre-8.33.tar.bz2
- The yara 1.7 (rev:167) stand-alone YARA command line: yara-1.7.tar
- The YARA extension for Python: yara-python-1.7.tar.gz
- YARA rules documentation: YARA User's Manual 1.6.pdf

The components are available for download here: https://code.google.com/p/yara-project/downloads/list

Note: As of writing, YARA 2.0 is available but not supported for Malware Analysis 10.5.

Install Libraries and Applications Required to Build YARA on a CentOs-Based Appliance

As a prerequisite to building YARA on a host that is running CentOS, you must install `make`, the GNU Compiler Collection, and C++ Python Development Library on the appliance. To install the applications and libraries required to build YARA:

1. To ensure the standard YUM repo and no other repo files are in the /etc/yum.repos.d folder, enter the following command:
   `ls -al /etc/yum.repos.d`
   The results should be similar to the following:
   ```
   -rw-r-r-. 1 root root 1926 Jun 26  2012 CentOS-Base.repo
   -rw-r-r-. 1 root root  637 Jun 26  2012 CentOS-Debuginfo.repo
   -rw-r-r-. 1 root root  626 Jun 26  2012 CentOS-Media.repo
   -rw-r-r-. 1 root root 2593 Jun 26  2012 CentOS-Vault.repo
   ```
2. To install `make` on the appliance, enter the following commands:
   a. **`yum search make`**
      The following message is returned: `make.x86_64 : A GNU tool which simplifies the build process for user`
   b. **`yum install make.x86_64`**
3. To install and test GCC on the host, enter the following commands:
   a. **`yum search gcc`**
      The following messages are displayed:
      ```
      gcc-c+.x86_64 : C+ support for GCC
       gcc.x86_64 : Various compilers (C, C++, Objective-C, Java, ...)
      ```
   b. Enter the following commands:
      `yum install gcc.x86_64`
      `yum install gcc-c++.x86_64`

c. To test the gcc commands, enter the following commands:

```
gcc -v
cc -v
```

4. To install the C++ Python development library on the appliance, enter the following commands:

a. **yum search python dev**
The following message is returned:
`python-devel.x86_64 : The libraries and header files needed for Python development`

b. **yum install python-devel.x86_64**

Set Up YARA

To create a GCC and C++ Python development library in which you can build YARA on the NetWitness host that is running Malware Analysis:

1. Do one of the following:

a. If the host on which you are installing is running Mac OS, install xCode for Mac OS.

b. If the host on which you are installing is running CentOS, install make, GCC and C++ Python development library using the YUM command line.

2. To Install the PCRE library on the host, open a terminal window and enter the following commands:

```
tar -xvf pcre-8.33.tar.bz2
cd pcre-8.33
./configure
make
sudo make install
```

3. To install the stand-alone YARA command line, enter the following commands:

```
tar -xvf yara-1.7.tar
cd yara-1.7
./configure
make
sudo make install
```

4. To test the stand-alone YARA command line:

a. Enter the following command:

```
yara
```

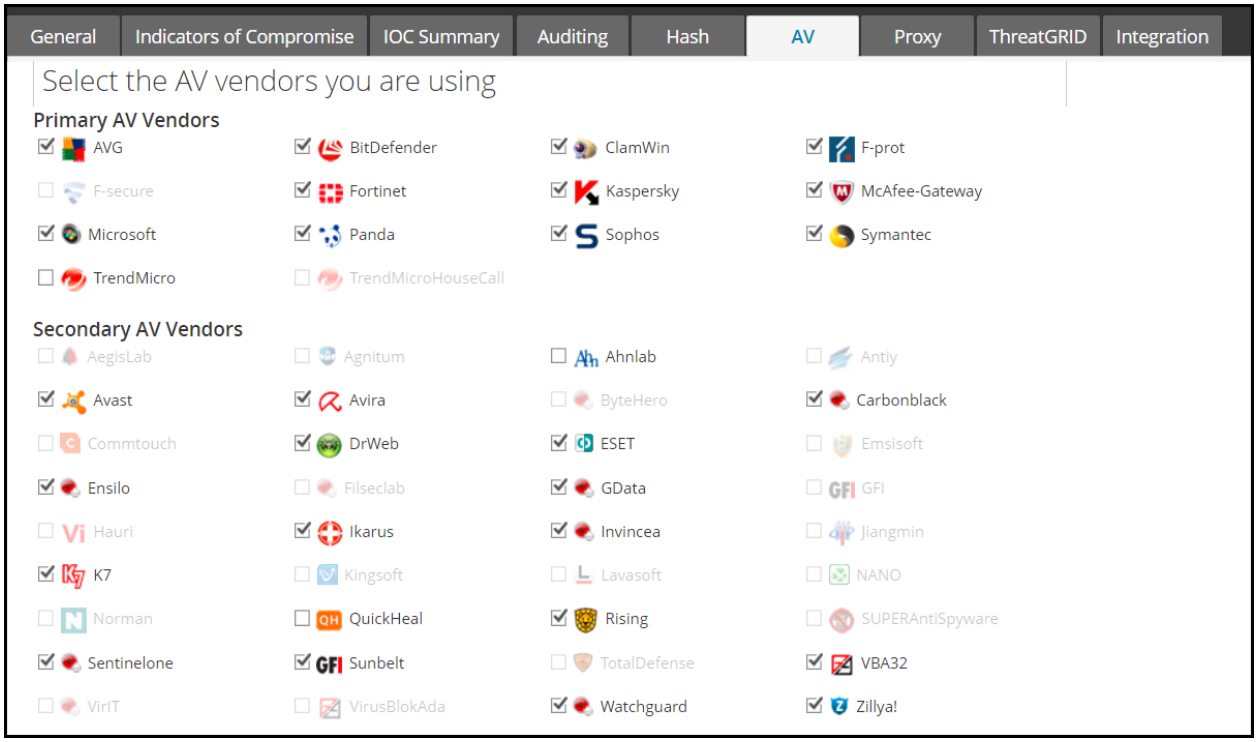
b. If the command succeeds, continue with Step 7. If the command fails and returns the `yara: error while loading shared libraries: libpcre.so.1: cannot open shared object file: No such file or directory` error, enter the following command to check the `/etc/ld.so.conf` file or `LD_LIBRARY_PATH` environment variable.

```
ldconfig -v
```

5. To install the YARA extension for Python, enter the following commands:

```
tar -xvf yara-python-1.7.tar.gz
cd yara-python-1.7
```

```
python setup.py build
sudo python setup.py install
```



6. To test the YARA extension:
   a. Enter the following command: **python**
   b. At the Python prompt (>>>), enter the following commands:

```
import yara
exit()
```

When this configuration is complete, analysts can create custom YARA IOCs for consumption on a Malware Analysis host as described in "Implement Custom YARA Content" in the *Malware Analysis User Guide*

Supported Antivirus Vendors

This section provides detailed information about the NetWitness supported antivirus (AV) vendors.

The following are the new AV vendors supported in NetWitness version 11.4.0.1 or later.

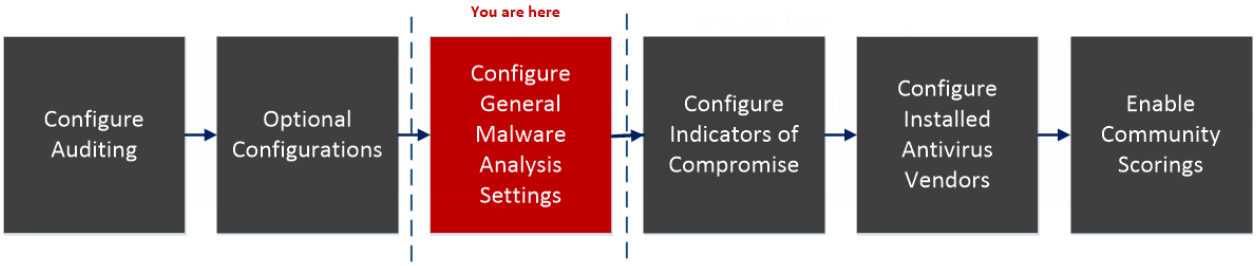
- Panda
- Gdata
- Avast
- Carbonblack
- Dr.Web
- enSilo
- Invincea
- Rising
- SentinelOne
- Sunbelt
- VBA32
- Watchguard

The following AV vendors are not supported in NetWitness version 11.4.0.1 or later.

Note: AV vendors that are not supported by NetWitness Platform are disabled in the user interface.

- F-secure
- TrendMicroHouseCall
- AegisLab
- Agnitum
- Antiy
- ByteHero
- Commtouch
- Emsisoft
- Filseclab
- GFI
- Hauri
- Jiangmin
- Kingsoft
- Lavasoft
- NANO
- Norman
- nProtect
- SUPERAntiSpyware
- TotalDefense
- VirIT
- VirusBlokAda
- Zillya
- Zoner

Malware Analysis References



- Services Config View - General Tab

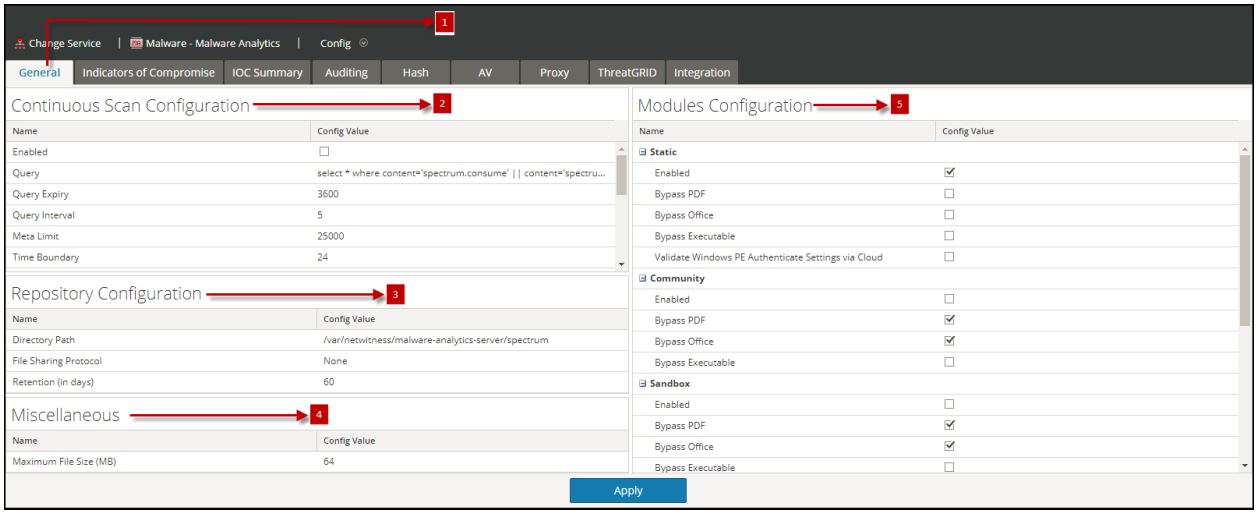
Services Config View - General Tab

This topic introduces the configuration settings in the Service Config view > General tab for Malware Analysis, which has parameters specific to the Malware Analysis service. In this tab, you can configure:

- The processing parameters for Core services that are capturing data.
- The repository for captured data.
- The static, community, and sandbox scoring categories used to analyze the data.

Workflow

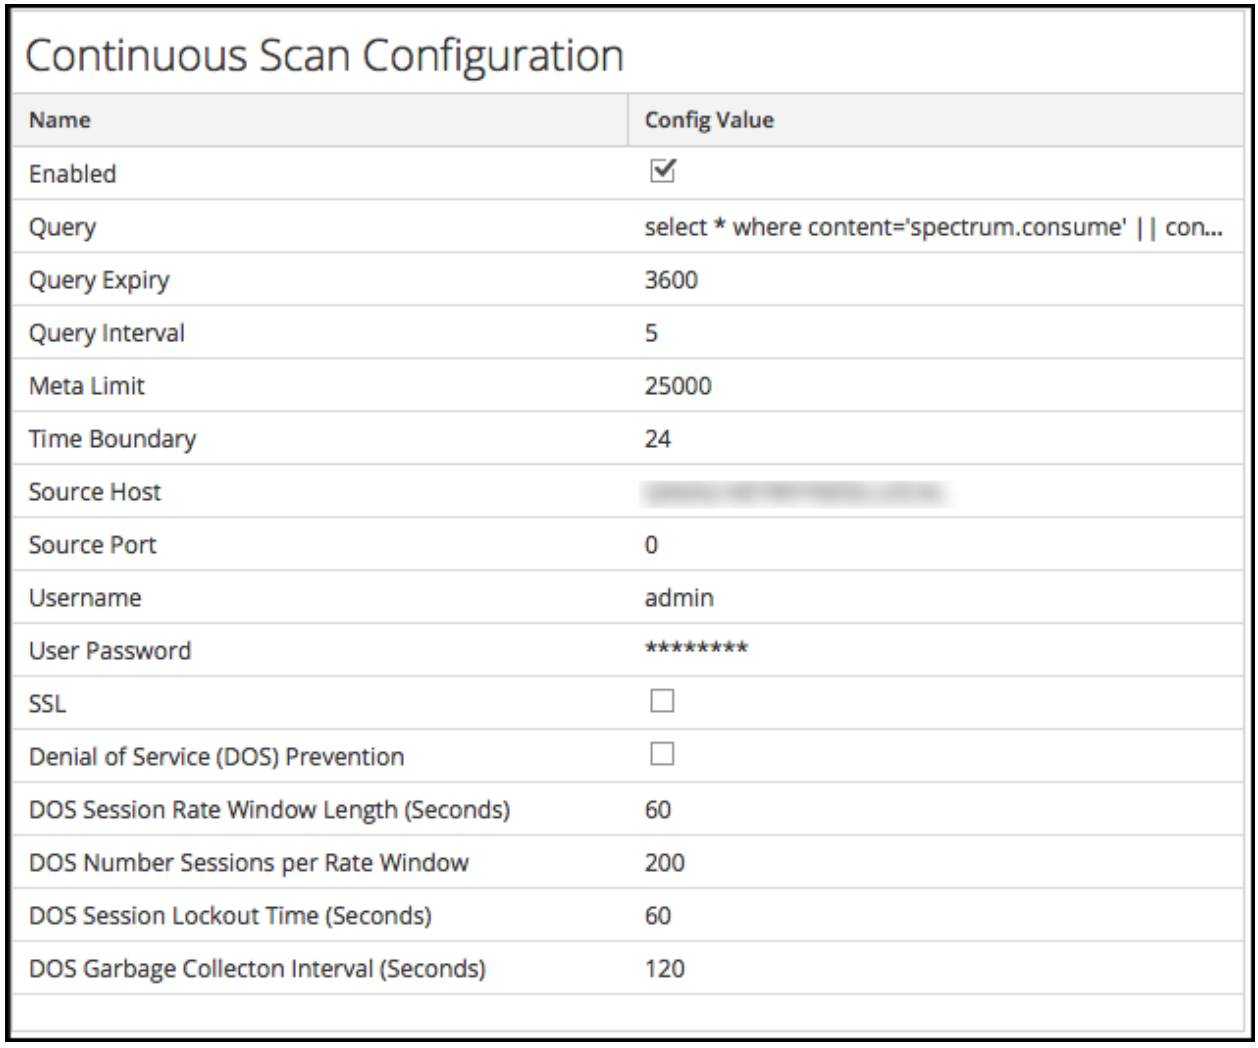


What do you want to do?

Role	I Want to...	Show me how
Administrator	Configure General Malware Analysis Settings*	Configure General Malware Analysis Settings
Administrator	Configure Indicators of Compromise	Configure Indicators of Compromise
Administrator	Configure Auditing on Malware Analysis Host	(Optional) Configure Auditing on Malware Analysis Host
Administrator	Configure Hash Filter	(Optional) Configure Hash Filter
Administrator	Configure Installed Anti virus Vendor	Configure Installed Antivirus Vendors
Administrator	Configure Malware Analysis Proxy Settings	(Optional) Configure Malware Analysis Proxy Settings
Administrator	Register a TreadGRID API Key	(Optional) Register for a ThreatGRID API Key
Administrator	Enable Community Analysis	Enable Community Analysis

*You can perform this task in the current view

Quick Look



This is an example of the General tab.

1 Displays the General Tab.
2 Allows you to Configure Continuous Scan.
3 Allows you to Configure Repository.
4 Displays Miscellaneous Settings.
5 Allows you to Configure Modules.

This tab has four sections: Continuous Scan Configuration, Repository Configuration, Miscellaneous, and Modules Configuration.

Continuous Scan Configuration Section

Continuous Scan Configuration

Name	Config Value
Enabled	☑
Query	select * where content='spectrum.consume' || con...
Query Expiry	3600
Query Interval	5
Meta Limit	25000
Time Boundary	24
Source Host	[redacted]
Source Port	0
Username	admin
User Password	********
SSL	☐
Denial of Service (DOS) Prevention	☐
DOS Session Rate Window Length (Seconds)	60
DOS Number Sessions per Rate Window	200
DOS Session Lockout Time (Seconds)	60
DOS Garbage Collecton Interval (Seconds)	120

This table describes the features of the Continuous Scan Configuration section.

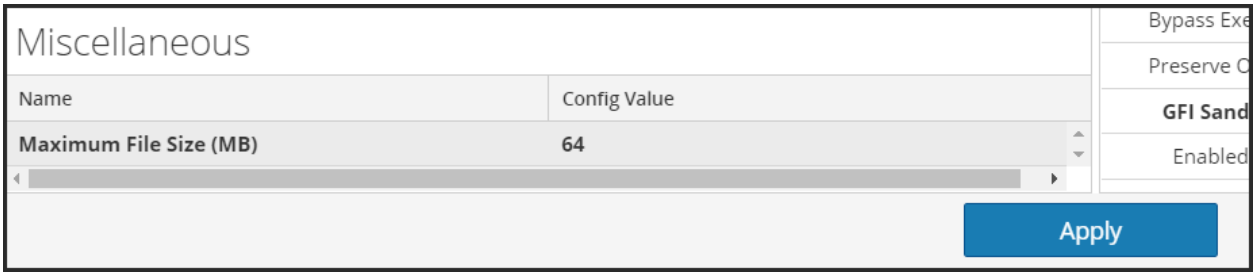
Parameter	Description
Enabled	Completely disable or enable continuous polling of the Core service. By default this is not selected (**disabled**).
Query	While the Decoder is analyzing network traffic, it creates a meta field called content with a value of **spectrum.consume** in sessions that are likely to contain malware. By default, Malware Analysis only performs analysis on events that have this particular meta value. By changing this query, Malware Analysis can be configured to analyze different types of events. Making this query too broad may force Malware Analysis to analyze too many events, causing it to fall behind or perform poorly. The default query is **select * where content='spectrum.consume'**

Parameter	Description
Query Expiry	When Malware Analysis queries the Core service for meta, it gets a result back within a few seconds. If there is a problem, such as a network connectivity issue, Malware Analysis abandons the query after this configured amount of time. The default value is **3600 seconds**.
Query Interval	How often, in minutes, to query for new session meta and files.
Meta Limit	Each time Malware Analysis queries the Core service, it pulls an amount of meta, up to this meta limit. Using this setting, in conjunction with the query interval, you can tune the performance of Malware Analysis in the Core infrastructure. The default value is **25000**.
Time Boundary	Malware Analysis analyzes sessions that occurred after the Time Boundary. This setting is most important when installing a new Malware Analysis appliance, because it determines how far back in time to begin analysis. Setting the boundary too many hours in the past may cause Malware Analysis to analyze too many past events, causing a large delay before you see any traffic happening in real time. The default value is **24 hours**.
Source Host	Hostname of the Malware Analysis appliance. This is the IP address, or the hostname, of the service that Malware Analysis queries to retrieve its data for analysis. Do not use localhost as the source host. Depending on the model of the appliance and the configuration of the NetWitness infrastructure, this source host can vary. **Note:** When you change the host name or the host IP address, ensure that you re add the Source Host in the Malware Service config page, and restart the service to take the source host field changes into effect.
Source Port	Malware Analysis communicates with the NetWitness infrastructure using the REST service listening on this port. This port number is specific to the type of the Core service that is being used as the Source host. This corresponds to the outbound connections for your Core service.
Username	Username. The default value is **admin**. Malware Analysis must authenticate to the Source host each time it queries for data. In most cases, the account used by Malware Analysis is the same account used to access the Core service through NetWitness. However, it is recommended to create a new account on the Core service dedicated to Malware Analysis.
User Password	User password. The default value is **netwitness**.
SSL	Use SSL when communicating with Core. If Malware Analysis is using an SSL connection to communicate with a Core service, check this option. The default value is unchecked.

Parameter	Description
Denial of Service (DOS) Prevention	The Denial of Service Prevention feature provides safeguards against malware that intentionally generates high volumes of network connections between two endpoints containing Windows PE content. Generating a high volume of connections artificially inflates the amount of traffic that security services monitoring the network must consume and analyze resulting in a denial of service. This feature helps identify these sessions so that you can have the analysis processing disregard them. The default value is unchecked.
DOS Session Rate Window Length (Seconds)	Malware Analysis uses this parameter with the **DOS Number Sessions per Rate Window** and **DOS Session Lockout Time (Seconds)** parameters to identify a Denial of Service Attack and determine how long to disregard sessions from a single IP address. To identify a Denial of Service Attack, Malware Analysis monitors the number of sessions established by a single IP address during a specific time frame. The **DOS Session Rate Window Length (Seconds)** defines this time frame. If the number of sessions exceeds the **DOS Number Sessions per Rate Window** setting within the number of seconds defined in **DOS Session Rate Window Length**, Malware Analysis identifies the activity as a Denial of Service attempt. In this case, traffic from the IP address is disregarded for the length of time specified in **DOS Session Lockout Time (Seconds)**. The default value is: **60** seconds.
DOS Number Sessions per Rate Window	Malware Analysis uses this parameter with the **DOS Session Rate Window Length (Seconds)** and **DOS Session Lockout Time (Seconds)** parameters to identify a Denial of Service Attack and determine how long to disregard sessions from the IP address. To identify a Denial of Service Attack, Malware Analysis monitors the number of sessions established by a single IP source during a specific time frame. The **DOS Session Rate Window Length (Seconds)** defines this time frame. If the number of sessions exceeds the **DOS Number Sessions per Rate Window** setting within the number of seconds defined in **DOS Session Rate Window Length**, Malware Analysis identifies the activity as a Denial of Service attempt. In this case, traffic is disregarded for the length of time specified in **DOS Session Lockout Time (Seconds)**. The default value is: **200** sessions
DOS Session Lockout Time (Seconds)	Malware Analysis uses this parameter with the **DOS Session Rate Window Length (Seconds)** and **DOS Number Sessions per Rate Window** parameters to identify a Denial of Service Attack and determine how long to disregard such an attack. To identify a Denial of Service Attack, Malware Analysis monitors the number of sessions established by a single IP address during a specific time frame. The **DOS Session Rate Window Length (Seconds)** defines this time frame. If the number of sessions exceeds the **DOS Number Sessions per Rate Window** setting within the number of seconds defined in **DOS Session Rate Window Length**, Malware Analysis identifies the activity as a Denial of Service attempt. In this case, traffic is disregarded for the length of time specified in **DOS Session Lockout Time (Seconds)**. The default value is: **60** seconds

Parameter	Description
DOS Garbage Collection Interval (Seconds)	Performs garbage collection on the internal memory structure used to track Denial of Service attempts. If memory usage is abnormally high, you can decrease this setting to free unused memory more often. If CPU usage is abnormally high, you can increase this setting to eliminate processing overhead (at the expense of memory usage). The default value is: **120** seconds

Repository Configuration Section

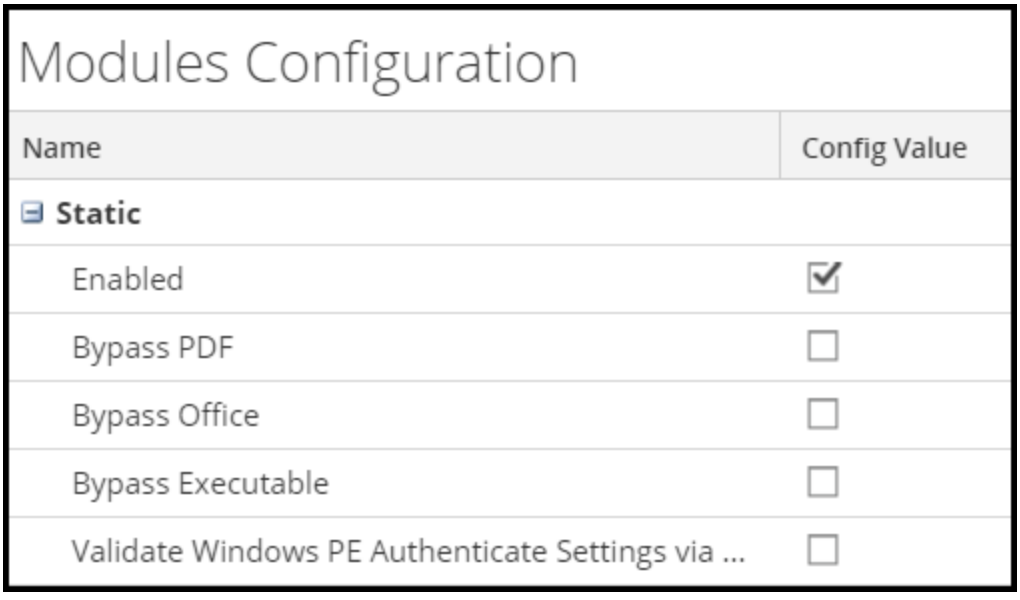


Malware Analysis stores all of the files that are analyzed for future use. These files can be downloaded through the user interface or accessed via one of the file sharing protocols.

This table describes the features of the Repository Configuration section.

Parameter	Description
Directory Path	All files are stored in the following directory on the Malware Analysis appliance: **/var/lib/netwitness/spectrum**
File Sharing Protocol	Possible values for the file sharing protocol are FTP, SAMBA, and None. You can enable FTP access and SAMBA file sharing to allow a user access to the stored files on the Malware Analysis from a remote location. No credentials are required to access these files. The port required for FTP access is TCP/21. The default file sharing protocol is **None**.
Retention (in days)	Malware Analysis maintains files stored in the repository for a specified number of days. You can set the number of days that files are retained before being deleted. The default value is **60** days.

Miscellaneous Configuration Section (10.3 SP2 and Later)

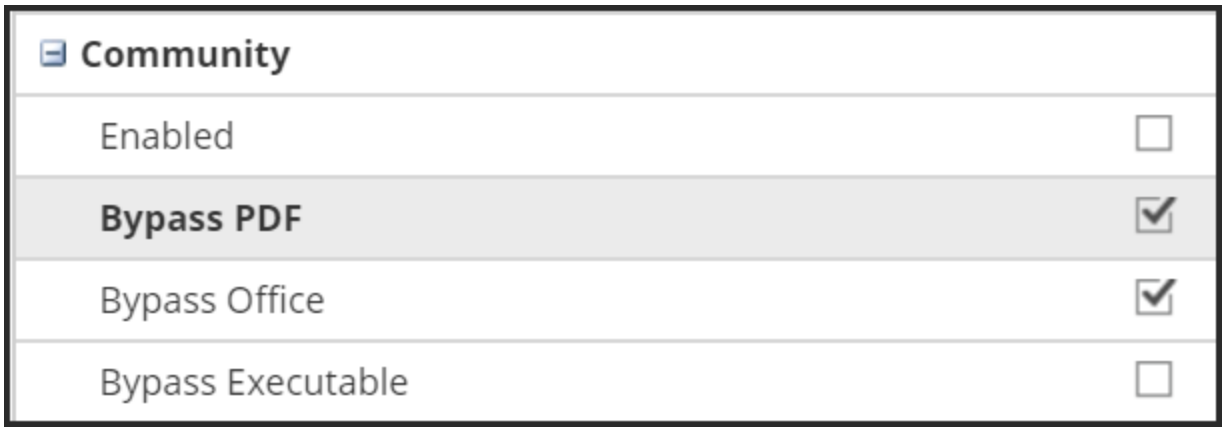


This table describes the features of the Miscellaneous Configuration section.

Parameter	Description
Maximum File Size	Limits the size of each file that you can scan for manually. This parameter applies to the feature described in "Upload Files for Malware Scanning" in the Investigation and Malware Analysis Configuration Guide. The default value is **64 MB**. If the file size limit is exceeded, prevents you from scanning the file.

Modules Configuration Section

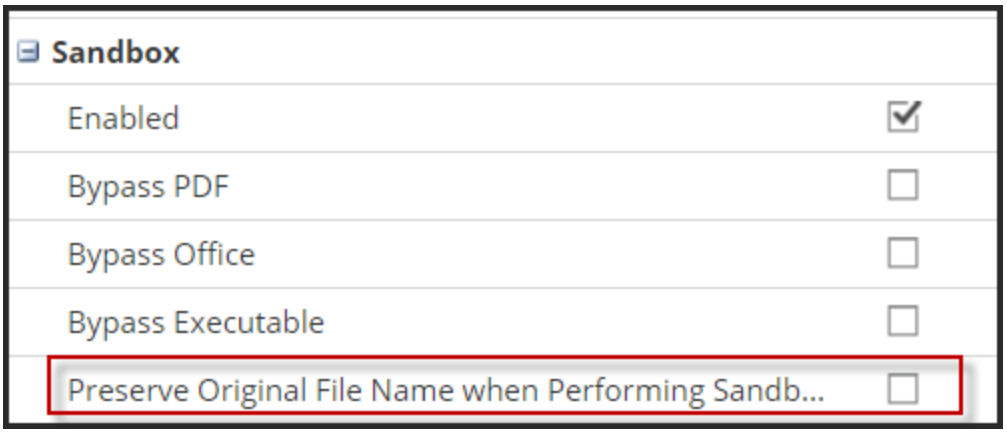
The Modules Configuration section allows configuration of the static, community, and sandbox scoring categories.



Static Analysis Configuration

The static module is the only scoring category that is enabled by default. This table describes the parameters for configuring static analysis.

Feature	Description
Enabled	Completely disable or enable static analysis. By default this is selected (**enabled**).
Bypass PDF	Disable analysis of PDF documents. By default this is not selected; all PDF files undergo static analysis.
Bypass Office	Disable analysis of Office documents. By default this is not selected; all MS Office files undergo static analysis.
Bypass Executable	Disable analysis of Windows PE documents. By default this is not selected; all Windows PE files undergo static analysis.
Validate Windows PE Authenticate Settings via Cloud	Specify whether or not Windows PE files are sent to the Netwitness Cloud for Authenticode validation. The default value is selected. • When selected, any Windows PE file that is digitally signed is transmitted over the network (in its entirety) to the Netwitness Cloud for validation. If the intent is to prevent Windows PE files from leaving the customer network, you should disable this option. • When not selected, ALL static analysis is performed locally (skipping Authenticode validation). Regardless of this setting, PDF and M/S Office documents are not subject to Authenticode validation and are not transmitted over the network during static analysis.

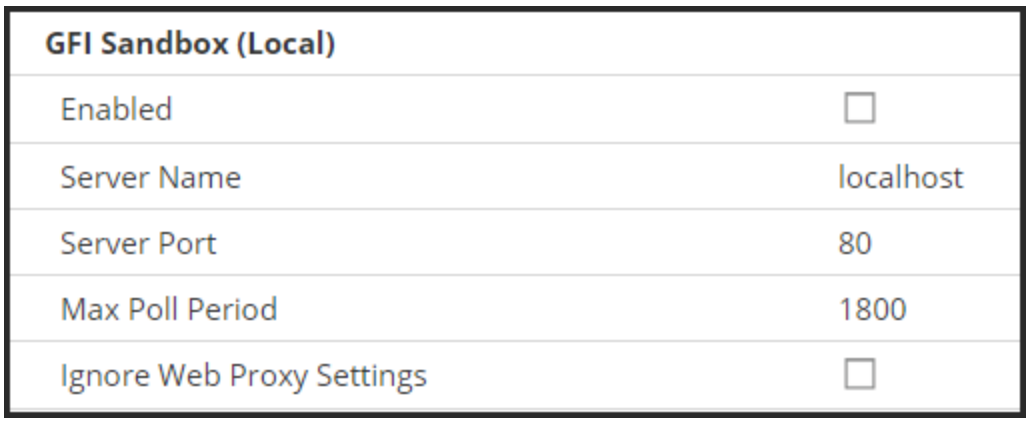


Community Analysis Configuration

By default, the community module is disabled and the options are selected to prevent PDFs and MS Office documents from being processed. The intent is to default the settings to the most restrictive choices so that no sensitive documents leave the network unless the user chooses. This table describes the parameters for configuring Community analysis.

Feature	Description
Enabled	Completely disable or enable community analysis. By default this is not selected (**disabled**). **Note:** Before you enable community, you must log in to live account. For more information about live account, see Live Services Management Guide.
Bypass PDF	Disable analysis of PDF documents. By default this is selected; PDF files are not processed.
Bypass Office	Disable analysis of Office documents. By default this is selected; Microsoft Office documents are not processed.
Bypass Executable	Disable analysis of Windows PE documents. By default this is selected; Windows PE documents are not processed

Sandbox Analysis Configuration

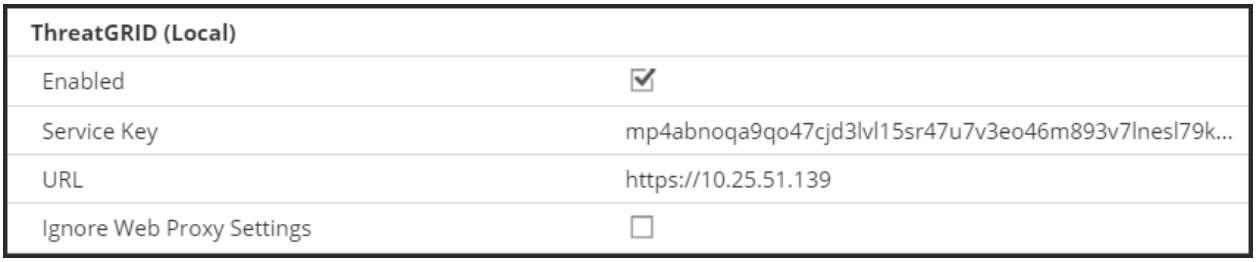


By default, the sandbox module is disabled and MS Office and PDF files are prevented from being processed. The intent is to set the most restrictive settings to force the user to specifically choose whether or not potentially sensitive information is sent outside of the network for processing. If the document type is not prevented from being processed, the file is sent to the destination sandbox server in its entirety (not limited to a hash of the file contents).

This table describes the parameters for configuring Sandbox analysis.

Feature	Description
Enabled	Completely disable or enable sandbox analysis. By default this is not selected **(disabled)**.
Bypass PDF	Disable analysis of PDF documents. By default this is selected; PDF files are not processed. When not selected, all PDF files are submitted in their entirety to the Sandbox for analysis.

Feature	Description
Bypass Office	Disable analysis of Office documents. By default this is selected; Microsoft Office documents are not processed. When not selected, all MS Office files are submitted in their entirety to the Sandbox for analysis.
Bypass Executable	Disable analysis of Windows PE documents. By default this is selected; Windows PE documents are not processed. When not selected, all Windows PE documents are submitted in their entirety to the Sandbox for analysis.
Preserve Original File Name when Performing Sandbox Analysis	In 10.3 SP2 and later, enable the ability to hash for filenames when they are sent to a local sandbox. By default this is not selected. **Note:** If you do not select this parameter, NetWitness hashes the files.



GFI Sandbox Settings

In the GFI Sandbox section, you can enable sandbox processing by GFI and configure the locally installed GFI sandbox. The table describes the parameters for configuring the GFI sandbox.

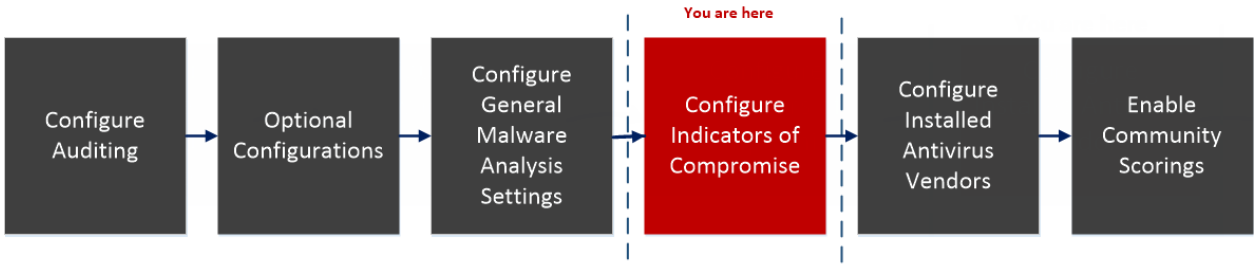
Feature	Description
Enabled	When enabled, sandbox processing is performed by a local copy of GFI. The default value is **disabled**. If you enable GFI, you need to configure the remaining parameters.
Server Name	The GFI Sandbox server name. No default value.
Server Port	The GFI Sandbox server port. Default value is **80**.
Max Poll Period	Determines how long to wait for a submitted sample to finish processing. Default value is **600 seconds**.
Ignore Web Proxy Settings	Tells Malware Analysis to bypass the web proxy, if a web proxy is configured, when making this connection. If no web proxy has been configured in Malware Analysis, the setting is ignored.

ThreatGRID Sandbox Settings

In the ThreatGRID Sandbox section, you can enable sandbox processing by ThreatGRID and choose whether to use the locally installed ThreatGRID or the ThreatGRID Cloud for sandbox analysis.

- If you have a local copy of ThreatGRID, configure sandbox processing to use the local copy.
- If no local instance of ThreatGRID has been purchased and installed, configure the ThreatGRID Cloud.

The table describes the parameters for configuring the ThreatGRID sandbox.



Note: Before enabling this service, you must configure a ThreatGRID-supplied Service Key. The service key allows ThreatGRID to recognize that samples submitted from this site are legitimate.

Feature	Description
Enabled	When enabled, sandbox processing is performed by ThreatGRID, either a local copy or the ThreatGRID Cloud. The default value is **disabled**.
Service Key	Before enabling the sandbox module, a ThreatGRID-supplied Service Key must be configured. The service key allows ThreatGRID to recognize that samples submitted from this site are legitimate.
URL	The URL for the ThreatGRID server to be used (if you are not using a locally installed ThreatGRID). The ThreatGRID Cloud is reachable via https://panacea.threatgrid.com
Ignore Web Proxy Settings	Tells Malware Analysis to bypass the web proxy, if a web proxy is configured, when making this connection. If no Web Proxy has been configured in Malware Analysis, the setting is ignored.

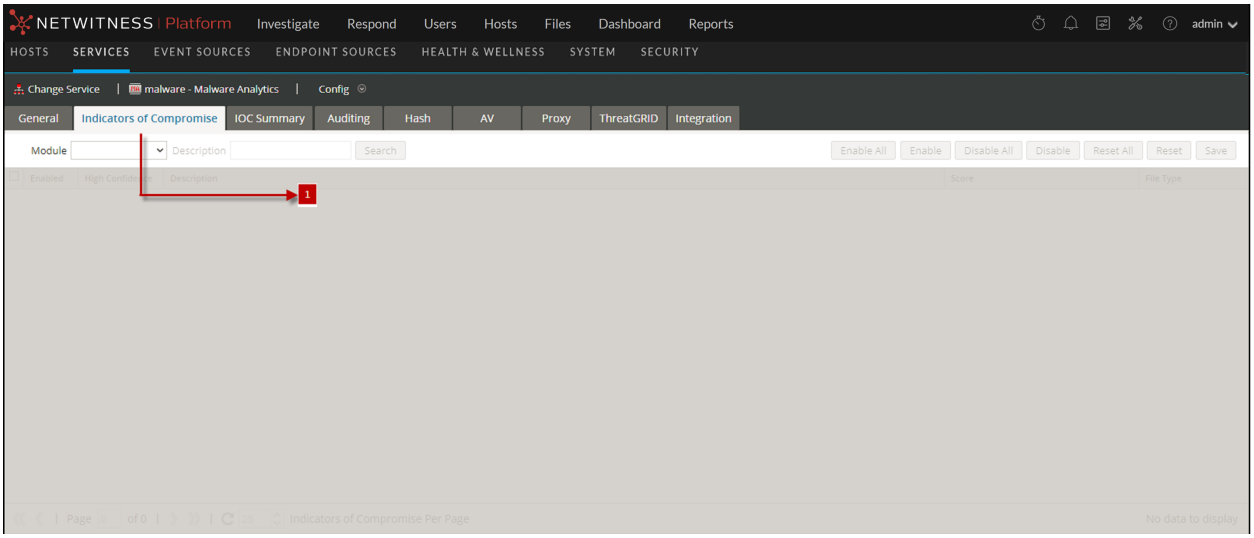
Services Config View - Indicators of Compromise Tab

This topic introduces the features and functions available in the Service Config view > Indicators of Compromise tab, which applies to the Malware Analysis service. This tab provides a way to configure the way each of the four scoring modules uses the available rules to score data.

Workflow

What do you want to do?

Role	I Want to...	Show me how
Administrator	Configure General Malware Analysis Settings	Configure General Malware Analysis Settings
Administrator	Configure Indicators of Compromise*	Configure Indicators of Compromise
Administrator	Configure Auditing on Malware Analysis Host	(Optional) Configure Auditing on Malware Analysis Host
Administrator	Configure Hash Filter	(Optional) Configure Hash Filter
Administrator	Configure Installed Anti virus Vendor	Configure Installed Antivirus Vendors
Administrator	Configure Malware Analysis Proxy Settings	(Optional) Configure Malware Analysis Proxy Settings
Administrator	Register a TreadGRID API Key	(Optional) Register for a ThreatGRID API Key
Administrator	Enable Community Analysis	Enable Community Analysis



*You can perform this task in the current view

Basic Setup

Quick Look

This is an example of the Indicators of Compromise tab.

1 Displays the Indicators of Compromise Tab.

Features

The Indicators of Compromise tab consists of a toolbar and page-able grid.

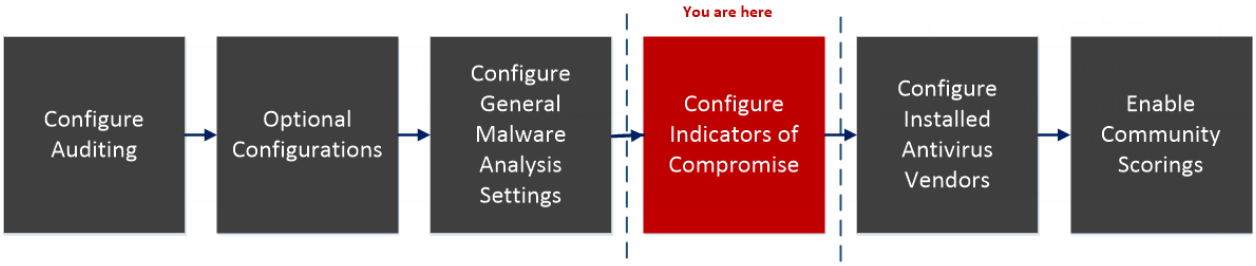
This table describes the features of the grid.

Feature	Description
Module selection list	Selects the scoring module for which you want to view the Indicators of Compromise: All, Network, Static, Community, Sandbox, or Yara.
Search field	Type text for which you are searching in the Description field.
Search option	Filters the grid to display only Descriptions that match the Description search term.
Enable All option	Click to enable all rules for the scoring module, as opposed to enabling all rules on the page using the checkbox.
Enable option	Click to enable selected rules.
Disable All option	Click to disable all rules for the scoring module, as opposed to disabling all rules on the page using the checkbox.
Disable option	Click to disable selected rules.

Feature	Description
Reset All option	Click to reset all rows on the page to their default values.
Reset option	Click to reset selected rows to their default values.
Save option	Click to save changes you made on this page. If you leave the page without saving, the changes are lost. The description of each row with unsaved changes has a red corner.

This table describes the features of the toolbar.

Column	Description
Selection checkbox	Checkboxes for selecting individual rows or all rows on the page.
Enabled checkbox	If the indicator of compromise is enabled, Malware Analysis uses the rule for scoring session data.
High Confidence checkbox	If checked, Malware Analysis treats the rule as one very likely to indicate the presence of malware, and an event that triggers that rule is marked in the results grid.
Description	Describes the Indicator of Compromise.
Score	Specifies the score that you want to factor in to the total score for any event that triggers the rule. The default score is displayed and you can raise or lower the score by dragging the slider or typing a number in the score box.
File Type	Displays the file types to which the rule applies. Possible values are **ALL**, **PDF**, **MS Office**, and **Windows PE**.



Services Config View - IOC Summary Tab

This topic introduces the features and functions available in the Service Config view > IOC Summary tab. This tab provides a way to view summary information for any IOC. A grid for each scoring module lists the configured IOCs along with statistics associated with that IOC of a specific range of time. The statistics include:

- The number of events for a network session or the number of files for a static, community, or sandbox event that were flagged with the IOC.
- The current score configured for the IOC in the Indicators of Compromise tab.
- The scores returned by each of the scoring modules.

When you select an event, you can show the Malware Events view or Malware Files view for the IOC. You can also open the selected IOC in the Indicators of Compromise tab to edit the Current Score.

Workflow

What do you want to do?

Role	I Want to...	Show me how
Administrator	Configure General Malware Analysis Settings	Configure General Malware Analysis Settings

Basic Setup

Quick Look

This is an example of the IOC Summary tab for the Network scoring module.

1 Displays the IOC Summary Tab.
2 Displays the Network View.
3 Displays the Static View.
4 Displays the Community View.
5 Displays the Sandbox View.

Features

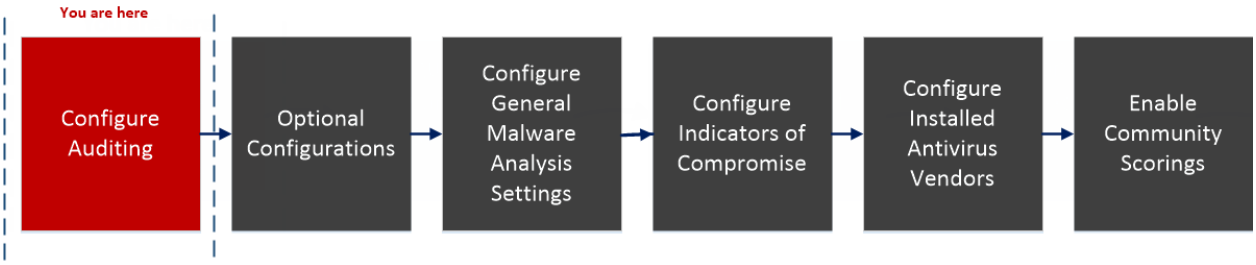
The IOC Summary consists of four tabs, one for each scoring module: Network, Static, Community, and Sandbox. Each tab has the same form and same information with a toolbar and page-able grid.

This table describes the features of each tab.

Feature	Description
Time Range	Selects the time range for the IOC Summary. Possible values are: Last 5 Minutes, Last 15 Minutes, Last 30 Minutes, Last Hour, Last 3 Hours, Last 6 Hours, Last 12 Hours, Last 24 Hours, Last 2 Days, Last 5 Days, Early Morning, Morning, Afternoon, Evening, All Day, Yesterday, This Week, Last Week, or Custom.
Description column	Lists the descriptions for the IOCs.
Count column	Lists the number of occurrences of the IOCs. In the Network tab, the count is the number of events in which the IOC was found. In the other tabs, the count is the number of files in which the IOC was found.
Current Score column	Lists the current score for the IOCs as configured in the Indicators of Compromise tab.
Static, Network, Community, and Sandbox columns	List the scores that each of the scoring modules gave the IOCs.
Actions drop-down	The Actions drop-down menu has two options: • Show Events/Files: opens the IOC in the Investigation Events view or Files view. This view can also be opened by double-clicking on the IOC. • Edit: opens the IOC in the Indicators of Compromise tab to edit the Current Score.

Services Config View - Auditing Tab

This topic introduces the features and functions of the Auditing tab in the Services Config view for Malware Analysis. The Auditing tab in the Services Config view for Malware Analysis provides a way to configure the auditing feature. Malware Analysis has an automated auditing system capable of sending alerts (syslog, snmp, audit log file entries) as Malware Analysis exceeds configured score value thresholds for each scoring module (Network, Static, Community, Sandbox). Malware Analysis can automatically feed any external system capable of ingesting the supported audit formats. One alert is generated for each file in an analyzed session that meets or exceeds the configure threshold.



The audit log is a log file maintained on the Malware Analysis appliance for every significant event or action. Audit logs are rolled out and archived over time as they become large so an audit history is maintained. The size of these audit logs and their number are both configurable.

Some examples of events that are logged are:

- User login successes and failures
- Changes to system configuration settings
- Server restart
- Server version upgrade and install
- Suspicious events that exceed the Audit Thresholds

Malware Analysis can send audit events as an SNMP trap to a configured SNMP trap host, and consolidate logs in syslog format. Refer to the following task topic for detailed procedures: (Optional) Configure Auditing on Malware Analysis Host.

Workflow

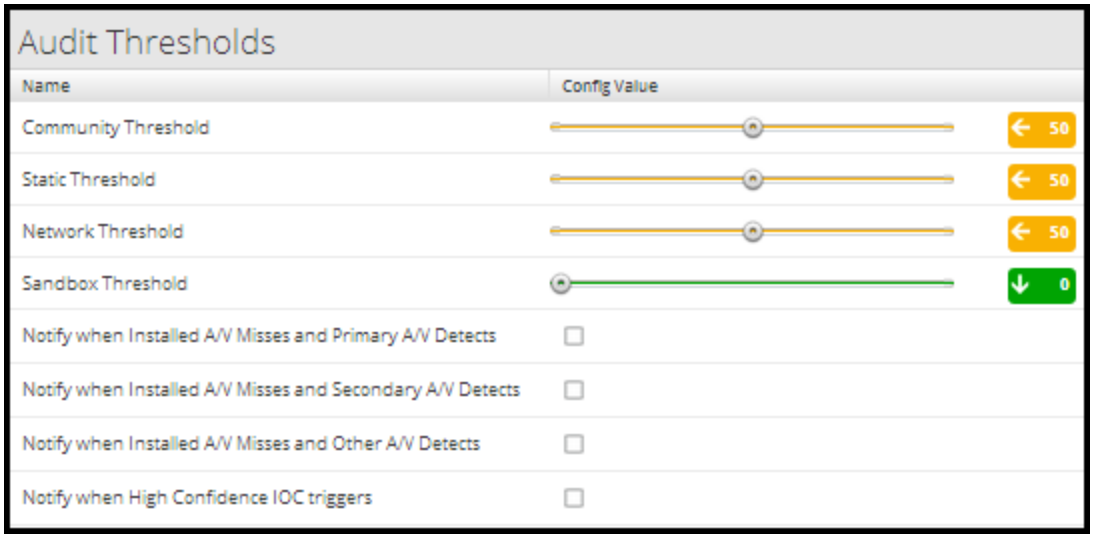
Basic Setup

Quick Look

This is an example of the Auditing tab.

1 Displays the Auditing Tab.
2 Displays the Audit Thresholds section.
3 Displays the SNMP Auditing section.



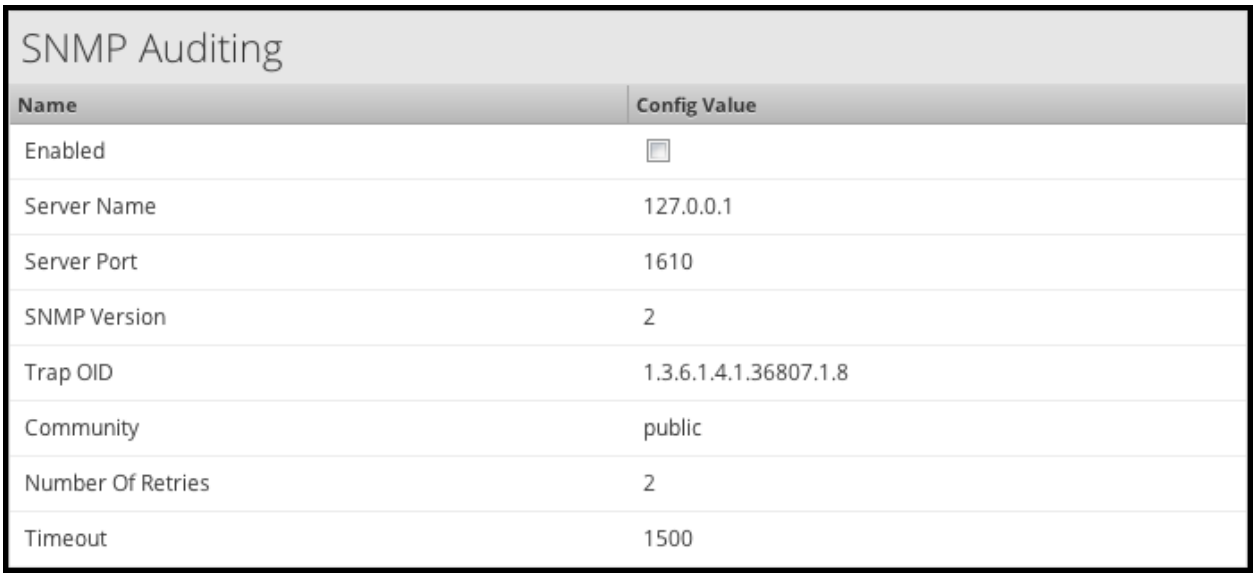
4 Displays the Respond Alerting section.
5 Displays the File Auditing section.
6 Displays the Syslog Auditing section.

Features

The Auditing tab includes five sections and an Apply button used to save changes made in this tab and put them into effect.

- Auditing Thresholds
- SNMP Auditing
- Respond Alerting
- File Auditing
- Syslog Auditing

Audit Thresholds



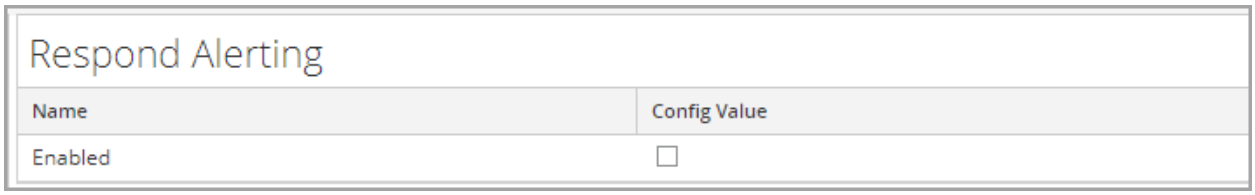
This table describes the features in the Audit Thresholds section.

Name	Config Value
Community, **Static**, **Network**, and **Sandbox Thresholds**	Malware Analysis scoring module thresholds for recording event information in a log file. Malware Analysis records the event information in a log file if the event scored high enough to satisfy all of the auditing thresholds. Each scoring category that completed analysis (for example, not all sessions invoke sandbox analysis) is compared against the configured audit threshold for that category. Any one of the category must exceed the threshold in order for an audit event to be triggered. An integer between 0 and 100 is a valid value. Setting these thresholds too low may cause a very large volume of audit events and notifications.

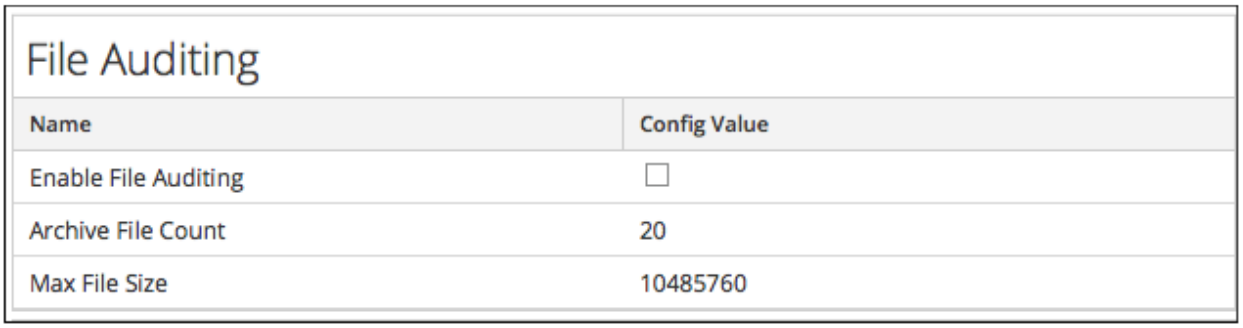
Name	Config Value
Notify when Installed A/V Misses and Primary A/V Detects	Records a message in a log file when installed antivirus software misses a virus and the primary antivirus software detects that virus. The recorded message is sent through all enabled auditing methods: SNMP, File, and Syslog. The default value is unchecked.
Notify when Installed A/V Misses and Secondary A/V Detects	Records a message in a log file when installed antivirus software misses a virus and the secondary antivirus software detects that virus. The recorded message is sent through all enabled auditing methods: SNMP, File, and Syslog. The default value is unchecked.
Notify when Installed A/V Misses and Other A/V Detects	Records a message in a log file when installed antivirus software misses a virus and the other antivirus software detects that virus. The recorded message is sent through all enabled auditing methods: SNMP, File, and Syslog. The default value is unchecked.
Notify when High Confidence IOC triggers	Records a message in a log file when a high confidence IOC (Indicators of Compromise) triggers. The recorded message is sent through all enabled auditing methods: SNMP, File, and Syslog. The default value is unchecked.

SNMP Auditing

The Simple Network Management Protocol (SNMP) is an Internet-standard protocol for managing services on IP networks. When SNMP auditing is enabled, Malware Analysis can send an audit event as an SNMP trap to a configured SNMP trap host.



This table describes the features in the SNMP Auditing section.

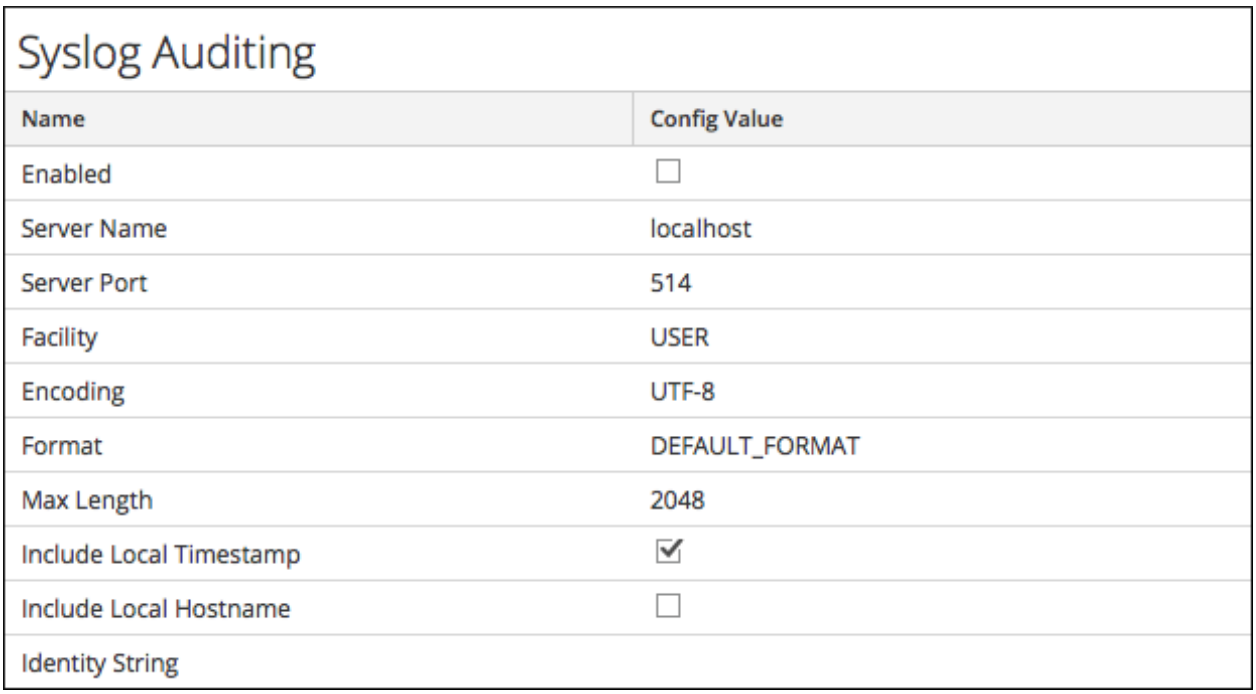


Name	Config Value
Enabled	Click to enable or disable SNMP auditing.
Server Name	The host where the target SNMP server is running.
Server Port	The port used where the SNMP trap receiver is listening.
SNMP Version	The version of the SNMP protocol to use when sending traps.
Trap OID	The object ID to use to identify the type of trap to send.
Community	The SNMP group to which Malware Analysis belongs.
Number Of Retries	The number of retries for sending a trap.
Timeout	The timeout period to wait for acknowledgment.

Respond Alerting

The Respond Alerting section enables NetWitness Respond to receive alerts from Malware Analysis. Select Enabled to forward alerts to the Respond view.

File Auditing



This table describes the features in the File Auditing section. Avoid setting the max file size and archive file count too high because it may have an adverse effect on the available disk space on the Malware Analysis appliance.

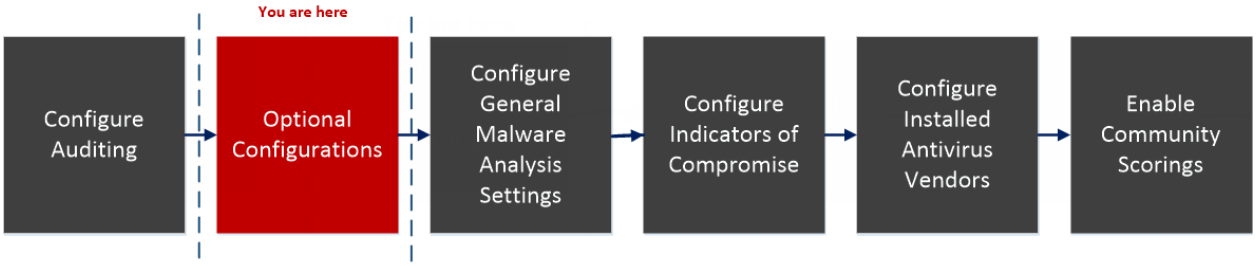
Name	Config Value
Enable File Auditing	Click to enable or disable file auditing.

Name	Config Value
Archive File Count	Malware Analysis keeps only as many log files as defined by this setting. When the maximum number is reached, the oldest log files are deleted and cannot be recovered. The default value is 20. Valid value: Integer between 1 and 50, inclusive.
Max File Size	The maximum file size for a single auditing log before it is archived. The default value is 10485760 bytes.

Syslog Auditing

This table describes the features in the Audit Thresholds section.

Feature	Description
Enabled	Click to enable or disable syslog auditing.
Server Name	This is the host where the target syslog process is running.
Server Port	This is the port where the target syslog process is listening.
Facility	This is the designated syslog facility to use for all outgoing messages. Possible values are KERN, USER, MAIL, DAEMON, AUTH, SYSLOG, LPR, NEWS, UUCP, CRON, AUTHPRIV, and LOCAL1 through LOCAL7.
Encoding	This is the encoding to use for text in syslog messages; for example, UTF-8.
Format	This is the desired message format. Possible values are: Default, PCI DSS, or SEC.



Feature	Description
Max Length	This is the maximum length in bytes that any syslog message can be. Default is 1024. Messages that exceed the maximum length are truncated.
Include Local Timestamp	Check this box to include the local timestamp in messages.
Include Local Hostname	Check this box to include the local hostname.
Identity String	This is an identity string to be prepended to each syslog alert. If the string is blank, no identity string is prepended to the outgoing syslog alerts. You can use this to identify the source of the alert. Users conventionally set it to the name of the program that will submit the messages to a syslog auditing.

Services Config View - Hash Tab

This topic introduces the features and functions available in the Service Config view > Hash tab for Malware Analysis.

In this tab, you can manage hash filtering in Malware Analysis. The hash grid is initially empty; the grid lists filters that have been added to Malware Analysis. In this view, you can add a hash filter, delete a hash filter, mark a hash filter as trusted or untrusted, and save changes.

Workflow

What do you want to do?

This is an example of the Hash tab.

1 Displays the Hash Tab.

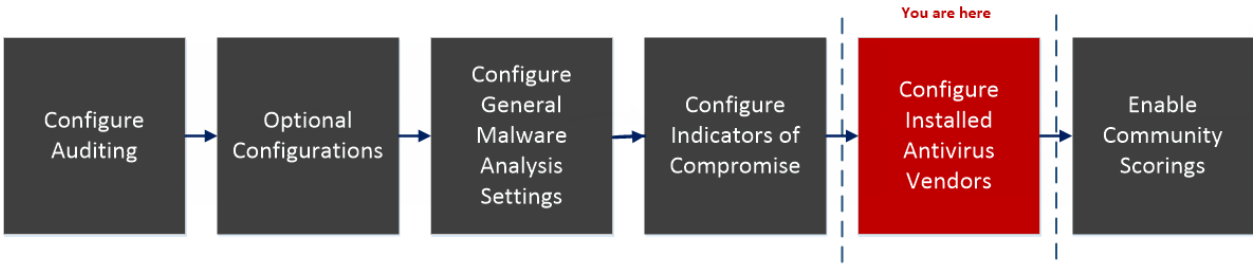
This is an example of the Add Hash dialog.

Features

The **Hash** tab consists of a toolbar and a pageable hash grid.

This table describes the Hash tab toolbar.

Feature	Description
MD5 Search	Enter an MD5 hash for which you want to search the results in the grid. The search function is case-insensitive.
Add	Displays the Add Hash dialog in which you can add a new hash to the hash grid, specify whether the hash is trusted or not, and provide the hash file size.
Save Edit	Saves any additions or edits to hashes in the grid.
Delete	Deletes selected hashes from the grid.



This table describes the Hash grid columns.

Feature	Description
Select Checkbox	Click to select a row. Click in the column header to select a header.
Trusted	Marks a hash as trusted or untrusted.
MD5	Identifies the MD5 hash.
File Size	Identifies the hash file size in kilobytes.

Services Config View - AV Tab

This topic introduces the features and functions of the AV tab in the Service Config view for a Malware Analysis service. The AV tab provides a way to identify the anti-virus software vendors whose software is in use on your network. NetWitness can include the results from these vendors in the detailed results view of an event that has been analyzed using Malware Analysis.

Workflow

Configure Installed Antivirus Vendors

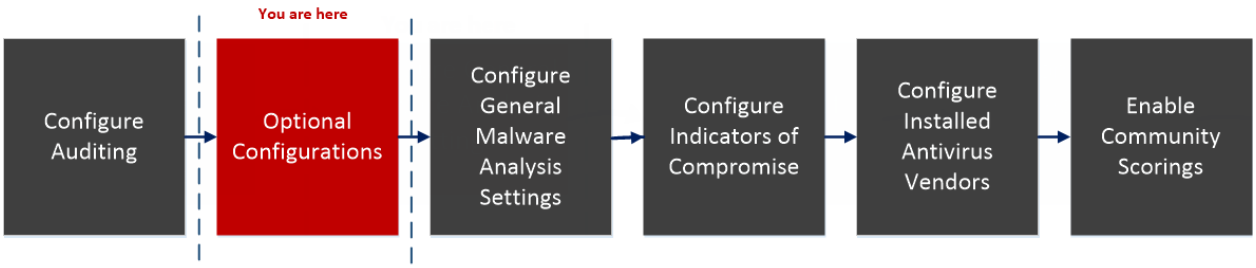
Quick Look

This is an example of the AV tab.

1 Displays the Av Tab.
2 Allows you to select the AV vendor that you are using.
3 Displays the Secondary AV vendors.

Features

The AV tab lists anti-virus vendors whose software may be installed in your network. There are two categories for vendors: Primary, which are the most trusted, and Secondary, which are less known. Each vendor name has a checkbox and an icon. Checking a vendor name indicates that you have installed the selected AV software from that vendor in your environment.



This table describes the options in the AV tab.

Feature	Description
Vendor Checkbox	Choose one or more Anti Virus vendors from the supplied list to indicate which products have been installed in the local organization.
Apply	Saves changes made in the AV tab.
Reset	Resets the AV list to the default state, which has no vendors selected.

Service Config View - Proxy Tab

This topic introduces the parameters configured in the Proxy tab in the Service Config view for a Malware Analysis service. This tab configures Malware Analysis communication via web proxy with the NetWitness Cloud for community analysis and with the sandbox service for sandbox analysis to preserve anonymity. If you are using a local sandbox service, communications via web proxy are unnecessary and may slow performance. When configuring the sandbox module in the **General** tab, you can choose to bypass the configured web proxy.

Workflow

Feature	Description
Enabled	Select the checkbox to enable communication via web proxy with the NetWitness Cloud for community analysis and with the sandbox service for sandbox analysis to preserve anonymity.
Automatically detect web proxy settings	Select the checkbox to use settings configured in the System settings.
Proxy host	Enter the hostname for the proxy host.
Proxy port	Enter the port used for communication on the proxy host
Users	Enter the username used to log on to the proxy host.
User Password	Enter the user password used to log on to the proxy host.
SSL	(Optional) Select the checkbox to enable communication using SSL.
Apply button	Click the **Apply** button to submit chosen settings.

Services Config View - ThreatGRID Tab

This topic introduces the parameters required to obtain a trial ThreatGRID API key in the Malware Analysis **ThreatGRID** tab, which provides a method of obtaining a trial ThreatGRID API key for use in the ThreatGRID Cloud sandbox. Before enabling ThreatGRID as the sandbox service in the Sandbox module, a ThreatGRID-supplied Service Key must be configured so that ThreatGRID can recognize that samples submitted from this site are legitimate.

If you do not have a ThreatGRID-supplied Service Key, you can obtain a key using this tab. The key is provided on a trial basis.

Workflow

Services Config View - Integration Tab

This topic introduces the features and functions of the Integration tab in the Administration Services Config view for Malware analysis. This tab provides a way to test connections and enable Community scoring by registering the Malware Analysis service. An administrator can test the connection to `cloud.netwitness.com` and to a core service that was configured for continuous scan.

Workflow

What do you want to do?

Role	I Want to...	Show me how
Administrator	Configure General Malware Analysis Settings	Configure General Malware Analysis Settings

Quick Look

The following figure is an example of the Integration tab.

1 Displays the Integration Tab.

Features

This tab has two sections: NetWitness Cloud Connection Test and Registration and Continuous Scan Connection Test. The following table describes the features.

Feature	Description
NetWitness Cloud Connection Test and Registration button	Clicking this button tests for an active connection to cloud.netwitness.com. NetWitness tests communications with the site and checks Proxy settings. A valid connection is required in order to register with the Community Service.
Company Name	This is the name of your company. This is a required field.
Contact Email	This is the contact email. This is a required field.
Internal EMC Use Only Check box	This is an optional field. EMC customers, salespersons, or demo users should check this option to ensure that their requests do not use bandwidth on the production server. When the box is checked the following warning is displayed: `Checking this box may cause a less robust performance because the production server isn't being used.`
Register button	Clicking the Register button completes registration if all required fields are filled in. The Register button becomes the Update button after registration is complete.
Update button	The Update button is displayed after registration is complete.

Feature	Description
Continuous Scan Connection Test button	Clicking this button initiates a check to verify that the Malware Analysis service can connect to the Core service selected for continuous scanning (the Source Host, Source Port, Username, and User Password as specified in the General tab).

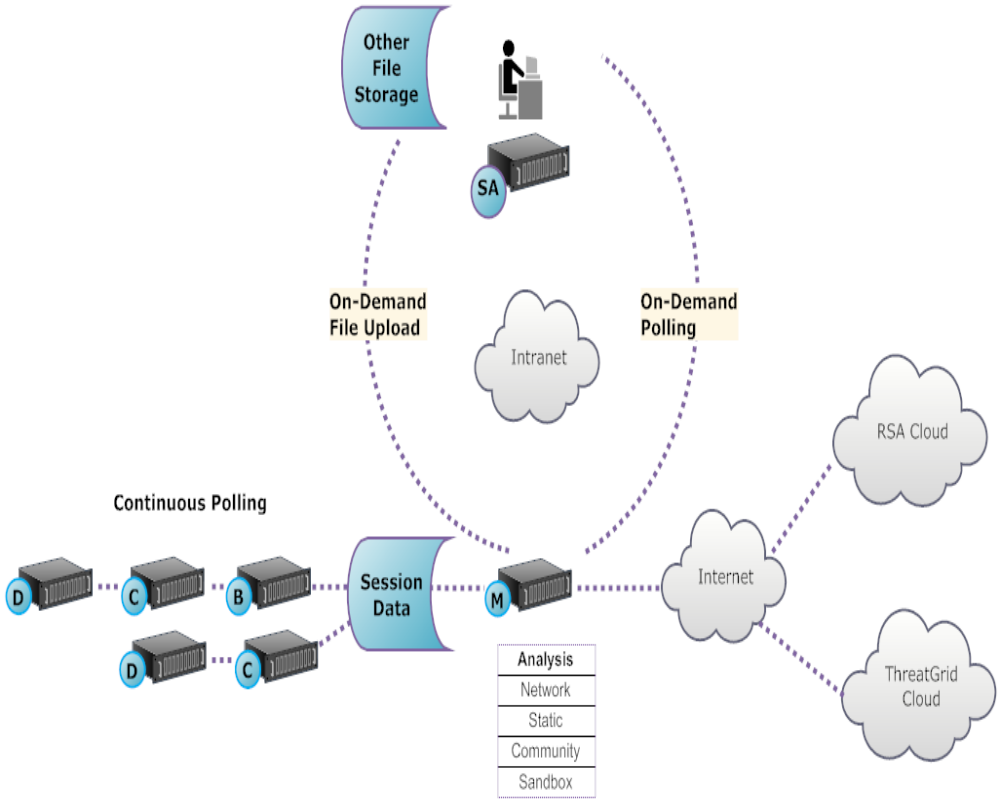
Malware Analysis Functions

NetWitness Malware Analysis is an automated malware analysis processor designed to analyze certain types of file objects (for example, Windows portable executable (PE), PDF, and MS Office) to assess the likelihood that a file is malicious.

Malware Analysis detects indicators of compromise using four distinct analysis methodologies:

- Network Session Analysis (network)
- Static File Analysis (static)
- Dynamic File Analysis (sandbox)
- Security Community Analysis (community)

Each of the four distinct analysis methodologies is designed to compensate for inherent weaknesses in the others. For example, Dynamic File Analysis can compensate for Zero-Day attacks that are not detected during the Security Community Analysis phase. By avoiding malware analysis that strictly focuses on one methodology, the analyst is more likely to be shielded from false negative results.



In addition to the built-in indicators of compromise, Malware Analysis supports indicators of compromise written in YARA. YARA is a rule language, which allows malware researchers to identify and classify malware samples. This allows IOC authors to add detection capabilities to NetWitness Malware Analysis by authoring YARA rules and publishing them in NetWitness Live. These YARA-based IOCs in NetWitness Live will automatically be downloaded and activated on the subscribed host, to supplement the existing analysis that is performed in each analyzed file.

Malware Analysis also has features that support alerts for Incident Management.

Functional Description

This figure depicts the functional relationship between the Core services (the Decoder, Concentrator, and Broker), the Malware Analysis service, and the NetWitness Server.

Daily Quota (Number of Files)	Free	Standard	Enterprise
Malware Analysis	100	unlimited	unlimited
ThreatGrid Analysis	5	1000	5000

The Malware Analysis service analyzes file objects using any combination of the following methods:

- **Continuous automatic polling of a Concentrator or Broker** to extract sessions identified by a parser as potentially carrying malware content.
- **On-demand polling of a Concentrator or Broker** to extract sessions identified by a malware analyst as potentially carrying malware content.
- **On-demand upload of files** from a user-specified folder.

When automatic polling of a Concentrator or Broker is enabled, the Malware Analysis service continuously extracts and prioritizes executable content, PDF documents, and Microsoft Office documents on your network, directly from data captured and analyzed by your Core service. Because the Malware Analysis service connects to a Concentrator or Broker to extract only those executable files that are flagged as possible malware, the process is both rapid and efficient. This process is continuous and does not require monitoring.

When on-demand polling of a Concentrator or Broker is chosen, the malware analyst uses Investigation to drill into captured data and choose sessions to be analyzed. The Malware Analysis service uses this information to automatically poll the Concentrator or Broker and to download the specified sessions for analysis.

On-demand upload of files provides a method for the analyst to review files captured external to the Core infrastructure. The malware chooses a folder location and identify one or more files to be uploaded and analyzed by Malware Analysis. These files are analyzed using the same methodology as files automatically extracted from network sessions.

Analysis Method

For the Network analysis, the Malware Analysis service looks for characteristics that seem to deviate from the norm, much as an analyst does. By looking at hundreds to thousands of characteristics and combining the results into a weighted scoring system, legitimate sessions that coincidentally have a few abnormal traits are dismissed, while the actual bad ones are highlighted. A user can learn patterns that indicate anomalous activity in the sessions as indicators that warrant further investigation, Indicators of Compromise.

The Malware Analysis service can perform Static analysis against suspicious objects it finds on the network and determine whether those objects contain malicious code. For Community analysis, new malware detected on the network is pushed to the NetWitness Cloud for checking against NetWitness's own malware analysis data and feeds from the SANS Internet Storm Center, SRI International, the Department of the Treasury and VeriSign. For Sandbox analysis, the services can also push data into major security, information and event management (SIEM) hosts (the ThreatGrid Cloud).

Malware Analysis has a unique method for analysis that is partnered with industry leaders and experts, so their technologies can enrich the Malware Analysis scoring system.

NetWitness Server Access to the Malware Analysis Service

The NetWitness Server is configured to connect to the Malware Analysis service and import tagged data for deeper analysis in Investigation. Access is based on three subscription levels.

- Free subscription: All NetWitness customers have a free subscription, with a free key for ThreatGrid analysis. The Malware Analysis service is rate-limited to 100 file samples per day. The number of samples (within the set of files from above) submitted to the ThreatGrid Cloud for sandbox analysis is limited to 5 per day. If one network session had 100 files in it, customers would hit the rate limit after processing the one network session. If 100 files were manually uploaded, that would cause the rate limit to be reached.
- Standard subscription tier: The number of submissions to the Malware Analysis service is unlimited. The number of samples submitted to the ThreatGrid Cloud for sandbox analysis is 1000 per day.
- Enterprise subscription tier: The number of submissions to the Malware Analysis service is unlimited. The number of samples submitted to the ThreatGrid Cloud for sandbox analysis is 5000 per day.

Scoring Method

By default, the Indicators of Compromise (IOC) are tuned to reflect industry best practices. During analysis, the IOCs that trigger cause the score to move upward or downward to indicate the likelihood that the sample is malicious. The tuning of IOCs is exposed in NetWitness so that the malware analyst can choose to override the assigned score or to disable an IOC from being evaluated. The analyst has the flexibility to either use the default tuning, or to completely customize the tuning to specific needs.

YARA-based IOCs are interleaved with the built-in IOCs within each built-in category and are not distinguished from native IOCs. When viewing IOCs in the Service Configuration view, administrators can select YARA from the Module selection list to see a list of YARA rules.

After a session is imported into NetWitness, all of the viewing and analysis capabilities in Investigation are available to further analyze Indicators of Compromise. When viewed in Investigation, YARA IOCs are distinguished from the built-in native IOCs by the tag `Yara rule`.

Deployment

The Malware Analysis service is deployed as a separate NetWitness Malware Analysis host. The dedicated Malware Analysis host has an on-board Broker which connects to the Core infrastructure (either another Broker or a Concentrator). Prior to this connection, a collection of parsers and feeds must be added to the Decoders that are connected to the Concentrators and Brokers from which the Malware Analysis service pulls data. This allows suspicious data files to be marked for extraction. These files are `malware analysis` tagged content available through the NetWitness Live content management system.

Malware Scoring Modules

NetWitness Malware Analysis analyzes and scores sessions and the embedded files within these sessions by scoring four categories: Network, Static Analysis, Community, and Sandbox. Each category comprises many individual rules and checks that are used to calculate a score between 1-100. The higher the score, the more likely the session is to be malicious and worthy of more in-depth follow-on investigation.

Malware Analysis can facilitate a historical investigation into events leading up to a network alarm or incident. If you know that a certain type of activity is taking place on your network, you can select only the reports of interest to examine the content of data collections. You can also modify behavior for each scoring category based on the scoring category or the file type (Windows PE, PDF, and Microsoft Office).

Once you become familiar with data navigation methods, you can explore the data more completely through:

- Searching for specific types of information
- Reviewing specific content in detail.

Category scores for Network, Static Analysis, Community, and Sandbox are maintained and reported independently. When events are viewed based on the independent scores, as long as one category detects malware, it is evident in the Analysis section.

Network

The first category examines each core network session to determine if the delivery of the malware candidates was suspicious. For example, benign software being downloaded from a well-known safe site, using proper ports and protocols, is considered less suspicious than downloading software known to be malicious from a known dubious download site. Sample factors used in the scoring of this criteria set may include sessions that:

- Contain threat feed information
- Connect to well-known bad sites
- Connect to high-risk domains/countries (for example, .cc domain)
- Use well-known protocols on non-standard ports
- Contain obfuscated JavaScript

Static Analysis

The second category analyzes each file in the session for signs of obfuscation in order to predict the likelihood of the file behaving maliciously if allowed to run. For example, software that links to networking libraries is more likely to perform suspicious network activity. Sample factors used in the scoring of this criteria set may include:

- Files found to be XOR encoded
- Files found embedded within non-EXE formats (for example, PE file found embedded in a GIF format)
- Files linking to higher risk import libraries
- Files highly deviating from the PE Format

Community

The third category scores the session and files based on the collective knowledge of the security community. For example, files whose fingerprint/hash is already known to be good or bad by respected anti-virus (AV) vendors is scored accordingly. Files are also scored based on knowledge that a file was delivered from a site known to be good or bad by the security community.

Community scoring also indicates whether the AV on your network flagged the files as malicious. It does not indicate that the resident AV product acted to protect your system.

Sandbox

The fourth category examines the behavior of the software by actually running it in a sandbox environment. By running the software to watch its behavior, a score can be calculated by identifying well-known malicious activity. For example, software that configures itself to autostart on each reboot and make IRC connections would score higher than a file with no known bad behavior.

Conducting Malware Analysis

Analysts can use theNetWitness Malware Analysis service to detect malware in selected data and files.

Analysts who conduct analysis using NetWitness Malware Analysis need to have the appropriate system roles and permissions set up for their user accounts.

The following procedures provide instructions for using Malware Analysis:

- Begin a Malware Analysis Investigation
- Upload Files for Malware Analysis Scanning
- Implement Custom YARA Content
- Configure the Malware Analysis Summary of Events View
- Filter Dashlet Data in the Summary of Events View
- Examine Scan Files and Events in List Form
- View Detailed Malware Analysis of an Event

Begin a Malware Analysis Investigation

You can investigate data that has been scanned, flagged, and rated by Malware Analysis as containing Indicators of Compromise. This includes all types of Malware Analysis scans: continuous mode polling, on-demand polling, and on-demand uploaded files. Continuous mode polling must be enabled when the administrator configures basic settings for the Malware Analysis service.

NetWitness provides several methods of launching a Malware Analysis investigation.

Fastest: Instant Launch from Malware Analysis Dashlets

The fastest way to begin a Malware Analysis investigation is an Instant launch from the NetWitness Dashboard using one of the Malware Analysis dashlets that lists events or files that are likely to contain malware. The dashlets are described as part of the NetWitness Content in Dashlets. From one of these dashlets, you can go directly to the Analysis Results for a specific event that has been listed as worthy of investigation:

- Top Listing of Highly Suspicious Malware
- Top Listing of Possible Zero Day Malware
- Malware with High Confidence IOCs and High Scores Dashlet

On-Demand Polling from a Meta Value in the Navigate View

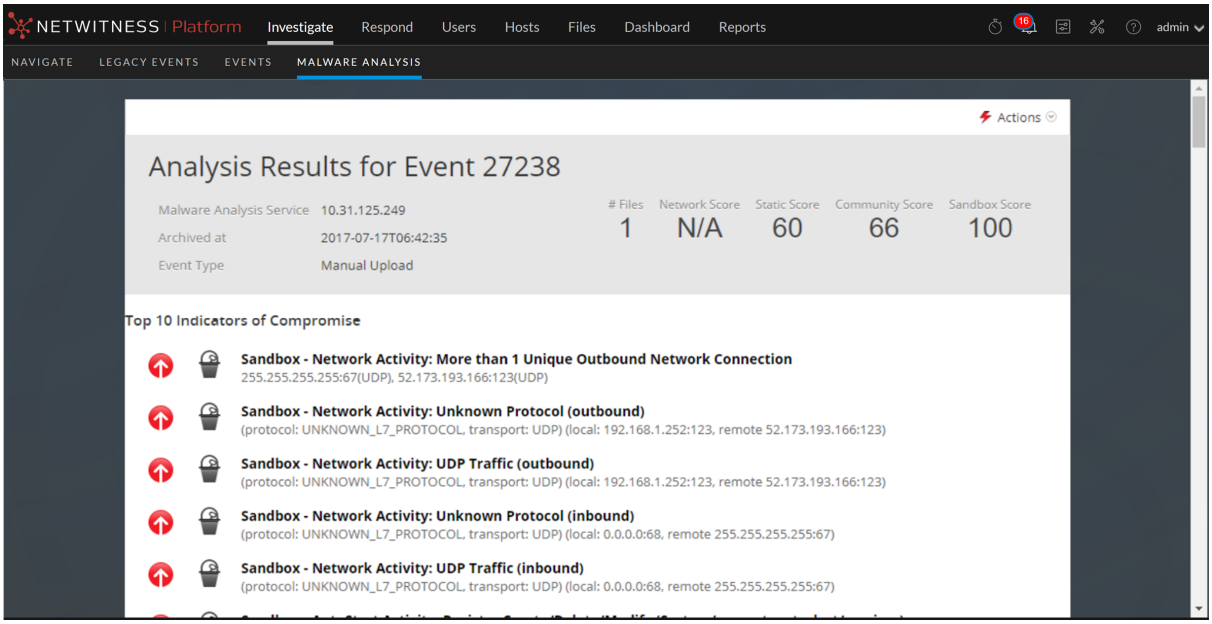
You can initiate on-demand polling from within an investigation by right-clicking a meta value in the Navigate view, and choosing an option from the context menu. When polling is complete, the scanned data is available for malware analysis (see "Launch a Malware Analysis Scan from the Navigate View" in the *NetWitness Investigate User Guide*).

Investigate a Specific Service

You can also begin a Malware Analysis investigation of a service in the Investigate > Malware Analysis view. For Malware Analysis investigation on a service basis, a service must be specified in the Investigate > Malware Analysis view.

1. Investigate opens the Malware Analysis view with the user-specified default service selected.
2. If no default service is currently specified, a dialog allows you to select the Malware Analysis service to investigate.
3. When a service has been selected in the Malware Analysis view, the Summary of Events for the selected service and continuous scan data for the service is displayed.

This topic provides instructions for all methods of launching a Malware Analysis investigation.



Launch a Malware Investigation from a Malware Analysis Dashlet

A prerequisite for this procedure is that one of the following dashlets must be visible in the NetWitness dashboard or in the Malware Analysis view, and must be populated with listed events or files. If you do not see the dashlets, add them and configure the dashlets.

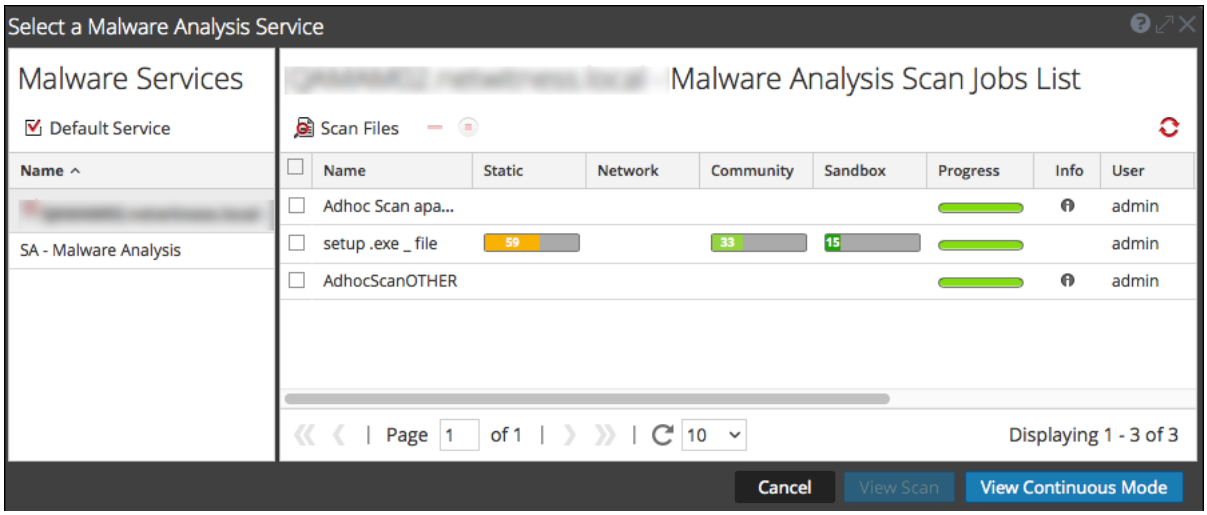
- Top Listing of Highly Suspicious Malware
- Top Listing of Possible Zero Day Malware
- Malware with High Confidence IOCs and High Scores Dashlet

To launch a Malware Analysis investigation from a dashlet:

1. Log in to NetWitness and look for one of the above dashlets in the Monitor view or in the Malware Analysis view
2. In the dashlet, double-click an event or file for deeper analysis. A detailed analysis of the event in the Events List or the event with which the file in the File List is associated is displayed in the Malware Analysis view.

To learn more about configuring the Malware Analysis dashlets in the Monitor dashboard, see "Dashlets" in the *NetWitness Platform Getting Started Guide*.

To learn about the ways you can configure and filter information in dashlets in the Malware Analysis view, refer to Filter Dashlet Data in the Summary of Events View.



To learn about the actions you can perform in the Analysis Results, refer to View Detailed Malware Analysis of an Event.

Begin a Malware Analysis Investigation (No Default Service)

To begin an investigation with no default service specified:

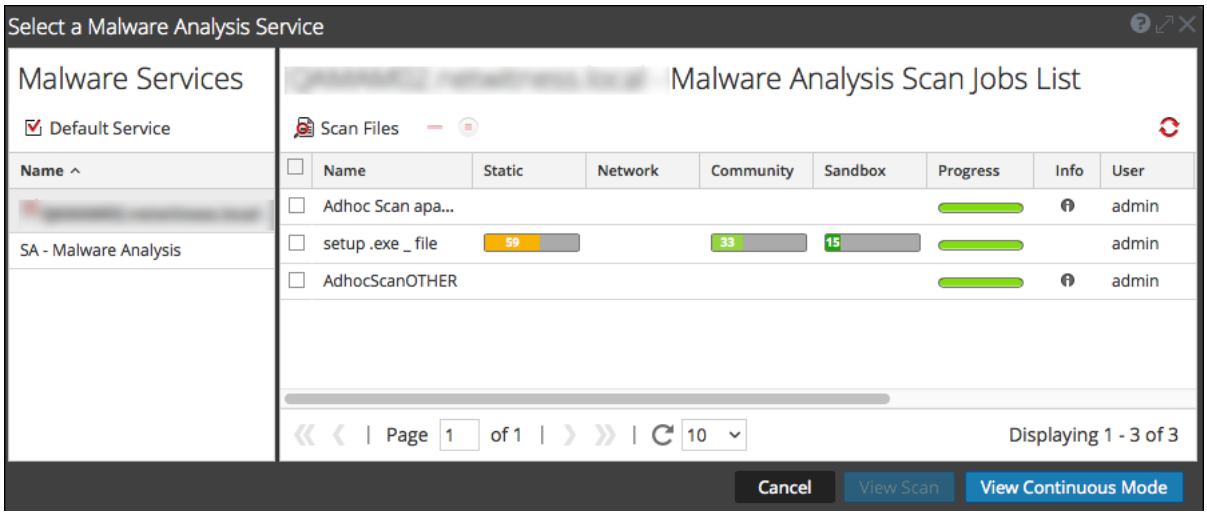
1. Select **Investigate > Malware Analysis**.

   The Select a Malware Analysis Service dialog is displayed, with available Malware Analysis hosts and services for the current user in the left panel and available scan jobs in the right panel. This scan jobs panel contains the same columns as the Malware Scan Jobs dashlet in the Unified dashboard. In addition, it has a toolbar and View options, which are described in Select a Malware Analysis Service Dialog.

2. In the list of Malware Analysis hosts, select a host and a list of scan jobs is displayed in the right panel. These jobs are created when you scan an event or a file (see Upload Files for Malware Analysis Scanning and "Launch a Malware Analysis Scan from the Navigate View" in the *NetWitness Investigate User Guide*.
3. To begin analyzing a scan, do one of the following:
   a. Select a scan and click **View Scan**.
   b. Click **View Continuous Mode**.

      The Summary of Events for the selected scan is displayed with the default dashlets open. Each user can add, modify, and delete default dashlets, which persist through different scan investigations. Users can also restore default dashlets as described in Filter Dashlet Data in the

Summary of Events View.



Set or Clear the Default Service

You can set the default service and clear the default service in the Select a Malware Analysis Service dialog.

To set a default service:

1. Click the service name in the Summary of Events toolbar.

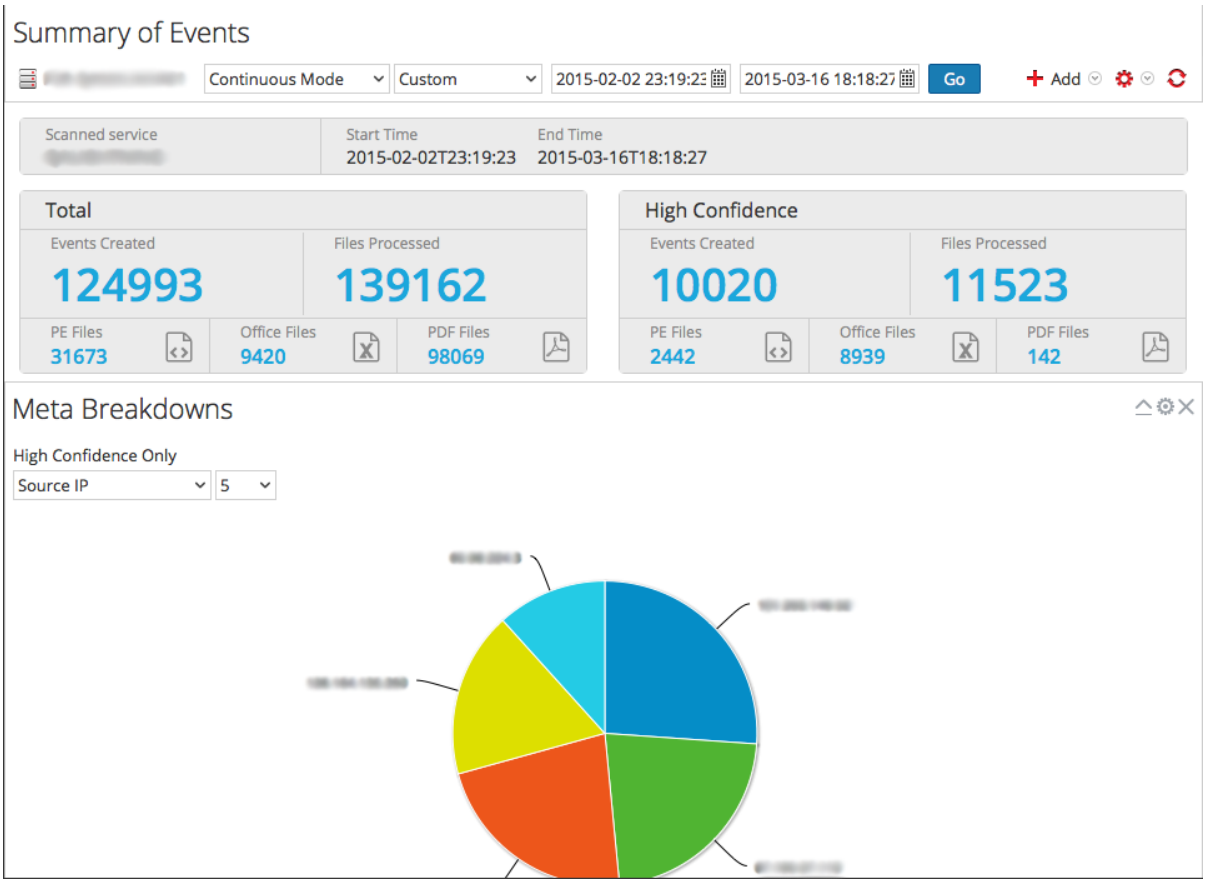
   The Select a Malware Analysis Service dialog is displayed.

2. Select a service on the list of available Malware services, and click Default Service.

   The service becomes the default, (indicated by ☑ in front of the host name).

3. To clear the default service, select the default service in the grid, and click Default Service.

   No default service is set.



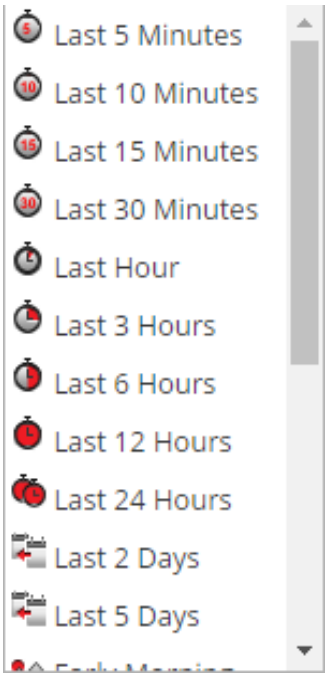
Upload and Scan Files

A Malware Analyst with permission to `Initiate Malware Analysis Scan` can upload files to scan using the Scan Files option in the Select a Malware Analysis Service dialog (see Upload Files for Malware Analysis Scanning. An administrator can upload packet capture files to a Decoder for Malware Analysis in the Services System view as described in "Upload Packet Capture File" in the *Decoder and Log Decoder Configuration Guide*.

Begin an Investigation (Default Service Specified)

To begin an investigation with a default service specified, select **Investigate > Malware Analysis**.

The Summary of Events for a continuous scan of the selected service is displayed with the default dashlets open. Each user can add, modify, and delete default dashlets, which persist through different scan investigations. Users can also restore default dashlets as described in Filter Dashlet Data in the Summary of Events View.



Apply Time Parameters Filter for Results

You can apply a Threshold filter to refresh the results of the chosen dashlets.

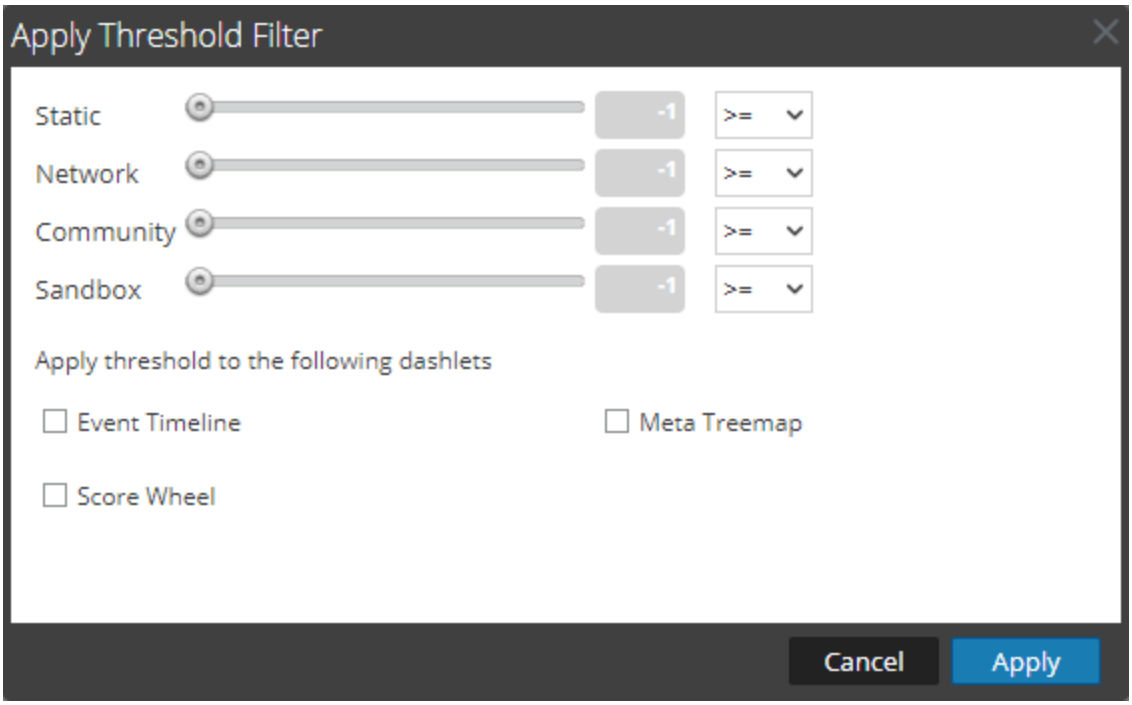
1. To select a different time range, select either **Continuous Mode** or a different scan from the toolbar.

   The Malware Summary of Events for the selected scan is displayed.

2. To select a new time range for the scan, click in the range selection list in the toolbar. Ranges available are: Last 5 minutes, Last 10 minutes, Last 15 minutes, Last 30 minutes, Last Hour, Last 3 Hours, Last 6 Hours, Last 12 Hours, Last 24 Hours, Last 2 Days, Last 5 Days, Early Morning, Morning, Afternoon, Evening, All Day, Yesterday, This Week, Last Week, or Custom.

The results are updated immediately.

3. To refresh a continuous mode scan with new data, click .



Apply a Threshold Filter to Continuous Mode Results

You can apply a new threshold filter to an instance of the Malware with High Confidence IOCs and High Scores dashlet, the Meta Treemap dashlet, the Score Wheel dashlet, and the Event Timeline dashlet.

To customize the scoring applied to the scan, in the toolbar, do the following:

1. Select > **Apply Threshold Filter**.

   The Apply Threshold Filter dialog is displayed.

2. If you want to limit the number of events displayed to events that were given a score above a certain number, do the following:
   a. Drag the slider in the Static, Network, Community, and Sandbox slider bars.
   b. To select the dashlets in which the thresholds apply, select the appropriate checkboxes.
   c. Click **Apply**.

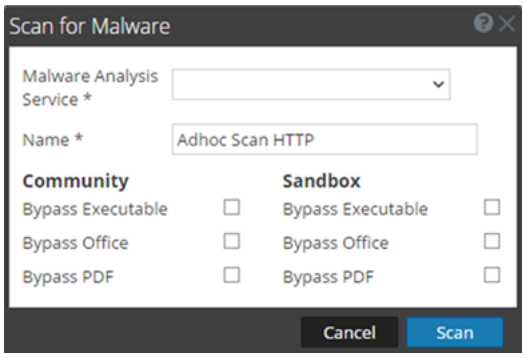
Delete or Resubmit an On-Demand Scan with New Bypass Settings

You can delete an on-demand scan or resubmit an on-demand scan with different bypass settings than those specified in the Service Configuration view for a Malware Analysis service.

To delete a scan while viewing an on-demand scan, do the following:

1. Select **Actions > Delete Scan**.

   A dialog asks for confirmation that you want to delete the scan.



2. Click **Yes**.

   The selected scan is deleted.

To apply different bypass settings to the current scan:

1. Select **Actions > Resubmit Scan**.

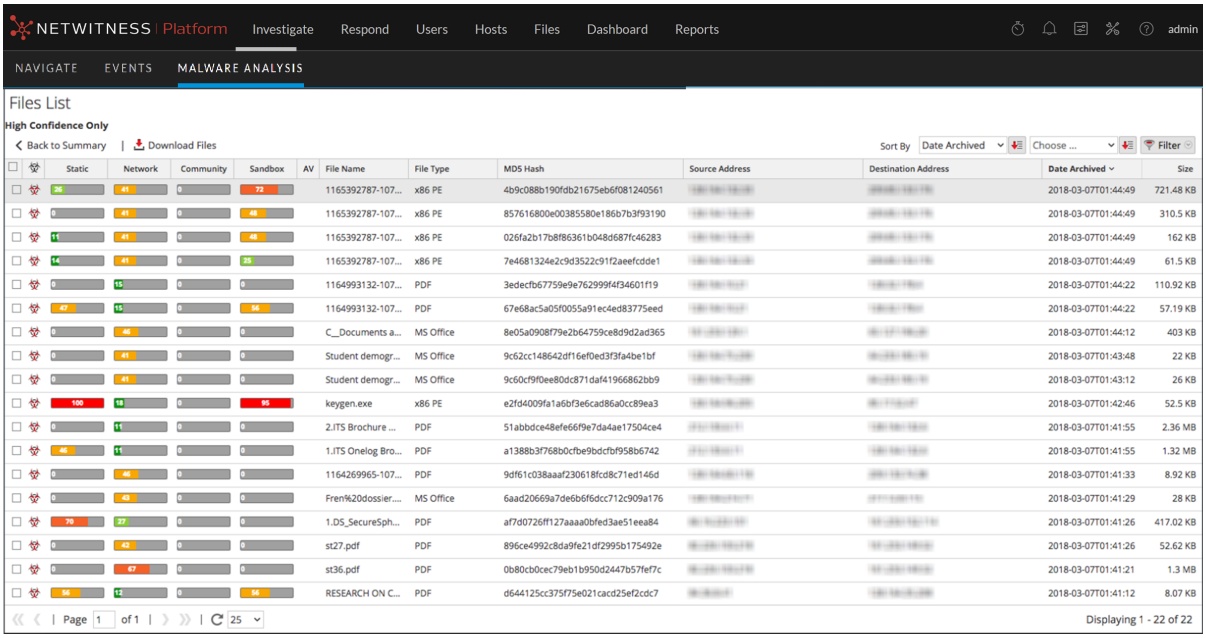
   The Scan for Malware dialog is displayed.

2. Select the bypass settings that you want to use on the new scan, and click **Scan**.

   Malware Analysis resets cache and resubmits the file for a new scan, and the scan jobs are added to the jobs queue.

3. When the job is complete, scroll to the left and select **View**.

   The Malware Summary of Events for the selected scan is displayed.



View the Files List

You can view a list of files for an event from the Malware Analysis Summary of Events and from each of the Visualization charts: Event Timeline, Meta Breakdowns, Meta Treemap, and Score Wheel.

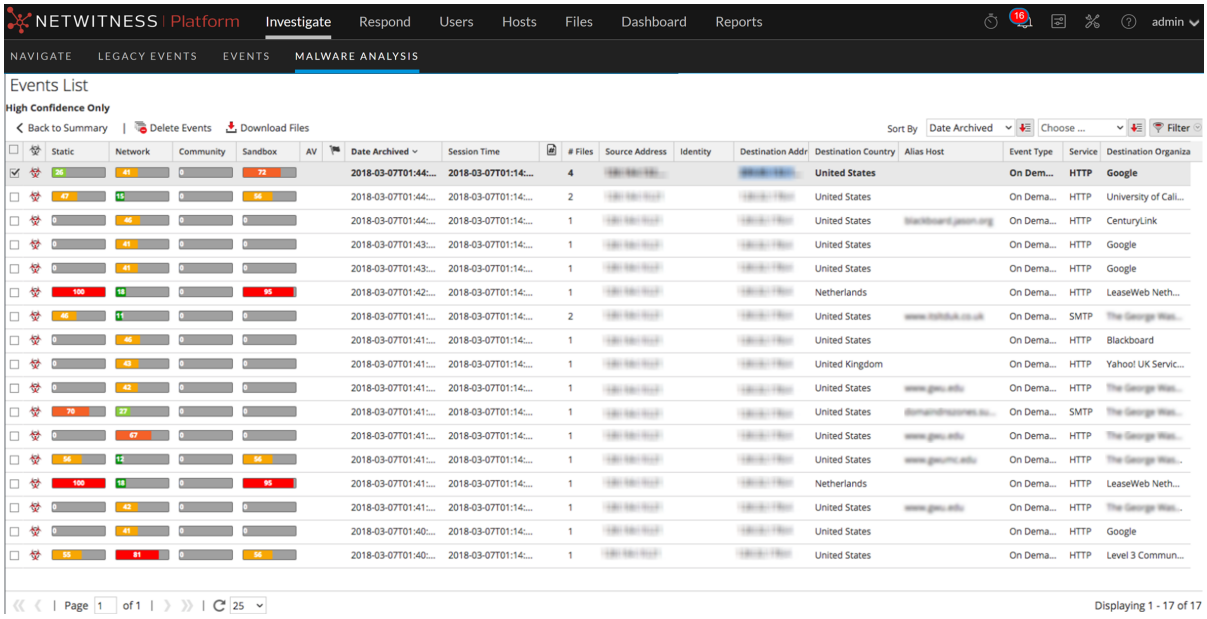
To view the Files List, do one of the following:

- In the Summary of Events, click on the number of files in the **Total** row or the **High Confidence** row under **Files Processed**, **PE Files**, **Office Files**, or **PDF Files**. The Files List is displayed.
- In any visualization dashlet, click the number next to the **Files** field in the top right corner of the dashlet.

The Files List for the selected drill point is displayed.

From the Files List, you can search for a file by filename or MD5 file hash, sort the list using two criteria and ascending or descending order, and download files as described in Examine Scan Files and Events in List Form.

To return to the Summary of Events, click **Back to Summary**.



View the Events List

From the Malware Analysis Summary of Events and from each of the visualization charts (Event Timeline, Meta Breakdowns, Meta Treemap, and Score Wheel), you can select events to view in the Events grid.

To view the Events List, do one of the following:

- In the Summary of Events, click the number of Events Created in the **Total** row or the **High Confidence** row. The Events List is displayed.
- In any visualization dashlet, click the number next to the Events field in the top right corner of the dashlet.

The Events List for the selected time is displayed.

Implement Custom YARA Content

In addition to the built-in indicators of compromise, Malware Analysis supports indicators of compromise written in YARA. YARA is a rule language that allows malware researchers to identify and classify malware samples. It makes built-in YARA-based Indicators of Compromise (IOCs) available in Live; these are automatically downloaded and activated on subscribed hosts.

Customers with advanced skills and knowledge can add detection capabilities to Malware Analysis by authoring YARA rules and publishing them in Live or placing YARA rules in a watched folder for the host to consume.

As malware and the threat landscape evolve, it is important to review and examine existing custom rules. Updates are often necessary to incorporate new detection methods. It also updates YARA rules in Live from time to time. To receive updates, you can subscribe to the Blog and Live at NetWitness Community Blog.

This document provides information to help customers implement custom YARA rules in Malware Analysis.

Prerequisites

The host on which you are adding custom rules must be configured to support authoring of YARA rules as described in "Enable Custom YARA Content" in the *Malware Analysis Configuration Guide*.

YARA Version and Resources

Malware Analysis is packaged with YARA version 1.7 (rev:167). To find out the exact version, you can run `yara -v` on the Malware Analysis host as shown in this example:

```
[root@TESTHOST yara] # yara -v
 yara 1.7 (rev:167)
```

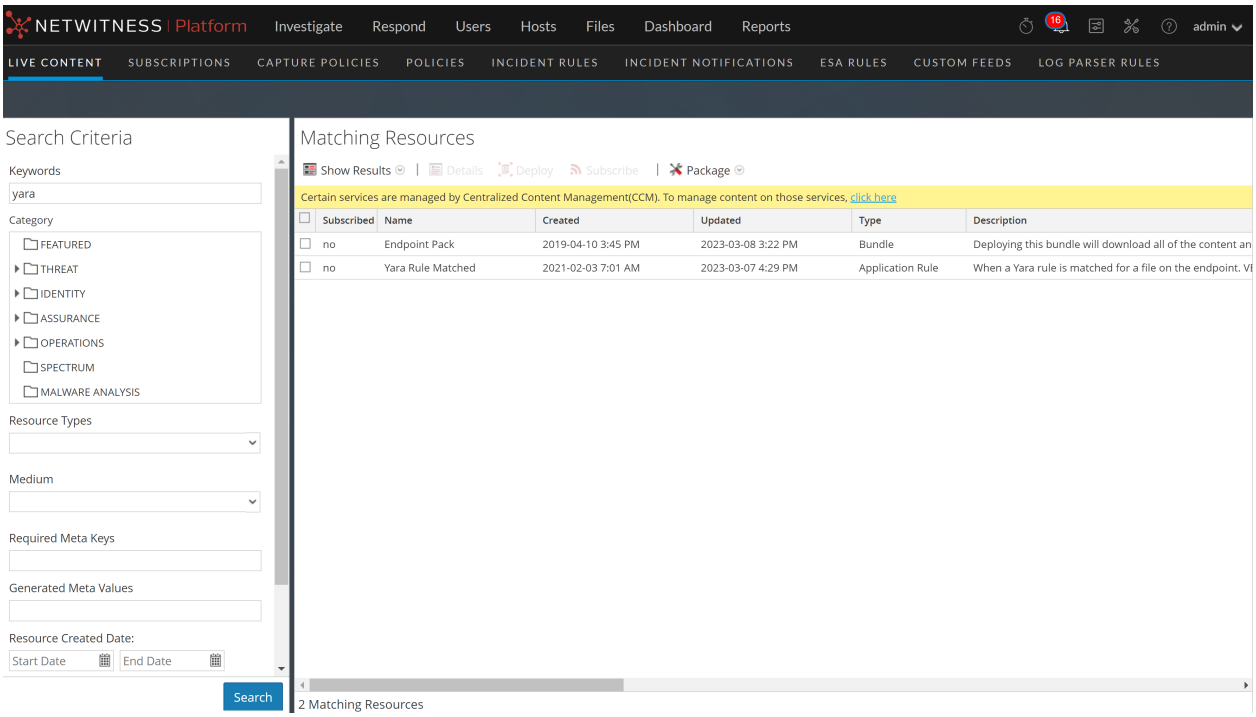
Meta Keys in YARA Rules

Malware Analysis is compliant with other sources of YARA rules, and it also consumes additional meta keys that are specific to Malware Analysis. Each YARA rule is equivalent to an Indicator of Compromise (IOC) within Malware Analysis. The example below illustrates the meta definitions in a rule:

```
meta:
 iocName = "FW.ecodedGenericCLSID"
        fileType = "WINDOWS_PE"
        score = 25
        ceiling = 100
        highConfidence = false
```

Meta Key	Description
iocName	(Required) This is the name that MA uses as the rule name. It is specific to Malware Analysis and is required to add the rule to the IOC list.

Meta Key	Description
fileType	Specifies the files type. Possible values are: WINDOWS_PE, MS_OFFICE, and PDF. If not specified, the default value is WINDOWS_PE.
score	This value that is added to the static score if the YARA rule is triggered. If not specified, the default value is 10.
ceiling	This is the maximum amount that is added to the static scores when a rule is triggered multiple times in one session. For example, if each time a rule is triggered, 20 points are added to the static, and you do not want more that 40 points added when the rule is triggered more than two times, you can specify a ceiling of 40. If not specified, the default value is 100.
highConfidence	This sets the High Confidence flag, which is set on IOCs when there are high confidence indicators that malware is present. If not specified, the default file value is false.

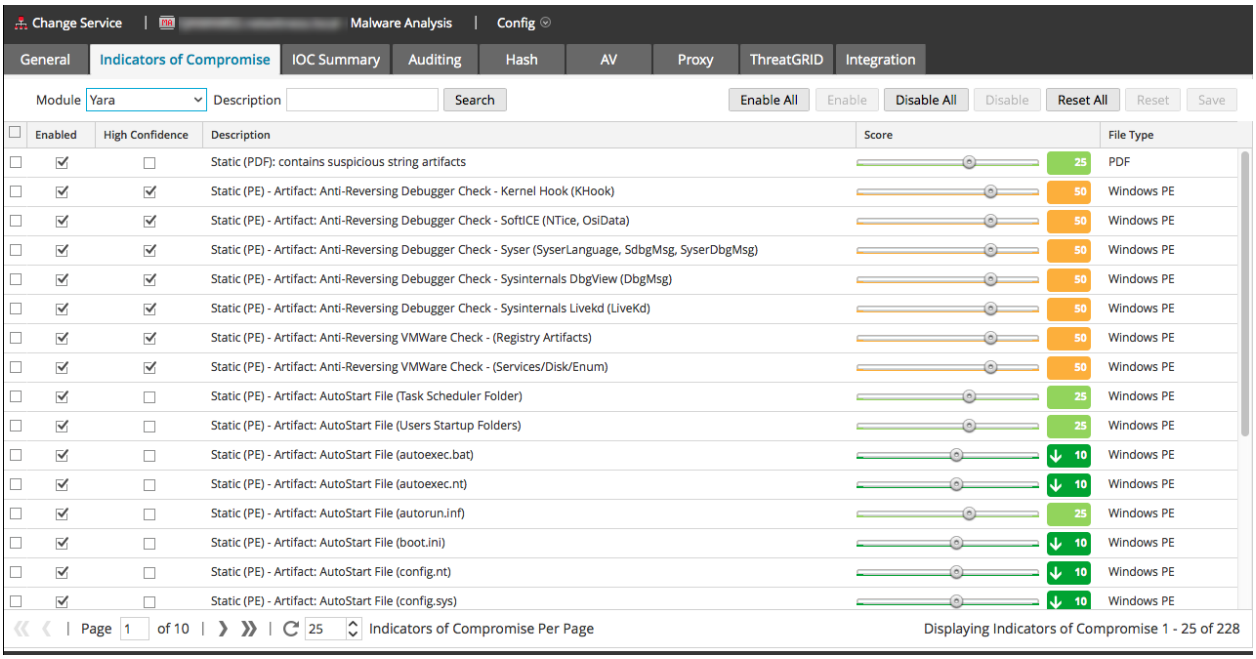


Note: Refer to the following URL for YARA resources: https://code.google.com/p/yara-project/downloads/list. NetWitness uses YARA 1.7, not YARA 2.0.

YARA Content

Live contains 3 sets of Yara rules:

- PE Packers
- PDF Artifacts
- PE Artifacts



The following figure illustrates YARA content available as YARA rules in NetWitness Live.

On the Malware Analysis host, the YARA rules reside in `/var/lib/netwitness/malware-analytics-server/spectrum/yara`, as shown in the example below.

```
[root@TESTHOST yara]# pwd
 /var/lib/netwitness/malware-analytics-server/spectrum/yara
 [root@TESTHOST yara]# ls *.yara
 rsa_mw_pdf_artifacts.yara rsa_mw_pe_artifacts.yara rsa_mw_pe_packers.yara
```

The individual rules are listed as IOCs in the Malware Analysis Service Config view > Indicators of Compromise tab. To view them, use the Yara module as the filter. You can adjust the configuration of an individual in the same way that you configure other IOCs.

Add Custom YARA Rules

To introduce custom YARA rules from other sources:

1. To ensure that the YARA rules follows the correct format and syntax, use the YARA command to compile the YARA rule as shown in the following example. If the rule compiles with no errors, this indicates that the YARA rule has the correct syntax.

   ```
   [root@TESTHOST yara]# yara rsa_mw_pe_packers.yara dummy.txt
   [root@TESTHOST yara]#
   ```

2. Ensure that custom rules do not duplicate existing YARA rules from other sources. All YARA rules are in `/var/lib/netwitness/malware-analytics-server/spectrum/yara`

3. Ensure that the meta keys supports are included to organize the YARA rules as part of the configurable IOCs, and name the file with the yara extension (<filename>.yara). For better organization, make sure that the `iocName` meta is included in the meta section as shown in the following example.

   Example:

   ```
   rule HEX_EXAMPLE
    {
        meta:
            author = "RSA"
            info = "HEX Detection"
           iocName = "Hex Example"
        strings:
            $hex1 = { E2 34 A1 C8 23 FB }
            $wide_string = "Ausov" wide ascii
        condition:
   ```

```
        $hex1 or $wide_string
}
```

4. When ready, place the custom YARA file in the folder that the Malware Analysis service watches:
   `/var/lib/netwitness/malware-analytics-server/spectrum/yara/watch`
   The file is consumed within one minute.
   Once consumed, NetWitness moves the file to the `processed` folder, and the new rule is added to the Malware Analysis Services Config view > Indicators of Compromise tab.

Note: If you fail in adding the custom YARA rule, after step 4, do the following:
1. Check the custom YARA file is in `/var/lib/netwitness/malware-analytics-server/spectrum/yara/watch/error`.
2. Check the logs `/var/lib/netwitness/malware-analytics-server/spectrum/logs/spectrum.log`.

Examine Scan Files and Events in List Form

When viewing the Summary of Events in a Malware Analysis scan, you can click a file count or an event count to view the Files List or the Events List for the scan (see Begin a Malware Analysis Investigation). In the Files List and Events List, you can search for a file by filename or MD5 file hash, sort the list using two criteria and ascending or descending order, and download files. When you find an event or file of interest in the Events List or Files List, you can view many details about the event in the Event Details view.

For each event in the Events List, NetWitness provides the following information:

- Flagged as a High Confidence event, which is considered likely to contain Indicators of Compromise.
- The numeric score for each scoring module: Static, Network, Community, and Sandbox.
- Antivirus vendor scores.
- The Influenced by customized rule flag.
- The date the event was archived.
- The session time.
- The MD5 hash filter.
- The number of files in the event.
- The source IP address of the event.
- The Identity.
- The destination IP address.
- The destination country.
- The name of the alias host.
- The event type, for example, Network.
- The service used by the event.
- The destination organization

For each file in the Files List, NetWitness provides the following information:

- Flagged as a High Confidence event, which is considered likely to contain Indicators of Compromise.
- The numeric score for each scoring module: Static, Network, Community, and Sandbox.
- Antivirus vendor scores.
- The filename.
- The file type.
- The MD5 hash filter.
- The source IP address of the event that contained the file.

- The destination IP address.
- The date the event that contained the file was archived.
- The file size.

Sort the Files List or Events List

You can sort the Files List and Events List by column name in ascending and descending order. You can choose one or two columns.

To sort the list:

1. In the first **Sort By** drop-down list, choose a column name and sort direction:  for descending order or  for ascending order.
2. (Optional) In the second **Sort By** drop-down list, choose a column name, and sort direction,  for descending order or  for ascending order.
   The column titles reflect the selected sort order.

Filter the List by Filename or MD5 File Hash

You can filter the Files List and Events List by filename or file hash. With this feature, you can specify a limited subset of the original data based on the search criteria.

Note: When you perform a search, you search the scan that you are currently displaying, not all scans.

1. Click 

   .
   The Filter dialog is displayed.
2. Enter a value in **File Name** or **MD5 Hash** and click **Filter**. The File Name and Hash field are not case sensitive. Wild card or regular expressions are not supported. The filter is based on exact matches. You can drag across a filename or hash to select from the Files list or Events list, then copy and paste it in the dialog.
3. Click **Filter**.
   Malware Analysis filters the list to display only files or events with the selected hash
4. To revert to the unfiltered list, click 

   . When the Filter dialog is displayed, click **Reset**.

Download Files from the Files List

NetWitness lets you select and download files from the Files List or the Events List.

Caution: Use caution when downloading files from Malware Analysis; some files may contain harmful code. File Download is a specific permission that can be configured, refer to "Define Roles and Permissions for Malware Analysts" in the *Malware Analysis Configuration Guide* for more details.

To download files from the Files List or Events List:

1. In the **Files List** or **Events List**, select the checkbox next to one or more rows.
2. In the toolbar, select 

.
   The Malware File Download dialog is displayed.
3. Do one of the following:
   a. If you decide not to download the file, click **Cancel**.
   b. If you want to download the file, select click the **Download** button.
      The file or files selected are downloaded in a zip archive with the name `Malware_Files.zip`.

Delete Events from the Scan

In the Events List, you select one or more events and delete them from the scan. This is useful for removing events that are not of interest.

To remove an event from the scan being viewed:

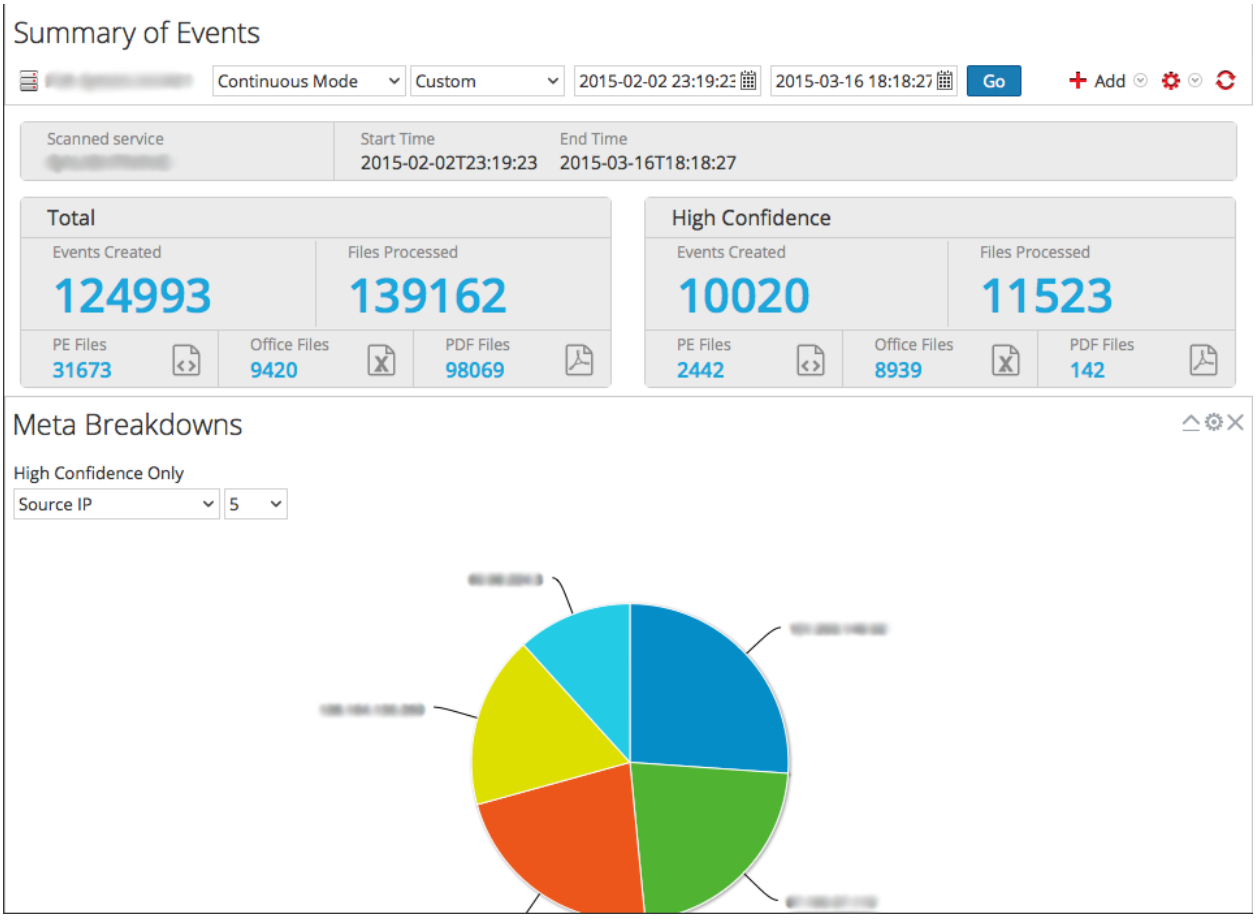
1. In the **Events List**, select one or more events.
2. In the toolbar, click 

.
   NetWitness asks for confirmation that you want to delete the events.
3. In the confirmation dialog, click **Yes**.
   The selected events are deleted.

Return to the Summary of Events

To leave the Files List or Events List and return to the Summary of Events, click **Back to Summary**.

Open the Detailed Analysis for an Event



While you examine events or files in the Files List or Events List, you can double-click any event or file to open a detailed analysis of the event in the Events List or the event with which the file in the Files List is associated (see View Detailed Malware Analysis of an Event).

Configure the Malware Analysis Summary of Events View

The Summary of Events provides a summary of the scan being investigated, and below the summary are configurable dashlets such as visualization charts and listings. By default, the Summary of Events for a scan opens with the default dashlets displayed. You can customize the view by adding, modifying, and deleting default dashlets. The configured customization of dashlets persists through different scan investigations, and you can restore default dashlets at any time. The default dashlets are:

- Summary of Events (Fixed)
- Event Timeline
- Top Listing of Highly Suspicious Malware
- Meta Treemap
- Score Wheel
- Meta Breakdowns

The following figure is an example of the default Summary of Events.

The rest of this topic provides instructions for managing and configuring dashlets.

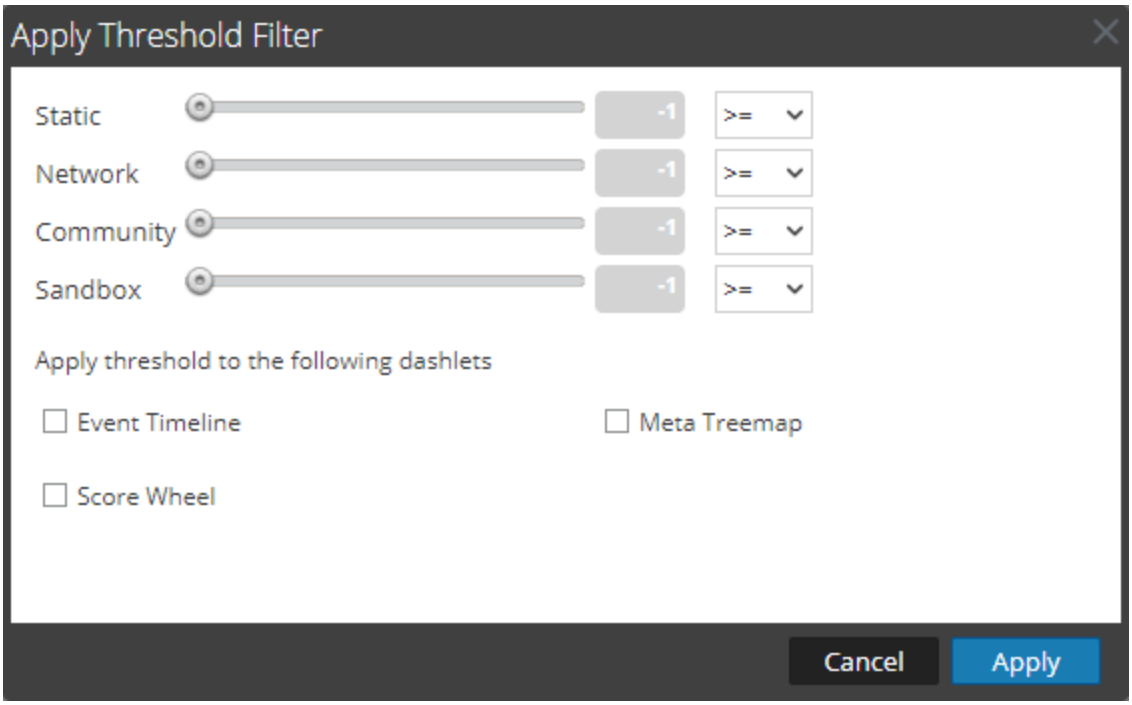
Add a Dashlet

You can add multiple copies of dashlets in the Malware Analysis Summary of Events. To add a dashlet:

1. In the toolbar, select **Add**.
   The drop-down list of dashlets is displayed. There are four visualization options: Score Wheel, Meta Treemap, Meta Breakdowns, and Event Timeline. The other three dashlets are the same dashlets available in the NetWitness dashboard: Malware with high Confidence IOCs and High Scores, Top Listing of Highly Suspicious Malware, Top Listing of Possible Zero Day Malware. Details for these common dashlets are provided in "Dashlets" in NetWitness Content.
2. Select a dashlet.
   The new dashlet is added as the last dashlet below the existing dashlets.
3. If the dashlet is a duplicate of an existing dashlet, change the name of the new dashlet so that it is unique.

Modify or Delete a Dashlet Using Toolbar Options

Each dashlet has a toolbar that offers options for modifying the dashlet. The visualization charts have the same configuration settings, while some of the other dashlets have different additional settings.

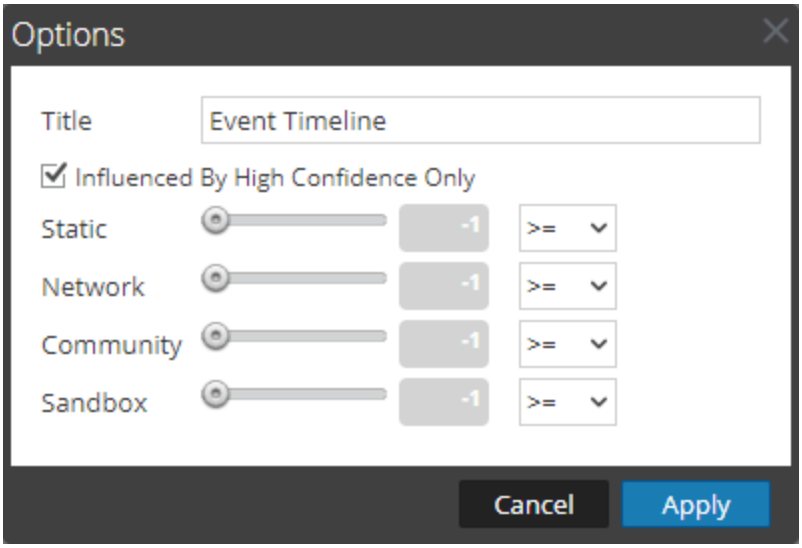


To use the toolbar options:

- To close a dashlet so that only the title bar is displayed, click .
- To open a dashlet that is closed, click .
- To display the configurable settings for a dashlet, click .
  The settings dialog for the dashlet is displayed.
- To delete a dashlet, click .

Apply Threshold Filter to Multiple Dashlets

Within dashlets, you can set a threshold to show only events equal to, above, or below a certain score in the four categories (Static, Network, Community, and Sandbox). This procedure sets the thresholds by dashlet type for these dashlets: Event Timeline, Score Wheel, and Meta Treemap. You can also set the threshold for individual dashlets.

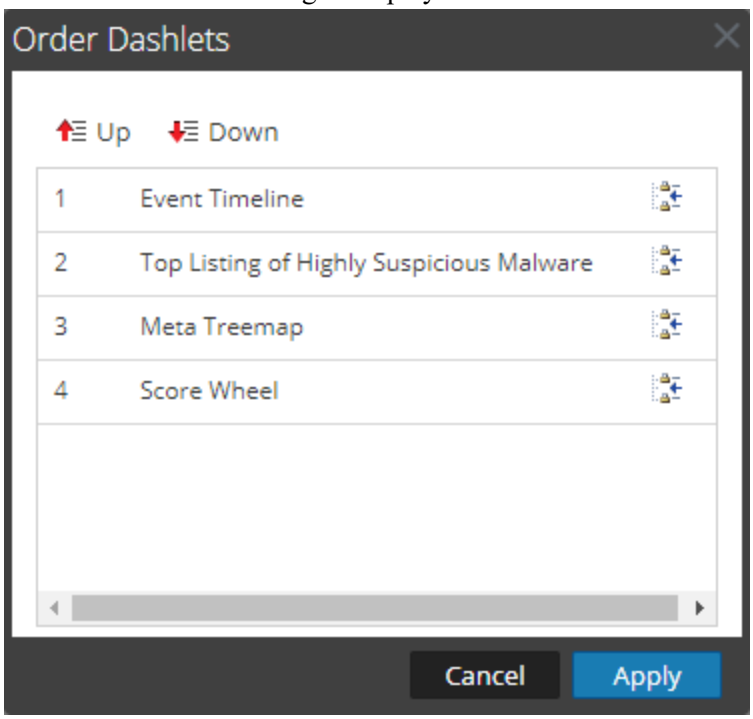


1. In the toolbar, select > **Apply Threshold Filter**.
   The Apply Threshold Filter dialog is displayed.

2. Select one or more dashlet types: Event Timeline, Score Wheel, and Meta Treemap.
3. Drag the corresponding slider or enter a numeric value, then select an operator in the drop-down list: =, >=, or <=.
4. Click **Apply**.
   The threshold filters are applied to the selected dashlet types in the Summary of Events.

Set Title and Category Options for a Dashlet

1. To display the configurable settings for a dashlet, click ⚙.
   The Options dialog for the dashlet is displayed.



2. Type a new title for the dashlet in the **Title** field.
3. If you want to see only events that are influenced by a High Confidence tag, which means there is high confidence that the event contains harmful code, check the **Influenced By High Confidence Only** option.
4. If you want to see only events that were given a score above a certain score in the four categories (Static, Network, Community, and Sandbox), drag the corresponding slider or enter a numeric value, then select an operator in the drop-down list: =, >=, or <=.
5. Click **Apply**.
   The title and filters are applied to the dashlet.

Order Dashlets

To change the order of dashlets as they appear beneath the Summary of Events:

1. In the toolbar, select > **Order Dashlets**.
   The Order Dashlets dialog is displayed.

2. Select a dashlet that you want to move up or down, and click Up or Down.
3. When you are satisfied with the order, click **Apply**.
   The dialog closes and the order of dashlets below the Summary of Events is changed to match your choices.

Restore Default Dashlets

After you have added, modified, and arranged dashlets, you can revert to the default settings for dashlet display. To restore the default dashlets:

1. In the toolbar, select  > **Restore Default Configuration**.
   A dialog requests confirmation that you want to restore the configuration.
2. Do one of the following:
   a. If you decide to keep the dashlet arrangement you have configured, click **No**.
   b. If you are sure that you want to restore the defaults, click **Yes**,
      The dashlet display reverts to the default display.

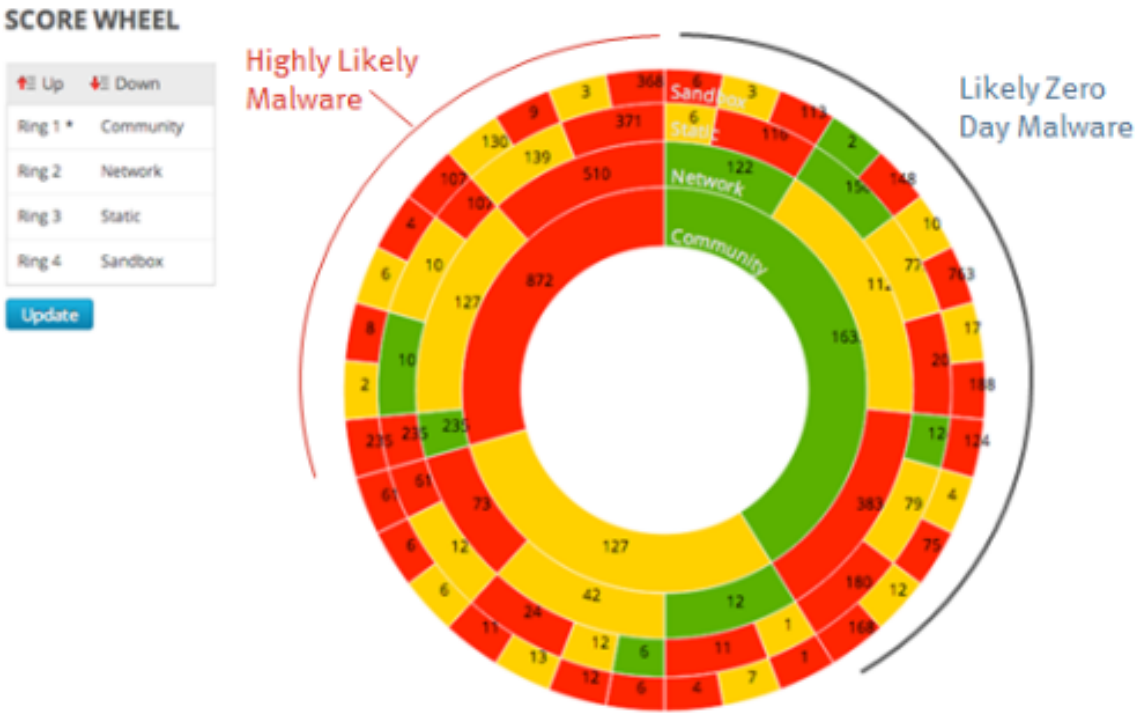
Filter Dashlet Data in the Summary of Events View

The Summary of Events provides a summary of the scan being investigated with selectable dashlets. The Summary of Events is fixed, but Analysts can configure each dashlet to filter out information and drill into the data.

The rest of this topic provides instructions for managing and configuring dashlets.

Configure the Score Wheel Dashlet

The Score Wheel is a high-level visualization of analyzed sessions that scored high, medium, or low in each of the scoring categories: Static, Network, Community, and Sandbox. The Score Wheel is a quick way to drill into sessions to review them. Each ring represents a different scoring category so that you can visually compare results by category.



You can change the order of the rings to highlight indicators of compromise that were flagged in one category but not in another category. Comparing the same results in a different sequence of the rings provides visibility into additional vulnerabilities in a session, and you can drill into sessions of interest. The following examples show two possible use cases.

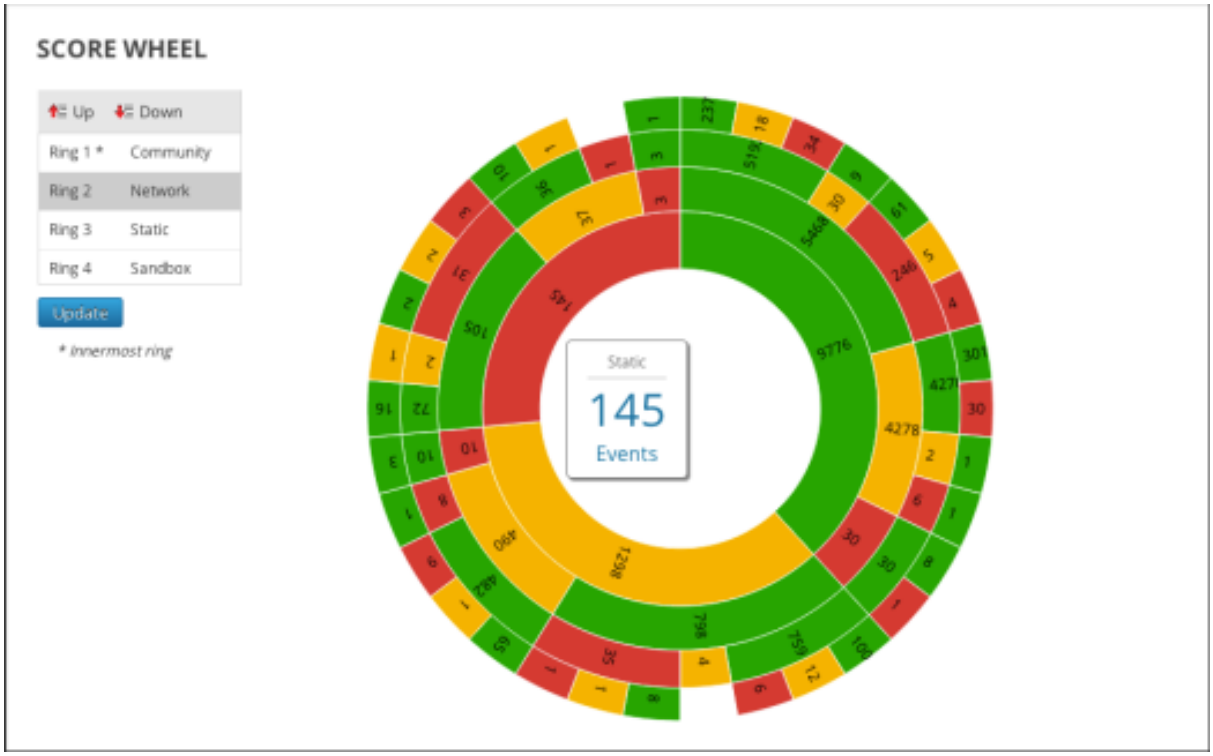
Zero-Day Candidates Example

This example shows how to drill into sessions that the Community did not flag as malicious, but all other scoring categories did. The resulting list of sessions highlights zero-day candidates.

1. Configure the Score Wheel rings in the following sequence:
   Community (innermost) > **Static** > **Network** > **Sandbox** (outermost)
2. Click the red slice in the outermost (Sandbox) ring that aligns with a green slice on the innermost ring (Community): green (innermost) -> **Static**: red -> **Network**: red -> **Sandbox**: red (outermost).

Malicious Sessions Example

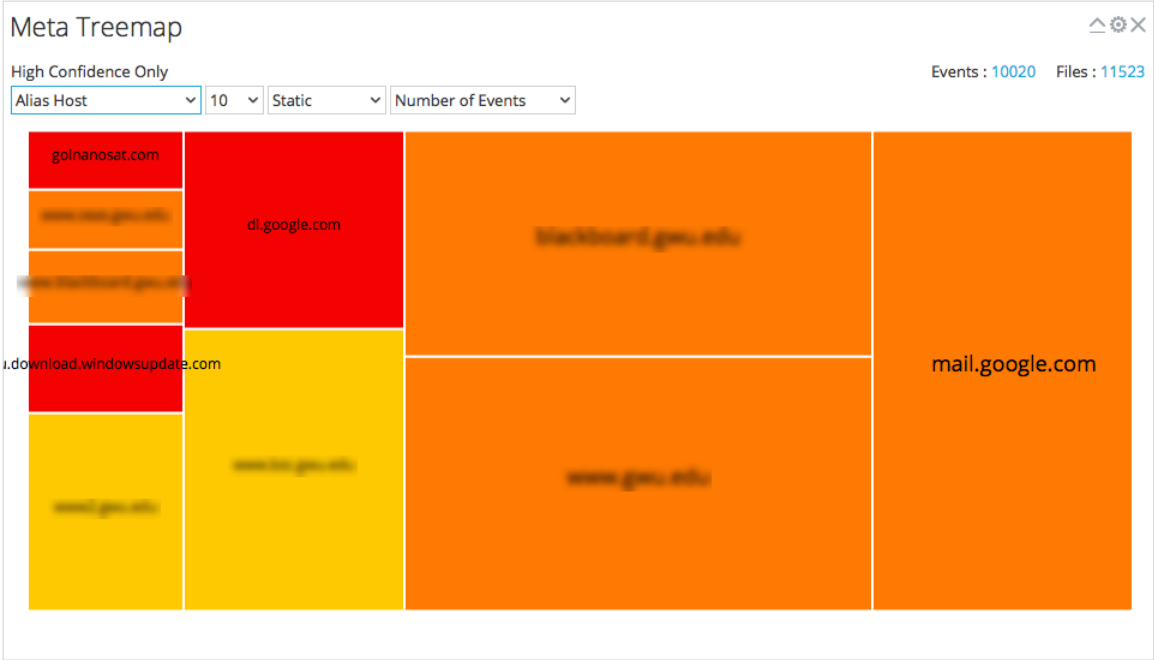
This example shows how to drill into sessions in which all scoring categories identify the resulting list of sessions as malicious, indicating Malware Analysis has the most confidence that they are malware.



1. Configure the Score Wheel rings in the following sequence:
   Community (innermost) > **Static** > **Network** > **Sandbox** (outermost)
2. Click the red slice of the outermost (Sandbox) ring that aligns within a red slice on the innermost ring (Community): red (innermost) -> Static: red -> Network: red -> Sandbox: red (outermost).

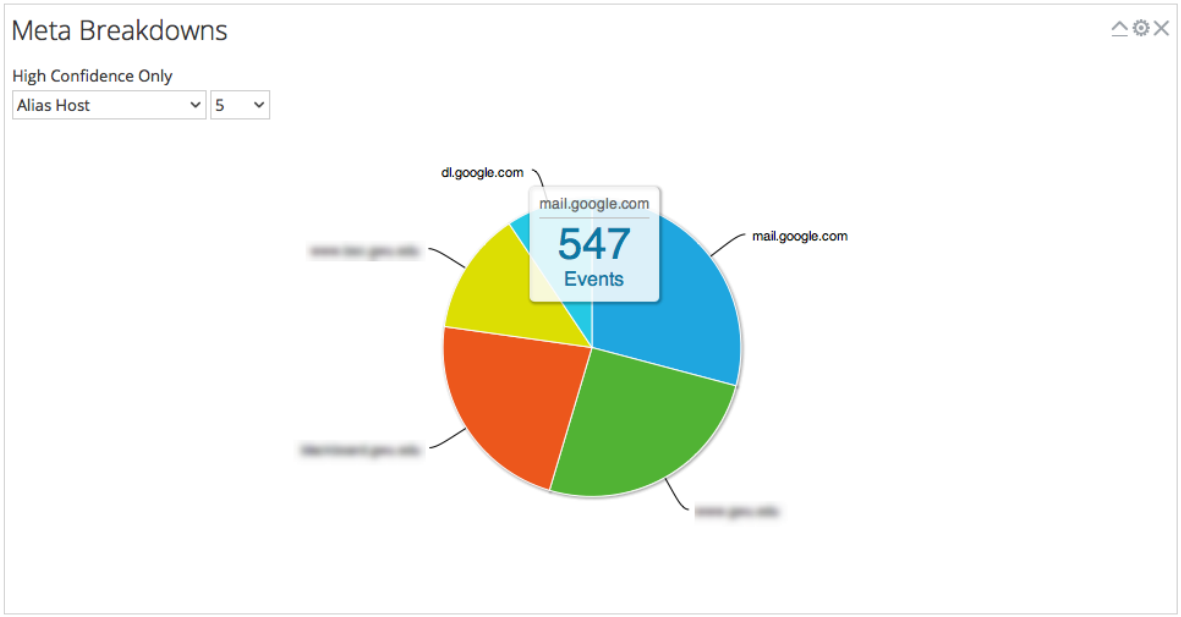
Arrange the Ring Sequence by Scoring Module

In the Score Wheel, you can arrange the sequence of the rings by scoring module. Initially, the sequence of rings from inside to outside is Static, Network, Community, and Sandbox.



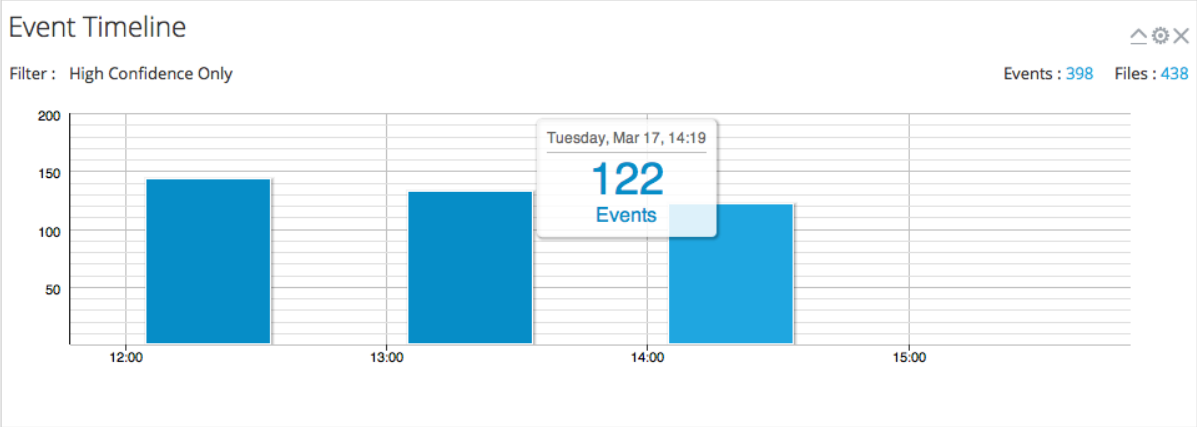
To change the ring sequence:

1. Do one of the following:
   a. Click and drag each scoring module up or down.
   b. Select each scoring module and use the Up and Down buttons to move it.
2. When the ring sequence is the way you want it, click the **Update** button.
   The Score Wheel is refreshed with the new sequence.



Configure the Meta Treemap Dashlet

In the Meta Treemap chart, you can visualize and filter meta breakdowns by meta type, count, and analysis type. Use the three selection lists to set the filter, and the Meta Treemap chart is refreshed immediately.

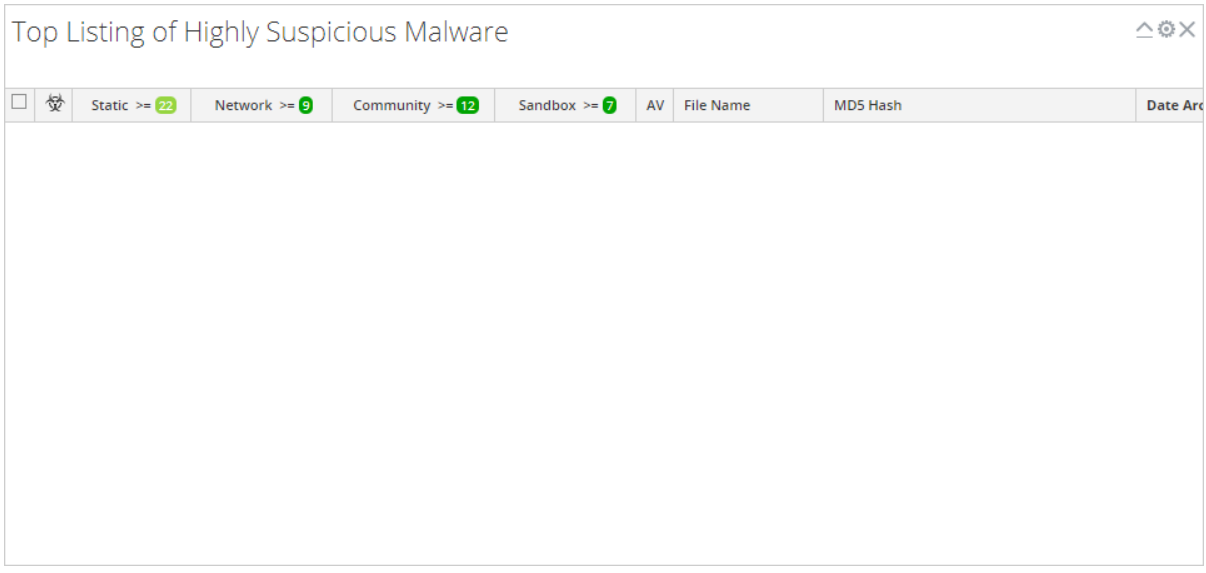


Configure the Meta Breakdowns Dashlet

The Meta Breakdowns dashlet is a visualization of values for a specific meta key in a pie chart. In the Meta Breakdowns chart, you can filter meta breakdowns by meta type and count. Use the two selection lists to set the filter, and the Meta Breakdowns chart is refreshed immediately.

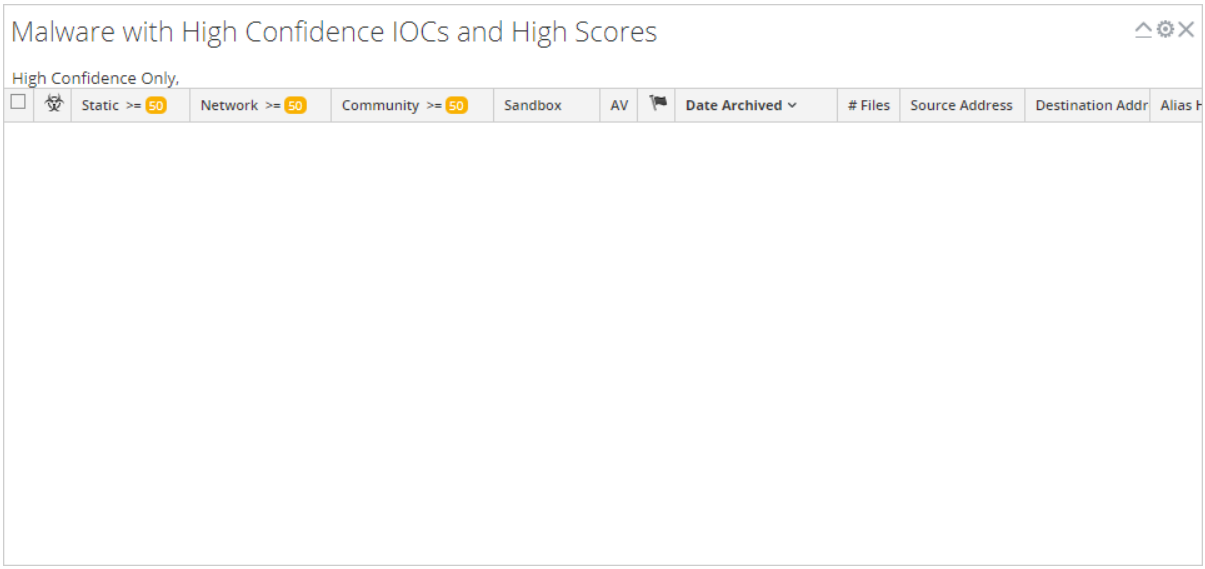
Configure the Events Timeline Dashlet

The Events Timeline dashlet is a visualization of the events along a timeline. No additional filters are available for the Event Timeline.



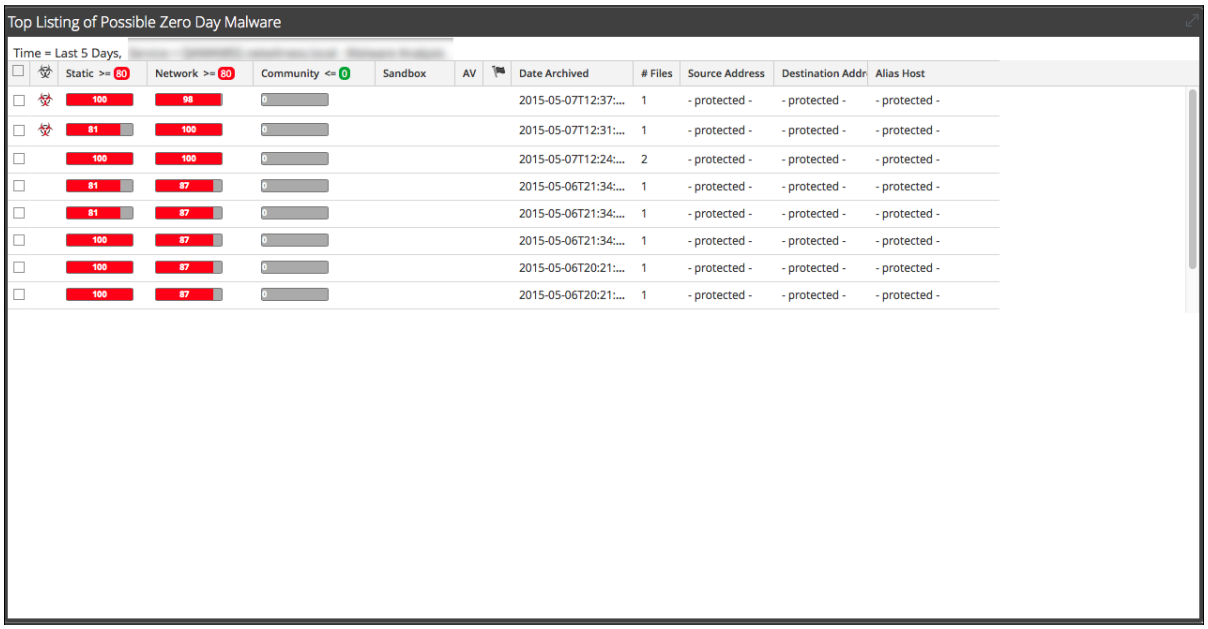
Open All Events in the Events List

From within the Event Timeline, you can open the entire list of events in the Events List. To do so, click View Events. This option is not the same as clicking the count next to Events, which is the same for all visualization charts and opens the current drill point in the Events List.



Configure the Top Listing of Highly Suspicious Malware Dashlet

The Top Listing of Highly Suspicious Malware Dashlet presents the Top 10 most suspicious events in the Events List or the Files List. This dashlet is also available in the Monitor dashboard, and the configuration options are described as part of the NetWitness Content in Dashlets.



Configure the Malware with High Confidence IOCs and High Scores Dashlet

The Malware with High Confidence IOCs and High Scores dashlet presents Indicators of Compromise that have both high scores and high confidence that the events are likely to contain malware. The dashlet is also available in the Unified dashboard, and the configuration options are described as part of the NetWitness Content in Dashlets.

Configure the Top Listing of Possible Zero Day Malware Dashlet

The Top Listing of Possible Zero Day Malware dashlet presents potential zero day events in the Events List or the Files List. The dashlet is also available in the Unified dashboard, and the configuration options are described as part of the NetWitness Content in Dashlets.

Top Listing of Possible Zero Day Malware
Time = Last 5 Days,
Static >= 80
Network >= 80
Community <= 0
Sandbox
AV
Date Archived
Files
Source Address
Destination Addr
Alias Host
100 98 0 2015-05-07T12:37:... 1 - protected - - protected - - protected -

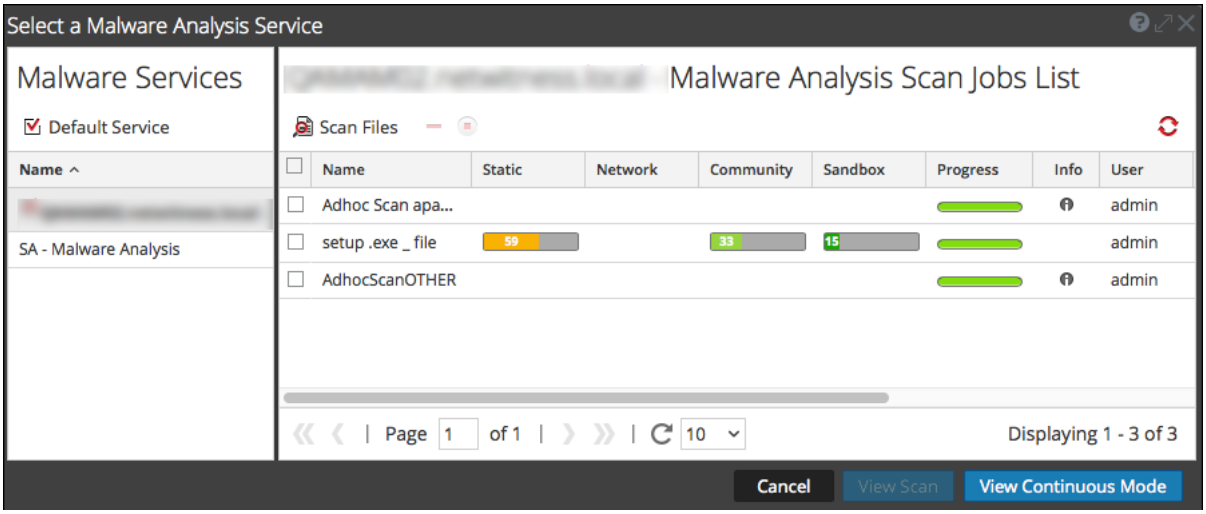
Upload Files for Malware Analysis Scanning

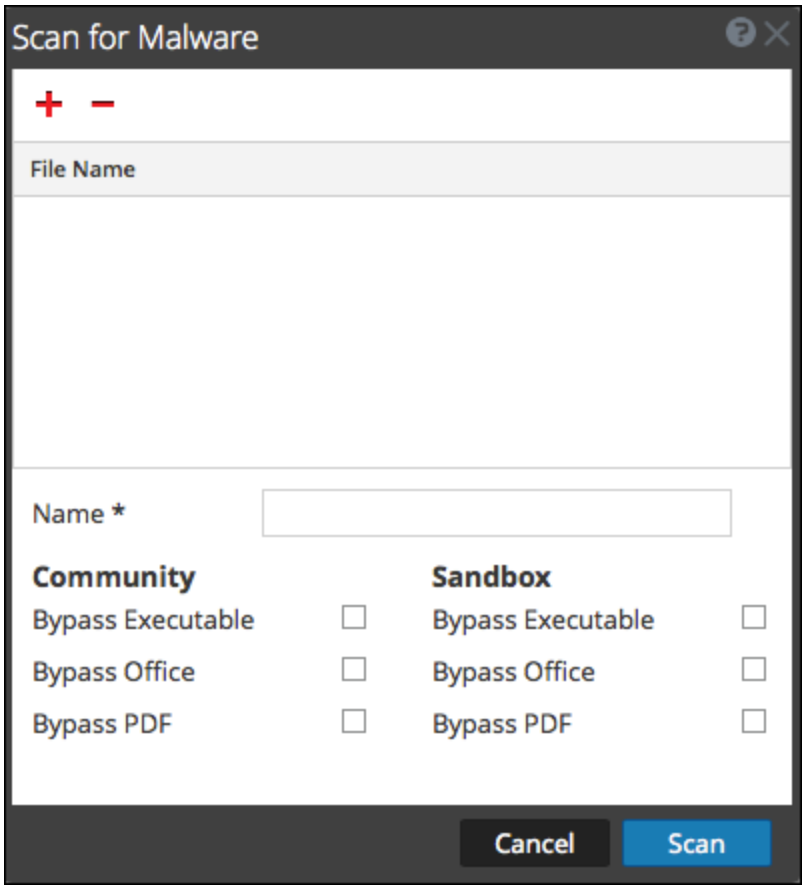
There are two methods for analysts to upload files for Malware Analysis scanning.

A Malware Analyst with permission to Initiate Malware Analysis Scan can upload files to scan using the Scan Files option in the Select a Malware Analysis Service dialog.



It is also possible to upload a file for scanning using a watched file share.

Upload Files Manually



This topic provides instructions for initiating on-demand scanning of an uploaded file. When you upload a file for scanning, NetWitness starts the upload job and adds it to the jobs queue. When the job is complete, you can view the scan in Malware Analysis.

To upload a file to scan:

1. Go to **Investigate > Malware Analysis**.
   The Select a Malware Analysis Service dialog is displayed, with available Malware Analysis hosts and services for the current user in the left panel.

2. Click **View Scan**.
   The Scan for Malware dialog is displayed.

3. Click +
   A view of the files system is displayed so that you can choose files to upload.
4. Select one or more files from the list and click **Open**.
   The file names are added. Malware Analysis escapes the filename characters before processing a file. The maximum number of filename characters after escaping is 200. If the filename is greater than 200 characters, Malware Analysis truncates the filename characters and displays the truncated filename in the NetWitness user interface.
5. Continue adding and deleting files until you have a list of the files that you want to upload.
6. Name the scan and select the types of files to bypass. This is useful for a zip archive that contains different types of files, and overrides the default bypass settings.
7. Click **Scan**.
   The scan job is submitted and NetWitness displays a confirmation message for successful submission. The scan request is added to the Scan Jobs List dashlet. The bypass settings in this dialog override the default settings in the basic Malware Analysis configuration settings.
8. The job is added to the Scan Jobs List in the Select a Malware Analysis Service dialog and in the Unified dashboard Scan Jobs List dashlet.
9. To view the scan when complete, double-click the scan.
   The Malware Summary of Events for the selected scan is displayed.

Upload Files from a Watched Folder

To upload files from a watched folder, you can drop files into a watched file share for Malware Analysis. Analysts can share YARA rules, hash files, and infected zip archives with Malware Analysis.

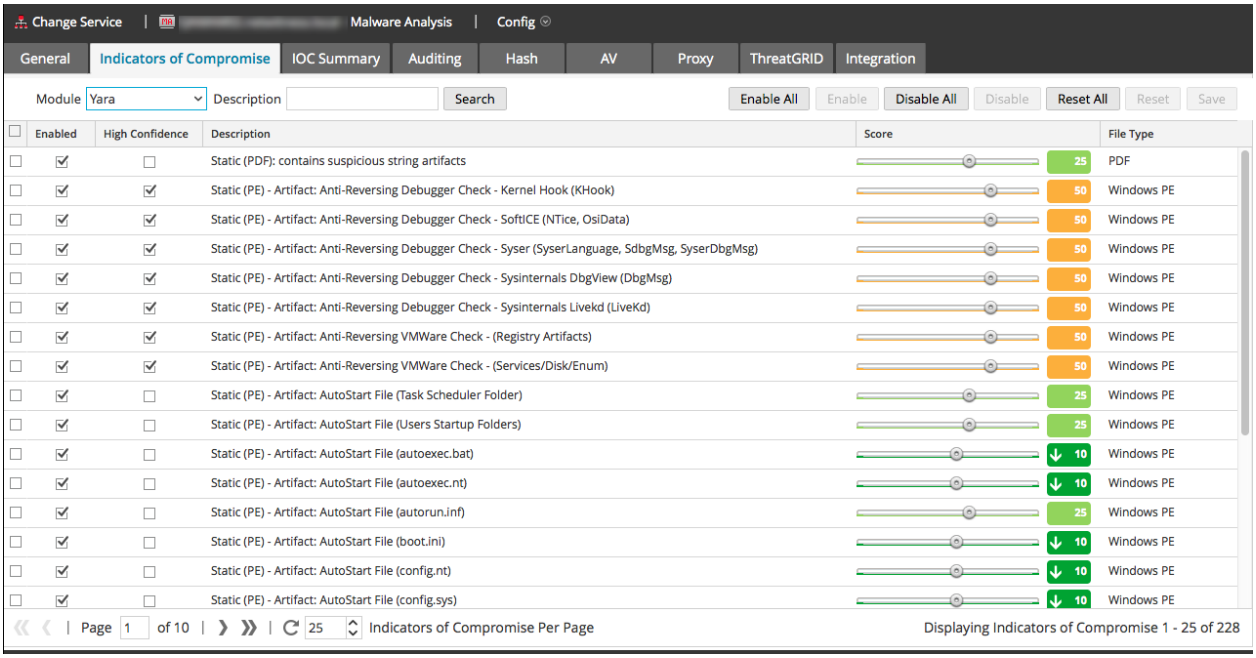
Malware Analysis watches a file share and automatically consumes files placed in specific folders in the file share. This feature is useful for:

- Bulk import of hash files from `/var/lib/rsamalware/spectrum/hashWatch`.
- Addition of custom-YARA rules to the Indicators of Compromise (IOC) list on the host from `/var/lib/netwitness/malware-analytics-server/spectrum/yara/watch`.
- Creation of on-demand scan jobs from a zip archive of infected zip files from `/var/lib/rsamalware/spectrum/infectedZipWatch/watch`.

Analysts need to prepare the files for consumption in accordance with requirements, the file extension must be correct, and the file must be copied to the correct watched folder in the file share.

Import a Hash List

To import a hash list from the watched directory, the hash list must be in the specified format and must be sorted on md5. You can drop a file formatted into a folder (`/var/lib/rsamalware/spectrum/hashWatch`) on the Malware Analysis host, and it is automatically imported into the local hash database. This is described in "Configure Hash Filter" in the *Malware Analysis Configuration Guide.*



To import a hash list using the watched folder method:

1. Copy the hash lists that you want to import into the **`/var/lib/rsamalware/spectrum/hashWatch`** directory.
   NetWitness Malware Analysis automatically watches this folder and processes files placed there.
   a. Malware Analysis adds every hash found in the hash lists to the hash filter.
   b. If there are processing errors, they are logged in: `/var/lib/rsamalware/spectrum/hashWatch/error`
   c. Processed files are cataloged here: `/var/lib/rsamalware/spectrum/hashWatch/processed`
   d. Processed files are not removed from the hashWatch directory.
2. After importing hashes in bulk, the System Administrator can use a cronjob to clean up old processed files.

Import YARA rules to the IOC List

Customers with advanced skills and knowledge can add detection capabilities to Malware Analysis by authoring YARA rules and publishing them in Live or placing YARA rules in a watched folder for the host to consume. Implement Custom YARA Content provides complete information on the prerequisites for using custom YARA content and authoring rules.

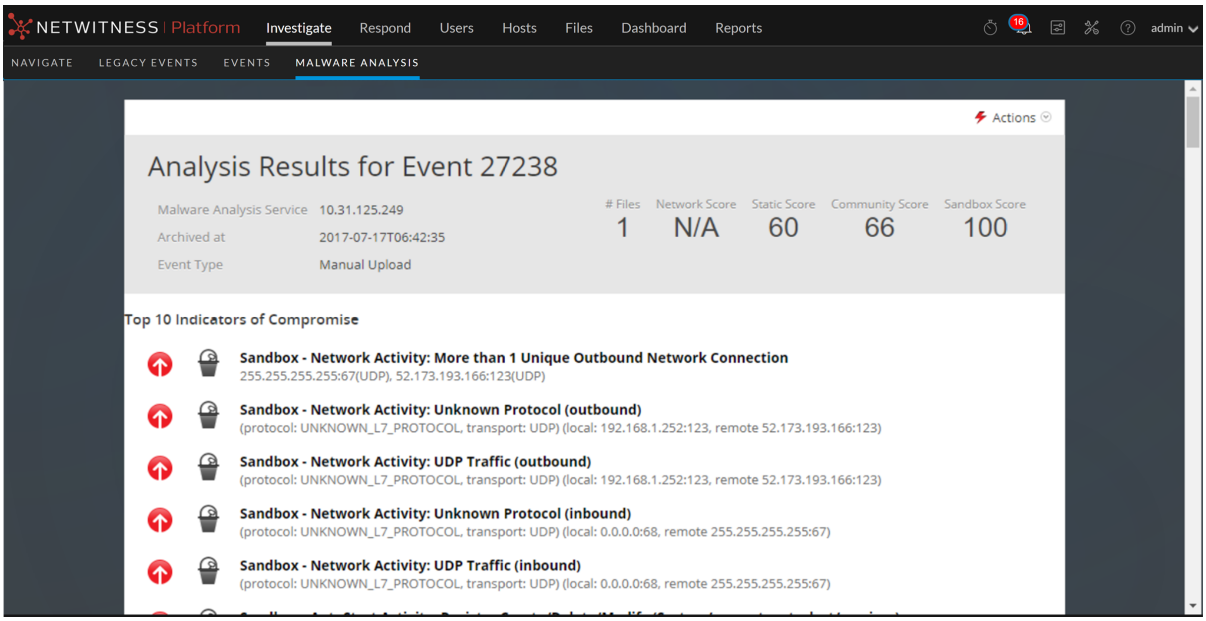
When the rules are ready, place the custom YARA files in the folder that the Malware Analysis service watches:
`/var/lib/netwitness/malware-analytics-server/spectrum/yara/watch`
The file is consumed within one minute.
Once consumed, NetWitness moves the file to the `processed` folder, and the new rule is added to the Malware Analysis Service Config view > Indicators of Compromise tab.

Import Files into the Scan Jobs List

When you obtain samples from perimeter security solutions and would like to perform further analysis on the files, you can zip the files and password protect the archive with `infected`, then add to the watched folder for consumption by Malware Analysis. This zipped archive is ready to be placed in the watched folder: `/var/lib/rsamalware/spectrum/infectedZipWatch/watch`.

Note: The maximum size of the archive is 100 MB.

To analyze infected, password-protected zip files, Malware Analysis consumes archives place in a watched folder and creates an on-demand job that is added to the Scan Jobs List.



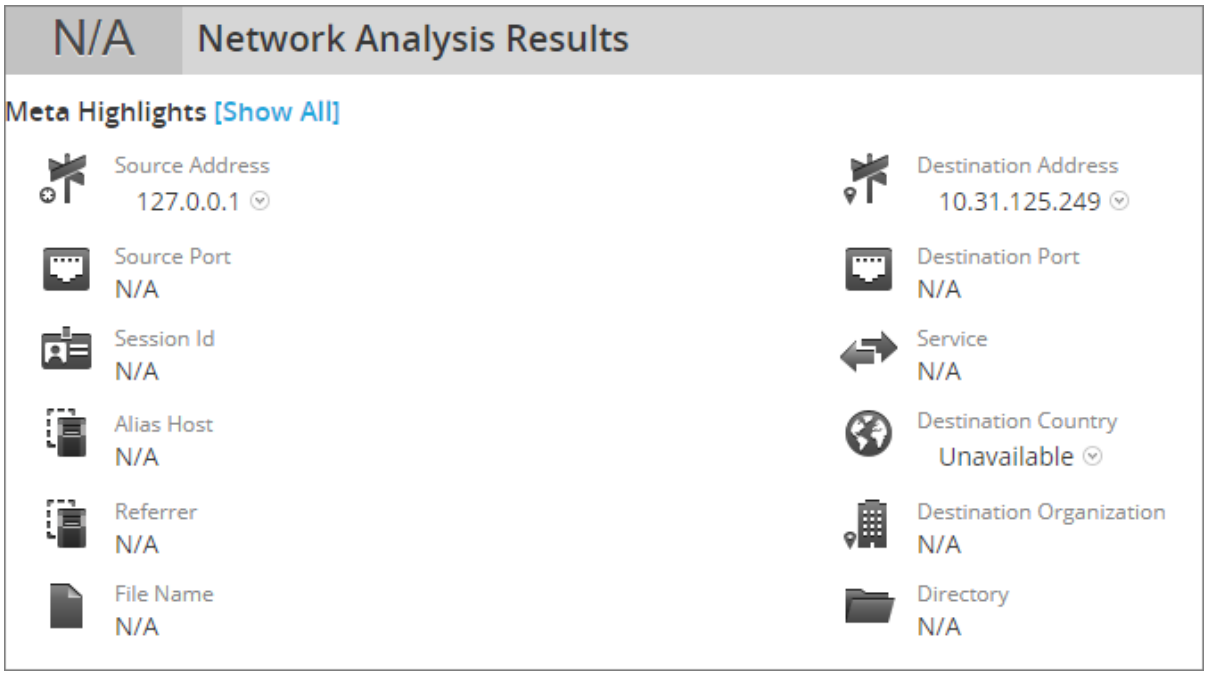
1. While logged on as administrator, place the files to be processed in a zip file with password `infected` at `/var/lib/rsamalware/spectrum/infectedZipWatch/watch`
   In a minute or two Malware Analysis consumes the archive and creates an on-demand job in the Scan Jobs List. The scan job name is the name of the file, the user is **file share**, and the Event Type is 1. The archive is moved to `/var/lib/rsamalware/spectrum/infectedZipWatch/processed`
2. After the job is added to the Scan Job List, run a script or cronjob to clean up the zip file in `/var/lib/rsamalware/spectrum/infectedZipWatch/processed`.

View Detailed Malware Analysis of an Event

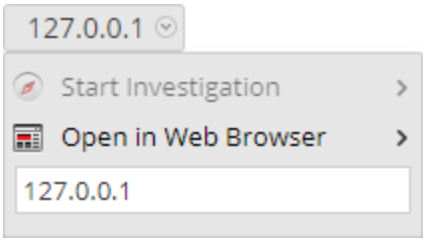
When viewing the list of individual events in a Malware Analysis scan in the Malware Analysis Events grid, you can double-click an event to view the detailed analysis results for the event.

View Malware Analysis Details for an Event

1. Start an investigation in the **Malware Analysis** view.
   The Malware Summary of Events is displayed, and includes four charts, including the Event Timeline.
2. Do one of the following:
   a. To view all events in the Event Timeline, click the **View Events** button.
   b. Double-click data in the **Meta Breakdown**, **Meta Treemap Chart**, or **Score Wheel**.
   The Events List is displayed.
3. Double-click an event.
   The Analysis Results for the event are displayed.



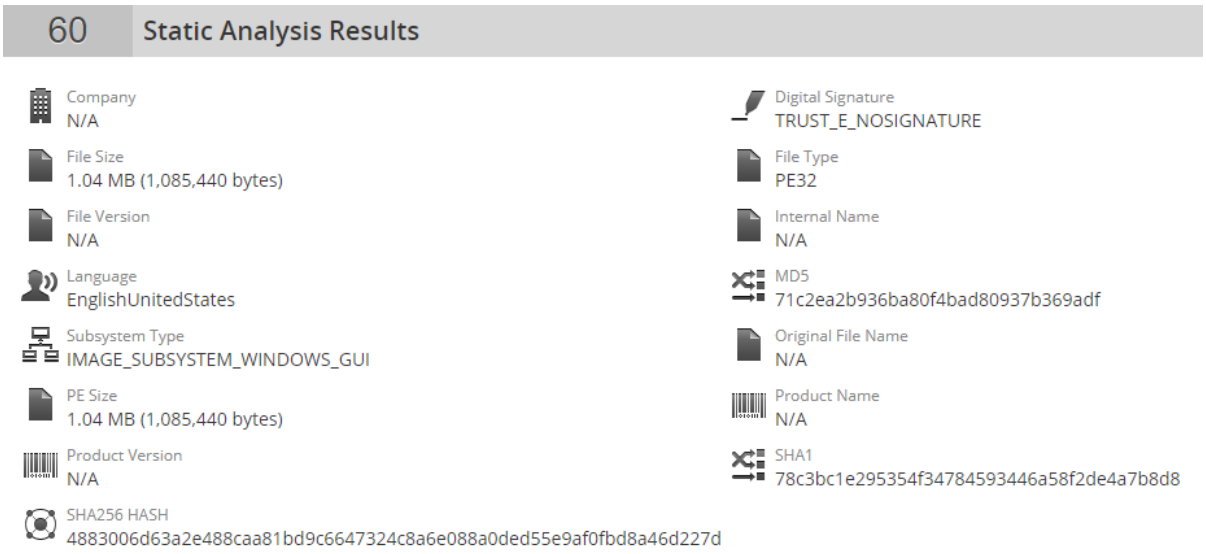
4. (Optional) If you want to delete an event, select **Actions > Delete Event**.
5. If you want to view a reconstruction of the network session, select **Actions > View Network Session**.
   The session opens in the Navigate view > Event Reconstruction.



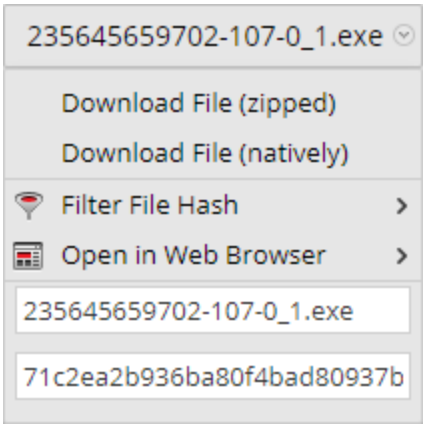
Pivot Network Analysis Results

You can pivot the Network Analysis Results in several ways:

1. Scroll down to the Network Analysis Results.



2. Hover over a meta value and left-click.
   The context menu is displayed.



3. To view the selected meta value in the **Navigate** view, select **Start Investigation** and a time option.
4. To view the selected meta value in a browser, select **Open in Web Browser > Open in Google**.

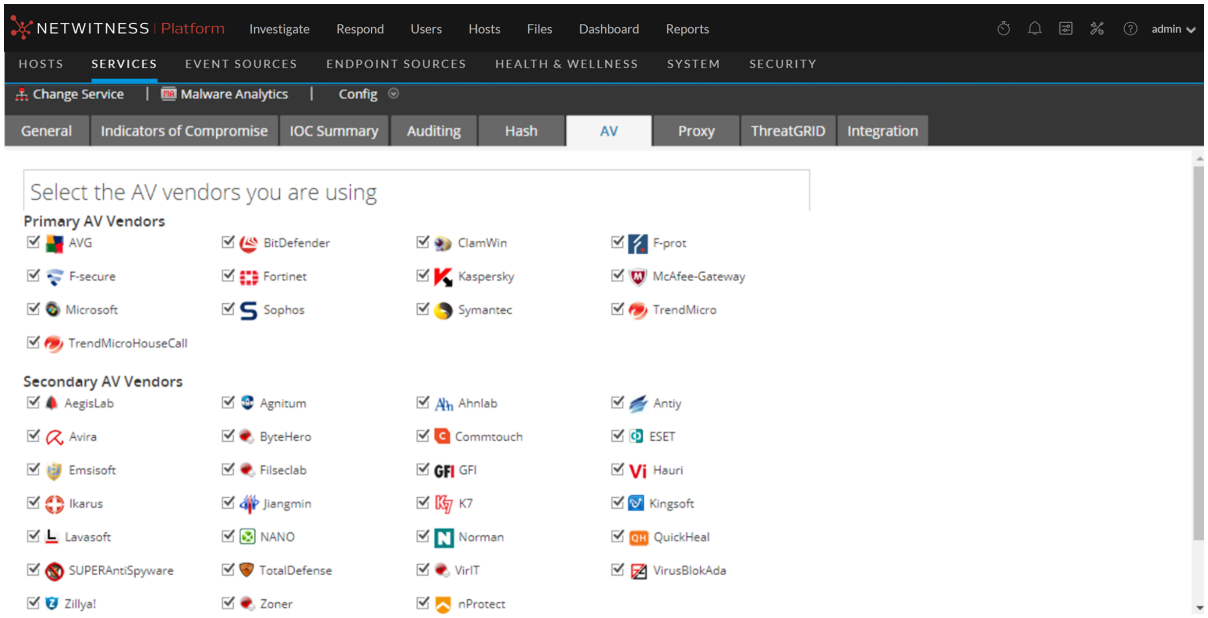
Use File Actions in the Static Analysis Results

1. Scroll down to the Static Analysis Results.

2. If you want to download a file, select the file name and either **Download File (zipped)** or **Download File (natively)** in the drop-down menu. It is safer to download a file in zipped format.

3. If you want to mark the file as safe or unsafe in the hash list, select **Filter File Hash** and **Mark hash as good** or **Mark hash as bad**.

View Community Analysis Results Details

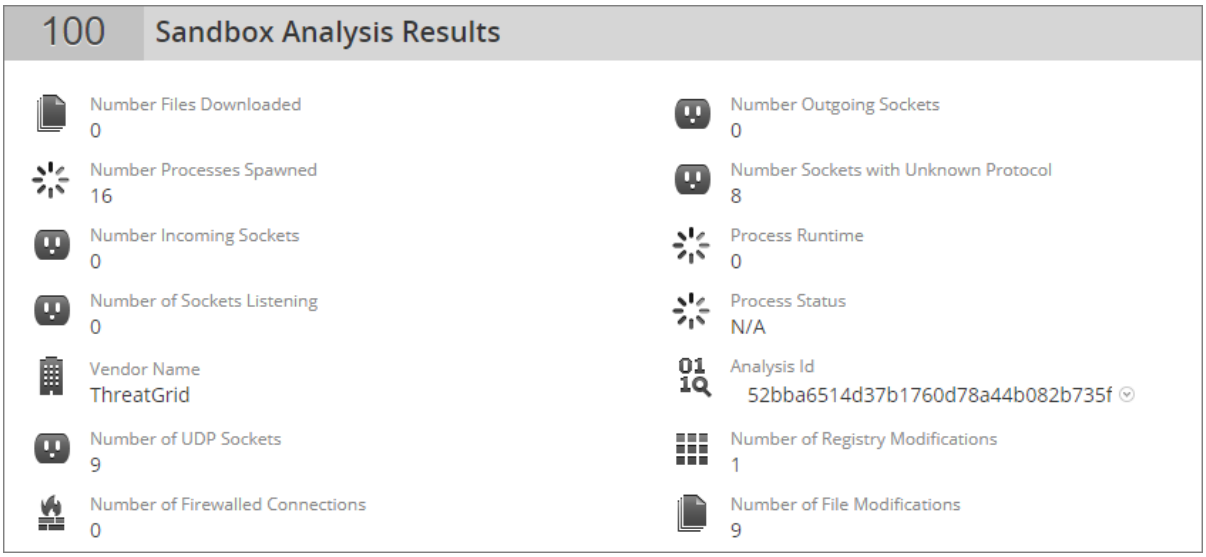


The Community Analysis Results summarizes results from the community, identifying Indicators of Compromise that were flagged as a risk or identified as good.

In addition, this view lists the results from Installed AV Vendors and Not Installed AV Vendors. You can compare results of the installed AV vendors that were configured for the current Malware Analysis service versus Community results. You can also see results from a list of AV vendors that are not configured as installed for the current Malware Analysis service.

Each row of AV vendor results includes the shield icon to show whether the IOC was discovered by a Primary ( ) or Secondary AV ( ) vendor in the community, the name of the Installed or Not Installed vendor, and the name of malware or risk detected by the community and AV vendor. If the AV vendor did not detect a risk, **-- Not detected --** is displayed instead of the name of the risk.

The Not Installed AV Vendors section is expandable to view all entries, but is collapsed by default to minimize the need to scroll. Clicking the + expands the list.



If no installed AV vendors have been configured for the current Malware Analysis service, the following message is displayed: No AV vendors were marked as installed. Please go to the Malware Analysis Service configuration page to identify installed AV vendors.

View Sandbox Analysis Results in the ThreatGRID User Interface

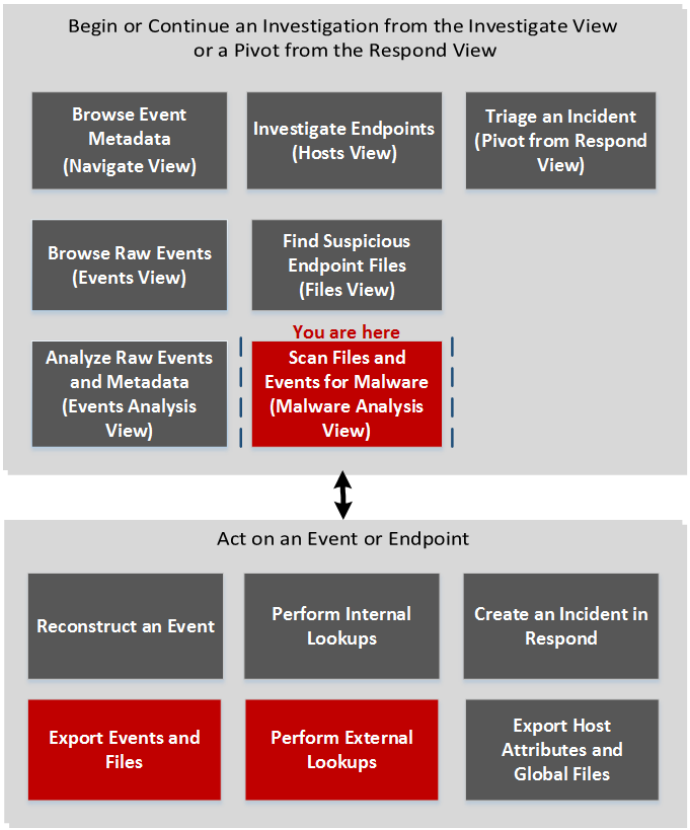
If you have registered with ThreatGRID, you can view the Sandbox results directly in ThreatGRID.

1. Scroll down to the Sandbox Analysis Results.

2. Click the **Analysis ID** and select **Open In ThreatGRID**.
   The analysis report in ThreatGRID is displayed.

Malware Analysis Reference Materials

This section provides is intended to help you understand the purpose and application of Malware Analysis views in NetWitness Investigate. For each view, there is a brief introduction and a What Do You Want To Do table with links to related procedures. In addition some of the reference materials include workflows and Quick Looks to highlight important features in the user interface.



- Malware Analysis View
- Malware Analysis Events List and Files List
- Scan For Malware Dialog
- Select a Malware Analysis Service Dialog

Malware Analysis View

In NetWitness Investigate, the Malware Analysis view provides the user interface for conducting a malware analysis. The Malware Analysis view is in the form of a customizable dashboard, in which default dashlets in the initial view are based on the user role (Administration or Analyst) and user customizations. Initially, the Summary of Events dashlet is displayed in the Malware Analysis view. Additional dashlets present different visualizations of the events being viewed, and each representation is configurable to further refine your view as you search for Indicators of Compromise. The Malware Analysis dashlets available in the Dashboard are also available in the Malware view.

To access this view, select **Investigate > Malware Analysis**. If a default service has not been selected, the Select a Malware Analysis Service dialog is displayed. Select a service, then click **View Continuous Mode**.

Quick Look

Below is an example of the Malware Analysis view.

The Malware Analysis view consists of the Summary of Events panel and four dashlets unique to this view. Each of the unique dashlets have identical Options dialogs. The Malware Analysis dashlets in the MONITOR view are also available, and are described in the Dashlets topic in the NetWitness Content space.

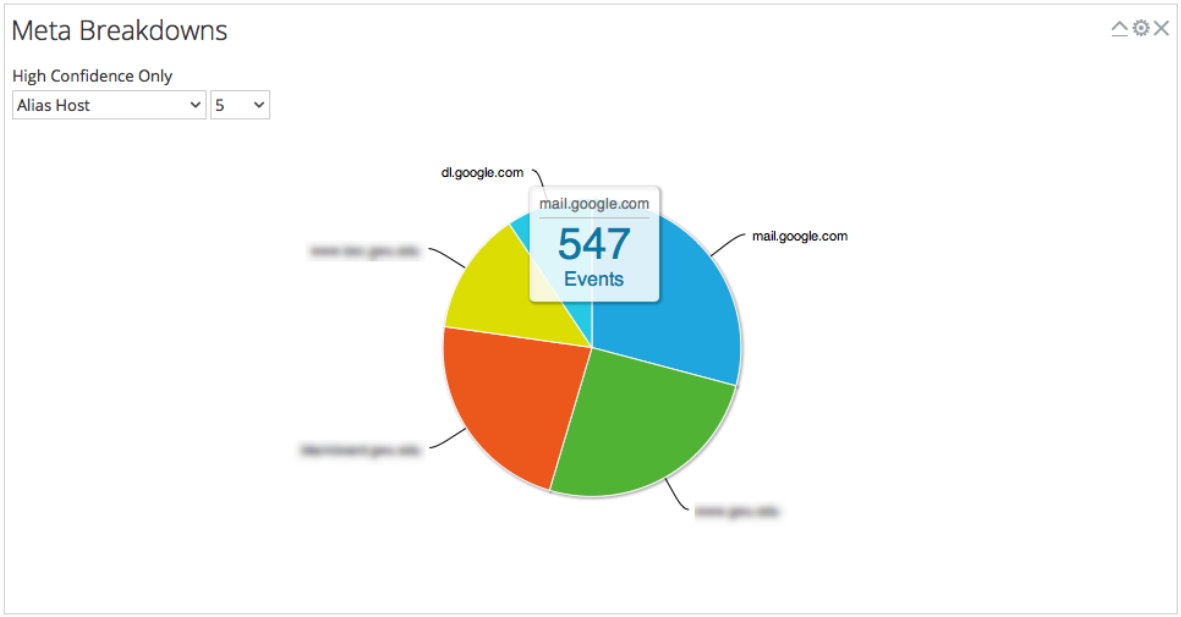
Summary of Events Panel

In the Summary of Events panel, you can select the service, the scan mode, and the time range. In addition, you can select a data point and view the events associated with the event.

The following table describes all features in the Summary of Events panel.

Feature	Description
	Selects a service to display.
Scan Mode	Displays a drop-down list of available scan modes.
Time Range	Displays a drop-down list of time ranges to view events.
Start Date	When Time Range is set to custom, offers a calendar from which to choose the start date of the time range.

Feature	Description
End Date	When Time Range is set to custom, offers a calendar from which to choose the end date of the time range.
	Displays a drop-down list of dashlets you can add to the view.
	Displays a drop-down list of actions you can perform in this view: • Restore Default Configuration • Order Dashlets • Apply Threshold Filter
	Refreshes the Malware Analysis view.



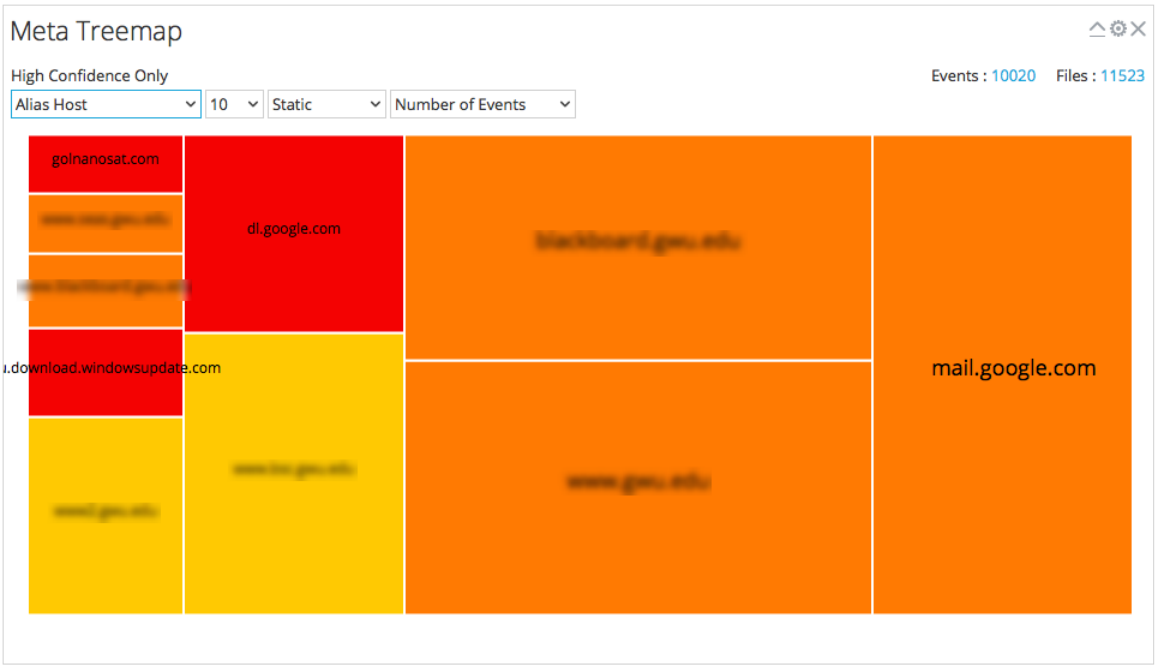
Options Dialog

In the Options dialog, you can customize the results displayed in the dashlet. This dialog can be accessed by clicking the  icon in the top right corner of each dashlet. The following table describes the features of the Options dialog.

Feature	Description
Title	Indicates whether the data shown is restricted to events flagged as high confidence or not. If the data is not restricted, this line will not be displayed.
Influenced By High Confidence Only	Indicates whether the data shown is restricted to events flagged as high confidence.
Static, Network, Community, Sandbox	Allows you to filter results based on the scores in the scoring modules.
Cancel	Closes the dialog without saving any changes.
Apply	Applies changes to the dashlet immediately and closes the dialog.

Meta Breakdowns

Meta Breakdowns presents events in the form of a pie chart, with each slice representing a meta value for the specified meta key. You can select the meta key and the count of meta values for that key to render in the chart, starting with the meta value having the most events. Hovering over an event displays the count.



The following table describes the options in the Meta Breakdowns dashlet.

Feature	Description
High Confidence Only	Indicates whether the data shown is restricted to events flagged as high confidence or not. If the data is not restricted, this line will not be displayed.
Meta Key	Drop-down list of available meta keys.
Count	Drop-down list specifying how many of the top results are displayed.

Meta Treemap

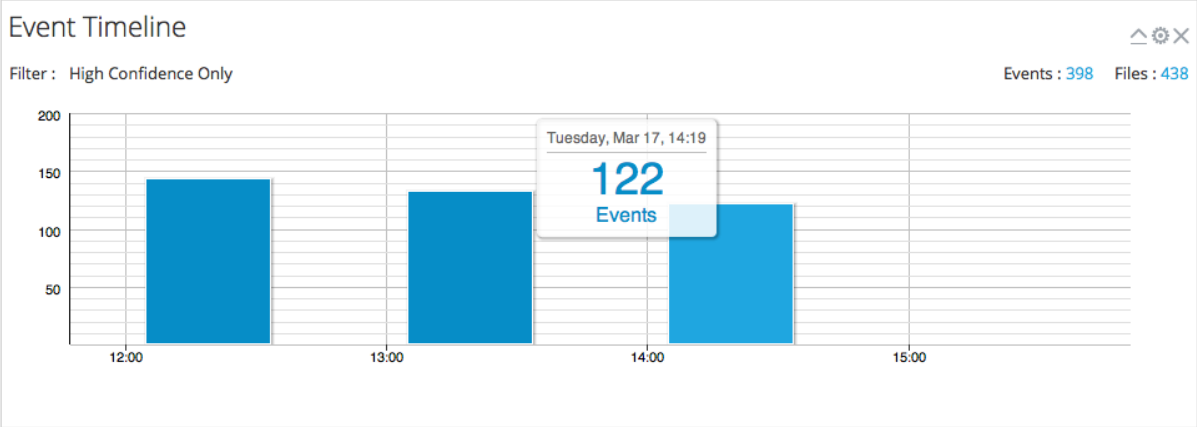
Meta Treemap presents events in the form of a heat map. You can select the meta key and the count of meta values for that key to render in the chart, starting with the meta values having the most events. In addition, you can select the module that detected the meta value in the events: static, network community, or sandbox.

The following table describes the options in the Meta Treemap dashlet.

Feature	Description
High Confidence Only	Indicates whether or not the results are restricted to events flagged as high confidence or not. If the results are not restricted, this line will not be displayed.
Meta Key	Drop-down list of available meta keys to select as a filter.
Count	Drop-down list specifying how many of the top results are displayed.
Module	Drop-down list specifying which module results will be pulled from.
Value	Drop-down list specifying what information will be displayed when the mouse is hovering over a result (for example, Average Score).

Score Wheel

The Score Wheel offers a view of events as concentric rings with colors representing scores for events based on Indicators of Compromise and the scoring module. You can arrange the position of the rings using the Up and Down arrows to obtain a view that highlights events that were detected by one scoring module (red) and not detected by other scoring modules.



The following table describes the features of the Score Wheel dashlet.

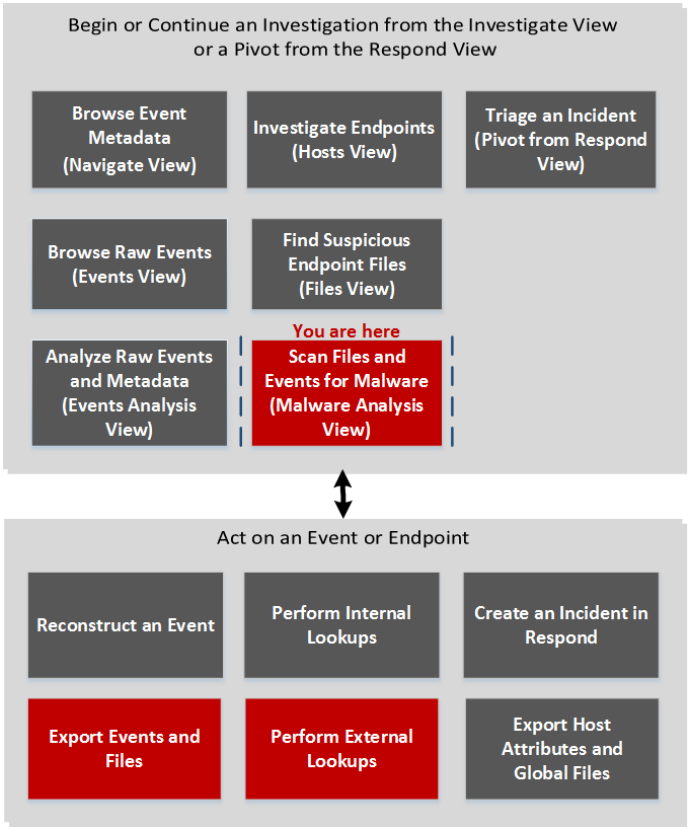
Feature	Description
High Confidence Only	Indicates whether or not the results are restricted to events flagged as high confidence or not. If the results are not restricted, this line will not be displayed.
Module Order grid	Displays the order of the rings in Score Wheel, Ring 1 being the innermost ring and Ring 4 being the outermost ring. You can click the **Up** and **Down** buttons to reorder the modules, then click **Update** to apply the changes.

Event Timeline

The Event Timeline offers a view of events organized by the time of occurrence in a bar graph. Clicking and dragging to select a time range within the chart zooms in on the selected time.

The following table describes the features of the Event Timeline dashlet.

Feature	Description
High Confidence Only	Indicates whether or not the results are restricted to events flagged as high confidence or not. If the results are not restricted, this line will not be displayed.
View Events	Displays the Investigate > Events view.



Malware Analysis Events List and Files List

The Malware Analysis Events List and Files List provide a detailed view of events or files. You can double-click on an event or file in either of the lists to display the Analysis Results view in a new browser tab.

To access this view, go to **Investigate > Malware Analysis** > **Select a Malware Analysis Service** dialog. Select a service from the left panel, then select a job from the right panel, and click **View Scan**. In the Summary of Events view do one of the following:

- In either the **Total** panel or the **High Confidence** panel, click the number in the **Events Created** section.
- If you want to view the Files List, click the number in the **Files Processed** section.

Quick Look

This is an example of the Events List view.

This is an example of the Files List view.

These are the features in the Events List toolbar, and the Files List toolbar is the same, except it has no option to delete events.

Feature	Description
Back to Summary	Returns to the Summary of Events view.
Delete Events	Removes the selected events from the current events list.
Download Files	Displays the Malware File Download dialog, which allows you to download available files.

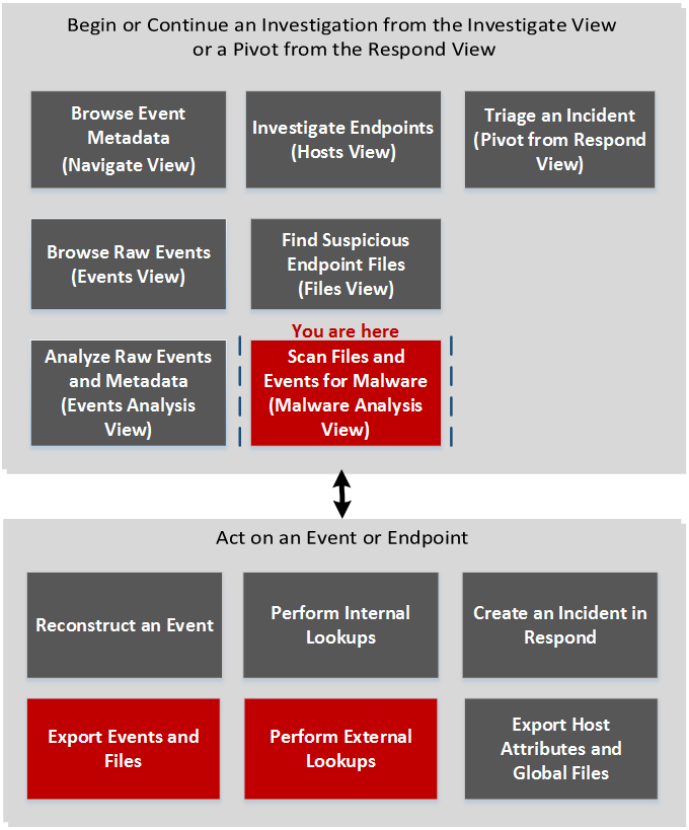
Feature	Description
Choose ...	Displays a drop-down menu from which you can decide how to sort the list. These are the options for sorting: • High Confidence • Static • Network • Community • Sandbox • AV • File Name • File Type • Hash • Date Archived • Size The button directly to the right of this drop-down indicates whether the list will be sorted by ascending or descending values.
Choose ...	Displays a drop-down menu from which you can select a secondary sorting order. This menu includes an option forNetWitness**None**, so selecting a secondary sorting order is not necessary.
Filter	Displays a drop-down window in which you can filter the list by filename or MD5 Hash.

These are the features in the Events List.

Feature	Description
	Indicates whether the event is influenced by the high confidence flag.
Static, Network, Community, Sandbox	Displays the scores for each scoring module.
AV	Indicates whether the AV flagged this event as suspicious.
	Indicates whether the event is influenced by a customized rule.
Date Archived	Displays the date and time the event was archived.
Session Time	Displays the time of the event's session.
	Indicates whether the hash value is marked as trusted.
# Files	Displays the number of files included in the event.

Feature	Description
Source Address	Displays the address of the event source.
Identity	Displays the identity of the event source.
Destination Address	Displays the address of the event destination.
Destination Country	Displays the country of the event destination.
Alias Host	Displays the hostname of the alias.
Event Type	Displays the type of event. For example, Manual Upload.
Service	Displays the service on which the event occurred.
Destination Organization	Displays the organization of the destination.

These are the features in the Files List grid.



Feature	Description
	Indicates whether the event is influenced by high confidence flag.
Static, Network, Community, Sandbox	Displays the scores for each scoring module.
AV	Indicates whether the AV flagged this event as suspicious.
File Name	Displays the name of the file.
File Type	Displays the type of the file (for example, PDF or x86 PE)
MD5 Hash	Displays the MD5 hash.
Source Address	Displays the address of the file source.
Destination Address	Displays the address of the file destination.
Date Archived	Displays the date and time the file was archived.
Size	Indicates the size of the file.

Scan For Malware Dialog

In the Scan for Malware dialog, Malware Analysis analysts can upload files to investigate in Malware Analysis.

To access this dialog go to the **Malware Analysis** view. In the **Select a Malware Analysis Service** dialog, select a service in the left panel, then click Scan Files in the right panel.

Workflow

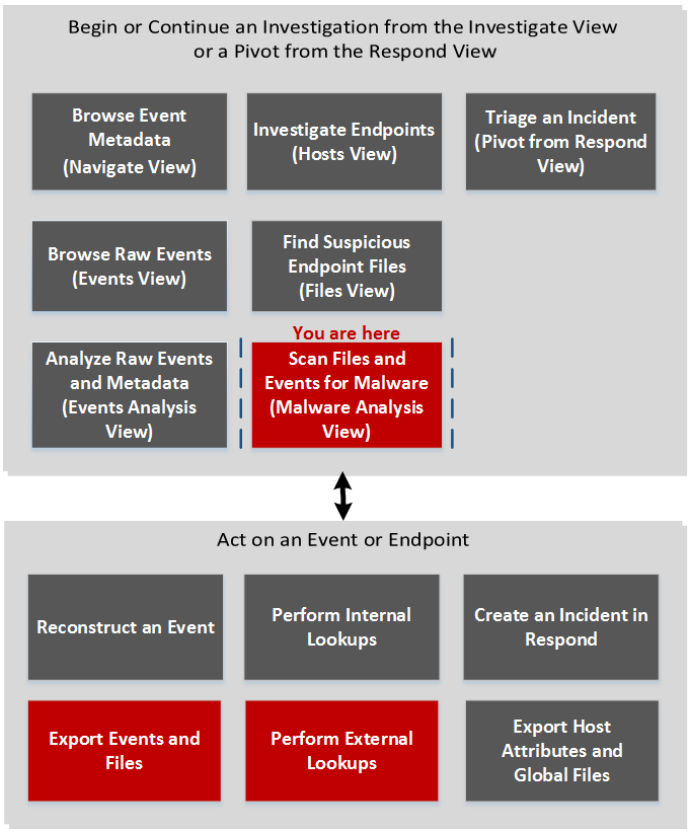
Quick Look

The figure below illustrates the Scan for Malware dialog, and The following table describes the features available in the dialog.



Feature	Description
+	Uploads a file from your computer.
−	Deletes a file from the list.
File Name	Displays the names of the files added to the list.
Name	Allows you to name the scan job.

Feature	Description
Community	Displays options for Community to bypass or ignore certain types of files: • Bypass Executable • Bypass Office • Bypass PDF
Sandbox	Displays options for Sandbox to bypass or ignore certain types of files: • Bypass Executable • Bypass Office • Bypass PDF
Cancel	Closes the dialog without performing any actions.
Scan	Scans the uploaded files.

Select a Malware Analysis Service Dialog

The Select a Malware Analysis Service dialog is accessible in the Malware Analysis view. In this dialog, Malware Analysis analysts can select a service to investigate, choose a scan on that service to investigate, upload a file to scan, and begin a continuous scan of the service.

Workflow

Quick Look

The Select a Malware Analysis Service dialog has a Malware Services panel on the left and a Scan Jobs List on the right. The Scan Jobs List panel has a toolbar, list, and buttons to view scans.

The Malware Services panel is a list of services available for malware analysis. In this panel, you can select the service to investigate and you set a default service using the Default Service icon. When you select a service, the available scan jobs for that service are listed in the Scan Jobs list.

These are the features in the Scan Jobs List toolbar.

Feature	Description
Scan Files	Displays the Scan for Malware dialog, in which you can upload a file to the service for scanning.

Feature	Description
Delete scan job ( )	Deletes one or more selected scan jobs, NetWitness displays a confirmation dialog before deleting scan jobs.
Cancel scan job ( )	Pauses or continues one or more scan jobs.
Refresh ( )	Refreshes the list of scan jobs.

These are the columns in the Scan Jobs list. This list is also available in the Malware Scan Jobs dashlet.

Feature	Description
Name	Displays the name of the job.
Static, Network, Community, Sandbox	Filters the results based on the scores for each scoring module.
Progress	Displays the current progress made on the job. • Green: The job is finished. • Black: The job is in progress. • Red: An error occurred.
Info	Provides additional information. Displays the query for the job. If the job is not complete, it also displays more detailed description of the status.
User	Displays the name of the user who created the job.
Events	Counts the number of events for the job.
Dropped	Counts the number of files or events in the job that were dropped because the scores are below their configured threshold.
Event Type	Displays the type of job: Manual Upload, On Demand, or Resubmit.
Scheduled	Displays the date and time when the job was executed.

These are the available actions in the dialog.

Feature	Description
Cancel button	Cancels the selected scan job.
View Scan button	Displays the Summary of Events for the selected scan with the default dashlets displayed.
View Continuous Mode button	Displays the Summary of Events for the selected scan with the default dashlets displayed.

Access NwConsole and Help

NetWitness Console, also known as NwConsole, is a multi-platform terminal application that provides powerful tools and command line access to Core services, such as Decoder, Log Decoder, Concentrator, Broker, and Archiver. While most users complete their tasks and investigations through the NetWitness user interface, some advanced users, such as administrators and developers, require direct access to the services without going through the user interface. NwConsole enables you to enter commands from the command line or run multiple commands from a file.

This topic describes how to access NwConsole and view the internal help within NwConsole.

Extensive help information is available within the NetWitness console, also known as NwConsole. You can access this help from the NetWitness command line.

Prerequisites

All NetWitness appliances have the NwConsole application installed. You can also install it on Windows, Mac, and CentOS to connect and interact with a Core service.

NwConsole is available from the command line on a NetWitness appliance. If you are accessing a Core appliance remotely, you need to have the NetWitness Console application installed on a Windows, Mac, or CentOS machine. To obtain the NetWitness Console application installer, contact NetWitness Customer Care.

Access NwConsole

To run NwConsole from the command line on a NetWitness appliance or on a terminal emulator, at the <$> prompt, type `NwConsole` (Linux) or `nwconsole` (Windows). The actual command is `NwConsole`, but Windows is not case sensitive. NetWitness Console is displayed as shown in the following example.

```
Last login: Thu Sep 24 14:00:42 on console
usxx<username>m1:~ <username>$ NwConsole
RSA NetWitness Platform Console 11.2.0.0.6105
Copyright 2001-2020, RSA Security Inc. All Rights Reserved.

Type "help" for a list of commands or "man" for a list of manual
pages.
>
```

View Help

NwConsole provides help on individual commands as well as help on specific topics.

Caution: To get the latest information, view the command and help topics within NwConsole.

View a List of Commands

To view a list of available commands and their descriptions, at the (>) prompt, type `help`. The following example shows a list of available commands.

```
> help
Local commands:
    avro2nwd      - Convert AVRO files to NWD files
    avrodump      - Display schema and contents of AVRO file (for debugging)
    blockspeed    - Tests various write block sizes to determine best setting
    compileflex   - Compile all flex parsers in a directory
    createflex    - Create a flex parser that matches tokens read from a file
    dbcheck       - Perform a database integrity check over one or more
                    session, meta, packet, log or stat db files
    diskspeed     - Measures the speed of the disk(s) mounted at a specified
                    directory
    echo          - Echos the passed in text to the terminal
    encryptparser - Encrypt all parsers in a directory
    feed          - Create and work with feed files
    fmanip        - Manipulate a file with XOR and check for embedded PEs
    hash          - Creates or verifies hashes of database files
    help          - Provides help information for recognized console commands
    history       - Displays, erases or executes a command in the command
                    history
    httpAggStats  - Tests HTTP aggregation and reports statistics as it
                    continues
    log           - Perform operations on a log database
    logParse      - Parse line delimited logs on stdin and post results to
                    stdout
    logfake       - Create a fake log pcap file
    lua           - Execute a lua script
    makec3        - Generate C3 Test Data
    makepcap      - Convert packet database files to pcap or log files
    man           - Displays a list of topics or opens a specific manual page
                    on a topic
    metaspeed     - Tests read performance over an existing meta db
    netbytes      - Display statistics on network interface utilization
    nwdstrip      - Convert full NWD file into just session and meta file
    pause         - Wait for user input when running a script file
    reindex       - reindex a collection
```

```
    sdk             - Execute SDK commands based on the C SDK library, type "sdk
                      help" for more information
    sleep           - Sleeps for the specified milliseconds
    timeout         - Globally change the timeout for waiting for a response from
                      a service
    tlogin          - Open a trusted SSL connection to an existing service
    topQuery        - Returns the top N longest running queries from the audit
                      log (either a file or from the log API)
    vslice          - Validate index slices

Remote commands (executed on the connected service, see "login"):
    login           - Connect to a remote service.  Once connected, type help to
                      see commands available for remote execution.

For detailed help, type "help <command>"
>
```

View Detailed Help on a Command

To view detailed information about a command, type `help <command>`. The following example shows help for the `logParse` command after typing `help logParse`.

```
For detailed help, type "help <command>"
> help logParse
Usage: logParse {in=<pathname>} {indir=<pathname>} [out=<pathname>]
                [content=<c2|c3>] [device=<device,[device...]>]
                [path=<log-parsers-config-path>] [metaonly] [srcaddr=<src
                address>] [srcaddrfile=<filename,IP Address>]
Parse line delimited logs on stdin and post results to stdout

    in          - The input source file. "in=stdin" means interactive typing of
                  log.
    indir       - The input source files parent directory
    out         - The output file or output file parent directory if input is
                  set by indir. If not specified, use stdout as output.
    content     - Content version, either c2 or c3. Default is c2.
    device      - Comma delimited device list specifying devices that is
                  enabled. Default enable all devices.
    path        - The logparsers configuration path. Default will find
                  configuration file like logdecoder.
    metaonly    - The output will only contains parsed meta, otherwise will
```

```
                print log message after metas.
    srcaddr     - The source address of the all the logs
    srcaddrfile - The source address for logs in one input file, in the format
                filename,ipaddress
>
```

View a List of Help Topics

To view a list of help topics, type `man`. The following example shows a list of help topics.

```
> man
List of topics:

    Introduction
    Connecting to a Service
    Monitoring Stats
    Feeds
    Converting Packet DB Files to PCAP
    Packets
    Verifying Database Hashes
    SDK Content
    SDK Content Examples
    Troubleshooting

Type "man <topic>" for help on a specific topic, partial matches are acceptable
>
```

View a Specific Help Topic

To view help about a specific topic, type `man <topic>`. The following example shows the Packets help topic after typing `man Packets`.

```
Type "man <topic>" for help on a specific topic, partial matches are acceptable
> man Packets
                                    Packets
                                    =======

The *packets* command can be used to generate a pcap or log file based on a
list of Session IDs, a time period or a where clause.  The command is quite
flexible and can be used on any running service that has access to the raw
data from a downstream component.  Before running the command, you must first
```

```
*login* to a service and then change directory to the appropriate sdk node,
(e.g., "cd /sdk").  Unlike the *makepcap* command, which only works on the
local file system, this command is meant to be used on a remote service.

    login ...
    cd /sdk
    packets where="service=80 && time='2018-03-01 15:00:00'-'2018-03-01
    15:10:00'" pathname="/tmp/march-1.pcap"
Write 10 minutes of HTTP only packets from March 1st, to the file
/tmp/march-1.pcap.  All times are in UTC.

    packets time1="2018-04-01 12:30:00" time2="2018-04-01 12:35:00"
    pathname=/media/sdd1/packets.pcap.gz
Write all packets between the two times to a gzip compressed file at
/media/sdd1/packets.pcap.gz

    packets time1="2018-04-01 12:30:00" time2="2018-04-01 12:35:00"
    pathname=/media/sdd1/mylogs.log
Write all logs between the two times to a plaintext file at
/media/sdd1/mylogs.log.  Any pathname ending with .log indicates that the
format of the output file should be plaintext line-delimited logs.
>
```

Caution: To get the latest information, view the command and help topics within NwConsole.

Quit NwConsole

To exit the NwConsole application, type `quit` at the command line.

Basic Command Line Parameters and Editing

NwConsole is like a Swiss army knife; it contains many tools buried underneath its command line interface. NwConsole is multi-platform. Executables are available for CentOS (which ships on appliances), Windows, and Mac. NwConsole is included on all hosts.

Basic Command Line Parameters

Here are some basic command line parameters:

- `-f` To run a set of commands from a file, use the `-f` attribute as shown here:
  `NwConsole -f /tmp/<somefile.script>`
- `-e` You can use the `-e` attribute (which is similar to the -f attribute) to run a set of commands from a file and allow environment variable substitution within the file using `$ENV_VAR` syntax, as shown here:
  `NwConsole -e /tmp/<somefile.script>`
  Use `\$` to escape a dollar sign and `\\` to escape a backslash.
- `-c` To pass in a list of commands from the command line, use the `-c` attribute as shown here:

  `NwConsole -c <command1> -c <command2> -c <command3>`

  This is not recommended except for very simple scripts. The Bash interpreter can jumble quoted strings if you do not escape properly. If you have non-obvious errors passing through the command line, switch to reading from a file to see if that fixes the issues.
- `-i` Normally, the NwConsole exits after running commands passed by a file or command line. If you want to keep the interactive prompt open after the commands are executed, include `-i` in the command line.
- `-q` To suppress command information messages and only see command output, use `-q` for Quiet mode. This makes it easy to pipe command output (`stdout`) to other commands.

  You can also run NwConsole and type the commands in the console window.

When you use the `-c` option, you can use additional quotes and escape quotes to include embedded spaces for the `where` clause. For example:

```
where="\"tcp.dstport=443 && time='2020-09-07 17:25:00'-'2020-09-08
05:24:59'\""
```

The following example shows how to use the `-c` option for pcap extraction.

```
[root@nwadmin1 ~]# NwConsole -c login 127.0.0.1:56003:ssl <user> <passowrd> -
c cd sdk -c packets
where="\"tcp.dstport=443 && time='2020-09-07 17:25:00'-'2020-09-08
05:24:59'\""
pathname="/var/netwitness/ny_sdwan_tcp_443_20200930.pcap"
RSA NetWitness NextGen Console 11.3.1.0
```

```
Copyright 2001-2020, RSA Security Inc. All Rights Reserved.

>login ...
Successfully logged in to 127.0.0.1:56003 as session 168886
>cd sdk
[127.0.0.1:56003] /sdk
>packets where="tcp.dstport=443 && time='2020-09-07 17:25:00'-'2020-09-08
05:24:59'"
pathname=/var/netwitness/ny_sdwan_tcp_443_20200930.pcap
Writing packets to /var/netwitness/ny_sdwan_tcp_443_20200930.pcap (100%)
```

Line Editing

You can use the keys in the following table when editing a command.

Key	Descripton
Ctrl-U	Clears the current line
Ctrl-W	Deletes the word that the cursor is on
Ctrl-A	Moves the cursor to the beginning of the line
Ctrl-E	Moves the cursor to the end of the line
Ctrl-F	Moves the cursor forward to the next word
Ctrl-B	Moves the cursor backwards to the previous word
Up arrow	Displays the previously executed command
Down arrow	Displays the command executed after the current command (only valid if the up arrow has been pressed)
Left arrow	Moves the cursor to the previous character
Right arrow	Moves the cursor to the next character
Tab	Provides context sensitive completion of most commands and their parameters. The Tab key is very helpful for editing. For example, to view the *Connecting to a Service* help topic, at the command line, you can type `man con` and then press the `Tab` key. NwConsole completes the command for you: `man Connecting to a Service` Press **Enter** to run the command and view the topic.
`history`	Displays a numbered list of previous commands
`history execute=#`	Executes a previous command, which is also equivalent to typing `!#` For example, `!1` executes the previous command.
`history clear`	Clears all command history
`history erase=#`	Erases a specific command from the history buffer. History is automatically stored from one session to the next.

Connecting to a Service

To connect and interact with a NetWitness Core service (Decoder, Concentrator, Broker, Archiver, and so on), you must first issue the `login` command. You must have an account on that service. You can type `help login` at any time for more information. Here is the syntax of the `login` command:

`login <hostname>:<port>[:ssl] <username> [password]`

For example: `login 10.10.1.15:56005:ssl someuser`

If you do not include the password, the NwConsole prompts you.

If you have set up proper trust between NwConsole and the endpoint, you can use the `tlogin` command and avoid having to enter a password. Setting up trust is beyond the scope of this documentation, but it involves adding NwConsole's SSL cert to the endpoint with the `send /sys peerCert op=add --file-data=<pathname of cert>` command. You must first use a normal login with the proper permissions before you can add a peer cert for subsequent trusted logins.

Once connected, you can interact with the endpoint service through a virtual file system. Instead of files, what you are looking at are the nodes of that service. Some nodes are folders and have child nodes, forming a hierarchical structure. Each node serves a purpose and all of them support a subset of commands like `info` and `help`. The `help` message returns information about the commands that each node supports. When you first log on, you are on the root node, which is the path `/`, just like a Linux or Mac system. To see a list of nodes under `/`, type the `ls` command.

All services have nodes like `sys` and `logs`. To interact with the **/logs** API, you can first send the `help` command to the **/logs** node. To do this, you must use the `send` message, which has this syntax:

```
Usage: send {node pathname} {message name} [name=value [name=value]]
            [--file-data=<pathname>] [--string-data=<text>] [--binary-data=<text>]
            [--file-format={binary,params,params-list,string,params-binary}]
            [--output-pathname=<pathname>] [--output-append-pathname=<pathname>]
            [--output-format={text,json,xml,html}]
Sends a command to a remote pathname.  For remote help, use "send <pathname>help" for
details.
    pathname                - The node pathname to retrieve information on
    message                 - The command (message) to send
    parameters              - Zero or more name=value parameters for the command
    --file-data             - Loads data from a file and send as either a BINARY
                              message or as a PARAMS_BINARY message if other
                              parameters exist. Providing the --file-format parameter
will
                              override automatic detection.
   --file format            - Treat file input as the provided format
  --string-data            - Sends text as a STRING message type
   --binary-data            - Send text as either a BINARY message type or as a
                              PARAMS_BINARY message type if other parameters
                              exist
    --output-pathname       - Writes the response output to the given pathname,
```

```
                              overwriting any existing file
  --output-append-pathname - Writes the response output to the given pathname,
                              will append output to an existing file
  --output-format          - Writes the response in one of the given formats,
                              the default is text
```

Parameters are formatted in `<name>=<value>` pairs, with whitespace between each pair. If a `<value>` has whitespace, you should place each value in double quotes. If the value itself should have double quotes, you can escape them by preceding with a backslash. For example: `send /sdk query query="select * where time=\"12-31-2019 14:30:00\"-u" size=100`

You must also escape backslashes; a double backslash is treated as a single backslash. It is also possible to pass special characters by giving their hex value using `\x##`. For example, `\x0a` would pass a line feed in the parameter value.

To send a `help` message, you would send this:

```
send /logs help
```

And your response would look something like this:

```
description: A container node for other node types
  security.roles: everyone,logs.manage
  message.list: The list of supported messages for this node
  ls:  [depth:<uint32>] [options:<string>] [exclude:<string>]
  mon:  [depth:<uint32>] [options:<uint32>]
  pull:  [id1:<uint64>] [id2:<uint64>] [count:<uint32>] [timeFormat:<string>]
  info:
  help:  [msg:<string>] [op:<string>] [format:<string>]
  count:
  stopMon:
  download:  [id1:<uint64>] [id2:<uint64>] [time1:<date-time>] [time2:<date-time>]
    op:<string> [logTypes:<string>] [match:<string>] [regex:<string>]
    [timeFormat:<string>] [batchSize:<uint32>]
  timeRoll:  [timeCalc:<string>] [minutes:<uint32>] [hours:<uint32>] [days:<uint32>]
    [date:<string>]
```

To get more information about a specific message or command, you can specify the `msg=<message name>` on the help command as a parameter. For example, look at the `pull` message help:

```
send /logs help msg=pull
```

```
 pull: Downloads N log entries
  security.roles: logs.manage
  parameters:
  id1 - <uint64, optional> The first log id number to retrieve, this is
     mutually exclusive with id2
  id2 - <uint64, optional> The last log id number that will be sent, defaults to
```

```
       most recent log message when id1 or id2 is not sent
    count - <uint32, optional, {range:1 to 10000}> The number of logs to pull
    timeFormat - <string, optional, {enum-one:posix|simple}> The time format used in
each
       log message, default is posix time (seconds since 1970)
```

The built-in message help says that this command grabs the last N log entries if you omit ID1 and ID2. To look at the last 10 log entries:

```
send /logs pull count=10 timeFormat=simple
```

Almost all of the commands on the service follow this simple format. The only commands that do not are the ones that require more complicated handshaking, like importing a PCAP to a Decoder. To import a PCAP, use the NwConsole `import` command, which takes care of the complicated communication channel handshaking.

Some parameters are specific to NwConsole's `send` command and are not actually sent to the service. You can use these parameters to change the output format of the response, write the response to a file, or read a file from the local machine and send it to the service. The local parameters to NwConsole's `send` command all start with two dashes --.

- `--output-format` — This parameter changes the normal output of the command from plain text to one of these types: JSON, XML, or HTML. The format `values` is a text output that only writes values (query output, stat/config values, and so on) without any other decorations.
- `--output-pathname` — Instead of writing the output to the terminal, the output is written to the specified pathname (truncates any existing file).
- `--output-append-pathname` — This is the same as `--output-pathname` except that it appends the output to an existing file (or creates the file if it does not exist).
- `--file-data` — Reads in a file and uses it as the command payload. This is useful for commands like `/sys fileEdit`. The following example shows how you can send an updated **index-concentrator-custom.xml** file using NwConsole:

  ```
  send /sys fileEdit op=put filename=index-concentrator-
  custom.xml --file-data="/Users/user/Documents/index-
  concentrator-custom.xml"
  ```

- `--file-format` — When reading an input file with `--file-data`, this parameter forces NwConsole to interpret the file as a specific type of input. The allowed enumerations are: `binary`, `params`, `params-list`, `string` and `params-binary`. As an example, to send a file of application rules (`*.nwr`) to a Decoder, you can use this command:

  ```
  send /decoder/config/rules/application replace --file-
  data=/path/rules.nwr --file-format=params-list
  ```

- `--string-data` — Sends the command payload as a string instead of a list of parameters.
- `--binary-data` — Sends the command payload as binary instead of a list of parameters.

Example Streaming Query to JSON file (could be a large result set):

```
send /sdk query size=0 query="select * where service=80 && time='2018-
03-05 13:00:00'-'2018-03-05 13:59:59'" --output-format=json --output-
pathname=/tmp/query.json
```

One thing to note about the `send` command is the fact that, by default, there is a timeout of 30 seconds waiting for a response. Some commands (like the query above) may take longer to receive results. To avoid a premature client-side timeout, you can use the `timeout [secs]` command to increase the wait. For instance, `timeout 600` would wait 10 minutes for a response before timing out. Once enacted, it takes effect for all subsequent commands.

To navigate around the virtual node hierarchy of the service, you can use the `cd` command like you would on any command shell. This covers the basics of connecting and interacting with a service. Once you are connected, the `help` command lists all the commands that you can use to interact with the endpoint. These commands do not display when you are not connected to an endpoint.

Monitoring Stats

You can use NwConsole to watch statistics (stats) change on a service in real time. However, be warned that this can result in a LOT of output. If you are not careful and monitor too many nodes, the screen scrolls by too quickly to be useful.

As a simple example, if you log on to a Decoder, you can monitor the capture rate in real time. To do this, issue these commands after connecting to a Decoder:

```
cd /decoder/stats
```

```
mon capture.rate
```

That is all you need to do! Now, any time the capture rate changes, it outputs into the console window.

You can add another monitor:

```
mon capture.avg.size
```

Now it watches those two stats and outputs those values when they change. You may have noticed that as you tried to type the second command, the output from the original monitor was messing up your display. This is the problem with monitoring stats. It is not really meant for doing more than just watching the stats after the first command is entered.

However, you can stop the monitoring by typing `delmons` and pressing **Enter**. Just ignore the output while you type and it returns you to a proper command prompt. If you want to monitor many stats at once, you can give the path of the parent stat folder and it monitors all of the stats underneath it. For example, typing `mon /decoder/stats` or `mon .` (they are equivalent) monitors everything. Be prepared for a lot of output! Remember to enter `delmons` if it is scrolling too fast.

Useful Commands

The following NwConsole commands are useful when interacting with NetWitness Core services:

- **feed**: Enables you to create and work with feed files.
- **makepcap**: Converts Packet database (DB) files to PCAP.
- **packets**: Retrieves packets or logs from the logged in service.
- **hash**: Creates or verifies hashes of database files.

The following sections as well as the NwConsole help and topic information (man) pages, provide additional information.

Feeds

The `feed` command provides several utilities for creating and examining feed files. A feed file contains the definition and data of a single feed in a format that has been precompiled for efficient loading by a Decoder or Log Decoder. For a complete reference on feed definitions, see the "Feed Definitions File" topic in the *Decoder Configuration Guide*. Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

create

```
feed create <definitionfile> [-x <password>]
```

The `feed create` command generates feed files for each feed defined in a feed definition file. A definition file is an XML document that contains one or more definitions. Each feed definition specifies a data file and the structure of that data file. The resulting feed files will be created in the same directory as the definition file with the same name as the data file, but with the extension changed to **.feed** (for example, **datafile.csv** results in **datafile.feed**). Any existing files with the target name will be overwritten without a prompt.

```
$ ls
 example-definition.xml    example-data.csv
 $ NwConsole
 RSA NetWitness Console 11.3.0.0.0
 Copyright 2001-2020, RSA Security Inc.  All Rights Reserved.

 Type "help" for a list of commands or "man" for a list of manual pages.
 > feed create example-definition.xml
 Creating feed Example Feed...
 done.  2 entries, 0 invalid records
 All feeds complete.
 > quit
 $ ls
 example-definition.xml    example-data.feed    example-data.csv
 $
```

Optionally, feed files can be obfuscated using the option `-x` followed by a password of at least 16 characters (no spaces). This will be applied to all feeds defined in the definition file. In addition to the feed file, a token file will be generated for each feed file. The token file must be deployed with the corresponding feed file.

```
feed create example-definition.xml -x 0123456789abcdef
```

stats

```
feed stats <feedfile>
```

The `feed stats` command provides summary information for an existing, un-obfuscated feed file. Specifying an obfuscated feed file will result in an error.

```
> feed stats example.feed
 Example Feed stats:
 version  : 0
 keys count  : 1
 values count: 2
 record count: 2
 meta key  : ip.src/ip.dst
 language keys:
    alert    Text
```

dump

```
feed dump <feedfile> <outfile>
```

The `feed dump` command generates a normalized, key-value pair listing of an un-obfuscated feed file. You can use the resulting file to validate a feed file or assist in determining which records were considered invalid when the feed was created. Specifying an obfuscated feed file will result in an error. If `outfile` exists, the command will abort without overwriting the existing file.

```
feed dump example.feed example-dump.txt
```

Converting Packet DB Files to PCAP

You can use the `makepcap` command to quickly convert any Packet DB file to a generic PCAP file, preserving the capture time order. This command offers many options (see `help makepcap`), but is easy to use. All it really needs is the Packet DB directory (with the `source=<pathname>` parameter) to get started.

Note: You must stop the Decoder or Archiver service before running this command. If you want to generate a PCAP while the service is running, see the `packets` command.

- `makepcap source=/var/lib/netwitness/decoder/packetdb`
  This command converts every Packet DB file into a corresponding PCAP file in the same directory. If the disk is almost full, see the next command.

- `makepcap source=/var/lib/netwitness/decoder/packetdb dest=/media/usb/sde1`
  This command writes all of the output PCAPs to the directory at **/media/usb/sde1**.

- `makepcap source=/var/lib/netwitness/decoder/packetdb dest=/media/usb/sde1 filenum=4-6`
  This command only converts the files numbered 4 through 6 and skips all other files. In other words, it converts the Packet DB files: **packet-000000004.nwpdb**, **packet-000000005.nwpdb**, and **packet-000000006.nwpdb**.

- `makepcap source=/var/lib/netwitness/decoder/packetdb time1="2020-03-01 14:00:00" time2="2020-03-02 07:30:00" fileType=pcapng`
  This command only extracts packets with a timestamp between March 1st, 2020 at 2 PM and March 2nd, 2020 before or on 7:30 AM. It writes the file as `pcapng` in the same directory as the source. All timestamps are UTC.

Packets

You can use the `packets` command to generate a PCAP or log file based on a list of Session IDs, a time period, or a `where` clause. This command is very flexible, and you can use it on any running service that has access to the raw data from a downstream component. Before running the command, you must first `login` to a service and then change directory to the appropriate SDK node (for example, `cd /sdk`). Unlike the `makepcap` command, which only works on the local file system, you use this command for a remote service.

```
login ...
cd /sdk
packets where="service=80 && time='2020-03-01 15:00:00'-'2020-03-01 15:10:00'"
pathname="/tmp/march-1.pcap"
```

This command writes 10 minutes of HTTP-only packets from March 1st to the file **/tmp/march-1.pcap**. All times are in UTC.

- `packets time1="2020-04-01 12:30:00" time2="2020-04-01 12:35:00" pathname=/media/sdd1/packets.pcap.gz`
  This command writes all packets between the two times to a GZIP compressed file at **/media/sdd1/packets.pcap.gz**.

- `packets time1="2020-04-01 12:30:00" time2="2020-04-01 12:35:00" pathname=/media/sdd1/mylogs.log`
  This command writes all logs between the two times to a plaintext file at **/media/sdd1/mylogs.log**. Any pathname ending with **.log** indicates that the format of the output file should be plaintext line-delimited logs.

Verifying Database Hashes

By default, Archiver writes an XML file for every DB file that is written. This XML file ends with the extension **.hash** and contains a hash of the file along with other pertinent information. You can use the `hash` command to verify that the DB file has not been tampered with by reading the hash stored in the XML file and then rehashing the DB file to verify that the hash is valid. The command does accept wildcards, so something like `/var/netwitness/archiver/database0/default/packetdb/*.hash` will verify all hashes in that directory. You can also use the `--output-pathname` and `--output-format` parameters to write out the verification in json, xml or text formats for scripting purposes. If the DB files are not found in the location that the XML file says it should be in, then the command will attempt to find the DB files in the current directory or the directory where the hash file is found.

```
hash op=verify
hashfile=/var/lib/netwitness/archiver/database0/alldata/packetdb/packe
t-000004880.nwpdb.hash
```

This command verifies that the Packet DB file **packet-000004880.nwpdb** still matches the hash in the XML file **packet-000004880.nwpdb.hash**. For proper security, the hash file should be stored somewhere else to prevent the XML file from being tampered with (such as write-once only media), but the hash command itself is not affected by where it is stored.

SDK Content Command

One of the powerful commands in NwConsole is `sdk content`. It contains numerous options to do just about anything, at least as far as extracting content from the NetWitness Core stack. You can use it to create PCAP files, log files, or extract files out of network sessions (for example, to grab all of the pictures from email sessions). It can append files, have a maximum size assigned before creating a new file, and automatically clean up files when the directory grows too large. It can run queries in the background to find new sessions. It breaks queries into manageable groups and performs those operations automatically. When the group is exhausted, it does a requery to get a new set of data for further operations. The list of options for the SDK content command is very extensive.

Because the command has so many options, this document provides examples of commands for different use cases.

Before you can run `sdk content`, there are a few commands (like logging into a service) that you need to run first. Here are some examples:

- First connect to a service:
  `sdk open nw://admin:netwitness@10.10.25.50:50005`
- If you need to connect over SSL, use the nws protocol:
  `sdk open nws://admin:netwitness@10.10.25.50:56005`
- Keep in mind that you are passing a URL and must URL encode it properly. If the password is `p@ssword`, the URL looks like this:
  `sdk open nw://admin:p%40ssword@10.10.25.50:50005`
  This also applies to username.
- Once you log in, you can set an output directory for the commands: `sdk output <some pathname>`
- For command line help, type: `sdk content`

Before you try the example commands, it is important to understand the `sessions` parameter. This parameter is very important and controls how much or how little data you want to grab (the `where` clause is also important). The sessions parameter is either a single session ID or a range of session IDs. All NetWitness Core services work with session IDs, which start at 1 and increase by 1 for every new session added to the service (network or log session). Session IDs are 64-bit integers, so they can get quite large.

For example, to keep it simple, assume we have a Log Decoder that has ingested and parsed 1000 logs. On the service, you now have 1000 sessions with session IDs from 1 to 1000 (session ID 0 is never valid). If you want to operate over all 1000 sessions, you pass `sessions=1-1000`. If you only want to operate over the last 100 sessions, you pass `sessions=901-1000`. Once the command finishes processing session 1000, it exits back to the console prompt.

Many times, however, we do not care about specific session ranges. We just want to run a query over all of them and process the sessions that match a query. Here are some shortcuts that simplify this:

- The letter `l` (lowercase L) means lower bound or the lowest session ID.
- The letter `u` means the highest session ID. In fact, it actually means the highest session ID for future sessions as well. In other words, if you pass `sessions=l-u`, this special range means operate over all the current sessions in the system, but also do not quit processing, and as new sessions enter the system, process those, too. The command pauses and waits for new sessions once it reaches the last session on the service. To summarize, the command never exits and goes into continuous processing mode. It runs for days, months, or years, unless it is killed.
- If you do not want the command to run forever, you can pass `now` for the upper limit. This determines the last session ID on the service at the time the command starts and processes all sessions until it reaches that session ID. Once it reaches that session ID, the command exits, regardless of how many sessions may have been added to the service since the command started. So, for the example Log Decoder, `sessions=200-now` starts processing at session 200 and goes all the way to session 1000 and quits. Even if another 1000 logs were added to the Log Decoder after the command started, it still exits after processing session 1000.
- The parameter `sessions=now-u` means start at the very last session and continue processing all new sessions that come in. It does not process any existing sessions (except the last one), only new sessions.
- If you want to run this continually and have it remember the last session it processed between invocations, use the `sessionPersist={pathname}` parameter. The pathname should be a valid filename where the command will write the last successful session id. Upon restart, it will read the last session id and pick up where it left off.

For example commands and what they do, type `man sdk content examples` or see SDK Content Command Examples.

SDK Content Command Examples

The first NwConsole SDK content command example below is simple and shows all of the commands that you need to enter. After that, the examples show only the `sdk content` commands. The first example creates a log file and grabs the first 1000 logs out of a Concentrator aggregating from a Log Decoder:

- ```
  sdk open nw://admin:netwitness@myconcentrator.local:50005
  sdk output /tmp
  sdk content sessions=1-1000 render=logs append=mylogs.log
  fileExt=.log
  ```
  This script outputs 1000 logs (assuming sessions 1 through 1000 exist on the service) to the file **/tmp/mylogs.log**. The logs are in a plain text format. The parameter `fileExt=.log` is necessary to indicate to the command that we want to output a log file.

- ```
  sdk content sessions=1-1000 render=logs append=mylogs.log
  fileExt=.log includeHeaders=true separator=","
  ```
  This command grabs the same 1000 logs as above, but it parses the log header and extracts the log timestamp, forwarder, and other information, and puts them in a CSV formatted file.
  Example CSV: `1422401778,10.250.142.64,10.25.50.66,hop04b-LC1,%MSISA-4:81.136.243.248...`
  The timestamp is in Epoch time. The `includeHeaders` and `separator` parameters can only be used on NetWitness installs 10.4.0.2 and later.

- ```
  sdk content sessions=1-now render=logs append=mylogs.log
  fileExt=.log includeHeaders=true separator=","
  where="risk.info='nw35120'"
  ```
  This command writes a log file across the current session range, but only logs that match `risk.info='nw35120'`. Keep in mind that when you add a `where` clause, it performs a query in the background to gather the session IDs for export. The query should be run on a service with the proper fields indexed (which is typically a Broker or Concentrator). In this case, since you are querying the field `risk.info`, double-check the service where you run the command to make sure it is indexed at the value level (`IndexValues`, see **index-concentrator.xml** for examples). By default, most Decoders only have time indexed. If you use any field but time in the `where` clause, you need to move the query from the Decoder to a Concentrator, Broker, or Archiver with the proper index levels for the query. You can find more information on indexing and writing queries in the *NetWitness Core Database Tuning Guide*.

- ```
  sdk content sessions=1-now render=logs append=mylogs.log
  fileExt=.log includeHeaders=true separator=","
  where="threat.category exists && time='2020-01-05 15:00:00'-'2020-01-05 16:00:00'"
  ```
  This command is the same as above, but it only searches for matching logs between 3 PM and 4 PM (UTC) on Jan 5, 2020 that have a meta key `threat.category`. Again, because this query has a field other than time in the `where` clause (`threat.category`), it should be run on a service with

`threat.category` indexed at least at the `IndexKeys` level (the operators `exists` and `!exists` only require an index at the key level, although values work fine, too).

- `sdk content sessions=1-now render=logs append=mylogs fileExt=.log where="event.source begins 'microsoft'" maxFileSize=1gb`
  This command creates multiple log files, each one no larger than 1 GB in size. It prepends the filenames with **mylogs** and appends them with the date-time of the first packet/log timestamp in the file. Some example filenames: **mylogs-1-2020-Jan-28T11_08_14.log**, **mylogs-2-2020-Jan-28T11_40_08.log** and **mylogs-3-2020-Jan-28T12_05_47.log**. On versions older than 10.5, the T separator between date and time is a space.

- `sdk content sessions=1-now render=pcap append=mypackets where="service=80,21 && time='2020-01-28 10:00:00'-'2020-01-28 15:00:00'" splitMinutes=5 fileExt=.pcap`
  This command grabs all the packets between the five-hour time period for service types 80 and 21 and writes a PCAP file. Every five minutes, it starts a new PCAP file.

- `sdk content time1="2020-01-28 14:00:00" time2="2020-01-28 14:15:00" render=pcap append=mydecoder fileExt=.pcap maxFileSize=512mb sessions=1-now`
  Pay attention to this command. Why? It works for both packets and logs and is *extremely fast*. The downside is that you get everything between the two time ranges and you cannot use a `where` clause. Again, it starts streaming everything back almost immediately and does not require a query to run first on the backend. Because everything is read using sequential I/O, it can completely saturate the network link between the server and client. It starts creating files prepended with **mydecoder** and splits to a new file once it reaches 512 MBs in size.

- `sdk tailLogs`
  or (the equivalent command):
  `sdk content render=pcap console=true sessions=now-u`
  This is a fun little command. It actually uses `sdk content` behind the scenes. The purpose of this command is to view all incoming logs on a Log Decoder. As logs come into the Log Decoder (you can also run it on a Broker or Concentrator), they are output on the console screen. It is a great way to see if the Log Decoder is capturing and what exactly is coming into the Log Decoder. This command runs in continuous mode. Do not use it if the Log Decoder is capturing at a high ingest rate (this command cannot keep up with it). However, it is helpful for verification or troubleshooting purposes.

- `sdk tailLogs where="device.id='ciscoasa'" pathname=/mydir/anotherdir/mylogs`
  This command is the same as above, except it only outputs logs that match the `where` clause and instead of outputting to the console, it writes them to a set of log files under `/mydir/anotherdir` that do not grow larger than 1 GB. Obviously, you can accomplish this with the `sdk content` command as well, but this command requires a little less typing if you like the default behavior.

- `sdk content sessions=now-u render=pcap where="service=80" append=web-traffic fileExt=.pcap maxFileSize=2gb maxDirSize=100gb`
  This command starts writing PCAPs of all web traffic from the most recent session and all new incoming sessions that match `service=80`. It writes out PCAPs no larger than 2 GBs and if all the PCAPs in the directory grow larger than 100 GBs, it deletes the oldest PCAPs until the directory is 10% smaller than the maximum size. Keep in mind that the directory size checking is not exact and it only checks every 15 minutes by default. You can adjust the number of minutes between checks by passing `cacheMinutes` as a parameter, but this only works with versions 10.5 and later.

- `sdk content sessions=79000-79999 render=nwd append=content-%1%.nwd metaFormatFilename=did`
  This is a basic backup command. It grabs 1000 sessions and outputs the full content (sessions, meta, packets, or logs) to the NWD (NetWitness Data Format) format. NWD is a special format that can be re-imported to a Packet or Log Decoder without reparsing. So essentially, the original parsed session imports without changes. The timestamp does not change as well, so if it was originally parsed six months ago, the timestamp upon import will be retained as six months ago.

  Note: Do not expect great performance with this command, especially with packets. Gathering the packets for a session involves a lot of random I/O and can drastically slow down the export. Logs do not suffer as much from this problem (only one log per session), but behind the scenes, this command uses the /sdk content API, which is not a performance-minded streaming API like /sdk packets.

  The `metaFormatFilename` parameter is very helpful in this command. If this command is run on a Concentrator with more than one service, the NWD filenames will be created with the `did` meta for each session (the `%1%` in the append parameter is substituted with the value of `did`). Each filename will indicate exactly which Decoder the data came from.

- `sdk content session=1-u where="service=80,139,25,110" render=files cacheMinutes=10 dir=/tmp/content-files maxDirSize=200mb`
  This is another fun little command. It works very similar to our old Visualize product if you pair the output directory with something like Windows Explorer in Icon mode. It extracts files from all web, email, and SMB traffic. This includes all kinds of files, such as images, zip files, videos, PDFs, office documents, text files, executables, and audio files. If it extracts malware, your virus scanner will flag it. Nothing will be executed by the command, so it does not infect the machine (unless you try to execute it yourself). However, it can be useful because if you do find malware, the filename indicates the session ID where it was extracted. You can then query that session ID and see which host the malware possibly infected and take action. You can filter what gets extracted with the parameters `includeFileTypes` or `excludeFileTypes` (see the command help). For example, adding `excludeFileTypes=".exe;.dmg;.msi"` prevents executables and installers from being extracted. This command just runs nonstop extracting files from all existing and any new sessions. After the directory gets littered with more than 200 MBs of files, it automatically starts cleaning up the files every 10 minutes.

  Note: This command only makes sense for packet sessions, not logs.

- `sdk content session=1-now render=files where="time='2015-01-27 12:00:00'-'2015-01-27 13:00:00' && (service=25,110,80)" subdirFileTypes="audio=.wav;.mp3;.aac; video=.wmv;.flv;.mp4;.mpg;.swf; documents=.doc;.xls;.pdf;.txt;.htm;.html images=.png;.gif;.jpg;.jpeg;.bmp;.tif;.tiff archive=.zip;.rar; other=*" renameFileTypes=".download|.octet-stream|.program|.exe;.jpeg|.jpg" maxDirSize=500mb`
  This command extracts files from HTTP and email sessions from a one-hour period and then groups the extracted files into directories specified by the `subdirFileTypes` parameter. For example, any extracted audio file with the extension `.wav`, `.mp3`, or `.aac` will be placed into the subdirectory `audio`, which will be created under the specified output directory. The same goes for all the other groups specified in that parameter. Some files will also be automatically renamed based on their file extension, which is handled by `renameFileTypes`. Any file with an extension `.download`, `.octet-stream` or `.program` will be renamed to `.exe`. Files with the extension `.jpeg` will be renamed `.jpg`. Once the top-level directory exceeds 500 MBs, the oldest files are cleaned. This command stops at the last session at the time the command started.

- `sdk content session=1-u render=111 where="filename exists" maxDirSize=20mb fileHash=md5,sha1,sha256 linkMeta=sessionid,time,did,service_uuid deviceType=filehash logDecoder="<hostname>:<port>[:ssl]" sessionPersist=/tmp/last-session.txt`
  If you want to extract file hashes from network protocols like HTTP, SMB, POP3 and SMTP, this is the command you want to use. Not only will it give you the file hash, but it will send an event to a Log Decoder with this information, which will be processed into a session for querying. For example, use `sdk open` to talk to a Broker or Concentrator that is aggregating from one or more Network Decoders. Set the `where` clause to find sessions of interest that have embedded files in the protocols we support for file extraction (use Live to install Malware Analysis content for example). Next, set up a Log Decoder to receive the file hash information. This information will go into the meta keys `checksum`, `checksum.algo`, `filename`, `filename.size` and `link`. The meta key link is used to indicate the session (with the file that has been hashed) on the device used by `sdk open`. When hashes of interest are discovered on the Log Decoder, the link meta can be used to find the original packet session that contains the file. The parameters `fileHash`, `linkMeta` and `deviceType` can be used to customize how the log is generated that is sent to the Log Decoder. The ports for sending Syslog to a Log Decoder are usually 514 or 6514 (for SSL). You may need to add a `table-map-custom.xml` file on the Log Decoder to properly save the meta keys sent in the file hash log. For the `linkMeta` parameter, `service_uuid` is a special meta key that inserts the UUID of the service the session ID belongs to. This can be used to link back to the original session from the Log Decoder. `sessionPersist` is used to write out our session IDs to pick up where we left off from the last run.

- `sdk search session=1-now where="service=80,25,110" search="keyword='party' sp ci"`
  This command searches all packets and logs (the `sp` parameter) for the keyword `party`. If party is

found anywhere in the packets or logs, it outputs the session ID along with the text it found and the surrounding text for context. The `where` clause indicates that it only searches web and email traffic. The `ci` parameter means that it is a case-insensitive search. You can substitute `regex` for `keyword` and it performs a regex search.

- `sdk search session=1-now search="keyword='checkpoint' sp ci" render=log append=checkpoint-logs.log fileExt=.log`
  This is an interesting command example. It searches all logs (or it could be packets) for the keyword `checkpoint` and if that keyword is seen, it extracts the log to a file **checkpoint-logs.log**. There are all kinds of possibilities with this command. Essentially, when a hit is detected, it hands off the session to the content call. So any parameters you pass to `sdk search` that it does not recognize are just passed along to the content call. This allows the full capabilities of the `sdk content` call, but they only work on those sessions with content search hits.

Commands Used for Troubleshooting

NwConsole provides the following commands that are helpful when troubleshooting NetWitness:

- **whatIsWrong**: Provides a snapshot of a service's configuration, stats, and failure and warning logs for a specified period of time in the past.
- **dbcheck**: Performs consistency checking of database files.
- **topQuery**: Helps pinpoint queries that are taking an excessively long time to run.
- **netbytes**: Troubleshoots the network connections on the current host.
- **netspeed**: Troubleshoots the connection between the host computer running NwConsole and the remote computer connected to it using the `login` command.

The following sections, as well as the NwConsole help and topic information (man) pages, provide additional information.

whatIsWrong

When a service is not working correctly, the reason is usually somewhere in the logs that the service has written. You can use the `whatIsWrong` console command to obtain a snapshot of a service's configuration, stats, and failure and warning logs (with surrounding context logs) for a specified past period of time, which defaults to the previous seven days. You can save the results of running `whatIsWrong` into a specified plain-text file. The output of this command can be a useful starting point to help determine what is currently wrong with a service.

To use the `whatIsWrong` console command, log on to the service to troubleshoot using the `login` command, and run the `whatIsWrong` command.

Note: Use `help whatIsWrong` to see all of the available parameters, including the number of days or hours to look back for events, the pathname to store results, whether or not to append or overwrite the results file, and the delimiter to use for log fields. You can also limit the number of most recent logs used to find context, and you can specify how many context logs per warning or failure log to retrieve.

Whenever you receive a request for logs for a Core service, you should run the `whatIsWrong` command first and use the results collected as a starting point.

dbcheck

The `dbcheck` command is used to perform consistency checking of database files (session, meta, packets, logs, stats, and so on). This might be necessary when a service cannot start because of errors in the consistency of the database files. Normally a service would automatically recover and correct any consistency issues on startup, but there are times when this does not occur. When a service starts (like Decoder), it typically does not read or open most database files in order to start quickly. It assumes most files are in a consistent state and only does a cursory check of the most recently written files. If there are problems, `dbcheck` can perform those consistency checks, but ONLY if the service is not running.

Caution: Do not attempt to run this command while a service is running.

For example, you can check a single file:

```
dbcheck /var/lib/netwitness/decoder/packetdb/packet-000000001.nwpdb
```

You can also use wildcards to check multiple files:

```
dbcheck /var/lib/netwitness/decoder/metadb/meta-00000002*.nwmdb
```

topQuery

The `topQuery` command can help pinpoint queries that are taking an excessively long time to run. This command parses the audit logs of a service and returns the top N longest running queries for the specified time period.

The easiest way to run it is to log on to the service (usually a Broker or Concentrator) and type `topQuery`. The default behavior is to return the top 100 longest running queries for the last seven days.

Type `help topQuery` for the list of parameters. Here are some additional examples with explanations:

- `topQuery hours=12 top=10`
  This command returns the top 10 queries for the last 12 hours.

- `topQuery time1="2020-03-01 00:00:00" time2="2020-03-14 00:00:00"`
  This command returns the top 100 queries between March 1, 2020 and March 14, 2020. Times are in UTC, not local.

- `topQuery input=/var/log/messages output=/tmp/top20.txt top=20 user=sauser1`
  Instead of connecting to a service, it parses the Syslog audit messages for the top 20 queries in the last seven days, but only for queries executed by user sauser1. It writes the top 20 queries to **/tmp/top20.txt** instead of the console screen. The parameter user is a regex, so you can specify multiple usernames by writing something like `user="(sauser1|sauser2)"`.

netbytes

The `netbytes` command is very useful for troubleshooting the network connections on the current host. It displays continuous send and receive statistics for all network interfaces. Once executed, you must press **Ctrl-C** to exit this command, which also exits NwConsole.

netspeed

The `netspeed` command is used to troubleshoot the connection between the host computer running NwConsole and the remote computer connected to it through the `login` command. You must supply the amount of bytes to transfer and it will time the speed of the connection. The netspeed command is very useful for troubleshooting aggregation performance issues that might be network related.

```
login somedecoder:50004 admin ...
netspeed transfer=4g
```

To troubleshoot the connection between a Concentrator and a Decoder, SSH into the Concentrator, run NwConsole, and then log on to the Decoder and run `netspeed`. The output from the command gives you an indication of the maximum network throughput. If it is much less than the standard 1 Gbps interface, it could indicate a network issue.

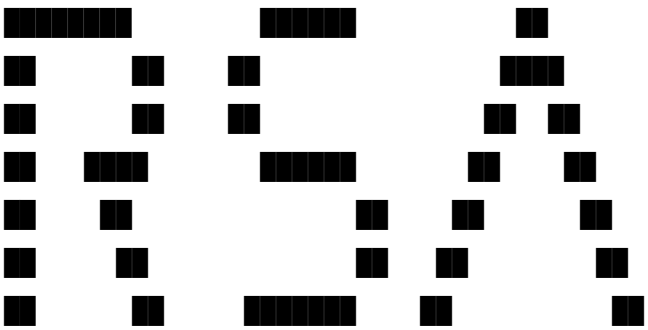
Shell

This guide describes the shell utility `nw-shell` that can be used to troubleshoot the operations of NetWitness management services like `security-server`, `investigate-server`, and `correlation-server`. It is the equivalent of the `NwConsole` utility used to interact with NetWitness capture services like Decoders and Concentrators. The shell utility is independent of the business logic of the service, and works the same with most NetWitness services.

Features



The `nw-shell` utility implements the following features:

- Supports secure connections to the local NetWitness service instances.
- Supports navigation of the service `tree` to explore its operational state (for more information, see Tree View).
- Provides an intuitive display of configuration, metrics, and health-check information to help with troubleshooting.
- Supports scripting to automate simple administration tasks in field deployments.
- Supports Linux, OSX and Windows terminals.

Installation

The `nw-shell` utility can be installed with the `rsa-nw-shell` RPM as shown here:

```
$ sudo yum install rsa-nw-shell
$ /usr/local/bin/nw-shell
```

```
RSA NetWitness Shell. Version: 4.0.0
See  "help" to list available commands, "help connect" to get started.
offline »
```

Usage

The primary goal of `nw-shell` is to help a human operator explore the runtime state of a NetWitness service. It is, essentially, an interactive program that invokes APIs on running NetWitness services. Each NetWitness service includes a system API that exposes its runtime state as a *logical* tree. The shell leverages the Tree API structure to present a hierarchical view of a service that is similar to a file system view. Users can navigate the tree by using the `cd` command to access directories, and can view or modify the corresponding configuration at the location, or invoke API methods and view the current state of components in the node.

The set of commands available to users at a given time depend on the current shell *context*, for example, their placement inside the *logical* tree. Certain commands, however, are always available, and we begin with a description of those commands.

System Commands

Shell *system* commands operate on the shell itself, instead of the nodes of a connected service. These commands are always available.

Command	Function	Example
`help [<command>]`	Provides help on available commands or a particular command.	`help` or `help connect`
`clear`	Clears the screen (shortcut `Ctrl-l`).	`clear`
`exit` or `quit`	Exits the shell.	`quit`
`history`	Displays the history of previously-run commands.	`history`

- Use the `help <command>` to explore the available commands. It is always available.
- `nw-shell` supports tab completion of a command, and the applicable parameter names wherever possible. For example, pressing the **Tab** key after typing **`e`** completes the command to `exit`.
- `nw-shell` also supports a non-interactive mode where it executes scripts from a provided file, used by specifying the absolute filepath prefixed by the `@` argument. See Shell for details.

Available Commands

```
Built-In Commands
        clear: Clear the shell screen.
        exit, quit: Exit the shell.
        help: Display help about available commands.
        history: Display or save the history of previously run commands
```

```
        script: Read and execute commands from a file.
        stacktrace: Display the full stacktrace of the last error.

Context Commands
      * cd: Change the current node. Usage: cd <path>
        connect: Connect to a service. One of --service or --port must be
specified.Usage: connect [--service <service>[.<id>]] [--broker
amqp://localhost/rsa/system] [--host localhost] [--port] [--insecure false]
      * where: Which service shell is connected to?

Token Commands
        login: Authenticate to a service. Usage: login [connect-parameters]
        login-insecure: Authenticate to a service providing user and password
on the command prompt. The password is recorded in the shell history so this
command must be used with care.Usage: login-insecure --user <user> --password
<password> [connect-parameters]
      * logout: Clear the authentication context: logout
      * whoami: Who am I?

Tree Node Commands
      * json: Print the current node as a JSON string
      * show: Pretty print the current node

Tree Node List Commands
      * config: Summarize configuration of the current subtree
      * health: Summarize health of the current subtree
      * ls: List the children of the current node. Usage: ls [<filter>] [--
values] [--types]
      * lsv: Shorthand for ls --values. Usage: lsv [<filter>] [--types]
      * method: Summarize methods of the current subtree
      * metrics: Summarize metrics of the current subtree
      * snapshot: Snapshot the current subtree

Tree Node Method Commands
      * invoke: Invokes the method that exists on the current method type
```

```
node. Usage: invoke [argument] [--file jsonfile]

Tree Node Value Commands
      * get: Get the value of the current node
      * set: Set the value of the current node. Usage: set <new-value>

Commands marked with (*) are currently unavailable.
Type `help <command>` to learn more.
```

Help, History Command Usage

```
offline » help connect
    connect - Connect to a service. One of --service or --port must be
specified. Usage: connect [--service <service>[.<id>]] [--broker
amqp://localhost/rsa/system] [--host localhost] [--port] [--insecure false]
    ...
    ...
offline » history
help
help connect
history
offline »
```

You can navigate previously-typed commands in `nw-shell` by using the Up and Down arrow keys, which can help minimize typing by recalling previously-executed commands.

Authentication Commands

As an administration and monitoring tool, it is important that `nw-shell` authenticates users before handing them control over a running service. The following commands manage the shell authentication context:

Command	Function
`login`	Authenticates and retains tokens for future interactions.
`logout`	Clears the security context and token.
`whoami`	Prints a summary of the current identity.

The `login` command can be used to authenticate the user and establish an identity. Service operators can log in once (against the NetWitness Security Server) and then use the token to connect to multiple services and perform administration based on the roles assigned. This single-sign-on workflow is simplified by separating the `login` and `connect` commands to allow the operator to authenticate once (using `login`) and then switch services seamlessly using `connect`.

In general, the `login` command takes the same parameters as `connect` (described below) to specify the service that performs the credential validation. For example:

```
offline » login
user: admin
password: ********
admin@offline » connect --service respond-server
INFO: Connected to respond-server (23e1dab7-0658-41a5-bb1e-d716a37d5ea5)
admin@respond-server:Folder:/rsa »
admin@respond-server:Folder:/rsa » connect --service investigate-server
INFO: Connected to investigate-server 2f21db20-4b50-48cf-8f7f-c0be0d1d1d12)
admin@investigate-server:Folder:/rsa »
```

The current logged-in identity can be confirmed at any point using the `whoami` command. For example:

```
admin@offline » whoami
```

Subject	admin
Issued By	security-server-ebeb90da-761b-4f14-b9ec-30410499d2b8
Issued At	2018-10-04T17:22:52.041Z
Expires After	2018-10-05T05:22:52.041Z
Roles	[ebeb90da-761b-4f14-b9ec-30410499d2b8]

The shell security context can be cleared by using the `logout` command.

```
security-server:Folder:/rsa » logout
security-server:Folder:/rsa » whoami
You are not logged in.
```

Some operations, such as setting certain configuration properties or invoking a method, require a certain RBAC. To perform such privileged operations, you need to authenticate with an identity that has the necessary permissions. For example:

```
security-server:Configuration » /rsa/logging/operations/max-file-count » get
10
security-server:Configuration:/rsa/logging/operations/max-file-count » set 15
ERROR: Failed to set the node value: Access is denied
security-server:Configuration:/rsa/logging/operations/max-file-count » login
user: admin
```

```
password: **********
admin@security-server:Configuration:/rsa/logging/operations/max-file-count »
set 15
security-server:Configuration:/rsa/logging/operations/max-file-count » get
15
```

Context-Changing Commands

The following commands change the current shell context.

Command	Function	Options	Examples
`connect`	Connect to a service	`servicehost`, `port`, `http`, `broker`	`connect --service security-server.d6a55b48...`
`cd`	Change context to a node		`cd /rsa/security`, `cd ../sys`, `cd ..`, `cd`

Connecting to a Service

The shell can connect to services over AMQP or HTTP(S), however, AMQP is the preferred and default option.

To connect to a specific instance of a service, `name` and `serviceId` needs to be supplied in the format:
`connect --service {service-name}.{serivceId}`
For example, `foo-server.d6a55b48-6103-46bd-9ead-3b4d589b302b`.

If the service identifier is skipped, it is assumed to be `any`, for example, `connect --service foo-server` will connect with any service named `foo-server` that is connected to the AMQP broker.

Change Node

The `cd` command can be used to change the current node. Just like `cd` on a file system shell, it takes relative or absolute paths as input and changes the current context to the node at that path.

```
offline » cd
Command 'cd' was found but is not currently available because you are not
connected to any service.

offline » connect
```

```
security-server:Folder:/rsa » cd log
security-server:Folder:/rsa/logging » cd ../security
security-server:Component:/rsa/security » cd /rsa/security/fips-mode
security-server:Configuration:/rsa/security/fips-mode » cd
security-server:Folder:/rsa »
```

The shell prompt summarizes and presents the user's current context. It starts off with `offline`, and once the shell is connected to a service, it displays the service name it is connected to, and the type and the path of the current node. Once the user is authenticated, the userId is included in the prompt.

Invoking `cd` before connecting to a service reminds the user that some commands work only in certain contexts.

Note: Some commands are available only in certain contexts. For example, `cd` works only when the shell is *online*. The Help command lists all the commands, but commands marked with (*) are unavailable in the given context.

Certain node-specific commands are enabled only when the current node is of a certain type. For example, method nodes support a command `invoke`, which is not enabled for any other node type.

Node Display Commands

The following commands are available with all node types. They do not take any arguments, and display the node details for the user to review.

Command	Function
`show`	Pretty-print the current node.
`json`	Print the current node as a JSON string.

For example:

```
security-server:Configuration:/rsa/security/authentication/token-
lifetime » show
```

Configuration	/rsa/security/authentication/token-lifetime
value	10 hours
valueType	com.rsa.asoc.launch.api.helpers.Seconds
defaultValue	10
description	The time-to-live on a token.

```
security-server:Configuration » /rsa/security/authentication/token-lifetime »
json
{
  "path"  :  "/rsa/security/authentication/token-lifetime",
  "type"  :  "Configuration",
```

```
  "value"  :  "10 HOURS",
  "parent"  : {
    "path"  :  "/rsa/security/authentication",
    "type"  :  "Component"
  },
  "attributes"  : {
    "defaultValue"  : 10,
    "valueType"  :  "com.rsa.asoc.launch.api.helpers.Seconds",
    "description"  :  "The time-to-live on a token."
  }
}
```

The output of `json` dumps the API payload and may contain more details than those shown by `show`.

Node Value Commands

`Configuration`, `Metric` and `Health` nodes have values. Their current values can be obtained using the `get` command.

Command	Function	Examples
`get`	Get the current value of the node.	
`set`	Update the value of the node.	`set false`, `set '{"enabled": false}'`

For example:

```
security-server:Gauge:/rsa/process/hostname » get
"hostxyz.corp.emc.com"
security-server:Gauge:/rsa/process/hostname » cd /rsa/transport/http/secure
security-server:Configuration:/rsa/transport/http/secure » get
true
```

The value of a `Configuration` node can be changed by invoking the `set` command. For example:

```
admin@security-server:Configuration:/rsa/security/pki/tls-protocols »
show
```

Configuration	/rsa/security/pki/tls-protocols
value	[TLSv1.2]
valueType	java.lang.String[]
description	This property controls the TLS protocol versions supported by the applications.

```
admin@security-server:Configuration:/rsa/security/pki/tls-protocols » set '
["SSLv3"]'
admin@security-server:Configuration:/rsa/security/pki/tls-protocols » value
[
  "SSLv3"
]
```

Node List Commands

`Folder`, `Component` and `Method` nodes can contain other nodes as their children. You can use the `ls` command to list the children nodes, their types, and where available, their current values.

Command	Function	Options	Examples
`ls <filter>`	List the child nodes of the current node.	`types`, `values`	`ls`, `ls cfg`, `ls --values`
`lsv <filter>`	Shorthand for `ls <filter> --values`	`types`	`lsv metrics ls name:fips`

For example:

```
security-server:Component:/rsa/process » ls
jvm                       Component
modules                   Component

version-raw              0.0.0.0
ready
shutdown
```

Listing commands are not available on nodes that do not have children (for example, configuration or metric nodes):

```
security-server:Component:/rsa/process » cd hostname
security-server:Gauge:/rsa/process/hostname » ls
Command 'ls' exists but is not currently available because you are not logged
in.
```

Note: Values displayed in `ls` and `lsv` may be truncated for presentation purposes. Use `get` on the value node to get the complete (unaltered) value of a node.

Method Node Commands

The `method` command shows all the available methods and all the sub-folders under the current node.

```
security-server:Component:/rsa/process » method
/rsa/process/ready
/rsa/process/shutdown
```

On a node that is of `Method` type , the `invoke` command will invoke the method. For example:

```
security-server:Method:/rsa/process/ready » invoke
{
  "ready" : true,
  "serviceId" : "84f36740-5ae7-409f-b14f-b17e98703983",
  "marketingVersion" : "0.0"
}
```

If the `method` signature takes `input`, then `invoke <input>` will invoke the `method` with given parameters.

```
security-server:Method:/rsa/health/get » show
```

Method	/rsa/health/get
output	java.util.List<com.rsa.asoc.launch.api.health.api.HealthStatus>
input	java.lang.String
description	Get the details of a single composite health check @param id The health check id @return The composite health check

Metric	Value
failed	0
invoked	0
timer	0.0

```
Method:/rsa/health/get » invoke 'rsa.health.checks.security-pki'
[
  {
    "name" : "rsa.security.pki.pki-health",
    "status" : "Unhealthy",
    "details" : {
      "Reason" : "Using a self-signed certificate"    }
  }
]
```

For inline `method` execution with input payload, in cases where the input contains any special characters such as `\, \n, \r, \t , ",` the input needs to be properly escaped with a backslash (`\`).

In cases where `method` takes a complex payload, payload can be supplied with a file reference. In this case, payload does not need any special escaping.

```
Method:/rsa/configuration/collections/register » invoke --file
/tmp/jsonfile.txt
```

Run State of a Service

Once `nw-shell` is connected to a service, commands like `health`, `metrics`, `config` or `snapshot` can be used to retrieve the current state of the service at the current node, and all the sub-folders under the current node.

Health

The `health` command lists the health of the components, and the all the sub-folders, under the current node.

```
admin@security-server:Component:/rsa/process » health
/rsa/process/jvm/memory-health      Healthy
/rsa/process/modules/module-health  Healthy
```

Respond Server APIs

You can use `nw-shell` to retrieve and modify the incident details. In order for this to work, make sure that the relevant APIs are exposed. You can perform following actions using these APIs.

Retrieve Incidents

Retrieve Incident Details

Retrieve Incidents

Add Alerts to an Incident
Delete Alerts from an Incident

Retrieve Incidents

You can retrieve incidents using a single criteria. The criteria can include name, priority, risk score, status, alert count, etc. The `invoke` command returns all the incidents with the matching criteria.

Note: You must export the output to a file to avoid rollover in the shell output. You can query using single meta filters only, for example, filter by name or priority. Depending on the load, a large number of results might cause the request time-out.

Sample Query

```
admin@respond-server:Folder:/rsa » cd respond/incident
admin@respond-server:Component:/rsa/respond/incident » cd find-incident-by-criteria
admin@respond-server:Method:/rsa/respond/incident/find-incident-by-criteria »
invoke '["<meta name>", "<meta value>", "<number of records>"]'
```

Examples

The following example command reads the query from an input file and exports the results to an output file.

```
invoke --file /root/incident_req.txt outputFile /root/output_incidents.json
```

In the above example, the `incident_req.txt` file contains the following information.

```
[root@SA ~]# cat incident_req.txt
["status", "ASSIGNED", "500"]
```

The output is exported to the `output_incidents.json` file that contains 500 incidents with ASSIGNED status.

The following are some more examples:

- Retrieve incidents with `testinc for rule` as name and a maximum of 10 incidents.
  `["name", "testinc for rule", "10"]`
- Retrieve incidents with HIGH priority and a maximum of 50 incidents.
  `["priority", "HIGH", "50"]"]`
- Retrieve incidents with ASSIGNED status and a maximum of 500 incidents.
  `["status", "ASSIGNED", "500"]`

Retrieve Incident Details

The `invoke` command is used to list the details of specific incidents.

Sample Query

```
admin@respond-server:Folder:/rsa » cd respond/incident
admin@respond-server:Component:/rsa/respond/incident » cd find-by-ids
```

```
admin@respond-server:Method:/rsa/respond/incident/find-by-ids » invoke '["INC-1", "INC-2"]'
```

The output is incident details in JSON format displayed in `nw-shell`.

Examples

You can use an input file containing the request to list the incident details.

```
admin@respond-server:Method:/rsa/respond/incident/find-by-ids » invoke --file /tmp/findIncidents.txt
```

The output is incident details in JSON format displayed in `nw-shell`.

In the above example, the file `/tmp/findIncidents.txt` file contains the following information.

```
[root@NWAPPLIANCE27144 ~]# cat /tmp/findIncidents.txt

["INC-10", "INC-12"]
```

You can store the incident details to an output file.

```
admin@respond-server:Folder:/rsa » cd respond/incident
admin@respond-server:Component:/rsa/respond/incident » cd /rsa/respond/alert/add-alerts-to-incident
admin@respond-server:Method:/rsa/respond/incident/find-by-ids » invoke '["INC-1", "INC-2"]' outputFile /root/result_output.json
```

The output is incident details in JSON format stored in the `result_output.json` file.

Retrieve Alerts

You can retrieve alerts using a single criteria. The criteria can include any field that is part of the alert record (alert name, alert type, alert source, etc). The `invoke` command returns the alert with the matching criteria.

Note: You must export the output to a file to avoid rollover in the shell output. You can query using single meta filters only, for example, filter by name or type. Depending on the load, a large number of results might cause the request time-out.

Sample Query

```
admin@respond-server:Folder:/rsa » cd respond/alert
admin@respond-server:Component:/rsa/respond/alert » cd find-alerts-by-criteria
admin@respond-server:Method:/rsa/respond/alert/find-alerts-by-criteria »
invoke '["<meta name>", "<meta value>", "<number of alerts to retrieve>", "<list of alert fields (include fields)>"]'
```

Note: If you provide `<null>` as the `<list of alert fields>` value, the output returns all the alert fields.

Examples

The following example command reads the query from an input file and exports the results to an output file.

```
invoke --file /root/alerts_req.txt outputFile /root/output_alerts.json
```

In the above example, the `alerts_req.txt` file contains the following information.

```
[root@SA ~]# cat alerts_req.txt
["alert.source","Event Stream Analysis", "20", "alert.severity"]
```

The output is exported to the `output_alerts.json` file that contains 20 alerts from Event Stream Analysis and the alert severity field included.

The following are some more examples:

- Retrieve 20 alerts from Event Stream Analysis with the alert severity field included.
  `["alert.source","Event Stream Analysis", "20", "alert.severity"]`
- Retrieve 20 alerts from Event Stream Analysis with all the alert fields included.
  `["alert.source","Event Stream Analysis", "20", "null"]`

Add Alerts to an Incident

The `invoke` command is used to add alerts to an existing incident. You will require alert IDs and Incident ID.

Sample Query:

```
admin@respond-server:Folder:/rsa » cd respond/alert

admin@respond-server:Component:/rsa/respond/incident » cd
/rsa/respond/alert/add-alerts-to-incident
admin@respond-server:Method:/rsa/respond/alert/add-alerts-to-incident » invoke
'["INC-1","603dcc5091e818391ee57e1d","603dcc5091e818391ee57e1c",
"603dcc5091e818391ee57e1e"]'
```

Alternatively, you can specify the add alert query in an input file.

```
invoke --file /tmp/add_alerts.txt
```

In the above example, the `/tmp/add_alerts.txt` file contains the following information.

```
[root@NWAPPLIANCE27144 ~]# cat /tmp/add_alerts.txt

["INC-1","603dcc5091e818391ee57e1d","603dcc5091e818391ee57e1c",
"603dcc5091e818391ee57e1e"]
```

The first parameter is the incident ID (INC-1). The rest of the parameters are alert IDs (for example, 603dcc5091e818391ee57e1e) to be added to the incident mentioned in the first parameter.

The output is a list of alert IDs added to the incident.

Delete Alerts from an Incident

The `invoke` command is used to remove alerts from an existing incident. You will require alert IDs and Incident ID.

Sample Query:

```
admin@respond-server:Folder:/rsa » cd respond/alert

admin@respond-server:Component:/rsa/respond/incident » cd
/rsa/respond/alert/delete-alerts-by-alert-ids
admin@respond-server:Method:/rsa/respond/alert/delete-alerts-by-alert-ids »
invoke '["INC-1","603dcc5091e818391ee57e1d","603dcc5091e818391ee57e1c",
"603dcc5091e818391ee57e1e"]'
```

Alternatively, you can specify the delete alert query in an input file.

```
invoke --file /tmp/delete_alerts.txt
```

In the above example, the file `/tmp/delete_alerts.txt` file contains the following information.

```
[root@NWAPPLIANCE27144 ~]# cat /tmp/delete_alerts.txt

["INC-1","603dcc5091e818391ee57e1d","603dcc5091e818391ee57e1c",
"603dcc5091e818391ee57e1e"]
```

The first parameter is the incident ID (INC-1). The rest of the parameters are alerts IDs (for example, 603dcc5091e818391ee57e1e) to be removed from the incident mentioned in the first parameter.

The output is a list of alert IDs removed from the incident.

Metrics

The `metrics` command lists all of the available metrics, and all the sub-folders, under the current node.

```
admin@respond-server:Component:/rsa/tree/node » metrics
/rsa/tree/node/get/invoked   14
/rsa/tree/node/get/timer     5666541.077918259
/rsa/tree/node/list/invoked  12
/rsa/tree/node/list/timer    6652400.379371729
```

In the above example, `/rsa/tree/node/get/invoked 14` shows that the method `get` is invoked `14` times, and `timer` shows that it took on average `5666541.077918259` nano seconds to process the `get` request.

Using `cd` into the `timer` node shows more details, such as rate of requests, for the current node for per-minute and five minutes. For example:

```
admin@respond-server:Timer:/rsa/tree/node/get/timer » show
```

Timer	/rsa/tree/node/get/timer
value	3267513.7521543643
valueType	java.lang.Double
stdDeviation	4381863.808014679
fiveMinuteRate	0.018725581010540414
max	181326026
count	27
sampleSize	27
oneMinuteRate	0.038516144812437314
min	810240
fifteenMinuteRate	0.009425563630894371
median	2146170.0
meanRate	5.189274295248098E-4
mean	3267513.7521543643

Config

The `config` command shows all the configuration properties in the current node and all the sub-folders under the current node.

```
admin@respond-server:Component:/rsa/logging » config
/rsa/logging/audit/max-file-count       10
/rsa/logging/audit/max-file-size        10 MB
/rsa/logging/forward/categories         [Audit]
/rsa/logging/forward/destination        SYSLOG_UDP
/rsa/logging/forward/enabled            true
/rsa/logging/forward/host               localhost
/rsa/logging/forward/port               50514
/rsa/logging/forward/secure             false
/rsa/logging/levels
/rsa/logging/operations/max-file-count  10
/rsa/logging/operations/max-file-size   10 MB
```

Snapshot

The `snapshot` command combines `metrics`, `configuration`, and `health` of the current state of the service node and all the sub-folders under the current node. This command is very useful for troubleshooting purposes. When opening a support case, take a `snapshot` dump at the root node `\rsa` of a service that might be having issues, and attach it to the case.

```
admin@security-server:Component:/rsa/security » snapshot
/rsa/security/account/external/get-all/invoked      16
/rsa/security/account/external/get-all/timer        NaN
/rsa/security/account/external/get/failed           6
/rsa/security/account/external/get/invoked          6
/rsa/security/account/external/get/timer            NaN
/rsa/security/account/force-password-change/invoke  1
/rsa/security/account/force-password-change/timer   NaN
/rsa/security/account/get/invoked                   123
/rsa/security/account/get/timer                     902163.0
/rsa/security/account/password-policy/cannot-inclu  false
/rsa/security/account/password-policy/min-chars     8
/rsa/security/account/password-policy/min-lower-ch  0
/rsa/security/account/password-policy/min-non-lati  0
/rsa/security/account/password-policy/min-numeric-  0
/rsa/security/account/password-policy/min-special-  0

----
```

Scripting

`nw-shell` supports non-interactive executions that can take commands from files. For example:

```
> cat /tmp/foo.script
connect --service security-server
cd /rsa/security/pki/ciphers
get
> time nw-shell @/tmp/foo.script
INFO: Connected to security-server (52c7b92c-23d5-4b3e-9973-31d8b1b27ec4)
[
```

```
  "TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA256",
  "TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA",
  "TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256",
  "TLS_DHE_RSA_WITH_AES_128_CBC_SHA"
]
nw-shell    5.89s user 0.33s system 305% cpu 2.032 total
```

`nw-shell` also has a built-in `script` which can be used to execute scripts in the shell once the shell is launched.

```
offline » script --file /tmp/foo.script
INFO: Connected to security-server (52c7b92c-23d5-4b3e-9973-31d8b1b27ec4)
[
  "TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256",
  "TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA256",
  "TLS_DHE_RSA_WITH_AES_128_GCM_SHA256",
  "TLS_RSA_WITH_AES_128_CBC_SHA256"
]
```

Note: `nw-shell` is primarily meant to help a human to explore the runtime state of a NetWitness Platform service. For most other purposes, it is usually best to use the service published APIs.

Troubleshooting Commands

The `nw-shell` utility provides troubleshooting commands to help recover from misconfigurations that may cause the service to work improperly.

fix-keystore

When a service's keystore is corrupt or its SSL trust is broken with the rest of NetWitness, you can use the `fix-keystore` command to fix this issue. This command reads the keystore file of the services running on the host and attempts to reestablish trust with the NetWitness Platform CA. For example, the following is the command to repair the respond-server 's keystore:

```
>> fix-keystore --service respond-server
```

This command repairs the keystore `keystore.p12` that is located at `/etc/netwitness/respond-server`. It does not modify the service's original keystore. The repaired keystore can be found with the suffix

`.good`, for example, `keystore.p12.good`. If no fixes can be made to the keystore, this command does not write the new `keystore.p12.good` file.

Once the keystore repair is successful, the system admin can restore the service's communication by renaming `keystore.p12.good` to `keystore.p12` and restart the service.

print-keystore

The `print-keystore` command prints the requested NetWitness Platform Service's keystore certificates to the given output file in JSON format. Unless verbose is enabled, only a few key attributes of the certificates are printed to the file. For example, the following command prints the respond-server's keystore certificates.

```
>> print-keystore respond-server outputFile /tmp/crts
```

With verbose enabled:

```
>> print-keystore respond-server outputFile /tmp/crts verbose
```

reconstruct-keystore

The `reconstruct-keystore` command can be used when a service's keystore needs to be restored to its original clean state.

The following command reconstructs the respond-server's keystore to the new file `/etc/netwitness/respond- server/keystore.p12.new` (it does not modify the original keystore).

```
>> reconstruct-keystore --service respond-server
```

To restore the service back to its healthy state, restore `keystore.p12.new` to `keystore.p12`, and restart the service.

Advanced Customization

The following JVM system properties can be used to customize certain aspects of the `nw-shell` presentation:

System Property	Controls	Default Value
`console.width`	The width of text.	100
`console.colors`	The use of colors.	true
`console.prompt`	The prompt.	`%s%s%s »`
`timeout`	The API timeout.	30s

These can be specified using the `JAVA_OPTS` environment variable. For example:

```
> export JAVA_OPTS="-Dtimeout=100s -Dconsole.width=40 -
Dconsole.prompt=%s%s%s>"
> export JAVA_OPTS="-Dconsole.colors=false"
> nw-shell
```

The API timeout is a time unit which can use typical time unit values such as 30 MINUTES, 30 mins, 30 m, 5 seconds, 5 sec, 5s, 5, 8000 milliseconds, or 8000 ms (ms = milliseconds).

The value of `console.prompt` must contain placeholders (for example, `%s`) for three strings which are replaced, in order, by:

1. The node type
2. A separator (`:`)
3. The node path

Setting `console.colors` to `false` will not turn off *all* use of colors, it only disables colors used by `nw-shell` in its output. The underlying libraries that the program uses may still output some text in color.

Tree View

A NetWitness service, such as `security-server` or `investigate-server`, is a collection of components working together to implement the goals of the service. This topic describes the support for exposing these components and their associated elements (for example, configuration parameters, metrics, API methods, health checks, and so on) in a `tree-view`. The `tree-view` is a hierarchically-nested arrangement of `tree-node`s, each of which corresponds to a distinct functional area of the service. The arrangement enables the end-user to navigate the nodes at run-time and to explore the current state of the service. See Shell for an interactive tool that uses the tree-view.

Features

The `tree-view` implements the following features:

- Supports encapsulation of functionally related elements under the same `tree-node`.
- Supports hierarchical linkage of `tree-node` s to enable navigation from one node to another.

Implementation

The current implementation of the `tree-view` is described in the following sections.

Node Types

The `tree-view` is comprised of `tree-node` instances taken from the following types.

Type	Represents
`Component`	A service component with associated configurations, metrics, health, APIs, etc.
`Configuration`	A configuration parameter that controls some aspect of the service behavior (for example, `rsa.filesystem.prefix`).
`Metric`	A *quantitative* measure of some aspect of the component operations (for example, Requests Processed).
`Health`	A *qualitative* assessment of some aspect of the component (for example, "Using too much memory").
`Method`	An API that can be invoked remotely to interact with the component (for example, `/rsa/security/pki/setCertificate`)
`Parameter`	A payload parameter that is an input or an output from an API.
`Folder`	A logical grouping of nodes that are related to one another but are not a component (for example, the root `/rsa`).

Node Structure

All `tree-nodes` have the same structure. In particular, they include the following elements:

Item	Information
`path`	The node path is a backslash (/) separated path, for example, `/rsa/security/pki/api-secure`.
`type`	The type of the node, taken from the previous table.
`attributes`	A map of string keys to attribute values. The available keys depend on the type of the node.
`value`	The value of this node. This can be null if the node has no associated value (or if it has a null value).
`children`	A list of child nodes, if the node has any.
`parent`	The parent node. This is only null for the root node.

Introduction

The instructions in this guide apply to physical hosts exclusively. See the *Virtual Host Installation Guide for NetWitness Platform 12.1* for instructions on how to set up virtual hosts in 12.1.

Note: Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

Supported Hardware

Series 5, and Series 6.

Refer to the *NetWitness* Hardware Setup Guides for detailed information on each series type (https://community.netwitness.com/t5/netwitness-platform-hardware/tkb-p/netwitness-hardware-documentation).

Endpoint Log Hybrid Host Hardware Specifications

Series 5 (Dell R730) hardware or Series 6 (Dell R740 hardware. See "(Optional) Task 2 - Install Endpoint Log Hybrid" in Post Installation Tasks for instructions on how to install the Endpoint Log Hybrid.

Note: If you have RSA NetWitness Endpoint 4.x hardware, you can re-purpose it for NetWitness Endpoint Log Hybrid 12.0.

NetWitness UEBA Host Hardware Specifications

S5 (Dell R630 appliance) or S6 (Dell R640) hardware. See "(Optional) Task 3 - Install NetWitness UEBA" in Post Installation Tasks for instructions on how to install NetWitness UEBA.

SERIES 5 (DELL R630) SPECIFICATIONS

Specification	Capacity
Model	Dell PowerEdge R630xl
Processor Type	Intel Xeon E5 -2680v3
Processor Speed	2.5 GHz
Cache	30MB
Number of Cores	12
Number of Processors	2
Number of Threads	24
Total Memory	256GB
Internal Disk Controller	Dell PERC H730
External Disk Controller	Dell PERC H830

Specification	Capacity
SAN Connectivity (HBA) - Optional	N/A
Remote Management Card	iDRAC8 Enterprise
Drives	Total - 6 Drives 2 x 1TB, 2.5" HDD 4 x 2TB, 2.5" HDD
Chassis	1U
Weight	18.4 kg (40.5 lbs)
NIC Card*	On Board 2 x 10 Gb Copper 2 x 10 Gb & 2 x 1Gb Copper (Other options are available)
Dimensions	H: 4.28 cm (1.68 in.) x W: 48.23 cm (18.98 in.) x D: 75.51 cm (29.72 in.)
Power	1100W Redundant
BTU/hr	4100 BTU/hr (max)
Amps (Spec)	1100W / 220VAC = 5A
Actual Amp Draw (Post Startup)	2.1 Amps
Events Per Second (EPS)	100K EPS
Throughput	N/A

Note: Network Interface Controller (NIC) card options are available for swap with on-board daughter cards or add ons.

External Attached Storage

If you have external storage devices (for example, DACs or PowerVaults) attached to physical hosts, refer to the Hardware Setup Guides on NetWitness Community (https://community.netwitness.com/t5/netwitness-platform-hardware/tkb-p/netwitness-hardware-documentation) for information on how to configure this storage.

Physical Host Installation Workflow

The following diagram illustrates the NetWitness 12.1 Physical Host Installation workflow.

Self-Help Resources

There are several options that provide you with help as you need it for installing and using NetWitness:

- See the documentation for all aspects of NetWitness here: https://community.netwitness.com/t5/netwitness-platform/ct-p/netwitness-documentation
- Use the **Search** and **Ask it** fields in NetWitness Community to find specific information here: https://community.netwitness.com/
- See the NetWitness Knowledge Base: https://community.netwitness.com/t5/netwitness-knowledge-base/tkb-p/netwitness-knowledge-base
- See Troubleshooting section in the Guides.
- See also NetWitness® Platform Blog Posts.
- If you need further assistance, contact NetWitness Support.

Contact NetWitness Support

If you contact NetWitness Support, you should be at your computer. Be prepared to provide the following information:

- The version number of the NetWitness Platform product or application you are using.
- The type of hardware you are using.

Use the following contact information if you have any questions or need assistance.

NetWitness Community	https://community.netwitness.com/ In the main menu, click **Support** > **Case Portal** > **View My Cases**.
International Contacts (How to Contact NetWitness Support)	https://community.netwitness.com/t5/support-information/how-to-contact-netwitness-support/ta-p/563897
Community	https://community.netwitness.com/t5/support/ct-p/support

Installation Tasks

This topic contains the tasks you must complete to install NetWitness 12.1 on physical hosts.

Checklist

Complete the installation tasks in the following order.

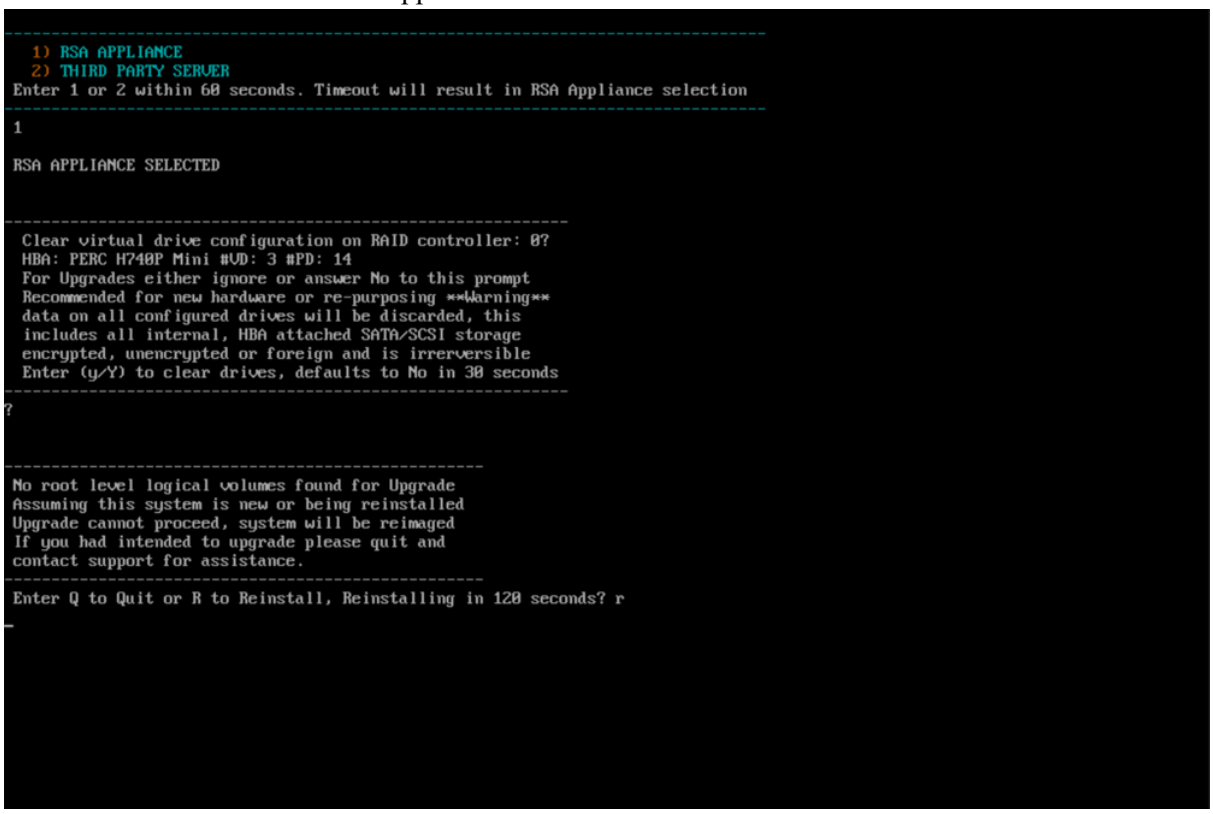
Step	Description	Instructions
1	Install 12.1 on NetWitness hosts.	Install 12.1 on the NetWitness Server (NW Server) Host and Other Component Host
2	Set up ESA hosts.	Set Up ESA Hosts
3	Install component services on your hosts.	Install Component Services on Hosts
4	Complete licensing requirements for services.	Complete Licensing Requirements
5	(Optional) Install warm standby NW Server host.	(Optional) Install Warm Standby NW Server

Caution: Before you begin the installation process, open all your firewall ports. The"Network Architecture and Ports" topic in the *Deployment Guide for NetWitness Platform 12.1* lists all the ports in a deployment. Do not proceed with the installation until the ports on your firewall are configured.

Install 12.1 on the NetWitness Server (NW Server) Host and Other Component Host

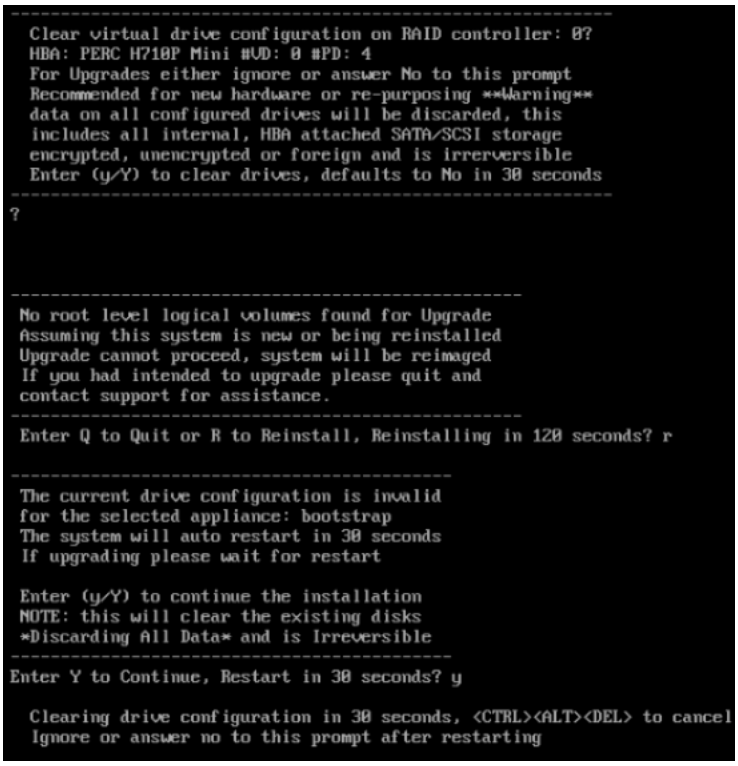
Complete the following steps to install 12.1 on NW Server host and other component hosts. Steps that are specific to the NW Server host or to component hosts are noted.

Create a Base Image on the RSA Appliance



1. Attach media (ISO) to the host.
   See the *USB Build Stick Instructions for NetWitness* for more information. Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.
   - Hypervisor installations - see the *Virtual Host Installation Guide for NetWitness Platform 12.1*
   - Physical media - use the ISO image to create bootable flash drive media. You can use Rufus or another suitable imaging tool to create a Linux file system on the USB drive. Rufus is available at https://rufus.ie

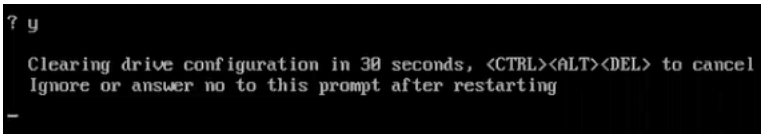
- iDRAC installations - the virtual media type is:
  - **Virtual Floppy** for mapped flash drives
  - **Virtual CD** for mapped optical media devices or ISO file.



2. Log in to the host and reboot it.

```
login: root
Password:
Last login: Tue Sep 19 13:27:15 on tty1
[root@saserver ~]# reboot
```

3. Select **F11** (boot menu) during reboot to select a boot device and boot to the connected media. After system checks, the **Welcome to NetWitness Platform 12.1** installation menu is displayed.
4. Select **Install NetWitness Platform 12.1** (default selection) and press **Enter**. The Appliance Type selection menu is displayed.
5. You must enter **1** to select RSA appliance.



6. The Installation program runs and stops at the Enter (**y**/**Y**) to clear drives prompt that asks you to format the drives.

Caution: You must respond **y** or **Y** to this prompt even if the host does not have an internal RAID configuration or the installation will fail.

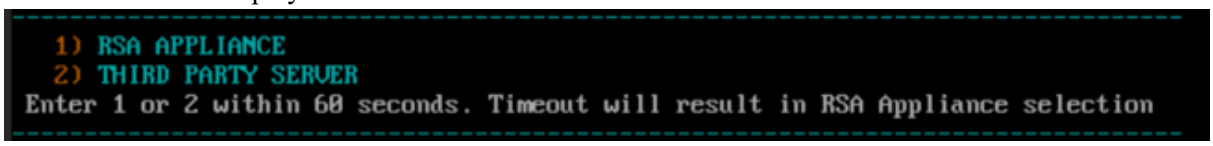
7. Type **y** to continue. The default action is No, so if you ignore the prompt, it will select No in 30 seconds, and will not clear the drives.

The system displays all the installation tasks it is performing. This can take a minute or so. After it completes the tasks, the installation program reboots the host.

Caution: Do not reboot with the attached media attached (media that contains the ISO file, for example a build stick).

Create a Base Image on the Third Party Server Hardware

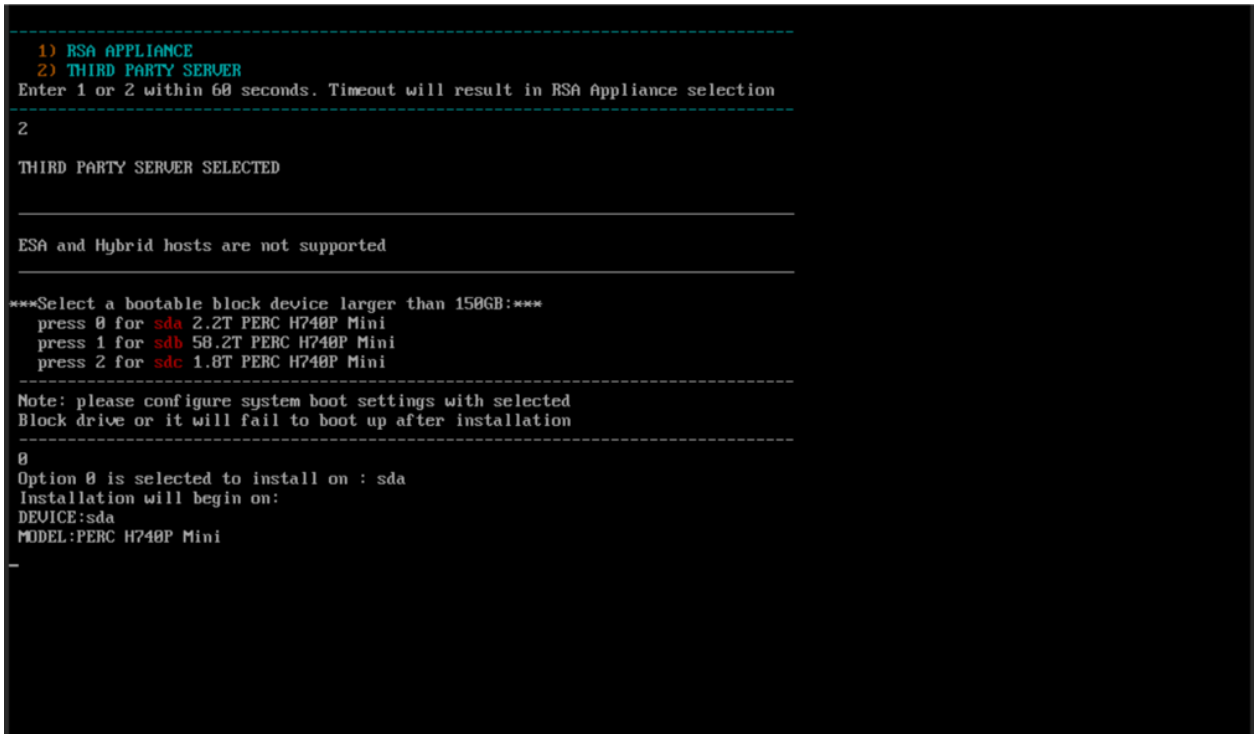
Prerequisites



NetWitness recommends that the Third party Server Hardware meets the criteria defined in Appendix D. Third Party Server System Requirement.

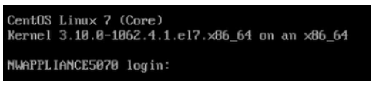
1. Attach media (ISO) to the host.
   See the *USB Build Stick Instructions for NetWitness* for more information. Go to the NetWitness All

Versions Documents page and find NetWitness Platform guides to troubleshoot issues.



- Physical media - use the ISO image to create bootable flash drive media. You can use Rufus or another suitable imaging tool to create a Linux file system on the USB drive. Rufus is available at https://rufus.ie.

2. Log in to the host and reboot it.
3. Select **F11** (boot menu) during reboot to select a boot device and boot to the connected media. After system checks, the **Welcome to NetWitness Platform 12.1** installation menu is displayed.
4. Select **Install Netwitness Platform 12.1** (default selection) and press **Enter**. The Appliance Type selection menu is displayed.



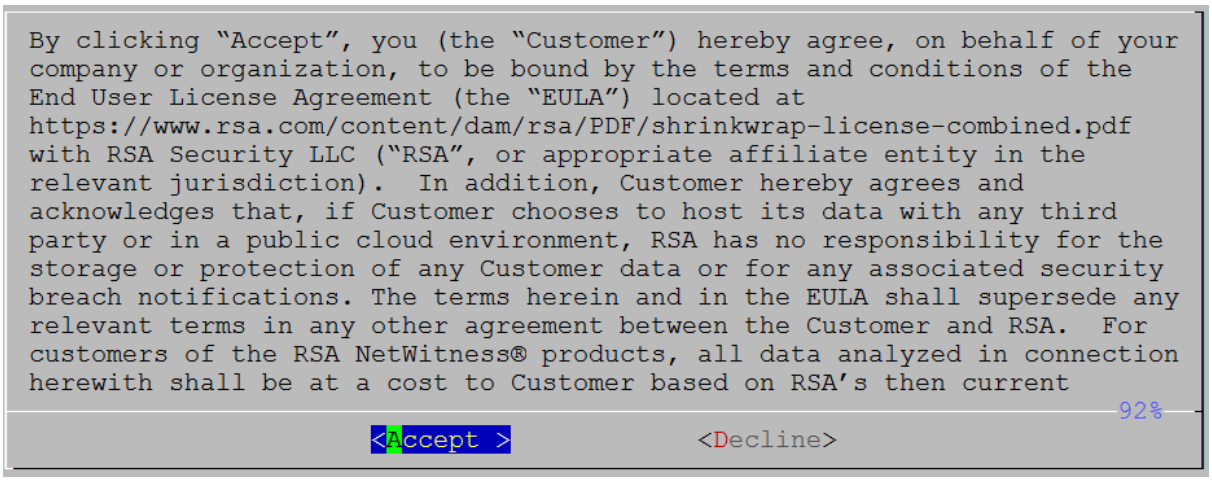
5. Enter **2** to select the Third Party Server.
6. All the available block devices are displayed. Select a block device larger than 150 GB to install the Netwitness Platform.

Note: You must configure the system boot settings with selected block device else the system will not boot after imaging.

7. The system displays all the installation tasks running, and it may take few minutes to complete the installation. Once the installation is complete, the installation program reboots the host.

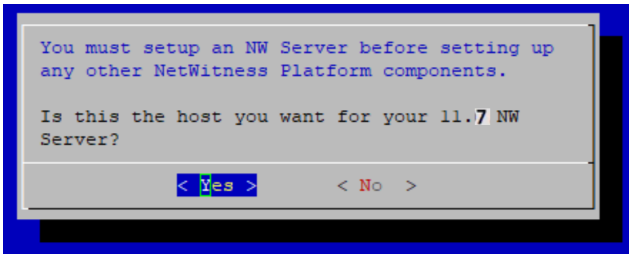
Caution: Do not reboot with the attached media that contains the ISO file, for example, build stick.

Install NetWitness Platform



Caution: If you want to install the Endpoint Relay Server, do not run the `nwsetup-tui` script. Follow the instructions in "(Optional) Installing and Configuring Relay Server" in the *NetWitness Endpoint Configuration Guide*.

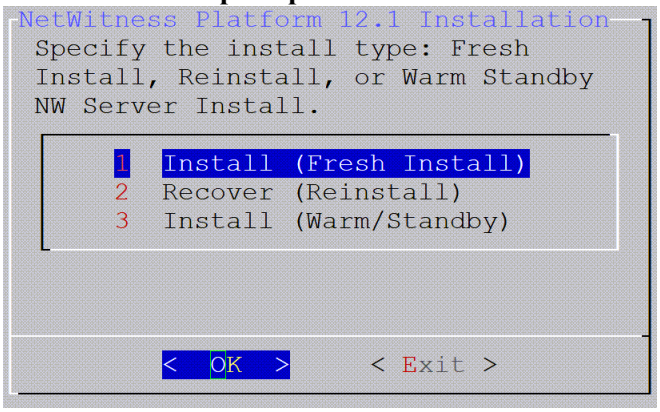
IMPORTANT: In NetWitness Platform version 11.6 or Later, deployment account password must contain at least one number, one upper and lower case letter, and one special characters (!@#%^,+ .) along with the existing policy. The same password policy applies while updating deploy_admin password using `nw-manage script`.
If `deploy_admin` password is changed on Primary NW Server, It must be changed on the Warm Standby Server if it exists.



1. Log in to the host with the `root` credentials and run the `nwsetup-tui` command to set up the host.

   This initiates the `nwsetup-tui` (Setup program) and the EULA is displayed.

   Note: Use the following options to navigate the Setup prompts.
   1.) When you navigate through the Setup program prompts, use the down and up arrows to move among fields, and use the Tab key to move to and from commands (such as **<Yes>**, **<No>**, **<OK>**, and **<Cancel>**). Press **Enter** to register your command response and move to the next prompt.
   2.) The Setup program adopts the color scheme of the desktop or console you use to access the host.
   3.) If you specify DNS servers during the Setup program (`nwsetup-tui`) execution, they MUST be valid (valid in this context means valid during setup) and accessible for the `nwsetup-tui` script to proceed. Any misconfigured DNS servers cause the Setup program to fail. If you need to reach a DNS server after setup that is unreachable during setup, (for example, to relocate a host after setup that would have a different set of DNS Servers), see "Change Host Network Configuration" topic in the System Maintenance Guide.
   If you do not specify DNS Servers during setup (`nwsetup-tui`), you must select **1 The Local Repo (on the NW Server)** in the **NetWitness Update Repository** prompt in step 12 (the DNS servers are not defined so the system cannot access the external repo).



2. Tab to **Accept** and press **Enter**.
   The **Is this the host you want for your 12.1 NW Server** prompt is displayed.

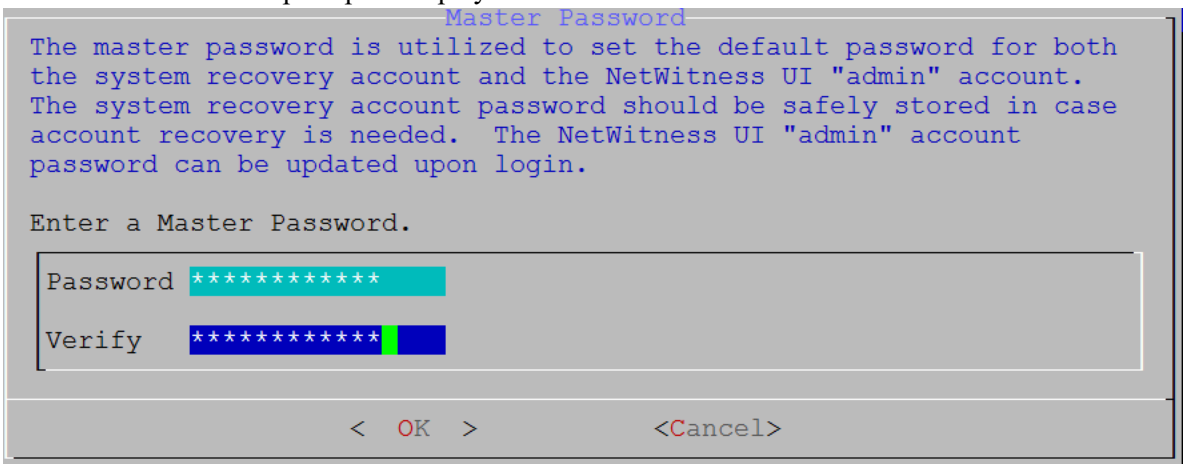
3. Tab to **Yes** and press **Enter** to install 12.1 on the NW Server.
   Tab to **No** and press **Enter** to install 12.1 on other component hosts.

   Caution: If you choose the wrong host for the NW Server and complete the Setup, you must restart the Setup Program (step 2) and complete steps all the subsequent steps to correct this error.

4. The **Install** prompt is displayed (**Recover** does not apply to the installation.).
   NW Server Host prompt:

   Other Component Hosts, the prompt is the same, but does not include option 3 Install (Warm/Standby)

5. Press **Enter**. **Install (Fresh Install)** is selected by default.
   The **System Host Name** prompt is displayed.
   NW Server prompt:



Other Component Hosts prompt says <non-nwserver-host-name>

Caution: If you include "." in a host name, the host name must also include a valid domain name.

Press **Enter** if want to keep this name. If not, edit the host name, tab to **OK**, and press **Enter** to change it.

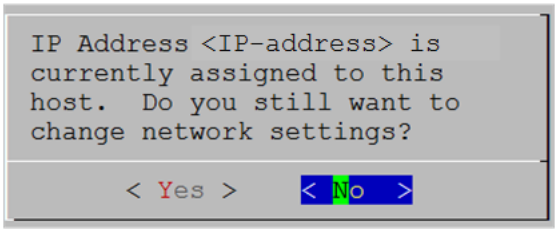
6. **This step applies only to NW Server hosts**.
   The **Master Password** prompt is displayed.

   The following list of characters are supported for Master Password and Deployment Password:

   - Symbols: **! @ # % ^ +**
   - Numbers: **0-9**
   - Lowercase Characters: **a-z**
   - Uppercase Characters: **A-Z**

   No ambiguous characters are supported for Master Password and Deployment Password. For example:
   space { } [ ] ( ) / \ ' " ` ~ ; : . < > -

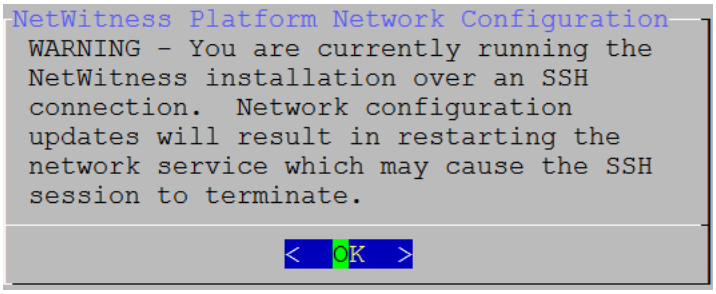
   Type the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.



7. **This step applies to both NW Server hosts and component hosts.**
   The **Deployment Password** prompt is displayed.

Type the **Password**, down arrow to **Verify**, retype the password, tab to **OK**, and press **Enter**.

8. One of the following conditional prompts is displayed.



- If the Setup program finds a valid IP address for this host, the following prompt is displayed.

  Press **Enter** if you want to use this IP and avoid changing your network settings. Tab to **Yes** and press **Enter** if you want to change the IP configuration on the host.

- If you are using an SSH connection, the following warning is displayed.

  Note: If you connect directly from the host console, the following warning is not displayed.

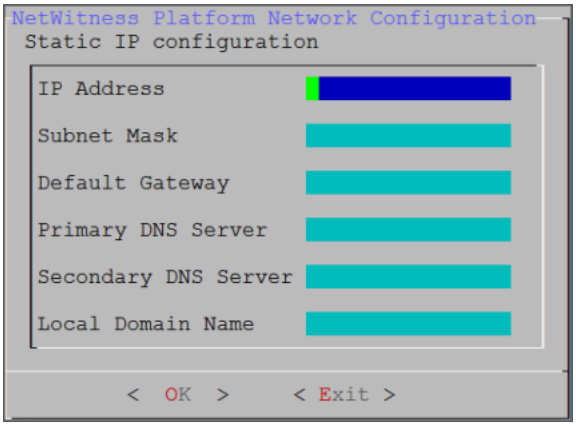
  Press **Enter** to close warning prompt.

- If the Setup Program finds an IP configuration and you choose to use it, the **Update Repository** prompt is displayed. Go to step 12 and complete the installation.

- If the Setup Program did not find an IP configuration or if you choose to change the existing IP configuration, the **Network Configuration** prompt is displayed.

  Caution: Only select "**Use DHCP**" as an IP address configuration for the NW Server if DHCP issues static IP addresses.

Tab to **OK** and press **Enter** to use **Static IP**.



If you want to use DHCP, down arrow to **2 Use DHCP** and press **Enter**.

The **Network Configuration** prompt is displayed.

9. Down arrow to the network interface you want, tab to **OK**, and press **Enter**. If you do not want to continue, tab to **Exit.**

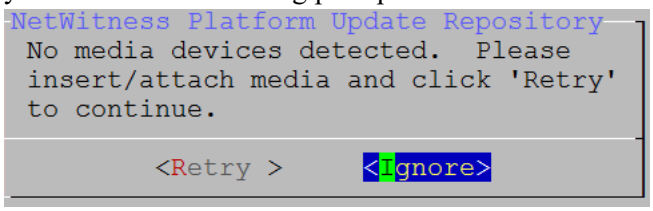
   The following **Static IP Configuration** prompt is displayed.

10. Type the configuration values, tab to **OK**, and press **Enter**. If you do not complete all the required fields, an `All fields are required` error message is displayed (**Secondary DNS Server** and **Local Domain Name** fields are not required). If you use the wrong syntax or character length for any of the fields, an `Invalid <field-name>` error message is displayed.

    Caution: If you select **DNS Server**, make sure that the DNS Server is correct and the host can access it before proceeding with the installation.

11. The Use Network Address Translation (NAT) prompt is displayed.

    For the NW Server, tab to **No** and press **Enter**.
    For component hosts, if this host requires the use of NAT-based addresses to communicate with the NW Server, tab to **Yes**. Otherwise, tab to **No** and press **Enter**.

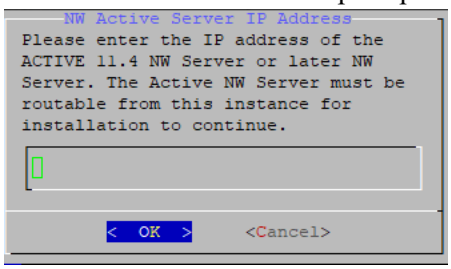


12. The **Update Repository** prompt is displayed.

    For the NW Server:

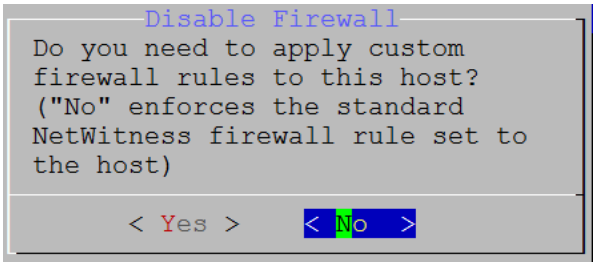
    - Press **Enter** to choose the **Local Repo**.
    - If you want to use an external repo, down arrow to **External Repo**, tab to **OK**, and press **Enter**. If you select **1 The Local Repo (on the NW Server)** in the Setup program, make sure that you have the appropriate media attached to the host (media that contains the ISO file, for example a build stick) from which it can install NetWitness 12.1. If the program cannot find the attached media,

you receive the following prompt.



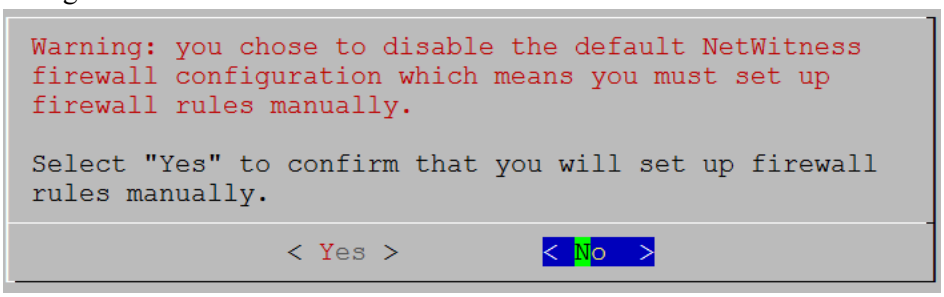
- If you select **2 An External Repo (on an externally-managed server)**, the UI prompts you for a URL. The repositories give you access to NetWitness updates and CentOS updates. Refer to "Appendix B. Create an External Repo" in this guide for instructions on how to create this repo and its external repo URL so you can enter it in the following prompt.

Enter the base URL of the NetWitness external repo and click **OK.** The **Start Install** prompt is displayed.



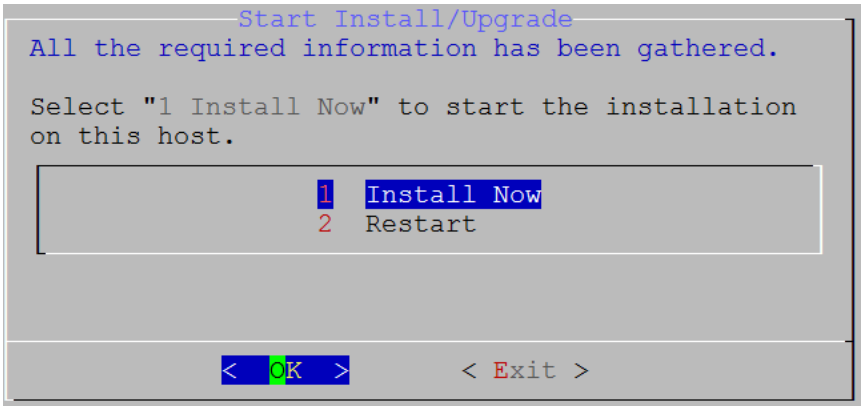
For component hosts:

- Select the same repo that you selected when you installed the NW Server host and follow the steps above.
- The NW Server IP Address prompt is displayed.



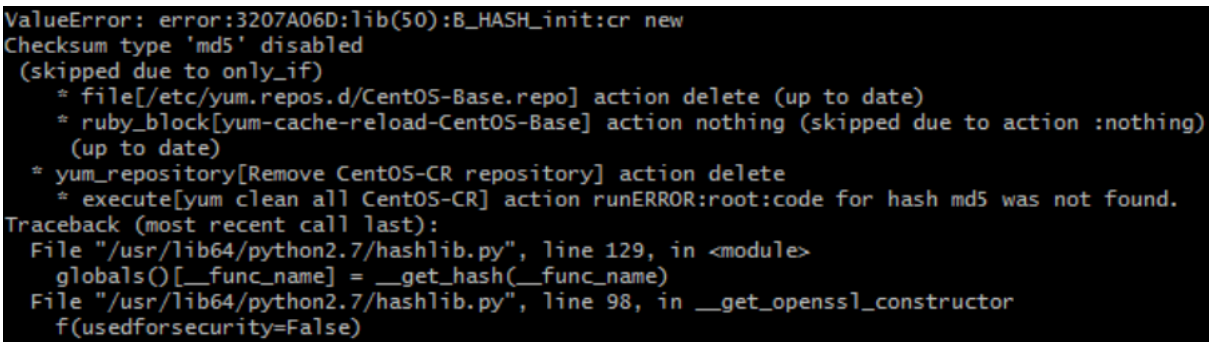
Type the NW Server IP address. Tab to **OK** and press **Enter**.

13. The Disable firewall prompt is displayed.



Tab to **No** (default), and press **Enter** to use the standard firewall configuration.
To disable the standard firewall configuration, tab to **Yes**, and press **Enter**.
If you select **Yes**, confirm your selection(select **Yes** again) or select **No** to use the standard firewall

configuration.



14. The **Start Install** prompt is displayed.

15. Press **Enter** to install 12.1.
When **Installation complete** is displayed, you have installed 12.1 on this host.

Note: Ignore the hash code errors similar to the errors shown in the following figure that are displayed when you initiate the `nwsetup-tui` command. Yum does not use MD5 for any security operations so they do not affect the system security.

16. (Optional) If your system configuration requires that a component host must use a NAT IP address to reach the NW Server host, you must configure the NAT IP address of the NW Server by running the following command:
`nw-manage --update-host --host-id <NW Server Host UUID> --ipv4-public <NAT IP address>`

Set Up ESA Hosts

After you install your NW Server and component hosts, follow these steps to set up your ESA hosts.

- Install your primary ESA host following the instructions in "Install 12.1 on the NetWitness Server (NW Server) Host and Other Component Hosts" in this guide, and install the **ESA Primary** service on it after you finish the Set Up program in the UI in  (Admin) > **Hosts** > :
- (Conditional) If you have a secondary ESA host, install it and install the **ESA Secondary** service on it after you finish the Set Up program in the UI in  (Admin) > **Hosts** > :

Install Component Services on Hosts

After you have installed NW Server and component hosts, and set up your ESA hosts, follow these steps to install component services, such as Decoders and Concentrators, on your host systems.

1. Install a component service on the host.
   a. Log into NetWitness and go to (missing or bad snippet)> **Hosts**.
   The **New Hosts** dialog is displayed with the **Hosts** view grayed out in the background.

   Note: If the **New Hosts** dialog is not displayed, click **Discover** in the Hosts view toolbar.

   b. Select the host in the **New Hosts** dialog and click **Enable**.
   The **New Hosts** dialog closes and the host is displayed in the **Hosts** view.

   c. Select that host in the **Hosts** view and click .
   The **Install Services** dialog is displayed.

   d. Select the appropriate host type (for example, **Concentrator**) in **Category** and click **Install**.

Complete Licensing Requirements

Complete licensing requirements for installed services. See the *NetWitness Platform 12.1 Licensing Management Guide* for more information. Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

(Optional) Install Warm Standby NW Server

Refer to "Warm Standby NW Server Host" under "Deployment Option Setup Procedures" in the *Deployment Guide for NetWitness Platform 12.1* for instructions on how to set up a Warm Standby NW Server.

Update or Install Windows Legacy Collection

Refer to Windows Legacy Collection Guide for NetWitness for NetWitness Legacy Windows Collection Upgrade & Installation Instructions.

Note: After you upgrade or install Windows Legacy Collection, reboot the system to ensure that Log Collection functions correctly.

Post Installation Tasks

This topic contains the tasks you complete after you install 12.1.

- Event Stream Analysis (ESA)
- NetWitness Endpoint
- NetWitness UEBA

Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

Event Stream Analysis (ESA)

Configure Meta Keys on New ESA Hosts to Match Upgraded ESA Hosts in the Same NetWitness Platform Network

If you have one or more ESA hosts in a NetWitness Platform network, which were upgraded from a version before 11.3.0.2 to 11.7, and you add a new ESA host, you must configure the meta keys on the new ESA host to match the other ESA hosts. All ESA Correlation services on the same NetWitness Platform network must have the same Meta Key configurations.

1. For each ESA Correlation service on an upgraded ESA host and for the ESA Correlation service on the newly installed ESA host:
   a. Open a new tab, go to  (Admin) > **Services**, and in the Services view, select the ESA Correlation service and then select  > **View** > **Explore**.
   b. In the Explore view node list for the ESA Correlation service, select **correlation** > **stream**.
2. Ensure that the **`multi-valued`** and **`single-valued`** meta key values are the same on each of the upgraded ESA Correlation services.
3. Ensure that the **`multi-valued`** and **`single-valued`** meta key values on the newly installed ESA host are the same as those on the upgraded services.
4. To apply any changes on the ESA Correlation services, go to  **(Configure)** > **ESA Rules** and click the **Settings** tab. In the Meta Key References, click the **Meta Re-Sync (Refresh)** icon ().
5. If you updated the ESA Correlation services, redeploy the ESA rule deployments.

For more information, see "Update Your ESA Rules for the Required Multi-Value and Single-Value Meta Keys" in the *ESA Configuration Guide*.

NetWitness Endpoint

The tasks in this section only apply to customers that use the NetWitness Endpoint component of NetWitness Platform.

Install Endpoint Log Hybrid

Depending on the number of agents and the location of the agents, you can choose to deploy a single Endpoint Log Hybrid host or multiple Endpoint Log Hybrid hosts. To deploy a host, you provision it and install a category on it.

- **Single Endpoint Log Hybrid host** - Deploy NetWitness Server host, Endpoint Log Hybrid host, and ESA host or hosts.
- **Multiple Endpoint Log Hybrid hosts** - Deploy NetWitness Server host, ESA host or hosts, Endpoint Log Hybrid hosts. You can deploy up to 6 Endpoint Log Hybrid hosts. For a consolidated view of all endpoint data from multiple Endpoint Log Hybrid hosts, install the Endpoint Broker. You can add only one broker in a NetWitness platform deployment which serves upto 6 Endpoint Log Hybrid hosts.

  Note: NetWitness recommends that you co-locate the Endpoint Broker on the NetWitness Broker host. However, you can deploy the Endpoint Broker on a separate host or co-locate it on the Endpoint Log Hybrid.

  Note: You must plan to scale your ESA deployment to support multiple Endpoint Log Hybrid hosts.

Follow these steps to deploy an Endpoint Log Hybrid host.

Complete the following steps first:

- For a physical host, complete steps 1 - 16 in "Install NetWitness Platform" under Installation Tasks in the *Physical Host Installation Guide for NetWitness Platform*
- For a virtual host, complete steps 1 - 16 in "Step 4. Install NetWitness Platform" under Install NetWitness Platform Virtual Host in Virtual Environment in the *Virtual Host Installation Guide for NetWitness Platform 12.1*

Configuring Multiple Endpoint Log Hybrids

Follow these steps to install another Endpoint Log Hybrid.

Step 1: Install additional Endpoint Log Hybrid

- To install a physical host, complete steps 1 - 16 in "Install NetWitness Platform" under Installation Tasks in the *Physical Host Installation Guide for NetWitness Platform 12.1*

- To install a virtual host, complete steps 1 - 16 in "Step 4. Install NetWitness Platform" under Install NetWitness Platform Virtual Host in Virtual Environment in the *Virtual Host Installation Guide for NetWitness Platform 12.1*

Step 2: Setup the Endpoint Log Hybrid

1. Create a directory `mkdir -p /etc/pki/nw/nwe-ca`.
2. Copy the following certificates from the first Endpoint Log Hybrid to the secondary Endpoint Log Hybrid:

   `/etc/pki/nw/nwe-ca/nwerootca-cert.pem`

   `/etc/pki/nw/nwe-ca/nwerootca-key.pem`

   Note: NetWitness recommends that you copy certificates from Endpoint Log Hybrid to secondary Endpoint Log Hybrid CentOS to Windows using the `SCP` command to avoid any corruption caused by Antivirus or third-party tools.

Step 3: Switch to the NetWitness UI and add Hosts

- See Add Hosts to the Endpoint Log Hybrid: for more information.

Add Hosts to the Endpoint Log Hybrid:

1. Log into NetWitness Platform and click  **(Admin) > Hosts**.

   The New Hosts dialog is displayed with the Hosts view grayed out in the background.

   Note: If the New Hosts dialog is not displayed, click **Discover** in the **Hosts** view toolbar.

2. Select the host in the **New Hosts** dialog and click **Enable**.

   The New Hosts dialog closes and the host is displayed in the Hosts view.

3. Select that host in the **Hosts** view (for example, **Endpoint**) and click 

.

   The Install Services dialog is displayed.

4. Select the **Endpoint Log Hybrid** category and click **Install**.
5. Make sure that the Endpoint Log Hybrid service is running.
6. Configure Endpoint Meta forwarding.

   See the *Endpoint Configuration Guide* for instructions on how to configure Endpoint Meta forwarding.

7. Deploy the ESA Rules from the Endpoint Rule Bundle. For more information, see "Deploy Endpoint Risk Scoring Rules on ESA" section in the ESA Configuration Guide.

   Note: The Endpoint IIOCs are available as OOTB Endpoint Application rules.

8. Review the default policies and create groups to manage your agents. See *Endpoint Configuration Guide*.

   Note: In 11.3 or later, agents can operate in Insights or Advanced mode depending on the policy configuration. The default policy enables the agent in an advanced mode. If you want to continue to use the Insights agent, before updating, review the policy, and make sure that the Agent mode is set to Insights.

9. Install the Endpoint Agent. You can install an Insights (free version) or an Advanced agent (licensed). See *Endpoint Agent Installation Guide* for detailed instructions on how to install the agent.

   Note: You can migrate the Endpoint Agent from 4.4.0.x to 11.7. For more information, see the *NetWitness Endpoint 4.4.0.x to NetWitness Platform 12.1 Migration Guide*.

(Optional) Configure an Endpoint Service on an Existing Log Decoder Host

You can install an Endpoint service category on an existing Log Decoder host. For an overview of installing service categories on hosts, see "Hosts and Services Set Up Procedures" in the *Host and Services Getting Started Guide*. Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

- If you have an existing Endpoint Log Hybrid, you must copy certificates from that Endpoint Hybrid host to the Log Decoder before you install the Endpoint service category on the Log Decoder.
- If you do not have an Endpoint Log Hybrid host, you do not need to copy over the certificates before you install the Endpoint service category on the Log Decoder.

Do You Need to Install an Endpoint Service onto Separate Hardware

If you are only using NW Platform for collecting and analyzing logs, you can co-locate your Endpoint Server on the same physical hardware as your Log Decoder. For more information, see the Prepare Virtual or Cloud Storage topic in the *Storage Guide for NetWitness Platform*.

If you exceed these guidelines, the amount of disk space usage and CPU might become so high as to create alarms for your Endpoint Server in Health and Wellness. If you notice this, and are running both log collection and EDR scans, you can use Throttling to control the amount of data coming into the Log Decoder.

If that doesn't help, NetWitness recommends that you move your Endpoint Server onto separate hardware from that used by your Log Decoder.

Install an Endpoint Service Category on an Existing Log Decoder

To install an Endpoint service category on an existing Log Decoder if you have an existing Endpoint Log Hybrid:

1. Create a directory `mkdir -p /etc/pki/nw/nwe-ca`.
2. Copy the following certificates from the first Endpoint Log Hybrid to the Log Decoder on which you are going to install the additional **Endpoint** service category.

   Note: NetWitness recommends that you copy certificates from Endpoint Log Hybrid to secondary Endpoint Log Hybrid using the `SCP` command to avoid any corruption caused by Antivirus or third-party tools.

   `/etc/pki/nw/nwe-ca/nwerootca-cert.pem`

   `/etc/pki/nw/nwe-ca/nwerootca-key.pem`
3. Log into NetWitness Platform and click  **(Admin) > Hosts**.
4. Select the Log Decoder host in the **Hosts** view and click .

   The Install Services dialog is displayed.
5. Select the **Endpoint** category and click **Install**.

To install an Endpoint service category on an existing Log Decoder if you do not have an existing Endpoint Log Hybrid:

1. Log into NetWitness Platform and click  **(Admin) > Hosts**.
2. Select the Log Decoder host in the **Hosts** view and click .

   The Install Services dialog is displayed.
3. Select the **Endpoint** category and click **Install**.

NetWitness UEBA

The tasks in this section only apply to customers that use the UEBA component of NetWitness Platform.

Install UEBA

To set up NetWitness UEBA in NetWitness Platform 11.7, you must install and configure the NetWitness UEBA service.

The following procedure shows you how to install the NetWitness UEBA service on a NetWitness UEBA Host Type and configure the service.

1. For:
   - A physical host, complete steps 1 - 16 in "Install NetWitness Platform" under "Installation Tasks" in the *Physical Host Installation Guide for NetWitness Platform 11.7*.
   - A virtual host, complete steps 1 - 16 in "Step 4. Install NetWitness Platform" in the *Virtual Host Installation Guide for NetWitness Platform 11.7*.

   Note: The Kibana and Airflow webserver User Interface password is the same as the deploy admin password. Make sure that you record this password and store it in a safe location.

2. Log into NetWitness Platform and go to  **(Admin) > Hosts**.
   The New Hosts dialog is displayed with the Hosts view grayed out in the background.

   Note: If the New Hosts dialog is not displayed, click **Discover** in the **Hosts** view toolbar.

3. Select the host in the **New Hosts** dialog and click **Enable**.
   The New Hosts dialog closes and the host is displayed in the Hosts view.

4. Select that host in the **Hosts** view (for example, **UEBA**) and click .
   The Install Services dialog is displayed.

5. Select the **UEBA** Host Type and click **Install**.

6. Make sure that the UEBA service is running.

7. Complete licensing requirements for NetWitness UEBA.
   See the *Licensing Management Guide* for more information.

   Note: NetWitness Platform supports the User and Entity Behavior Analytics License (UEBA). This license is used based on the number of users. The Out-of-the-Box Trial License is a 90-day trial license. In case of UEBA licenses, the 90-day trial period begins from the time the UEBA service deployed on the NetWitness Platform product.

Configure NetWitness UEBA

To start running UEBA:

1. Define the following parameters: data schemas, data source (NetWitness Broker or Concentrator) and start date.

   a. Define UEBA schemas:
      Choose schemas from the following list:

      AUTHENTICATION, FILE, ACTIVE_DIRECTORY, PROCESS, REGISTRY and TLS.

      Note: The TLS packet requires adding the hunting package and enabling the JA3 feature. For more information regarding events that each schema contains, see the *NetWitness UEBA Configuration Guide*.

   b. Define the data source:
      If your deployment has multiple Concentrators, we recommend that you assign a Broker at the top of your deployment hierarchy for the NetWitness UEBA data source.

   c. Define the UEBA start-date:

      Note: The selected start date must contain events from all configured schemas.

      NetWitness recommends that the UEBA start date is set to 28 days earlier than the current date. For UEBA systems that intend to process TLS data, you must make sure that the start date is set to no later than 14 days earlier than the current date.

2. . Create a user account for the data source (Broker or Concentrator) to authenticate to the data.
   a. Log into NetWitness Platform.
   b. Go to (Admin) **> Services**.
   c. Locate the data source service (Broker or Concentrator).
      Select that service, and select (Actions) > **View** > **Security**.
   d. Create a new user and assign the "Analysts" role to that user.
      The following example shows a user account created for a Broker.

3. SSH to the NetWitness UEBA server host.
4. Submit the following commands with the above parameters that you already defined.
   `/opt/rsa/saTools/bin/ueba-server-config -u <user> -p <password> -h <host> -o <type> -t <startTime> -s <schemas> -v -e <argument>`
   Where:

Argument	Variable	Description
-u	<user>	User name of the credentials for the Broker or Concentrator instance that you are using as a data source.
-p	<password>	Password of the credentials for the Broker or Concentrator instance that you are using as a data source. The following special characters are supported in a password. !"#$%&()*+,-:;<=>?@[\]^_`\{\|} If you want to include a special character or special characters, you must delimit the password with an apostrophe sign, for example: sh /opt/rsa/saTools/bin/ueba-server-config -u brokeruser -p **'!"UHfz?@ExMn#$'** -h 10.64.153.104 -t 2018-08-01T00:00:00Z -s 'AUTHENTICATION FILE ACTIVE_DIRECTORY TLS PROCESS REGISTRY' -o broker -v
-h	<host>	IP address of the Broker or Concentrator used as the data source. Currently, only one data source is supported.
-o	<type>	Data source host type (broker or concentrator).
-t	<startTime>	Historical start time as of which you start collecting data from the data source in YYYY-MM-DDTHH-MM-SSZ format (for example, 2018-08-15T00:00:00Z). **Note:** The script interprets the time you enter as UTC (Coordinated Universal Time) and it does not adjust the time to your local time zone.
-s	<schemas>	Array of data schemas. If you want to specify multiple schemas, use a space to separate each schema (for example, AUTHENTICATION FILE ACTIVE_ DIRECTORY PROCESS REGISTRY TLS).
-v		**verbose mode**.
-e	<argument>	Boolean Argument. This enables the UEBA indicator forwarder to Respond. **Note:** If your NetWitness deployment includes an active Respond server, you can transfer NetWitness UEBA indicators to the Respond server and create incidents by enabling the indicator forwarder, from this data. For more information on how to enable the NetWitness UEBA incidents aggregation, see Enable User Entity Behavior Analytics Incident Rule.

5. If you are deploying a hot fix on 11.x.x.x version, you must do the following:
   a. Run the presidio-upgrade DAG.
   b. Press the play sign next to the DAG and then click the trigger button.

Enable Access Permission for the NetWitness UEBA User Interface

After you install NetWitness UEBA 11.7, you need to assign the UEBA_Analysts and Analysts roles to the UEBA users. For more information, see 'Assign User Access to UEBA' topic in the *NetWitness UEBA Configuration Guide*. After this configuration, UEBA users can access the **Investigate** > **Users** view.

Note: To complete NetWitness UEBA configuration according to the needs of your organization, See the *NetWitness UEBA Configuration Guide*.

Deployment Options

NetWitness Platform has the following deployment options. See the *NetWitness Deployment Guide* for detailed instructions on how to deploy these options.

- **Analyst User Interface** - gives you access to a subset of features in the NetWitness Platform UI that you can set up in individual locations when you deploy NetWitness Platform in multiple locations. It is designed to reduce latency and improve the performance that can occur when accessing all functionality from the Primary User Interface on the NW Server Host (Primary UI).
- **Group Aggregation** - configures multiple Archiver or Concentrator services as a group and share the aggregation tasks between them.
- **New Health and Wellness Search** - New Health and Wellness is an advanced monitoring and alerting system that provides insights on the operational state of the host and services in your deployment, and helps identify potential issues.
- **Hybrid Categories on Series 6 (R640) Hardware** - installs Hybrid Categories such as Log Hybrid and Network (Packet) Hybrid service categories on a Series 6 (R640) Physical host. This gives you the ability to attach multiple PowerVault external storage devices to the Series 6 (R640) Physical host.
- **NW Server Deployment on ESA Hardware** - installs the NW Server host on NetWitness Series 5 and Series 6 Analytics hardware. The Series 6 Analytics Hardware has more memory and storage capacity than the standard Core appliance on which NW Server has typically been deployed. This results in better overall responsiveness and larger retention capacity for Report Engine.
- **Second Endpoint Server** - deploys a second Endpoint Server.
- **Warm Standby NW Server** - duplicates the critical components and configurations of your active NW Server Host to increase reliability.

Appendix A. Troubleshooting

This section describes solutions to problems that you may encounter during installations and upgrades. In most cases, NetWitness creates log messages when it encounters these problems.

Note: If you cannot resolve an upgrade issue using the following troubleshooting solutions, contact Customer Support (https://community.netwitness.com/t5/support-information/how-to-contact-netwitness-support/ta-p/563897).

This section has troubleshooting documentation for the following services, features, and processes.

- Command Line Interface (CLI)
- Event Stream Analysis

Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

Command Line Interface (CLI)

Error Message	Command Line Interface (CLI) displays: "Orchestration failed." `Mixlib::ShellOut::ShellCommandFailed: Command execution failed. STDOUT/STDERR suppressed for sensitive resource in/var/log/netwitness/config-management/chef-solo.log`
Cause	Entered the wrong `deploy_admin` password in `nwsetup-tui`.
Solution	Retrieve your `deploy_admin` password. 1. SSH to the NW Server host. `security-cli-client --get-config-prop --prop-hierarchy nw.security-client --prop-name deployment.password` SSH to the host that failed. 2. Run the `nwsetup-tui` again using correct `deploy_admin` password.

Error Message	`ERROR com.rsa.smc.sa.admin.web.controller.ajax.health. AlarmsController - Cannot connect to System Management Service`
Cause	NetWitness sees the Service Management Service (SMS) as down after successful upgrade even though the service is running.
Solution	Restart SMS service. `systemctl restart rsa-sms`

Error Message	You receive a message in the User Interface to reboot the host after you update and reboot the host offline. 
Cause	You cannot use CLI to reboot the host. You must use the User Interface.
Solution	Reboot the host in the Host View in the User Interface.

Event Stream Analysis

For ESA Correlation troubleshooting information, see the *Alerting with ESA Correlation Rules User Guide*.

Appendix B. Create an External Repository

Complete the following procedure to set up an external repository (Repo).

Note: 1.) You need an unzip utility installed on the host to complete this procedure. 2.) You must know how to create a web server before you complete the following procedure.

1. (Conditional) Complete this step if you have an external repo and you want to override it.
   - Case 1: You bootstrapped the host from an external repo and you want to upgrade using a local repo on the Admin Server.
     a. Create the `/etc/netwitness/platform/repobase` file.
        `vi /etc/netwitness/platform/repobase`
     b. Edit the `repobase` file so that the only information in the file is the following URL.
        `https://nw-node-zero/nwrpmrepo`
     c. Complete the instructions on how to run the upgrade using the `upgrade-cli-client` tool.
   - Case 2: You bootstrapped the host from local repo on the Admin server (NW Server host) and you want to use an external repo for the upgrade.
     a. Create the `/etc/netwitness/platform/repobase` file.
        `vi /etc/netwitness/platform/repobase`
     b. Edit the `repobase` file so that the only information in the file is the following URL.
        `https://<webserver-ip>/<alias-for-repo>`
     c. Complete the instructions on how to run the upgrade using the `upgrade-cli-client` tool. The instructions are in "Appendix A. Offline Method (No Connectivity to Live Services) - Command Line Interface" in the *Upgrade Guide for NetWitness Platform*. Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.
2. Set up the external repo.
   a. Log in to the web server host.
   b. Create directory to host the NW repository (`netwitness-11.7.0.0.zip`), for example `ziprepo` under `web-root` of the web server. For example, /var/netwitness is the web-root, run the following command string.
      `mkdir -p /var/netwitness/<your-zip-file-repo>`
   c. Create the 11.7.0.0 directory under `/var/netwitness/<your-zip-file-repo>`.
      `mkdir -p /var/netwitness/<your-zip-file-repo>/11.7.0.0`
   d. Create the `OS` and `RSA` directories under `/var/netwitness/<your-zip-file-repo>/11.7.0.0`.
      `mkdir -p /var/netwitness/<your-zip-file-repo>/11.7.0.0/OS`
      `mkdir -p /var/netwitness/<your-zip-file-repo>/11.7.0.0/RSA`

e. Unzip the `netwitness-11.7.0.0.zip` file into the `/var/netwitness/<your-zip-file-repo>/11.7.0.0` directory.
`unzip netwitness-11.7.0.0.zip -d /var/netwitness/<your-zip-file-repo>/11.7.0.0`
Unzipping `netwitness-11.7.0.0.zip` results in two zip files (`OS-11.7.0.0.zip` and `RSA-11.7.0.0.zip`) and some other files.

f. Unzip the:
`OS-11.7.0.0.zip` into the `/var/netwitness/<your-zip-file-repo>/11.7.0.0/OS` directory.
`unzip /var/netwitness/<your-zip-file-repo>/11.7.0.0/OS-11.7.0.0.zip -d /var/netwitness/<your-zip-file-repo>/11.7.0.0/OS`

The external url for the repo is `http://<web server IP address>/<your-zip-file-repo>`.

g. Unzip the:
`RSA-11.7.0.0.zip` into the `/var/netwitness/<your-zip-file-repo>/11.7.0.0/RSA` directory.
`unzip /var/netwitness/<your-zip-file-repo>/11.7.0.0/RSA-11.7.0.0.zip -d /var/netwitness/<your-zip-file-repo>/11.7.0.0/RSA`

h. (Conditional - For Azure) Follow these steps for Azure update.

   i. `mkdir -p /var/netwitness/<your-zip-file-repo>/11.7.0.0/OS/other`

   ii. `unzip nw-azure-11.3-extras.zip -d /var/netwitness/<your-zip-file-repo>/11.7.0.0/OS/other`

   iii. `cd /var/netwitness/<your-zip-file-repo>/11.7.0.0/OS`

   iv. `createrepo`

i. Use the `http://<web server IP address>/<your-zip-file-repo>` in response to **Enter the base URL of the external update repositories** prompt from NW 11.7.0.0 Setup program (`nwsetup-tui`) prompt.

Appendix C. Silent Installation Using CLI

You can use the following Command Line Interface commands to run the installation script (`nwsetup-tui`) without getting prompted for inputs. This enables you to automate the installation of a host by supplying response to the scripts prompts through the command line.

1. After you have created a base image on the host, log in to the host with the `root` credentials.
2. Submit the `nwsetup-tui` script with the `--silent` command and the arguments that you want to apply.

   The following command string is an example of how you would install a basic NW Server host.

   ```
   nwsetup-tui --silent --is-head=true --host-name=new-host --master-
   pass=netwitness --deploy-pass=netwitness --repo-type=1 --custom-
   firewall=false --ip-override=false --eula=true
   ```

Note: In NetWitness Platform version 11.6 or later, deployment account password must contain at least one number, one upper and lower case letter, and one special characters (!@#%^,+ .) along with the existing policy. The same password policy applies while updating deploy_admin password using `nw-manage script`.
If `deploy_admin` password is changed on Primary NW Server, It must be changed on the Warm Standby Server if it exists.

3. (Conditional - For Component Hosts Only) Install the appropriate service **Category** on the newly provisioned host in the NetWitness Platform Hosts view.

   a. Log into NetWitness and go to  **(Admin)** > **Hosts**.

   The **New Hosts** dialog is displayed with the **Hosts** view grayed out in the background

   Note: If the **New Hosts** dialog is not displayed, click **Discover** in the Hosts view toolbar.

   b. Select the host in the **New Hosts** dialog and click **Enable**.

   The **New Hosts** dialog closes and the host is displayed in the **Hosts** view.

   c. Select that host in the **Hosts** view (for example, **Event Stream Analysis**) and click 

.

   The **Install Services** dialog is displayed.

   d. Select the appropriate host type in **Category** and click **Install**.

Arguments

Argument	Description
`--help-install-opts`	Display all the arguments in this table.

Argument	Description
`--eula`	Accept or decline the End User License Agreement (EULA). Specify: • `true` (default) to accept the agreement • `false` to decline it and cancel the installation. For example: `--eula=true`
`--is-head`	Designate the host as the NW Server host or a component host. Specify: • `true` for NW Server host. • `false` for Component host. For example: `--is-head=true`
`--host-name`	Specify new hostname. If you do not specify this argument, NetWitness Platform retains the existing hostname. For example: `--host-name=<hostname>`
`--master-pass`	Enter master password. For example: `--master-pass=<password>`
`--deploy-pass`	Enter deployment password. For example: `--deploy-pass=<password>`
`--iface-name`	Specify network interface. For example: `--iface-name=eth0`
`--ip-override`	Accept or override IP address found for this host or change the IP configuration found on the host. Specify: • `true` provide IP address. • `false` use IP address found on the host. For example: `--ip-override=false`
`--ip-type`	Select ip address configuration type. Specify: • `1` Static IP Configuration) • `2` DCHP For example: `--ip-type=1`
`--ip-addr`	For Static IP configuration, enter IP Address for static address. For example: `--ip-addr=<ip-address>`
`--ip-netmask`	For Static IP configuration, enter Subnet Mask for static address. For example: `--ip-gateway=<subnet-mask>`

Argument	Description
`--ip-gateway`	For Static IP configuration, enter default gateway for static address. For example: `--ip-gateway=<default-gateway>`
`--ip-nameserver`	IP address assigned to DNS server. `--ip-nameserver=<ip-address>`
`--ip-nameserver-secondary`	Optional - IP address assigned to a secondary DNS server. For example: `--ip-nameserver-secondary=<ip-address>`
`--ip-domain`	For Static IP configuration, enter Local Domain Name for static address. For example: `--ip-domain=<default-gateway>`
`--repo-type`	Select type of update repository. Specify: • `1` Local repository • `2` External repository For example: `--repo-type=1`
`--repo-url`	For an external update repository, specify the url of the repository. For example: `--repo-url=<url>`
`--head-ip`	For a component host, specify IP Address of the NW Server. For example: `--head-ip=<ip-address>`
`--custom-firewall`	Disable default firewall configuration and use your custom configuration. Specify: • `true` use custom firewall configuration. • `false` use default firewall configuration. For example: `--custom-firewall=true`
`--use-nat`	Configure the host to use Network Address Translation (NAT) based IP addresses: • `true` use NAT IPs to connect to other hosts • `false` do not use NAT IPs to connect to other hosts (default) For example: `--use-nat=false`

Appendix D. Third Party Server System Requirement

This section contains all the hardware requirements and configuration needed to successfully deploy NetWitness Platform on Third Party Server Hardware. It contains the required compute, memory, drive types and recommendations.

Third Party Server Deployments only support the following NetWitness Platform components:

- Core Services (Broker , Decoder, Log Decoder, Archiver , Concentrator)
- Analyst UI
- New Health & Wellness
- Log Collector
- Malware Analysis
- Warehouse connector

Hardware Requirements

Administrators must configure single bootable block device (RAID volume/group) and ensure it is bootable. After installation is complete, See core service storage configuration the NetWitness Storage Guide.

Item	Core
Host Type	• NW Server • Warm standby • Analyst UI • Health & Wellness • Core Services • Log Collector • Malware Analytics • Warehouse Connector
Memory	128 GB
Processor	
Processor Speed	3.2 Ghz
# of Processors	2
# of Cores	8 Cores Per Processor
# of Threads	16 Threads Per Processor
Storage Configuration	

Item	Core
Volume	Single block device. 150 GB or greater.
Drive Types	10K SAS or SSD
RAID Configuration	1, 5 or 6
Network	
NIC	Supported by Centos 7.9 (1G, 10G or 40G)
Capture Speed	3G

NetWitness® Platform

Version 12.3.1.0

Getting Started with NetWitness Platform

Overview

NetWitness is a powerful threat detection suite that enables Security Operation Centers (SOCs) to quickly locate, prioritize, and triage threats. NetWitness helps you to isolate and remediate known threats as well as those that were previously unknown. It provides deep insight into packets, logs, and endpoints that provide you with an unparalleled view into your enterprise or business.

NetWitness is powerful, but it is easier for Tier 1 Analysts to use because it automates the process of identifying and prioritizing suspicious threats. Tier 2 and Tier 3 Analysts can hunt for and locate threats by searching and filtering events and then examining events using reconstruction and analysis tools.

Architecture

NetWitness is a distributed and modular system that enables highly flexible deployment architectures that scale with the needs of the organization. NetWitness allows administrators to collect three types of data from the network infrastructure: packet data, log data, and endpoint data. The key aspects of the architecture are:

- **Distributed Data Collection**: The **Decoder** ingests packet data while the **Log Decoder** ingests log data. Decoders parse and reconstruct all collected network traffic from Layers 2 - 7, or log and event data from hundreds of devices and event sources, including NetWitness Endpoint data (if installed and configured). The **Concentrator** indexes metadata extracted from network or log data and makes it available for enterprise-wide querying and real-time analytics while also facilitating reporting and alerting. The **Broker** aggregates data captured by other devices and event sources. Brokers aggregate data from configured Concentrators; Concentrators aggregate data from Decoders. Therefore, a Broker bridges the multiple real-time data stores held in the various Decoder or Concentrator pairs throughout the infrastructure.
- **Real-time Alerting**: The NetWitness **Event Stream Analysis (ESA)** service provides advanced stream analytics such as correlation and complex event processing at high throughputs and low latency. It can process large volumes of disparate event data from Concentrators. ESA uses an advanced Event Processing Language (EPL) that allows analysts to express filtering, aggregation, joins, pattern recognition, and correlation across multiple disparate event streams. Event Stream Analysis helps to perform powerful incident detection and alerting.
- **Real-time Analytics** (automatic analysis of events): The Automated Threat Detection functionality includes preconfigured ESA analytics module for detecting Command and Control traffic.
- **NetWitness Server**: The NetWitness Server provides reporting, investigation, administration, and other aspects of the user interface.
- **Capacity**: NetWitness has a modular-capacity architecture enabled with direct-attached capacity (DACs) or storage area networks (SANs), that adapts to the organization's short-term investigation and long-term analytic and data-retention needs.

NetWitness provides large deployment flexibility. You can design its architecture using as many as multiple dozens of physical hosts or a single physical host, based on the particulars of the customer's performance and security-related requirements. In addition, the entire NetWitness system has been optimized to run on virtualized infrastructure.

The System Architecture comprises of these major components- Decoders, Brokers, Concentrators, Archivers, ESA, and Warehouse Connectors. NetWitness components can be used together as a system or can be used individually.

- In a security information and event management (SIEM) implementation, the base configuration requires these components- Log Decoder, Concentrator, Broker, Event Stream Analysis (ESA), and the NetWitness Server.
- In a forensics implementation, the base configuration requires these components- Decoder, Concentrator, Broker, ESA, Malware Analysis, and Endpoint Log Hybrid. The Respond Server service is also required and is used to prioritize alerts.

The table provides a synopsis of each major component:

System Component	Description
Decoder / Log Decoder	• NetWitness collects packet, log, and endpoint data. • Packet data, that is, network packets, are collected using the Decoder through the network tap or span port, which is typically determined to be an egress point on an organization's network. • A Log Decoder can collect four different log types - Syslog, ODBC, Windows eventing, and flat files. • Windows eventing refers to the Windows 2008 collection methodology and flat files can be obtained via SFTP. • Both types of Decoders ingest raw transactional data that is enriched, closed out, and aggregated to other NetWitness components. • The process for ingesting and parsing transactional data is a dynamic and open framework.
Endpoint Log Hybrid	• Collects and manages endpoint (host) data from Windows, Mac, or Linux hosts. • Records data about every critical action, such as process, file, registry modification, network connections, and user console interactions. • Collects Windows logs and file logs from Windows host, if configured. • Generates metadata to correlate endpoint data with sessions from other events sources, such as logs and network. • Performs on-demand memory analysis and suspicious user behavior detection.

System Component	Description
Concentrator	• Provides index and query capability to NetWitness Collections. • Can optionally forward data to ESA.
Broker	• Distributes NetWitness Collection access across many Concentrators or Archivers, making the entire NetWitness enterprise appear as a single collection.
Archiver	• The Archiver service enables long-term log archiving by indexing and compressing log data and sending it to archiving storage. • The archiving storage is optimized for long-term data retention, and compliance reporting. • Archiver stores raw logs and log metadata from Log Decoders for long-term retention, and it uses Direct-Attached Capacity (DAC) for storage. **Note:** Raw packets and packet metadata are not stored in the Archiver.
Event Stream Analysis (ESA)	• ESA provides event stream analytics such as correlation and complex event processing at high throughputs and low latency. It can process large volumes of disparate event data from Concentrators. • ESA uses advanced Event Processing Language that allows users to express filtering, aggregation, joins, pattern recognition, and correlation across multiple disparate event streams. • ESA helps to perform powerful incident detection and alerting.

Core Versus Downstream Components

In NetWitness, the Core services ingest and parse data, generate metadata, and aggregate generated metadata with the raw data. The Core services are Decoder, Log Decoder, Concentrator, and Broker. Downstream systems use data stored on Core services for analytics; therefore, the operations of downstream services are dependent on Core services. The downstream systems are Archiver, ESA, Malware Analysis, Investigate, and Reporting.

Although the Core services can operate and provide a good analytics solution without the downstream systems, the downstream components provide additional analytics. ESA provides real-time correlation across sessions and events as well as between different types of events, such as log, packet, and endpoint data. Investigate provides the ability to drill into data, examine events and files, and reconstruct events in a safe environment. The Malware Analysis service provides real-time, automated inspection for malicious activity in network sessions and associated files.

Logging in to NetWitness Platform

Note: NetWitness supports modern (or current) versions of Google Chrome, Mozilla Firefox, Microsoft Edge, and Apple Safari. It is possible to use a different browser, but some features may not function as expected. Internet Explorer is no longer supported.

Logging in to NetWitness can vary based on your environment. You may have an internal user account or an external user account. Internal user accounts are local to the NetWitness and internal users can log in to NetWitness and receive role-based permissions. External user accounts authenticate outside of the NetWitness and are mapped to NetWitness roles. If you are an external user and you cannot access NetWitness or view the information that you need, contact your System Administrator. Your Administrator can assign the appropriate roles to your account.

NetWitness Platform 11.4 or later also supports Single Sign-On authentication (SSO) using Security Assertion Markup Language 2.0 (SAML 2.0) protocol with Active Directory Federation Services (ADFS) as the Identity Provider.

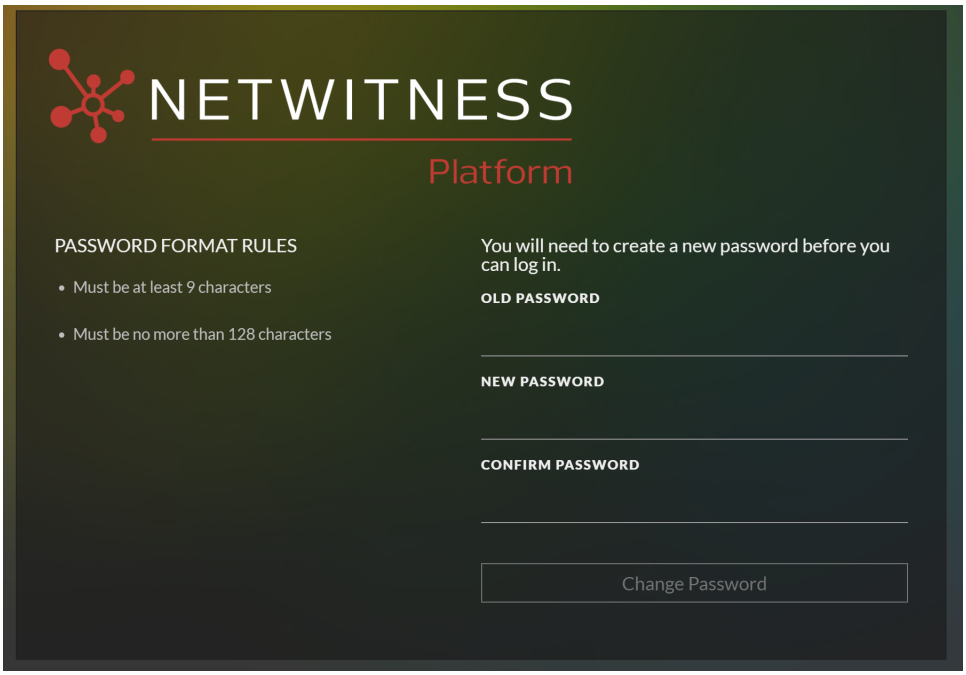
If SSO authentication is enabled by your administrator, you will be redirected to the Identity Provider User Interface instead of the default NetWitness login page. After you enter the username and password you will be securely logged into NetWitness Platform.

Note: In 11.4 or later, Single Sign-On (SSO) authentication can be used to access the NetWitness Platform UI, and Analyst UI Deployment.

1. Use the icon provided by your Administrator, or type the following in your web browser:
   `https://<hostname or IP address>/login`
   Where `<hostname or IP address>` is the hostname or the IP address of your NetWitness server.
   If Single Sign-On authentication is enabled, this redirects you to the ADFS login screen.
2. Enter the username and password, and then click **Sign in**.
   If the login is successful, you will be logged into the landing page specified in the user preferences.

Note: If you had previously authenticated to any other application configured to the same IDP, then you may be redirected to the requested NetWitness Platform UI without being prompted for the credentials.

If you are locked out



Note: This information applies to internal accounts only. It does not apply to Active Directory or PAM accounts.

If you try too many times to log in with an incorrect username or password, your account will be locked. Contact your Administrator to unlock your account.

If you have a new account or your account is expired

Note: This procedure applies to internal accounts only. It does not apply to Active Directory or PAM accounts.

1. In the dialog to create a new password, enter your old password, type a new password, and confirm it. Password format rules (as defined by your system administrator) are provided on the left and your new password must conform to the indicated format rules.

2. Click **Change Password**.

If you do not have the appropriate access to NetWitness

If you are able to log in successfully, but you are not able to view the information that you need, it is possible that you need a user role assigned to your user account. Contact your NetWitness Administrator for assistance.

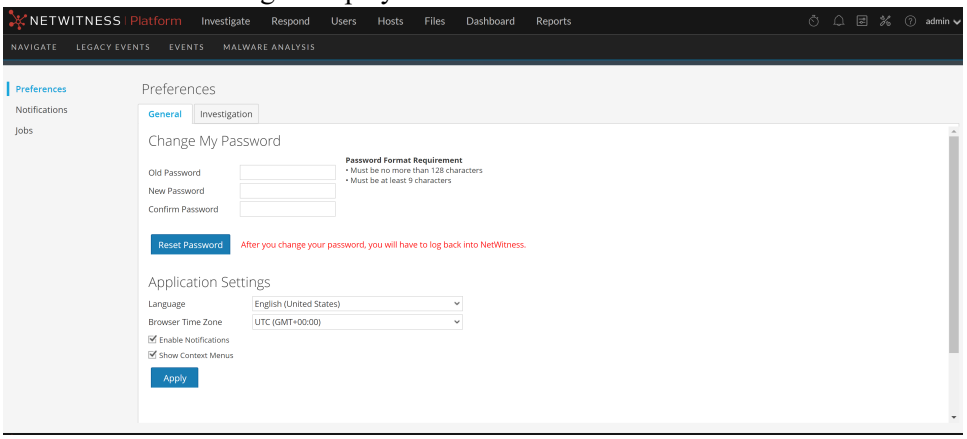
Log Off NetWitness Platform

To log off from the Respond and some Investigate views

1. In the main menu bar, select your username, for example, admin.
2. In the User Preferences, click **Sign Out**.

To log off from the other views

In the main menu bar, select your username and then select **Sign Out**.



Changing Your Password

You can change the password that you use for NetWitness authentication at any time in your user preferences. Your administrator defines the appropriate password strength requirements for your NetWitness password, such as minimum password length and minimum number of uppercase, lowercase, decimal, non-Latin alphabetic, and special characters. These requirements are then displayed when changing your password.

To change your password:

1. Do one of the following:
   - For most views, such as Investigate, Dashboard, Reports,  (Configure) or  (Admin) , select your username, for example , and then select **Profile**.
   - In the Springboard, Investigate view (Events), Respond, Users, Hosts, and Files, select your username, for example , and in the User Preferences dialog click **Change my password**.

   The Preferences dialog is displayed.

2. In the **Change My Password** section, enter the password that you used to authenticate to NetWitness in the **Old Password** field.
3. In the **New Password** field, enter the password that you want to use for the next login.
4. In the **Confirm Password** field, retype the new password.
5. Click **Reset Password**.
   You will be logged out of NetWitness for the changes to take effect. The new password becomes effective the next time you log in to NetWitness.

For more information on user preferences, see Setting User Preferences.

Identifying Your Role

The roles listed here are the typical roles or functions of a Security Operations Center (SOC). Determine the role or roles that you perform in the SOC. You can use these functions as a guide to decide how to set up and navigate NetWitness so that you can efficiently perform your job tasks.

SOC Team

SOC Manager
(SOC Management and Reporting)

- Manage SOC readiness
- Respond to incidents
- Respond to data breaches

Data Privacy Officer

- Monitor and protect privacy and sensitive information

Incident Responder
(T1 Analyst)

- Respond to incidents
- Remediate incidents

Threat Hunter
(T2/T3 Analyst)

- Hunt for threats
- Conduct forensic analysis
- Recommend issues for remediation
- Remediate issues

Content Expert
(Threat Intelligence)

- Investigate new threat intelligence
- Evaluate and create new feeds
- Create correlation rules to flag indicators of compromise

System Administrator

- Install and configure equipment and software
- Manage user access
- Monitor and fine tune performance
- Backup and restore data
- Manage storage and archives
- Update software
- Create reports for regulatory compliance

NetWitness Platform Basic Navigation

The NetWitness application is divided into ten main functional areas, known as views, that are based on typical Security Operation Center (SOC) roles.

Note: On upgrade to version 11.5 or later, by default the Springboard is displayed if you have not configured the default landing page in previous versions.

- **Springboard**: Springboard presents Analysts with the platform-wide detections and signals in a single view to hunt and investigate faster than ever before. System Administrators set up and maintain the Springboard. You can view the Springboard at any time by clicking NetWitness in the main menu. For more information, see Managing the Springboard.
- **Investigate**: This view is primarily for Threat Hunters, who prefer to manually hunt for threats using NetWitness metadata, raw event data, and event reconstruction and analysis. Incident Responders also use this view to get details about events associated with an incident being investigated. Both Threat Hunters and Incident Responders can use the forensic event reconstruction and event analysis features in this view.
- **Respond**: This view is for Incident Responders, who can view a list of prioritized incidents to triage. These incidents come from sources such as ESA rules, NetWitness Endpoint, or ESA Analytics modules for Automated Threat Detection. You can also view all of the alerts received by NetWitness here.
- **Users**: This view is for SOC Managers and Analysts to discover, investigate, and monitor risky behaviors across entities namely Users and Network in your environment.
- **Hosts**: This view is for Analysts, who can investigate or perform analysis on hosts using attributes such as IP address, host name, Mac address, risk score, and so on.
- **Files**: This view is for Analysts, who can investigate or perform analysis on files using attributes such as IP address, host name, Mac address, risk score, and so on
- **Dashboard**: This view is for all users. You can view dashboards on different areas of interest depending on your user permissions.
- **Reports**: This view is for all users. You can view reports on different areas of interest depending on your user permissions.
- **Configure**: This view is for Threat Intel personnel (Content Experts), who configure data sources and inputs to NetWitness. Content Experts use this area to download and manage Live content. They can also create and manage incident and ESA rules.
- **Admin**: This view is for System Administrators, who set up and maintain the overall application.

Menu changes

The following table illustrates the top-level menu changes in the 11.5 version.

Previous Version - 11.4 and earlier	11.5 Version
N/A	RSA Click the RSA logo at the top left corner to view the Springboard.
Monitor > Dashboard Monitor > Reports	Dashboard Reports
Investigate > Hosts Investigate > Files Investigate > Entities	Hosts Files Users
Configure	
Admin	

The following table illustrates the menu changes in the 12.0 version.

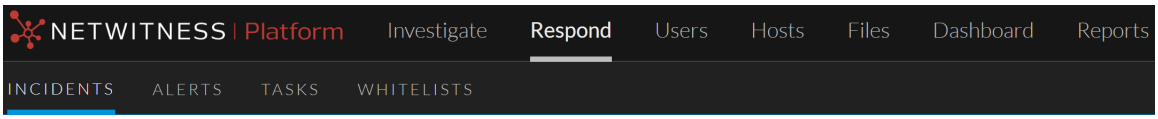
Previous Version - 11.5 to 11.7.x.x	12.0 Version
RSA logo	NETWITNESS Click the NetWitness logo at the top left corner to view the Springboard.

The following table illustrates the menu changes in the 12.1 version.

12.0 Version	12.1 Version
NETWITNESS logo	NETWITNESS Platform XDR Click the NetWitness Platform XDR logo at the top left corner to view the Springboard.

The following table illustrates the menu changes in the 12.3.1 version.

12.3 Version	12.3.1 Version
NETWITNESS Platform XDR logo	NETWITNESS Platform Click the NetWitness Platform logo at the top left corner to view the Springboard.

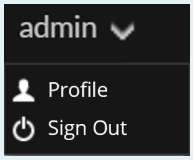


Accessing Main Views

The options that open each of the main views are listed at the top of the browser window. With the appropriate permissions, you can access any of these views at the top of every UI at any time.

Secondary Menus

The main views have secondary menus with additional views that you can select, which vary according to the tasks that you can complete. The following example shows the Respond menu.



Additional Options

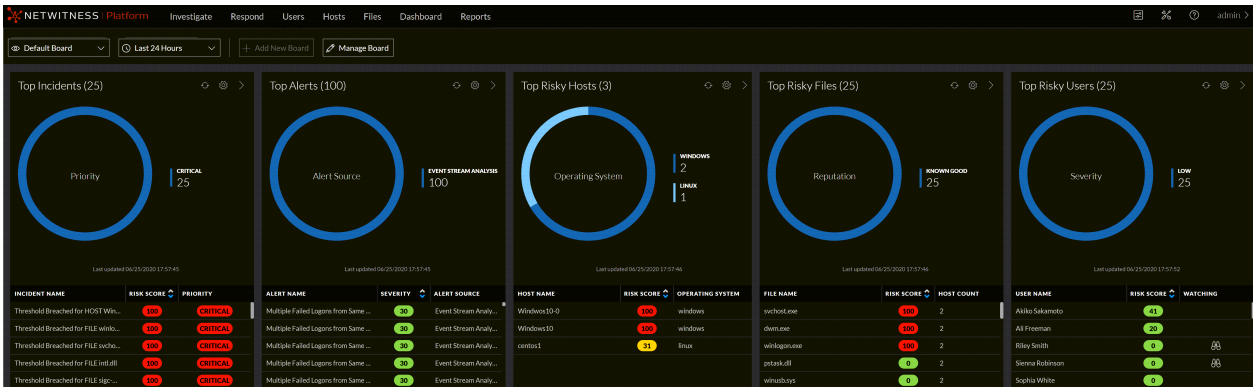
In addition to the main views, there are additional options at the top of the UI that are common to the application.

The following table describes the common options.

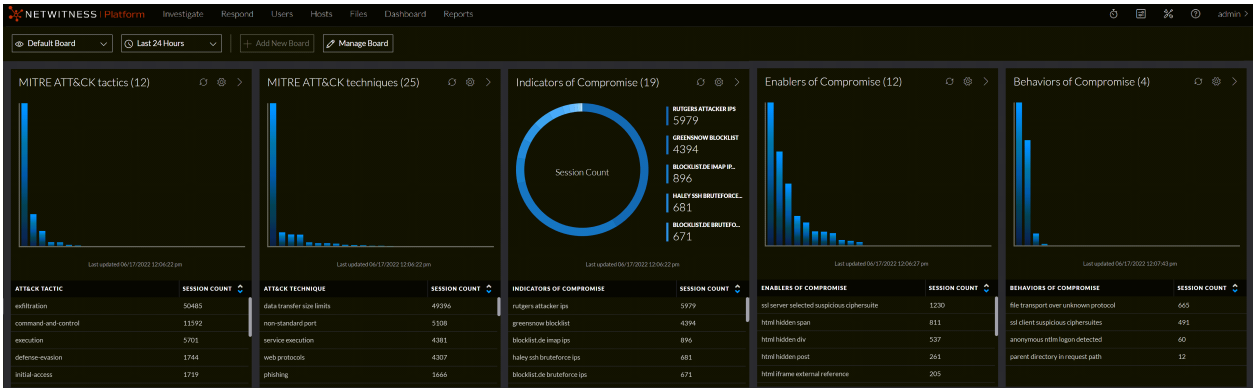
Common Option	Name	Description
	Jobs	In the Investigate, Dashboard, Reports, (Configure) , and (Admin) views, click this icon to view and manage your jobs in the Jobs tray. Jobs are on-demand or scheduled tasks that take some time to complete in the NetWitness application.

Common Option	Name	Description
	Notifications	Click this icon to view notifications from the application.
	User Preferences	Click this icon to view your available user preference options. You can manage your user preferences and log out of NetWitness.
	User Profile	Click your user profile to view the available options. You can manage your user preferences, change your password, and log out of NetWitness UI.
	Help	Click this icon to view NetWitness help topics.

Main Views



The following sections explain the main views:

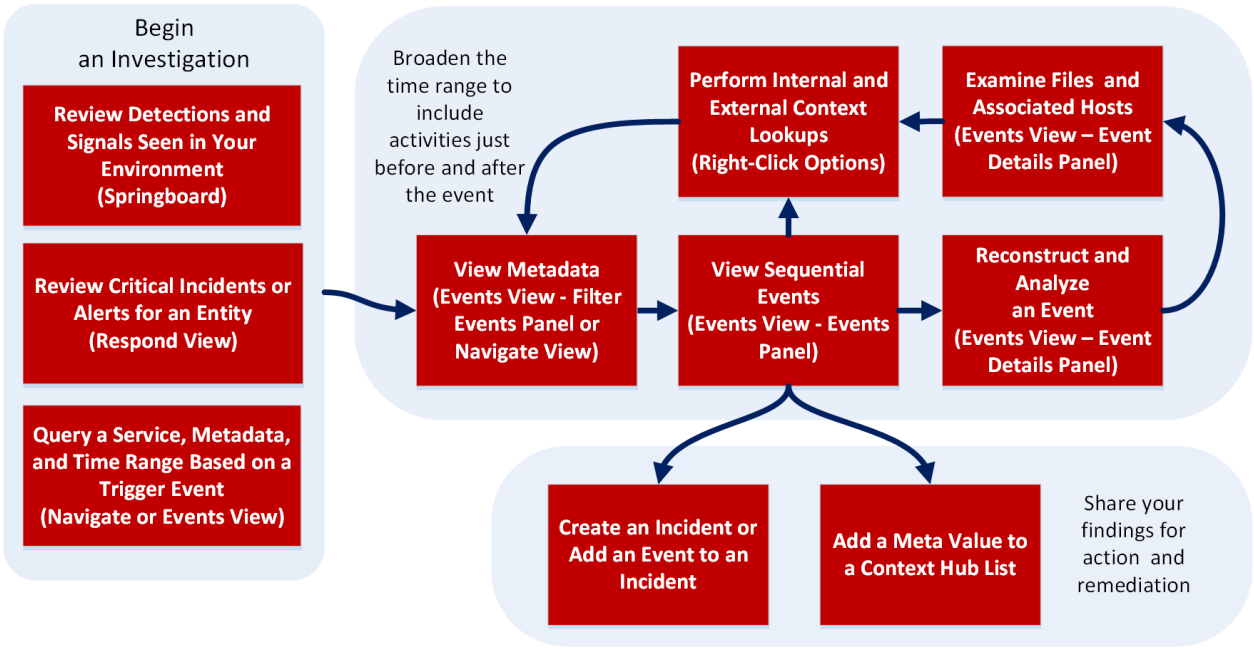


- Springboard
- Investigate
- Respond
- Users
- Hosts
- Files
- Dashboard
- Reports
-  Configure
-  Admin

Springboard

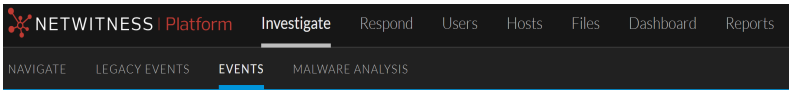
(From 11.5 and later) NetWitness Platform Springboard is an easy-to-use landing page that presents platform-wide detections and signals in a single view to help analysts hunt and investigate faster than ever before.

Click the NetWitness logo at the top left corner to view the Springboard.



What can I do here?	Path	Show me how
View out-of-the-box panels Edit a panel Add New Board Refresh a panel Select time range View all incidents, alerts, users, files, and hosts View details of selected incident, alert, user, file, and host Manage Board (add, rearrange, and delete panels) Add a new custom private board	Springboard view	See Managing the Springboard.

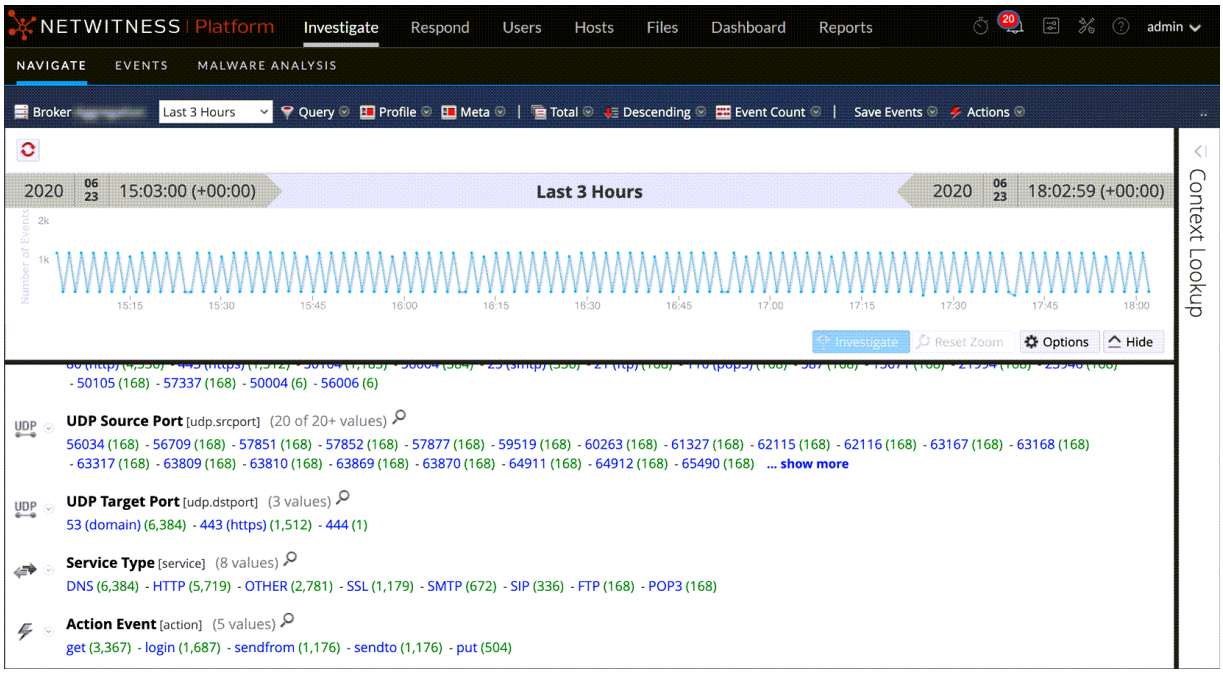
Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.



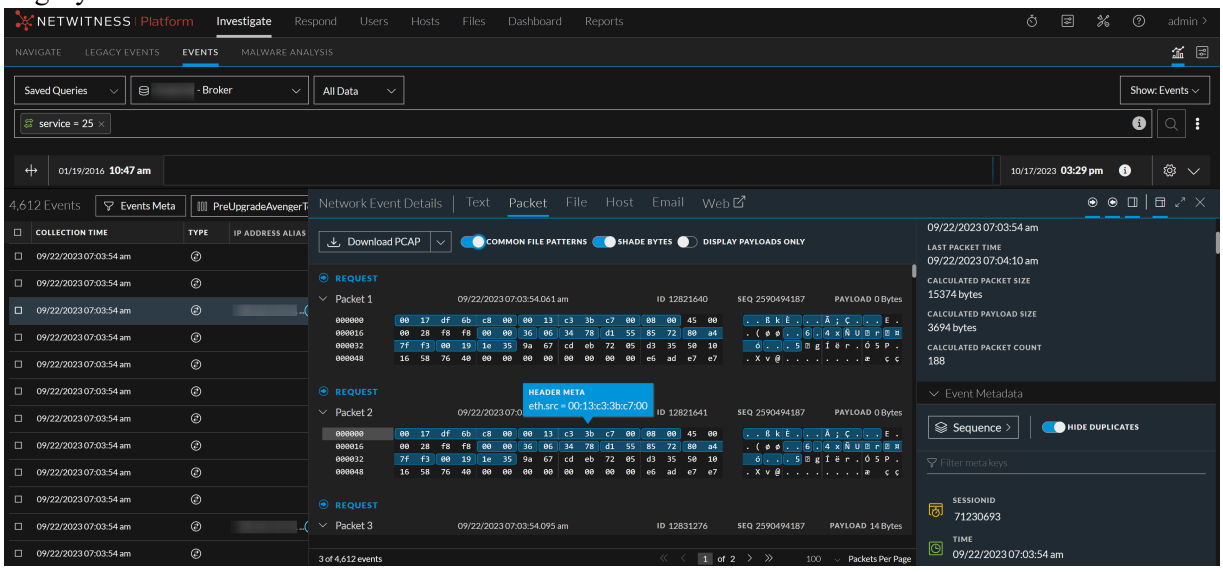
Investigate

The Investigate view is the tool for SIEM, network, and endpoint data investigation, presenting different views into a set of data. Analysts can see metadata and raw data for endpoints, logs, and events, as well as potential indicators of compromise. In addition to investigating data on a specific service, you can pivot into Investigate from Respond, the Dashboard view, an entry in a report generated by the Reporting Engine, or a properly configured third-party application.

You can begin your investigation in any Investigate view, then continue the investigation seamlessly in another Investigate view. The manner in which you proceed is determined by the question that needs to be answered. If you find an event that needs a response, you can create an incident in Respond where an incident responder will take further action. The following figure depicts the high-level flow of an investigation. The *NetWitness Investigate User Guide* provides detailed information.

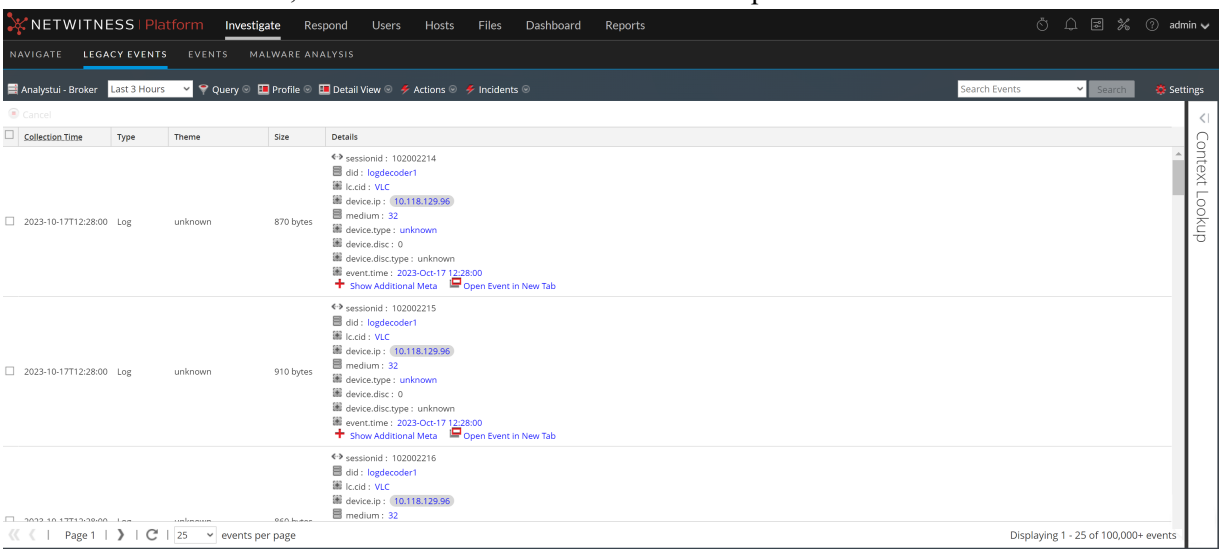


Investigate Menu

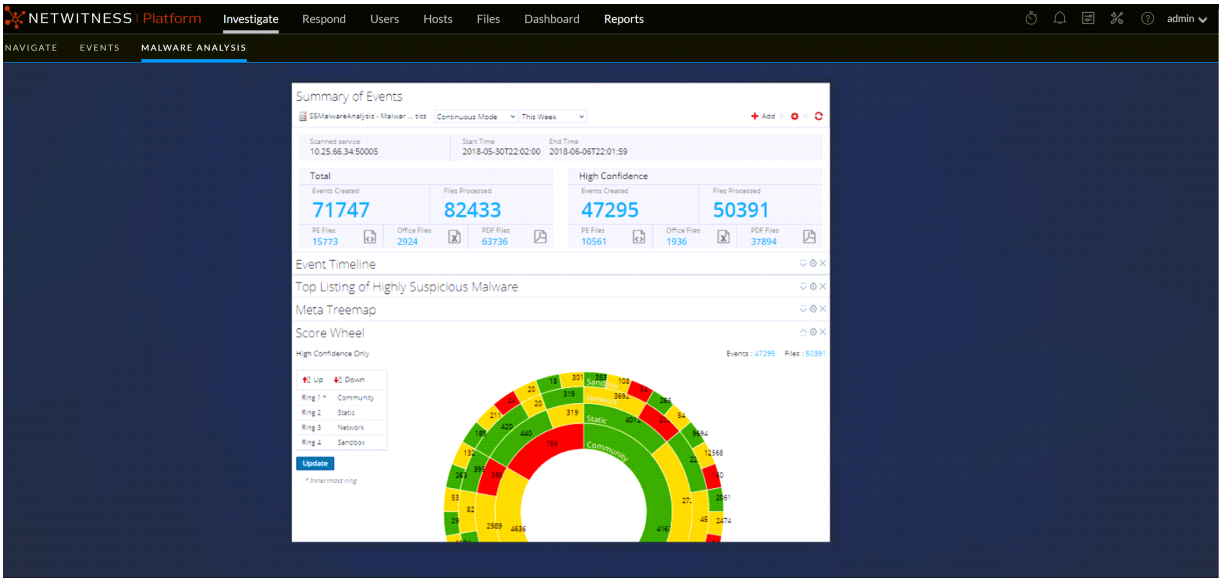


The Investigate menu has the following options:

- **Navigate**: The Navigate view provides a list of meta keys and meta values with a focus on metadata. You can drill into the data, search for events, open a selected event in the Events view, and look up additional context from the Context Hub service.



- **Events**: The Events view (formerly Event Analysis view) is the default user interface for interacting with events. It provides a sortable list of events with focus on metadata and raw data. You can search for events, view a reconstruction that offers helpful cues to identify points of interest, pivot to standalone Endpoint, look up additional context from the Context Hub service, look up data in Live, do external lookups, and create an incident for incident responders. By default only the Events view appears in the menu, but when the Legacy Events view is enabled, both the Events view and the Legacy Events view are visible in the menu bar.

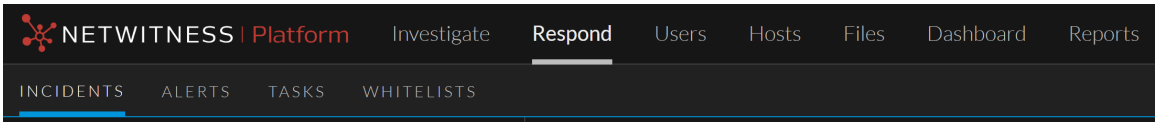


- **Legacy Events**: With major functionality added to the 11.3 Events view, the Legacy Events is no longer needed and it is hidden unless the administrator enables it. The Legacy Events view provides a list of events with a focus on raw data. You can browse a simple list of events, a detailed list, and a log list. You can search for events, view a reconstruction of an event, look up additional context from

the Context Hub service, and create an incident for incident responders.

- **Malware Analysis**: Malware Analysis is an automated malware analysis processor designed to analyze certain types of file objects (for example, Windows PE, PDF, and MS Office) to assess the likelihood that a file is malicious. Using Malware Analysis, you can prioritize the massive number of files captured in order to focus analysis efforts on the files that are most likely to be malicious.

What can I do here?	Path	Show me how
Configure Investigate Views and Preferences	Investigate view	See "Configuring Investigate Views and Preferences" in the *NetWitness Investigate User Guide*.



What can I do here?	Path	Show me how

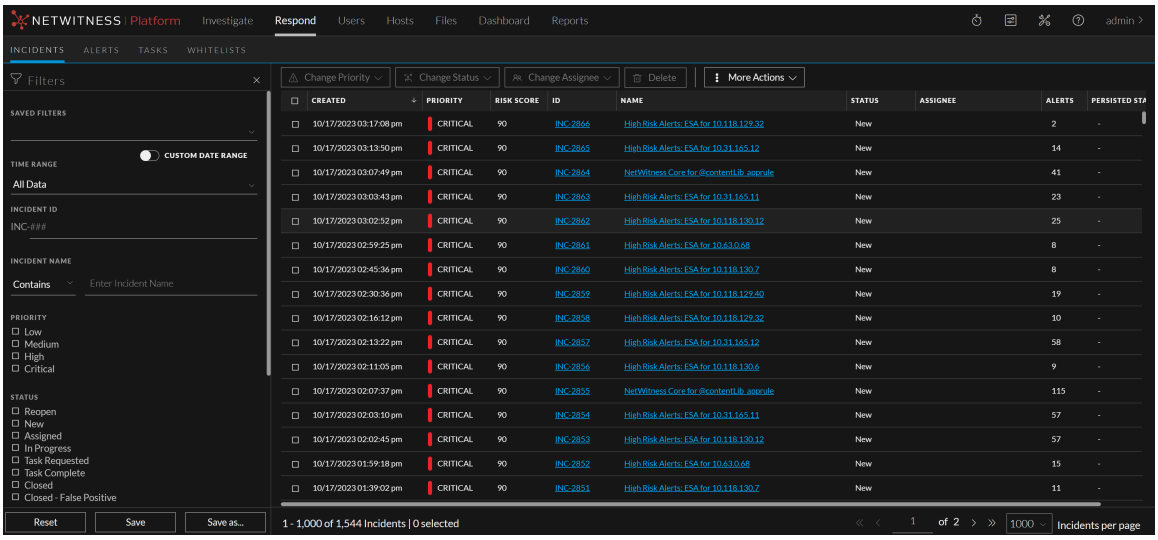
Triage an Incident	Pivot from the Respond view	See the *NetWitness Respond User Guide*.

Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

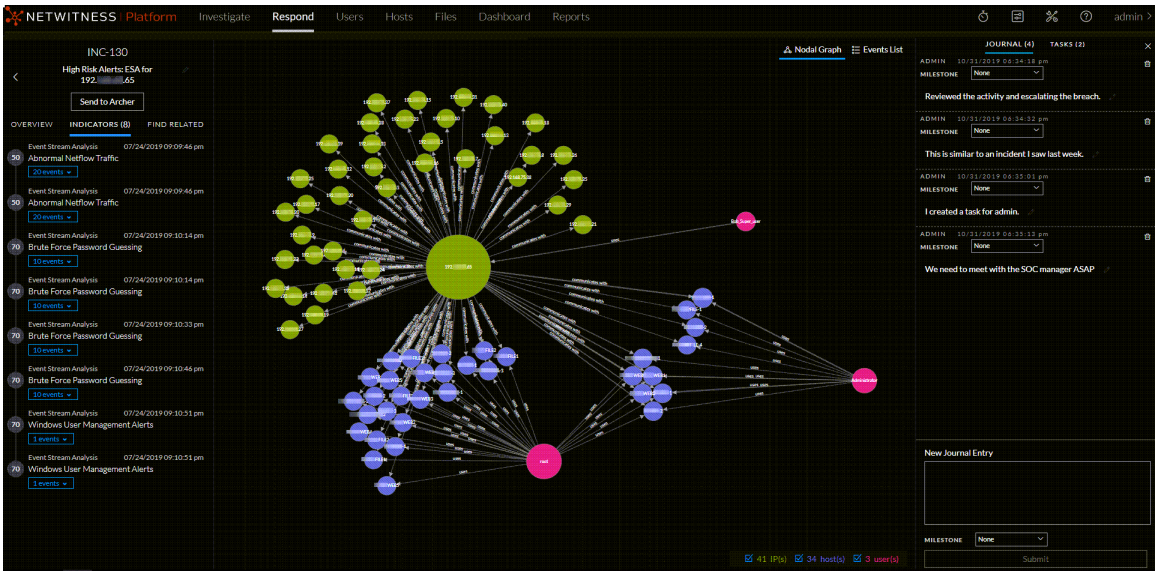
Respond

The Respond view presents analysts with a queue of incidents in severity order. When you take an incident from the queue, you receive relevant supporting data to help you investigate the incident. From there, you can determine the incident scope and escalate or remediate it as appropriate.



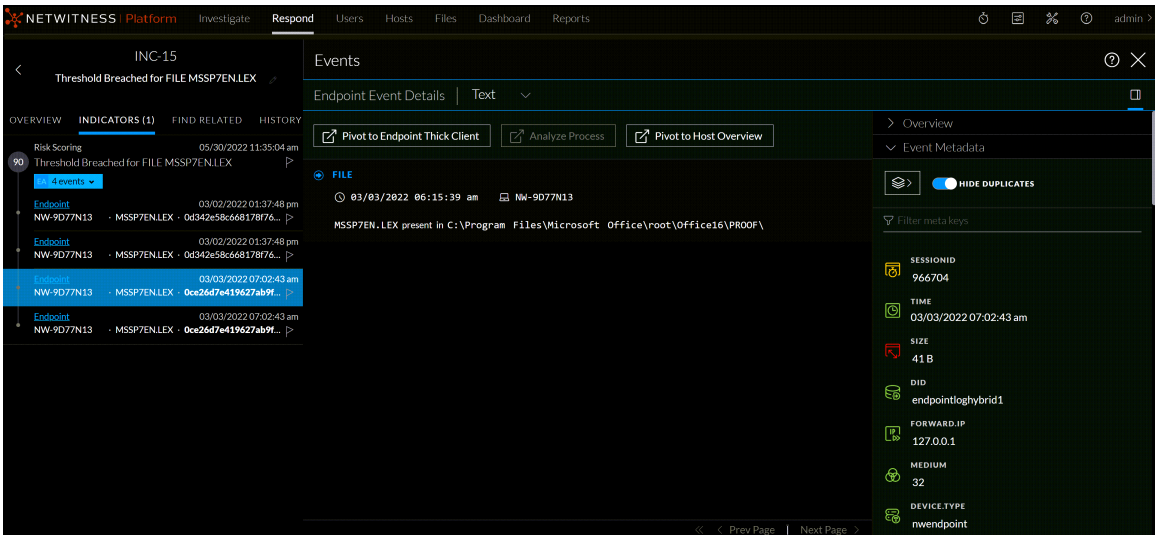
Respond Menu

The Respond menu has the following options:

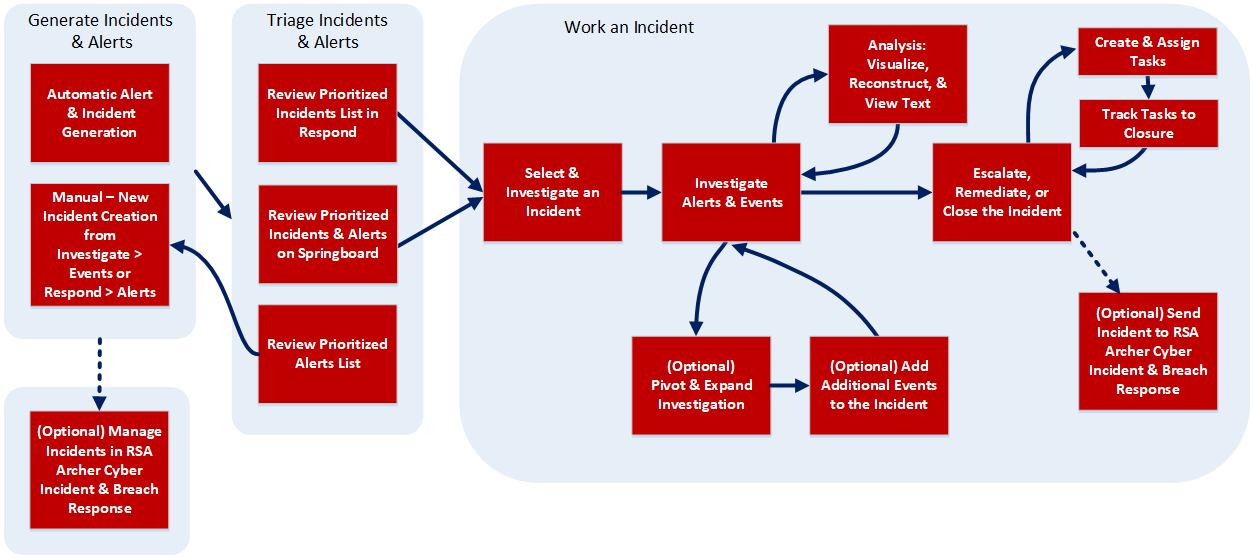


- **Incidents**: The Incidents List view contains a list of all incidents with basic information. The Incident Details view provides extensive details about the incident.
- **Alerts**: The Alerts List and Alert Details views provide information about all of the threat alerts and indicators received by NetWitness in one location.
- **Tasks**: The Tasks List view enables you to create tasks and track them to completion.

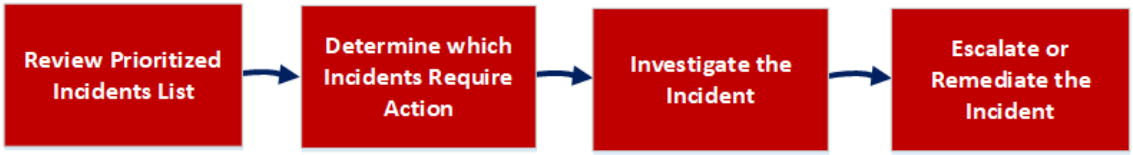
The following figure shows the Respond view - Incidents List view, which shows a list of prioritized incidents.



When using NetWitness as your case management tool, you can also manage incidents from this view. New incidents appear at the top of the incident queue.



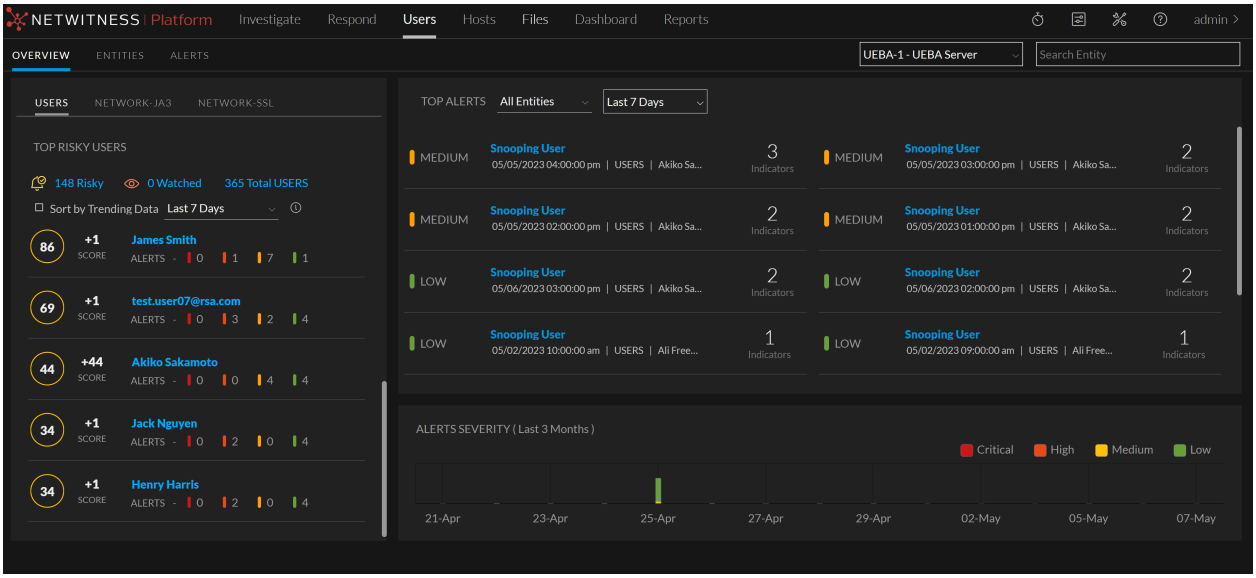
The following figure shows an example of the Respond view - Incident Details view, which shows details for a selected incident.



The Respond view is designed to make it easy to evaluate incidents, contextualize that data, collaborate with other analysts, and pivot to a deep-dive investigation as needed. The following figure shows an example of an event analysis in the Incident Details view.

The following figure shows the high-level Respond workflow process.

The following figure shows the high-level process that Incident Responders use to respond to incidents in the Respond view.



In the Respond view, analysts look at the prioritized list of incidents and determine which incidents require action. They click an incident for a clear picture of the incident with supporting details and they can investigate the incident further. Analysts can then determine how to respond to the threat, by escalating or remediating it.

What can I do here?	Path	Show me how
View prioritized incident lists	Respond > Incidents (Incidents List view)	See the *NetWitness Respond User Guide*.
Determine which incidents require action (Triage an incident)	Respond > Incidents (Incident Details view)	See the *NetWitness Respond User Guide*.
Investigate the incident	Respond > Incidents (Incident Details view)	See the *NetWitness Respond User Guide*. (You can also pivot to the Investigate view.)
Escalate or Remediate the Incident	Respond > Incidents (Incident Details view) and Respond > Tasks (Tasks List view)	See the *NetWitness Respond User Guide*.
Review Alerts	Respond > Alerts (Alerts List and Alert Details views)	See the *NetWitness Respond User Guide*.

Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

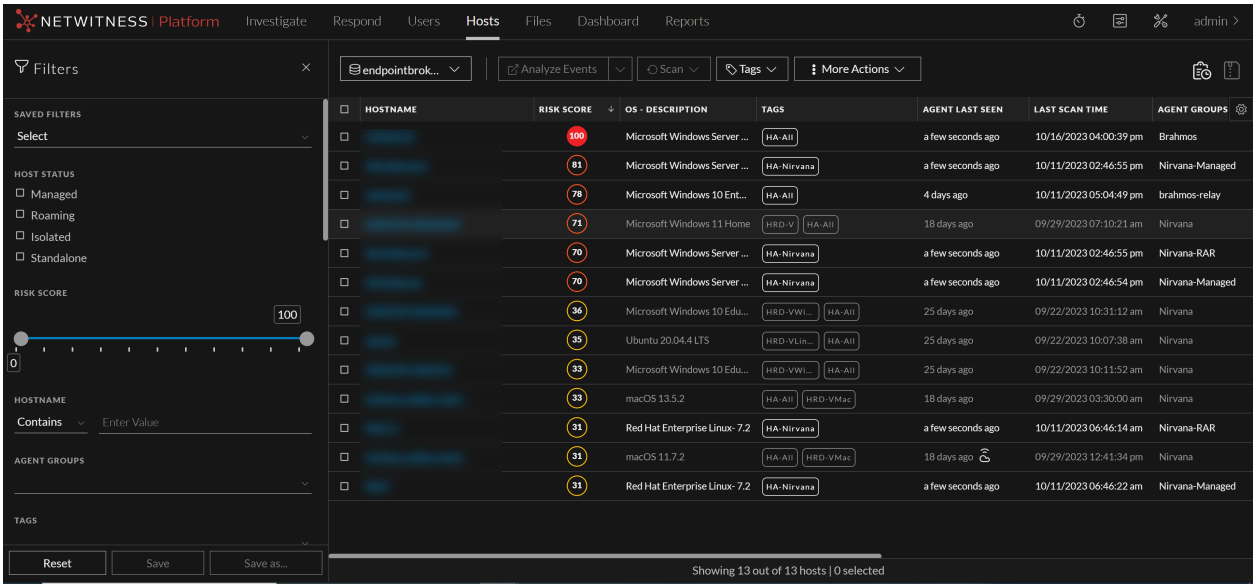
Users

The Users view provides visibility into risky user behaviors across your enterprise with NetWitness UEBA. You can view a list of high-risk users and a summary of the top alerts for risky behavior for your environment. Then you can select a user or an alert and view details about the risky behavior and a timeline during which the behaviors occurred.

The Users menu has the following options:

- **Overview**: It provides an initial view into the recent and most important user or network entity activities in the environment. Each panel shows either prioritized incidents for investigation or consolidated metrics reflecting potential risks to the enterprise.
- **Entities**: It is a proactive threat hunting console. You can use behavioral filters to build use case driven target lists, and to continuously monitor the environment for specific risky behavior patterns.

Note: The Entities view is only available if you are assigned the role of Administrator or UEBA Analyst.



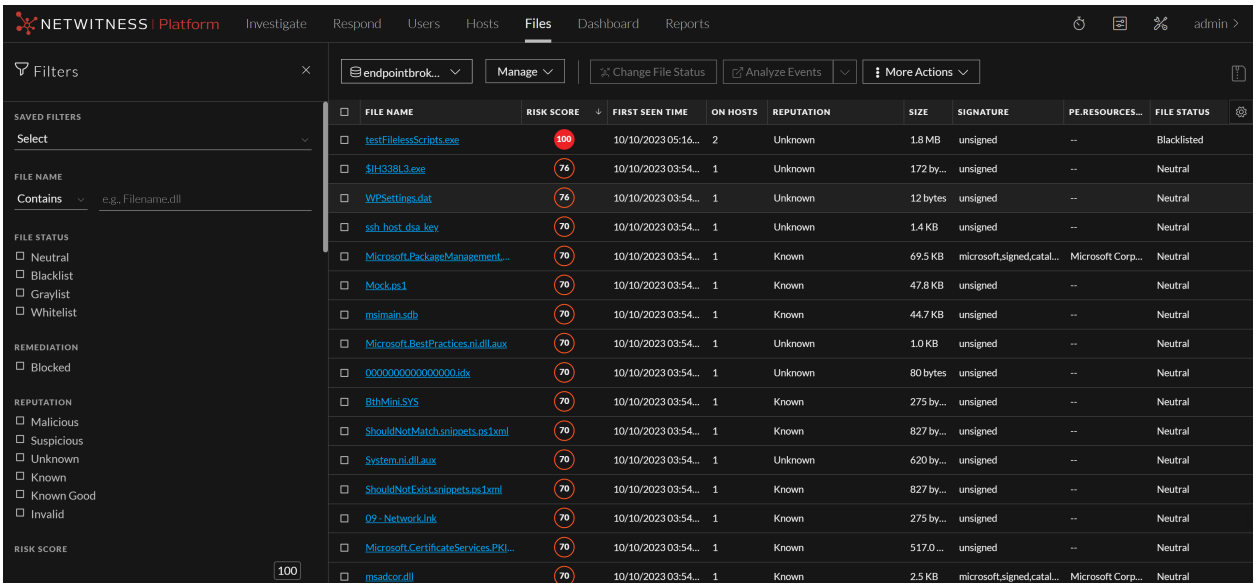
- **Alerts**: It displays details about all the alerts in your environment. You can view forensic information about suspicious activity in your environment that is based on a specific timeframe.

What can I do here?	Path	Show me how
Find Risky User Behavior	Users view	See the *NetWitness UEBA User Guide*.

Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

Hosts

The Hosts view lists all hosts that have a NetWitness Endpoint agent running. You can filter hosts based on operating system, agent last seen, last scan time, risk score, and other factors. You can open a specific host to view events related to alerts, anomalies, process details, and information related to logged-in users.

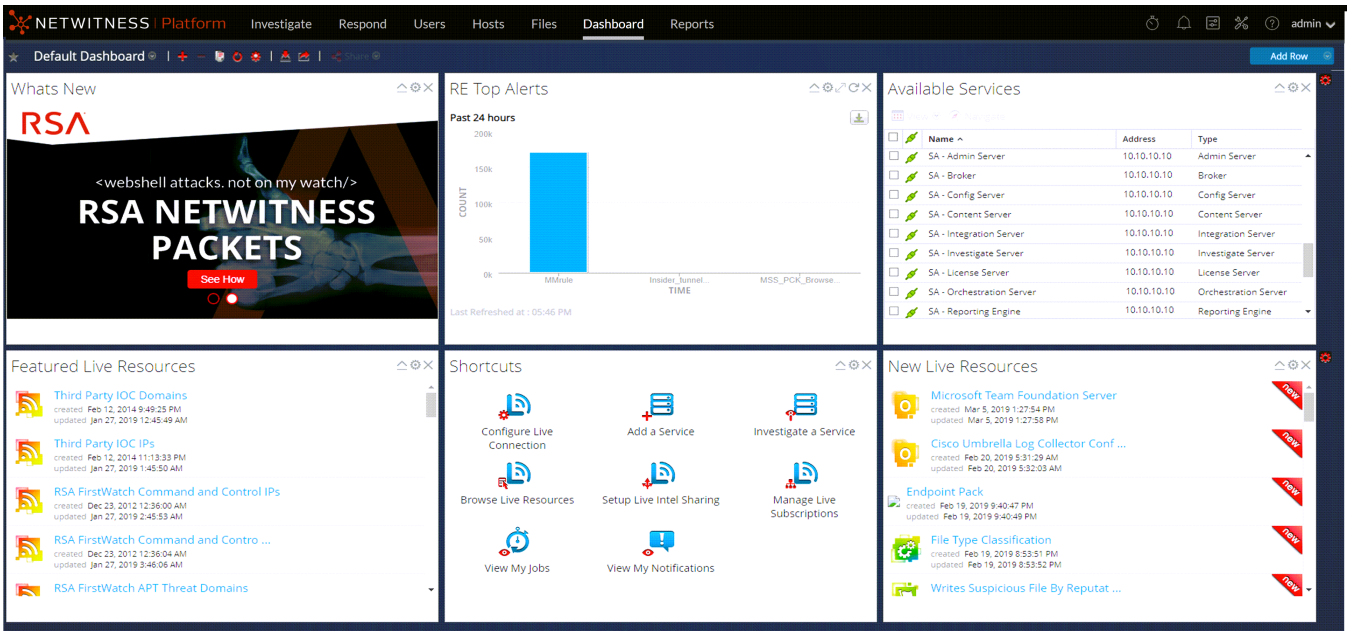


What can I do here?	Path	Show me how
Investigate Endpoints	Hosts view	See the *NetWitness Endpoint User Guide*.

Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

Files

The Files view provides a holistic view of all files in your deployment. You can apply filters, sort, and categorize files by status to reduce the number of files for analysis, and identify suspicious or malicious files.



What can I do here?	Path	Show me how
Find Suspicious Endpoint Files	Files view	See the *NetWitness Endpoint User Guide*.

Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

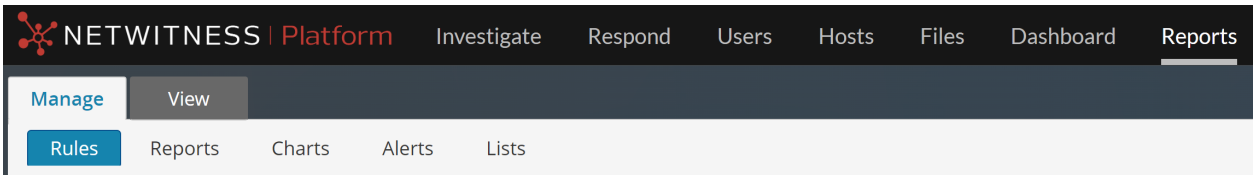
Dashboard

A dashboard is a group of dashlets that give you the ability to view data in one space, the key snapshots of the various components that you consider important. In NetWitness® Platform, you can compose dashboards to obtain high-level information and metrics that portray the overall picture of a NetWitness Platform deployment, displaying only the information that is most relevant to the day-to-day operations.

NetWitness Platform has predefined dashboards that you can select in the Dashboard view depending on the tasks you perform:

You can select the following preconfigured dashboards:

- Default
- Identity
- Investigation
- Operations - File Analysis
- Operations - Logs
- Operations - Network
- Operations - Protocol Analysis
- Overview
- RSA SecurID
- Threat - Hunting
- Threat - Intrusion
- Threat - Malware Indicators



What can I do here?	Path	Show me how
Select a Dashboard	Dashboard view	See Managing Dashboards.
Create a Dashboard	Dashboard view	See Managing Dashboards.
Manage Dashboards	Dashboard view	See Managing Dashboards.

Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

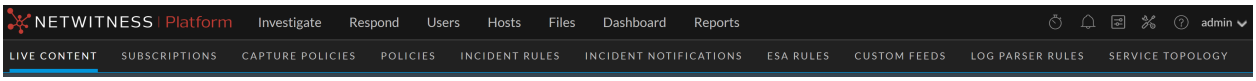
Reports

The Reports view enables you to view and manage reports relevant to your SOC role according to your assigned permissions.

Reports Menu

The Reports menu has the following options:

- **Manage**: This panel allows you to create or modify an rules, reports, charts, alerts, and lists as per the requirement.
- **View**: You can view a report or list of all reports. You can also view the scheduled reports to know the state of the scheduled report. If the scheduled report is in a stop or disable state, you can start or enable the scheduled report.



What can I do here?	Path	Show me how
View a Report	Reports > View	See the *Reporting User Guide*.
Manage Reports	Reports > Manage	See the *Reporting User Guide*.

Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

Configure

The Configure view enables Threat Intel personnel (Content Experts) to configure data sources and inputs to NetWitness in one convenient location.

Configure Menu

The Configure menu has the following options:

- **Live Content** (Live Services): The Live Content view enables you to search for and subscribe to Live Services resources. Live Services is the component of the NetWitness that manages communication

and synchronization between NetWitness services and a library of Live content available to NetWitness customers. You can view, search, deploy, and subscribe to content from the RSA Live Content Management System (CMS) to NetWitness services and software. When you subscribe to a resource, you agree to receive updates on a regular basis from RSA Live Services.

- **Subscriptions** (Live Services): The Subscriptions view enables you manage the Live content that you subscribed to, in the Live Content view. To set up Live Services on NetWitness, you configure the connection and synchronize between the CMS server and NetWitness.
- **Capture Policies**: The Capture Policies view enables you to set up selective network data collection, which gives you the ability to apply centrally managed capture policies across your Network Decoders. This results in better use of service resources, including hard drive space, which leads to more predictable costs and lessens the burden of managing multiple services. You can determine which traffic is stored and how it is stored by using policies. Each policy contains a list of supported base protocols and definitions for handling any other protocols that are detected.
- **Policies**: The Policies view contains two sub-tabs, namely **Configuration** and **Content**.
  - **Configuration**: Centralized Service Configuration via policy allows you to manage the configuration of services in your environment efficiently. The Decoder, Concentrator, and Log Decoder deployed in your environment may be large in number and geographically distributed.
  - **Content**: Policy-based Centralized Content Management enables you to find, deploy, and manage content through the entire life cycle based on policies that can be assigned to groups of devices. It is a single location to view, modify and manage the content deployed across all services in the environment.
- **Incident Rules**: The Incident Rules view enables you to create incident rules with various criteria to automatically create incidents. You can view prioritized incidents in the Respond view.
- **Incident Notifications**: The Incident Notifications view enables you to automatically send email notifications to SOC Managers and the Analysts assigned to the incidents when incidents are created or updated.
- **ESA Rules**: The ESA Rules view enables you to manage the Event Stream Analysis (ESA) rules that specify criteria for problematic behavior or threatening events in your network. When ESA detects a threat that matches the rule criteria, it generates an alert.
  You can create ESA rules yourself or download them from Live Services. The Rule Library shows all ESA rules created or downloaded. To activate rules, you have to add them to a deployment. Deployments map rules from your rule library to the appropriate ESA services.
- **Custom Feeds** (Live Services): The Custom Feeds view streamlines the task of creating and managing custom feeds, as well as populating the feeds to selected Decoders and Log Decoders. You can set up and maintain custom and identity feeds.
  NetWitness uses feeds to create metadata based on externally defined metadata values. A feed is a list of data that is compared to sessions as they are captured or processed. For each match, additional metadata is created.
  You can create custom feeds to provide extra metadata extraction, for example, to accommodate custom network applications.

- **Log Parser Rules**: The Log Parser Rules tab displays information about individual log parsers, as well as the default, "parse all" parser that can parse logs that are not associated with a particular log parser. This tab contains the following information:
  - You can view the rules for a particular event source type, including the default parser.
  - You can view the names, literals, patterns, and metadata for each configured log parser.
  - You can add log parsers.
  - You can add, edit, and delete custom rules for log parsers.
- **Service Topology**: The Service Topology tab enables administrators and analysts to view all the NetWitness core services in a hierarchical layout depicting the collection and aggregation of the services in your deployment. This visualization displays the topology for Broker, Concentrator, Log Decoder, Packet Decoder, Hybrids, ESA and Log Collector.

Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

Admin

In the Admin view, administrators can manage network hosts and services; monitor the health and wellness of NetWitness; and manage system-level security. They can also configure global system resources and manage event sources.

Admin Menu

The (Admin) menu has the following options:

- **Hosts**: The Hosts view is where you set up and maintain hosts. A host is the machine on which services run and a host can be a physical or virtual machine.
- **Services**: The Services view enables you to manage services, manage service users and roles, maintain service configuration files, and explore and edit service properties. A service performs a unique function, such as a Decoder service, which captures network data in packet form.
- **Event Sources**: The Event Sources view enables you to manage event sources and configure alerting policies for them. Organizations typically monitor event sources in groups based on the criticality of the event sources. You can create monitoring policies for each event source group and order them based on priority.
- **Endpoint Sources**: The Endpoint Sources view enables you to manage and update endpoint agent configurations through groups and manage the agents behavior using policies. You can either use the default policies or customize these policies.
- **Health & Wellness**: The Health & Wellness view enables you to monitor the health of the NetWitness hosts and services in your network environment.
- **System**: The System view enables you to set global NetWitness configurations. You can configure global audit logging, email, system logging, jobs, RSA Live Services, URL integration, Investigation, Event Stream Analysis (ESA), ESA Analytics, and advanced performance settings. In addition, you can manage NetWitness versions and configure the local licensing server.
- **Security**: The Admin Security view provides the capability to manage user accounts, manage user roles, map external groups to NetWitness roles, and modify other security-related system parameters. These apply to the NetWitness system and are used in conjunction with the security settings for individual services.

Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

Setting Up Your Default View by SOC Role

After logging in to NetWitness, you can navigate into the application easier by setting up your default view based on your Security Operations (SOC) role. You can set your default view, also known as a landing page, in your user preferences.

On upgrade to version 11.5 or later, by default the Springboard is displayed if you have not configured the default landing page in previous versions.

In version 11.4 and prior versions, if you configured the default landing page as Respond or Investigate in the User Preferences, then on upgrade to version 11.5, the default landing page will be Respond or Investigate view.

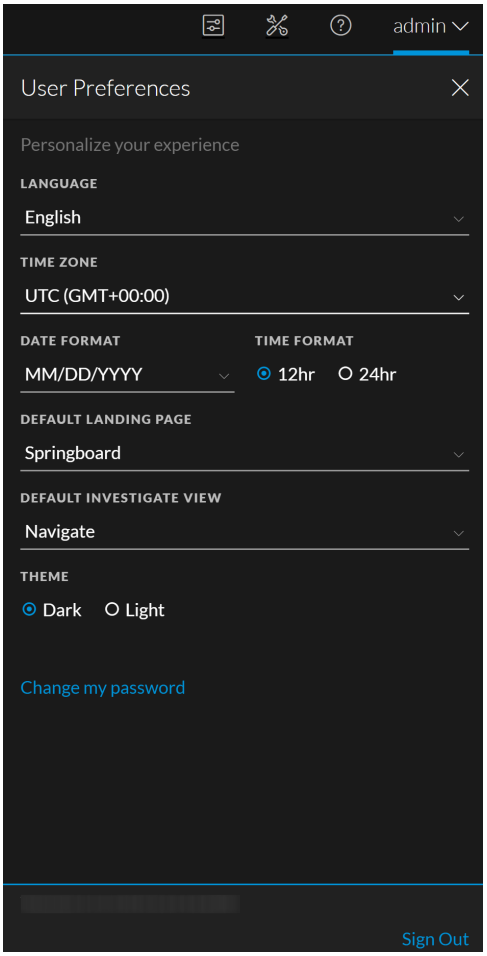
On fresh install of NetWitness 11.5 version, when you log in, by default Springboard is the landing page.

The following figure shows the main NetWitness views.

- **Springboard**: This view is for Analysts, who can see panels for prioritized alerts, incidents, risky hosts, risky users, risky files, and focused event data to help hunt and investigate faster than ever before.
- **Investigate**: This view is for Threat Hunters, who investigate and hunt for advanced threats. Other analysts such as Incident Responders may pivot into this view for deeper analysis of an incident.
- **Respond**: This view is for Incident Responders, who can view a list of incidents to triage and alerts.
- **Users**: This view is for SOC Managers and Analysts to discover, investigate, and monitor risky behaviors across entities namely Users and Network in your environment.
- **Hosts**: This view is for Analysts, who can investigate or perform analysis on hosts using attributes such as IP address, host name, Mac address, risk score, and so on.
- **Files**: This view is for Analysts, who can investigate or perform analysis on files using attributes such as IP address, host name, Mac address, risk score, and so on.
- **Dashboard**: This view is for all users. You can view dashboards on different areas of interest depending on your user permissions. You have the option to select a preconfigured dashboard, import a dashboard, or create your own custom dashboard.
- **Reports**: This view is for all users. You can view reports on different areas of interest depending on your user permissions.
-  **Configure**: This view is for Threat Intel personnel (Content Experts), who configure data sources and inputs to NetWitness. Content Experts use this area to download and manage Live content. They can also create and manage incident and ESA rules.
-  **Admin**: This view is for System Administrators, who set up and maintain the overall application.

You can select any of the main NetWitness views as your default view. In addition to the main views, NetWitness has predefined dashboards that you can select in the Dashboards view depending on the tasks you perform:

- Default Dashboard
- Identity Dashboard
- Operations - Logs Dashboard
- Operations - Network Dashboard
- Overview Dashboard
- Threat - Indicators Dashboard
- Threat - Intrusion Dashboard



The following table shows typical SOC roles and the available views you can select as your landing page in your user preferences based on your SOC role. If you have more than one role, select the view that is most appropriate for you to start with when you log in to NetWitness.

SOC Roles	Role Description	Consider this Default Landing Page
Incident Responder (Tier 1 Analyst)	Addresses incidents and alerts queued for them to review and mitigate.	**Springboard** or **Respond**
Threat Hunter (Tier 2/Tier 3 Analyst)	Investigates and hunts for advanced threats.	**Springboard**, **Investigate**, **Users**, **Hosts**, or **Files** For information on selecting the default Investigate view, see the *NetWitness Investigate User Guide*.
SOC Manager (SOC Management and Reporting)	Manages SOC readiness and responds to incidents and data breaches.	**Springboard** or **Dashboard** When you log in, select the appropriate predefined dashboard for your SOC role. You can also import a dashboard or create your own dashboard.
Content Expert (Threat Intelligence)	Configures data sources and inputs to NetWitness.	**Dashboard** or  (Configure) When you log in, select the appropriate predefined dashboard for your SOC role. You can also import a dashboard or create your own dashboard. If you choose Dashboard as your default view, you can navigate to the  (Configure) view from the main menu.
Data Privacy Officer (DPO)	Similar to an Administrator, but a DPO monitors and protects privacy-sensitive information.	**Dashboard** When you log in, select the appropriate predefined dashboard for your SOC role. You can also import a dashboard or create your own dashboard.

SOC Roles	Role Description	Consider this Default Landing Page
System Administrator	Focuses on the configuration and stability of the overall application. Manages user access.	**Springboard**

Set Your Default View

1. On the main menu bar, select your username, for example, admin.
   The User Preferences dialog shows your current preferences.

2. In the **Default Landing Page** field, select the default view that you would like to see when you log in to NetWitness. Use the above table to make your selection based on your SOC role. For example, if you are an Analyst, you can select **Springboard**; if you are an Incident Responder you can select **Respond**; and if you are a Threat Hunter, you can select **Investigate**.

   Your preferences become effective immediately. You can change your default landing page at any time. For information on other preferences, see Setting User Preferences.

3. To verify that you can see the correct default view, click **Sign Out** to log out and then log back in to NetWitness.

Managing the Springboard

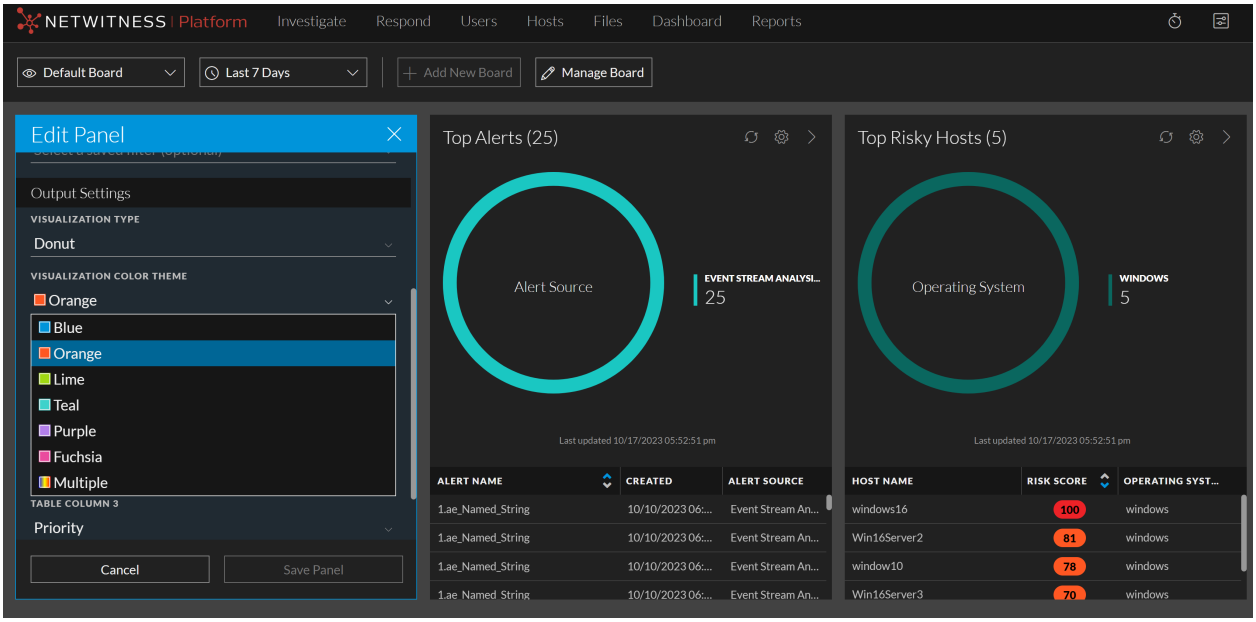
(From 11.5 and later) NetWitness Platform Springboard presents platform-wide detections and signals in this view so analysts hunt and investigate faster than ever before.

From 12.0 and later, NetWitness Platform Springboard introduces five more out-of-the-box panels based on the events processed with a specific query and presented on Springboard view. This helps analysts with further investigation.

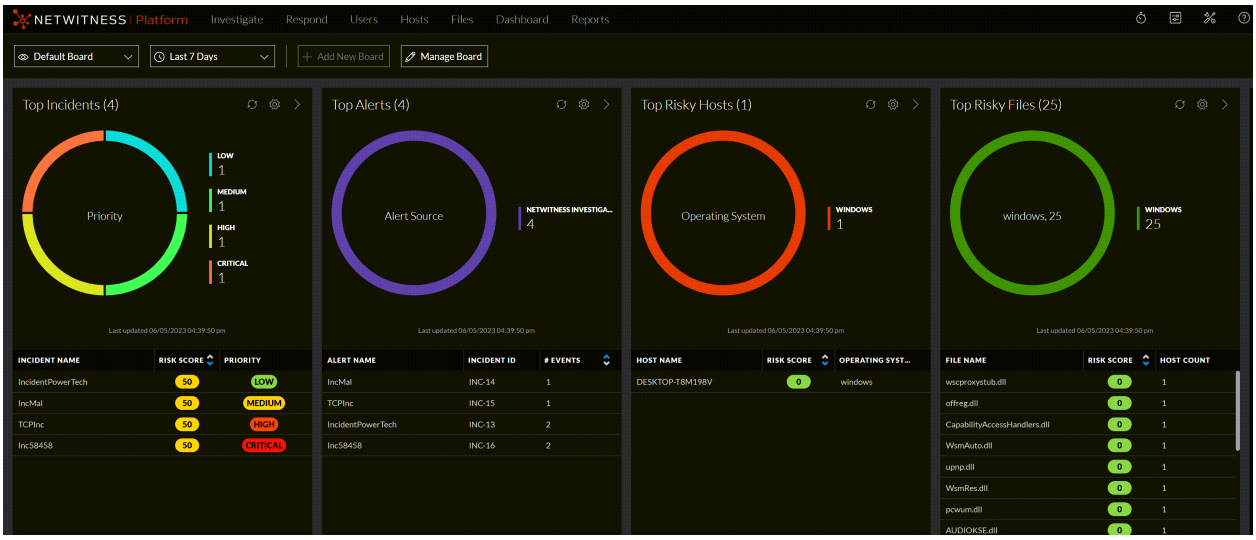
The Springboard congregates the following information for analysts to view:

- Critical incidents and high severity alerts that require attention.
- Hosts and files with high risk scores that may be potential threats.
- Risky users that are potential leads for investigation.
- Events with specific query and high severity that require immediate attention.

The Springboard displays important information for the last 24 hours in the following out-of-the-box panels:



- **Top Incidents**
- **Top Alerts**
- **Top Risky Hosts**
- **Top Risky Files**



- **Top Risky Users**
- **MITRE ATT&CK tactics**
- **MITRE ATT&CK techniques**
- **Indicators of Compromise**
- **Enablers of Compromise**
- **Behaviors of Compromise**

For example, the Top Risky Hosts displays the top 25 risky hosts based on the highest risk score and Operating system (Windows, Linux, and Mac). The result displays hosts of all Endpoint Servers if the Endpoint Broker is available. Otherwise, it displays the result of the first Endpoint Server.

From 12.3 version and later, NetWitness Springboard provides the ability for analysts to choose from a variety of color palettes when creating or editing panels using the **Visualization Color Theme** option. This option gives analysts more control over the appearance of their panels, making them more visually appealing and easier to understand. As a result, analysts can visualize the data better and perform analysis and investigations more efficiently.

Note: The **Multiple** color option is available only for the Donut chart.

You can perform the following actions on the Springboard:

- Change the time range for some panels namely Incidents and Alerts panels. To change the time range, select the time range selection box from the drop-down menu in the top left corner of the Springboard view.

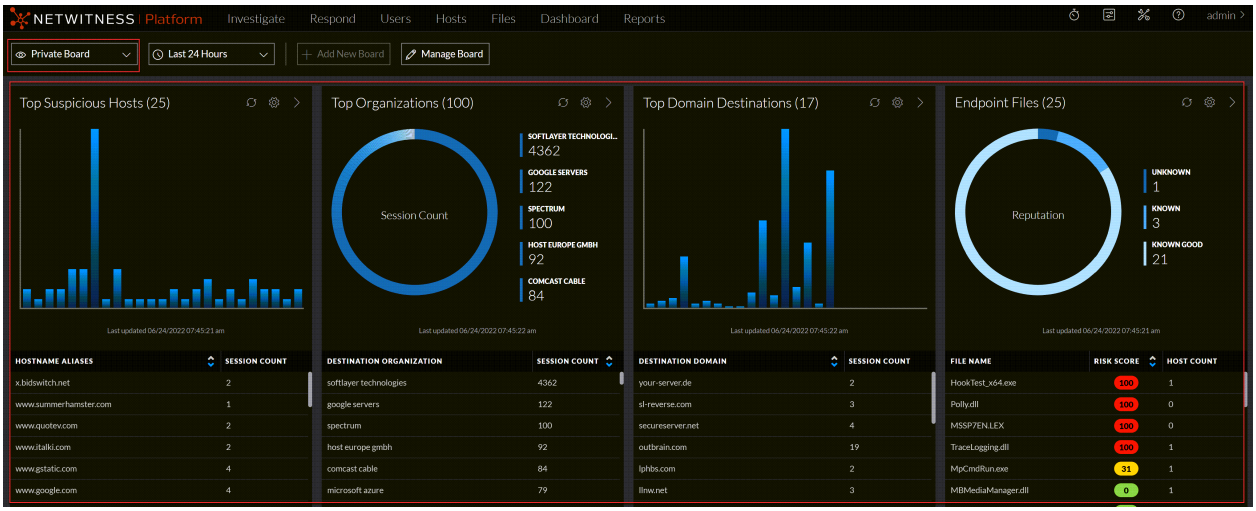
  IMPORTANT: If the selected filter has a time range selected, it is given priority, otherwise the Springboard time range for the specified panel is considered.

- Increase the display of the results in the table to view more than 25 results. Click on the panel, the Edit Panel dialog is displayed. Edit the number of results field and click **Save Panel**.
- Click a row in the table to view details or to investigate.
- Click at the top of the panel to view all the results. For example, in the Top Incidents panel, click to view all incidents in the **Incidents** list view.
- Click a row name in the events panel to view or investigate the event details with relevant filters applied in the **Events** view.
- Scroll to view the different panels using the scroll bar available below the panels.

Administrators can customize the Springboard by performing the following:

- Create own custom private board and add panels on the board. For more information, see Add a Custom Private Board.
- Edit the out-of-the-box panels. For more information, see Edit a Panel.
- Refresh the out-of-the-box panels. For more information, see Refresh a Panel.
- Create new panels with important system indicators. For example, a new panel showing focused event metadata based on pre-defined query conditions can be created. For more information, see Add a Panel.

Working with the Springboard



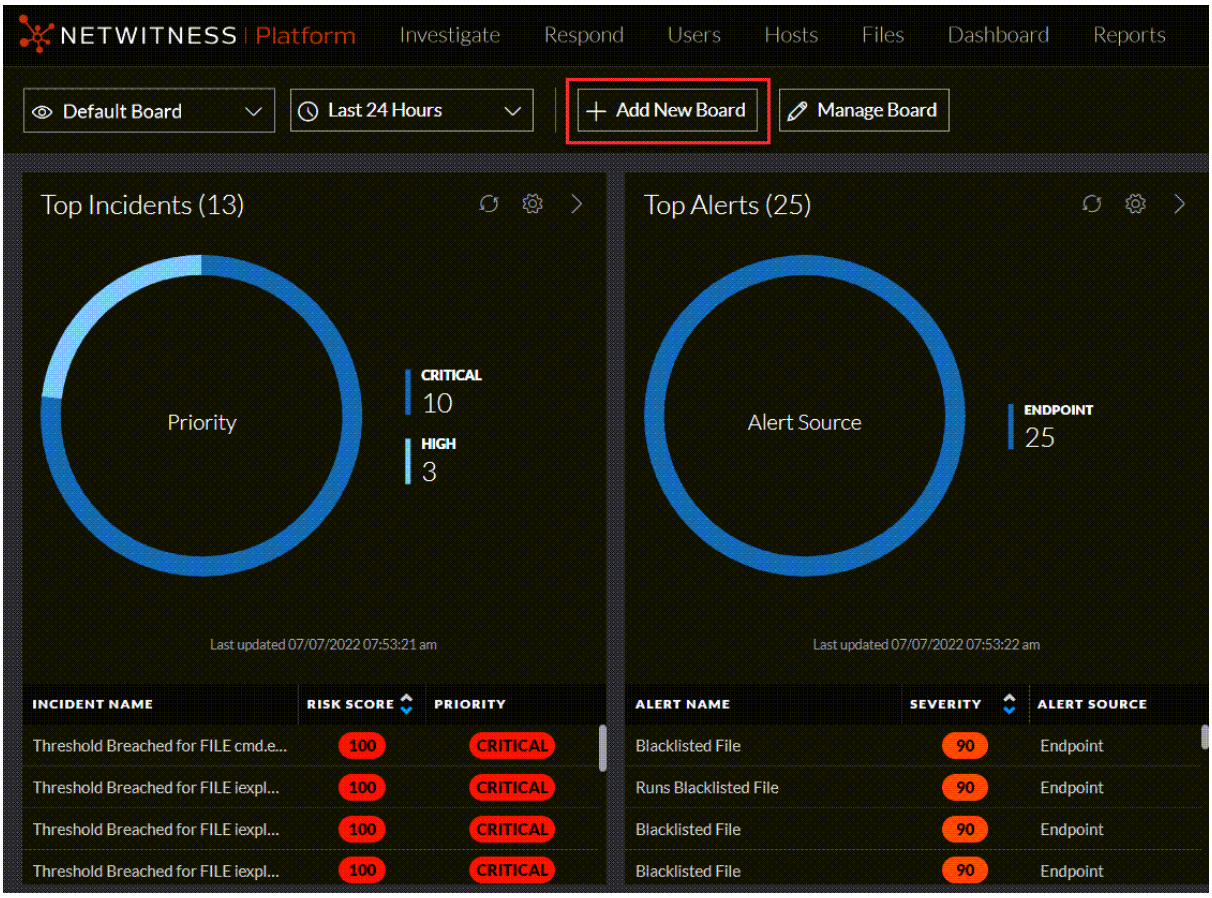
Note: An administrator must provide the appropriate permissions to allow users to edit the springboard panels. For more information see the the Springboard section in the "Role Permissions" topic in the *System Security and User Management Guide*.

You can customize the information on the out-of-the-box Springboard by adding, editing, copying, moving, and deleting panels.

From 12.0 and later, the data sources and query filters are automatically added for the new out-of-the-box panels.

Add a Custom Private Board

(From 12.0 and later), Administrators and Analysts can create their own custom private board in the springboard and add panels with important system indicators, which helps in threat hunting and investigation. The users can also add, edit, rearrange, and delete panels in the custom private board view. The board allows users to organize and manage information in an easy manner.



IMPORTANT:
- The board will be saved as a custom private board, and other users will not be able to view the board.
- Only one custom private board can be created.

Note: The maximum number of panels on the custom private board must not exceed 20 panels.

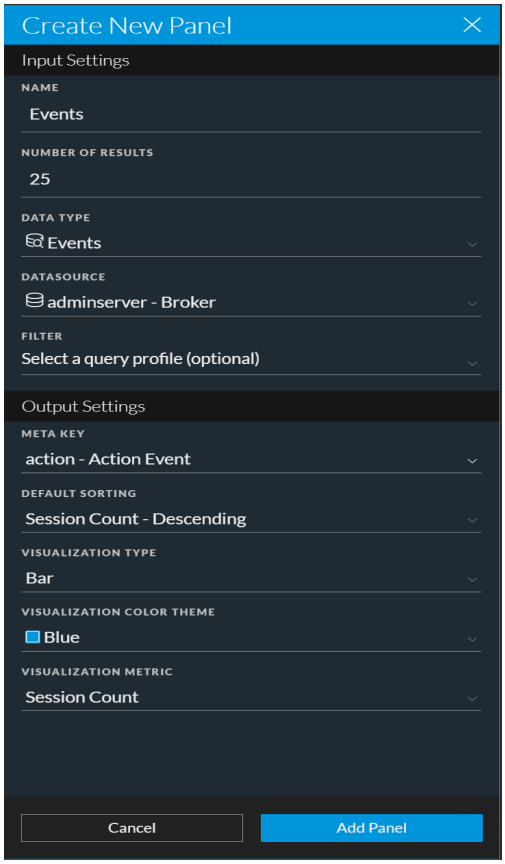
To add a custom Board:

1. Click + **Add New Board**.

   It navigates to a custom private board view to add panels.

2. Add the panels. For more information, see Add a Panel.
3. To edit the custom board's name, click at the top left corner and enter a unique name.
4. Click **Save Board**.

Add a Panel



You can add a panel to the Springboard according to the analyst preferences. For example, an analyst can watch top risky users or top risky hosts for a particular region in a panel.

Note: The maximum number of panels on the Springboard should not exceed 20 panels.

To add a panel:

1. Click **Manage Board**.
2. Click + New Panel either on the top or on the right side of the view or click ⊞ at the bottom of the view to add a panel.

The Create New Panel dialog is displayed. The following figure is an example of the events panel configuration.

3. In the Input Settings section:
   - **Name**: Enter a unique name for the panel. The name can include letters, numbers, spaces, and special characters, such as `_ - ( ) [ ]`.
   - **Number of Results**: By default, the number of results is 25. Specify the number of results that range from 25 to 100.
   - **Data Type**: Select the type of data to use for the panel:
     - Alerts
     - Incidents
     - Events
     - Files
     - Hosts
     - Users
   - **Data Source**: Select the source of the data to use for the panel. This field is enabled when the data type is Events, Files, Hosts and Users.

- Events: Select either Broker or Concentrator.
- Files: Select either Endpoint Broker Server or Endpoint Server.
- Hosts: Select either Endpoint Broker Server or Endpoint Server.
- Users: Select either UEBA Server 1 or UEBA Server 2.

Note: You can only select different data sources for **Users** if you have configured multiple UEBA servers in your environment. For more information, see "Configure Multiple UEBA Servers" in *NetWitness UEBA Configuration Guide*.

- (Optional) **Filter**: Filter the data as required from the drop-down for each data type from the saved filters list.

4. In the Output Settings section, select the appropriate settings based on the data type.
5. Click **Add Panel**.
6. Click **Save Board** once you have added all the panels.

Edit a Panel

You can edit the out-of-the-box or newly added panels on the Springboard.

To edit a panel:

1. Click  on the panel that you want to edit.
   The Edit Panel dialog is displayed.
2. Edit and click **Save Panel**.

Rearrange Panels

You can arrange the panels by dragging and dropping them into a different order on the Springboard.

To rearrange panels:

1. Click **Manage Board**.
2. To move a panel, click anywhere on the panel, drag and drop the panel to the desired location.
3. Click **Save Board**.

Delete Panels

You can delete panels permanently in the following situations:

- Services are not installed. For example, if you do not have Endpoint Log Hybrid installed, then you can delete the panels for Top Risky Hosts and Files.
- The maximum number of panels have exceeded the limit, that is 20, and you want to add a new panel.

To delete existing panels:

1. Click **Manage Board**.
2. Select the panels that you want to delete.
3. Click **Remove Panel**.
4. Click **Save Board**.

Restore System Default Settings

Note: This is enabled only if any changes are made to the out-of-the-box Springboard panels.

To restore the out-of-the-box panels:

1. Click **Manage Board**.
2. Click **Restore System Default**.

   A confirmation pop-up is displayed to confirm if you want to restore the out-of-the-box panels or not.
3. Click **Restore System Default**.

Refresh a Panel

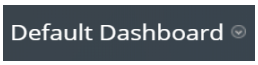
To refresh a panel:

Click  on the panel that you want to refresh, it loads the latest data in the panel.

Managing Dashboards

A dashboard is a group of dashlets that give you the ability to view data in one space, the key snapshots of the various components that you consider important. In NetWitness, you can compose dashboards to obtain high-level information and metrics that portray the overall picture of a NetWitness deployment, displaying only the information that is most relevant to the day-to-day operations.

The dashboards for all NetWitness components are available to add to the default NetWitness dashboard or a custom NetWitness dashboard.



You can view dashboards on different areas of interest depending on your user permissions. You have the option to select a preconfigured dashboard, import a dashboard, or create your own custom dashboard. The dashboards help you to quickly and easily view reports. You can configure your dashboards to display the information that supports your workflow. This topic explains the high-level tasks that can be done when you are setting up a dashboard.

Dashboard Basics

If the Dashboard view is your default landing page following logging in to NetWitness, you always see either the default dashboard or the currently configured dashboard immediately after completing the login process. To return to the dashboard from another NetWitness component, click **Dashboard**.

Dashboard Title

The dashboard title reflects the currently active dashboard; for example, Default Dashboard.

Dashboard Selection List

You can access preconfigured and custom dashboards on the dashboard selection list. When you select a dashboard, its title is displayed below the NetWitness toolbar.

A dashboard has:

- The dashboard toolbar
- The dashboard title and the dashboard selection list.

Dashboard Toolbar

The dashboard toolbar is available next to the title of the selected dashboard. The dashboard toolbar allows various operations on dashboards and dashlets.

Note: The Copy, Delete, Import, Export, Share, and Add Row options are disabled for preconfigured dashboards.

Option	Description
★	Sets the selected dashboard as the Favorite.
Default Dashboard	Displays the list of available dashboards from which you can make a selection.
+	Displays the Create a Dashboard dialog, where you define or add a custom dashboard.
−	Deletes a custom dashboard. The default dashboard cannot be deleted.

Option	Description
	Allows you to copy a dashboard.
	Displays the Manage Dashlet dialog.
	Exports a dashboard as a .zip file.
	Imports a dashboard as .zip or.cfg file.
	Allows you to share a dashboard with another user.
	Enables user to add rows and columns to the dashboard based on the requirement. Click the  icon in a row to add a dashlet.

The Default Dashboard

The default dashboard is configured to display specific dashlets in specific positions. The default dashboard serves as an example of dashboard composition and a starting point for customization.

- You can customize the information on the default dashboard by editing, adding, moving, maximizing, and deleting dashlets.
- After modifying the default dashboard, you can restore the default dashboard () to its original layout.
- The default dashboard cannot be deleted or shared.

Selecting a Preconfigured Dashboard

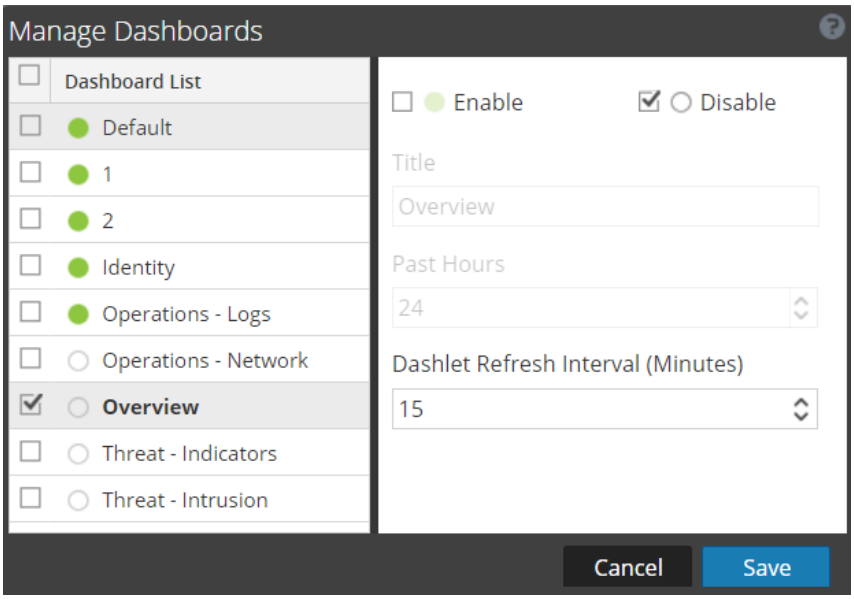
On installation of NetWitness, the following preconfigured dashboards are automatically activated and are available to you:

- Default
- Identity
- Investigation
- Operations - File
- Operations - Logs
- Operations - Network
- Operations - Protocol Analysis
- Overview

- RSA SecurID
- Threat - Hunting
- Threat - Intrusion
- Threat - Malware Indicators

You cannot perform the following actions on a preconfigured dashboard:

- Edit a dashboard
- Export a dashboard
- Share a dashboard
- Delete a dashboard

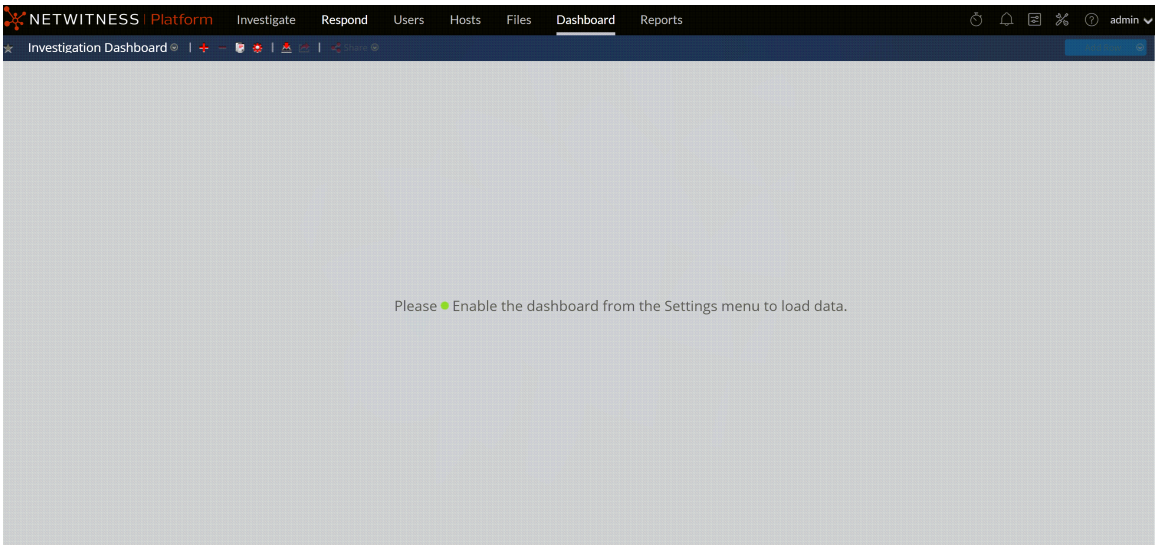


For more information on each preconfigured dashboard, see the Dashboards Catalog in the NetWitness Content space on NetWitness Community.

Note: If you are logged into an Analyst UI, you can view but cannot enable, disable, or edit preconfigured Dashboards.

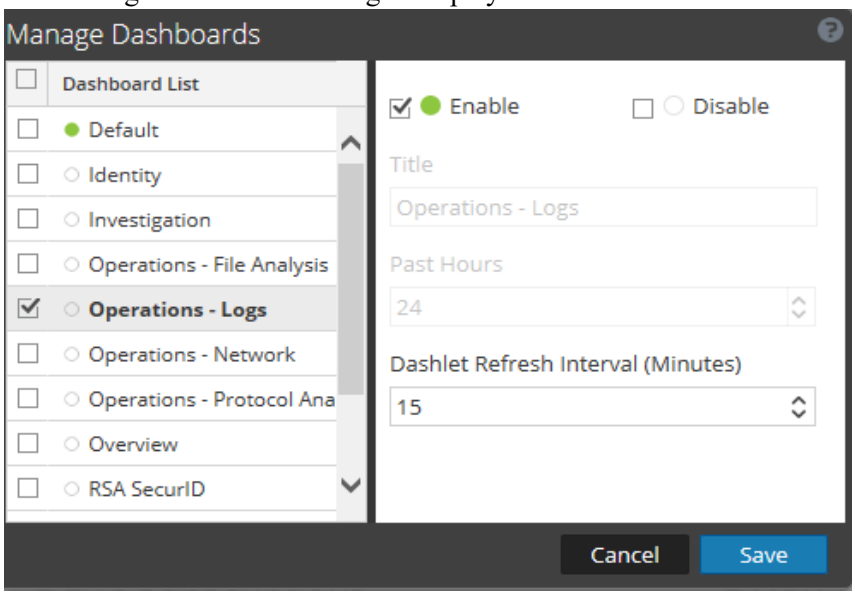
Enabling or Disabling Dashboards

When you enable or disable a dashboard, all the dashlets within the dashboard are enabled or disabled along with the associated charts, unless they are used in any other dashboard.



NetWitness modules can display only those dashlets presented in the Manage Dashboard dialog. The main dashboard offers all NetWitness dashlets. This is an example of currently available dashlets.

Name	Description
Dashboard List	Displays a list of the default, preconfigured, and custom dashboards.
Enable	Indicates if the selected dashlet is enabled.
Disable	Indicates if the selected dashlet is disabled.
Title	Displays the title of the selected dashlet and you can also rename the dashboard.
Past Hours	Displays the time for which the data is collected.
Dashlet Refresh Intervals (Minutes)	Displays the refresh interval time of a dashlet.

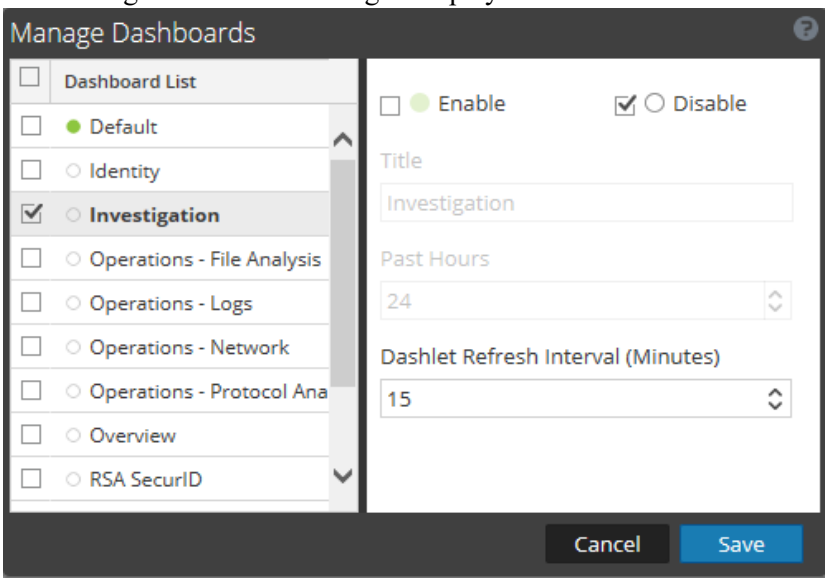


Enable a Dashboard

If you select a dashboard that is not enabled, a masked screen is displayed.

To enable one or more dashboards:

1. Navigate to the dashboard to be enabled.
2. In the dashboard toolbar, click  (Manage Dashboards).
   The Manage Dashboards dialog is displayed.



3. From the dashboard list, select the dashboards to be enabled.
4. Select the **Enable** checkbox.
5. Click **Save**.

Disable a Dashboard

To disable one or more dashboards:

1. Navigate to the dashboard to be disabled.
2. In the dashboard toolbar, click  (Manage Dashboards).
   The Manage Dashboards dialog is displayed.

3. From the dashboard list, select the dashboards to be disabled.
4. Select the **Disable** checkbox.
5. Click **Save**.

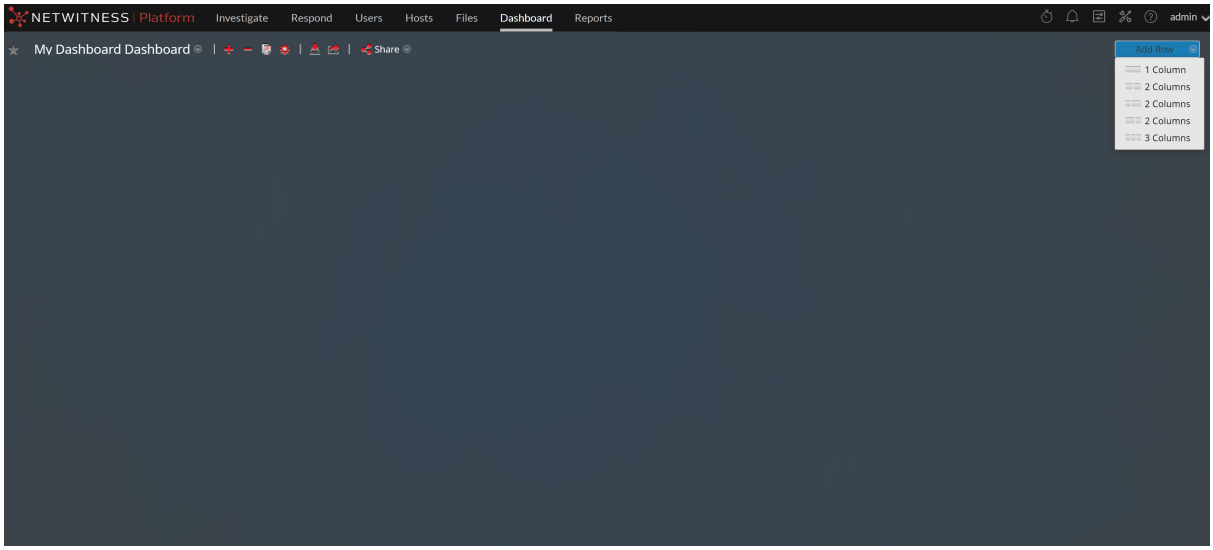
Setting a Dashboard as a Favorite

To customize the views in NetWitness, you can set a preconfigured or custom dashboard as a Favorite. The NetWitness dashboard offers all NetWitness dashlets. The Favorite dialog sets a specific dashboard as your favorite dashboard and is listed as favorite every time you log in to NetWitness.

1. Navigate to any dashboard.
2. In the dashboard toolbar, click 

   If the favorite icon is red in color, it indicates that selected dashboard is set as a Favorite and is listed on top above the line.

Creating Custom Dashboards



You can create custom dashboards to serve a particular purpose; for example, to represent a specific geographical or functional area of the network. Each custom dashboard is appended to the dashboard selection list.

To create a custom dashboard:

1. In the dashboard toolbar, click .
   The Create a Dashboard dialog is displayed.

2. Enter a title for the new dashboard and click **Create**.
   The new dashboard is displayed as a blank screen.

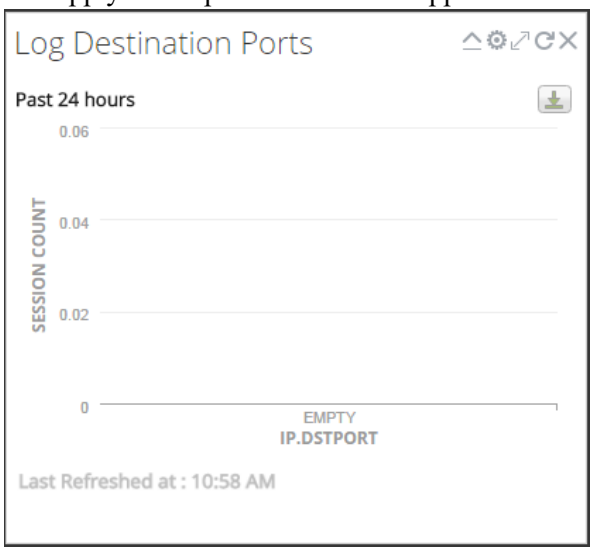
3. Add rows to the dashboard, which can contain one or more columns, using the **Add Row** option on the right side of the screen (). Click the desired column configuration in the drop-down list to add one row to the dashboard with the selected number of columns. Repeat the process

to add more rows.

4. You can add any desired dashlets to the dashboard by clicking  in an empty placeholder in a row. For complete details on adding and managing dashlets, see Working with Dashlets.

After custom dashboards are created, you can:

- Switch between dashboards by selecting an option from the dashboard selection list.
- Delete any custom dashboard.
- Import or export a dashboard.



Each dashboard has:

- The dashboard toolbar.
- The dashboard title and the dashboard selection list.
- Zero or more dashlets.

Working with Dashlets

Dashlets are the parts that make up a dashboard. NetWitness uses dashlets to display focused subsets of system information, services, jobs, resources, subscriptions, rules, and other information.

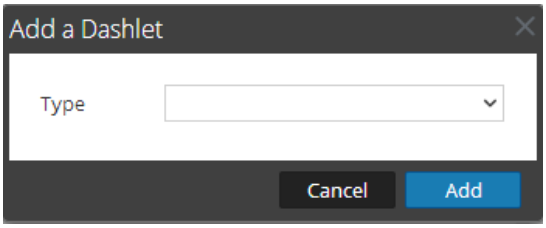
The controls for a dashlet are in the title bar. All dashlets use a common set of controls, and only those that apply to the particular dashlet appear in the title bar of the dashlet.

The following table displays the description of each icon on the dashlet.

Icon	Name	Description
	Collapse vertically	Collapses the dashlet vertically so that only the title is visible.
	Expand vertically	Expands the dashlet to its original size.
	Reload	Reloads the dashlet.
	Settings	Displays configurable settings for the dashlet.
	Maximize	In some dashlets with content that does not fit horizontally within the width of the dashlet, maximizes a chart or a dashlet to full screen.
	Delete	Deletes the dashlet from the dashboard.
Last Refreshed at		Displays the time at which the data is polled from the related chart.
View More		When clicked, navigates to the corresponding dashboard which is linked to the main dashlet and displays more details. If you have not linked the dashboard to an existing dashlet, this link with not be available on the dashlet. To configure this option, click , and in the Dashboard Link field select a related dashboard view more details of the specific dashlet.

You can add dashlets to the default dashboard or construct a custom dashboard with your own useful set of dashlets to make your workflow more efficient.

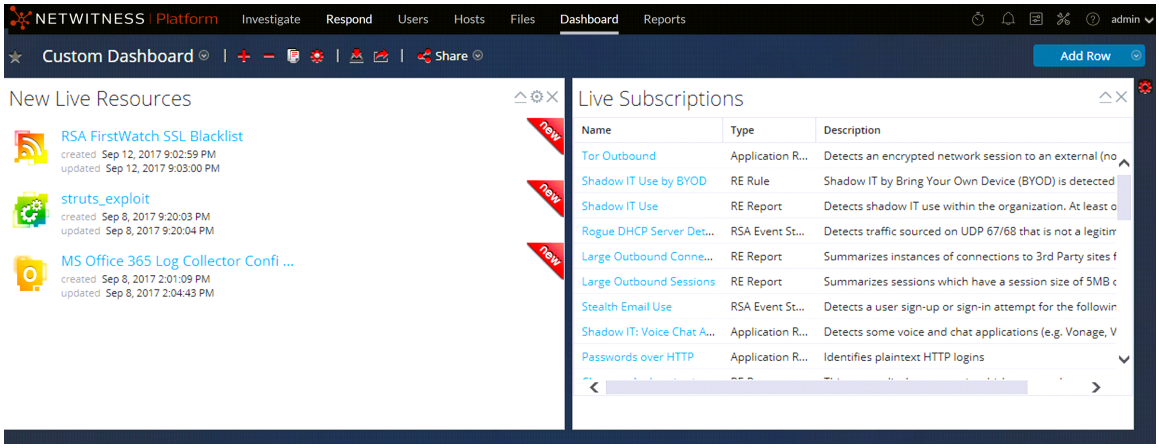
Add a Dashlet



To customize the views in NetWitness, you can add dashlets to a default dashboard or create custom dashboards. However, you cannot add dashlets to preconfigured dashboards.

To add a dashlet:

1. Navigate to any dashboard or create a new dashboard.



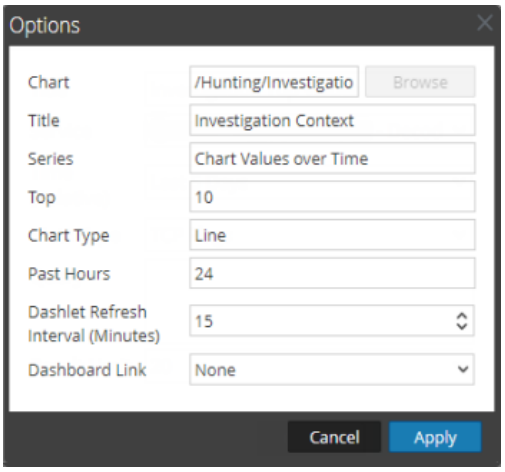
2. Click  on the placeholder where you want to add the dashlet.
The Add a Dashlet dialog is displayed.

3. Click the **Type** selection list to view the available dashlets, and select the type of dashlet you want to add. Depending on the type of dashlet you are adding, some configurable fields appear in the **Add a Dashlet** dialog.
4. Type a title for the dashlet. The title can include letters, numbers, special characters, and spaces.
5. If there are additional configurable fields for the dashlet, set appropriate values.

6. When all required fields have been configured, click **Add**.
   The dashlet is added to the dashboard in the selected placeholder and is automatically saved.

Edit Dashlet Properties

All preconfigured dashlets are read-only and their properties cannot be edited. Other dashlets are editable and allow users to customize some aspect of the data displayed in the dashlet. A dashlet with editable properties has a settings (⚙) option that displays all the editing options.

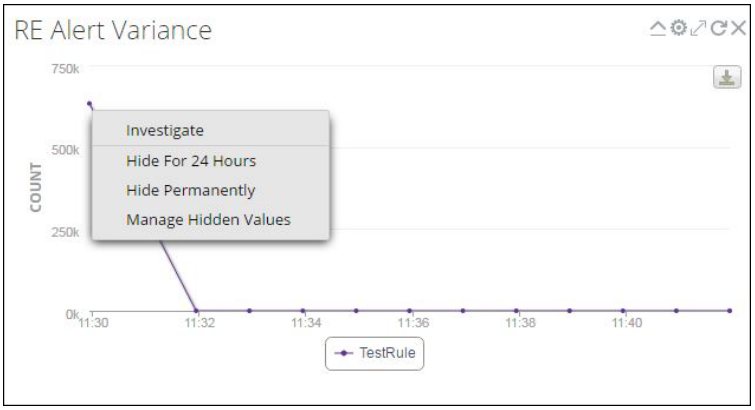


After the dashlets are added, you can drag and drop them and they can be swapped.

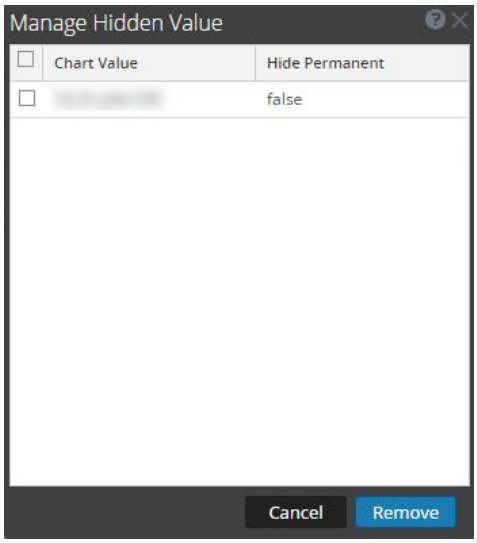
A dashlet without editable properties, such as the Live Subscriptions dashlet, does not display the settings option in the title bar. Many dashlets have an editable title where you can edit the following properties:

- Dashlet display title.
- Type of services to monitor; for example, you can monitor only Decoders, or you can monitor Decoders and Concentrators.

Other dashlets have parameters that you define to specify the kind and amount of information you want to see in the dashlet. For example, a Realtime Chart Dashlet has the settings option.



1. To display and modify the options for a dashlet, click settings (⚙) in the dashlet title bar.
   The Options dialog is displayed.



2. Edit any of the displayed properties. For example, in an in Operations - File Analysis Dashboard, edit Dashlet Refresh Interval from 15 to 20.
3. Click **Apply**.

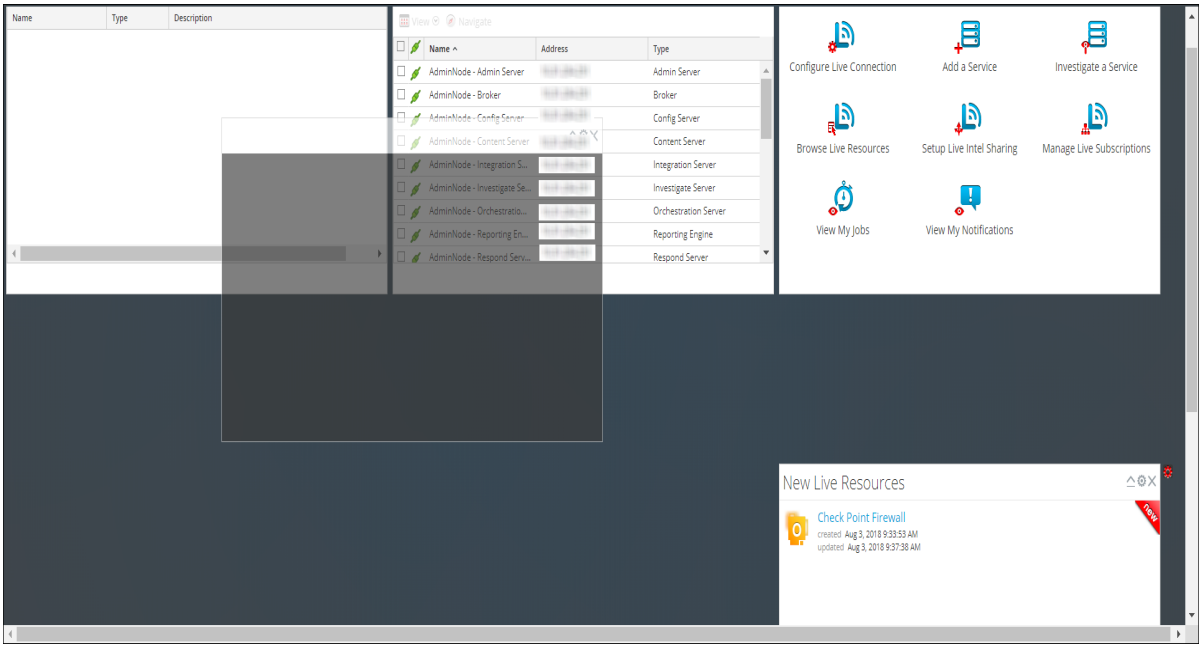
Some dashlets have configuration options to tailor the appearance or the contents of the dashlet. The following options are available for RE Top Alerts, RE Alert Variance, and RE Realtime Charts dashlets on left-click:

- **Hide For 24 Hours**: This option allows you to hide the selected value for the next 24 hours. After 24 hours, the data is automatically displayed on the dashlet, if the value is configured and listed on top.
- **Hide Permanently**: This option allows you to hide the selected value permanently until you add it back using the Manage Hidden Values option.

- **Manage Hidden Values**: This option displays a list of all the hidden values. You can select the checkbox for a value and click **Remove** to view the data back on the chart.

The options to Hide for 24 Hours, Hide Permanently, and Manage Hidden Values are not available for Geomap charts.

Note: When you edit a value in a preconfigured dashboard, it is a user-specific change. The changes made to a preconfigured dashboard are applicable only to your dashboard and cannot be viewed by other users who use the same preconfigured dashboard. For example, if you hide a value in an overview dashboard, the change is applicable only to your dashboard. If another user views the same overview dashboard, the value is still displayed. The same applies to a custom dashboard. When you hide a value in the custom dashboard and share the same dashboard with another user, the values are still displayed even though the dashboard is shared.



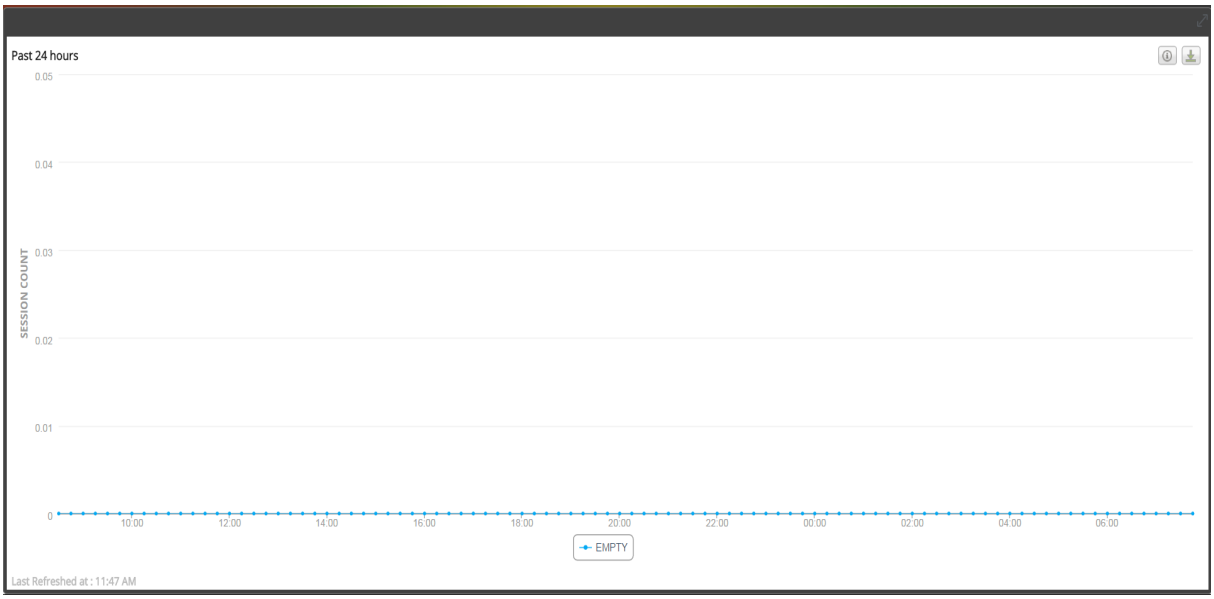
For more information on available dashlets, see the Dashboards Catalog in the NetWitness Content space on NetWitness Community.

Rearrange a Dashlet

You can arrange dashlets according to your preference by dragging and dropping them into a different order on the dashboard.

1. To move a dashlet, hover in the header of the dashlet that you want to move.
   The directional cursor appears over the dashlet. Click and hold in the header of the dashlet that you want to move.

2. Continue to hold the left mouse button and drag the window toward the new location.
   The figure below shows a dashlet as it is being re-arranged.



3. Release the mouse button when the dashlet is in the desired location.
   The dashlet that currently occupies that position moves down.

Maximize a Single Dashlet

This section explains how to open a dashlet on the entire area of the main NetWitness dashboard with the same dashlet title. Dashlets that have a lot of columns or charts, for example some Reporting dashlets, are easier to view when maximized so that the entire contents is visible without scrolling.

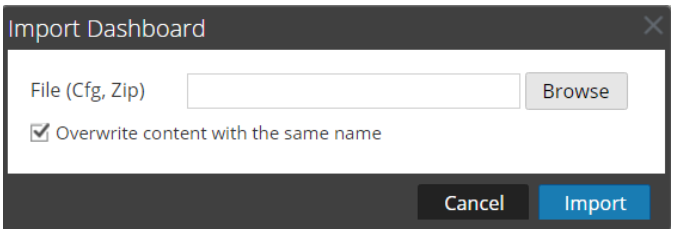
To maximize a dashlet, click the maximize control icon in the dashlet title bar: ⤢. The dashlet is displayed on full screen.

To minimize a dashlet, click the same control icon in the dashlet title bar: ⤢. The dashlet is restored to previous size.

Delete a Dashlet

1. Click ✕ in the dashlet title bar:
   A confirmation pop-up is displayed to confirm if you want to delete the dashlet.
2. Click **Yes**, if you want to delete. The dashlet is removed from the dashboard.
   Click **No**, if you do not want to delete.

Note: After you remove the dashlet, the empty space is replaced by a placeholder where you can add another dashlet using the above Add a Dashlet procedure.



Importing and Exporting Dashboards

The ability to customize dashboards to changing circumstances and conditions could result in a large number of dashboards that are not needed on a daily basis. Rather than reinvent the wheel each time you want to recreate a particular custom dashboard, you can export your dashboards that are not currently in use. When you are ready to use a previously exported dashboard, import the dashboard into NetWitness.

Import a Dashboard

Note: You can import the Reporter Realtime Charts dashboard and its related charts in different instances of the NetWitness server and Reporting Engine from which it was exported.

1. In the dashboard toolbar, click (Import Dashboard).
   The Import Dashboard dialog is displayed.

2. Browse to the dashboard file in the **Import Dashboard** dialog. You can import .cfg and .zip files.
3. Click **Import**.
   The dashboard is displayed in NetWitness

Note: If you import a dashboard from Security Analytics 10.6. x into NetWitness11.x, the dashboard and the associated rules and charts must be imported separately. But when you import a dashboard from NetWitness11.x into NetWitness, the dashboard and all the rules and charts associated with it are imported in .zip format.

Export a Dashboard

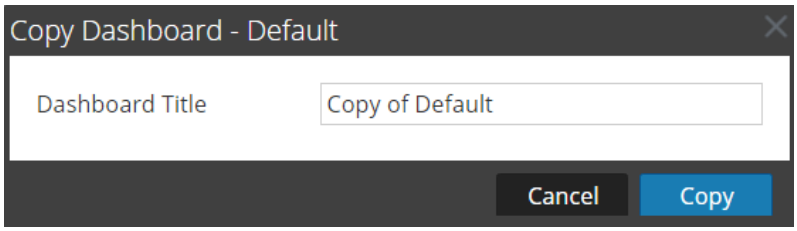
Note: When you export a Reporter Realtime dashboard, the corresponding Reporting Engine contents is also exported.

Exported dashboards are designed to work within the same NetWitness instance. It is also possible to share your custom dashboards with other users in your organization, provided they have equivalent permissions.

To export a dashboard, you must have the dashboard open to access the Export Dashboard option under the Edit drop-down menu in the dashboard toolbar.

1. Navigate to the dashboard that you want to export. All existing dashboards appear in the drop-down **Dashboard Selection List** in the currently displayed dashboard.
2. In the dashboard toolbar, click  (Export Dashboard).
   The exported file is saved in .zip format.

Note: The Export feature is not applicable for preconfigured dashboards.



Copying a Dashboard

To customize the views in NetWitness, you can copy dashboards to the NetWitness dashboard or a custom dashboard. The NetWitness dashboard, as the name suggests, offers all NetWitness dashlets. The Copy Dashboard dialog creates a duplicate dashboard, which can be customized. When you copy a dashboard, the default name is prefixed with `Copy of`. For example, if the name of the original dashboard is `XYZ`, the default title of the copied dashboard will be `Copy of XYZ`.

To copy a dashboard:

1. Navigate to any dashboard.
2. In the dashboard toolbar, click .
   The Copy Dashboard dialog is displayed. The following screenshot is an example of copying a

dashboard.

3. Enter the Dashboard Title.
4. Click **Copy**.

Sharing a Dashboard

In NetWitness, as an administrator you can share dashboards for viewing purposes with other roles such as Administrators, Analysts, Operators and so on. When you share a dashlet, the users can only view the dashboard, make dashboard as favorite, copy the dashboard, and export the dashboard. In case of other roles such as Analysts, Operators, and so on, you can share the dashboard only with similar roles. For example, an analyst can share a dashboard with other analysts only.

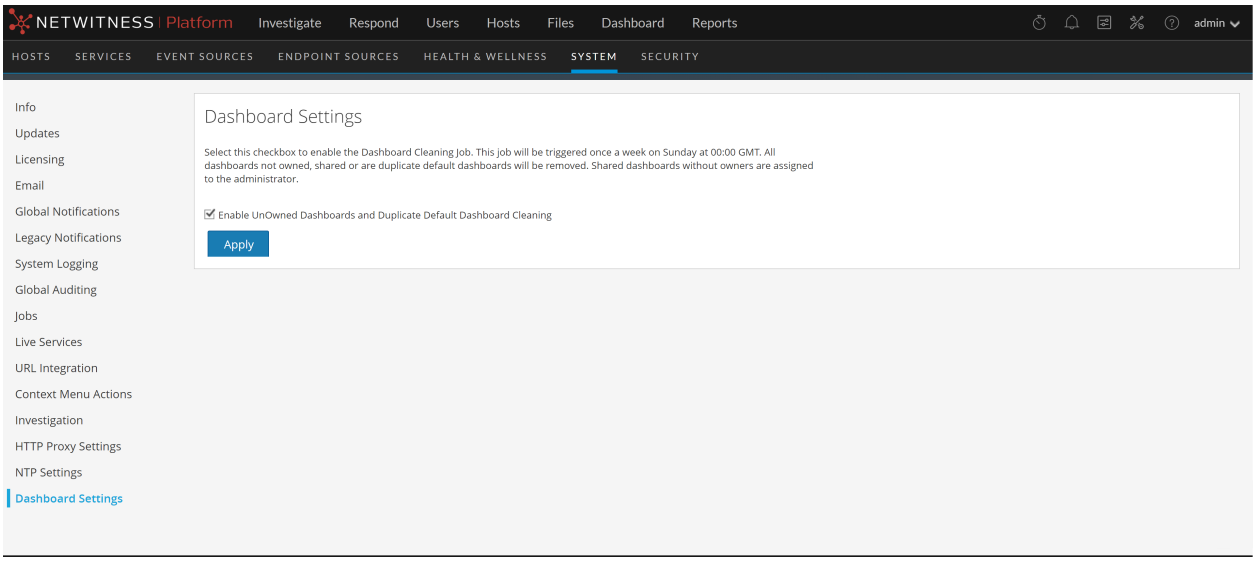
1. Navigate to any dashboard.
2. In the dashboard toolbar, click 

and select the checkbox of the role with whom you want to share the dashboard.

Note: If you do not want to share the dashboard, clear the checkbox of the role. If a dashboard is shared, the dashboard name will be displayed with the share icon .

Removing Unwanted Dashboards

You can remove the following dashboards by enabling the dashboard cleaning job.



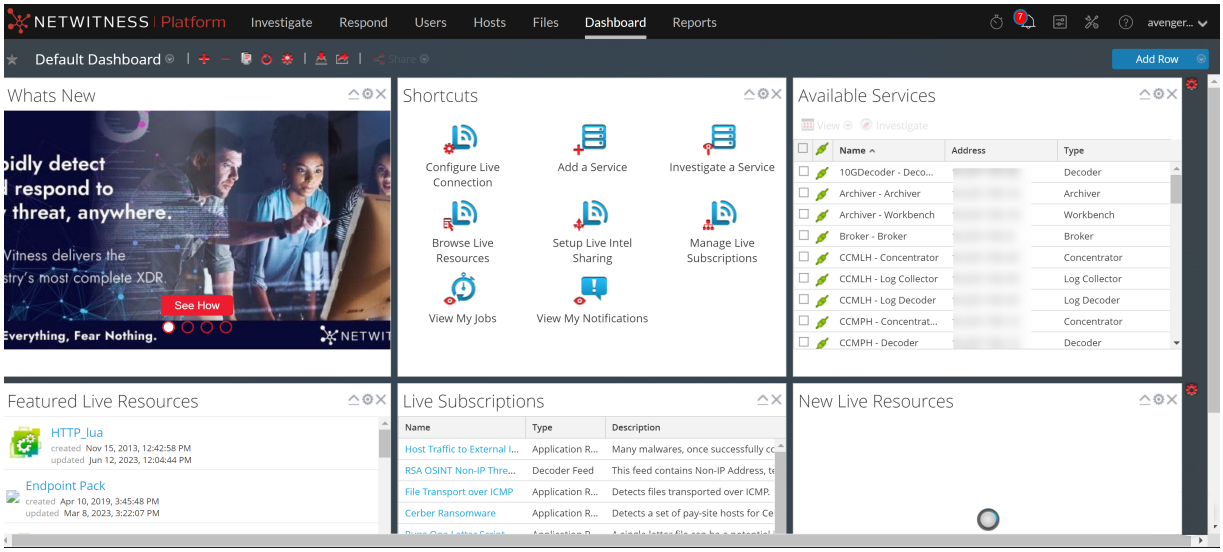
- Dashboards not owned by anyone
- Dashboards not shared
- Duplicates default dashboards

When the dashboard cleaning job is enabled, a scheduled job is triggered once a week on Sunday at 00:00.

Shared dashboards without owners are assigned to the administrator.

To enable Dashboard Cleaning Job:

1. Go to **(Admin) > System > Dashboard Settings**.
2. Select the **Enable UnOwned Dashboards and Duplicate Default Dashboard Cleaning** checkbox.
3. Click **Apply**.



Using Dashboards in the Analyst User Interface

Large environments that include geographical distribution with a single data center and multiple NetWitness Servers require Analyst UI instances in all their NetWitness locations or managed entities. For example, if an Analyst UI is deployed for the EMEA SOC team, analysts can query their EMEA NetWitness Platform hosts directly. If the EMEA team has Broker hosts and Concentrator hosts within the region, the Analyst UI can connect and query them instead of connecting back to Primary User Interface (Primary UI).

When using the dashboards in the Analyst UI, these features apply and affect the dashboards available to analysts:

- Each Analyst UI instance is connected to its local Reporting Engine service. Every Reporting Engine has its own copy of the built-in content such as rules and charts and the local Reporting Engine runs them on the default data source (if configured in Reporting Engine) when the dashboard is enabled.
- The built-in Reporting Engine content that is modified on local Analyst UI is available only to that specific Analyst UI. This behavior is same for an Admin UI as well.
- Dashboards that are shared across different Analyst deployments display the Reporting Engine chart data from the shared instance. To edit the shared dashboard, the analyst must create a copy or contact the Admin to customize it.
- When built-in preconfigured dashboards are enabled from an Admin UI, the dashboard is enabled for all the roles and for all the Analyst UIs. However, the data displayed in every Analyst UI is specific to the associated Reporting Engine.
- By default, all the built-in preconfigured dashlets are disabled and can be enabled only from an Admin UI. Before you enable a preconfigured dashlet, you must set up the Live Services Account, see

the *Set Up Live Services* topic in the Live Services Management Guide.

Note: The Analyst UI functions are similar to the Admin UI functions, except all configurations must be performed from the Admin UI.

Setting User Preferences

You can view and manage your NetWitness global application preferences from your user profile. There are two global user preference dialogs that have different options. The user Preferences dialog is accessible from the Springboard, Investigate (Events), Respond, Users, Hosts, Files and Configure views.

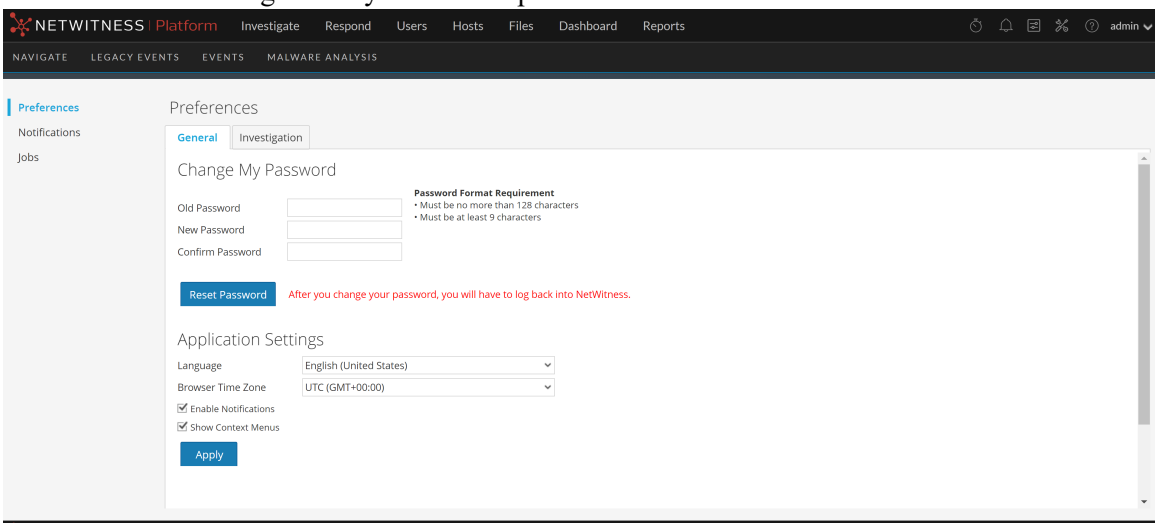
The Preferences dialog is accessible from the Investigate, Dashboard, Reports,  (Configure) , and  (Admin) views. The dialog that you see depends on where you access the user preferences.

You can:

- Change the application language
- Set the application time zone
- Set the application date and time format*
- Select your default NetWitness starting location*
- Select your default Investigate view*
- Choose a dark or light theme for the application*
- Change your password (See Changing Your Password for more information.)
- Enable or disable notifications**
- Enable or disable context menus**

* You can make this change from the **User Preferences** dialog accessible from these views:

Springboard, Investigate > Events (formerly Event Analysis), Respond, Users, Hosts, Files, and  (Configure) > (Capture Policies, Incident Rules, Incident Notifications, and Log Parser Rules). See User Preferences.



** You can make this change from the **Preferences** dialog accessible from these views: Investigate, Dashboard, Reports,  (Configure) > (Live Content, Subscriptions, ESA Rules, and Custom Feeds), and  (Admin) . See Preferences.

Preferences

This section gives instructions for various tasks that can be performed in the Preferences dialog that is accessible in Investigate, Dashboard, Reports,  (Configure) , and  (Admin) .

View your Preferences

In the upper right corner of the NetWitness browser window, select your username, for example admin, and then select **Profile**.
The Preferences dialog shows your current preferences.

Set the Language and Time Zone

Note: The Language preference option applies to NetWitness 11.2 and later.

You can change your preferred language for the entire NetWitness Platform. The default language is English (United States).

1. In the Preferences dialog, select your localization preferences:
   a. **Language**: Select your preferred language for NetWitness.
   b. **Browser Time Zone**: Set the time zone to use in the NetWitness.
2. Click **Apply**.
   Your preferences become effective immediately.

Note: When Daylight Saving Time (DST) starts or ends, if the selected time zone for the currently logged in user observes DST, the user interface automatically updates to reflect the correct time.

Enable or Disable System Notifications for Your User Account

By default, NetWitness system notifications are enabled when a new user account is created. You can disable and enable these notifications at any time.

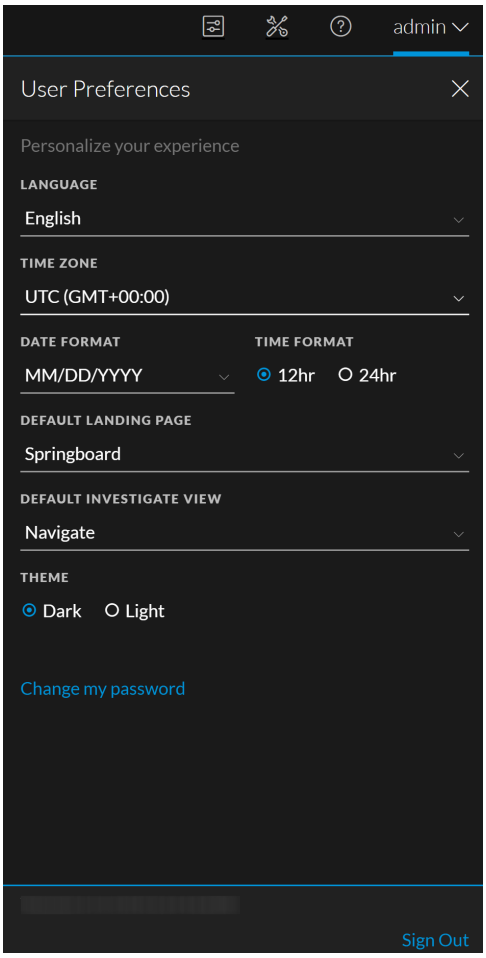
1. In the Preferences dialog Application Settings section:
   - To enable notifications for your user account, select the **Enable Notifications** checkbox.
   - To disable notifications, clear the **Enable Notifications** checkbox.
2. Click **Apply**.
   Your preference becomes effective immediately.

Enable or Disable Context Menus for Your User Account

By default, context menus are enabled when a new user account is created. Context menus provide additional functions for specific views when you right-click a view.

1. In the Preferences dialog Application Settings section:
   - To enable context menus for your user account, select the **Show Context Menus** checkbox.
   - To disable context menus, clear the **Show Context Menus** checkbox.
2. Click **Apply**.
   Your preference becomes effective immediately.

Note: Settings available on the Investigate tab in the Preferences dialog are documented in the *NetWitness Investigate User Guide*.



User Preferences

This section gives instructions for various tasks that can be performed in the User Preferences dialog that is accessible in the Springboard, Events, Respond, Users, Hosts, Files and  (Configure) views.

View Your User Preferences

In the upper right corner of the NetWitness browser window, select your username, for example, 

.
The User Preferences dialog shows your current preferences when accessed through the Springboard, Events, Respond, Users, Hosts, Files and  (Configure) views.

Any selections that you make become effective immediately.

Set the Language, Time Zone, and Date and Time Format

Note: The Language preference option applies to NetWitness 11.2 and later.

You can change your preferred language for the entire NetWitness Platform UI. The default language is English (United States). You can also change the time zone and the format of the date and time for your location.

1. Open the User Preferences dialog.
2. In the User Preferences dialog, select your localization preferences:
   a. **Language**: Select your preferred language for NetWitness.
   b. **Time Zone**: Set the time zone to use in the NetWitness.
   c. **Date Format**: Set the format for the order of the display of the month (MM), day (DD), and year (YYYY). For example, the MM/DD/YYYY format shows the date as 05/11/2019.
   d. **Time Format**: Set the time as 12-hour or 24-hour time. For example, 2:00 PM in 12-hour time is 14:00 in 24-hour time.

Changes in the Investigate and Respond views become effective immediately.

Note: When Daylight Saving Time (DST) starts or ends, if the selected time zone for the currently logged in user observes DST, the user interface automatically updates to reflect the correct time.

Select the Default NetWitness Platform Starting Location

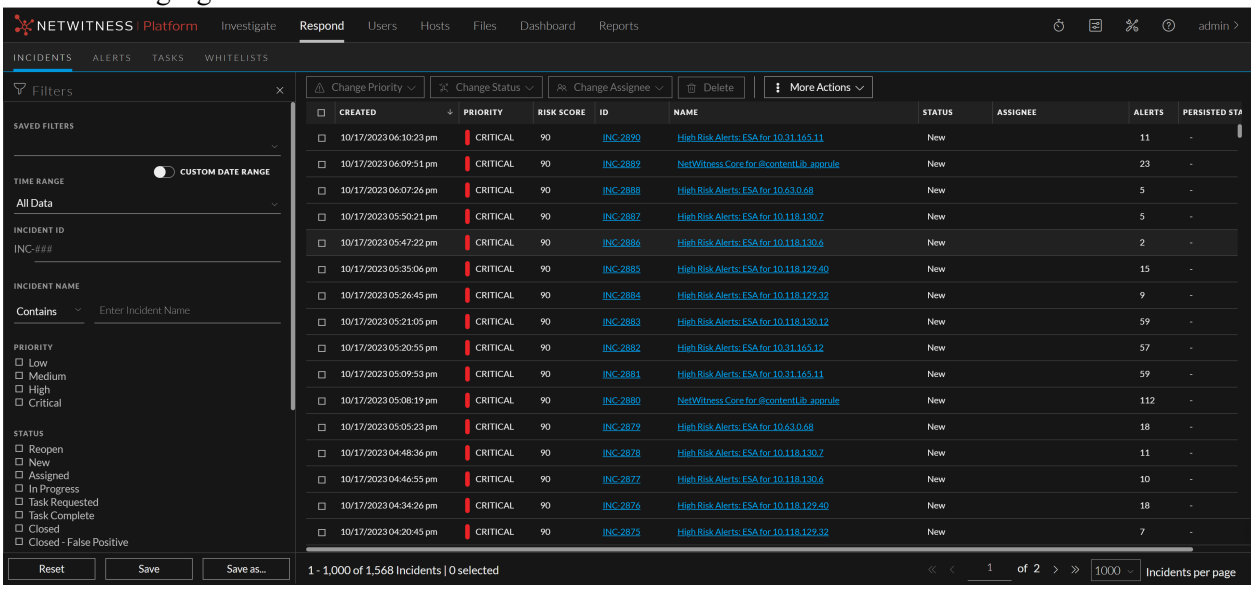
1. Open the User Preferences dialog.
2. In the **Default Landing Page** field, select the opening view that you would like to see when you log in to NetWitness. You can choose Springboard, Investigate, Respond, Users, Hosts, Files, Dashboard, Reports, Configure, and Admin, and according to your user role. For example, you can choose Respond to go directly to the relevant section of the application for Incident Responders. For more information, see Setting Up Your Default View by SOC Role to help you select the appropriate default view.
   This selection sets the default view for the entire application. The changes take effect immediately.

Select the Default Investigate View

1. Open the User Preferences dialog.
2. In the **Default Investigate View** field, select the default landing page when you log in to NetWitness and navigate to Investigate. You can choose Navigate, Legacy Events (if enabled), Events (formerly Event Analysis), or Malware Analysis as the default Investigate view. For example, you can choose Events for the default Investigate view to go directly to the Events view to see the events generated for a service. See Setting Up Your Default View by SOC Role to help you select the appropriate default view. For more information, see the *NetWitness Investigate User Guide*.

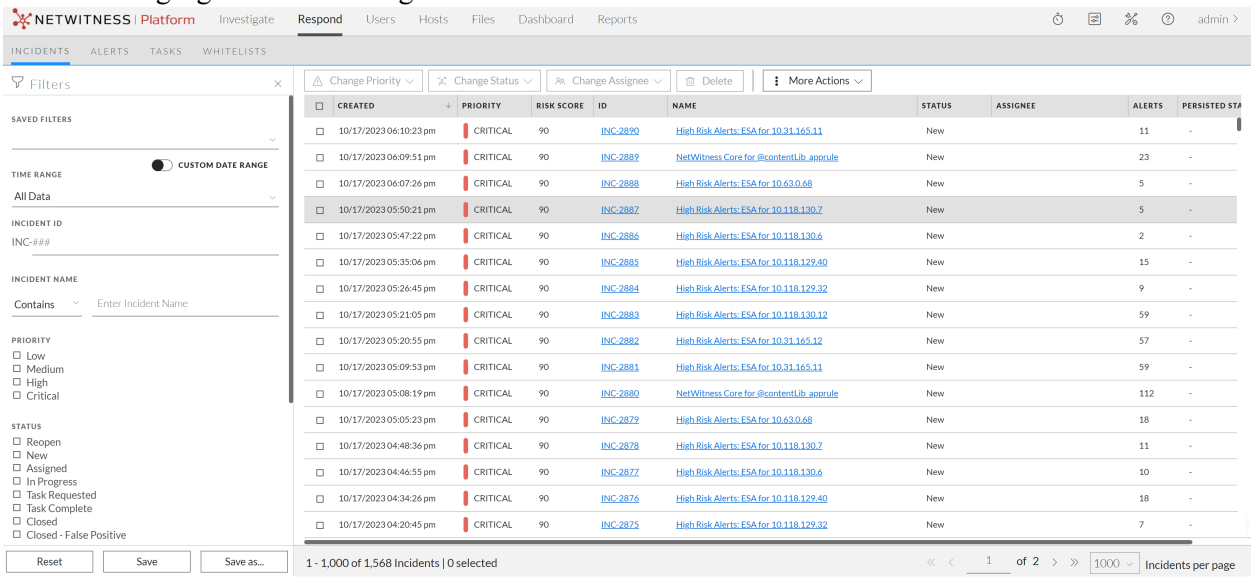
Note: After you have applied the change in the drop-down, sometimes it takes few seconds for the changes to take effect.

Choose the Appearance of NetWitness Platform



Note: This option is only available for NetWitness versions 11.1 and later.

You can choose a dark theme or a light theme for your application, depending on your personal preference. When you change the theme, the Respond view and some Investigate views change to the light or dark theme. Your selection only changes how NetWitness appears to you, not other users.



1. Open the User Preferences dialog.
2. Under **Theme**, select one of the following options:
   - **Dark**: The dark theme is best for darker environments or when you do not need as much contrast.
   - **Light**: The light theme is best for lighter environments, when you need more contrast, or when you are projecting the application for others to view. Since some views are not affected by the theme changes, you may want to choose the light theme for a more cohesive viewing experience.

Changes become effective immediately.

The following figure shows the dark theme.

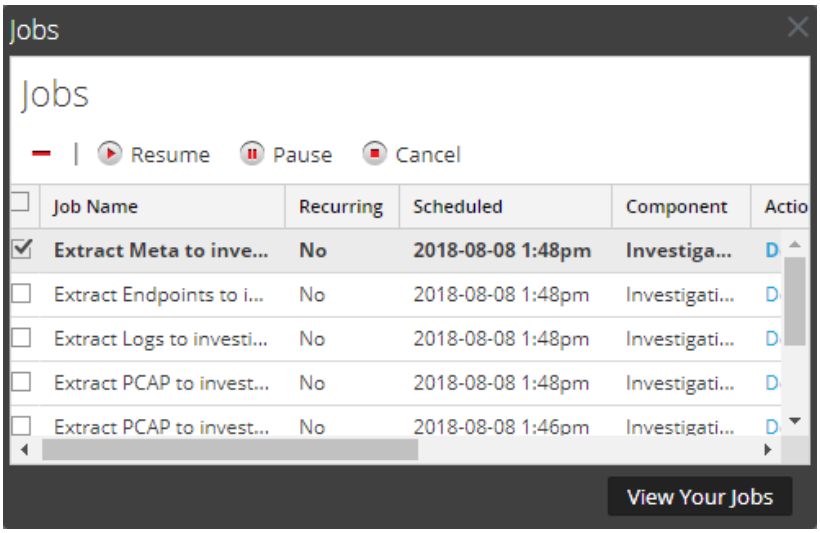
The following figure shows the light theme.

Managing Jobs

Inevitably, there are on-demand or scheduled tasks in NetWitness that take a few minutes to be completed. The NetWitness jobs system lets you begin a long-running task and continue using other parts of NetWitness while the job is running. Not only can you monitor the progress of the task, but you can also receive notifications when the task has completed and whether the result was a success or failure.

While you are working in NetWitness, you can open a quick view of your jobs from the toolbar. You can look anytime, but when a job status has changed, the Jobs icon ( ) is flagged with the number of running jobs. Once all jobs are completed, that number disappears.

You can also see the jobs in these two views:

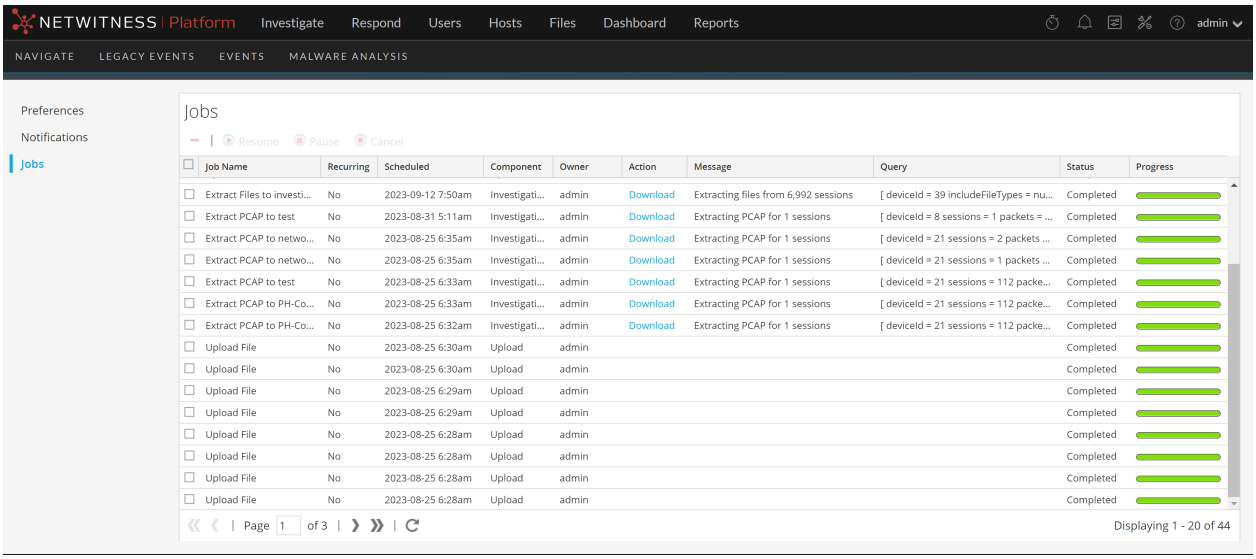


- In the user Profile Jobs panel, you see the same jobs in a full panel. These are only your jobs.
- In the System view, users with administrative privileges can view and manage all jobs for all users in a single jobs panel.

The structure of the jobs panel is the same in all views.

Display the Jobs Tray

In the NetWitness toolbar, click the Jobs icon ( ).



The Jobs Tray is displayed.

The Jobs Tray lists all recurring and non-recurring jobs that you own, using a subset of the columns available in the Jobs panel. Otherwise the Jobs Tray and the user Profile view Jobs panel are the same. In the Admin System view, the Jobs panel lists information about all NetWitness jobs for all users.

View All of Your Jobs

To see a complete view of your jobs, in the Jobs Tray, click **View Your Jobs**.
The Jobs panel is displayed. The Query column is available in Version 11.5 and later.

Pause and Resume Scheduled Execution of a Recurring Job

The Pause and Resume options apply only to recurring jobs. You can pause a recurring job that is running; however, it has no effect on that execution. The next execution (assuming the job is still paused) is skipped.

1. To stop the next execution of a recurring job, in any **Jobs panel**, select the job, and click **Pause**.
   The next execution of the job is skipped, and the schedule is paused until you click Resume.
2. To restart execution of paused recurring jobs, select the job and click **Resume**.
   The next execution of the job occurs as scheduled, and the schedule for the job resumes.

Cancel a Job

To cancel jobs that are executing or in the queue to execute:

1. In the **Jobs Tray** or either **Jobs** panel, select one or more jobs.
2. Click **Cancel**.
   A confirmation dialog is displayed.
3. Click **Yes**.
   The jobs are canceled, and the entries remain in the list with a status of **canceled**.

   If you cancel a recurring job, it cancels that execution of the job. The next time the job is scheduled to run, it executes normally.

Delete a Job

Caution: When you delete a job, the job is instantly deleted from the list. No confirmation dialog is offered. If you delete a recurring job, all future executions are removed as well.

Users can delete their own jobs before, during, or after execution. Administrators can delete any job. To delete jobs:

1. Select one or more jobs.
2. Click −.
   The jobs are deleted from the list.

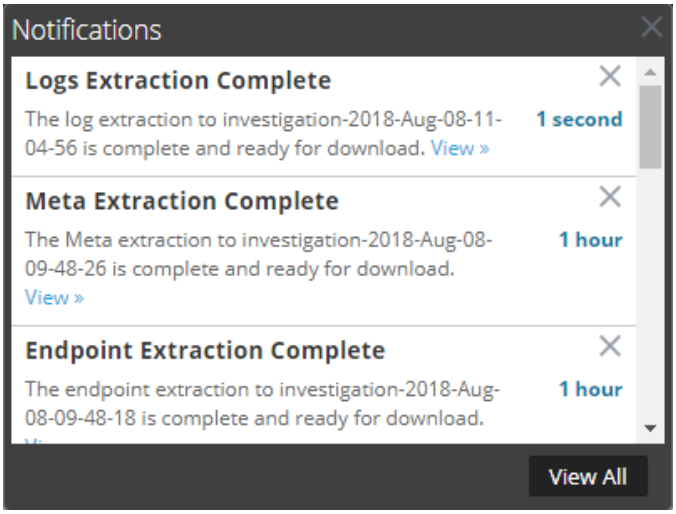
Download a Job

When a job has the Download status in the Action column, you can download the result of the job. If you are working in the Investigate view and extract the packet data for a session as a PCAP file or extract the payload files (for example, Word documents and images) from a session, a file is created. To download the file to your local system, click **Download**.

Viewing and Deleting Notifications

While you are working in NetWitness, you can view recent system notifications without leaving the area where you are working. You can open a quick view of notifications from the NetWitness toolbar. You can look anytime, but when a new notification is received, the Notifications icon is flagged ( ).

Examples of notifications include:



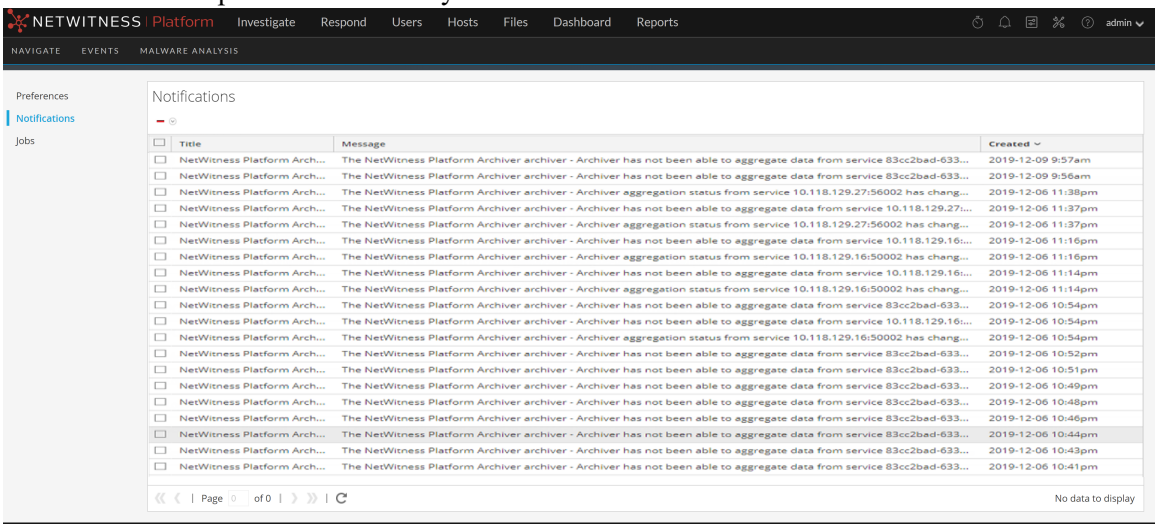
- A host upgrade completed.
- A parser push to decoders completed.
- A newer software version is available.

You can see notifications in these two views:

- In the Notifications tray, you can see your recent notifications.
- In the user Profile Notifications panel, you can view all of your notifications.

View Recent Notifications

To display recent notifications, click the Notifications icon ( ).
The Notifications tray is displayed.



View All Your Notifications

To view all of your notifications, do one of the following:

- Click  to open the Notifications tray and then click **View All** in the Notifications tray.
- In the upper right corner of the NetWitness browser window, select your username and then select **Profile**. In the options panel of the Preferences dialog, select **Notifications**.

The Notifications panel shows all of your notifications.

Delete Notification Records

To delete notification records:

1. In the **Profile Notifications** list, select the notifications that you want to delete.
2. Click −.

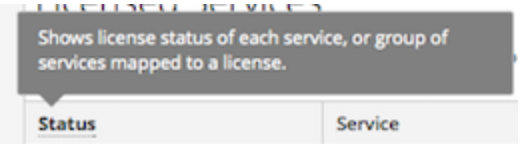
   The selected notifications are deleted from this list and from the Notifications tray.

Viewing Help in the Application

There are different ways available to get help while using NetWitness. You can use inline help, tooltips, and online help links.

View Inline Help

Inline help provides additional information about what to do in sections or fields that you are currently viewing in the NetWitness user interface. To display inline help, hover over . The inline help shows a brief description of the element.

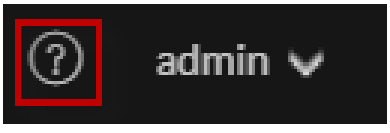


Inline help example:

View Tooltips

Tooltips are a quick way for you to see a description of the text or additional information about an action, field, or parameter. Tooltips appear as underlined text. To display the tooltip and see a brief description of the term, hover over the underlined text.

Tooltip example:



View Online Help

Online help links take you outside of NetWitness to the NetWitness Community online documentation. This site has a complete documentation set for NetWitness, and the links take you directly to the topic that describes the part of the user interface currently in view.

To view the online help topic for the current location, click in the NetWitness toobar or in a dialog. The relevant help topic is displayed in a separate browser window. The topic describes the features and functions of the current view or dialog. From that topic, you can quickly navigate to the related procedures.

The following figure is an example of the online help icon in the NetWitness toobar.

Finding Documents on NetWitness Community

The NetWitness documentation is located on NetWitness Community. NetWitness Community brings all of your NetWitness resources together in one place. It includes advisories, product documentation, knowledge base articles, downloads, and training. To view a *Guided Tour of NetWitness Community*, see https://community.netwitness.com/t5/netwitness-platform/ct-p/netwitness.

Locate NetWitness Documentation

NetWitness Logs, Networks, Endpoints, and UEBA documentation is at the following link: https://community.netwitness.com/t5/netwitness-platform/ct-p/netwitness-documentation

To navigate to NetWitness Logs, Networks, Endpoints, and UEBA documentation:

1. On the NetWitness Community homepage (https://community.netwitness.com), under **Products**, click **NetWitness Platform**.
2. On the NetWitness Platform page, click **Documentation**.

Locate NetWitness Content

NetWitness Content contains feeds, parsers, reports, and rules. It is located at the following link: https://community.netwitness.com/t5/threat-intelligence/ct-p/threat-intelligence.

To navigate to NetWitness Content:

1. On the NetWitness Community homepage (https://community.netwitness.com), under **Products**, click **NetWitness Platform**.
2. On the NetWitness Platform page, click **Documentation** > **Threat Intelligence**.

Locate NetWitness Supported Event Sources

The NetWitness Integrations Catalog is located at the following link: https://community.netwitness.com/t5/netwitness-platform-integrations/tkb-p/netwitness-integrations.

To navigate to the NetWitness Integrations Catalog:

1. On the NetWitness Community homepage (https://community.netwitness.com), under **Products**, click **NetWitness Platform**.
2. On the NetWitness Platform page, click **Integrations**

Locate Hardware Setup Guides

The Hardware Setup Guides are at the following link: https://community.netwitness.com/t5/netwitness-platform-hardware/tkb-p/netwitness-hardware-documentation.

1. On the NetWitness Community homepage (https://community.netwitness.com), under **Products**, click **NetWitness Platform**.
2. On the NetWitness Platform page, click **Documentation** > **Hardware Setup Guides**.

Follow Content for Updates

You can follow pages or documents to be notified of changes.

1. Log in to NetWitness Community.
2. Navigate to a page or a document and next to the Search bar, click ⋮ > **Subscribe**.

Troubleshooting the User Interface

This section describes common issues that users may face during setup and provides basic troubleshooting information.

Basic Troubleshooting Tips for User Setup

The following table provides basic troubleshooting tips that may be helpful for user setup in NetWitness.

Problem	Troubleshooting Tip
When I log in to NetWitness, I see the wrong default view.	Verify that the correct default view is set in the Default Landing Page field in your user preferences. If you select the Dashboard view, you can select the predefined dashboard that is most appropriate for your SOC role. You can also import or create your own dashboard.
I see the correct view, but the metadata does not load.	Make sure that you are using the latest version of the browser. If that does not work, try using another browser. For example, if you are using Safari, try using Firefox or Chrome.
I am using Internet Explorer 10 and I get the following error: `The page can't be displayed.`	NetWitness supports current versions of Firefox, Chrome, and Safari. Internet Explorer is no longer supported.
When I log in, I cannot see anything.	See your administrator, you may need a user role assigned to your account or additional troubleshooting.
I can't see where to change my default landing page.	Go to the User Preferences in the Respond view or Events view (formerly Event Analysis view) or see your administrator.

Analyst User Interface Dashlet Issue

Problem	Cause	Solution
I see the following error message on my dashboard: `The underlying chart for this dashlet is unavailable.`	This scenario occurs on an Analyst UI deployment when an Analyst creates a dashboard on one NetWitness Server, logs in to another NetWitness Server, and tries to view a dashboard that the Analyst did not share.	Share the dashboard to view the data. For more information, see Sharing a Dashboard.

Springboard Issue

Problem	Cause	Solution
I see the following error message on a Springboard panel: `Filter definition is missing! Edit the panel to remove the filter or update with a new filter.`	A query profile that is used to filter events in the panel may have been deleted in the Investigate view. Springboard panels that use a deleted query profile as a filter do not work.	Edit the Springboard panel to remove the filter or use a different filter. For more information, see Managing the Springboard.

Springboard Fails to Load the Panel Issue

Problem	Cause	Solution
I see the following error messages on a Springboard panel: `Request timed out! Contact your administrator or refer to the Getting Started Guide on NetWitness Community for details.` `Failed to fetch the results. Refresh the panel. If the issue persists, contact your administrator or refer to the Getting Started Guide on NetWitness Community for details.`	• The Springboard panels request time out in 60 seconds. • The associated data sources are offline or not reachable. • Allocated memory is insufficient to execute the query.	• Limit the results by narrowing the time range for the Springboard using the time range field above the panels. • Go to the Investigate > Events view and refine the Query Profile used in the panel as described in "Use Query Profile to Encapsulate Common Areas of Investigation" in the *Investigate User Guide*. • Make sure that the associated data sources are online. • Increase the memory by modifying the `max.query.memory` parameter setting. • If the above solution does not work and if the issue still persists, check the service logs in the given order: ▪ Admin server ▪ Investigate server ▪ Respective core services For more information, see “Display System and Service Logs” section in the *System Maintenance Guide*.

Inconsistent Event Panel Count Issue

Problem	Cause	Solution
Event count on the panel is inconsistent.	The underlying data sources are offline or not reachable.	Make sure that all underlying data sources are online and refresh the panel. For more information, see Managing the Springboard.

NetWitness Platform Getting Started References

The following section contains user interface reference information related to getting started with the NetWitness application.

- User Preferences
- Notifications Panel and Notifications Tray
- Jobs Panel and Jobs Tray

User Preferences

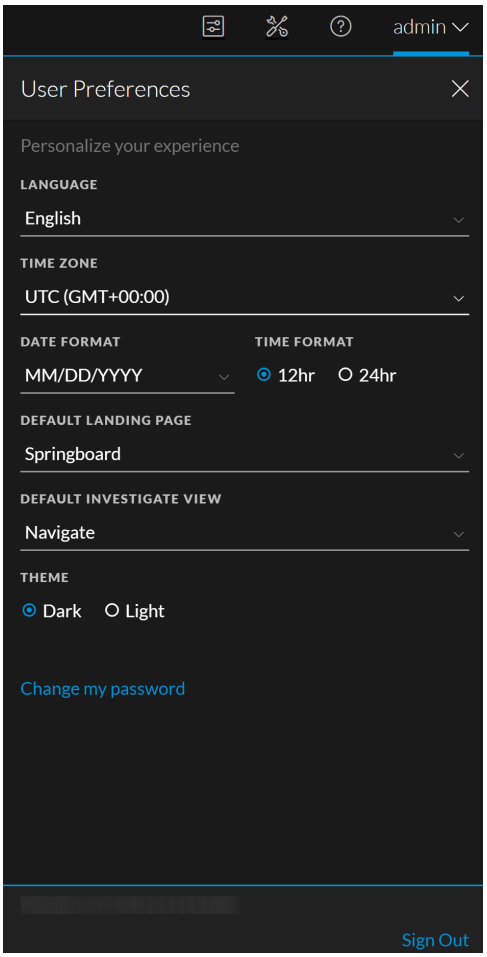
To adjust NetWitness to best fit your environment and work practices, you can set your own global application preferences. You can:

- Change the application language
- Set the application time zone
- Set the date and time formats
- Select your default NetWitness starting location
- Select your default Investigate view
- Choose a dark or light theme for the application
- Change your password
- Enable notifications
- Enable context menus
- Change Investigate preferences - Described in the *NetWitness Investigate User Guide*.

Your global preference options vary depending on whether you access them, such as Springboard, Investigate, Respond, Users, Hosts, Files, Dashboard, Reports, Configure, and Admin. There are two global user preferences dialogs accessible from the main menu bar:

- **User Preferences** dialog - Accessible from these views: Springboard, Investigate > Events (formerly Event Analysis), Respond, Users, Hosts, Files, and  (Configure) > (Capture Policies, Incident Rules, Incident Notifications, and Log Parser Rules).
- **Preferences** dialog - Accessible from these views: Investigate, Dashboard, Reports,  (Configure) > (Live Content, Subscriptions, ESA Rules, and Custom Feeds), and  (Admin) .

What do you want to do?



Role	I want to ...	Show me how
All	Change my Password	Change My Password Section
All	Choose my Default Landing Page	Setting Up Your Default View by SOC Role
All	Set my User Preferences	Setting User Preferences

Related Topics

- NetWitness Platform Basic Navigation

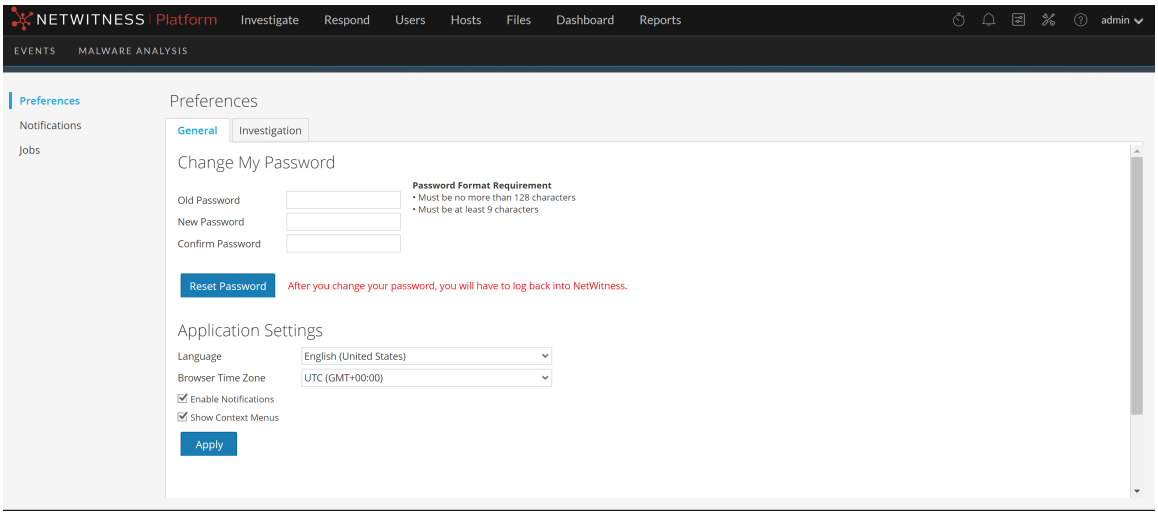
User Preferences

To access your user preferences, click your username, for example, admin.
The User Preferences dialog shows your current preferences and the NetWitness version.

The following table describes the global application preference options that you can access from the User Preferences dialog.

Option	Description
Language	(This option applies to NetWitness 11.2 and later.) Sets the preferred language for the entire NetWitness Platform. The default language is English (United States).
Time Zone	Sets the time zone to use in NetWitness.
Date Format	Sets the format for the order of the display of the month (MM), day (DD), and year (YYYY). For example, the MM/DD/YYYY format shows the date as 05/11/2017.
Time Format	Sets the time as 12-hour or 24-hour time. For example, 2:00 PM in 12-hour time is 14:00 in 24-hour time.

Option	Description
Default Landing Page	Enables you to select the default view when you log in to NetWitness. You can choose Springboard, Investigate, Respond, Users, Hosts, Files, Dashboard, Reports, (Configure) , and (Admin) , according to your user role. For example, you can choose Respond to go directly to the relevant section of the application for Incident Responders. This selection sets the default view for the entire application.
Default Investigate View	(This option applies to NetWitness 11.1 and later.) Select the default landing page for the Investigate view. You can choose Navigate, Legacy Events (if enabled), Events (formerly Event Analysis), or Malware Analysis as the default Investigate view. For example, you can choose Events for the default Investigate view to go directly to the Events page to view the events generated for a service.
Theme	(This option applies to NetWitness 11.1 and later.) Changes the appearance of the Respond view and some Investigate views that you see in the application. You can choose between light and dark themes: • **Dark**: The dark theme is best for darker environments or when you do not need as much contrast. • **Light**: The light theme is best for lighter environments, when you need more contrast, or when you are projecting the application for others to view. Since some views are not affected by the theme changes, you may want to choose the light theme for a more cohesive viewing experience. Your selection only changes how NetWitness appears to you, not other users.
Change my password	Opens the Preferences dialog where you can change your password.
Version	Shows the NetWitness version.
Sign Out	Enables you to log out of NetWitness.



Any selections that you make become effective immediately.

Preferences

To access additional global user preferences, do one of the following:

- For most views, such as Investigate, Dashboard, Reports, (Configure) , or (Admin) , select your username and then select **Profile**.
- In the Springboard, Investigate view [Events (formerly Event Analysis)], Respond, Users, Hosts, Files, and some (Configure) views, select your username, for example admin, and in the User Preferences dialog click **Change my password**.

The Preferences dialog shows your current preferences.

The following tables describe the global application preference options that you can access from the Preferences dialog.

Change My Password Section

This section enables you to change your password. Your administrator defines the appropriate password strength requirements for your NetWitness password, such as minimum password length and minimum number of uppercase, lowercase, decimal, non-Latin alphabetic, and special characters. These requirements are then displayed when changing your password.

The following tables describes the options in the Change My Password section.

Option	Description
Old Password	Enter the password that you used to log in to NetWitness.
New Password	Enter the password that you want to use for the next login.
Confirm Password	Retype the new password.
Reset Password	Updates your user profile with the new password. You will be logged out of NetWitness for the changes to take effect. The new password becomes effective the next time you log in to NetWitness. The password change is applied to your system login and to all NetWitness services on which your account has been added.

If you changed your password, you will be logged out of NetWitness for the changes to take effect. The new password becomes effective the next time you log in to NetWitness.

Application Settings Section

The following tables describes the options in the Application Settings section.

Option	Description
Language	(This option applies to NetWitness 11.2 and later.) Sets the preferred language for the entire NetWitness Platform. The default language is English (United States).

Option	Description
Browser Time Zone	Sets the time zone to use in NetWitness. Your time zone preference is displayed on the toolbar.
Enable Notifications	This checkbox enables and disables notifications for your user account. By default, NetWitness system notifications are enabled when a new user account is created.
Enable Context Menus	This checkbox enables and disables context menus for your user account. By default, context menus are enabled when a new user account is created. Context menus provide additional functions for specific views when you right-click in a view.
Apply	Updates your preferences and applies the changes immediately.

Notifications Panel and Notifications Tray

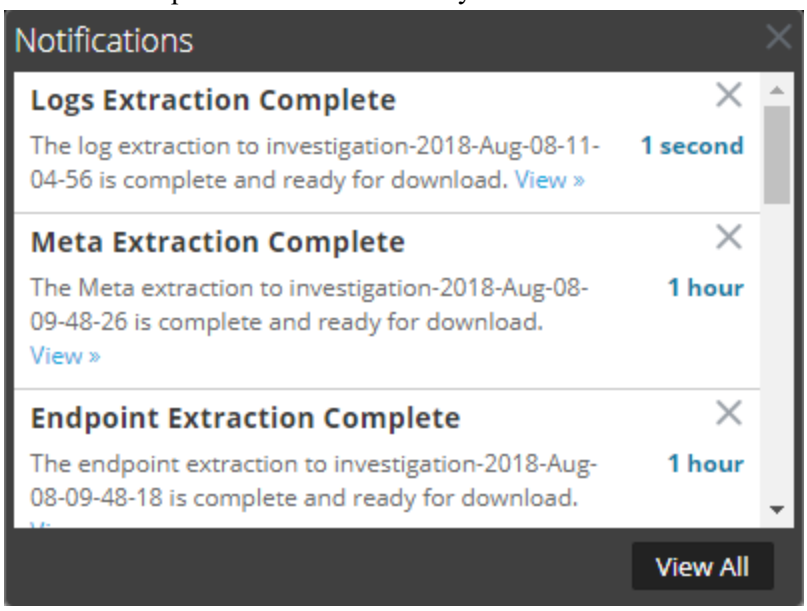
NetWitness provides system notifications to advise users about certain actions or conditions:

- A host upgrade completed.
- A parser push to decoders completed.
- A service went down (critical log of a certain type).
- A visualization completed.
- A report completed.
- A newer software version is available.

While you are working in NetWitness, you can view recent system notifications without leaving the area where you are working. You can open a quick view of notifications from the NetWitness toolbar. You can look anytime, but when a new notification is received, the Notifications icon is flagged ().

When you are viewing notifications in the Notifications tray, only recent notifications are displayed. You can access all of your notifications from your user Profile and from the Notifications tray by selecting the View All option. Procedures for viewing notifications are provided in Viewing and Deleting Notifications.

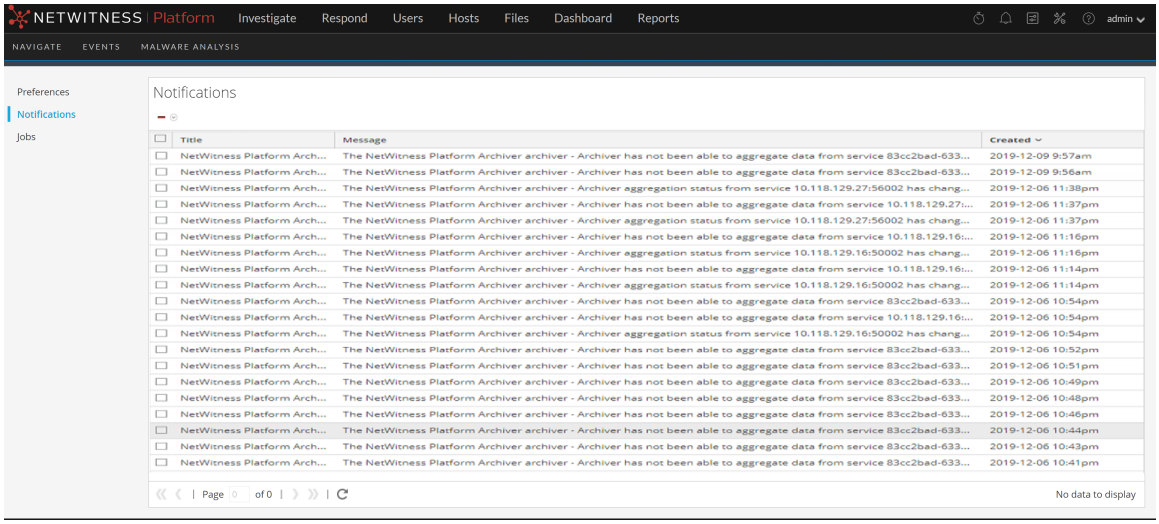
Note: In the Analyst UI, the license notifications are not displayed in the notification tray or login window when the license goes out of compliance or when the license expires. This is displayed only on the Admin UI.



What do you want to do?

Role	I want to ...	Show me how
All	View all notifications	Viewing and Deleting Notifications
All	Delete notifications	Viewing and Deleting Notifications

Quick Look



To access the Notifications panel, do one of the following:

- Click  to open the Notifications tray and then click **View All** in the Notifications tray.

- In the upper right corner of the NetWitness browser window, select your username and then select > **Profile**. In the options panel of the Preferences dialog, select **Notifications**.

  The Notifications panel is displayed.

The Notifications tray shows your recent notifications. It contains a subset of the information in the Notifications panel. The Notifications panel shows all of your notifications. The following table describes the Notifications panel and Notifications tray features.

Feature	Description
	(Notifications panel only) Displays a drop-down menu where you can delete the selected notification or all of your notifications in the Notifications panel and in the Notifications tray.
Title	The title of the notification, for example, **Logs Extraction Complete**.
Message	The entire message, for example, **The log extraction to Investigation is complete and ready for download.**
View	Some messages include a **View** link that displays a view where you can take action. For example, if there is a file to download, clicking this link opens the Jobs panel, the view where you can download the file.
Created	The date and time the notification was created. In the Notifications tray, it shows the number of hours or days since the notification was created.
View All	(Notification tray only) Opens the Notifications panel, which lists all of your notifications.

Jobs Panel and Jobs Tray

Jobs are started by various NetWitness components; for example, downloading Content Management System (CMS) resources from Live Services and extracting logs, meta, and PCAP files from NetWitness Investigate.

In the  (Admin) > System view, Administrators can manage all NetWitness jobs in the Jobs panel. Other non-administrative users can view their own jobs in the user Profile Jobs panel.

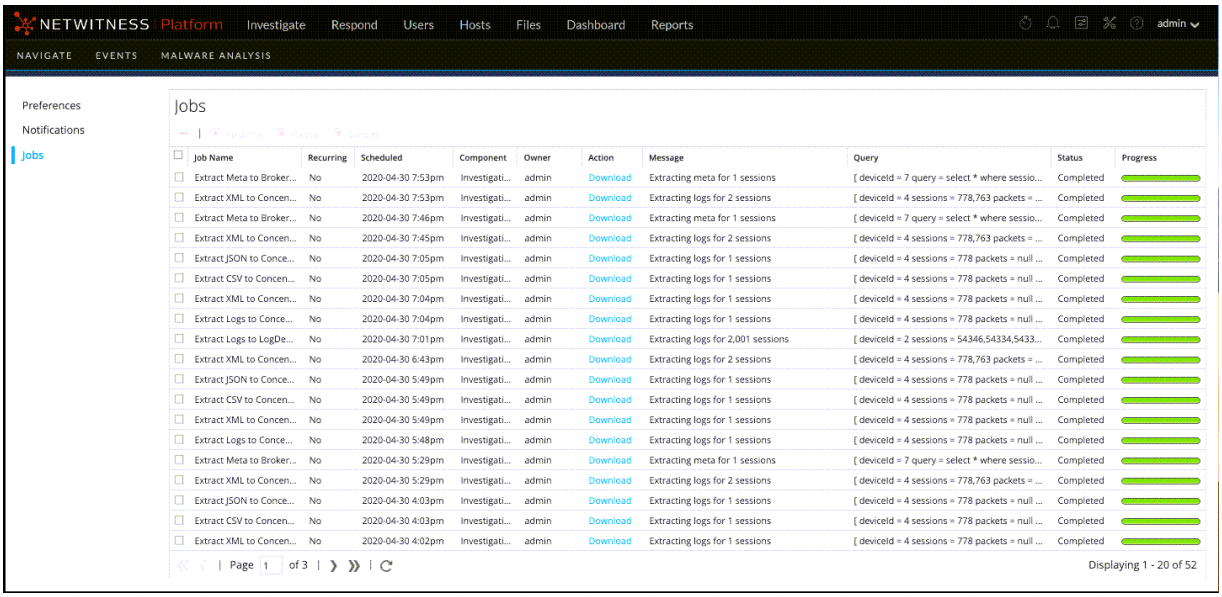
In addition, while working in NetWitness, you can open a quick view of your jobs from the NetWitness toolbar. When a job status has changed, the Jobs icon () is flagged with the number of running jobs. Once all jobs are completed, that number disappears.

In the Jobs panel, you can:

- View and sort the jobs
- Pause or resume a job
- Cancel a job
- Delete a job
- Download a job

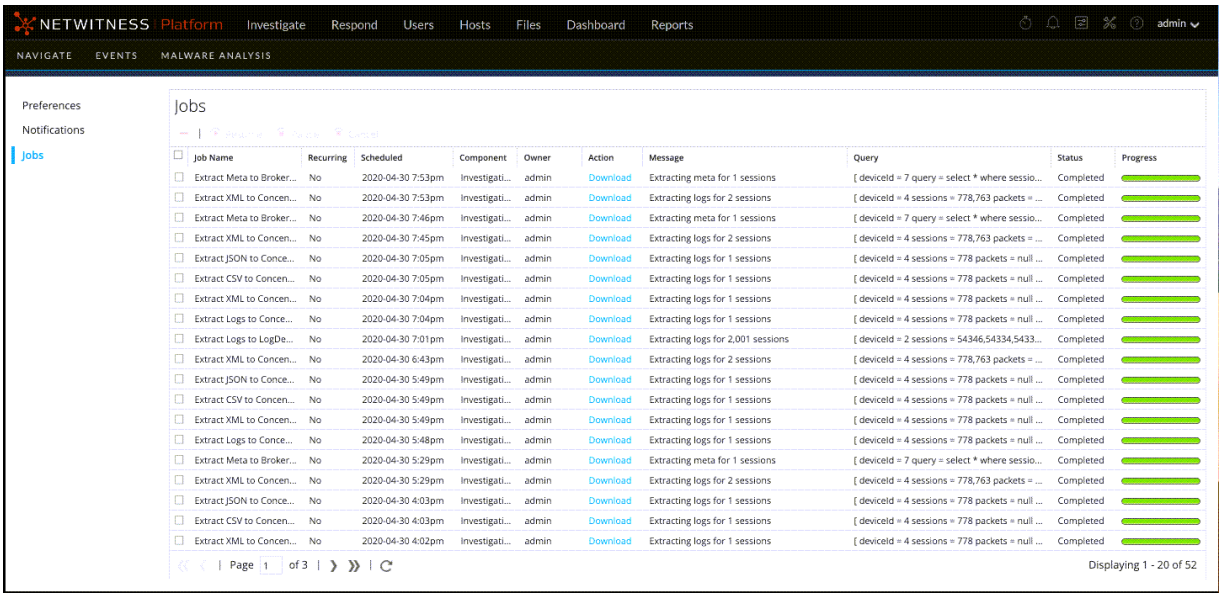
The structure of the jobs panel is the same in all views.

What do you want to do?



Role	I want to ...	Show me how
All	Pause and Resume a Scheduled Job	Managing Jobs
All	Cancel or Delete a Job	Managing Jobs
All	Download a Job	Managing Jobs

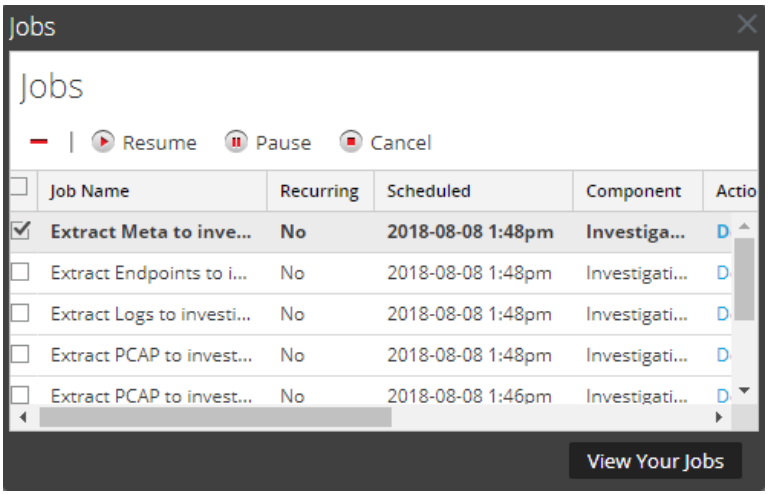
Your actions may be limited to your own jobs depending on your permissions.



Quick Look

To access the Jobs panel, do one of the following:

- In the upper right corner of the NetWitness browser window, select your username and then select **Profile**. In the options panel of the Preferences dialog, select **Jobs**.
  The Jobs panel is displayed. It shows the jobs of a particular user.



- Go to **(Admin) > System**, and in the options panel, select **Jobs**.
  The Jobs panel in the Admin System view is displayed. It shows the jobs for all users.

The Jobs panel organizes information about jobs into a list. The columns present a job progress bar, the job name, an indication that the job is recurring or not recurring, the NetWitness component that is controlling the job, the owner of the job, the status, any associated message, and a download button to allow downloading of a job's packet capture files or payload files.

To display the Jobs tray, click the **Jobs** icon .

The Jobs tray lists all jobs that you own, recurring and non-recurring, using a subset of the columns available in the **Jobs** panel. Otherwise the Jobs tray and the user Profile Jobs panel are the same. In the Admin System view, the Jobs panel lists information about all NetWitness jobs for all users.

The following table describes the available options in the Jobs panel.

Option	Description
Resume	The Resume option applies only to recurring jobs that have been paused. When you resume a paused job, the next execution of the job executes as scheduled.
Pause	The Pause option applies only to recurring jobs. When you pause a recurring job that is running, it has no effect on that execution. The next execution (assuming the job is still paused) is skipped.
Cancel	Cancels a recurring or non-recurring job. You can cancel a job while it is running. If you cancel a recurring job, it cancels that execution of the job. The next time the job is scheduled to run, it executes normally.
–	Deletes a recurring or non-recurring job from the Jobs panel. When you delete a job, the job is instantly deleted from the Jobs panel. No confirmation dialog is offered. If you delete a recurring job, all future executions are removed as well.

The following table describes the Jobs tray and Jobs panel columns.

Column	Description
Selection box	Enables you to select one or more jobs.
Job Name	Displays the name of the job; for example, **Extract Files** or **Upgrade Service**.
Recurring	Indicates whether the job is recurring or non-recurring. **Yes** = recurring, **No** = non-recurring.
Scheduled	Indicates the date and time at which the job was scheduled to begin.
Component	Indicates the component in which the job originated; for example, **Investigation** or **Administration**.
Owner	Indicates the owner of the job. The owner of the job is not included in the default **Jobs Tray**, because only the current user's jobs are displayed here. The column is available to add.
Action	Views the job in another view or downloads job files for the job to the default **Downloads** directory on the local system. Only successfully completed jobs have the **View** link in the **Action** column. Only jobs that create a file have the **Download** link in the **Action** column.
Message	Displays additional information about the job; for example, **Extracting files** or **No sessions found.**
Query	Displays the query associated with the job to help you understand any issues with the result. This example provides the deviceid and the query that was submitted: `[Deviceid = 7 query = select * where sessionid=35667 size = 0 flags = 0]`
Status	Indicates the status of the job. Common values for status are **Paused**, **Running**, **Canceled**, **Failed**, **Completed**, and other status values are possible.
Progress	Shows the percentage complete for a job.
View Your Jobs	(Jobs tray only) Displays your jobs in the **Jobs panel**.

Disaster Recovery (Backup and Restore Instructions)

You can take a backup and restore of NetWitness Hosts using any of the following:

- (Recommended) NetWitness Recovery Wrapper Tool
- NetWitness Recovery Tool (NRT)

(Recommended) NetWitness Recovery Wrapper Tool

Note: NetWitness Recovery Wrapper tool is supported from NetWitness 11.6.1.4 and later. In case of host with large volume of data (>500GB), NetWitness recommends to use NetWitness Recovery Tool (`nw-recovery-tool`) for backup.

NetWitness Recovery Wrapper Tool (NRWT) provides centralized backup and restore that makes it easy for you to take a backup of all the supported installation options (Physical Host, Virtual Host, AWS, and Azure).

With NRWT you can:

- Backup (export) an individual, a specific, or all hosts at a time.
- Restore (import) an individual host at a time.
- Customize files or folders during backup and restore.
- Copy back up data to/from remote host location from/to Netwitness hosts provided:
  - Remote host is reachable via SSH from each NetWitness hosts.
  - The credentials are correct.
  - The location specified has sufficient space to take a backup in case of export.
  - The location specified should contain valid backup data in case of import.
- (For version 11.7.1 and later) Back up Mongo databases for Endpoint and ESA instances.
- (For version 11.7.1 and later) Include Broker index for NetWitness node in which Broker service is running.
- (For version 11.7.1 and later) Back up custom files and folders provided by user.

- (For version 12.3 and later) Avoid entering the password in the Command Line Interface (CLI) while exporting and importing the data.
- (Optional) (For version 12.3 and later) Log in to the NetWitness Server or any other component host systems as a non-root user and perform backup and recovery of data. You must use the following login credentials to log in to the NetWitness Server or any other component host systems.
  - Username: **nwnrt**
  - Password: **netwitness**

  Note: To log in as a non-root user to the NetWitness Server or any other component host systems, root users must use the username **su nwnrt**.
- (For version 12.3 and later) Back up Group Hosts and Category Hosts.

For details on previous run, check NRWT logs at `/var/log/netwitness/recovery-tool/nw-recovery-wrapper.log` on the Admin Server.

Basic Usage of the NetWitness Recovery Wrapper Tool

You can use the NRWT to back up data by using the `export` option. To restore data, use the `import` option. The basic usage of the tool is to run the following command from the root directory level:

```
nw-recovery-wrapper [command] [option]
```

The commands and options that you can use with this tool are described in the following tables.

Commands and Options	Description
`-h --help`	Display help on commands and option. For example, specify: `nw-recovery-wrapper --help` to get a list of supported operations and arguments.
`-e, --export`	Export data or configuration.
`-i, --import`	Import data or configuration.
`-d, --dump-dir <path>`	Path for the where data will be exported or imported from (for example, `/var/netwitness/backup`).
`--host-key HOST_KEY [HOST_KEY ...]`	Host IP, ID or display name.
`--host-all`	Specify for all hosts - supported only for export.
`--category-group CATEGORY_GROUP [CATEGORY_GROUP ...]`	Specify for host and service groups - supported only for export.
`--host-group HOST_GROUP [HOST_GROUP ...]`	Specify host group created on the UI hosts page - supported only for export.
`--include CUSTOM_PATH [CUSTOM_PATH ...]`	Custom path or file.
`--remote-location REMOTE_LOCATION`	Remote host path for remote host configuration.
`--remote-ip REMOTE_IP`	Remote host IP for remote host configuration.
`--remote-password REMOTE_PASSWORD`	Remote host password for remote host configuration.
`--remote-user REMOTE_USER`	User for remote host configuration. (Optional) user for remote host configuration. If not specified, defaults to root user.

Required Conditions

- Make sure that there is adequate disk space on dump directory to take the backup on each NetWitness Hosts.
- Valid Host key is entered. Host key can be Host ID, IP address or display name.

Back Up using NRT Wrapper:

1. Backup NetWitness Hosts and store on local dump directory of each hosts:

```
nw-recovery-wrapper export --dump-dir <dir> --host-key <Host 1 IP/ID/Name>
<Host 2 IP/ID/Name>......<Host N IP/ID/Name>

nw-recovery-wrapper export --dump-dir <dir> --host-all
```

> **Note:** If you have logged in with the username **nwnrt** or **su nwnrt**, you must enter **sudo** before the commands you run while performing the backup and recovery actions on the NetWitness Server Host or any other Component Hosts using the NetWitness Recovery Wrapper Tool.
> For Example: To backup NetWitness hosts using the NetWitness Recovery Wrapper Tool, the first step is to run the following command after logging in.
> `sudo nw-recovery-wrapper export --dump-dir <dir> --host-key <Host 1 IP/ID/Name> <Host 2 IP/ID/Name>......<Host N IP/ID/Name>`

2. (Optional) Add custom files or folders during backup and restore other than what is predefined in recovery tool:

> **Note:** Make sure the custom files or directories are available on NetWitness Hosts, if not, the files or directories will be ignored.

```
nw-recovery-wrapper export --dump-dir <dir> --include-file <custom files>/-
-include-dir --host-key <Host 1 IP/ID/Name> <Host 2 IP/ID/Name>......<Host
N IP/ID/Name>
nw-recovery-wrapper export --dump-dir <dir> --include-file <custom files>/-
-include-dir --host-all
```

3. (Optional) Copy backup data to remote Location:

> **Note:** Make sure that:
> - You specify valid values for `--remote-ip`, `--remote-location` arguments for remote copy operation.
> - Remote Host IP is valid and reachable via SSH from all NetWitness Hosts.
> - Remote Host location (`--remote-location`) has adequate space to take backup.

```
nw-recovery-wrapper export --dump-dir <dir> --host-key <Host 1 IP/ID/Name>
<Host 2 IP/ID/Name>......<Host N IP/ID/Name> --remote-ip <IP ADDRESS of
remote host> --remote-location <remote-location-where-backups-should-be-
copied-to>
nw-recovery-wrapper export --dump-dir <dir> --host-all --remote-ip <IP
ADDRESS of remote host> --remote-location <remote-location-where-backups-
should-be-copied-to>
```

Note:
- Optional argument `--remote-user` defaults to root if you do not specify any value.
- Optional argument `--remote-password <remote-password>` uses ssh keys if argument is not specified.

Note: To perform password-less export, follow these steps on all the NetWitness nodes:
1. ssh-keygen (Without passphrase)
2. ssh-copy-id <remote - username>@<remote - ip>
Confirm the ssh connection by performing step 3 and exit from the remote machine.
3. ssh <remote - username>@<remote - ip>

Example:

For adminserver, the backup folder name will be adminserver-backup-2021-09-08-12:48:13

4. Backup (export) including custom files or folders and copy to remote location:

Note: Make sure that:
- the custom files or directories are available on NetWitness Hosts, if not, the files or directories will be ignored.
- You specify valid values for `--remote-ip`, `--remote-location` arguments for remote copy operation.
- Remote Host IP is valid and reachable via SSH from all NetWitness Hosts.
- Remote Host location (`--remote-location`) has adequate space to take backup.

```
nw-recovery-wrapper export --dump-dir <dir> --include <custom files/folder>
--host-key <Host 1 IP/ID/Name> <Host 2 IP/ID/Name>......<Host N IP/ID/Name>
--remote-ip <IP ADDRESS of remote host> --remote-location <remote-location-
where-backups-should-be-copied-to>
```

```
nw-recovery-wrapper export --dump-dir <dir> --include <custom files/folder>
--host-all --remote-ip <IP ADDRESS of remote host> --remote-location
<remote-location-where-backups-should-be-copied-to>
```

Note:
- Optional argument: `--remote-user` defaults to root if argument is not specified.
- Optional argument `--remote-password <remote-password>` uses ssh keys if argument is not specified.

Note: To perform password-less export, follow these steps on all the NetWitness nodes:
1. ssh-keygen (Without passphrase)
2. ssh-copy-id <remote - username>@<remote - ip>
Confirm the ssh connection by performing step 3 and exit from the remote machine.
3. ssh <remote - username>@<remote - ip>

Example:

For Admin server, the backup folder name will be adminserver-backup-2021-09-08-12:48:13

5. (For version 11.7.1 and later) (Optional) Include Mongo service.

   Note: Make sure that:
   - Mongo service is running on the NetWitness host.
   - `--host-all and --host-key` with multiple values are not supported for include Mongo operation.

   ```
   nw-recovery-wrapper export --dump-dir <dir> --host-key <Host 1 IP/ID/Name>
   --include-mongo
   ```

6. (For version 11.7.1 and later) (Optional) Include Broker index.

   Note: Make sure that:
   - Broker service is running on the NetWitness host.

   ```
   nw-recovery-wrapper export --dump-dir <dir> --host-key <Host 1 IP/ID/Name>
   <Host 2 IP/ID/Name>......<Host N IP/ID/Name> --include-broker-index
   ```

   ```
   nw-recovery-wrapper export --dump-dir <dir> --host-all --include-broker-
   index
   ```

7. (For version 11.7.1 and Later) (Optional) Backup (export) including Mongo and Broker index.

   Note: Make sure that:
   - Mongo service is running on the NetWitness host.
   - Broker service is running on the NetWitness host.
   - `--host-all and --host-key` with multiple values are not supported for include Mongo operation.

   ```
   nw-recovery-wrapper export --dump-dir <dir> --host-key <Host 1 IP/ID/Name>
   --include-mongo --include-broker-index
   ```

8. (For version 11.7.1 and later) (Optional) Backup (export) including custom files or folders, copying to remote location, Broker index and Mongo.

   ```
   nw-recovery-wrapper export --dump-dir <dir> --include-broker-index --
   include-mongo ---include-file <custom files>/--include-dir <custom folders>
   --host-key <Host 1 IP/ID/Name> --remote-ip <IP ADDRESS of remote host> --
   remote-location <remote-location-where-backups-should-be-copied-to>
   ```

   Note: To perform password-less export, follow these steps on all the NetWitness nodes:
   1. ssh-keygen (Without passphrase)
   2. ssh-copy-id <remote - username>@<remote - ip>
   Confirm the ssh connection by performing step 3 and exit from the remote machine.
   3. ssh <remote - username>@<remote - ip>

9. (For version 12.3 and later) Back up all the hosts specific to a given group created on the `/admin/appliances` page.

   ```
   nw-recovery-wrapper export --dump-dir <dump location> --host-group <UI host
   group>
   ```

   Example:

   ```
   nw-recovery-wrapper export --dump-dir /var/netwitness/Test-backup --host-
   group TestGroup
   ```

10. (For version 12.3 and later) Back up all the hosts specific to a given category such as Log Hybrid, Log Collector, and Standalone Broker in the environment.

    ```
    nw-recovery-wrapper export --dump-dir <dump location> --category-group
    <category name>
    ```

    Example:

    ```
    nw-recovery-wrapper export --dump-dir /var/netwitness/Test-backup --
    category-group LogDecoder
    ```

    Note: Make sure that:
    - Custom files or directories are present on NetWitness hosts to be backedup, if it is not present it skips the files or directory.
    - Fields such as `--remote-ip`, `--remote-location` are mandatory for remote copy operation.
    - Remote host IP credentials should be valid and reachable via SSH from all NetWitness hosts.
    - Remote host location (`--remote-location`) should have sufficient space to contain backups.
    - Mongo service is running on the NetWitness host.
    - Broker service is running on the NetWitness host.
    - `--host-all`,`--host-key`, `--category-group`, and `--host-group` with multiple values are not supported for include Mongo operation.
    - Optional argument `--remote-password <remote-password>` uses ssh keys if argument is not specified.

Restore (import) options supported in NRT Wrapper

Caution: Use import commands carefully as it performs system level changes.

1. Restore (import) single host at a time (using IP address, Host name, or Host ID).
   ```
   nw-recovery-wrapper import --dump-dir <dir> --host-key <Host IP/ID/Name>
   ```
2. Restore custom files or folders (if any).

   Note: Make sure the custom files or directories are available on NetWitness Hosts, if not, the files or directories will be ignored.

   ```
   nw-recovery-wrapper import --dump-dir <dir> --include-file <custom files>/-
   -include-dir --host-key <Host IP/ID/Name>
   ```
3. Restore from a remote location.

   Note: Make sure that:
   - `--remote-location` contains remote host location in which data is backedup.
   - Remote Host IP is valid and reachable via SSH from all NetWitness Hosts.
   - Remote Host location (`--remote-location`) has adequate space to take backup.

   ```
   nw-recovery-wrapper import --remote-ip <IP address of remote host> --
   remote-location <location-of-backup-on-remote-host> --dump-dir <dir> --
   host-key <Host IP/ID/Name>
   ```

Note:
- Optional argument: `--remote-user` defaults to root if argument is not specified.
- Optional argument `--remote-password <remote-password>` uses ssh keys if argument is not specified.

Note: To perform password-less import, follow these steps on all the NetWitness nodes:
1. ssh-keygen (Without passphrase)
2. ssh-copy-id <remote - username>@<remote - ip>
Confirm the ssh connection by performing step 3 and exit from the remote machine.
3. ssh <remote - username>@<remote - ip>

Example, for adminserver, the backup folder name should be adminserver-backup-2021-09-08-12:48:13

```
nw-recovery-wrapper import --dump-directory <dir> --host-key <host-1> --
remote-ip <remote-ip> --remote-location /home/adminserver-backup-2021-09-
08-12:48:13
```

Note:
- Optional argument: `--remote-user` defaults to root if argument is not specified.
- Optional argument `--remote-password <remote-password>` uses ssh keys if argument is not specified.

4. **Note:** To perform password-less import, follow these steps on all the NetWitness nodes:
1. ssh-keygen (Without passphrase)
2. ssh-copy-id <remote - username>@<remote - ip>
Confirm the ssh connection by performing step 3 and exit from the remote machine.
3. ssh <remote - username>@<remote - ip>

5. Restore data from remote location including custom files or folders.

Note: Make sure that:
- The custom files or directories are available on NetWitness Hosts, if not, the files or directories will be ignored.
- `--remote-location` contains remote host location in which data is backedup.
- Remote Host IP is valid and reachable via SSH from all NetWitness Hosts.
- Remote Host location (`--remote-location`) has adequate space to take backup.

```
nw-recovery-wrapper import --dump-dir <dir> --include <custom files/folder>
--host-key <host1> --remote-ip <IP ADDRESS of remote host> --remote-
location <remote-location-where-backups-should-be-copied-to>
```

Example, for Admin Server, the backup folder name will be adminserver-backup-2021-09-08-12:48:13

Note:
- Optional argument: `--remote-user` defaults to root if argument is not specified.
- Optional argument `--remote-password <remote-password>` uses ssh keys if argument is not specified.

6. **Note:** To perform password-less import, follow these steps on all the NetWitness nodes:
1. ssh-keygen (Without passphrase)
2. ssh-copy-id <remote - username>@<remote - ip>
Confirm the ssh connection by performing step 3 and exit from the remote machine.
3. ssh <remote - username>@<remote - ip>

7. (For version 11.7.1 and later) (Optional) Restore Mongo service.

   Note: Make sure that:
   - Mongo service is running on the NetWitness host.
   - `--host-all and --host-key` with multiple values are not supported for include Mongo operation.

   ```
   nw-recovery-wrapper import --dump-dir <dir> --host-key <Host 1 IP/ID/Name>
   --include-mongo
   ```

8. (For version 11.7.1 and later) (Optional) Restore Broker index.

   Note: Make sure that:
   - Broker service is running on the NetWitness host.
   - `--host-all option is not support for include broker index operation.`

   ```
   nw-recovery-wrapper import --dump-dir <dir> --host-key <Host 1 IP/ID/Name>
   --include-broker-index
   ```

9. (For version 11.7.1 and later) (Optional) Restore Mongo and Broker index.

   Note: Make sure that:
   - Mongo service is running on the NetWitness host.
   - Broker service is running on the NetWitness host.
   - `--host-all and --host-key` with multiple values are not supported for include Mongo operation.

   ```
   nw-recovery-wrapper import --dump-dir <dir> --host-key <Host 1 IP/ID/Name>
   --include-mongo --include-broker-index
   ```

10. (For version 11.7.1 and later) (Optional) Restore custom files or folders, copying to remote location, Broker index, and Mongo.

    Note: Make sure that:
    - Custom files or directories are present on NetWitness hosts to be backedup, if it is not present the files or directory is skipped for backup.
    - Fields such as `--remote-ip`, `--remote-location` are mandatory for remote copy operation.
    - Remote host IP credentials should be valid and reachable via SSH from all NetWitness hosts.
    - Remote host location (`--remote-location`) should have sufficient space to contain backups.
    - Mongo service is running on the NetWitness host.
    - Broker service is running on the NetWitness host.
    - `--host-all and --host-key` with multiple values are not supported for include Mongo operation.

    ```
    nw-recovery-wrapper import --dump-dir <dir> --include-file <custom files>/-
    -include-dir <custom folders> --include-mongo --include-broker-index --
    host-key <host1> --remote-ip <IP ADDRESS of remote host> --remote-location
    <remote-location-where-backups-should-be-copied-to>
    ```

Note:
- Optional argument: `--remote-user` defaults to root if argument is not specified.
- Optional argument `--remote-password <remote-password>` uses ssh keys if argument is not specified.

Note: To perform password-less import, follow these steps on all the NetWitness nodes:
1. ssh-keygen (Without passphrase)
2. ssh-copy-id <remote - username>@<remote - ip>
Confirm the ssh connection by performing step 3 and exit from the remote machine.
3. ssh <remote - username>@<remote - ip>

Status Check

You can check the Backup or Restore status using the below command.

`/var/log/netwitness/recovery-tool/recovery.log`

Troubleshooting

Error Message	NRT Wrapper fails during backup or restore.
Solution	Do any one of the following: • Log in to host where backup is failing and check `/var/log/netwitness/recovery-tool/recovery.log`. • Run in debug mode (`nw-recovery-wrapper -l debug`) on Node 0 to get recovery logs of each host.

Error Message	NRT Wrapper fails due to incorrect password for remote copy operation (`--remote-password`).
Cause	NRWT fails if you enter wrong password multiple times during remote copy. Since SFTP uses

	SSH, it locks the system SSH for a while.
Solution	You must retry after sometime.

Error Message	NRT Wrapper fails after running for long hours for a particular host but the backup is still in progress. For example, Endpoint or ESA node.
Cause	NRT architecture is designed to take a backup of configuration and not user data. It uses salt to communicate between admin server(SA) and nodex. Due to large volume of data in the particular host, this issue is caused when salt communication times out.
Solution	SSH to the particular host and check the backup status at `/var/log/netwitness/recovery-tool/recovery.log`. If the data to be backed up is huge, recommend using "nw-recovery-tool" by logging into particular host.

NetWitness Recovery Tool (NRT)

You can use the NetWitness Recovery Tool (NRT) to back up and restore data from the NetWitness Server and component host systems. The NRT is a script that you run from the command line to back up and restore data on hosts for RMAs, hardware refreshes, and general backup and restore requirements. Refer to Disaster Recovery in Azure Deployment for specific steps on how to perform disaster recovery for hosts deployed in Azure VMs.

Note: You must run the NRT on each host system locally. You cannot run it from remote hosts or an external host.

The following types of hosts can be backed up and restored.

Note: In the NRT script, the following terms in bold are referred to as categories.

- **NetWitness Admin Server** (may include Broker, Investigate, Respond, Health and Wellness, and Reporting Engine)
- **AnalystUI** (may include Broker, Investigate, Respond, Reporting Engine)

- **Archiver** Log Archiver (Workbench and Archiver)
- **Broker** Stand-alone Broker
- **Concentrator** Network or Log Concentrator
- **Decoder** Network Decoder (Packets)
- **Endpoint** Endpoint Agents
- **Endpoint Broker** Endpoint Broker
- **Endpoint Log Hybrid** Log Collector, Log Decoder, Endpoint Server, and Concentrator
- **Event Stream Analysis (ESA) Primary** Contexthub, ESA Correlation, and Incident Management database
- **ESA Secondary** ESA Correlation
- **Gateway** Cloud Gateway
- **Log Hybrid Retention** Log Hybrid-Retention Optimized (for RSA Series 6 Hybrid hardware with Log Hybrid-Retention Optimization)
- **Log Collector** Log Collector including Virtual Log Collector if installed
- **Log Decoder** Log Decoder including Local Log Collector and Warehouse Connector, if installed
- **Log Hybrid** Log Collector, Log Decoder, and Concentrator
- **Malware** Malware Analysis and Broker
- **Network Hybrid** Concentrator and Decoder
- **Search** (for Health & Wellness Beta Host)
- **UEBA** User Entity and Behavior Analytics
- **Warehouse** Warehouse Connector

Basic Usage of the NetWitness Recovery Tool

You can use the NRT to back up data by using the `export` option. To restore data, use the `import` option. The basic usage of the tool is to run the following command from the root directory level:

```
nw-recovery-tool [command] [option]
```

The commands and options that you can use with this tool are described in the following tables.

Commands and Options	Description
`-h, --help`	Display help on commands and option. For example, specify: `nw-recovery-tool --help-categories` to get a list of all the valid category names.
`-e, --export`	Export data or configuration.
`-i, --import`	Import data or configuration.
`-d, --dump-dir <path>`	Path for the where data will be exported or imported from (for example, `/var/netwitness/backup`).
`-C, --category <name>`	Select components by category. Valid category names are `AdminServer`, `AnalystUI`, `Archiver`, `Broker`, `Concentrator`, `Decoder`, `Endpoint`, `EndPointBroker`, `EndpointLogHybrid`, `ESAPrimary`, `ESASecondary`, `Gateway`, `LogHybridRetention`, `LogCollector`, `LogDecoder`, `LogHybrid`, `Malware`, `NetworkHybrid`, `Search`, `UEBA`, and `Warehouse`. You can specify a single category or multiple categories if multiple categories are co-located on the same host. For example: • `--category AdminServer` for the Admin Server exclusively. `--category AdminServer --category Gateway` for the Admin Server and the Cloud Gateway. • `--category ESAPrimary` for the ESA Primary exclusively. • `--category Broker` for the Broker exclusively. `--category Broker --category EndpointBroker` for the Broker and the Endpoint Broker.
`--remote-location <path>`	Remote backupfile path.
`--remote-ip <IP>`	Remote machine IP.
`--remote-user <name>`	Remote machine Username, (optional) user for remote host configuration. If not specified, defaults to root user.

Commands and Options	Description
`--remote-password <pass>`	Remote machine password.

Required Conditions

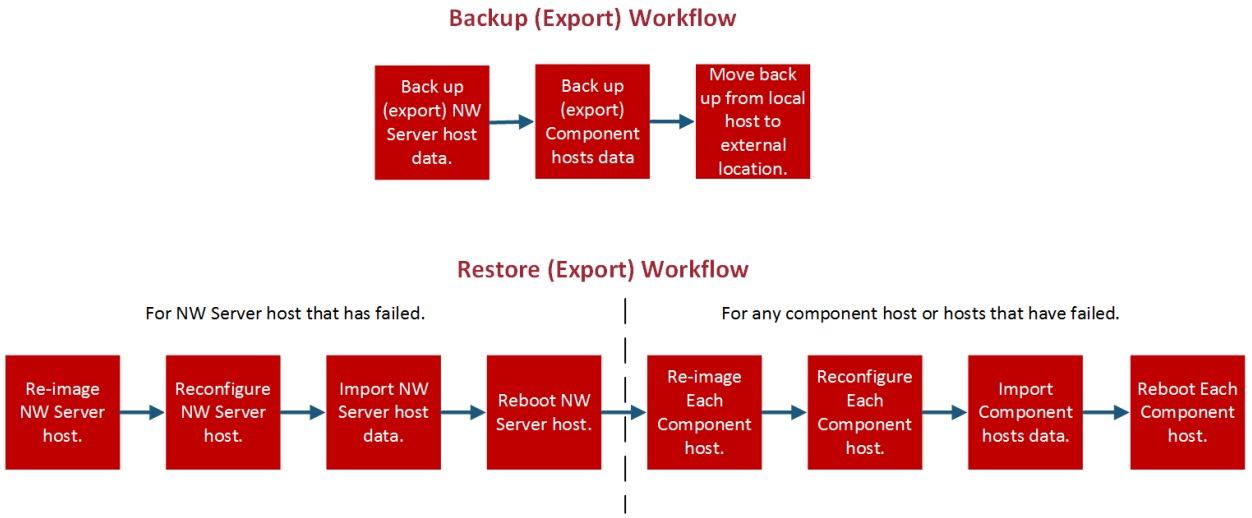
Make sure that the following conditions are met:

- Read the entire document before backing up any data. The document covers all deployment scenarios, so you want to make sure you have all the information required to back up and restore your implementation of NetWitness Platform before going through this process.
- Run the NRT for both backup and recovery locally, on each system being backed up or restored. You cannot run the NRT on an external host, or back up or restore several hosts simultaneously. However, you can back up several components on the same host system simultaneously.
- Export and import data on the same host. If a host fails and you need to build a new system, the new system must have the same identity parameters (i.e., the same IP address), and must be on the same version of NetWitness Suite.
- Make sure that there is adequate disk space in the backup location (`/var/netwitness/backup` is the recommended directory) before the export command in the nw-recovery tool is executed. Do not use a `tmp` directory because it fills up quickly and may cause the system to crash.
- Check the sizing of the Malware disks and adjust them before you back them up. The following table shows you the maximum size of Malware databases that you can back up by hardware type with the actions you can take to reduce them to the maximum size.

Host	Source Hardware	Target Hardware	Database	Maximum Size for Backup	Actions to Reduce Size to Backup Maximum
Malware	Series 4S Hybrid	Series 6 Core	`/var/netwitness`	2.5TB	Configure a rollover. Purge data that you do not need from the database.

- Restore to the exact ISO Image that each host had at the time of backup.
- If you have multiple services co-located on a single host, include all the services in a single command string for the `import` and `export` commands in the nw-recovery tool.

Note: When you run the NRT, the Malware , Reporting Engine, and Postgresql services are stopped and restarted during both the backup (export) and restore (import) processes



Disaster Recovery Workflow

The following diagram shows the high-level Disaster Recovery tasks.

Note: You only need to recover a host if it failed. This means that you can recover a single host, or any combination of hosts depending on which host or hosts failed.

The following diagram shows the tasks for:

- Backup (perform as soon as possible and as frequently as possible).
- Restore (only required if you need to restore your data).

Back Up and Restore Data for Hosts

The procedures for backing up and restoring data are different for NetWitness Server host systems and for component systems.

Caution: 1.) Do not remove component hosts (that is any host other than the NW Server host) from the Hosts View ((Admin) > **Hosts**) from the user interface when you are performing the following disaster recovery procedure. 2.) You must retain (restore) the 'Host name' that existed prior to performing the disaster recovery procedure.

Back Up and Restore Data on the NetWitness Server

Note: If you are using shared storage to export data from multiple hosts (for example, a shared mount or drive), use host-specific subfolders for the path to the location of the exported files for each host, to avoid overwriting one host's exported data with another. For example, you could use a path similar to `--dump-dir /mnt/storage/<host-specific-name>` for the path to the location of the exported files.

Back Up Data on a NetWitness Server Host

Perform this procedure on an existing, functional NetWitness Server host system.

1. At the root level, type the following command:

   ```
   nw-recovery-tool --export --dump-dir /var/netwitness/backup --category
   AdminServer
   ```

   Note: If you have logged in with the username **nwnrt** or **su nwnrt**, you must enter **sudo** before the commands you run while performing the backup and recovery actions on the NetWitness Server Host or any other Component Hosts using NetWitness Recovery Tool.
   For Example: To backup the data on a NetWitness Server host using the NetWitness Recovery Tool, the first step is to run the following command after logging in.
   `sudo nw-recovery-tool --export --dump-dir /var/netwitness/backup --category AdminServer`

   Note: If a service is co-located with another category on the same host rather than on its own, dedicated host, you must include it in the command string. The `Gateway` and `EndpointBroker` can be co-located as show in the following examples:
   `nw-recovery-tool--export --dump-dir /var/netwitness/backup --category AdminServer --category Gateway`
   `nw-recovery-tool--export --dump-dir /var/netwitness/backup --category Broker --category EndpointBroker`

2. Replace `/var/netwitness/backup` with the path to the location to which the data should be exported.

   a. Ensure that this location has sufficient space to store the backup data.

   b. The backup directory path should be located on the local host. However, the backup files could be located on a network mount or an external device.

The data is backed up on the NetWitness Server host in the location you set up in step 2.

3. Move the backed up data from the local host to an external server or a USB stick.
4. (Optional) Copy backup data to remote Location:

   Note: Make sure that:
   - You specify valid values for `--remote-ip`, `--remote-location` a rguments for remote copy operation.
   - Remote Host IP is valid and reachable via SSH from all NetWitness Hosts.
   - Remote Host location (`--remote-location`) has adequate space to take backup.

```
nw-recovery-tool --export --dump-dir /var/netwitness/backup --category
AdminServer --remote-ip <IP ADDRESS of remote host> --remote-location
<remote-location-where-backupsshould-be-copied-to>
```

Note:
- Optional argument `--remote-user` defaults to root if you do not specify any value.
- Optional argument `--remote-password <remote-password>` uses ssh keys if argument is not specified.

Note: To perform password-less export, follow these steps on all the NetWitness nodes:
1. ssh-keygen (Without passphrase)
2. ssh-copy-id <remote - username>@<remote - ip>
Confirm the ssh connection by performing step 3 and exit from the remote machine.
3. ssh <remote - username>@<remote - ip>

Restore Data on a NetWitness Server Host

1. Re-image the NetWitness Server host using the same network configuration settings of the original host. For information about re-imaging the NetWitness Server host, see "Task 1 - Install 12.3 on the NetWitness Server Host" in the *Physical Host Installation Guide for Version 12.3 Guide*

   a. **Optional** If you need to establish network connectivity before you can fetch backup data, for example, if it is on a remote host, run the following script using the same IP address, subnet, gateway, DNS and domain information as the original host:

   ```
   netconfig --static --interface <name> --ip <address> --netmask <netmask>
   --gateway <gateway>
   ```

   For example:

   ```
   netconfig --static --interface eth0 --ip 192.168.1.100 --netmask
   255.255.255.0 --gateway 192.168.1.1
   ```

   Optional: To specify DNS server(s), include the following additional parameter:

   ```
   --dns <address>
   ```

   Optional: To set the local domain name, include the following additional parameter:

   ```
   --domain <name>
   ```

   b. (**Optional**) If you are using DHCP, run the following script:

   ```
   netconfig --dhcp --interface <name>
   ```

   For example:

   ```
   netconfig --dhcp --interface eth0
   ```

   c. Add the backup data to the backup directory path on the local host, for example:

   ```
   /var/netwitness/backup
   ```

2. Run the `nwsetup-tui` command. This initiates the Setup program.

   Note: During the Setup program, when you are prompted for the network configuration of the host, be sure to specify the same identical network configuration that was used for the original installation of the host.

3. When you are prompted, select install type option **2: Recover (Reinstall)**, click **OK**, and then enter the path to the backup directory containing the backup data.
4. After the installation completes successfully, ensure that the host is running the exact same release and patch version of the data that was backed up:

   - If the data was on an system that was updated to a later patch release, update the host by following the instructions for updating systems offline in the update guide for the same patch version as what was previously running on the host (the exact release or patch version for which data was backed up).
   - If the data was on a major release version (for example, 12.3) that had not been updated to a later patch version, you do not need to update the host system.

5. When the host is running at the correct version, run the following command on the NetWitness Server to restore data:

```
nw-recovery-tool --import --dump-dir /var/netwitness/backup --category
AdminServer
```

Note: If a service is co-located with another category on the same host rather than on its own, dedicated host, you must include it in the command string. The `Gateway` and `EndpointBroker` can be co-located as show in the following examples:

```
nw-recovery-tool--import --dump-dir /var/netwitness/backup --category
AdminServer --category Gateway
nw-recovery-tool--import --dump-dir /var/netwitness/backup --category
Broker --category EndpointBroker
```

6. (Optional) Restore backup from a remote location:

Note: Make sure that:
- You specify valid values for `--remote-ip`, `--remote-location` arguments for remote copy operation.
- Remote Host IP is valid and reachable via SSH from all NetWitness Hosts.
- Remote Host location (`--remote-location`) has adequate space to take backup.

```
nw-recovery-tool --import --dump-dir /var/netwitness/backup --category
AdminServer --remote-ip <IP ADDRESS of remote host> --remote-location
<location-of-backup-on-remote-host>
```

Note:
- Optional argument `--remote-user` defaults to root if you do not specify any value.
- Optional argument `--remote-password <remote-password>` uses ssh keys if argument is not specified.

Note: To perform password-less export, follow these steps on all the NetWitness nodes:
1. ssh-keygen (Without passphrase)
2. ssh-copy-id <remote - username>@<remote - ip>
Confirm the ssh connection by performing step 3 and exit from the remote machine.
3. ssh <remote - username>@<remote - ip>

7. (Conditional) If you use custom firewall rules or custom entries in `/etc/hosts`:
   a. (Conditional) If you use custom firewall rules (that is, replied "Yes" to the "Disable Firewall" nwsetup-tui prompt during installation), restore the `/etc/sysconfig/iptables` file from the backup copy located in the `<dump-dir>/unmanaged/etc/sysconfig/iptables` file.
   b. (Conditional) If you use custom entries in `/etc/hosts`, restore the `/etc/hosts.users` file from the backup copy located at `<dump-dir>/unmanaged/etc/hosts.user` to `/etc` on the host.
   c. If you performed step 7a or 7b, refresh the host by running the following command:
   `nw-manage --refresh-host --host-key <ID, IP, hostname or display name of host>`
8. Reboot the NetWitness Server host.

Note: If you want to add any more custom entries to `/etc/host`, you must add them to the `/etc/hosts.users` file and then refresh the host as described in step 6c.

Back Up and Restore Data on Other Component Hosts

Perform these procedures on each existing, functional component host system.

Back Up Data on a Component Host

1. At the root level, type the following command:
   `nw-recovery-tool --export --dump-dir /var/netwitness/backup --category <category name>`
   where the category name is one of the following:
   `AdminServer`, `AnalystUI`, `Archiver`, `Broker`, `Concentrator`, `Decoder`, `Endpoint`, `EndPointBroker`, `EndpointLogHybrid`, `ESAPrimary`, `ESASecondary`, `Gateway`, `LogHybridRetention`, `LogCollector`, `LogDecoder`, `LogHybrid`, `Malware`, `NetworkHybrid`, `Search`, `UEBA`,or `Warehouse`

   Note: If you have logged in with the username **nwnrt** or **su nwnrt**, you must enter **sudo** before the commands you run while performing the backup and recovery actions on the NetWitness Server Host or any other Component Hosts using NetWitness Recovery Tool.
   For Example: To backup the data on a component host using the NetWitness Recovery Tool, the first step is to run the following command after logging in.
   `sudo nw-recovery-tool --export --dump-dir /var/netwitness/backup --category <category name>`

   Note: 1.) Use the category that matches the host type. 2.) If services are co-located on a Component Host rather than on its own dedicated host, you must include it in the command string. For example, a Warehouse Connector resides on a Log Decoder host. The following is an example of this command string.
   `nw-recovery-tool--export --dump-dir /var/netwitness/backup --category LogDecoder --category Warehouse`

2. (Optional) Copy backup data to remote Location:

   Note: Make sure that:
   - You specify valid values for `--remote-ip`, `--remote-location` arguments for remote copy operation.
   - Remote Host IP is valid and reachable via SSH from all NetWitness Hosts.
   - Remote Host location (`--remote-location`) has adequate space to take backup.

   ```
   nw-recovery-tool --export --dump-dir /var/netwitness/backup --category
   <category name> --remote-ip <IP ADDRESS of remote host> --remote-location
   <remote-location-where-backupsshould-be-copied-to>
   ```

   Note:
   - Optional argument `--remote-user` defaults to root if you do not specify any value.
   - Optional argument `--remote-password <remote-password>` uses ssh keys if argument is not specified.

Note: To perform password-less export, follow these steps on all the NetWitness nodes:
1. ssh-keygen (Without passphrase)
2. ssh-copy-id <remote - username>@<remote - ip>
Confirm the ssh connection by performing step 3 and exit from the remote machine.
3. ssh <remote - username>@<remote - ip>

3. **(Optional)** Replace `/var/netwitness/backup` with the path to the location to which the data should be exported:
   a. Ensure that this location has sufficient space to store the backup data.
   b. The backup directory path should be located on the local host. However, the backup files could be located on a network mount or an external device.
4. For **Endpoint Log Hybrid** and **ESA Primary** hosts, you can export application data that is stored in the database by running the following command:
   `nw-recovery-tool --export --dump-dir /var/netwitness/backup --component mongo`
   You can replace `/var/netwitness/backup` with the path to the location to which the data should be exported.

   Note: 1.) Make sure that there is enough space in the export location for the files from the Mongo database. 2.) You can back up the **Endpoint Log Hybrid** or **ESA Primary** host data and Mongo database in a single command string. For example, `nw-recovery-tool --export --dump-dir /var/netwitness/backup --category EndpointLogHybrid --component mongo`
5. For **Malware**, you can export application data from the Malware application database by running the following command:
   `nw-recovery-tool --export --dump-dir /var/netwitness/backup --component postgresql`
   You can replace `/var/netwitness/backup` with the path to the location to which the data should be exported.

   Note: Ensure that there is enough space in the export location for the files from the Malware database.
6. Move the backed up data from the local host to an external server or a USB stick.

Restore Data on a Component Host

1. Re-image the component host using the same network configuration settings of the original host. For information about re-imaging a component host, see "Task 2 - Install 12.3 on Other Component Hosts" in the *Physical Host Installation Guide for Version 12.3 Guide*

2. **Optional** If you need to establish network connectivity before you can fetch backup data, for example, if it is on a remote host, run the following script using the same IP address, subnet, gateway, DNS and domain information as the original host:
   `netconfig --static --interface <name> --ip <address> --netmask <netmask> --gateway <gateway>`
   For example:
   `netconfig --static --interface eth0 --ip 192.168.1.100 --netmask 255.255.255.0 --gateway 192.168.1.1`
   Optional: To specify DNS server(s), include the following additional parameter:
   `--dns <address>`
   Optional: To set the local domain name, include the following additional parameter:
   `--domain <name>`

   a. (**Optional**) If you are using DHCP, run the following script:
      `netconfig --dhcp --interface <name>`
      For example:
      `netconfig --dhcp --interface eth0`

   b. Add the backup data to the backup directory path on the local host, for example, `/var/netwitness/backup`.

3. Run the `nwsetup-tui` command. This initiates the Setup program.

   Note: During the Setup program, when you are prompted for the network configuration of the host, be sure to specify the same identical network configuration that was used for the original installation of the host.

4. When you are prompted, select install type option **2: Recover (Reinstall)**, click **OK**, and then enter the path to the directory containing the backup data.

5. After you complete the `nwsetup-tui` command setup, you must re-install the appropriate services on the host using the **Install** command from the Hosts View in the NetWitness Platform User Interface.
6. After the service installation completes, ensure that the host is running the exact same release and patch version of the data that was backed up:
   - If the data was on system that was updated to a later patch release, update the host by following the instructions for updating systems offline for the same patch version as what was previously running on the host (the exact release or patch version for which data was backed up).
   - If the data was on a major release version (for example, 12.3) that had not been updated to a later patch version, you do not need to update the host system.
7. When the host is running at the correct version, return to the root level of the component host and run the following command to restore data:
   ```
   nw-recovery-tool --import --dump-dir /var/netwitness/backup --category
   <category name>
   ```

   Note: If services are co-located on a Component Host rather than on its own dedicated host, you must include it in the command string. For example, a Warehouse Connector resides on a Log Decoder host. The following is an example of this command string.
   ```
   nw-recovery-tool--import --dump-dir /var/netwitness/backup --category
   LogDecoder --category Warehouse
   ```
8. (Optional) Restore backup data from remote Location:

   Note: Make sure that:
   - You specify valid values for `--remote-ip`, `--remote-location` a rguments for remote copy operation.
   - Remote Host IP is valid and reachable via SSH from all NetWitness Hosts.
   - Remote Host location (`--remote-location`) has adequate space to take backup.

   ```
   nw-recovery-tool --import --dump-dir /var/netwitness/backup --category
   <category name> --remote-ip <IP ADDRESS of remote host> --remote-location
   <location-of-backup-on-remote-host>
   ```

   Note:
   - Optional argument `--remote-user` defaults to root if you do not specify any value.
   - Optional argument `--remote-password <remote-password>` uses ssh keys if argument is not specified.

   Note: To perform password-less export, follow these steps on all the NetWitness nodes:
   1. ssh-keygen (Without passphrase)
   2. ssh-copy-id <remote - username>@<remote - ip>

   Confirm the ssh connection by performing step 3 and exit from the remote machine.
   3. ssh <remote - username>@<remote - ip>
9. For **EnpointLogHybrid** and **ESAPrimary** systems, you can import application data to be restored by running the following command:
   ```
   nw-recovery-tool --import --dump-dir /var/netwitness/backup --component
   mongo
   ```

10. For **Malware**, you can import application data from the Malware application database to be restored by running the following command:
    ```
    nw-recovery-tool --import --dump-dir /var/netwitness/backup --component
    postgresql
    ```

11. For a Decoder, Log Decoder , Concentrator, Archiver, Network Hybrid, or Log Hybrid configured with external storage (that is, DAC, SAN, Unity or Powervault):

    a. Scan the `<dump-dir>/unmanaged/etc/fstab` file for devices with mount points that do not exist in the system `/etc/fstab` file.

    IMPORTANT: If you are migrating to new host hardware (that is a new Decoder, Log Decoder, Concentrator, Archiver, Network Hybrid, or Log Hybrid host), before you proceed to the next step you must:
    1. Power off the old hardware host and the external storage device attached to it.
    2. Attach the external storage device to the new host hardware.
    3. Power on both the new host hardware and the external storage device attached to it.

    a. Complete the following steps for each device in the backup copy of `<dump-dir>/unmanaged/etc/fstab`.

        i. Verify that the corresponding device is present and attached. If it not attached, attach it. If the device is no longer applicable, skip it and go to the next device.

        ii. Verify that the mount point directory exists on the file system. If it does not exist, create the directory with the `mkdir <path>` command.

        iii. Add the `fstab` entry from the backup copy to the system `/etc/fstab` file.

        Caution: For a Series 5 or 6 Hybrid, you must restore backed up data to the `/etc/fstab` directory according to the instructions in Appendix A. Modify fstab for Series 5 and 6 Hybrid Storage After Recovery.

    b. Run the following command on each host.
    ```
    mount -a
    ```

12. (Conditional) If you use custom firewall rules or custom entries in `/etc/hosts`:

    a. (Conditional) If you use custom firewall rules (that is, replied "Yes" to the "Disable Firewall" nwsetup-tui prompt during installation), restore the `/etc/sysconfig/iptables` file from the backup copy located in the `<dump-dir>/unmanaged/etc/sysconfig/iptables` file.

    b. (Conditional) If you use custom entries in `/etc/hosts`, restore the `/etc/hosts.users` file from the backup copy located at `<dump-dir>/unmanaged/etc/hosts.user` to `/etc` on the host.

    c. If you performed step 12a or 12b, refresh the host by running the following command:
    ```
    nw-manage --refresh-host --host-key <ID, IP, hostname or display name of host>
    ```

13. Reboot the component host.

Hardware Refresh Only - Use Additional Space in New Hardware Hosts

Refer to the *Core Database Tuning Guide for NetWitness Platform* for instructions on how to use all the space you have available on your new hardware. Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

Disaster Recovery in Azure Deployment

This section tells you how to back up and restore NetWitness Platform deployed on Azure virtual hosts (also referred to as VMs in this section). The two major tasks to back up and restore data in an Azure deployment are:

- Task 1 - Backup and Export Data
- Task 2 - Restore and Import Data

Task 1 - Backup and Export Data

1. Export the data by running the `nw-recovery-tool --export` commands as described in the Disaster Recovery (Backup and Restore Instructions) section of this document.

Task 2 - Restore and Import Data

You need to refer to the *10.6.6.x to 11.3 Azure Upgrade Guide* to complete this task. Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

1. Delete the VM.

   Caution: Do not delete the resources (for example, do not delete Disks, Network Interface, and so on).

2. Complete the following steps for the NW Server host, Broker host, ESA host, Endpoint Log Hybrid host, and Log Collector host (where host = `--category`).

   a. Delete all the resources except the network interface card of the older 12.3 VM.

   b. Deploy the fresh 12.3 VM with the same disk and resources and power it off.
   For detailed instructions on how to deploy a virtual host in Azure, see the *Azure Installation Guide*.

   c. Run the `azure-mac-retention.ps1` from the local machine.
   See the *10.6.6 to 11.3 Azure Upgrade Guide* for instructions on how to run this script.

   d. Follow the procedure for the NRT restoration for the respective host as described in Disaster Recovery (Backup and Restore Instructions).

   e. After you restore NRT the component host, restore the following files.

   - `/etc/fstab`
   - `/etc/hosts` (if hostname is not changed)
   - `/etc/waagent.conf`
   - `/etc/logrotate.d/waagent.logrotate`
   - `/etc/krb5.conf` from the `<dump-dir>/unmanaged` folder

3. Complete the following steps for the Log Decoder host, Concentrator host, and Archiver host (where host = `--category`.

   a. Delete all the resources except the disks that are named **external** and the network interface card of the older 12.3 VM.

   b. Deploy the fresh 12.3 VM with the same disk and resources listed in the *Azure Installation Guide* and power it off.

   > **Note:** Do not create the **external** disk. Only create the **nwhome** disks.

   c. Run the `azure-mac-retention.ps1` from the local machine.
   See the *10.6.6 to 11.3 Azure Upgrade Guide* for instructions on how to run this script.

   d. Follow the procedure for the NRT restoration for the respective hosts as described in Restore Data on a Component Host.

   e. After you restore NRT the component host, restore the following files.

   - `etc/fstab`
   - `/etc/hosts` (if hostname is not changed)
   - `/etc/waagent.conf`
   - `etc/logrotate.d/waagent.logrotate`
   - `/etc/krb5.conf`

Disaster Recovery in AWS Deployment

This section tells you how to back up and restore NetWitness Platform deployed on AWS virtual hosts (also referred to as VMs in this section). The two major tasks to back up and restore data in an AWS deployment are:

- Task 1 - Backup and Export Data
- Task 2 - Restore and Import Data

Task 1 - Backup and Export Data

1. Export the data by running the `nw-recovery-tool --export` commands as described in the Disaster Recovery (Backup and Restore Instructions) section of this document.
2. Record the IP addresses. You need to refer to them later in the Disaster Recovery process. Refer to the *10.6.6 to 11.3 AWS Upgrade Guide* for instructions on how retain the IP addresses. Go to the NetWitness All Versions Documents page and find NetWitness Platform guides to troubleshoot issues.

Task 2 - Restore and Import Data

You need to refer to the *10.6.6 to 11.3 AWS Upgrade Guide* to complete this task.

1. Delete the VM.

   Caution: Do not delete the resources (for example, do not delete Disks).

2. Complete the following steps for the NW Server host, Broker host, ESA (Primary/Seconday) host, Endpoint Log Hybrid host, and Log Collector host (where host = `--category`).
   a. Delete all the resources of the older 12.3 VM.
   b. Deploy the fresh 12.3 VM with the same IP address, disk and resources and power it off. For detailed instructions on how to deploy a virtual host in AWS, see the *AWS Installation Guide*.
   c. Follow the procedure for the NRT restoration for the respective host as described in Restore Data on a Component Host.
   d. After you restore NRT the component host, restore the following files.
      - `/etc/fstab`
      - `/etc/hosts` (if hostname is not changed)
3. Complete the following steps for the Log Decoder host, Decoder (Network Decoder) host, Concentrator host, and Archiver host (where host = `--category`.
   a. Delete all the resources except the **external disks** of the older 12.3 VM.
   b. Deploy the fresh 12.3 VM with the same IP address, disk, and resources listed in the *AWS Installation Guide* and power it off.

Note: Do not create the **external** disk. Only create the **nwhome** disks.

c. Follow the procedure for the NRT restoration for the respective hosts as described in Restore Data on a Component Host.

d. After you restore NRT the component host, restore the following files.

- `etc/fstab`
- `/etc/hosts` (if hostname is not changed)
- `/etc/krb5.conf`

Appendix A. Modify fstab for Series 5 and 6 Hybrid Storage After Recovery

Note: The procedures in this Appendix do not apply if the hybrid was an 11.4 fresh installation and you had a disaster.

You must modify the `/etc/fstab` file for a Series5 or Series 6 Hybrid if a Series 5 or Series 6 Network Hybrid was upgraded from 11.2.x.x or 11.3.x.x to 11.4 and a disaster occurred.

These are the tasks to recovery from this disaster scenario.

1. Image a new Series 5 or Series 6 Hybrid as Network Hybrid using an 11.4 ISO.
2. Import the backed up data or configuration (`nw-recovery-tool --import`).
3. Modify the recovered `/etc/fstab` file.

Sample etc/fstab File Before Disaster

The following data is an example of the external storage configuration backup for a Series 5 or 6 Hybrid that was upgraded to 11.4.

The data highlighted in yellow corresponds to internal storage on an upgraded system. This configuration is carried over from prior releases during upgrade process. This lay out changed in 11.4 (Fresh Install). You must only copy the entries corresponding to external storage (highlighted in green) to the new `etc/fstab` file as part of a disaster recovery.

When you export data or configuration using the `nw-recovery-tool --export` command, the storage configuration details are saved to `<back-location>/unmanaged/etc/fstab`. The `fstab` file contains both internal storage (highlighted in yellow) and external storage configuration (highlighted in green). The contents on a upgraded (10.6 or 11.x -> 11.4) Series 5 or Series 6 Network Hybrid look similar to the following storage configuration.

```
/dev/mapper/netwitness_vg00-root / xfs defaults 0 0 UUID=906e2a3d-3b59-46d1-
975d-fa2b8467d009
/boot xfs defaults 0 0 /dev/mapper/netwitness_vg00-usrhome
/home xfs nosuid 0 0
/dev/mapper/netwitness_vg00-varlog /var/log xfs defaults 0 0
/dev/mapper/netwitness_vg00-nwhome /var/netwitness xfs nosuid,noatime 0 0
/dev/mapper/concentrator-vlnwc /var/netwitness/concentrator xfs noatime,nosuid
0 0
/dev/mapper/index-vlnwci /var/netwitness/concentrator/index xfs noatime,nosuid
0 0
/dev/mapper/concentrator-vlnwcm /var/netwitness/concentrator/metadb xfs
noatime,nosuid 0 0
/dev/mapper/concentrator-vlnwcs /var/netwitness/concentrator/sessiondb xfs
noatime,nosuid 0 0
/dev/mapper/decoderpacket-vlnwd /var/netwitness/decoder xfs noatime,nosuid 0 0
```

```
/dev/mapper/decoderpacket-vlnwdi /var/netwitness/decoder/index xfs
noatime,nosuid 0 0
/dev/mapper/decodermeta-vlnwdm /var/netwitness/decoder/metadb xfs
noatime,nosuid 0 0
/dev/mapper/decoderpacket-vlnwdp /var/netwitness/decoder/packetdb xfs
noatime,nosuid 0 0
/dev/mapper/decoderpacket-vlnwds /var/netwitness/decoder/sessiondb xfs
noatime,nosuid 0 0
/dev/mapper/netwitness_vg00-swap swap swap defaults 0 0
/var/netwitness/decoder /var/netwitness/logdecoder none defaults,rbind 0 0
/dev/concentrator0/sessiondb /var/netwitness/concentrator/sessiondb0 xfs
noatime,nosuid 1 2
/dev/concentrator0/metadb /var/netwitness/concentrator/metadb0 xfs
noatime,nosuid 1 2
/dev/decoder0/packetdb /var/netwitness/decoder/packetdb0 xfs noatime,nosuid 1
```

Sample etc/fstab File After Recovery - Before Modification

After you install 11.4 with the 11.4 ISO and execute the recovery tool execution to restore all previous configurations, the `/etc/fstab` file appears looks like the following example.

```
#
# /etc/fstab
# Created by anaconda on Thu Dec 5 17:31:26 2019
#
# Accessible filesystems, by reference, are maintained under '/dev/disk'
# See man pages fstab(5), findfs(8), mount(8) and/or blkid(8) for more info
#
/dev/mapper/netwitness_vg00-root / xfs defaults 0 0
UUID=d84db66c-fce6-4fec-9f84-b3449861f664 /boot xfs defaults 0 0
/dev/mapper/netwitness_vg00-usrhome /home xfs nosuid 0 0
/dev/mapper/netwitness_vg00-varlog /var/log xfs defaults 0 0
/dev/mapper/netwitness_vg00-nwhome /var/netwitness xfs nosuid,noatime 0 0
/dev/mapper/netwitness_vg00-swap swap swap defaults 0 0
/dev/hybrid-decoder-meta/decoroot /var/netwitness/decoder xfs noatime,nosuid 1
2
/dev/packet/packetdb /var/netwitness/decoder/packetdb xfs noatime,nosuid 1 2
/dev/hybrid-concentrator/root /var/netwitness/concentrator xfs noatime,nosuid
1 2
/dev/index/index /var/netwitness/concentrator/index xfs noatime,nosuid 1 2
```

Note: You can see that it is missing the external storage configurations. You must add the external storage configurations highlighted in green above) to the `/etc/fstab` file on the newly built Hybrid.

Sample etc/fstab File After Recovery - After Modification

After you make this updater, the `/etc/fstab` looks like the following example.

```
#
# /etc/fstab
# Created by anaconda on Thu Dec 5 17:31:26 2019
#
# Accessible filesystems, by reference, are maintained under '/dev/disk'

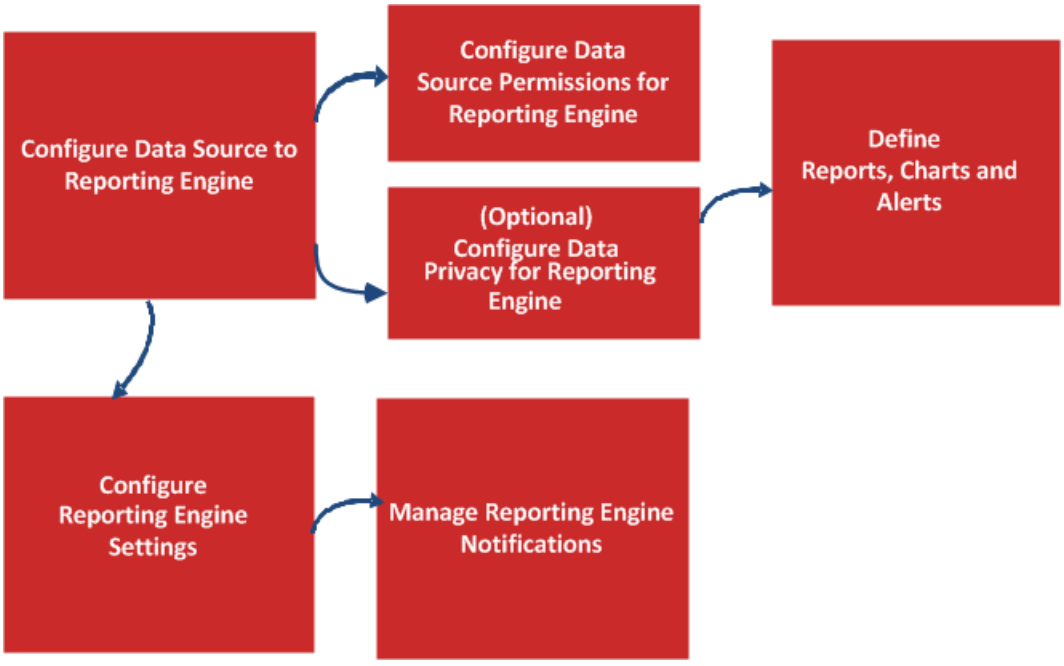
How Reporting Engine Works

NetWitness Reporting Engine is a service on the NetWitness Admin Server. It facilitates the data extraction from different data sources to generate reports for compliance and analysis. Reporting Engine stores the definitions of the charts, rules, reports and alerts that are used to generate reports, charts and alerts.

Reporting Engine configuration includes configuring the data sources, definitions of outputs or notifications and parameters to improve the performance of data extraction and report, chart, and alert generation.



When you install the NetWitness, Reporting Engine is automatically installed as a service. This enables the Reports, Charts, and Alerts to be maintained in the NetWitness and be available to view, download reports as PDF or CSV format, download charts as PDF and be added as dashlets.

For the Reporting Engine to run reports and alerts based on the data drawn from a data source, you must associate a data source, or multiple data sources to a Reporting Engine. There are three types of data sources:

- NWDB - The NetWitness Database (NWDB) data sources are Decoders, Log Decoders, Brokers, Concentrators, Archiver, and Collection. Reporting Engine supports the generation of reports, alerts, and charts.
- Warehouse - The Warehouse data sources are Horton Works and MapR which collects information from the Warehouse Connector and generates reports and alerts. This data source generates Reports only.
- Respond - Respond is used to generate reports on alerts and incidents. This data source generates Reports only.

Workflow

The following workflow shows an overview of the Reporting Engine configuration which enables the user to generate Reports, Charts, and Alerts.

Configure the Reporting Engine

On installation of the NetWitness Server, the Reporting Engine service is automatically available and some parameters are pre-populated with default values to achieve optimal results.

Make sure that the data sources are deployed and configured in the NetWitness. For more information, see "Add Service or Edit Service Dialog" topic in the *Host and Service Configuration Guide*.

You can perform the following tasks:

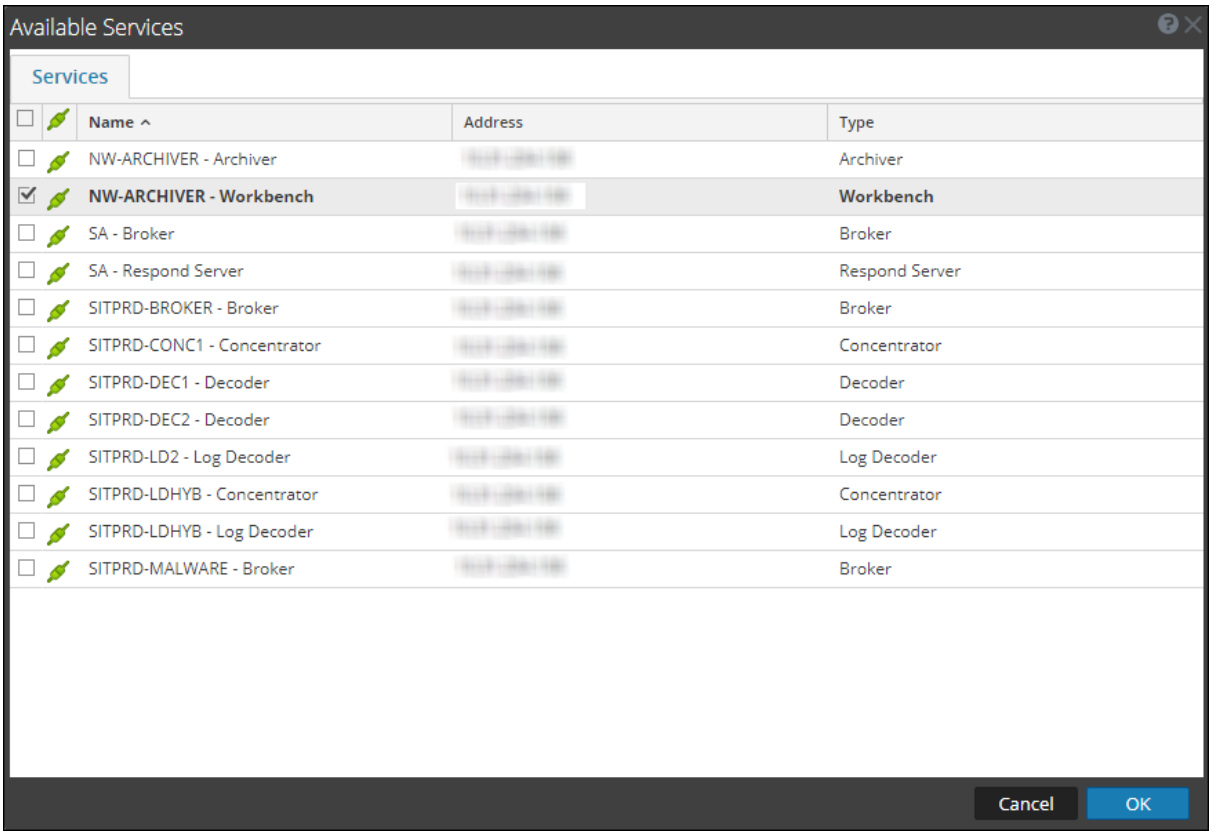
- Check Live for the latest data source content and deploy it on a regular basis. (For more information, see "Manage Live Resources" topic in the in *Live Services Management Guide*).
- (Optional) Add Additional Space for Large Reports.

Configure the Data Sources

You must configure NWDB, Warehouse, and Respond to generate Reports, Charts, and Alerts. Optionally, you can also configure Archiver, Collection, and Workbench data sources.

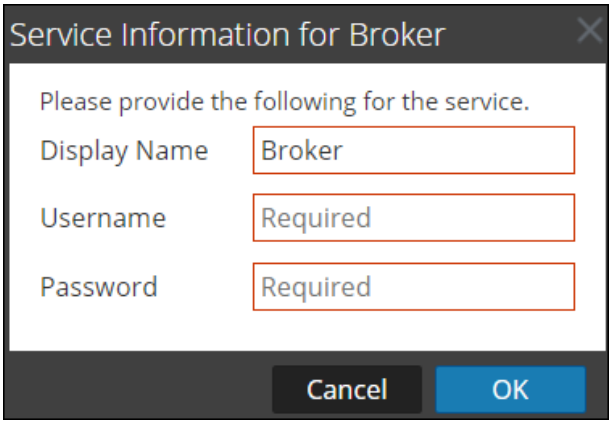
IMPORTANT: If you change the admin password on a NetWitness service that is used as a Reporting Engine data source, you must remove and then re-add the service as a data source.

Note: To execute Reports and Charts on an Analyst UI, make sure the admin adds the data sources to each Reporting Engine instance from the admin node using the relevant procedure described in this topic.



Configure a NWDB Data Source

To add a NWDB data source:



1. Go to  **(Admin) > Services**.
2. In the **Services**, select **Reporting Engine** service.
3. Click  > **View** > **Config**

   The Services Config View of Reporting Engine is displayed.
4. On the **Sources** tab, click  > **Available Services**.

   The **Available Services** dialog is displayed.

5. Select a NWDB service you want to add and click **OK**.
6. In the Service Information for Broker dialog, enter the service information for the service and click **OK**. In this example, we are adding a Broker service.

7. The service is displayed in the Sources tab when it is successfully added.

Note: The services with the Trust Model enabled must be added individually. You are prompted to provide a username and password for the selected service.

Configure a Warehouse Data Source

You can add the warehouse data source to Reporting Engine, so that you can extract the data from the required services, store them in MapR or Horton works and generate Reports and Alerts. The procedure to configure Warehouse as a data source differs. To extract data from a Warehouse data source, you must configure it using the following procedure.

Note: Warehouse Connector is still supported, as it is reporting against a warehouse in NetWitness 11.x.

Prerequisite

Make sure you:

- Add a Warehouse Data Source to Reporting Engine.
- Set Warehouse Data Source as the Default Source.
- HIVE server is in running state on all the Warehouse nodes. Use the following command to check the status of the HIVE server:

  ```
  status hive2 (MapR deployments)
  service hive-server2 status (Horton Works deployments)
  ```

- Warehouse Connector is configured to write data to the warehouse deployments.
- If Kerberos authentication is enabled for HiveServer2, make sure that the keytab file is copied to the `/var/netwitness/re-server/rsa/soc/reporting-engine/conf/` directory in the Reporting Engine Host.

  Note: The `rsasoc` user should have read permissions for the keytab file. For more information, see Configure Data Source Permissions.

  Also, make sure that you update the keytab file location in the **Kerberos Keytab File** parameter in the Reporting Engine Service Config View. For more information, see Reporting Engine General Tab.

To add Warehouse data source for MapR:

1. Go to  **(Admin) > Services**.
2. In the **Services** list, select the **Reporting Engine** service.
3. Click  > **View** > **Config**.

   The **Service Config** view is displayed with the **General** tab open.
4. Click the **Sources** tab.
5. In the **Sources** tab, click  and select **New Service**.

   The New Service dialog is displayed.

6. In the **Source Type** drop-down menu, select **WAREHOUSE**.
7. In the **Warehouse Source** drop-down menu, select the warehouse data source.
8. In the **Name** field, enter the host name of the Warehouse data source.
9. In the **HDFS Path** field, enter the HDFS root path to which the Warehouse Connector writes the data.

   For example:

   If `/saw` is the local mount point for HDFS that you have configured while mounting NFS on the device. And if you have installed the Warehouse Connector service to write to SAW. For more information, see "Mount the Warehouse on the Warehouse Connector" topic in the *Warehouse (MapR) Configuration Guide*.

   If you have created a directory named `Ionsaw01` under `/saw` and provided the corresponding Local Mount Path as `/saw/Ionsaw01`, then the corresponding HDFS root path would be `/Ionsaw01`.

   The `/saw` mount point implies to `/`as the root path for HDFS. The Warehouse Connector writes the data `/Ionsaw01` in HDFS. If there is no data available in this path, the following error is displayed:

   `"No data available. Check HDFS path"`

   Make sure that `/lonsaw01/rsasoc/v1/sessions/meta` contains avro files of the meta data before performing test connection.
10. Select the **Advanced** checkbox to use the advanced settings, and fill in the **Database URL** with the complete JDBC URL to connect to the HiveServer2.

    For example:

If kerberos is enabled in HIVE then the JDBC url will be:

```
jdbc:hive2://<host>:<port>/<db>;principal=<Kerberos serverprincipal>
```

If SSL is enabled in HIVE then the JDBC url will be:

```
jdbc:hive2://<host>:<port>/<db>;ssl=true;sslTrustStore=<trust_store_
path>;trustStorePassword=<trust_store_password>
```

For more information on HIVE server clients, see https://cwiki.apache.org/confluence/display/Hive/HiveServer2+Clients.

11. If not using the advanced settings, enter the values for the **Host** and **Port**.
    - In the **Host** field, enter the IP address of the host on which HiveServer2 is hosted.

      Note: You can use the virtual IP address of MapR only if HiveServer2 is running on all the nodes in the cluster.

    - In the **Port** field, enter the HiveServer2 port of the Warehouse data source. By default, the port number is **10000**.
12. In the **Username** and **Password** field, enter the JDBC credentials used to access HiveServer2.

    Note: You can also use LDAP mode of authentication using Active Directory. For instructions to enable LDAP authentication mode, see Enable LDAP Authentication.
13. Enable Kerberos authentication: see Enable Kerberos Authentication.
14. If you want set the added Warehouse data source as default source for the Reporting Engine, select the added Warehouse data source and click Set default.

To add Warehouse data source for Horton Works (HDP):

Note: Make sure you download the `hive-jdbc-1.2.1-with-full-dependencies.jar`. This jar contains the driver file of HIVE 1.2.1 which connects to Reporting Engine for Hive 1.2.1 Hiveserver2.

1. SSH to the NetWitness server.
2. In the `/opt/rsa/soc/reporting-engine/plugins/` folder, take a backup of the following jar:

   `hive-jdbc-0.12.0-with-full-dependencies.jar` or `hive-jdbc-1.0.0-mapr-1508-standalone.jar`
3. Remove the following jar:

   `hive-jdbc-0.12.0-with-full-dependencies.jar` or `hive-jdbc-1.0.0-mapr-1508-standalone.jar`
4. In the /opt/rsa/soc/reporting-engine/plugins folder, copy the following jar using WinSCP:

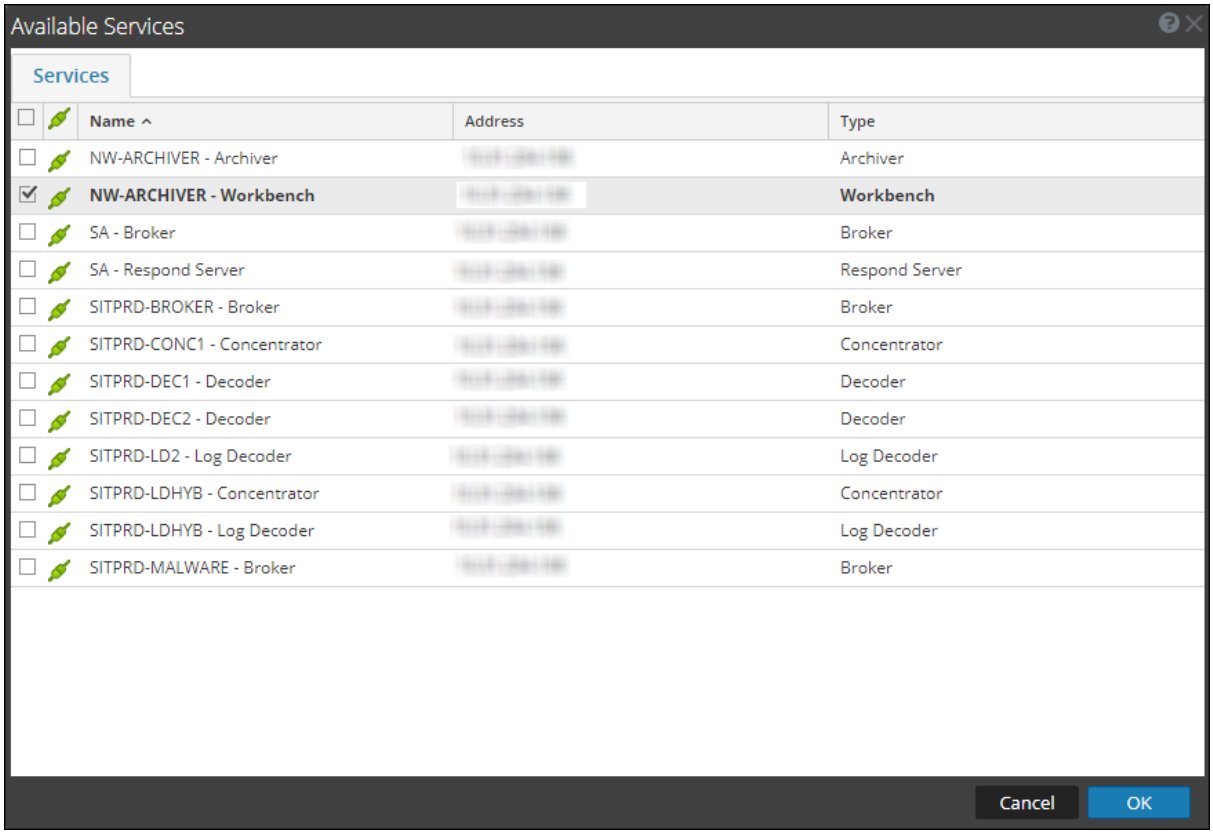
   `hive-jdbc-1.2.1-with-full-dependencies.jar`
5. Restart the Reporting Engine service.
6. Log in to NetWitness UI.
7. Select the **Reporting Engine** service and select > **View** > **Explore**.
8. In the **hiveConfig**, set **EnableSmallSplitBasedSchemaLiteralCreation** parameter to **true**.

Enable Kerberos Authentication

1. Select **Kerberos Authentication** checkbox, if the Warehouse is Kerberos enabled HIVE server.

2. Fill in the fields as follows:

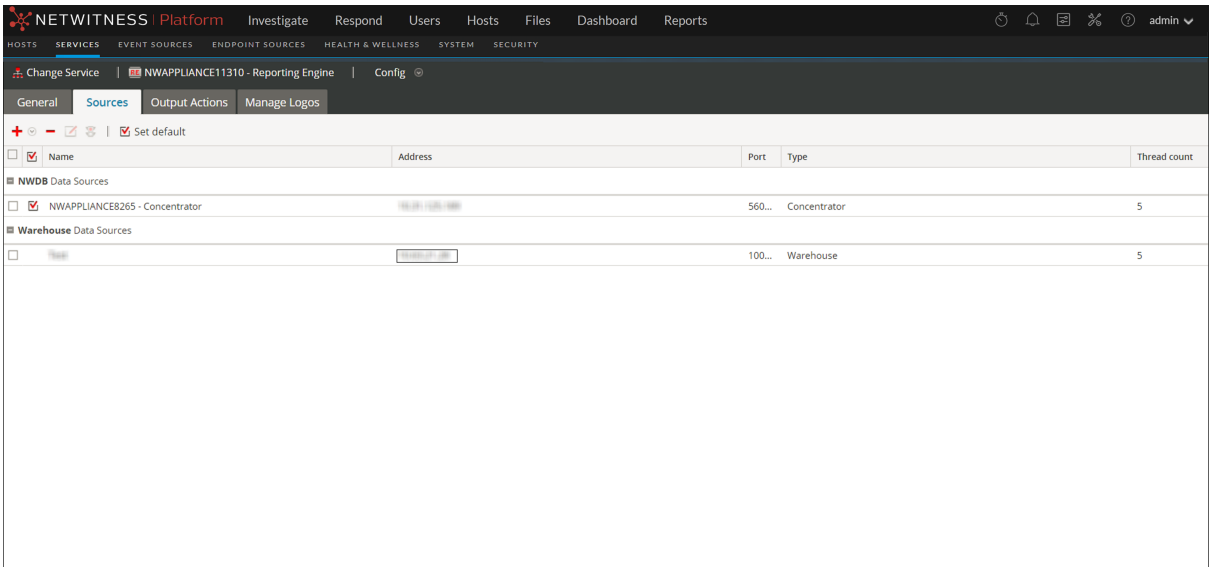
Field	Description
Server Principal	Enter the Principal used by the HIVE server to authenticate with the Kerberos Key Distribution Center (KDC) Server.
User Principal	Enter the Principal that HIVE JDBC client uses to authenticate with the KDC server for connecting the HIVE server. For example, gpadmin@EXAMPLE.COM.



Field	Description
Kerberos Keytab File	View the Kerberos keytab file location configured in the HIVE Configuration panel on the Reporting Engine General Tab. **Note:** Reporting Engine supports only the data sources configured with the same Kerberos credentials, like, User Principal and key tab file.

3. Click **Test Connection** to test the connection with the values entered.
4. Click **Save**.

   The added Warehouse data source is displayed in the Reporting Engine Sources tab.



5. Click  > **Available Services**.

   The Available Services dialog box is displayed.

6. In the Available Services dialog box, select the service that you want to add as data source to the Reporting Engine and click **OK**.

   NetWitness adds this as a data source available to reports and alerts against this Reporting Engine.

Note: This step is relevant only for an Untrusted model.

Set a Data Source as the Default Source

To set a data source to be the default source when you create reports and alerts:

1. Go to  **(Admin) > Services**.
2. In the **Services** list, select a **Reporting Engine** service.
3. Select  > **View**> **Config**.

   The Services Config View of Reporting Engine is displayed.
4. Select the **Sources** tab.

   The **Services Config View** is displayed with the Reporting Engine Sources tab open.
5. Select the source that you want to be the default source (for example, Broker).
6. Click the  checkbox.

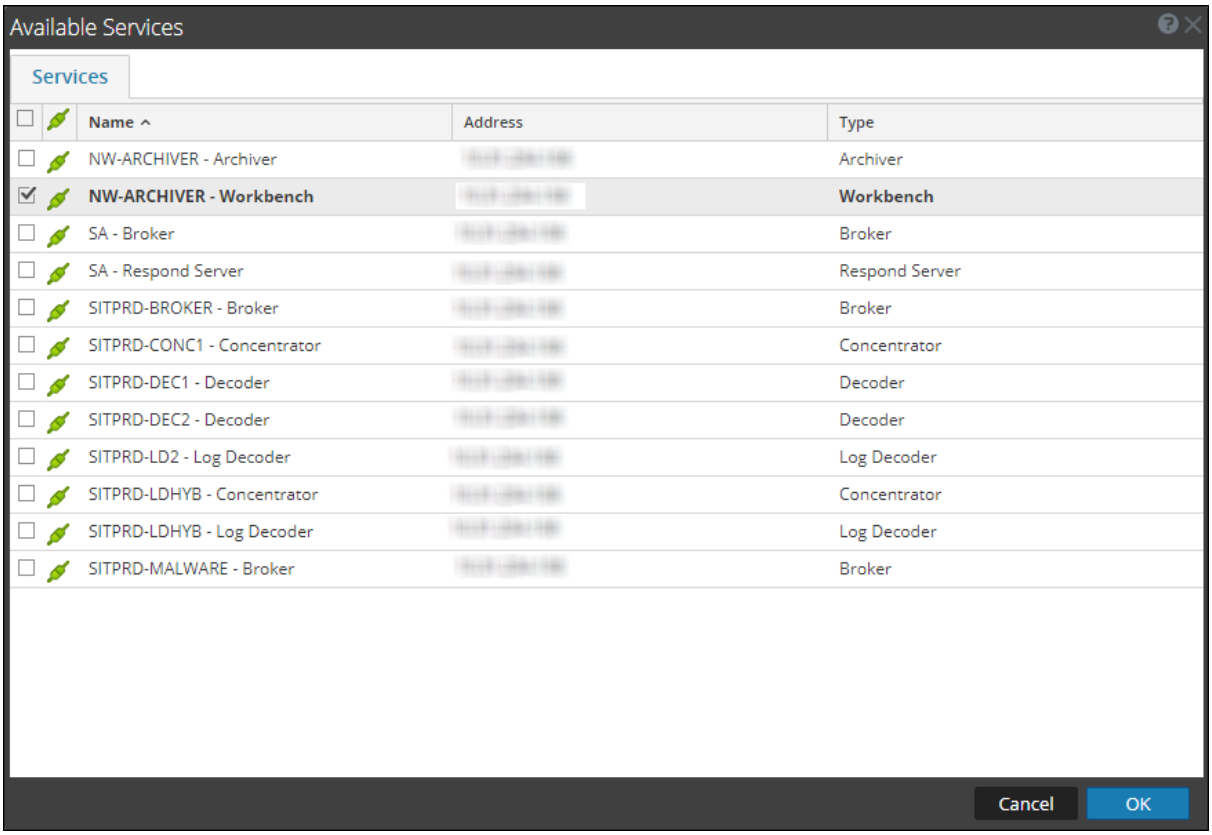
   NetWitness defaults to this data source when you create reports and alerts against this Reporting Engine.

(Optional) Add Workbench as Data Source

You must configure Workbench,to be able to use data from Workbench data source to generate Reports and Alerts. The following instructions describe how to add Workbench service as a data source to Reporting Engine to generate report for the data collected by Workbench.

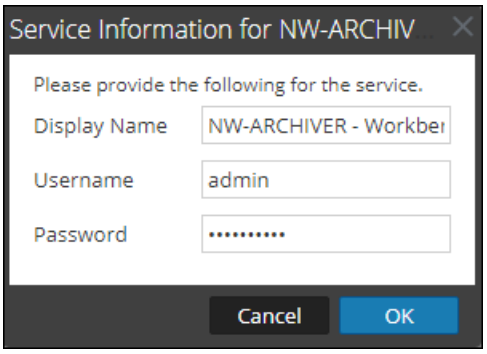
Prerequisites

Make sure you have:



1. Added Workbench as a service to your NetWitness deployment. For more information, see the *Archiver Configuration Guide*.
2. Added a Collection on the Workbench service.

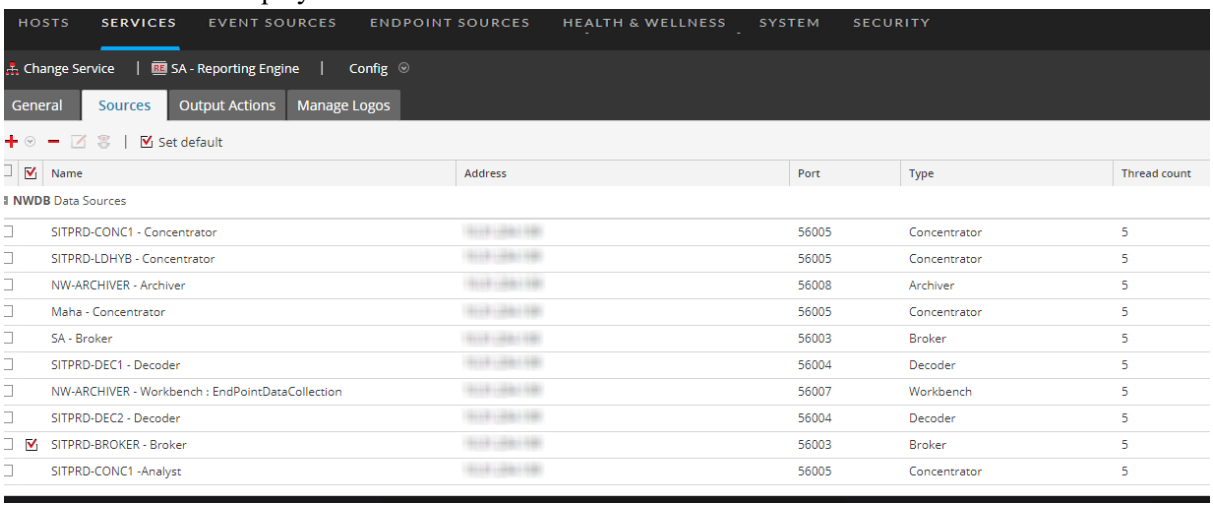
To add Workbench as a data source to Reporting Engine:



1. Go to  **(Admin) > Services**.
2. In the **Services** list, select a **Reporting Engine** service.
3. Select  > **View** > **Config**.

   The Services Config View of Reporting Engine is displayed.
4. Select the **Sources** tab.
5. Click  and select **Available Services**.

   The Available Services dialog is displayed:



6. Select the Workbench service and click **OK**.
   A list of collections are displayed.
7. Enter the service information, and click **OK**

8. Select a collection from the dropdown.

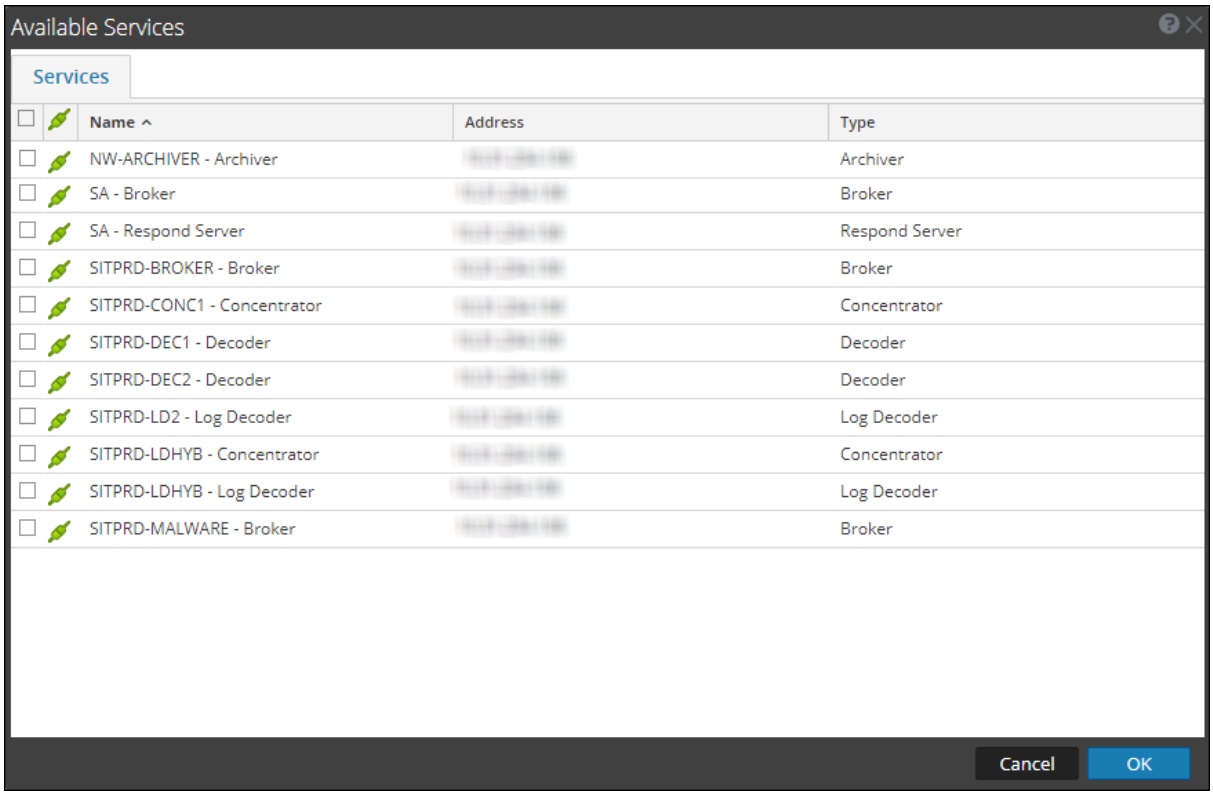
9. The data source is displayed in the Sources tab.

The workbench service is now added as a data source to the Reporting Engine.

Note: The services with the Trust Model enabled must be added individually. You are prompted to provide a username and password for the selected service.

(Optional) Add Archiver as Data Source

You must configure Archiver, to be able to use data from Archiver data source to generate Reports and Alerts:



Prerequisites

Make sure that you have:

1. Installed the NetWitness Archiver host in your network environment. For more information, see the *Hosts and Services Getting Started Guide*.
2. Installed and configured Log Decoder in your network environment. For more information, see "Add Log Decoder as a Data Source to Archiver" in the *Archiver Configuration Guide*.
3. Reporting Engine service is available in your NetWitness deployment.
4. Added Archiver service to your NetWitness deployment. For more information, see "Add the Archiver Service" in the *Archiver Configuration Guide*.
5. Applied license to the Archiver service.

To add Archiver Data Source to Reporting Engine:

1. Go to  **(Admin) > Services**.
2. In the **Services** list, select the **Reporting Engine** service.
3. Click  > **View** > **Config**.
   The Services Config View of Reporting Engine is displayed.
4. Select the **Sources** tab.
5. Click  and select **Available Services**.
   The Available Services dialog is displayed.

6. Select the Archiver service and click **OK**.

   The service authentication dialog box is displayed.

   Note: The services with the Trust Model enabled must be added individually. You are prompted to provide a username and password for the selected service.

7. Enter the Username and Password for the Archiver.
8. Click **OK**.

   The selected Archiver is listed in the Aggregate Services pane.

(Optional) Integrate Endpoint Information Into Reports

You can use the Endpoint data by using the following instructions to add the Endpoint information into Reports. The *Endpoint Integration Guide* provides an overview of Endpoint integration into NetWitness.

Prerequisites

Make sure that:

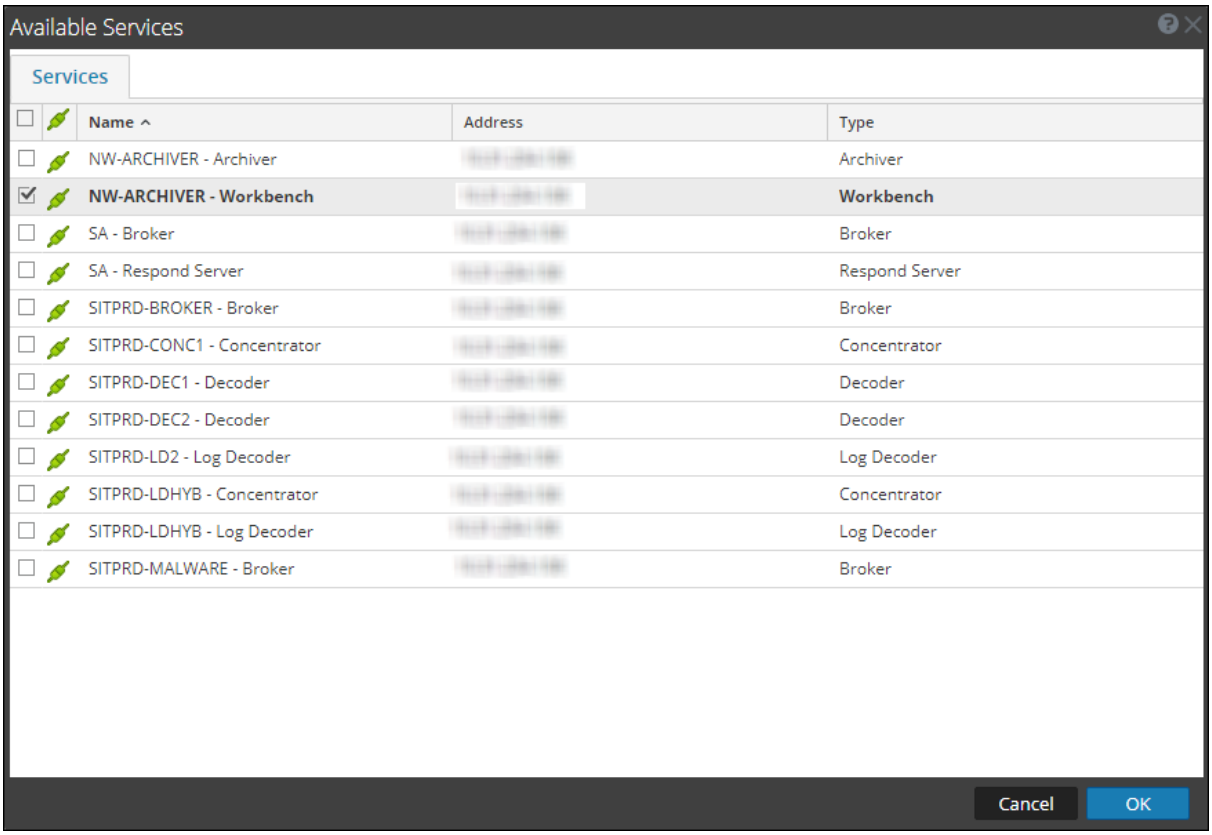
- You have configured the Endpoint alerts via syslog into a Log Decoder. For more information see, "Configure Endpoint Alerts Via Syslog into a Log Decoder" topic in *Endpoint Integration Guide*).

To integrate Endpoint information into Reports:

1. In **Reporting Engine**> **View**> **Config**> **Sources**.
2. Add the Concentrator that is consuming data from the Log Decoder as a data source.
   Endpoint meta is populated in Reporting Engine.
3. Run reports by selecting the appropriate meta.

(Optional) Add Collection as Data Source to Reporting Engine

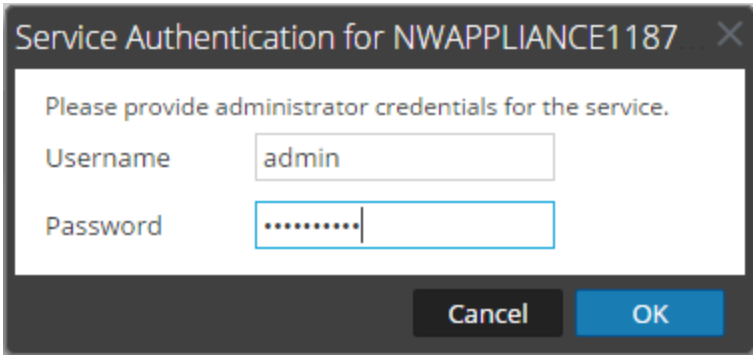
You must configure Collection, to be able to use data from Collection data source to generate Reports, Charts, and Alerts:



Prerequisites

Make sure that you have:

- Installed a Workbench service on a Reporting Engine host.
- Backed up data in a known location on your local host, if you are adding a collection using the data restored from the backed up data.



To associate a Collection as a data source with Reporting Engine:

1. Go to  **(Admin) > Services**.
2. In the **Services** list , select a **Reporting Engine** service.
3. Click  > **View** > **Config**.
   The Services Config View of Reporting Engine is displayed.
4. Select the **Sources** tab.
5. Click  and select **Available Services**.
   The Available Services dialog is displayed.

6. Select the Workbench service and click **OK**.

   The Service Authentication dialog for the selected service is displayed.

Note: The services with the Trust Model enabled must be added individually. You are prompted to provide a username and password for the selected service.

7. Enter the username and password for admin credentials for the service.
8. Click **OK**.

   The add collection dialog is displayed.

9. Select a collection from the drop-down list and click **OK**.

   The workbench service is now added as a data source to the Reporting Engine.

Configure Data Privacy for the Reporting Engine

You can configure the data privacy for all data sources of Reporting Engine using the Sources tab of the **Services** > **View** > **Config** view.

With the addition of the Data Privacy feature to NetWitness 11.0 and above, access to sensitive meta in NetWitness Core services can be restricted by configuring separate data sources for Data Privacy Officer (DPO) users and non-DPO users, and limiting access to those data sources by assigning appropriate permissions.

In the **Services** > **Config** view, you can add each Core service as two separate data sources: one with a service account having privileges equivalent to a DPO and the other with a service account having privileges equivalent to any other user. Then, to limit access to those data sources based on roles, you can assign read access or no access to those data sources for individual roles. To limit access to Warehouse data sources, you can do the same.or more information, see Configure Data Source Permissions.

Note: A user assigned to the `Data_Privacy_Officers` role (or an equivalent custom role), can create a report, chart and alert. Also, configure a report or alert output actions in the Reporting module. In an environment where data privacy features of NetWitness are enabled and one or more meta keys are configured as protected, these actions can result in the following:
- When an alert is created by a DPO user, any protected or sensitive meta involved in the alert is automatically available in Respond. This may inadvertently provide all the users of Respond module access to the sensitive meta values, regardless of their roles. One option to prevent this is to disable publishing into Respond from Reporting.
- When an Output Action is configured by a DPO user, either sensitive meta values, reports with sensitive meta values or both, may become available to target users or destinations of that Output Action, regardless of the role assigned to the target user.

It is strongly recommended that DPO users completely avoid creating alerts or configuring output actions for a report or alert in the Reporting module. If they do such configuration, the above implications must be carefully considered.

NetWitness Core services (for example, Concentrator, Broker, or Archiver) support the ability to restrict meta data based on the configured user role. To make use of the data privacy feature for Reporting Engine, you can configure two separate service accounts against Core services. One service account for general purpose reporting that does not include any sensitive data and the other account for privileged users with access to all data including sensitive data. The access to restricted meta data for the two service accounts is configured as part of the data privacy plan on each Core service.

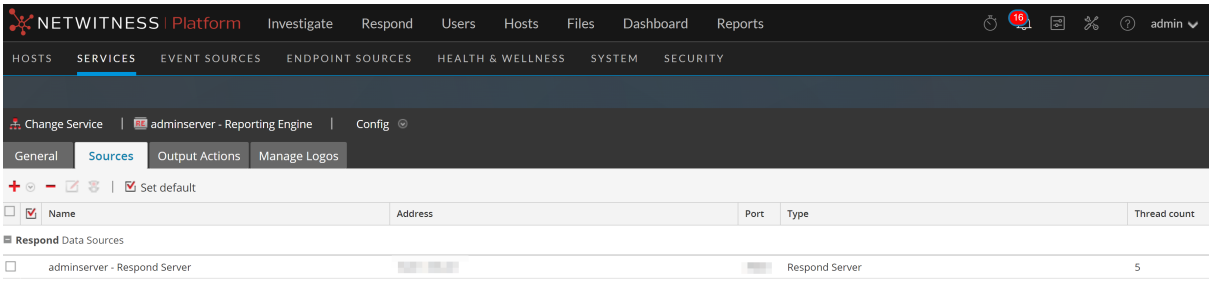
In Reporting Engine, you can add each Core service as two separate data sources (one being the regular data source and the other a privileged data source) using the two separate service accounts. You can configure Reporting Engine to allow only users with privileged roles to access the sensitive data source. Hence, Reporting Engine can connect to a NWDB Data source in two ways:

- Using a service account with DPO role.
- Using a service account without a DPO role.

Note: You can also add two or multiple data sources for the same Core service.

After adding two data sources with different service accounts for the same Core service, you can configure data source permissions to manage access to these data sources. For more information, see Configure Data Source Permissions.

Note: If the content is changed to utilize the transformed meta key, the hash value of the original meta is displayed in its place when viewing reports, charts and alerts.



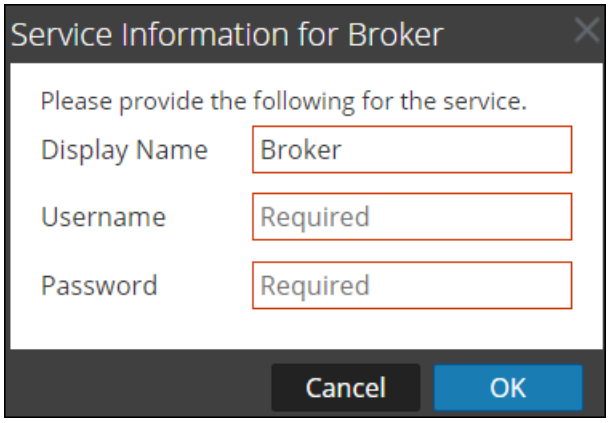
Add a NWDB Data Source with Different Service Accounts

To add a NWDB data source:

1. Go to  **(Admin) > Services**.
2. In the **Services** list, select a **Reporting Engine** service.
3. Click  **View** > **Config**.

   The Services Config view of Reporting Engine is displayed.
4. Select the **Sources** tab.

   The Services Config View is displayed.

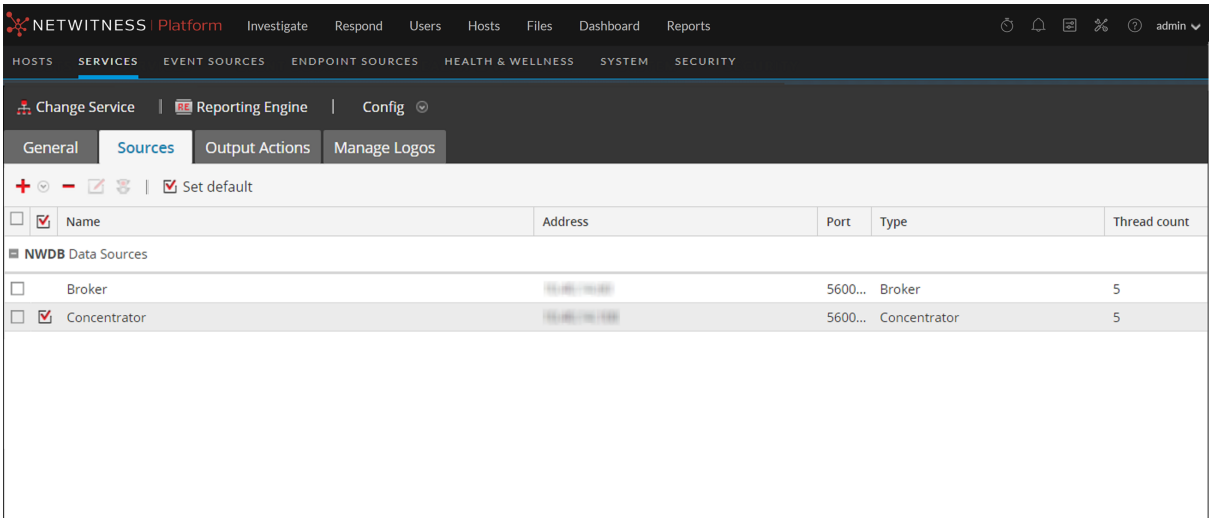


5. Click  and select Available Services.

   The Available Services dialog is displayed. All services are listed, including those that have already been added to the Reporting Engine.

6. Select the checkbox next to the service and click **OK**.

   The Service Information dialog for the selected service is displayed.



Note: NetWitness prompts you to provide a username and password for the selected service. To limit access to sensitive data, DPO users must use their credentials while adding the source instead of using the admin credentials. These credentials need to be applied to the host even if using trusted connections between the NetWitness server and NetWitness Core hosts.

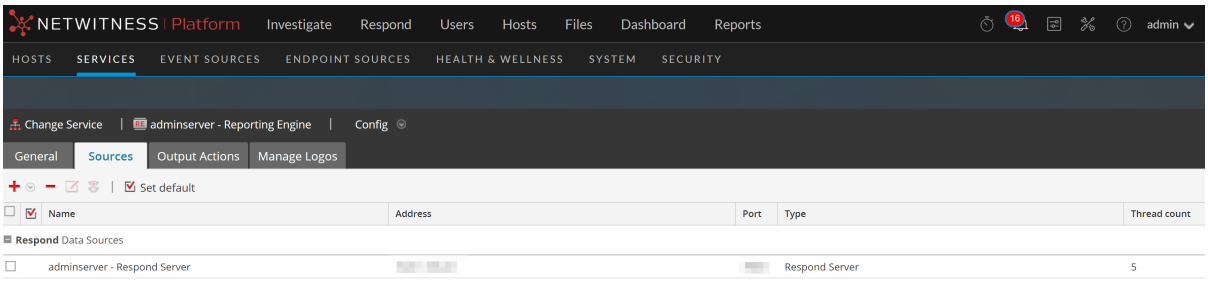
   Repeat the step for Non-DPO data source.

7. Enter the username and password for the required service account.
8. Click **OK**.

The required service is added as a data source to the Reporting Engine. Two data sources are added to Reporting Engine for the same Core device.

Configure Data Source Permissions

You can configure data source permissions for Reporting Engine using the **Sources** tab of the **Services** > **Config** view. This helps manage access control to the data sources by setting the data source permissions. Now, with the ability to add more than one data source for the same Core service, you can configure different permissions for each data source of the same Core service. For example, data privacy officers (DPO) can create a Warehouse source using their credentials, and that allows them to execute reports against the Warehouse while restricting everyone else from being able to use that source.



Note: In 11.x, the permissions for NWDB and Warehouse data sources are automatically set based on the permissions of the reporting objects. For example, if the role had the permissions set as **Read Only**/**Read & Write** for any reporting object in 10.5, then that role is automatically assigned read only permission for all the data sources that existed in 10.5. If no permission is set for the role, then the data source permission is automatically set to No Access.

To configure permissions to data sources:

1. Go to **(Admin) > Services**.
2. In the **Services** list, select a **Reporting Engine** service.
3. Click > **View** > **Config**.

   The Services Config view of Reporting Engine is displayed.
4. Select the **Sources** tab.

   The Service Config View displays the Sources tab.

5. Select the data source for which you want to configure permissions by selecting the checkbox.
6. Click .

   The Data Source Permissions dialog is displayed.

7. Modify the access permission for different users based on the type of service account of the data source. The permission can be either **Read Only** or **No Access**.
8. Click **Save**.

   The required permissions are configured for the data source. For more information, see the *Reporting Guide*.

Configure Reporting Engine Settings

After you configure the Reporting Engine and required data sources based on your requirements, you can modify some of the configurations to customize your Reports, Charts, and Alerts.

To configure the settings:

1. Go to  **(Admin) > Services**.
2. In the **Services** list, select a **Reporting Engine** service.
3. Click  > **View** > **Config**.

   The Services Config View of Reporting Engine is displayed with the General tab highlighted. For more information on Reporting Engine General tab, see Reporting Engine General Tab.
4. Edit the Reporting Engine service settings and click **Apply**.

   The service settings are configured on Reporting Engine.

Enable LDAP Authentication

To enable LDAP mode of authentication using Active Directory for HiveServer2 for Warehouse data source, follow these steps.

1. Log on to the Analytics Warehouse appliance as root user.
2. Navigate to `/opt/mapr/hive/hive-0.11/conf.new/` directory. Type the following command and press ENTER:

   ```
   cd /opt/mapr/hive/hive-0.11/conf.new/
   ```
3. Edit the file `hive-site.xml`. Type the following command and press ENTER:

   ```
   vi hive-site.xml
   ```
4. Add the following properties under `<Configuration>` tag:

   ```
   <property> <name>hive.server2.authentication</name> <value>LDAP</value>
   </property> <property> <name>hive.server2.authentication.ldap.url</name>
   <value>LDAP_URL</value> </property>
   ```

   Where `LDAP_URL` is the URL of the LDAP Server.
5. Restart HiveServer2.

Add Additional Space for Large Reports

To add additional disk space to the Reporting Engine for large reports, follow the below steps. If large compliance reports have to be generated for Warehouse, the Reporting Engine disk space might get consumed quicker than expected. In such cases, you can mount any external storage such as SAN or NAS for storing reports.

The directories that tend to fill up disk space are `resultstore` and `formattedReports` under the Reporting Engine home directory. It is recommended to move only these two directories to SAN or NAS and replace the original locations with soft links pointing to the new locations. It is also recommended to leave the remaining directories in the local disk itself for reliable and high I/O performance.

Note: The following steps assume that the Reporting Engine home directory is located at `/var/netwitness/re-server/rsa/soc/reporting-engine/` and the external storage is mounted under `/externalStorage/`. Also, the 'rsasoc' user must have read-write access to the specified external storage path.

To move disk space for the Reporting Engine to external storage:

1. Stop Reporting Engine service as a root user.

   ```
   service rsasoc_re stop
   ```

2. Switch to `rsasoc` user.

   ```
   su rsasoc
   ```

3. Change to RE home directory.

   ```
   cd /var/netwitness/re-server/rsa/soc/reporting-engine/
   ```

4. Move the resultstore directory to a mounted external storage. Type the following command and press ENTER:

   ```
   mv resultstore /externalStorage
   ```

5. Move the formatted Reports directory to a mounted external storage. Type the following command and press ENTER:

   ```
   mv formattedReports /externalStorage
   ```

6. Create a soft link for resultstore. Type the following command and press ENTER:

   ```
   ln -s /externalStorage/resultstore /var/netwitness/re-
   server/rsa/soc/reporting-engine/resultstore
   ```

7. Create a softlink for formattedReports. Type the following command and press ENTER:

   ```
   ln -s /externalStorage/formattedReports /var/netwitness/re-
   server/rsa/soc/reporting-engine/formattedReports
   ```

8. Exit the `rsasoc` user.

   ```
   exit
   ```

9. Start Reporting Engine service as a root user.

   ```
   service rsasoc_re start
   ```

   Note: If the external storage is offline, you cannot perform the following tasks:
   1) Execute Reports or Reporting Alerts
   2) View existing Reports or Reporting Alerts
   However, you can create new Reporting objects such as Reports and Charts, and access Charts and Live Dashboard created for charts. Therefore, you must ensure that the external storage is reliable and has the required space.

   Additionally, if you want to store reports beyond 100 days, change the retention configuration appropriately for the service that you are using as a data source.

Accessing Reporting Engine Log Files

You can access the Reporting Engine log files which are stored in the following logs directory `/var/netwitness/re-server/rsa/soc/reporting-engine/logs/`

- Current logs in the `reporting-engine.log` file.
- Backup copies of previous logs in the `reporting-engine.log.*` file.
- All UNIX script logs in the files that have the following syntax: `reporting-engine.sh_timestamp.log` (for example, `reporting-engine.sh_20120921.log`)

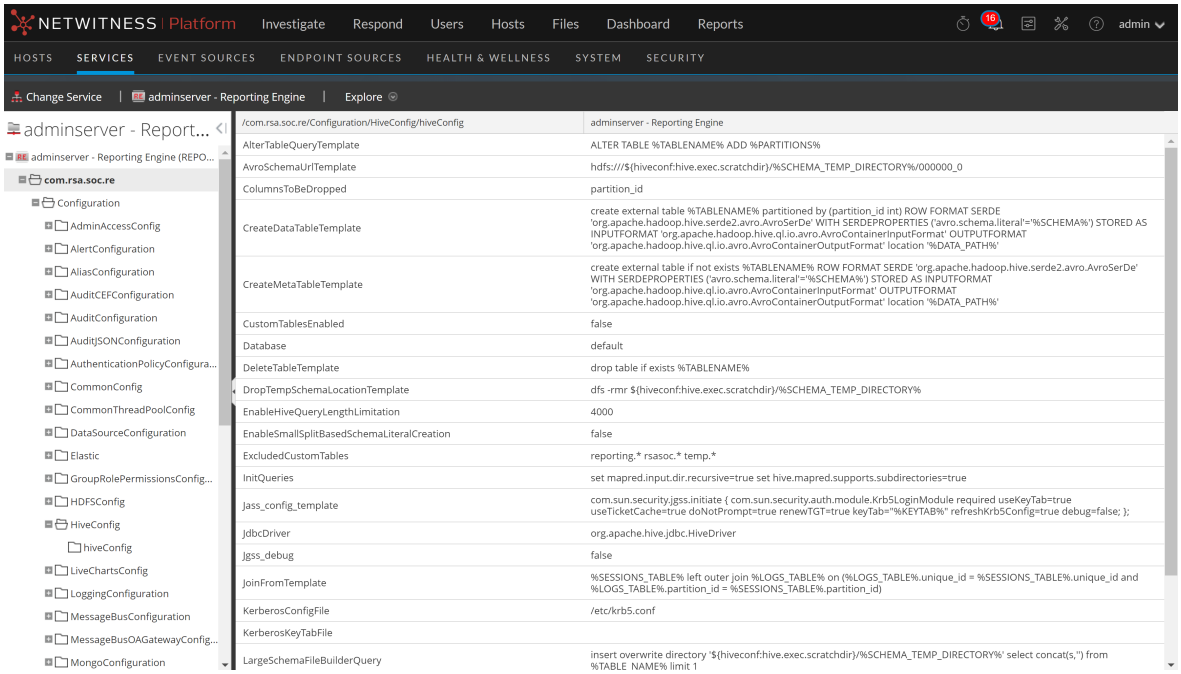
The Reporting Engine rarely writes command line error messages to the `rsasoc/nohup.out` file.

The Reporting Engine appends the log messages and output written by systemd system and the commands used to start the reporting-engine to the directory `/var/log/messages`.
A `/var/log/messages` log file is a system log file so only the root user can read it.

Configure Task Scheduler for a Reporting Engine

You can configure queues and pools in the Reporting Engine to schedule NWDB or Warehouse reports. For more information on Task Schedulers, see "Task Scheduler for Warehouse Reporting" in the *Reporting Guide*

Prerequisites



Make sure that you have identified the following:

- Scheduler type and pools or queues you want to use. You can configure only one scheduler for the Reporting Engine. By default the Fair Scheduler is configured.
- Names of the queues or pools, and the resources given to each queue and pool.
- NetWitness does not support multiple queues or pools per cluster. Netwitness recommends that you either provide unique names to queues or pools in all the clusters or use the same queue or pool names in both the clusters. If cluster size is large, there may be more than 3 pools or queues.
- If you are using an unsupported scheduler, the Reporting Engine does not set any property for the jobs that it launches.
- If the name of the pool or queue does not exist in the cluster, then Capacity Scheduler uses the default queue for the report. The Fair Scheduler may not execute the rule or creates a new pool with the lowest share. This is based on the value specified for the Fair Scheduler property `mapred.fairscheduler.allow.undeclared.pools`.
- If you do not specify a pool or queue, the job launched by the test rule is in the `mapr` pool or the default queue. It recommends that you configure a pool mapr with low (around 1/10 of total capacity) share with `maxRunningJobs = 2` so that these rules do not disrupt running reports. Make sure that you do not specify this pool name for any reports.

Specify the Pools and Queues

To specify the pools and queues:

1. Go to **(Admin) > Services**.
2. Select **Reporting Engine** and click > **View** > **Explore**.
3. Select **com.rsa.soc.re** > **Configuration** > **HiveConfig** > **hiveconfig** > **WarehouseResourcePoolNames**.
4. In the **WarehouseResourcePoolNames** field, enter the pool or queue names separated by spaces. For example, to configure four pools or queues with the names pool1, pool2, wrong and default, enter the names separated by a space.

Define Reports, Charts and Alerts

After you configure the Reporting Engine and the required data source based on your requirement, you can generate your Reports, Charts, and Alerts.

Define Reports

After creating the data sources and configuring the user permissions to these data sources, you can now use these data sources to perform the following tasks for Reporting module:

- Define a Rule
- Test a Rule
- Schedule Reports
- Add an Alert
- Add a Chart
- Test a Chart

For more information, see the above topics in the *NetWitness Reporting Guide*.

Define Charts

After creating the data sources and configuring the user permissions to these data sources, you can now use these data sources to perform the following tasks for Reporting module:

- Define a chart and Chart Groups
- Test a Chart
- Investigate Charts
- Manage Charts

For more information, see the above topics in the *NetWitness Reporting Guide*.

Define Alerts

After creating the data sources and configuring the user permissions to these data sources, you can now use these data sources to perform the following tasks for Alerting module:

- Configure Alerts
- Generate Alerts
- Add an Alert
- View an Alert

- View and Alert
- View Alerts Schedule
- Investigate an Alert

For more information, see the above topics in the *NetWitness Reporting Guide*.

Configure Reporting Engine General Settings

After you add and configure the Reporting Engine service, the system settings are defined with default values to achieve optimal results. However, you can modify and customize the Reporting Engine notifications based on your requirement by navigating to the **General** tab in the **Services** > **Config** view for a Reporting Engine.

Access the General Tab

You need to open the General tab to configure the general parameters for Reporting Engine.

To access this view:

1. Go to  **(Admin) > Services**.
2. In the Services list, select a **Reporting Engine** service.
3. Click **View** > **Config**.
4. Select the **General** tab.
5. Click **Apply** after you edit the parameters.

After you navigate to the General tab, you can modify the following parameters.

- System Configuration
- Logging Configuration
- Warehouse Kerberos Configuration

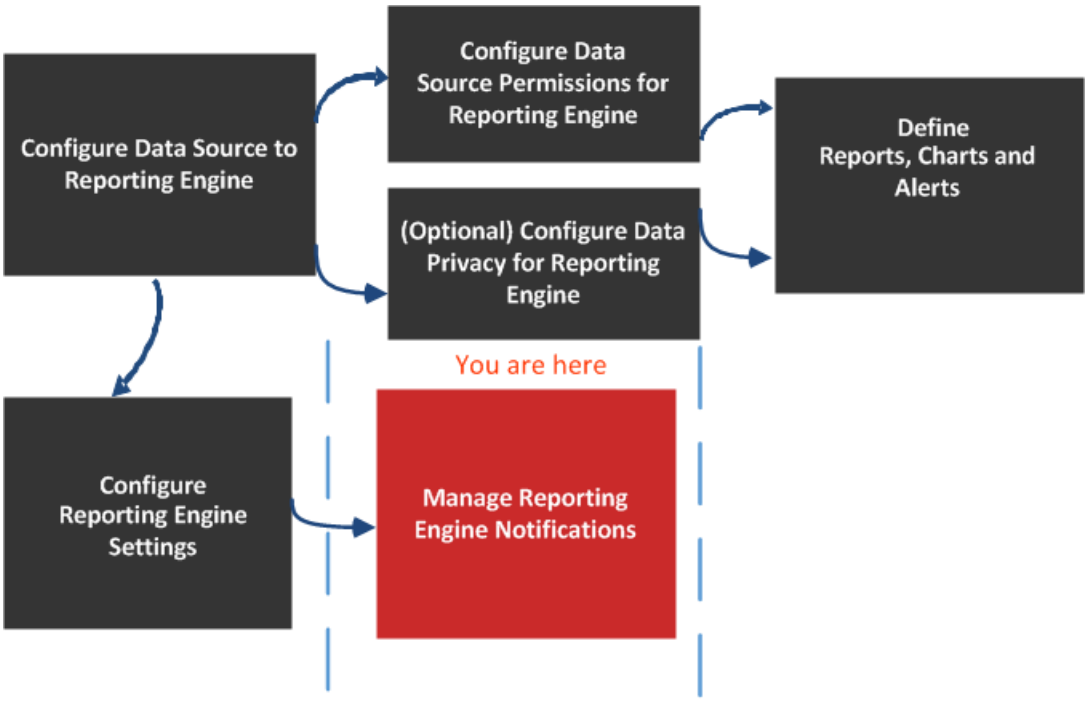
For more information see, General tab for details on the configuration parameters.

Troubleshooting Reporting Engine Configuration

Problem	Solution
When the NetWitness Server IP address is changes, the Reporting Engine datasource configuration does not get updated with the new IP	You must manually configure the new IP. Perform the following manual steps to configure the new IP address: 1. Login in NetWitness Platform. 2. Go to  **(Admin) > Services** > **Reporting Engine** > **View** > **Config**. 3. Click the **Output Actions** tab. 4. Add the new IP address in the **Hostname** field. 5. Click **Apply**. 6. Click the **Sources** tab and add the data sources again.

References

You can customize and make optimum use of the service by modifying the Reporting Engine settings in the **Services** > **Config** view, which has parameters that specifically pertain to the Reporting Engine.



See the following sections for details:

- Reporting Engine General Tab
- Reporting Engine Sources Tab
- Reporting Engine Output Actions Tab
- Reporting Engine Manage Logos Tab

Reporting Engine General Tab

The General tab for the Reporting Engine service controls several settings that can tune the performance of a service and specify the user credentials for the service. Navigate to Services > View > Config > Reporting Engine > General. These settings are used for the Reporting Engine service exclusively.

The required permission to access this view is Manage Services.

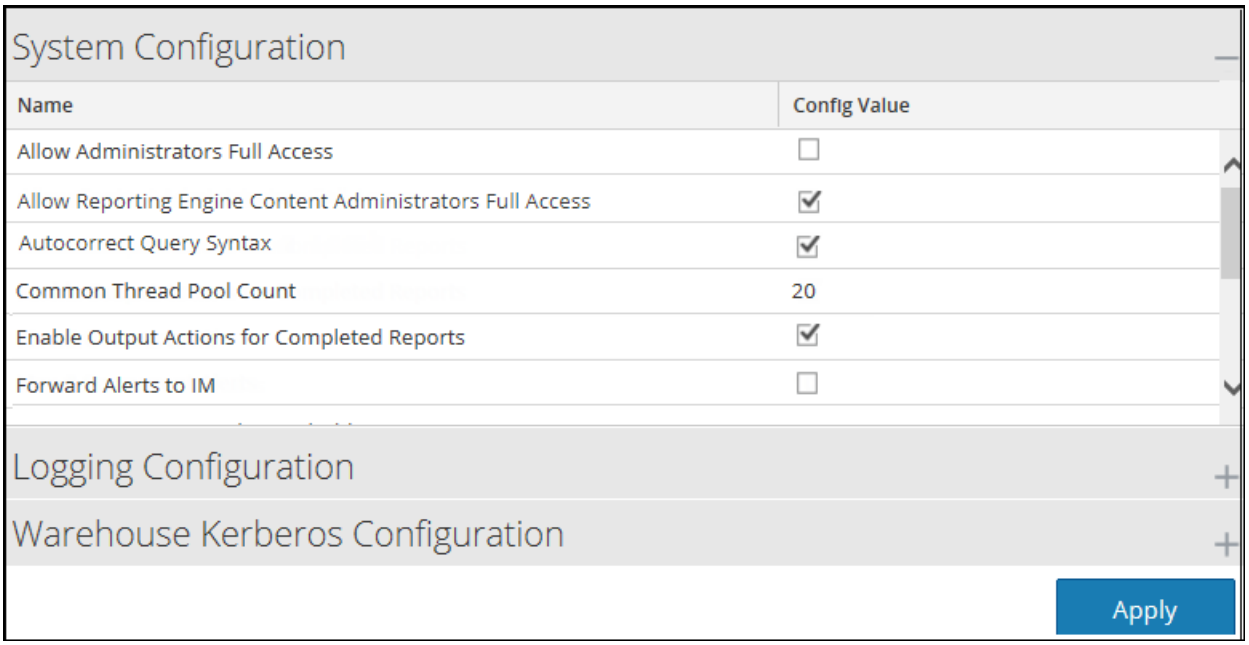
- How Reporting Engine Works

Quick Look

Here is example of the General tab where service configurations are displayed.



1. Displays all the available configurable tabs.
2. Displays the available configuration parameters for the system.
3. Displays the name of the parameter.
4. Displays the set values for each parameter.
5. Applies the changes.

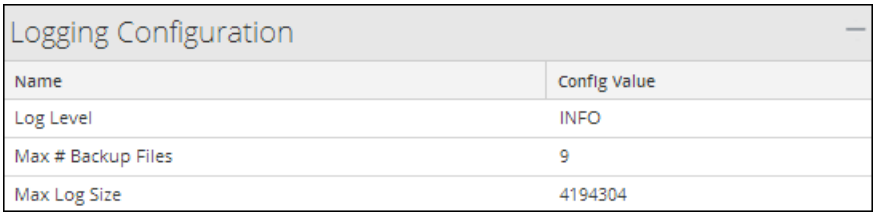
System Configuration

The System Configuration panel parameters for the Reporting Engine manage service configuration for a Reporting Engine service. When you add a Reporting Engine service, default values are in effect. The default values are designed to accommodate most environments and recommends that you do not edit these values because it may adversely affect performance.

The following figure displays the fields that can be configured in the System Configuration panel:

The following table describes the System Configuration panel features.

Name	Config Value
Allow Administrators Full Access	Select the checkbox if you want to access all the Reporting Engine objects (Reports, Rule, Charts, Schedule, and List) created by other users (non-admin). By default, this is not enabled. **Note:** If you enable the checkbox and then disable it, the access on all Reporting Engine objects that were enabled by selecting the checkbox will not be accessible. But, if you have defined the access on specific objects via Permissions window (**Reports > Manage > RE Object >**  **> Permissions**), enabling/disabling this checkbox will not have impact on these objects.
Allow Reporting Engine Content Administrators Full Access	Select the checkbox if you want to access all the Reporting Engine objects (Reports, Rule, Charts, Schedule, and List) created by other users. By default, this is enabled. If disabled, you cannot access the Reporting Engine objects (Reports, Rule, Charts, Schedule, and List) created by other users.
Common thread pool count	The number of thread pools assigned for executing common tasks on the Reporting Engine. A valid value is an integer (**20** default).
Enable Output Actions for Completed Reports	Select the checkbox to process the output actions only for reports with all rule executions successful. By default, this is enabled. If disabled, the output actions are processed for all scenarios (completed, partial, failure).
Forward Alerts to Respond	Select the checkbox to forward all the alerts to Respond. By default, this is not enabled.



Name	Config Value
Max# of Concurrent Alerts	The maximum number of alerts that can be run simultaneously. This has a direct impact on the NetWitness service against which the alerts are run, as each alert consumes a query thread on the NetWitness service. A valid value is an integer (**10** default).
Max # of Concurrent Charts	The maximum number of charts that can be run simultaneously. A valid value is an integer (**10** default).
Max # of Concurrent LookupAndAdd Queries	The maximum number of parallel LookupAndAdd Queries that can be run per NWDB rule. A valid value is an integer (**2** default). When you increase this value, for better performance, you must ensure the NWDB data source is configured to handle the parallel queries.
Max # Concurrent List Value Reports	The maximum number of list value reports per schedule that can be generated in parallel. A valid value is an integer (**1** default).
Max # List Value Reports	The maximum number of list value reports generated, irrespective of the number of values in the list. A valid value is an integer (**10000** default).
Max rows stored per Rule (Billions)	The maximum number of rows that a rule can fetch when queried. A valid value is an integer (**100** default).
Maximum disk space threshold	The maximum disk space threshold allotted (in GB) to execute reports, alerts and charts. The initial value is configured based on the available system space.
Minimum disk space threshold	The minimum disk space threshold allotted (in percentage) required to execute reports, charts, and alerts. By default, this is value is set to 5. **Note:** If the minimum threshold is reached, then the execution of reports, charts and alerts will stop even if the service is running.
NWDB Info Queries Time Out	The info queries time out in seconds for NWDB server. A valid value is an integer (**1800** default).
NWDB Maximum aggregate Rows	The maximum number of rows that is returned when an aggregation is used in the NWDB rule. A valid value is an integer (**1000** default).
NWDB Query Time out	The time out in seconds for NWDB server to time out the rule execution, if it cannot process the result in configured time. A valid value is an integer (**259200000** default).
Process output actions for successful reports only	Select this checkbox to process output actions only for reports whose all rule executions are successful. When you de-select this checkbox, output action will be triggered for partial, completed, and failed reports. **Note:** This is applicable for all output actions except for dynamic list output actions.

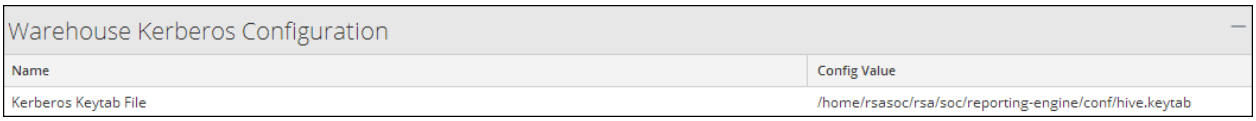
Name	Config Value
Retain Alert history for # days	The maximum number of days to retain the alert history and alert status. A valid value is an integer (**100** default).
Retain Chart history for # days	The maximum number of days to retain the chart history and chart status. A valid value is an integer (**30** default).
Retain Report history for # days	The maximum number of days the system retains report history and report status. A valid value is an integer (**100** default).
Schedule Thread pool count	The number of thread pools assigned for scheduled tasks (for example, clearing history) on the Reporting Engine. A valid value is an integer (**5** default).

Logging Configuration

The Logging Configuration panel parameters of the Reporting Engine manages the logging configuration for a Reporting Engine service. When you add a Reporting Engine service, default values are in effect. NetWitness designed the default values to accommodate most environments and recommends that you do not edit these values because it may adversely affect performance of the Reporting Engine.

The following figure displays the fields that can be configured in the Logging Configuration panel.

The following table describes the Logging Configuration panel features.



Name	Config Value
Log Level	The logging level that determines the scope of information included in log files. Possible values are: • `ERROR` • `WARN` • `INFO (default)` • `DEBUG` • `ALL`
Maximum # Backup Files	The maximum number of backup log files the system retains. A valid value is an integer (**9** default).
Max Log Size	The maximum size (in bytes) of the primary log file. A valid value is an integer (**4194304** default).

For more information on Reporting Engine logging, see Accessing Reporting Engine Log Files.

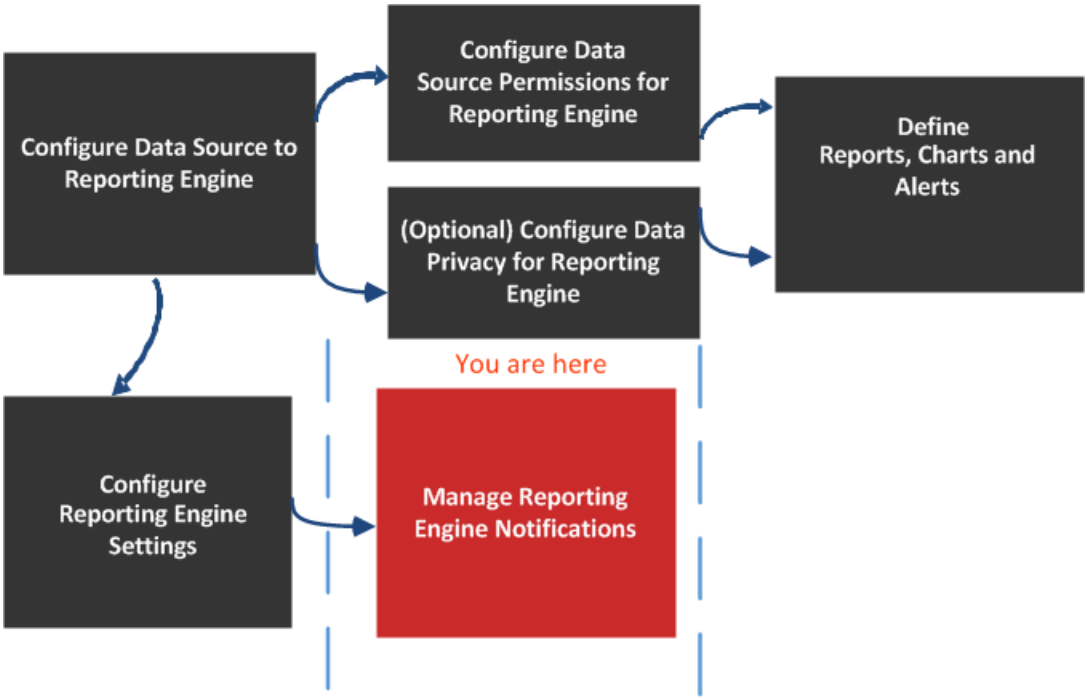
Warehouse Kerberos Configuration

The Warehouse Kerberos Configuration panel provides a way to specify the Kerberos Keytab file on this Reporting Engine.

The following figure displays the field that can be configured in the Warehouse Kerberos Configuration panel:

The following table describes the Kerberos Configuration panel features:

Name	Config Value
Kerberos Keytab File	The Kerberos keytab file location. For example: `/var/netwitness/re-server/rsa/soc/reporting-engine/conf/hive.keytab`



The default Kerberos configuration file is located at, `/etc/kbr5.conf` in the Reporting Engine. You can modify the configuration file to provide details for Kerberos realms and other parameters related to Kerberos.

Added the host name (or FQDN) and IP address of the Horton Works nodes and Warehouse Connector to the DNS server. If the DNS server is not configured, add the host name (or FQDN) and IP address of the Horton Works nodes and Warehouse Connector to the `/etc/hosts` file in the host on which the Warehouse Connector service is installed.

Reporting Engine Sources Tab

The services configuration parameters are available in the Sources tab of the Services Config view for the Reporting Engine. The Sources tab for the Reporting Engine service in the Services Config view controls that data sources associated with a Reporting Engine. The Source tab consists of a single panel with a toolbar and a grid that lists the data sources associated with the Reporting Engine.

- How Reporting Engine Works

Quick Look

Here is example of the Sources tab where the available services are displayed.

1 Displays all the available configurable tabs.
2 Displays the available configuration parameters for the selected service .
3 Displays the field parameters for the selected service.

The data sources available to the Reporting Engine for which you are defining reports, charts and defining alerts are:

- **NWDB Data Sources** - The NetWitness Database (NWDB) data sources are Decoders, Log Decoders, Brokers, Concentrators, Archiver, and Collection.

  Note: When a data privacy plan has been implemented to limit access to sensitive data on a data source, you must configure different service accounts in Reporting Engine for privileged and non-privileged users. To configure different service accounts for data privacy, you can add more than one NWDB data source. This procedure is available under Configure Reporting Engine Settings.

  IMPORTANT: If you change the admin password on a NetWitness service that is used as a Reporting Engine data source, you must remove and then re-add the service as a data source.

- **Warehouse Data Sources** - The Warehouse data sources are Horton Works and MapR.

- **Respond Data Sources** - Respond is used to generate reports on alerts and incidents. The Respond data sources are Reporting Engine, ESA, Malware, EndPoint, and Web Threat Detection. Respond is used to store the alerts and incidents reports.

If you set a source as the default data source, NetWitness uses that source when you create reports and alerts unless you choose to override it with one of the other sources listed in this tab.

Note: You can manage access control to NWDB and Warehouse Data Sources. For more information, see Configure Reporting Engine Settings.

Features

You can perform the following actions on the Sources tab:

Icon	Actions
	This option adds new services as data sources for Reporting Engine. Add existing services (Archiver, Workbench, and Collection) as data sources for Reporting Engine. For details, see the corresponding topic: • (Optional) Add Archiver as Data Source • (Optional) Add Collection as Data Source to Reporting Engine • (Optional) Add Workbench as Data Source
	This option removes data sources from a Reporting Engine.
	This option configures the Data Source Permissions. This is enabled only for NWDB and Warehouse Data Sources. For more information, see Configure Data Source Permissions.
	This option sets the default data sources for a Reporting Engine. This is the source to which NetWitness defaults in the **Data source** field of the following views: • Rule Definition view. • Create or Modify Alert view.

The NetWitness data sources are listed under the different categories as follows:

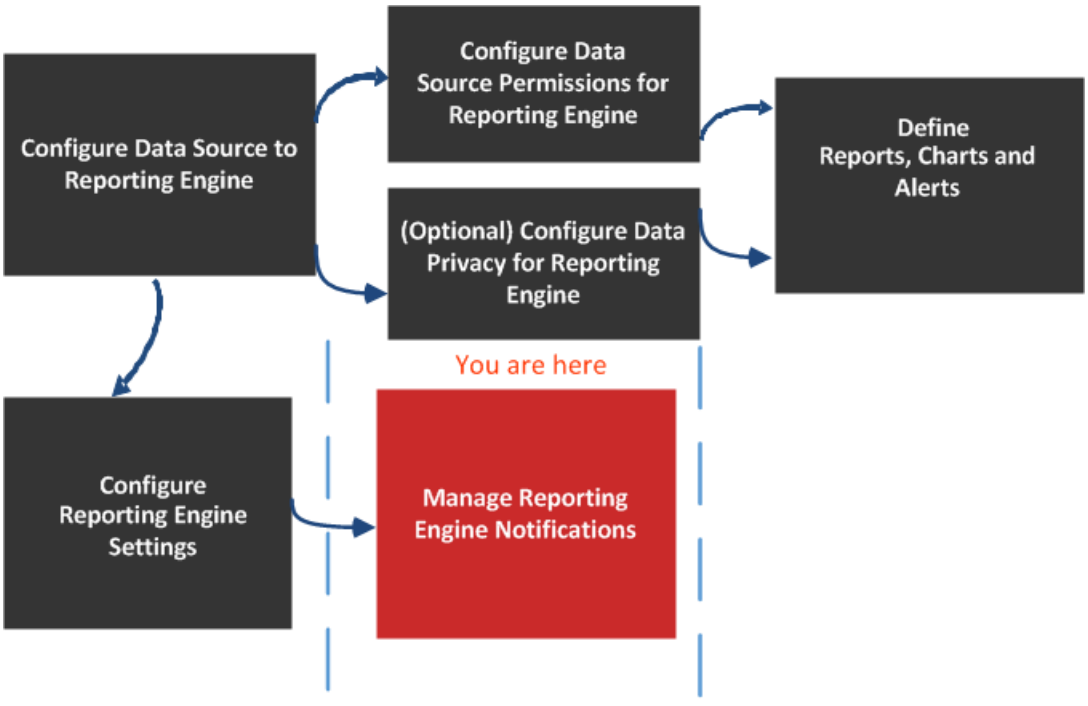
- NWDB Data Sources category displays the NetWitness data sources.
- Warehouse Data Sources category displays the Warehouse data sources.

Column	Description
	Clicking the check box selects the data source. After you select it, you can use toolbar to remove the source or set the source as the default.
Name	Displays the name of the data source.
Address	Displays the IP Address of the data source.
Port	Displays the port of the data source.

Column	Description
Type	Displays the service type of the data source.
Thread Count	Displays the thread pool size used for executing rules on the data source.

Reporting Engine Output Actions Tab

You can configure output actions for a Reporting Engine to determine the format you want the data to be presented to you based on your requirements. The service configuration parameters are available in the Output Actions tab of the Services Config view configured for a report or an alert execution. This tab consists of the following panels:



- NetWitness Configuration
- Simple Mail Transfer Protocol (SMTP)
- Simple Network Management Protocol (SNMP)
- Syslog
- Simple File Transfer Protocol (SFTP)
- Uniform Resource Locator (URL)
- Network Share

For instance, Syslog output action is used specifically for Reporting Engine Alerts, whereas, SFTP, URL, and Network Share output action is used specifically for Reporting Engine Reports.

You can configure the required permission to access this view in Manage Services.

You must ensure that the Reporting Engine is up and running and the data source from which you want to generate a report is configured in the NetWitness.

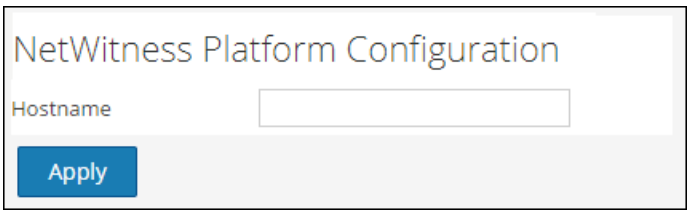
Related Topics

- How Reporting Engine Works

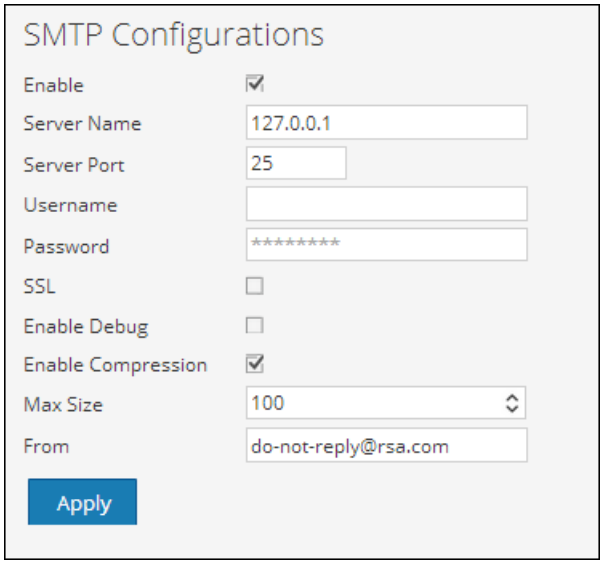


Quick Look

1	Displays all the available configurable tabs.
2	Displays the NetWitness configuration host.
3	Displays all the types of output action that can be configured.

NetWitness Configuration

The following figure shows the NetWitness Configuration on the Output Actions Tab.



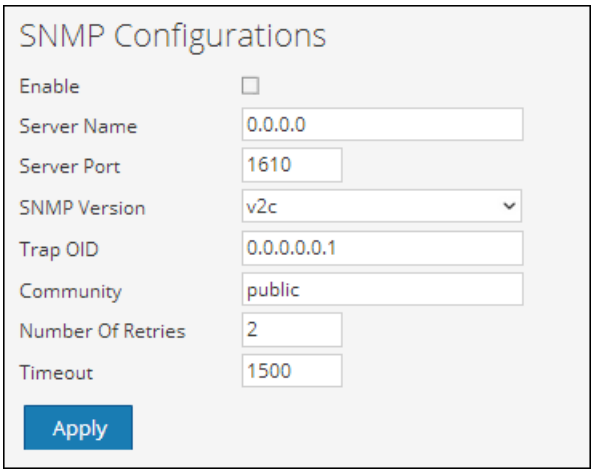
The following parameters identify the NetWitness host that is associated with the Reporting Engine.

Name	Config Value
Host Name	IP Address or Hostname of the NetWitness server. You must specify this parameter for all kind of deployments so that you can refer to this address to create investigation links to NetWitness from Reports, Alerts, and so on. The NetWitness uses this parameter to correctly generate: • SMTP Output Action • SNMP Output Action • Syslog Output Action • SFTP Output Action • URL Output Action • Network Share Output Action • Hyperlinks for meta values in Report PDFs
Apply	Update the configuration.

SMTP

After an execution is completed, an email notification is sent to the user based on the SMTP configuration.

The following figure shows the SMTP Configuration on the Output Actions Tab.



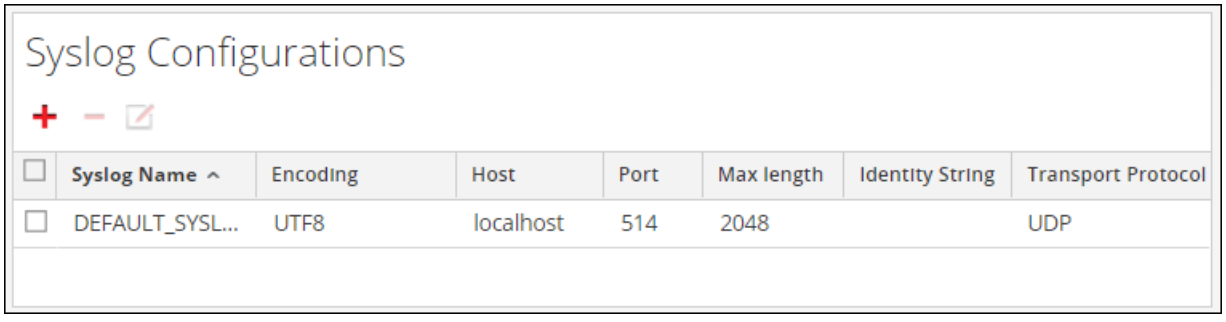
The following parameters manage SMTP (email) output action configuration for a Reporting Engine service. When you add a Reporting Engine service, default values are in effect. You must modify the **Config Values** of these parameters according to the requirements of your enterprise.

Name	Config Value
Enable	Check this box to enable SMTP as an output action for both alert and report from this Reporting Engine. By default, this value is enabled.
Server Name	Specify the hostname or IP Address of the server on which the target SMTP server runs. Default value is 0.0.0.0.
Server Port	Specify the SMTP server port number. Default value is 25.
Username	Specify the username of your SMTP account. Default value is blank. Password Specify
Password	Specify the password of your SMTP account.
SSL	Check this box to use Secure Socket Layer (SSL) to communicate with the SMTP server. Default value is do not use SSL.
Enable Debug	Check this box to enable debugging. Default value is do not enable debug.
Enable Compression	Check this box to enable compression. Default value is enable compression. If this value is enabled, the output files will have `.zip` extension.
Max Size	Specify the maximum size of attachments that can be sent. Default value is 100.
From	Specify the email address from which Security Analytics sends all messages. Default value is `do-not-reply@rsa.com`.
Apply	Update the configuration.

SNMP

After an execution is completed, a trap notification is sent to the user based on the SNMP configuration.

The following figure shows the SNMP Configuration on the Output Actions Tab.



The following parameters manage SNMP (messages to network-attached services) output action configuration for a Reporting Engine service. When you add a Reporting Engine service, default values are in effect. You must modify the **Config Values** of these parameters according to the requirements of your enterprise.

Name	Config Value
Enable	Check this box to enable SNMP output action as an output for alert messages from this Reporting Engine. Default value is Disable.
Server Name	Specify the hostname or IP Address of the server on which the target SNMP server runs. Default value is **0.0.0.0**.
Server Port	Specify the port number of the server on which the target SNMP server listens for faults and exceptions. Default value is **1610**.
SNMP Version	Specify the version number of the SNMP protocol NetWitness uses to send SNMP traps.
Trap OID	Specify the object identification number that identifies the type of trap to send. Default value is **0.0.0.0.0.1**.
Community	Specify the SNMP group to which NetWitness belongs. The default value is **public**.
Number Of Retries	Specify the maximum number of times NetWitness tries to resend the alert message through SNMP. Default value is **2**.
Timeout	Specify the number of seconds after which NetWitness times out (stops trying to send SNMP alerts). Default value is **1500**.
Apply	Update the configuration.

Syslog

After an execution is completed, all notifications are sent via Syslog messages to a particular host based on the Syslog configuration. Multiple Syslog servers can be configured on the Syslog Configuration panel.

The following figure displays the Syslog Configuration on the Output Actions Tab.

The following parameters manage syslog output action configuration for a Reporting Engine service. When you add a Reporting Engine service, you can define values for this output configuration, as no default values are available for this configuration. You must modify the **Config Values** of these parameters according to the requirements of your enterprise.

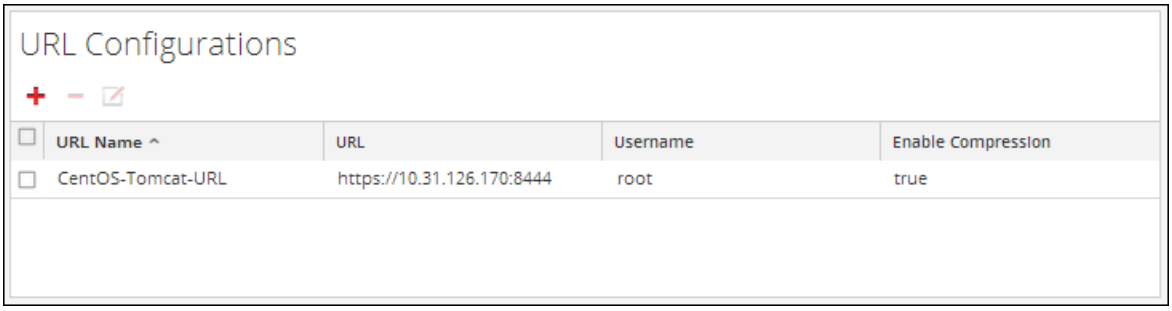
Name	Config Value
Syslog Name	The name of the Syslog configuration. **Note:** You cannot create a Syslog configuration with a name that already exists in the Reporting Engine Syslog configuration list.
Encoding	Specify the internationalization encoding for Syslog messages. Default value is **UTF8**.
Server Name	Specify the hostname or IP Address of the server on which the target Syslog process runs. Default value is blank.
Server Port	Specify the port number of the server on which the target Syslog server listens for faults and exceptions. Default value is **514**.
Max Length	Specify the maximum size (in bytes) of each Syslog alert message. Default value is **2048**. If **UDP** is the transport type and the Syslog message size is greater than 1024 bytes, you must configure a Syslog server that supports message sizes greater than 1024 bytes.
Identity String	Specify the string NetWitness inserts as a prefix in all Syslog alert messages. Default value is blank.
Include Local Hostname	Check this box to include the local hostname in all Syslog alert messages. Default value is do not include local hostname.
Truncate Message	Check this box to truncate all Syslog alert messages. Default value is do not truncate Syslog messages.
Use Identity	Check this box to use the IDENT protocol. Default value is does not use this protocol.
Include Local Timestamp	Check this box to include the local timestamp in all Syslog alert messages. Default value is do not include local timestamp.
Transport Protocol	Specify the transport type for Syslog message delivery. There are three parts to the Syslog transport type: UDP, TCP, and SECURE_TCP. Default value is **UDP**.
Syslog Message Delimiter	Specify the delimiter for the Syslog message. There are three delimiters: CR, LF, and CRLF. By default the value is **CR**. **Note:** This field populates when you select TCP or SECURE_TCP as the transport protocol.
Trust Store Password	Specify the password for the Trust store. **Note:** This field populates when you select SECURE_TCP as the transport protocol.
Key Store Password	Specify the password for the Key store. **Note:** This field populates when you select SECURE_TCP as the transport protocol.

Name	Config Value
Apply	Save the configuration.

SFTP

After an execution is completed, you can send or transfer files to a remote location based on the SFTP configuration.

The following figure displays the SFTP Configuration on the Output Actions Tab.



The following parameters manage SFTP (file transfer to a local drive) output action configuration for a Reporting Engine service. When you add a Reporting Engine service, you can define values for this output configuration, as no default values are available for this configuration. You must modify the **Config Values** of these parameters according to the requirements of your enterprise.

Name	Config Value
SFTP Name	The name of the SFTP configuration. **Note:** You cannot create an SFTP configuration with a name that already exists in the Reporting Engine SFTP configuration list.
Host	The IP Address or Hostname of the Reporting Engine server associated with the file transfer.
Port	If you want to use a different port than the default port, enter a port number. Default value is **22**.
Username	Specify the username for the SFTP configuration.
Password	Specify the password for the SFTP configuration.
Custom Folder	Select an SFTP location where you want to transfer the file to. You can use the pre-defined Windows or Linux directory structure in the custom folder path. For example, **/root/Downloaded_Files**. **Note:** If the directory does not exist, RE will create the directory in the custom folder path and copy files to this directory.
Enable Compression	Select this checkbox to enable compression. Default value is enable compression. If this value is enabled, the output files will have ".zip" extension.

URL

After an execution is completed, the output files are published to a URL based on the URL configuration.

The following figure shows the URL Configuration on the Output Actions Tab.

The following parameters manage URL (file transfer to a URL) output action configuration for a Reporting Engine service. When you add an Reporting Engine service, you can define values for this output configuration, as no default values are available for this configuration. You must modify the Config Values of these parameters according to the requirements of your enterprise.

Name	Config Value
URL Name	The name of the URL configuration. **Note:** You cannot create a URL configuration with a name that already exists in the Reporting Engine URL configuration list.
URL	The URL address associated with the file transfer.
Username	Specify the username for the URL configuration.
Password	Specify the password for the URL configuration.
Enable Compression	Select this checkbox to enable compression. Default value is enable compression. If this value is enabled, the output files will have ".zip" extension.

After the URL is configured, the files will be copied under the "URL_OUTPUT_ACTION" directory and the following parameters are sent to the server along with the compressed file.

Name	Config Value
filename	The name of the file.
filesize	The file size in bytes.
filetype	The file type associated with the file.
filechecksum	The number computed from a file that can be used to confirm that this is the one you expect and has been downloaded and stored properly.
hashingalgorithm	The hashing algorithm used to calculate the file checksum.

Name	Config Value
reportname	The name of the downloaded report.
executionid	The execution id associated with the report execution.
reportexecutionstarttime	The start time the report was executed.
status	The report creation status.
status description	The status description.

Network Share

After an execution is completed, you can transfer the output files to a mounted path or shared location based on the Network Share configuration.

The following figure shows the Network Share Configuration on the Output Actions Tab.

The following parameters manage Network Share (file transfer to a shared location on the network) output action configuration for a Reporting Engine service. When you add a Reporting Engine service, you can define values for this output configuration, as no default values are available for this configuration. You must modify the **Config Values** of these parameters according to the requirements of your enterprise.

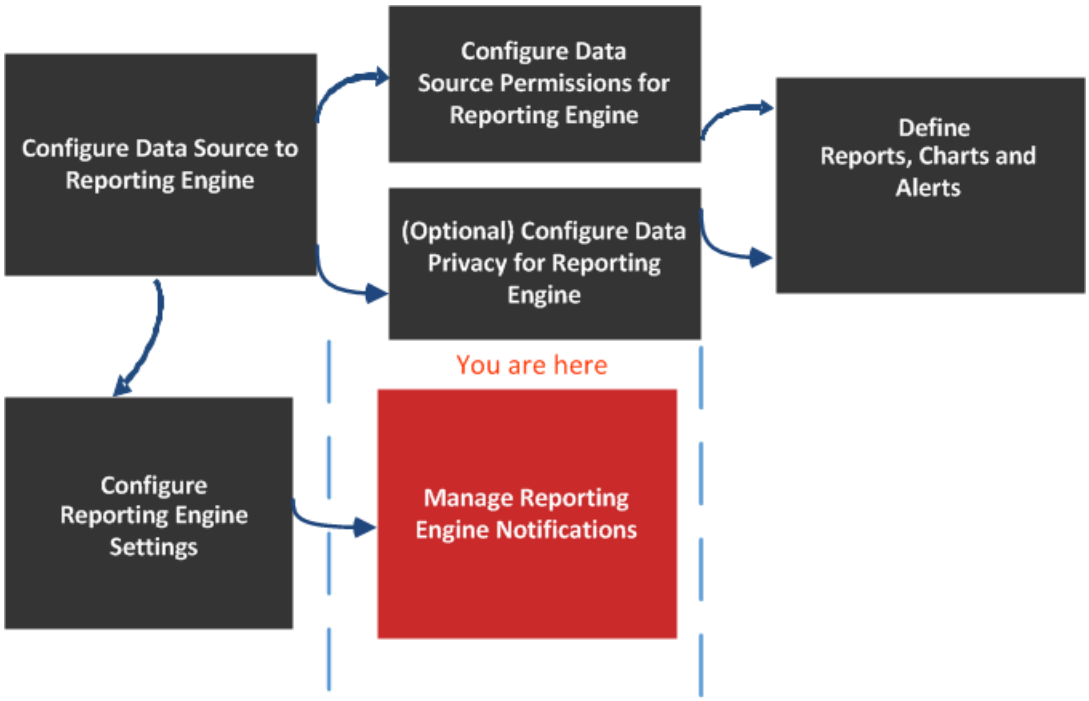
Name	Config Value
Network Share Name	The name of the Network Share. **Note:** You cannot create a Network Share configuration with a name that already exists in the Reporting Engine Network Share configuration list.
Mounted Path	The path (location) associated with the file transfer. You can use the pre-defined Linux directory structure in the mounted path. For example, **/mnt/win**. **Note:** The 'rsasoc' user must have read-write access to the specified Network Share mounted path.
	Click to view how the mounted path is created. This pop-up notifies that you must manually create the mounted path.

Name	Config Value
Destination Directory	Name of the directory where the transferred file is stored in the shared location.
Enable Compression	Select this checkbox to enable compression. Default value is enable compression. If this value is enabled, the output files will have ".zip" extension.

The following table lists the common operations you can perform in the Syslog, SFTP, URL and Network Share sections.

Operation	Description
	Create a Syslog, SFTP, URL and Network Share configuration.
	Delete a Syslog, SFTP, URL and Network Share configuration.
	Edit a Syslog, SFTP, URL and Network Share configuration.

Reporting Engine Manage Logos Tab



The Manage Logos option available in the **Services Config View** > **Manage Logos** tab, helps you to manage the logos associated with the Reporting Engine. The Manage Logos tab consists of a single panel with a toolbar and a grid that lists the logos.

You can upload the logos that you want to use in your report. After you upload the logo, you can set any logo as a default logo which will be automatically used in all the scheduled reports. You can choose to override the default logo with any other logo listed in this tab when you schedule a report. For more information, see "Select a Logo Dialog" topic in the *Reporting Guide*.

The supported image formats are:

- .jpg
- .png
- .gif

1 Displays all the available configurable tabs.
2 Displays edit actions.

You can perform the following actions on the Manage Logos Tab.

Icon	Actions
	Add new logos from the local directory of the system to the Reporting Engine. **Note:** The logo size cannot exceed 500 KB. The logos chosen must be of the following file types: * .jpg * .gif * .png

Icon	Actions
	Removes logos from the Reporting Engine. **Note:** By performing (Ctrl+click), you can select multiple logos to delete.
	Sets the default logo for a Reporting Engine. This is the logo NetWitness defaults to in the **Log** panel of the Schedule a Report view. **Note:** If no default logo is selected, the logo is displayed.

Reporting Overview

Reporting is a collection of data as a result of monitoring the network traffic, which can be used for further analysis. In NetWitness you can run a report against NetWitness Database core services to identify the network activities. For example, if you want to identify the Top Source Countries and Destination Countries, or top Threat and Risk trends that help monitor any changes to the normal categories or monitor the users and services that may potentially have malicious activities etc.

The reporting typically consist of: Reports and Charts. You can report on the log, packet and endpoint data collected, and customize the reports and charts to enhance the visual appearance. You can create real-time reports for historical data. You can create charts and dashlets, that can be added in the real-time chart dashlets as well.

Reporting Engine

Reporting relies on the Reporting Engine to provide data for the reports, alerts and charts. Hence, you must configure the Reporting Engine as a service to NetWitness before you can generate the reports. You must also specify the data source in the Reporting Engine from which the data is extracted.

The data that you can report or alert depends on the configuration of Reporting Engine and the data sources that you specify as part of the rule definition.

Note: Make sure you have access to the components in the Reporting.

Note: Reporting is accessible based on the role based access, defined for the user.

Report

A report is a combination of rules and other formatting objects such as headers and HTML-formatted notes that describe and identify data pertaining to a particular area of interest. Reports are defined and managed in the Build Report page and can be scheduled to run on an adhoc or timely basis. Once a report is run, results are stored centrally and can be automatically sent over email, SFTP, URL, and NFS to users, viewed via the NetWitness web interface, downloaded as PDF and CSV files.

A report consists of the following:

Property	Description	Example
Report Name **Note:** For **Name** field, the icon to extend the column size is not displayed at the end of the column field. You have to hover the mouse a little to the left side to see the icon for extending the column.	Used to identify the report to schedule them at a later time.	Report1
Text	Pre-defined text fields used within a report to make the report more meaningful to the user.	Header1, Comment
Rules	The rules (queries) used to create a report.	select user.dst where ip.src = 10.10.10.1

Note: In the Reporting user interface, the displayed date or time is always according to the user-selected time zone profile.

Rule

A rule is the basic and essential building block in the Reporting. You must create a rule which can be used in a Report, Chart or Alert.

A rule represents a unique query that detects and summarizes the requested information within a collection of network data.

The rule syntax is very similar to that of Standard Query Language (SQL) where you can use the select clause, where clause, sort and group options and limits for the result set. A rule consists of the following:

Property	Description	Example
Name	The name of the rule.	Windows System Account Activity
Select	List of meta types that are returned in the result set. The list of meta types is provided in the Meta Library. Meta Library in the Rule Builder is continually synchronized with the index configuration of the NetWitness host to which NetWitness is connected. The number of meta types that this property can represent depends on how the rule is to be sorted. If the Sort by property is 'None' or Custom, a rule can have more than one select field, for example, for each match, include the ip.src, ip.dst, size, time in the rule result. If a rule is set to be sorted, either by session count, session size, or packet size, then there can only be one field on which to select.	
Where	A clause that is the base query for the rule.	alert='cleartext_ftp_password'
Then (Rule Actions)	A series of functions that manipulate the original result set of a rule in order to make the output in a report more meaningful or add additional functionality other than querying and displaying data.	lookup_and_add ('username','ip.src',10);
Sort By	Determines how the data in the result set is sorted. The various possibilities are: • Total • Value • Column Name	Total
Limit	Designates how large a result set can be for the given rule. Users must note that if a result set is sorted by count or size, the limit represents the top (or bottom) N values to be returned. If the result set is not sorted, the first N values are returned.	20

Note: In the User Interface (UI), the date or time displayed depends on the time zone selected by the user.

Rule Types

There are different rule types in the Reporting. Rule types designate the source of data for the report rule. Following are the rule types:

Rule Type	Description
NetWitness Database (**NetWitness DB**)	The NetWitness database extracts the meta from a Reporting Engine configured to use a Concentrator, Broker and Archiver as the data sources and provides the meta for rules.
Warehouse Database (**Warehouse DB**)	The Warehouse database, also referred to as the NetWitness Warehouse, warehouses large volumes of data. The Warehouse is designed so that you can retrieve large volumes of data easily and efficiently. The Warehouse also extracts the meta from the Reporting Engine.
Respond Database (**Respond DB**)	The Respond database contain alerts and incidents generated from different services and you can create a report on those alerts and incidents.
Unused Rules	The Unused Rules is an option that helps in listing out the rules that are not used by any chart, alert and, report. For more information, see Filter Unused Rules.

Note: In the User Interface (UI), the date or time displayed depends on the time zone selected by the user.

List

A list is a variable that refers to a series of comma-separated values (CSV). You can insert a list into a rule or use it as an argument to a rule action. Lists can act as placeholders for other values, which you can populate and update as needed.

You can create, manage and view lists that can be used to define rules for Reporting and Alerting. You can also filter and delete the unused lists.

Lists cannot be empty or have duplicate or blank values.

Note: If you are defining a report with a rule which has lookup_and_add in the **Then** clause and direct the report output to a list, the list is not populated with the result.
For example, if you create a rule with ip.src in the **Select** clause and lookup_and_add ('ip.dst','ip.src', 10) in the **Then** clause, the report displays the result, but if you have redirected the output to a list, the list will be empty

Chart

Chart is a tabular or grid representation of data. It consists of the following:

Property	Description	Example
Chart Name	Identifies the chart.	Chart1
Rule Basis	Identifies the rule path chosen from the folder hierarchy.	

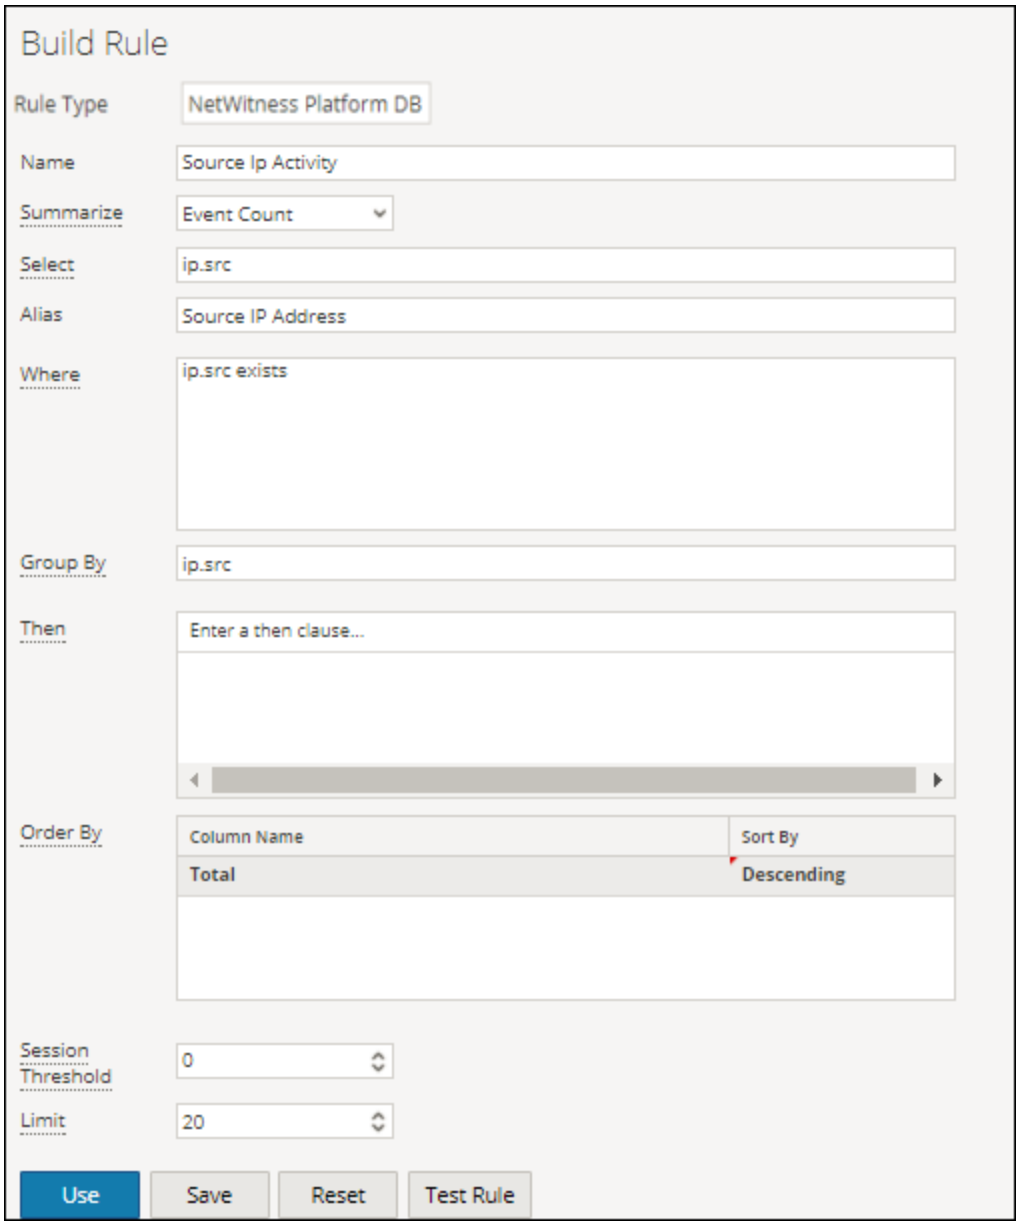
Any NetWitness DB rule in the Reporting Engine system which is not sorted by none can be used to instantly create a chart. In NetWitness, the chart interval can be adjusted from the chart definition panel itself. Each time a chart runs, it stores its result data locally in the Reporting Engine, so that it can be reviewed in either the Dashboard View or Chart View without any performance considerations. You can also filter the unused charts from Chart View.

Note: In the Reporting user interface, the output for the field where Date and Time are displayed is always according to the user-selected time zone profile.

Note: The Reporting Engine (RE) will automatically check for the available disk space before you execute a Test Rule, Report, Chart and Alert. If the RE disk space (in percentage) is less than the minimum disk space threshold (default value is 5), the RE will stop the current execution and an error message 'Available disk space of Reporting engine home is <5%, please clean up the space to proceed further' is displayed. Additionally, you may also configure the minimum disk space threshold by using the following path: **RE>Config>General>System Configuration>Mini disk space threshold in %.**

Reporting Guidelines

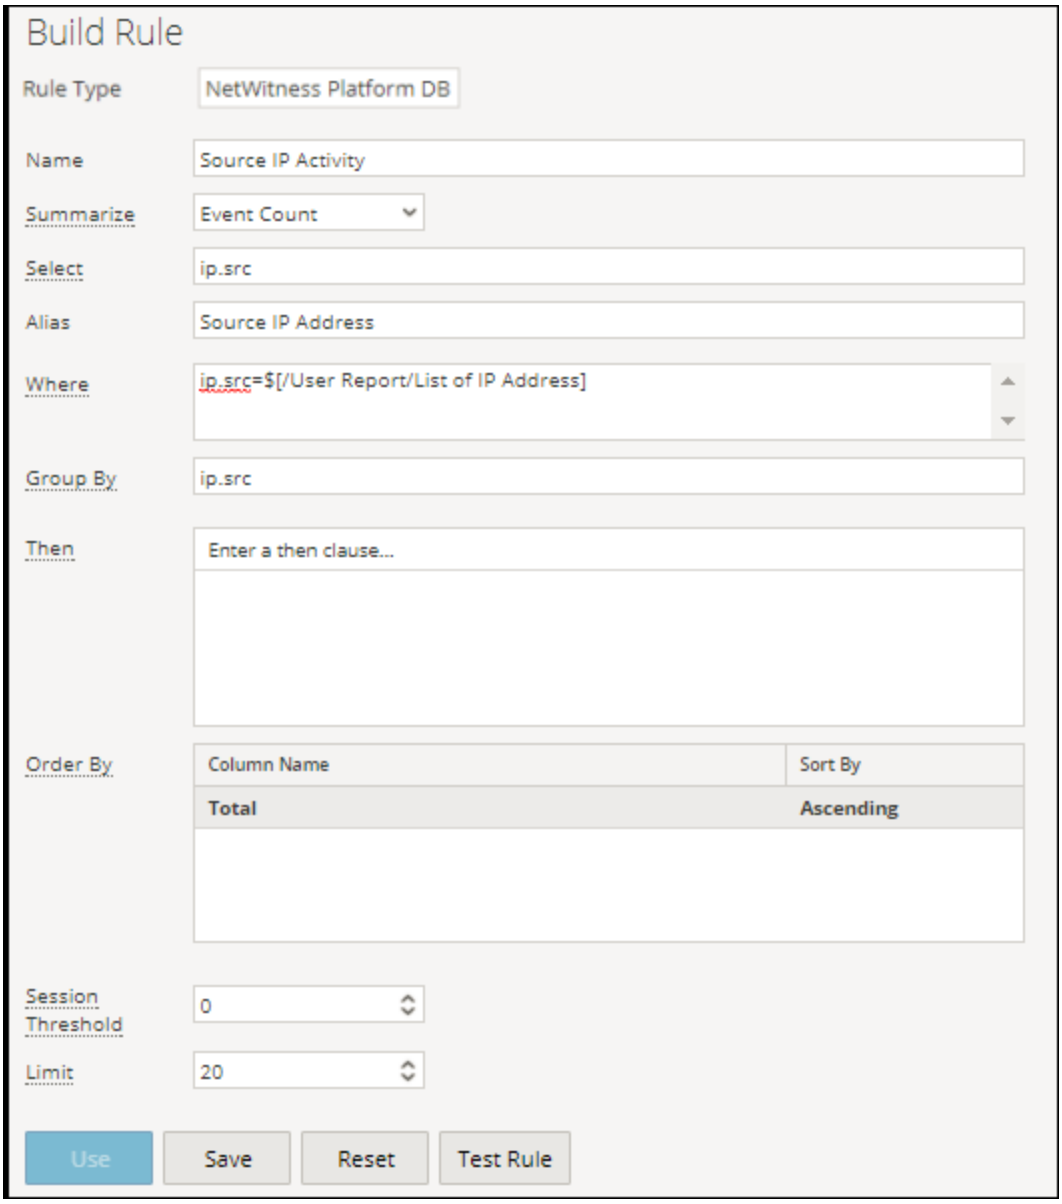
This section lists recommended guidelines to enhance the execution time of your reporting entities such as rules, reports, alerts, charts, and lists. The guidelines are provided for the following:



- NWDB Rules
- Timeout Configuration for NWDB Rules
- Lookup and Add rule action
- List value Reports

NWDB Rules

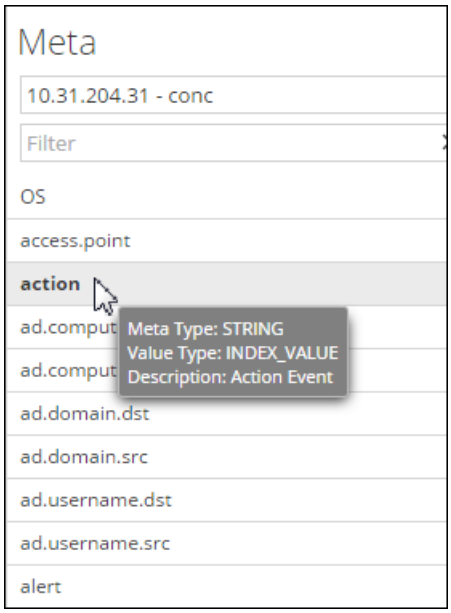
If the reporting entities such as report, alert, or chart contain NWDB rules (in most cases where the query contains Group By) takes a long time to execute, you may do the following:



1. Refine the Where clause:

   You may limit the number of sessions scanned by using or refining the Where clause (especially when you use the Group By option). For example, consider the following rule.

If you use a Where clause as mentioned above, the number of sessions aggregated is huge. To avoid this, you can filter only required sessions by specifying the list of IP addresses or creating a List (list of IP Address) that contains relevant IP addresses.



Note: The NWDB rule where clause is appropriately quoted if the syntax has an invalid quote. For example, in case of an invalid meta, or missing separator, the status and the error message is updated appropriately.

2. Using indexed Meta keys in the Where clause:

   To understand if the Meta is indexed or not, mouse hover the Meta List present on the right panel. If the Value Type is INDEX_VALUE, then the Meta is indexed. The Value Type is INDEX_KEY or INDEX_NONE if the Meta is not indexed.

   Below is a snapshot of a Meta key that is indexed.

3. Configure the Timeout option:

   If the query is taking a long time and fails due to timeout issues, you can configure the timeout for the NWDB rule executions. For more information, see below section "Timeout Configuration for NWDB Rules".

4. Schedule the queries to run at different times:

   If multiple query aggregates are concurrently executed and timeout occurs, you may schedule the queries to run at different times without much overlap.

Timeout Configuration for NWDB Rules

Note: It is a good practice to check the statistics of the Reporting Engine and the NWDB data sources before you make any changes to the configuration. For more information, see the "Monitor Service Details" topic for Reporting Engine and "Monitor System Statistics" topic in the *System Maintenance Guide*.

If NWDB rule execution fails due to timeout, you may get the following errors on the View a Report panel:

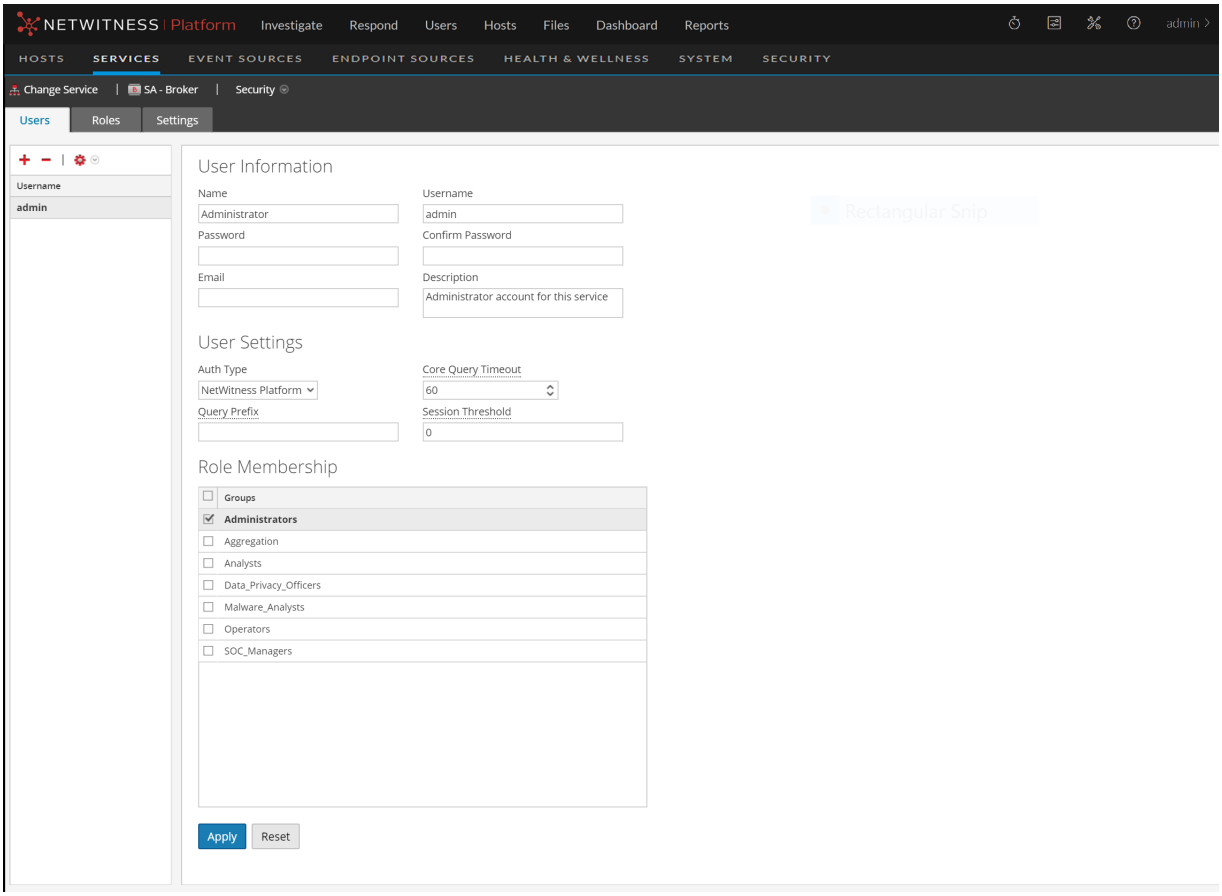
- Reporting Engine timeout error

  “Data source ‘`10.31.x.x Concentrator`' did not respond within the configured time `30` minutes for the ‘`/sdk/values`' request.”

- NWDB timeout error

  "Error occurred while fetching data from source '`10.31.x.x Concentrator`'. `{Timeout message from NWDB}`”

In such cases, you need do the following:



- Reporting Engine timeout

  In case of Reporting Engine timeout, you may set the timeout to a longer duration so the long running queries can be executed. For more information on setting the `NWDB Queries Time Out` and `NWDB Info Queries Time Out` option for the Reporting Engine, see "Step 2. Configure Reporting Engine Settings" topic in the *Reporting Engine Configuration Guide*. NetWitness recommends you set the `NWDB Query Time Out` to zero minutes (implies no timeout) and `NWDB Info Queries Time Out` to 60 minutes.

- NWDB timeout

  In case of NWDB timeout, you may need to configure the `query.level.timeout` and `max.concurrent.queries` parameters for the NWDB data source based on the recommendations in the *Core Database Tuning Guide* to fine tune the queries.

  The following figure is an example of Explorer view where you can set the parameters for NWDB data source.

- Schedule Reports at different times

  If the NWDB core devices are heavily utilized, you may schedule the reports to run at different times without overlap.

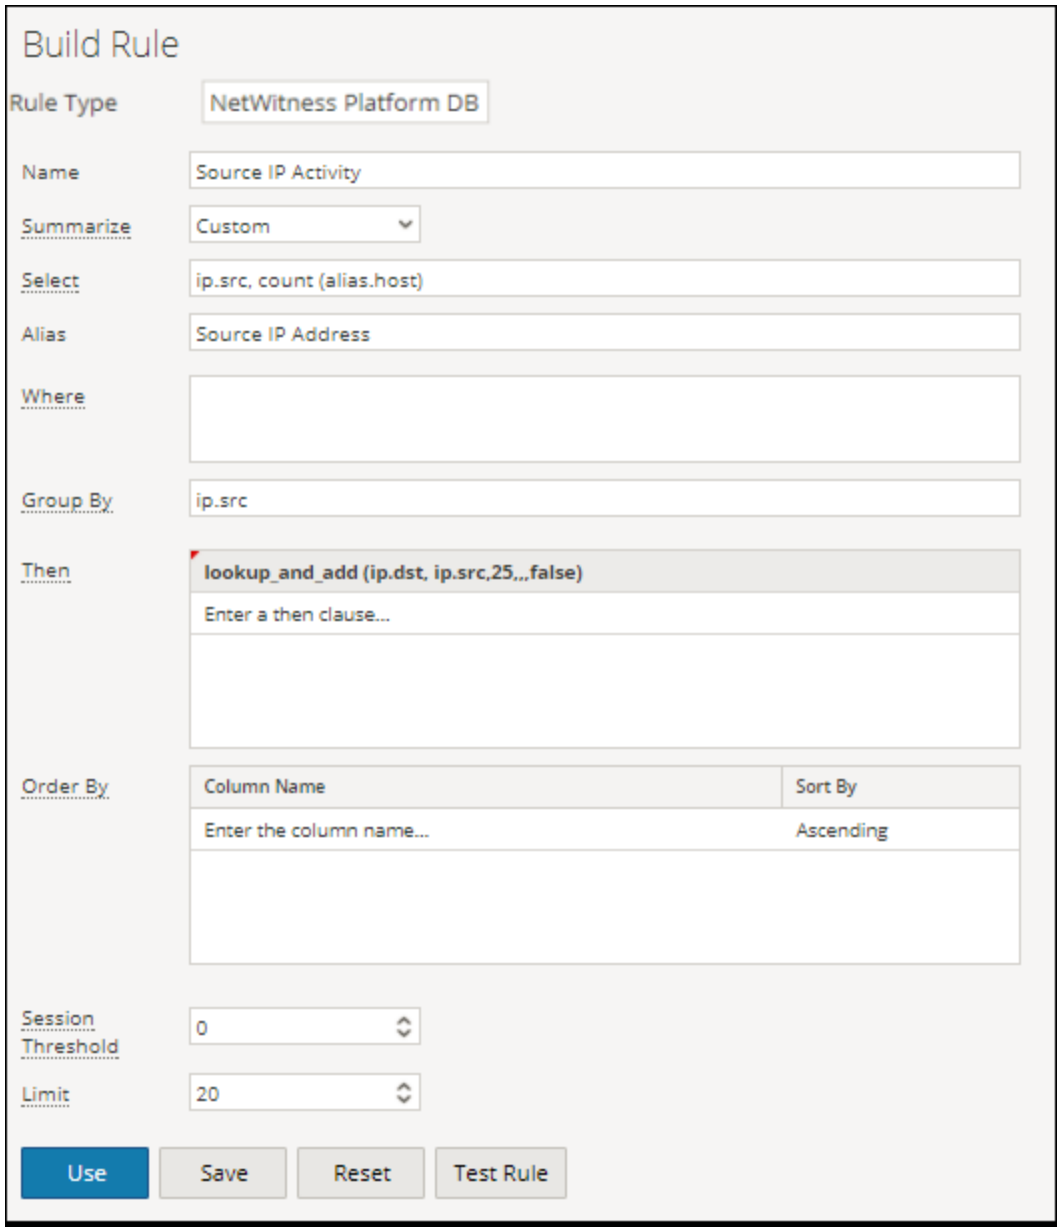
- Split the Report

If you have many rules in a Report, split the report into multiple reports with each report containing logical set of rules. If you have multiple rules, all rules will begin to execute at the same time based on available threads, therefore you may group the rules logically into separate reports.

Lookup_and_Add Rule Action

If a rule that consists of single or multiple `lookup_and_add` rule actions, takes a long time to execute the report, it is because each of the rule action triggers multiple lookup queries on the NWDB data source resulting in longer execution time.

To improve the report execution time, you may do the following:



- Refine the Where clause in the following:
  - Rule that contains the `lookup_and_add` rule action
  - `lookup_and_add` rule action
- Set Limits

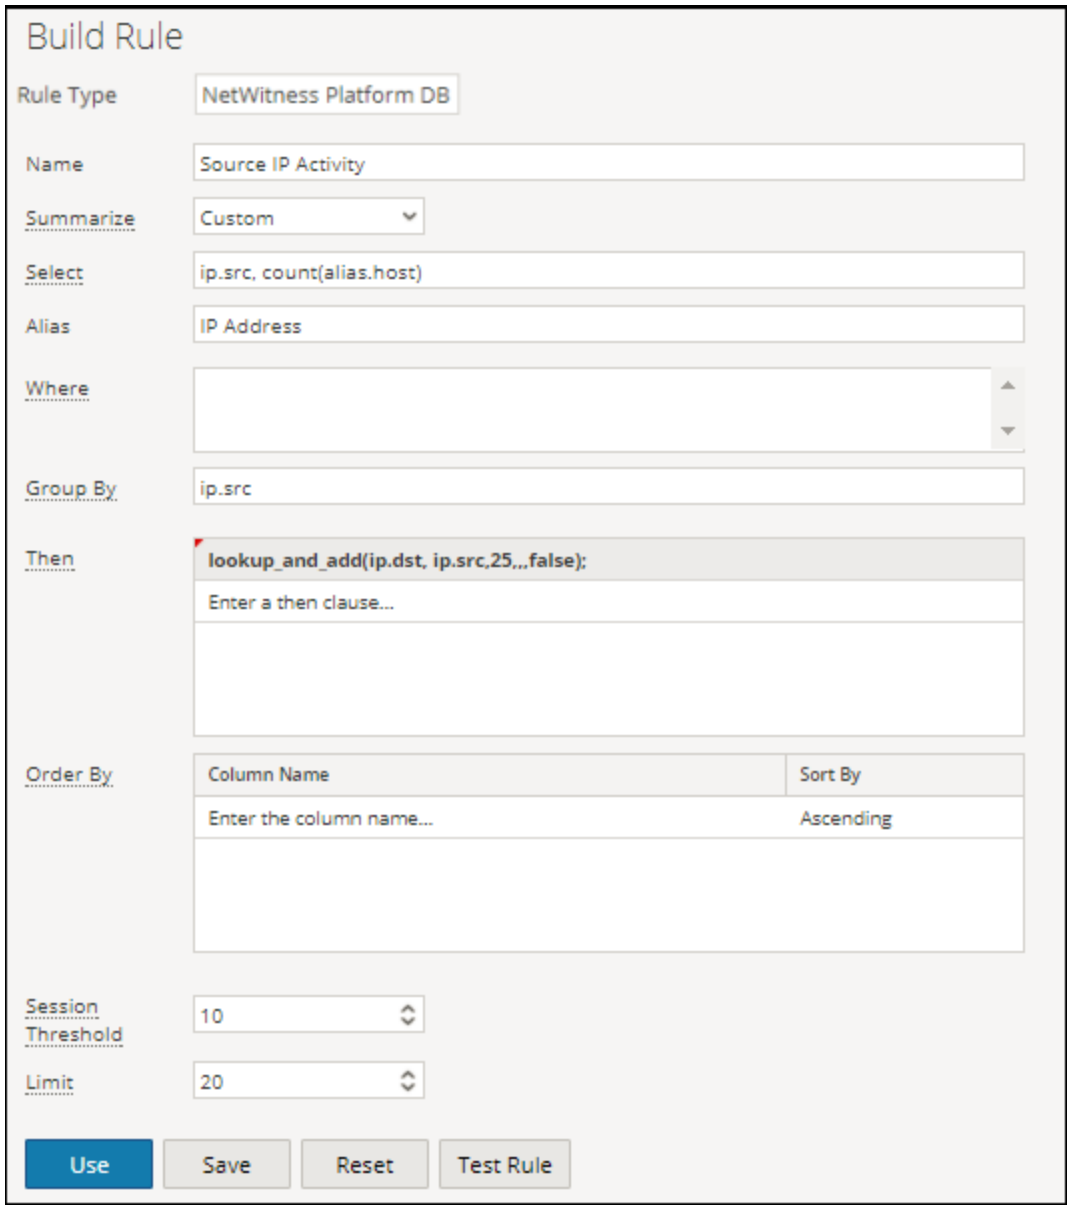
  You must set appropriate limits for the rule and rule actions. If the limit is high it will result in many queries being triggered and hence the report will take a long time to execute.
- Set the boolean aggregate parameter

  If you do not want the aggregate value such as `sum(meta), count(meta)` etc. for the lookup values, set the boolean aggregate parameter to false in the `lookup_and_add` rule action. For more information, see the "NWDB Rule Syntax" section in Rule Syntax.

  ```
  lookup_and_add(string select, string field, int limit, boolean inherit,
  string extraWhere, boolean aggregate)
  ```

  Consider the rule with lookup_and_add rule action:

The output is displayed:



- Each `lookup_and_add` rule action triggers by default two concurrent lookup queries on the data source. NetWitness recommends that you retain the default setting, however if you want to increase the value you may want to ensure the value of `Max # of Concurrent LookupAndAdd Queries` parameter in Reporting Engine is less than the `Max Concurrent Queries` value in the NWDB data source configuration.

  If the NWDB data source is shared across other services, then you may retain a low value for the `Max # of Concurrent LookupAndAdd Queries` parameter in Reporting Engine as increasing it will impact the queries from other services. For more information, see "Reporting Engine General Tab" topic in *Reporting Engine Configuration Guide*.

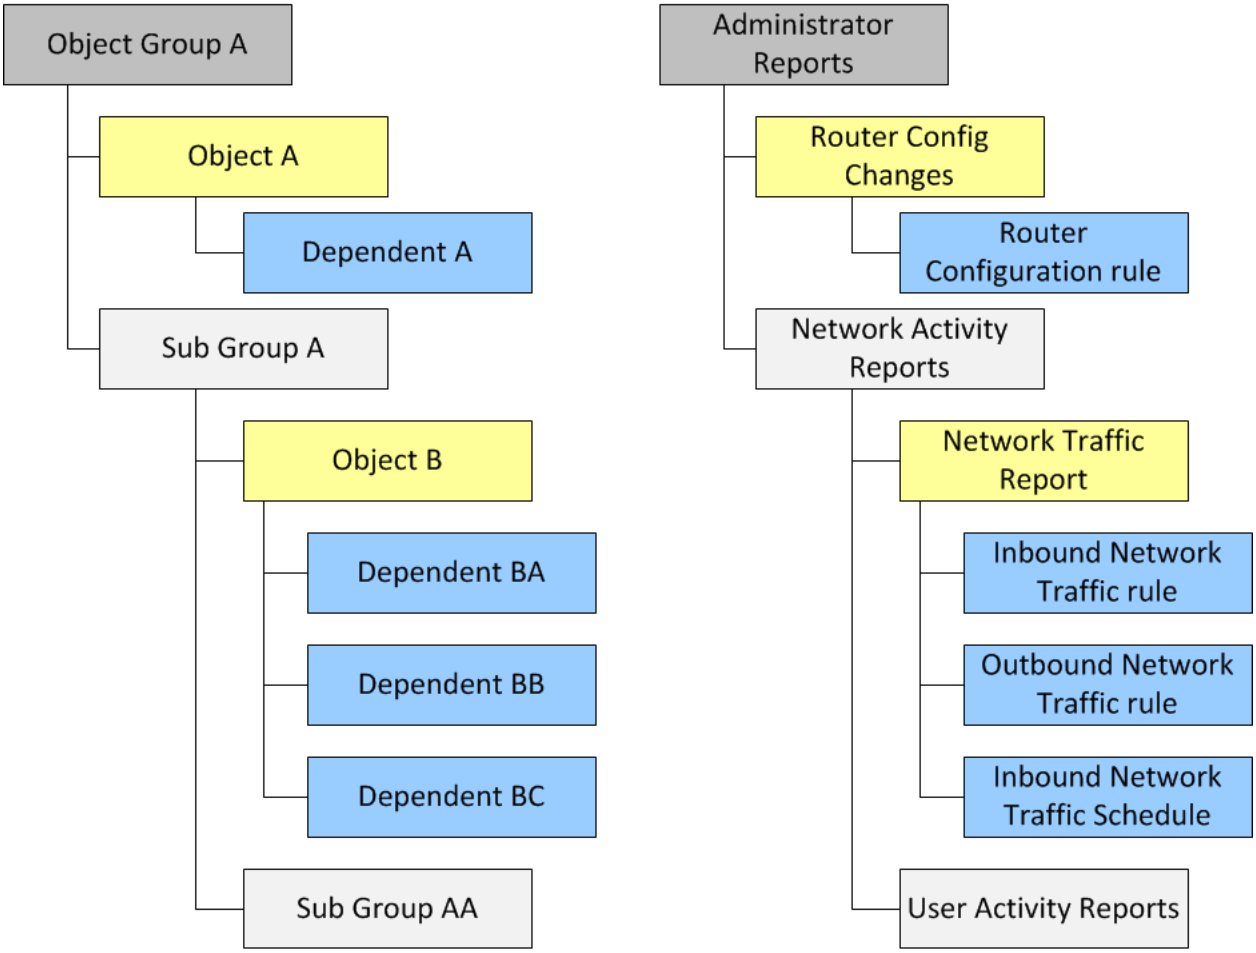
- If you are interested only in unique values and not accurate aggregates, then set the `Session Threshold` to a non-zero value for the NWDB rule. For more information, see "Create a Rule Using NetWitness Data Source" section in Configure a Rule. The higher the value, the longer is the rule execution. If the value is set to zero it will take a longer time but will provide accurate aggregates.

  Consider a rule with lookup_and_add rule action and Session Threshold set to 10.

The output is displayed:

List Value Reports

Use a Refined List:



In case of List value reports (for any data source type), individual reports will be generated for each value in the list. Therefore, more the number of values in the list the longer the reports will take to execute. Hence, you must use a refined list to generate such reports.

Access Control for Reporting

Reporting Module provides you the option to set up access control for all the components in the module. In NetWitness, you can define different roles and specify the access control for each of the role from the System Security module. You can define the access control to be provided for the Reporting module for each role. For more information, see "Step 1: Review the Pre-Configured NetWitness Platform Roles" and "Step 2: (Optional) Add a Role and Assign Permission" topics in the *System Security and User Management Guide*.

In the Reports module, you can modify the role permissions or access to the following Reporting objects:

The Following is an example of the hierarchy of the object groups, objects and dependents. This is an illustration of the Report Groups and Reports hierarchy.

Report Groups and Reports Hierarchy

Permission for Object Groups

- You must have the Read & Write permission to set the permissions for the Object Group, Objects, or Dependents. The dependents with “No Access” permission are grayed out and dependents with “Read-Only” permission are indicated with an icon.
- When you set the permission for the Object Group, the Objects and Dependents in the Object Group do not inherit the permission automatically. You must select the "Apply these permissions to sub-groups and <Objects> in this group" option to achieve this. For example, if you do not want Operators roles to access reports in Report Group A, then you must set the permission on Group A to No access for the Operator role and select the "Apply these permissions to sub-groups and Reports in this group" option.
- When you set the permissions for the Object Group and select the "Apply these permissions to sub-groups and <Objects> in this group" option, the dependents such as rules or schedules in the objects do not inherit the permissions automatically. You must use the "Apply Read-only permission to Rules in the <Object>" option to apply the permission to the rules.

- When you set the permissions for the Objects, you must ensure that the Objects in hierarchy should always have a permission that is less than or equal to the one above in the hierarchy for the permission to be applied. For example, if the reports in a Report Group have Read & Write permission and you apply a Read-Only or No Access permission at the Report Group level and select the "Apply these permissions to sub-groups and Reports in this group" option, then the permission on the rules will remain unchanged.
- The permissions are cascaded from top to down in the hierarchy and not vice-versa. For example, if you apply a permission to a rule, it does not change the permission of the Report that contains the rule.

Permission for Objects or Dependents

- You must have the Read & Write permission to set the permissions for the Objects or Dependents.
- You can specify the permission for multiple objects at once instead of setting the permission for each object.
- When you set the permission for the Object, the dependents in the Object do not inherit the permission automatically. You must select the "Apply Read-only permission to Rules in the <Object>" option to achieve this.

When you apply the permission to dependents the permission is applied based on the existing permission for the role. For example, consider an Analyst and a Operator with the following permissions for the different dependents (Report A object has Rule AA, Rule AB, and Rule AC as dependents).

Object or Dependent	Analyst	Operator
Report A	Read & Write	No Access
Rule AA	Read & Write	No Access
Rule AB	Read and Write	Read and Write
Rule AC	Read-only	No Access

When the Analyst applies a Read & Write permission for the Operator role and selects the option "Apply Read-only permission to Rules in the <Object>", the permissions is set for the different dependents as follows:

Modify the Permissions

- **Group Level:** Set the permissions at the Object Group level and for all the object and entities in the Group. For example, if you have 80 reports in the Administrators Reports group and you do not want anyone except the Administrator to add or modify these reports, you can set the permission for all the other roles at the group level to Read-Only and select the option to apply it to all the reports and sub-groups in the report group.
- **Multiple Objects:**Select multiple objects and specify the access for all the selected objects. For example, if you have 10 reports in the Network Traffic sub group with sensitive information that you

do not want anyone to access, select the 10 reports and then set the permission for all the roles as "No Access".

- **Single Object:** Select only the object and specify the permission. For example, select the Network Traffic Report and specify the Read-Write permission for the Security Analyst role or select the Login Failure Alert and specify the Read-Write permission for a Security Analyst role.

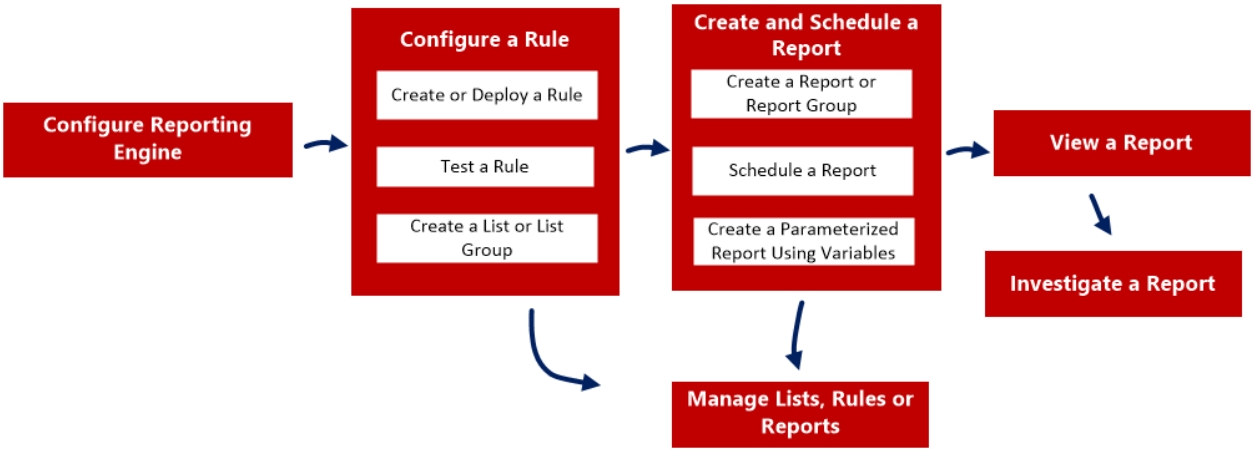
Object or Dependent	Operator (Before Permission is applied)	Operator (After Permission is applied)
Report A	No Access	Read & Write
Rule AA	No Access	Read-only
Rule AB	Read and Write	Read & Write
Rule AC	No Access	Read-only

Roles and Permissions for Reporting Module

Although NetWitness has five pre-configured roles, you can add custom roles. For example, in addition to the pre-configured Analysts role, you can add custom roles for AnalystsEurope and AnalystsAsia.

Role	Permission
Administrators	Full system access
Operators	Access to configurations but not to data
Analysts	Access to data but not to configurations
SOC_Managers	Same access as Analysts and an additional permission to handle incidents
Malware_Analysts	Access to malware events only

Depending on the user role, you can set the following access permissions to access the Reporting module components (Rules, Reports, Charts, Alerts, Lists):



- Create
- Delete
- Export
- Manage
- View

Note: You must enable all these permissions for a user role to be able to define, delete, manage and view each of the Reporting modules. You must also have appropriate permissions for the data source to be listed, while defining the reports, charts, or alerts. For more information, see "Configure Data sources Permissions" topic in the *Reporting Engine Configuration Guide*.

For a detailed list of permissions and how to add a role and assign permissions, see "Role Permissions" and "Step 2. (Optional) Add a Role and Assign Permissions" topics in the *System Security and User Management Guide*.

Configure and Generate a Report

This figure is an overview of the entire process of configuring and generating a report.

To configure and generate a report, perform the following tasks:

1. Configure Reporting Engine - You must configure the Reporting Engine before you can configure and generate a report. You must also specify the data source in the Reporting Engine from which the data is extracted. For more information on how to configure Reporting Engine, see "Configure Reporting Engine" topic in the *Reporting Configuration Guide*.
2. Configure a Rule
3. Create and Schedule a Report
4. View a Report
5. Investigate a Report
6. Manage Lists, Rules or Reports

Configure a Rule

You can create a new rule or deploy an existing rule from the Live Services which can be used in a report. You can use different conditions to refine the data or information in the data sources such as:

- Select clause
- Where clause
- Group By
- Order By and so on

For example, you can write a rule to view the top 20 web addresses that the users visit daily.

You can create different type of rules using different data sources. Based on your requirements you can select any of the following options to create a rule:

- Create a Rule Using NetWitness Data Source
- Create a Rule Using Warehouse Data Source
- Create a Rule Using Respond Data Source

You can also use a list in a rule to refine a search result from the data source. Once a rule is created you can test a rule to see the results returned by the rule.

Create a Rule Group

To create a rule group or rule sub-group, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Do one of the following.
   - To define a rule group:
     a. In the **Rules Groups** Panel, click  .
     The new rule group is added to the Rule Groups panel.
     b. Enter the name for the rule group and press ENTER.
   - To add a rule sub-group:
     a. In the **Rules Groups** panel, select the rule group to which you want to add a sub-group.
     b. Click  .
     The new rule sub-group is added to the rule group.
     c. Enter the name for the rule sub-group and press **ENTER**.

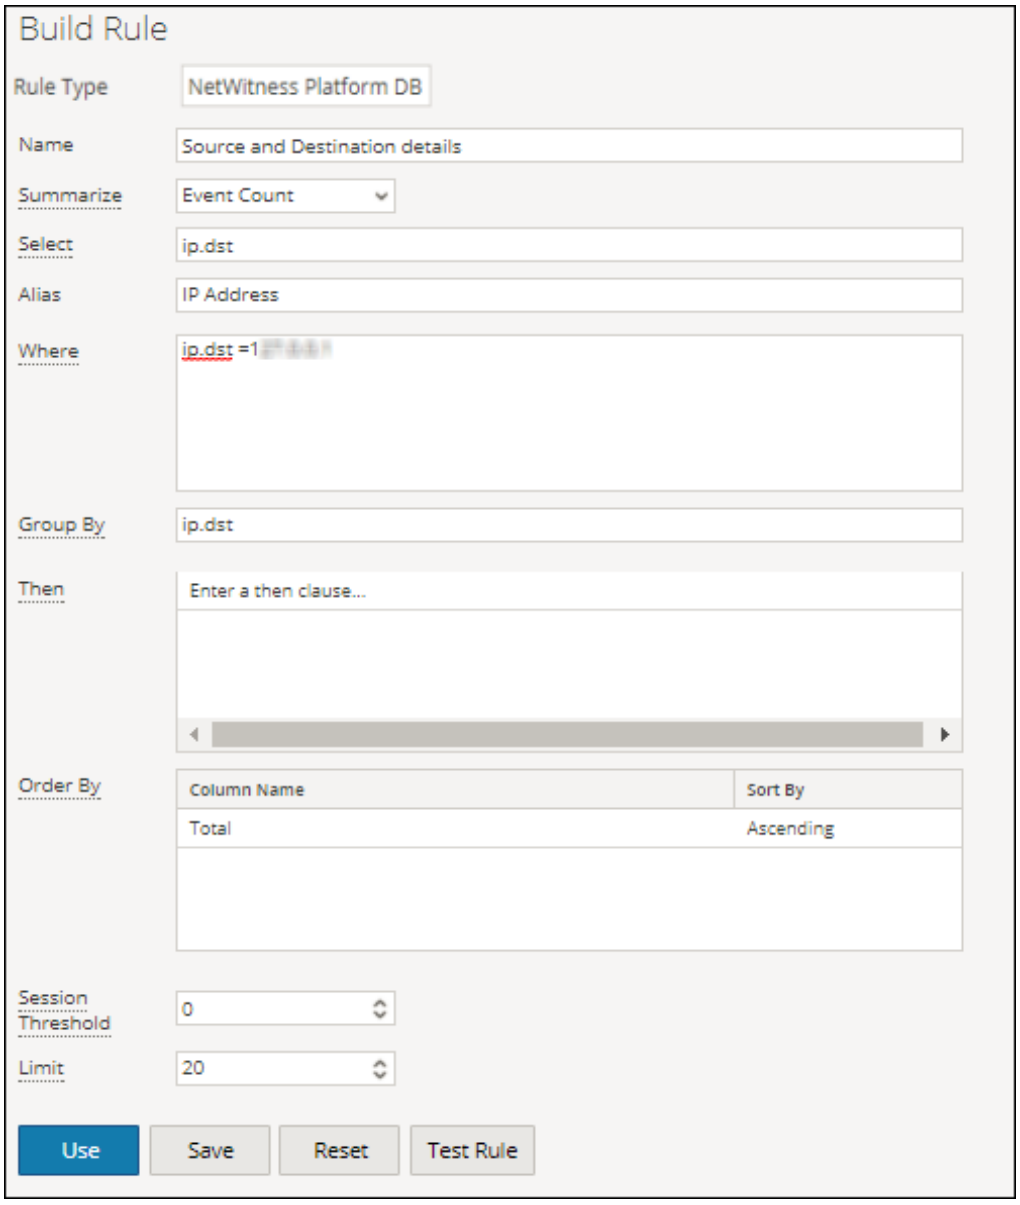
Create a Rule Using NetWitness Data Source

You can create a rule to fetch data or events from a NetWitness data source. The same procedure is used to define a rule to fetch data or events from an Archiver data source.

The Archiver data source can be added in the Services Config View of the Reporting Engine. For more information, see "(Optional) Add Archiver as a Data Source to Reporting Engine" topic in the *Archiver Configuration Guide*.

Prerequisites

Make sure that you understand how custom meta keys are created using custom feeds. For more information, see "Create Custom Meta Keys using Custom Feed" topic in the *Decoder and Log Decoder Configuration Guide*.



To create a rule to fetch data or events from a NetWitness Data Source, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. In the **Rules** toolbar, click + > **NetWitness Platform DB**.

   The Build Rule view tab is displayed.

3. In the **Rule Type** field, **NetWitness Platform DB** is selected by default.
4. In the **Name** field, enter a name that is used to Identify or label the rule in alerts and reports.
5. The **Summarize** field determines the type of summarization or aggregation for the rule. Based on the type of rule to be defined, you must select one of the following:
   - To define a **Non-Aggregate** rule without any grouping, select: **None**
   - To define an **Aggregate** rule with special aggregation like the collection (sessions/events/packets) related aggregates, select one of the following:
     - Event Count
     - Packet Count
     - Session Size

- To define an **Aggregate** rule with meta values and custom aggregates like sum(), count(), and so on, select: **Custom**

  Choosing 'Custom' in the **Summarize** field enables you to define aggregate function of your choice in the *Select* clause. For example, select ip.src, countdistinct(ip.dst), distinct(ip.dst). The supported aggregate functions are:

  - sum (<meta>)
  - count(<meta>)
  - countdistinct(<meta>)
  - min(<meta>)
  - max(<meta>)
  - avg(<meta>)
  - first(<meta>)
  - last(<meta>)
  - len(<meta>)
  - distinct(<meta>)

  For more detailed information about Aggregate and Non-aggregate rule, see "NWDB Rule Syntax section" in Rule Syntax.

6. In the **Select** field, enter a meta or select a meta from the list of available meta types provided in the Meta Library. For more information, see "Meta Panel" in Build Rule View. The meta name to fetch raw log is raw. raw can only be used in the **Select** field. It cannot be used in the **Where** and **Then** fields. Multiple aggregate functions are supported for Custom aggregate rule in the **Select** field. For example, Select: *ip.src, username, service, distinct(country.src), sum(payload).*
7. In the **Alias** field, enter the alias name for columns used in the Select clause.
8. In the **Where** field, enter a meta or select a meta from the list of available meta types and use the operators to construct the Where clause for the base query criteria.
9. The **Group By** field is a read-only field which gets populated with meta that are defined in the Select clause. For a Non-Aggregate function, this field is not visible. A maximum of six meta are supported in the **Group By** field.

   Note: In earlier versions of NetWitness, only one meta was supported for Custom aggregate rule in the **Group By** clause. From now, a maximum of six meta are supported in the **Group By** clause.

10. In the **Then** field, enter the rule actions that manipulate the original result set of a rule in order to make the output in a report more concrete or add additional functionality other than querying data and displaying it, for example, creating a feed from the results. For a complete list of available rule actions, see "NWDB Rule Syntax" in Rule Syntax.

    Note: When a rule is executed for an Archiver data source, it is recommended not to use query intensive rule actions such as lookup_and_add() and show_whats_new().

11. In the **Order By** field, perform the following:

a. In the **Column Name** column, enter the name of the columns by which you want to sort the results. By default, the value is empty. The value gets populated based on the value selected in the **Summarize** field.

- For Summarize 'None', if no **Order By** is selected, then by default it is ordered by session or collection time.
- For other Summarize values, the default sorting is based on the first 'group by' meta selected when no 'order by' is defined. For Event Count, Packet Count, and Session size, the accepted values are Total and Value.

b. In the **Sort by** column, select one of the following ways to sort the results:

- Ascending Order
- Descending Order

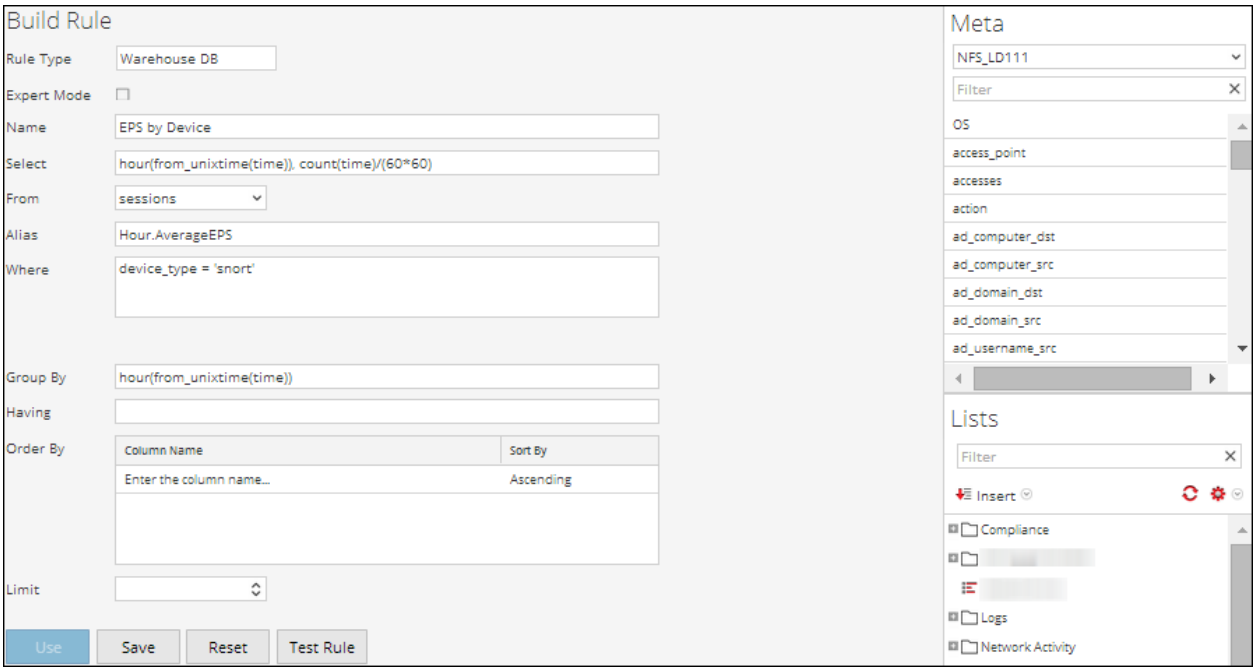
12. In the **Session Threshold** field, enter the optimization setting to stop scanning the matching sessions for each possible unique value for the selected meta. The threshold is an integer between 0 (default) and 2147483647.

Note: This is applicable to only NWDB Aggregate rules. If the default value is specified, all the matching sessions will be scanned and the accurate value will be returned. A higher session threshold allows accurate counts for a value. However, this causes longer rule execution time. For example, consider you set the Session Threshold as 1000 for ip.src. If there are 5000 matching sessions then for a particular ip.src value which is present in more than 1000 sessions, NWDB stops the scan after 1000 sessions and returns the extrapolated aggregate value. This optimizes the query execution time. If the value is present in less than 1000 sessions, then the actual value is returned.

13. In the **Limit** field, enter the limit to be put on the query while fetching data from the database. If a result set is sorted by event count, packet count, or session size, the limit represents the top (or bottom) N values to be returned. If the result set is not sorted, the first N values are returned.
14. Click **Save**.

Note: Unlike parsed meta, raw logs are fetched from decoders. When both raw log and parsed meta are queried in a single rule, due to different retention periods, parsed meta might be available and raw logs missing in the same session. So the result will have parsed meta values and empty raw value for those sessions. For example, for the rule Select **ip.src**, **ip.dst**, **service**, **username**, **raw**, the parsed meta might be populated and the **raw** meta remains empty for a few sessions.

Create a Rule Using Warehouse Data Source



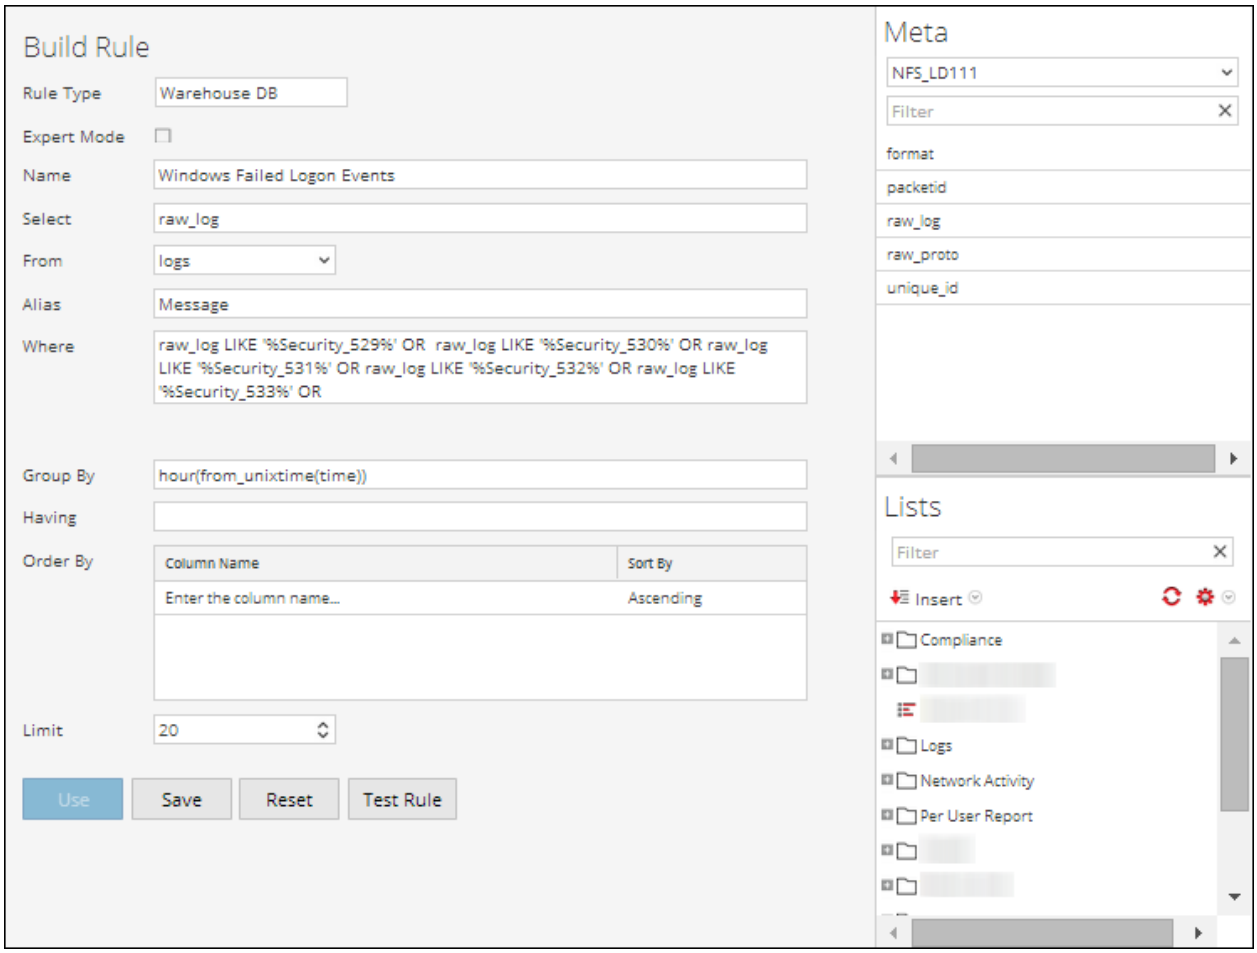
You can create a rule to fetch data or events from a Warehouse event source. You can define the rules in two modes:

- Default Mode
- Expert Mode

Default Mode

In Default Mode, you can create rules containing simple SQL like HIVE queries that contain clauses like Select, Where, Group By, and Having. By default, you can create rules to query sessions or raw logs. For more information on "Simple query syntax and examples", see Warehouse DB Simple Rules Syntax.

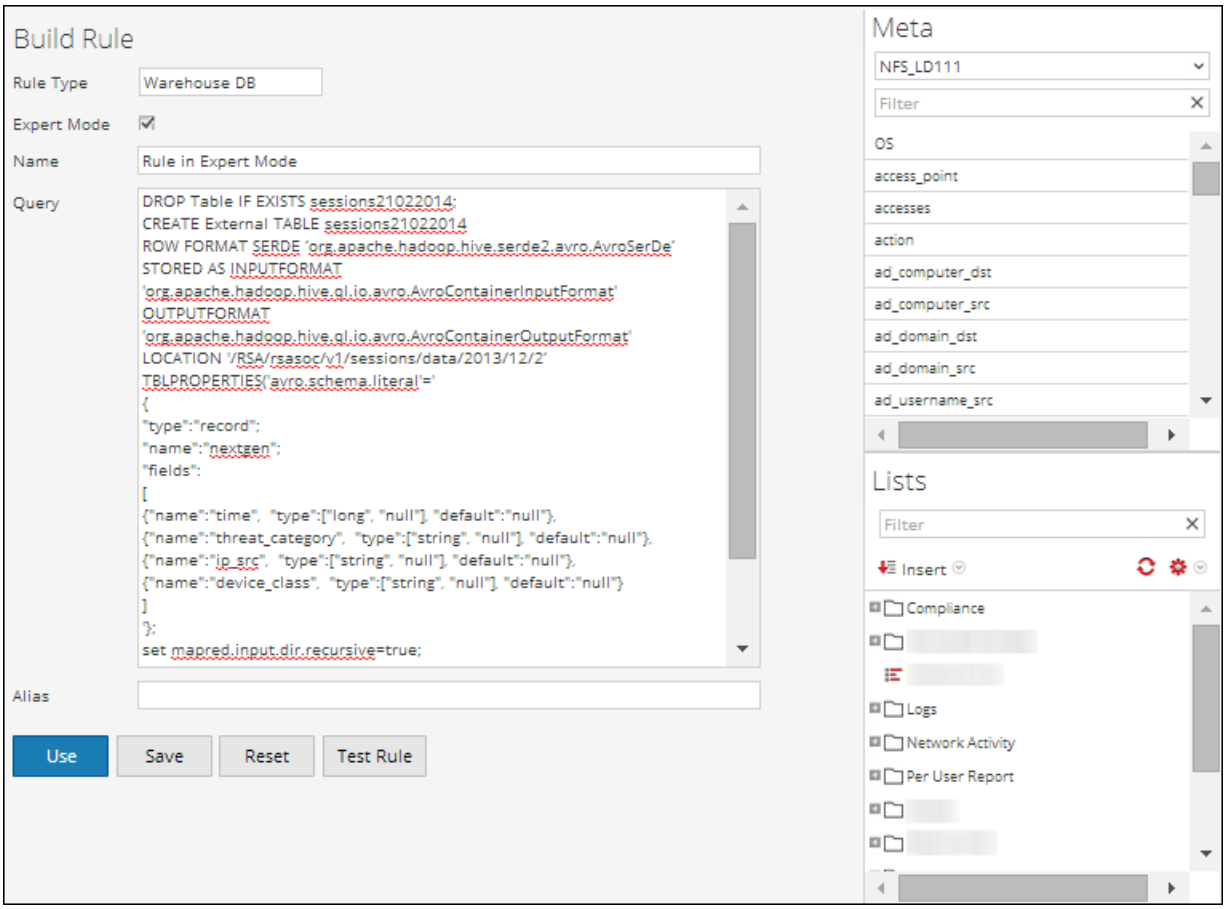
The following figure is an example of the **Build Rule view** that displays when you select **Warehouse DB** for **Rule Type** without the Expert Mode selected.



Querying Raw Logs

The raw log format is used in the select or where clause to query for raw logs.

Note: The time range that you can specify in your query is a day (24 hours). If you have specified a time range less than a day in your query, the result set contains data of at least a day (24 hours).



The following figure is an example of the **Build Rule view** that displays when you select **Warehouse DB** for **Rule Type** and create a rule for querying raw logs.

Expert Mode

Advanced rules are defined using complex HIVE queries created using the clauses DROP, CREATE, and so on. Unlike simple rules, we always insert the results into a table. For more information on "Advanced HIVE query language", see *HIVE language manual*.

The following figure is an example of the Build Rule view that is displayed when you select **Warehouse DB** for **Rule Type** with Expert Mode selected.

If you want to generate a report for a specific time range, you need to manually define the time range in the query using the following two variables:

- ${report_starttime} - The starting time of the range in seconds.
- ${report_endtime} - The ending time of the range in seconds.

For example, **`SELECT col1, col2 FROM custom_table WHERE timecol >= ${report_starttime} AND timecol <= ${report_endtime};`**

Note: By default, Reporting Engine treats `${keyword}` as a variable. If you want to specify HIVE variables, you must mention the complete syntax of a variable. For example, `${hiveconf:hive.exec.scratchdir}`.

Prerequisites

Make sure that you understand how custom meta keys are created using custom feeds. For more information, see "Create Custom Meta Keys using Custom Feed" topic in the *Host and Services Configuration Guide*.

To create a rule to fetch data or events from a Warehouse data source, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. In the **Rules** toolbar, click  > **Warehouse DB**.

   The Build Rule view is displayed.

3. In the **Rule Type** field, **Warehouse DB** is selected by default.

   If you are defining the rule in Default mode, perform the following:

   a. In the **Name** field, enter a name that is used to Identify or label the rule in alerts and reports.

   b. In the **Select** field, enter a meta or select the meta from the drop-down or select a meta from the list of available meta types provided in the Meta Panel. For more information, see " Meta Panel" in Build Rule View.

   c. In the **From** drop-down menu, select one of the following:

      - Session
      - Logs

   d. In the **Alias** field, enter the alias name for columns used in the Select clause.

   e. In the **Where** field, enter a meta or select a meta from the list of available meta types provided in the Meta Panel. The Where clause provides the base query criteria for the rule.

   f. In the **Group By** field, enter the meta selected in the Select clause, so that the result set is grouped based on the meta.

   g. In the **Having** field, enter the criteria to filter the result set for aggregated queries.

   h. In the **Order By** field, perform the following:

      1. In the **Column Name** column, enter the name of the columns by which you want to group the results.
      2. In the **Sort by** column, select one of the following ways to sort the results:

         - Ascending Order
         - Descending Order

   i. In the **Limit** field, enter the limit to be put on the query while fetching data from the database. If a result set is sorted by session count, packet count, or session size, the limit represents the top (or bottom) N values to be returned. If the result set is not sorted, the first N values are returned.

   j. Click **Save**.

4. If you are defining the rule in Expert mode, select the **Expert Mode** checkbox and perform the following:

   a. In the **Name** field, enter a name that is used to Identify or label the rule in alerts and reports.

   b. In the **Query** field, enter the Hive query statement to query the data source.

   c. In the **Alias** field, enter the alias name for columns used in the Select clause.

   d. Click **Save**.

Create a Rule Using Respond Data Source

You can create a rule to fetch incidents or alerts from a Respond data source.

Prerequisites

Make sure that you:

- Ensure Reporting Engine service is up and running.
- Ensure the Incident Management service is up and running. For more information, see "Configure a Database for the Respond Server Service" topic in the *NetWitness Respond Configuration Guide*.
- (Optional) Ensure the Event Stream Analysis service is up and running. For more information, see "Step 2. Configure Advanced Settings for an ESA Service" topic in the *ESA Configuration Guide*.
- (Optional) Ensure the Malware Analysis service is up and running. For more information, see " (Optional) Configure Auditing on Malware Analysis Host" topic in the *Malware Configuration Guide*.

Note: You need to configure any one of the services (Event Stream Analysis, Reporting Engine, Malware Analysis, or Endpoint) based on your requirement and the type of alerts or incidents you want to generate.

To create a rule to fetch data or events from a Respond Data Source, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. In the **Rules** toolbar, click  > **Respond DB**.

   The Build Rule view tab is displayed.

3. In the **Rule Type** field, Respond is selected by default.
4. In the **Name** field, enter a name that is used to Identify or label the rule in alerts and incident reports.
5. The **Summarize** field determines the type of summarization or aggregation for the rule. Based on the type of rule to be defined, you must select one of the following:
   - To define a **Non-Aggregate** rule without any grouping, select **None**
   - To define an **Aggregate** rule with meta values and custom aggregates select **Custom**

     Choosing 'Custom' in the **Summarize** field enables you to define aggregate function of your choice in the *Select* clause based on the report type you have selected.

     For more detailed information about Aggregate and Non-aggregate rule, see Rule Syntax.
6. In the **From** field, based on the type of report output to be displayed, you must select one of the following:
   - Alert
   - Incident

- incidentStats
- incidentUserStats

7. In the **Select**field, enter a meta or select a meta from the list of available meta types provided in the Meta Library. For more information, see "Meta Panel" in Build Rule View. It cannot be used in the **Where** field. Only one aggregate function is supported at a time in a query.

   For example, the supported metas for alert are:

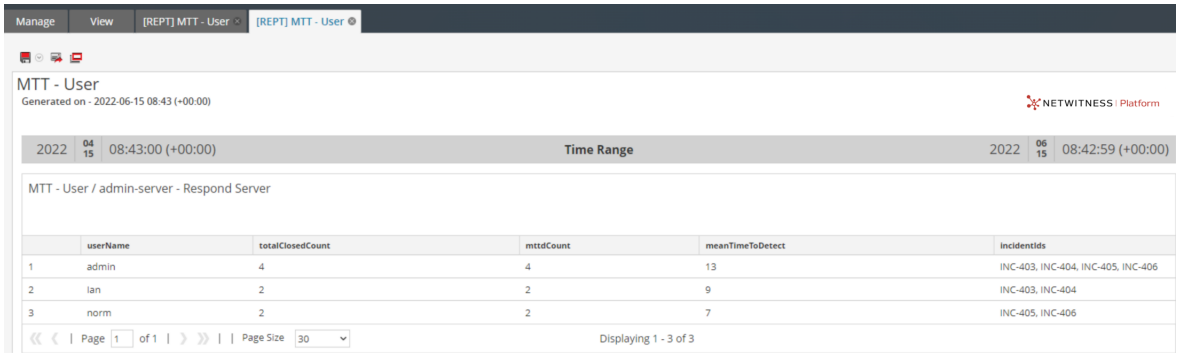
   - alert_host_summary
   - alert.name
   - alert.numEvents
   - alert.severity
   - alert.source
   - alert.timestamp
   - incidentCreated
   - incidentId
   - receivedTime

   For example, the supported metas for incident are:

   - categories
   - created
   - priority
   - riskScore
   - sealed
   - status
   - assignee.id
   - tta (for more information on this meta, see **View Basic Summary Information about the Incident** topic in the *Respond User Guide.*)
   - ttd (for more information on this meta, see **View Basic Summary Information about the Incident** topic in the *Respond User Guide.*)
   - ttr (for more information on this meta, see **View Basic Summary Information about the Incident** topic in the *Respond User Guide.*)

   Note: When an incident is assigned, tta and assignee.id metas are populated. Similarly, when the task assigned is completed and the incident is closed, ttd and ttr metas are populated. Refer to

the following figure.



For example, the supported metas for incidentStats are:

- created
- mtta.time - This meta displays the average time taken to acknowledge the incidents in a single day.
- mtta.count - This meta displays the number of incidents acknowledged in a single day.
- mttd.time - This meta displays the average time taken to detect the incidents in a single day.
- mttd.count - This meta displays the number of incidents detected in a single day.
- mttr.time - This meta displays the average time taken to resolve the incidents in a single day.
- mttr.count - This meta displays the number of incidents resolved in a single day.

For example, the supported metas for incidentUserStats are:

- userName - This meta displays the assignee's or the user's ID for the associated user stats.
- totalClosedCount - This meta displays the total number of Incidents closed by the assignee till date.
- meanTimeToDetect - This meta displays the average time taken by the user to detect the incidents in the time range selected.
- mttdCount - This meta displays the count of incidents contributing to the MTTD value computed.
- incidentIds - This meta displays the list of incident IDs closed by the user during the time range selected.

For more detailed information, see "Aggregate and Non-aggregate rule" topic in the Rule Syntax.

8. In the **Alias** field, enter the alias name for columns used in the Select clause.
9. In the **Where** field, enter a meta or select a meta from the list of available meta types and use the operators to construct the Where clause for the base query criteria.
10. The **Group By** field is a read-only field which gets populated with meta that are defined in the Select clause. For a Non-Aggregate function, this field is not visible. A maximum of six meta are supported in the **Group By** field.
11. In the **Order By** field, perform the following:
    a. In the **Column Name** column, enter the name of the columns by which you want to sort the results.

    Note: by default the first meta in the select clause will be dispalyed.

    b. In the **Sort by** column, select one of the following ways to sort the results:
    - Ascending Order
    - Descending Order
12. In the **Limit** field, enter the limit to be put on the query while fetching data from the database. If a result set is sorted by the limit represents the top (or bottom) N values to be returned. If the result set is not sorted, the first N values are returned.
13. Click **Save**.

Deploy a Rule

In NetWitness you can deploy the selected rules on the service (for example, Reporting Engine), using the Deployment Wizard.

Prerequisites

Make sure that:

- The services on which you deploy a rule is up and running.
- The Live Services is configured.

To deploy a rule, perform the following:

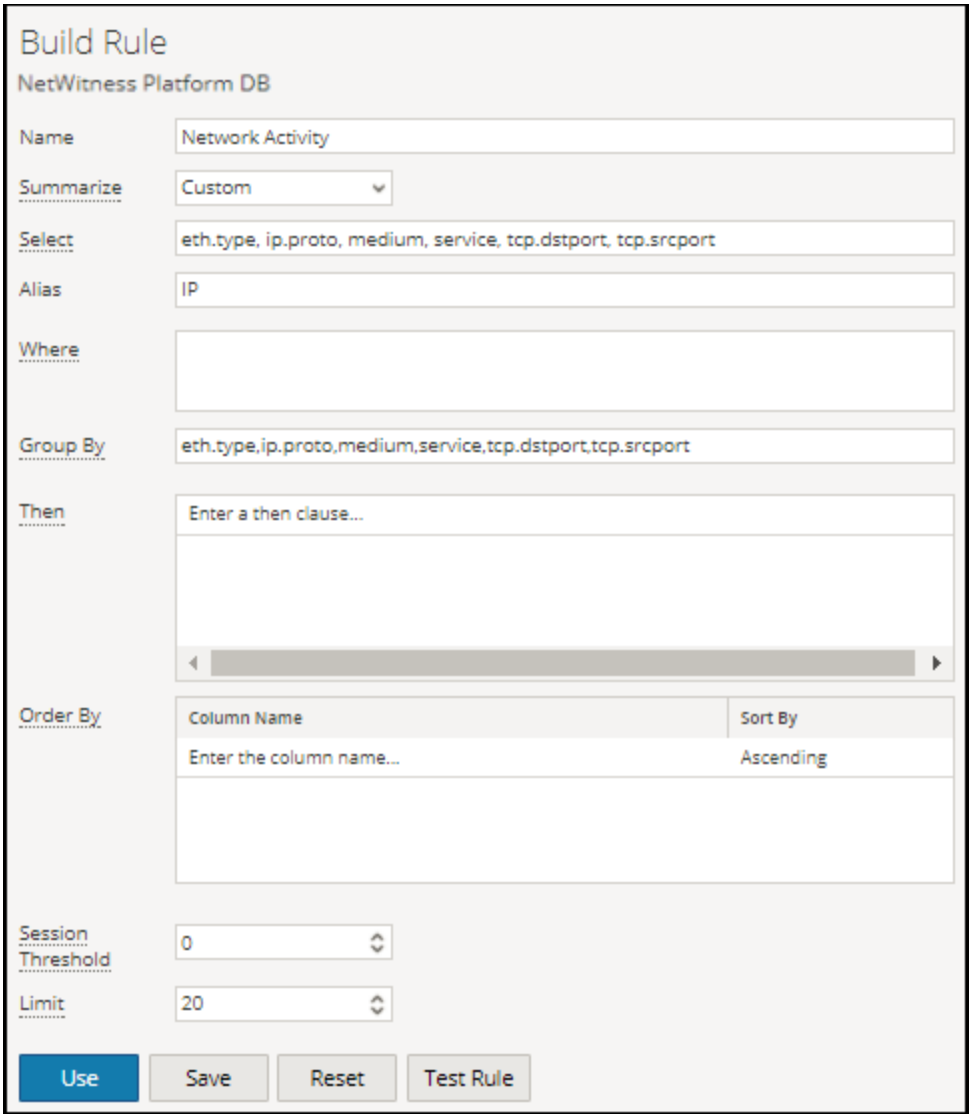
1. Go to  **(Configure) > LIVE CONTENT**.
2. In the **Search Criteria** panel, search Live resources (for example, search for the **Application Rule** resource Type).
3. In the **Matching Resources** panel, select **Show Results > Grid**.
4. Select the checkbox to the left or the rules that you want to deploy.
5. In the **Matching Resources** toolbar, click .
6. Click **Next**.
7. Select the service on which you to deploy a rule (For example, Reporting Engine) and click **Next**.
8. Click **Deploy**.
   The rule is deployed successfully.

Use Meta Aliases for Reporting

When you refer to meta data in Reports and Charts, you can only view aliases for the meta names. These aliases makes them more understandable to a broader audience.

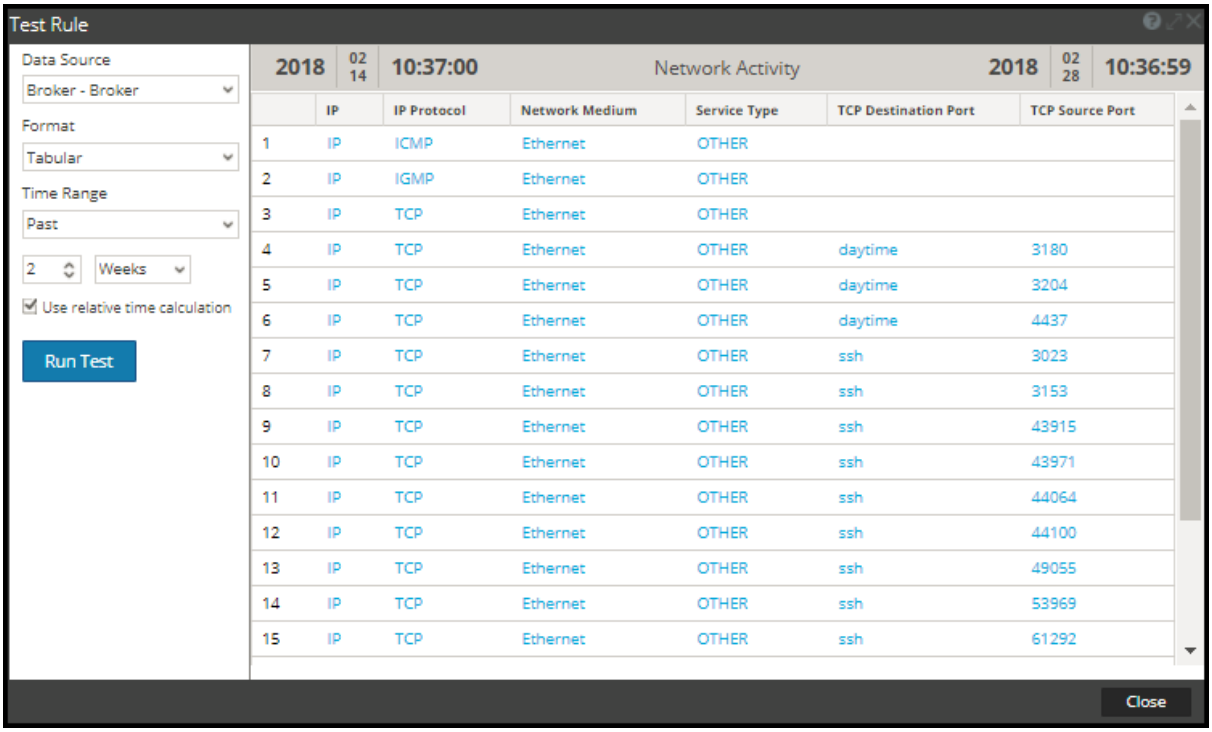
You cannot provide alias values for any meta in the WHERE clause because NetWitness uses the WHERE clause to fetch data from the data source (for example, in the Concentrator) and data sources do not support aliases. In other words, you cannot provide the alias value **HTTP** for the HTTP port # 80.

Note: * You cannot create aliases for meta other than the ones that have existing aliases by Reporting Engine. Also, the format of the aliases cannot be changed.
* Aliases are not supported for Alerts and CSV reports.



To use alias in a rule, perform the following:

1. Go to **Reports**.
   The Manage tab is displayed.
2. In the **Rules** panel, do one of the following:



- Select a rule and click in the Rules toolbar.
- Click > **Edit**.

3. Specify the meta key with aliases in the **Select** field.

The following example specifies the **eth.type**, **ip.proto**, **medium**, **service**, **tcp.dstport**, and **tcp.srcport** meta in the Select field.

4. Click **Test Rule**.
   The following example displays the results under the **eth.type**, **ip.proto**, **medium**, **service**, **tcp.dstport**, and **tcp.srcport** alias columns that were specified in the **Select** field of the rule.

	IP	IP Protocol	Network Medium	Service Type	TCP Destination Port	TCP Source Port
1	IP	ICMP	Ethernet	OTHER		
2	IP	IGMP	Ethernet	OTHER		
3	IP	TCP	Ethernet	OTHER		
4	IP	TCP	Ethernet	OTHER	daytime	3180
5	IP	TCP	Ethernet	OTHER	daytime	3204
6	IP	TCP	Ethernet	OTHER	daytime	4437
7	IP	TCP	Ethernet	OTHER	ssh	3023
8	IP	TCP	Ethernet	OTHER	ssh	3153
9	IP	TCP	Ethernet	OTHER	ssh	43915
10	IP	TCP	Ethernet	OTHER	ssh	43971
11	IP	TCP	Ethernet	OTHER	ssh	44064
12	IP	TCP	Ethernet	OTHER	ssh	44100
13	IP	TCP	Ethernet	OTHER	ssh	49055
14	IP	TCP	Ethernet	OTHER	ssh	53969
15	IP	TCP	Ethernet	OTHER	ssh	61292

Alias Definitions

The alias files in this section are examples only and are based on current alias definitions in the Reporting Engine. NetWitness cannot modify these definitions in the Reporting Engine depending on the changes in the concentrator xml file. Since any changes in the Concentrator xml file are not reflected in the Reporting Engine.

The details of different meta are explained in each of the **meta.aliases**.

Test a Rule

You can test a rule based on the time range and the data source selected.

To test a rule, perform the following:

1. Go to **Reports**.
   The Manage tab is displayed.
2. In the **Rules** panel, do one of the following:
   - Select a rule and click  in the Rules toolbar.
   - Click  > **Edit**.
     The Build Rule view tab is displayed.

3. Click **Test Rule**.
   The Test Rule view is displayed.

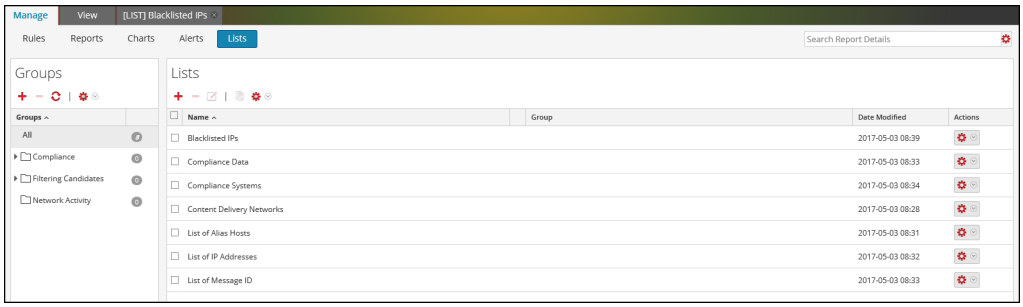
> **Note:** When you click **Test Rule**, the rule is not saved. You have to click **Save**in the Build Rule view to save the rule.

4. From the **Data Source** drop-down list, select a data source.
   You must select the appropriate data source for the rule defined.
5. From the **Format** drop-down list, select the format in which you want the result displayed.
6. From the **Time Range** drop-down list, select one of the following.
   - **Past** -To specify number of years, days, weeks, months, days or hours.
   - **Range** - To specify a date range and time period.

   > **Note:** In the User Interface (UI), the date or time displayed depends on the time zone profile selected by the user.

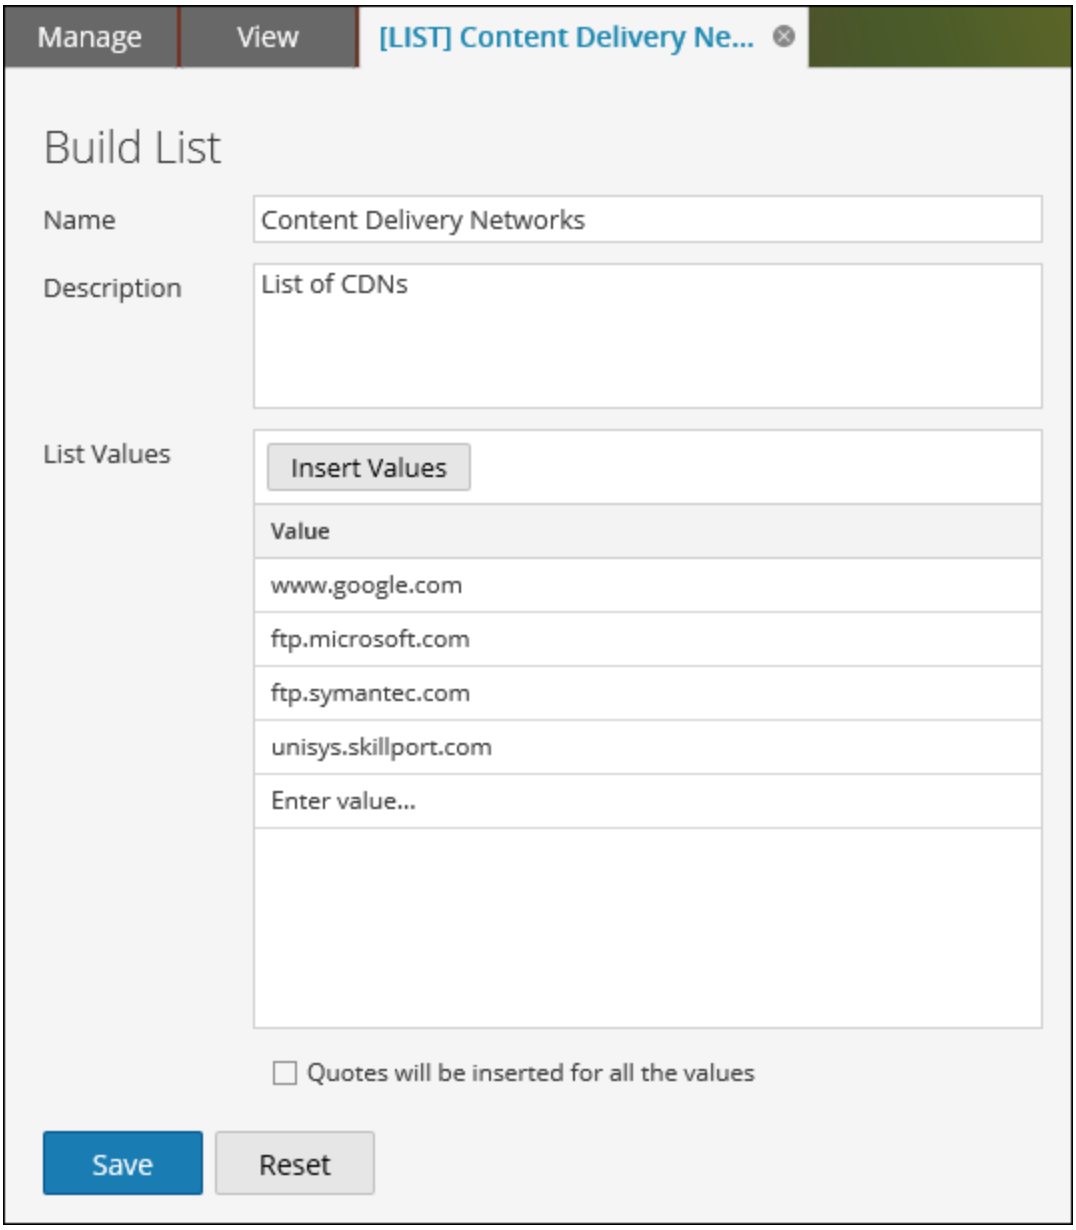
7. **X-Axis** and **Y-Axis** are used to specify the meta to be plotted in charts.
   In **X-Axis**, the Meta for the 'Group by' rule is displayed. In **Y-Axis**, the aggregate functions used in the rule are displayed.

> **Note:** Sum, Count, Countdistinct and Average are the supported aggregate functions for rule. By default, for Custom Rules with multiple 'Group by', you can select only the first meta in **X-Axis**.



8. Click **Run Test** to execute the rule.
   The rule data (if any) for the selected time range is displayed.

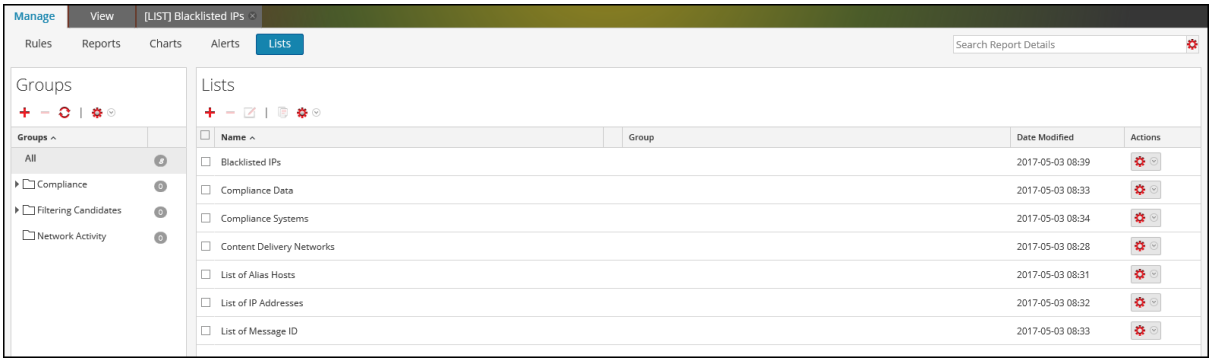
Create a Lists or List Group



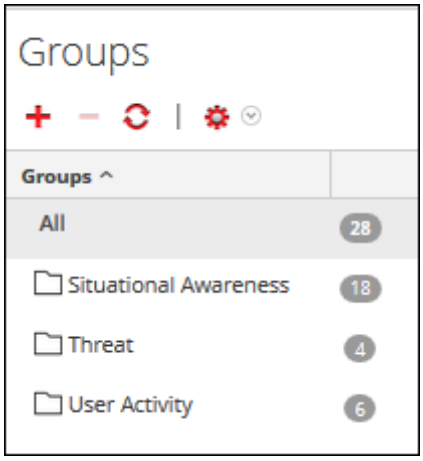
To create a list, perform the following:

Lists can be added within a group or in the root folder.

1. Go to **Reports**, and click **Lists**.
   The List view is displayed.



2. In the **Lists** toolbar, click .
   The Build List view tab is displayed.



3. In the **Name** field, enter a unique name for the list.
4. In the **Description** field, enter a description for the list.
5. In the **List Values** field, do one of the following:
   - Click **Insert Values** and enter the values separated by commas. You can paste a list of values from a file or other lists.
   - In the **Value** column, enter the values.
6. If you want quotes to be inserted directly for the values at runtime, select **Quotes will be inserted for all the values**.
7. Click **Save**.

To create a list group, perform the following:

1. Go to **Reports**, and click **Lists**.
   The List view is displayed.

2. Do the following:
   - To create a list group:
     a. In the **Lists Groups** panel, click  .
        A new list group is added to the List Groups panel.

     b. Enter the name for the list group and press **ENTER**.
   - To create a list subgroup:
     1. In the **Lists** Groups panel, select the list group to which you want to add a subgroup.
     2. Click  .
        A new list subgroup is added to the list group.
     3. Enter the name for the list subgroup and press **ENTER**.

Create and Schedule a Report

You can create a simple or complex report and configure its execution properties by scheduling a report. A report can include multiple rules and you can schedule different time range to execute the same report. For example, depending on your requirement, you can schedule a report to run daily, weekly or monthly.

When you run a report, the results are stored in Reporting Engine.

After you generate a report, you can perform the following:

- Send the reports by email to other users by configuring the output actions. You can also configure the output actions before generating a report.
- Download the reports as PDF or Comma-Separated Values (CSV) format files.

Note: The cancel operation is not supported for Respond Reports.

Create a Report or Report Group

To create a report to a group or sub-group, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

3. In the **Reports** toolbar, click + .

   The Build Report tab is displayed.

4. Enter the name of the report.

5. Drag and drop the text and rules to the report.

   Note: The text entered is optional and you may need this option only when you want to display user-defined headers or content.

6. Click **Save**.

   A confirmation message that the report is saved successfully is displayed.

To create a group to the default folder or add sub-groups under a report group, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

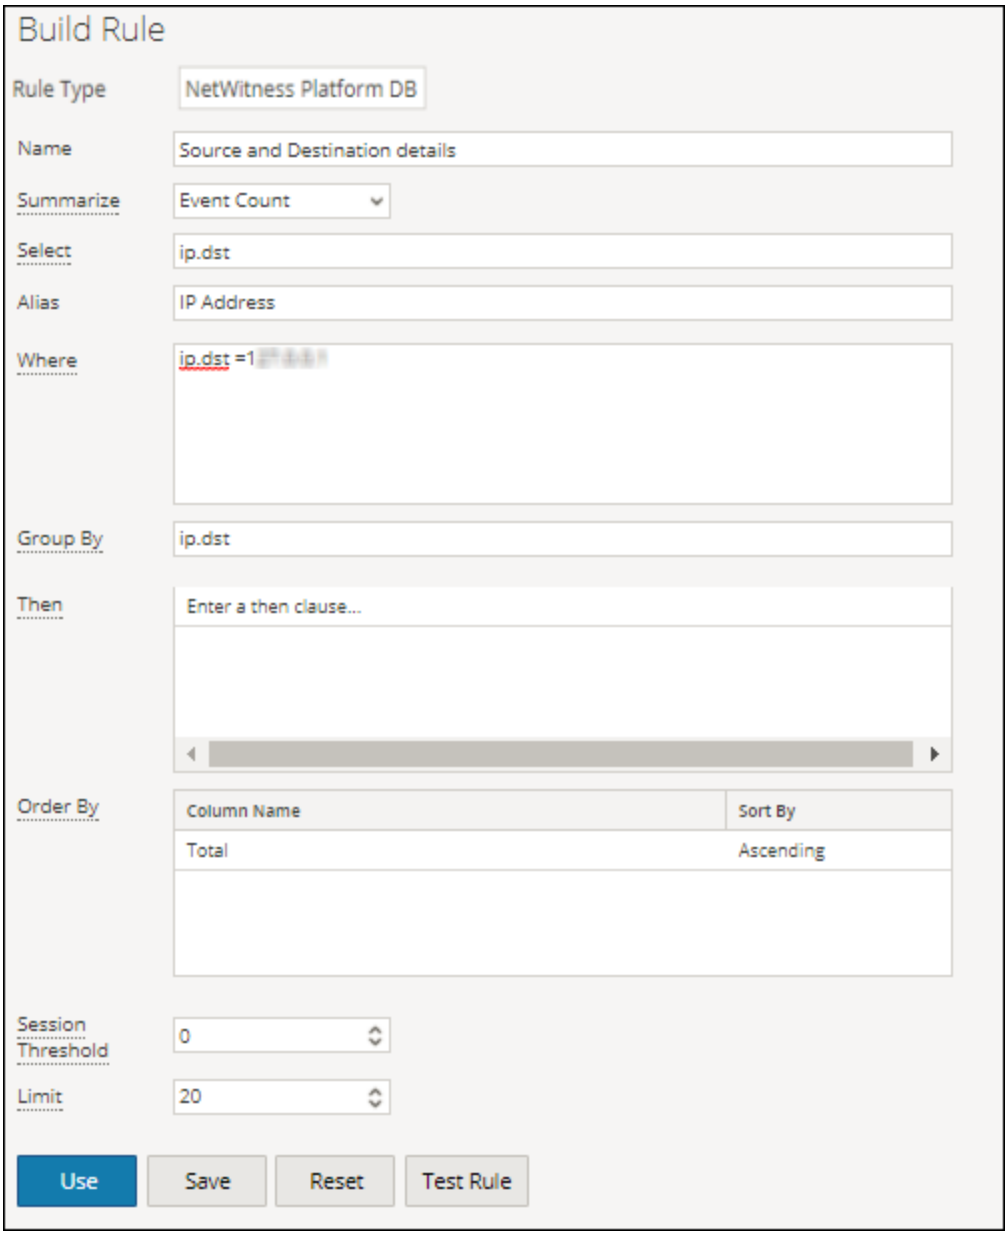
3. In the **Reports Groups** panel, click  .

   A default group is added in the Report Groups panel.

4. Enter the name of the new group.
5. Press **Enter**.

   The group is added to the Report Groups panel.

Schedule a Report



Note: When you schedule a Warehouse report, you can use a supported task scheduler to allocate specific resources in a cluster for the scheduled job. For more information on "supported task schedulers", see Task Scheduler for Warehouse Reporting.

To schedule a report, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. In the **Rules** panel, click  to create a rule.
3. Click **Save**.
4. Click **Use**.

5. Go to **Reports**.

   The Manage tab is displayed.

6. Click **Reports**.

   The Report view is displayed.

7. On the **Reports** panel, click + to create a report.
8. Enter the Report Name in the field.
9. Add the rule by drag and drop which has the user defined variable from the Rules tab.
10. Click **Schedule**.

The Schedule Report view is displayed.

If you provide another user with access permissions to a report, you must also provide permissions for the report group, the rules used in the report, and the rule groups otherwise an error message is displayed.

11. To execute the reports as per the schedule, select the **Enable** checkbox.
12. In the **Schedule Name** field, enter a name for the schedule report configuration.
13. From the Data Source field, select the data source.

    Note: If the data source is not listed, then ensure you have **Read**permissions set for the data source. This is applicable for NWDB, Respond and Warehouse data source. For more information, see "Configure Data Source Permissions" topic in *Reporting Engine Configuration Guide*.

14. (Optional) From the **Warehouse Resource Pool** drop-down, select the pools or queues available in the cluster to schedule the report to run on either the pool or queue. This drop-down list is available only if you select a Warehouse DB report.

    Note: All the queues or pools you specified in the Explore page for the Reporting Engine are listed. If no pools or queues are configured in the Explorer page, this drop-down is disabled and the jobs are submitted to the clusters without any a queue or pool name.

    Note: If the pool or queue configured in the report schedule is removed from the Cluster, then in the Capacity Scheduler, the queue name remains undefined. However, in the Fair Scheduler, the specified pool name will be created using the property mapred.fairscheduler.allow.undeclared.pool.

15. From the Time Zone drop-down, select a time zone to display all the time-related data in a report output in the specified format. This setting is configurable from the Reporting Engine Explore view (/com.rsa.soc.re/configuration/reportoutputformatterconfig/reportoutputformatterconfig).
16. From the **Run** field, select the type of run schedule. (For example, Now or Hourly).

    Depending on the type of run schedule, choose one of the following:

    - If you select a **Later** or **Monthly** run schedule, you must provide a value for the day and time in the respective field provided.
    - If you select an **Hourly** run schedule, you must specify the minutes in the **At Minute** field.
    - If you select a **Daily** run schedule, you must enter a value in the **At** field.
    - If you select a **Weekly** run schedule, you must enter a value in the **At** field and also select the week days.

    Note: While scheduling a report, if you select **Past** option or **Range (specific/generic)** option or an end time range very close to the current time, you must ensure that the aggregate data in the data source is returned. If there is an aggregation delay in the data source, the end time you choose must account for the delay, otherwise reports lose non-aggregate data for that time range.

    For information on how to generate a report with variables, see Create a Parameterized Report Using Variable.

17. (Optional) In the **Output Actions** panel, do the following:

a. Enter the email address and subject.

b. Edit the body of the message for the report.

c. Select the format of the attachment.

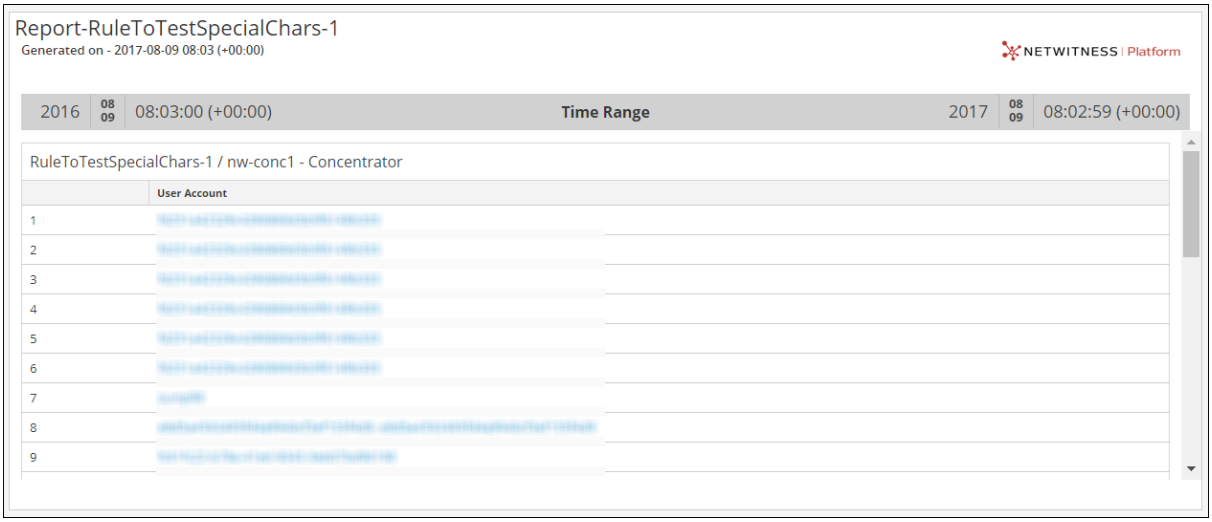
d. Enter a value for the CSV and Multi-value delimiters.

e. (Optional) In the Other Options field, do the following:

i. Click + and select SFTP, URL, or Network Share output action.

A row gets added with the selected output action.

ii. Select the appropriate options to send the report in PDF or CSV format, or both to the RE configured SFTP, or URL, or Network Share output action.



18. (Optional) To add a list in the Dynamic List panel, see Generate a List from the Scheduled Report.

19. (Optional) To choose a logo in the Logo panel, see "Manage and Select a Report Logo" section in Manage Lists, Rules or Reports.

Note: If you do not specify a logo, the default logo will be used.

20. Click **Schedule**.

The scheduled report executes as scheduled and provides the configured outputs.

After you create and Schedule a report, you can perform any of the following tasks:

- You can notify the email recipient when the report execution completes and send reports in PDF and CSV formats as attachments in the email.
- You can generate a list based on the scheduled report and view them in the **Lists** module.
- You can send a scheduled report in PDF or CSV format, or both to the RE configured SFTP location, or URL, or Network Share.
- You can change the default logo and view them in the scheduled report.

- You can modify the NetWitness Reporting Engine config details, by navigating to the Reporting Engine General Tab. See the "Reporting Engine General Tab" topic in the *Reporting Engine Guide*.

Examples

When you schedule reports in the Schedule Report view, by default, the results for the **Past** option are presented based on the user specified time zone. The following examples provide a clear picture on what results to expect when you select **Hours**, **Days**, **Weeks**, **Months**, or **Years** for the **Past** option based on the absolute or relative duration.

Note: By default, the relative duration checkbox is de-selected. This implies that the results for the **Past** option are presented based on the absolute duration.

- **Based on Absolute duration** - Absolute Duration allows a report to be scheduled at an absolute time with respect to the current time, excluding the seconds and considering the time interval as a whole. For example, 12.00pm is the absolute time with respect to the current time (12.45 pm).
  - Hours - Suppose that you select Hours and specify one hour. If the current user specified time is 4.20PM, the report is generated for the time range, 3.00PM to 4.00PM.
  - Days - Suppose that you select Days and specify one day. If the current date is August 27, 2014 and the current user specified time is 10.15AM, the report is generated for the range: August 26, 2014, 12.00AM to August 27, 2014, 12.00AM.
  - Weeks - Suppose that you select Weeks and specify one week. If the current date is August 27, 2014 2.30PM and the day is Wednesday, the report is generated for the range: Saturday, August 16, 2014, 12.00AM to Saturday, August 23, 2014, 12.00AM.
  - Months - Suppose that you select Months and specify one month. If the current date is August 27, 2014 2.30PM, the report is generated for the range:
    July 01, 2014, 12.00AM to July 31, 2014, 12.00AM.
  - Years - Suppose that you select Years and specify one year.If the current date is August 27, 2014 2.30PM, the report is generated for the range:
    January 01, 2013, 12.00AM to December 31, 2013, 12.00AM.
- **Based on Relative duration** - Relative Duration allows a report to be scheduled at a time relative to the current time which might vary based on the current time. For example, 12.45 pm is the relative time with respect to the current time (12.45 pm).
  - Hours - Suppose that you select Hours and specify one hour. If the current user specified time is 4.20PM, the report is generated for the time range, 3.20PM to 4.20PM.
  - Days - Suppose that you select Days and specify one day. If the current date is August 27, 2014 and the current user specified time is 10.15AM, the report is generated for the range: August 26, 2014, 10.15AM to August 27, 2014, 10.15AM.
  - Weeks - Suppose that you select Weeks and specify one week. If the current date is August 27, 2014 12.30PM and the day is Wednesday, the report is generated for the range: Thursday, August 21, 2014 12.30PM to Wednesday, August 27, 2014 12.30PM.
  - Months - Suppose that you select Months and specify one month. If the current date is August 27, 2014, 2.30PM the report is generated for the range:
    July 27, 2014 2.30PM to August 27, 2014 2.30PM.

- Years - Suppose that you select Years and specify one year.If the current date is August 27, 2014 2.30PM, the report is generated for the range: August 27, 2013 2.30PM to August 27, 2014 2.30PM.

Generate a List from the Scheduled Report

You can generate a list from the output of the scheduled report. Make sure that your lists are created in NetWitness prior to generating a list to schedule a report.

To generate a list from the Build Report view, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.
2. Click **Reports**.

   The Report view is displayed.
3. In the **Reports** panel, select a report and in Actions column, click  > **Schedule Report**.

   The Schedule Report view tab is displayed.
4. In the Output Actions section, in **Dynamic List** panel, click .

   The Generate List dialog box opens.
5. Click **Browse**.

   The List Selection panel is displayed.
6. Choose a list item and click **Select**.

   The list name gets populated in the List Name field.
7. Select a valid rule to filter the report results further based on the rule definition.
8. Select a value for the **Column** field.

   The column forms the values for the list that gets created.
9. If you want to overwrite the existing list, select the **Overwrite Existing List?** checkbox.
10. Click **Save**.

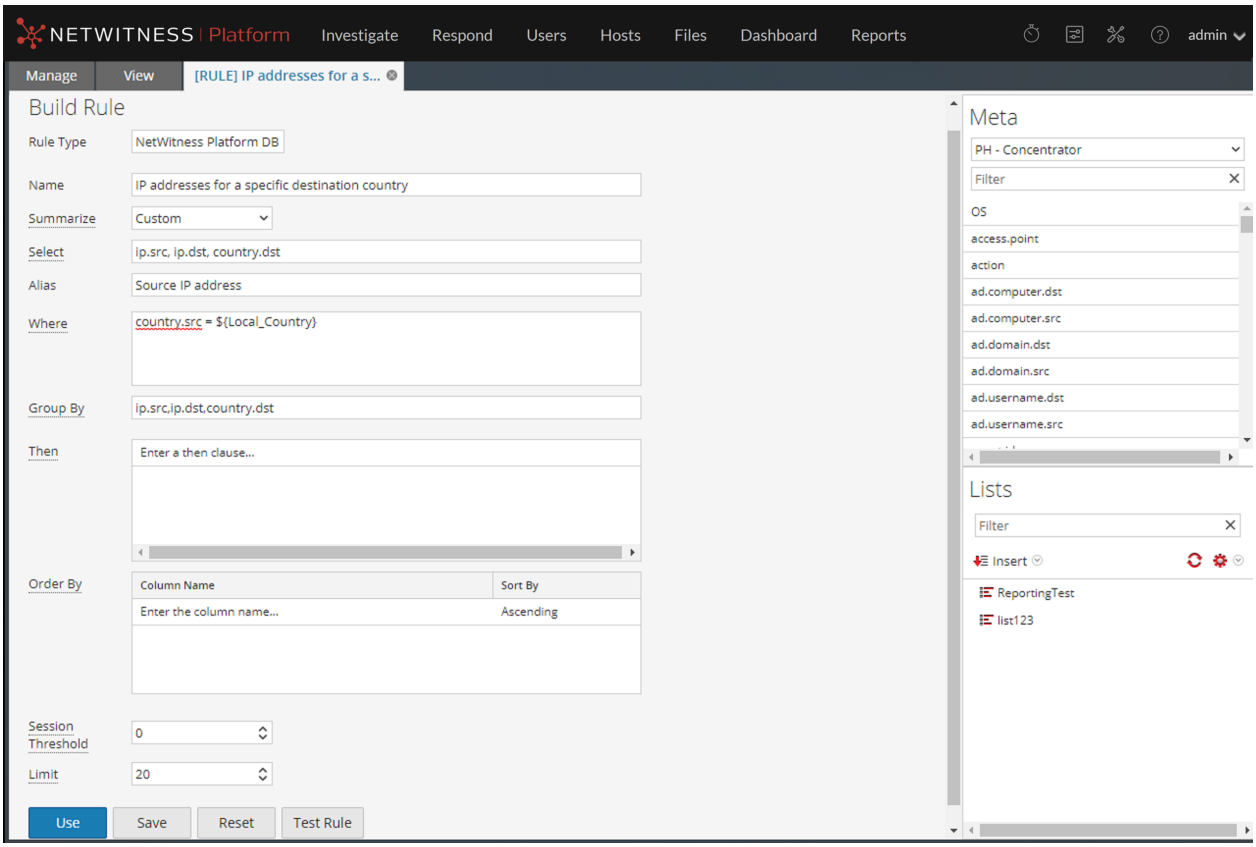
    The list name gets populated in the Generate List panel.

11. (Optional) Select a list from the Generate List panel and click to delete the selected list.
12. (Optional) Select a list from the Generate List panel and click to edit the list details.

Create a Parameterized Report Using Variable

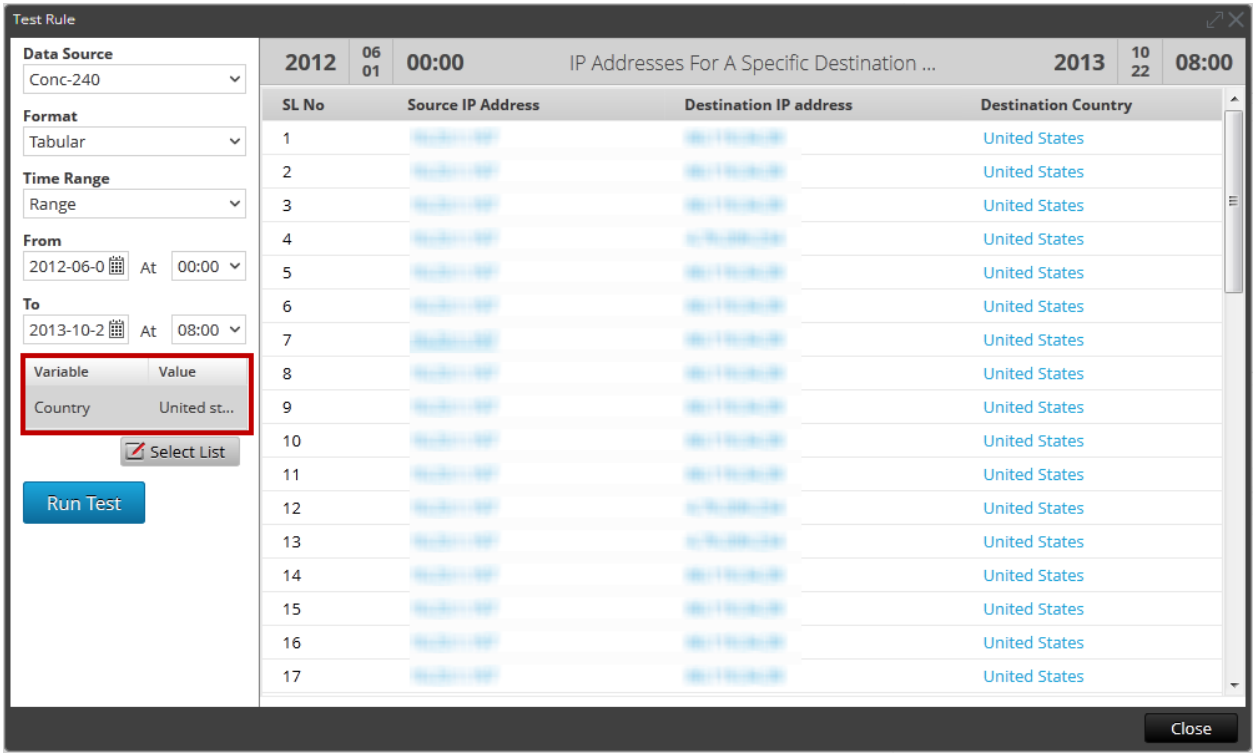
You use variables for reporting in the NetWitness Reporting module. Parameterized reporting allows you to specify values dynamically at runtime without changing the rule definition so you can view the results based on a particular value. You can achieve parameterize reporting by using variables in the query or rule. For information on adding a rule, see Configure a Rule. At runtime, you can enter the value for the variable or select the value from the list based on which the result set is displayed.

The syntax to specify the variable is as follows:



Description	Examples of Supported Syntax
Insert `$` before a variable. Enclose a variable within braces.	`columnname=${<variable>}`

The syntax to define the variable is the same for NetWitness DB and Warehouse DB data sources. When you assign the value of the variable in a Run Configuration, you must enclose the value within single quotes: `'<value>'`.



Some examples where a variable can be used are provided in this section.

View Source IP Addresses for a Specific Destination Country

The following is an example of a NetWitness DB rule to view the source and destination ip addresses for a specific destination country. Here the value for source country is defined as a variable `${local_country}`.

At runtime, you are prompted to enter the value for the variable. The figure below shows the `local_Country` variable where you can enter the value. If you enter the value as **United states**, all the source and destination ip addresses with destination country as United states are listed.

You can use the above rule to schedule a report. You can schedule two types of reports:

- Report with Dynamic Variables
- Iterative Report

Report with Dynamic Variables

Dynamic variables allows the user to specify the values for a variable defined in a rule while scheduling a report.

To schedule a report with Dynamic Variable, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

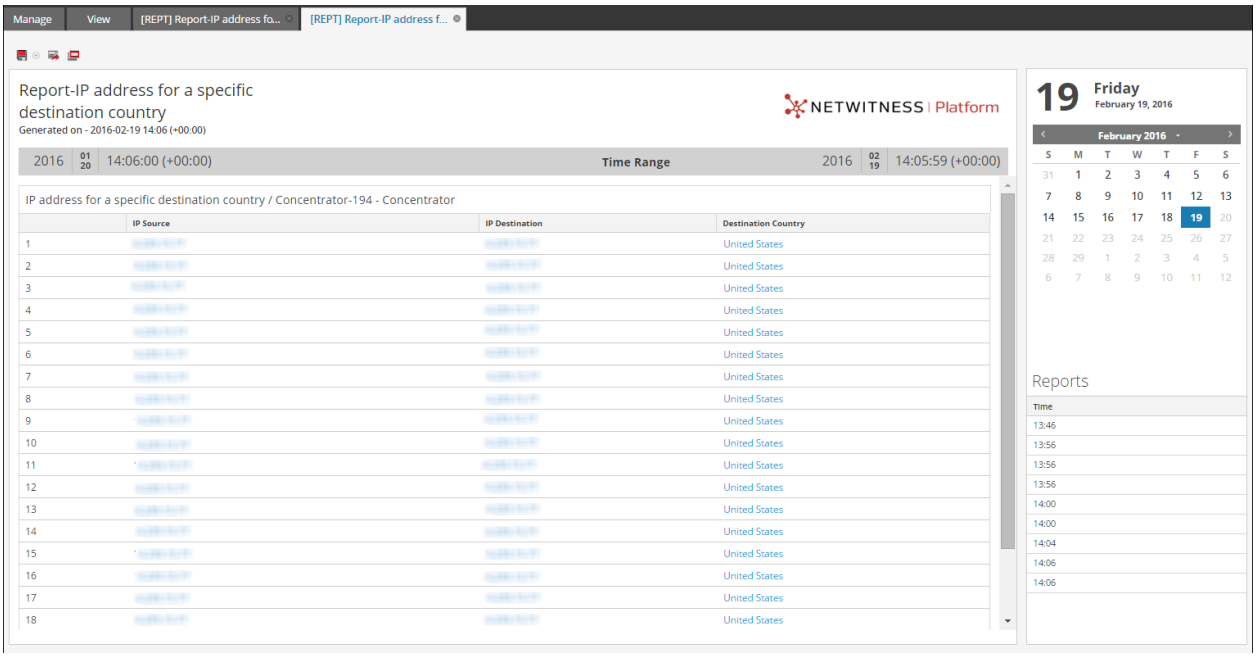
2. Click **Reports**.

   The Report view is displayed.

3. On the **Reports** panel, click + to create a report.
4. Enter the Report Name in the field.
5. Add the rule by drag and drop which has the user defined variable from the Rules tab.
6. Click **Schedule**.

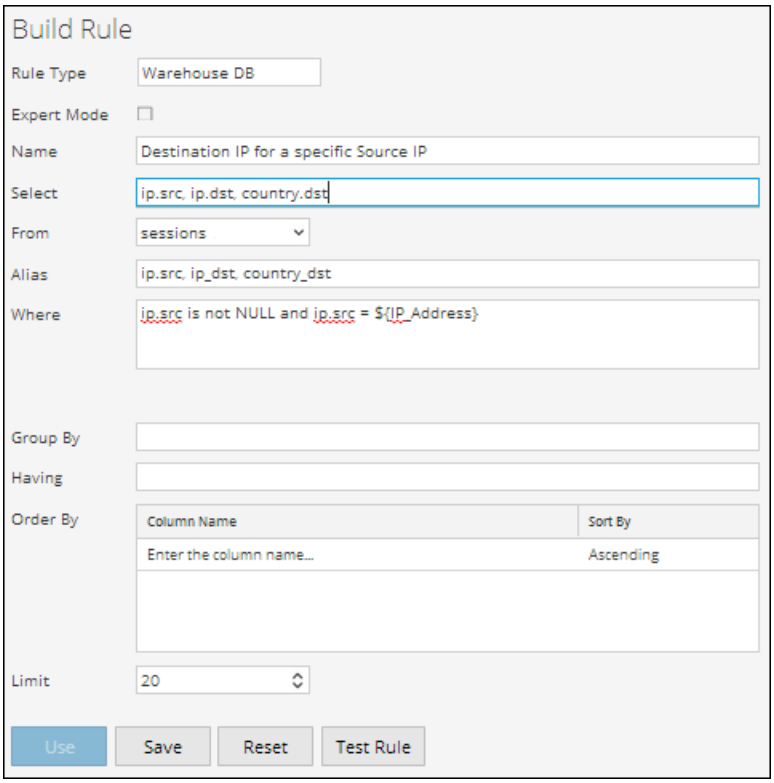
   The Schedule Report view tab is displayed.

7. To execute the reports as per the schedule, select the **Enable** checkbox.
8. In the **Schedule Name** field, enter a name for the schedule report configuration.
9. In the **NetWitness DB** drop-down, select the database.
10. From the Time Zone drop-down, select a time zone to display all the time-related data in a report output in the specified format.This setting is configurable from the Reporting Engine Explore view (/com.rsa.soc.re/configuration/reportoutputformatterconfig/reportoutputformatterconfig).
11. From the **Run** field, select the type of run schedule. (For example, Now or Hourly). Depending on the type of run schedule, do either of the following:
    - If you select a **Later** or **Monthly** run schedule, you must provide a value for the day and time in the respective field provided.
    - If you select an **Hourly** run schedule, you must specify the minutes in the **At Minute** field.
    - If you select a **Daily** run schedule, you must enter a time value in the **At** field.
    - If you select a **Weekly** run schedule, you must enter a value in the **At** field and also select the week days.



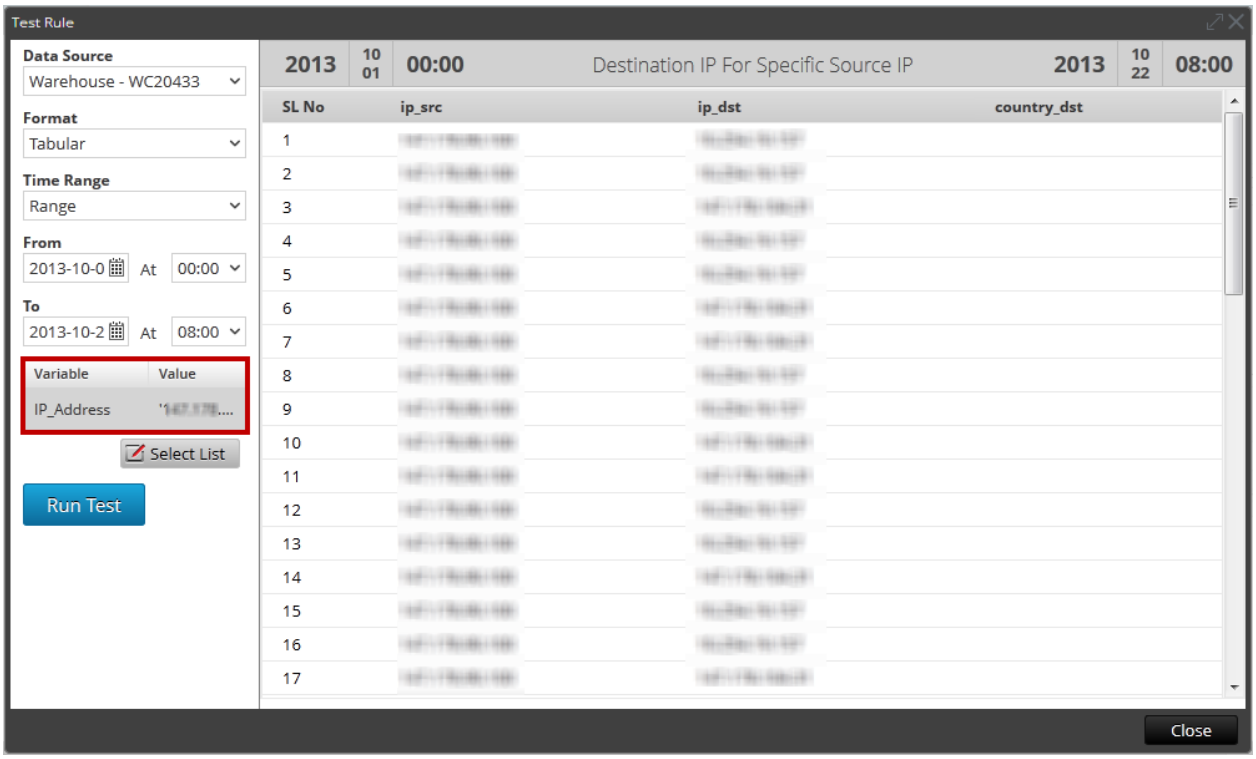
Note: While scheduling a report, if you select **Paste** option or **Range (specific/generic)** option or an end time range very close to the current time, you must ensure that the aggregate data in the data source is returned. If there is an aggregation delay in the data source, the end time you choose must account for the delay, otherwise reports lose non-aggregate data for that time range.

12. In the variables field, click .
13. Do one of the following:
    - Enter the value for the variable, or
    - Choose the list value for the variable.



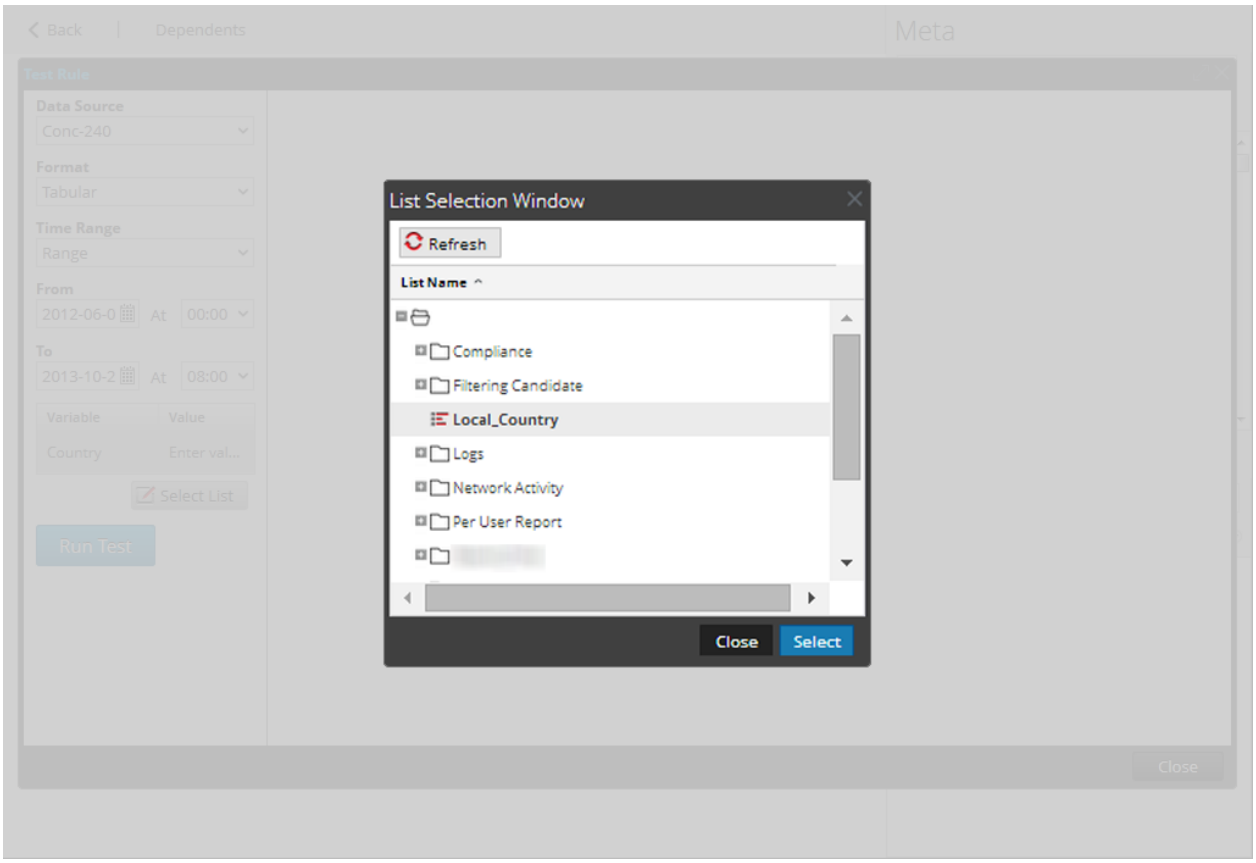
14. Click **Select**.
15. Click **Schedule**.

    The scheduled report executes as scheduled and provides the configured outputs.



View All Destination IP Addresses for a Source IP Address

The following is an example of a Warehouse rule to view all the destination IP addresses for a specific source IP. The source IP address `ip_src` is defined as a variable `${IP_Address}`.



At runtime, you are prompted to enter the source IP address. The figure below shows the `IP_Address` variable, and you can enter a valid source IP address. All the destination IP addresses with the specified source IP are listed.

Associate a Variable to a List of Values

You can associate the variable to a list. For example, you can create a list called `Local_Country` and enter all the country names as values. You can select the list `Local_Country` as the value for the variable `Local_Country`. At Run Configuration, the `Local_Country` list is populated and you can select the country based on which results are displayed.

Iterative Report

An iterative report generates a report for every value in the list.

To schedule an iterative report, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

3. On the **Reports** panel, click + to create a report.

4. Enter a Report name in the field.

5. Add the rule which has the user defined variable from the Rules tab.

6. Click **Schedule**.
   The Schedule Report view tab is displayed.

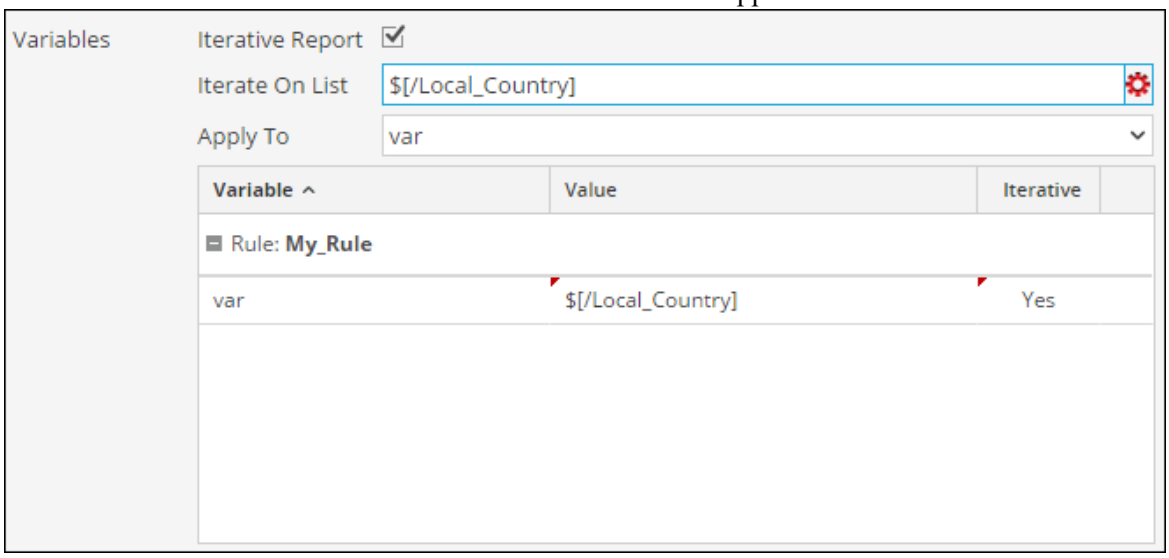
7. To execute the reports as per the schedule, select the **Enable** checkbox.
8. In the **Schedule Name** field, enter a name for the schedule report configuration.
9. From the **Data Source** field, select the data source.

> **Note:** If the data source is not listed, then ensure you have **Read** permissions set for the data source. This is applicable for NWDB and Warehouse data source. For more information, see "Configure Data Source Permissions" topic in the *Reporting Engine Configuration Guide*.

10. (Optional) From the **Warehouse Resource Pool** drop-down, select the pools or queues available in the cluster to schedule the report to run on either the pool or queue. This drop-down list is available only if you select a Warehouse DB report.

> **Note:** All the queues or pools you specified in the Explore page for the Reporting Engine are listed. If no pools or queues are configured in the Explorer page, this drop-down is disabled and the jobs are submitted to the clusters without any a queue or pool name.

Note: If the pool or queue configured in the report schedule is removed from the Cluster, then in the Capacity Scheduler, the queue name remains undefined. However, in the Fair Scheduler, the specified pool name will be created using the property `mapred.fairscheduler.allow.undeclared.pool`.

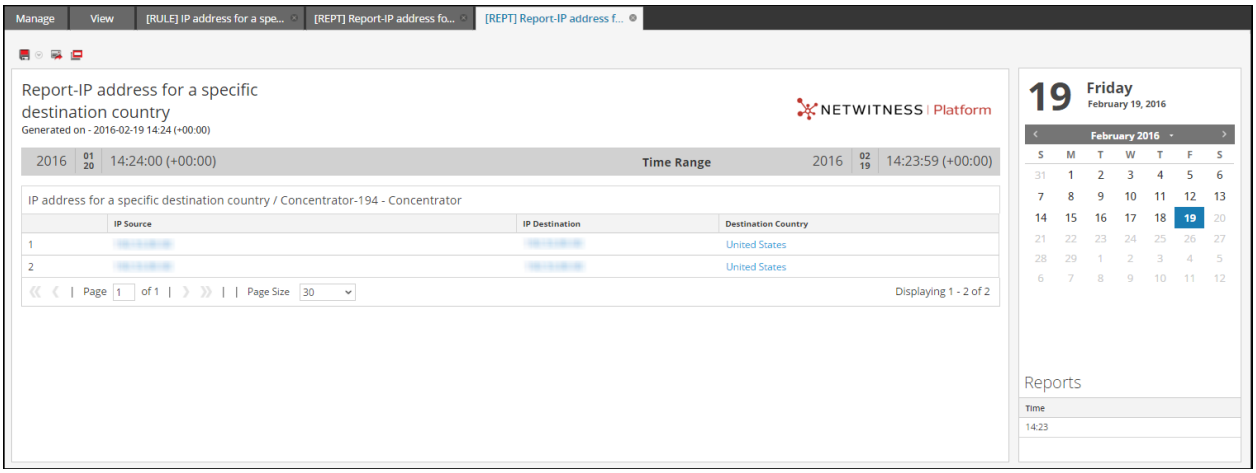


11. From the Time Zone drop-down, select a time zone to display all the time-related data in a report output in the specified format. This setting is configurable from the Reporting Engine Explore view (/com.rsa.soc.re/configuration/reportoutputformatterconfig/reportoutputformatterconfig).
12. From the **Run** field, select the type of run schedule. (For example, Now or Hourly). Depending on the type of run schedule, do either of the following:
    - If you select a **Later** or **Monthly** run schedule, you must provide a value for the day and time in the respective field provided.
    - If you select an **Hourly** run schedule, you must specify the minutes in the **At Minute** field.
    - If you select a **Daily** run schedule, you must enter a time value in the **At** field.
    - If you select a **Weekly** run schedule, you must enter a value in the **At** field and also select the week days.

    Note: While scheduling a report, if you select **Paste** option or **Range (specific/generic)** option or an end time range very close to the current time, you must ensure that the aggregate data in the data source is returned. If there is an aggregation delay in the data source, the end time you choose must account for the delay, otherwise reports lose non-aggregate data for that time range.
13. In the variables field, do the following:
    a. To run iterative reports, select the **Iterative Report** checkbox.
    b. To Iterate on List value, click .

       The List Selection Window opens.
    c. Choose a list and click **Select**.

       The list item selected gets added to the **Iterate on List** field.



d. Select the variable on which the selected list value has to be applied.

14. Click **Schedule**.
    The scheduled report executes as scheduled and provides the configured outputs.

The following figure shows the Iterative Report view.

Create a Report Using a Rule

You can create a report using a rule. When you create a report using a rule, a default report is created with this single rule. You can further edit the report to add more rules.

To create a report using a rule, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Choose any of the following:

   - Create a report using a rule when you create or edit the rule:

     a. In the **Rules** view, select a rule and click  > **Use**> **Report**.

     The Use Rule dialog is displayed.

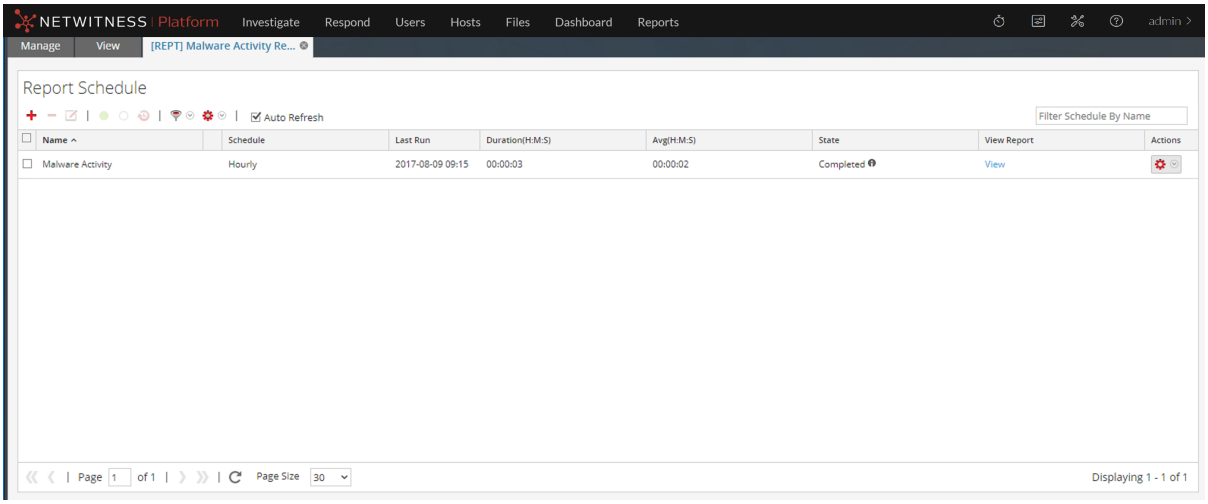
   - Select a rule in the Rules panel and click  in the Rule toolbar. From the drop-down menu, select **Use** > **Report**.

   - In the Rules panel click  > **Create Report**.

Note: Custom rules can be used to create a Report and If you select the view for the rule as "Area" or "Pie", a window pops up for **X-Axis** and **Y-Axis** inputs. By default, you can select only the first meta in **X-Axis**.

3. Select **New Report** or **Existing Report** based on your requirement.
4. Click **Select**.

View a Report



You can view a report or list of all reports. You can also view the scheduled reports to know the state of the scheduled report. If the scheduled report is in a stop or disable state, you can start or enable the scheduled report.

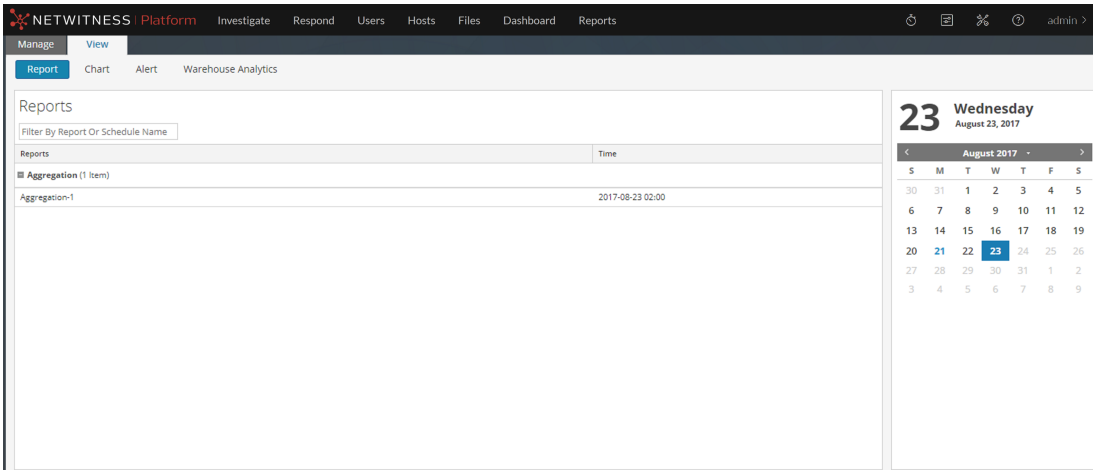
After you view a report, you can perform any of the following tasks:

1. You can print, save, email and view reports on full screen.
2. You can also select a date from the calendar to view a list of successfully run reports for the chosen date.

To view a report, perform the following:

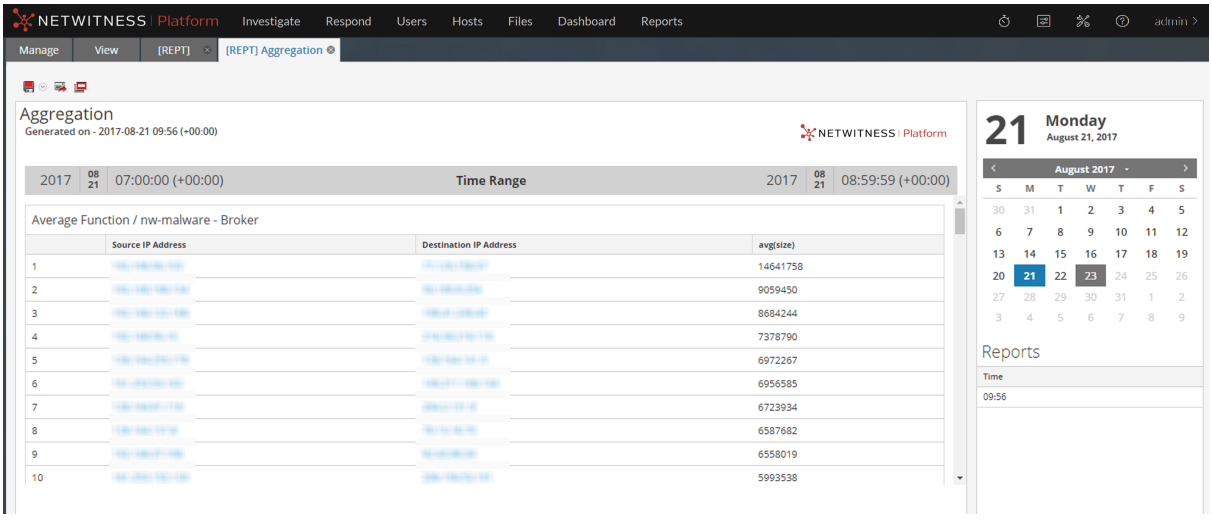
1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Reports**.
   The Report view is displayed.
3. In the **Reports** panel, select a report and in Actions column, click  > **View Scheduled Reports**.
4. Click the **#Schedules** column.
   The Schedule Reports view tab is displayed with the status of each of the scheduled report.

5. Select a scheduled report and click **View**.
   One of the following is displayed:
   - The selected report.
   - The Sub reports panel for a scheduled report having 'Iterative' selected.



For each value in the configured list a report is displayed.

> **Note:** If the report status is partial or complete, the "last run timestamp" and the "last run (seconds)" are updated. However, the average time taken to run the report is updated only when the report status is complete and not when it is partial.



To view a list of all reports, perform the following:

1. Go to **Reports**.
   The **Manage** tab is displayed.
2. Click **Reports**.
   The Report view is displayed.
3. In the **Reports** panel, click **View All Reports**.
   A list of reports along with their schedule name and time are displayed on the View tab.

> **Note:** If no list is displayed, select a date from the calendar to view a list of reports for that date.

4. Double-click on a report to view the details of the report.
5. You can select a scheduled report and print, save as PDF/CSV, send email notifications, or view it on full screen.

Investigate a Report

You can investigate a report by directly navigating to the Investigation View from the report. With the Investigate a report option, you can investigate each event mentioned in the report.

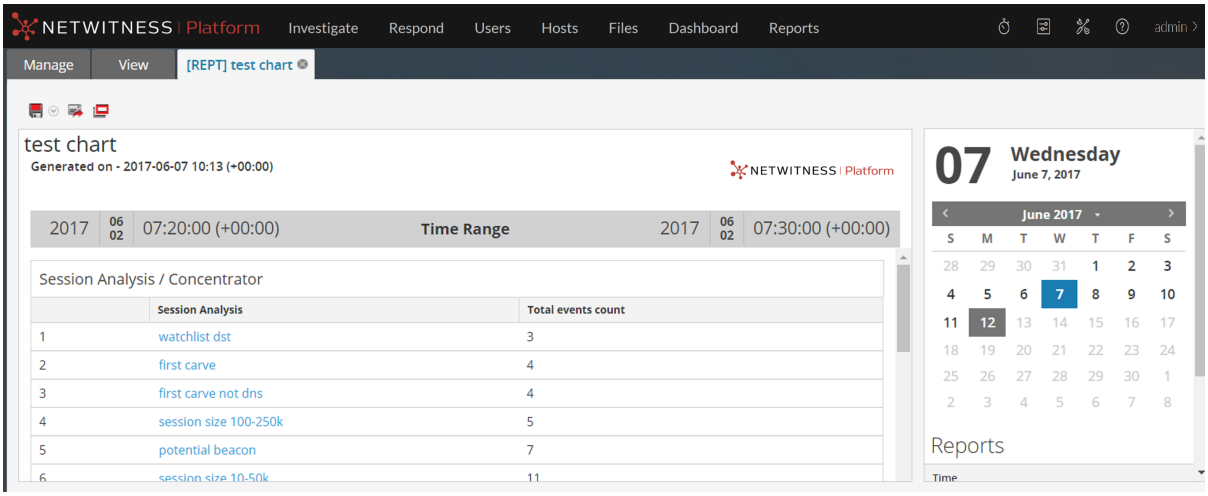
To investigate a report, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.



3. In the **Reports** toolbar, click **View All Reports**.

   The View All Reports tab is displayed.

   Note: If no reports are displayed in the View All Reports, select a date for which you want to display the reports.

4. Double-click the report name to view the report details.

   The Report details screen is displayed.

   You can click on the session analysis to investigate on the report.

Note: If you want to manually copy the result data and use it for investigation, make sure that the binary values are prefixed with 'hex:'.

Manage Lists, Rules or Reports

You can set access control, delete, edit, import, or export a list, rule or report.

Manage a List

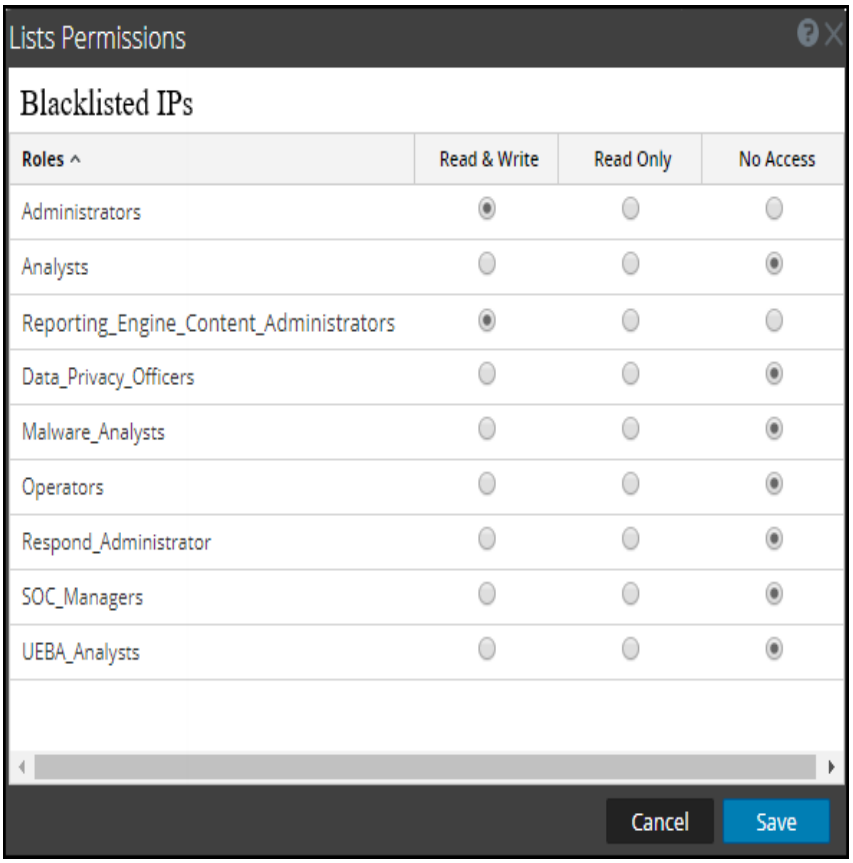
You can perform the following procedures to manage a list.

- Access Control for a List and List Group
- Edit a List
- Delete a List or List Group
- Duplicate a List
- Export a List or List Group
- Import a List or List Group
- Filter Unused Lists

Access Control for a List and List Group

You can set up the access permissions for the user roles to manage lists or list groups. The Reporting provides access control at the list and list group level. Only a user who has the right set of permissions can perform the tasks in the Reporting. The access control is managed by the administrator from the  (Admin) > Security > Roles tab.

As an administrator, you must ensure that the roles created for specific tasks have access to all the permissions higher in the hierarchy of roles.



Lists or list groups can be assigned to a specific set of user roles. When users log into NetWitness, they can access only those lists to which they belong. Users who belong to a user role with the **Read & Write** access permission have full access rights on the lists. Further, the access can be strengthened so that lists are accessed only by those who have the **Read Only** access.

Note: You must have **Read Only** permission for a list group to view the lists within that group.

For example, if you want **Security Analysts** to have access to all the lists in a list group, you can set the permission **Read & Write** at the list group level. And, if you do not want the **Operator** role to have access to a specific set of lists in a list group, you can set the permission **No Access** at the list group level.

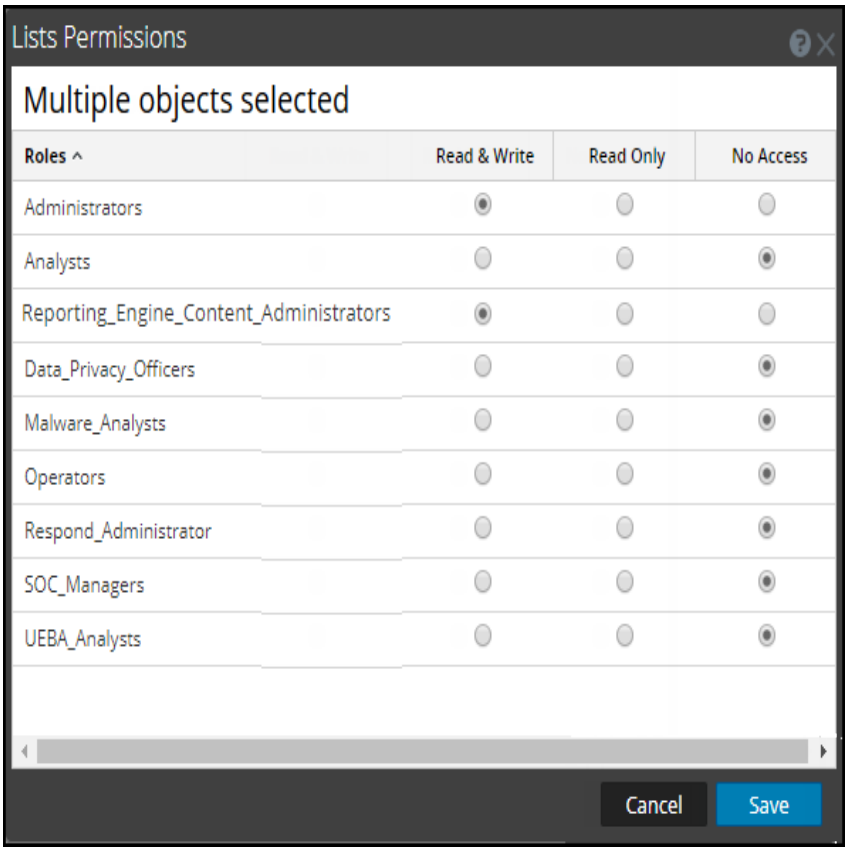
At the list or list group level, you can set the following access permissions for the user roles in NetWitness. For more information, see List View:

- Read & Write
- Read Only
- No Access

The following table lists the columns in the Lists Permissions panel:

Column	Description
Roles	Describes roles of the users logged into the NetWitness user interface.
Read & Write	Allows users to access, view, edit, delete, import, and export lists on the Lists view. Users can also change the permission on the rule.
Read Only	Allows users to only access and view the list on the lists view.
No Access	Doesn't allow users to access or view the lists.

Access Control for a List



To change the list permissions, you must select a list and set access permissions using the List Permissions panel.

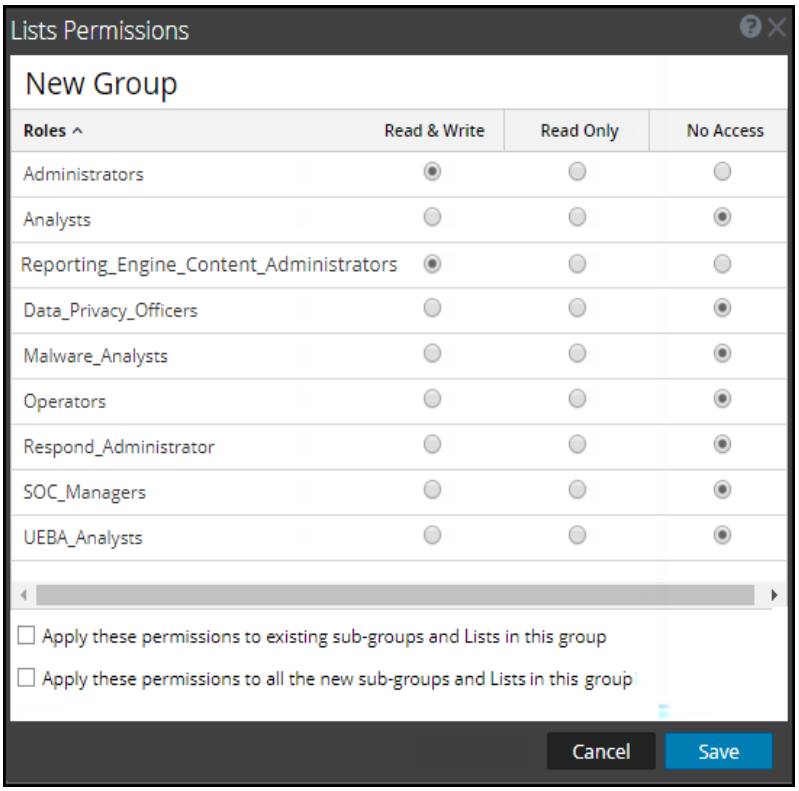
If you want to change the access permission for a specific user role, you must set it at the list level. Except for administrators (with full access in Reporting Engine service Config page) and reporting engine content administrators, the default permission set for all the user roles is **No Access** before applying job permissions.

Access Control Multiple Lists

You can select multiple lists at once and set access permissions using the Lists Permissions Panel. The access permission that you choose is applied to all the selected lists.

Note: The **"*"** beside the role name indicates that other permissions are available for the user role. If you want to change the access permission for the required user role, select the user role and change the access permission.

Note: If a user (other than ADMIN) creates a list, ADMIN cannot access that list.



Access Control for a List Group

To change the list group permissions, you must select a list group and set access permissions using the Lists Permissions panel.

If you want to change the access permission for a specific user role, you must set it at the list group level. The default permission set for all the other user roles is **No Access** before applying job permissions.

You can also apply permissions to existing subgroups and lists in the group by selecting the appropriate checkbox.

You can also apply permissions to all the new subgroups and lists in the group by selecting the appropriate checkbox.

The following scenarios describe defining permissions for list groups or subgroups and lists in the groups:

- Scenario 1: Permissions applied to list group or subgroup based on the user role.

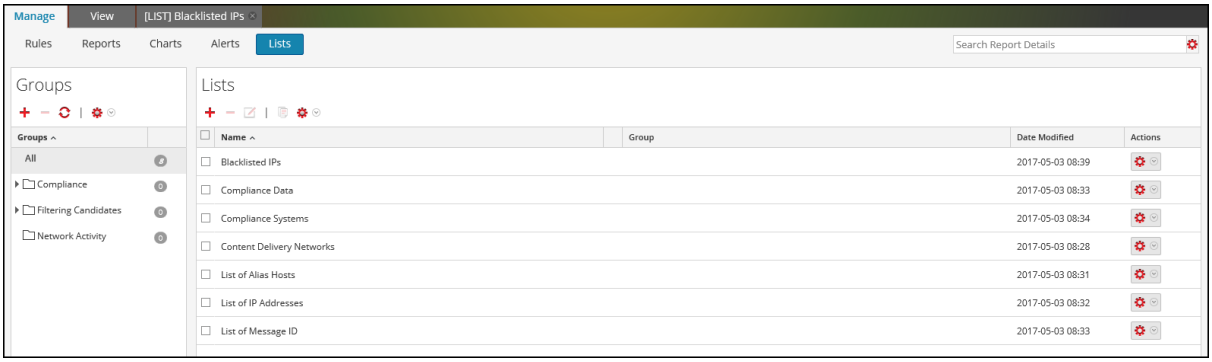
  Each of the levels will have a permission set depending on the user role. For example, if a list group is assigned the role of Security Analyst, permissions are set to Read & Write for the list group.

- Scenario 2: Permissions applied to subgroups and lists in the group.

  The access permissions that you set can be applied to subgroups and child objects of this group. Permission at the list group level will be inherited by the subgroups and lists in the group.

Role (Analysts)	Permissions applied to list group or subgroup based on the user role	Permissions applied to subgroup and lists in the group
Group	Read & Write	Read & Write
Subgroup	Read	Read & Write - Inherited
Lists	Read	Read & Write - Inherited

Access permission for a list or list group



Ensure that you have at least **Read & Write** access permission so that you can set access permissions for lists or list groups.

To set access permission for a list, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

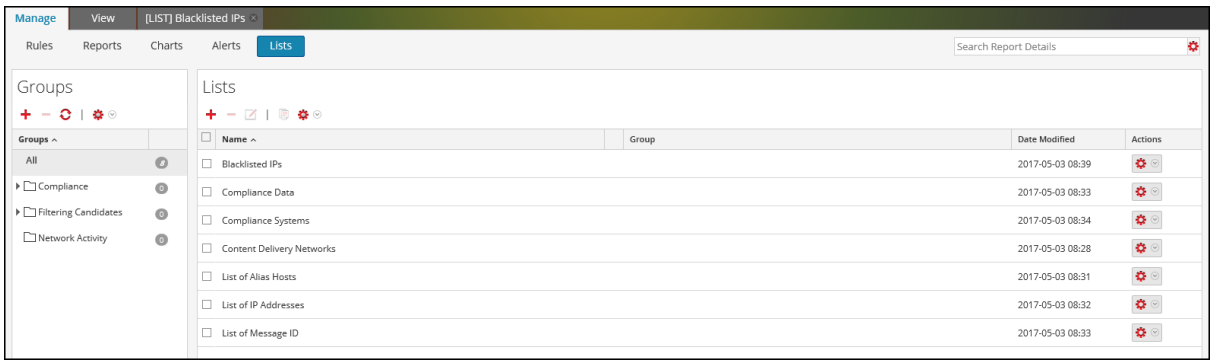
2. Click **Lists**.
   The List view is displayed.

3. In the **Lists** panel, select a list.

4. Click  > **Permissions** in the List toolbar.
   The List Permissions dialog is displayed.

5. Select the appropriate access permission for each of the user roles and click **Save**.

   A confirmation message that the permission is successfully set for the selected list is displayed.



To set access control for a list group, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Lists**.

   The List view is displayed.

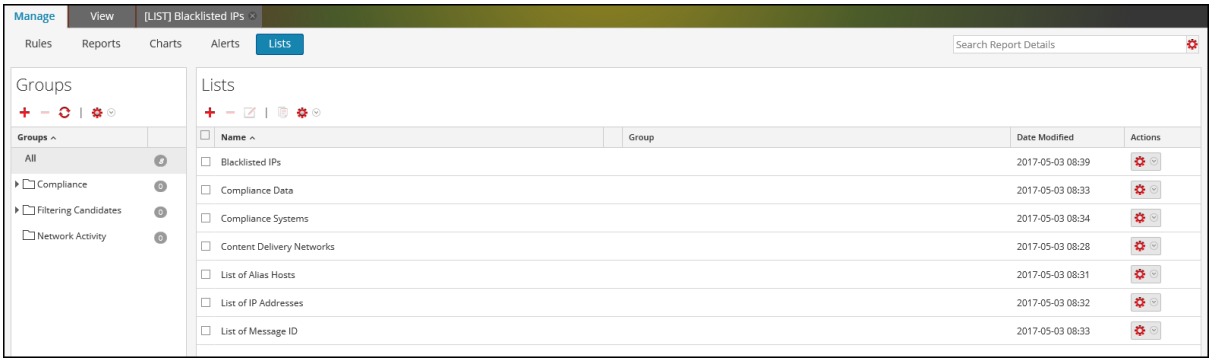
3. In the **Lists Groups** panel, select a list group.

4. Click  > **Permissions**.

   The List Permissions dialog is displayed.

5. (Optional) Select the appropriate checkbox to apply these permissions to existing subgroups and lists in this group.
6. (Optional) select the appropriate checkbox to apply these permissions to all the new subgroups and lists in this group.
7. Click **Save**.

   A confirmation message that the permission is successfully set for the selected list group is displayed.



Edit a List

To edit a list, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.
2. Click **Lists**.

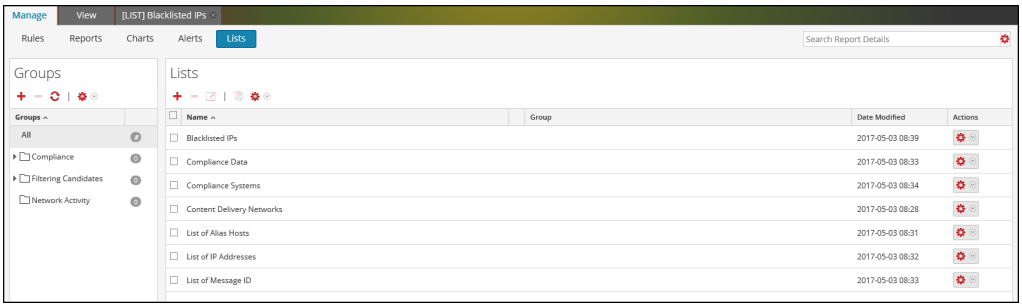
   The List view is displayed.

3. In the **Lists** panel, select a list that you want to edit and do one of the following.
   - Click  in the **Lists** toolbar.
   - In the **Lists** panel, click  > **Edit**.

     Note: You can only edit one list at a time.
4. Modify the required fields and add new values to the list.
5. Click **Save**.

   A confirmation message that the list is saved successfully is displayed.

Delete a List or List Group



To delete a list, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Lists**.

   The List view is displayed.

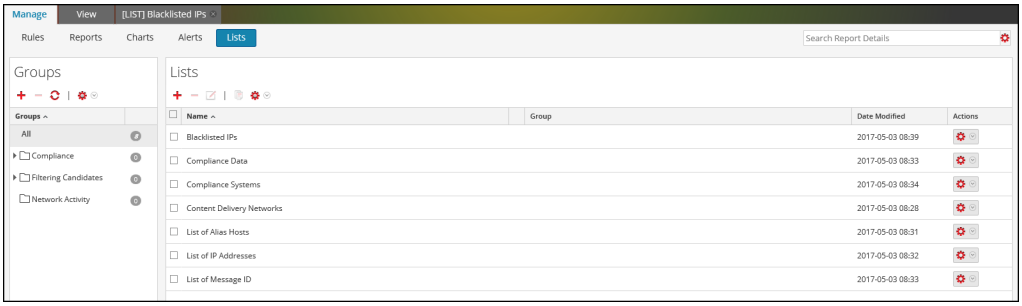
3. In the **Lists** panel, do one of the following:

   - Select a list or multiple lists that you want to delete and click in the **Lists** toolbar.
   - In the **Actions** column, click > **Delete**.

     Note: Before you delete a list, make sure that the list is not associated with any rule.

4. Click **Yes** to delete the list.

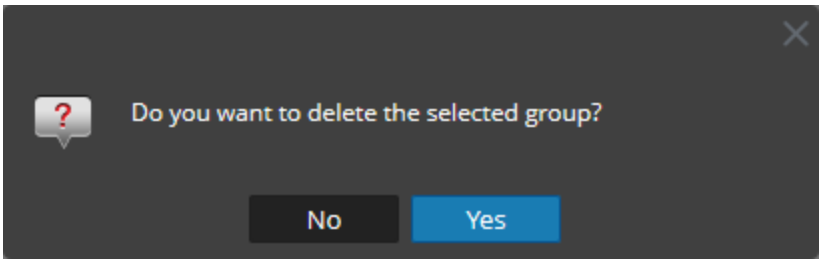
   A confirmation message that the list is deleted is displayed and the selected list is deleted from the List View panel.



To delete a list group, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.



2. Click **Lists**.

   The List view is displayed.

3. In the **Lists Groups** panel, select the group and click .

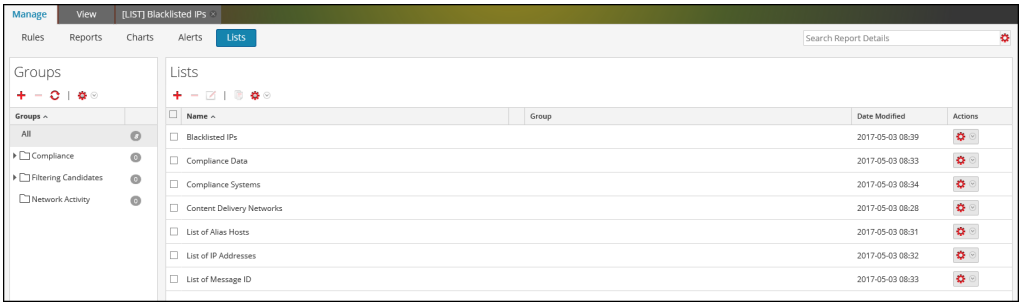
   A confirmation dialog is displayed.

Caution: If you delete a group, all subgroups and lists in that group are deleted.

4. Click **Yes** to delete the selected group.

Note: If you try to delete a list group that has lists referenced in a rule or an alert, a warning message that **Lists are referenced in a rule** is displayed.

Duplicate a List



To duplicate a list, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Lists**.

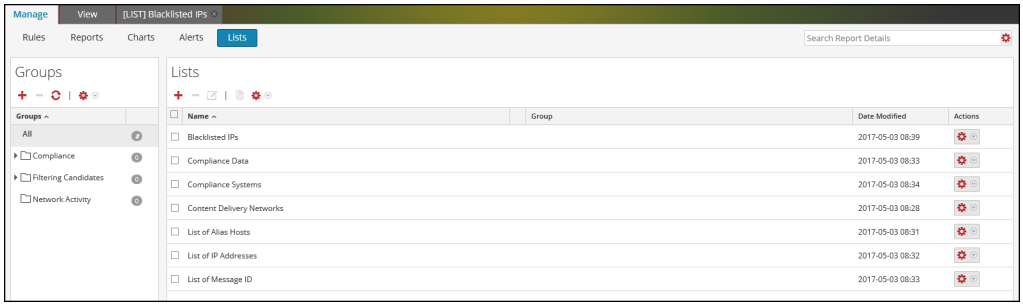
   The List view is displayed.

3. In the **Lists** panel, select a list that you want to duplicate.

   Note: You can only duplicate one list at a time.

4. In the **Lists** toolbar, click .

Export a List or List Group



To export a list, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Lists**.

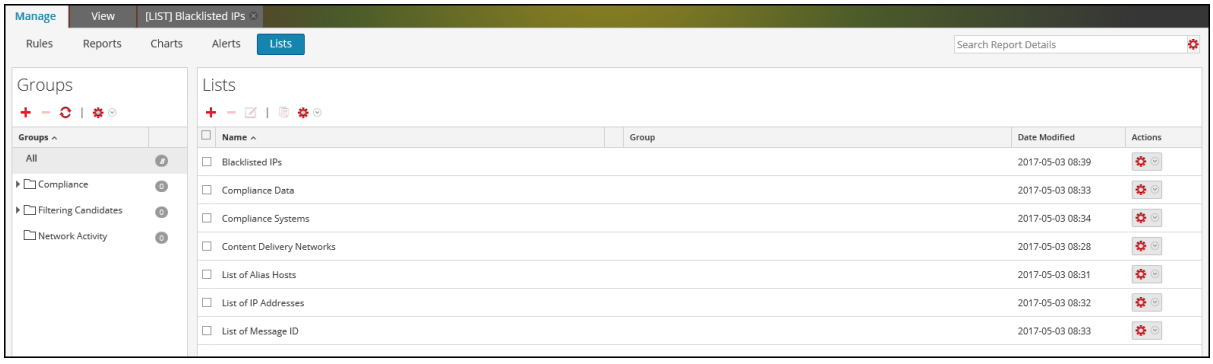
The List view is displayed.

3. In the **Lists** panel, do one of the following:

   - Select a list and click  **> Export** in the List toolbar.
   - In **Actions** column, click  > **Export**

   You can export multiple lists at a time. To select multiple lists, select the checkbox of the lists to be exported. A browser-specific export dialog may be displayed allowing you to open or save the file.

To export a list group, perform the following:



You can export selected list groups to an external file that can be later imported to NetWitness. If nothing is selected in the List Library panel, the entire list tree is exported. When you export, the result is a single export file in binary format.

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Lists**.

   The List view is displayed.

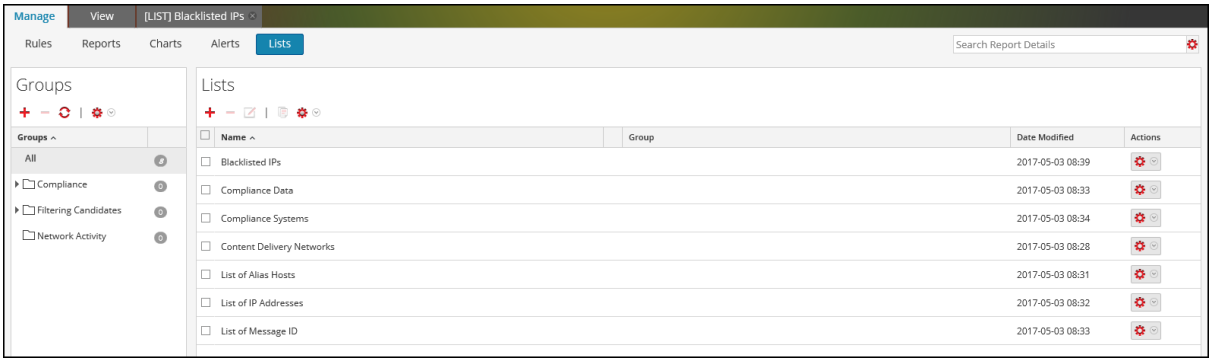
3. In the **Lists Groups** panel, select the list group containing the lists which you want to export.

4. Click  > **Export**.

   You can export multiple list groups at a time. To select multiple list groups, press and hold the CTRL button and select the list groups to be exported. The exported file is saved to the local drive.

Import a List or List Group

To import a list, perform the following:



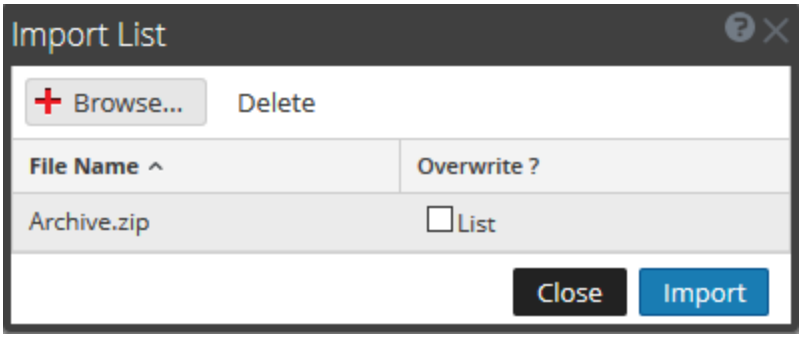
You can import lists from instances of NetWitness into the list tree in the List View panel. Lists must be in a valid binary file exported from a NetWitness instance.

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Lists**.

   The List view is displayed.



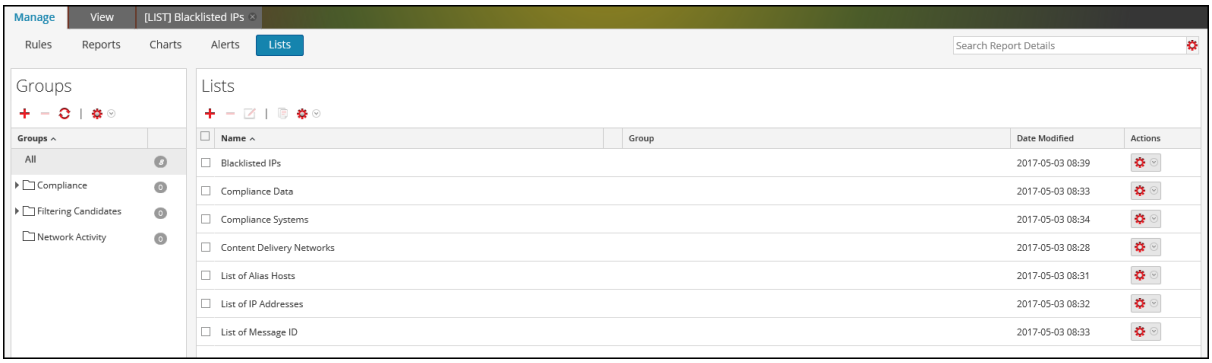
3. In the **Lists** toolbar, click  > **Import**.

   The Import List dialog is displayed.

   Note: You can import multiple lists at a time. To select multiple lists, press and hold the CTRL button and select the lists to be imported.

4. Click **Browse** and select archived file containing the lists.

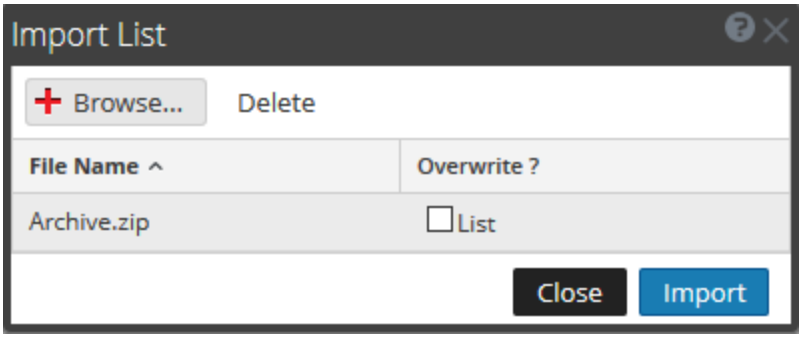
5. Click **Import**.



Note: During the import process, if a duplicate list exists and you do not select the overwrite option, the list is imported and no message about duplicate lists is displayed.

To import a list group, perform the following:

You can import list groups from instances of NetWitness into the list tree in the List Groups panel. Lists must be in a valid binary file exported from a NetWitness instance.



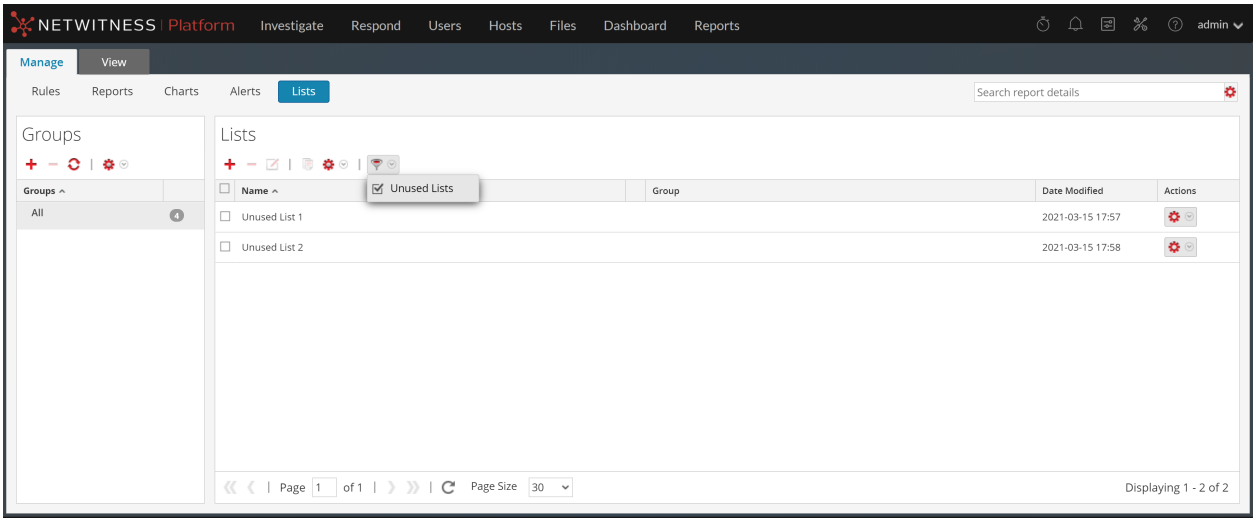
1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Lists**.

   The List view is displayed.

3. In the **Lists Groups** panel, click  > **Import**.

   The Import List dialog box is displayed.
4. Click **Browse** and select archived file containing the list groups.

   You can import multiple list groups at a time. To select multiple list groups, press and hold the CTRL button and select the list groups to be imported.
5. Click **Import**.



Note: During the import process, if a duplicate list group exists and you do not select the overwrite option, the list group is imported and no message about duplicate list group is displayed.

Filter Unused Lists

You can filter and delete the lists that are not used by any rule. To filter unused lists:

1. Go to **Reports**.
   The **Manage** tab is displayed.
2. In the **Lists** panel, click  and select **Unused Lists**.
   List of unused lists will get displayed.

3. [Optional] Delete the unused lists.
   For more information, see Delete a List or List Group.

Manage a Rule

You can perform the following procedures to manage a rule.

- Access Control for a Rule and Rule Group
- Delete a Rule or Rule Group
- Duplicate a Rule
- Edit a Rule
- View Dependents of a Rule
- Export a Rule or Rule Group
- Filter Unused Rules

Access Control for a Rule and Rule Group

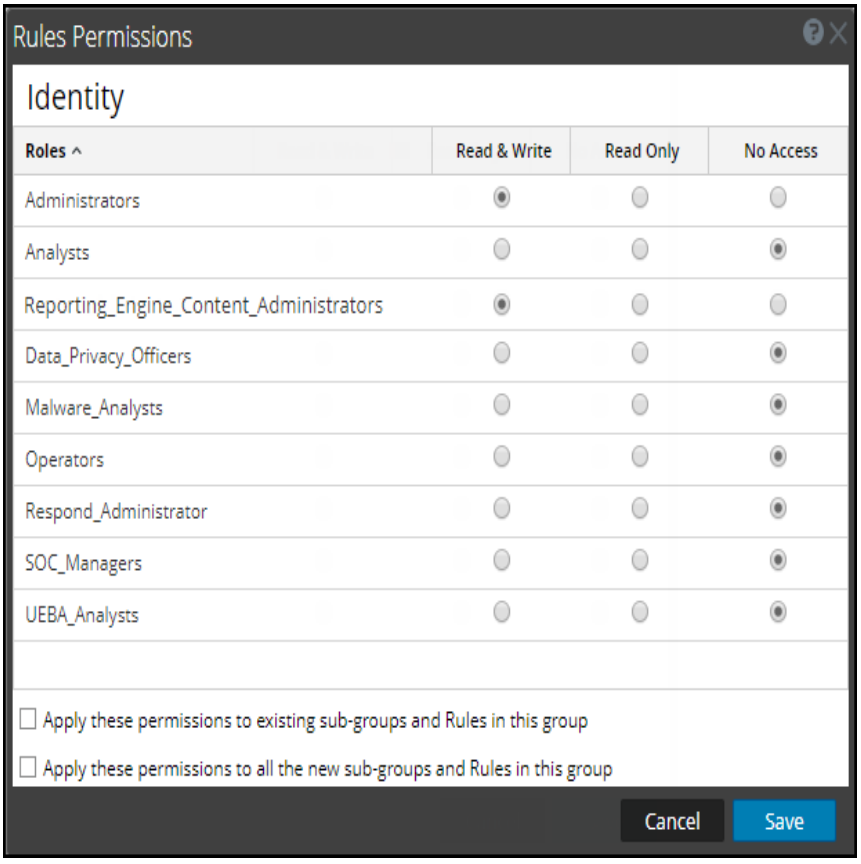
To set access permissions the user will have depending on the user role to manage a rule or rule group. The Reporting provides access control at the rule and rule group level. Only a user who has the right set of permissions can perform the tasks in the Reporting. The access control is managed by the administrator from the **(Admin) > Security > Roles** tab.

When creating users and user roles, the administrator must ensure that the roles created for specific tasks have access to all the permissions higher in the hierarchy of roles.

Rules or Rule Groups can be tied to a specific set of user roles so that when a user logs into NetWitness, the only rules they can access are rules accessible to the group to which the user belongs. Users that belong to a user role with the ‘Read & Write’ access permission have full access rights on the rule. Further, the access can be tightened so that rules are accessed only by those who have the ‘Read Only’ access.

Note: You must at least have ‘Read Only’ permission on a group to view the rules within that group.

At the rule level, you can set the following access permissions for the user roles:

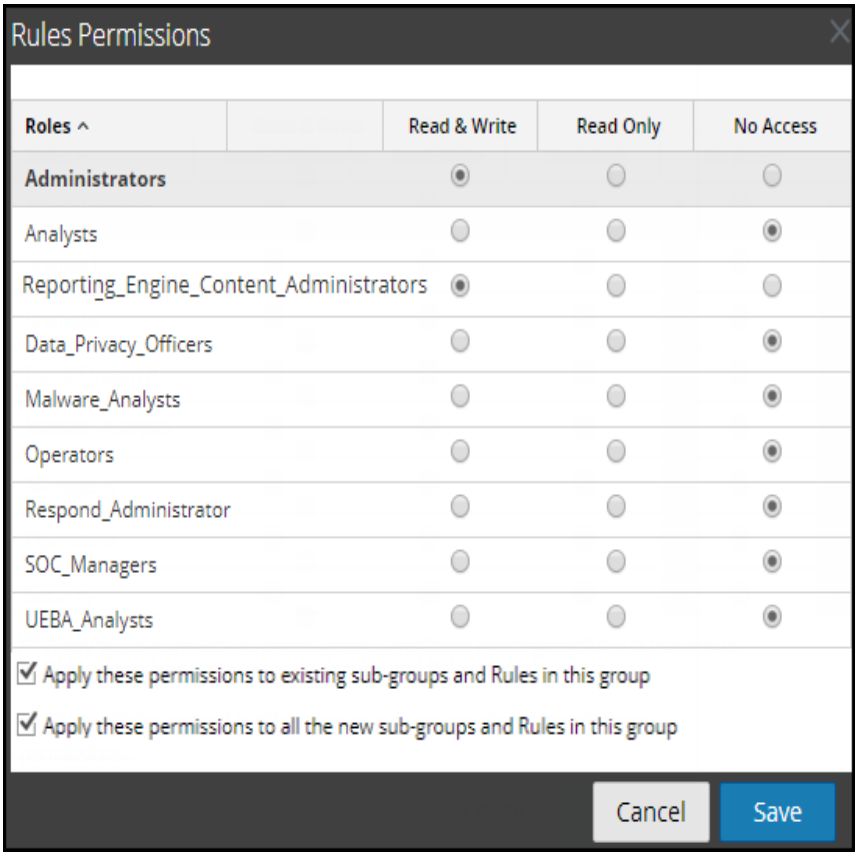


- Read & Write
- Read Only
- No Access

Suppose, you want the **Security Analysts** to have access to all the rules in a Rule Group, you can set the permission '**Read & Write**' at the Rule Group level. And, if you do not want the **Operator** role to have access to a specific set of rules in a rule group, you can set the permission '**No Access**' at the Rule Group level. The permission is set only for the rule group but not the rules or subgroups in the Rule Group.

Access Control for a Rule Group

When you want to change the rule group permissions, you must select a rule group and set access permissions using the Rule Permissions panel.



Before applying rule group permissions, the default permission set for all the user roles is 'No Access' permission, and the checkboxes are deselected.

If you want to change the access permission for a specific user role, you must set these at the rule group level, as shown in the figure. Suppose, you want the **Administrators** to have access to all the rules in a Rule Group, you can set the permission '**Read & Write**' in the Rule Group Permissions panel.

You can also apply permissions to existing subgroups and Rules in the group by selecting the appropriate checkbox.

You can also apply permissions to all the new subgroups and Rules in the group by selecting the appropriate checkbox.

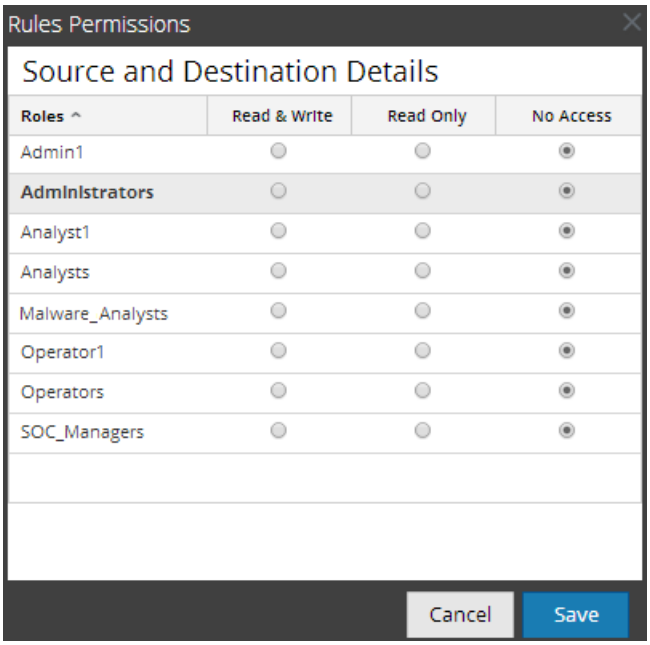
You can also apply permissions to subgroups and rules in the group by selecting the checkbox.

The two scenarios are explained in brief:

- Scenario 1: Permissions applied to Rule Group/ Sub Group/ Rules based on the user role.
- Scenario 2: Permissions applied to Sub Group and Rules in the Group.

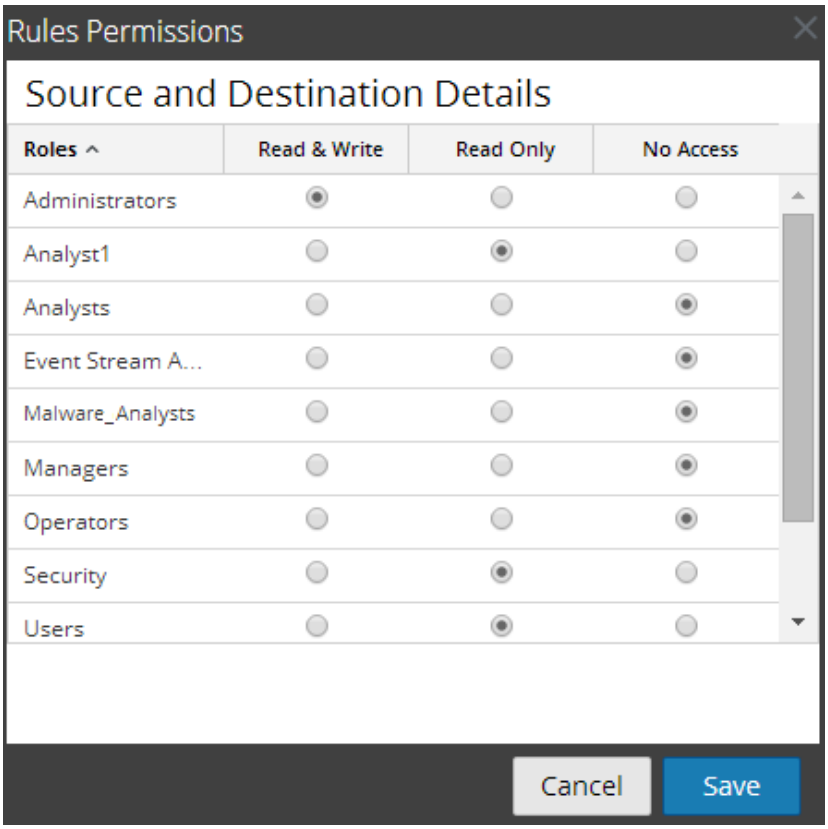
Role (Analysts)	Permissions applied to Rule Group/ Sub Group/ Rules based on the user role	Permissions applied to Sub group and Rules in the Group
Group	Read & Write	Read & Write
Sub Group	Read	Read & Write - Inherited
Rules	Read	Read & Write - Inherited

The access permissions that you set can be applied to subgroups and child objects of this group.



The Rule Group will be assigned the role of a **Security Analyst** and permissions are set to **Read & Write** rule group.

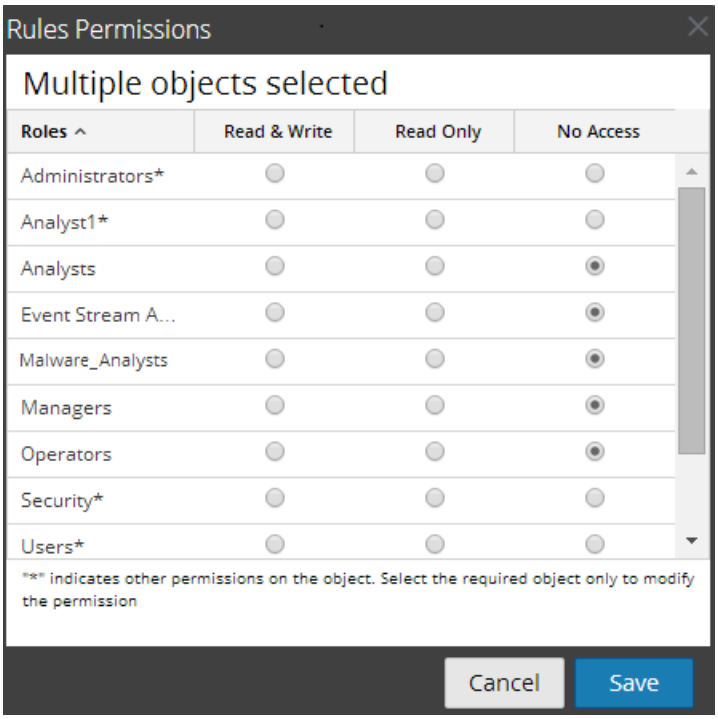
For scenario 1, each of the levels will have a permission set depending on the user role. For scenario 2, the permission at the Rule Group level will be inherited by the Sub Group and Rules in the Group.



Access Control for a Rule

When you want to change the rule permissions, you must select a rule and set their access permissions using the Rule Permissions panel.

Before applying the Rule permissions, the default permission set for all the user roles is 'No Access' permission and the checkbox is deselected.



If you want to change the access permission for a specific user role, you must set these at the rule level, as shown in the figure. Suppose, you want the **Administrators** to have access to a specific rule, you can set the permission '**Read & Write**' in the Rule Permissions panel.

Access Control for a Rule When Multiple Rules are Selected

When you want to change permissions of multiple rules, you can select multiple rules at a time and set their access permissions using the Rules Permissions Panel. The access permission that you choose will be applied to all the selected rules.

Note: The '*' besides the role name indicates the other permissions available on the user role. If you want to change the access permission for the required user role, select the user role and change the access permission.

Log in as a specific user and view the access details

When you log in to the NetWitness UI as a user having 'Read access' permission, all the rules will be denoted with the symbol (📖) and when you click on the symbol the 'Read Only' callout is displayed on the Rules panel.

When you log in to the NetWitness

UI as a user not having 'Read & Write' access permission on a Rule, all the rules will be denoted with the symbol ( ) and the rules appear grayed out on the Rules List panel.

The following figure shows the Rules panel when logged in with minimal 'Read & Write' access permission.

Name	Type	Group	Date Modified	Actions
*(raw_log)-RULE	Warehouse	Aggregate Function	2014-07-13 09:46	
[redacted]	Warehouse	Regular	2014-07-16 07:34	
Accounts Created	NetWitness DB	Identity Management	2014-07-14 10:56	
Accounts Created SAW	Warehouse	Compliance_old	2014-07-14 09:40	
Accounts Created SAW	Warehouse	Warehouse	2014-07-25 09:48	
Accounts Created SAW(1)	Warehouse	Warehouse	2014-07-25 09:54	
Accounts Deleted	NetWitness DB	Identity Management	2014-06-26 08:35	

Note: If a user (other than administrator) creates a rule, ADMIN cannot access that rule.

Tabular Listing

The following table lists the columns in the Rules Permissions panel:

Column	Description
Roles	The role of the user logged into the NetWitness user interface.
Read & Write	The user can access, view, edit, delete, import, and export rules on the Rules view. The user can also change the permission on the rule.
Read Only	The user can only access and view the rule on the Rules view
No Access	The user cannot access or view the rule for which this permission is set.

Set Access Control for a Rule

You can set access control for a rule. The Reporting Engine provides access control at the rule level. Only a user who has the right set of permissions can perform tasks on the rule. The administrator when creating users and roles must ensure that the roles created for specific tasks have access to all the permissions higher in the hierarchy of roles.

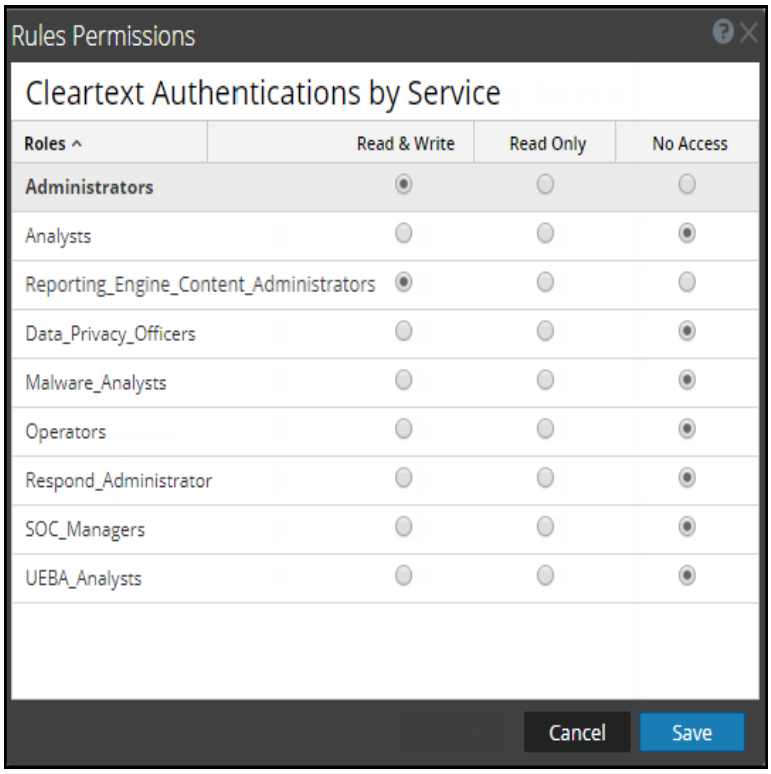
At the rule level, you can set the following access permissions for the user roles in NetWitness:

- Read & Write – View or edit the rules in the rule group.
- Read Only – View the rules in the rule group.
- No Access – Cannot view or edit the rules in the rule group.

Prerequisites

Make sure that you have a minimal 'Read & Write' access permission to set access permissions for a rule.

To set access control for a rule, perform the following:



1. Go to **Reports**.

   The Manage tab is displayed.

2. In the **Rules** panel, select the rule.

3. Click  > **Permissions** in the Rule toolbar.

   The **Rules Permissions** dialog is displayed.

4. Select the following appropriate access permission for the user role and click **Save**.
   - Read & Write
   - Read Only
   - No Access

Set Access Control for a Rule Group

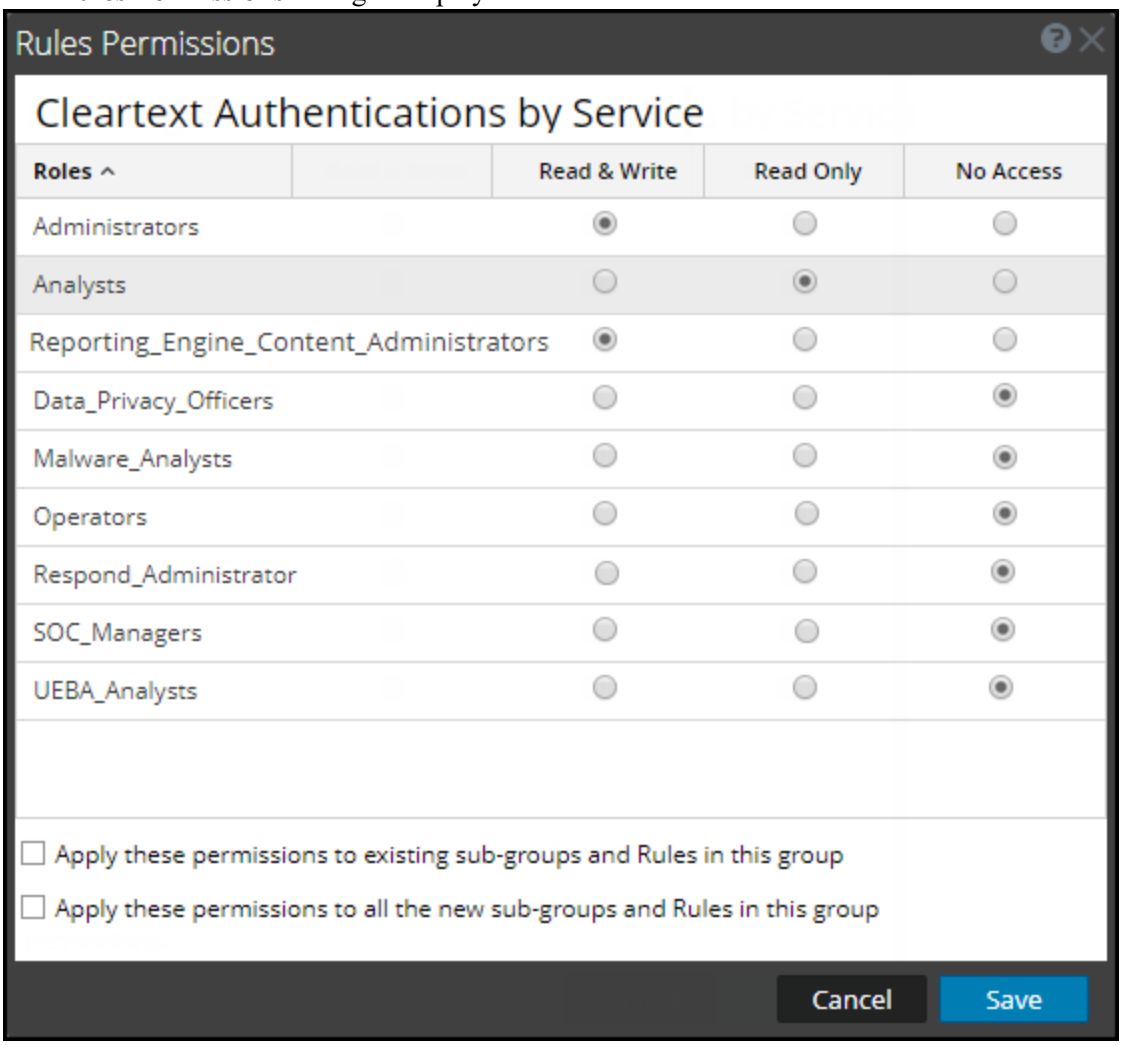
You can set access control at the rule group level. Only a user who has the right set of permissions can perform the tasks on the rule. The administrator when creating users and roles must ensure that the roles created for specific tasks have access to all the permissions higher in the hierarchy of roles.

At the rule group level, you can set the following access permissions for the user roles in NetWitness:

- Read & Write – View or edit the rules in the rule group.
- Read Only – View the rules in the rule group.
- No Access – Cannot view or edit the rule in the rule groups.

Prerequisites

Make sure that you have a minimal 'Read & Write' access permission to set access permissions for a rule group.



To set access control for a rule group, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

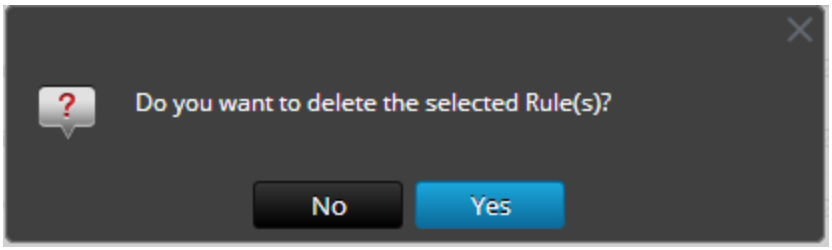
2. In the **Rules Groups** panel, select the rule group and Click and select **Permissions**.

   The **Rules Permissions** dialog is displayed.

3. (Optional) Select the appropriate checkbox to apply these permissions to existing subgroups and Rules in this group.
4. (Optional) Select the appropriate checkbox to apply these permissions to all the new subgroups and Rules created in this group.
5. Click **Save**.

   A confirmation message that permission is successfully set for the selected rule group is displayed.

Delete a Rule or Rule Group



To delete a rule, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

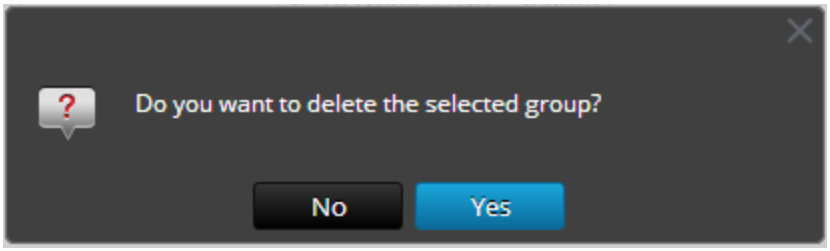
2. In the **Rules** panel, do one of the following.
   - Select a rule and click − in the Rule toolbar.
   - Click ⚙ > **Delete**.

     A confirmation dialog is displayed.

   Note: If a rule is being used in a report, a warning that the rule is in use and cannot be deleted is displayed.

3. Click **Yes** to delete the rule.

   A confirmation message that the rule is deleted successfully is displayed and the selected rule is deleted from the Rules panel.



To delete a rule group, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. In the **Rules Groups** panel, select the rule group that you want to delete.
3. Click −.

   A confirmation dialog is displayed.

   Note: If any one of the rules in the group is being used in reports, a warning that the rule is in use and cannot be deleted is displayed.

4. Click **Yes** to delete the group.

   A confirmation message that the group is deleted successfully is displayed and the selected group is deleted from the Rule Groups panel.

Duplicate a Rule

To duplicate a rule, perform the following:

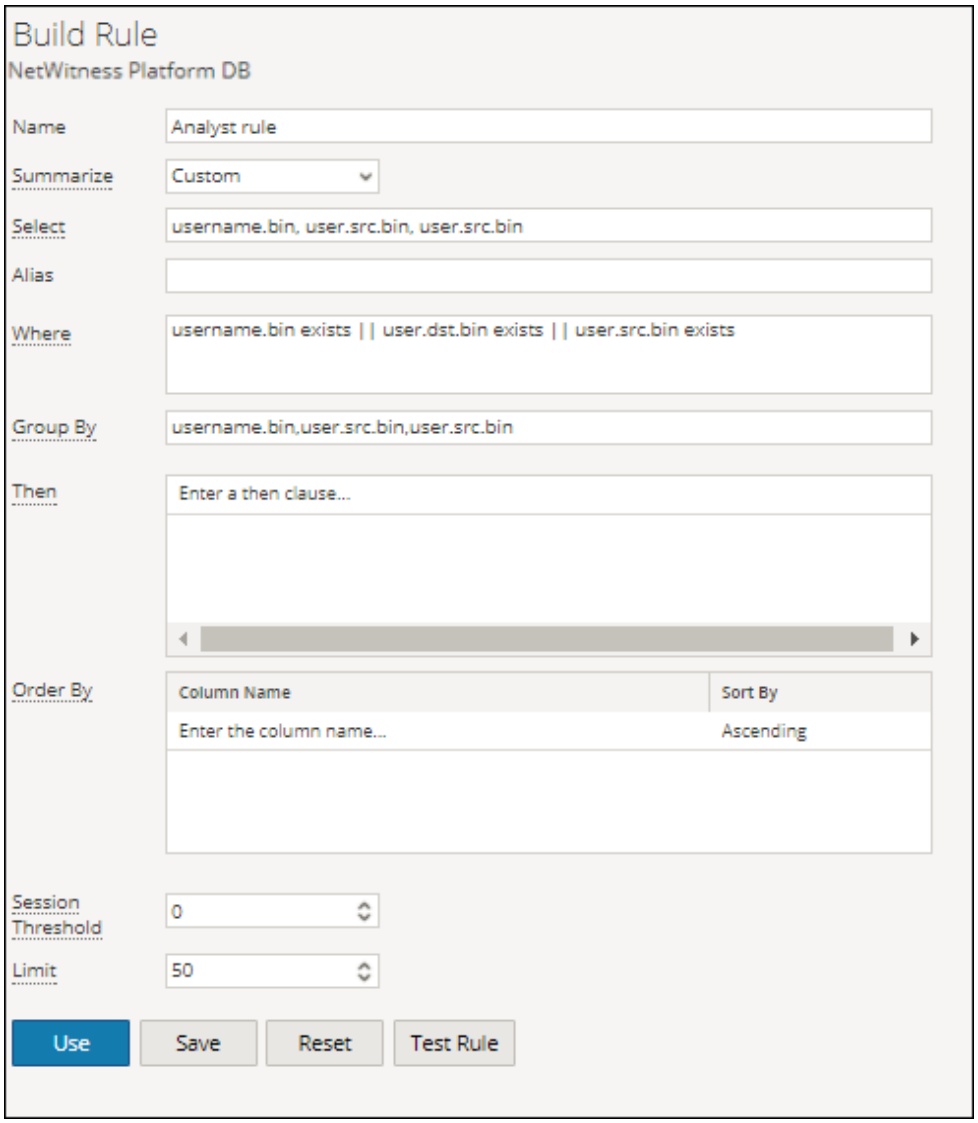
1. Go to **Reports**.

   The Manage tab is displayed.

2. In the **Rules** panel, select a rule that you want to duplicate.
3. In the Rule toolbar, click .

Edit a Rule

To edit a rule, perform the following:



1. Go to **Reports**.

   The Manage tab is displayed.

2. In the **Rules** panel, do one of the following:

   - Select a rule and click  in the Rule toolbar.
   - Click  > **Edit**.

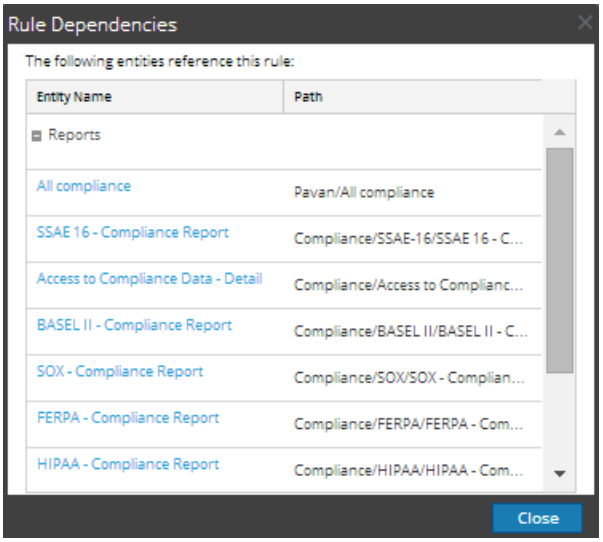
     The Build Rule view tab is displayed.

Note: If a rule is edited, the updated rule definition is applied to the Reports, Charts, and Alerts where the rule is included.

3. Modify the required fields.
4. Click **Save**.

   A confirmation message that the rule is saved successfully is displayed.

When you edit a rule, ensure to re-select the Rule for which you want the Chart to be generated, so that the edited rule is applied. If you do not re-select the Rule and attempt to save or test the rule, the rule is saved and a warning message is displayed.



View Dependents of a Rule

You can view dependents of a rule. You must traverse a rule list, select a rule for which you want to identify the dependency over a report, chart, or alert.

The following figure shows the Rule View where you select the rule 'Access to Compliance Data Details'.

The following figure shows the dependency of the rule over alerts and reports.

The following table lists the various columns in the Rule Dependencies dialog and their description.

Column	Description
Entity Name	The name of the entity referencing the rule.
Path	The path where the entity is located in the user interface.

To view dependents of a rule, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Rules**.

   The Rule view is displayed.

3. In the **Rules** panel, select a rule and in Actions column, click > **Dependents**.

   The Rule Dependencies dialog is displayed.

Export a Rule or Rule Group

Note: Make sure that you have rules in the rule group.

To export a rule, perform the following:

1. Go to **Reports**.

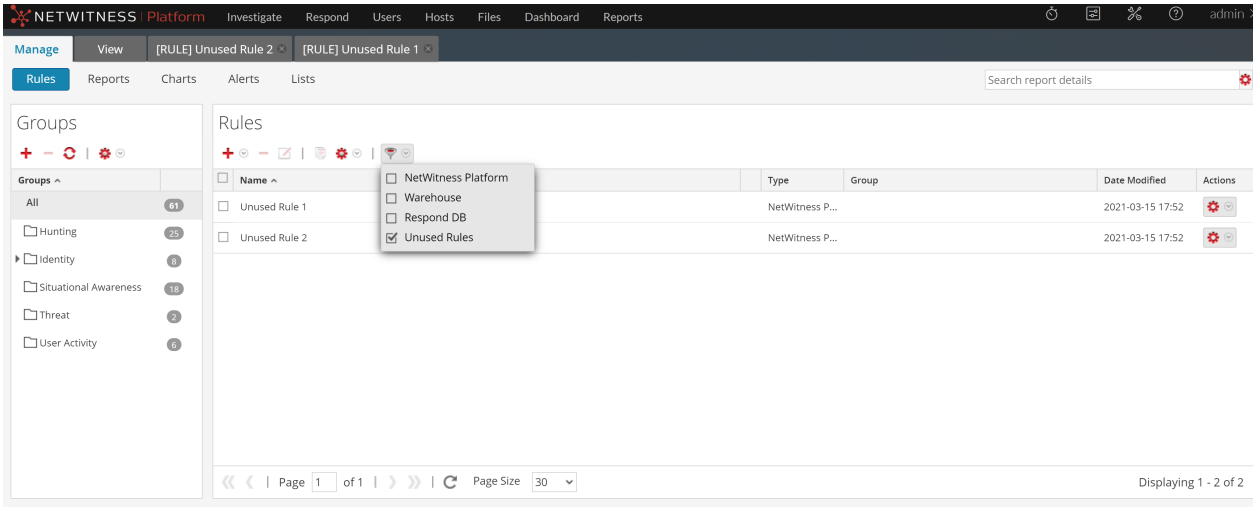
   The Manage tab is displayed.

   In the **Rules** panel, do one of the following:

   - Select a rule and click > **Export** in the Rule toolbar.
   - Click > **Export**.

2. A browser-specific export dialog may be displayed, allowing you to open or save the file. You can export multiple rules at a time. To select multiple rule, press and hold the CTRL button and select the rules to be exported.

To export a rule group, perform the following :



1. Go to **Reports**.
   The Manage tab is displayed.
2. In the **Rules Groups** panel, select the rule group containing the rules which you want to export. You can export multiple rules groups at a time. To select multiple rule groups, press and hold the CTRL button and select the rules groups to be exported.

3. Click  > **Export**.
   A browser-specific export dialog may be displayed allowing you to open or save the file.

Filter Unused Rules

You can filter and delete the rules that are not used by any group in charts, alerts, and reports. To filter unused rules:

1. Go to **Reports**.
   The **Manage** tab is displayed.
2. In the **Rules** panel, click  and select **Unused Rules**.
   List of unused rules is displayed.
3. [Optional] Delete the unused rules.
   For more information, see Delete a Rule or Rule Group.

Manage a Report

You can perform the following procedures to manage a report.

- Access Control for a Report or Report Group
- Delete a Report or Report Group
- Duplicate a Report
- Edit a Report
- Refresh a Report Group or Report List
- Edit a Scheduled Report
- Delete a Scheduled Report
- Export a Report

- Export a Report Group
- Import a Report or Report Group
- Enable or Disable a Scheduled Report
- Start or Stop a Scheduled Report
- View an Execution History of a Scheduled Report
- Manage and Select a Report Logo
- Search Reporting Details

Access Control for a Report or Report Group

This section covers the access permissions the user has depending on the user role to manage a report and report group. The Reporting provides access control at the report and report group level. The user who has the right set of permissions can only perform the tasks in reporting module. The access control is managed by the administrator from the **(Admin) > Security > Roles** tab.

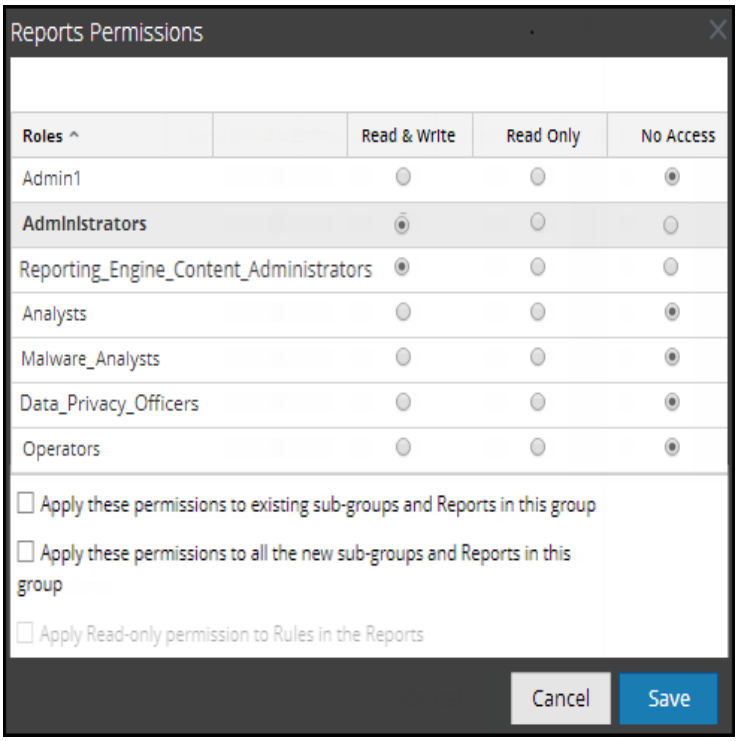
When creating users and user roles, the administrator must ensure that the roles created for specific tasks have access to all the permissions higher in the hierarchy of roles.

Reports and Report Groups can be tied to a specific set of user roles so that when a user logs into NetWitness, the reports with the access rights for the specific user role can be viewed. Users that belong to a user role with the 'Read & Write' access permission can define reports. Further, the access can be tightened so that reports are accessed only by those who have the 'Read Only' access.

Note: You must have 'Read Only' permission for a group to view the reports within that group.

At the report level, you can set the following access permissions for the user roles in NetWitness:

- Read & Write
- Read Only
- No Access

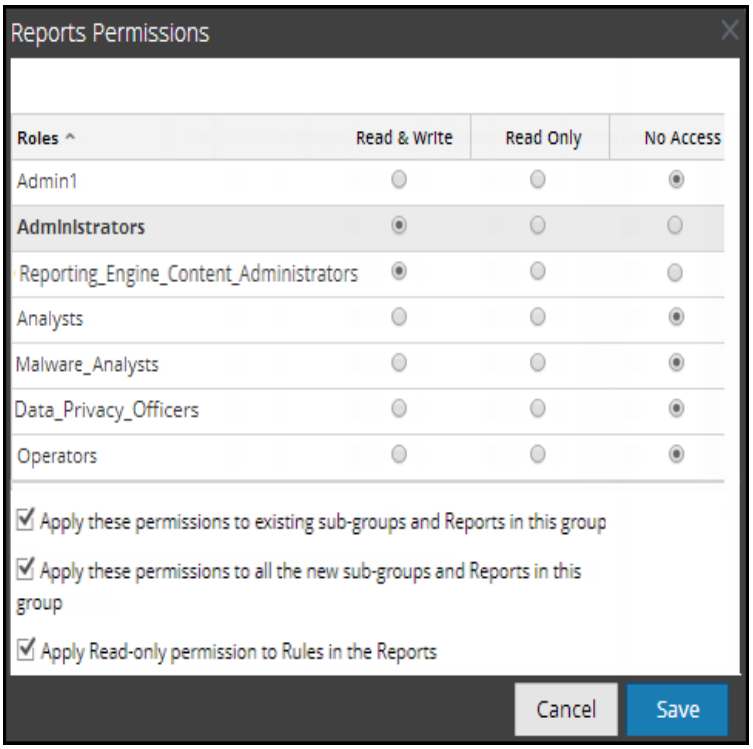


Suppose, you want the NetWitness to have access to all the reports in a Report Group, you can set the permission '**Read & Write**' at the Report Group level. And, if you do not want the **Operator** role to have access to a specific set of reports in a report group, you can set the permission '**No Access**' at the Report Group level.

The permission is set only for the report group but not the reports, rules, or subgroups in the Report Group.

Access Control for a Report Group

When you want to change the report group permissions, you must select a report group and set access permissions using the Reports Permissions panel.



Before applying report group permissions, the default permission set for all the user roles is 'No Access' except for administrators (with full access in Reporting Engine service Config page) and reporting engine content administrators, as shown in the figure.

If you want to change the access permission for a specific user role, you must set these at the report group level, as shown in the figure. <suppose,>Administrators to have access to all the reports in a Report Group, you can set the permission '**Read & Write**' in the Report Group Permissions panel.

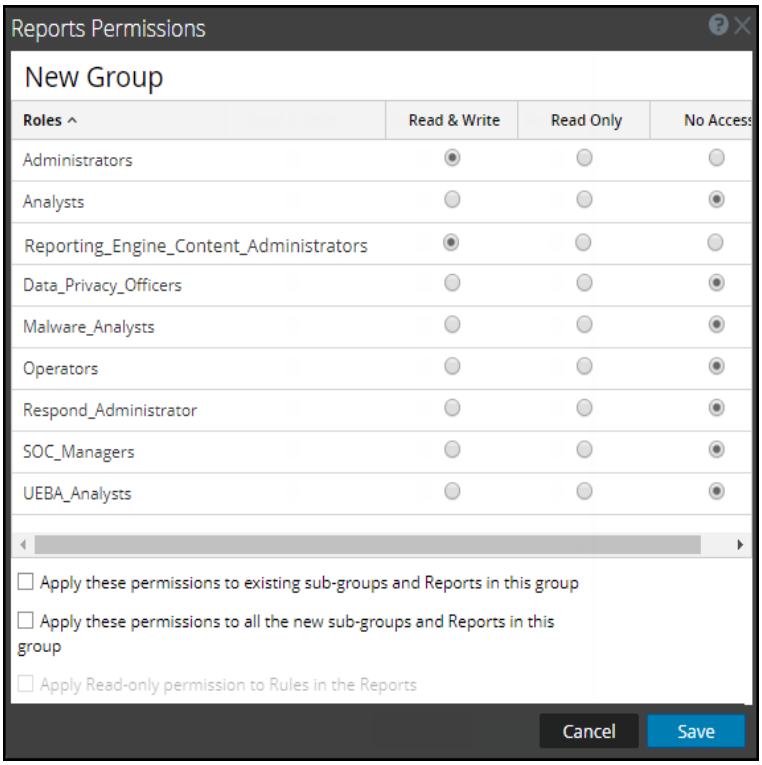
You can also apply permissions to existing subgroups and reports in the group, as well as apply read-only permission to rules in the reports by selecting the appropriate checkboxes, as shown in the figure.

You can also apply permissions to all the new subgroups and reports by selecting the appropriate checkbox.

The three scenarios are explained in brief:

- Scenario 1: Permissions applied to Report Group/ Sub Group/ Report based on the user role.
- Scenario 2: Permissions applied to Sub Group and Report in the Group.
- Scenario 3: Read-only permission applied to Rules in the Report.

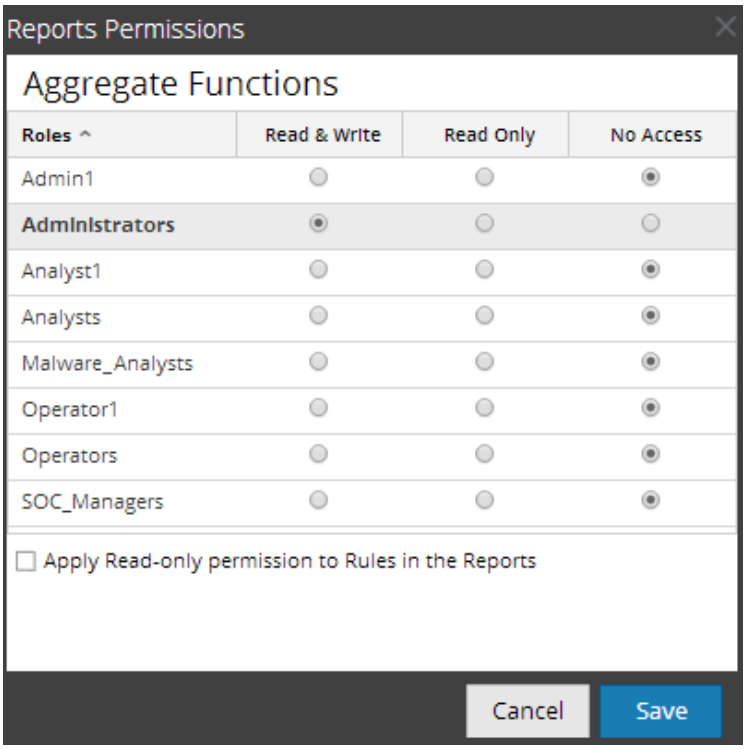
	Role (Analyst)	Permissions applied to Report Group/ Sub Group/ Report based on the user role	Permissions applied to Sub group and Report in the Group	Permission (Read-only) applied to Rules in the Report
Group	Read & Write	Read & Write	Read & Write	Read & Write
Sub Group	Read	Read	Read & Write - Inherited	Read & Write
Report	Read	Read	Read & Write - Inherited	Read & Write
Rules	Read	Read	Read	Read



The Report Group will be assigned the role of a **Security Analyst** and permissions are set to **Read & Write** report group.

For scenario 1, each of the levels has a permission set depending on the user role. For scenario 2, the permission at the Report Group level (Read & Write) is inherited by the Sub Group and Reports in the Group. For scenario 3, the Read permission is set for the Rules except that the permission set for the rules cannot be higher than the permissions set for the Report Group.

Access Control for a Report



When you want to change the report permissions, you must select a report and set their access permissions using the Report Permissions panel.

Before applying the Report permissions, the default permission set for all the user roles is 'No Access' permission and the checkbox is unchecked, as shown in the figure.

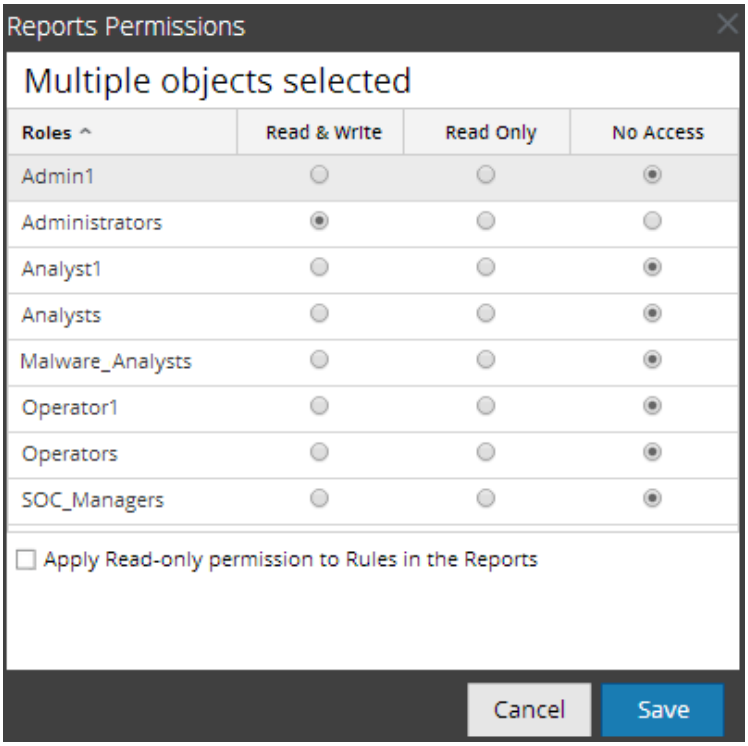
If you want to change the access permission for a specific user role, you must set these at the report level, as shown in the figure. Suppose, you want the **Administrators** to have access to a specific report, you can set the permission '**Read & Write**' in the Report Permissions panel.

You can apply read-only permission to rules in the reports by selecting the checkbox, as shown in the figure.

The two scenarios are explained in brief:

- Scenario 1: Permissions applied to Report Group/ Sub Group/ Report/ Rules.
- Scenario 2: Read-only permission applied to Rules in the Report.

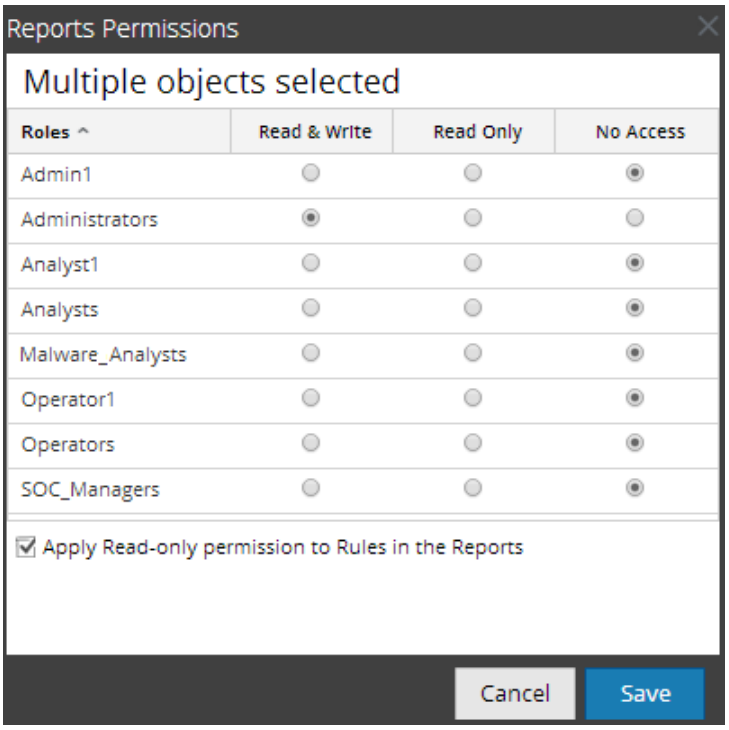
	Role (Analysts)	Permissions applied to Report Group/ Sub Group/ Report/ Rules based on the user role	Permission (Read-only) applied to Rules in the Report
Group	Read & Write	Read & Write	Read & Write
Sub Group	Read	Read	Read & Write
Report	Read	Read	Read & Write
Rules	Read	Read	Read



The Report will be assigned the role of a **Security Analyst** and permissions are set to **Read & Write** reports.

For scenario 1, each of the levels has a permission set based on the user role. For scenario 2, the Read permission is set for the Rules except that the permission for the rules cannot be higher than the permission for the Reports.

Note: If the permission for the rules is higher than the permission for the Reports then the permission is be applied only to the reports. For example, if you set the permissions for the Report Group as **No Access** and then specify the option *Apply Read-only permission to Rules in the Reports*, then the read-only permission is not set for the rules.

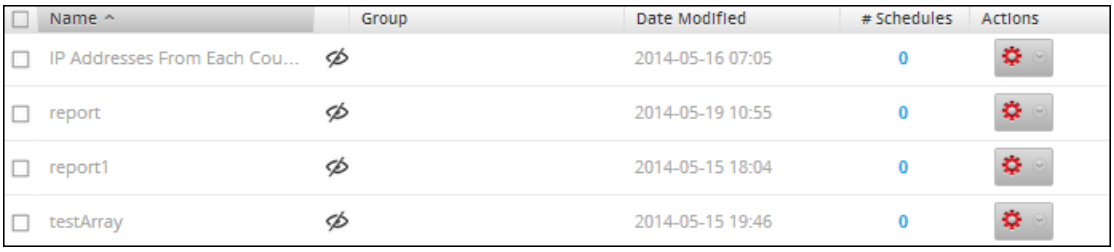


Access Control for a Report When Multiple Reports are Selected

When you want to change permissions of multiple reports, you must select several reports and set their access permissions using the Report Permissions panel. The access permission that you choose is applied to all the selected reports.

Access Control for a Report When Multiple Reports with several rules are Selected

When you want to change permissions when multiple reports with several rules are selected, you must select the checkbox in the Report Permissions panel, as shown in the figure. The read-only access permission is applied to all the rules of the selected reports, provided that the permission of the rules are lower than the permission of the reports.



Log in as a Specific User and View the Access Details

When you log in to the NetWitness UI as a user having 'Read access' permission, all the reports is denoted with the symbol (📖) and when you click on the symbol the 'Read Only' callout is displayed on the Reports panel.

When you log in to the NetWitness UI as a user not having 'Read & Write' access permission on a Report, all the reports are denoted with the symbol (⊘) and the reports appear grayed out on the Reports panel.

The following figure shows the Reports panel when logged in with minimal 'Read & Write' access permission.

Note: If a User (other than the super user) creates a report there will be no access to that report for the super user.

Tabular Listing

The following table lists the various columns in the Reports Permissions Panel:

Column	Description
Roles	The role of the user logged into the NetWitness UI.
Read & Write	The user can access, view, edit, import, export, and delete the report on the Reports view. The user can also change the permission on the report.
Read Only	The user can only access and view the report on the Reports view.
No Access	The user cannot access or view the report for which this permission is set.
Apply these permissions to existing subgroups and Reports in this group	Select the checkbox to apply the selected permissions to the existing subgroups in the group and reports in the group. **Note:** This checkbox is populated only when you set access permissions for a Report Group.
Apply these permissions to all new subgroups and Reports in this group	Select the checkbox to apply the selected permissions to the all new subgroups in the group and reports in the group. **Note:** This checkbox is populated only when you set access permissions for a Report Group.
Apply Read-only permission to Rules in the Reports	Select the checkbox to automatically apply permissions to the rules in the reports.

Set Access Control for a Report

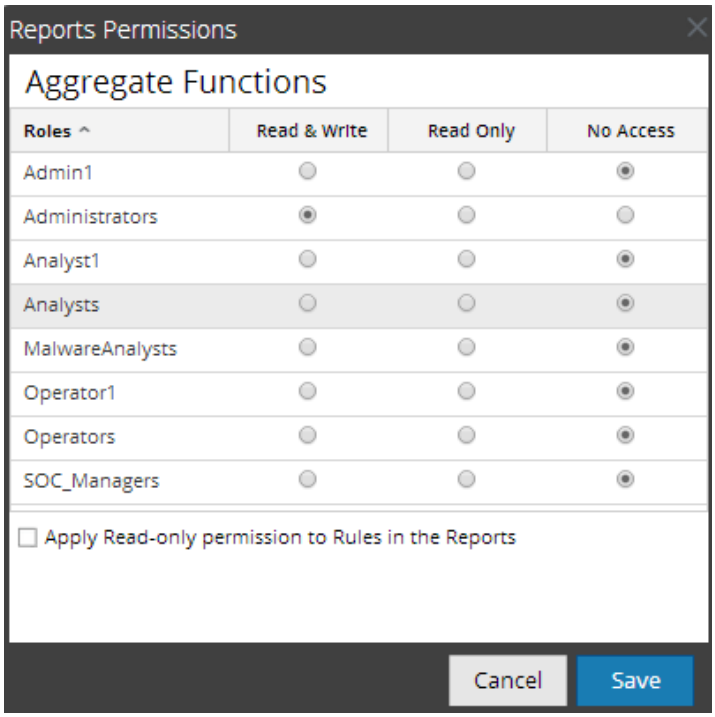
Prerequisites

Make sure that you have a minimal 'Read & Write' access permission to set access permissions for a report.

To set access permissions for a report, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.



2. Click **Reports**.

   The Report view is displayed.

3. In the **Reports** panel, select a report.

4. Click > **Permissions**.

   The Reports Permissions dialog is displayed.

5. Based on the user role, select the appropriate buttons.
6. (Optional) Select the checkbox, if you want to provide read access permission to rules in the reports.

   Note: On selecting the check box, all dependent rules are given READ access permission, provided the permissions for the report is higher compared to the permissions of the rules.

7. Click **Save**.

   A confirmation message that the permission is set for the selected report is displayed.

Set Access Control for a Report Group

Prerequisites

Make sure that you have a minimal 'Read & Write' access permission to set access permissions for a report group.

To set access permissions for a Report Group, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

3. In the **Reports Groups** panel, select or right-click on a report group.
4. Click > **Permissions**.

The Reports Permissions dialog box is displayed.

4. Based on the user role, select the appropriate buttons.
5. (Optional) Select the appropriate checkbox to apply the selected permissions to subgroups and reports in the group.
6. (Optional) Select the appropriate checkbox to apply the selected permissions to all the new subgroups and reports in this group.
7. (Optional) Select the appropriate checkbox to provide read access permission to rules in the reports.

   Note: On selecting the check box, all dependent rules is given READ access permission, provided the permissions for the report is higher compared to the permissions of the rules.

8. Click **Save**.

   A confirmation message that the permission is successfully set for the selected report group is displayed.

Delete a Report or Report Group

To delete reports in a group or subgroup from the Reports panel:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

3. In the **Reports** panel, do one of the following:
   - Select the reports and click −.
   - Click ⚙ > **Delete**.

     A confirmation dialog is displayed.

4. Click **Yes** to delete the report.

   A confirmation message that the report is deleted successfully is displayed and the selected report is deleted from the Reports panel.

Delete a Report Group

Prerequisites

Make sure that you have no reports associated with the report group.

To delete report groups in the default folder or subgroups under a report group, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

3. In the **Reports Groups** panel, select the report group and click −.

   A confirmation dialog is displayed.

4. Click **Yes** to delete the group.

   A confirmation message that the group is deleted successfully is displayed and the selected group is deleted from the Report Groups panel.

Duplicate a Report

You can duplicate a report to schedule multiple report for the same report. The duplicated report is displayed in the Reports panel with suffixes. For example, Report (1).

Generally, the duplicate option is used in two scenarios:

- You want to make a copy of the report, to move the same report to another group.
- You want to retain most of the configuration settings for an object but modify few of these settings. For example, when you have a complex query in a rule or several rules in a report, it is very much appropriate to use the duplicate option.

To duplicate an existing report, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

3. In the **Reports** panel, select a report that you want to duplicate and click .

   The report is saved successfully and added to the Report list.

You can move the duplicated report to another group.

Edit a Report

To edit reports in a group or subgroup from the Reports panel, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

3. Select a report and in Actions column, click  > **Edit**.
   The Build Report view tab is displayed.

4. Modify the text and add more rules to the report (if required).
5. Click **Save**.

   A confirmation message that the report is saved successfully is displayed.

Refresh a Report Group or Report List

You can refresh a report group or reports to view the re-arrangement of groups or reports.

To refresh a report group or reports, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

3. Do the following to move the group or reports to a new location:

   - In the **Reports Groups** panel, drag and drop the group.
   - In the **Reports** panel, drag and drop the reports to the desired group in the Report Groups panel.
     The report group or reports are moved to the new location.

4. Do the following to refresh a group or report list:

   - In the **Reports Groups** panel, click .

     The report group gets refreshed.

   - In the **Reports** panel, click  .

     The Report list gets refreshed.

Edit a Scheduled Report

To edit a scheduled report from the Scheduled Reports List panel, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

3. In the **Reports** panel, select a report and in Actions column, click  > **View Scheduled Reports**.

   The Report Schedule tab is displayed.

4. In the **Report Schedule** panel, do one of the following:

   - Select a report and click .
   - Select a report and click  > **Edit Schedule**.
     The Schedule Report tab is displayed.

5. In the Schedule Report tab, do the following:

   a. In the **Schedule Name** field, modify the name for the schedule report configuration.

   b. To execute the reports as per the schedule, select the **Enable** checkbox.

   c. From the **Data Source** field, select the datasource.

> **Note:** If the data source is not listed, ensure you have **Read** permissions set for the data source. This is applicable for NWDB and Warehouse data source. For more information, see "Configure Data Source Permissions" topic in the *Reporting Engine Configuration Guide*.

6. (Optional) From the **Warehouse Resource Pool** drop-down, select the pool or queue for the report.

   Note: The **Warehouse Resource Pool** drop- down is displayed only if the Warehouse Rule is selected. If no pools or queues are entered for the Reporting Engine, this field is disabled.

7. From the **Run** field, select the type of run schedule. (For example, Now or Hourly).
8. Select the date range to run the query based on absolute duration or select the **Use relative time duration** checkbox to run the query based on relative duration.
9. (Optional) In the Output Actions panel, do the following:
   a. Type the email address and subject.
   b. Edit the body of the message for the report.
   c. Select the format of the attachment.
   d. Type a value for the CSV and Multivalue delimiters.
10. (Optional) In the Other Options field, do the following:
    a. Click > **SFTP** or **URL** or **Network Share**. Based on the selected option, a row gets added in the Other options field.
    b. Select the appropriate options to send the report in PDF or CSV format to the configured SFTP, URL or Network Share.
11. (Optional) To add a list in the Dynamic List panel, see Generate a List from the Scheduled Report section in Create and Schedule a Report.
12. (Optional) To choose another logo in the Logo panel, see Manage and Select a Report Logo section.

    Note: If you do not specify a logo, the default logo is used.

13. Click **Schedule**.

    The scheduled report executes as scheduled and provides the configured outputs.

Delete a Scheduled Report

To delete a scheduled report from the Scheduled Reports List panel, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

3. In the **Reports** toolbar, click **View All Schedules**.

   View Report Schedule is displayed.

4. In the **Report Schedule** panel, select the report.
5. Click >**Delete Schedule**.

   A confirmation dialog is displayed.

6. Click **Yes** to delete the scheduled report.

   A confirmation message that the scheduled report is deleted successfully is displayed and the selected schedule is deleted from the Scheduled Reports List panel.

Export a Report

You can export the selected reports to an external file that can be later imported to another NetWitness environment.

Prerequisites

Make sure that you have reports in the report group.

To export selected reports in the Report Groups panel to an external file, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

   In the **Reports** panel, do one of the following:

   - Select a report and click  > **Export**.
   - Click  > **Export**.

3. You can export multiple reports at a time. To select multiple reports, check the checkbox of the report to be exported. The exported file is saved to the local drive in an archived format.

Open CSV files with Unicode characters in MS Excel

To open downloaded CSV files containing Unicode characters in MS Excel, follow these steps:

1. Download and save the CSV file.
2. Open Microsoft Excel and navigate to the **Data** tab.
3. Click on **From Text** menu item; find the CSV file that you downloaded and click **Import**.
   The Text Import Wizard is displayed.
4. Select **Delimited** or **Fixed Width** data type from the **Original data type** radio button.
5. Click **File origin** drop down list and select **65001: Unicode (UTF-8)** and click **Next**.
6. Select the delimiter that was used in the file that you imported and click **Next**.
7. Select the data format for each column of data that you want to import and click **Finish**.
   The correct output is displayed in an MS Excel sheet.

Export a Report Group

You can export a selected report groups to an external file that can be later imported to another NetWitness environment.

Prerequisites

Make sure that you have reports in the Report Group.

To export selected report groups in the Report Groups panel to an external file, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

3. In the **Reports Groups** panel, select a report group and click  and select one of the following:

   - **Export** - This selection exports a report in a .zip file.
   - **Export as Text** - This selection exports all the content from the Reporting Engine in a .zip file which contains the data in text format.

   You can export multiple report groups at a time. To select multiple report groups, press and hold the CTRL button and select the report groups to be exported. The exported file is saved to the local drive.

Import a Report or Report Group

You can import a group containing subgroups and reports from other instances of NetWitness into Report Groups panel. Reports must be in a valid binary file that was exported from another NetWitness instance.
During the import process, you select the binary file and specify whether existing reports with the same name must be overwritten or not by the reports contained in the binary import file.

- If you choose to overwrite, all duplicate rules, lists and reports are overwritten by the contents of the binary import file.
- If you choose not to overwrite, and a duplicate rule, list or report exists in the target folder, the import fails and display a message about duplicate reports.

You cannot import reports to a specific report group. The imported files are stored in the **All**root folder.

Prerequisites

Make sure that you have the reports or report groups exported from other instances of NetWitness.

To import groups containing subgroups and reports from other instances of NetWitness into Report Groups panel, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

The Report view is displayed.

3. In the **Reports Groups** panel, select a folder to import the file.
4. Do one of the following:
   - In the **Reports Groups** toolbar, click > **Import** to import a group.
   - In the **Reports** toolbar, click > **Import** to import a report.
     The Import Report dialog is displayed. You can import multiple reports and report groups at a time. To select multiple reports or report groups, press and hold the CTRL button and select the reports or report groups to be imported.
5. Click **Browse** to select the binary file.

   NetWitnessprovides a file system view of the files.
6. Locate the binary file and click **Open**.

   The file gets added to the Import Report list.
7. (Optional) To overwrite any existing rule in the library with an identically named rule in the binary file when importing, check the **Rule** checkbox. If you do not select the Overwrite option, and an identical rule is encountered in the binary file, the binary file is imported and no error message is displayed.
8. (Optional) To overwrite any existing list in the library with an identically named list in the binary file, check the **List** checkbox. If you do not select the Overwrite option, and an identical list is encountered in the binary file, the binary file is imported and no error message is displayed.
9. (Optional) To overwrite any existing report in the library with an identically named report in the binary file when importing, check the **Report** checkbox. If you do not select the Overwrite option, and an identical report is encountered in the binary file, the binary file is imported and no error message is displayed.
10. Click **Import** to import the binary file.

Enable or Disable a Scheduled Report

To enable or disable a scheduled report from the Scheduled Reports List panel, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.
2. Click **Reports**.
   The Report view is displayed.
3. In the **Reports** panel, select a report and click > **View Scheduled Reports**.
   View Report Schedule is displayed.
4. Select a report from the Report Schedule panel.
5. In the Actions column, click > **Enable**.
   The state of the report is changed to ‘Running’, if the report is scheduled to run immediately.

6. In the Actions column, click  > **Disable**.
   The state of the report is changed to 'Inactive'.

Start or Stop a Scheduled Report

To start or stop a scheduled report, perform the following:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Reports**.
   The Report view is displayed.
3. In the **Reports** panel, select a report and click  > **View Scheduled Reports**.
   The Report Schedule view is displayed.
4. Select a report from the Scheduled Reports List panel.
5. In the Actions column, click  > **Start**.
   The state of the report is changed to 'Running', if the report is scheduled to run immediately.
6. In the Actions column, click  > **Stop**.
   The state of the report is changed to 'Completed'.

Note: If you have multiple executions running for a scheduled report and the state of the report is in Queued state, the STOP option is disabled till all the previous executions are completed and last execution is in running state. To stop the individual execution of a particular schedule, refer to Stop an Individual Execution of a Scheduled Report.

View an Execution History of a Scheduled Report

You can view the execution history of a scheduled report. You can view the history of a scheduled report that is run. You can view the history based on the following criteria:

- Number of past schedules executed
- Start date and end date for the date range

You can view the details such as how many times the scheduled report was executed, the time of execution (seconds), execution state. You can also view the report generated on a full screen.

To view the execution history of a scheduled report, perform the following:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Reports**.
   The Report view is displayed.

3. In the **Reports** panel, do one of the following:
   - Click  > **View Scheduled Reports**.
   - Click the **#Schedules** column.
     The Schedule Reports view tab is displayed with the status of each of the scheduled report.
4. Do one of the following:
   - Select a scheduled report and click  > **Execution History**.
   - Select a scheduled report and click  .
     The Execution History view is displayed.

   Note: By default, you can view 10 number of execution history of a scheduled report. The execution history shown depends on the Retain Report History Configuration set on the **General**tab of the  **(Admin) > Services > Reporting Engine Config** view.
   For example, if you set the Retain Report History Configuration to 100 days, the data displayed on the Execution History view. is the past 100 days execution history details considering the current date information.
5. From the **Get history by:** field, select the type of history to be fetched. (For example, Past or Range (Specific))
6. In the **Count** field, enter the number of executions to be displayed.
7. Click **Show History**.
   The execution history of the scheduled report is displayed.

Stop an Individual Execution of a Scheduled Report

If you have multiple executions running for a scheduled report, you can stop the individual execution of the scheduled report in **Execution History** panel.

To stop the individual execution of a scheduled report, perform the following:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Reports**.
   The Report view is displayed.
3. In the **Reports** panel, do one of the following:
   - Click  > **View Scheduled Reports**.
   - Click the **#Schedules** column.
     The Schedule Reports view tab is displayed with the status of each of the scheduled report.
4. Do one of the following:
   - Select a scheduled report and click  > **Execution History**.
   - Select a scheduled report and click  .
     The Execution History panel is displayed.

5. Select a schedule, in the **Actions** column, click .
   The state of the execution schedule is changed to 'Cancelled'.

Manage and Select a Report Logo

Prerequisites

Make sure that you have the Reporting Engine service defined prior to managing a logo.

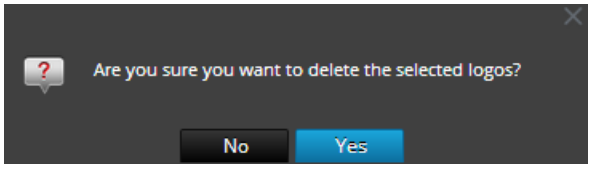
Manage Report Logos

To manage logos, perform the following:

1. Go to **(Admin) > Services**.
   The Services view is displayed.
2. In the **Services** panel, select an Reporting Engine service and click **View** > **Config**.
   The services config view is displayed.
3. Select the **Manage Logos** tab.
   All the available logos are displayed.

Add a Logo

To add a logo, perform the following:



1. In the **Manage Logos** tab, click .
   A file browser opens where you can choose the file from the local drive.
2. Select the logo and click **Open**.
   The selected logo gets added to the Manage Logos section.

Delete a Logo

To delete a logo, perform the following:

1. In the **Manage Logos** tab, do one of the following:
   - Select the logo and click .
   - Perform (Ctrl+click) to select multiple logos and click .

   A confirmation dialog is displayed.

2. If you want to delete the logo, click **Yes**.
   The selected logo is deleted from the Manage Logos section.

Set Default Logo

To set a default logo, perform the following:

In the **Manage Logos** tab, select a logo and click Set default.
The chosen logo is set as the default logo for the RE service.

Select a Logo

To select a logo, perform the following:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

3. In the **Reports** panel, select a report.

4. Click > **View Scheduled Reports**.
   The View scheduled reports view tab is displayed.

5. Select a scheduled report and in Actions column, click > **Edit Schedule**.

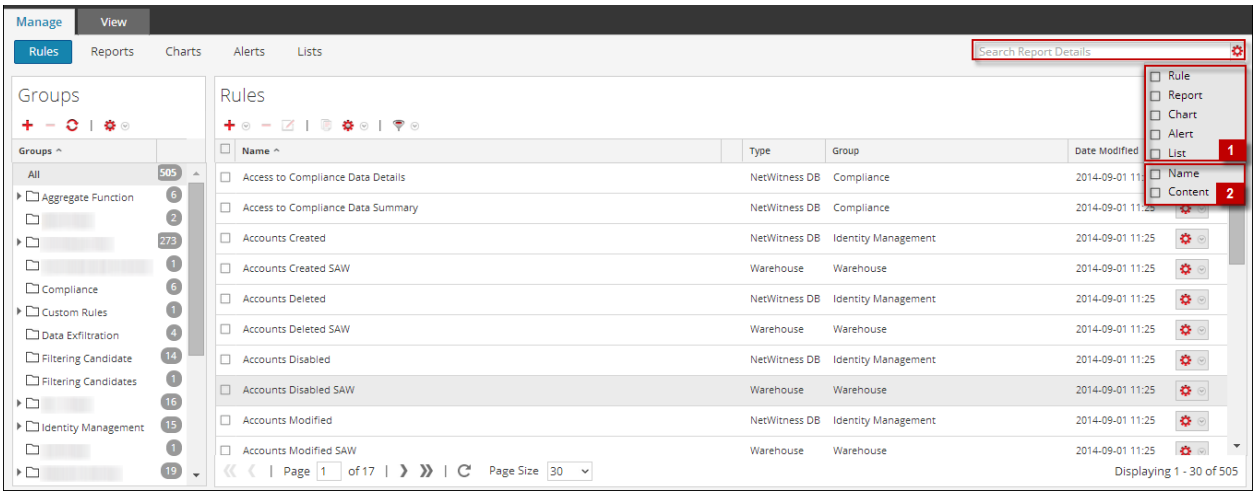
   The Schedule Report view tab is displayed.

6. In the Logo panel, click **Change Logo**.

   The Change a Logo dialog box is displayed.

7. Do one of the following:

   - Click **Upload new logo** to upload another logo.
   - Select a logo from the list.



8. Click **Select**.
   The selected logo is available on the Logo panel.

Search Reporting Details

This section provides instructions on how to perform a keyword search on name and content for each of the Reporting components. You can perform a keyword search on name and content for each of the Reporting components (Rule/Report/Chart/Alert/List) on the Reporting UI.

Note: You cannot search based on date and numeric values.

The following figure shows the search parameters available in the Reporting Module:

The following are the search parameters available on the Reporting UI:

1. Search for entities (rule, report, chart, alert, list).
2. Search for the entities based on either the name or content.

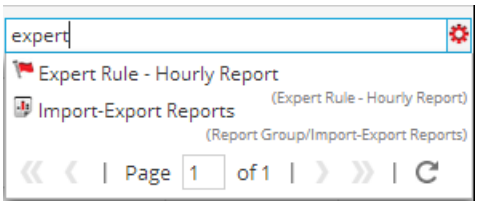
Note: Searches are case insensitive. For example, Completed is equivalent to completed.

Prerequisites

In the Reporting Module, you can perform a keyword search based on the name and content (definition). In this context, content implies definition of each of the reporting components. For instance, the value defined in the rule, report, report schedule, chart, and alert panel. You can also prioritize your search by selecting either or all of the components: Rule, Report, Chart, Alert, or List.

Note: You cannot search based on the List values and list path stored in schedule definition panel.

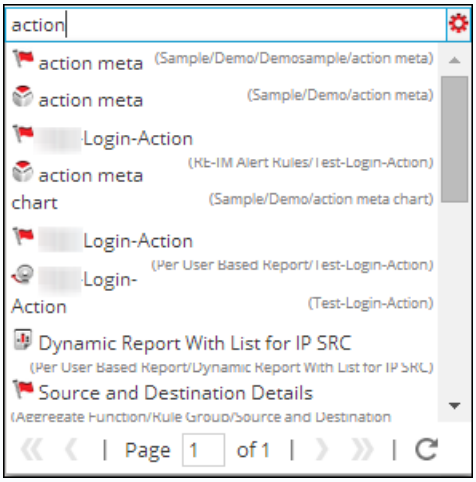
For example, to search for the rule name (ExpertRule), you must select **Rule, Name, and Content** in the **filtering options** drop-down to view all the rule names that matched the search. You can similarly search for a report, chart, alert, or list definition.

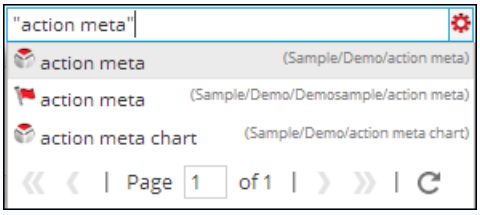


To search for reporting details from the Manage tab, perform the following:

1. Go to **Reports**.

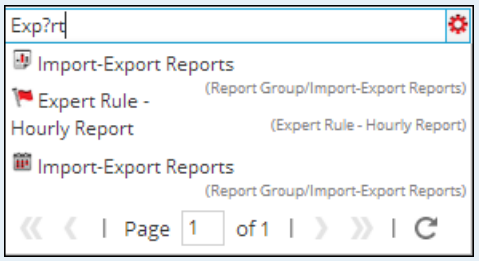
   The **Manage** tab is displayed.

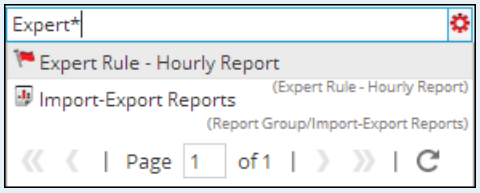


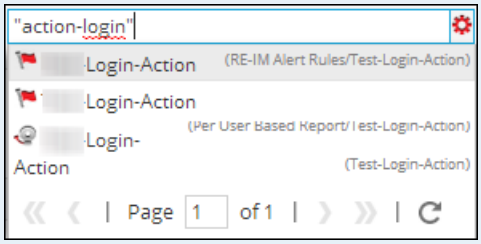


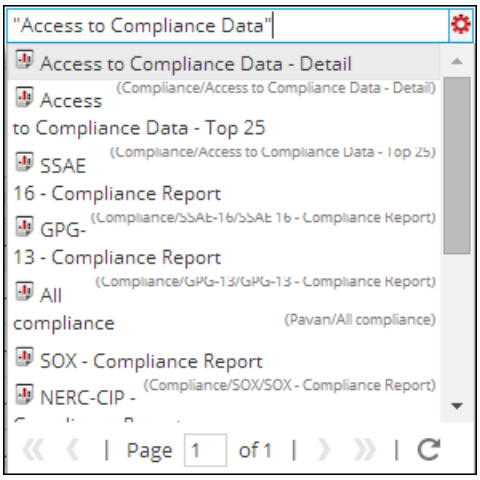
2. Click  and select the appropriate criteria to search.
3. In the **Search** field, enter the text to be searched.

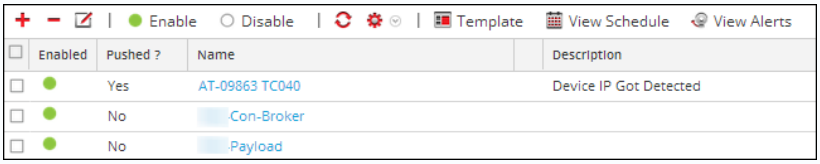
   The search drop-down list is displayed:

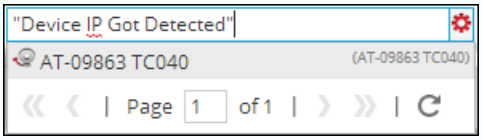












Search Syntax and Different Types of Search

The following table explains the search syntax and the possible searches that can be performed on the Reporting user interface.

Search Types	Description
Word or phrase based search	**Word Based Search:** To search for a word such as "action" or "meta", you must enter the word in the search box. The following figure shows the search results for the text **action**.  **Phrase based search:** A Phrase is a group of words surrounded by double quotes such as "action meta". To search for a phrase, you must enclose phrases in double-quotes in the search box. The following figure shows the search results for the phrase "action meta". 

Search Types	Description

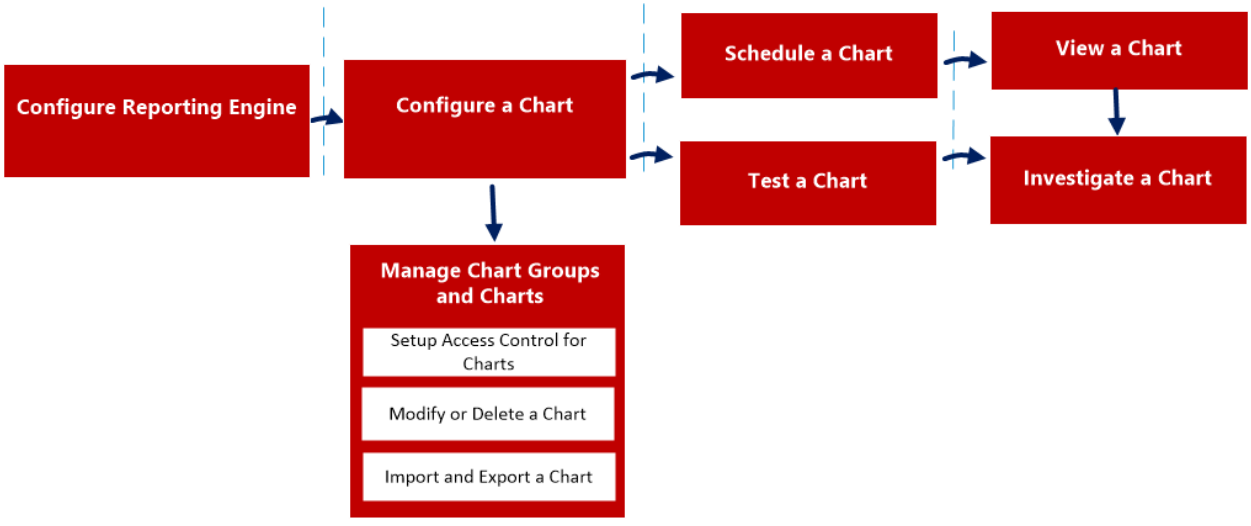
Wildcard Search (Single/ Multiple/ Special Character Search)
 	
The question mark "**?**" symbol is used to perform a single character wild card search and asterisk "*" symbol is used to perform multiple character wildcard search.
	Single character search:
	The single character wildcard search looks for terms that match with the single character replaced. For example, to search for "Expert" or "Export" you can use the search syntax:
	`Exp?rt`
	The following figure shows the search results for the wildcard character **Exp?rt**.
	
	Multiple character search:
	Multiple character wildcard search looks for 0 or more characters. For example, to search for Expert, or Experts, you can use the search syntax:
	`Expert*`
	The following figure shows the search results for the wildcard multiple character **Expert***.
	
	Special character search:
	Certain punctuation and special characters are ignored during search (@#$%^&*(){}"~=+-[]\?|!:,.). For example, a search for action-login will be interpreted during search as "action" "login", that is, if rules exist with name "action-login" and "action@login" and search string is "action-login", the search result will return both the rules.
	

Search Types	Description
Search based on name or content	**Search based on name:** When you want to search based on the name of a report, select **Report**and **Name**box from the filtering options drop-down. For example, to search for the report name "Report With Multiple Rules", you can use the search syntax: "Access to Compliance Data" **Note:** When you search for a report, it implies you can search for the report schedules as well. The search result will return the report containing the specific name.  **Search based on content:** When you want to search for the content within an alert, say alert description, select **Alert** and **Content** box from the filtering options drop-down. For example, to search for the alert description "Device IP Got Detected", you can use the search syntax: "Device IP Got Detected"  The search will return the result having the specific content. 

Working with Charts

The Reporting module user interface provides access to NetWitness charts. The following topics discuss charts:

- Configure and Generate a Chart
- Configure a Chart
- Schedule a Chart
- View a Chart
- Test a Chart
- Investigate a Chart
- Manage a Chart Group and Chart



Configure and Generate a Chart

Chart is a graphical visualization of data. You can view different kinds of charts, including multiple types of plot, line, bar, and area charts.

Any NWDB rule in the Reporting Engine system which is not sorted by none can be used to instantly create a chart. For more information on "How to create an NWDB rule", see Configure a Rule.

The chart interval can be adjusted from the chart definition panel itself. Every time a chart is executed, it stores its result data locally in the Reporting Engine, so that it can be reviewed in either the Dashboard View or Chart View without any performance considerations.

The following is an overview of the entire process of configuring and generating a chart.

To configure and generate a chart, perform the following:

1. Configure Reporting Engine
2. Configure an NWDB rule
3. Configure a Chart

4. Schedule a Chart
5. View a Chart
6. Test a Chart
7. Investigate a Chart
8. Manage a Chart Group and Chart

Configure Reporting Engine

You must configure the Reporting Engine before you can configure and generate a chart. You must also specify the data source in the Reporting Engine from which the data is extracted. For more information on how to configure a Reporting Engine, see "Configure Reporting Engine" topic in *Reporting Engine Configuration Guide*.

Configure an NWDB Rule

The NetWitness rule which is not sorted by none is used to create a chart. The NetWitness database extracts the meta from the Reporting Engine and provides the meta for rules. These rules are an essential building block in managing a chart.

Note: If the rule contains the lookup_and_add, sum_count, or sum_values rule actions, the associated chart will not contain data. Do not use lookup_and_add function in a rule to create a chart or a report in a chart format as the output of the lookup_and_add function in a rule will not be displayed on the chart and may result in graphical representation of incorrect information. Also, the PDF for that chart created may show an empty chart or incorrect representation of data.

Configure a Chart

You can configure a chart using the NWDB rules.

Schedule a Chart

After a chart is defined with the required components, you can configure its execution properties by scheduling a chart. Here, you can quickly view, add, and edit the schedule details for a chart.

View a Chart

You can view the scheduled charts in the Chart View.

Test a Chart

You can run the test on a chart and view all the chart details based on the selected time range.

Access Control for a Chart

The Reporting Module provides access control at the chart level. Only a user who has the right set of permissions can perform the tasks in Reporting module. The access control is managed by the administrator from the  **(Admin) > Security > Roles** tab.

When you create users and user roles, ensure that the roles that you create for specific tasks have access to all the necessary permissions. This could require permissions at several levels of the role hierarchy.

Charts can be tied to a specific set of user roles so that when a user logs in NetWitness, the charts with the access rights for the specific user role can be viewed. Users that belong to a user role with the 'Read & Write' access permission can define charts. Further, the access can be tightened so that charts are accessed only by those who have the 'Read Only' access.

At the chart level, you can set the following access permissions for the user roles in NetWitness:

- Read & Write
- Read Only
- No Access

To change the access permission for a specific user role, you must set the permission at the chart level. For example, for **Administrators** to have access to a specific chart, you could set the permission 'Read & Write' in the Charts Permissions dialog.

You can apply read-only permission to rules in the charts by selecting the checkbox.

Two scenarios that describe how to set access control are explained here:

- Scenario 1: Permissions applied to Chart Group/ Subgroup/ Chart/ Rules based on the user role.
- Scenario 2: Read-only permission applied to Rules in the Chart.

	Role (Analyst)	Permissions applied to chart group, subgroup, chart or rules based on the user role	Permissions (Read-only) applied to rules in the chart
Group	Read & Write	Read & Write	Read & Write
Subgroup	Read	Read	Read & Write
Chart	Read	Read	Read & Write
Rules	Read	Read	Read

The chart is assigned the role of a **Security Analyst** and permissions are set to 'Read & Write' charts.

For scenario 1, each of the levels has a permission set based on the user role. For scenario 2, the Read permission is set for the rules except that the permission for the rules cannot be higher than the permission for the charts.

Note: If the permission for the rules is higher than the permission for the chart, the permission is not applied. For example, if you set the permissions for the Report Group as **No Access** and specify the option *Apply Read-only permission to Rules in the Reports*, the read-only permission is not set for the rules.

Access Control for a Chart When Multiple Charts are Selected

To change permissions for multiple charts, you must select several charts and set their access permissions using the Charts Permissions panel. The access permission that you choose is applied to all the selected charts.

Access Control for a Chart When Multiple Charts with Several Rules are Selected

To change access permissions for a specific user role when multiple charts with several rules are selected, select the checkbox in the Charts Permissions panel.

The read-only access permission is applied to all the rules of the selected charts, provided that the permission of the rules are lower than the permission of the charts.

Note: If a user (other than the super user) creates a chart, the super user cannot access that chart.

Access Control for a Chart Group

To change chart group permissions, select a chart group and set the access permissions using the Charts Permissions panel. Before chart group permissions are applied, the default permission set for all the user roles is 'No Access'.

To change the access permission for a specific user role, set the permission at the chart group level. For example, for administrators to have access to all the charts in a Chart Group, set the permission 'Read & Write' in the Charts Group Permissions panel.

You can also apply permissions to subgroups and charts in the group, and apply read-only permission to rules in the charts by selecting the appropriate checkboxes.

Three scenarios that describe how to set access control are explained here:

- Scenario 1: Permissions applied to chart groups, subgroups, or charts based on user roles.
- Scenario 2: Permissions applied to subgroups and charts in the group.
- Scenario 3: Read-only permission applied to rules in the chart.

	Role (Analyst)	Permissions applied to chart groups, subgroups, or charts based on user roles	Permissions applied to subgroups and charts in the group	Permissions (Read-only) applied to rules in the chart
Group	Read & Write	Read & Write	Read & Write	Read & Write
Subgroup	Read	Read	Read & Write - Inherited	Read & Write
Chart	Read	Read	Read & Write - Inherited	Read & Write
Rules	Read	Read	Read	Read

The chart group is assigned the role of a **Security Analyst** and permissions are set to 'Read & Write'.

For scenario 1, each of the levels will have a permission set depending on the user role.

For scenario 2, the permission at the chart group level will be inherited by the subgroup and by charts in the group.

For scenario 3, the Read permission is set for the rules. However, the permission set for the rules cannot be higher than the permissions set for the chart group.

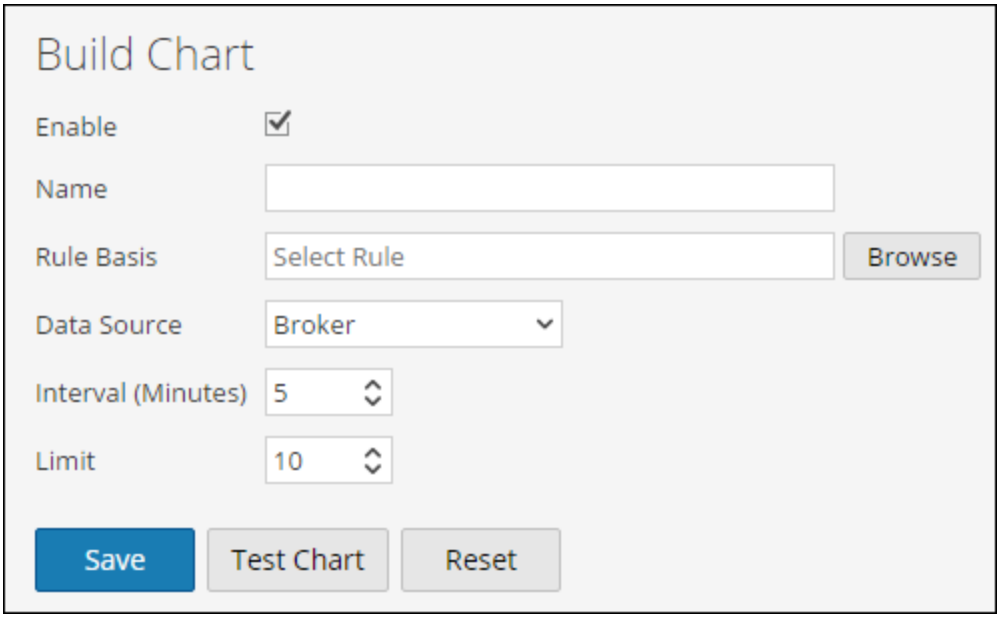
The following table lists the columns in the Charts Permissions panel:

Column	Description
Roles	The role of the user logged into the NetWitness UI.
Read & Write	The user can access, view, edit, import, export, and delete the chart in the Charts view. The user can also change the permission for the chart.
Read Only	The user can only access and view charts on the Charts view.
No Access	The user cannot access or view charts for which this permission is set.
☐ Apply these permissions to existing sub-groups and Charts in this group	Select the checkbox to apply the selected permissions to the existing subgroups in the group and charts in the group. **Note:** This checkbox is populated only when you set access permissions for a Chart Group.
☐ Apply these permissions to all new sub-groups and Charts in this group	Select the checkbox to apply the selected permissions to the new subgroups in the group and charts in the group. **Note:** This checkbox is populated only when you set access permissions for a Chart Group.
☐ Apply Read-only permission to Rules in the Charts	Select the checkbox to automatically apply permissions to the rules in the charts.

Configure a Chart

After a chart is defined with the NetWitness rules with NWDB as the data source, you can configure its execution properties.

Create a Chart Group



To add groups to the default folder or to add subgroups under a chart group:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Charts**.
   The Chart view is displayed.
3. In the **Charts Groups** panel, click .
   A default group is added in the Chart Groups panel.
4. Enter the name of the new group.
5. Press **Enter**.
   The group is added to the Chart Groups panel.

Create a Chart

To add charts to a group or subgroup:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Charts** to display the Chart view.
3. In the **Charts** toolbar, click .
   The Build Chart tab is displayed.

4. Enter the name of the chart.
5. For the Reporting Engine to collect the data and generate chart results, select the **Enable** checkbox.
6. In the Rule Basis field, do the following:
   a. Click **Browse**. The Add Rule dialog box is displayed.
   b. Navigate the Rule tree and select a rule.
   c. Click **Select**.
7. The Rule appears in the **Rule Basis** field.
8. Select the data source from the **Data Source** drop-down list.

   Note: If the default data source is configured in the Reporting Engine, then the data source is displayed by default on the Build Chart page. If the data source is not displayed, ensure you have Read permissions set for the data source. This is applicable for NWDB and Warehouse data sources. For more information, see the "Configure Data Source Permissions" topic in the *Host and Services Configuration Guide*.

9. (Optional) To modify the Interval value, click the up or down arrow.
   The Interval value is the interval in minutes at which the rule which forms the basis of the chart is

run to collect data.

10. Select the **Limit** value to limit the number of records to be displayed.
11. **X-Axis** and **Y-Axis** are used to specify the meta to be plotted in charts.
    In the **X-Axis**, the meta for the 'Group by' rule is displayed. In the **Y-Axis**, the aggregate functions used in the rule are displayed.

    Note: Sum, Count, Countdistinct and Average are the supported aggregate functions for chart. By default, for Custom Rules with multiple 'Group by', you can select only the first meta in **X-Axis**.
12. Click **Save**.
    A confirmation message that the chart is saved successfully is displayed.

Schedule a Chart

You must schedule a chart to further investigate on the chart details.

By enabling a chart, the chart executes as scheduled and provides the configured output with the state of the chart changed to ‘Scheduled’.

To schedule a chart:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Charts**.
   The Chart view is displayed.
3. In the **Charts** panel, select a chart or several charts that display ○ in the **Enabled** column.
4. Click .
   A confirmation message indicates that the chart(s) state is changed successfully.

View a Chart

After you view a chart, you can perform the tasks:

- You can print, save, email and view charts on full screen.
- You can also select a date from the calendar to view a list of successfully run charts for the chosen date.

To view a chart:

1. Go to **Reports**.

   The Manage tab is displayed.
2. Click **Charts**.

   The Chart view is displayed.

3. In the **Charts** panel, Select a chart and click  > **View**.

   The View Chart view tab is displayed.

4. In **Chart Options**, do the following:

   a. Select the **Time Range**.

   > **Note:** When you select the Time Range option, you can select a pre-set time range such as last hour, last 3 hours and the Last N Days...or you can customize the selection by choosing Last N Days or Custom. If you select Last N Days option, you can view the historical data for a maximum of 15 days. If you select the Custom option, you can select a start date and end date to view the data for the selected date range.

   b. Select the **Series**, either **Chart Values over Time** or **Chart with Totals**.
   When you select **Chart Values over Time**, the chart displays the change in values for the selected time. When you select **Chart with Totals**, the chart displays a total for each aggregate value for the selected time.

   c. Select **Items To Plot** to define the number of events to view on the chart.

   d. From the **Chart Type** drop-down list, select the chart type.

   e. Click **Reload** to reload the selected chart.
   If there is a delay in retrieving the historical data for the selected time range, a message is displayed.

After the chart is generated, a notification is displayed in the notification tray available in the NetWitness toolbar. For more information on the NetWitness toolbar, see the "Browser Window" topic in the *NetWitness Getting Started Guide*.

View all Charts List

To view a list of all the charts:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Charts**.

   The Chart view is displayed.

3. In the **Charts** toolbar, click **View All Charts**.

   All the executed charts for the selected date are displayed in a new tab.

   > **Note:**
   > * If no list is displayed, you can select a date from the calendar to view a list of charts.
   > * If you want to view a specific chart, enter the chart name in the search criteria.

4. Click the chart name to view the chart details for that date.

Test a Chart

You can test a chart in the **Test a Chart** view.

To test a chart:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Charts**.

   The Chart view is displayed.

3. Do one of the following:

   - In the **Charts** toolbar, click .
   - In the **Charts** panel, double-click a chart or select a chart and click .
   - In the **Charts** panel, select a chart and in Actions column, click  > **Edit**.

   The Build Chart view tab is displayed.

4. Click **Test Chart** to view the chart.

   The View Chart view tab is displayed.

5. In the **Time Range** drop-down, select the hours range.
6. Select the **Series**, either **Chart Values over Time** or **Chart with Totals**.
7. In the **Items To Plot** field, select the number of items to plot.
8. From the **Chart Type** drop-down list, select the chart type.
9. Click **Run Test** to run the test.

The chart data (if any) for the selected time range is displayed.

Investigate a Chart

You can investigate the chart by navigating directly to the Investigation module from the chart.

To investigate a chart:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Charts**.

   The Chart view is displayed.

3. In the **Charts** toolbar, click **View All Charts**.

   All the executed charts for the selected date from the **Chart Options** panel are displayed on a new tab.

4. Double-click the chart name to view the chart details such as the time at which the chart is executed and the default data source used for the chart execution.
5. Do one of the following:

- Click a data point on the chart to investigate.
- In the toolbar, click **Investigate** to investigate for the entire time range.

Manage a Chart Group and Chart

You can manage chart groups and charts using the following procedures.

Manage a Chart Group

Depending on the access permissions set for the user role, you can modify or delete, import or export, drag and drop a chart, or refresh a chart group.

Modify a Chart Group

To modify a chart group in the default folder or subgroups under a chart group:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Charts**.

   The Chart view is displayed.

3. In the **Charts Groups** panel, select the chart group to modify.

The selected chart group is modified and can be viewed on the **Charts Groups** panel.

Delete a Chart Group

To delete a chart group in the default folder or subgroups under a chart group:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Charts**.

   The Chart view is displayed.

3. In the **Charts Groups** panel, select the group and click −.

   A confirmation dialog asks for confirmation that you want to delete the selected group.

4. Click **Yes** to delete the group.

The selected group is deleted from the Chart Groups panel.

Import a Chart Group

To import chart groups from other instances of NetWitness:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Charts**.

   The Chart view is displayed.

3. From the **Charts Groups** panel, select a folder to import the file.
4. Do one of the following:

   - In the Chart Groups panel, click  > **Import**.

     The **Import Chart** dialog box is displayed.

   - You can import multiple chart groups at the same time. To select multiple chart groups, press and hold the CTRL button and select the chart groups to be imported.

5. Click **Browse** to select the binary file.

   NetWitness provides a file system view of the files.

6. Locate the binary file and click **Open**.

   The file is added to the Import Chart list.

7. (Optional) To overwrite any existing rule in the library with an identically named rule in the binary file when importing, select the **Rule** checkbox. If you do not select the Overwrite option, and an identical rule is encountered in the binary file, the binary file is imported and no error message is displayed.
8. (Optional) To overwrite any existing list in the library with an identically named list in the binary file, select the **List** checkbox. If you do not select the Overwrite option, and an identical list is encountered in the binary file, the binary file is imported and no error message is displayed.
9. (Optional) To overwrite any existing chart in the library with an identically named chart in the binary file when importing, select the **Chart** checkbox. If you do not select the Overwrite option and an identical chart is encountered in the binary file, the binary file is imported and no error message is displayed.
10. Click **Import** to import the binary file.

Export a Chart Group

To export selected chart groups:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Charts**.

   The Chart view is displayed.

3. In the **Charts Groups** panel, select a chart group and click  and do one of the following:

   - **Export** - This selection exports a chart in a .zip file.
   - **Export as Text** - This selection exports all the content from the Reporting Engine in a .zip file which contains the data in text format.

   You can export multiple chart groups at the same time. To select multiple chart groups, press and hold the CTRL button and select the chart groups to be exported. The exported file is saved to the local drive.

Drag and Drop Chart to a Group

To drag and drop a chart from the Charts panel to a group in the Charts Groups panel:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Charts**.

   The Chart view is displayed.

3. Select a chart from the **Chart** panel and drag and drop the chart to a group in the **Chart Groups** panel.

The chart is copied to the group in the Chart Groups panel.

Refresh a Chart Group

To refresh chart groups:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Charts**.

   The Chart view is displayed.

3. In the **Charts Groups** panel, drag and drop the group.

   The chart group is moved to the new location.

4. In the **Charts Groups** panel, Click .

The chart group is refreshed.

Manage a Chart

Depending on the access permissions set for the user role, you can modify or delete, duplicate, import and export, enable or disable charts, search for existing charts, and refresh a chart list.

Access Control for a Chart

To set access permissions for a chart:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Charts**.

   The Chart view is displayed.

3. In the **Charts** panel, select a chart.

4. Click  > **Permissions**.

   The Charts Permissions dialog box is displayed.

5. Based on the user role, select the appropriate buttons.

6. (Optional) Select the checkbox if you want to provide read access permission to dependent rules.

   Note: On selecting the check box, all dependent rules with No access permission are granted a READ access permission.

7. Click **Save**.

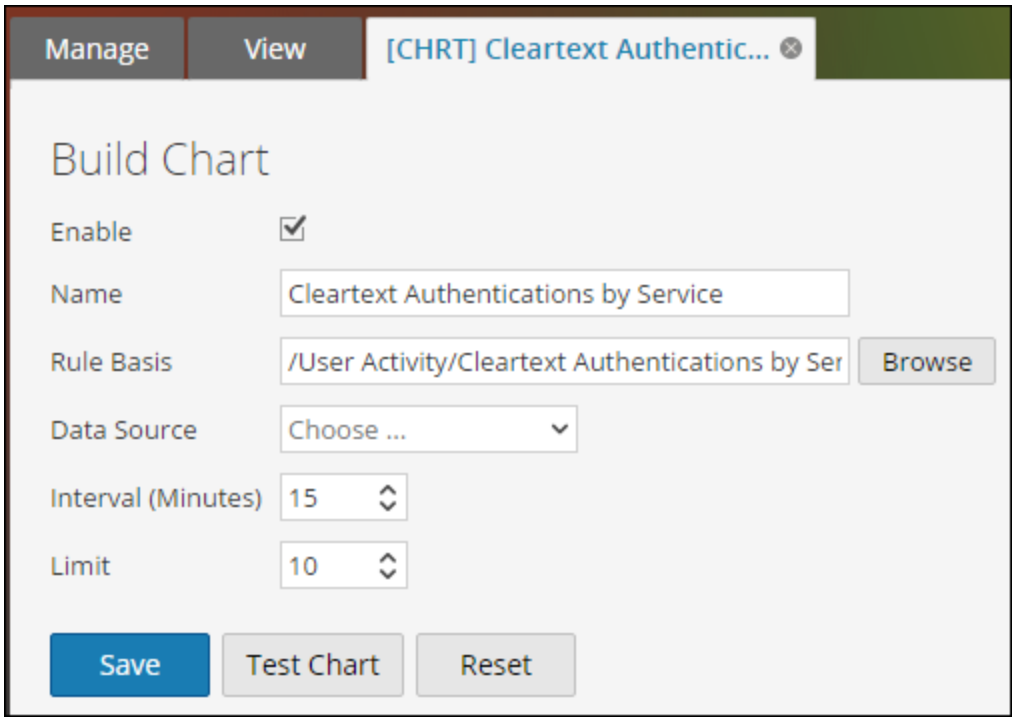
A confirmation message that the permission is successfully set for the selected chart is displayed.

Modify a Chart

To modify a chart in a group or subgroup:

1. Go to **Reports**.

   The Manage tab is displayed.



2. Click **Charts**.

   The Chart view is displayed.

3. In the **Charts** panel, do one of the following:

   - Double-click a chart or select a chart and click .
   - Select a chart and click  > **Edit**.

     The Build Chart view tab is displayed.

4. Modify the name of the chart.
5. For the Reporting Engine to collect the data and generate chart results, select the **Enable** checkbox.
6. (Optional) In the **Rule Basis** field, do the following:

a. Click **Browse**.

The Add Rule dialog is displayed.

b. Navigate the Rule tree and select a rule.

c. Click **Select**.

The Rule appears in the Rule Basis field.

7. Select the data source from the **Data Source** drop-down list.

> **Note:** If the data source is not listed, then ensure you have **Read** permissions set for the data source. This is applicable for NWDB and Warehouse data sources. For more information, see the "Configure Data Source Permissions" topic in the *Host and Services Configuration Guide*.

8. (Optional) To modify the Interval value, click the up or down arrows.
9. Select the limit value to limit the number of records to be displayed.
10. Click **Save**.

A confirmation message that the chart is modified successfully is displayed.

Delete a Chart

To delete a chart in a group or subgroup:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Charts**.
   The Chart view is displayed.
3. In the **Charts** panel, do one of the following:
   - Select the charts and click .
   - Click  > **Delete**.
     A confirmation message asks if you want to delete the selected chart.
4. Click **Yes** to delete the chart.

A confirmation message that the chart is deleted successfully is displayed and the selected chart is deleted from the Charts panel.

Duplicate a Chart

To duplicate an existing chart:

1. Go to **Reports**.

   The Manage tab is displayed.
2. Click **Charts**.

   The Chart view is displayed.

3. From the **Charts** panel, select a chart to be duplicated.
4. In the **Charts** toolbar, click .

The chart is duplicated and gets added to the Charts panel.

Import a Chart

To import charts from other instances of NetWitness:

1. Go to **Reports**.

   The Manage tab is displayed.
2. Click **Charts**.

   The Chart view is displayed.
3. From the **Charts Groups** panel, select a folder from which to import the file.
4. Do one of the following:

   - In the **Chart** toolbar, click  > **Import**.

     The **Import Chart** dialog box is displayed.
   - You can import multiple charts at the same time. To select multiple charts, press and hold the CTRL button and select the charts to be imported.
5. Click **Browse** to select the binary file.

   NetWitness provides a file system view of the files.
6. Locate the binary file and click **Open**.

   The file is added to the Import Chart list.
7. (Optional) To overwrite any existing rule in the library with an identically named rule in the binary file when importing, select the **Rule** checkbox. If you do not select the Overwrite option, and an identical rule is encountered in the binary file, the binary file is imported and no error message is displayed.
8. (Optional) To overwrite any existing list in the library with an identically named list in the binary file, select the **List** checkbox. If you do not select the Overwrite option, and an identical list is encountered in the binary file, the binary file is imported and no error message is displayed.
9. (Optional) To overwrite any existing chart in the library with an identically named chart in the binary file when importing, select the **Chart** checkbox. If you do not select the Overwrite option and an identical chart is encountered in the binary file, the binary file is imported and no error message is displayed.
10. Click **Import** to import the binary file.

Export a Chart

To export selected charts to an external file:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Charts**.

   The Chart view is displayed.

3. In the **Charts** panel, select a chart and click  and do one of the following:

   - **Export** - This selection exports a chart in a .zip file.
   - **Export as Text** - This selection exports a chart from the Reporting Engine in a .zip file which contains the data in text format.

   You can export multiple charts at the same time. To select multiple charts, select the checkboxes of the charts to be exported. The exported file is saved to the local drive.

Enable a Chart

To enable a chart:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Charts**.

   The Chart view is displayed.

3. In the **Charts** panel, select a chart or several charts that display ○ in the **Enabled** column.

4. Click ●.

A confirmation message indicates that the chart(s) state is changed successfully.

Disable a Chart

To disable a chart:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Charts**.

   The Chart view is displayed.

3. In the **Charts** panel, select a chart or several charts that display ● in the **Enabled** column.

4. Click ○.

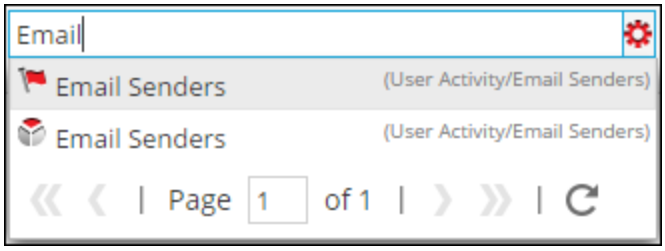
A confirmation message indicates that the chart(s) status is changed successfully.

Search an Existing Chart

To search for an existing chart:

1. Go to **Reports**.

   The Manage tab is displayed.



2. Click **Charts**.

   The Chart view is displayed.

3. In the **Charts** toolbar, enter text in the Search text box.

4. Click > **Chart**.

All charts that match the search string are displayed in the search drop-down list.

Refresh a Chart

To refresh charts:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Charts**.

   The Chart view is displayed.

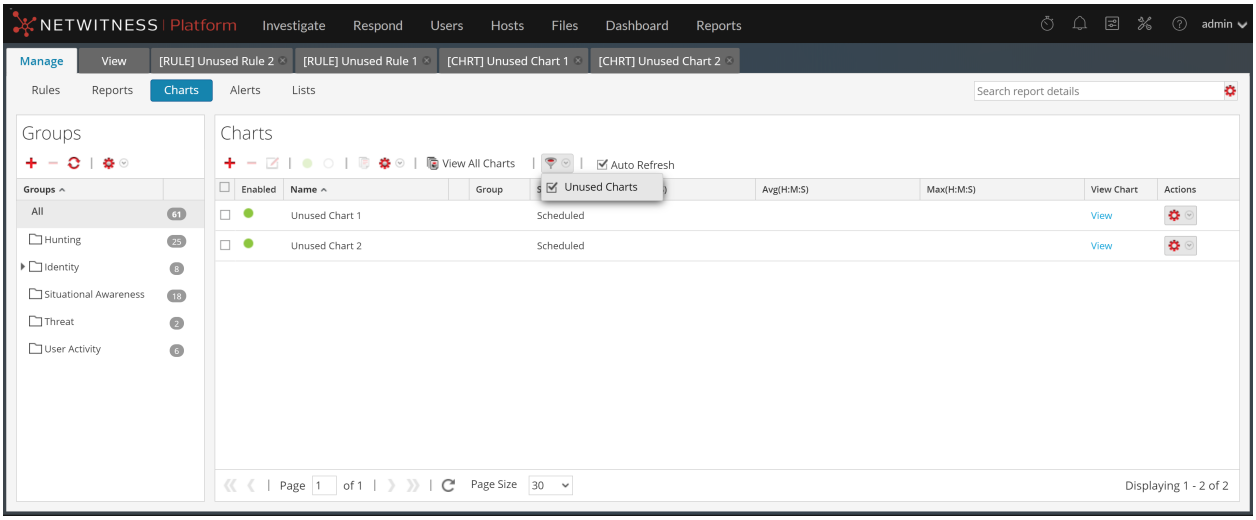
3. In the **Charts** panel, drag and drop the charts to the desired group in the **Charts Groups** panel.

   The charts are moved to the new location.

4. Do either of the following:

   - In the **Charts** panel, click .
   - In the **Charts** toolbar panel, select **Auto Refresh**.

   The Chart list is refreshed.



Filter Unused Charts

You can filter and delete the charts that are not used in any dashlet.

To filter unused charts:

1. Go to **Reports**.
   The **Manage** tab is displayed.

2. In the **Charts** panel, click  and select **Unused Charts**.
   List of unused charts will get displayed.
3. Delete the unused charts.
   For more information, see Delete a Chart.

Working with Alerts

The Alerting module user interface provides access to NetWitness alerts. The following topics discuss alerts:

- Alerting Overview
- Configure Reporting Engine
- Configure an Alert
- Schedule an Alert
- View an Alert
- Investigate an Alert
- Manage an Alert and Alert Template

Alerting Overview

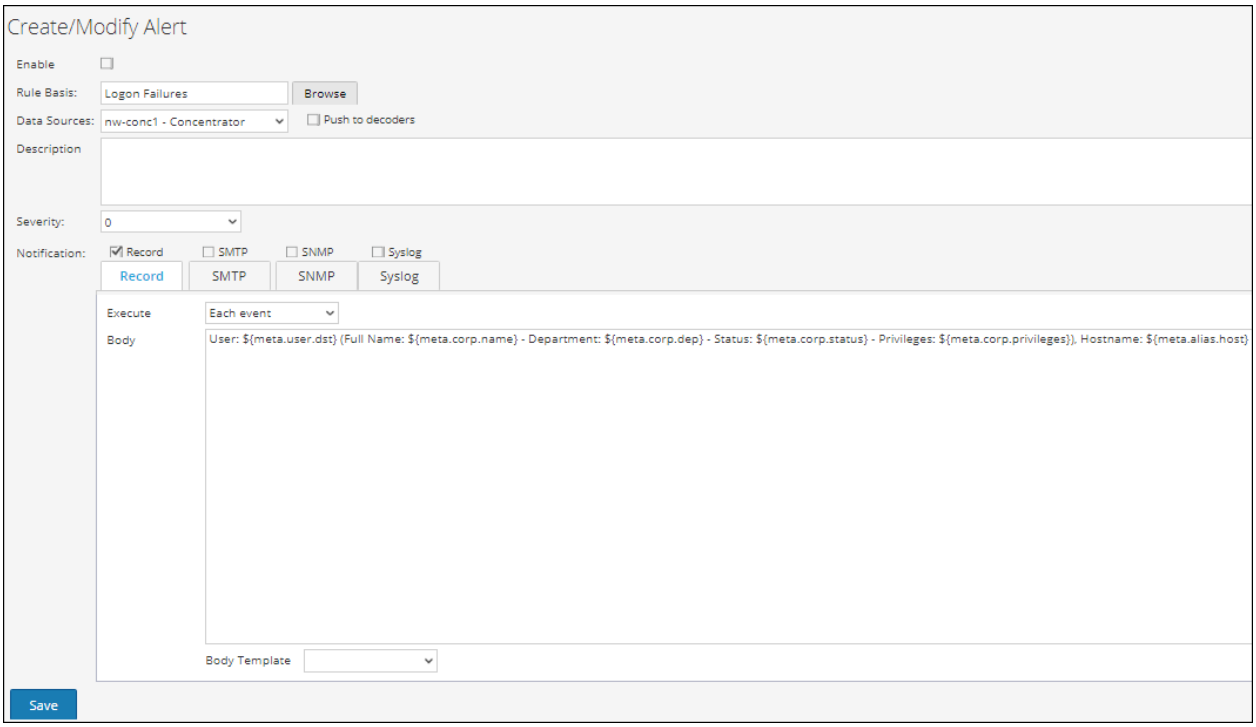
Alerts can be used to generate timely insights about current security issues, vulnerabilities, and exploits. For example, when a malicious email is sent from a compromised account, you would need an alert that automatically notifies you when such an event occurs.

The following concepts of alerting will help you understand more about alert rules, conditions, notifications, and templates.

Alert Rules

Alert rules specify the logic for alert generation. Alert rules allow you to set up threshold limits and define how to be notified if these limits are exceeded. For example, you may set up a rule to be alerted if the CPU usage remains abnormally high for 5 minutes or more.

Alert Definitions



The alert definition is similar to defining rules for reports. These rules must be defined based on your use case. Alert definitions are made by selecting the alert rules you define in the Build Rule view. You select this rule while defining an alert.

Note: You can only alert using rules defined for NetWitness data source.

Once an alert is created, this data is collected from the Reporting Engine and displayed on the user interface.

Once an alert is defined, you can schedule the alert to run every minute (by default), or run at the present time, or run at the near future.

Note: In the NetWitness user interface, wherever Date and Time is displayed, it is always according to the user selected time zone profile.

Alert Notifications

The following are the components required to configure alert notifications:

- Notification server – Notification Server is used to send alert notifications. For example, SMTP mail server. Once you configure a notification server, you can add it to a rule. When the rule triggers an alert, the rule will use that server to send alert notifications.
- Notifications – Alert outputs, which can be email, SMTP, SNMP, and Syslog.
- Templates – The pre-defined format of an alert message.

When ever the rule condition is encountered, alerts get generated based on the severity level and notifies the user depending on the notification method set for that specific alert. The following are the various notification methods:

- Email/ SMTP: Simple Mail Transfer Protocol (SMTP) sends alert emails for system activity. Email alerts can be sent to their intended recipients by selecting SMTP as notification type.
- SNMP: Simple Network Management Protocol (SNMP) sends alerts to multiple computers for SNMP traps. SNMP alerts can be sent to other computers by selecting SNMP as notification type.
- Syslog: Syslog alerts generate notifications from Syslog messages. Syslog alerts can be sent by selecting Syslog as notification type.

Alerts can be configured to notify events that require attention, or as mechanisms to take automated actions based on conditions configured in an alert. An alert is sent when conditions within the entity have met the criteria selected for the alert. The notification criteria determines when and at what frequency the alert is generated.

Alert Templates

Alert templates are pre-defined format for an alert message. You can use these templates to create alerts.

Access Control for Alerting

Depending on the user role, the user is provided with specific set of access permissions in order to manage an alert. The Administrator manages the access rights provided to each user role from the **(Admin) > Security > Roles** tab. You can set access permissions for the user roles to manage an alert. The Reporting module provides access control at the alert level.

Note: Reporting Engine Alert permissions are prefixed with 'RE' to distinguish them from Event Streaming Analysis (ESA).

When you create users and user roles, ensure that the roles that you create for specific tasks have access to all the necessary permissions. This could require permissions at several levels of the role hierarchy.

Alerts can be combined with a specific set of user roles so that when a user logs into NetWitness, the only alerts they can access are alerts accessible by the role to which the user belongs. Users that belong to a user role with the '**Read & Write**' access permission can define alerts. The access can further be tightened so that the alerts are accessed only by those who have the '**Read Only**' access.

At the alert level, you can set the following access permissions for the user roles in NetWitness:

- Read & Write
- Read Only
- No Access

Note: Before applying the Alert permissions, the default permission set for all the user roles is '**No Access**' permission and the checkbox is unchecked.

If you want to change the access permission for a specific user role, you must set it at the alert level. Except for administrators, the default permission set for all the other user roles is '**No Access**' permission.

The two scenarios are explained in brief:

- Scenario 1: Permissions applied to alert/ rules based on the user role.
- Scenario 2: Read-only permission applied to rules in the Alert.

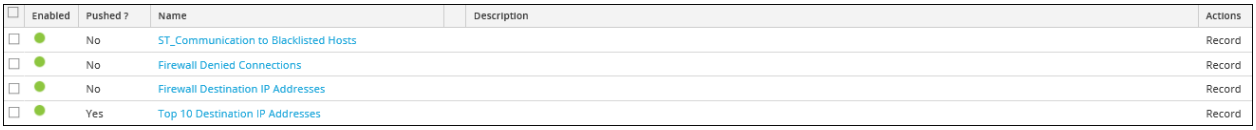
	Role (Analysts)	Permissions applied to Alert/ Rules based on the user role	Permission (Read-only) applied to Rules in the Alert
Alert	**Read & Write**	**Read & Write**	**Read & Write**
Rules	**Read**	**Read**	**Read**

The Alert is assigned the role of a Security Analyst and permissions are set to **Read & Write** alerts.

For scenario 1, each of the levels has a permission set based on the user role. For scenario 2, the **Read** permission is set for the Rules except that the permission for the rules must not be higher than the permission for the Alerts.

If the permission for the rules is higher than the permission for the Alerts, the permission is not applied. For example, if you set the permissions for the Alert as **No Access** and then specify the option *Apply Read-only permission to Rules in the Alerts*, the read-only permission is not set for the rules.

Access Control for an Alert When Multiple Alerts are Selected



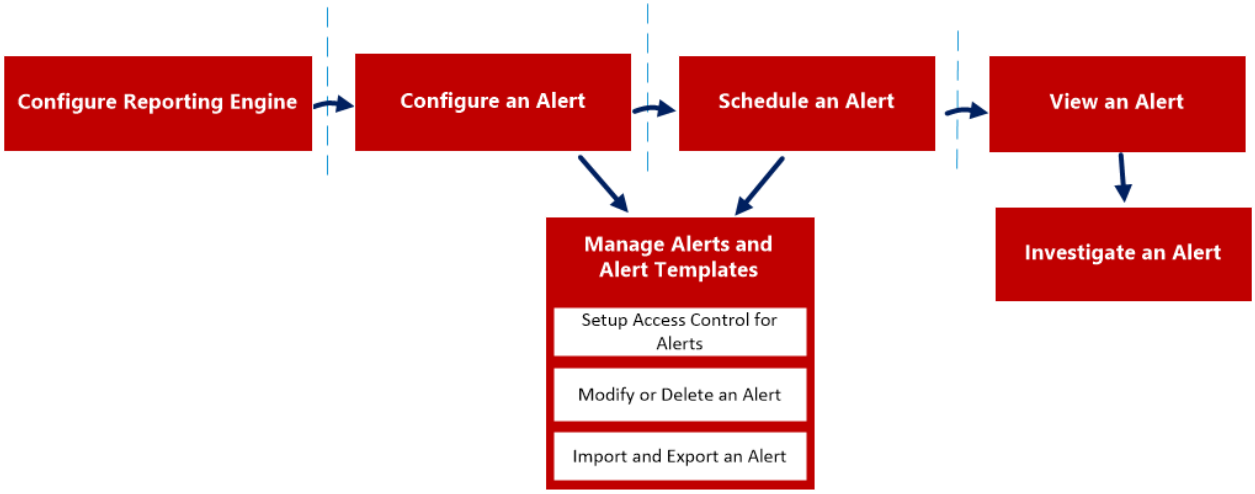
When you want to change permissions of multiple alerts, you must select several alerts and set their access permissions using the Alert Permissions panel. The access permission that you choose is applied to all the selected alerts.

Log in as a specific user and view the access details

When you log in to the NetWitness UI as a user having **Read** access permission, all the alerts will be denoted with the symbol (📖) and when you click on the symbol the 'Read Only' callout is displayed on the Alert panel.

When you log in to the NetWitness UI as a user not having **Read & Write** access permission on an Alert, all the alerts will be denoted with the symbol ( ) and the alerts appear grayed out on the Alert panel.

The following figure shows the Alert panel when logged in with minimal **Read & Write** access permission.



Note: If a user (other than ADMIN) creates an alert, ADMIN cannot access that alert.

The following table lists the various columns in the Alert Permissions panel:

Column	Description
Roles	The role of the user logged into the NetWitness user interface.
Read & Write	The user can access, view, edit, import, export, and delete the alert on the Alerts page. The user can also change the permission on the alert.
Read Only	The user can only access and view the alert on the Alerts page.
No Access	The user cannot access or view the alert for which this permission is set.
Apply Read-only permission to Rules in the Alerts	The user can automatically apply permissions to the rules in the alerts.

The following is an overview of the entire process of alerting:

To configure and generate an alert on Reporting Engine, perform the following:

1. Configure Reporting Engine
2. Configure an Alert
3. Schedule an Alert
4. View an Alert
5. Investigate an Alert
6. Manage an Alert and Alert Template

Configure Reporting Engine

Ensure that:

- You have Decoders that are connected to the Concentrator added to the Reporting Engine for the selected data source, before creating an alert rule.
- You have installed and configured a Syslog server that supports TCP/TLS in your environment. For example, WinSyslog. You can configure the Reporting Engine to send Syslog messages over TCP with Transport Layer Security (TLS) when an alert is triggered.

To configure the Reporting Engine to send Syslog alerts over TCP with Transport Layer Security (TLS):

1. Obtain the required certificates.
2. Append the CA certificate to the ca.pem file on the NetWitness server.
3. Configure the Syslog server to accept messages from client machines.
4. Configure the delivery of alert messages in the NetWitness UI.

Task 1: Obtain the required certificates

To generate certificates for configuring Reporting Engine to send Syslog messages over TCP with TLS:

1. Generate a Certifying Authority (CA) certificate. For more information, see http://www.rsyslog.com/doc/tls_cert_ca.html.

Note: You can ignore this step if you already have a CA running in your environment.

2. Generate a key pair for the Syslog server. For more information, see http://www.rsyslog.com/doc/tls_cert_machine.html.

Note: You can ignore this step if you have already configured security for the Syslog server using the key and certificates generated by the same CA.

Task 2: Append the CA certificate to the ca.pem file on the NetWitness Server

To append an existing CA certificate to the ca.pem file:

1. Manually append the contents of the CA certificate that you generated to the **/etc/pki/CA/certs/ca.pem** file.
2. Run the following command on the NetWitness server to have the certificate populate to the Truststore:
   ```
   keytool -import -file /etc/pki/CA/certs/ca.pem -keystore cacerts
   ```

Task 3: Configure the Syslog Server to accept messages from client machines

To configure the Syslog server to accept messages from client machines that have the same CA certificates:

1. Copy the following files to your secure TCP server target location:
   - ca_cert.pem
   - server_cert.pem
   - server_key.pem

   Where:

   ca_cert.pem - is the CA certificate

   server_cert.pem - is the server certificate

   server_key.pem - is the server key

   For more information, see the documentation specific to your Syslog server. If you are using rsyslog, refer to http://www.rsyslog.com/doc/tls_cert_server.html.

Task 4: Configure the delivery of alert messages in NetWitness

Configure Reporting Engine to send Syslog messages over TCP with Transport Layer Security (TLS) when an alert is triggered by enabling **SECURE_TCP** in the **Output Actions** tab for the Reporting Engine service in the Reporting Engine Services Config View. For more information, see the **"Reporting Engine Output Actions"** topic in the *Host and Services Configuration Guide*.

Configure an Alert

You can configure an alert by setting up alert notifications and adding a notification method to a rule.

Note: Only Administrators can set up these notifications.

To configure an alert:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Alerts**.

   The Alert view is displayed.

3. In the **Alert** toolbar, click .

   The Create/Modify Alert panel is displayed.

4. Click **Enable** to enable the alert.
5. In the **Rule Basis** field:
   a. Click **Browse**.

      The Lookup Rule Basis dialog box is displayed.

   b. Navigate the Rule tree and select a rule.
   c. Click **OK**.

      The Rule name is displayed in the Rule Basis field.

6. From the **Data Sources** drop-down list, select a data source.

   Note: If the data source is not listed, then ensure you have **Read** permissions set for the data source. This is applicable for NWDB and Warehouse Connector data sources. For more information, see **"Configure Data Source Permissions"** topic in the *Host and Services Configuration Guide*.

7. Select the **Push to decoders** checkbox for the Reporting Engine to send the rule to the Decoder.
8. (Optional) Enter an alert description in the **Description** field.
9. From the **Severity** drop-down list, select the severity level.
10. In the **Notification** field:
    a. Select the appropriate notification.
       The selected notification tab is displayed in the Create/Modify Alert dialog box.
    b. (Optional) Deselect the notification to disable the notification tab.
    c. Define an action in one of the **Notification** tabs:

i. In the **Record** tab field:

   a. From the **Execute** drop-down list, select the frequency for recording an alert.

   b. Enter the RECORD message. You can create a new message or select a template in the **Body Template** field and modify the template here.

   c. (Optional) If templates have been defined, select a template for the RECORD message that you can use as is or modify.

ii. In the **SMTP** tab field:

   a. From the **Execute** drop-down list, select a value to identify the number of times to send an email message for the alert.

   b. Enter an email address or comma-separated list of email addresses to send this alert.

   c. Enter the subject of the email message.

   d. Enter the body of the message. You can create a new message or select a template in the **Body Template** field and modify the template here.

iii. In the **SNMP** tab field:

   a. From the **Execute** drop-down list, select a value to identify the number of times that you want to send an SNMP message for the alert.

   b. Enter the SNMP message. You can create a new message or select a template in the **Body Template** field and modify the template here.

iv. In the **Syslog** tab field:

> **Note:** You can configure Multiple Syslog servers on the Syslog Configuration panel. For more information, see **"Reporting Engine Output Actions"** topic in the *Host and Services Configuration Guide*.

   a. Click .

   The New Syslog Configuration dialog box is displayed.

b. From the **Syslog Configs** drop-down list, select a value for the syslog configuration.

c. From the **Execute** drop-down list, select a value to identify the number of times to send a Syslog message for the alert.

d. From the **Facility** drop-down list, select the facility.

e. From the **Severity** drop-down list, select the severity level.

f. Enter the Syslog message. You can create a new message or select a template in the **Body Template** field and modify the template here.

> **Note:** If you want to add a metakey, specify the same in the format: ${meta.metakey}. For example, ${meta.ip.dst}.

g. Click **Save**.
The Syslog configuration gets added to the alert.

11. Click **Create**.

NetWitness creates an alert with a confirmation message that the alert is saved successfully. NetWitness generates the alert and executes the output actions every minute.

Schedule an Alert

You must schedule an alert to search for events on a regular schedule.

To schedule an alert:

1. Go to **Reports** to view the Manage tab.
2. Click **Alerts** to open the Alert view.
3. Select an alert to schedule.
4. On the **Alert** toolbar, click **Enable**.
The selected alert is scheduled.

View an Alert

You can view an alert or a list of all alerts.

You can view the alerts triggered and investigate any alert in the Investigation module and customize these views to show alerts for a specific period of time, and set the maximum number of alerts displayed in a single page.

To view an alert:

1. Go to **Reports** to view the Manage tab.
2. Click **Alerts** to open the Alert view.
3. On the **Alert** toolbar, click **View Alerts**.
   The View Alerts view is displayed.

Investigate an Alert

You can investigate every alert that is triggered on the Alert View. For more detailed investigation on a particular alert, you can view the alert on the Investigation module.

To investigate an alert:

1. In the **Alert** section toolbar, click **View Alerts** to navigate to the View Alerts view.
2. Do one of the following:
   - Click the  button against the alert you want to investigate.
     The Investigation module displays the details of the first session that registered the match for the given alert for immediate analysis.
   - Click on the alert name of the alert you want to investigate.
     The Investigation module displays all matches for that particular alert for the hour surrounding the registered alert.

Manage an Alert and Alert Template

You can manage alerts, scheduled alerts, and alert templates using the following procedures.

Manage an Alert

Depending on the access permissions set for the user role, you can modify or delete, import and export, enable or disable alerts, view or refresh an alert list.

Access Control for an Alert When a Single Alert is Selected

To set access permissions for an alert:

1. Go to **Reports**.
   The Manage tab is displayed.

2. Click **Alerts**.
   The Alert view is displayed.
3. In the **Alert** panel, select an alert.
4. Click > **Permissions**.
   The Alert Permissions dialog box is displayed.
5. Based on the user role, select the appropriate options.
6. (Optional) Select the checkbox if you want to automatically provide read access permission to dependent rules.

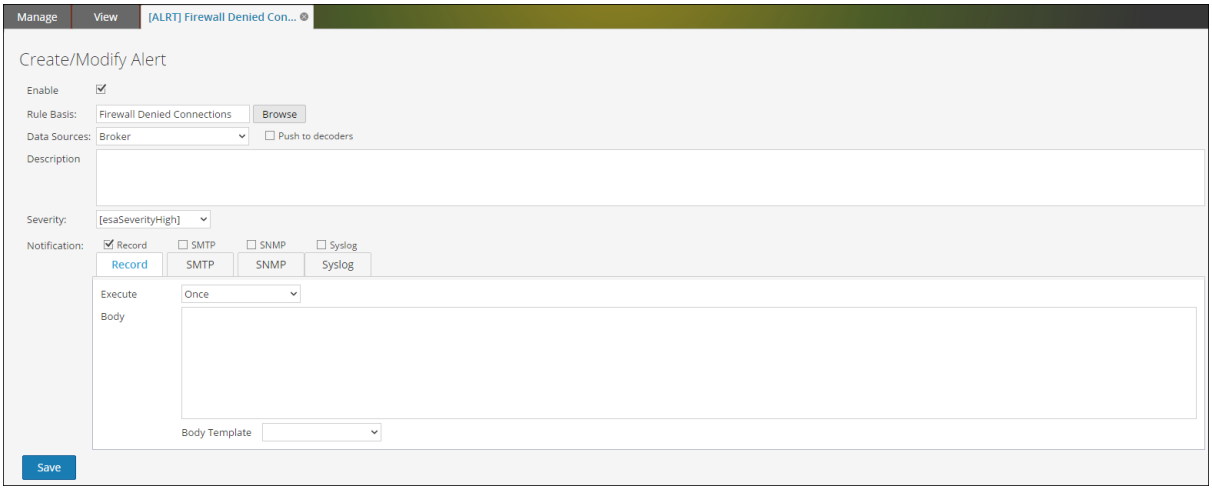
Note: When the check box is selected, all dependent rules with the No access permission will be given the READ access permission.

7. Click **Save**.
   A confirmation message that the permission is successfully set for the selected alert is displayed.

Access Control for an Alert When Multiple Alerts are Selected

To change permissions of multiple alerts:

1. In the **Alerts** panel, select all the alerts whose permissions must be set.
2. Click > **Permissions**.
   The Alert Permissions dialog box is displayed.
3. Select the permission to set for the respective user role.
4. Click **Save**.
   A confirmation message that the permission is successfully set for all the selected alerts is displayed.



Edit an Alert

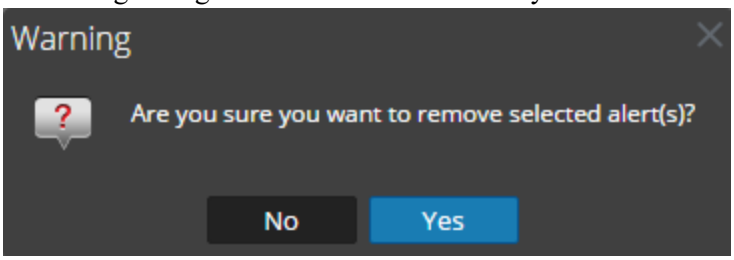
For example, if you want to be notified about the alert over an email on a different Email ID, you will have to modify the alert notification section with the new Email ID details to be reverted over an email when an alert is generated. Additionally, you can also modify the alert description and alert notification in the Create or Modify Alert panel.

To edit an alert:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Alerts**.
   The Alert view is displayed.

3. In the **Alert** panel, select an alert and click .
   The Create or Modify Alert tab is displayed.

4. In the **Rule Basis** field, navigate the rule tree and select another rule.
   The Rule name is displayed in the Rule Basis field.
5. (Optional) Select a data source from the **Data Sources** drop-down list.



> **Note:** If the data source is not listed, then ensure you have **Read** permissions set for the data source. This is applicable for NWDB and Warehouse data source. For more information, see **"Configure Data Source Permissions"** topic in the *Host and Services Configuration Guide*.

6. (Optional) Modify the alert description in the **Description** field.
7. Modify the appropriate **Notification** tabs – **RECORD**, **SMTP**, **SNMP**, and **Syslog**.
8. Click **Save**.
   A confirmation message that the alert is modified successfully is displayed.

Delete an Alert

To delete an alert:

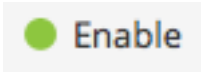
1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Alerts**.
   The Alert view is displayed.
3. In the **Alert** panel, select the alert and click .
   A warning dialog asks for confirmation that you want to remove the selected alerts.

4. Click **Yes** to delete the alert.
   A confirmation message that the alert is deleted successfully is displayed and the selected alert is deleted from the Alert panel.

Import an Alert

To import an alert from other instances of NetWitness in the Alerts panel:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Alerts**.
   The Alert view is displayed.
3. In the **Alert** toolbar, click > **Import**.
   The Import Alert dialog box is displayed.
4. Click **Browse** to select the binary file.
   NetWitness provides a file system view of the files. You can import multiple alerts at a time. To select multiple alerts, select the checkbox of the alert to be imported.
5. Locate the binary file, and click **Open**.
   The file is added to the Import Alert list.
6. (Optional) To overwrite any existing alert in the library with an identically named alert in the binary file when importing, select the Alert checkbox. If you do not select the Overwrite option, and an identical alert is encountered in the binary file, the binary file is imported and no error message is displayed.
7. Click **Import** to import the binary file.



Export an Alert

To export an alert to an external file that can be later imported to NetWitness:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Alerts**.
   The Alert view is displayed.
3. In the **Alert** panel, select an alert and click and do one of the following:
   - **Export** - This selection exports an alert in a .zip file.
   - **Export as Text** - This selection exports all the content from the Reporting Engine in a .zip file which contains the data in text format.
     You can export multiple alerts at a time. To select multiple alerts, check the checkbox of the alert to be exported.
4. Click > **Export**.
   The exported binary file is saved to the local drive.

Enable an Alert

To enable an alert:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Alerts**.
   The Alert view is displayed.
3. In the **Alert** panel, select the alert that displays ○ in the **Enabled** column.
4. Click 

.
   A confirmation message shows that the change to the alert(s) state was successful.

Disable an Alert

To disable an alert:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Alerts**.
   The Alert view is displayed.
3. In the **Alert** panel, select the alert that displays ● in the **Enabled** column.
4. Click 

.
   A confirmation message shows that the alert(s) status is changed successfully.

View an Alert List

To view an alert list:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Alerts**.
   The Alert view is displayed.
3. In the **Alert** toolbar, click **View Alerts**.
   The View Alerts view tab is displayed.
4. Select the last number of days from the drop-down list.
5. Enter a value for the **Max no of alerts**.
   The alerts list is displayed based on the chosen filter value.

Refresh an Alert List

To refresh the list of alerts:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Alerts**.
   The Alert view is displayed.
3. From the **Alert** toolbar, click  to refresh the alerts list.
   The Alert panel is refreshed.

Manage a Scheduled Alert

You can enable or disable a scheduled alert, and view all scheduled alerts.

Enable a Scheduled Alert

To enable a scheduled alert:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Alerts**.
   The Alert view is displayed.
3. Click View Schedule.
   The View Alerts Schedule view tab is displayed.
4. In the **Alerts Schedule List** panel, select the scheduled alert (s) to be enabled.
5. Click .
   A confirmation message indicates that the alert(s) status is changed successfully and the alert is now available in the Alert panel.

Disable a Scheduled Alert

To disable a scheduled alert:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Alerts**.
   The Alert view is displayed.
3. Click View Schedule.
   The View Alerts Schedule view tab is displayed.
4. In the **Alerts Schedule List** panel, select the scheduled alert (s) to be disabled.
5. Click .
   A confirmation message indicates that the alert(s) status is changed successfully and the alert is now available in the Alert panel.

View all Alerts Scheduled

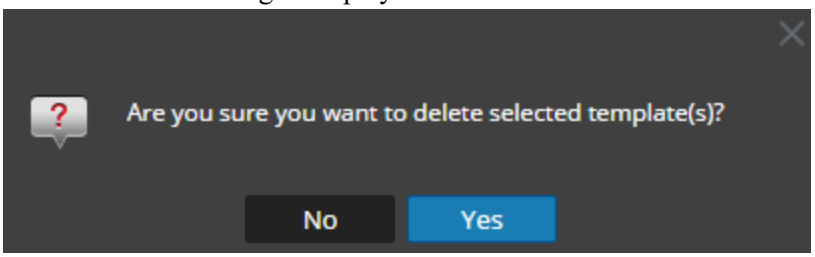
To view all the alerts scheduled:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Alerts**.
   The Alert view is displayed.
3. In the **Alert** toolbar, click **View Schedule**.
   The View Alerts Schedule view is displayed with a list of all the scheduled alerts.

Manage an Alert Template

You can modify or delete an alert template, and view all alert templates.

Edit an Alert Template



To edit an alert template:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Alerts**.
   The Alert view is displayed.
3. Click Template.
   The Alert Template view is displayed.
4. In the **Alert Template** panel, select a template and click .
   The Create/Modify Template dialog box is displayed.
5. Click **Save**.
   A confirmation message that the template is modified successfully is displayed.

Delete an Alert Template

To delete an alert template:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Alerts**.
   The Alert view is displayed.
3. Click Template.
   The Template view tab is displayed.
4. In the **Alert Template** panel, select a template and click .
   A confirmation dialog is displayed.

5. Click **Yes** to delete the template.
   A confirmation message that the template is deleted successfully is displayed.

View all Alert Templates

To view all alert template messages:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Alerts**.
   The Alert view is displayed.

3. In the **Alert** toolbar, click **Template**.
   The Template view tab is displayed with a list of templates.

List of Available Variables

Below are the list of variables available on the Reporting Engine notification for Reporting Engine alerts.

```
Name: ${name}
Severity: ${severity}
alert count: ${count}
Start_session_id = ${sid1}
end_session_id = ${sid2}
data source id = ${device.id}
netwitness host = ${nw.host}
```

See below example for how to use metadata information on the notification template.

To use ip.src and ip.dst meta, use the format `${meta.<meta-name>}`.

```
ip.src meta = ${meta.ip.src}
ip.dst meta = ${meta.ip.dst}
```

Appendix

This section provides detailed information about the supported aggregate functions, rule syntax, advanced rules query syntax in Reporting and task scheduler for Warehouse Reporting.

Rule Syntax

This section describes the different rule syntax supported in the Reporting Engine.

NWDB Rule Syntax

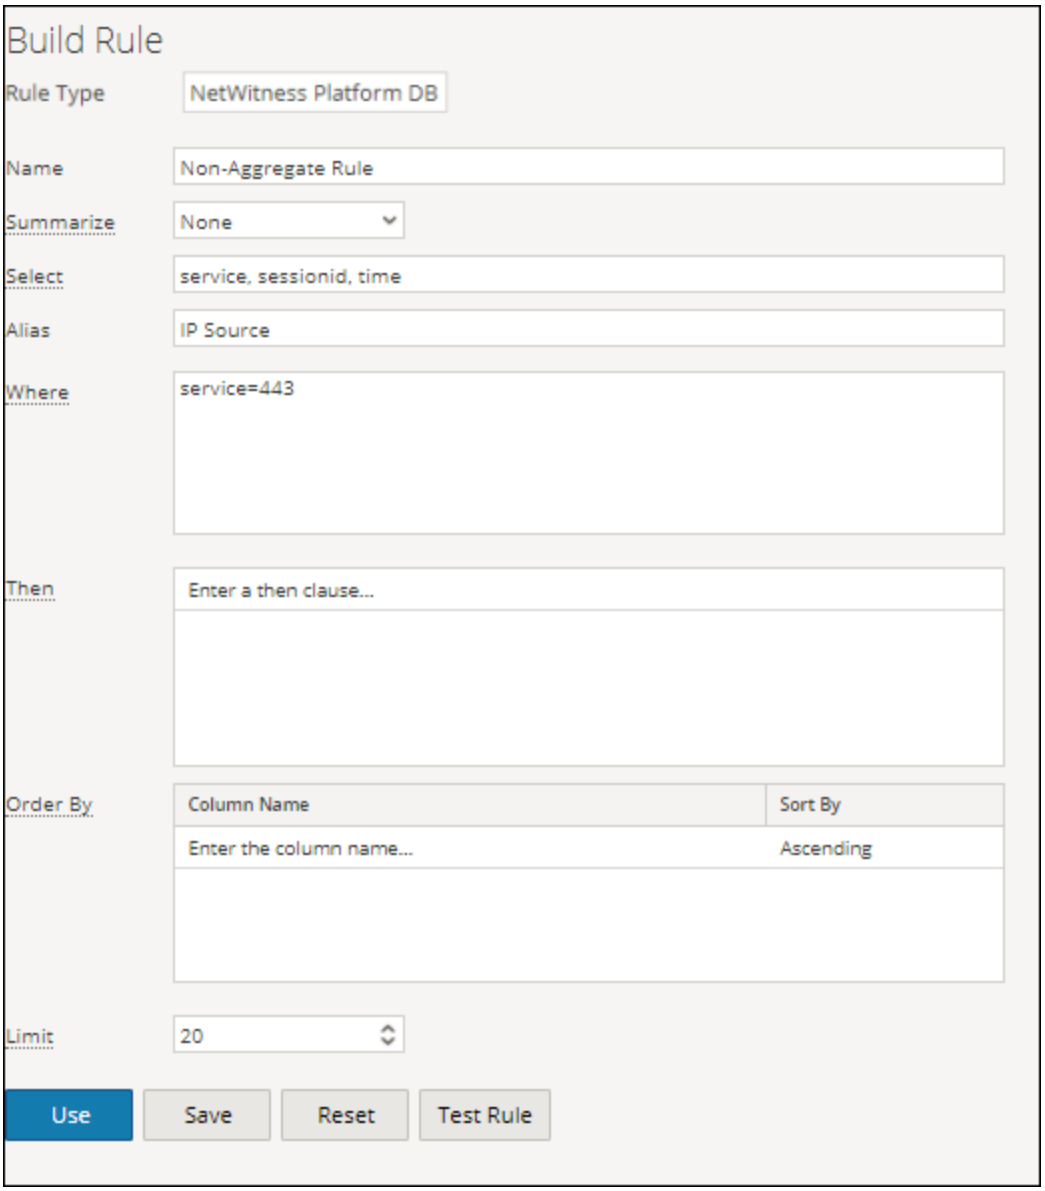
The NWDB rule is one of the rule syntax supported in the Reporting Engine. To enhance the execution time of your reporting entities, see "Reporting Guidelines" section in Reporting Overview.

A Rule is a function that manipulates the result set of a rule in order to make the output in a report more meaningful or add additional functionality to a rule other than querying data and displaying it. Any combination of these rule actions can be used to create unique and interesting representations of the information collected by NetWitness.

The Reporting Engine supports the following categories of NWDB data source rule syntax:

- **select** clause
  - Non-Aggregate Rule
  - Aggregate Rule
- **alias**
- **where** clause
- **where** clause Operators
- **then** clause
- **Limit** field
- Rule Actions
- Rule Operators

Select Clause



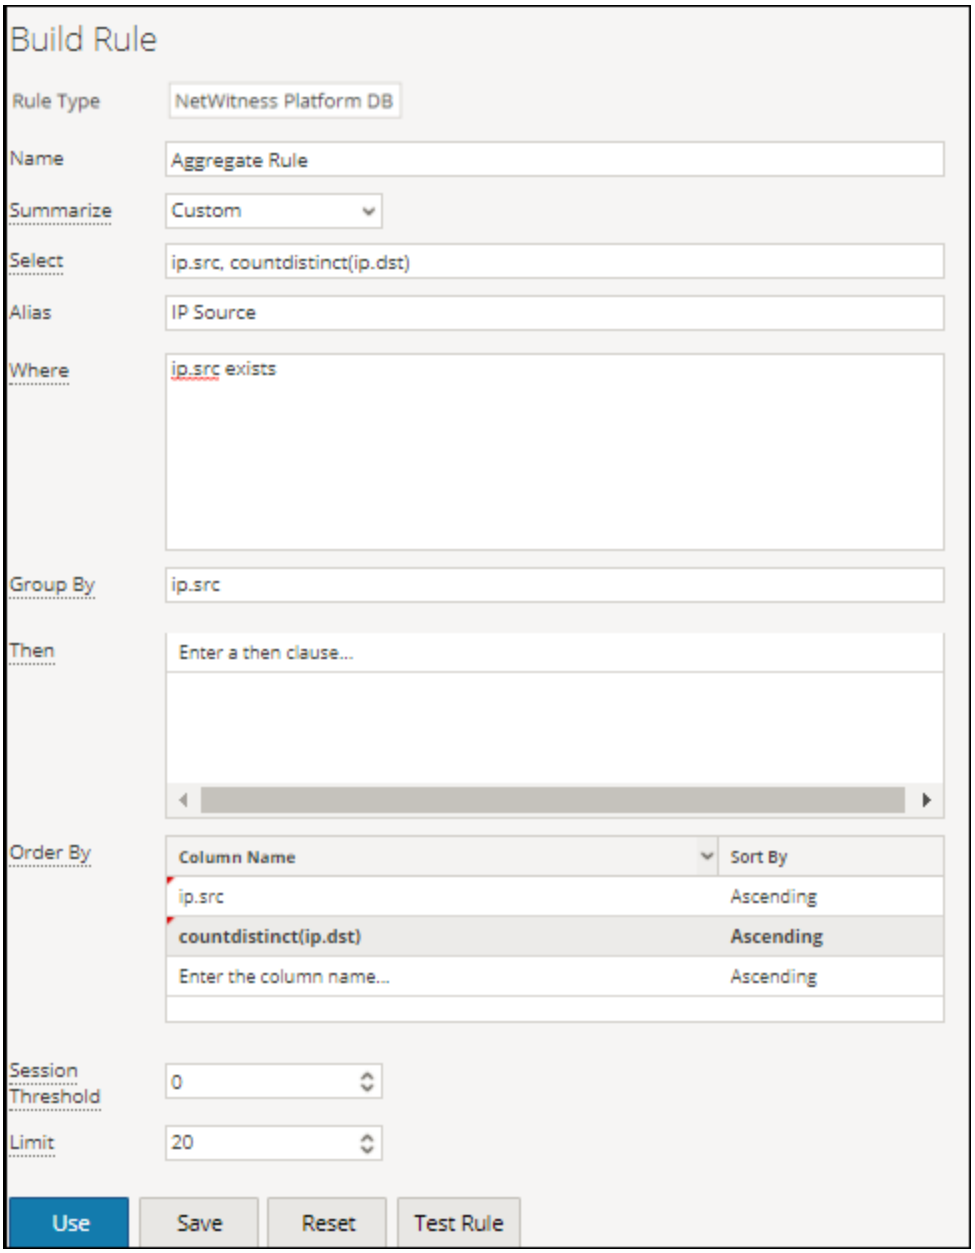
The select clause is a comma separated list of values. For example: select sessionid,time,service.

There are two types of select clause for NWDB Rule:

- Non-aggregate rule
- Aggregate rule

Non-Aggregate Rule

When you want to define a rule without any grouping, choose 'None' in the Summarize field. In a non-aggregate rule, you can select any number of metas in the *Select* clause. For example, select service, sessionid, time.



Aggregate Rule

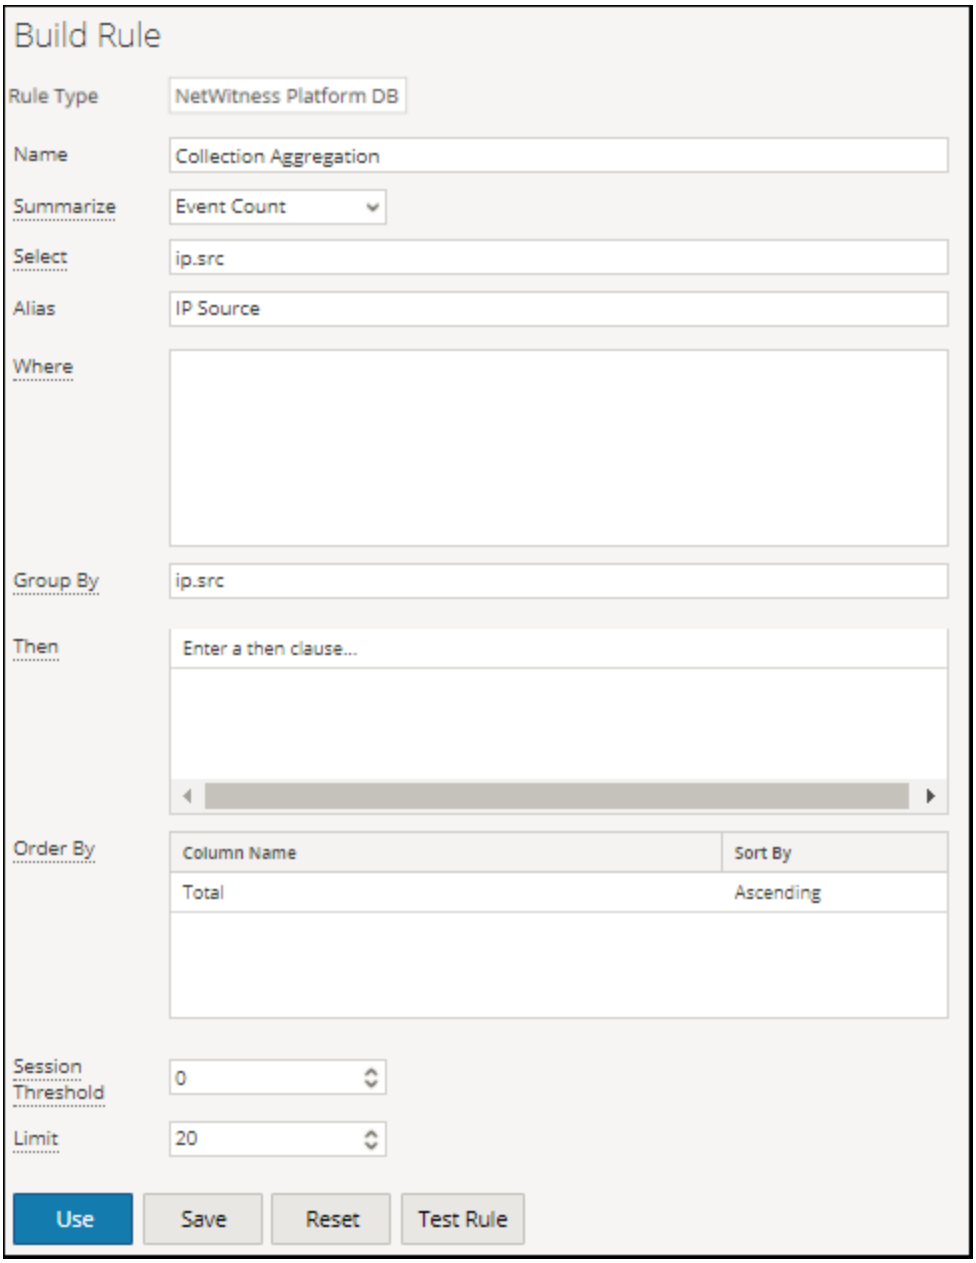
When you want to query for a specific meta and its associated aggregate value then you must use the Aggregate rule. To get an aggregate, you must choose either of the three metas (Event Count, Packet Count, Session Size) or choose 'Custom' in the **Summarize** field to include an aggregate function in the *Select* clause. For example, select ip.src, sum (ip.dst). When Custom aggregate rule is enabled, the following fields are populated in the user interface:

- Group By
- Order By
- Session Threshold

The following figure shows the Build Rule view for Aggregate Rule.

There are two types of aggregate values that can be queried:

- Collection aggregation
- Meta aggregation



Collection Aggregation

With collection aggregation, you can get aggregates related to Event, Session or Packets. The following values can be queried in a collection aggregation:

- **Event Count**: The total count of events.
- **Packet Count**: The total count of packets.

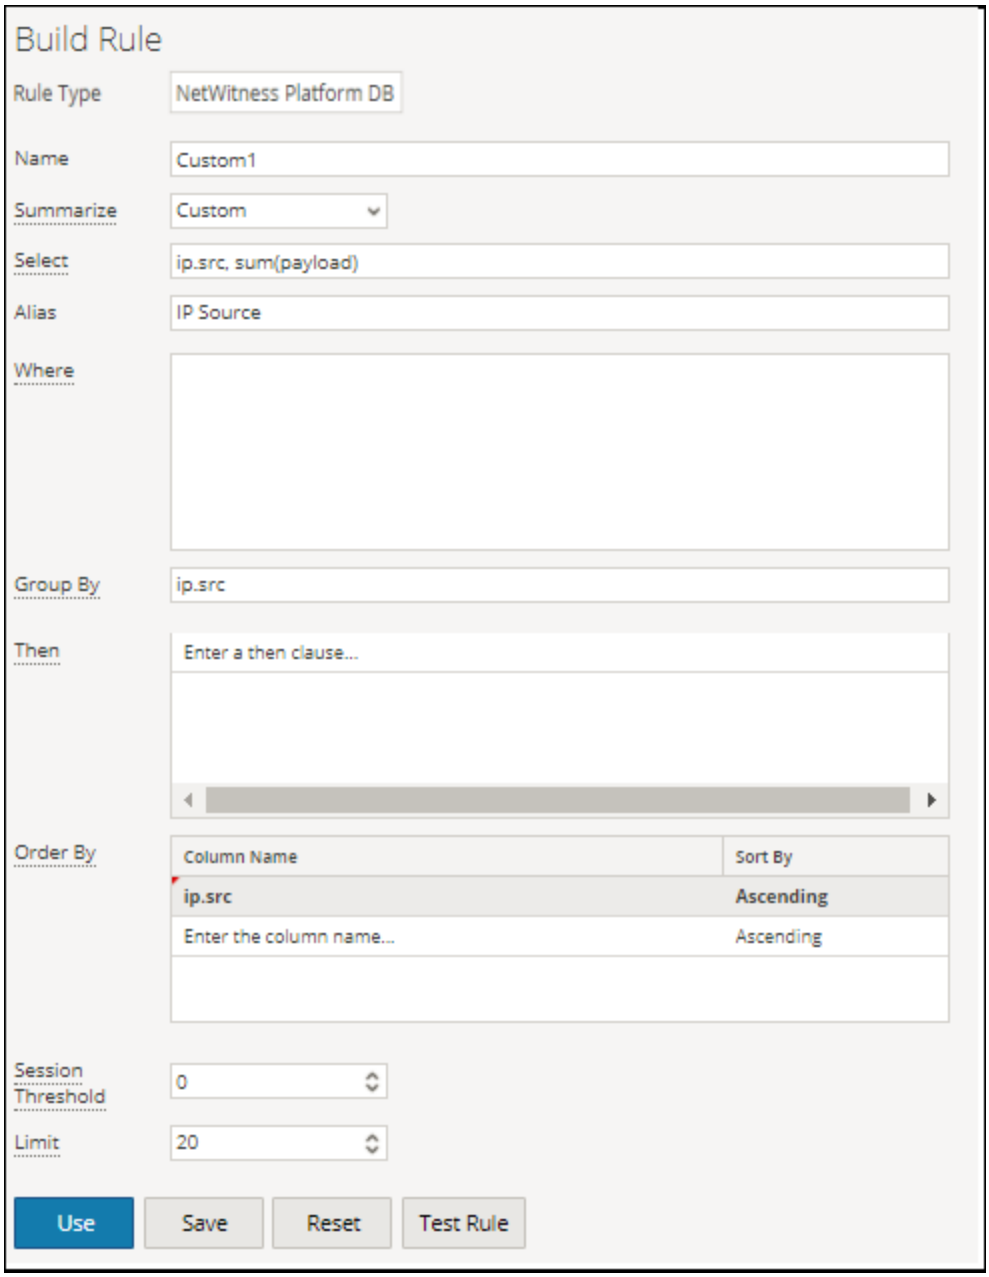
- **Session Size**: The total session size.

These options are listed in 'Summarize' field and any one of them can be selected in a rule.
For example, choose any of the Collection aggregates (Event Count or Packet Count or Session Size) in the 'Summarize' field and select ip.src.

Meta aggregation

With meta aggregation, you can get aggregates of meta values. The following are the supported meta aggregate functions:

- sum(meta)
- count(meta)
- countdistinct(meta)
- min(meta)
- max(meta)
- avg(meta)
- first(meta)
- last(meta)
- len(meta)
- distinct(meta)



Supported Meta Aggregate Functions

The NWDB service supports the following meta aggregate functions and syntax in this release.

Syntax	Function
sum(<meta>)	The sum of all meta values. For example, if you provide the field sum(payload) in the select clause, the resultset is the sum of payload size. **Note:** The meta field chosen for the sum aggregate function must be of numeric data type.
count(<meta>)	The total number of meta fields that would be returned. For example, if you provide the field count(ip.dst) in the select clause, the resultset is the number of times an ip.dst value is returned.
countdistinct (<meta>)	The total number of distinct meta fields that would be returned. For example, if you provide the field countdistinct(ip.dst) in the select clause, the resultset is the number of times a distinct ip.dst value is returned.
min(<meta>)	The minimum of all meta values. For example, if you provide the field min(payload) in the select clause, the resultset is the min of payload size.
max(<meta>)	The maximum of all meta values. For example, if you provide the field max(payload) in the select clause, the resultset is the max of payload size.
avg(<meta>)	The average of all meta values. For example, if you provide the field avg(payload) in the select clause, the resultset is the avg of payload size. **Note:** The meta field chosen for the avg aggregate function must be of numeric data type.

Syntax	Function
first(<meta>)	The first occurrence of the meta value. For example, if you provide the field first(ip.src) in the select clause, the resultset is the first occurrence of ip.src for that group.
last(<meta>)	The last occurrence of the meta value. For example, if you provide the field last(ip.src) in the select clause, the resultset is the last occurrence of ip.src for that group.
len(<meta>)	Converts all field values to a UInt32 length instead of returning the actual value. This length is the number of bytes to store the actual value, not the length of the structure stored in the meta database. For instance, the meta value "NetWitness" returns a length of 10. All IPv4 fields, like ip.src, returns 4 bytes.
distinct (<meta>)	The distinct values of the meta. For example, if you provide the field distinct(ip.src) in the select clause, the resultset is all the distinct ip.src for that group.

You must select 'Custom' in 'Summarize' field and provide the meta and the meta aggregate functions in the select clause.

Note: Meta aggregate functions cannot be used in a WHERE clause and the rule actions like min_threshold/max_threshold can be used to filter aggregate functions. It is advised to use a more refined WHERE clause to get a better rule performance while using 'group by'.

Aggregate Query for Multiple Meta

To execute aggregate query for multiple Meta, follow these steps:

1. Go to **Reports**.

   The Manage tab is highlighted and the **Rules** view is displayed.

2. In the **Rules** toolbar, click + > **NetWitness Platform DB**.

   For example, enter the following meta in the fields highlighted below:

   SELECT: ip.src, service, count(alias.host)
   ALIAS: Source IP Address, Service Type, count(alias.host)
   WHERE: ip.src = 59.96.136.142

   Note: In the alias field you can enter a name for columns used in the select clause. If you do not specify the alias for one of the field in the select clause, then the default description will be used. For example, if the select clause has Field1, Field2, Field3, Field4, and alias has only Field1, Field3, Field4, then for Field2 a default description is used.

3. Click the **Test Rule** button at the bottom of the screen.

   The Test Rule page is displayed.

Summarize

Summarize determines the type of summarization or aggregation for the rule.

Name	Config Value
Summarize	To query metas without any custom grouping, select: • **None**: The data is grouped by session in this case. To get collection (sessions/events/packets) related aggregates, select either of the following: • **EventCount**: The total count of events. • **Packet Count**: The total count of packets. • **Session size**: The total session size. To get meta based aggregates, select: • **Custom**: This indicates that expected meta aggregate function is defined in rule select clause.

Order By

Order By determines how to sort the result set.

Name	Configuration Value
Column Name	The **Column Name** is the name of the columns by which you want to sort the results. By default, the value is empty. When you click on a column, the value gets populated based on the Summarize field. • For 'None' and 'Custom', the value gets populated based on the entries made in the Select field. You can select from this list or add custom name. • For Event Count, Packet Count and Session size, accepted values are Total and Value. • Total - sort by aggregate value • Value - sort by group by meta
Sort By	**Sort By** determines the order in which you want to sort the results. The following are the values: • Ascending Order • Descending Order

Session Threshold

The session threshold is the optimization setting to stop scanning the matching sessions for each possible unique value for the selected meta. The threshold is an integer between 0 (default) and 2147483647. The threshold 0 scans for all matching sessions.

Note: If you provide a non-zero value (a value higher than zero), the aggregate results are inaccurate. This can be used only when you are interested in unique values and not aggregate values.

Supported where Clause

Syntax	Description
where <field1> [<field-operator>] < value1>,<value2>,<value3-value4> <logic-operator> <field2>,and so on	The where clause is a comma separated list of language field values and ranges that is used by NwValues function. In the where clause, string values have to be enclosed within single quotes. For example, where username = 'admin' && service = 22.
where <field1> [<field-operator>] <List1>	You can use a list in the where clause if you have multiple values to report on. For example, where ip.src exists && alias.host exists && alias.host contains $[User Reports/List of Alias Host]. When you use the list you must specify in the format $[<path>/<List name>].

In the where clause, make sure the syntax is correct based on the meta type.
For example,
For all text meta type use quotes for example, username = ‘user1’.
For all IP Addresses, Ethernet Addresses, and Numeric meta types do not use quotes for example, service = 80 && ip.src = 192.168.1.1.
For date and time meta types, if the date and time format is 'YYYY-MM-DD HH:MM:SS‘, use quotes.
If the date and time format is 1448034064 (number of seconds since EPOCH (Jan 1, 1970)), do no use quotes.

Note: If list is used in the rule, make sure that the list values are quoted or unquoted based on the type of the meta used. Checking the **Quotes will be inserted for all the values** checkbox in list definition page (for more information see, "Create Lists or List Groups" section in Configure a Rule) would quote all the list values.

Supported where Clause Operators

Syntax	Description
=	Returns results where the field is equal to any provided value. For example, tcp.dstport = 21-25,110 returns session with TCP destination ports of 21, 22, 23, 24, 25, or 110.
!=	Returns results for fields that do not match the values specified. For example, eth.type !=0x0800 returns sessions outside of hex value (decimal value of 2048) that is all non-IP based protocols.
begins	Checks for a value at the beginning of a text or binary field.
contains	Searches a text or binary value for a partial match.
ends	Checks for a value at the end of a text or binary field.
exists	If the field value exists, regardless of value, the operation evaluates to true.
!exists	If the field value does not exist, the operation evaluates to true.
length	Evaluates the length of the field. For example, username length 20-u returns any username that is 20 or more characters long.

Syntax	Description
regex	Performs a regular expression search against text or binary values.
not	Not operator is used to negate a clause or condition. For example, (not(user.dst ends "$")) will not display values for user destination.

Supported then Clause

Syntax	Description
then <rule action>	The then clause contains a rule action that manipulates the original result set of a rule in order to make the output in a report more concrete or add additional functionality other than querying data and displaying it. For example, dedup (filename).

Limit field

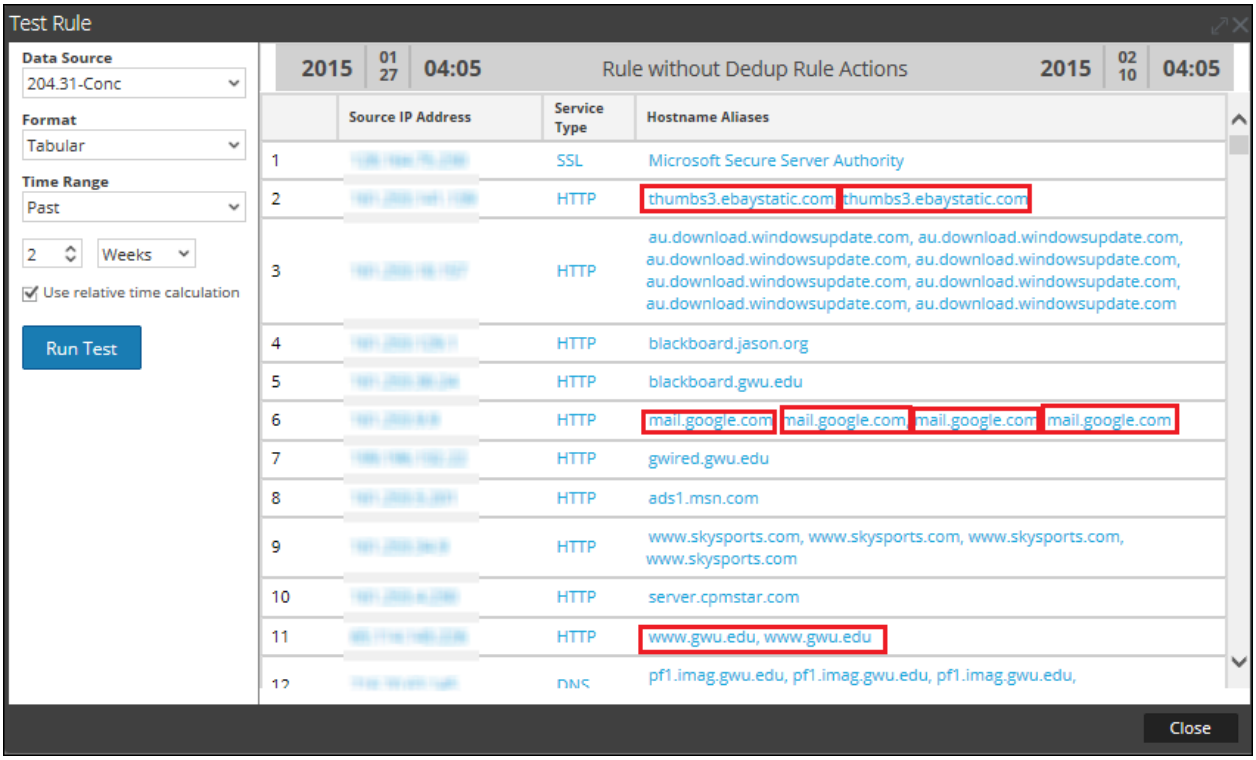
This indicates the limit to be put on the query while fetching data from the database. If a result set is sorted by event
count, packet count, or session size, the limit represents the top (or bottom) N values to be returned. If the result set is not
sorted, the first N values are returned.

Rule Actions

The NWDB data source rule syntax supports the following rule actions:

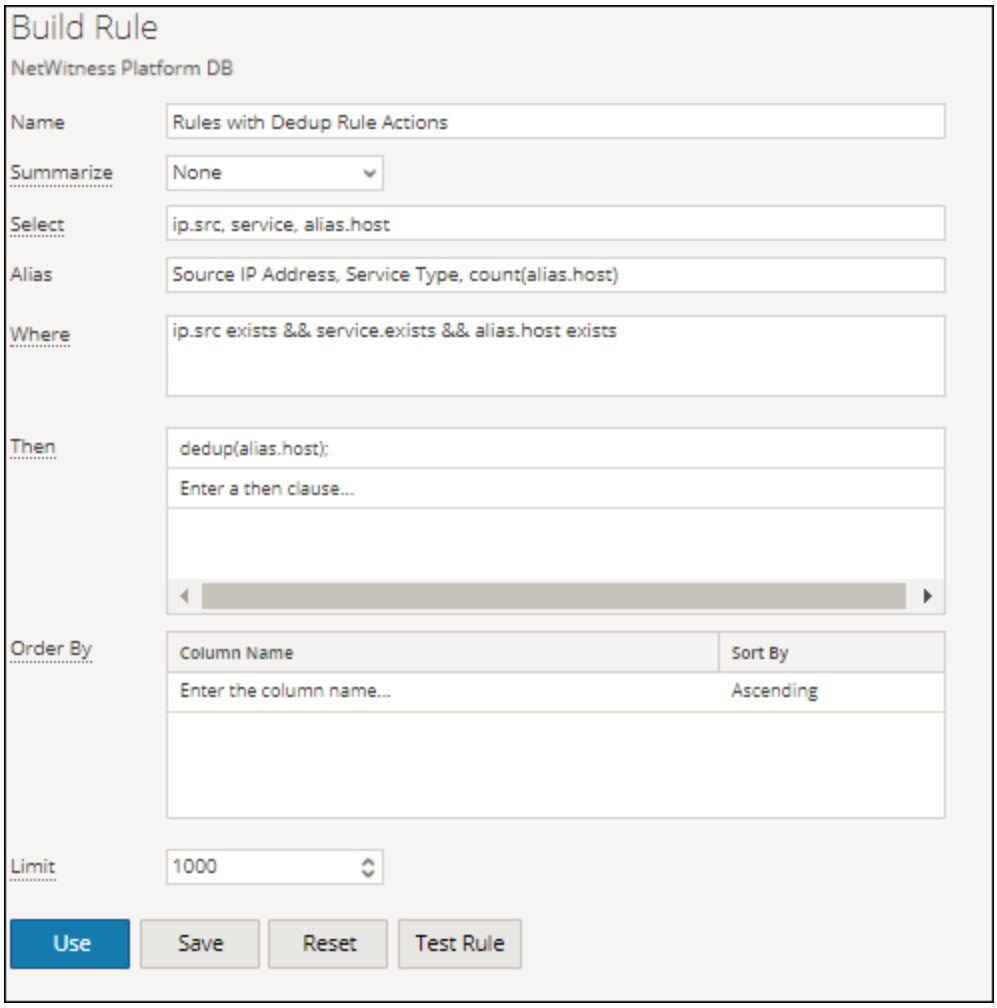
- dedup
- filter_on
- filter_out
- lookup_and_add
- max_threshold
- min_threshold
- regex
- sum_count
- sum_values
- show_whats_new

dedup (string field)



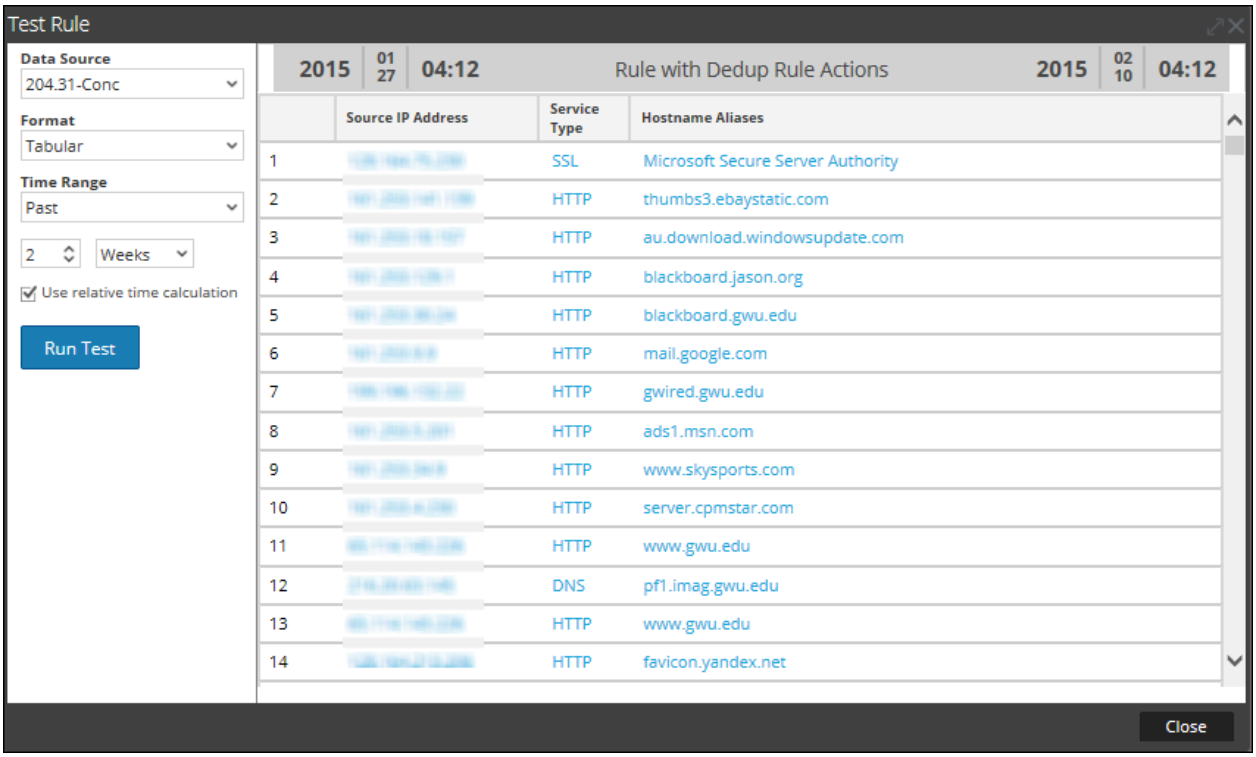
dedup removes the duplicate entries in an unsorted result set and displays only pertinent data.
The dedup rule action removes duplicate entries of a specific field in the report, so that only the first occurrence of that value is listed in the report.

Note: The dedup rule action cannot be used with an aggregate rule.



For example, the meta data generated by an individual session is often repetitive, especially when you have sessions with a lot of DNS lookups or web sessions that access the same host multiple times for various resources (such as, javascript, css). To remove the duplicate entries of the host, you can use the dedup rule action.

Example:



The following example is a lengthy result set that can be trimmed by removing the duplicate values in the same session.

The following figure shows the use of dedup rule action to remove the duplicate entries from the result set.

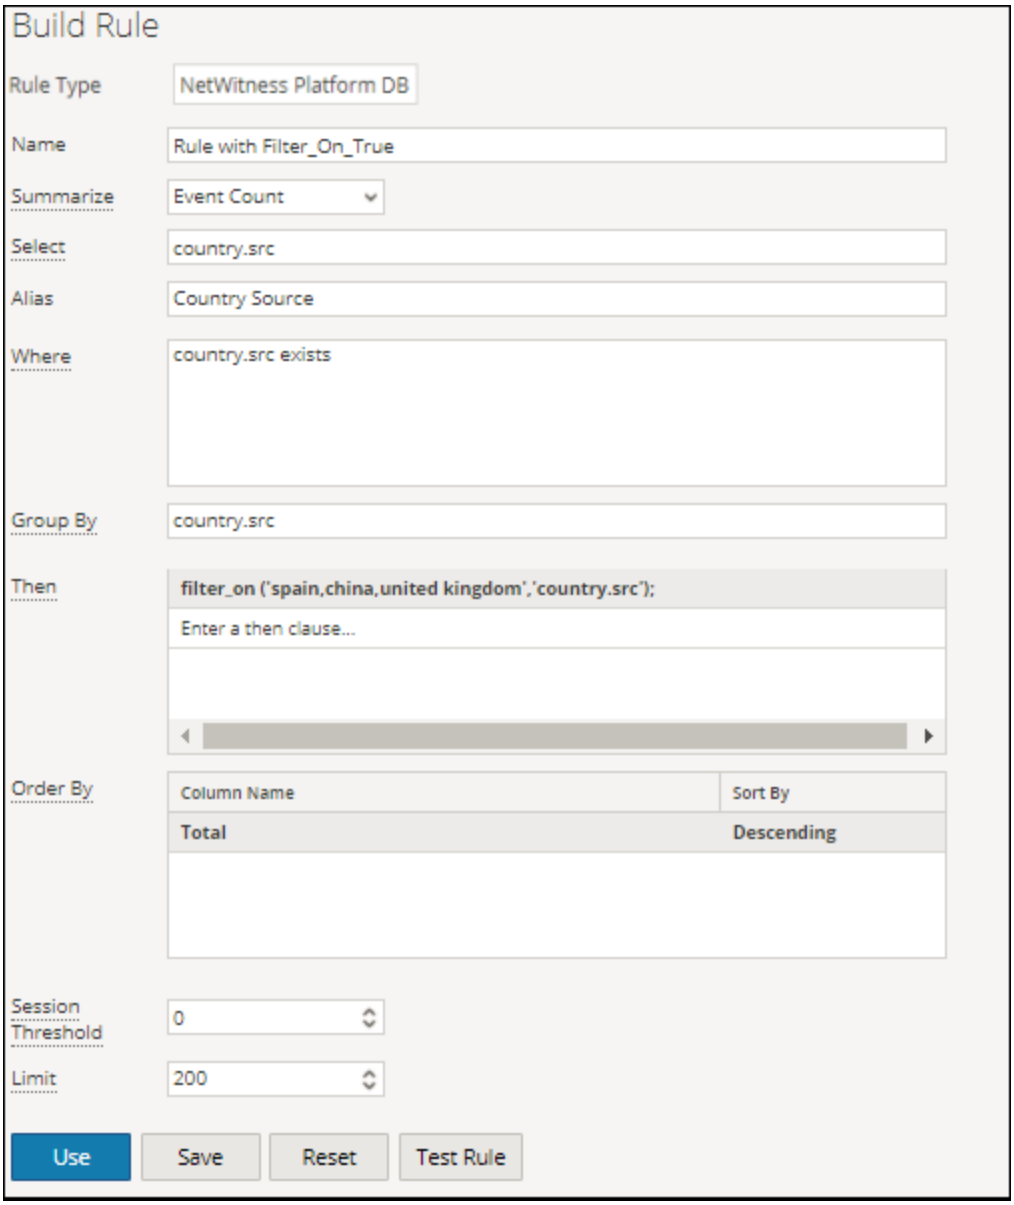
The duplicate value for each entry in the rule result set is reduced to one value.

filter_on (string filter, string field, bool matchExact)

`filter_on` removes values that do not contain the `filter` criteria from the result set. If the result set contains multiple fields, you must select a specific field to which the filter is applied. To add additional results to a single result set, include function such as lookup_and_add.

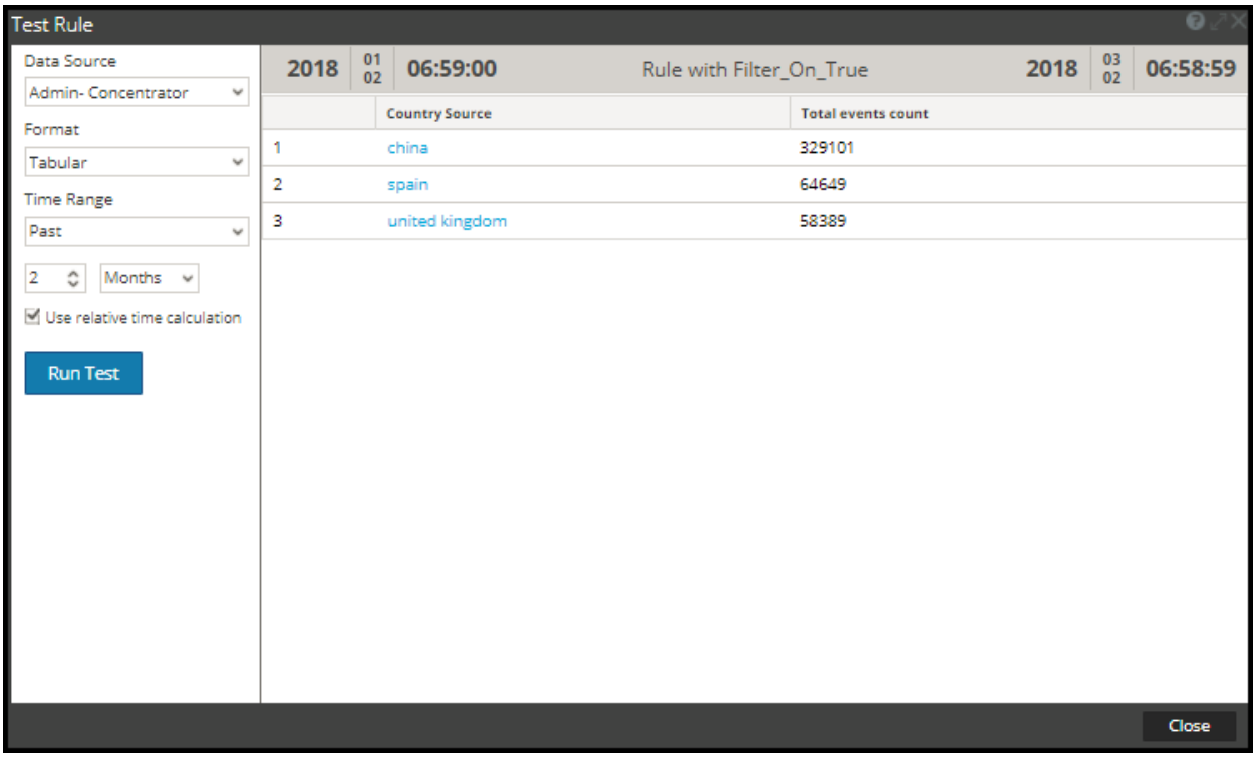
The matchExact parameter determines if the match is an exact match or contains a match.

- If matchExact is set to `false`, any value that contains the filter text is considered a match.
- If matchExact is set to `true`, only values that match the provided filter text is included in the result set.



Note: Unless the matchExact parameter is specified, the default behavior of the rule action is to match exactly the text specified in the filter parameter. To specify that results containing the filter text must be kept in the result set, users must set the matchExact parameter to false.

Example:



The following figure displays the list of countries and their event count.

The following figure shows a filter_on rule action to filter out countries except Spain, China, United States and United Kingdom from the result set.

The following figure shows the output with the filter_on rule action.

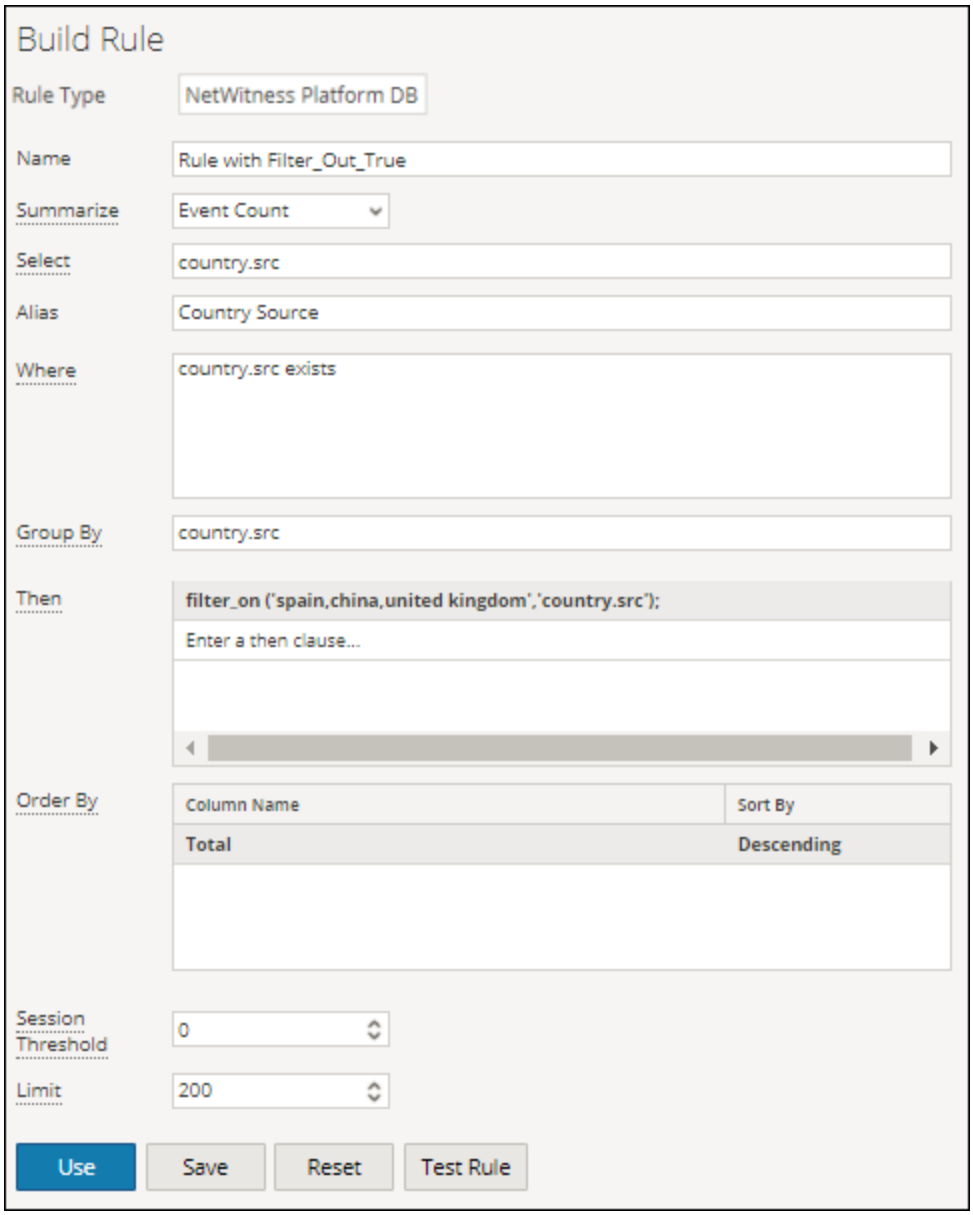
Another way of filtering out the entries from the result set is to create a list of variables which you want to filter out. For example, you can create a list with United Kingdom, France and Germany as values in the list. You can use this list in the rule action to get the same result set. For example, if you create a list called COUNTRY_LIST, you can use the list as follows:

```
filter_on ('$COUNTRY_LIST', 'country.src', 'false');
filter_out (string filter, string field)
filter_out (string filter, string field, bool matchExact)
```

filter_out removes the values that contain the *filter* criteria from the result set. If the result set contains multiple fields, you must select a specific field to which the filter is applied (for example, you can use a lookup_and_add to add results to a single result set).

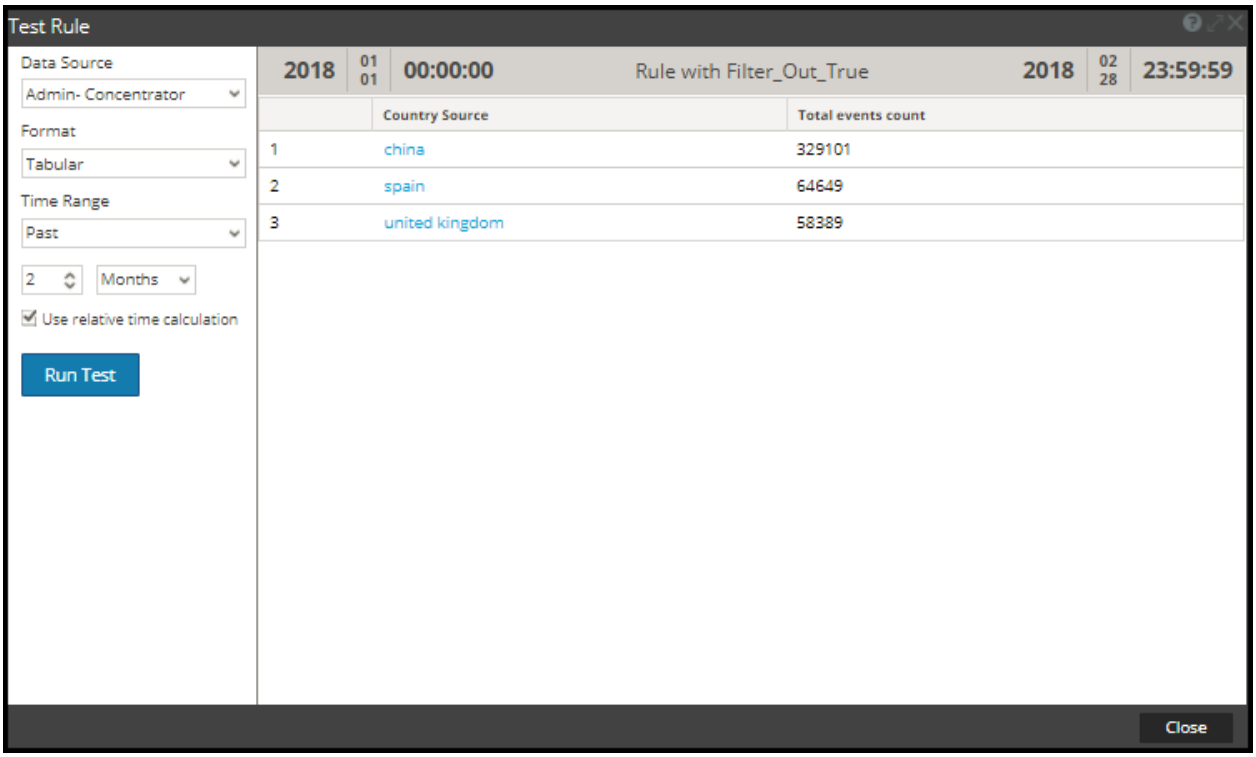
The matchExact parameter determines if the match is an exact match or contains a match.

- If matchExact is set to false, any value that contains the filter text is considered a match.
- If matchExact is set to true, only values that match the provided filter text is excluded from the result set.



Note: Unless the `matchExact` parameter is specified, the default behavior of the rule action is to match exactly the text specified in the filter parameter. To specify that results containing the filter text must be removed from the result set, users must set the `matchExact` parameter to false.

Example:



The following figure displays the list of countries and their event count.

The following figure shows the filter_out rule action to remove the event count for Spain, China, United States and United Kingdom from the result set.

The following figure shows the output with the filter_out rule action.

```
lookup_and_add (string select, string field)
lookup_and_add (string select, string field, int limit)
lookup_and_add (string select, string field, int limit, boolean inherit)
lookup_and_add (string select, string field, int limit, boolean inherit, string extraWhere)
lookup_and_add(string select, string field, int limit, boolean inherit, string extraWhere, boolean aggregate)
```

This rule action iterates through a list of values in a result set and lookup additional meta data to further describe the relationships between various elements in a result set.

Note: The lookup_and_add rule action can be used only with an aggregate rule.

The first parameter, select, designates the type of meta data that must be added to elements of the result set. The second parameter, field, specifies where in the result set the append must apply to. Also, a limit can be applied to avoid crowding the result set with a large result set.

By default, subsequent queries to the SDK will inherit the where clause of the parent rule. To use a unique where clause, you can specify a boolean value in the fourth parameter as false and in the fifth parameter you can specify a different where clause.

Note: If you are using a unique where clause in your query, make sure that you use a single quote (') for enclosing arguments and double quotes (") for string values.

Now, with the addition of **Custom** summarization and **Group By** feature, the result can be achieved even without having lookup_and_add rule action. The new rule syntax with groupby displays the result in a flat structure which is better than the earlier rule syntax without groupby Hence it is recommended to manually edit/update rules with lookup_and_add rule action and use groupby clause wherever it is applicable.

Note: Lookup_And_Add rule action is supported only if the SELECT clause has one meta and aggregate function.

For example, see below scenarios: In Example **2a**, lookup_and_add rule action is used. Instead of using lookup_and_add rule action, the same result can be achieved by using **Custom** summarization and **Group By** feature. See Example **2b** below.

But, lookup_and_add rule action is still supported for NWDB rules on the following conditions:

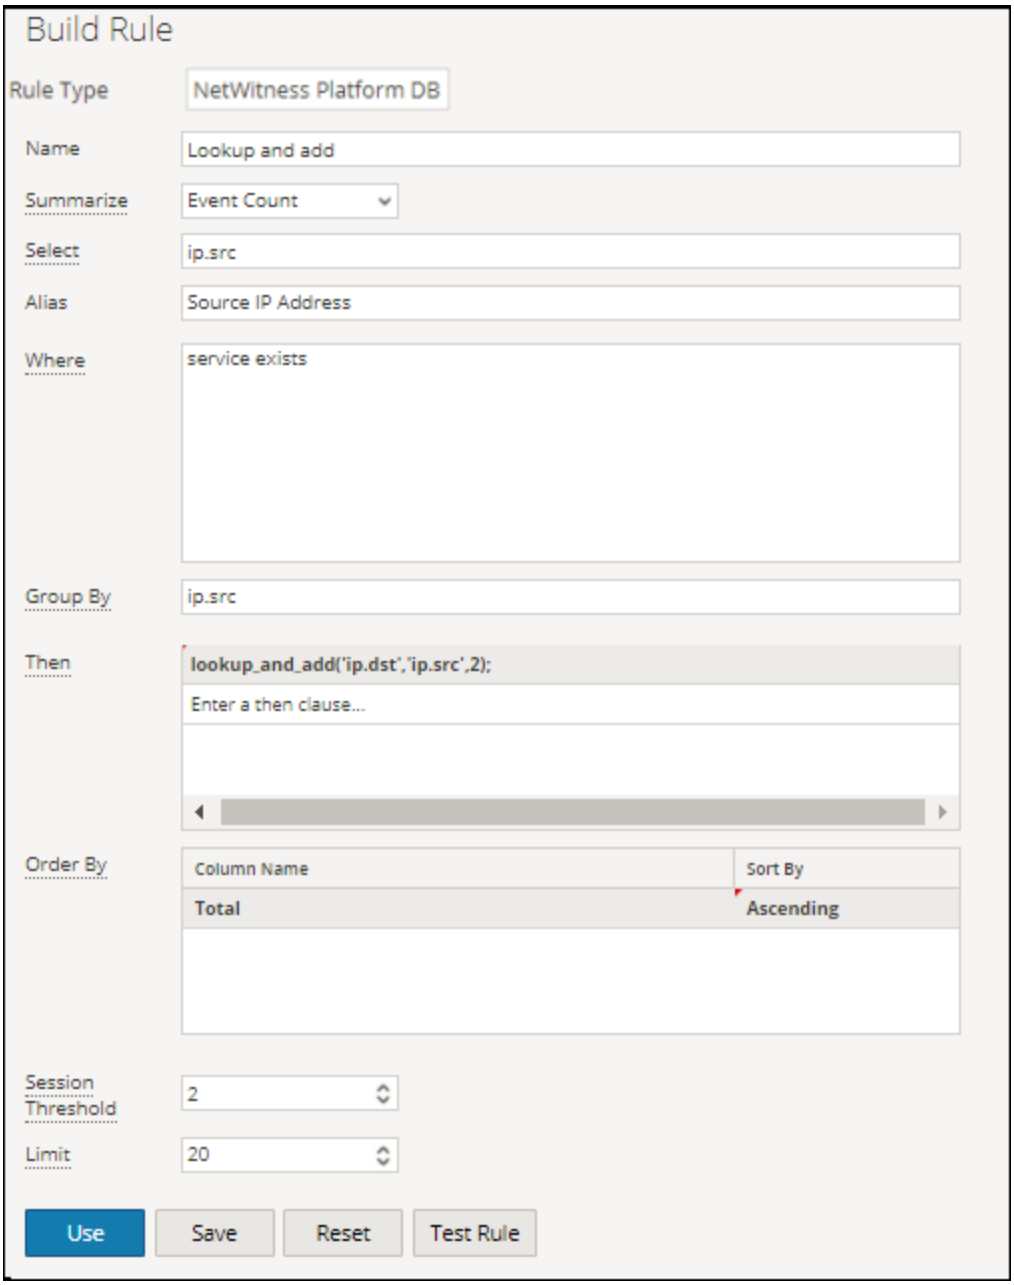
- All versions of NWDB rules with Summarization as Event Count, Packet Count, or Session Size.
- For Custom summarization, the lookup_and_add rule must have only one group by meta with only one aggregate function where the aggregate function must be either sum() or count().

Note: It is not supported for “Summarize-None”.

For example, lookup_and_add rule action can be used for the following rules:

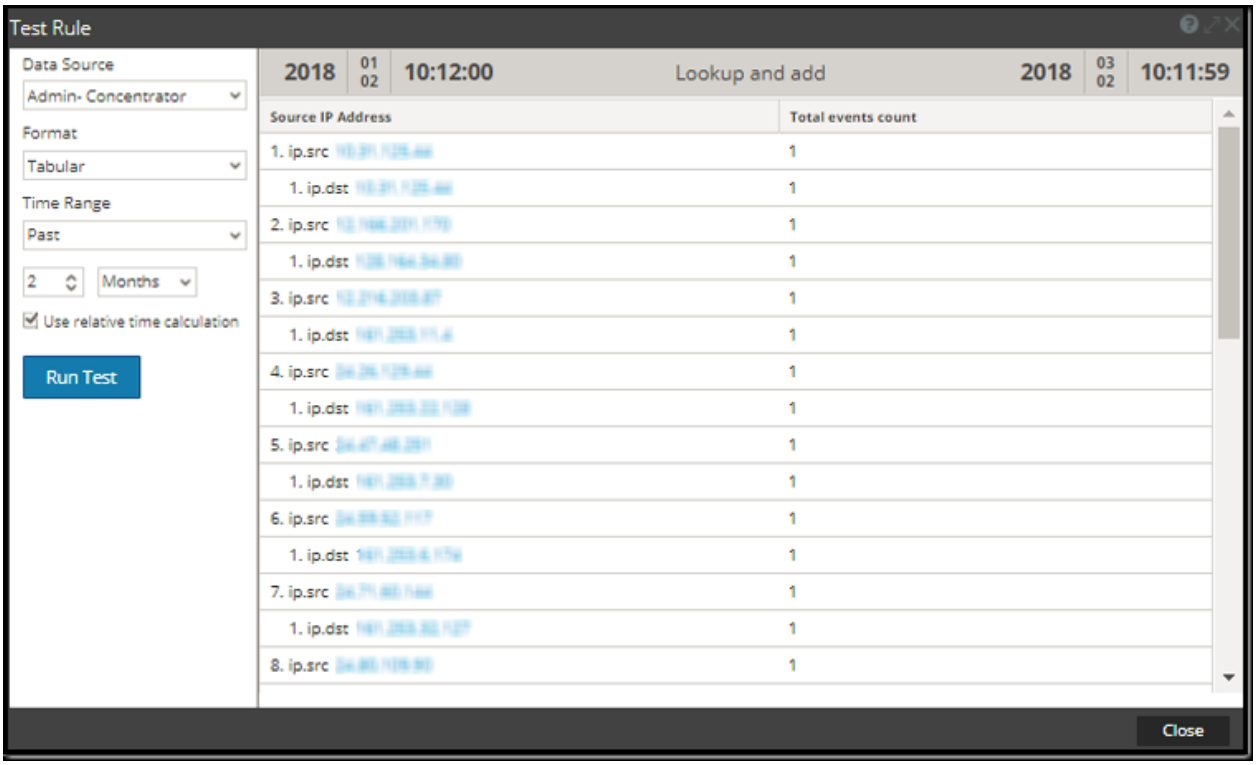
- select ip.src, sum(size) group by ip.src
- select ip.src, count(filename) group by ip.src

It cannot be used for the following rules:



- select ip.src, sum(size),count(filename) group by ip.src
- select ip.src, sum(size),avg(size) group by ip.src
- select ip.src,ip.dst count(filename) group by ip.src,ip.dst

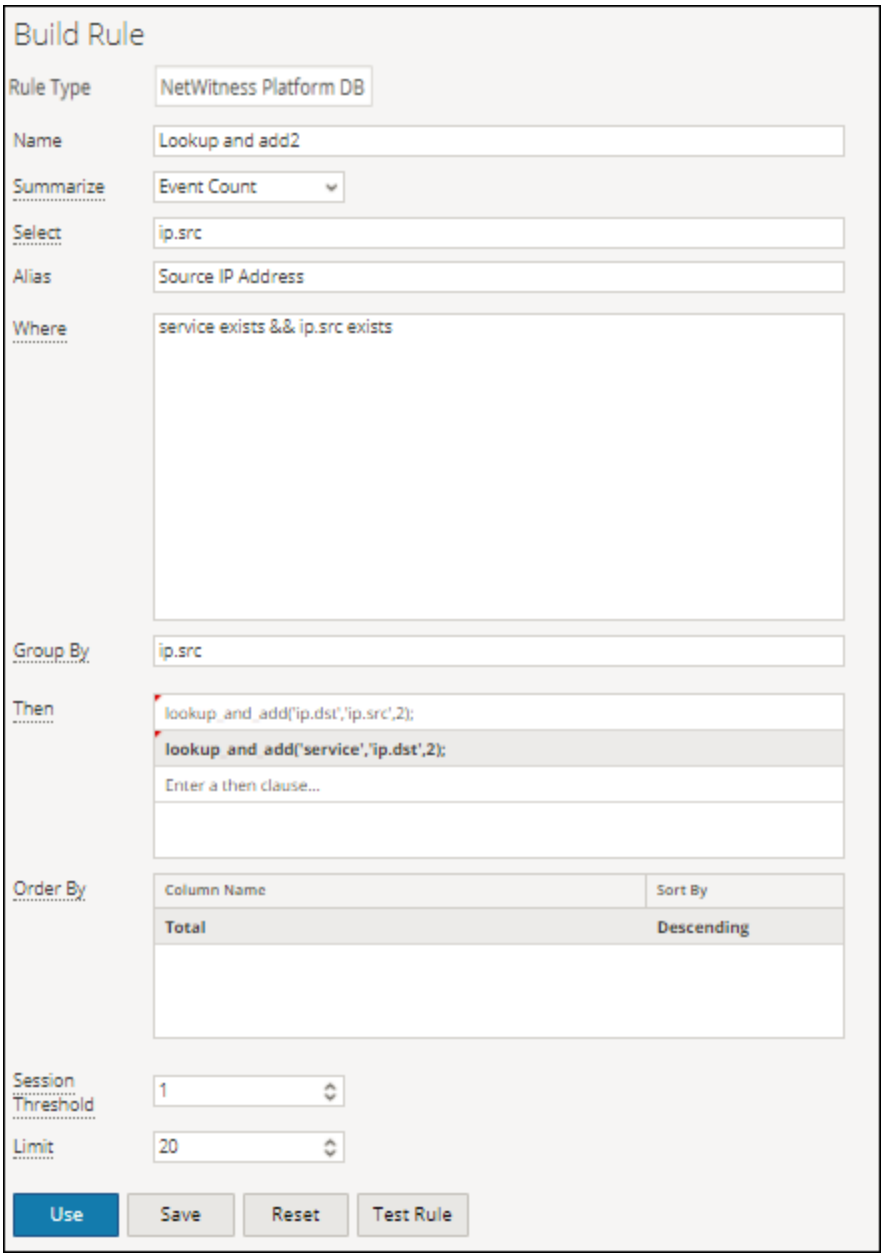
Examples:



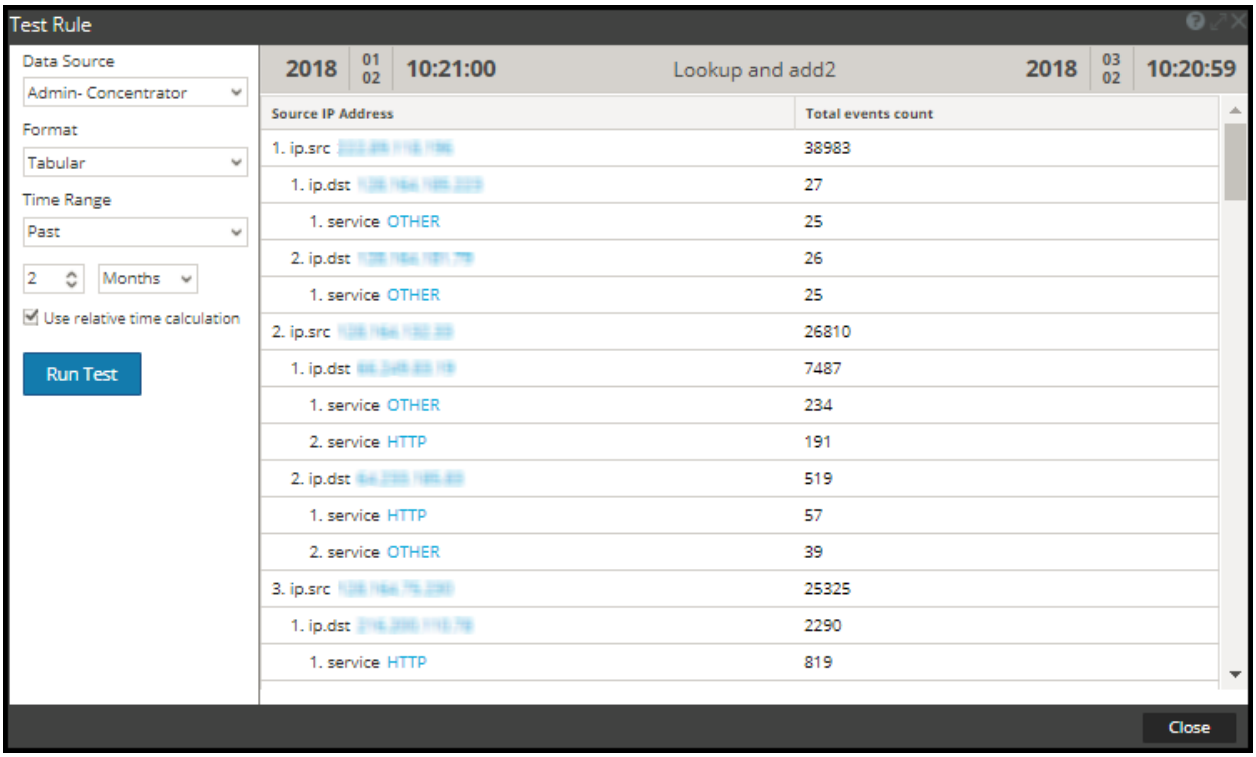
1. lookup_and_add('ip.dst','ip.src', 2);

This rule action would iterate through each ip.src in the initial result set and lookup the top two destination IP addresses with each ip.src.

The following figure shows the rule definition.



The following figure shows the result set containing the source IP addresses and the top two destination IP addresses with each ip.src.

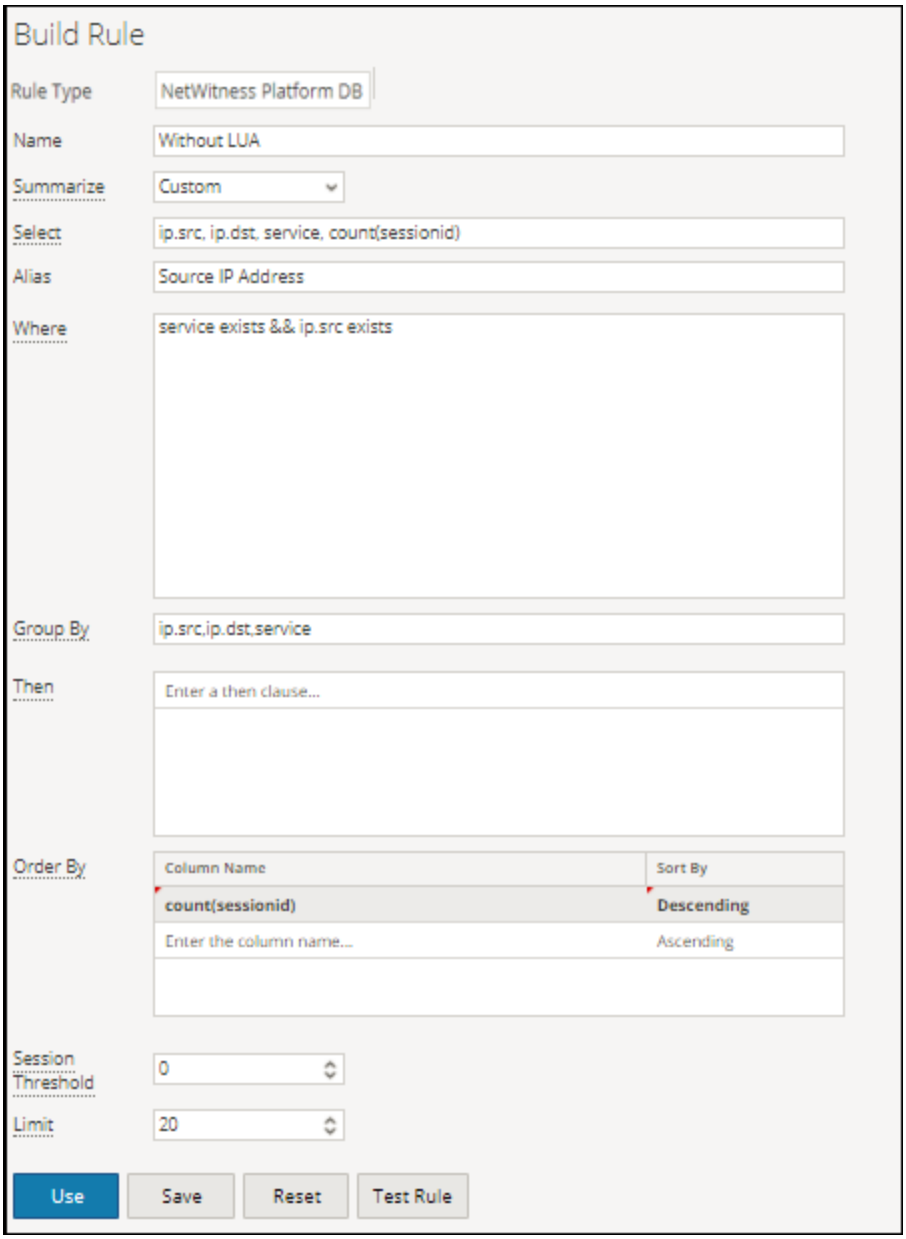


2a. lookup_and_add('ip.dst','ip.src', 2); lookup_and_add('service','ip.src', 3);

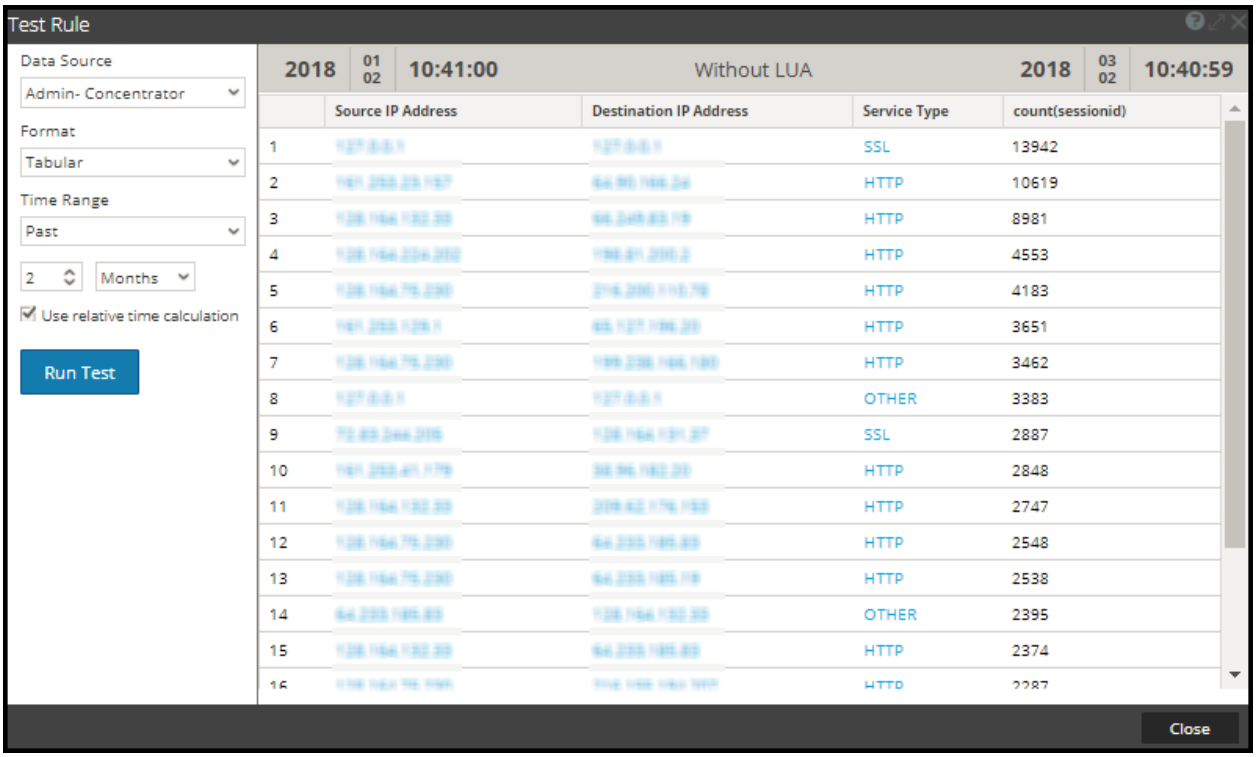
This rule action would iterate through each ip.src in the initial result set and lookup the top two destination IP addresses with each ip.src and the top three ports used by each ip.src.

The following figure shows the rule definition.

The following figure shows the result set containing the source IP addresses and the top two destination IP addresses with each ip.src and the top three ports used by each ip.src.



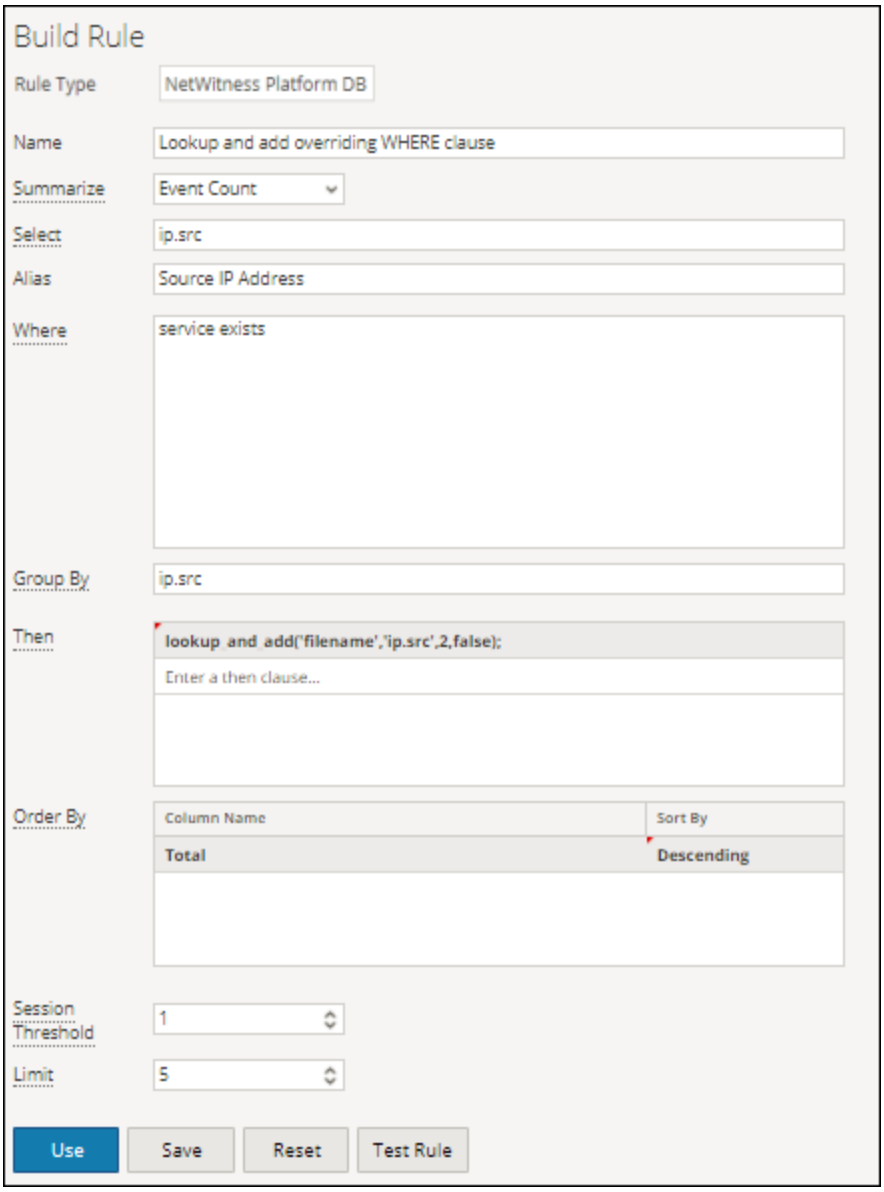
You can make the query as complex as you want by selecting different fields in the result set and by appending to different parts. For example, you may want to know what files each source IP had touched. However, because the parent rule has a WHERE clause of service = 6667 and the default behavior of this rule action is to append to the original WHERE clause, it becomes necessary to override the parent WHERE clause. The easiest way to understand this concept is to look at the previous lookup_ and_add call lookup_and_add('ip.dst','ip.src',2). The actual query that is sent to the server is SELECT ip.dst WHERE service = 6667 &&ip.src = 206.42.199.194. In order to force the WHERE clause to override the service = 6667 portion of the WHERE clause (inherited from the parent rule), the user can specify a 4th parameter of false as shown in example 3.



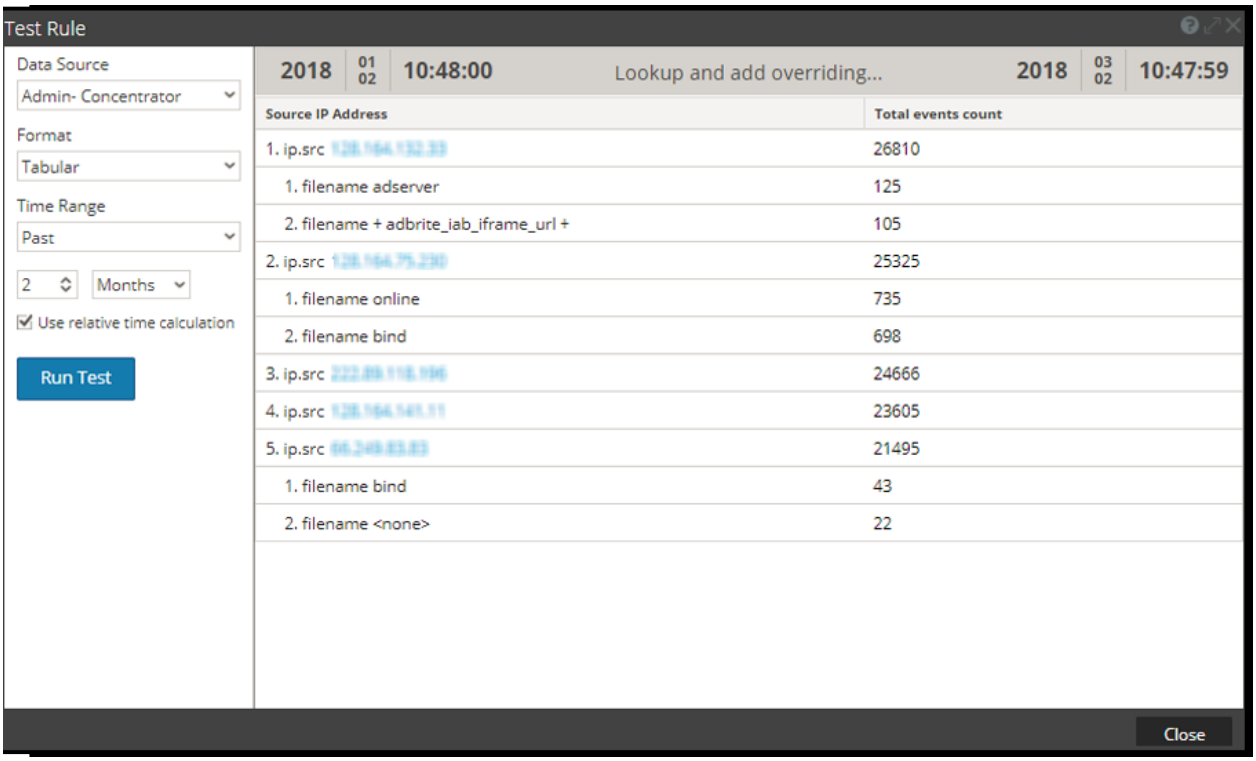
2b. Without Lookup_and_add Rule

This rule uses the Custom summarization and Group By feature to sort the results.

The following figure shows the rule definition.



The following figure shows the result set containing the source IP addresses and the top two destination IP addresses with each ip.src and the top three ports used by each ip.src.

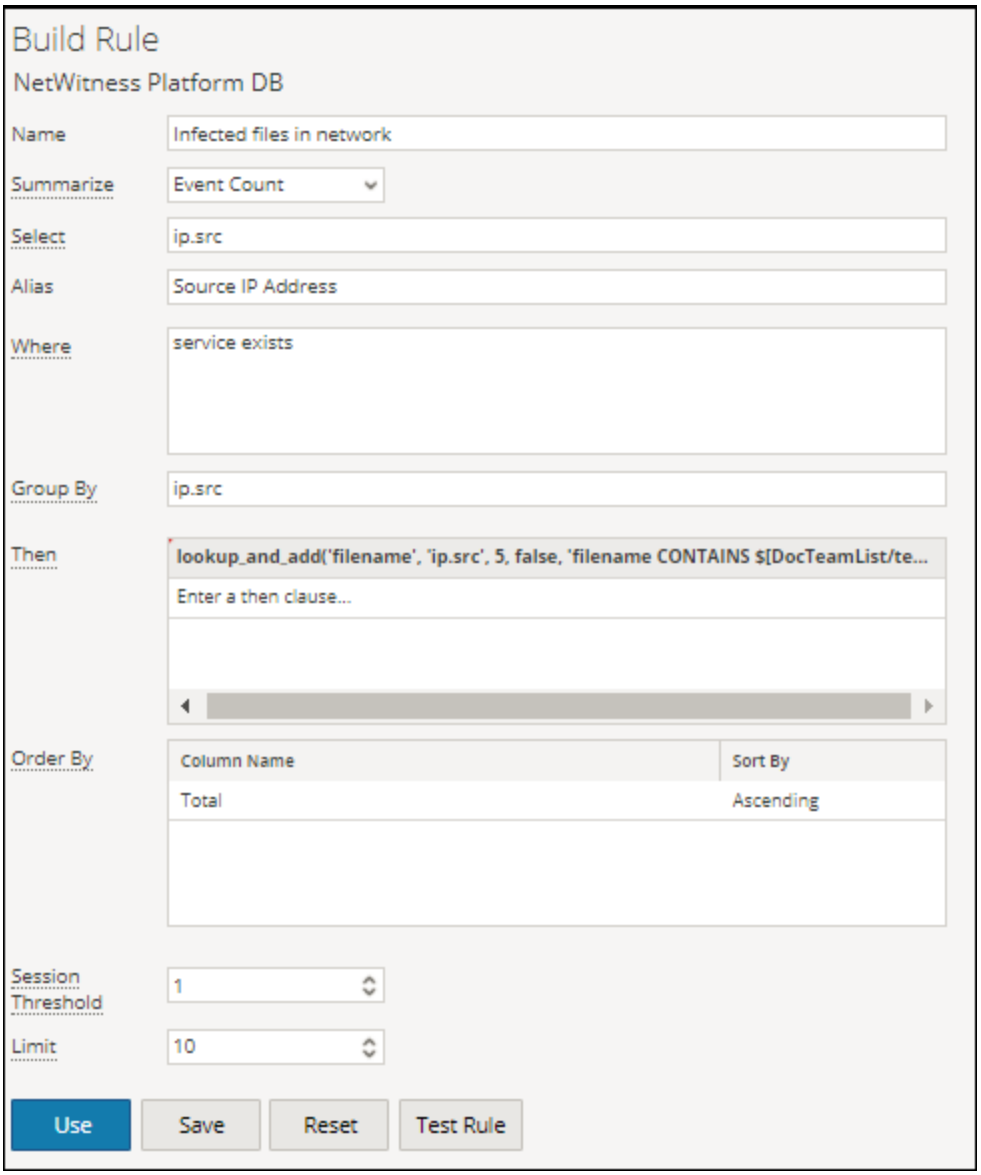


3. lookup_and_add('filename', 'ip.src', 2, false);

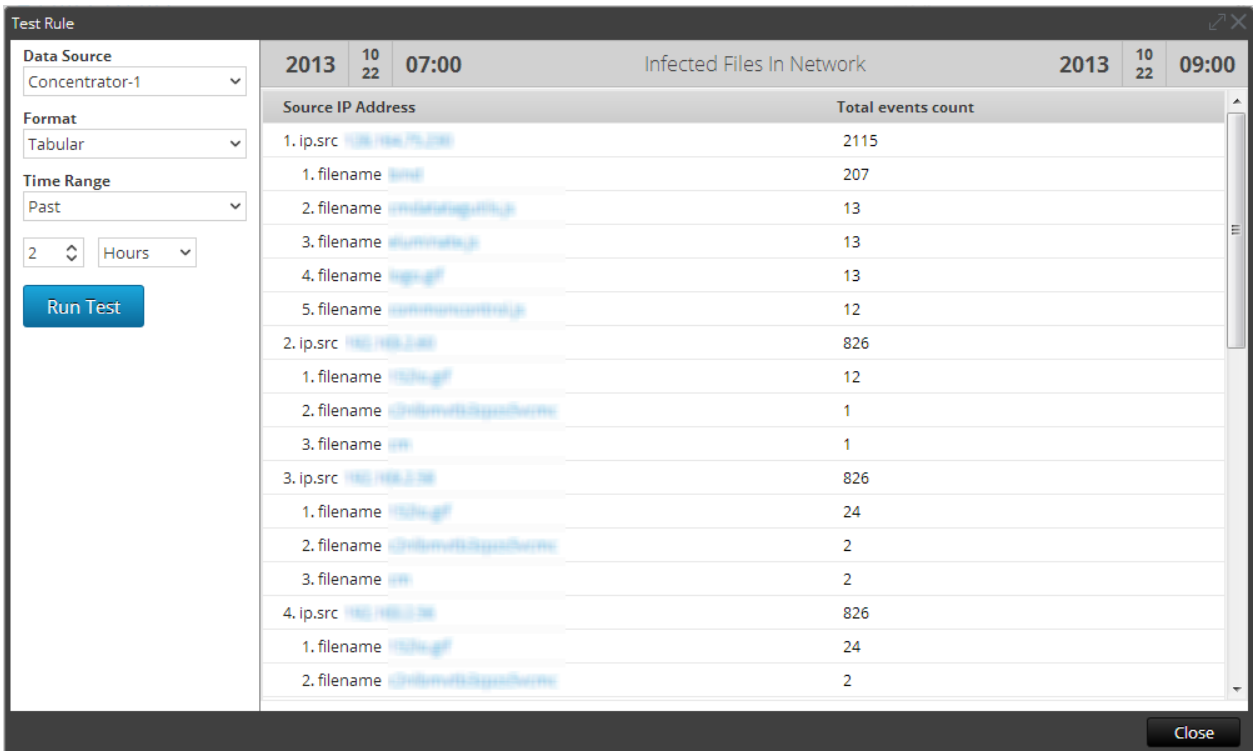
This call would issue a query to the server, like `SELECT filename WHERE ip.src = 90.0.0.142` rather than `SELECT filename WHERE service = 6667' && ip.src = 90.0.0.142` because you have specified the rule action to ignore the initial `WHERE` clause of the parent rule.

The following figure shows the rule definition.

The following figure shows the result set.



The test list is in a group name netwitness, you can access that list with the following syntax.

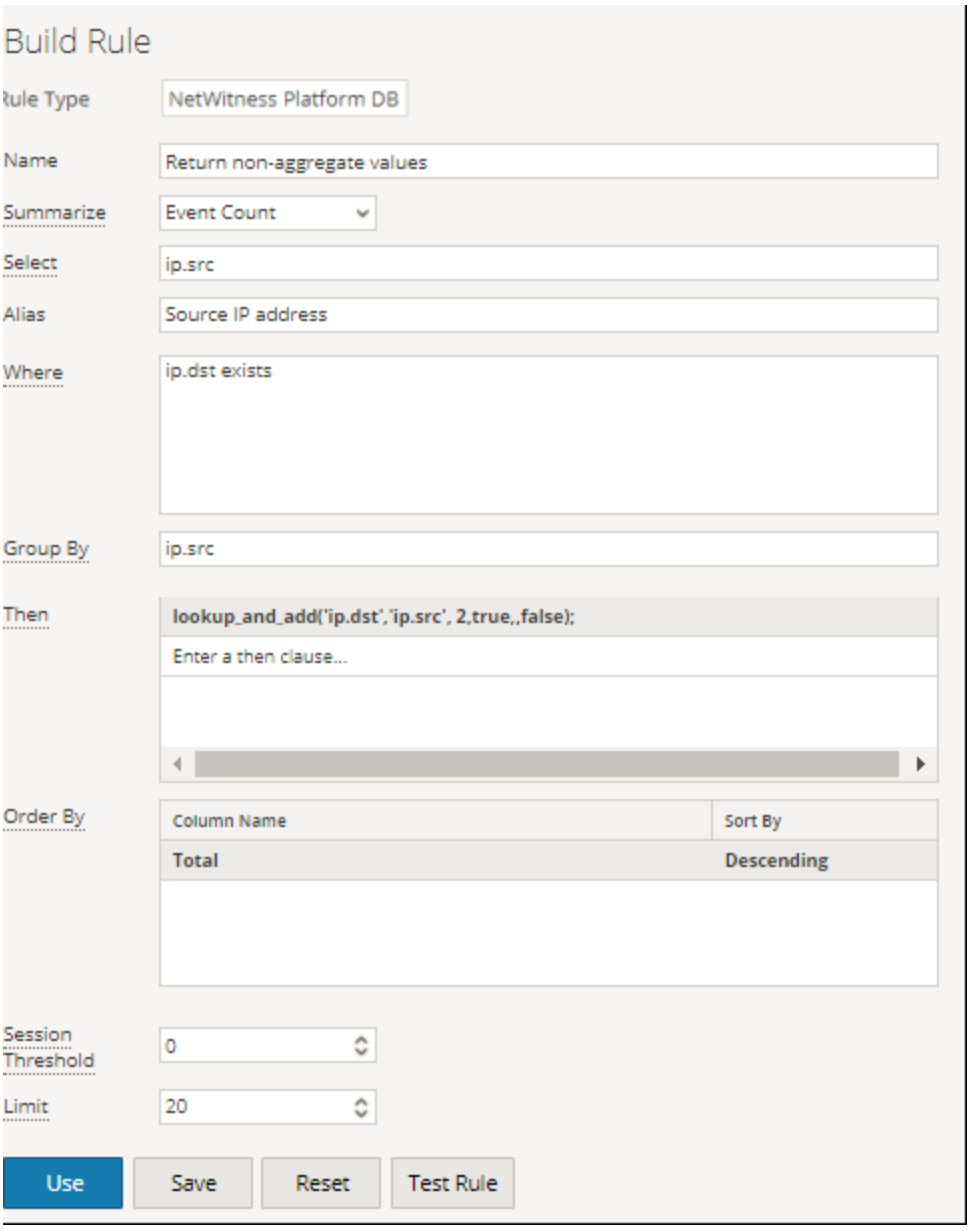


You can even narrow down these appended results even further to only include filenames that have .gif as filename extension by using the fifth parameter in the rule action. The fifth parameter allows you to specify additional WHERE clause criteria. The files with .gif filename extension would be stored in the **test** list within a group named **DocTeamList**. You can access this list with the following syntax: threat.source = $[DocTeamList/test]
This can be referenced in the extra where clause parameter in the following manner:

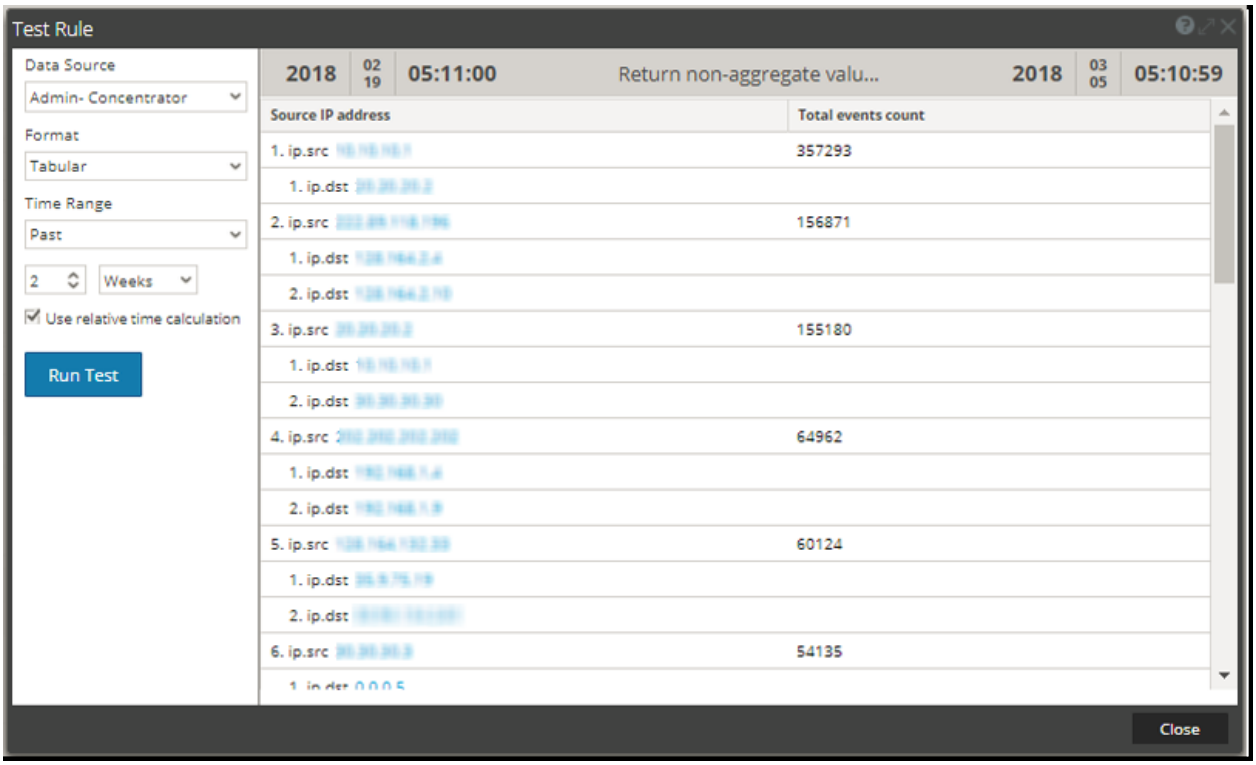
4. lookup_and_add('filename', 'ip.src', 5, false, 'filename CONTAINS $[DocTeamList/test]');

The following figure shows the rule definition.

The following figure shows the result set.



5. lookup_and_add('ip.dst','ip.src', 2,true,,false);



This rule action would iterate through each ip.src in the initial result set and lookup the top two destination IP addresses with each ip.src. The 'aggregate' parameter is set to 'false', this implies that aggregates would be skipped for lookup values and hence the lookup query executions will complete faster.

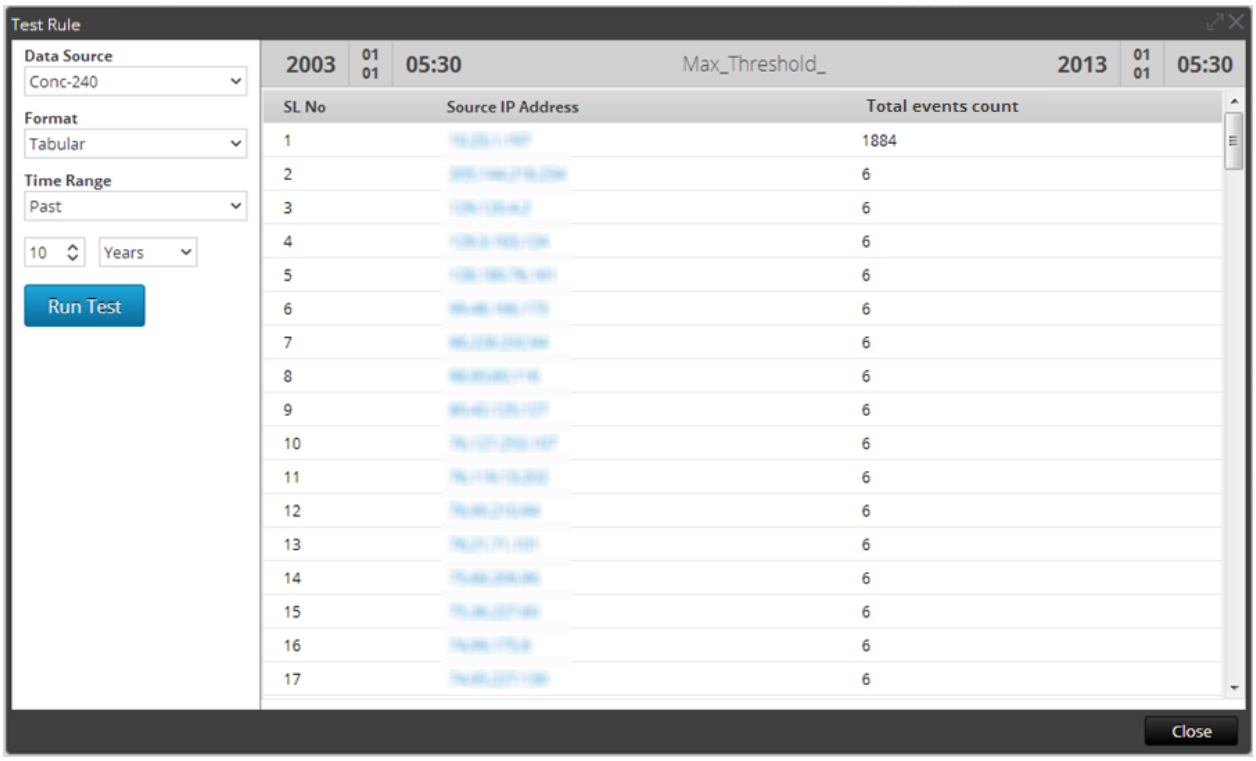
Note:
The default value for 'aggregate' is 'true'. When 'aggregate' is set to 'false', Reporting Engine passes threshold=1, Sort by='value' and Order=Ascending to NWDB to make lookup queries run faster.
. You must set the 'aggregate' to false, when rule contains aggregate functions or when the rule is run against a wide time range. This helps the rule to complete the execution faster.

The following figure shows the rule definition.

The following figure shows the result set.

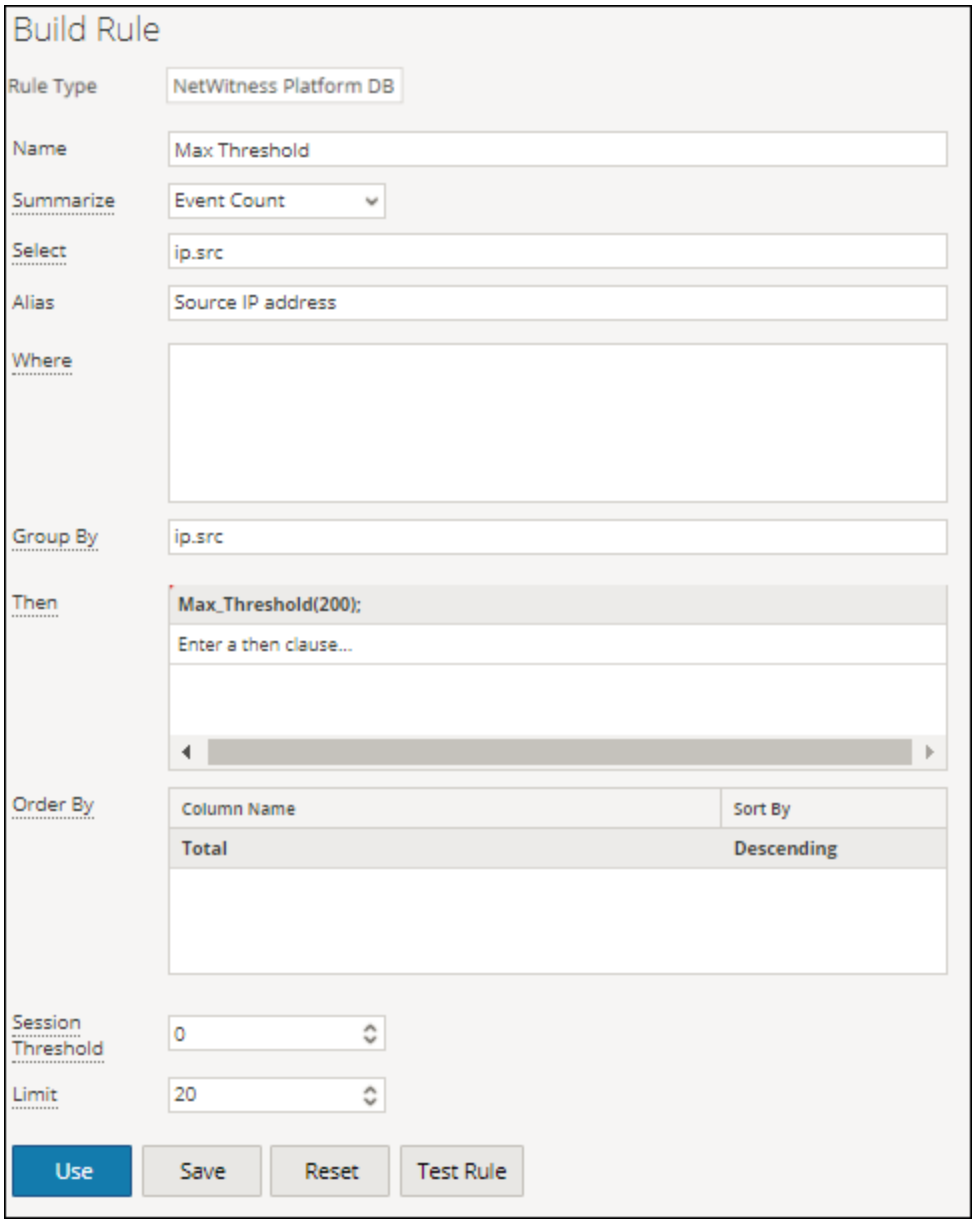
```
max_threshold (string quantity)
max_threshold (string quantity, string field)
```

max_threshold removes any results with a quantity that is larger than the maximum threshold quantity from a result set. The quantity can either be in terms of count or size and it is relative to the sorting options of the parent rule. This means that if you sort a rule by size, the rule action expects you to specify the parameter in bytes (you can append KB, MB, GB, TB to the parameter to make size conversion easier).



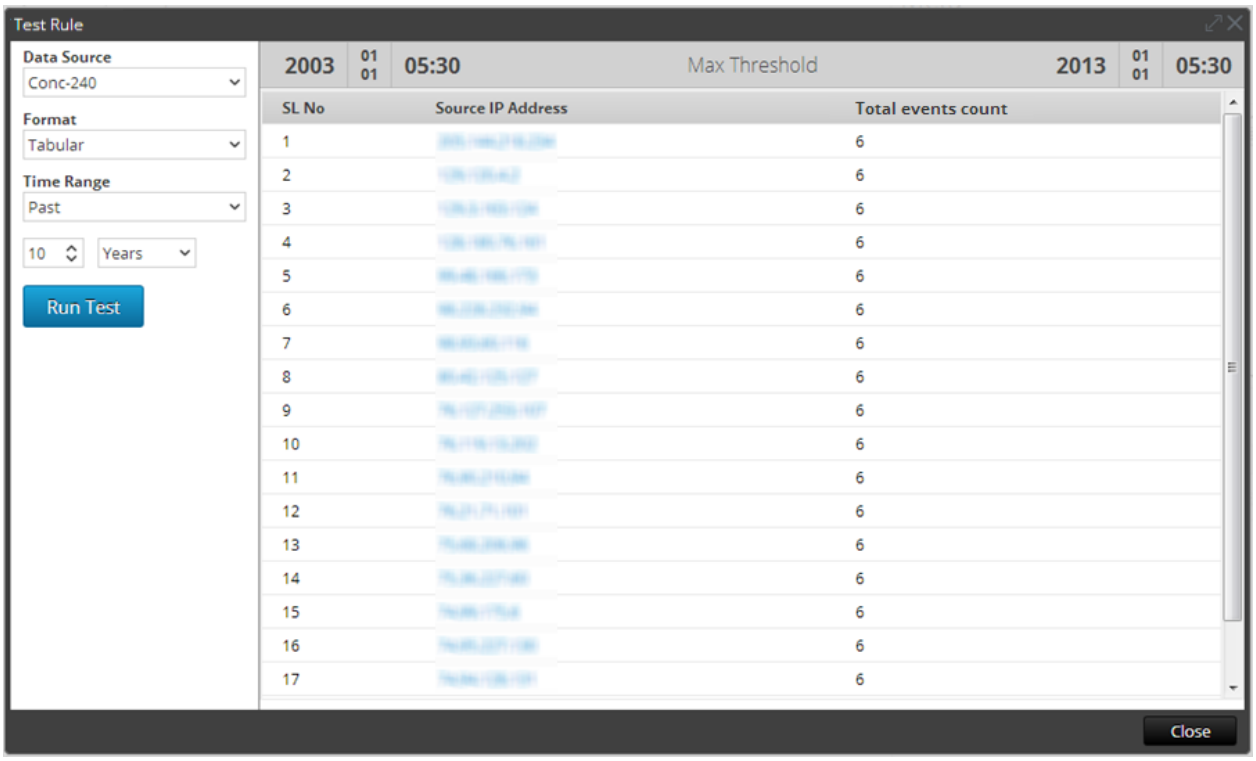
max_threshold rule can also be used to filter values based on the aggregate function values. Use the syntax based on the type of summarization used in the rule as below:

- max_threshold(String quantity): Can be used to filter Event Count, Packet Count, and Session Size.
- max_threshold(String quantity, String field): Can be used to filter values of Custom aggregates or any metas.



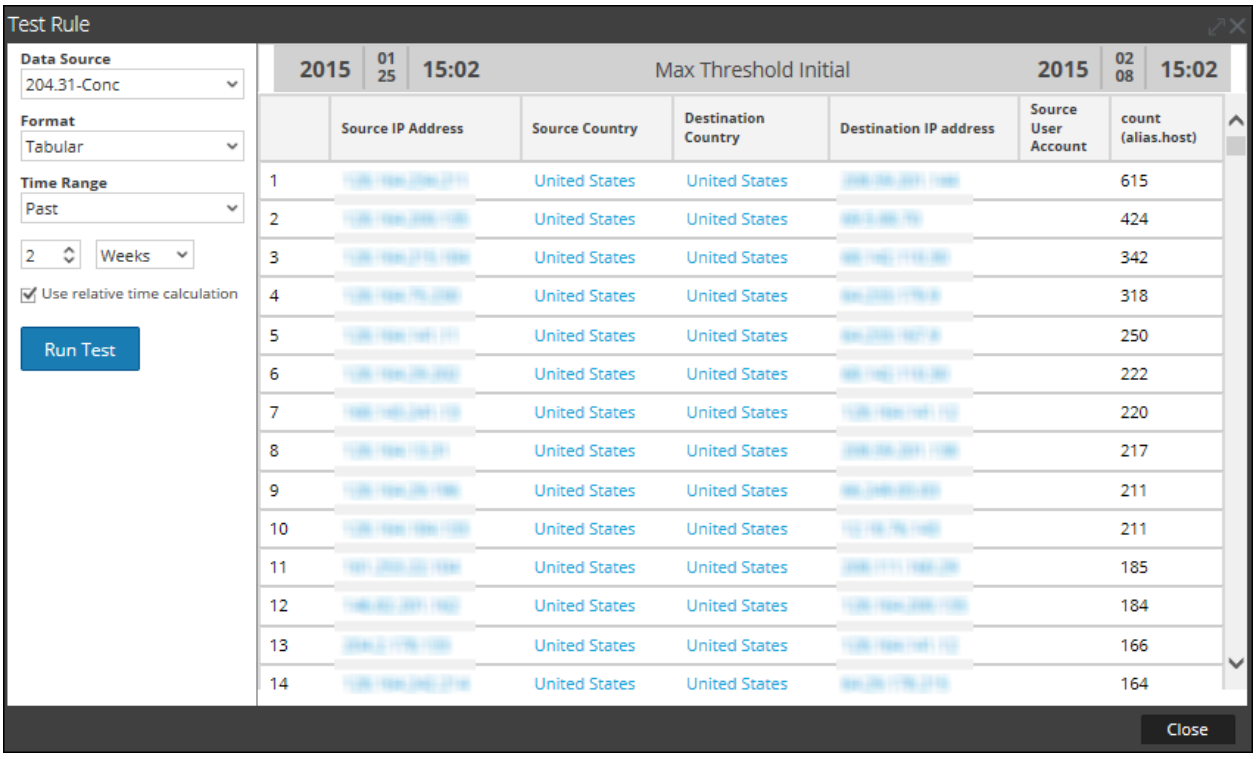
Examples:

1. max_threshold(200);

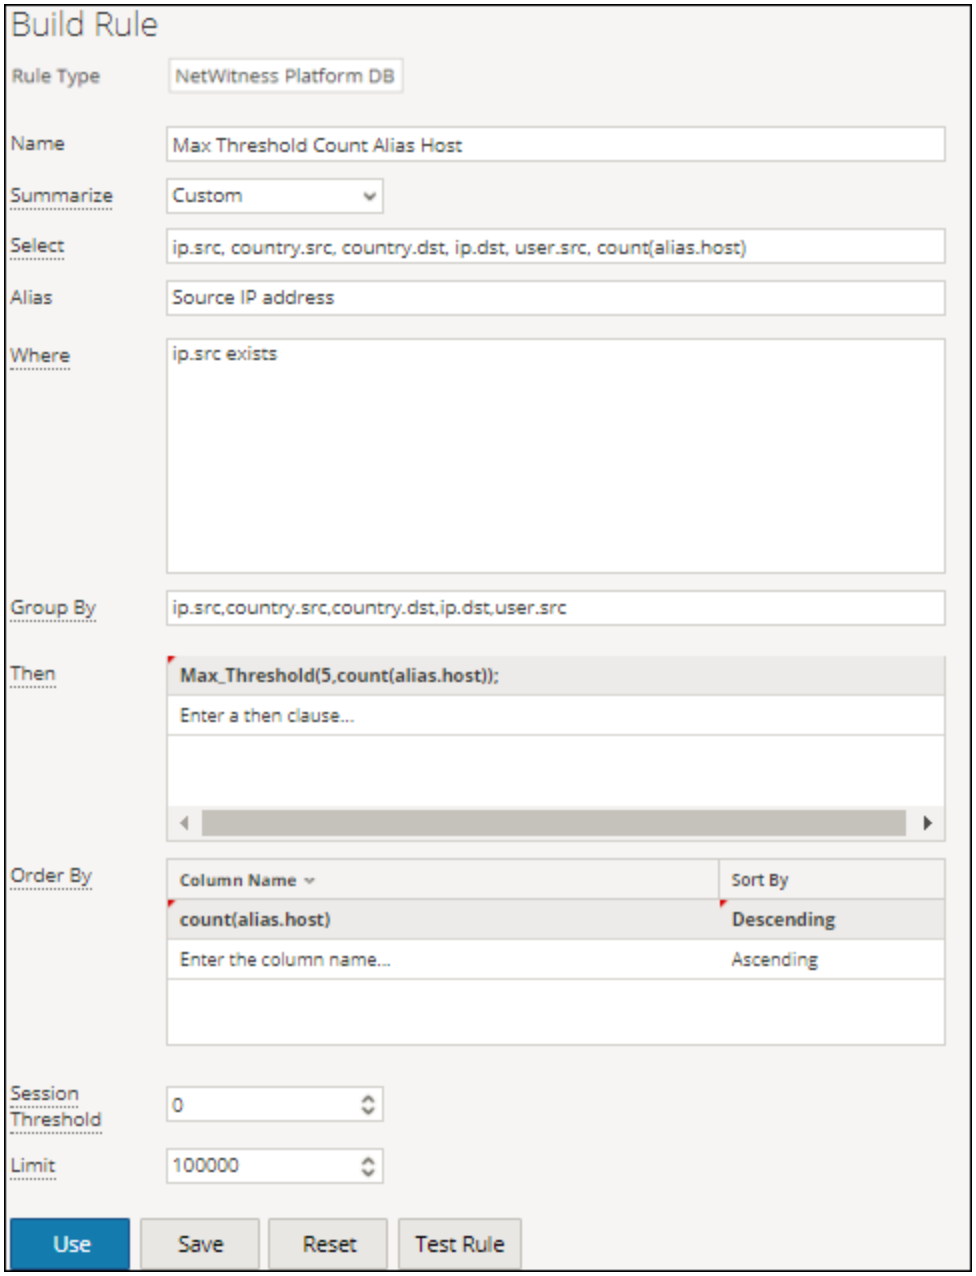


The following figure shows the result without the max_threshold argument. The output results have event counts exceeding 200.

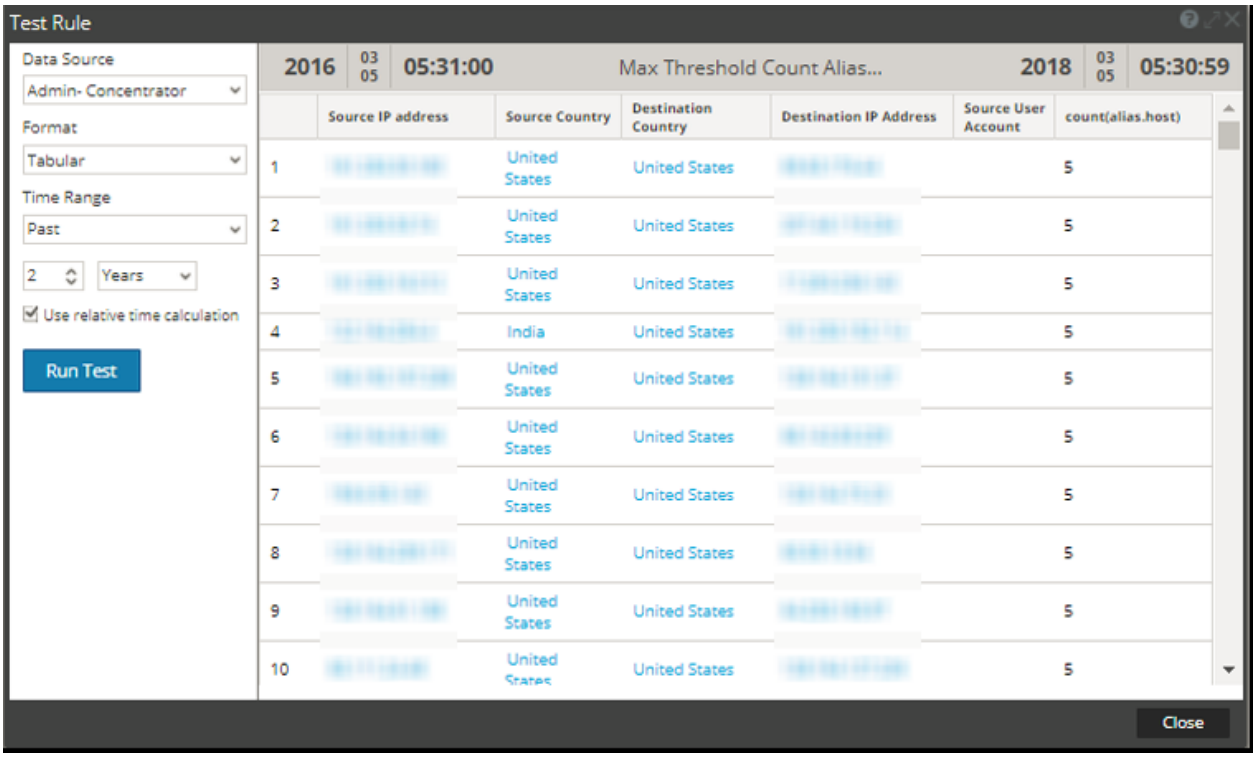
The following figure shows a the max_threshold rule action that puts a limit of 200 bytes on the output. Any output having more than 200 bytes of data are not listed.



The following figure shows the result when the max_threshold rule action is applied. The result numbered 1 in the above screen capture is removed from the result.



2. max_threshold(5,count(alias.host));



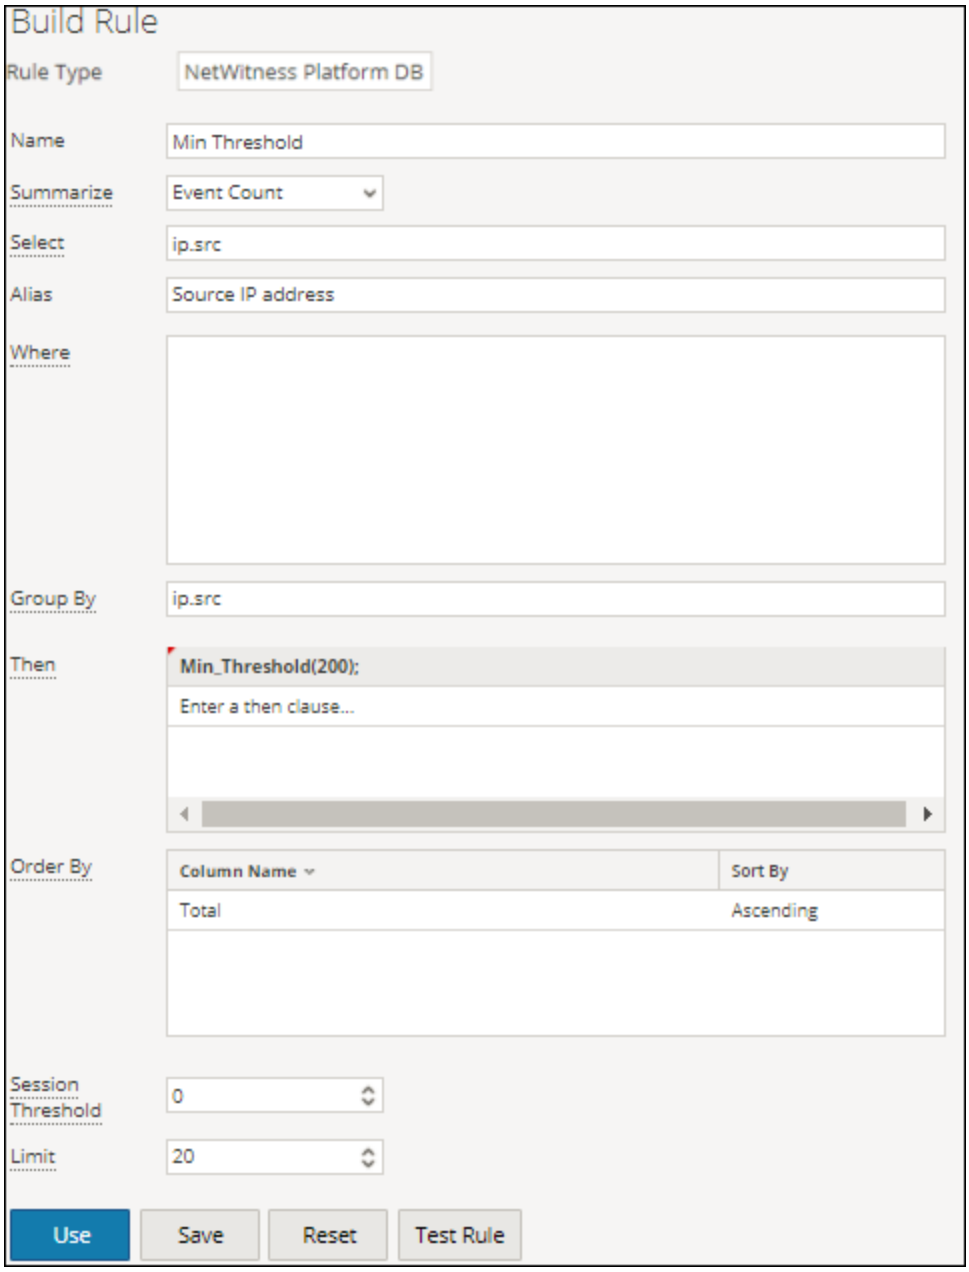
The following figure shows the result without the max_threshold argument. The output results have count of alias.host exceeding 5.

The following figure shows a the max_threshold rule action that puts a limit of 5 on the output. Any output having value more than 5 is not listed.

The following figure shows the result when the max_threshold rule action is applied. Any output having value more than 5 is removed from the result.

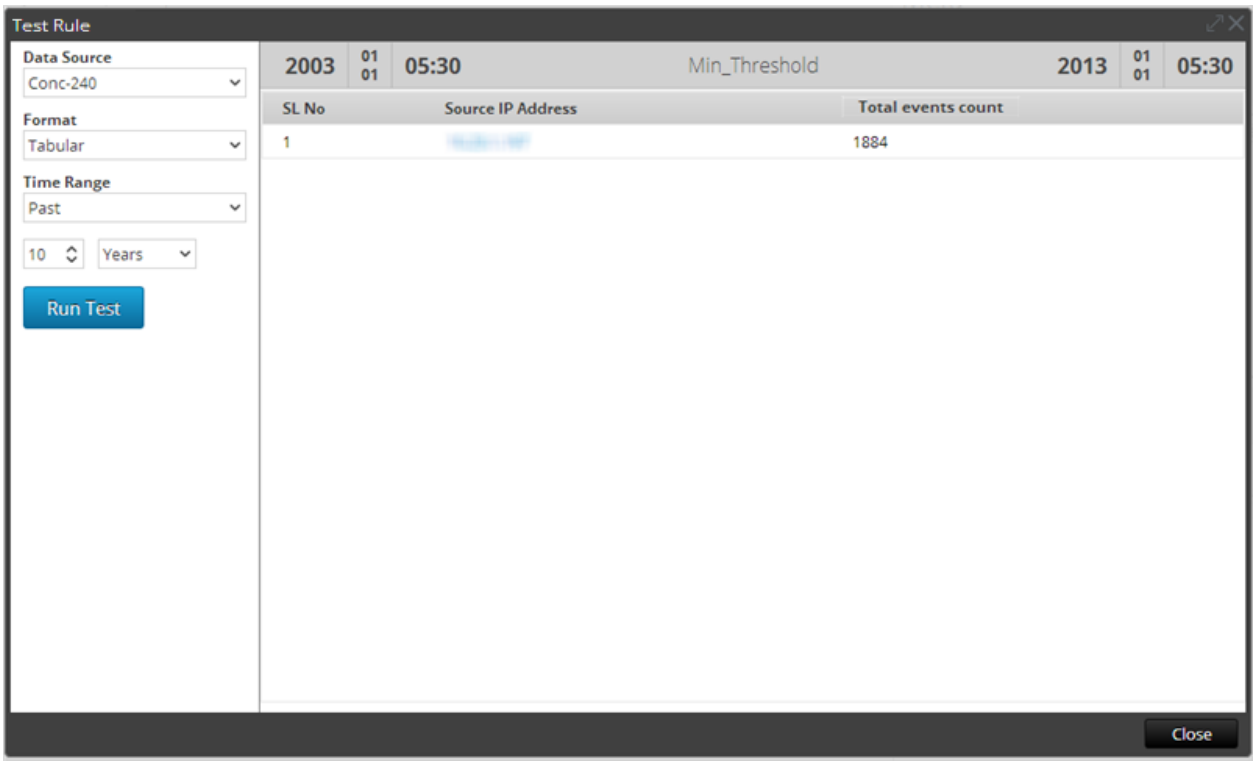
min_threshold (string quantity)

min_threshold removes results with a quantity that is smaller than the minimum threshold quantity from a result set. The quantity can either be in terms of count or size and it is relative to the sorting options of the parent rule. This means that if you sort a rule by size, the rule action expects you to specify the parameter in bytes (you can append KB, MB, GB, TB to the parameter to make size conversion easier).



min_threshold rule can also be used to filter values based on the aggregate function values. Use the syntax based on the type of summarization used in the rule as below:

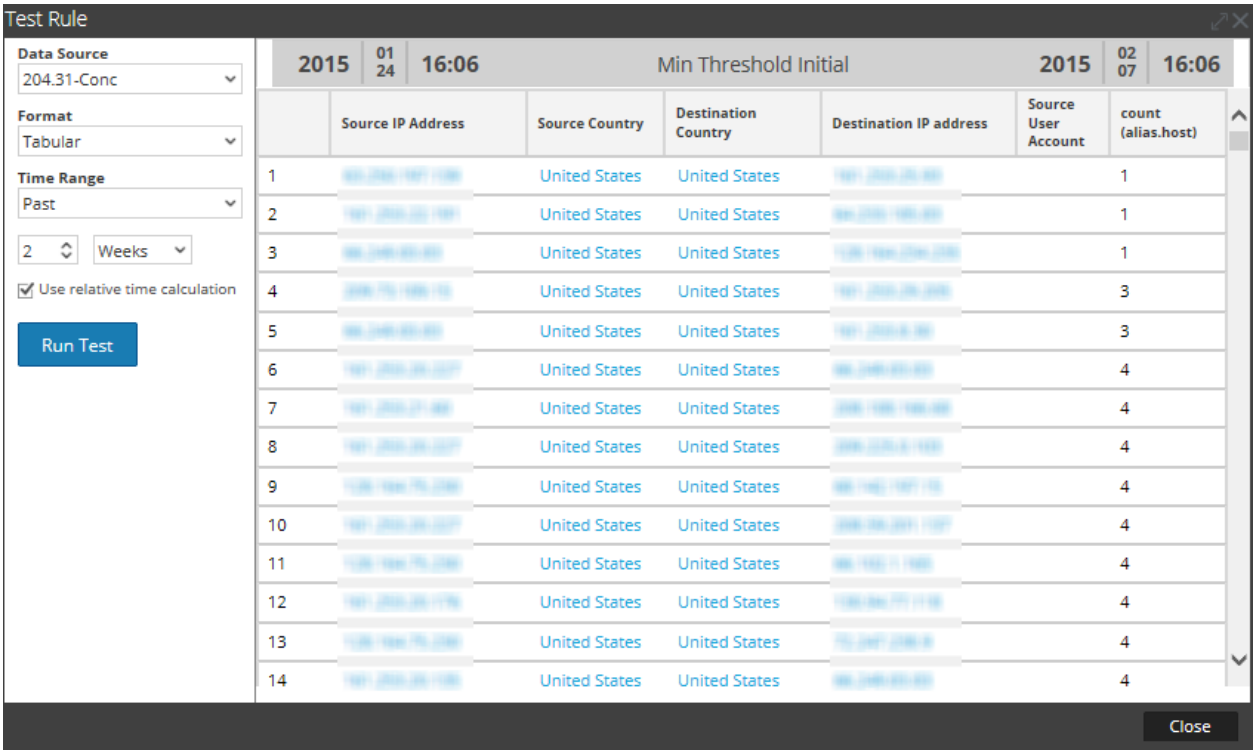
- min_threshold(String quantity): Can be used to filter Event Count, Packet Count, and Session Size.
- min_threshold(String quantity, String field): Can be used to filter values of Custom aggregates or any metas.



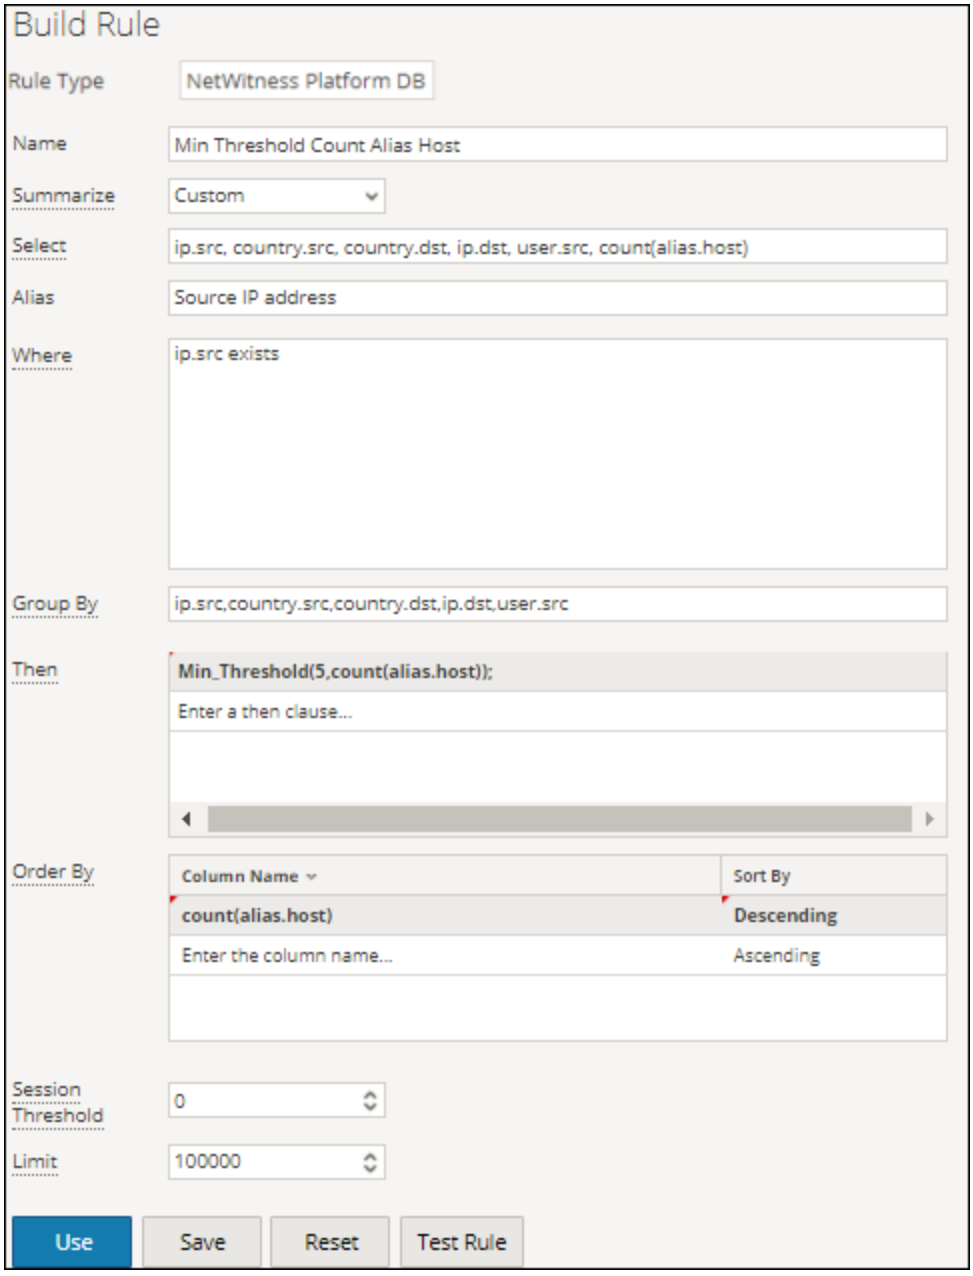
Examples:

1. min_threshold(200);

The following figure shows a sample of the min_threshold query.

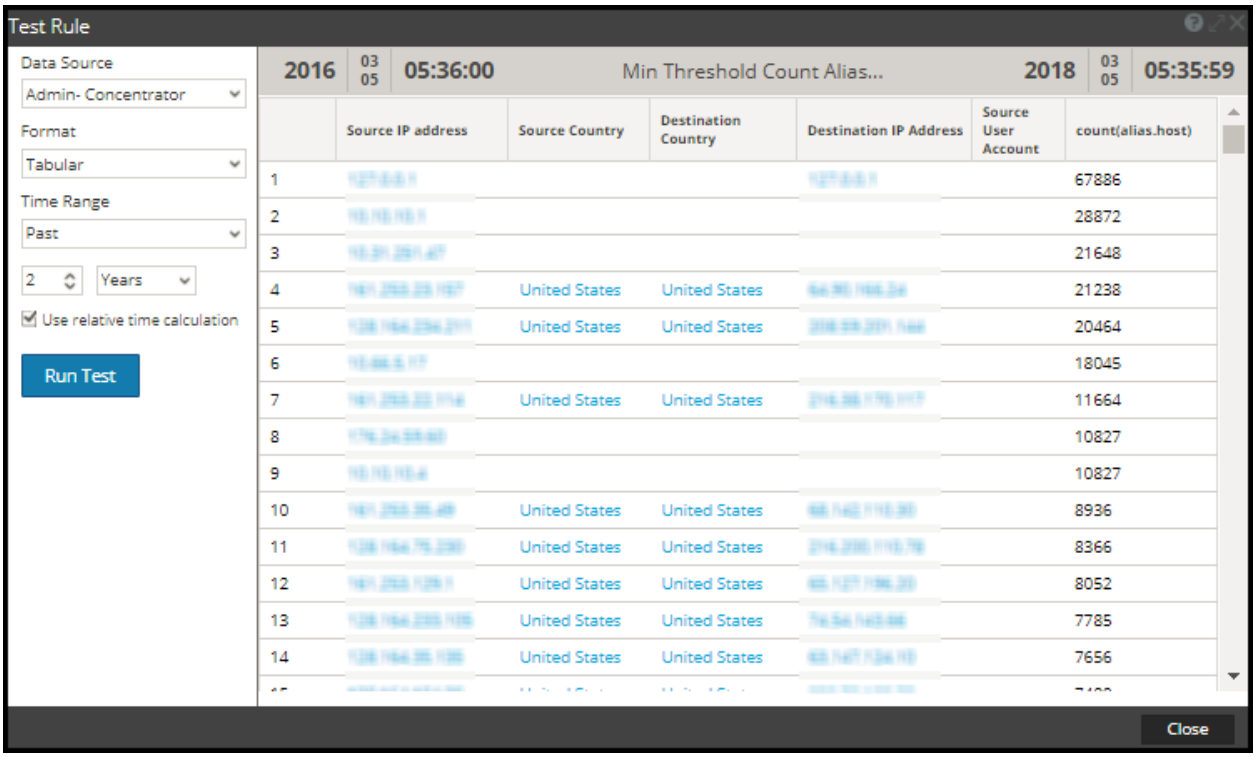


The above figure puts a limit of 200 bytes on the output. Any output having less than 200 bytes of data is not listed. The output with the min_threshold rule action is applied.



As shown, all the values are greater than 200 bytes.

2. min_threshold(100,count(alias.host));



The following figure shows the result without the min_threshold argument. The output results have count of alias.host below 100.

The following figure shows a the min_threshold rule action that sets the minimum limit of 100 on the output. Any output having data less than 100 is not listed.

The following figure shows the result when the min_threshold rule action is applied. Any output having data less than 100 is removed from the result.

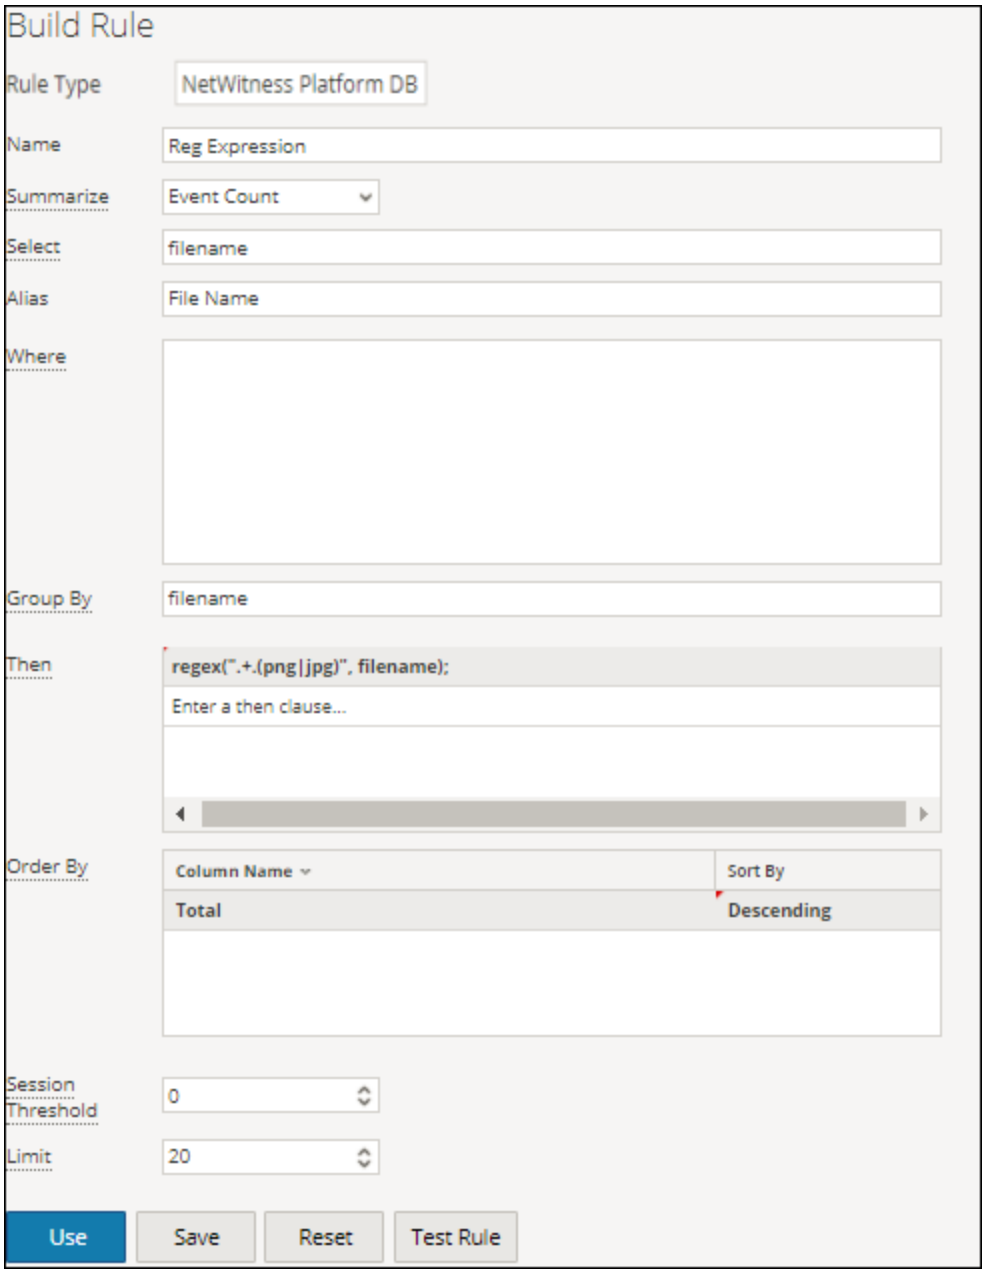
regex (string regex, string field)

The regex rule action applies regular expression to the result set. The following is the format of the regex rule action:

regex(regular_expression, meta_name)

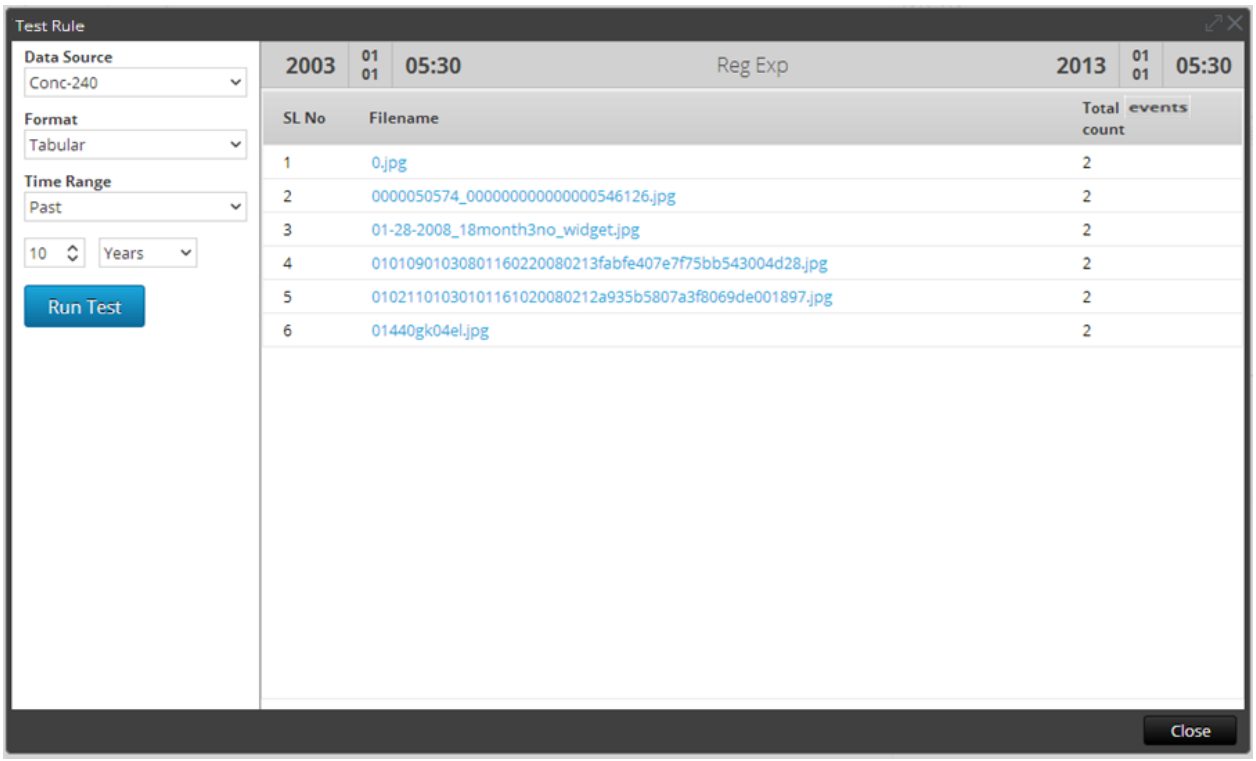
Where:

- regular_expression - Regular expression to match the value of the meta.
- meta_name - Meta or field name on which the regex has to be applied.



For a comprehensive list of supported regex patterns, refer to http://docs.oracle.com/javase/7/docs/api/java/util/regex/Pattern.html.

Sample regex rule action:

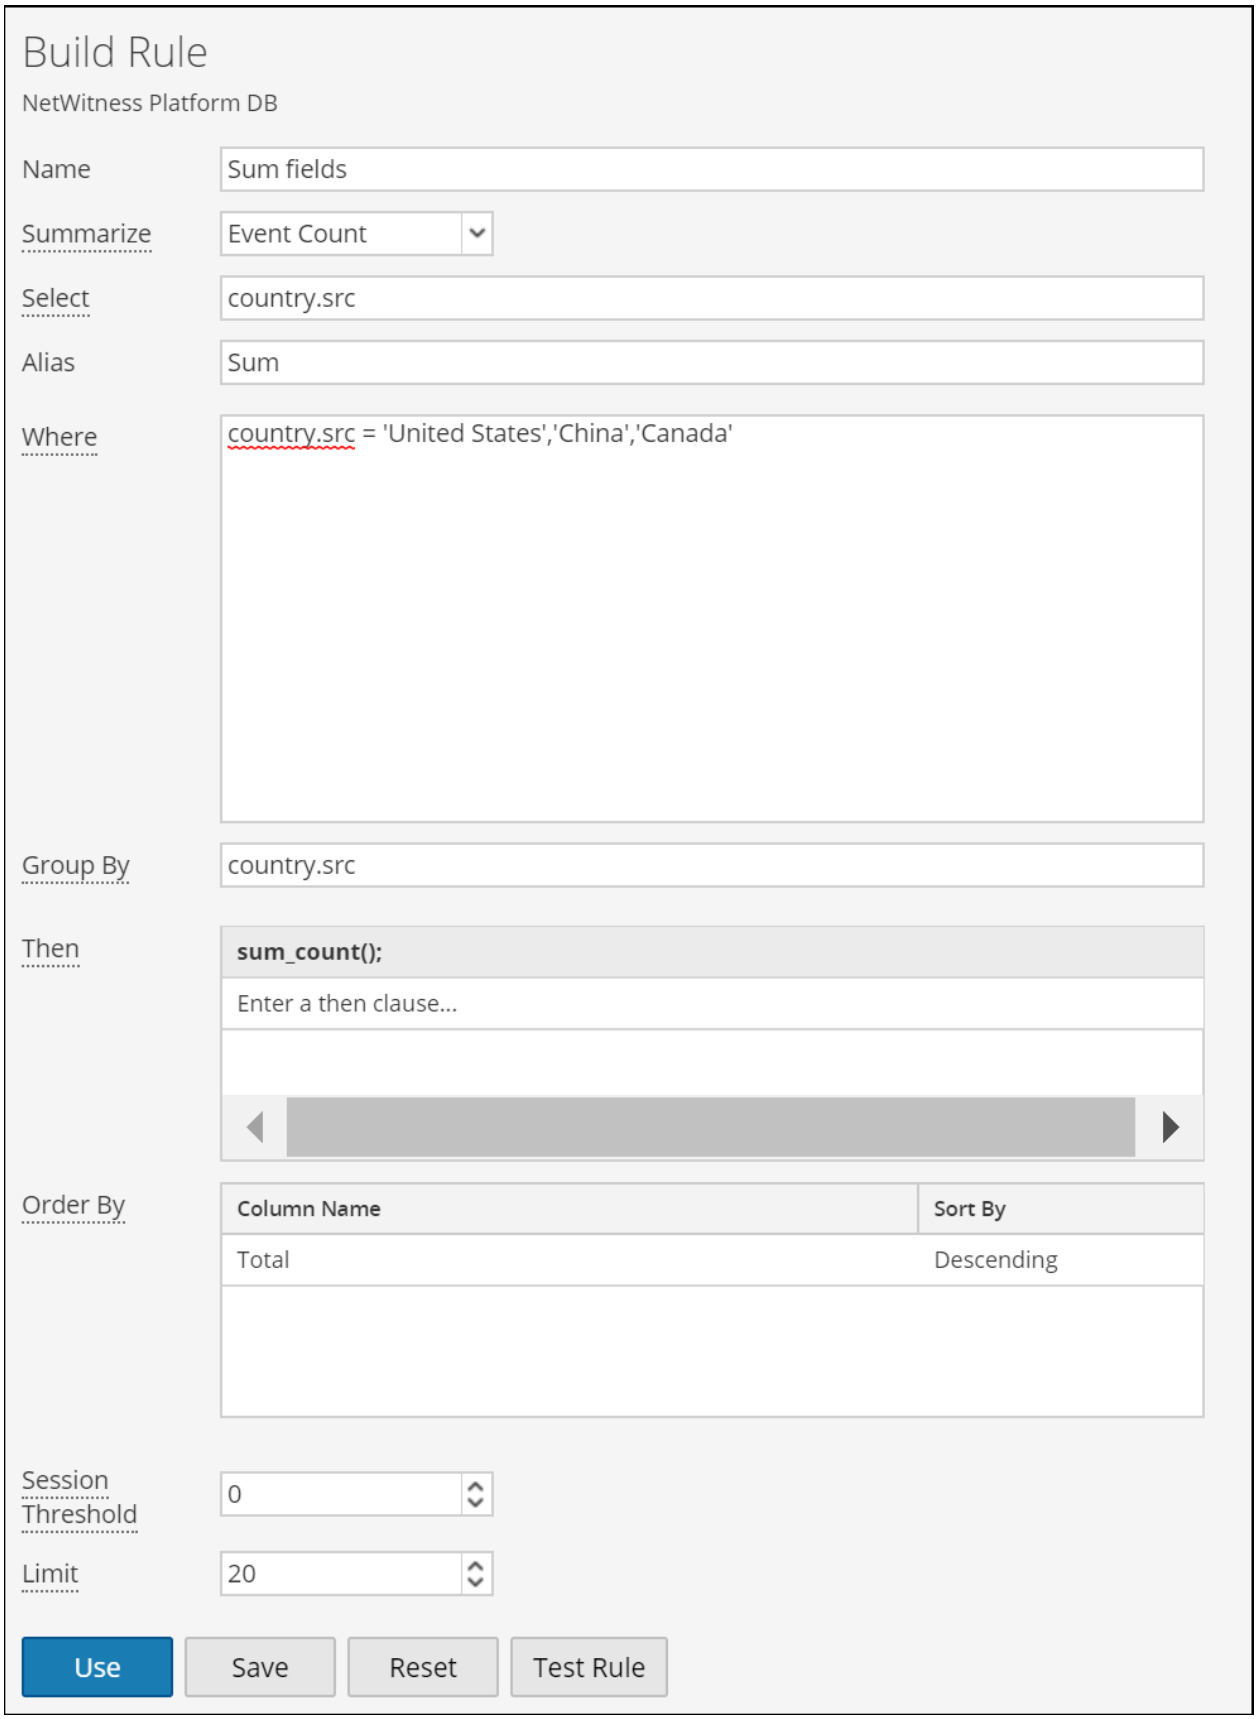


If you want to list filenames of all the PNG and JPEG format files from various sessions, you can write a rule with the following regex rule action:

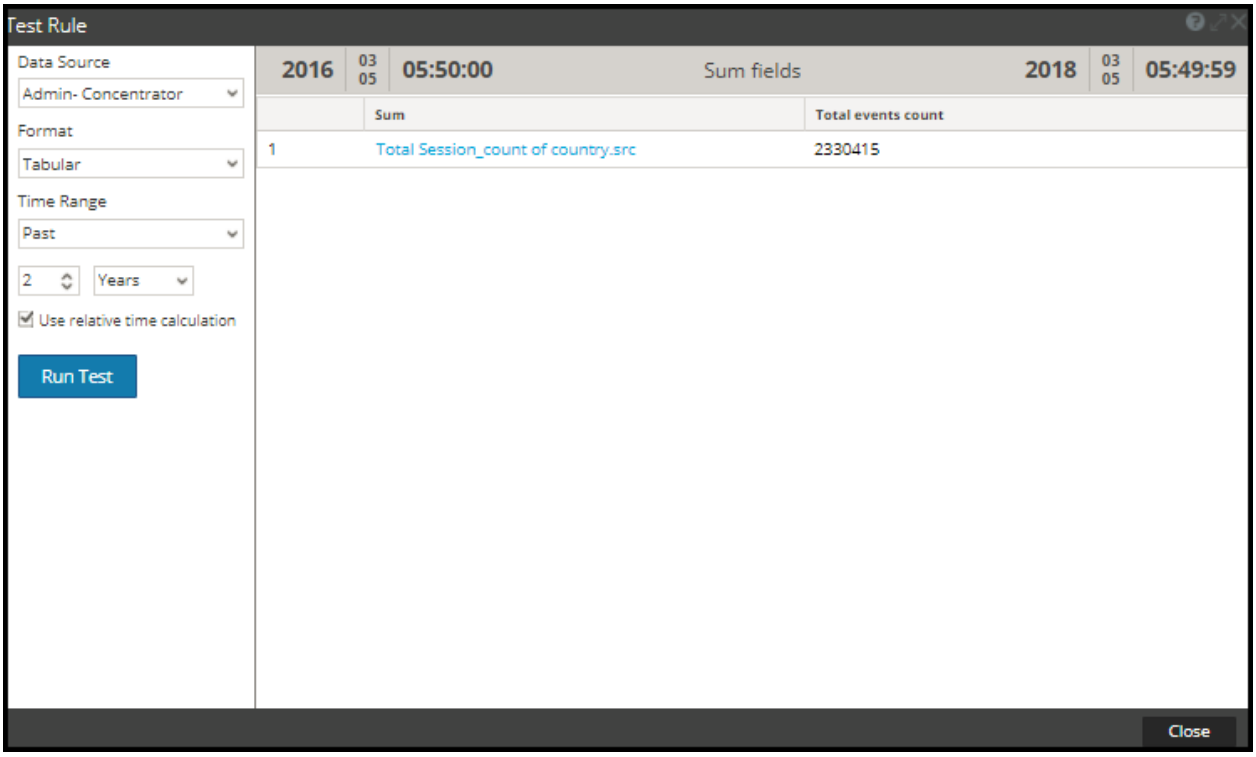
regex(".+.(png|jpg)", filename);

The following figure shows the rule.

The output with the regex rule action applied is shown in the following figure.



`sum_count()`



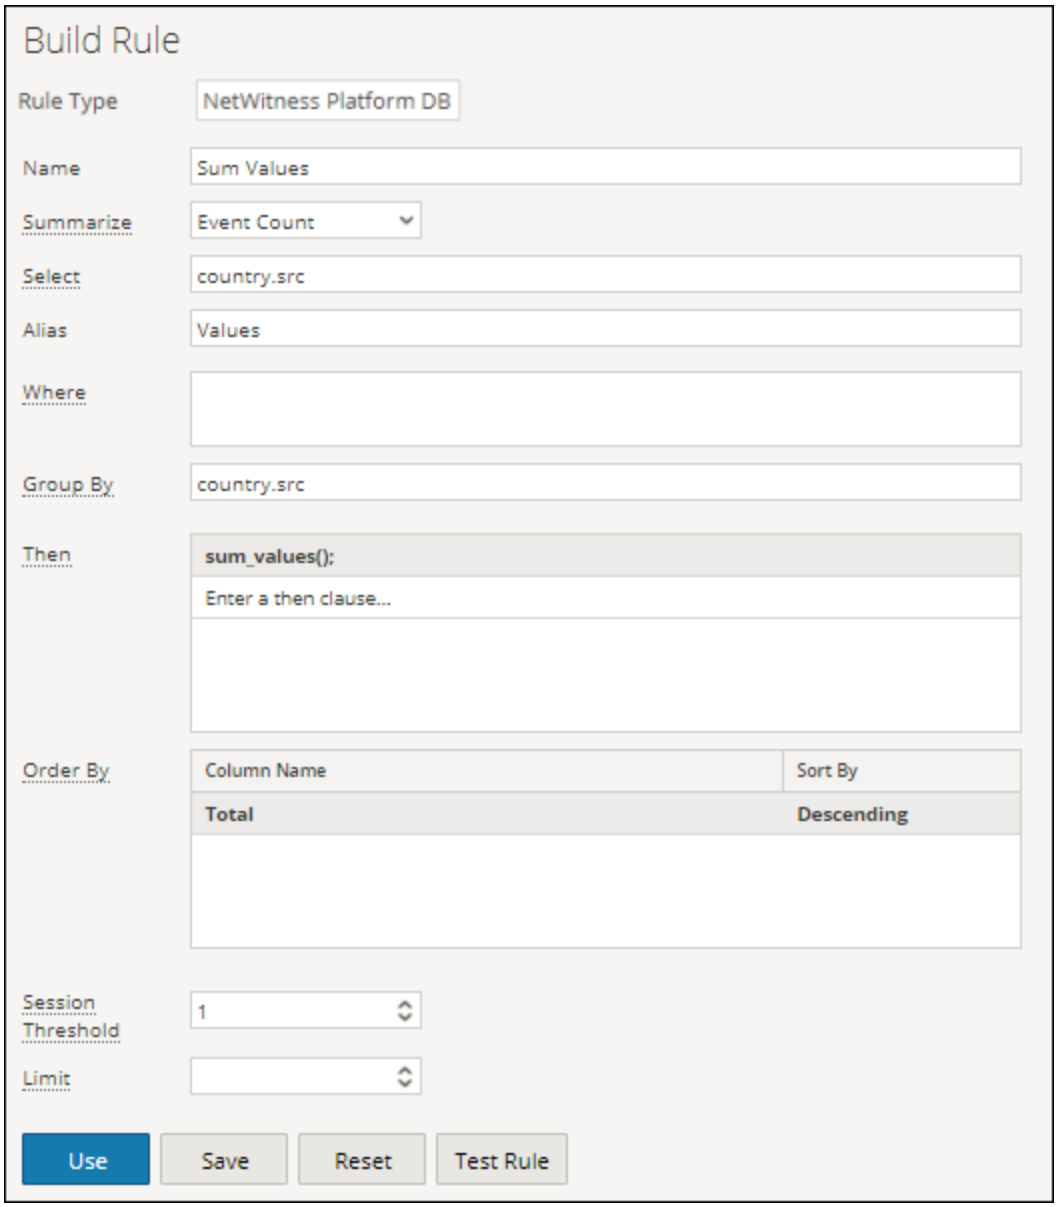
Totals the quantifiers for a given result set. For example, calling a sum_count() for a rule that is sorted by event count totals the size of all values in the result set and displays the total in place of the result set.

Example:

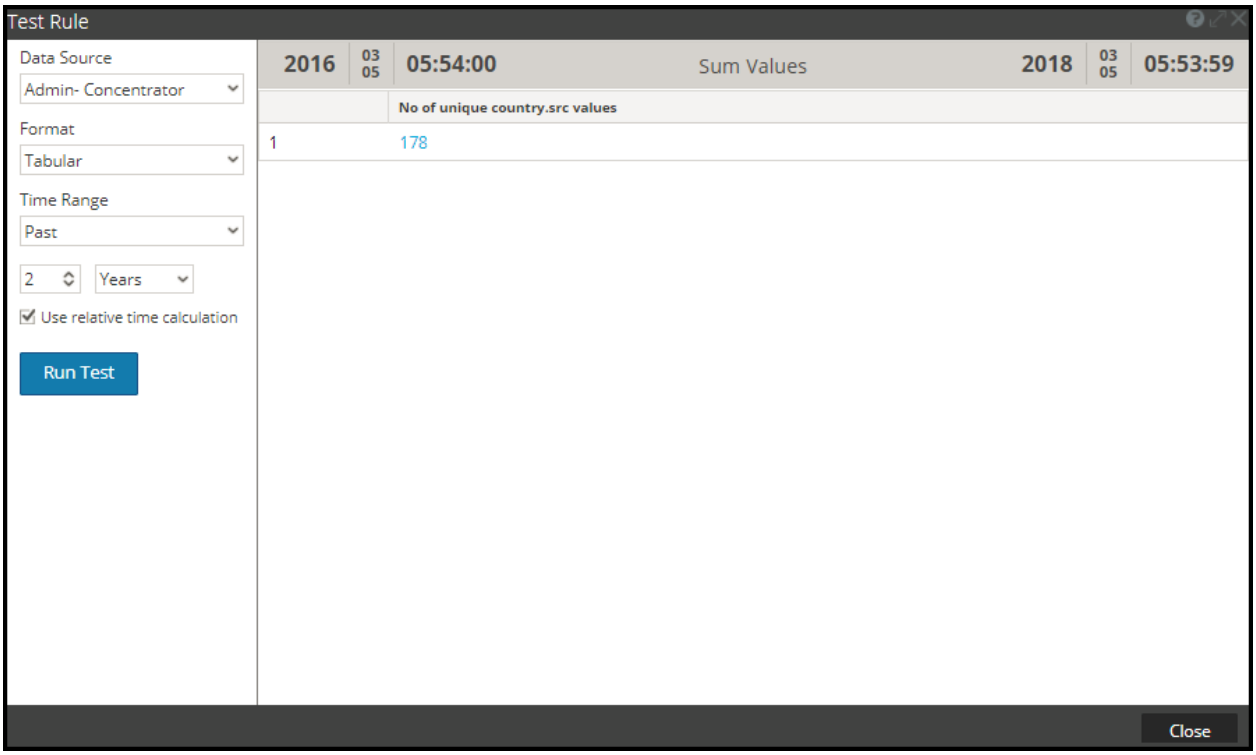
The following figure shows the sum_count() rule action.

Build Rule
NetWitness Platform DB
Name
Sum fields
Summarize
Event Count
Select
country.src
Alias
Sum
Where
country.src = 'United States','China','Canada'
Group By
country.src
Then
sum_count();
Enter a then clause...
Order By
Column Name
Sort By
Total
Descending
Session Threshold
0
Limit
20
Use
Save
Reset
Test Rule

With sum_count() rule action, the output shows the total size of all the event counts.



`sum_values()`



Totals the number of values for a given result set. Use this action to display how many matches exists for a given rule.

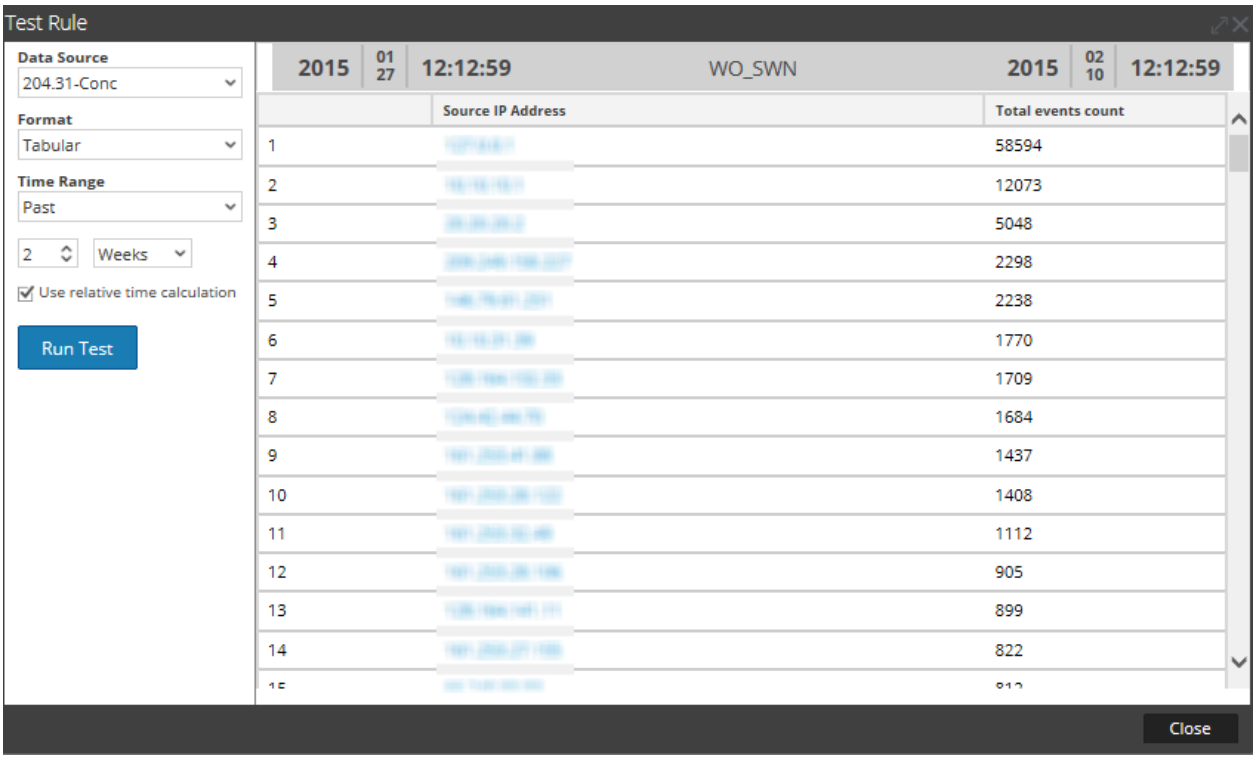
Example:

The following figure shows the sum_values() rule action.

The following figure shows the result with sum_values rule action.

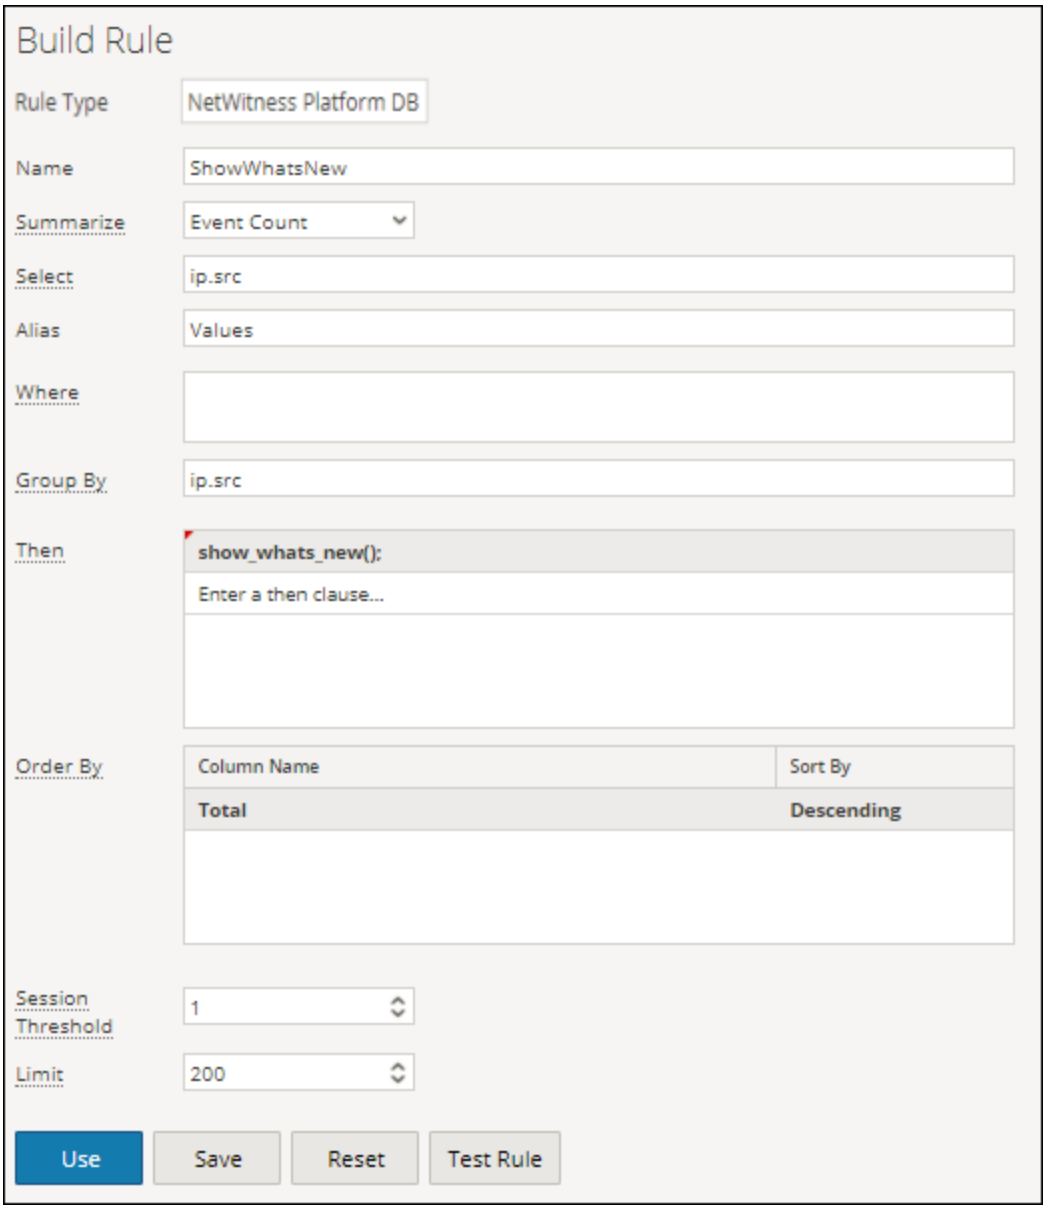
show_whats_new()

The show_whats_new() rule action takes any result in a result set and filters out any value that is available in the NetWitness meta database prior to the time frame of the currently running report. When a report runs, NetWitness determines the ID of the first session in the time range of the report. If a value in a result set has a first session id that is greater than the first session id of the report time frame, it did not exist in the NetWitness meta database prior to the report being run and so is new to the NetWitness system relative to the time frame of the report.



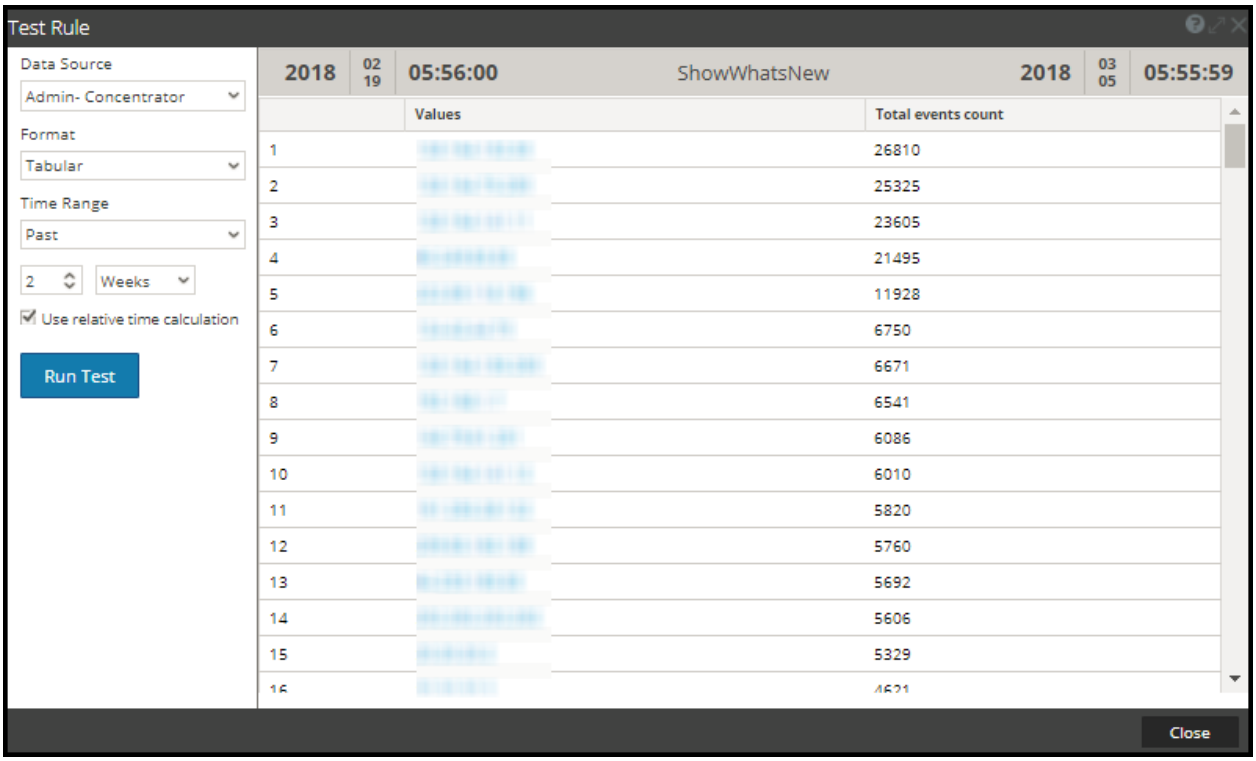
The show_whats_new() rule action is also supported for Custom Aggregate Rule. When multiple meta's are selected in the Custom rule, the first meta is considered for filtering out the old values. See "Example 2" below to understand how this rule action is used for Custom Aggregate Rule.

Note: The show_whats_new() rule action can be used only with an aggregate rule.



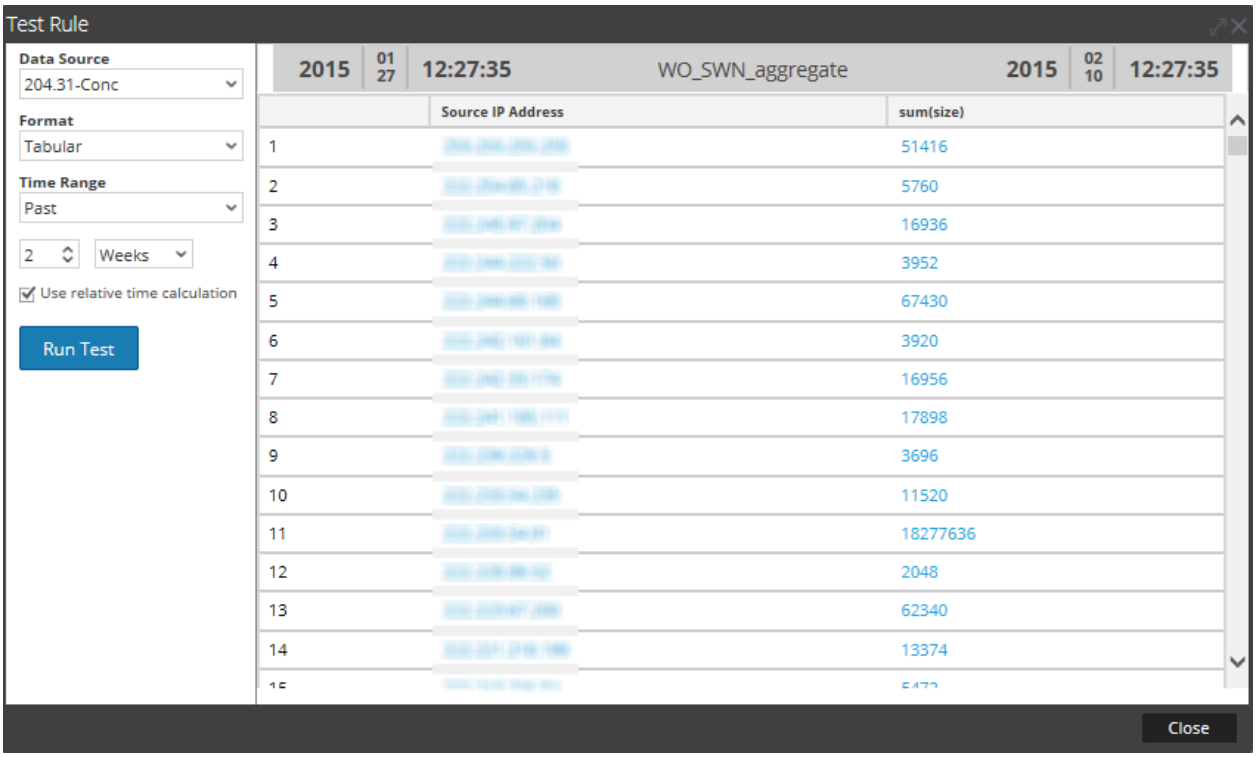
Examples:

1. show_whats_new() for aggregate rule with Event Count

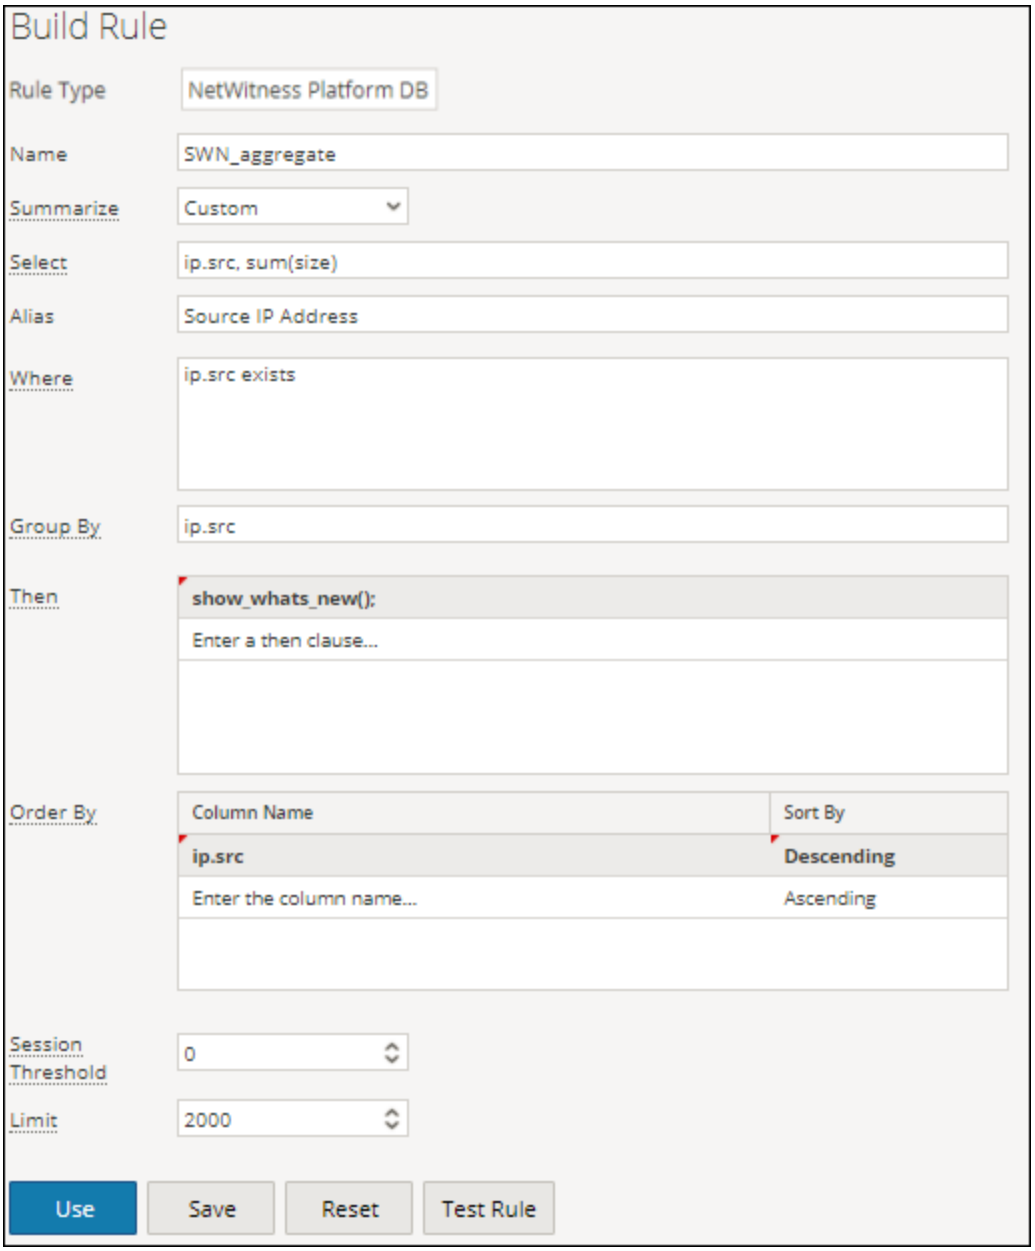


In the following example, all the Source IP Addresses available for the past two weeks are listed.

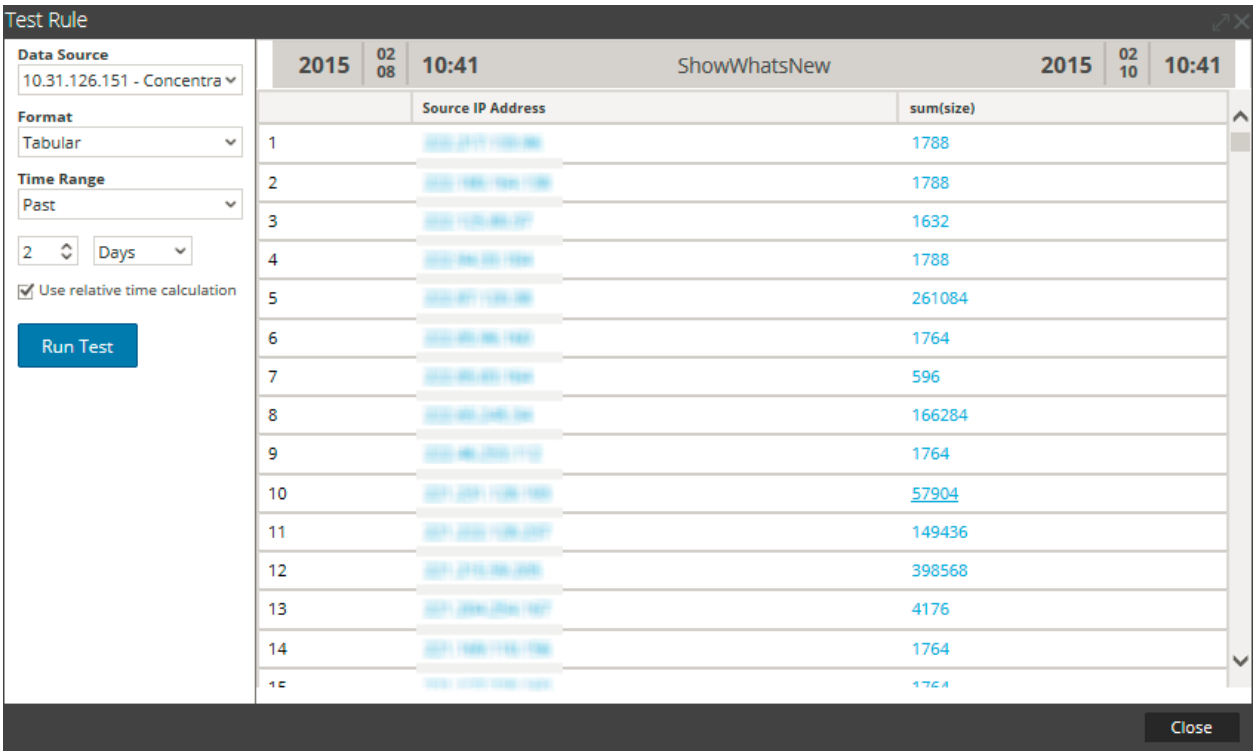
The following figure shows the use of the show_whats_new rule action to list only the new entries for the past two weeks.



The following figure lists the new entries for the past two weeks.



2. show_whats_new() for Custom aggregate rule



In the following example, all the Source IP Addresses available for the past two weeks are listed.

The following figure shows the use of the show_whats_new rule action to list only the new entries for the past two weeks.

The following figure lists the new entries of Source IP Addresses for the past two weeks.

The power of this feature is that it doesn't matter when the report is run in identifying values that are new to NetWitness. The caveat with this feature is that if a data reset occurs, you will lose your data. However, it is easy to baseline a system and identify changes and new items without a tremendous amount of strain on the system (depending on the size of your result set).

Supported Rule Operators

The NWDB Reporting Engine data source rule syntax supports a subset of rule operators that are supported by NetWitness.

Syntax	Description
*	Use an asterisk (*) as the sole operator in a rule to select all traffic.
=	Equals operator
!=	Does not equal operator
&&	Logical AND operator
||	Logical OR operator
-u	Upper boundary. For example, **tcp.port = 40000-u** selects all TCP ports above 40000.
l-	Lower boundary. For example, **tcp.port = l-40000** selects all TCP ports below 40000.
-	The dash (-) operator only applies to numeric values. Separate the lower and upper boundaries of the range with a dash (-). For example, **tcp.port = 25-443** selects all TCP ports between 25 and 443.

Sample Supported Queries

Respond Rule Syntax

The supported rule syntax for the Respond service through descriptions and examples of supported and unsupported syntax. There is a finite set of syntax that you can use to construct rules for reports using the Respond service in this release.

The Reporting Engine supports the following categories of Respond data source rule syntax:

- **select** clause
  - Non-Aggregate Rule
  - Aggregate Rule
- **alias**
- **where** clause
- **where** clause Operators
- Group By
- Order By
- **Limit** field

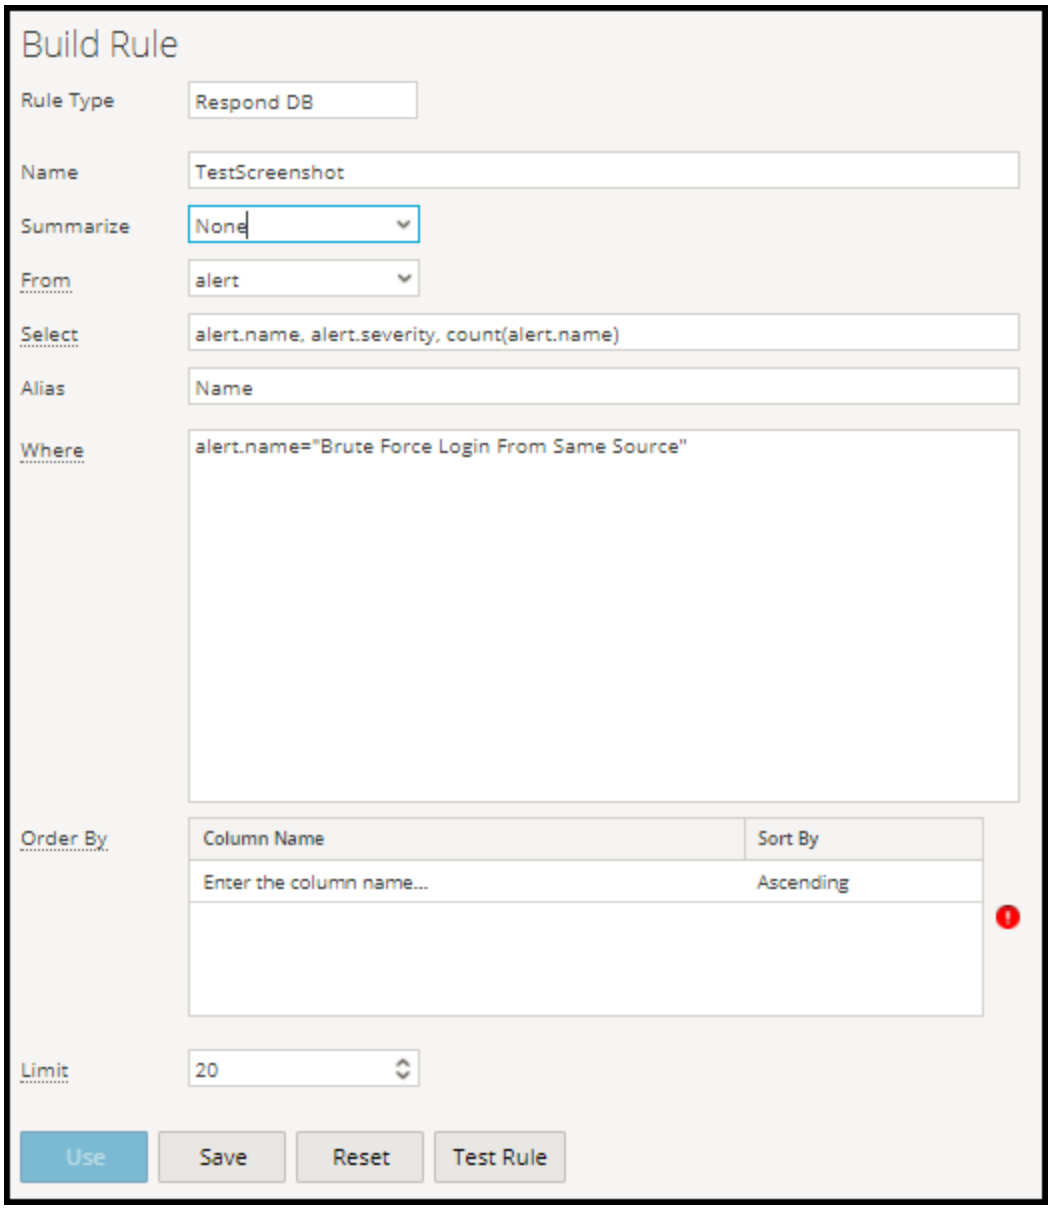
Note: List is not supported in Respond Data source rules.

Select Clause

The select clause is a comma separated list of values. For example: select alert.severity, alert.name, count (*).

There are two types of select clause for Respond Rule:

- Non-aggregate rule
- Aggregate rule



Non-Aggregate Rule

When you want to define a rule without any grouping, choose 'None' in the Summarize field. In a non-aggregate rule, you can select any number of metas in the *Select* clause. For example, select alert.severity, alert.name.

Aggregate Rule

When you want to query for a specific meta and its associated aggregate value then you must use the Aggregate rule. To get an aggregate, you must choose 'Custom' in the **Summarize** field to include an aggregate function in the *Select* clause. For example, select alert.severity, alert.name, count(*).

The following figure shows the Build Rule view for Aggregate Rule.

Supported Aggregate Functions

The rules on Respond service supports the following aggregate functions and syntax.

- count
- max
- min
- sum
- avg

Note: The aggregate functions must be added in the end of a select clause for aggregate query. For example, alert.name, alert.severity, sum(alert.numEvents). By default, a maximum of 10,000 rows results are fetched and this can be configured using the **rsa.response.query.QueryProperties**.

Examples of select Clause Syntax

The following table provides examples of the select Clause Syntax.

Examples	Descriptions
select *column1* ,*column2*,*column3*,...,*columnN*	Select specific metas from an Respond Data Source (You must separate each column with a comma.).

Examples of Supported Select Queries

select alert.name, alert.numEvents, count(alert.numEvents)

select alert.severity, avg(alert.severity)

select alert.timestamp, incidentCreated where alert.timestamp >= 1475658011

Summarize

Summarize determines the type of summarization or aggregation for the rule.

Name	Config Value
Summarize	To query metas without any custom grouping, select: • **None**: To get meta based aggregates, select: • **Custom**: This indicates that expected meta aggregate function is defined in rule select clause.

Alias

Some meta names may not be descriptive, in this case description can be added in the the alias field to make column names more readable. For example, **SELECT**: alert.severity, alert.name, count(*)
ALIAS: Alert Severity, Alert Name

In the alias field you can enter a name for columns used in the select clause. If you do not specify the alias for one of the field in the select clause, then the default description will be used. For example, if the select clause has Field1,Field2,Field3,Field4, and alias has only Field1, ,Field3,Field4, then for Field2 a default description is used.

Where Clause

The where clause is a language field values and ranges that is used by Respond function. In the where clause, string values have to be enclosed within single quotes.

Examples	Descriptions
alert.host summary =' (Primary) Link status "Down" on interface INTNAME.'	For TEXT or string type data, enclose the string or text in single or double quote. If there is any special character such as an apostrophe within the data then you need to add an additional single or double quotes. For example, alert.name = 'top alerts from Cote d"Ivoire'.
alert.timestamp >= 1475658011	For Date and Time (date/timestamp data type columns), use the EPOCH syntax.

Supported Where Clause Operators

Operator	Syntax
= (equals)	*column1* = '*value*'
!= (does not equal)	*column1* != '*value*'
>	*column1* > '*value*'
>=	*column1* >= '*value*'
<	*column1* < '*value*'
<=	*column1* <= '*value*'

Group By

Syntax	Function
group by : alert.severity, alert.timestamp, incidentCreated **Note:** Group by field is enabled for Aggregate queries and are not editable.	Respond picks the metas for Group By field from the selected Select clause automatically.

Order By

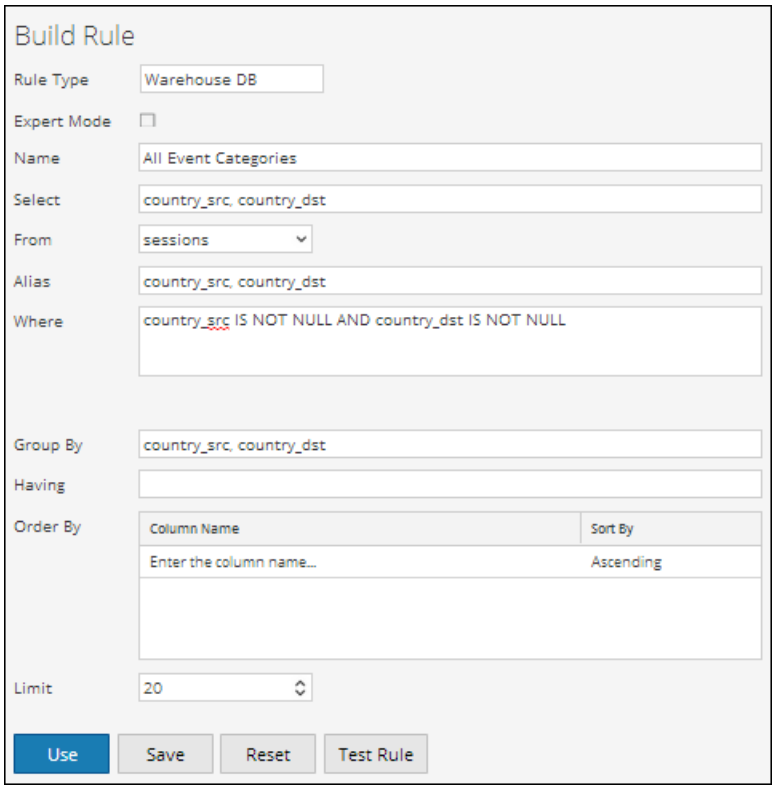
Order By determines how to sort the result set and is not case sensitive.

Name	Configuration Value
Column Name	The Column Name is the name of the columns by which you want to sort the results. By default, the value is empty. When you click on a column, the value gets populated based on the Summarize field. • order by alert.name asc • order by incidentCreated desc • order by count(numEvents) • order by status
Sort By	Sort By determines the order in which you want to sort the results such as ascending or descending. **Note:** For all queries, it is mandatory for you to select the order by field.

Limit field

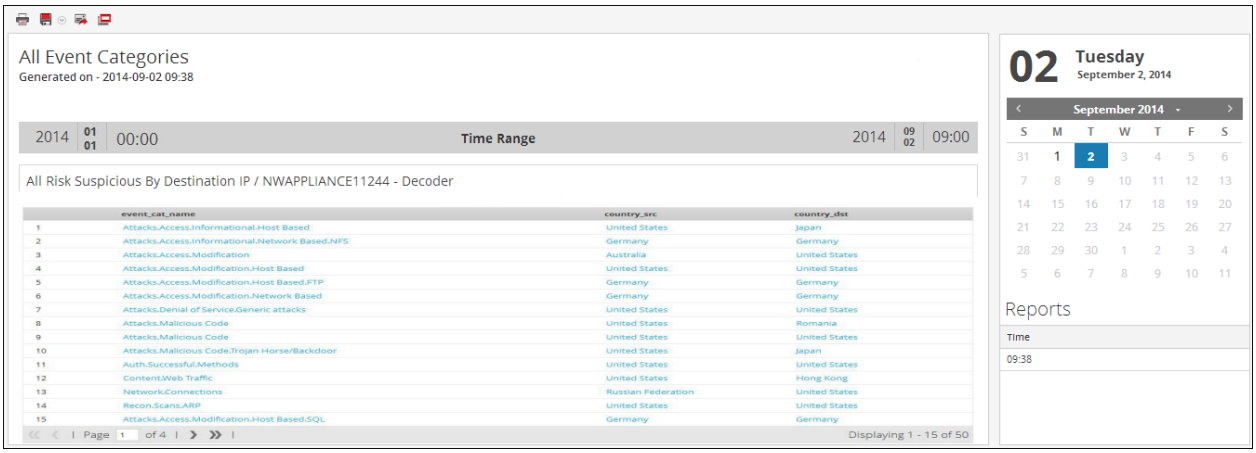
This indicates the limit to be put on the query while fetching data from the database. If a result set is sorted by event count, packet count, or session size, the limit represents the top (or bottom) N values to be returned. If the result set is not sorted, the first N values are returned.

Warehouse DB Simple Rules Syntax



The section explains the simple rules query syntax and examples.

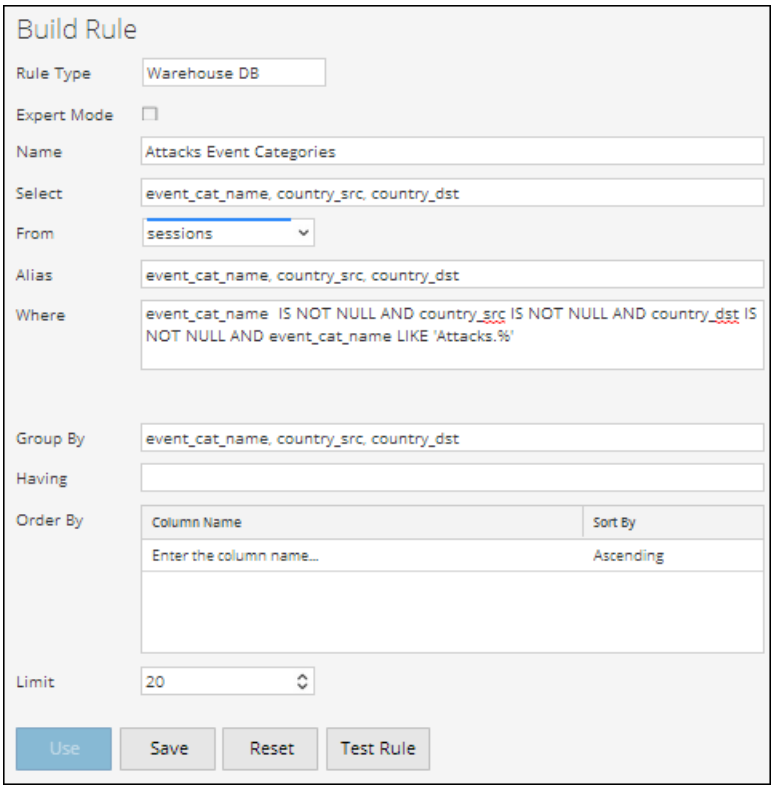
The following examples illustrate simple rules in the default mode:



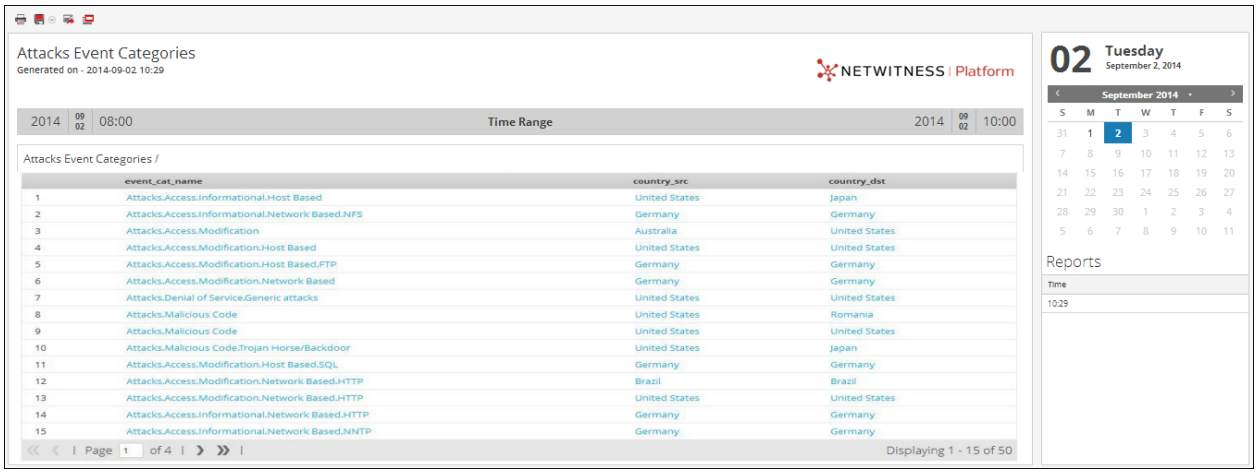
- All Event Categories Report
- Attacks Event Categories Report
- Source: China Event Categories Report
- IP Source and Destination Event Categories Report
- Time Threat Categories Report
- Array Query Report
- Raw Log Query Report

All Event Categories Report

This rule fetches all event categories, source country, and destination country from the **sessions** table by defining alias names (temporary column names) for each of the fields to be fetched from the table, that is, **country_src** for the source country, and **country_dst** for the destination country.

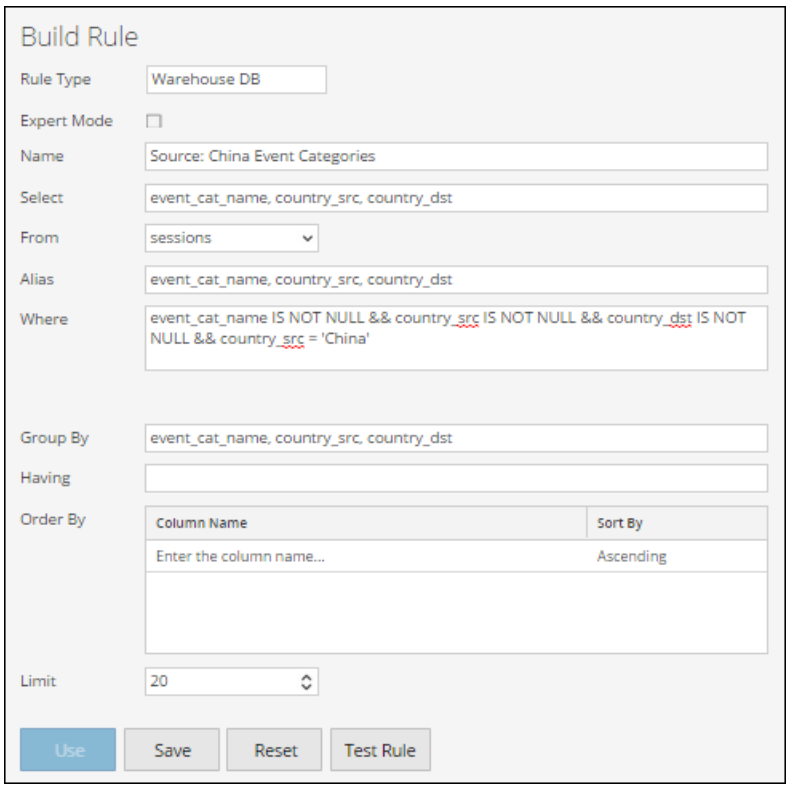


The following figure shows the result set of the All Event Categories rule.

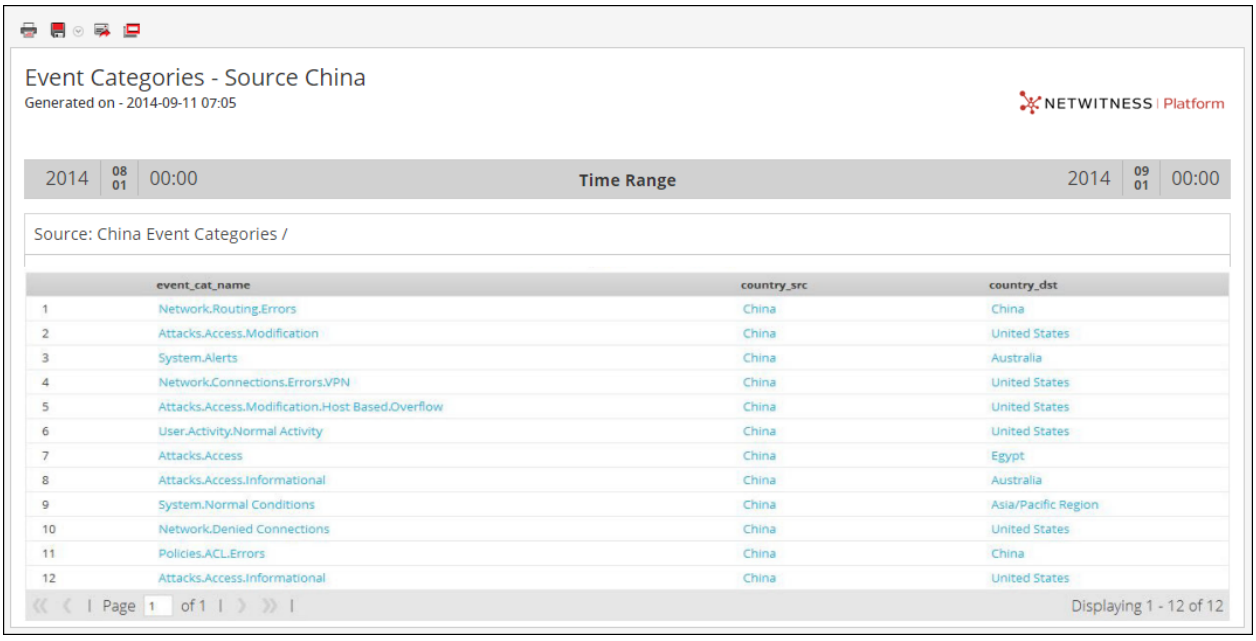


Attacks Event Categories Report

This rule fetches the event categories, source country, and destination country from the **sessions** table by defining alias names (temporary column names) for each of the fields to be fetched from the table and selecting only those columns whose event category name like 'Attacks.%'.



The following figure shows the result set of the Attacks Event Categories rule.



Source: China Event Categories Report

This rule fetches the event categories, source country, and destination country from the **sessions** table by defining alias names (temporary column names) for each of the fields to be fetched from the table and selecting only those columns whose source country is 'China'.

The following figure shows the result set of the Source: China Event Categories rule.

Event Categories - Source China

Generated on - 2014-09-11 07:05

IP Source and Destination Event Categories Report

This rule fetches the IP address of source and destination country from the **sessions** table by defining alias names (temporary column names) for each of the fields to be fetched from the table and selecting only those columns whose destination country is NOT NULL.

Build Rule

Rule Type: Warehouse DB

Expert Mode: ☐

Name: Destination Country By IP Source

Select: ip_src, country_dst

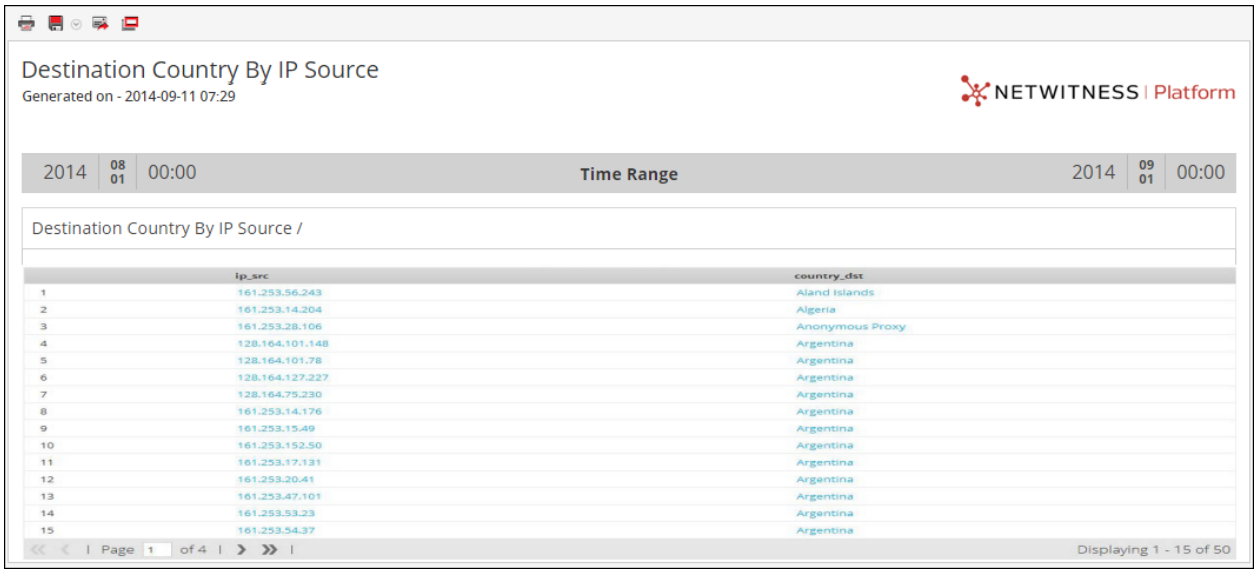
From: sessions

Alias: ip_src, country_dst

Where: device_class IS NULL && country_dst IS NOT NULL

Group By: country_dst, ip_src

Having:



Order By:

Column Name	Sort By
Enter the column name...	Ascending

Limit: 50

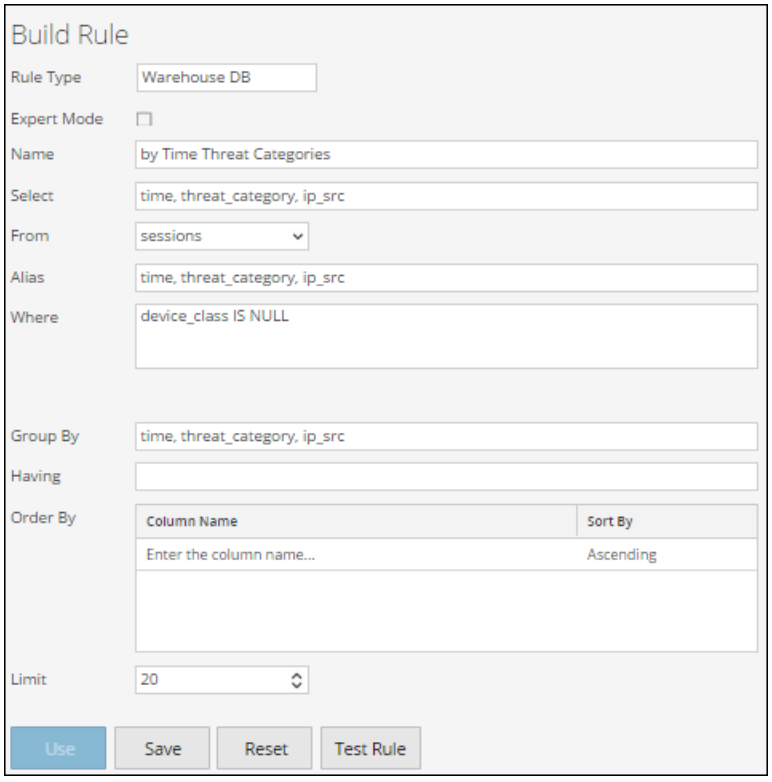
Use | Save | Reset | Test Rule

The following figure shows the result set of the IP Source and Destination Event Categories rule.

Destination Country By IP Source
Generated on - 2014-09-11 07:29

NETWITNESS | Platform

2014	08 01	00:00	Time Range	2014	09 01	00:00



Destination Country By IP Source /

	ip_src	country_dst

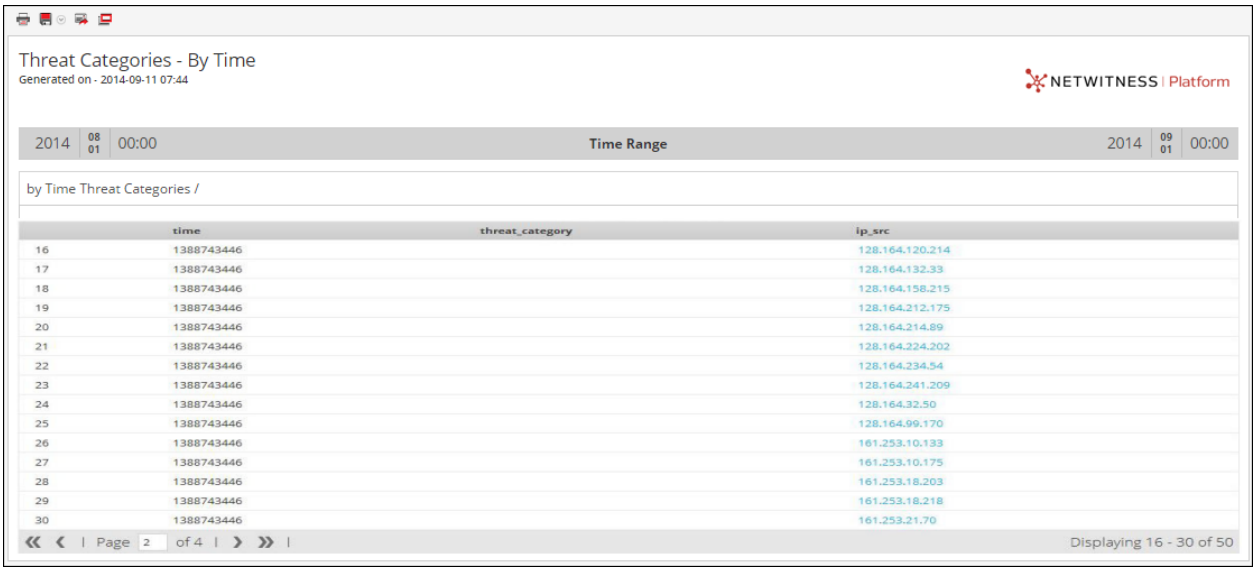
Time Threat Categories Report

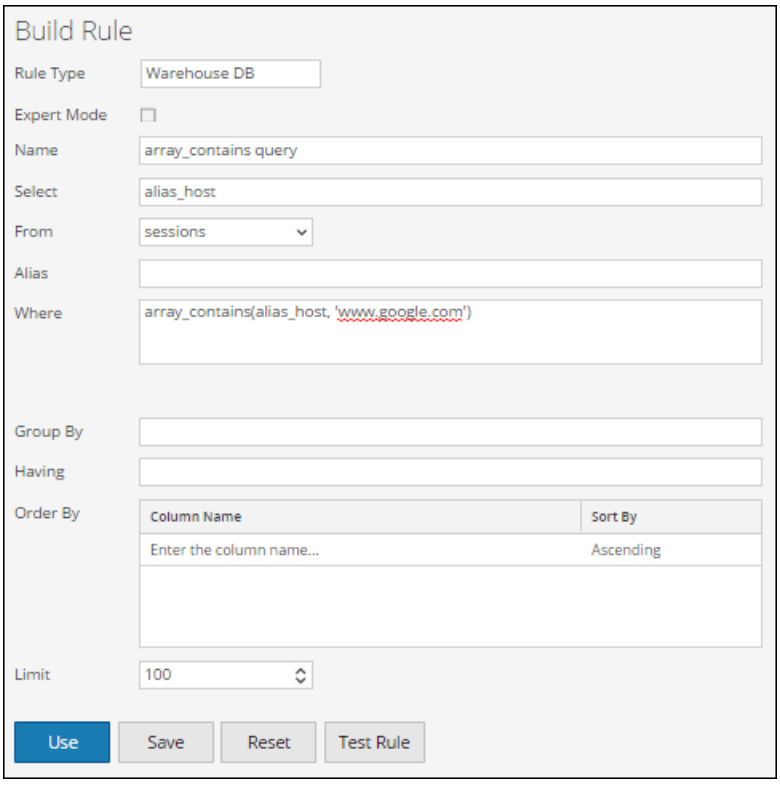
This rule fetches the threat category events, the time the log or event was ingested into Log Decoder/Decoder, and the source IP addresses from the **sessions**table by defining alias names (temporary column names) for each of these fields to be fetched from the table.



Build Rule

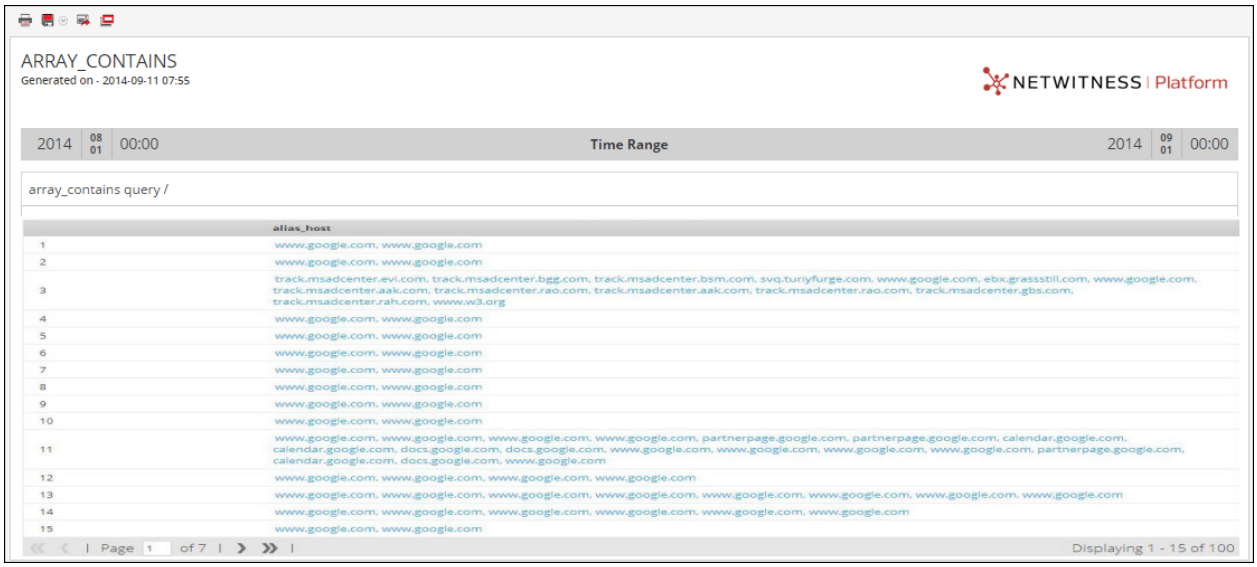
Rule Type	Warehouse DB
Expert Mode	☐
Name	by Time Threat Categories
Select	time, threat_category, ip_src
From	sessions
Alias	time, threat_category, ip_src
Where	device_class IS NULL
Group By	time, threat_category, ip_src
Having	
Order By	Column Name: Enter the column name... / Sort By: Ascending
Limit	20

Use Save Reset Test Rule



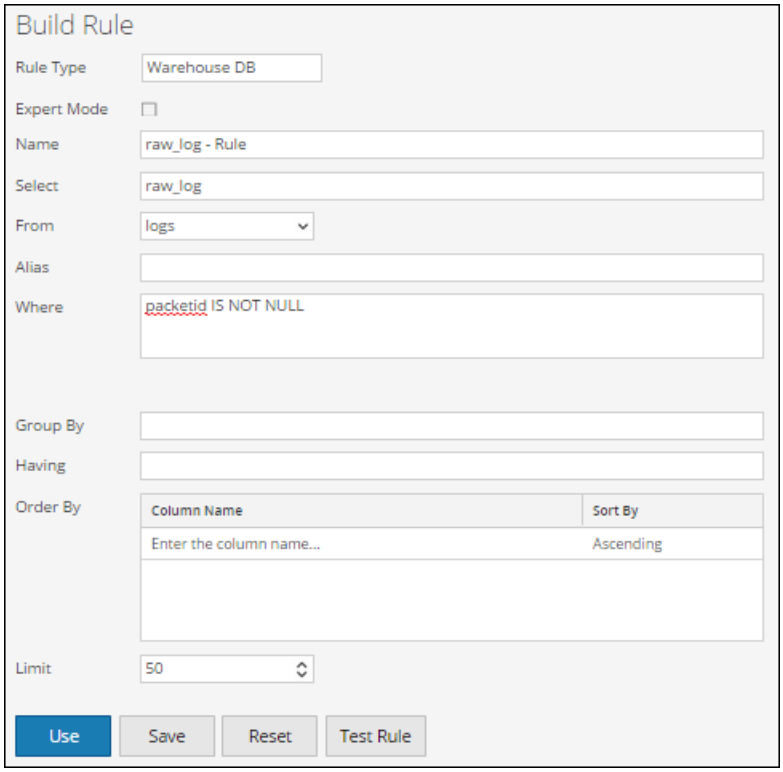
The following figure shows the result set of the by Time Threat Categories rule. The time displayed in the time field is the UNIX time (For example, 1388743446).

Note: In the “Select” clause the syntax would be “UNIX time” to convert to UTC time in report. For example, you can use the Epoch time converter tool to convert UNIX time (1388743446) to UTC (Coordinated Universal Time) (1/3/2014 3:34:06 PM).

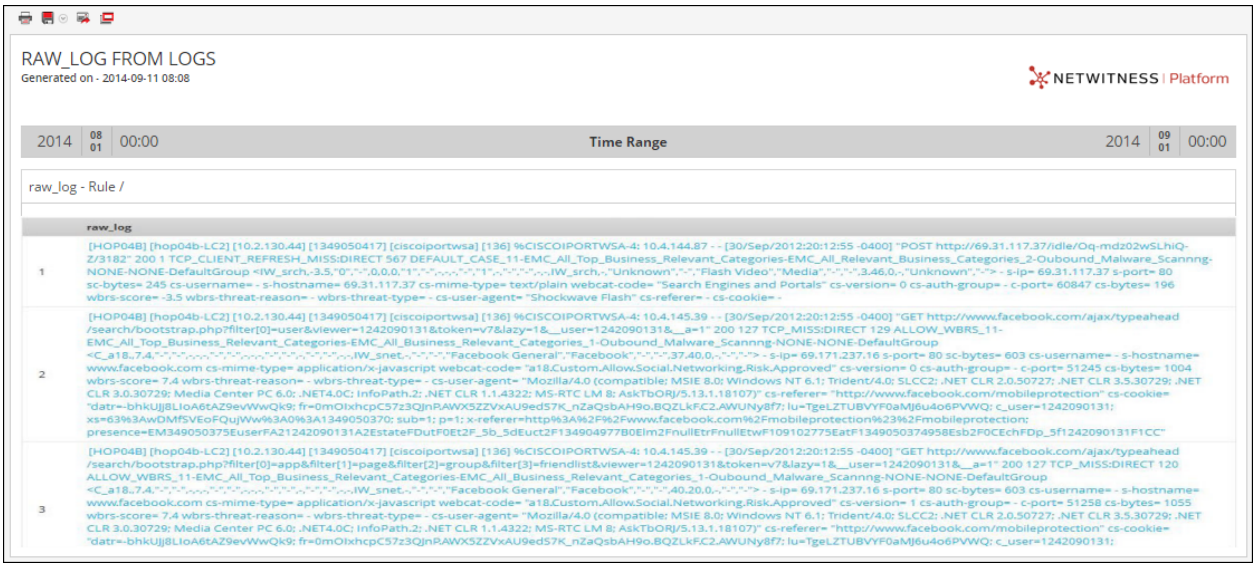


Array Query Report

This rule fetches an array of alias host names from the **sessions** table which contains the value 'www.google.com'.

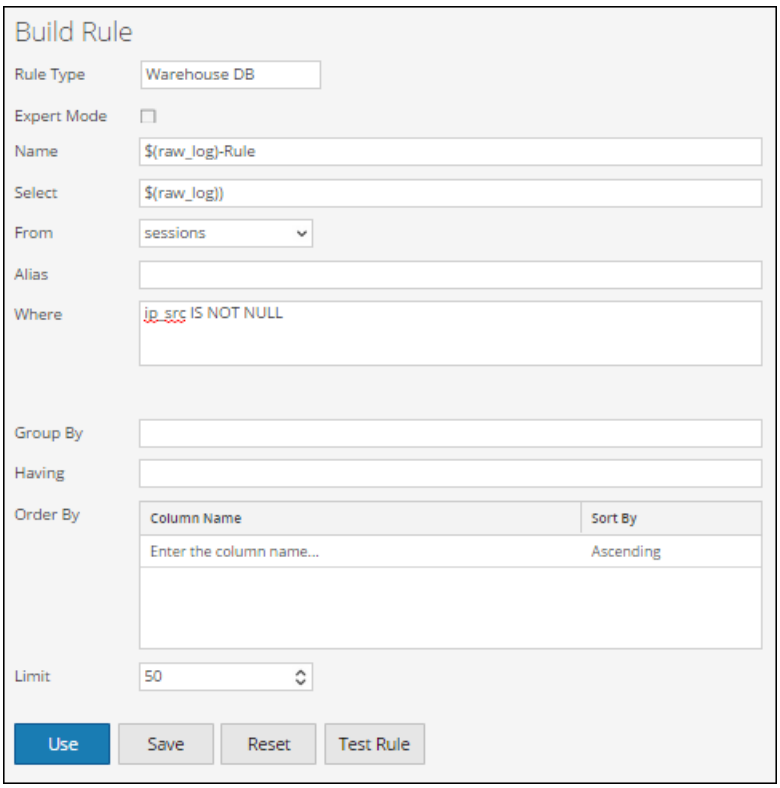


The following figure shows the result set for querying an array from sessions.

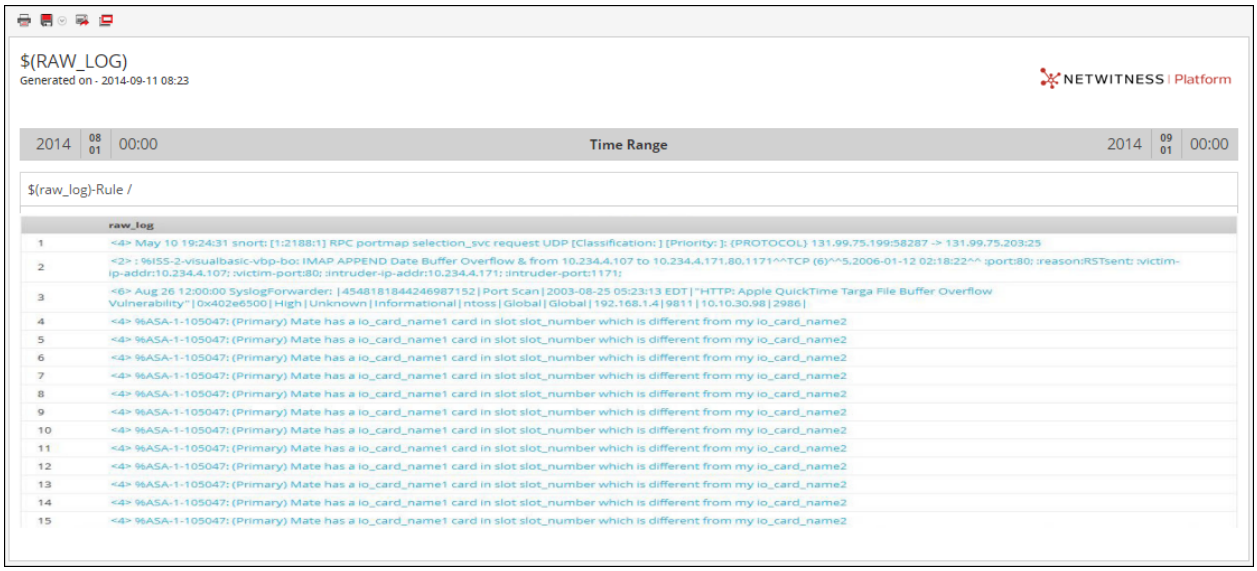


Raw Log Query Report

Raw logs can be queried either from the logs or sessions table.



This rule uses **raw_log** as a meta for querying raw log from logs whose packet ID is NOT NULL.



The following figure shows the result set for querying raw logs from logs.

This rule uses **${raw_log}** as a meta for querying raw log from sessions whose source IP address is NOT NULL.

The following figure shows the result set for querying raw logs from sessions.

$(RAW_LOG)

Warehouse DB Advanced Rules Syntax

The section explains the advanced rules query syntax and examples.

General Syntax of an Advanced Rule

The following figure shows how to define an advanced query.

The following syntax is an example of an advanced query:

```
DROP Table IF EXISTS sessions21022014;
CREATE External TABLE sessions21022014
ROW FORMAT SERDE 'org.apache.hadoop.hive.serde2.avro.AvroSerDe'
STORED AS INPUTFORMAT
'org.apache.hadoop.hive.ql.io.avro.AvroContainerInputFormat'
 OUTPUTFORMAT 'org.apache.hadoop.hive.ql.io.avro.AvroContainerOutputFormat'
LOCATION '/RSA/rsasoc/v1/sessions/data/2013/12/2'
TBLPROPERTIES('avro.schema.literal'='
 {
"type":"record";
"name":"nextgen";
"fields":
 [
 {"name":"time",  "type":["long", "null"], "default":"null"},
{"name":"threat_category",  "type":["string", "null"], "default":"null"},
```

```
{"name":"ip_src",  "type":["string", "null"], "default":"null"},
{"name":"device_class",  "type":["string", "null"], "default":"null"}
 ]
 '};
set mapred.input.dir.recursive=true;
set hive.mapred.supports.subdirectories=true;
```

select `from_unixtime(time), threat_category, ip.src` from `time_variable` where `threat_category` is not `NULL` and `time >= ${report_starttime}` and `time <= ${report_endtime};`

Note: Reporting Engine treats a line beginning with <hyphen> <hyphen> as a comment in Expert Warehouse Rule.
For example,

```
set mapred.input.dir.recursive=true;
-- This is an Expert comment
 set hive.mapred.supports.subdirectories=true;
```

The general syntax of an advanced query is as explained below:

1. Drop and create an external table, and then format the row:
   Firstly, we drop the table, if the table already exists and create an external table **sessions21022014**

   ```
   DROP TABLE IF EXISTS sessions21022014
    CREATE EXTERNAL TABLE sessions21022014
   ```

   Note: You must create an external table only if you are using an other table. For example, if you are using an other table apart from **sessions21022014** then you must drop the table and create an external table.

   Then, specify the row format as Avro.SerDe interface to instruct HIVE as to how a record is to be processed. Avro.SerDe allows you to read or write Avro data as HIVE tables and store them as input format and output format.

   ```
   ROW FORMAT SERDE 'org.apache.hadoop.hive.serde2.avro.Avro.SerDe'
    STORED AS INPUTFORMAT
   'org.apache.hadoop.hive.ql.io.avro.AvroContainerInputFormat'
    OUTPUTFORMAT 'org.apache.hadoop.hive.ql.io.avro.AvroContainerOutputFormat'
   ```

2. Specify the HDFS location:
   Secondly, you must specify the HDFS location '/RSA/rsasoc/v1/sessions/data/2013/12/2' from where the data is queried before executing the HIVE statements.The location parameter specifies the data to be fetched depending on the date input provided. This is a variable parameter hence you can fetch values depending on the date entered.

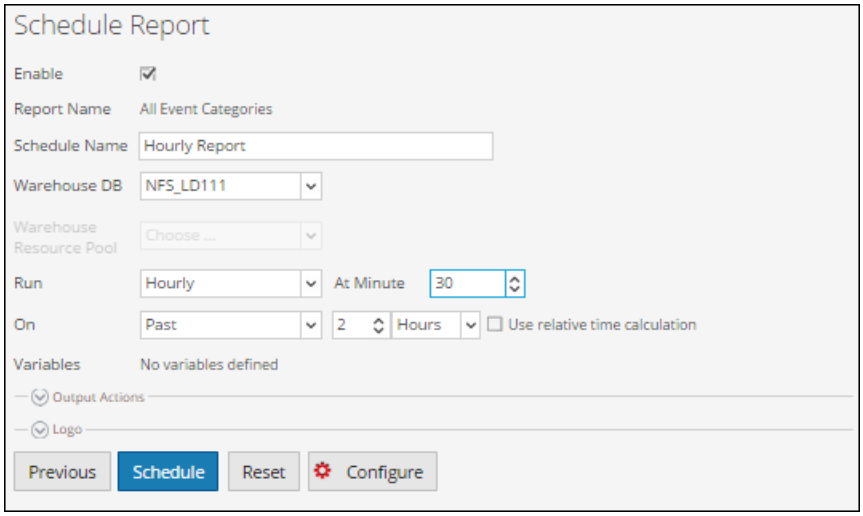
3. Define the table schema:
   Thirdly, you define the table schema by defining columns with a specific data type and default value as 'null'.

   ```
   TBLPROPERTIES('avro.schema.literal'='
    {"type":"record";
    "name":"nextgen";
    "fields":
    [
    {"name":"ip_src",  "type":["string", "null"], "default":"null"}
    ]
    '};
   ```

4. Import data from directory which contains sub directories:
   Then, you must enable HIVE to recursively scan all sub-directories and fetch all the data from all sub-directories.
   ```
   set mapred.input.dir.recursive=true;
   set hive.mapred.supports.subdirectories=true;
   ```
5. Fetch data from the HIVE table:
   Once you execute all the above statements, you can query the database with the HIVE query **select** clause to fetch the data from the HIVE table.

The following examples illustrate advanced rules in the expert mode:

- Hourly, daily, weekly, and monthly report
- Table partition based on location report
- Join logs and sessions based on unique_id report
- List report
- Parameterized report
- Partition based table with multiple locations
- Automated partition using custom function (10.5.1 onwards)



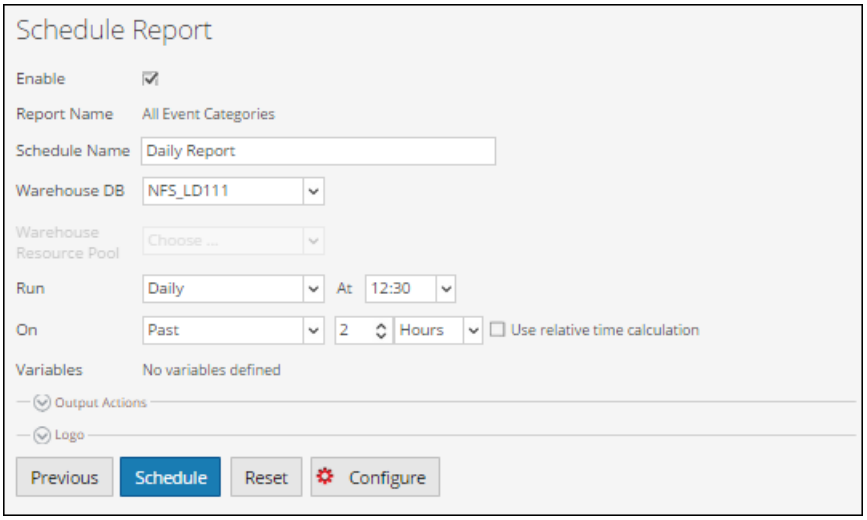
Hourly, Daily, Weekly, and Monthly Report

In these example rules, you can create various reports for December 02, 2013 (as in the below figure). The date variable in the LOCATION statement can be altered, depending on which you can create an hourly, daily, weekly, and monthly report.

Hourly Report

In this example rule, you can create an houly report for December 02, 2013. The LOCATION statement can be altered to generate an hourly report.

LOCATION '/RSA/rsasoc/v1/sessions/data/2013/12/2' - the date input (2013/12/2) indicates year/month/day. The entire data for 02 December, 2013 is retrieved using this location statement.

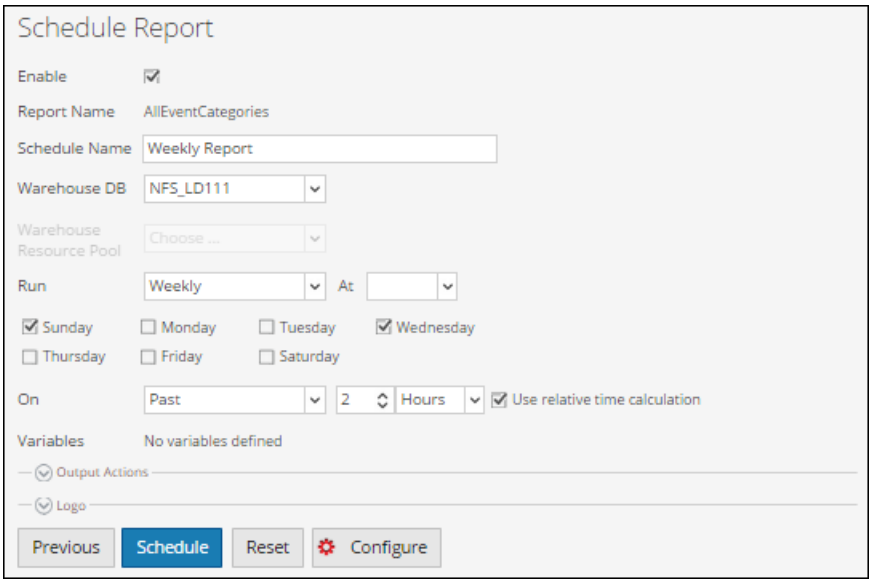


The result set of this query would be an hourly report.

Daily Report

In this example rule, you can create a daily report for December 2013. The LOCATION statement can be altered to generate a daily report.

LOCATION '/RSA/rsasoc/v1/sessions/data/2013/12' - the date input (2013/12) indicates year/month. The entire data for December, 2013 is retrieved using this location statement.

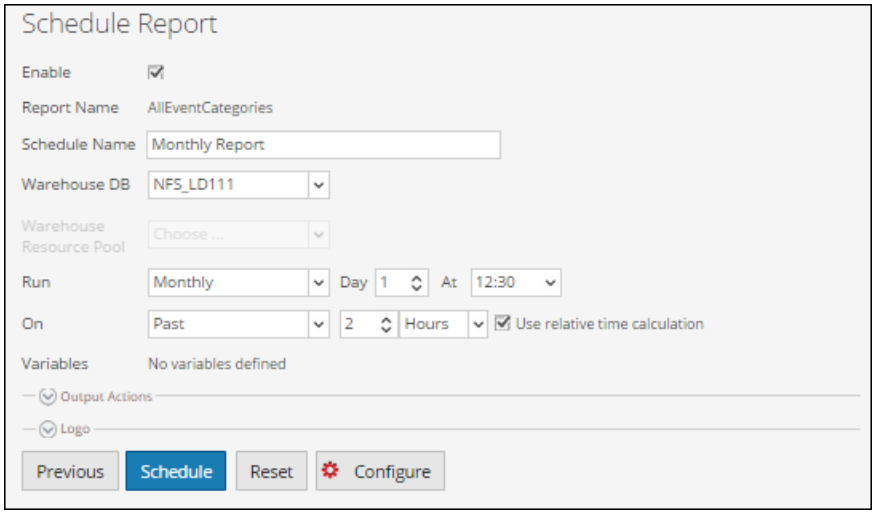


The resultset of this query would be a daily report.

Weekly Report

In this example rule, you can create a weekly report for December 2013. The LOCATION statement can be altered to generate a weekly report.

LOCATION '/RSA/rsasoc/v1/sessions/data/2013/12' - the date input (2013/12) indicates year/month. The entire data for December, 2013 is retrieved using this location statement.

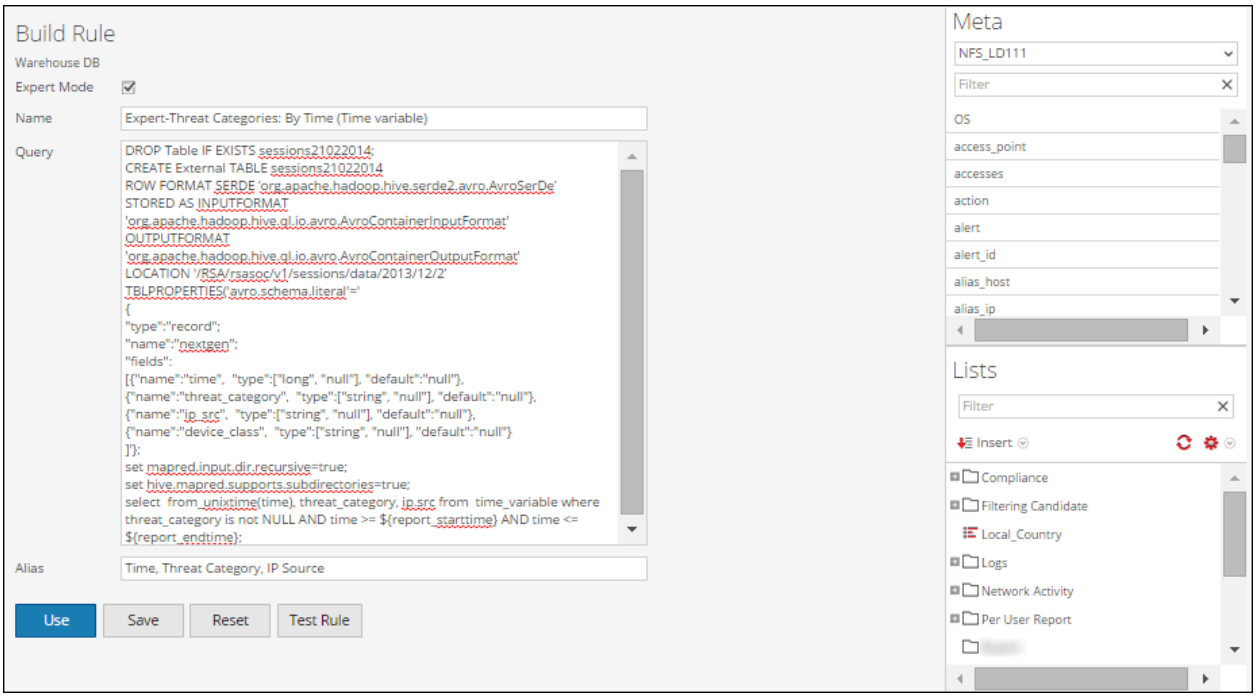


The result set of this query would be a weekly report.

Monthly Report

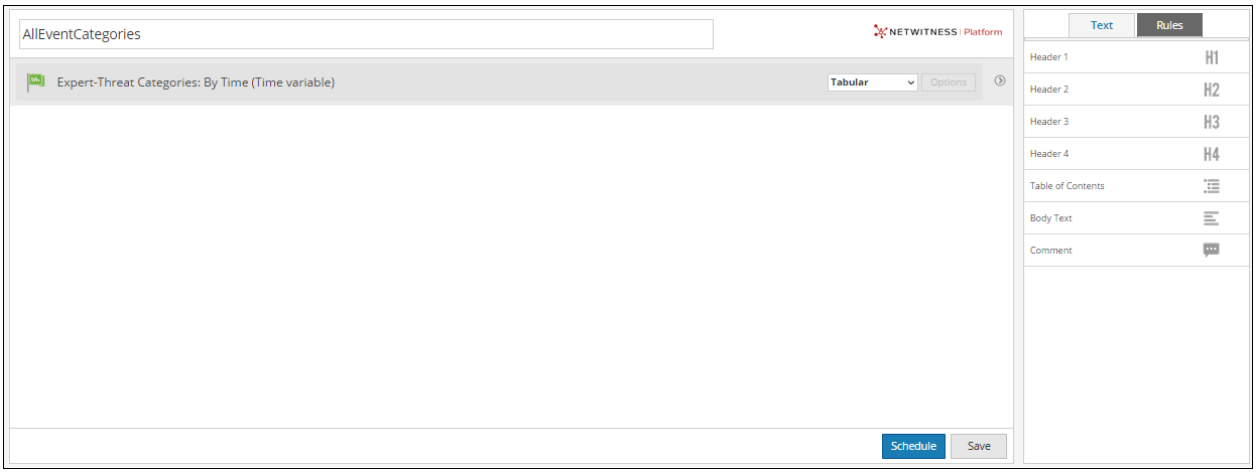
In this example rule, you can create a monthly report for the year 2013. The LOCATION statement can be altered to generate a monthly report.

LOCATION '/RSA/rsasoc/v1/sessions/data/2013' - the date input (2013) indicates year. The entire data for the year 2013 is retrieved using this location statement.



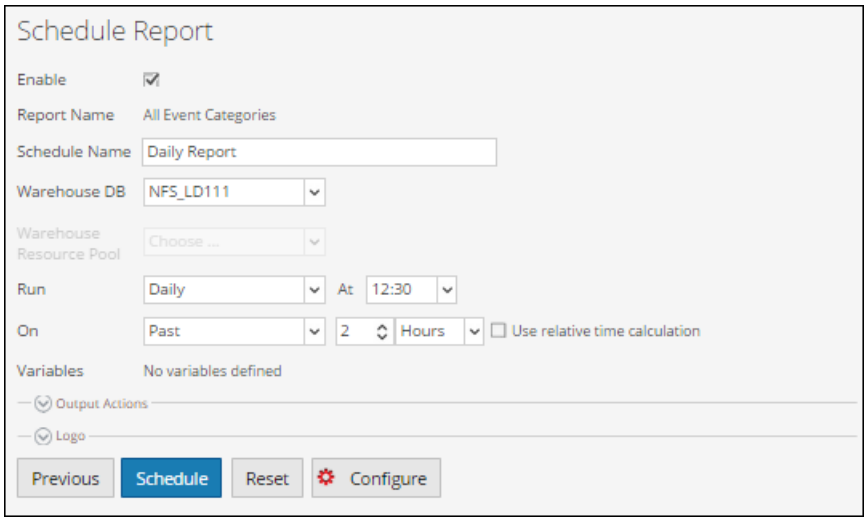
The result set of this query would be a monthly report.

For more information on LOCATION definition, see **Specify the HDFS location** in the **"General Syntax of an Advanced Rule"** section.



You must perform the following steps in sequence to view the resultset of an advanced rule:

1. Define an Advanced Rule
2. Add an advanced rule to a Report
3. Schedule a Report
4. View a scheduled Report



The following figure shows how to define an advanced rule.

The following figure shows how to add an advanced rule to a report (For example, **AllEventCategories**).

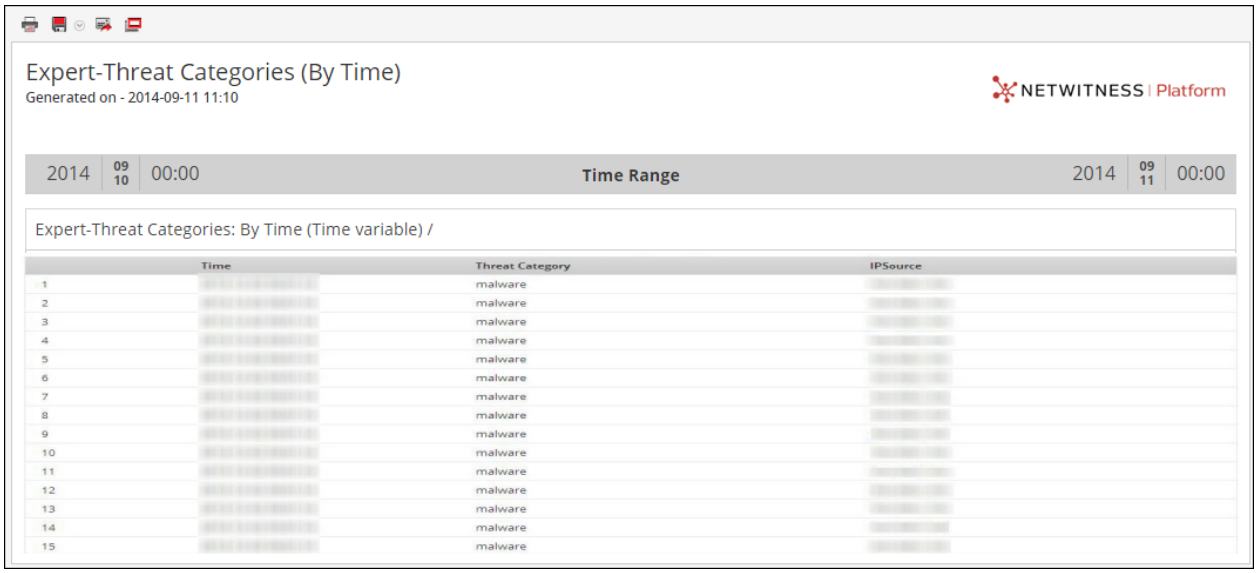
The following figure shows how to schedule a daily report.

If you want to generate a report for a specific time range, you need to manually define the time range in the query using the following two variables:

`${report_starttime} - The starting time of the range in seconds.`
`${report_endtime} - The ending time of the range in seconds.`

For example, `SELECT from_unixtime(time), threat_category, ip.src FROM time_variable WHERE threat_category is not NULL AND time >= ${report_starttime} AND time <= ${report_endtime};`

The following figure shows the result set of scheduling a daily report.



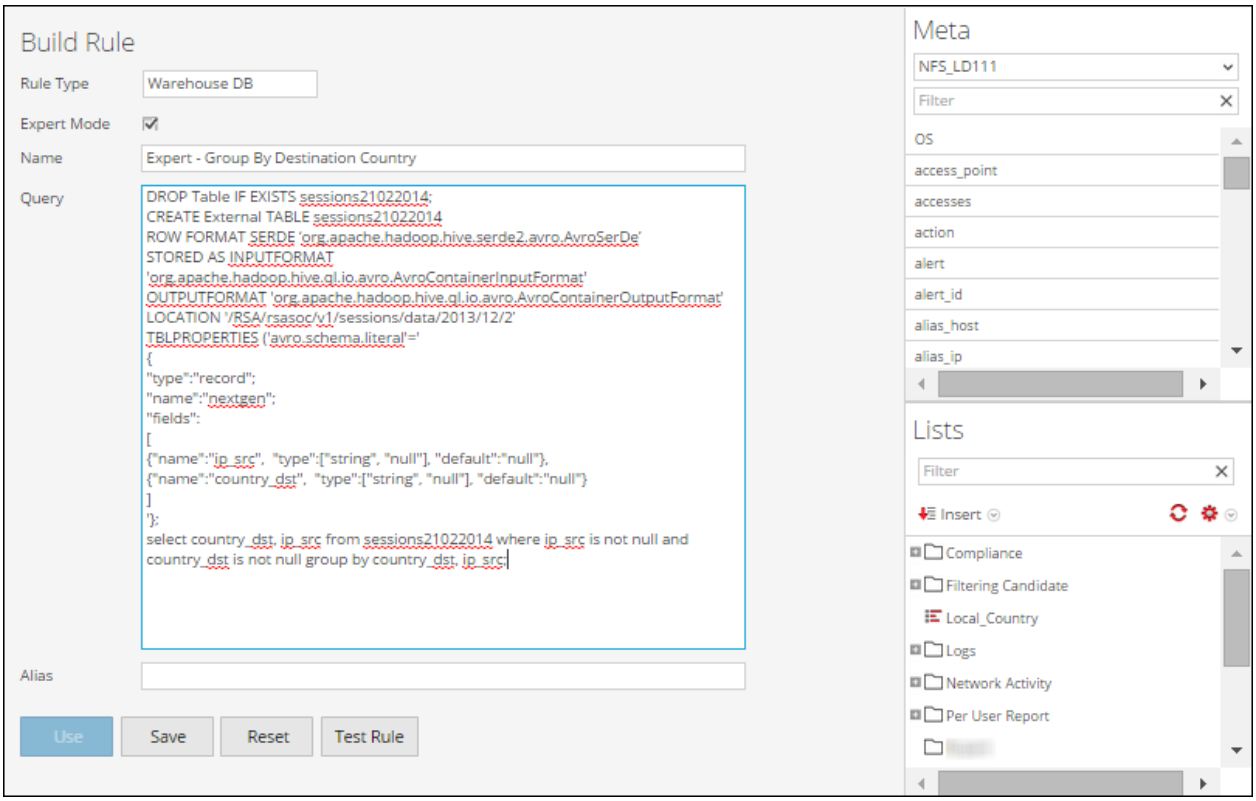


Table Partition Based on Location Report

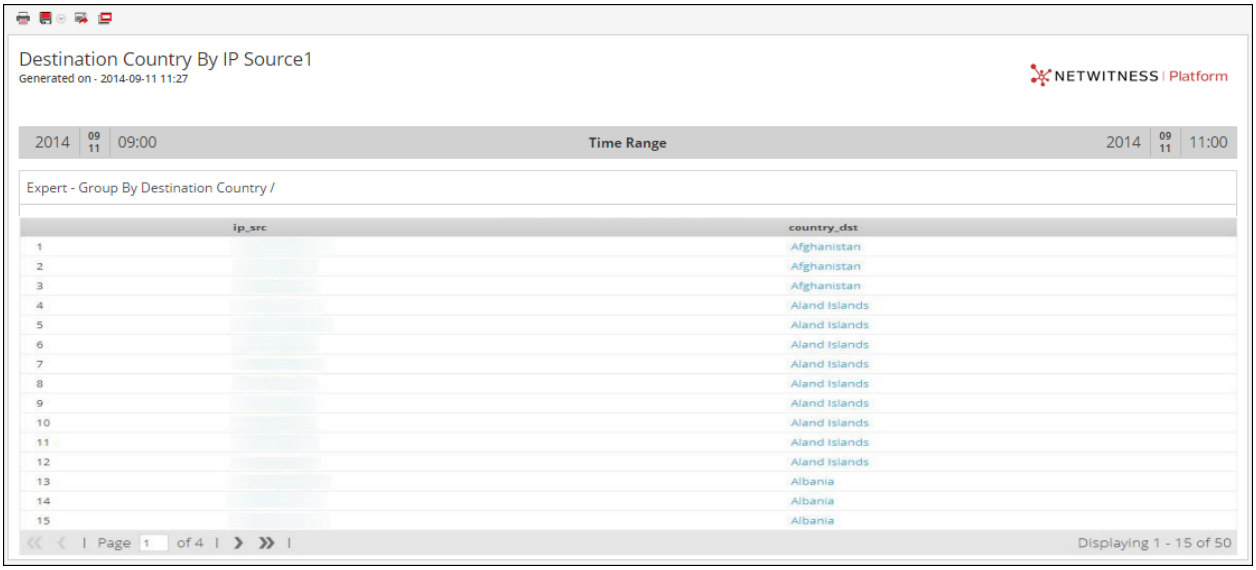
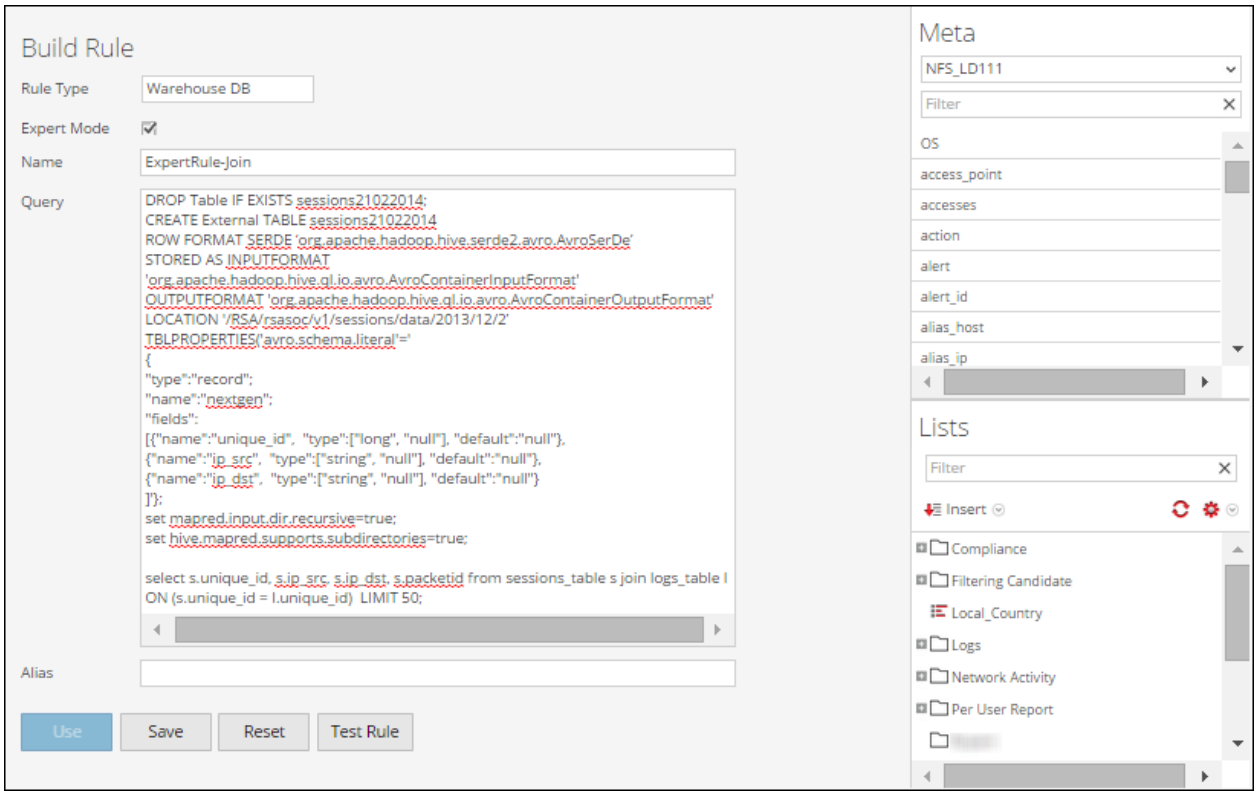


In this example rule, you can create a table partition based on location. Each table can have one or more partition keys which determines how the data is stored. For example, a country_dst of type STRING and an ip_src of type STRING. Each unique value of the partition keys defines a partition of the table.

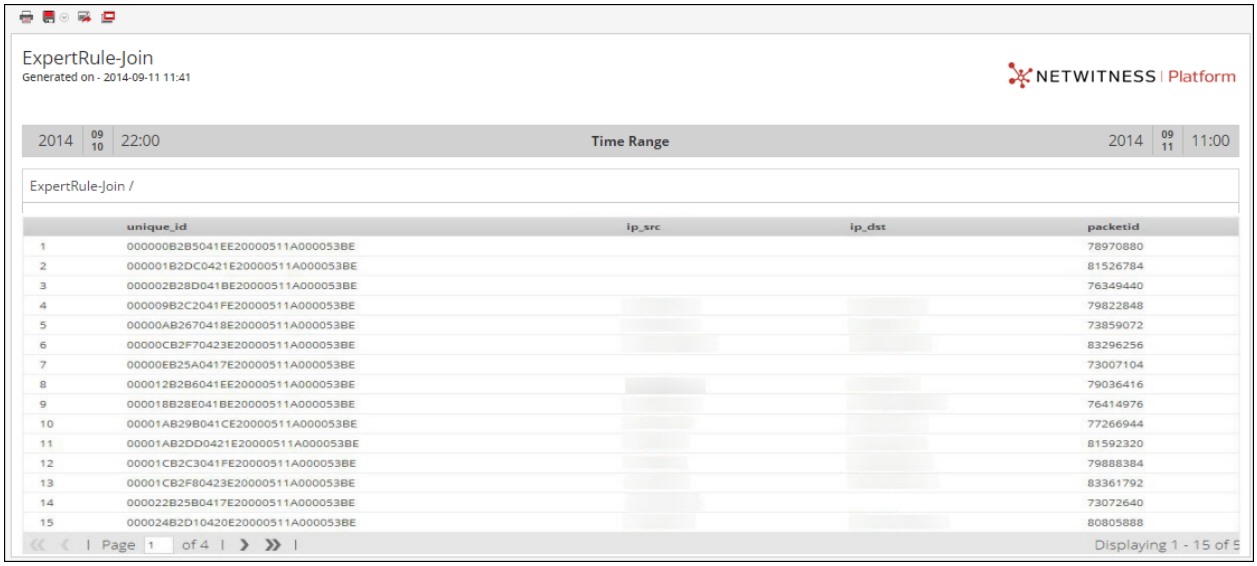
In the example provided, we execute a HIVE query to fetch destination country and IP address of source from the sessions05032014 table and group the result set by these fields.

This rule provides information about the table created, row formatted, location (directory path) for avro data files in Warehouse, and returns a result set as per the HIVE query to indicate that the query returned a result set. For more information on these statements, see "General Syntax of an Advanced Rule" section.

The following figure shows the result set of creating a table partition based on location report.



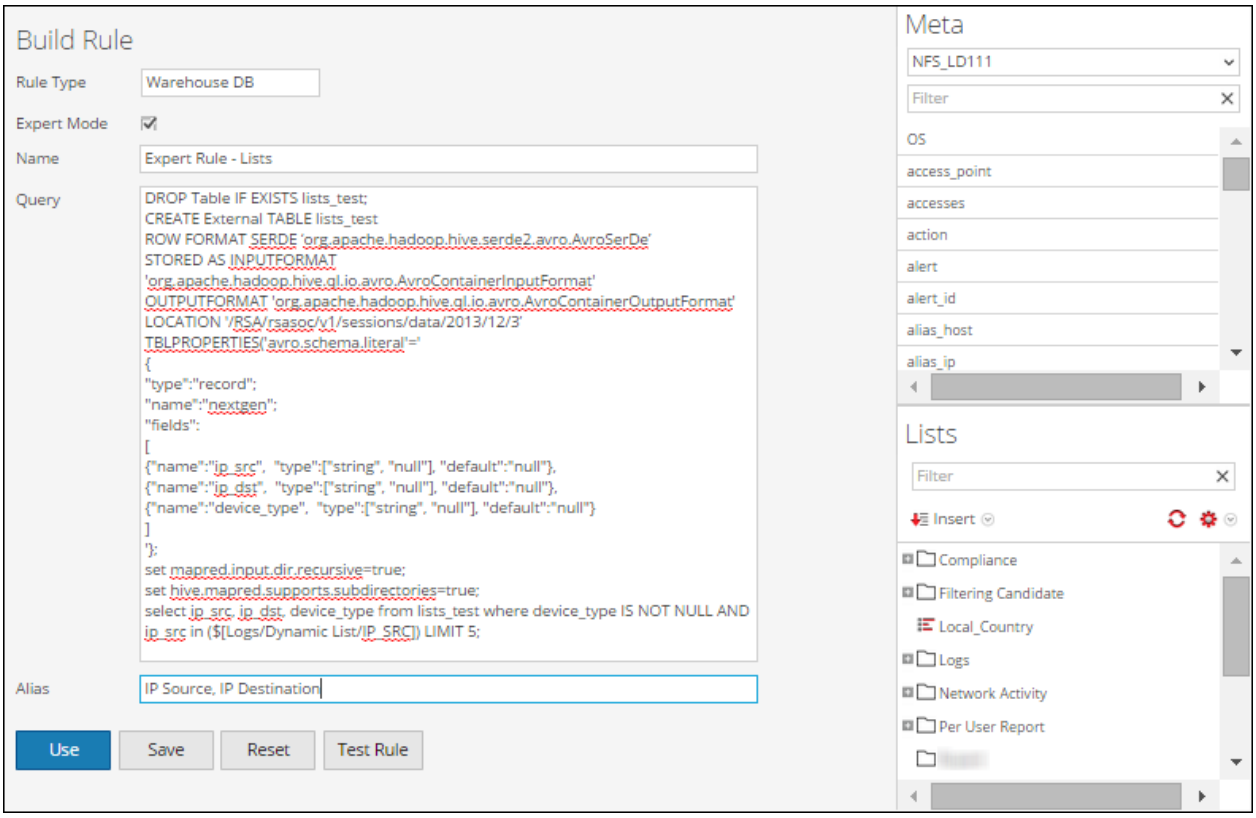
Join Logs and Sessions Based on unique_id Report



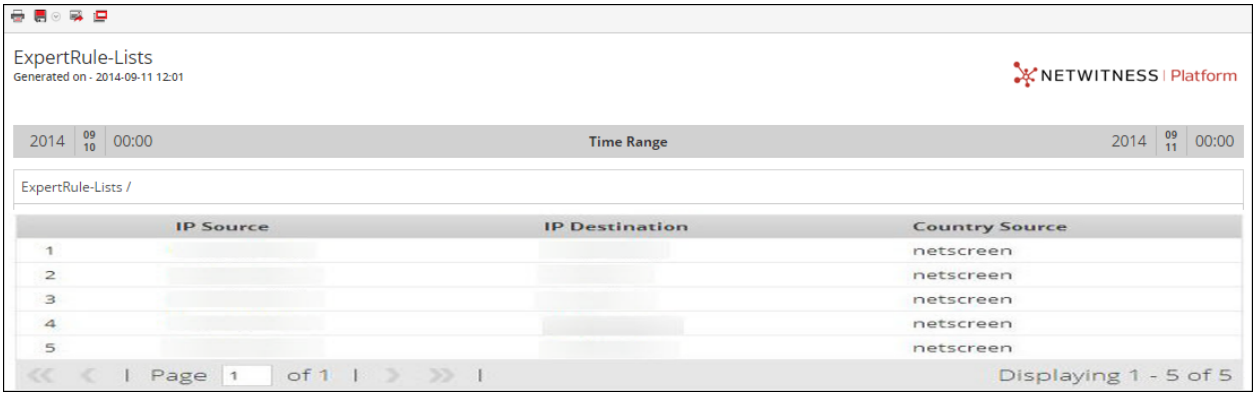
In this example rule, you can create a rule to join logs and sessions table to fetch unique_id, IP address of source and destination, and packet ID based on unique_id.

In the example provided, we execute a HIVE query to fetch certain fields from both the sessions_table and logs_table by performing a join based on the 'unique_id' field.

This rule provides information about the table created, row formatted, location (directory path) for avro data files in Warehouse, and returns a result set as per the HIVE query to indicate that the query returned a result set. For more information on these statements, see the **"General Syntax of an Advanced Rule"** section.



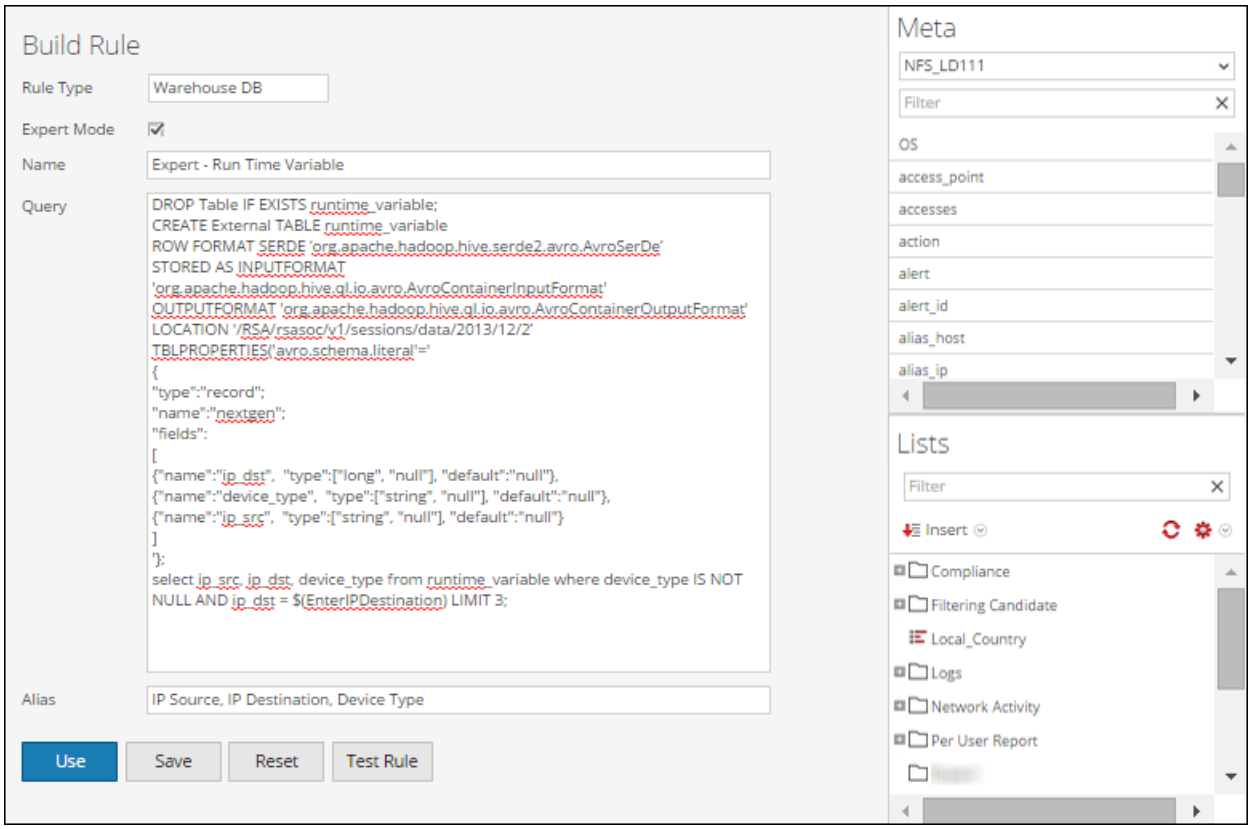
The following figure shows the result set of joining logs and sessions table based on unique_id.



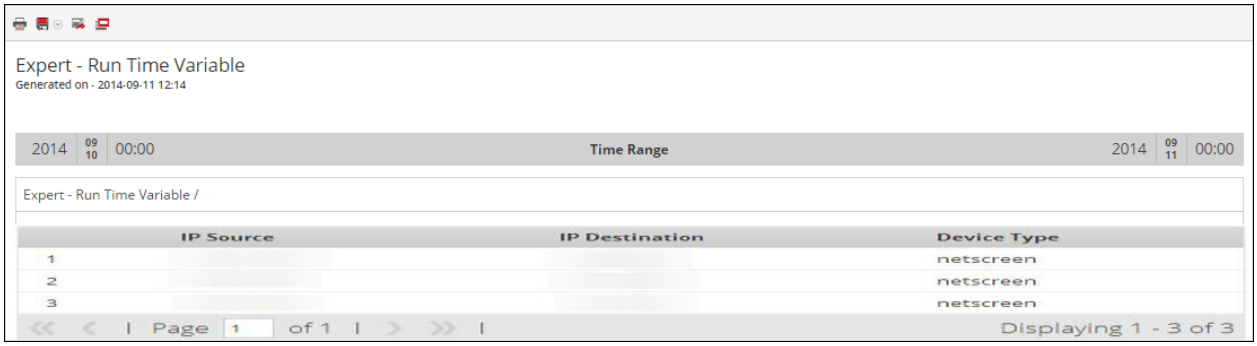
List Report

In this example rule, you can create a List report to fetch IP address of source and destination, and device type from the **lists_test** table where device type is not null and IP address of source is fetched from the appropriate event list.

This rule provides information about the table created, row formatted, location (directory path) for avro data files in Warehouse, and returns a result set as per the HIVE query to indicate that the query returned a result set. For more information on these statements, see the "General Syntax of an Advanced Rule" section.



The following figure shows the result set of executing a list report.



Parameterized Report

In this example rule, you can create a rule to fetch IP addresses of source and destination, and device type from the **runtime_variable** table based on the specified run time variable `${EnterIPDestination}`. At run time, you are prompted to enter a value for the IP address of destination ip_dst. Based on the value entered, the result set is displayed.

This rule provides information about the table created, row formatted, location (directory path) for avro data files in Warehouse, and returns a result set as per the HIVE query to indicate that the query returned a result set. For more information on these statements, see the "General Syntax of an Advanced Rule" section.

The following figure shows the result set of executing a parameterized report.

Partition Based Table with Multiple Locations

The following is an example of partition based table with multiple locations:

```
set mapred.input.dir.recursive=true;
 set hive.mapred.supports.subdirectories=true;
 DROP TABLE IF EXISTS AVRO_COUNT;
 CREATE EXTERNAL TABLE AVRO_COUNT
 PARTITIONED BY (partition_id int)
 ROW FORMAT SERDE 'org.apache.hadoop.hive.serde2.avro.AvroSerDe'
 WITH SERDEPROPERTIES (
 'avro.schema.literal'='{
 "name": "my_record", "type": "record",
 "fields": [
 {"name":"sessionid", "type":["null", "long"], "default" : null},
 {"name":"time", "type":["null", "long"], "default" : null}
 ]}'
 )
 STORED AS
 INPUTFORMAT
 'org.apache.hadoop.hive.ql.io.avro.AvroContainerInputFormat'
 OUTPUTFORMAT
 'org.apache.hadoop.hive.ql.io.avro.AvroContainerOutputFormat';
 ALTER TABLE AVRO_COUNT ADD PARTITION(partition_id=0) LOCATION
'/rsasoc/v1/sessions/data/2015/07/22/8';
 ALTER TABLE AVRO_COUNT ADD PARTITION(partition_id=1) LOCATION
'/rsasoc/v1/sessions/data/2015/07/22/9';
 ALTER TABLE AVRO_COUNT ADD PARTITION(partition_id=2) LOCATION
'/rsasoc/v1/sessions/data/2015/07/22/10/';
 ALTER TABLE AVRO_COUNT ADD PARTITION(partition_id=3) LOCATION
'/rsasoc/v1/sessions/data/2015/07/22/11/';
 ALTER TABLE AVRO_COUNT ADD PARTITION(partition_id=4) LOCATION
'/rsasoc/v1/sessions/data/2015/07/22/12/';
 SELECT COUNT(*) as TOTAL FROM AVRO_COUNT WHERE time >= ${report_
starttime} AND time
 <= ${report_endtime};
```

The partition based table with multiple location is as explained below:

1. Enable HIVE to recursively scan all sub-directories and read all the data from the sub-directories.
   ```
   set mapred.input.dir.recursive=true;
    set hive.mapred.supports.subdirectories=true;
   ```
2. Drop and create an external table, and then format the rows:
   ```
    DROP TABLE IF EXISTS AVRO_COUNT;
    CREATE EXTERNAL TABLE AVRO_COUNT
    PARTITIONED BY (partition_id int)
    ROW FORMAT SERDE 'org.apache.hadoop.hive.serde2.avro.AvroSerDe'
    WITH SERDEPROPERTIES (
    'avro.schema.literal'='{
    "name": "my_record", "type": "record",
    "fields": [
    {"name":"sessionid", "type":["null", "long"], "default" : null},
    {"name":"time", "type":["null", "long"], "default" : null}
    ]}'
    )
   ```

```
STORED AS
INPUTFORMAT
'org.apache.hadoop.hive.ql.io.avro.AvroContainerInputFormat'
OUTPUTFORMAT
'org.apache.hadoop.hive.ql.io.avro.AvroContainerOutputFormat';
```

Note: You must create an external table only if you are using any other table. For example, if you are using any other table apart from **AVRO_COUNT** then you must drop the table and create an external table.

Note: Points to remember when you create a table:
- Dropping a 'non-external' table deletes the data.
- The table is partitioned on a single column called partition_id and this is the standard column for Reporting Engine.
- The default value of any column is null as the AVRO file may not contain the specified column.
- The column names should be in the lowercase as HIVE is case insensitive but AVRO is case sensitive.
- You must specify **avro.schema.literal** in the *SERDEPROPERTIES* .

For more information on the "rule syntax", refer to *Apache HIVE*.

3. Add partitions:
   Once you define a table, you must specify the HDFS locations from where the data needs to be queried before you execute the HIVE statements.The location parameter specifies the data to be fetched depending on the specified date. The data is spread across multiple locations or directories in HDFS. For each location you need to add a partition with unique values assigned to the partition column. The locations can be any directory in the HDFS

```
ALTER TABLE AVRO_COUNT ADD PARTITION(partition_id=0) LOCATION
'/rsasoc/v1/sessions/data/2015/07/22/8';
ALTER TABLE AVRO_COUNT ADD PARTITION(partition_id=1) LOCATION
'/rsasoc/v1/sessions/data/2015/07/22/9';
ALTER TABLE AVRO_COUNT ADD PARTITION(partition_id=2) LOCATION
'/rsasoc/v1/sessions/data/2015/07/22/10/';
ALTER TABLE AVRO_COUNT ADD PARTITION(partition_id=3) LOCATION
'/rsasoc/v1/sessions/data/2015/07/22/11/';
ALTER TABLE AVRO_COUNT ADD PARTITION(partition_id=4) LOCATION
'/rsasoc/v1/sessions/data/2015/07/22/12/';
```

   Note: HIVE reads each file in these locations as AVRO. Incase if there is a non-AVRO file available in one of these locations then the query may fail.

4. Run the query

```
SELECT COUNT(*) as TOTAL FROM AVRO_COUNT WHERE time >= ${report_
starttime} AND time
<= ${report_endtime};
```

   When a table is created, you can execute specific queries to filter the data. For example, after you create the table you can filter the data as shown in the below examples:
   Sessions with a specific Source IP Address:

```
SELECT * FROM AVRO_COUNT WHERE time >= ${report_starttime} AND time
<= ${report_endtime}  AND ip_src = '127.0.0.1';
```

Group by based on user destination:

```
SELECT * FROM AVRO_COUNT WHERE time >= ${report_starttime} AND time
<= ${report_endtime}  GROUP BY usr_dst;
```

Automated Partition using Custom function

In 10.5.1, you can use the custom function to automate the addition of partitions to a user defined table in the expert mode.

General syntax

```
RE WH CUSTOM ADDPARTITIONS(table, namespace, rollup, [starttime,
endtime])
```

The following table describes the custom function syntax:

S.No	Name	Description
1	table	The table name for which the partition has to be added.
2	namespace	The namespace can be sessions or logs.
3	rollup	This value determines the level of directory path to be included in partitions. The value can be HOUR, DAY, or MINUTE. If Warehouse Connector is configured for Day rollup, setting this value as HOUR produces ZERO results. The number and location of each partition is based on time range used to run the rule and the rollup value.
4	(Optional) starttime, endtime	To generate partitions for a specific time range other than the time range mentioned in the rule, you must specify the starttime and endtime in **Epoch Seconds**. **Note:** Expressions are not supported for the starttime and endtime.

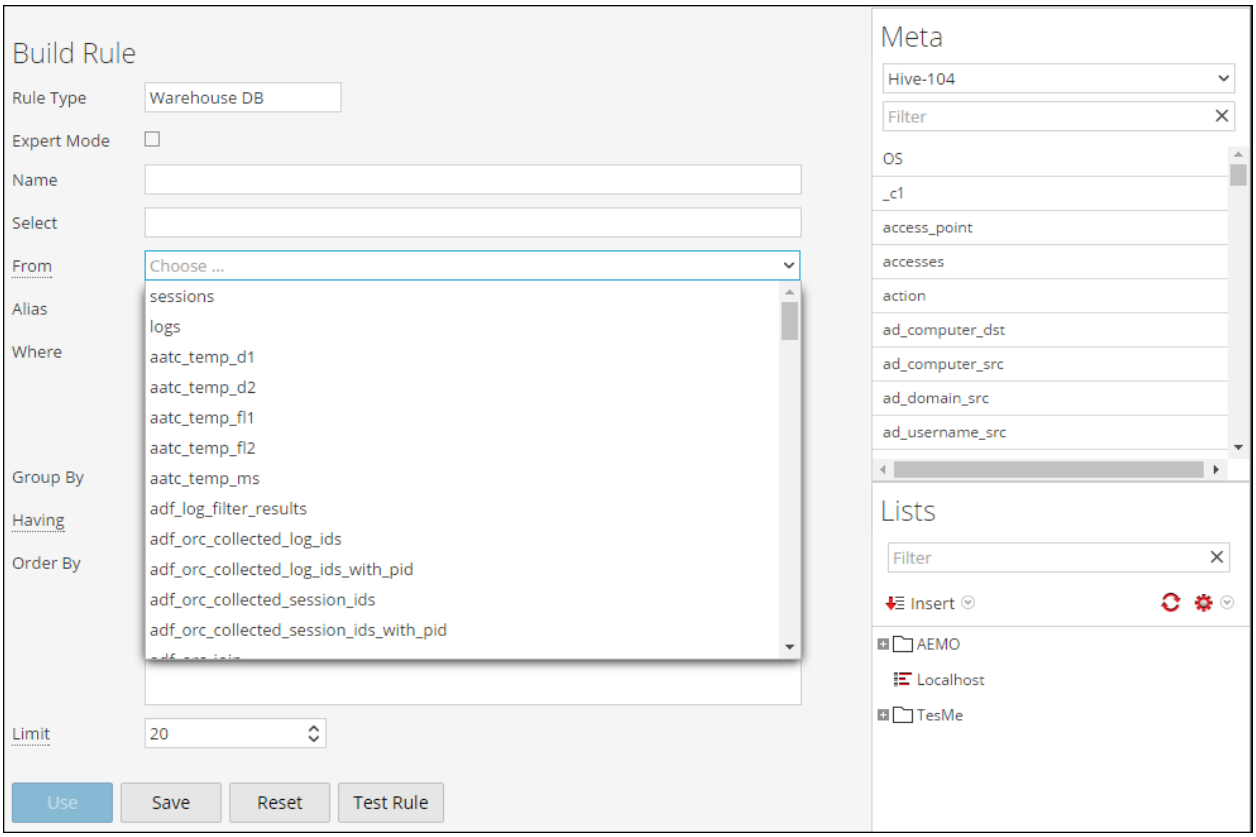
The custom function is invoked when Reporting Engine executes the rule either during test rule or scheduled report. While running a expert rule, whenever Reporting Engine identifies the function declaration, it extracts the required arguments and insert *n* number of ADD PARTITION HiveQL statements and executes them on the Hive Server.

The location and directory structure is determined by the argument passed in the rule and the Hive data source configuration in Reporting Engine. The number of partitions depends on the rollup specified and the time range used while executing the rule. For example, with the rollup as HOUR and the time range as PAST 2 Days results in 48 partitions for 48 Hours while with the rollup as DAY, Reporting Engine creates 2 partitions, one for each day.

The partition query is generated by the Syntax Template as set in Reporting Engine's Hive Configuration attribute AlterTableTemplate.

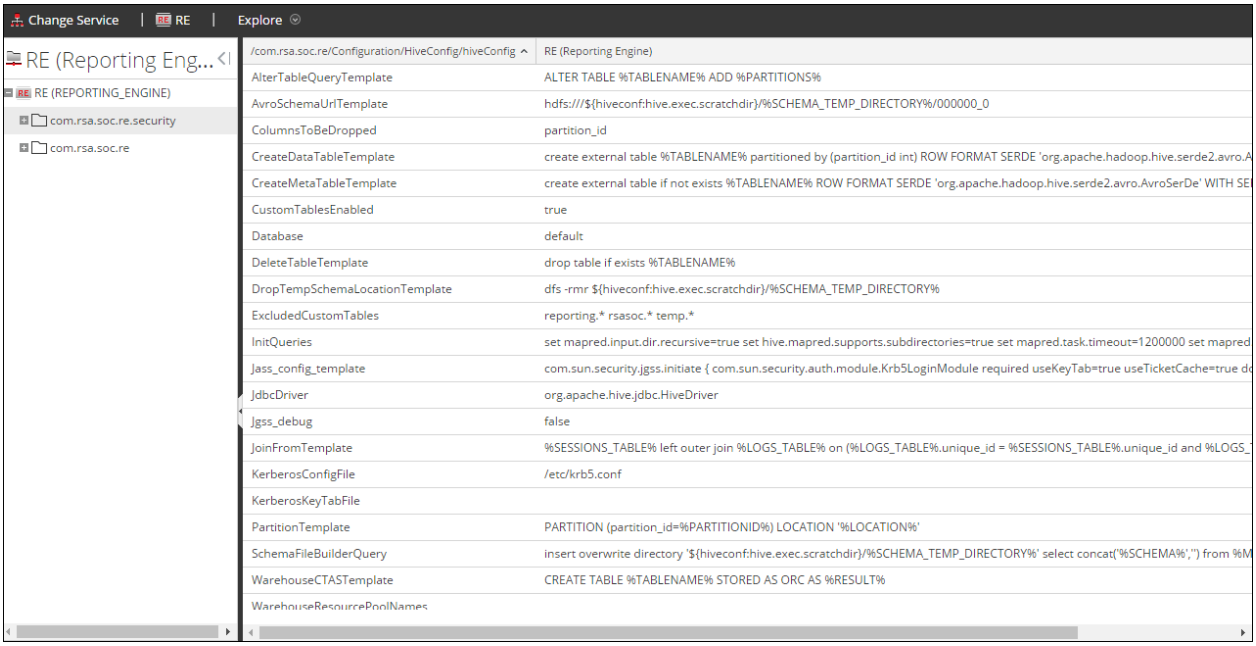
Note: By default, this function starts adding partitions to a table with partition id from 0 to N-1. Hence this requires that the table must be partitioned by single integer column named partition id.

The following is an example of automated partition using custom function:



```
set mapred.input.dir.recursive=true;
 set hive.mapred.supports.subdirectories=true;
 DROP TABLE IF EXISTS AVRO_COUNT;

CREATE EXTERNAL TABLE AVRO_COUNT
 PARTITIONED BY (partition_id int)
 ROW FORMAT SERDE 'org.apache.hadoop.hive.serde2.avro.AvroSerDe'
 WITH SERDEPROPERTIES (
 'avro.schema.literal'='{
  "name": "my_record", "type": "record",
  "fields": [
  {"name":"sessionid", "type":["null", "long"], "default" : null}
  ,{"name":"time", "type":[ "null" , "long"], "default" : null}
  ,{"name":"unique_id", "type":["null", "string"], "default" : null}
  ]}'
 )
 STORED AS
 INPUTFORMAT
 'org.apache.hadoop.hive.ql.io.avro.AvroContainerInputFormat'
 OUTPUTFORMAT
 'org.apache.hadoop.hive.ql.io.avro.AvroContainerOutputFormat';

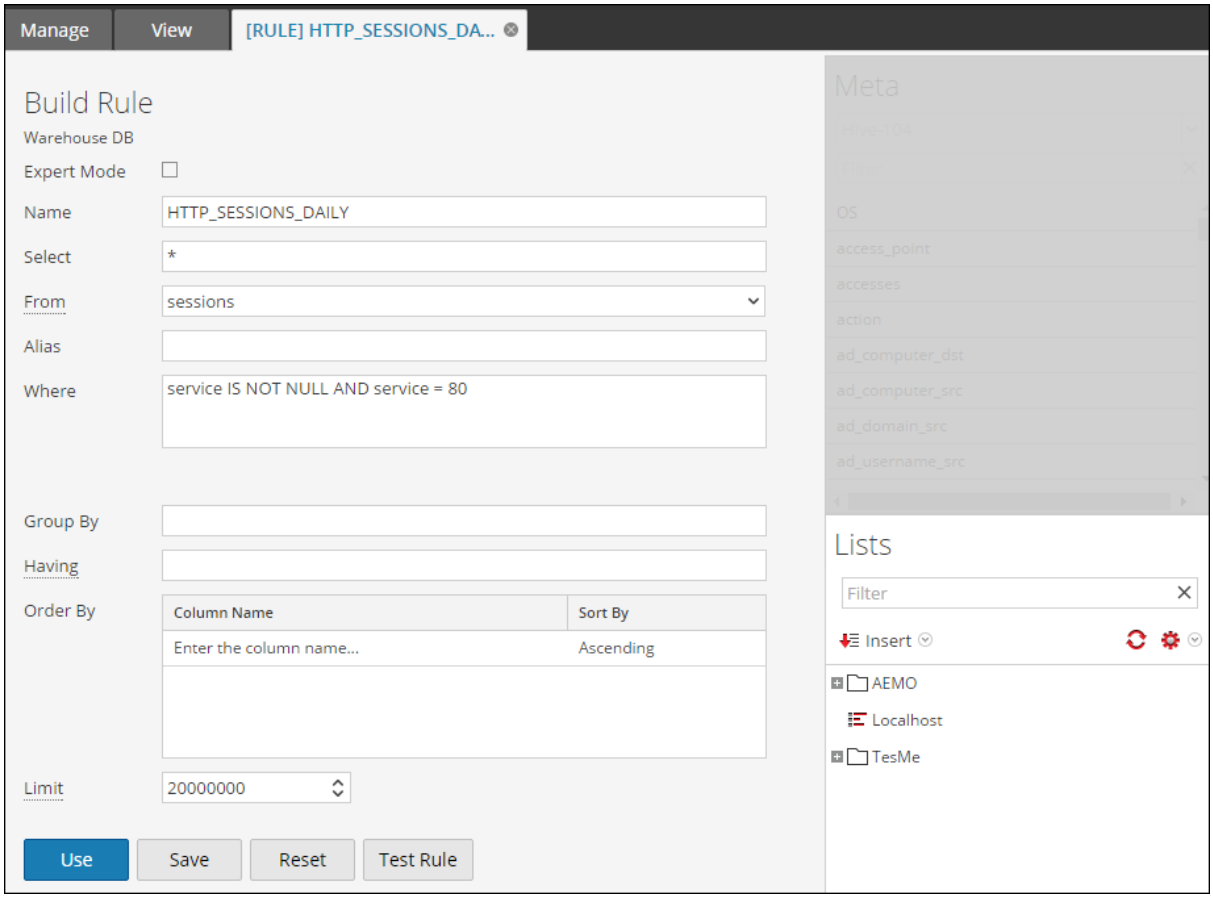


RE_WH_CUSTOM_ADDPARTITIONS(AVRO_COUNT, 'sessions', 'DAY');
 SELECT COUNT(*) as TotalSessions FROM AVRO_COUNT
 WHERE time >= ${report_starttime} AND time <= ${report_endtime};
```

Creating Custom Tables Report

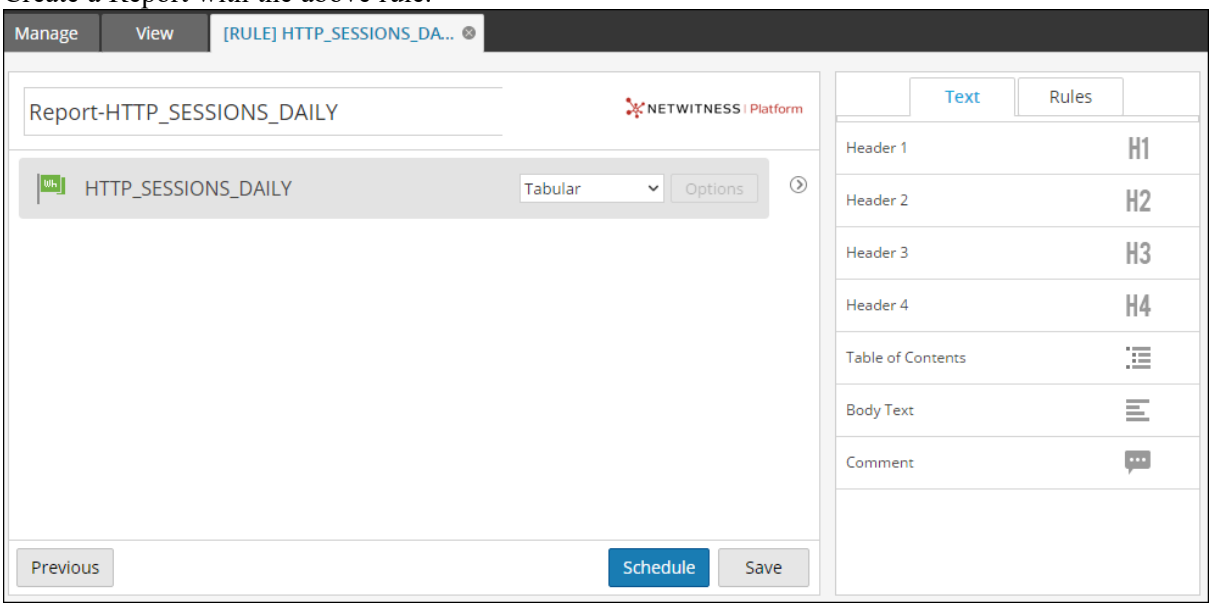
In 10.6.1, you can use and create Custom Tables on the Hive Server. Reporting Engine supports running queries on user defined tables and the ability to create a new table from a Single Rule output. When this feature is enabled in the Warehouse Rule Builder UI, user can see a list of custom tables available in Hive Server.

To enable this feature set **customTablesEnabled** to **TRUE** by navigating to **Reporting Engine** -> **Explore** ->**Hive Config**.



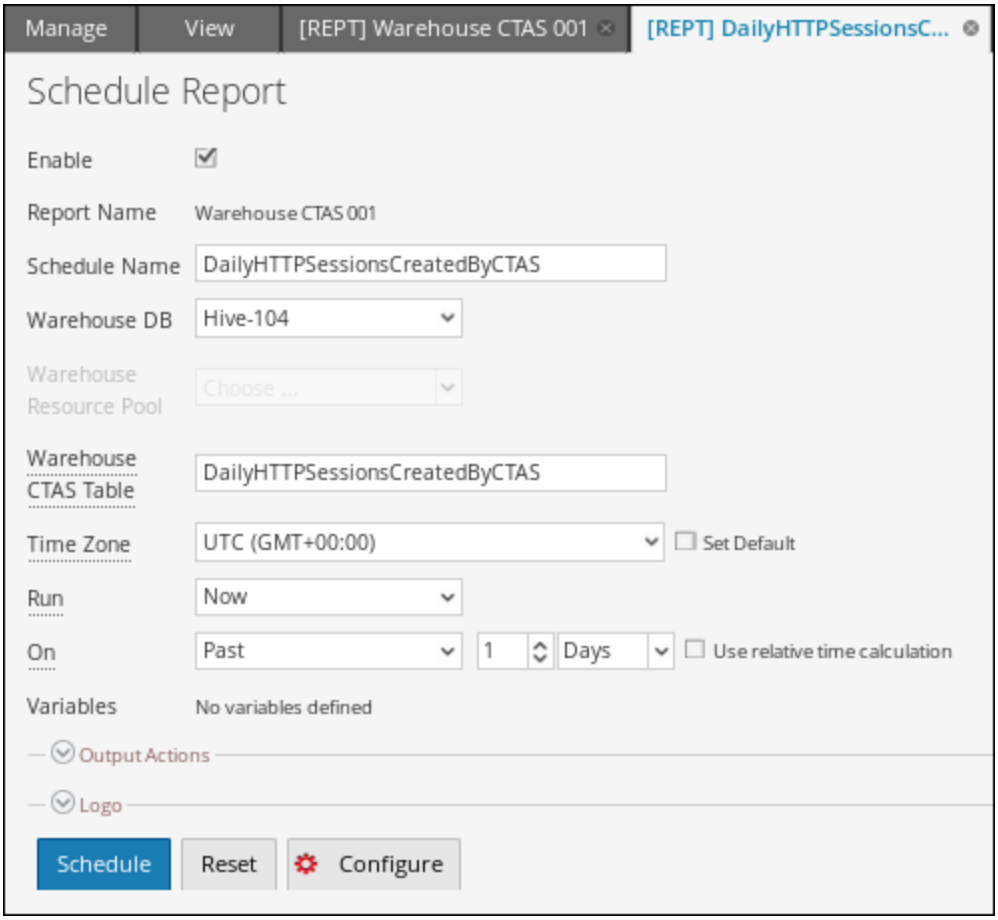
Creating Custom Table from Regular Rules

To schedule a report which contains a single SAW rule, a new text input with a **Warehouse CTAS Name** is added. The user can now specify a Custom Table name that will be created out of the output of the rule in Report.

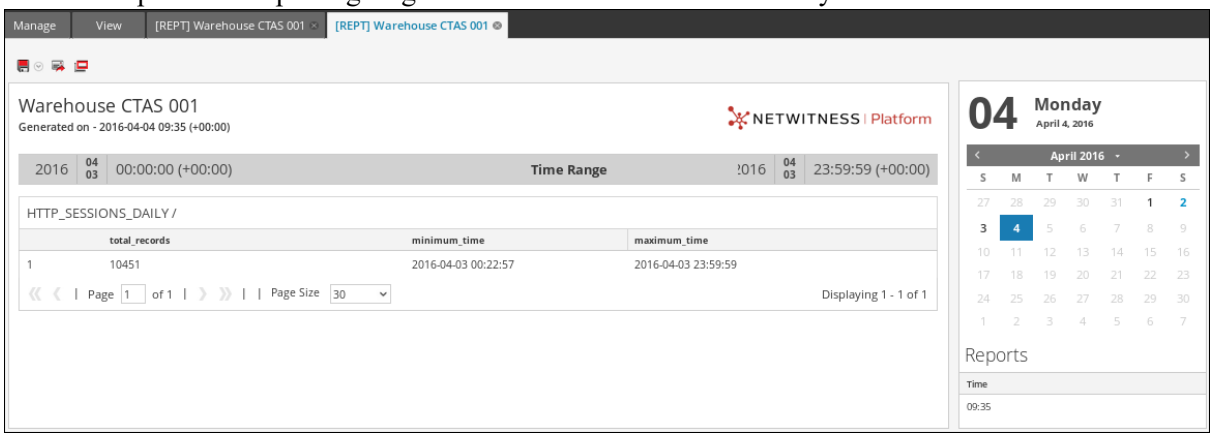


Note: This feature is available only if the Report contains a single SAW rule on the Schedule page. Otherwise, this option is hidden.

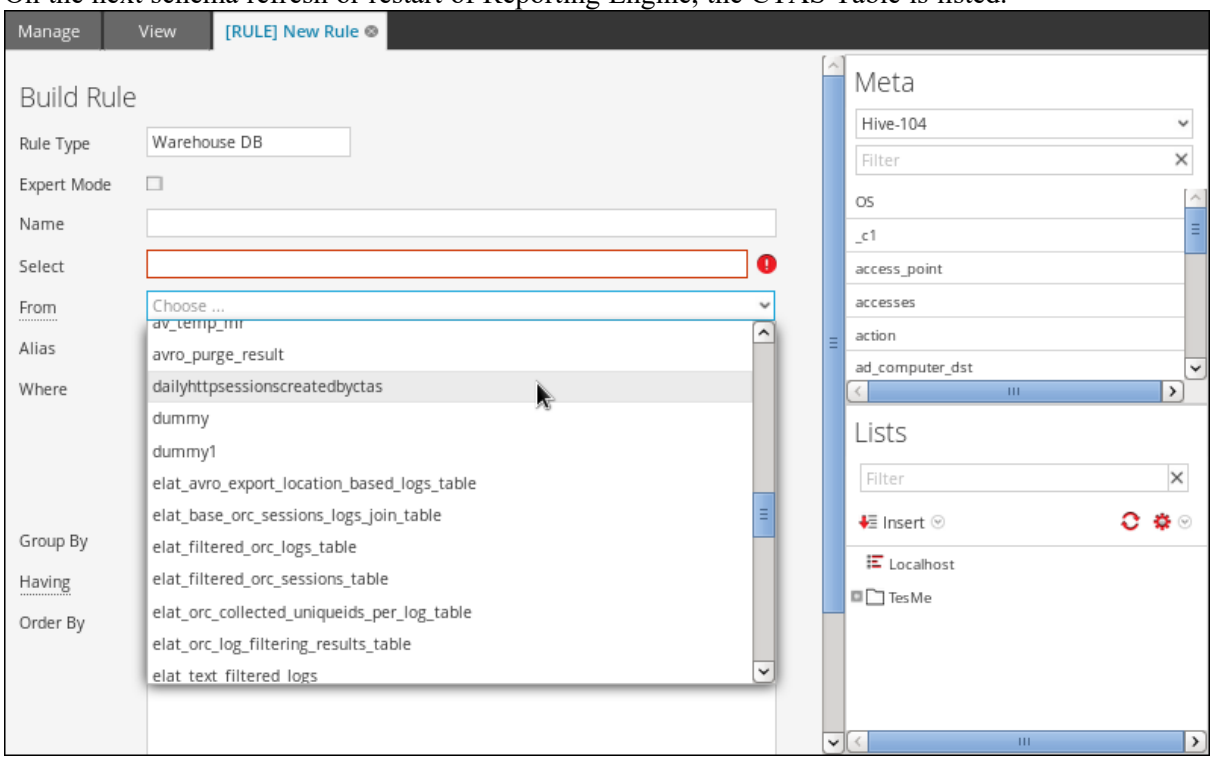
The process to use the feature is explained below:



1. Create a rule to filter with data in SAW.



2. Create a Report with the above rule.



3. Create a Schedule and enter the CTAS Table Name.

4. Run the Report and Reporting Engine will create the Result Summary as below for the Schedule.

5. On the next schema refresh or restart of Reporting Engine, the CTAS Table is listed.

Task Scheduler for Warehouse Reporting

A task scheduler in a Hadoop cluster schedules the jobs consisting of tasks, and allocates specific resources to each job running in a cluster. By default, the task scheduler allocates equal number of resources to all the jobs. For example, if 10 jobs are running they will share resources of the cluster equally. However, you can configure the task scheduler to control the execution of the jobs such that one job runs faster than others by allocating more resources (pools or queues) to the job. This helps you prioritize to run a few reports over others.

Features

NetWitness supports two task schedulers:

- Fair Scheduler (`org.apache.hadoop.mapred.FairScheduler`)
- Capacity Scheduler (`org.apache.hadoop.mapred.CapacityTaskScheduler`)

Fair Scheduler

This scheduler divides the total capacity of the cluster into logical pools. You can submit a job to any one of these pools. All the jobs submitted to a pool share the resources allocated to the pool only. Once a pool has free resources, the freed resources are given to other pools with jobs running. For example, a fair scheduler has 100% resources with two pools namely Pool A and Pool B which share the total resources at 40% and 60% respectively. If Pool A has four jobs running, it allocates 10% resources to each job. When the four jobs are completed, the freed resources are allocated to Pool B.

Note: You can configure a pool to run more than one job in parallel.

Capacity Scheduler

This scheduler divides the total capacity of the cluster into queues. Each queue is allocated a pre-configured share of the total capacity. A job may be submitted to any of these queues. If more than one job is submitted to the same queue, the jobs will be executed sequentially. For example, if a capacity scheduler has 100% resources with three queues namely the Default, Low and High and they share the total resources at 20%, 30% and 50% respectively. If Default has two jobs D1 and D2, Low has three jobs L1, L2 and L3, and High has four jobs H1, H2, H3 and H4, these jobs are executed in their respective queues sequentially. If the jobs in a queue are completed, the freed resources will not be distributed to other queues.

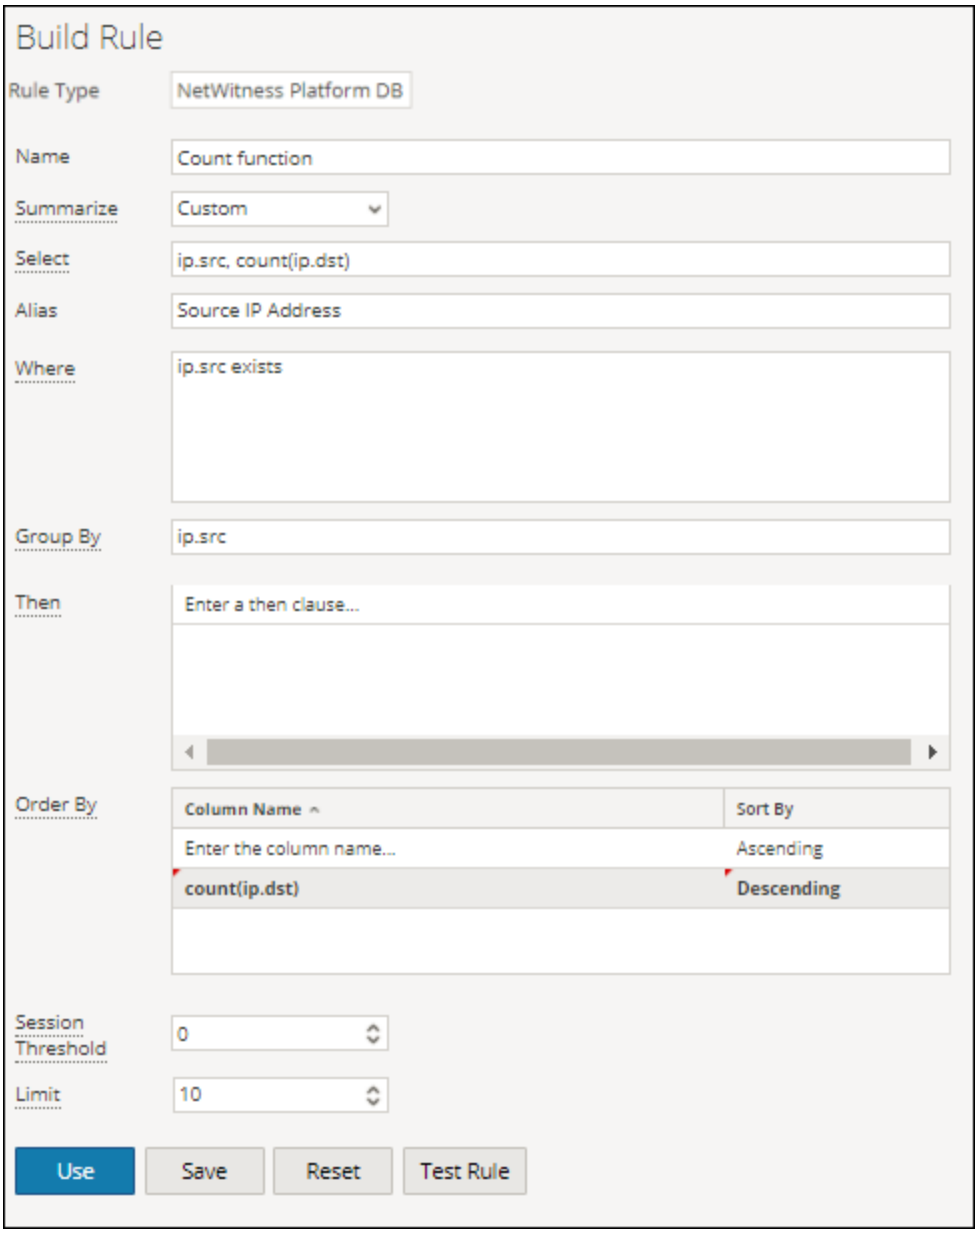
Query Aggregates

This section explains the supported aggregate functions.

Supported Aggregate Functions

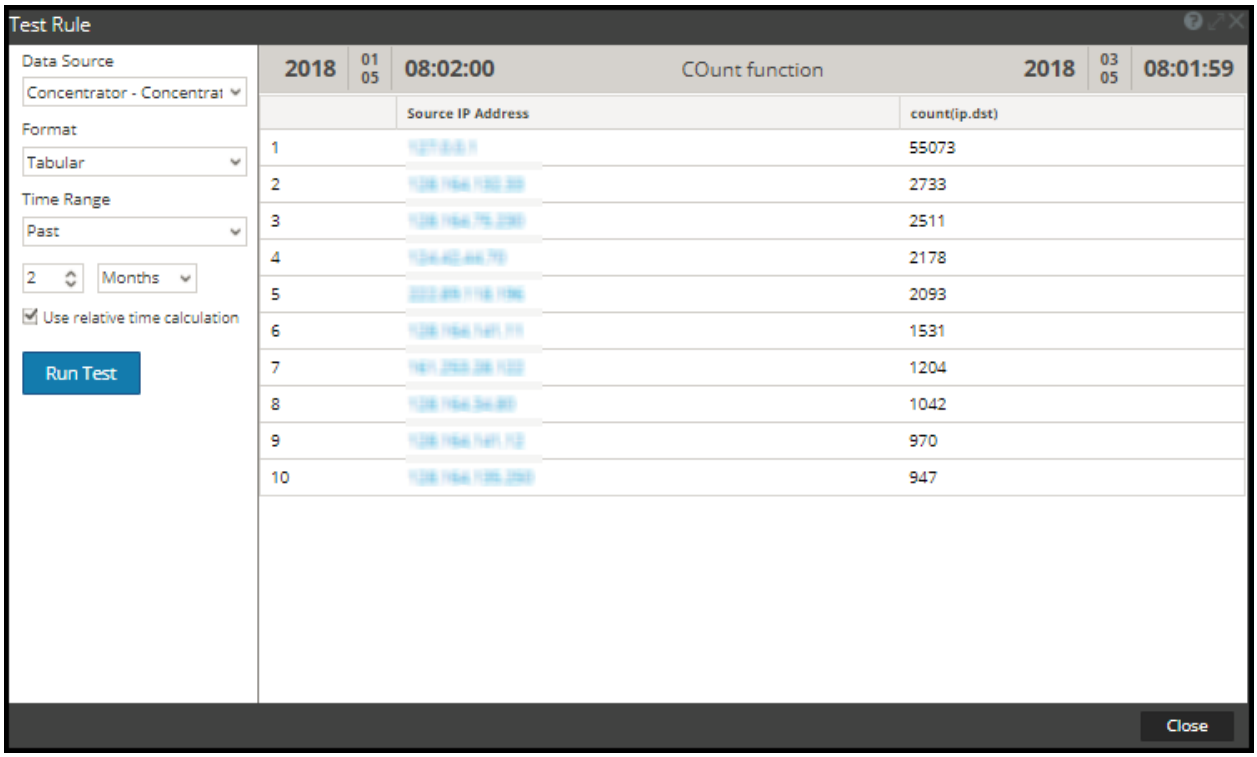
The following table lists the supported Aggregate Functions.

Aggregate Function	Description	Input data types	Output data types
count	Returns the count of meta values, which includes duplicate values as well.	Numeric	Numeric
countdistinct	Returns the total number of distinct or unique values.	Numeric	Numeric
distinct	Returns all the unique values.	Any	Any
first	Returns the first occurrence of the meta value.	Any	Same as input
last	Returns the last occurrence of the meta value.	Any	Same as input
sum	Returns a sum of all non-NULL values of metaKey in a group.	Numeric	Numeric
avg (Average)	Returns the average value of all non-NULL values of the metaKey within a group.	Numeric	Numeric
min (Minimum)	Returns the minimum for all values of metaKey in each group. This value is based on order by field.	Any	Any
max (Maximum)	Returns the maximum for all values of metaKey in each group. The maximum value is the value that is returned by order by field.	Any	Any
length	Returns the length of the values of metakey. This is called a "scalar function" in SQL.	Any	Numeric



Examples of Queries and Results per Function

Count



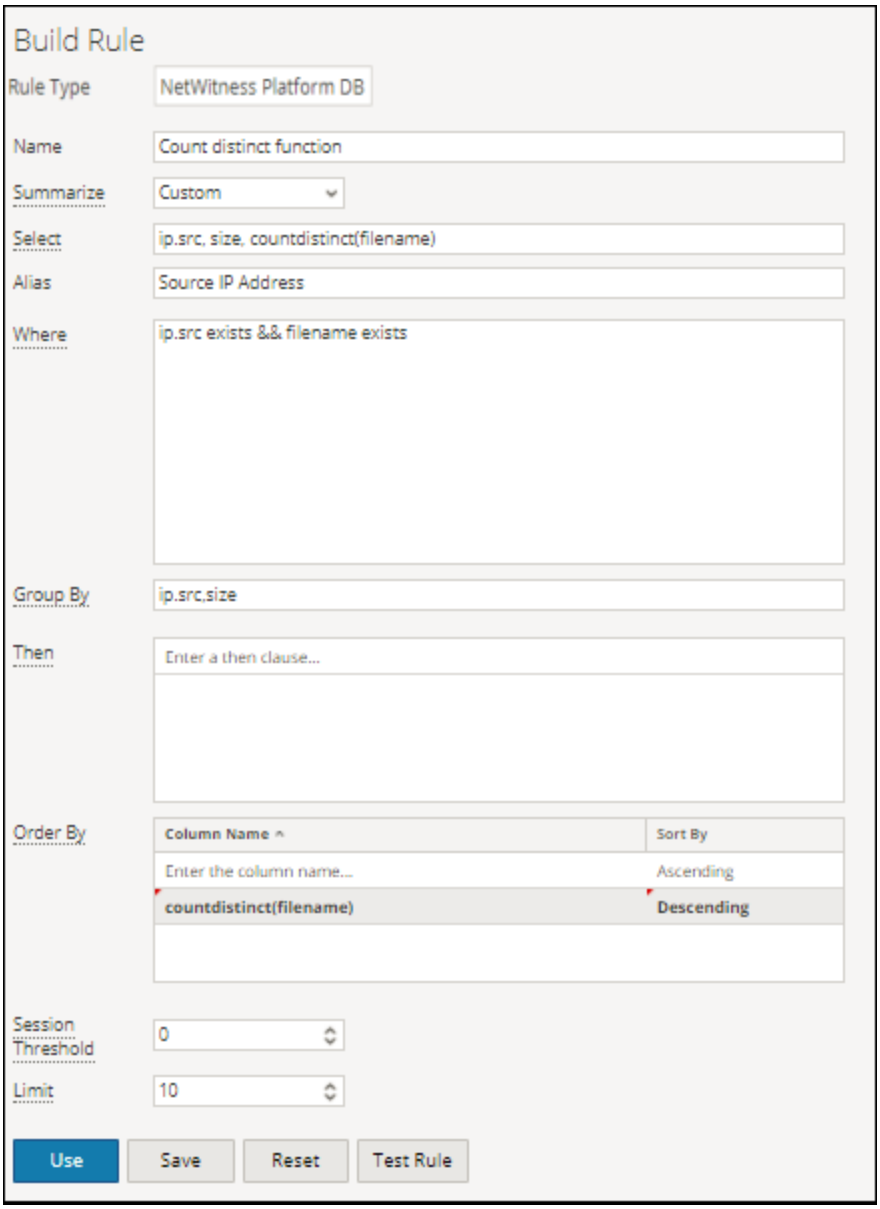
This function returns the number of values for a specified meta key, that exclude null values but include duplicate ones. .

Example

The following figure shows a sample query for count function used for the destination IP and the respective source IP.

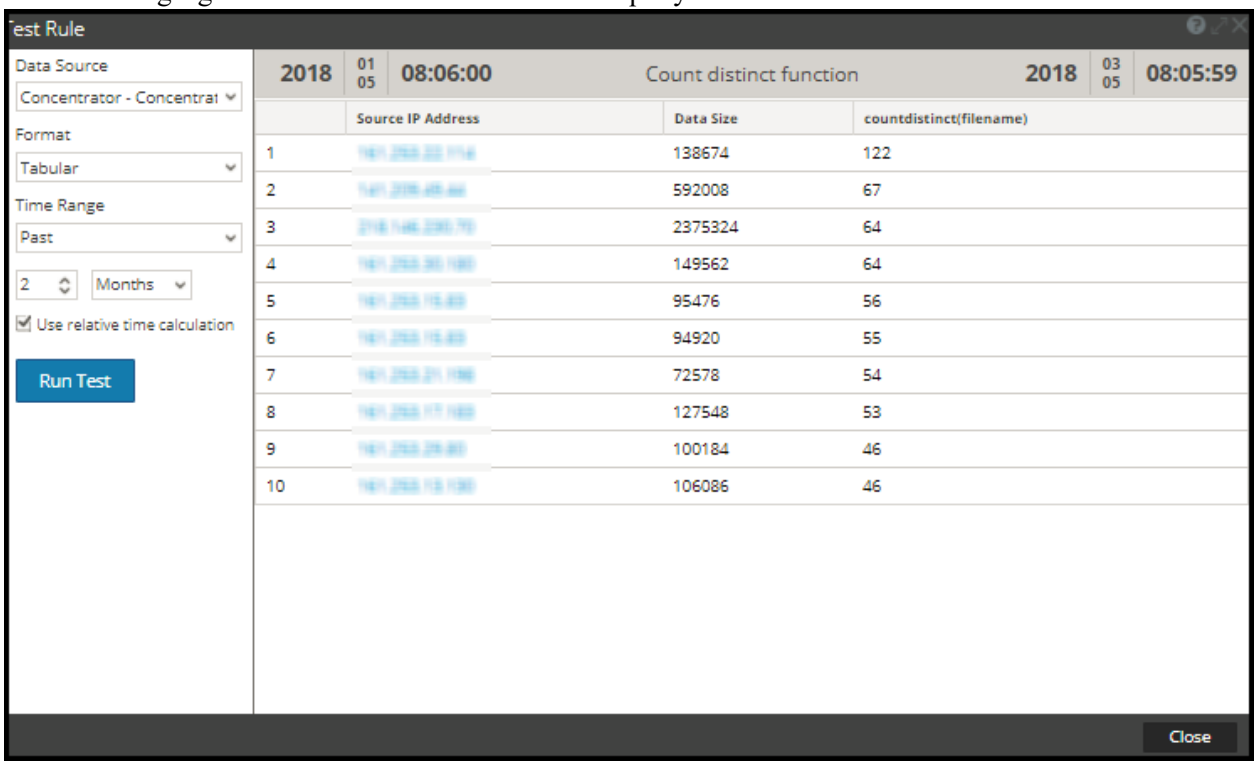
The following figure shows the result for the above query.

Here, for each unique ip.src (source IP), the page returns the total number or count of ip.dst (destination IP) values, which include the duplicate values as well.



Note: If your NetWitness is currently on 10.5 or newer version and any of the NetWitness Core devices are on 10.3 or 10.4 versions, then some of the aggregate functions may display unexpected errors. However, aggregate functions such as sum() and count() are supported in 10.4 version.

Countdistinct



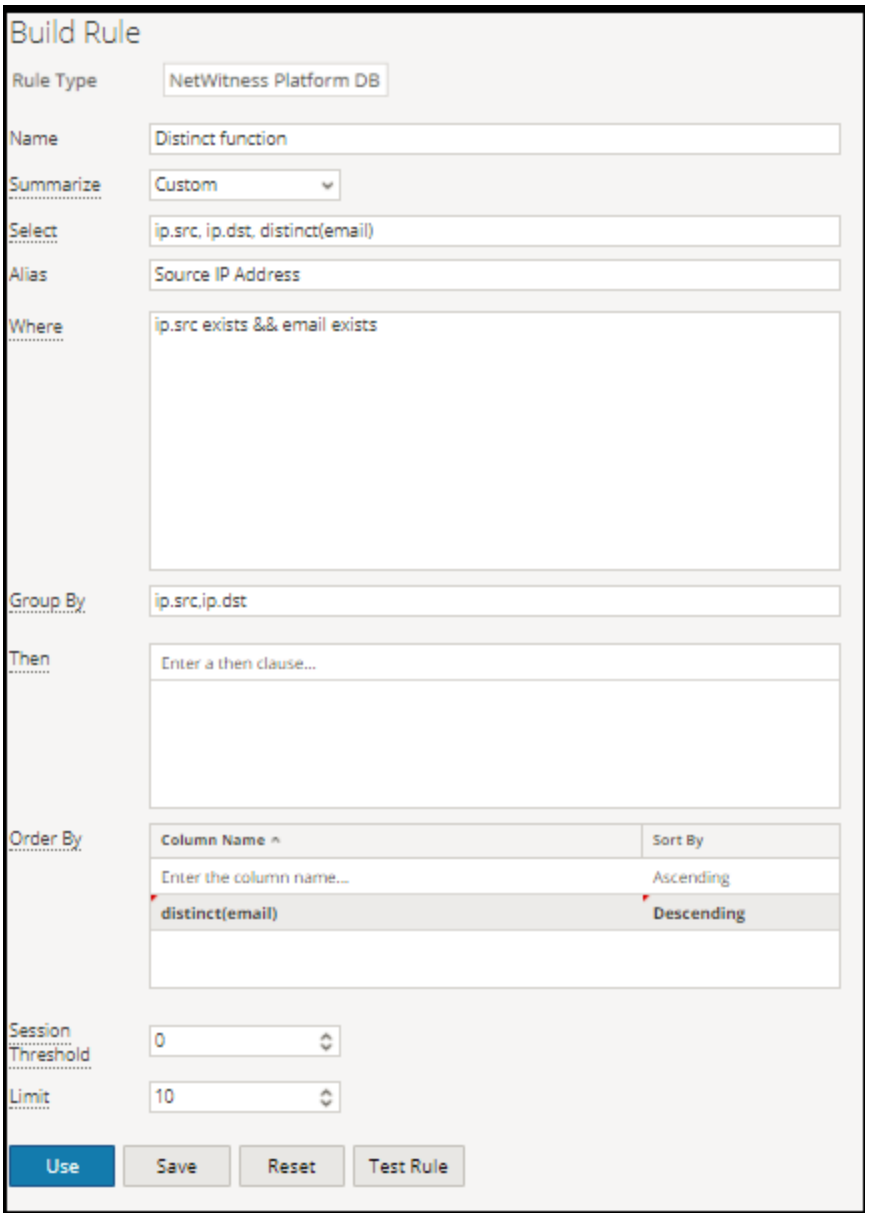
The countdistinct function returns the count of unique or distinct values for the metakey. In other words, countdistinct function can be used to retrieve a number of distinct values for the specified metakey.

The following figure shows a sample query where the countdistinct function is used along with IP source (ip.src) and data size(size).

Example

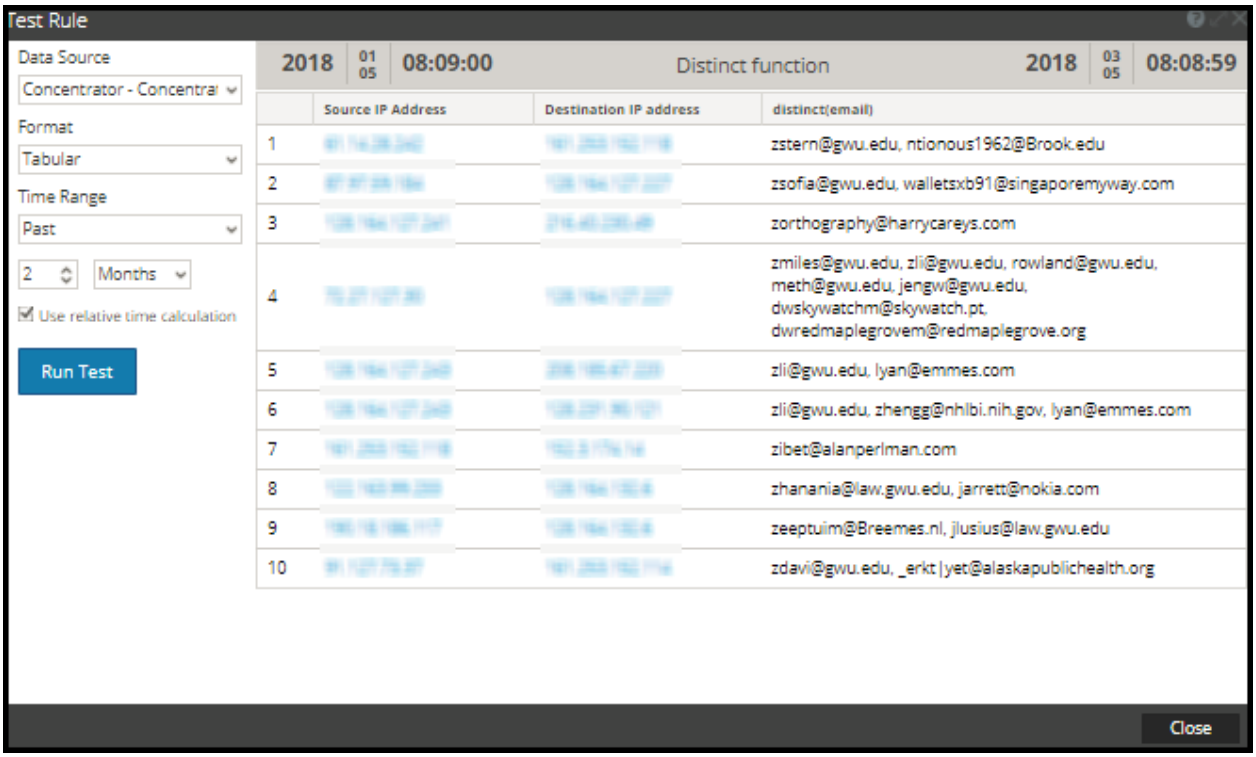
Build Rule
Rule Type
NetWitness Platform DB
Name
Count distinct function
Summarize
Custom
Select
ip.src, size, countdistinct(filename)
Alias
Source IP Address
Where
ip.src exists && filename exists
Group By
ip.src,size
Then
Enter a then clause...
Order By
Column Name
Sort By
Enter the column name...
Ascending
countdistinct(filename)
Descending
Session Threshold
0
Limit
10
Use
Save
Reset
Test Rule

The following figure shows the result for the above query.



Here, the page displays the data size along with the total number or count of distinct filenames from the respective IP source. Unlike the count function, the countdistinct excludes the duplicate values from the result.

Distinct

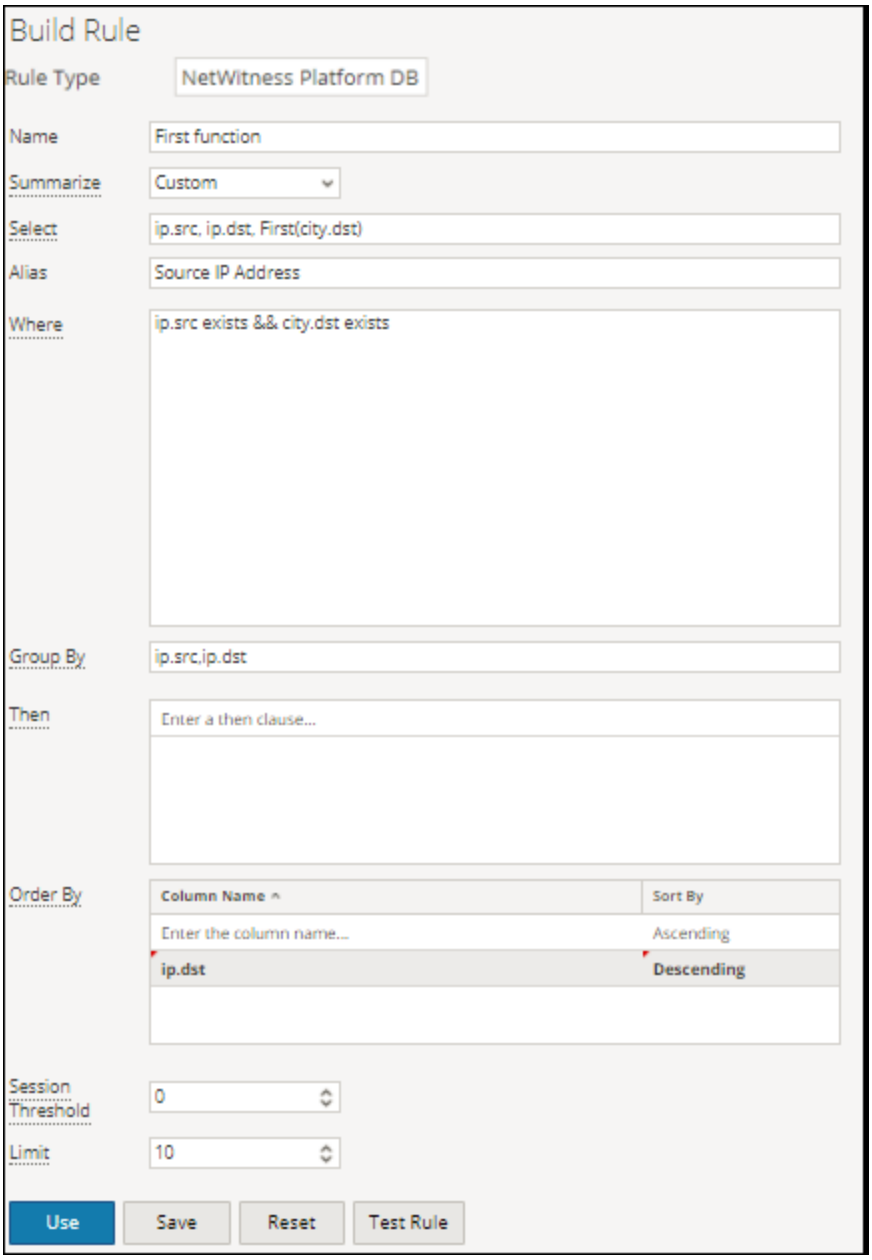


This function returns all the unique or distinct values of the metakey.

Example

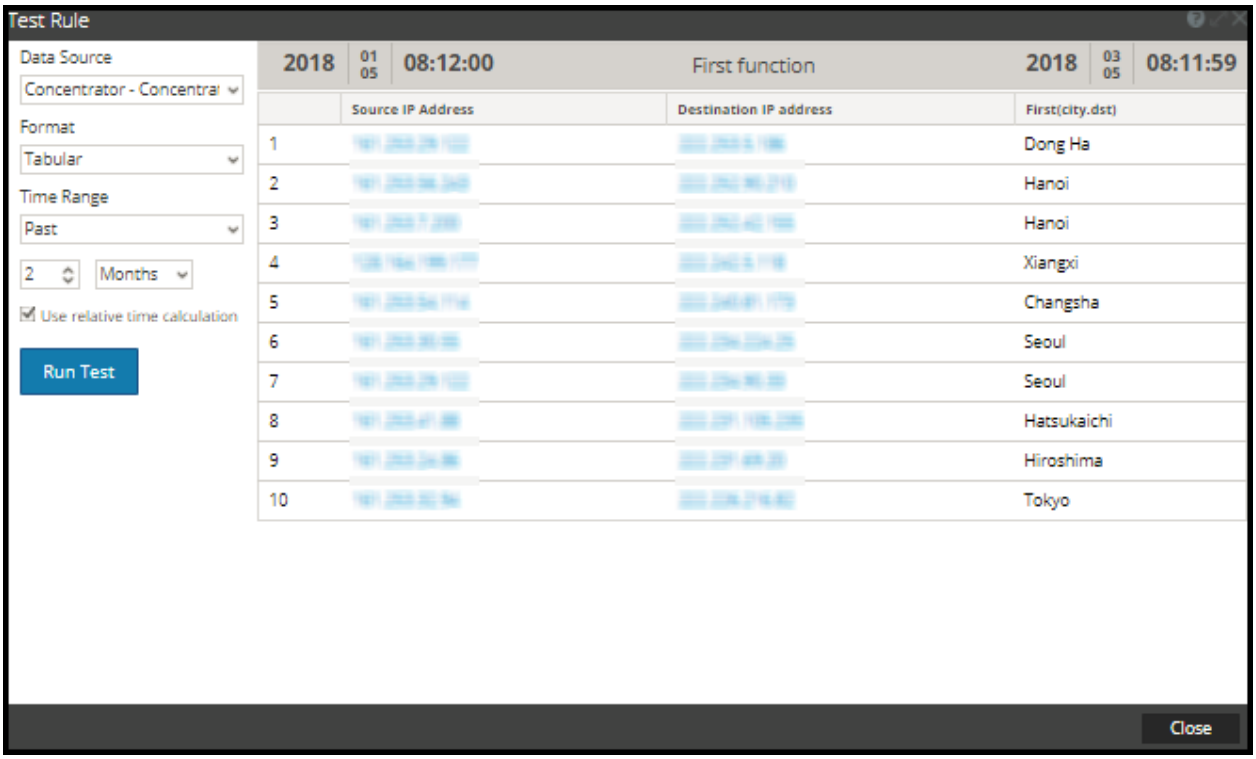
The following figure shows a sample query for distinct function used to retrieve e-mails, between various source and destination IP (ip.dst).

The following figure shows the result for the above query.



Here, the page displays the list of unique e-mails that were exchanged between the respective IP source and destination.

First

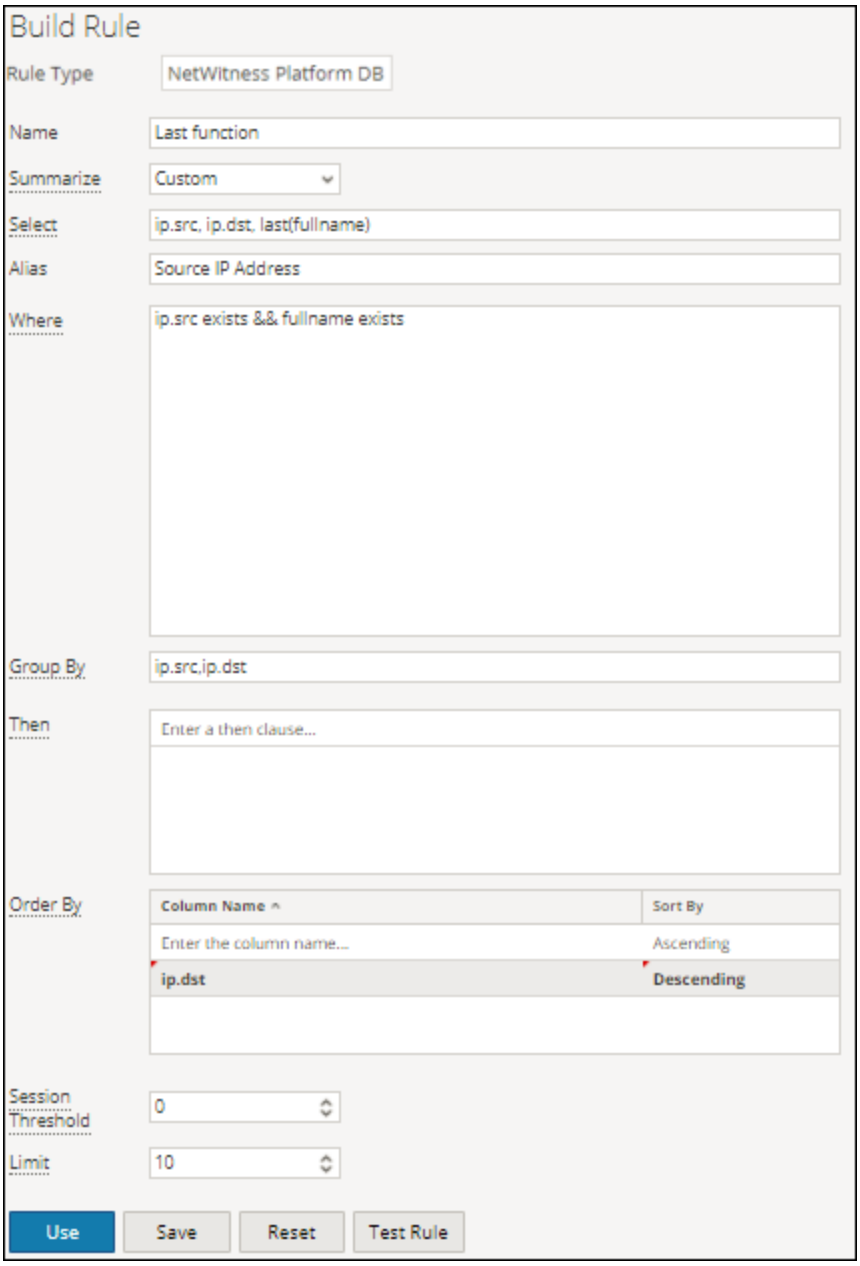


This function is used to retrieve the first value from an ordered sequence of values for a specified metakey.

Example

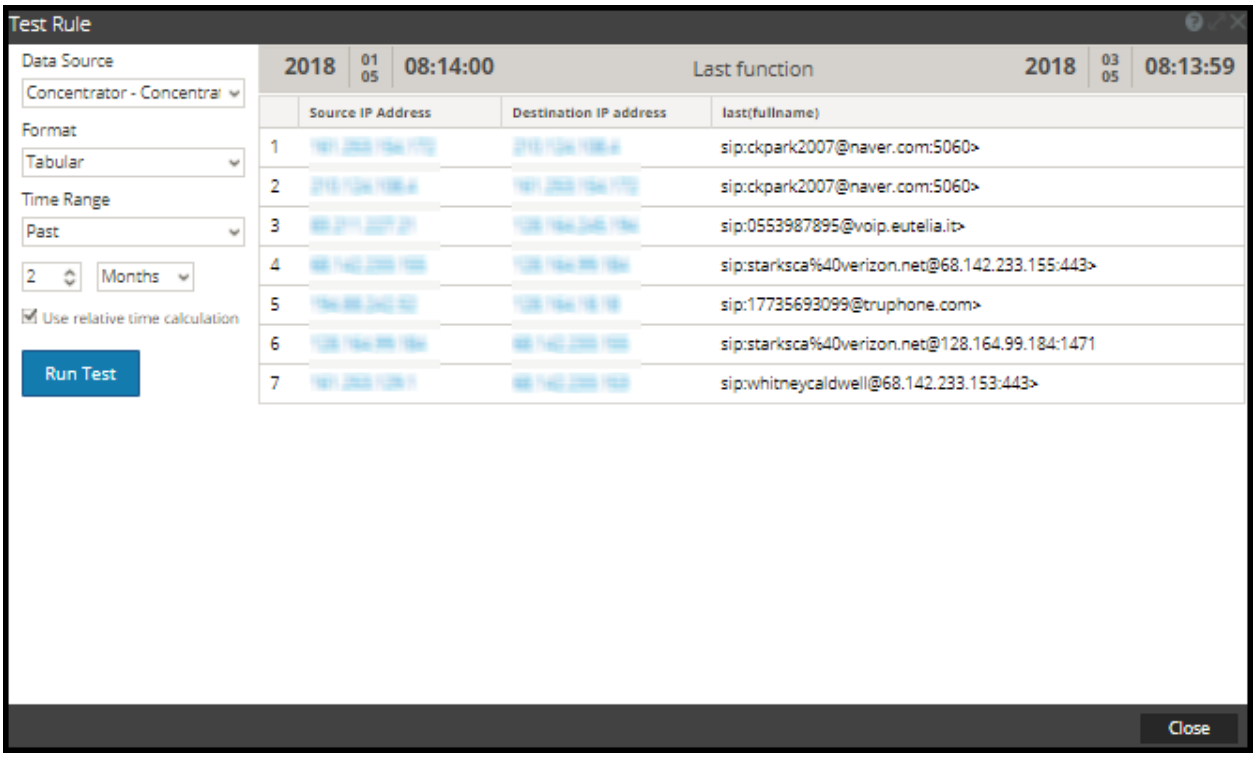
The following figure shows a sample query for first function used to retrieve the first destination city name.

The following figure shows the result for the above query.



Here, the page displays the the first destination city for the corresponding source and destination IP. You can use the first function to isolate a particular value from a search result.

Last

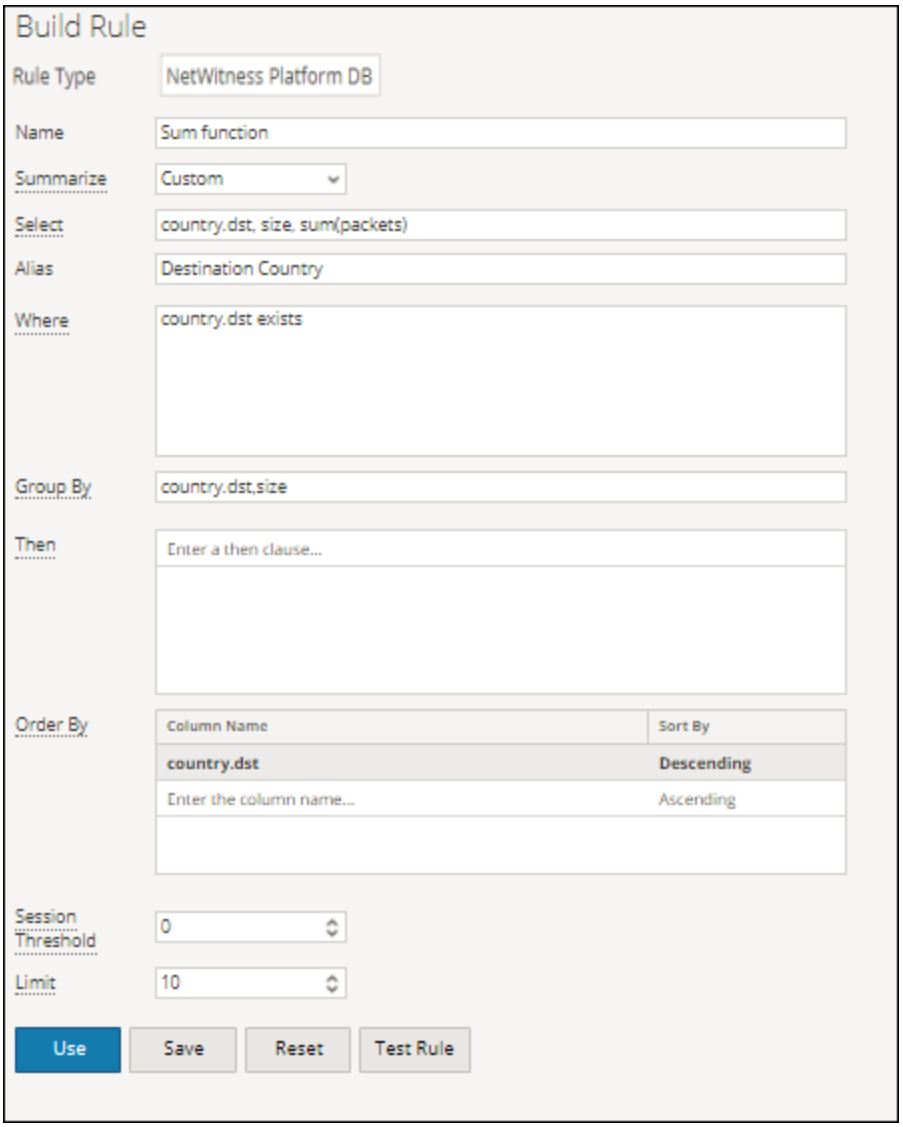


This function is used to retrieve the last value from an ordered sequence of values for a specified metakey.

Example

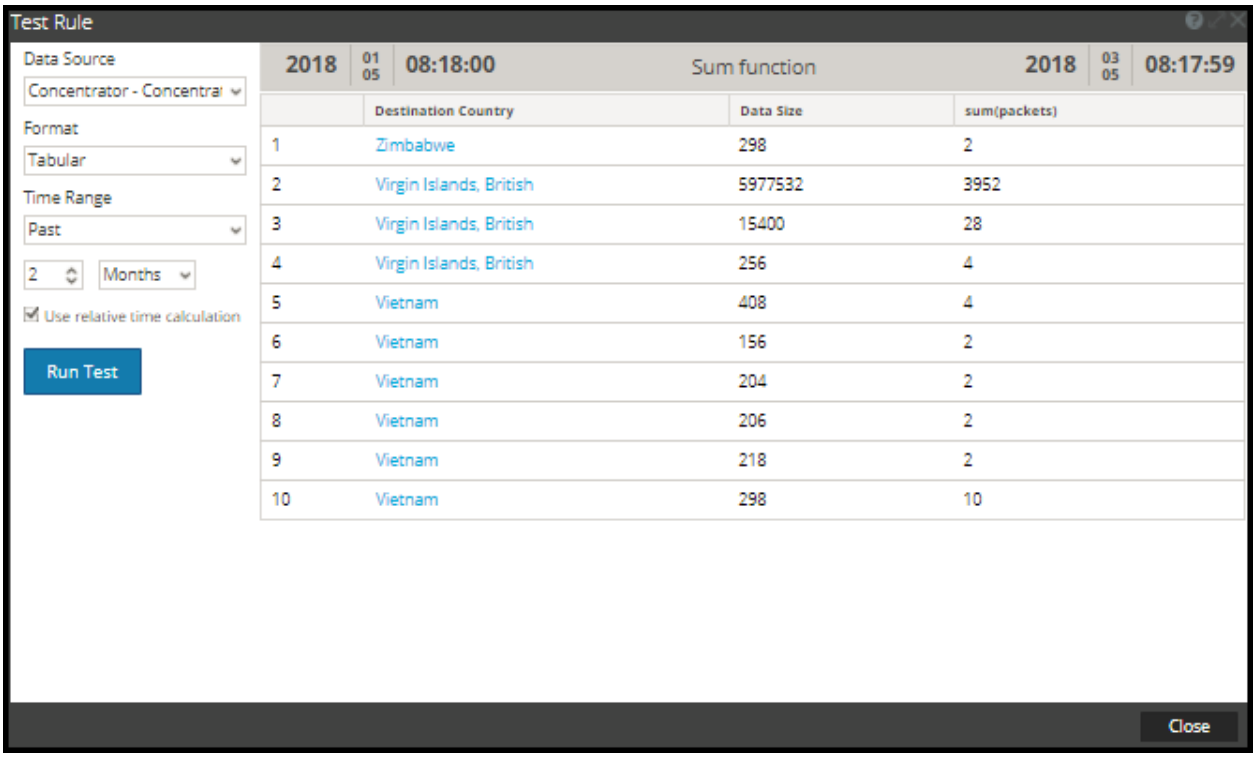
The following figure shows a sample query for last function used to retrieve the most recent user name.

The following figure shows the result for the above query.



Here, the page displays the list of most recent or last usernames in full, that were exchanged between the source and destination IP.

Sum

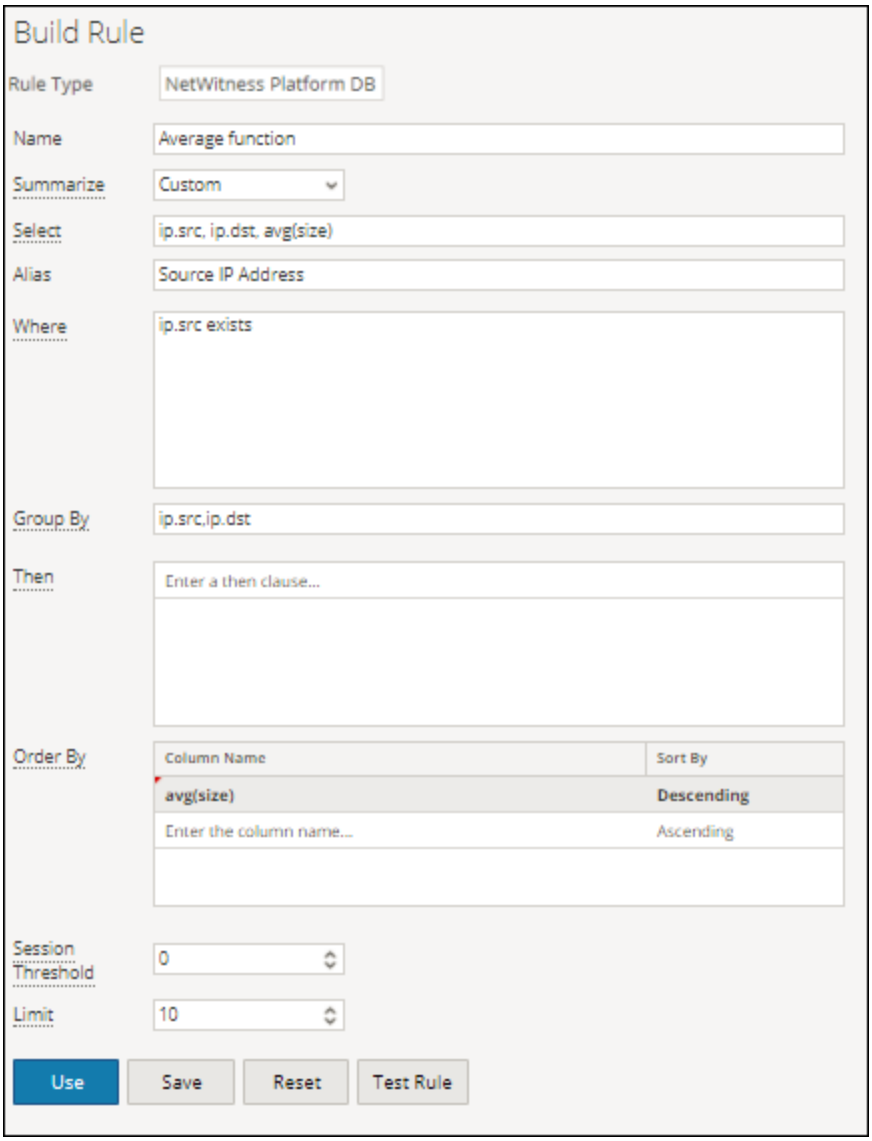


This function returns the total of the non-NULL values of the metaKey within a group.

Example

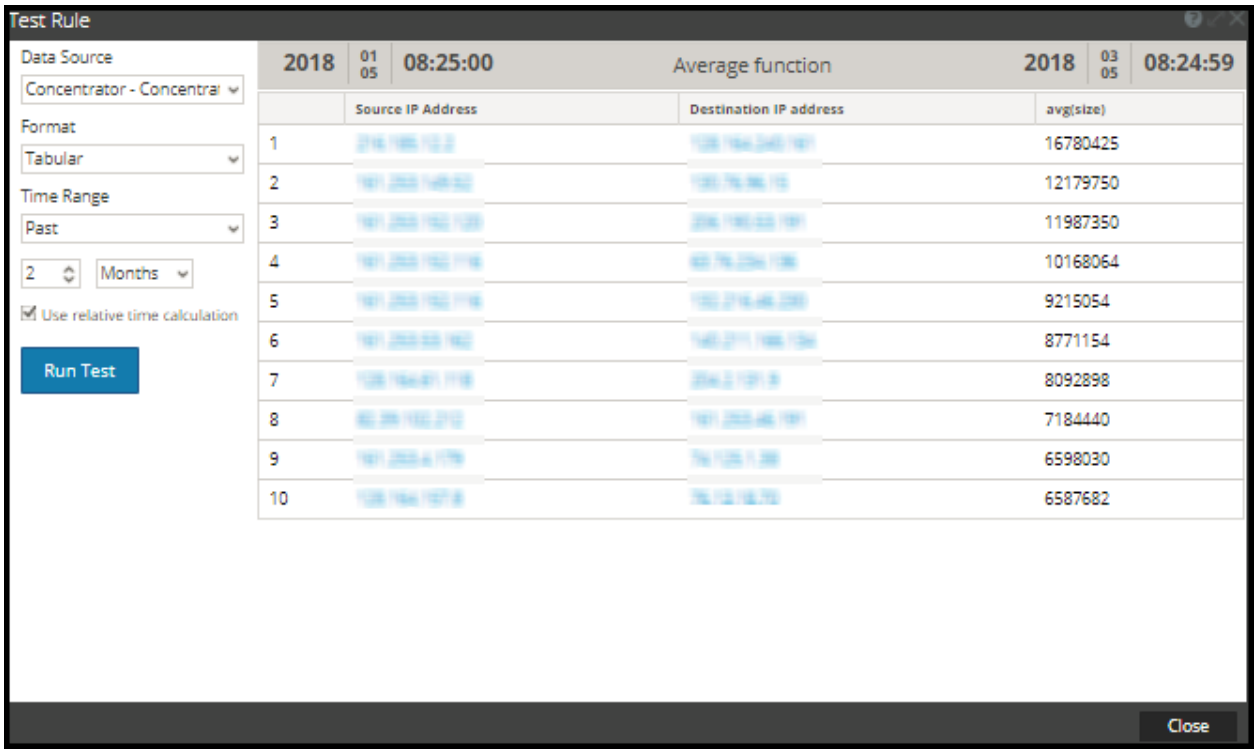
The following figure shows the query for the Sum function used for packets.

The following figure shows the result of the above query.



Here the page displays the total or sum of the packets along with the size of the data for the respective destination country.

Avg

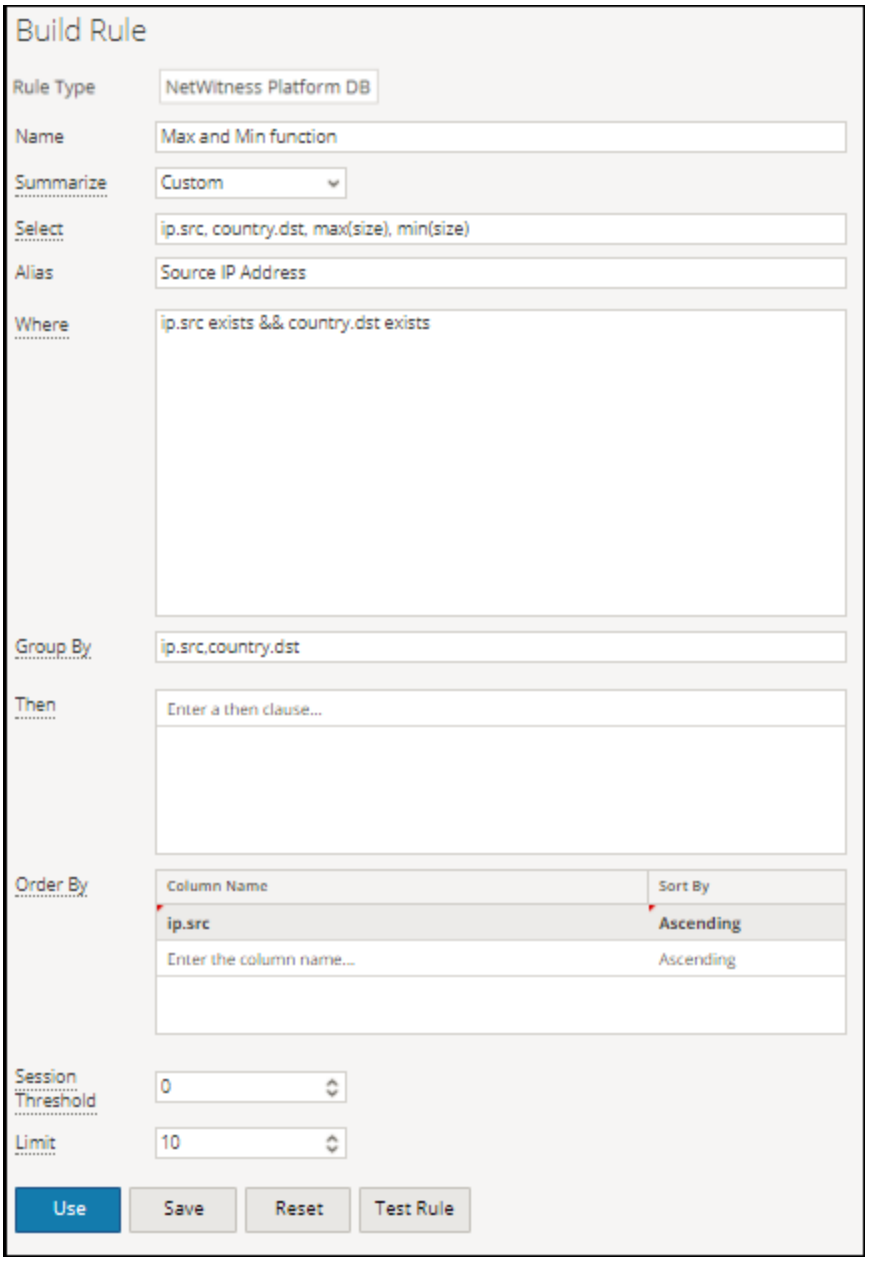


The average function returns the average of non-NULL values of the meta within a group.

Example

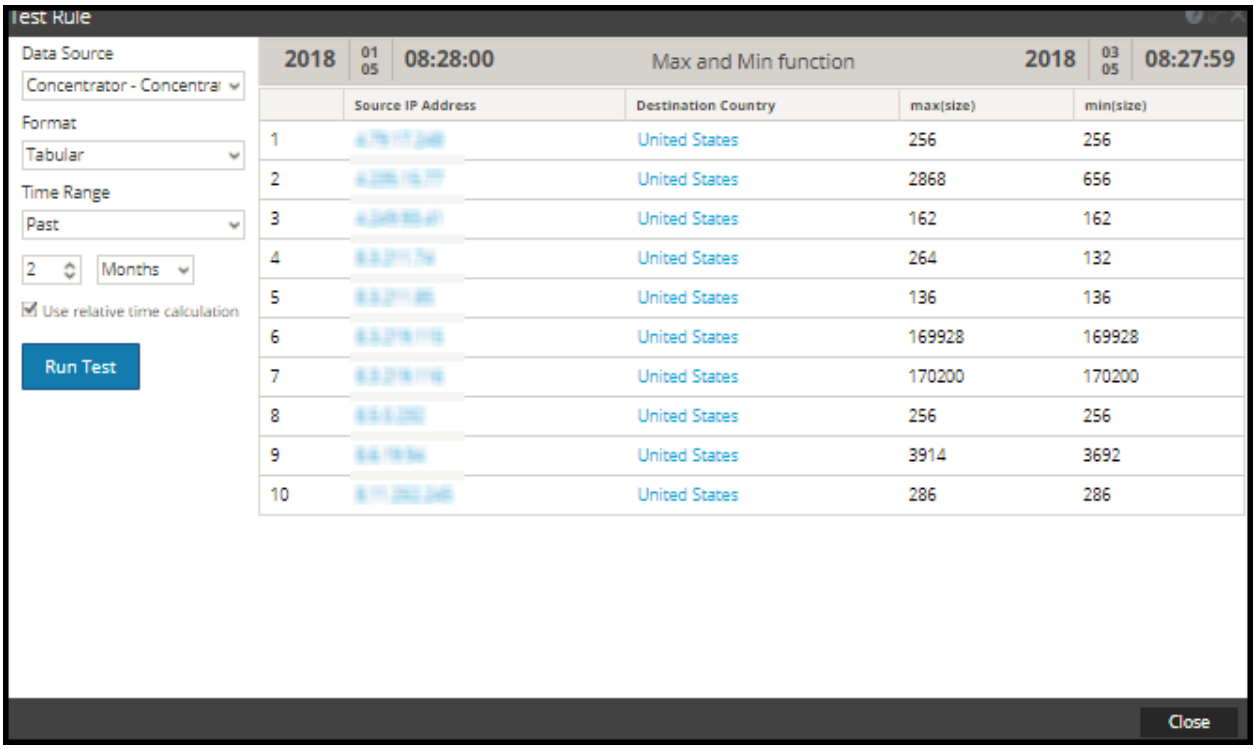
The following figure shows a sample query for average data size transmitted between a source and destination IP.

The following figure shows the result for the above query.



Here, the page displays the average size of data exchanged between source and destination IP:

Max and Min



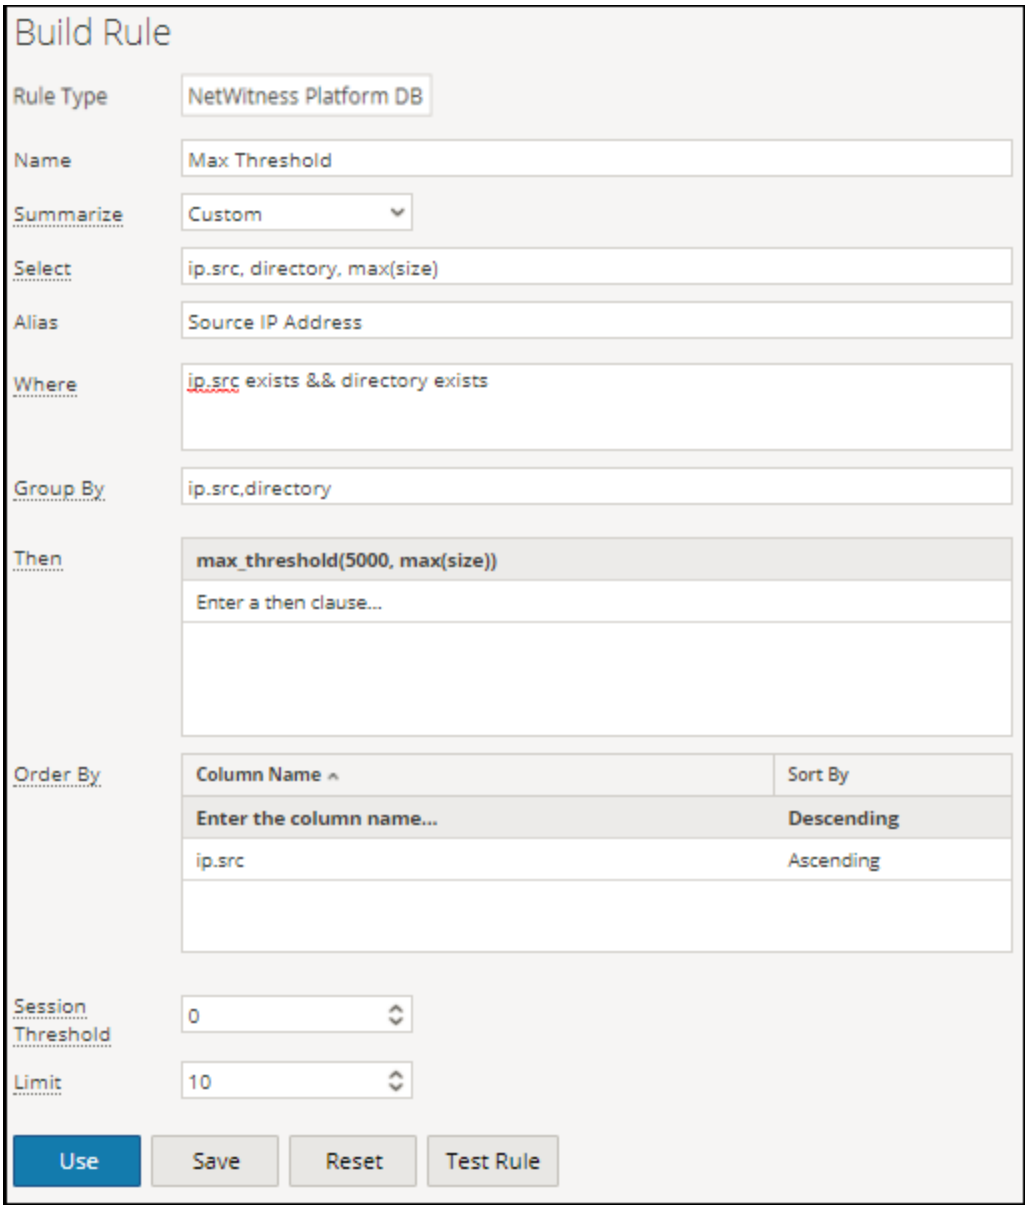
Max and Min functions provide the maximum and minimum for given values of a meta respectively.

The following figure shows a sample query for max and min functions for various data sizes, for source IP and destination country.

Example

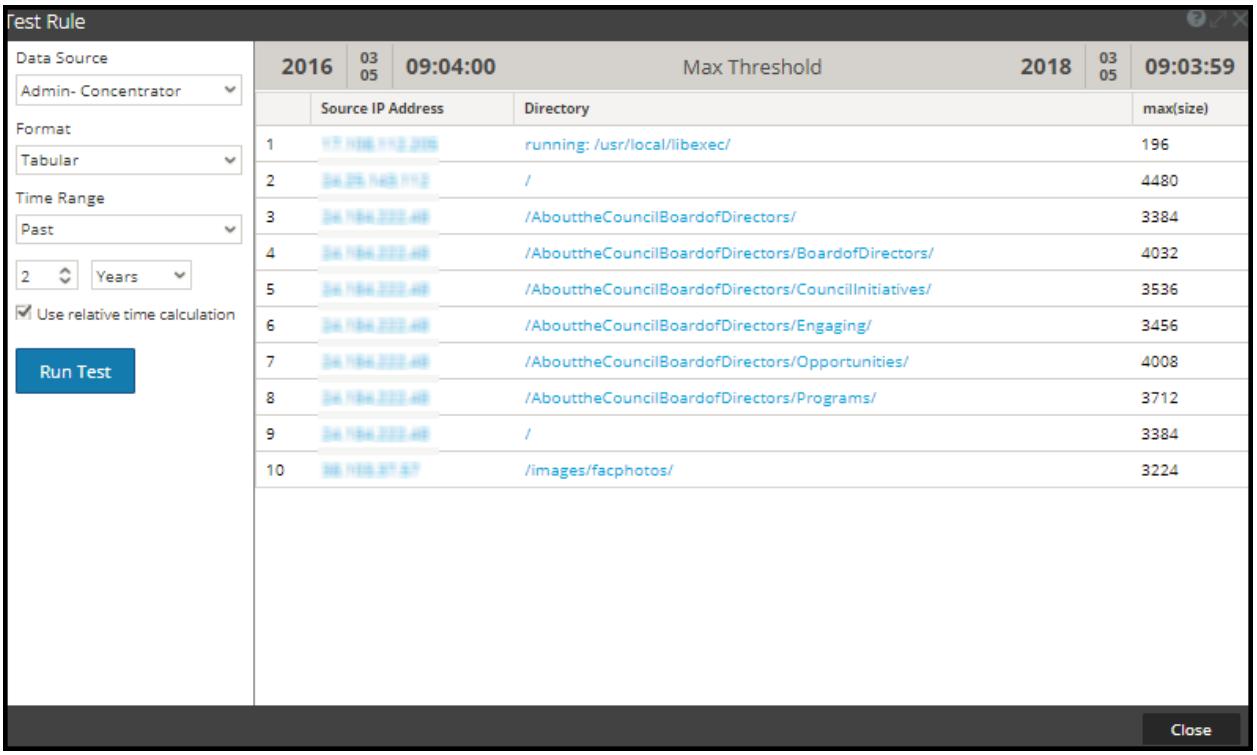
The following figure shows the result for the above query.

Here, the page displays the max(size) and min(size) columns, along with the list of source IP and destination country. The max(size) column lists the maximum data sizes exchanged while the min(size) column lists the minimum data sizes that were exchanged.



Filter aggregate meta results with Max_threshold

You can further filter the results of any function by using the threshold rule action.



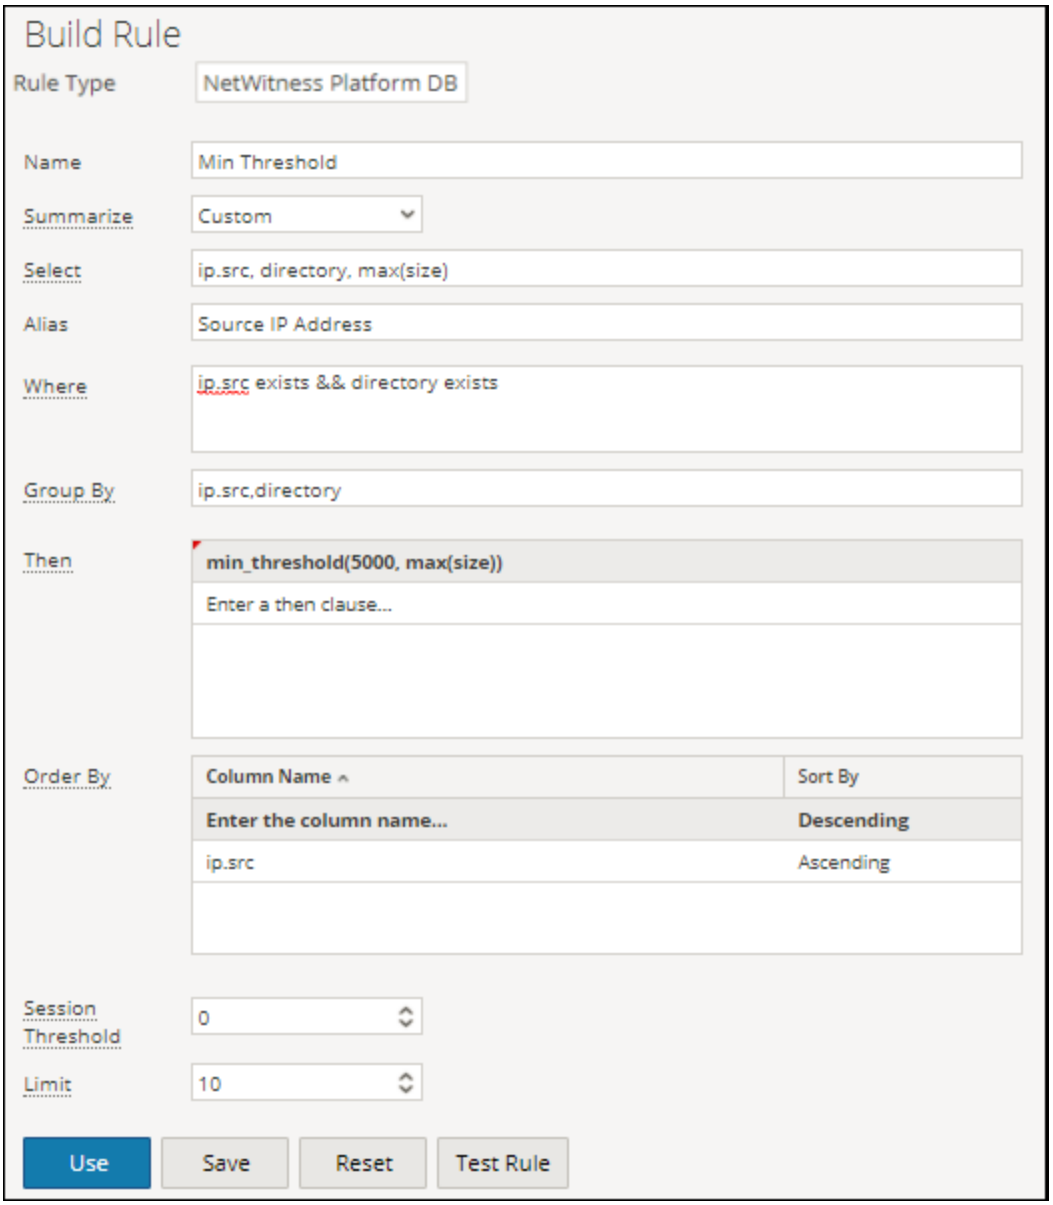
Example

Following is a sample query for max_threshold used along with the Max function in the **Then** field is:
max_threshold(5000,max(size))

The following figure shows the Build Rule screen for the above query.

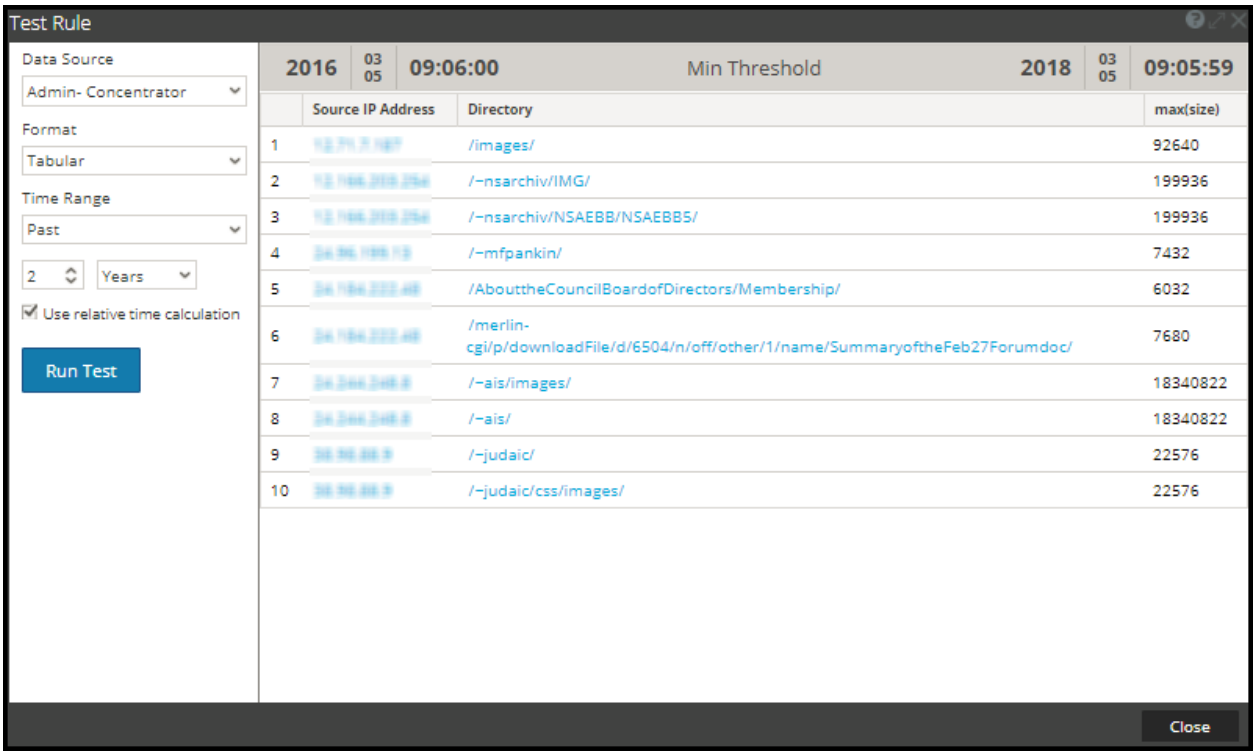
Here the max_threshold is applied for data size with an upper limit of 5000. The following figure shows the result.

Here, the result page displays the max(size) column, that lists the data sizes lesser than 5000 as this is the maximum threshold in the query, along with the corresponding IP source and the respective directory.



Filter aggregate meta results withMin_threshold

Similarly, min_threshold is used to filter the results for any function. A similar scenario as max_ threshold is considered to explain this.



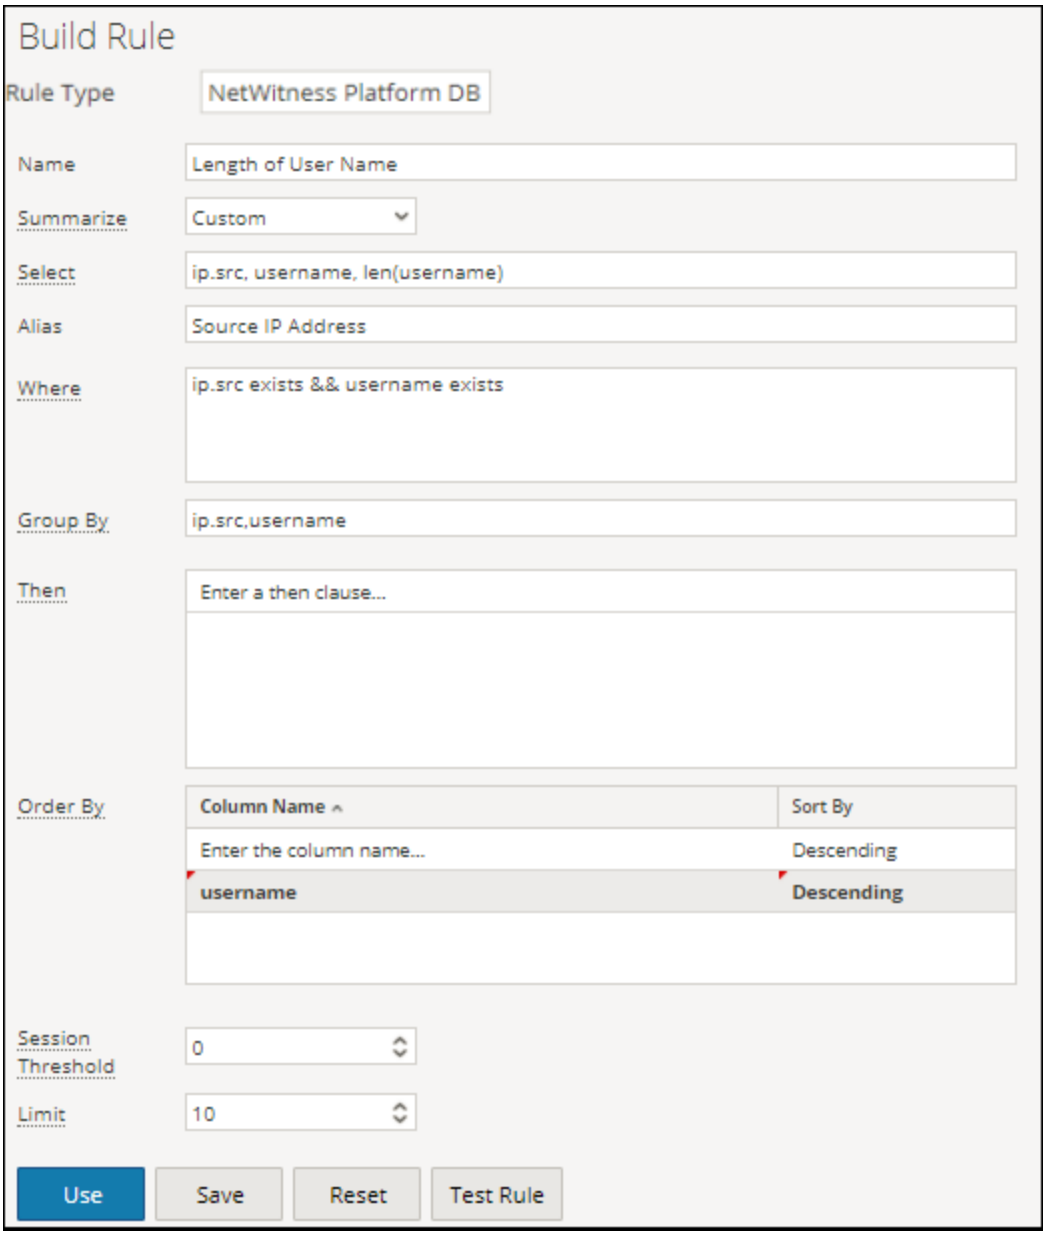
Example

Query for min_threshold used along with the Max function in the **Then** field is:
min_threshold(5000,max(size))

The following figure shows the Build Rule screen for the above query.

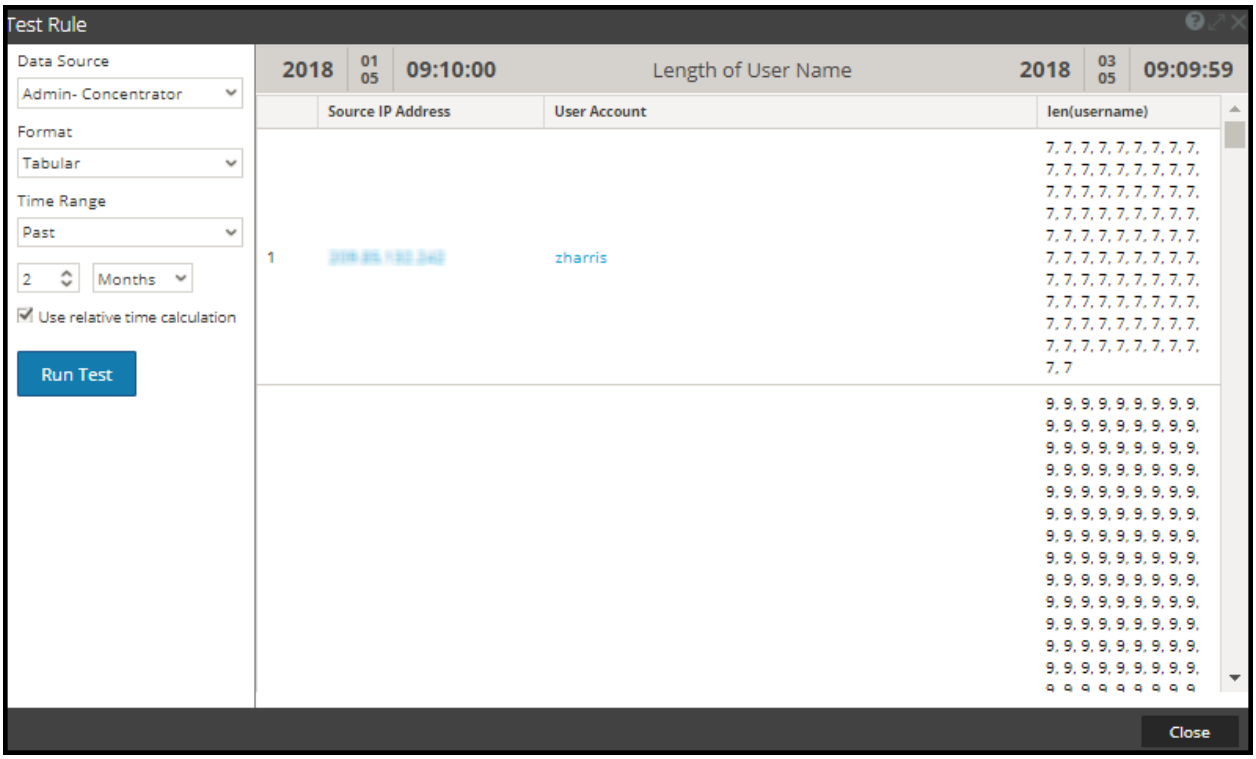
Here the min_threshold is applied for data size with a lower limit of 5000. The following figure shows the result.

Here, the result page displays the max(size) column, that lists the data sizes greater than 5000 as this is the minimum threshold in the query, along with the corresponding IP source and the respective directory.



Note: Max_threshold and Min_threshold rule actions are common across all the functions, and can be used along with the other queries in the **Then** field to retrieve the respective output.

Length



This function returns the length of a meta value. In other words, Length function returns the number of bytes used to store the actual value.
For instance, for the value "Analytics" it returns the length as 9. Similarly, for an IPv4 ip.src, it returns 4 (representing 4 bytes).

Example

The following figure shows a sample query for the length function used for usernames.

The following figure shows the result for the above query.

Here, the page displays the length of the usernames associated with the user account and their respective source IP.

Additional Information

When you query for aggregates (E.g. sum(size)) with **Group By** on a meta which has multiple values in a session, then the session with multiple values is accounted for aggregate calculation for each value of that meta.

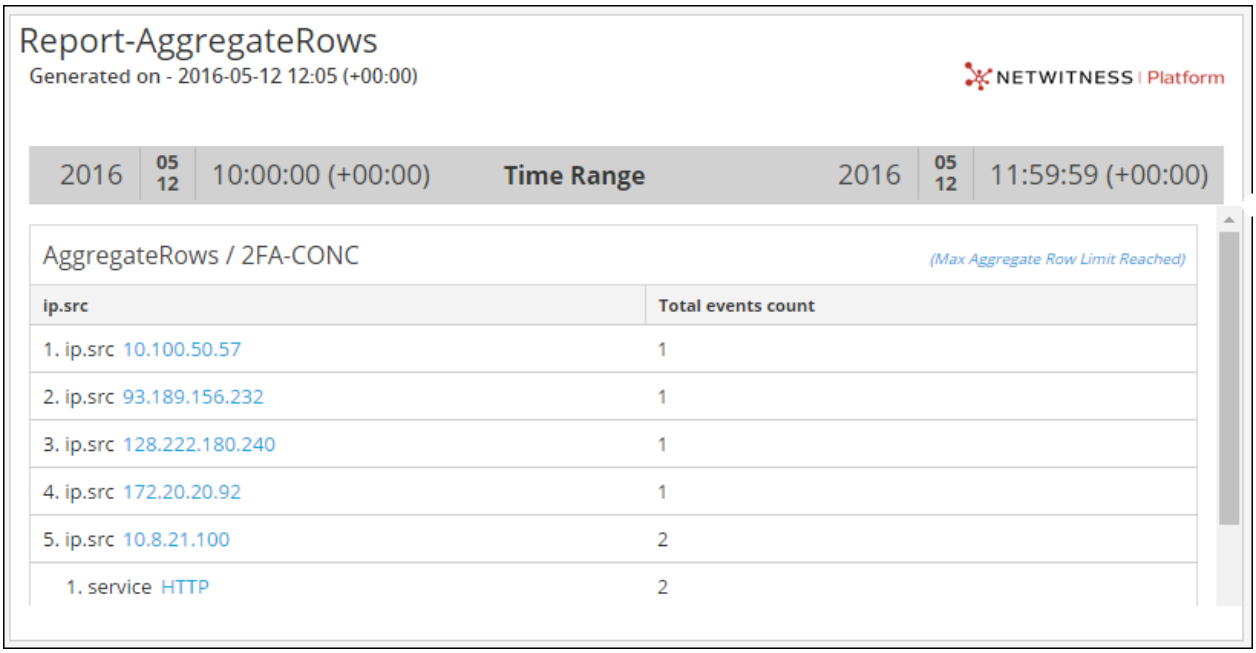
Example

When you query for the Count aggregate function with Group By on Alias.host and if the column has multiple values in a session, then the session is counted for each occurrence, including the duplicate values.

Consider the following table.

SessionID	Alias.host	Ip.src	Size
1	host-a, host-b, host-a	a	10
2	host-b, host-c, host-a, host-c	c	20
3	host-b, host-c, host-d	b	30
4	host-c, host-a	a	40

In the above table, alias.host for **host-a** and **host-c** has duplicate values listed for a single session. Let us consider the following query:



Select : alias.host, count(ip.src), sum(size)
Group By : alias.host

Here, **host-a** and **host-c** are present in 3 sessions and they are duplicated for two different sessions. However, the output is as shown below.

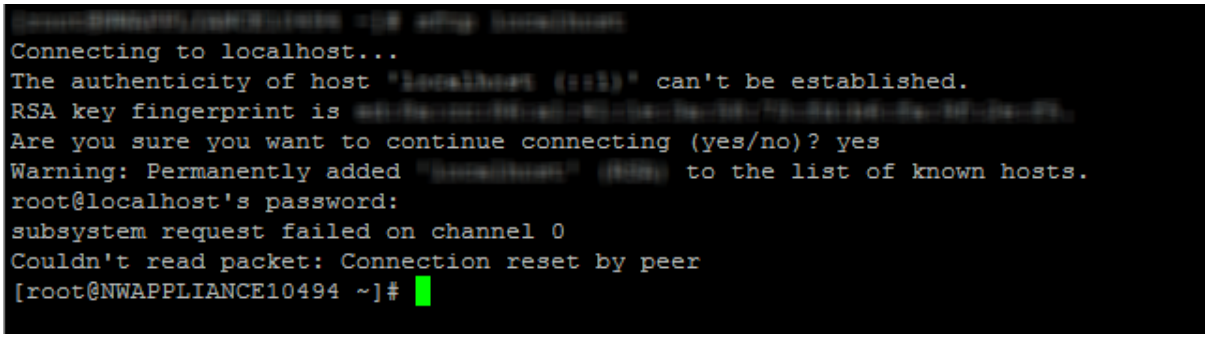
Alias.host	count(lp.src)	Sum (size)
host-a	4	80
host-b	3	60
host-c	4	110
host-d	1	30

Output table shows that the count for **host-a** and **host-c** is 4. This is because for each alias.host value, the entire session is considered. Similarly to calculate sum (size), the same sessions are considered for each alias.host value.

In the report output if the number of rows has reached **NWDB maximum aggregate rows** defined in RE configuration, then a message **Max Aggregate Row Limit Reached** is displayed to indicate that there is more information to be displayed. The default limit is 1000, and you can change this value as per your requirement, in the Reporting Engine Configuration page .

Troubleshoot Reporting

This section provides troubleshooting instructions for issues faced when using the Reporting module in NetWitness.



Configuring SFTP Server Issue

Procedure

Try the following steps if you face any issues while configuring the Linux SFTP server:

1. If the Report Output Action for the configured SFTP fails, you must SSH to the SFTP server and try to connect locally to check if SFTP is working fine.

   Connect to SFTP server:

2. If the Local connection fails, open the file **sshd_config> vi /etc/ssh/sshd_config.**
3. Check for the entry in the file:

   ```
   # override default of no subsystems
   Subsystem sftp /usr/libexec/openssh/sftp-server
   ```

4. If this entry does not exist, add the two lines mentioned in Step 3 at the bottom of the file and **Save** it.
5. Restart service from **SSH > service sshd restart**.
6. Retry the SFTP connection now.
7. Make sure SFTP port is not blocked by SA server appliance firewall. Update iptables rules to allow sftp port.

Meta Values in Investigation Link Issue

Issue	When the device information on the datasource is changed, the Investigation link for the meta values of the executed reports is not displayed on the NWDB results page.
Resolution	Remove and re-add the datasource to Reporting Engine. *Note: This workaround is not applicable for reports that are already generated.*

Internet Explorer 10 Browser Issue

Issue	When you click the Test Rule multiple times in quick succession, results with large input data may not displayed in Internet Explorer 10.
Resolution	If this issue occurs, try one of the following steps: • Close the Test Rule window on Internet Explorer 10 and run the test again. • Use other browsers like Chrome or Mozilla Firefox to test the rule execution.

Dynamic List Editing Issue

Issue	A dynamic list cannot be added from the Edit option on the 'View All Schedules' page to an existing schedule.
Resolution	1. Reports > Select the report > 2. Click the #Schedules for the specific report 3. Select the schedule to be modified from the Report Schedule page 4. Edit the schedule

Deployment Failure Issue

Issue	Deployment of reports fail, if the dependencies of certain compliance reports in Live are not deployed prior to the reports.
Resolution	Retry the deployment. If the problem persists, try to deploy the rule or list dependencies first and then deploy the reports.

Respond Server Issue

Issue	When the Forward Alerts to Respond option is enabled and RabbitMQ connections to the Respond Server are blocked, some of the Reporting Engine threads may be blocked.
Resolution	Disable the Forward Alerts to Respond option until the RabbitMQ broker in the NetWitness server at the Respond has begun and accepts the connections.

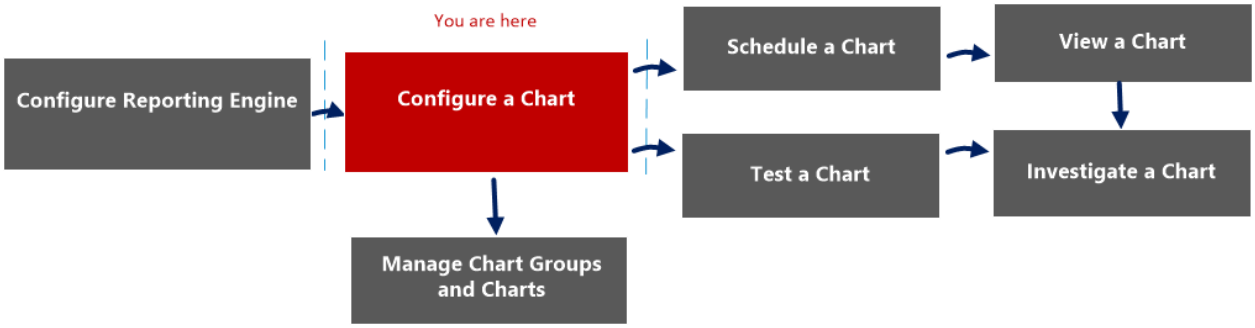
Post-Upgrade Issue

Issue	Post-upgrade from 10.6.x to 11.2, Categories meta for incident collection is not supported.
Resolution	When using the Categories meta for incident collection, the results rendered are in an incorrect format. Hence this meta is not supported and you cannot use the categories meta in either select clause or where clause. Also, it is not available in the list of metas for selection in the Rule Builder page.

Report Query Timeout Issue

Issue	When scheduling the report, if you choose a high time range, the query may timeout with the error message **`Query on channel 12345 was canceled by the system for exceeding time usage limits. Check timeout values.`**
Resolution	Set the **Summarize** option to **None** in the **Build Rule** view to exclude the **Group-By** clause (that is performance intensive) and then re-schedule the report. If the query still times out after 60 minutes, increase the timeout value from 60 minutes to 90 minutes on all the core services. To increase the timeout value: 1. Go to **Admin** > **Services** > **Security** > **Users** and set the **Core Query Timeout** to 90 minutes. 2. Enter the Service Admin Password and click **Save**. 3. Re-schedule the report.

Reporting References



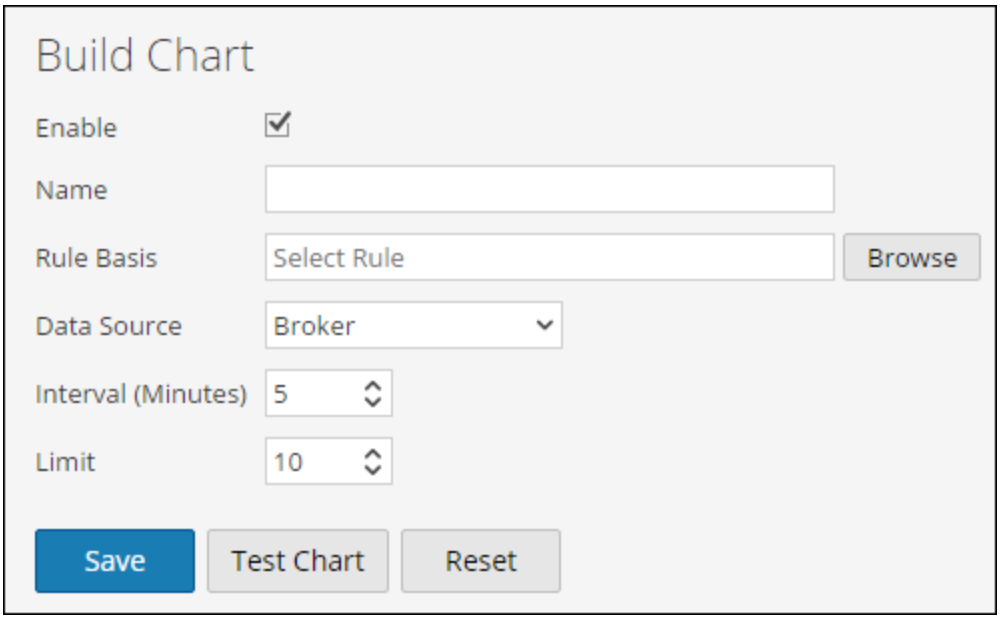
This section provides information about the Reporting user interface. You can look at your place in the workflow for creating and generating a report with theNetWitness, get a quick look at the important features, and follow links to the detailed concepts and procedures.

Build Chart View

In the Build Chart view, you can define and test a chart. You build a chart by assigning a name and then selecting a rule to include.

Note: Only the NetWitness DB rules can be used in charts.

Workflow



What do you want to do?

Role	I want to ...	Documentation
Administrator/ Analyst	Configure Reporting Engine	For more information, see "Configure Reporting Engine" in the *Reporting Engine Configuration Guide*.
Administrator/ Analyst	Configure a chart*	Configure a Chart
Administrator/ Analyst	Schedule a chart	Schedule a Chart
Administrator/ Analyst	View a chart	View a Chart
Administrator/ Analyst	Test a chart	Test a Chart
Administrator/ Analyst	Investigate a chart	Investigate a Chart
Administrator/ Analyst	Manage a chart group and chart	Manage a Chart Group and Chart

*You can complete these tasks here.

Quick View

The following figure is an example of the Build Chart view.

The following table describes the features in the Build Chart view.

Field	Description
Enable	Specifies if the Reporting Engine must collect the data and generate chart results. If the **Enable** checkbox is not selected, the results are not rendered.
Chart Name	Identifies the name of the chart.
Rule Basis	Displays the Add Rules dialog box from which you select a rule that is the basis of a chart. The rule that you select must be a rule which is not sorted by none.
Data Source	If the default data source is configured in the Reporting Engine, the data source is displayed on the Build Chart page. If a chart is configured to run on any other data source, that data source is displayed on the Build Chart page instead of the default data source. The Reporting module works with the following data sources: • Broker • Concentrator • Decoder • Log Decoder • Log Collector
Interval (Minutes)	The chart data refresh interval in minutes.
Limit	The number of records for which a chart is generated.
Save	Saves a chart to the database.
Test Chart	Plots a test chart based on the chart definition.

Field	Description
Reset	Resets the chart details.

Build List View

In the Build List view, you can enter or import values to create a list and save or reset the values. You can use lists when you are writing reporting rules to simplify the process of specifying values in the rule.

Workflow

This workflow shows the procedure to define lists or list groups. You can set access control at the list or list group level so that only users with specific roles can access the lists.

You must ensure that Reporting Engine is configured on the NetWitness.

What do you want to do?

Role	I want to ...	Show me how
Administrator / Analyst	Configure Reporting Engine	For more information, see "Step 3: Configure Reporting Engine Data Sources" topic in the *Reporting Engine Configuration Guide*

- Lists Permissions Dialog

Quick View

The following figure shows the Build List View.

To access this view

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Lists**.

   The Lists view is displayed.

3. In the **Lists** toolbar, click .

   The Build List tab is displayed.

The following table describes the features in the Build List view.

Feature	Description
Name	Identifies and labels the list.
Description	Provides a short description for the list.
List Values	Provides the grid of values associated with selected list from the List Library panel. You can import these values from a file or list. You can also enter values manually.
Quotes will be inserted for all the values	Automatically includes quotes for the values at runtime if checkbox is selected. If the checkbox is not selected and if a value in the list contains a comma, then that value has to be enclosed within single quotes. This syntax does not apply to list values for an NWDB rule.
Save	Saves the rule which can be used to create a report, a chart or an alert.
Reset	Deletes all the information from the fields.

Build Report View

In the Build Report view, you can create a report, add text and rules, and schedule a report.

Workflow

This workflow shows the procedure to create and schedule a report.

What do you want to do?

Role	I want to ...	Show me how
Administrator / Analyst	Configure Reporting Engine	For more information, see "Step 3: Configure Reporting Engine Data Sources" topic in the *Reporting Engine Configuration Guide*

Related Topics

- Configure and Generate a Report
- Report View

- Scheduled Reports View
- Reports Permissions Dialog

Quick View

The following figure shows the Build Report View.

To access this view

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Reports view is displayed.

3. In the **Reports** toolbar, click + .

   The Build Report tab is displayed.

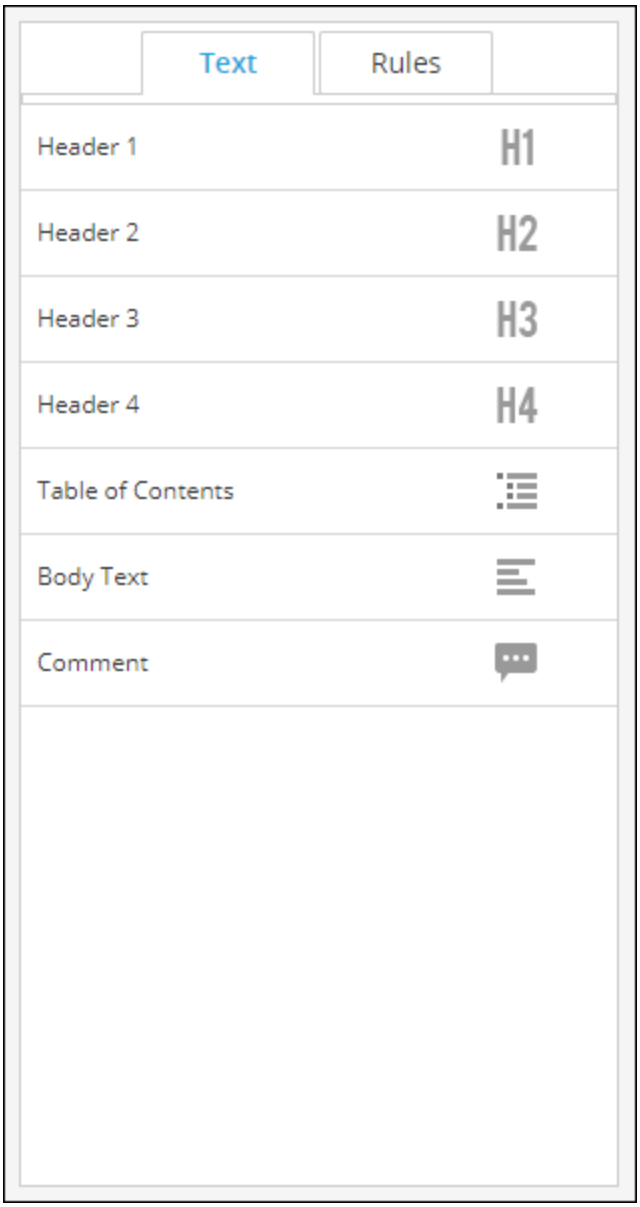
The Build Report view consists of the following panels:

1	Report Panel
2	Text Panel
3	Rules Panel

Report Panel

The Report panel allows you to create a report by assigning a name to the report. The content in a report depends on the items selected from the Text and Rules panels.

When you add rules to a report, you can change the output format of these rules either to tabular, area, line or pie by clicking the ⌄ button.



The following table lists the features of the Report Panel and the description.

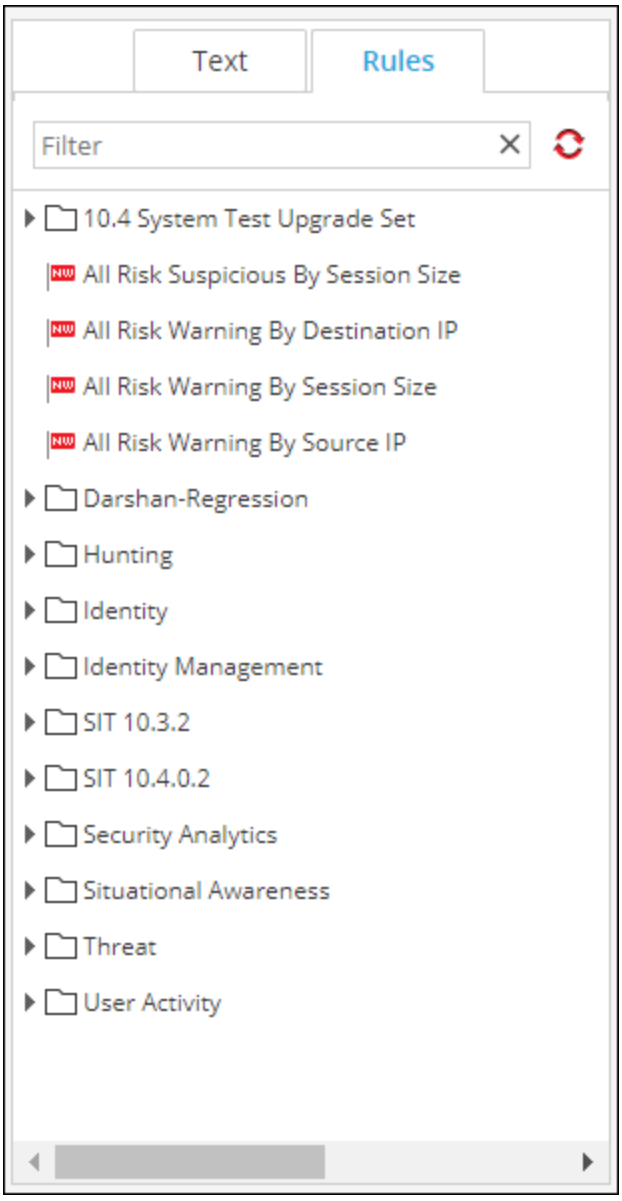
Feature	Description
Name	This field allows you enter the name of the report.
Options	This field allows you to select the output format of the report such as Tabular, Area, Bar, Bubble, Column, Line, Pie, Step Line, Step Area, Spline Area and Spline.
Schedule	Clicking this option generates the report.
Save	Clicking this option saves the report.

Text Panel

The Text panel consists of a list of text elements that add to the look and feel of the report. You can use these text elements to format the report.

- To add more structure to reports, you can use these headers defined in the Text panel to indent up to four levels. This allows you to identify specific sections in a report that can be included in the Table of Contents for easy navigation in the report result.
- To add headers to the Report panel, drag and drop H1, H2, H3, or H4 onto the Report pane based on the desired level of indentation.

The following table lists the text elements used to format a report:



Text Elements	Description
Header 1 H1	The Header 1 element adds a first-level heading to the report definition.
Header 2 H2	The Header 2 element adds a second-level heading to the report definition.
Header 3 H3	The Header 3 element adds a third-level heading to the report definition.

Text Elements	Description
Header 4 	The Header 4 element adds a fourth-level heading to the report definition.
Table of Contents 	The Table of Contents adds table of contents to the report definition.
Body Text 	The Body Text element adds body text to the report definition.
Comment 	The Comment element adds comments to the report definition. **Note:** The Comment element is not displayed when you view all the reports.

Rules Panel

The Rules panel consists of a list of rules that are defined in the Rules. From the rules list, you can drag and drop rules onto the Report panel to associate those rules with the report.

You can search for a specific rule using search text box provided in the Rules panel.

Text
Rules
Filter
10.4 System Test Upgrade Set
All Risk Suspicious By Session Size
All Risk Warning By Destination IP
All Risk Warning By Session Size
All Risk Warning By Source IP
Darshan-Regression
Hunting
Identity
Identity Management
SIT 10.3.2
SIT 10.4.0.2
Security Analytics
Situational Awareness
Threat
User Activity

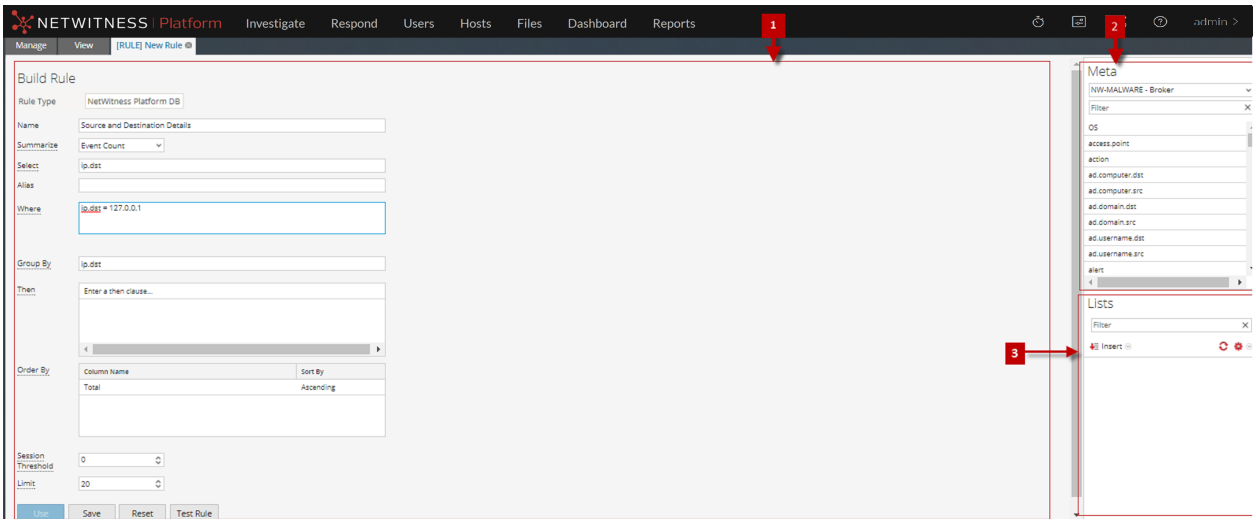
Build Rule View

The Build Rule view explains the actions and associated procedures that you can perform under Rules.

Workflow

This workflow shows the procedure to create or deploy a rule.

What do you want to do?



Role	I want to ...	Show me how

Administrator / Analyst	Create and Schedule a Report	Create and Schedule a Report
Administrator / Analyst	View a report or list of all reports	View a Report
Administrator / Analyst	Investigate a Report	Investigate a Report
Administrator / Analyst	Manage/Access Control for lists, Rules or Reports	Manage Lists, Rules or Reports

*You can complete these tasks here.

Related Topics

- Rule Permissions Dialog
- Rule View

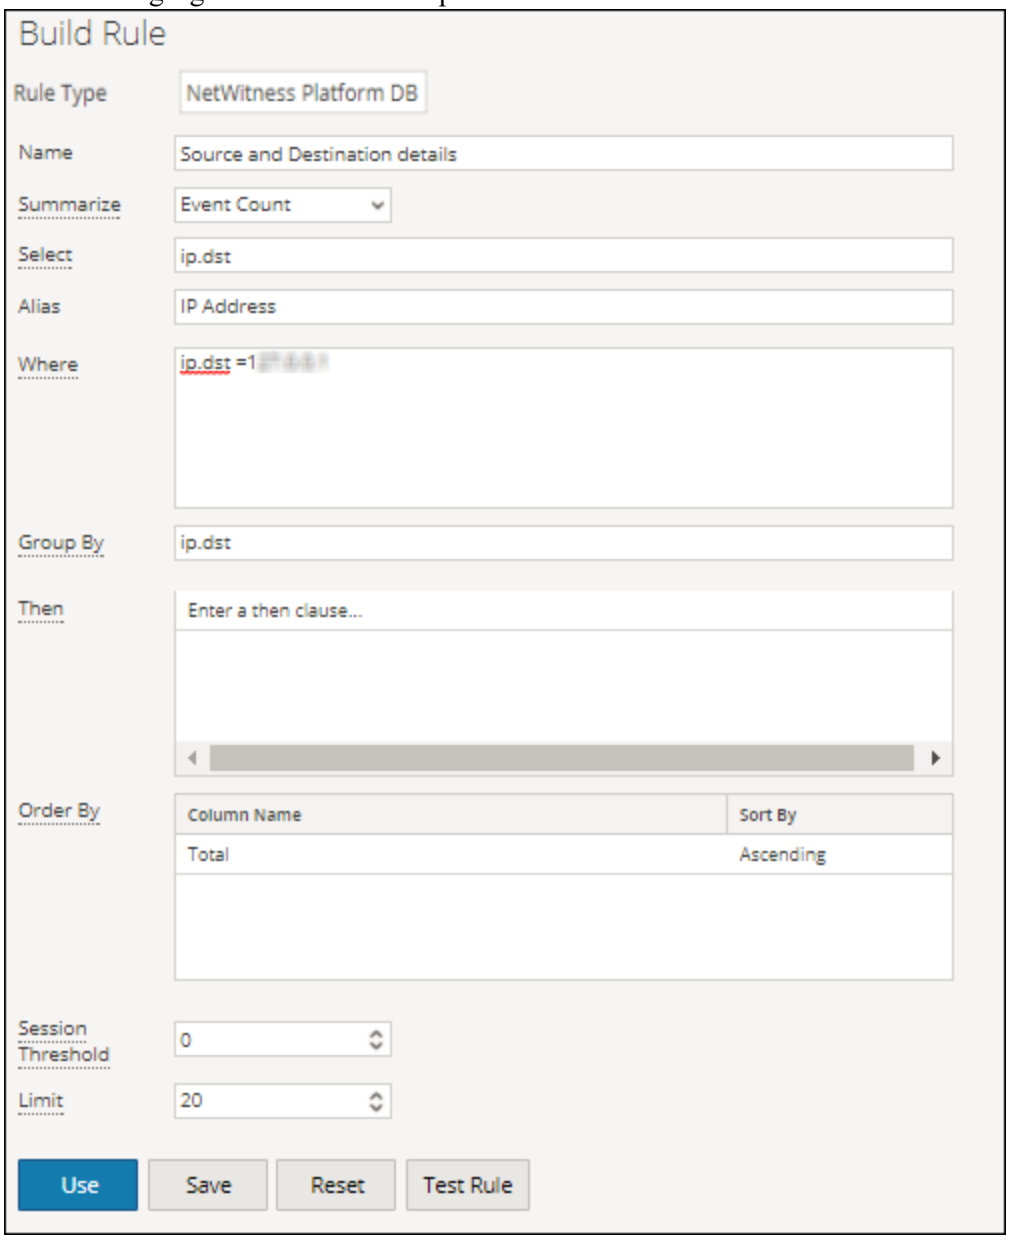
Quick View

To access the Build Rule view:

1. Go to **Reports**.
   The Manage tab is displayed.

2. In the **Rules** toolbar, click + > **NetWitness Platform DB**.
   The Build Rule view tab is displayed

Features



The Build Rule view includes the following panels.

1	Rule panel
2	Meta panel
3	Lists panel

Rule Panel

The Rule panel allows you to create a rule for the selected database type.

The following figure shows the Rule panel.

The following table describes the features in the Rule panel.

Feature	Description
Rule Type	A drop-down list of supported database types for which you can create rules. The options are: NetWitness DB and Warehouse DB.
Name	The name of the rule that you are creating or editing.
Summarize	A drop-down list of summarize options. The options are: None, Event Count, Packet Count, Session Count and Custom.
Select	The meta key for which you need the aggregate values; for example, ip.dest.

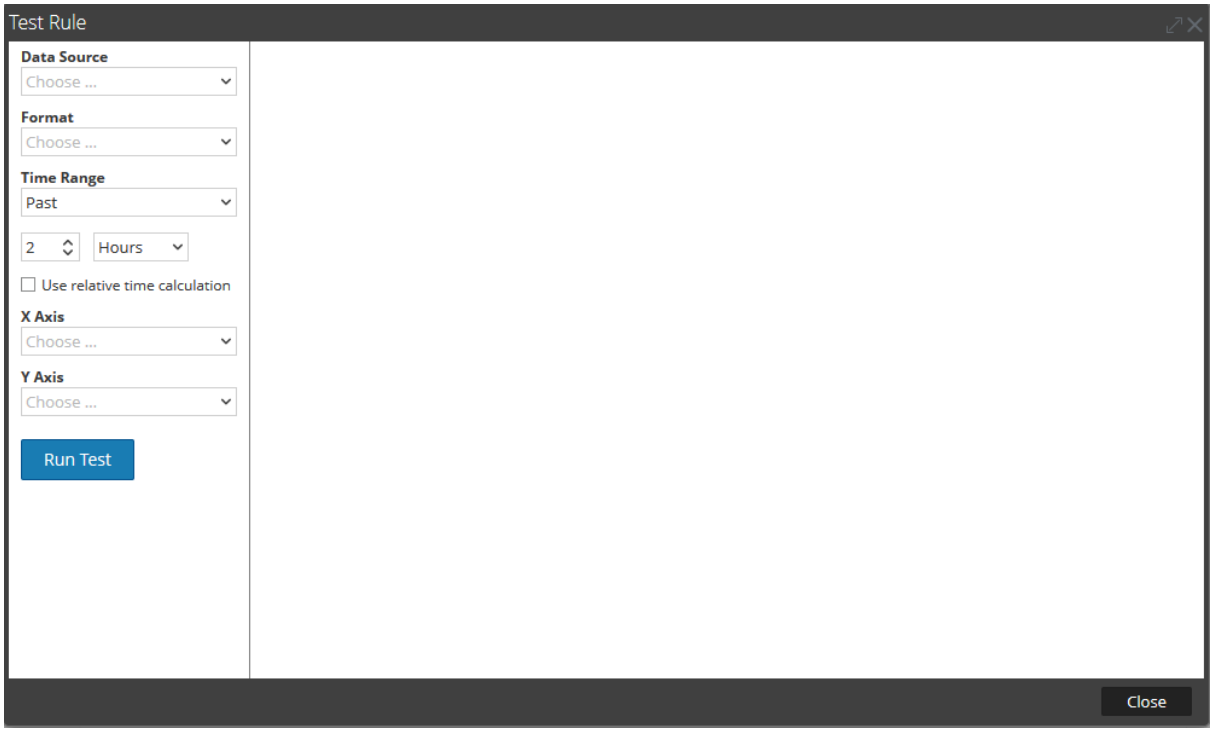
Feature	Description
Where	A Where clause that defines the conditions that trigger the rule execution; for example, ip.dest = 127.0.0.1.
Group By	The grouping method for the results. For example, specifying ip.dest produces a report in which like ip.dest values are grouped.
Then	A Then clause that defines the rule actions for additional processing on the output.
Order By	The sequencing method used to show results. For example, specifying Order By the value in the Total column, Ascending, produces a report in which the results are sorted in ascending order based on the value in the Total column.
Session Threshold	A selection list for the session threshold, which specifies maximum number of sessions that should be processed for aggregate functions.
Limit	A selection list for the maximum number of result rows to be fetched.
Use	Clicking Use enables you to use the Rule to generate a Report, Alert of Chart.
Save	Clicking Save saves the rule that you are editing and the Build Rule panel remains open. Before testing a rule, you must save it if you want to keep your changes.
Reset	Clicking Reset clears all the field information .
Test Rule	Clicking test rule opens the Test Rule dialog.

Test Rule Dialog

To access the Test Rule view:

1. Go to **Reports**.

   The Manage tab is displayed.



2. In the **Rules** panel, do one of the following:

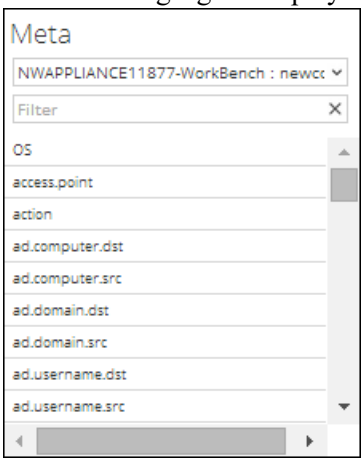
   - Select a rule and click  in the Rules toolbar.
   - Click  > **Edit**.

     The Build Rule view tab is displayed.

3. Click **Test Rule**.

The Test Rule view is displayed.

The following table describes the features in the Test Rule Dialog.



Feature	Description
Data Source	A drop-down list of data sources for the type of rule you are testing. Possible data sources are: Concentrator, Broker, Decoder or Log Decoder.
Format	A drop-down list of the formats for displaying results for the rule. Possible formats are: Tabular, Area, Bar, Bubble, Column, Line, Pie, Step Line, Step Area, Spline Area, and Spline.
Time Range	A drop-down list of time range specification methods. • Selecting Past allows you to specify a number of years, months, days, weeks, or hours. For example, Hours, Days, Weeks, Months, or Years. • Selecting Range allows you to specify a date range and time period. For example, start date to end date. In the user interface, the date or time displayed depends on the time zone profile selected by the user.
Use relative time calculation	Selecting this option calculates the time range relative to the current time.

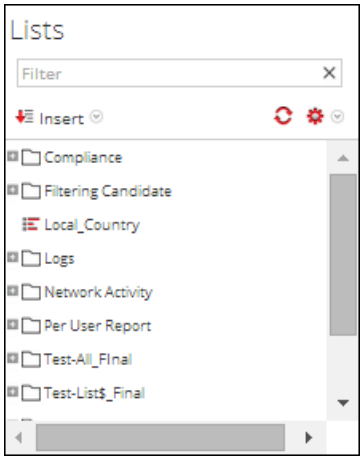
Feature	Description
X Axis	X-Axis and Y-Axis specify the metadata to be plotted in charts. In the X-Axis drop-down list, the meta types for the `Group by` setting in the rule are listed. You can select multiple meta types when the rule has a single `Group by` setting. For Custom Rules with multiple `Group by` values, you can select only the first meta type for the X-Axis.
Y Axis	In the Y-Axis drop-down list, the aggregate functions used in the rule are listed. Sum, Count, Countdistinct and Average are the supported aggregate functions for rules. You can select one or more aggregate functions.
Run Test	Clicking Run Test executes a test of the rule last saved in the Rule Builder dialog. When the test is complete, the rule data (if any) for the selected time range is displayed.

Meta Panel

The Meta panel provides a list of available meta types that you can use to build the rule. You can use the meta types in the Select, Where, and Then clauses. The Reporting Engine maintains an active list of the available meta names by continuously synchronizing with the data source to which it is connected.

The following figure displays the Meta panel.

The following table describes the features in the Meta panel.



Operation	Description
Choose	Based on the rule type that you have selected, the available data sources are displayed in the drop-down list of the Meta panel. Select the required data source. The available meta types for the data source are displayed. Select a meta.
Filter	Filter the meta for a specific meta value.

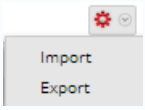
Lists Panel

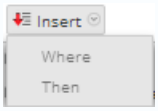
A List is a placeholder for a set of values that you can use in a meta or a variable. For example, you can define a list with all the whitelisted event source IP addresses. Once the List is defined then you can use the List name in the rule. This provides the flexibility of adding, modifying, and deleting the list values.

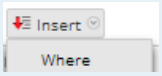
The Lists panel is a collection of Lists. The Reporting Engine maintains an active list of the available list names by continuously synchronizing with the collection to which it is connected.

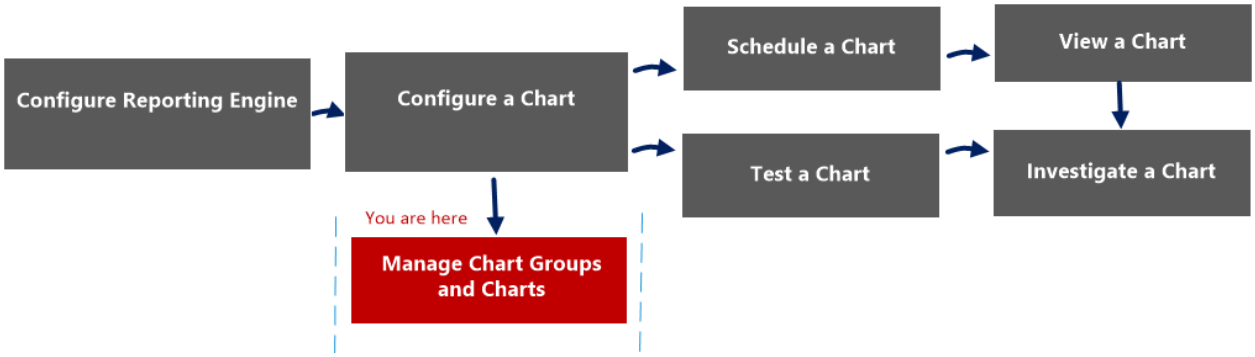
The following figure displays the Lists panel.

The following table describes the features in the Lists panel.









Operation	Description
	Import or Export a list.
	Refresh the Lists.
	If you select the **NetWitness DB** rule type, the options Where and Then are displayed. Insert the list in the Where or Then clause in the rule.
	If you select the **Warehouse DB** rule type, the option Where is displayed. Insert the list in the Where clause in the rule.

Chart Permissions Dialog

In the Chart Permissions dialog, you can manage access permissions for user roles at the chart and chart group level. Only a user with the 'Read & Write' permission can configure the chart in the Reporting module.

Workflow

What do you want to do?

Role	I want to ...	Documentation
Administrator/ Analyst	Configure Reporting Engine	For more information, see "Configure Reporting Engine" in the *Reporting Engine Configuration Guide*.

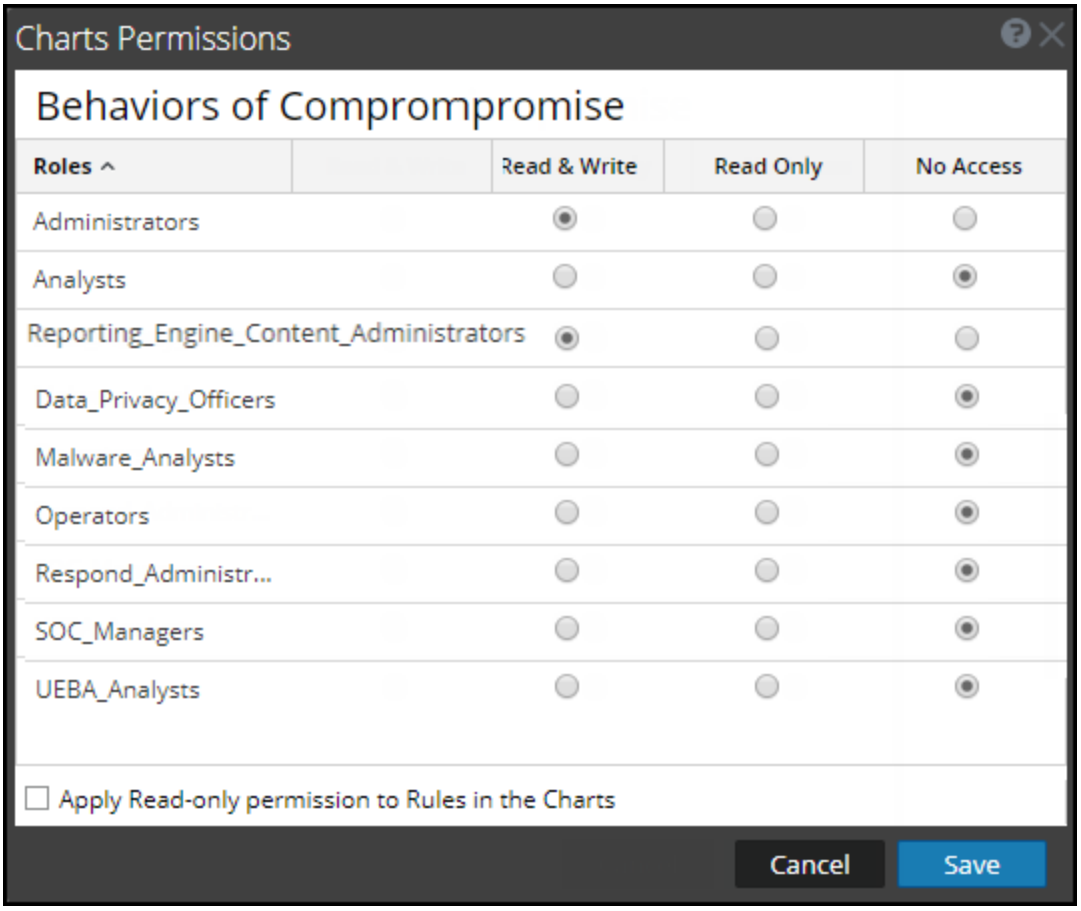
*You can complete these tasks here.



Related Topics

- Configure and Generate a Chart

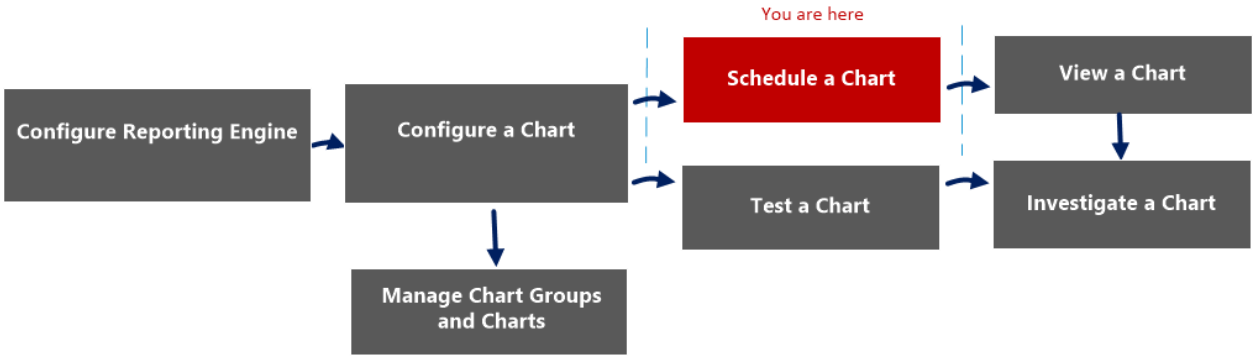
Quick View

The Chart permissions dialog allows you to set chart permissions depending on the user role.

The following figure is an example with the important features labeled.

1. Click **Reports** to view the Manage tab.
2. Click **Charts** to open the Chart view.
3. In the **Charts** panel, select a report and click > **Permissions**. The Chart Permissions dialog box is displayed.
4. Based on the user role, select the appropriate options.
5. (Optional) Select the checkbox if you want to automatically provide read access permission to dependent rules.
6. Click **Save**.

The following table lists the columns in the Charts Permission dialog.



Column	Description
Roles	Displays all the user roles in the NetWitness user interface.
Read & Write	Allows you to apply 'Read&Write' access to the chart.
Read Only	Allows you to apply only 'Read' access to the chart.

Column	Description
No Access	By selecting this permission, you cannot access or view the chart.
☐ Apply these permissions to sub-groups and Charts in this group	Allows you to apply permissions to the chart group, subgroups in the group and charts in the group. **Note:** This checkbox is populated only when you set access permissions for a Chart Group.
☐ Apply Read-only permission to Rules in the Charts	Allows you to automatically apply permissions to the rules in the charts.
Cancel	Cancels all the changes made to the permissions.
Save	Saves the selection and provides access to the role based on the selection.

Chart View

In the Chart View, you can see the available charts and groups in a grid format and also schedule them by enabling the charts.

Workflow

What do you want to do?

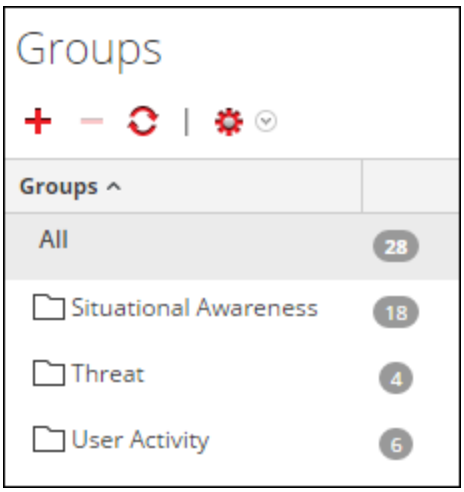
- Configure and Generate a Chart

Quick View

The following figure is an example with the important features labeled.



The Chart view includes the following panels:

1 Charts Groups panel
2 Charts toolbar
3 Charts panel

Charts Groups Panel

The Charts Groups panel allows you to organize charts in a group. You can create a group, add charts to the group and move charts among groups. The following figure shows the Charts Groups panel.

The Charts Groups Panel includes the following options:

Feature	Description
+	Adds a new chart to the Reporting module.

Feature	Description
	Deletes one or more selected charts.
	Edits a chart.
	Refreshes the view.
	Provides the following options: Import, Export and Permissions.

Charts Toolbar

The Charts toolbar allows you to add, modify, delete, duplicate, activate, deactivate, import and export a chart. You can also set access permissions for charts in a group.

The Chart toolbar includes the following options:

Feature	Description
	Adds a new chart to the Reporting module.
	Deletes one or more selected charts.
	Edit charts.
	Enables the selected charts.
	Disables the selected charts.
	Creates a duplicate copy of the selected chart.
	Provides the following options: Import, Export, Export as Text and Permissions.
View All Charts	Displays all the executed charts.
Auto Refresh	Automatically refreshes the charts list.
	Allows users to filter unused charts.

Charts Panel

The Charts Panel presents all the charts in a tabular or grid format.

The following table lists the columns in the Chart panel and their description.

Feature	Description
Enabled	● - The chart is enabled. ○ - The chart is disabled.
Name	The name of the chart.
Group	The Chart Group to which the chart belongs.
State	The state of the chart: • Queued • Completed • Failed
Duration (H:M:S)	The time taken to execute the latest chart.
Avg(H:M:S)	The average time taken to run the chart.
Max(H:M:S)	The maximum time taken to run the chart.
View Chart	A hyperlink that redirects to the View a Chart panel.
	The actions menu has the following options: Enable, Disable, View, Delete, Edit, and Export.

Execution History Panel

The Execution History panel allows you to fetch and display history details.

Workflow

This workflow shows the procedure to view report or report groups.

What do you want to do?

Role	I want to ...	Show me how

- Generate List Panel

- Scheduled Reports View

Quick View

The following figure is an example of the Execution History view.

Features

The View Execution History has the following panels:

1 Execution History Options panel
2 Execution History Output panel

To access this view:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.
   The Report view is displayed.
3. In the **Reports** panel, do one of the following:

   - Hover the mouse over a report and click > **View Scheduled Reports**.
   - Click **#Schedules** column.
     The Schedule Reports view is displayed with the status of each of the scheduled report.
4. Select a scheduled report and do one of the following:

- Click  > **Execution History**.
- Click  from the **Scheduled Reports** Toolbar Panel.

Execution History Options Panel

The Execution History Options panel allows you to fetch the history details based on either past n number of scheduled reports or a specific date range.

The following table lists the operations in the Execution History Options panel:

Operation	Description
Get history by:	This is the criteria to view the execution history: • **Past # Executions**: The past n number of scheduled reports. By default this option is displayed. • **Range (specific)**: The start date and end date for the date range. **Note:** The **From** and **To** field is populated in the NetWitness UI only when you select 'Range (Specific)' from the **Get history by** list.
From	The start date for the date range.
To	The end date for the date range.
Count	The number of execution history of the scheduled report to be displayed.
Show History	Shows the history details based on the selected criteria.

Execution History Output Panel

The Execution History Output panel displays the history details with the execution date, execution duration (seconds), state of the scheduled report, and a link to view the report.

The following table lists the various columns in the Execution History Output panel:

Column	Description
Execution Date	The date on which the scheduled report was executed. By default, the execution date is in descending order.
Execution Duration (Sec)	The time duration taken to execute the scheduled report.

Column	Description
State	The state of the scheduled report: • Scheduled: If a report is scheduled to run on an hourly, daily, weekly, monthly, or later time, the state of the report is displayed as scheduled, for the first run. • Queued: If a report is still waiting to get executed, the state of the report is displayed as queued. • Running: If the report schedule is in progress, the state of the report is displayed as running. • Partial: If in a report with several rules, a single rule execution failed or an output action failed or creation of PDF/CSV failed, the state of the report is displayed as partial. For example, consider a report with five rules and four rules are executed successfully and one fails, then the state is displayed as Partial. • Failed: If in a report with several rules, all the rule schedule executions failed, the state of the report is displayed as failed. • Completed: If a report schedule is successfully executed, the state of the report is displayed as completed. • Canceled: When cancel request is completed, the state of the report is displayed as canceled. • Inactive: If a report schedule is disabled, the state of the report is displayed as Inactive. • Not available: If the report schedule executed information is not available, the state of the report is displayed as not available.
View Report	The hyperlink to View a Report on full screen.
Action	Displays the icon to stop the execution schedule.
Close	Closes the execution history view.

Generate List Panel

The Generate List dialog allows you to generate and customize a list.

Workflow

This workflow shows the procedure to create and schedule a report.

What do you want to do?

Role	I want to ...	Show me how
Administrator / Analyst	Configure Reporting Engine	For more information, see "Step 3: Configure Reporting Engine Data Sources" topic in the *Reporting Engine Configuration Guide*

Quick View

The following figure is an example of the Generate List dialog.

To access this view:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

3. In the **Reports** panel, select a report and click > **Schedule Report**.

   The Schedule a Report view tab is displayed.

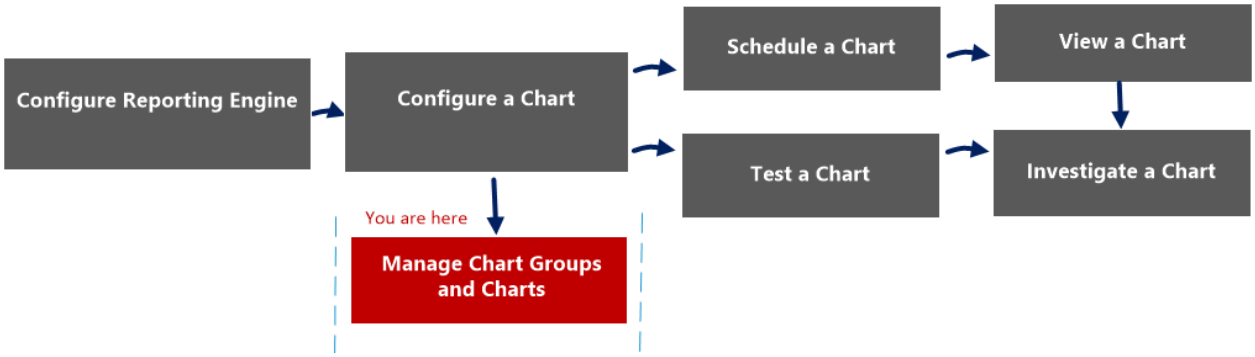
4. In the **Output Actions** section, in **Dynamic List** panel, click .

   The Generate List dialog is displayed.

Features

The following table lists the features in the Generate List dialog.

Field	Description
List Name	The name of the list chosen from the List Selection panel.
Browse	Click this button to select a list from the List Selection Window dialog.
Rule	Select a rule to be used to create the list.
Column	Select a value for the column.
Overwrite Existing List?	Overwrites the existing list.
Save	Adds the desired list to the Generate List panel of the Schedule Report view.



The List Selection Window dialog consists of lists that are defined in the Lists panel. Here, you can select a list to associate it with the report. The following figure shows the dialog.

List Selection Window

- Configure and Generate a Chart

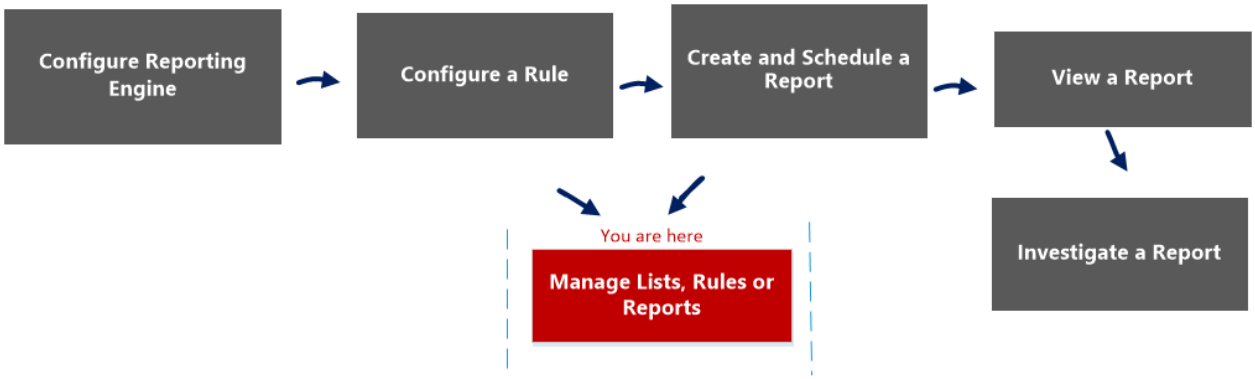
Quick View

This dialog displays differently when you use it to import groups containing subgroups and charts from other instances of NetWitness into the Chart Groups panel.

The following figure is an example of the Import Chart dialog.

1. Click **Reports** to view the Manage tab.
2. Click **Charts** to open the Chart view.
3. In the **Charts Groups** panel, select a folder to import the file.
4. In the **Charts Groups** panel or **Charts** toolbar, click > **Import** to import the file.

The following table describes the features in the Import Chart dialog.



Feature	Description
Browse	Displays a view of the local file system so that you can select the chart to be imported.
Delete	Deletes an imported report from the list of imported charts.
File Name	Displays a list of chart files that will be imported to your Charts module when you click Import.
Overwrite?	Allows you to select the option to overwrite an existing version of the chart you are importing. If you do not select the Overwrite option, a duplicate file is imported and no error message is displayed.
Close	Closes the dialog. If you have charts to select for import, but have not clicked Import. The charts are not imported, and are not saved in this dialog.
Import	Imports the selected charts to your Charts module.

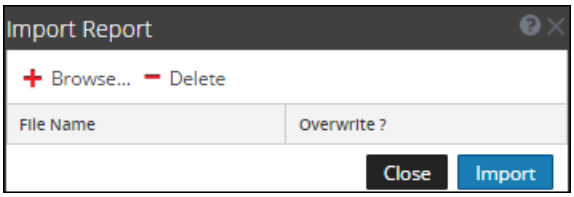
Import Report Dialog

In Import Report dialog, you can import groups containing subgroups and reports from other instances of NetWitness into Report Groups panel. Reports must be in a valid binary file that was exported from another NetWitness instance.

Workflow

This workflow shows the procedure to manage reports or report groups.

What do you want to do?



Role	I want to ...	Show me how

Quick View

To access the Import Report dialog:

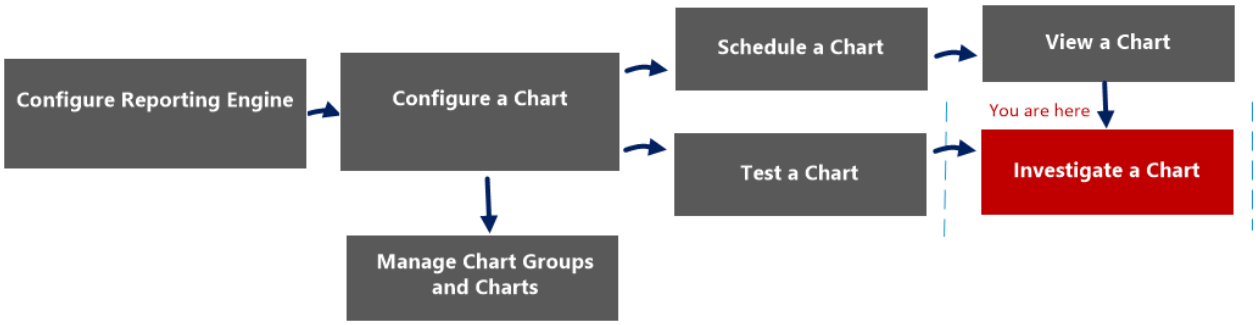
1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

3. In the **Reports Groups** panel, select a folder to import the file.
4. Do one of the following:
   - In the **Reports Groups** panel, click > **Import** to import a group.
   - In the **Reports** toolbar, click > **Import** to import a report.



The following table lists the features of the Import Report dialog.

Feature	Description
Browse	This option displays a view of the local file system so that you can select the report to be imported.
Delete	This option deletes an imported report from the list of imported reports.
File Name	Displays a list of report files that will be imported to your Reports module when you click Import.
Overwrite?	Allows you to select the option to overwrite an existing version of the report you are importing. If you do not select the Overwrite option, a duplicate file is imported and no error message is displayed.
Close	This option closes the dialog. If you select a report and not clicked Import. The reports are not imported, and are not saved in this dialog.
Import	This option imports the selected reports to your Reports module.

Investigate a Chart View

In the Investigate a Chart view, you can view and investigate chart details. There are options for filtering and sorting the information in the chart, as well as options for the type of chart, the number of items to chart, and charting values or totals. When viewing a chart, you can open the charted sessions in the Investigation module and save the chart as a PDF.

Quick View

The following figure shows the List view.

To access this view

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Lists**.

   The Lists view is displayed.

The List view includes the following panels:

1 Lists Groups panel
2 Lists toolbar
3 Lists panel

Lists Groups Panel

The Lists Groups panel provides a list of groups used to organize lists and has a toolbar that allows you to create and manage the groups.

Feature	Description
	Allows users to add a new group to the Reporting module.
	Allows users to delete groups.
	Refreshes the view.

Feature	Description
	Allows users to access following options: Import, Export and Permissions.
	Allows users to filter unused lists.

You can perform the following actions using the Lists Groups panel.

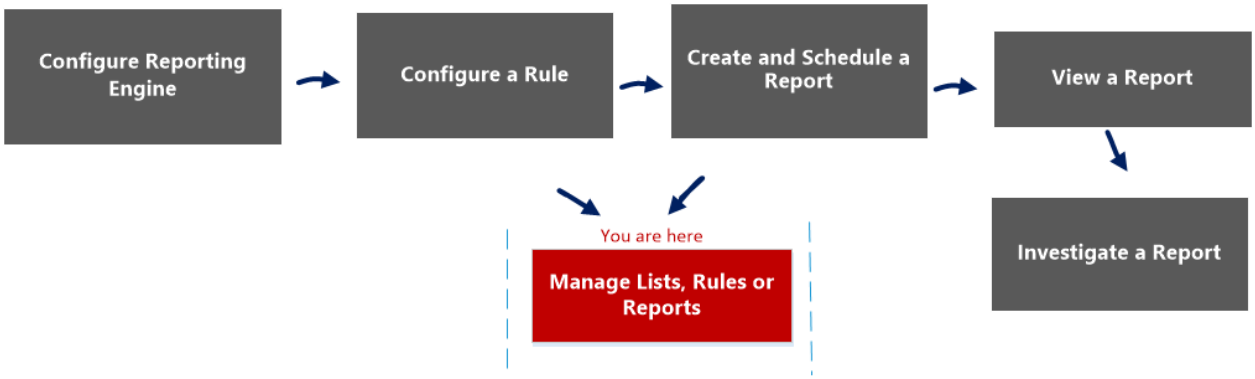
- Refresh lists in a group.
- Move lists between different groups. You can move a list from one group to another by dragging and dropping the list in the required group.
- Create list groups.
- Delete list groups.
- Import list groups.
- Export list groups.
- Set access control for list groups.

Lists Toolbar

Feature	Description
	Allows user to add a new list to the Reporting module.
	Allows user to delete one or more selected lists.
	Allows user to edit lists.
	Creates a duplicate copy of the selected list.
	Allows user to access the following options: Import, Export and Permissions.

Lists Panel

The Lists panel displays all the lists defined in a tabular format.



Column	Description
Name	Displays the name of the list. **Note:** For **Name** field, the icon to extend the column size is not displayed at the end of the column field. You have to hover the mouse a little to the left side to see the icon for extending the column.
Group	Displays the list group to which the list belongs.
Date Modified	Displays the date and time when the list was modified.

Reports Permissions Dialog

In the Reports Permissions dialog, the users with 'Read & Write' access permission can configure permissions.

Quick View

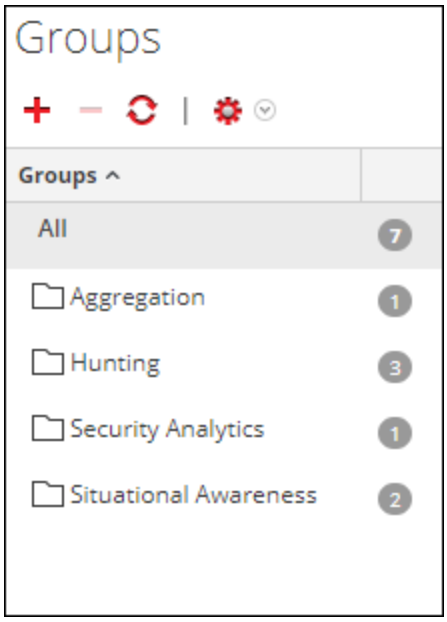
To access this view:

1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Reports**.
   The Reports view is displayed.



Features

The Report view includes the following sections:

1	Reports Groups panel
2	Reports toolbar
3	Reports panel

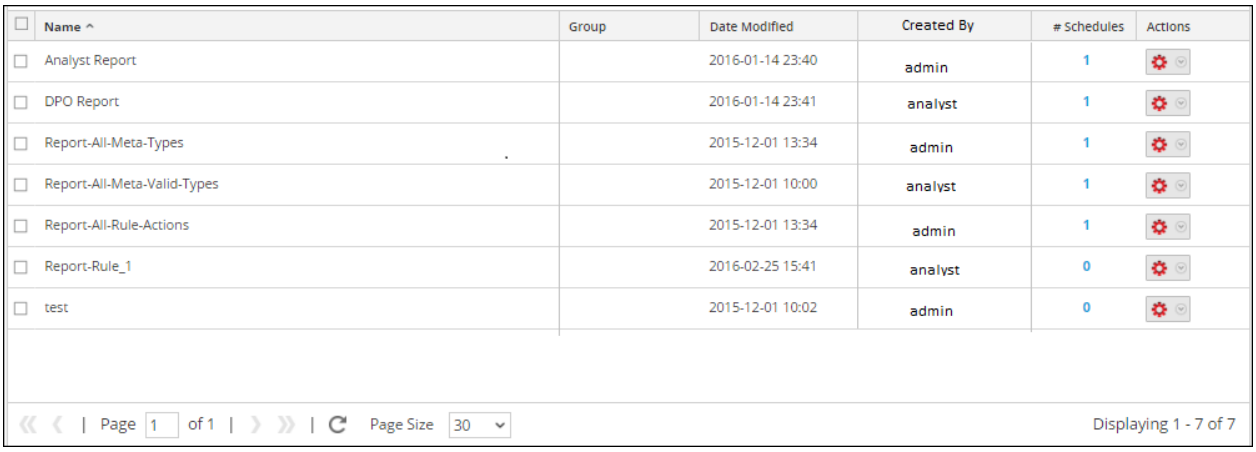
Report Groups Panel

The Report Groups panel allows you to organize reports in a group. You can create a report group, add reports to the group, and move reports among groups. You can view all reports by selecting All option under the Groups column.

Feature	Description
+	This option allows you to add a new report to the Reporting module.
−	This option allows you to delete one or more selected report.
↻	This option refreshes the view.
⚙	The actions menu has the following options: Import, Export and Permissions.

Reports Toolbar

The Reports toolbar allows you to add, modify, delete, duplicate, import and export reports. You can also set access permissions for a report in a group.



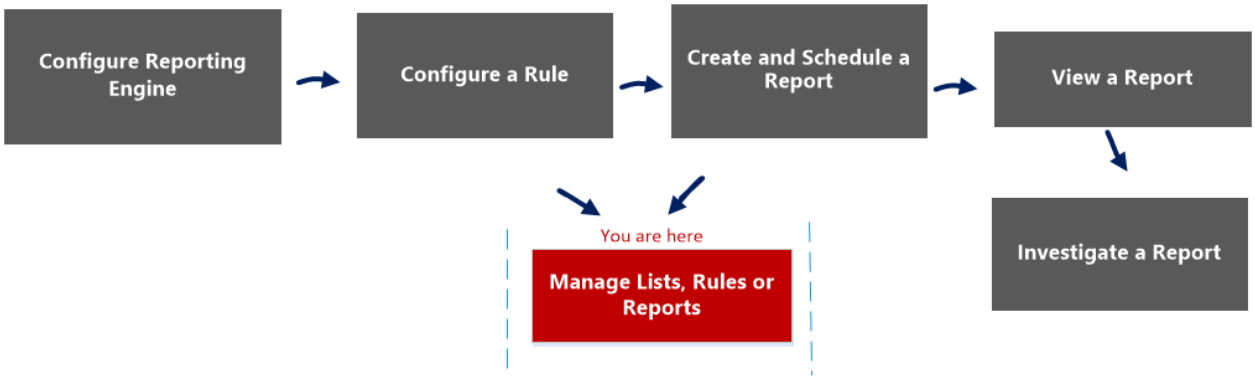
Feature	Description
+	This option allows you to add a new report to the Reporting module.
−	This option allows you to delete one or more selected reports.
✎	This option allows you to edit a chart.
⧉	This option creates a duplicate copy of the selected report.
⚙	The actions menu has the following options: Import, Export , Export as Text and Permissions.

Feature	Description
View All Reports	This option allows you to view a list of reports along with their schedule name and time.
View All	This option allows you to view all the scheduled reports.

Report List Panel

The Report List panel lists all the reports in a tabular format.

The following table describes the columns in the Report List panel.



Column	Description
Name	The name of the report.
Group	The Report Group to which the report belongs.
Date Modified	The date and time when the report was modified.
Created By	The creator of the report.
#Schedules	The count indicates the number of schedules created for a report.
Actions	The actions menu has the following options: Schedule Report, View Scheduled Reports, Delete, Edit, and Export.

Rule Permissions Dialog

The Reporting module provides access control at the rule level. Only a user who has the right set of permissions can perform tasks on the rule. When creating user roles, the administrator must ensure that the roles created for specific tasks have access to all the permissions higher in the hierarchy of roles.

Workflow

This workflow shows the procedure to manage rule or rule groups.

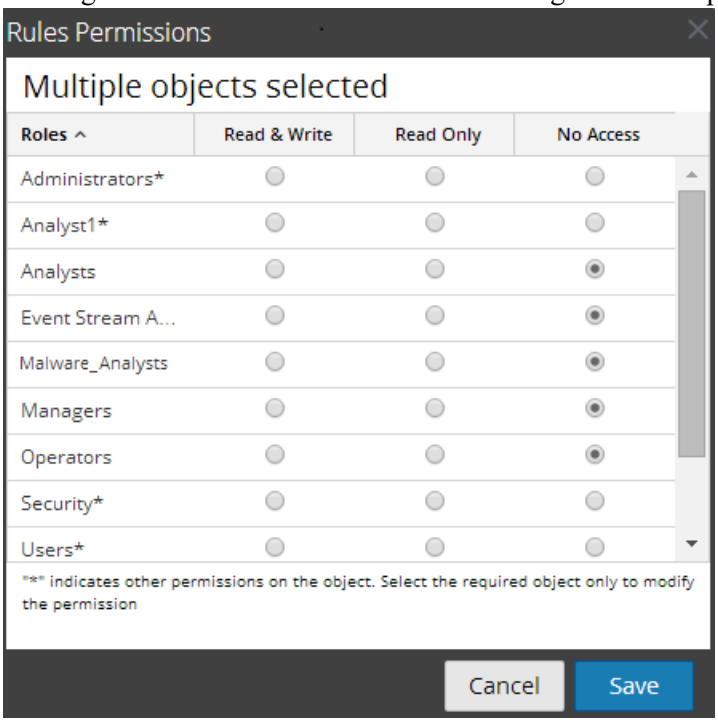
Related Topics



- Rule View

Quick View

This figure shows the Rules Permissions dialog for a single rule.

This figure shows the Rules Permissions dialog when multiple rules are selected.

The dialog has a different appearance for rule groups versus rules. To access the dialog:

1. Go to **Reports**.
   The Manage tab is displayed.
2. In the **Rules** panel, select one or more rules or a rule group.

3. Click  > **Permissions** in the toolbar.

   The Rules Permissions dialog is displayed.

Feature	Description
Roles column	Lists the NetWitness user roles, both built-in and custom roles. Each user who is logged in to NetWitness has user roles assigned. When multiple rules are selected, the asterisk beside the role name, for example, `Security*`, indicates there are other permissions available on that user role. To change the other permissions, you must select the user role and change the access permission.
Read & Write column	When the checkbox in this column is selected, the corresponding user role has permission to view, edit, delete, import, and export rules in the Rules view. The user can also change the permission on the rule.
Read Only column	When the checkbox in this column is selected, the corresponding user role has permission to view the rules in the rule group.
No Access column	When the checkbox in this column is selected, the corresponding user role cannot view or edit the rules in the rule group. Before applying rule permissions, this is the default permission set for all the user roles though the checkbox is unchecked.
Apply these permissions to sub-groups and Rules in this group checkbox	When checked, NetWitness applies permissions to sub-groups and rules in the group.
Cancel option	Clicking Cancel closes the dialog without saving any changes made.
Save option	Clicking Save closes the dialog and updates the rule group permissions for user roles. If specified, the access permissions are applied to subgroups and child objects of this group. When multiple rules are selected, the access permission is applied to all the selected rules.

Rule View

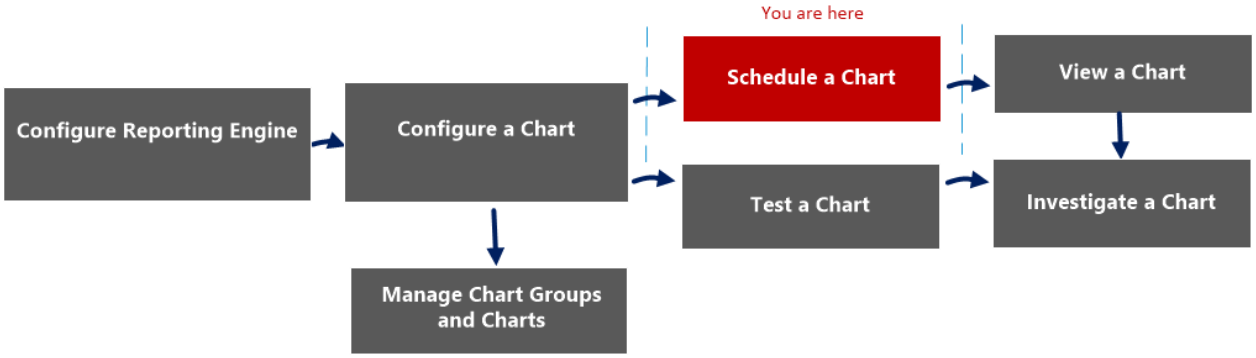
   The Change a Logo dialog box is displayed.



The following table lists the fields in the Select a Logo dialog.

Field	Description
Upload new logo	Click the icon to upload a new logo from the local directory.
Select	Select a logo from the existing list to be used as a logo in the scheduled report.
Cancel	Cancels the logo selection and returns to the Schedule a Report panel.
Set Default	Select a logo to set it as the default logo.

Schedule a Chart View

In the Schedule a Chart View, you can enable or disable a chart.

Quick View

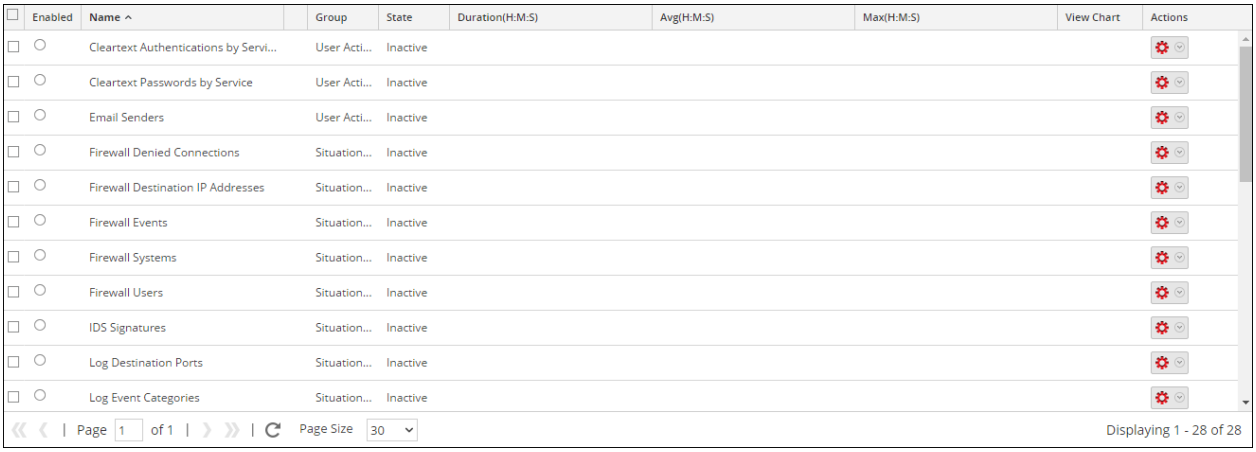
The following figure shows the Schedule a Chart view.

The Schedule a Chart view includes the following panels:

1 Charts Groups panel
2 Charts toolbar
3 Charts panel

Charts Toolbar

The Charts toolbar allows you to add, modify, delete, duplicate, enable, disable, import and export a chart. You can also set access permissions for charts in a group.



The Charts toolbar includes the following options:

Feature	Description
	Adds a new chart to the Reporting module.
	Deletes one or more selected charts.
	Edit charts.
	Enables the selected charts.
	Disables the selected charts.
	Creates a duplicate copy of the selected chart.
	Provides the following options: Import, Export, Export as Text and Permissions.
View All Charts	Displays all the executed charts.
Auto Refresh	Automatically refreshes the charts list.

Charts Panel

The Charts Panel presents all the charts in a tabular or grid format.

The following table lists the columns in the Charts panel and their description.

Feature	Description
Enabled	- The chart is enabled. - The chart is disabled.
Name	The name of the chart.
Group	The Chart Group to which the chart belongs.
State	The state of the chart: • Queued • Completed • Failed
Duration (H:M:S)	The time taken to execute the latest chart.
Avg(H:M:S)	The average time taken to run the chart.
Max(H:M:S)	The maximum time taken to run the chart.
View Chart	A hyperlink that redirects to the View a Chart panel.
	The actions menu has the following options: Enable, Disable, View, Delete, Edit, and Export.

Schedule Report Panel

The Schedule Report panel allows you to schedule a customized report. Prior to scheduling a report, you can create a dynamic list (with the overwrite option selected) with services added. For more information, see "Generate a List from the Scheduled Report" section in Create and Schedule a Report. Then use the list to generate a report with details in the report like services and host names.

Workflow

This workflow shows the procedure to create and schedule a report.

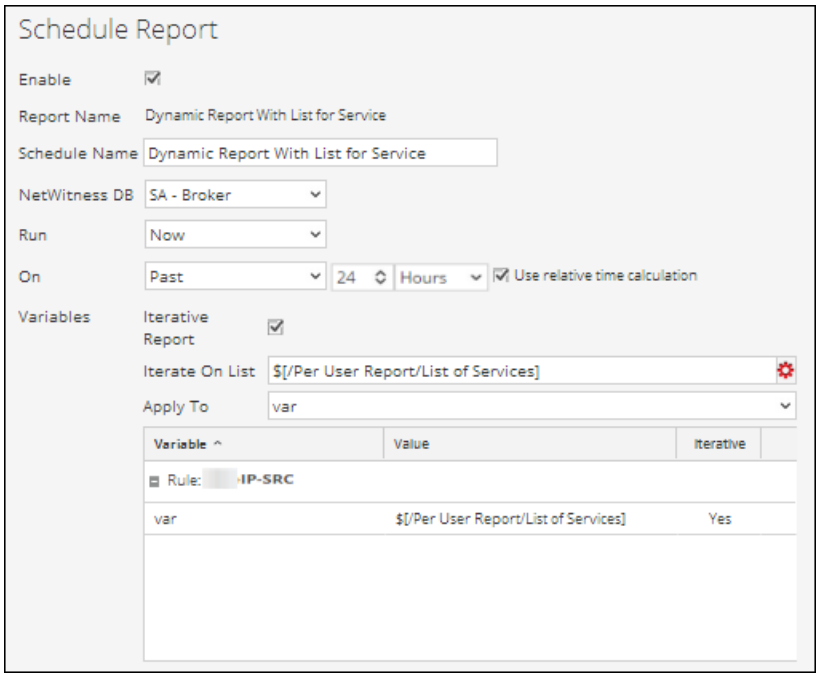
Quick View

To access this view:

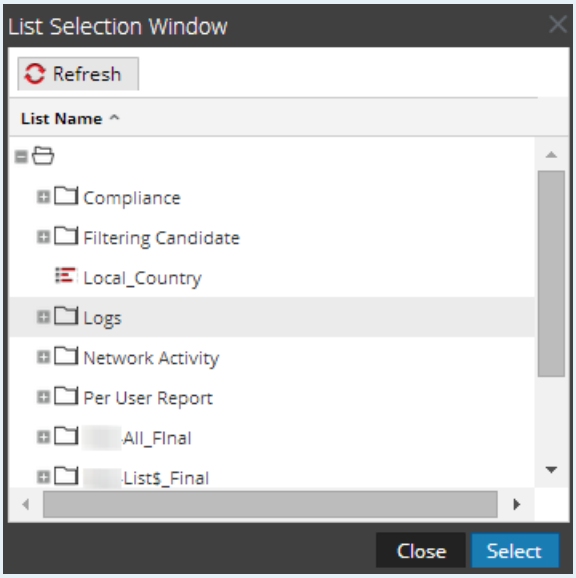
1. Go to **Reports**.
   The Manage tab is displayed.
2. Click **Reports**.
   The Reports view is displayed.
3. In the **Reports** panel, click > **Schedule Report**.



Features

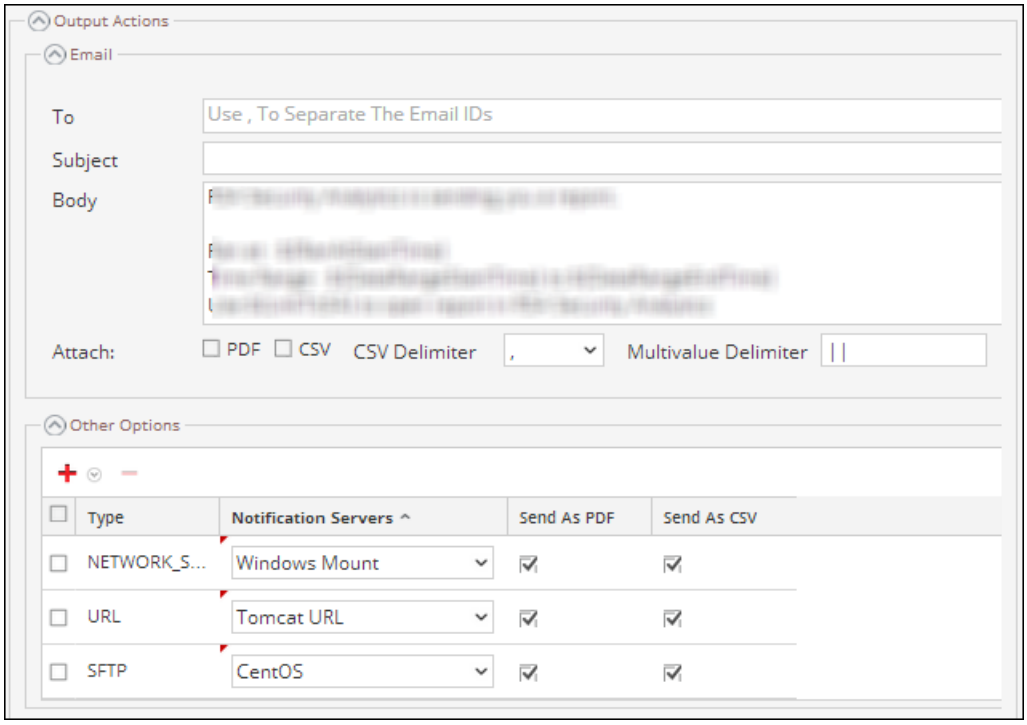
The Schedule Report view consists of the following panels:

1	Schedule Report View
2	Output Actions Panel
3	Dynamic List Panel
4	Logo Panel



Schedule Report View

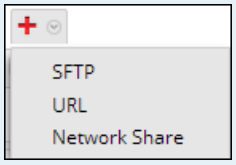
The Schedule Report view allows you to schedule reports.



The following table lists the fields in the Schedule Report panel.

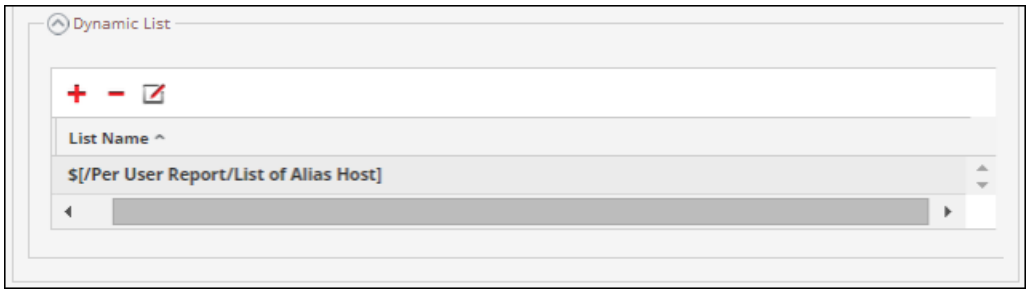
Field	Description
Enable	Enables the report schedules and runs the report.
Report Name	The name of the report.
Schedule Name	The name of the scheduled report configuration.
NetWitness DB	The database can be NWDB and Warehouse DB depending on the type of database that you selected in the rule definition. If the report has rules of NWDB and Warehouse DB types, all the database types or rule types are displayed.
Warehouse Resource Pool	If the report has rules of Warehouse DB, the Warehouse Resource Pool drop-down is displayed to select the pools or queues available in the cluster. If no pools or queues are entered for the Reporting engine, this field is disabled. For more information, see "Step 5: Configure Task Scheduler for a Reporting Engine" topic in the *Host and Services Configuration Guide*.
Run	Provides the type of schedule for the run configuration: • Ad-hoc execution • Hourly execution • Daily execution • Weekly execution • Monthly execution
On	The data range on which the query is run.

Field	Description
Use relative time calculation	Uses the relative time duration to schedule a report.
Iterative Report	Select the checkbox to schedule a report for the selected list value.
Iterate on List	Click this button to navigate to the List Selection panel and select a list. The following figure displays this panel:  The List Selection panel is a collection of Lists. The Reporting Engine maintains an active list of the available list names by continuously synchronizing with the collection to which it is connected.
Apply To	Apply list values on the selected variable.
Variables	Displays the rule variables along with their associated values and the iterative properties included in the report. **Note:** Depending on the rule chosen while creating a report, you can view dynamic variables defined for the rule in the **Variables** field of the Schedule Report panel. For example, Test-Country is the rule having the dynamic variable var.
Schedule	Schedules the report.
Reset	Resets the scheduled report.
Configure	Allows you to alter the Reporting Engine configuration details on the "Reporting Engine General Tab" topic in the *Host and Services Configuration Guide*. **Note:** This button is visible on the Schedule Report panel only when you have the 'Manage Device' access permissions on the Reporting module.



Output Actions Panel

The Output Actions panel specifies output actions to notify the email recipient when the report execution completes and also sends reports in PDF and CSV formats as attachments in the email, based on your selection.



The following table lists the fields in the Output Actions panel.

Field	Description
To	A comma-separated list of email addresses to receive the output.
Subject	The subject entered in the mail.
Body	The body of the email. By default, the body field is populated with pre-defined text that has certain variables that will add meta appropriate to the generated report. In the Reporting Engine, these variables are replaced with actual values. • `${RanAtStartTime}` : The Start time of the report. • `${DataRangeStartTime}` : The Start time of the data time range. • `${DataRangeEndTime}` : The End time of the data time range. • `${LinkToSA}` : The link to the NetWitnessHost from the email which in turn opens the report in NetWitness interface. • `${ReportName}` : The name of the report. • `${DataSource}` : The name of the data source.

Field	Description
Attach:	The output format in which the report is attached to the email, such as PDF or CSV as configured in the Schedule Report dialog.
CSV Delimiter	The default CSV delimiter is comma (,). If the CSV content contains a comma, you must identify a unique separator so the content is stored in its original form. For example, if msg is a column in the report to be saved as CSV and the msg content is as follows: `ASA-SSM-CSC-20 Module in slot 1," application reloading ""CSC SSM""," version ""6.2.1599.0"" CSC SSM scan services are reloading because of a pattern file or configuration update` The above content will be included in three columns due to the commas (,). To avoid this, you must specify a different delimiter such as a pipe line character "|". **Note:** To import the CSV file into Microsoft Excel, use the Data > From Text option in the Excel application. When you import the CSV file you must specify the file type of the file being imported as Delimited and use the same delimiter that you specify to generate the CSV file.
Multivalue Delimiter	The data in multivalued fields are separated by the multivalue delimiter. The default Multivalue delimiter is two pipe line characters (||).
Other Options	You can select an SFTP, URL, or Network Share location configured in ((RE}} and then send the report either in PDF or CSV format based on the requirement.
	Select this option to send the report to the SFTP, URL or Network Share location configured in the Reporting Engine Services Config view.
Type	The type of output action chosen. For example, SFTP, URL or Network Share.
Output Actions	Select the SFTP, URL or Network Share name configured in the Reporting Engine Services Config view.
Send as PDF / Send as CSV	Select these options to send the report either in PDF or CSV format, or both to the configured Notification Server (SFTP, URL or Network Share).

Dynamic List Panel

The Dynamic List panel populates the lists created and you can add, edit or delete the list. The list is generated based on the scheduled report which can be viewed in the Lists view.

The following table lists the operations in the Generate List panel.

Operation	Description
	Adds a new list to the report.
	Deletes all the lists added to the report.
	Displays the Generate List dialog.
List Name	The name of the list chosen from the List Selection panel. For more information on the List Selection panel topic, see Generate List Panel.

Logo Panel

The Logo panel populates the default logo from the Select a Logo panel. For more information on choosing a logo from this panel, see "Manage and Select a Report Logo" section in the Manage Lists, Rules or Reports.

You can set the default logo for a Reporting Engine. This is the logo that is used in the generated reports. For more information on choosing a logo, see Select a Logo Dialog.

Note: If you have not selected any logo then the default NetWitness logo is used on the report. The option **Save as PDF** for the previously executed reports does not support a new customer logo. It displays the default NetWitness Logo, if the customer logo must be displayed in the Schedule a Report view.

Scheduled Reports View

The Scheduled Reports view allows you to create, view and manage scheduled reports.

Workflow

This workflow shows the procedure to create and schedule a report.

What do you want to do?

Role	I want to ...	Show me how

- Build Report View
- Report View

- Schedule Report Panel
- Reports Permissions Dialog

Quick View

To access this view:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

3. In the **Reports** panel, do one of the following:

   - Click  > **View Scheduled Reports**.
   - Click the **Schedules** column.

Features

The View Scheduled Reports has the following features:

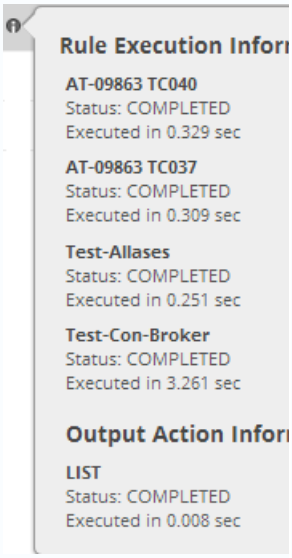
1	Report Schedule Toolbar
2	Report Schedule List panel

Report Schedule Toolbar

The Scheduled Reports has options to add, modify and delete the scheduled report as well as options to enable or disable the selected run configuration.

The following table lists the operations in the Scheduled Reports toolbar.

Operation	Description
	Create a new report schedule.
	Delete the selected report schedule.
	Edit the selected report schedule. **Note:** Double-click on a desired report schedule to edit it.
	Enables the selected report schedule.
	Disables the selected report schedule.
	View the history of the scheduled report.
	Filter schedules based on the type of schedule. (For example, AdHoc)
	Allows you to set permissions for the selected scheduled report.
	Automatically refreshes the scheduled reports list.
	Searches schedules based on the schedule name.

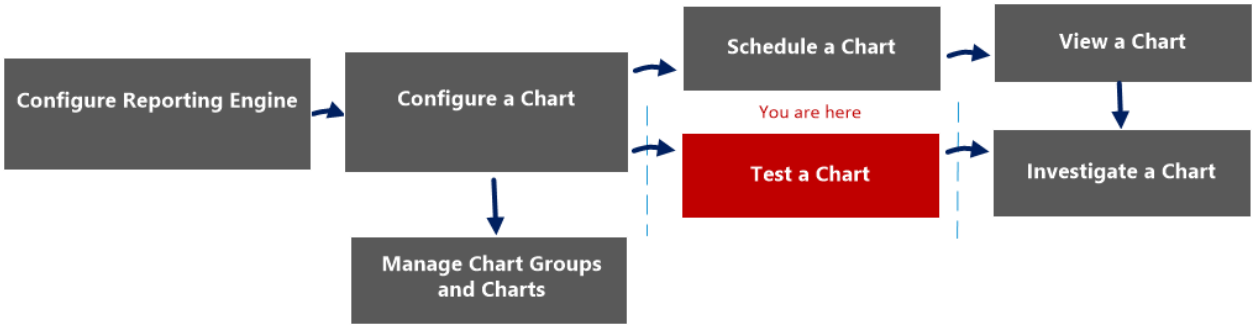


Report Schedule List Panel

The Scheduled Reports List panel lists the scheduled reports in a tabular format.

The following table lists the columns in the Scheduled Reports List panel:

Column	Description
Name	The name of the scheduled report.
Schedule	The type of schedule for the run configuration: • Ad-hoc execution • Hourly execution • Daily execution • Weekly execution • Monthly execution
Last Run	Displays the last time the report was run.
Duration(H:M:S)	Displays the time taken for last execution of the report.



Column	Description
Avg (H:M:S)	Displays the average time taken to run the report.
State	Indicates the state of the scheduled report. • Scheduled: If a report is scheduled to run on an hourly, daily, weekly, monthly, or later time, the state of the report is displayed as scheduled, for the first run. • Queued: If a report is still waiting to get executed, the state of the report is displayed as queued. • Running: If the report schedule is in progress, the state of the report is displayed as running. • Partial: If in a report with several rules, a single rule execution failed or an output action failed or creation of PDF/CSV failed, the state of the report is displayed as partial. For example, consider a report with five rules and four rules are executed successfully and one fails, then the state is displayed as Partial. • Failed: If in a report with several rules, all the rule schedule executions failed, the state of the report is displayed as failed. • Completed: If a report schedule is successfully executed, the state of the report is displayed as completed. • Canceled: When cancel request is completed, the state of the report is displayed as canceled. • Inactive: If a report schedule is disabled, the state of the report is displayed as Inactive. • Not available: If the report schedule executed information is not available, the state of the report is displayed as not available.

Column	Description
	Click to view the rule execution information and output action information. This pop-up notifies the status of multiple rules in a report and the time taken for its execution. **Note:** You can view the rule execution and output action information for a scheduled report having the state **Completed**, **Running**, **Partial** or **Failed**. By default, the Output Actions for Completed Report on Reporting Engine Config page is set to enable, to receive an email when the report status is completed. To receive an email for **Failed** or **Partial** reports, you must disable this option.
View Report	Click to view the rule execution information on the View a Report Panel. You can view the rule execution information for a scheduled report having the state 'running' as well.

Test a Chart View

In the Test a Chart view, you can view and test the charts.

Workflow

Quick View

The following figure is an example with the important features labeled.

The Test a Chart view consists of the following panels:

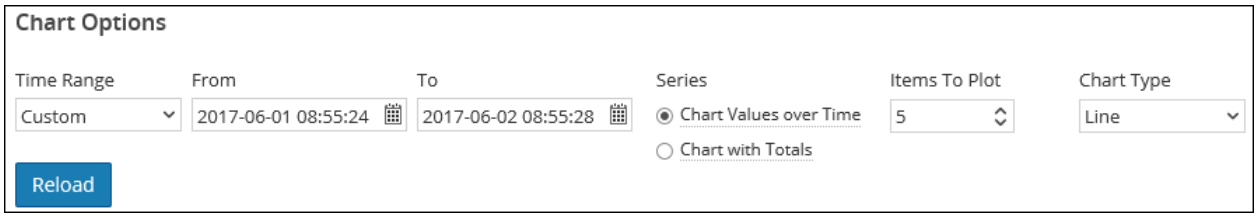
1 Chart toolbar
2 Chart Output panel
3 Chart Options panel

Chart Toolbar

The Charts toolbar allows you to investigate on a particular chart and change the screen to full screen.

Feature	Description
Investigate	Investigates further on the selected chart.
Full Screen	Displays the chart in full screen.

Chart Output Panel



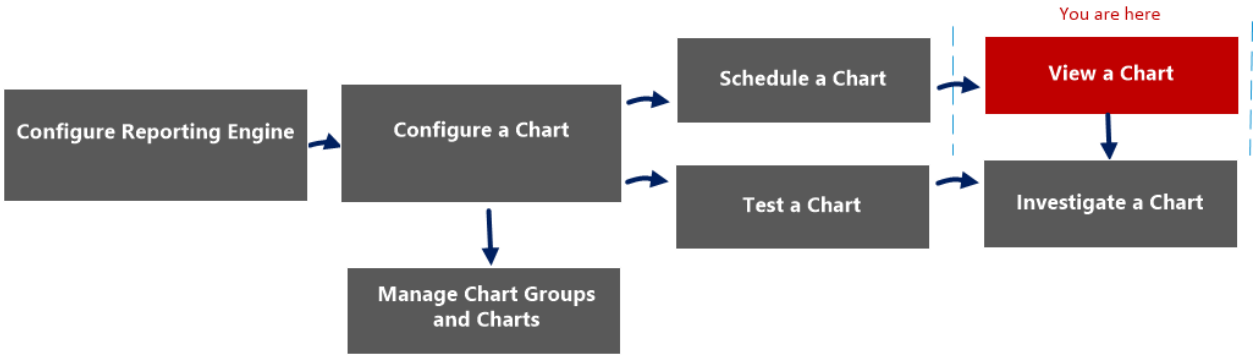
The Chart Output panel displays the information in a chart format for the selected time chart options.

The following table lists the features in the Test a Chart View and their descriptions.

Feature	Description
Display	Allows you select the values that needs to be displayed and have the following options: X Axis, Y Axis and Legends.
X Axis	Displays the session count.
Y Axis	Displays the actual output.
Legends	Displays the list of variables appearing in the chart.

Chart Options Panel

The following figure shows the Chart Options panel, which displays the time range, series, and chart type fields to configure the chart display.



The following table lists the fields in the Charts Options panel and the descriptions.

Feature	Description
Time Range	The default time range is Last 3 Hours. However, you can select a different value from the drop-down list, for example, Last Hour, or Last 6 Hours which are the preset values. Or you can customize by selecting Last N Days or the Custom option.
From	The start date and time. (only for custom options).
To	The end date and time. (only for custom options).
Series	The series field provides you with two options: • Chart Values over Time: Renders the chart for the entire time range selected. • Chart with Totals: Renders the summary of data for the selected date range.
Items to Plot	The maximum number of events the user wants to view on the chart.
Chart Type	The type of chart to be rendered either area, bar, column, line, step line, step area, spline area or spline.

View a Chart Panel

In the View a Chart panel, you can view and manage charts. There are options for filtering and sorting the information in the chart, as well as options for the type of chart, the number of items to chart, and charting values or totals. When viewing a chart, you can open the charted sessions in the Investigation module and save the chart as a PDF.

Quick View

The following figure is an example with the important features labeled.

The View a Chart panel includes the following panels:

1. Chart toolbar
2. Chart Output panel
3. Chart Calendar panel
4. Chart Options panel
5. Chart Executed list

Chart Toolbar

The Chart toolbar has options that allow you to investigate, and view the chart on another screen.

The following table lists the options in the Chart toolbar.

Operation	Description
Investigate	Investigates the chart details.
Full Screen	Displays the chart on a full screen.

Chart Output Panel

The Chart Output panel displays the chart with sortBy on the Y-axis, time on the X-axis and legends.

Note: You can save the chart as PDF using the icon on the Chart Output panel.

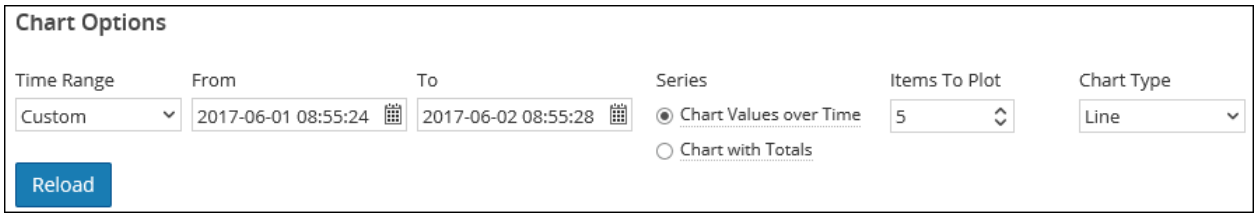

Chart Calendar Panel

The Chart Calendar panel is the default calendar with which you can filter the list of charts depending on the date you select from the Calendar, as shown in the following figure.

Chart Options Panel

The Chart Options panel displays the time range, series, and chart type fields to configure the chart is displayed.

The following table lists the fields in the Chart Options panel.

Field	Description
Time Range	The default time range is Last 3 Hours. However, you can select a different value from the drop-down list, for example, Last Hour, or Last 6 Hours which are the preset values. Or you can customize by selecting Last N Days or the Custom option. **Note:** The time range selected by you for a chart will be saved. When you open the same chart the next time, the time range that is saved will be displayed. This behavior is not applicable for the custom option.
From	The start date and time. (only for custom options)
To	The end date and time. (only for custom options)
Series	The series field provides the user with two options: • Chart Values over Time: Renders the chart for the entire time range selected. • Chart with Totals: Renders the summary of data for the selected date range.

Field	Description
Items to Plot	The maximum number of events the user wants to view on the chart.
Chart Type	The type of chart to be rendered. Either area, bar, column, line, step line, step area, spline area or spline.

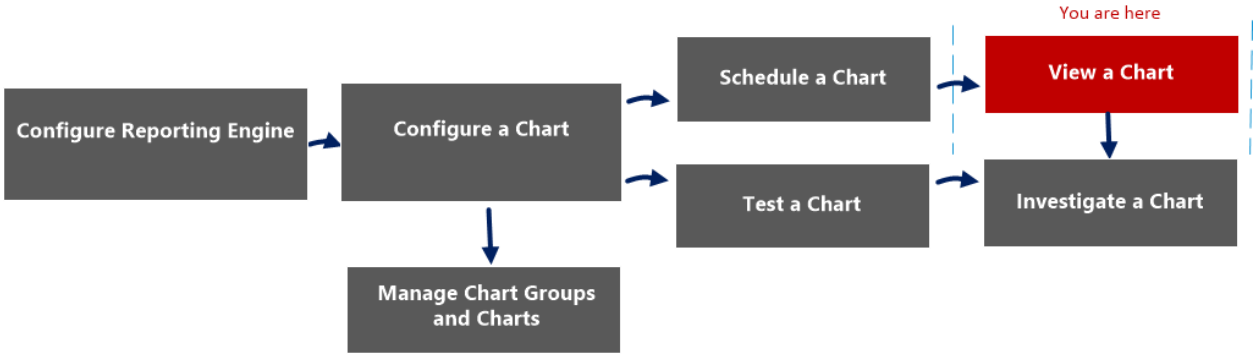

Chart Executed List Panel

The Chart Executed List panel displays all the executions for a particular chart for the selected date. Double-clicking on any chart execution loads the chart on the Chart Output panel. By default, the last executed chart is displayed in the Chart Output panel.

View All Charts View

In the View All Charts view, you can display, print, save and email charts.

Quick View

To access this view:

1. Go to **Reports**.

   The Manage tab is displayed.

2. Click **Reports**.

   The Report view is displayed.

3. In the **Reports** panel, do one of the following:

   - Click  >**View Scheduled Reports**.
   - Click the **#Schedules** column.

     The Report Schedule view is displayed.

4. Click **View**.

Features

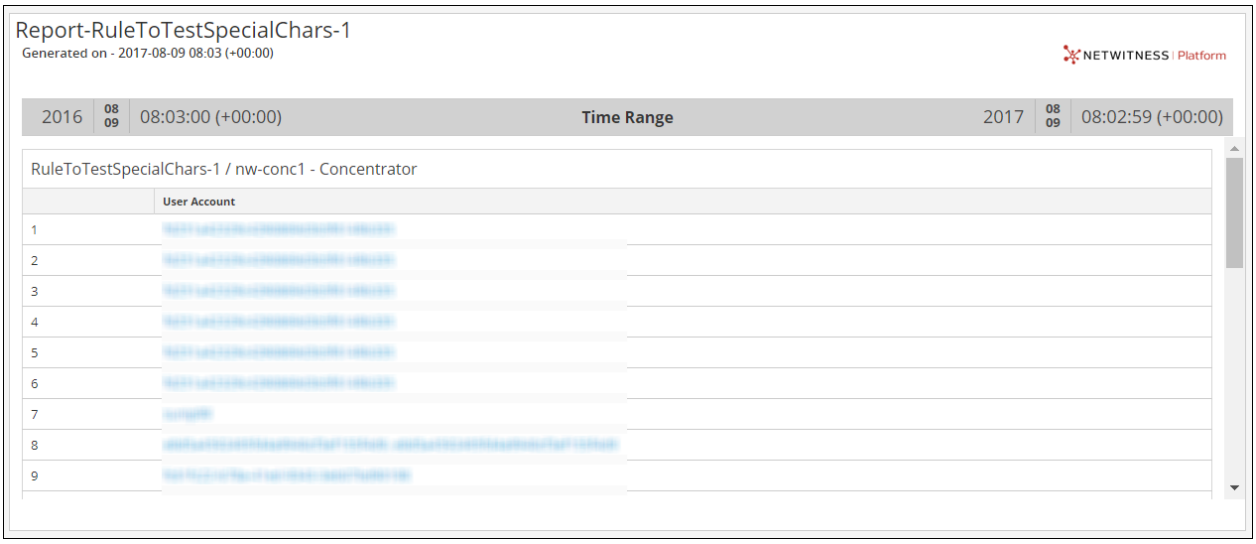
The View a Report panel has the following sections.

1	Reports Toolbar
2	Reports Output panel
3	Reports Calendar panel
4	Reports Time panel

Reports Toolbar

The Reports toolbar allows you to print, save, email, and view reports on full screen.

Note: The Reporting Engine is responsible for generating PDF and CSV output of the reports based on the report definition. The size of the PDF files for a report must not exceed 50,000 cells.



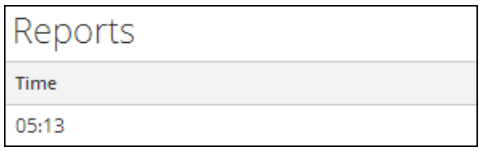
The following table lists the options in the Reports toolbar.

Operation	Description
	Prints the generated report.
	Saves the report as a PDF and a CSV file. **Note:** The **Save As PDF** option is not available for a large report. If you are generating a PDF for a report and it takes a longer time than expected, you get a warning message stating **PDF generation is in progress, please try after some time**. When you click download as a CSV file, the Select Rule to download dialog is displayed. You must select a rule from this dialog to download the rule result in a CSV file. If the file generation takes a while, you can click on the **Notify me** option to be notified once the PDF or CSV is generated. Once the PDF or CSV is generated, you can view the Notifications for the status.
	Emails the report with the PDF or CSV attachment.
	Opens the generated report on a new window.

Reports Output View

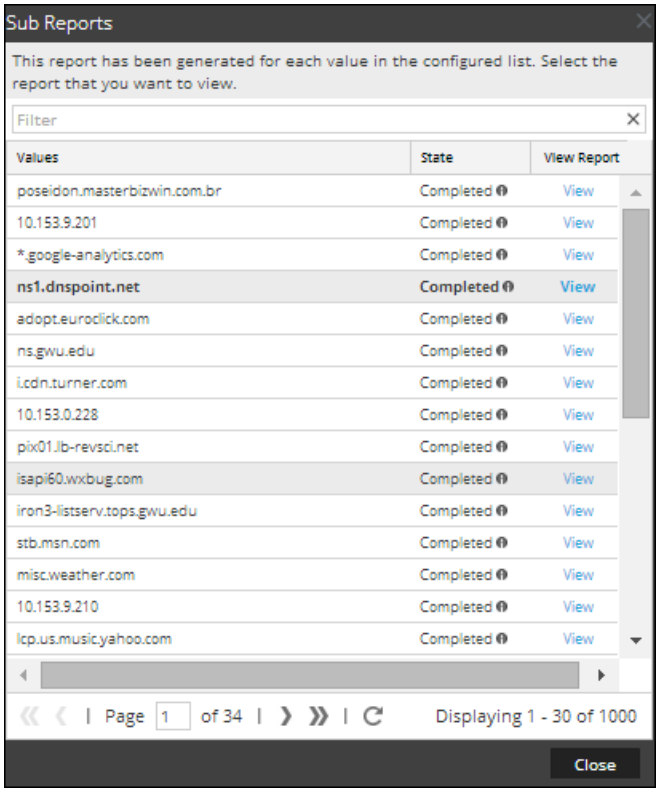
The Reports Output panel view the report with the report schedule name, report generated time and the actual report with the selected rule variables.

Feature	Description
Name	This field displays the name of the scheduled report.
Time	This field displays the time when the report is generated.
Report	This field displays the details report with the selected rule variables.



Reports Calendar View

The Reports Calendar view is used to select a date from the Calendar. Based on the date you select, the list of successfully run reports for the date is displayed.



Reports Time View

The Reports Time view displays the time when the report was actually run.

When you click **View** on the scheduled report having **Iterative** selected, the **Sub Reports** panel is displayed. For each value in the configured list a report is generated.

The following table lists the columns in the Sub Reports panel.

Column	Description
Values	The List values chosen for a dynamic variable from the List Selection panel.
State	Indicates the state of the scheduled report for each of the list values. • Partial: If in a report with several rules, a single rule execution failed or an output action failed or creation of PDF/CSV failed, the state of the report is displayed as partial. For example, consider a report with five rules and four rules are executed successfully and one fails, then the state is displayed as Partial. • Failed: If in a report with several rules, all the rule executions failed, the state of the report is displayed as failed. • Completed: If a report is successfully executed, the state of the report is displayed as completed.

Column	Description
View	Clicking on any of the report schedules or sub reports listed and then **View** displays the desired report. **Note:** You can view the completed rules on the **View a Report** page even when the report is 'running'.

View All Reports View

In the View All Reports view, you can display, print, save and email reports.

Alerting Overview

Quick View

The following figure is an example with the important features labeled.

1. Click **Alerts** to open the Alert view.
2. The Alert toolbar allows you to add, modify, delete, enable, disable, refresh, import, and export an alert. Using this toolbar, you can also set access permissions for the selected alert.
3. The Alert panel lists all the alerts in a tabular format.

The Alerts List view has the following panels:

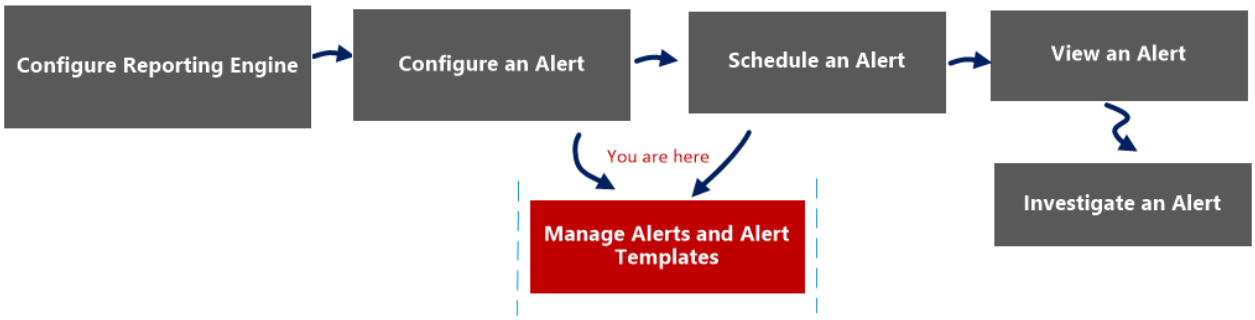
- Alert Toolbar
- Alert

Alert Toolbar

The Alert toolbar panel has the following features:

Feature	Description
	Adds a new alert to the Reporting module.
	Deletes one or more selected alerts.
	Edits an alert.
Enable	Enables the selected alerts.
Disable	Disables the selected alerts.
	Refreshes the view.
	Enables the following options: Import, Export and Permissions.

Alert



The Alert panel lists all the alerts in a tabular format. The following table lists the columns in the Alert panel and their descriptions.

Feature	Description
Enabled	Displays the state of the alert: • Enabled - the alert is active and fires based on the rule assigned to it. • Disabled - the alert is not active.
Pushed?	Indicates whether the alert is sent to Decoders or Log Decoders: • Yes - Alert is pushed to Decoders or Log Decoders. • No - Alert is not pushed to Decoders or Log Decoders.
Name	Identifies the name of the alert. Clicking the alert name displays the rule on which this alert is based in the Define Rules panel.
Description	Indicates the alert description.
Actions	Indicates the action the system takes when the alert fires. The different available action types are as follows: • Record • SMTP • SNMP • Syslog

Alert Permissions Dialog

In the Alert Permissions dialog, the users with 'Read & Write' access permission can set access permissions for an alert to configure permissions in the Alert Permissions dialog.

Workflow

Alerting Overview

Quick View

The Alert permissions dialog allows you to set alert permissions depending on the user role.

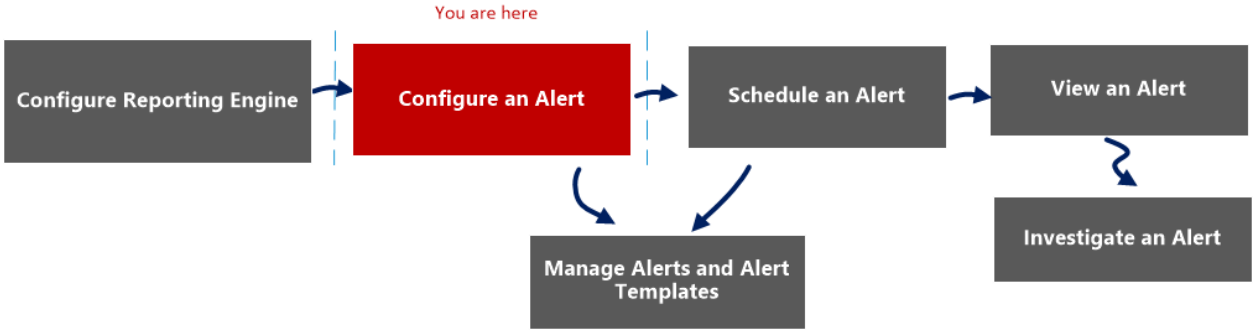
The following figure is an example with the important features labeled.

1. Click **Alerts** to open the Alert view.
2. Click ⚙ > **Permissions**. The Alert Permissions dialog box is displayed.
3. Based on the user role, select the appropriate options.
4. (Optional) Select the checkbox if you want to automatically provide read access permission to dependent rules.
5. Click **Save**.

Note: If a User (other than a super user) creates an alert, super users will not be able to access the alert.

The following table lists the columns in the Alert Permissions dialog.

Column	Description
Roles	Displays all the user roles in the NetWitness user interface.



Read & Write	Allows you to apply 'Read&Write' access to the alert.
Read Only	Allows you to apply only 'Read' access to the alert.
No Access	By selecting this permission, you cannot access or view the alert.
Apply Read-only permission to Rules in the Alerts	Allows you to automatically apply permissions to the rules in the alerts.
Cancel	Cancels all the changes made to the permissions.
Save	Saves the selection and provides access to the role based on the selection.

Alert Schedules View

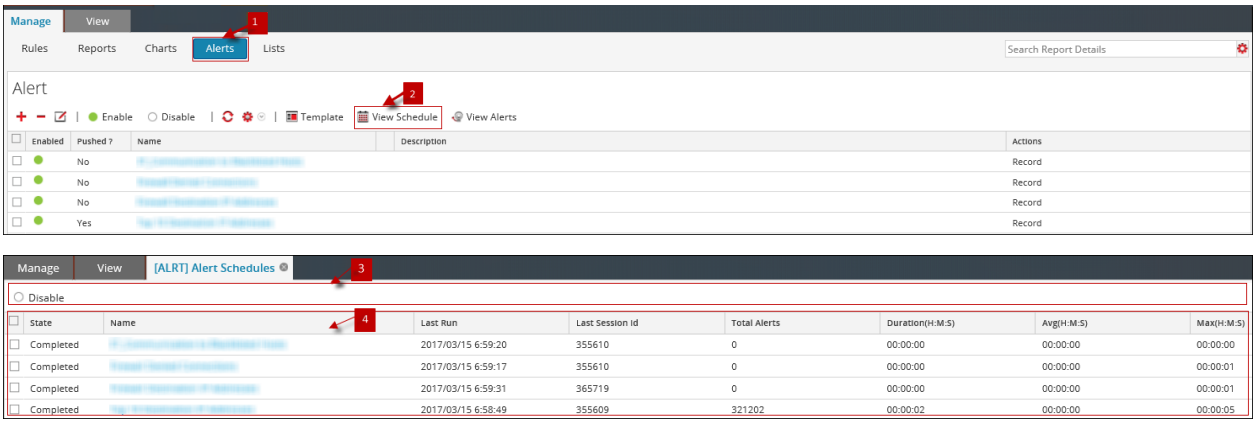
In the Alert Schedules view, you can view all the alerts scheduled. Alternately, you can also disable the scheduled alerts.

Workflow

The following workflow shows the tasks involved in creating or modifying an alert.

What do you want to do?

Role	I want to...	Documentation
Administrator/ Analyst	Configure Reporting Engine	Configure Reporting Engine
Administrator/ Analyst	Configure an alert*	Configure an Alert
Administrator/ Analyst	Schedule an alert	Schedule an Alert
Administrator/ Analyst	View an alert	View an Alert
Administrator/ Analyst	Investigate an alert	Investigate an Alert
Administrator/ Analyst	Manage an alert and alert template	Manage an Alert and Alert Template



*You can complete these tasks here.

Alerting Overview

Quick View

The following example shows you how to access the Alert Schedules view dialog.

1 Click **Alerts** to open the Alert view.
2 Click **View Schedule** to open the View Alerts Schedule view.
3 The Alerts Schedule toolbar allows you to modify the state of the scheduled alert.
4 The Alerts Schedule List panel lists only the Enabled alerts in a tabular format.

Features

The different panels on the Alert Schedules View dialog are:

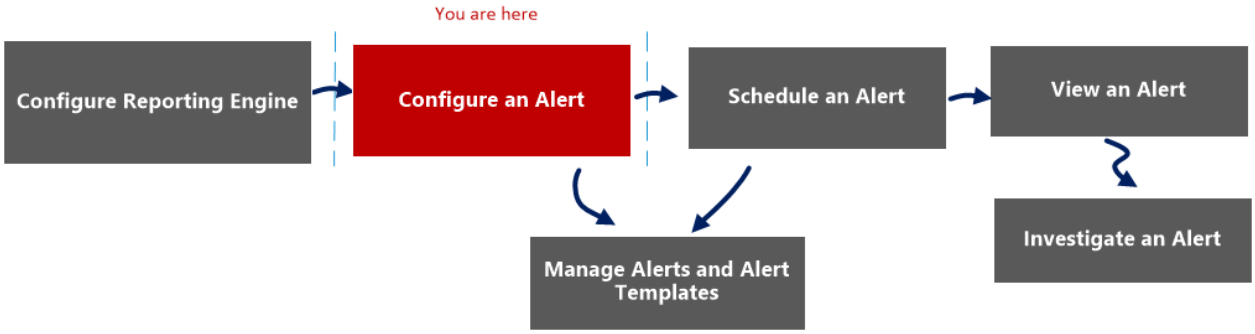
- Alerts schedule toolbar panel
- Alerts schedule list panel

Alerts Schedule Toolbar Panel

In the Alerts Schedule Toolbar panel, the Disable icon disables the selected alert. When schedule alerts are no longer needed or are determined to be ineffective, you can disable them so that they are no longer executed. You can select one of more alerts to disable. When an alert is disabled, it is removed from the scheduled alerts list so that you cannot view it here, and it will not execute again unless you manually execute the alert or set up a new schedule for it.

Alerts Schedule List Panel

The following table lists the columns in the Alerts Schedule List panel and their description.



Column	Description
State	The state of the scheduled alert: • Completed • Failed
Name	The name of the scheduled alert.
Last Run {#time}	The last time the scheduled alert was run.
Last Session Id	The Session Id of the last scheduled alert.
Total Alerts	The total number of event occurrences.
Duration	The time taken to run the scheduled alert.

Column	Description
Avg (s)	The average time taken to run the scheduled alert.
Max (s)	The maximum time taken to run the scheduled alert.

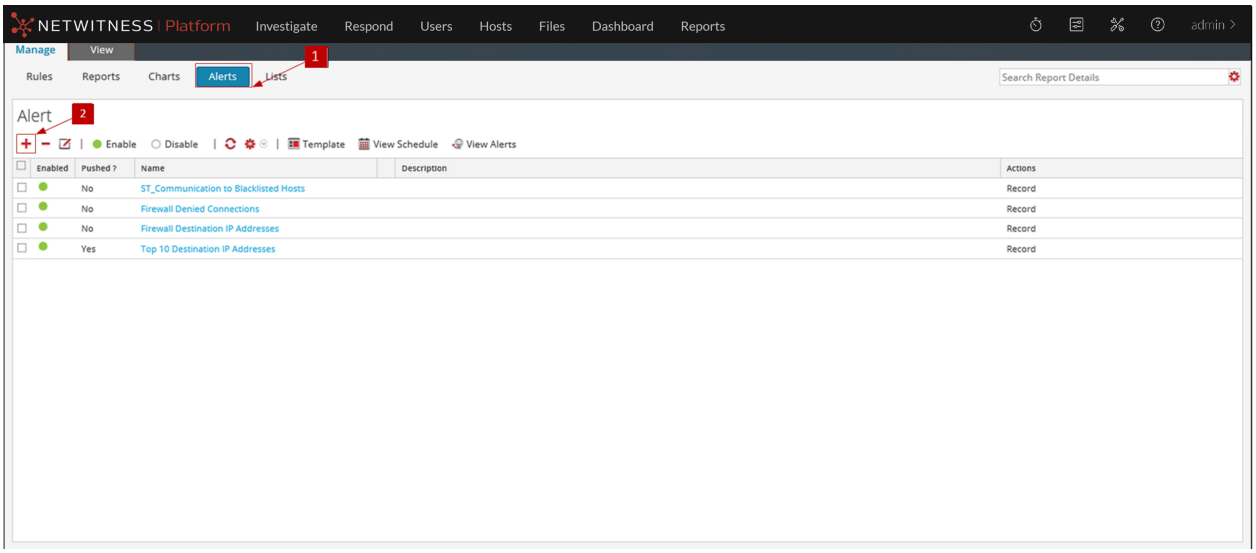
Create or Modify Alert Panel

The Create or Modify alert panel is a panel in the Alert List view. This panel allows you to create or modify an alert as per the requirement.

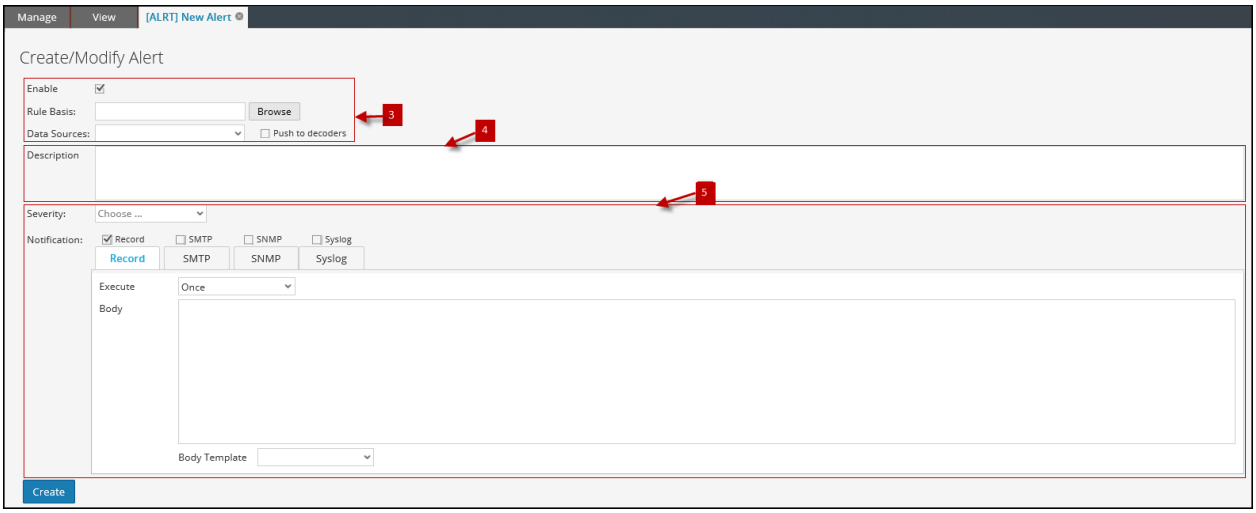
Workflow

What do you want to do?

Role	I want to...	Documentation
Administrator/ Analyst	Configure Reporting Engine	Configure Reporting Engine
Administrator/ Analyst	Configure an alert*	Configure an Alert
Administrator/ Analyst	Schedule an alert	Schedule an Alert
Administrator/ Analyst	View an alert	View an Alert
Administrator/ Analyst	Investigate an alert	Investigate an Alert
Administrator/ Analyst	Manage an alert and alert template	Manage an Alert and Alert Template



*You can complete these tasks here.



Related Topics

Alerting Overview

Quick View

The following figure is an example with the important features labeled.

1. Click **Alerts** to open the Alert view.
2. Click + to navigate to the Create or Modify Alert panel.
3. Enable the alert, navigate the rule, and select a data source to alert.
4. Enter a brief description of an alert.
5. Define the alert notification methods(RECORD, SMTP, SNMP, Syslog) to alert, when an alert condition is matched.

The Create or Modify Alert panel has the following sections:

- Alert Definition
- Alert Description
- Alert Notification

Alert Definition

The following table describes the fields in the Alert Definition:

Field	Description
Enable	• **Enable** activates the alert. The alert executes and sends output actions every minute (by default) when the alert conditions are met. • **Disable** deactivates the alert. The alert does not execute and does not send any output actions.
Rule Basis	Click **Browse** to display the Rules Library panel from which you select the rule that is the basis of this alert. You must select a rule that has a unique 'where' clause for an alert.
Data Sources	Specifies the data source for the alert.
Push to decoders	Pushes the ‘where’ clause of the alert rule to Decoders connected to the selected NWDB data source. This is the recommended option used to create RE alerts, as the alert conditions are checked on the Decoder itself and the alert queries will be comparatively faster in NWDB. If you deselect this option, the alert rule ‘where’ clause will be queried against the selected NWDB data source. Based on the complexity and metas in the ‘where’ clause of the rule, the alert queries might take more time to process in NWDB. **Note:** NetWitness does not send rules to the Decoder automatically.

Alert Description

The following table describes the fields in the Alert Description:

Field	Description
Description	Describes the alert.
Create	Creates the alert. (This option is displayed when you create an alert.)
Save	Saves the changes made to the alert. (This option is displayed when you modify an alert.)

Alert Notification

The Alert Notification allows you to define the notification action NetWitness takes when an alert is generated, for example, recording or sending the alert using one of the defined output actions. The output actions are Simple Mail Transfer Protocol (SMTP), Simple Network Management Protocol (SNMP), or Syslog message.

The Notification contains the default Record tab, which you use to create an alert. The icon beside the Record tab allows you to select the notification type from the drop-down list for the output to specify for the alert: SMTP, SNMP, or Syslog.

Depending on the selected notification type, the Notification section is populated with predefined text that contains variables that add Meta that is appropriate for the alert. In the Reporting Engine, these variables are replaced with actual values. The following table lists the variables and their descriptions.

Variable	Description
`${meta.<metakey>}`	The meta key value. **Note:** If the <metakey> did not fetch any value, an empty string("") is printed. By default, Reporting Engine displays all the repeated values for a meta key. If you do not want the meta values to repeat in the Alert output, enable the "removeRepeatedMetaValue" option by navigating to **Configuration > Alert Configuration** available for the Reporting Engine in the **Services - Configuration > Explore** view. For example, in an HTTP Session the value for the action is displayed as get, get, put, put, post, get. When this option is enabled, the value is displayed as get, put, post.
`${meta.time}` / `${meta.time:<time_format>}`	`${meta.time}` - The session time is printed in "yyyy-MMM-dd HH:mm:ss" format. `${meta.time:<time_format>}` - The session time is printed in the user-defined custom time format. For example, `${meta.time:dd-MM-yyyy HH:mm:ss}`. For more information on the supported time formats, see http://docs.oracle.com/javase/7/docs/api/java/text/SimpleDateFormat.html **Note:** If the time format provided by the user is invalid, the default time format will be used. The default time format is "yyyy-MMM-dd HH:mm:ss".
`${name}`	The alert name defined in Reporting Engine.
`${count}`	The number of times an alert is detected in a given time frame. (By default, it is one minute)
`${nw.host}`	The NetWitness host name as configured in Reporting Engine.
`${device.id}`	The NetWitness device ID of the data source.

The Alert Notification view has four tabs:

- **Record Tab**
- **SMTP Tab**
- **SNMP Tab**
- **Syslog Tab**

Record Tab

Use the Record tab to define the frequency for recording an alert and the message to generate when an alert is generated.

The following table lists the fields in the Record tab and their description.

Field	Description
Execute	The frequency for recording an alert. • **Once** - Record the alert only once based on the alert interval no matter how often the alert is generated. NetWitness records the number of times the alert has actually generated during that interval in the log file so that analysts know how many times the alert registered a match over a given day. • **Each Event** - Record the alert each time as it generates. If an alert generates unlimited number of times during a day, that alert is often treated as noise and can be ignored, except in case of alerts that require continuous monitoring such as network configuration changes and DDOS attacks. **Note:** Select **Each Event** setting from the **Execute** drop-down list for SNMP and Syslog output actions.
Body	The body of the message.
Body Template	(Optional) If templates have been defined, select a template for the alert message.

SMTP Tab

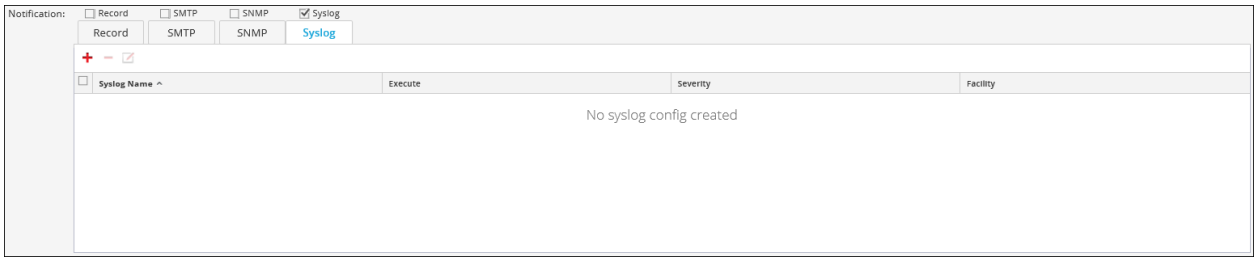
The SMTP tab allows you to define the SMTP (email) output for this alert.

The following table lists the fields in the SMTP tab and their description.

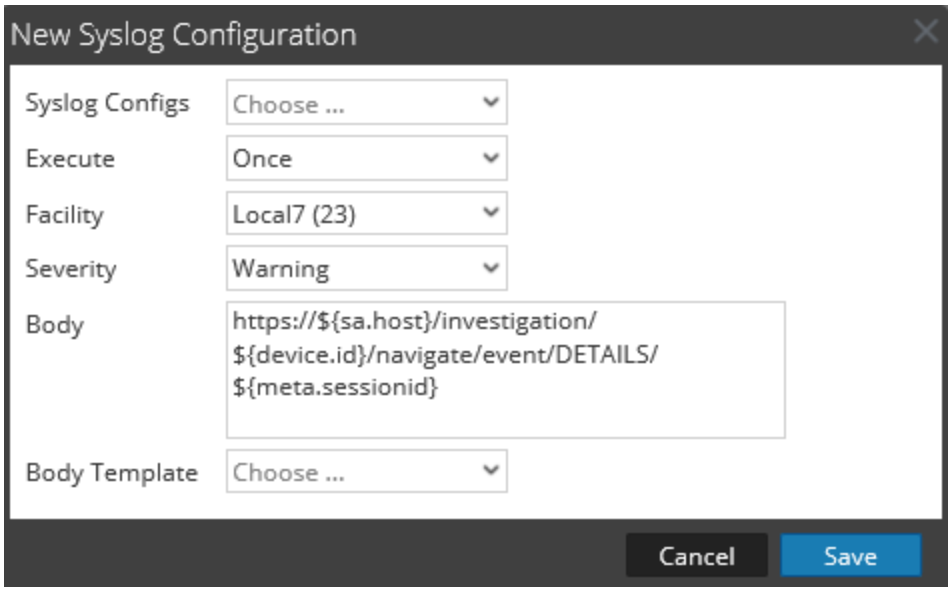
Field	Description
Execute	The frequency to send an email message for the alert. • **Once** - Sends only one email for an interval, if an alert generates in that interval, irrespective of how many alerts generated. • **Each Event** - Send an email with the alert for every event in which the rule criteria are met.
To	The email addresses to which to send this alert.
Subject	The subject of the email message.
Body	The body of the message.
Body Template	(Optional) If templates have been defined, select a template for the SMTP message that you can use as is or modify.

SNMP Tab

The SNMP tab allows you to define the SNMP output for the alert.



The following table lists the various fields in the SNMP tab and their description.



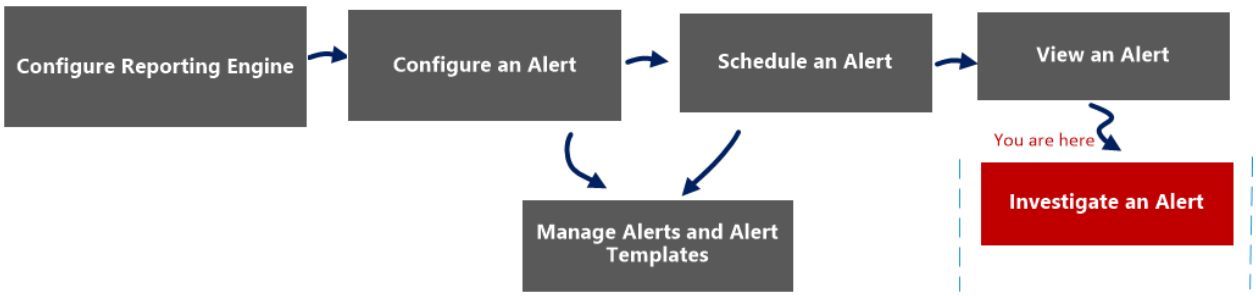
Field	Description
Execute	The frequency to send an SNMP output for an alert. • **Once** - Sends an SNMP message along with an email for an interval, if an alert generates in that interval, irrespective of how many alerts generated. • **Each Event** - Sends an SNMP message with the alert for every event in which the rule criteria are met.
Body	The body of the message.
Body Template	(Optional) If templates have been defined, select a template for the SNMP message to use as is or modify.

Syslog Tab

The Syslog tab allows you to define the Syslog message output for this alert.

Click  to add Syslog configuration to an alert. The New Syslog Configuration dialog box is displayed:

The following table describes the fields in the New Syslog Configuration dialog:



Field	Description
Syslog Configs	The Syslog configuration of the Device Config view located at the Syslog Configuration panel.
Execute	The number of times that you want to send a Syslog output for the alert. • **Once** - Sends a Syslog output along with an email for an interval, an alert generates in that interval, irrespective of how many alerts generated. • **Each Event** - Sends a Syslog output with the alert for every event in which the rule criteria are met.
Facility	The type of program logging the message. Examples for the type of programs are Syslog, Daemon, Mail, and Kernel.

Field	Description
Severity	The severity level of the alert that generated. • Emergency • Alert • Critical • Error • Warning • Notice • Informational • Debug
Body	The body of the message.
Body Template	(Optional) If templates have been defined, select a template for the Syslog message to use as is or modify.

Investigate an Alert View

In the Investigate an Alert view, you can view and investigate alert details. When investigating an alert, you can open the sessions in the Investigation module for further investigation.

Alerting Overview

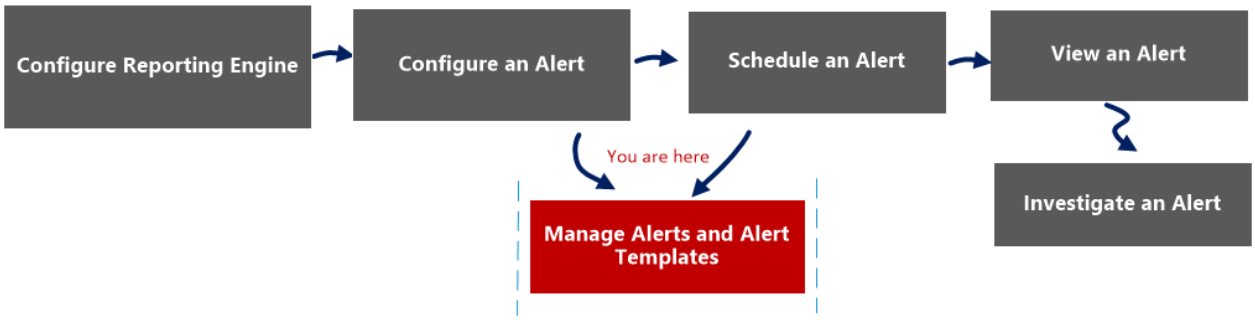
Quick View

The following figure is an example with the important features labeled.

The View an Alert view has the following panels:

- View Alerts Toolbar
- View Alerts List

View Alerts List



The following table lists the columns in the View Alerts List panel.

Column	Description
	The icon that opens the Investigation module, where the details of the first session that registered the match for the given alert is displayed for immediate analysis. **Note:** You are not redirected to the Investigation module when: -You reconfigure a data source for an existing alert and run an alert on the new data source. -You enter a host name instead of an IP address in the data source field.
Name	The name of the alert that registered the match. The hyperlink on the name opens the Investigation module to view all matches for that particular alert for the hour surrounding the registered alert.
Number of hits	The number of times the alert is generated.
Detected	The date and time at which the alert generates.
Message	The alert message.

Import Alert Dialog

The Import Alert dialog allows you to import an alerts archive and specify whether to overwrite existing rules, lists, and alerts.

Workflow

1 Click **Alerts** to open the Alert view.
2 In the **Alert** panel, select a folder to import the file.
3 In the **Alert** toolbar, click > **Import** to import an alert.

The following table lists the actions in the Import Alert dialog and their description.

Actions	Description
Browse...	Displays a view of the local zip file system so that you can select the alert to be imported.
−	Deletes the selected alert from the Import Alert dialog.
File Name	Name of the imported binary file.
Overwrite?	Selects the option to overwrite an existing version of the alert you are importing. If you do not select the Overwrite option, a duplicate file is imported and no error message is displayed.
Close	Closes the Import Alert dialog.
Import	Imports the alert with a confirmation message.

Alert Template References

The Reporting module user interface provides access to NetWitness alerts and alert templates as well. This topic contains descriptions of the user interface as well as other reference information to help users manage alert templates.

Alerting Overview

Quick View

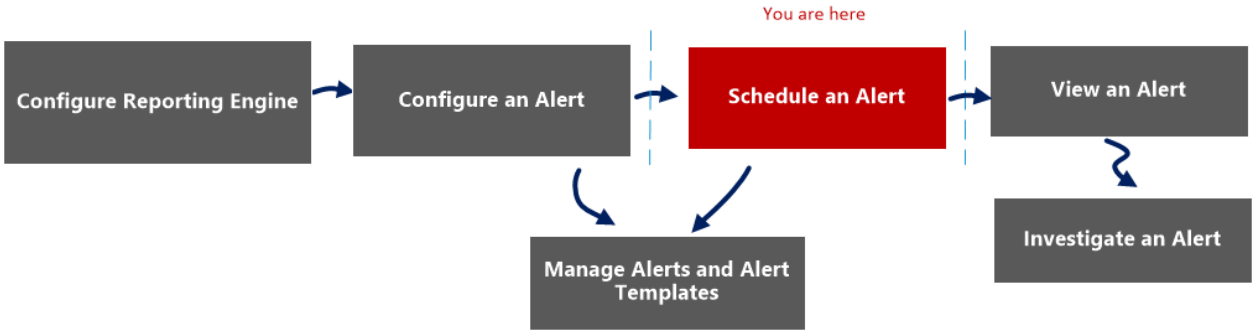
You can create or modify an alert template name and message on this view.

The following figure is an example of the Create or Modify alert template.

The following table describes the fields in the Create/Modify template.

Feature	Description
Name	Indicates the name of the template for Reporting alerts. For example, source IP.
Message	Specifies the message that will be sent when an alert is triggered.
Create	Creates the template with a confirmation message and becomes available for use in Reporting immediately.
Save	Saves the template with the edited details or when a new template is created. This button is visible only in the edit mode.
Cancel	Closes the dialog without saving the template or any changes made to the template.



View Alerts Schedule View

In the View Alerts Schedule view, you can view the following information about each of your scheduled alerts.

- Completion status, name, last run time, last session ID, total alerts triggered.
- Statistics about the time taken to run the scheduled alert: duration, average duration, maximum duration.

Note: You can also disable the scheduled alerts.
