

NetWitness[®] Platform

Version 12.4.1.0

Centralized Content Management

Contact Information

NetWitness Community at <https://community.netwitness.com> contains a knowledge base that answers common questions and provides solutions to known problems, product documentation, community discussions, and case management.

Trademarks

RSA and other trademarks are trademarks of RSA Security LLC or its affiliates ("RSA"). For a list of RSA trademarks, go to <https://www.rsa.com/en-us/company/rsa-trademarks>. Other trademarks are trademarks of their respective owners.

License Agreement

This software and the associated documentation are proprietary and confidential to RSA Security LLC or its affiliates and are furnished under license, and may be used and copied only in accordance with the terms of such license and with the inclusion of the copyright notice below. This software and the documentation, and any copies thereof, may not be provided or otherwise made available to any other person.

No title to or ownership of the software or documentation or any intellectual property rights thereto is hereby transferred. Any unauthorized use or reproduction of this software and the documentation may be subject to civil and/or criminal liability. This software is subject to change without notice and should not be construed as a commitment by RSA.

It is advised not to deploy third-party repos or perform any change to the underlying NetWitness Operating System that is not part of the supported NetWitness version. Any such change outside of the NetWitness approved image may result in a service or functionality conflict and require a reimage of the NetWitness system to bring NetWitness back to an optimized functional state. In the event a third-party repo is deployed, or other non-supported change is made by the customer without NetWitness approval, the customer takes full responsibility for any system malfunction until the issue can be remediated through troubleshooting efforts or a reimage of the service.

Third-Party Licenses

This product may include software developed by parties other than RSA. The text of the license agreements applicable to third-party software in this product may be viewed on the product documentation page on NetWitness Community. By using this product, a user of this product agrees to be fully bound by terms of the license agreements.

Note on Encryption Technologies

This product may contain encryption technology. Many countries prohibit or restrict the use, import, or export of encryption technologies, and current use, import, and export regulations should be followed when using, importing or exporting this product.

Distribution

Use, copying, and distribution of any RSA Security LLC or its affiliates ("RSA") software described in this publication requires an applicable software license.

RSA believes the information in this publication is accurate as of its publication date. The information is subject to change without notice.

About Policy-based Centralized Content Management (CCM)

Legacy content management involves deploying and managing content in multiple places in the UI.

- **Live Content UI:** Located under the Configuration interface, this allows a “push” deployment of Live content to one or more services, but does not provide any management of content once it is deployed
- **Service Config UI:** Located under **Admin > Services > View Config**, this UI enables you to view, edit or delete content on individual services.

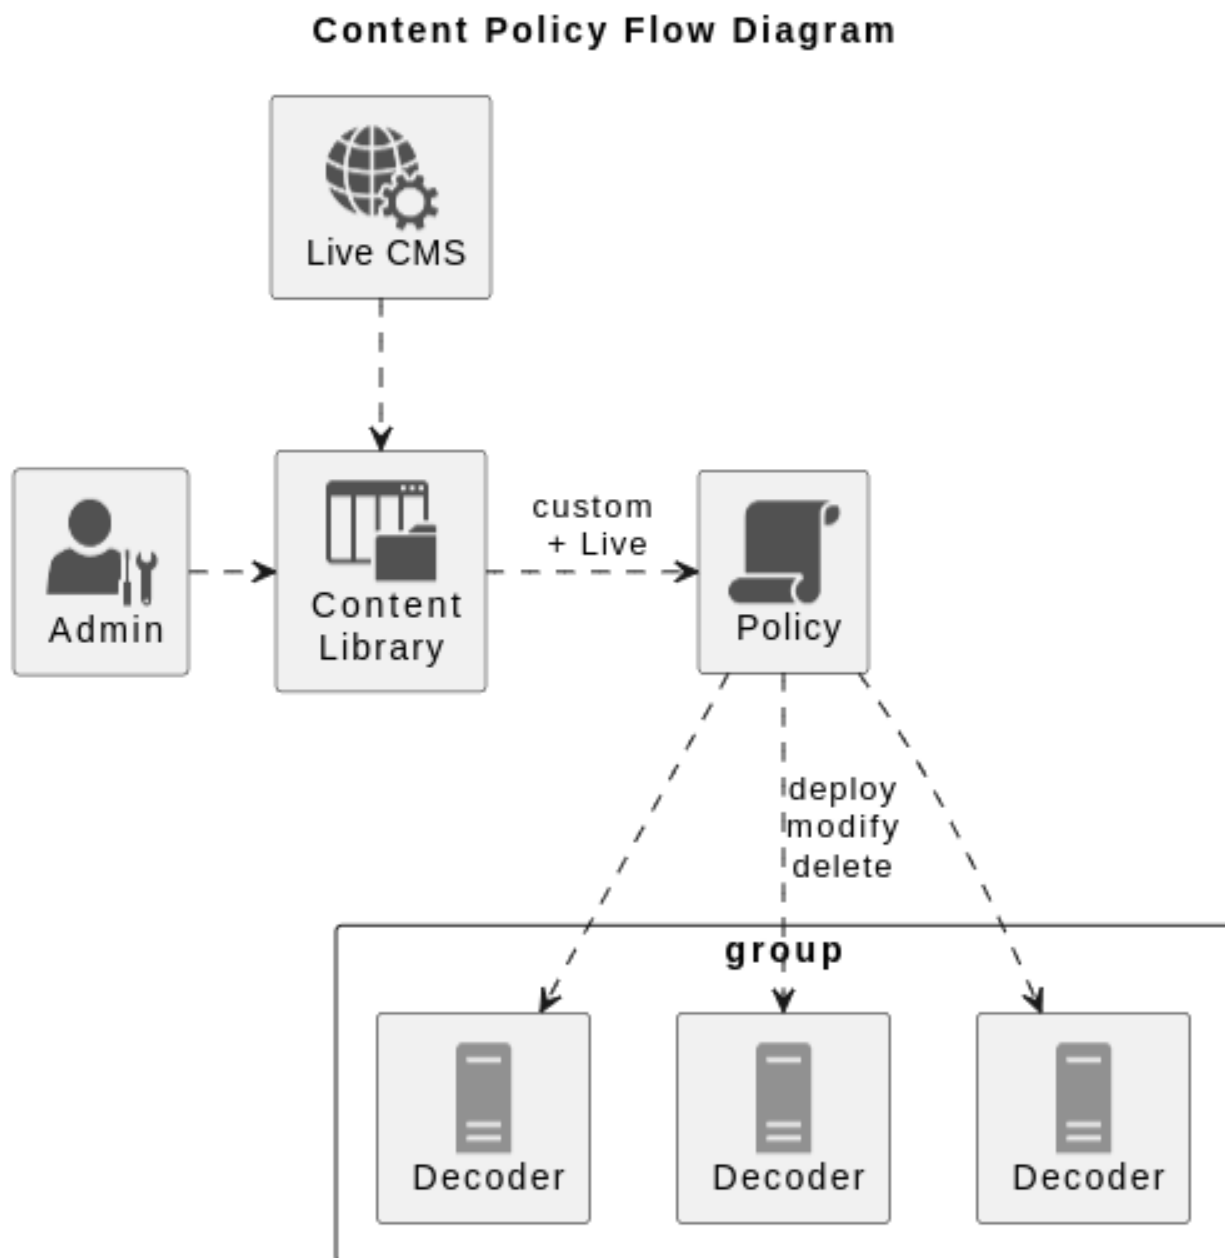

Policy-based Centralized Content Management (CCM) is a unified approach to find, deploy, and manage content through the entire life cycle based on policies that can be assigned to groups of devices. It is a single location to view, modify and manage the content deployed across all services in the environment.

This approach consists of three elements:

- **Groups:** A collection of NetWitness services (such as Decoders, Log Decoders, and Correlation Servers etc.) to assign and manage content.
- **Content Policies:** A container of content and subscription settings used to assign and manage content within a Group.
- **Content Library:** A local repository of content which resides on the Admin Server and is used to assign content to policies. This includes both Live and Custom content.

The Content Library contains Live content (synchronized with the Live CMS) and any custom content you create or import. To deploy, remove or manage content on your services, content is assigned from the Content Library to a Content Policy. Once that content policy is assigned to a group and Published, the content changes are put into effect on the services within the group.

Workflow

Benefits

Benefits of Policy-based Centralized Content Management:

- Add or remove content without repeating the process on each service.
- Add content from RSA Live or add your custom content into a single content repository. You can add content from this repository to a policy.
- Add a new service to an existing group to automatically deploy all necessary content.
- One-click management of subscriptions and automatic updates
- Provides highly responsive and updated UI for browsing RSA Live content that can help you with the following:
 - View Live content along with your content policies and click  to add content from Live.
 - Seamlessly view Live content along with your custom content.
- Create and upload content to the Content Library easily by:
 - Importing log parsers as a zip file instead of converting to ".envision" format.
 - Cloning existing Application Rules and Network Rules.
- Switch services between legacy Content Management UI and the new Centralized Content Management via Groups and Policies using the "toggle" feature. This can prevent content being mistakenly added or modified outside of a Policy, causing an out-of-sync issue.
- Create, modify and publish policies and manage custom content in the Content Library even without an internet connection.
- Find content, policies or groups of interest easily by using the **Filtering** capability of the UI.
- Receives meta key and operator suggestions while creating Application Rule and Network Rule conditions. This eases the creation of error-free rules.
- Manage ESA content and handle multiple deployments seamlessly using Policy.
- Seamlessly view ESA Live content along with your own custom content.
- Add and manage ESA Correlation servers as part of groups.
- Manage all the data sources for the ESA Correlation servers from the **Settings > Event Stream Analysis > Data Sources** page seamlessly.

IMPORTANT: It is recommended not to use the Centralized Content Management and Service Config page or Live Content page simultaneously for managing the content. Using the Service Config UI to add or modify content can cause the content to become out-of-sync with the Content Policy.

Note: If Policy-based Centralized Content Management is enabled for a service, then the Policy-based Centralized Content Management enabled services will be disabled in Live content UI and user will not be able to manage content of these services from Service Config page as Service Config page becomes read only and no actions except 'export' can be performed from Service Config page.

Enable or Disable CCM for All or Individual Decoder Services

You can choose to use CCM to manage content for selected services or for all services.

When CCM is Enabled:

- The service config page is read-only. Only **Export** button is enabled in service config page to export content.
- Content cannot be deployed to CCM enabled services through the Live Content UI.
- Content for all CCM enabled services can be managed through the Content Policies and the Content Library.
- Content subscription from CCM overrides content subscription from  (CONFIGURE) > **Subscriptions** page.

When CCM is Disabled:

- Content can be deployed from Live Content UI.
- The content of the service can be managed from service config page. Any changes made through the Service Config page does not reflect in the content policy.
- The service is disabled in the Policy or Group page of CCM and the policy status changes to **Partial**. The policy can be published with a disabled service. However, the policy state always remains **Partial**. Publishing a policy will affect only the services that are enabled for CCM.

Note: When a service, which is part of a group, is added back to CCM, the policy status changes to “Unpublished”.

Enable or Disable CCM for All Decoder Services

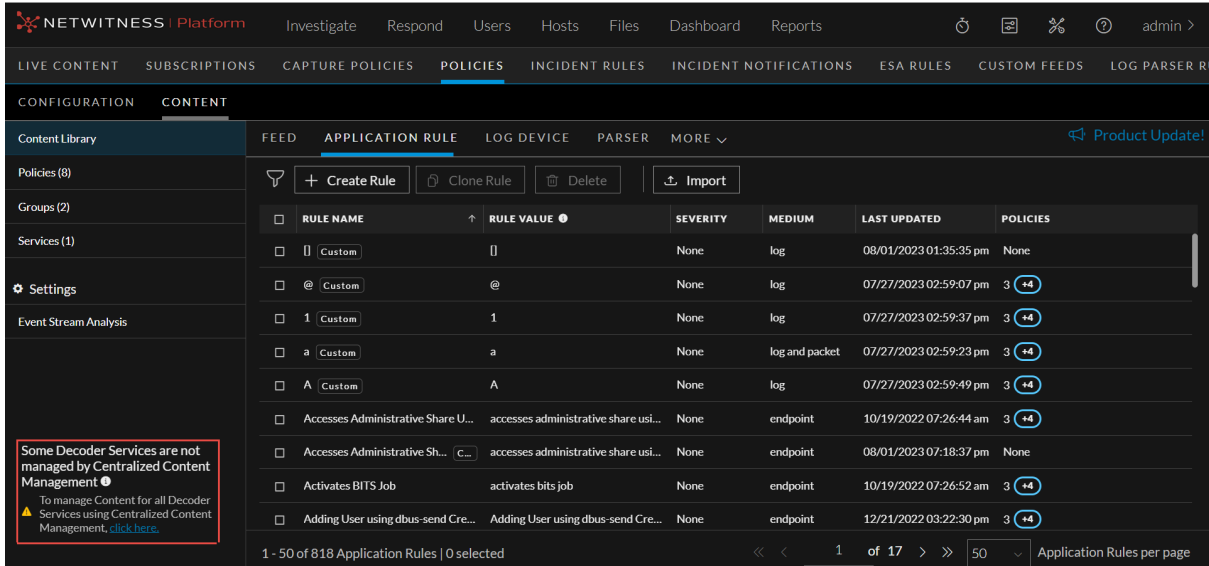

From 12.2 version onwards, a CCM toggle is introduced to enable or disable CCM for all 12.0+ Decoder Services. The toggle is available on the UI.

To enable or disable CCM for all Decoder Services on the UI

Scenario 1: Some Decoder Services are Managed by CCM

1. Go to  (CONFIGURE) > **Policies**.
2. In the policies panel, click **Content**.
3. Click either **Content Library**, **Policies**, **Groups** or **Services**.

The respective screens are displayed. On these screens, on the left bottom corner, the message on managing the content is displayed.

- If the NetWitness platform consists of only few Decoders managed by CCM, then the message "Some Decoder Services are managed by Centralized Content Management" is displayed. In such a case, you can choose to either manage all the Decoder Services by CCM or not to manage any Decoder Services by CCM by clicking **click here**.

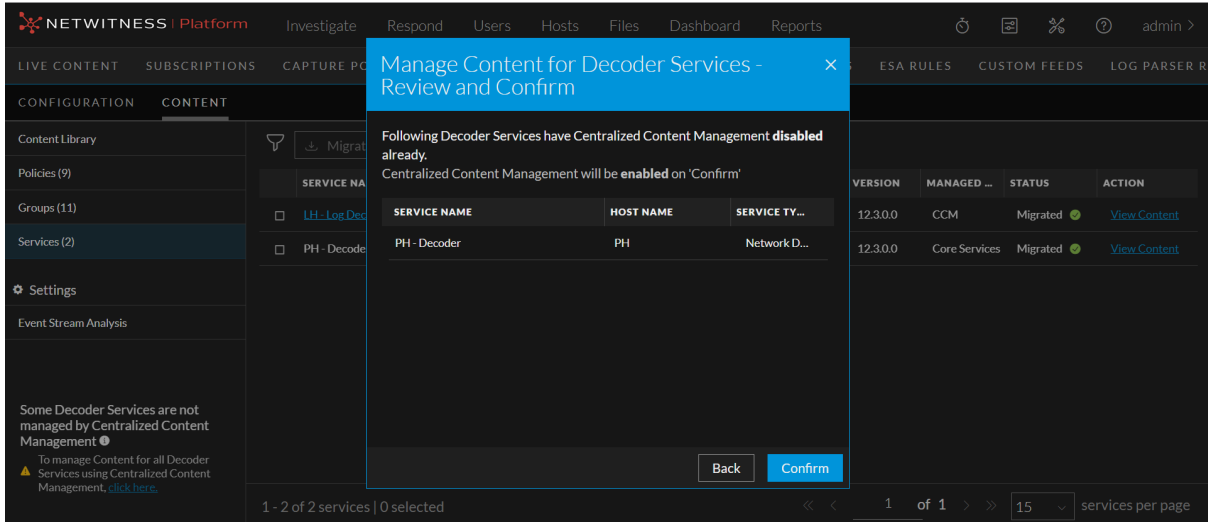

The **Manage Content for Decoder Services** pop-up window is displayed.

- On the **Manage Content for Decoder Services** pop-up window, click **Yes** for **Allow Centralized Content Management** to manage content for all Decoder Services to enable CCM for all Decoder Services. Click **No** to disable CCM for all Decoder Services.

Note: Read the notes on the pop-up window before clicking on **Continue**.

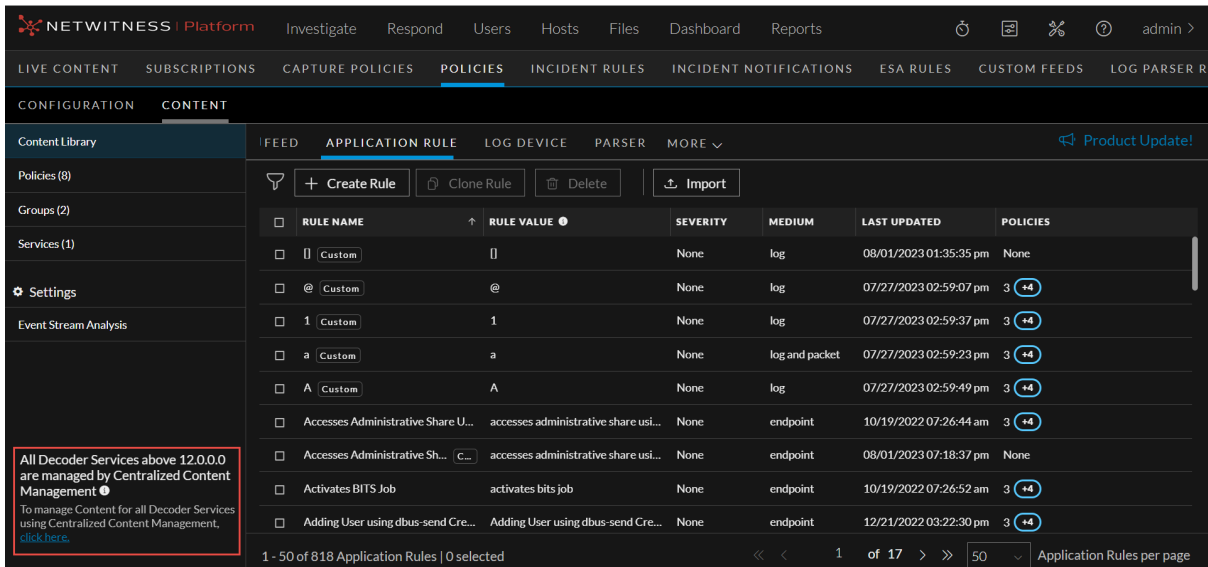

- Click **Continue**. The **Manage Content for Decoder Services - Review and Confirm** screen is displayed.

7. Click **Confirm** to review and confirm the services which will be enabled or disabled based on the selected option. Else, click **Back** to go back to the previous screen.
8. The success message is displayed on the screen.

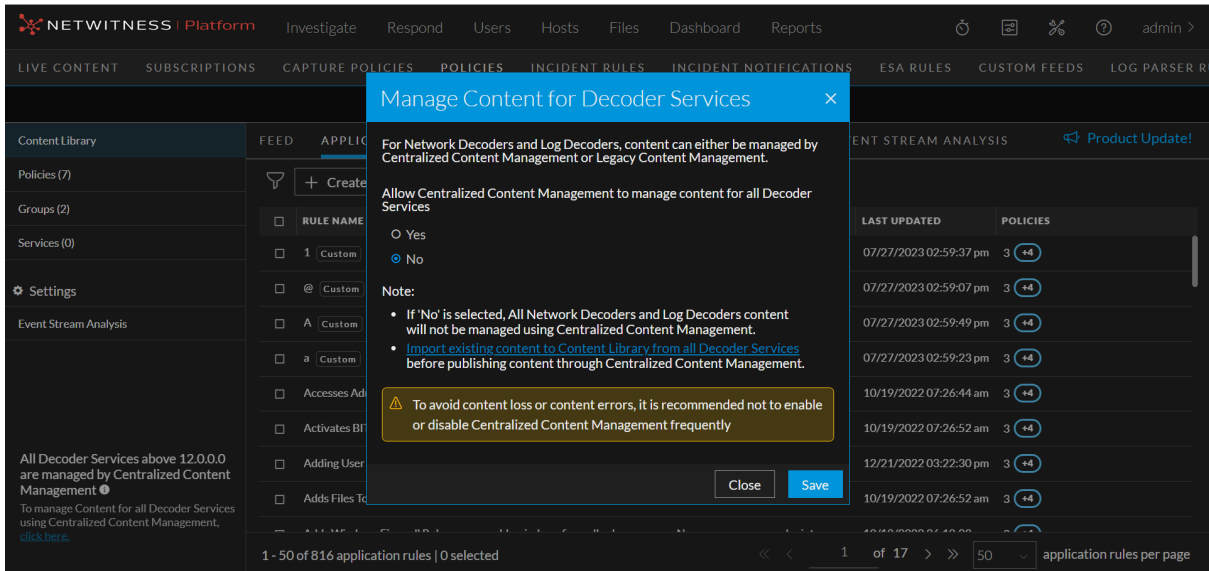

Scenario 2: All Decoder Services are Managed by CCM

1. Go to **(CONFIGURE) > Policies**.
2. In the policies panel, click **Content**.
3. Click either **Content Library, Policies, Groups** or **Services**.
4. The respective screens are displayed. On these screens, on the left bottom corner, the message on managing the content is displayed.

5. 5. If the NetWitness platform consists of all Decoders managed by CCM, then the message "All Decoder Services above 12.0.0.0 are managed by Centralized Content Management" is displayed. In such a case, you can choose to not manage any Decoder Services by CCM by clicking **click here**.

6. The **Manage Content for Decoder Services** pop-up window is displayed.

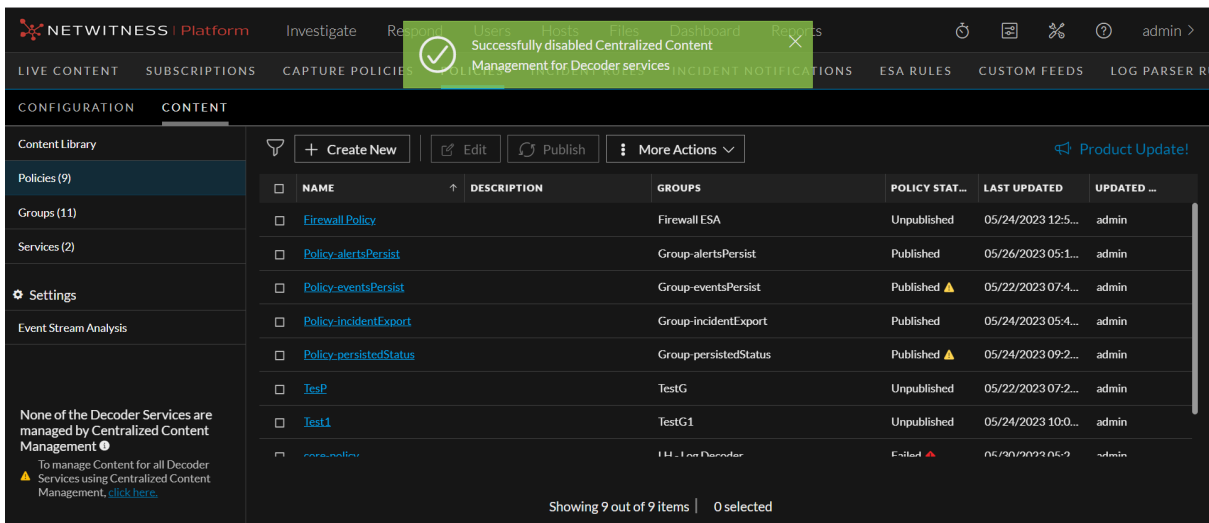

7. On the **Manage Content for Decoder Services** pop-up window, click **No** for **Allow Centralized Content Management to manage content for all Decoder Services** to disable CCM for all Decoder Services.

Note:

- The **Yes** option is selected by default.
- Read the notes on the pop-up window before clicking on **Save**.

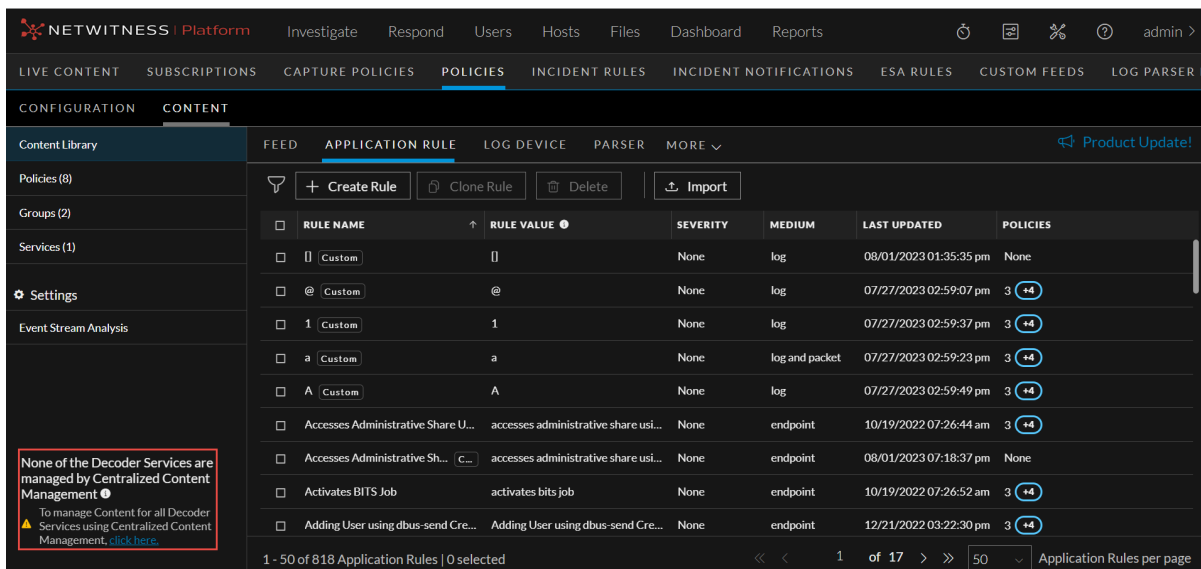

8. Click **Save**. The success message is displayed on the screen.

Note: The **Save** option is enabled only when you select **No**.

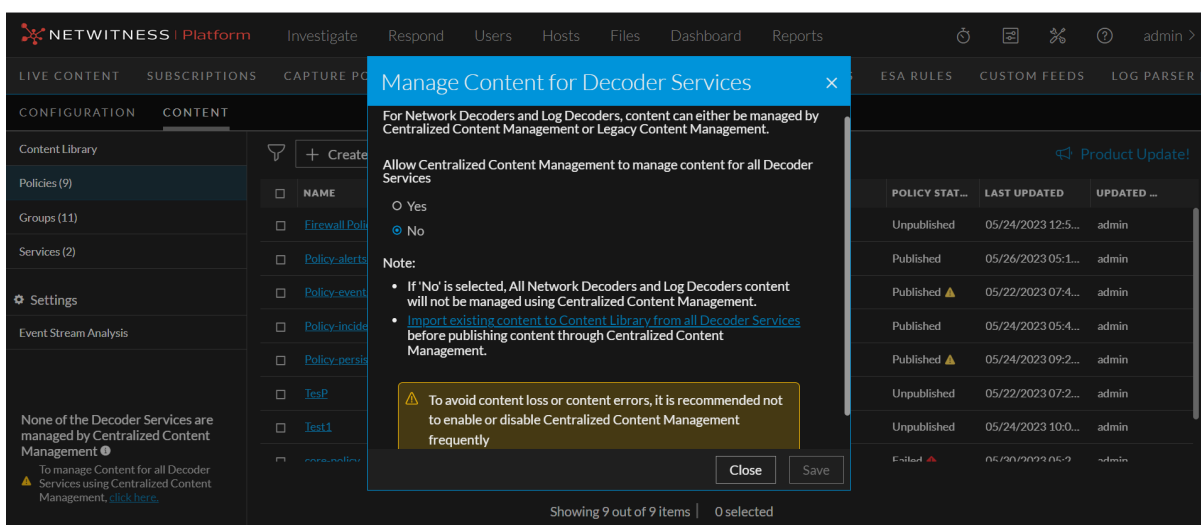

Scenario 3: None of the Decoder Services are Managed by CCM

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. Click either **Content Library**, **Policies**, **Groups** or **Services**.
4. The respective screens are displayed. On these screens, on the left bottom corner, the message on managing the content is displayed.

5. If the NetWitness platform does not consist of any Decoders managed by CCM, then the message "None of the Decoder Services are managed by Centralized Content Management" is displayed. In such a case, you can choose to manage all Decoder Services by CCM by clicking [click here](#).
6. The **Manage Content for Decoder Services** pop-up window is displayed.

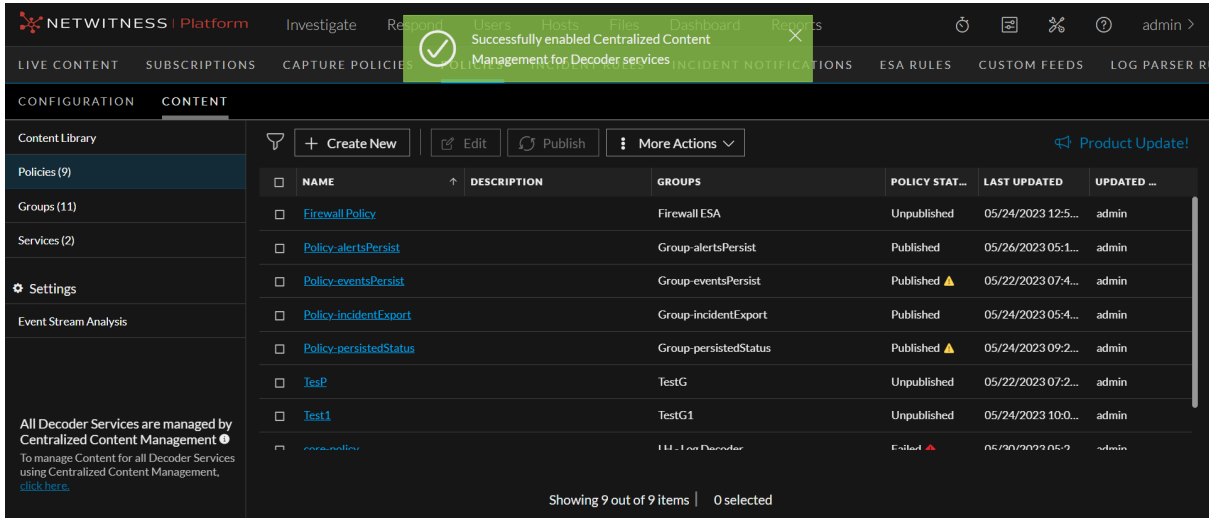

7. On the **Manage Content for Decoder Services** pop-up window, click **Yes** for **Allow Centralized Content Management** to manage content for all Decoder Services to enable CCM for all Decoder Services.

Note:

- The **No** option is selected by default.
- Read the notes on the pop-up window before clicking on **Save**.

8. Click **Save**. The success message is displayed on the screen.

9. **Note:** The **Save** option is enabled only when you select **Yes**.

Enable or Disable CCM for Individual Decoder Services

To enable or disable CCM for individual Decoder services, see [Enable or Disable CCM for Individual Decoder Services](#) topic under [Manage Services](#).

Manage Content Library

This section contains:

- [Clone Application Rule](#)
- [Edit Application Rule](#)
- [Delete Application Rule](#)
- [View Application Rule Details](#)
- [Create a Network Rule](#)
- [Edit Network Rule](#)
- [Delete Network Rule](#)
- [View Network Rule Details](#)
- [Create an ESA Rule](#)
- [Edit an ESA Rule](#)
- [Delete an ESA Rule](#)
- [About SASE Integration Plugins](#)
- [Manage Search Pattern Rules](#)
- [Filter Content Rules](#)

Migrate Content from Core Services to Content Library

The customers who want to use Centralized Content Management, and if their content is already deployed, a migration process is required.

The following types of content can be migrated from Core Services:

- Application Rule
- Network Rule
- Log Device
- Live Feeds
- LUA Parser

Note:

- When the user upgrades a Decoder or Log Decoder from 12.0 or 12.1 version to 12.1.1 or later version, a back up of all the content is created automatically. Backup file will be available on Core Services' host under the following path:
For Log Decoder - /var/netwitness/logdecoder/logdecoder_backupcontent_ccm.tar
For Network Decoder - /var/netwitness/decoder/decoder_backupcontent_ccm.tar
- When migrating content from two Decoders that have two different types of Custom or Live Base Parser associated with same Custom or Live Base Parser, both the Custom Parsers are added to Content Library. Th association inside the Policy will be with the most recently migrated Custom Parser.
- Within a migrated Policy, a Custom Parser will have only one Custom or Live Base Parser associated with it.
- Migrated content version will be in the Policy, if as part of migration, the Policy is auto created. If you remove this content, you cannot add the old version of the content back.

For steps on how to migrate content from Core Services to Content Library, see [Migrate Content from Service under Manage Services](#).

Import Content to Content Library

Before the custom content can be used in policies, it must be imported to the Content Library.

To export Application Rules or Network Rules from Legacy UI

1. Go to  (Admin) > Services.
2. Go to Config view of the service where application rule or network rule is deployed.
3. Click either the **Application Rule** or the **Network Rule** tab.

Note: The **Network Rule** tab is only available for **Network Decoder** services.

4. Select the content to migrate.
5. Click **Export** to export the selected content or click **All** to export all the content.

The following table lists the supported file types and file extensions for Application Rules and Network Rules:

| Content | Supported File Types | Supported File Extensions |
|-------------------|----------------------|---------------------------|
| Application Rules | .NWR | NA |
| Network Rules | .NWR | NA |

To export Feeds, LUA Parsers, or Log Devices

The content file locations are as given below:

- Feeds content file location: /etc/netwitness/ng/feeds
- Lua Parsers content file location: /etc/netwitness/ng/parsers
- Log Devices content file location: /etc/netwitness/ng/envision/etc/devices

You can upload the files which are copied locally from these locations and import these files to Content Library.

The following table lists the supported file types and file extensions for Log Devices, LUA Parsers and Feeds:

| Content | Supported File Types | Supported File Extensions |
|-------------|---|---|
| Feeds | .zip | .feed and .token |
| Log Devices | .envision, .zip, .xml <div style="border: 1px solid green; padding: 5px; margin-top: 10px;"> <p>Note:</p> <ul style="list-style-type: none"> - The zip file should have a root folder. The root folder should contain the 'N' folders for 'N' number of content. The 'N' folder names should be the content names. The 'N' folders, will contain the respective xml files. - You can upload a maximum of 10 xml files at once. - You can upload base parsers as well as custom parser at once. - If you are importing a file which has both base and custom content, the base and custom content files are separated after importing them. - - The custom log parser naming convention should be '<base>msg-custom.xml'. - The base content name in Content Library will be the display name mentioned in the xml file. - The custom content name in Content Library will be the 'displayname-custom'. - While importing extension of a Base Parser, when multiple flavours of a Base Parser are present in Content Library, the extension is associated to the first Base Parser that is found. </div> | NA |
| LUA Parsers | .zip | .lua, .lua and .flextoken |

Note: Any imported content will be treated as custom content. If imported content has the same name as existing Live content, then it must be renamed upon import. Custom content with the same name can be overwritten.

To create .envision files

1. Keep all the Log Devices in a root folder in your local drive. For example, "logDevices".
2. From the command prompt, run the python script specified in the NetWitness Community portal with input argument as the path of the above folder.

Note: The command to run the python script is "python3 pythonscriptname.py inputArg".

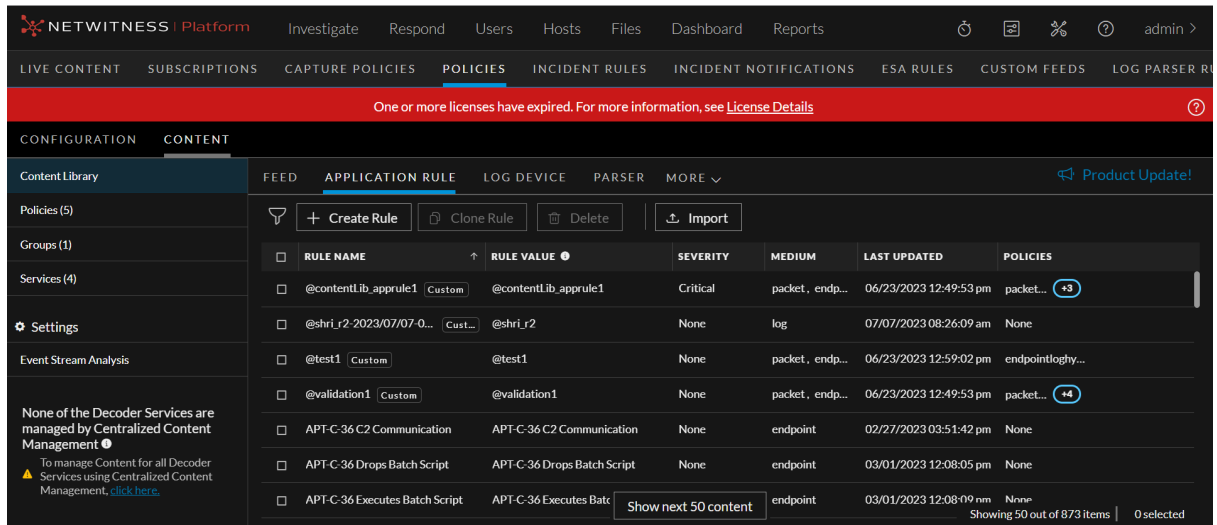

3. Once you run the script, a new zip named "nw_content_logDevices.zip" is created. This zip file will contain all the envision files.

IMPORTANT: All actions except ‘Export’ are disabled for Application Rules, Network Rules, Feeds, LUA Parsers and Log Devices from Service Config page for all core services if the service is managed by Policy-based Centralized Content Management.

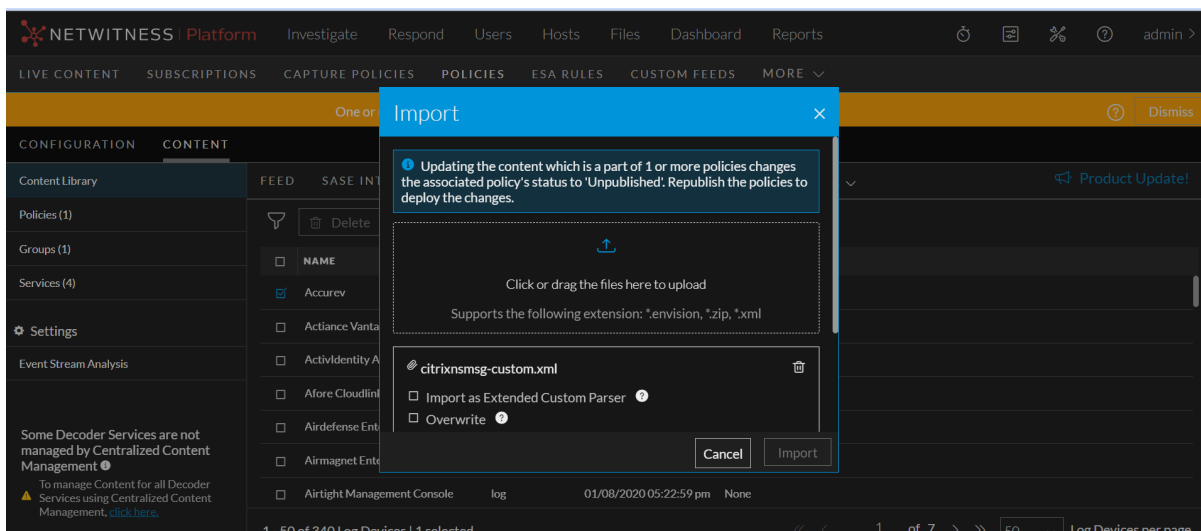

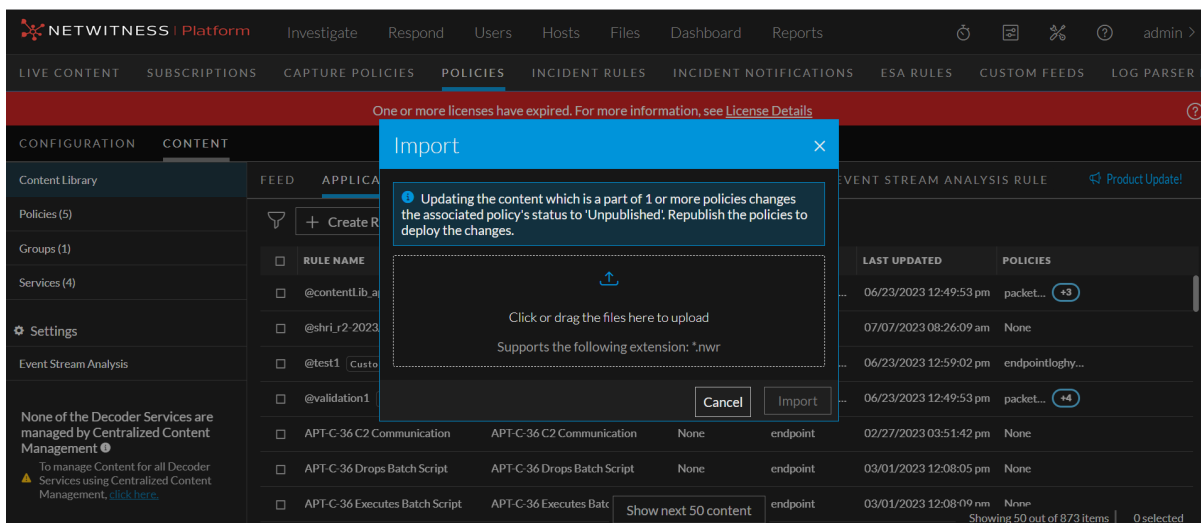

To import content to Content Library

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.
4. Depending upon the type of content to be imported, click the following tabs:
 - **Application Rule**
 - **Network Rule**
 - **Parser**
 - **Feeds**
 - **Log Devices**

Note: The name of the application rule or network rule to be imported should not be same as existing rule name.

5. In the respective content panel, click **Import**.

6. In the **Import** panel, click or drag the file to upload.
7. While importing a Log Device parser, if you want to import a standalone XML as an extended parser, select **Import as Extended Custom Parser**. If this option is not selected, then the XML will be imported as a standalone parser.
8. Click **Overwrite** to overwrite content. This is applicable only in case of overriding an already imported content.

Note: You cannot overwrite the content if the content name is same as the rule name of the existing content of the same type from live server. However, you can overwrite the content if the content name is same as the custom content rule name.

9. Select the medium types.
10. Click **Import** to complete the import process.

Create an Application Rule

This topic describes the steps to create an application rule. When you create a custom application rule, NetWitness allows you to tag MITRE ATT&CK Tactics and Techniques and for each rule.

IMPORTANT: Both MITRE ATT&CK® and ATT&CK® are registered trademarks of the MITRE Corporation. © 2024 The MITRE Corporation. This work is reproduced and distributed with the permission of The MITRE Corporation.

To create a new Application Rule

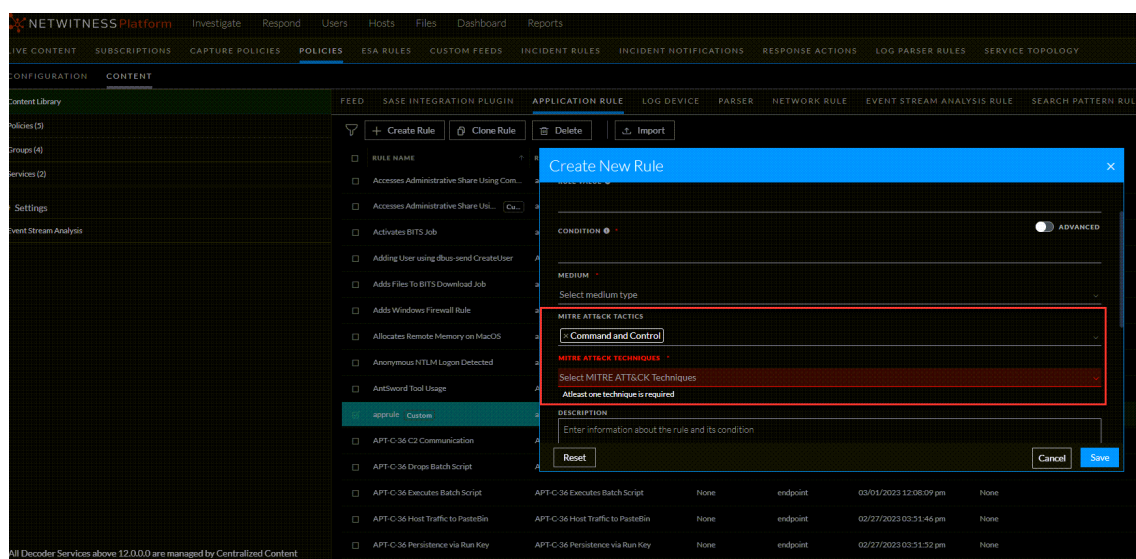

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.
The available rules are displayed.
4. In the application rule panel, click + **Create Rule** to add an application rule.
5. In the **CreateNew Rule** panel, do the following:
 - Enter a unique rule name. If the name of that application rule is the same as an existing rule, an error message is displayed.
 - Enter the rule value. This is the value written to the alert meta. While creating a new rule, the rule value is defaulted with the rule name. However, you can modify the same.
 - Enter the condition for the rule. You can apply two types of conditions for the rule.
 - Normal mode:
 - It gives suggestions for supported metas (ip, host and so on) and operators (“=”, “Not Equal To”, “Contains”, “Exists” and so on).
 - The entered condition will be enclosed in a ‘Pill’. When you enter multiple conditions, the conditions are automatically joined by an ‘AND’ operator. On clicking the ‘AND’ operator, you can toggle between ‘AND’ and ‘OR’ operators.
 - Advanced: You can customize the conditions as a free form text.
 - Select the medium to be applied for the rule.
 - Enter the description for the rule.
 - Select the session data to be applied for the rule.
 - Select the session options to be applied for the rule. The options are listed below:
 - **Flag Session with rule name in meta key:** Select the meta value for the alert from the drop-down menu. This is mandatory.
 - **Forward:** This option enables the performance of syslog forwarding when the log matches the rule.
 - **Transient:** This option prevents the created alert metadata from being written to the disk.

- **Notify:** This option enables you to choose the **Severity** levels for the application rule and utilize the option to trigger alert generation.
 - Low
 - Medium
 - High
 - Critical

Note: Severity is selected by default as Low.

- **MITRE ATT&CK TACTICS:** Lets you select MITRE ATT&CK TACTICS from the list.

Note: Ensure that you apply at least one MITRE ATT&CK TACTIC for the rule.

- **MITRE ATT&CK TECHNIQUES:** Lets you select MITRE ATT&CK TECHNIQUES from the list.
- **DESCRIPTION:** Provide a description for the rule.
 - Click **Save** to save the new application rule.
 - Click **Reset** to reset the fields.
 - Click **Cancel** to cancel the operation.

Clone Application Rule

This topic describes the steps to clone an application rule.

To clone an Application Rule

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.

3. In the left panel, click **Content Library**.
4. The list of application rules is displayed. From the available list of rules, select the rule to be cloned.
5. Click **Clone Rule**.
6. In the **Clone Rule** panel, do the following:
 - Enter a unique rule name. If the name of that application rule is same as an existing rule, an error message is displayed.
 - Enter the rule value.

Note: You can clone existing rules to generate cloned rules with different rule names but with same rule value.

- Enter the condition for the rule.
- Select the medium to be applied for the rule.
- Select the MITRE ATT&CK TACTICS for the rule.
- Select the MITRE ATT&CK TECHNIQUES for the rule.
- Enter the description for the rule.
- Select the session data to be applied for the rule.
- Select the session options to be applied for the rule.
- Select a meta value from the Flag session with rule name in meta key drop-down menu. This is a mandatory field.
- Click **Clone** to clone the rule.
- Click **Cancel** to cancel the operation.

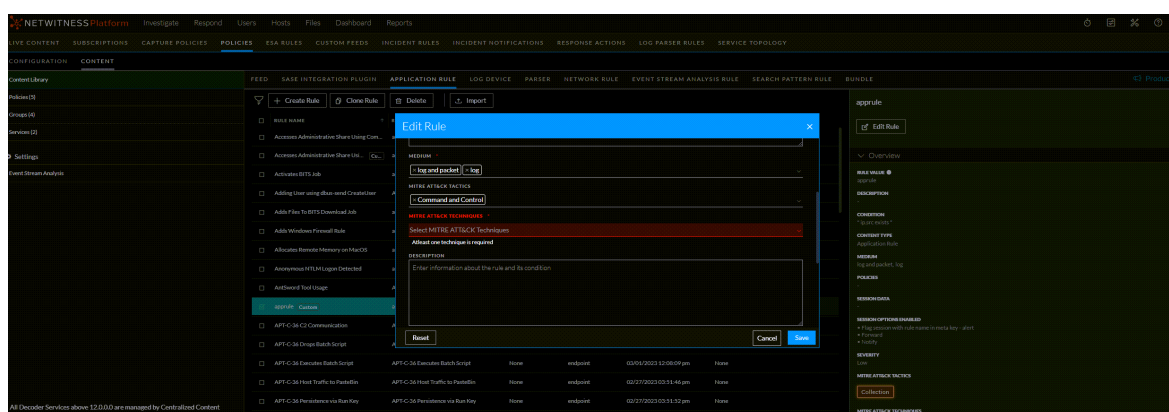

Edit Application Rule

When you edit the application rule, follow these guidelines:

- You can only edit the custom rules.
- The rule name and rule value cannot be edited if the custom rule is assigned to a policy.
- If the custom rule assigned to a policy is edited, then the customer must republish the policy for the changes to take effect in the service.
- The rule value cannot be edited. The rule value can be same for different rule names.
- While editing the rule name, if the name of that application rule is same as an existing rule, an error message is displayed.
- Let's you to tag MITRE ATT&CK Tactics for each rule.
- Let's you select the MITRE ATT&CK Techniques for the rule.

To edit an Application Rule

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.
4. Select an application rule to edit.
5. Click **Edit Rule** to edit the application rule.
6. In the **Edit Rule** panel, do the following:
 - Enter a unique rule name. If the name of that application rule is the same as an existing rule, an error message is displayed.
 - Enter the rule value. This is the value written to the alert meta.
 - Enter the condition for the rule. You can apply two types of conditions for the rule.
 - Normal mode:
 - It gives suggestions for supported metas (ip, host and so on) and operators (“=”, “Not Equal To”, “Contains”, “Exists” and so on).
 - The entered condition will be enclosed in a ‘Pill’. When you enter multiple conditions, the conditions are automatically joined by an ‘AND’ operator. On clicking the ‘AND’ operator, you can toggle between ‘AND’ and ‘OR’ operators.
 - Advanced: You can customize the conditions as a free form text.
 - Select the medium to be applied for the rule.
 - Select the MITRE ATT&CK TACTICS for the rule. The MITRE ATT&CK Tactics are listed. You can select an appropriate MITRE ATT&CK Tactic.

- Select the MITRE ATT&CK TECHNIQUES for the rule. The MITRE ATT&CK Techniques are listed. You can select an appropriate MITRE ATT&CK Technique.
- Enter the description for the rule.
- Select the session data to be applied for the rule.

- Select the session options to be applied for the rule. The options are listed below:
 - **Flag Session with rule name in meta key:** Select the meta value for the alert from the drop-down menu. This is mandatory.
 - **Forward:** This option enables the performance of syslog forwarding when the log matches the rule.
 - **Transient:** This option prevents the created alert metadata from being written to the disk.
 - **Notify:** This option enables you to choose the **Severity** levels for the application rule and utilize the option to trigger alert generation.
 - Low
 - Medium
 - High
 - Critical

Note: Severity is selected by default as Low.

- Click **Save** to save the application rule details.
- Click **Reset** to reset the fields.
- Click **Cancel** to cancel the operation.

Delete Application Rule

When you delete the application rule, follow these guidelines:

- You can delete only the custom application rules.
- You cannot delete the application rule if it is associated to a policy. You should first disassociate the application rule from the policy and then delete it.

To delete an Application Rule

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.
4. Select an application rule to delete.
5. Click **Delete** to permanently delete the selected application rule.

View Application Rule Details

This topic describes the steps to view the application rule details.

To view Application Rule details

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.
The list of application rules is displayed.
4. Click a row to view details about the selected application rule in the right panel.
The various details of the application rule are displayed.

Create a Network Rule

This topic describes the steps to create a network rule.

To create a Network Rule

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.
4. Click the **Network Rule** tab.
5. In the network rule panel, click + **Create Rule** to add a network rule.
6. In the **New Create Rule** panel, do the following:
 - Enter a unique rule name. If the name of that network rule is the same as an existing rule, an error message is displayed.
 - Enter the rule value. This is the value written to the alert meta. While creating a new rule, the rule value is defaulted with the rule name. However, you can modify the same.
 - Enter the condition for the rule. You can apply two types of conditions for the rule.
 - Normal mode:
 - It gives suggestions for supported metas (ip, host and so on) and operators (“=”, “Not Equal To”, “Contains”, “Exists” and so on).
 - The entered condition will be enclosed in a ‘Pill’. When you enter multiple conditions, the conditions are automatically joined by an ‘AND’ operator. On clicking the ‘AND’ operator, you can toggle between ‘AND’ and ‘OR’ operators.
 - Advanced: You can customize the conditions as a free form text.

Note: The medium is selected as **Packet** by default, and it cannot be modified.

- Enter the description for the rule.
- Select the session data to be applied for the rule.
- Select the session options to be applied for the rule.

- Click **Cancel** to cancel the operation.
- Click **Reset** to reset the data.
- Click **Save** to save the new network rule.

Clone Network Rule

This topic describes the steps to clone an application rule.

To clone an Application Rule

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.
4. Click **Network Rule** tab.
5. The list of application rules is displayed. From the available list of rules, select the rule to be cloned.
6. Click **Clone Rule**.
7. In the **Clone Rule** panel, do the following:
 - Enter a unique rule name. If the name of that network rule is same as an existing rule, an error message is displayed.
 - Enter the rule value.

Note: You can clone existing rules to generate cloned rules with different rule names but with same rule value.

- Enter the condition for the rule.

Note: The medium is selected as **Packet** by default, and it cannot be modified.

- Enter the description for the rule.
- Select the session data to be applied for the rule.
- Select the session options to be applied for the rule.
- Click **Clone** to clone the rule.
- Click **Cancel** to cancel the operation.

Edit Network Rule

When you edit the network rule, follow these guidelines:

- You can only edit the custom rules.
- The rule name and rule value cannot be edited if the custom rule is assigned to a policy.

- If the custom rule assigned to a policy is edited, then you must republish the policy for the changes to take effect in the service.
- The rule value cannot be edited. The rule value can be same for different rule names.
- While editing the rule name, if the name of that network rule is same as an existing rule, an error message is displayed.

To edit a Network Rule

1. Go to  (CONFIGURE) > Policies.
 2. In the policies panel, click **Content**.
 3. In the left panel, click **Content Library**.
 4. Click the **Network Rule** tab.
 5. Select the network rule to edit.
 6. Click **Edit Rule** to edit the network rule.
 7. In the **Edit Rule** panel, do the following:
 - Enter a unique rule name. If the name of that network rule is the same as an existing rule, an error message is displayed.
 - Enter the rule value. This is the value written to the alert meta.
 - Enter the condition for the rule. You can apply two types of conditions for the rule.
 - Normal mode:
 - It gives suggestions for supported metas (ip, host and so on) and operators (“=”, “Not Equal To”, “Contains”, “Exists” and so on).
 - The entered condition will be enclosed in a ‘Pill’. When you enter multiple conditions, the conditions are automatically joined by an ‘AND’ operator. On clicking the ‘AND’ operator, you can toggle between ‘AND’ and ‘OR’ operators.
 - Advanced: You can customize the conditions as a free form text.
- Note:** The medium is selected as **Packet** by default, and it cannot be modified.
- Enter the description for the rule.
 - Select the session data to be applied for the rule.
 - Select the session options to be applied for the rule.
 - Click **Cancel** to cancel the operation.
 - Click **Reset** to reset the data.
 - Click **Save** to save the new network rule.

Delete Network Rule

When you delete the network rule, follow these guidelines:

- You can delete only the custom network rules.
- You cannot delete the network rule if it is associated to a policy. You should first disassociate the network rule from the policy and then delete it.

To delete a Network Rule

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.
4. Click **Network Rule** tab.
5. Select a network rule to delete.
6. Click **Delete** to permanently delete the selected network rule.

View Network Rule Details

This topic describes the steps to view the network rule details.

To view Network Rule details

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.
4. Click the **Network Rule** tab.
5. The list of network rules is displayed.
6. Click a row to view details about the selected network rule in the right panel.
The various details of the network rule are displayed.

Create an ESA Rule

This topic describes the steps to create an ESA rule.

To create an ESA Rule

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.
The available rules are displayed.
4. Click **Event Stream Analysis Rule**.
5. In the ESA rule panel, click + **Create Rule** to add an ESA rule.

You can select the **Advanced EPL** option or **Rule Builder** option from the dropdown as per your requirement. It navigates to **ESA Rules > Rules** view.

See the section [Add a Rule Builder Rule](#) for more information on creating rules in Rule Builder.

See the section [Add an Advanced EPL](#) for more information on creating Advanced EPL.

Note: Analysts must have appropriate permissions to view the ESA rules under **(CONFIGURE) > ESA Rules** and **(CONFIGURE) > Policies** pages. For more information, see the **Source-server** section in the "Role Permissions" topic in the *System Security and User Management Guide*.

From 12.3 and later, **Severity** and **Notifications** list views are added to the **Event Stream Analysis Rule** section.

The Severity list consists of None, Low, Medium, High, and Critical. You can also view rules filtering these options except for None. For more information on filtering these options, see [Filter Content Rules](#).

The screenshot shows the NetWitness Platform interface. The top navigation bar includes 'NETWITNESS | Platform' and various menu items like 'Investigate', 'Respond', 'Users', 'Hosts', 'Files', 'Dashboard', and 'Reports'. Below this, there are tabs for 'LIVE CONTENT', 'SUBSCRIPTIONS', 'CAPTURE POLICIES', 'POLICIES', 'INCIDENT RULES', 'INCIDENT NOTIFICATIONS', 'ESA RULES', 'CUSTOM FEEDS', and 'LOG PARSER RULES'. The main content area is titled 'CONFIGURATION' and 'CONTENT', with sub-tabs for 'FEED', 'APPLICATION RULE', 'LOG DEVICE', 'EVENT STREAM ANALYSIS RULE', and 'MORE'. A 'Product Update!' notification is visible in the top right. On the left, there is a 'Filters' panel with a 'SEVERITY' dropdown menu that is open, showing options: 'None', 'Low', 'Medium', 'High', and 'Critical'. The 'Low' option is currently selected. The main table displays a list of rules with the following columns: NAME, SEVERITY, MEDIUM, NOTIFICATIONS, LAST UPDATED, and POLICIES. The table contains 17 rows of data, including rules like 'APT-C-36 Sandbox Evasion Detected', 'AWS Critical VM Modified', and 'AWS Permissions Modified Followed By L...'. At the bottom of the table, there is a 'Show next 50 content' button and a status bar indicating 'Showing 50 out of 137 items | 0 selected'.

Rules with syslog and email notifications can be viewed on the **Notifications** list of the **Event Stream Analysis Rule** section.

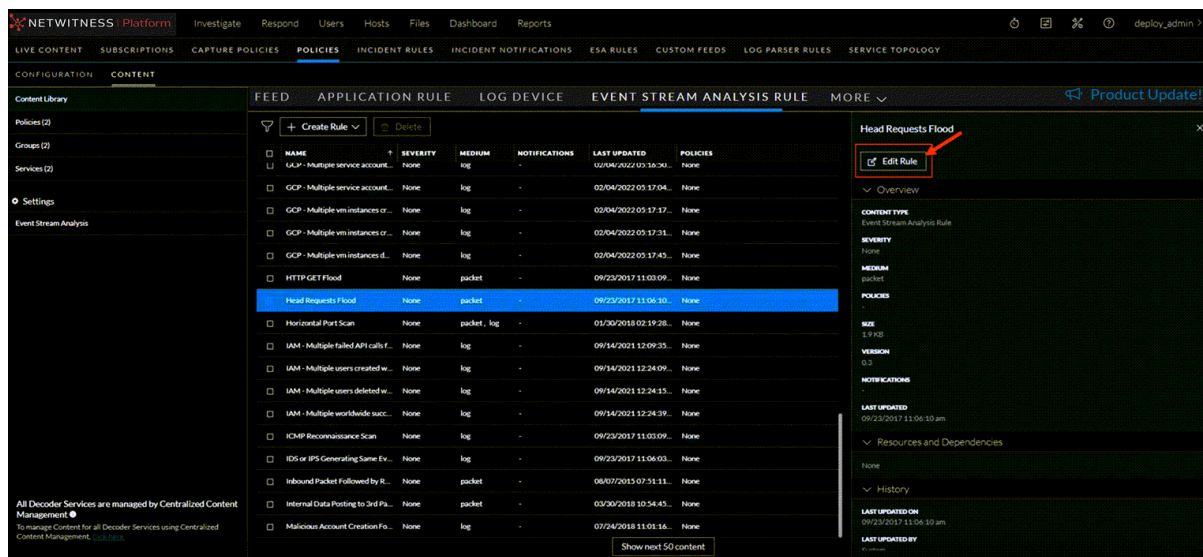

| NAME | SEVERITY | MEDIUM | NOTIFICATIONS | LAST UPDATED | POLICIES |
|--|----------|----------------|---------------|------------------------|------------|
| testsys Custom | Low | log and packet | Syslog | 04/17/2023 05:15:53 am | None |
| testmail Custom | Low | log and packet | Email | 04/17/2023 05:13:16 am | Email |
| test11 Custom | Low | log and packet | - | 04/17/2023 05:06:55 am | enrichm 12 |
| testmail Custom | Low | log and packet | Email 11 | 04/17/2023 05:25:15 am | System 11 |

| Problematic Rule 2 Custom | Critical | log and packet | - | 04/17/2023 05:20:45 am | ADV |

Edit an ESA Rule

This topic provides instructions to edit an Event Stream Analysis (ESA) rule. When you edit a rule, ESA applies the updated criteria going forward. No changes are made to previously generated alerts.

To edit an ESA Rule

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.
The available rules are displayed.
4. Click **Event Stream Analysis Rule**.
5. In the ESA rule panel, select the rule that needs to be edited.
The overview panel opens, showing the Edit Rule tab on top.
6. Click the **Edit Rule** tab.

It navigates to **ESA Rules > Rules** view.

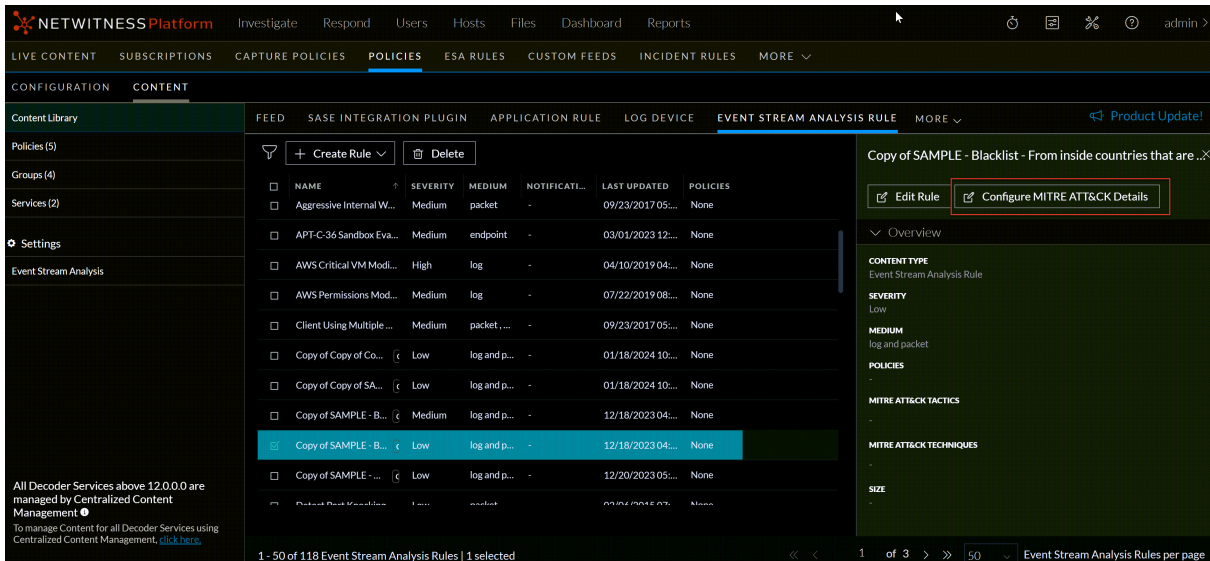

For more information on editing an ESA rule, see [Edit, Duplicate or Delete a Rule](#).

Configure MITRE ATT&CK Details for an ESA Rule

You can tag MITRE ATT&CK Tactics and Techniques for an ESA rule. MITRE framework provides insight into tactics, techniques, or sub-techniques used by advanced attackers or advanced persistent threats (APTs). When you tag an ESA rule with MITRE ATT&CK Tactics and Techniques, analysts can easily identify incidents, alerts, and events that are associated with MITRE techniques and tactics.

To configure MITRE ATT&CK details for an ESA Rule

1. Go to  (**CONFIGURE**) > **Policies**.
2. In the **policies** panel, click **Content**.
3. In the left panel, click **Content Library**.
The available rules are displayed.
4. Click **Event Stream Analysis Rule**.
5. In the ESA rule panel, select the rule that needs to be edited.
The overview panel opens, showing the Edit Rule tab on top.
6. Click the **Configure MITRE ATT&CK Details** option.

7. In the **Configure MITRE ATT&CK Details** window, select the **MITRE ATT&CK Tactics**. You can apply multiple MITRE Tactics for an ESA rule.
8. Select the **MITRE ATT&CK Techniques**. You can apply multiple MITRE Techniques for an ESA rule.

For more information on MITRE ATT&CK framework, see [About MITRE ATT&CK Tactics and Techniques](#) .

Delete an ESA Rule

You can delete one or more ESA rules. Once the ESA rule is deleted, the ESA rule will be removed from the available list.

To delete an ESA Rule

1. Go to  (**CONFIGURE**) > **Policies**.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.
The available rules are displayed.
4. Click **Event Stream Analysis Rule**.
The available ESA rules are displayed.

Note: Only Custom ESA rules that are not assigned to a policy will be available for deletion.

5. Select one or more custom ESA rules and click **Delete**.
A confirmation pop-up is displayed.
6. Click **Delete**.

About MITRE ATT&CK Tactics and Techniques

NetWitness allows you to tag an application rule with MITRE ATT&CK Tactics and Techniques. MITRE framework provides insight into tactics, techniques, or sub-techniques used by advanced attackers or advanced persistent threats (APTs). NetWitness uses the MITRE ATT&CK framework to detect and analyze different types of threats.

When you tag an application rule with MITRE ATT&CK Tactics and Techniques, analysts can look into the various techniques and tactics associated with the Incidents, alerts, and events.

You do not have to search the MITRE pages to understand techniques or tactics and learn about their implications. You can view all the MITRE details in the **ATT&CK Explorer**. The additional details about MITRE ATT&CK Tactics and Techniques help you to understand how an attack or event is detected in their NetWitness system and then make informed decisions.

NetWitness Platform enables analysts to conduct further analysis with levels of granularity in techniques. The MITRE ATT&CK framework is a curated knowledge base and model for cyber adversary behavior. It reflects the various phases of an adversary's attack lifecycle and the platforms they are known to target. For more information on the MITRE ATT&CK framework, go to <https://attack.mitre.org/resources/faq/>. For more information, see “Use MITRE ATT&CK Framework” chapter in the [NetWitness Respond User Guide for 12.4](#).

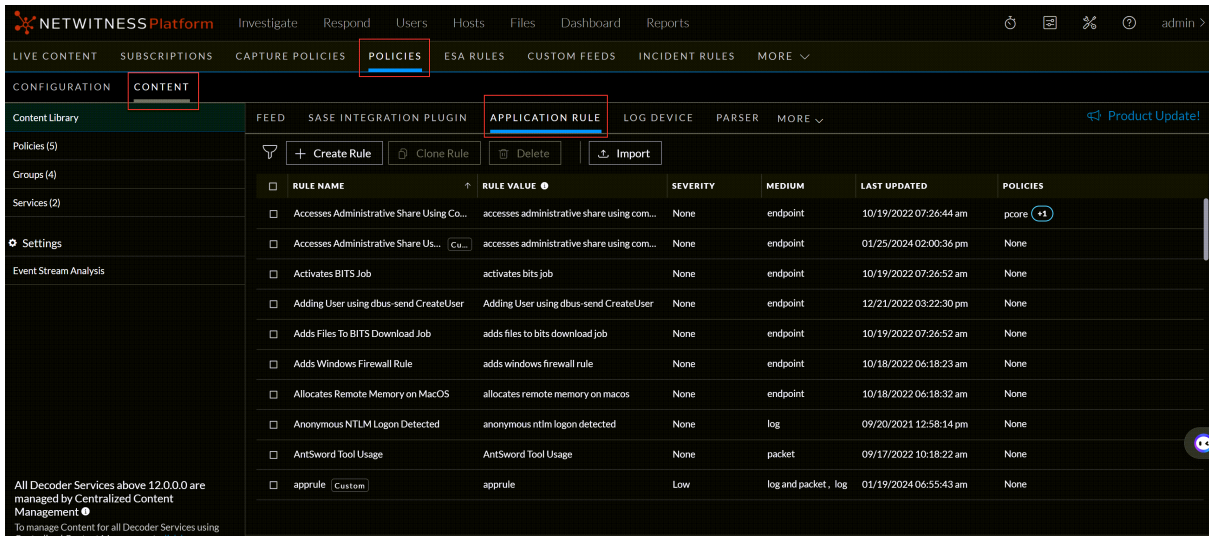

View MITRE ATT&CK Tactics and Techniques in Application and ESA rules

NetWitness allows you to tag application rules and ESA rules with MITRE ATT&CK Tactics and Techniques. When you tag MITRE ATT&CK Tactics and Techniques, you can view the details of the tactics and techniques used by advanced attackers or advanced persistent threats (APTs). You do not have to search the MITRE pages to understand techniques or tactics and learn about their implications. You can view all the MITRE details in the ATT&CK explorer. The additional details about MITRE ATT&CK Tactics and Techniques help you to understand how an attack or event is detected in their NetWitness system and then make informed decisions.

IMPORTANT: Both MITRE ATT&CK® and ATT&CK® are registered trademarks of the MITRE Corporation. © 2024 The MITRE Corporation. This work is reproduced and distributed with the permission of The MITRE Corporation.

To view MITRE ATT&CK Tactics and Techniques in application and ESA rules

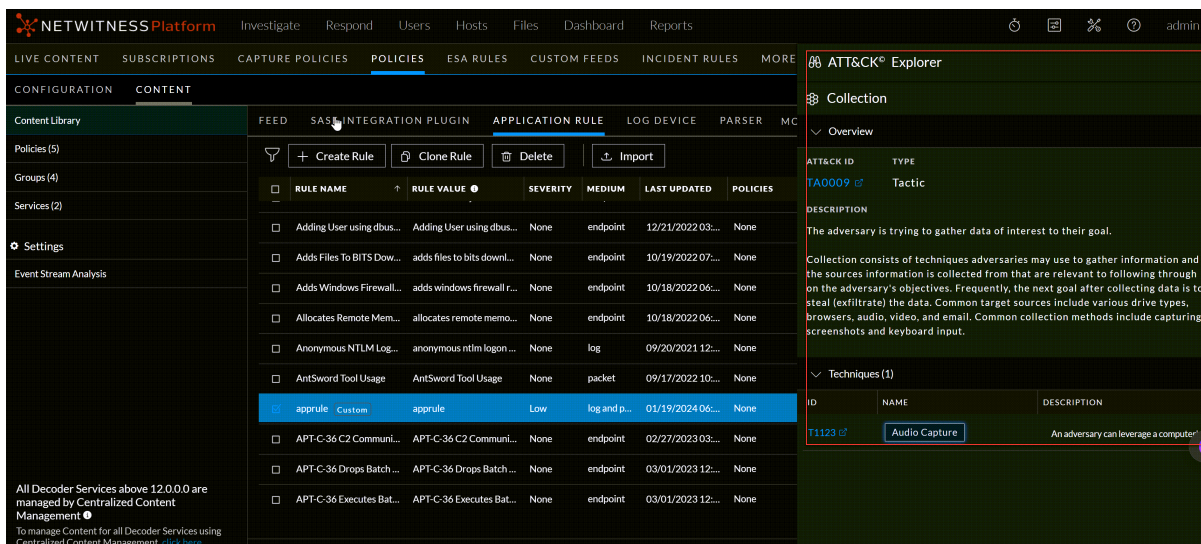

1. Go to  (CONFIGURE) > **Policies**.
2. In the **Policies** panel, click **Content** tab.
3. Click **APPLICATION RULE**. The Application Rules are listed.

- Click a rule that you want to view the MITRE ATT&CK Tactics and Techniques. The rule panel appears on the left side.

- In the left panel, scroll down and view the MITRE ATT&CK TACTICS and TECHNIQUES categories.
- Click a MITRE ATT&CK TACTICS or TECHNIQUES. The ATT&CK Explorer panel appears with details on tactics and techniques.

You can view the following details:

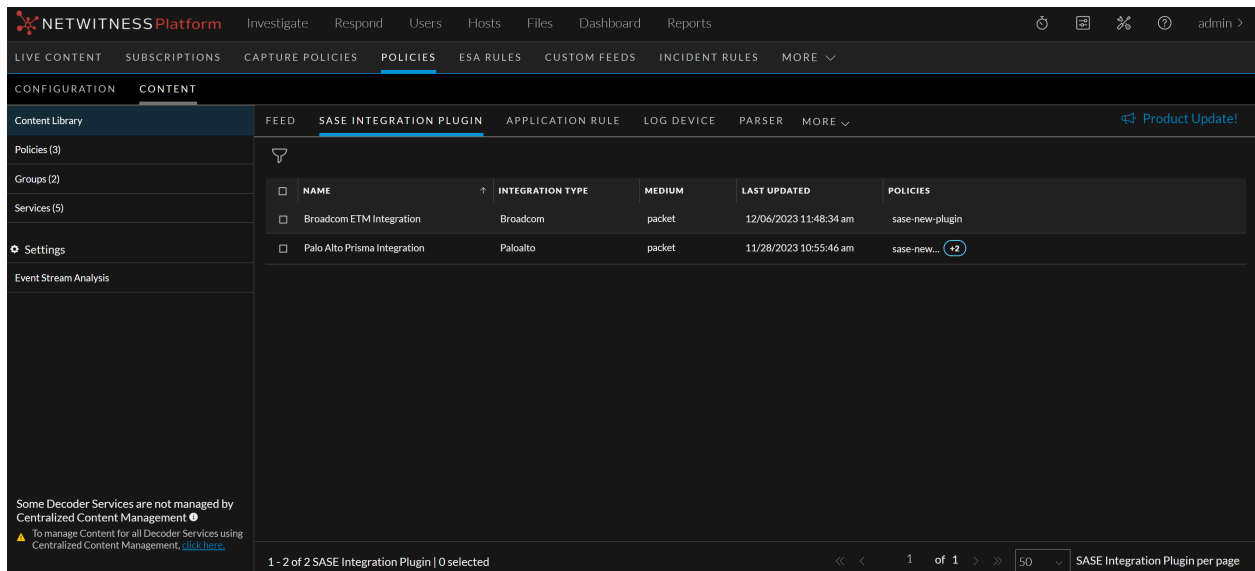

| Fields | Description |
|----------------------|---|
| MITRE ATT&CK Tactics | Displays the type of tactics associated with the Incident. For example, Credential Access . The tactic Credential Access tries to steal account names and passwords. For more information, see https://attack.mitre.org/tactics/enterprise/ . |
| ATT&CK ID | Displays the ATT&CK ID associated with the Tactics. You can click the ATT&CK ID and go to the MITRE page and view the details. Analysts can benefit by visiting the MITRE page directly to get additional details about the Tactics. For example: TA0006 . The Tactics ID TA0006 is associated with the Tactic Credential Access . |
| TYPE | Displays the Technique associated with the Tactics. |
| TACTIC | Displays the Tactics that you tagged. You can tag multiple Tactics with a rule. |
| DESCRIPTION | Displays the detailed information about the Tactic associated with the particular incident. |
| Techniques | Displays the ID, Name, and the Description of the various Techniques and Sub – Techniques associated with the Tactics. <div style="border: 1px solid green; padding: 5px; margin: 10px 0;"> <p>Note: Techniques are how the adversary tries to achieve a tactical goal by performing an action. Sub – Techniques describe the adversarial behavior at a lower level than a technique.</p> </div> <p>For more information, see</p> <ul style="list-style-type: none"> • https://attack.mitre.org/resources/faq/#faq-0-0-header. • https://attack.mitre.org/techniques/enterprise/. |

| Fields | Description |
|--------------------|--|
| Mitigations | Displays the ID, Name, and Description of the Mitigations used to prevent a technique or sub-technique from successfully executing. For example, The Mitigation name Account Use Policies associated with the ID M1036 helps configure features related to account use, like login attempt lockouts and specific login times. For more information, see https://attack.mitre.org/mitigations/enterprise/ . |
| Procedure Examples | Displays the ID, Name, and Description of the procedures that the adversary uses for techniques or sub-techniques. For example, Lazarus Group with the ID G0032 is a North Korean state-sponsored cyber threat group that was responsible for the November 2014 destructive wiper attack against Sony Pictures Entertainment as part of a campaign named Operation Blockbuster by Novetta. For more information, see https://attack.mitre.org/resources/faq/#faq-0-2-header and https://attack.mitre.org/groups/G0032/ . |

For more information, see “Use MITRE ATT&CK Framework” chapter in the [NetWitness Respond User Guide for 12.4](#).

About SASE Integration Plugins

From NetWitness Platform 12.4 version or later, NetWitness introduces the **SASE Integration Plugin** from the **Configure > Policies > Content Library** page. These plugins can be deployed on the services (Decoders) through a policy configuration, enabling them to capture all the network traffic from various SASE vendors and process the data efficiently, leading to increased network visibility. NetWitness uses the processed data to detect anomalies and displays them to analysts for further investigation and threat-hunting purposes.

The following are the supported SASE Integration Plugins:

- Palo Alto Prisma Integration
- Broadcom ETM Integration

You must create a policy with the **SASE Integration Plugin** type and associate the policy with the group having a Decoder service, and then publish the policy. Additionally, you must set up the **SASE Integration Plugin** details in the **Configuration** tab for a particular SASE Vendor inside the **Policy Details** view and save the configuration.

For more information on configuring **Palo Alto Prisma Integration**, see *Palo Alto Prisma SASE Configuration Guide*.

For more information on configuring **Broadcom ETM Integration**, see *Broadcom ETM SASE Configuration Guide*.

IMPORTANT: Ensure that you always publish the policy after adding the **SASE Integration Plugin** to deploy the plugin to the Decoder service.

Note:

- When you are adding the **SASE Integration Plugin** type, always enable the subscription by clicking the subscribed toggle. Once the content is subscribed, the updates are pushed automatically.
- You can also view the SASE Integration Plugin inside a **Policy Details** page and perform operations like **Filter**, **Enable**, **Disable**, **Subscribe**, and **Unsubscribe** those plugin types. For more information, see [Manage Policies](#).

For more information on adding the **SASE Integration Plugin** content to a policy, see [Create and Publish Policies](#).

For more information on groups, see [Manage Groups](#).

View SASE Integration Plugin Details

This topic describes the steps to view the SASE Integration Plugin details.

To view the SASE Integration Plugin details

1. Go to  (CONFIGURE) > **Policies**.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.
4. Click **SASE Integration Plugin**
The list of SASE Integration Plugins is displayed.
5. Click a row to view details about the selected **SASE Integration Plugin** in the right panel.

The various details of the SASE Integration Plugin are displayed.

The screenshot shows the NetWitness Platform interface. The main navigation bar includes 'Investigate', 'Respond', 'Users', 'Hosts', 'Files', 'Dashboard', and 'Reports'. The secondary navigation bar includes 'LIVE CONTENT', 'SUBSCRIPTIONS', 'CAPTURE POLICIES', 'POLICIES', 'ESA RULES', 'CUSTOM FEEDS', 'INCIDENT RULES', and 'MORE'. The 'POLICIES' section is active, showing a 'CONTENT' view of SASE Integration Plugins.

| NAME | INTEGRATION ... | MEDIUM | LAST UPDATED | POLICIES |
|----------------------------|-----------------|--------|-------------------|-------------|
| Broadcom ETM Integra... | Broadcom | packet | 12/06/2023 11:... | sase-new... |
| Palo Alto Prisma Integr... | Paloalto | packet | 11/28/2023 10:... | sase... +2 |

The detailed view for 'Palo Alto Prisma Integration' shows the following information:

- DESCRIPTION:** test
- CONTENT TYPE:** SASE Integration Plugin
- MEDIUM:** packet
- POLICIES:** sase-new-plugin +2
- SIZE:** 11.7 KB
- VERSION:** 2.0
- LAST UPDATED:** 11/28/2023 10:55:46 am

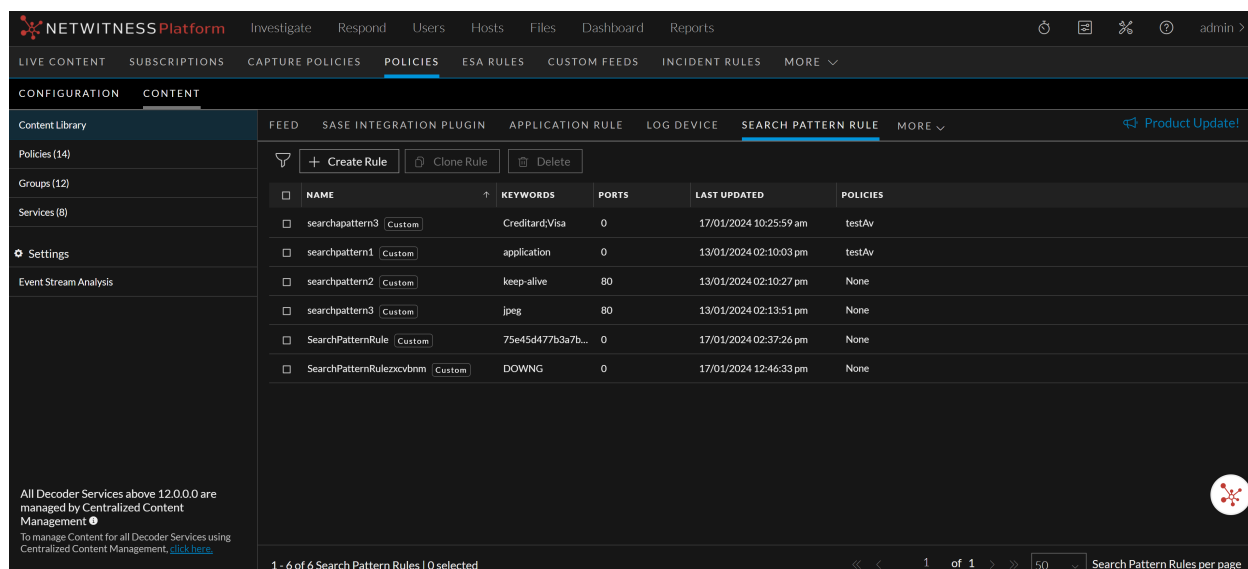

At the bottom of the interface, it indicates '1 - 2 of 2 SASE Integration Plugin | 1 selected' and 'SASE Integration Plugin per page'.

Manage Search Pattern Rules

From NetWitness Platform version 12.4 or later, administrators and analysts can create search pattern rules from the **Configure > Policies > Content Library** page to find sensitive data on their networks. These rules use keywords to identify patterns and they are matched based on an exact keyword string. Once a pattern is applied to a matched policy with services (Decoders), it searches for that pattern in the network traffic. Upon successful detection of a match, two important metadata will be generated (**found** and **match**).

- **found:** If a match (a keyword) is identified in a stream, the name of the search pattern rule will be added as the found metadata.
- **match:** If a keyword is detected as a match, the specific keyword that is identified will be added as a match meta.

Analysts can use this metadata to investigate further and determine if the sensitive data is being used maliciously. Additionally, analysts can gain real-time visibility into their network traffic, proactively monitoring it for potential threats.

Here is an example of search pattern that can be used to find sensitive data in networks:

Keywords: Keywords are words or phrases that are often associated with sensitive data. For example, the keyword **credit card** could be used to find network traffic that contains credit card numbers.

IMPORTANT: The custom search patterns you created using the **search.ini** file in version 12.3.1 or earlier will not be migrated to the new **search.xml** file format used in version 12.4 and later. As a result, those custom search patterns will not be available from the **Content Library > More > Search Pattern Rule** tab after you upgrade to version 12.4 or later.

For example, in an environment, if you have four Decoders with CCM enabled and published to the policy. However, only three of these decoders have the search parser enabled, while one decoder doesn't have it enabled. As a result, only the three decoders with enabled search parser will generate **found** and **match** meta keys.

In addition, administrators can perform other operations on the search pattern rule, such as editing, cloning, deleting, and filtering a rule.

Note: You can also view the search pattern rules inside a **Policy Details** view and allows you to enable or disable those rules. For more information, see [Manage Policies](#).

The screenshot shows the NETWITNESS Platform interface. The top navigation bar includes 'Investigate', 'Respond', 'Users', 'Hosts', 'Files', 'Dashboard', and 'Reports'. The main navigation menu includes 'LIVE CONTENT', 'SUBSCRIPTIONS', 'CAPTURE POLICIES', 'POLICIES', 'ESA RULES', 'CUSTOM FEEDS', 'INCIDENT RULES', 'INCIDENT NOTIFICATIONS', and 'MORE'. The 'POLICIES' page is active, showing a search bar with 'aaaa' and a table of policies. The table has columns for 'NAME', 'KEYWORDS', 'PORTS', 'LAST UPDATED', 'SUBSCRIPTION', and 'STATUS'. Three policies are listed:

| NAME | KEYWORDS | PORTS | LAST UPDATED | SUBSCRIPTION | STATUS |
|----------------------------|------------|-------|------------------------|--------------|---------|
| aaa | | 0 | 11/07/2023 05:53:04 pm | Unsubscribed | Enabled |
| qqq | | 0 | 11/07/2023 05:53:08 pm | Unsubscribed | Enabled |
| Search Pattern Rule test 6 | wdHMrabbit | 0 | 11/23/2023 09:45:27 am | Unsubscribed | Enabled |

At the bottom of the screenshot, it says 'Showing 3 out of 3 | 0 selected'.

You must create a policy with the **Search Pattern Rule** type and associate the policy with the group having a Decoder service, and then publish the policy.

For more information on adding the search pattern rule content to a policy, see [Create and Publish Policies](#).

For more information on groups, see [Manage Groups](#).

You can perform following operations for Search Pattern Rule:

- [View Search Pattern Rule Details](#)
- [Create a Search Pattern Rule](#)
- [Edit a Search Pattern Rule](#)
- [Clone a Search Pattern Rule](#)
- [Delete a Search Pattern Rule](#)
- [Filter Search Pattern Rules](#)
- [Filter Search Pattern Rules from Policy Details View](#)

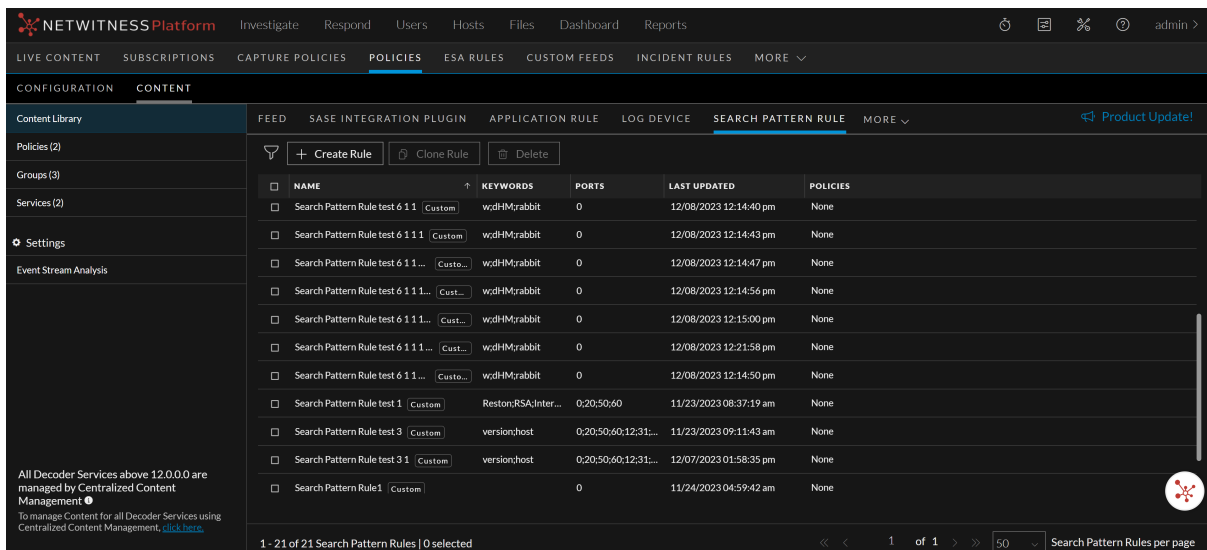

View Search Pattern Rule Details

This topic describes the steps to view the search pattern rule details.

To view the Search Pattern Rule details

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.
4. Click **More** > **Search Pattern Rule**.

The Search Pattern Rule tab is displayed.

5. Click a row to view details about the selected search pattern rule in the right panel. The various details of the search pattern rule are displayed.

Create a Search Pattern Rule

This topic describes the steps to create the search pattern rules.

Prerequisites

- By default, only administrators are allowed to create search patterns. To enable access for analysts, they must contact their administrators.

- To generate the meta keys **found** and **match**, you need to enable the **Search Parser** (found and match), which is disabled by default. To do this, navigate to  (Admin) > **Services** > select **Decoder** service >  > **Config** > **General** > under **Parser Configuration** section, enable the **Search Parser**.

Note: Creating a generic search pattern rule will cause performance issues.

Note: An administrator must enable **source-server.centralpolicy.manage** permission on the source server and **rules.manage** permission on the core devices to allow analysts to create the search pattern rules. For more information, see the "Role Permissions" topic in the *System Security and User Management Guide*.

To create a Search Pattern Rule

- Go to  (CONFIGURE) > **Policies**.
- In the policies panel, click **Content**.
- In the left panel, click **Content Library**.
- Click **More** > **Search Pattern Rule**.
The Search Pattern Rule tab is displayed.
- Click + **Create Rule**.
The Create New Rule dialog is displayed.

Create New Rule [X]

SEARCH PATTERN NAME *

Please enter the pattern name to identify in Content Library

searchpatternrule

KEYWORDS ⓘ

Keywords are matched based on an exact string. Regular expressions are not supported. Use ; to separate multiple keywords. Keywords are case sensitive

VISA

SERVICE PORT *

Use ; to separate multiple Service Port Numbers

25

Reset Cancel Save

6. Enter the pattern name to identify them. The name must be unique and can contain a maximum of 256 characters. Use only letters, and numbers.

Note: Search Pattern names cannot contain spaces.

7. Enter one or more keywords in the **Keywords** text box. Keywords are matched based on an exact string only. Regular expressions (Regex) are not supported.

Use semicolons (;) to separate multiple keywords. For example, **CreditCard;VISA;US**. Keywords are case-sensitive. You can enter one or more keywords to improve the chances of detecting an exact string match.

Note: Non-ASCII characters (for example, é, €, ★, etc.) are not supported. Enter only ASCII characters when creating a search pattern.

8. Enter one or more port numbers in the **Service Port** field. Use semicolons (;) to separate multiple port numbers. For example, **20;21;23**.

Note: The port numbers must be between **1** and **65535**.

9. Click **Save** to create the search pattern rule.
10. Click **Reset** to reset the fields.

Edit a Search Pattern Rule

When you edit the search pattern rule, follow these guidelines:

- The search pattern rule name cannot be edited if the rule is assigned to a policy.
- If the rule assigned to a policy is edited, then the administrator must republish the policy for the changes to take effect in the service.
- While editing the rule name, if the name of that search pattern rule is the same as an existing rule, an error message is displayed.

To edit a Search Pattern Rule

1. Go to  (CONFIGURE) > **Policies**.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.
4. Click **More > Search Pattern Rule**.
The Search Pattern Rule tab is displayed.
5. Click a row of the search pattern rule to be modified.
6. Click **Edit Rule** to modify the search pattern rule.
The Edit Rule dialog is displayed.

Edit Rule

SEARCH PATTERN NAME *

Please enter the pattern name to identify in Content Library

Reset Cancel Save

7. In the **Edit Rule** panel, do the following:
 - a. Enter a unique rule name. The name must be unique and can contain a maximum of 256 characters. Use only letters, and numbers.

Note: Search Pattern names cannot contain spaces. If the name of that search pattern rule is the same as an existing rule, an error message is displayed.
 - b. Enter one or more keywords in the **Keywords** field. Keywords are matched based on an exact string only. Regular expressions (Regex) are not supported.
Use semicolons (;) to separate multiple keywords. For example, **CreditCard;VISA;US**. Keywords are case-sensitive. You can enter one or more keywords to improve the chances of detecting an exact string match.
 - c. Enter one or more port numbers in the **Service Port** field. Use semicolons (;) to separate multiple port numbers. For example, **20;21;23**,

Note: The port numbers must be between **1** and **65535**.
 - d. Click **Save** to save the search pattern rule details.
 - e. Click **Reset** to reset the fields.
 - f. Click **Cancel** to cancel the operation.

Clone a Search Pattern Rule

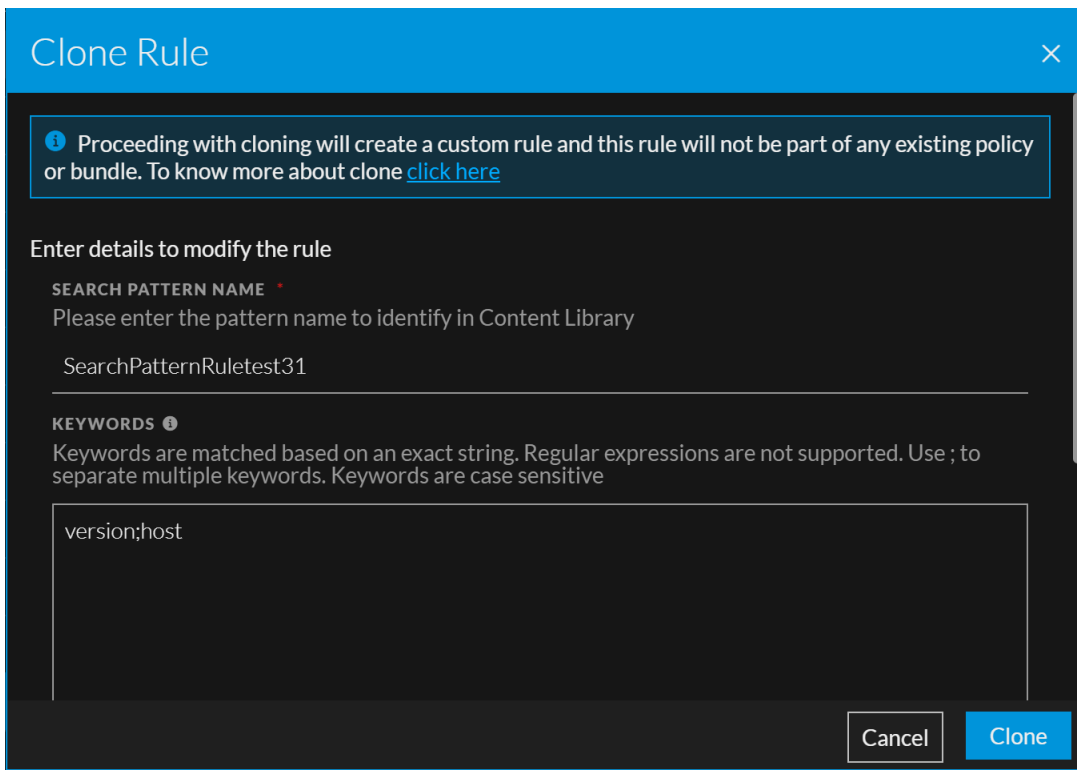

This topic describes the steps to clone a Search Pattern rule.

Note:

- Cloning will create a search pattern rule and will not be associated with any existing policy.
- You can clone existing search pattern rules to generate new ones with different rule names but with the same parameters.
- You can clone only one search pattern rule at a time.

To Clone a Search Pattern Rule

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.
4. Click **More > Search Pattern Rule**.
The Search Pattern Rule tab is displayed.
5. Select a search pattern rule and click **Clone Rule**.
The Clone Rule dialog is displayed.

6. In the **Clone Rule** panel, do the following:
 - a. Enter a unique name for the search pattern rule clone. The name can contain a maximum of 256 characters. Use only letters, and numbers.

Note: Rule names are always appended with a number. For example, if the rule has the name **SearchPatternRuletest3**, its name will be changed to **SearchPatternRuletest31** after the cloning.

- b. Enter one or more keywords in the **Keywords** text box. Keywords are matched based on an exact string only. Regular expressions (Regex) are not supported.

Use semicolons (;) to separate multiple keywords. For example, **CreditCard;VISA;US**. Keywords are case-sensitive. You can enter one or more keywords to improve the chances of detecting an exact string match.

- c. Enter one or more port numbers in the **Service Port** field. Use semicolons (;) to separate multiple port numbers. For example, **20;21;23**,

Note: The port numbers must be between **1** and **65535**.

- d. Click **Clone** to clone the search pattern rule details.
- e. Click **Cancel** to cancel the operation.

Delete a Search Pattern Rule

When you delete the search pattern rule, follow these guidelines:

- You cannot delete the search pattern rule if it is associated with a policy. You should first disassociate the search pattern rule from the policy and then delete it.
- If you select a search pattern rule that is associated with a policy and another that is not associated with a policy, the delete button will be disabled.

To delete a Search Pattern Rule

1. Go to  (**CONFIGURE**) > **Policies**.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.
4. Click **More** > **Search Pattern Rule**.
The Search Pattern Rule tab is displayed.
5. Select one or more search pattern rules and click **Delete**.
A confirmation pop-up is displayed.
6. Click **Delete** to permanently delete the selected search pattern rules.

Filter Search Pattern Rules

The Filters panel allows you to filter the list of search pattern rules under the content library based on the name, keywords, ports, last updated date, and source type.

To filter the search pattern rules

1. Go to  (**CONFIGURE**) > **Policies**.
2. In the policies panel, click **Content**.
3. In the left panel, click **Content Library**.

4. Click **More > Search Pattern Rule**.

The Search Pattern Rule tab is displayed.

5. By default, the filters panel is hidden. Click the  (Filters) icon in the toolbar to expand the filters panel.

6. To search by name:

- Set the filter option to **Contains** operator from the drop-down list and start typing the name of the search pattern rule. Type one character, and a list of search pattern rules that contain that character is displayed, as you continue to type, the list is filtered to match.
- Set the filter option to **Equals** operator from the drop-down list and enter the full name. The particular rule will be displayed.

7. To search by keywords, select one or more keywords that are listed in the **Keywords** drop-down list. The filter is an AND operator when searching for multiple keywords, such as **Visa** and **MasterCard**. In this case, the filter results will display all matches that contain both Visa and MasterCard.

8. To search by ports, select one or more port numbers that are listed in the **Ports** drop-down list. The filter is an AND operator when searching for multiple port numbers, such as **25** and **34**. In this case, the filter results will display all matches that contain both 25 and 34.

9. To filter by date range, under the **Last Update Date**, select the start date and end date from the date fields.

For example, to filter search pattern rules that were updated between May 1 and May 31, you select May 1 as the start date and May 31 as the end date. You must enter dates in mm/dd/yyyy format, or you can click and pick dates from a calendar.

10. To filter by source type, select one or more sources from the **Source Type** drop-down list. The options are listed below:

- **Custom**
- **Live**

11. To hide, click the  icon at the top-right of the panel.

The search pattern rules are displayed in the right panel according to the filter you selected. Click **Reset** to clear the existing filter results.

Filter Search Pattern Rules from Policy Details View

The Filters panel allows you to filter the list of displayed search pattern rules in the policy details view based on the name, keywords, ports, source type, enabled/disabled status, subscription status, resource-created date, and last updated date.

To filter the search pattern rules

1. Go to  (CONFIGURE) > **Policies**.
2. In the policies panel, click **Content**.
3. Click **Policies**. The available policies are displayed.
4. Do one of the following:
 - Click a policy name.
 - Click a row to view details about the selected policy and click **View Details**.

The policy details view is displayed.

5. Click the **Search Pattern Rule** tab.
6. By default, the filters panel is hidden. Click the  (Filters) icon in the toolbar to expand the filters panel.

| NAME | KEYWORDS | PORTS | LAST UPDATED | SUBSCRIPTI... | STATUS |
|--|-------------|-------|------------------------|---------------|---------|
| <input type="checkbox"/> aaa Custom | | 0 | 11/07/2023 05:53:04 pm | Unsubscribed | Enabled |
| <input type="checkbox"/> QQI Custom | | 0 | 11/07/2023 05:53:08 pm | Unsubscribed | Enabled |
| <input type="checkbox"/> Search Pattern Rule Test 6 (Custom) | wdHMrrabbit | 0 | 11/23/2023 09:45:27 am | Unsubscribed | Enabled |

7. To search by name:
 - Set the filter option to **Contains** operator from the drop-down list and start typing the name of the search pattern rule. Type one character, and a list of search pattern rules that contain that character is displayed, as you continue to type, the list is filtered to match.
 - Set the filter option to **Equals** operator from the drop-down list and enter the full name. The particular rule will be displayed.

8. To search by keywords, select one or more keywords that are listed in the **Keywords** drop-down list. The filter is an AND operator when searching for multiple keywords, such as **Visa** and **MasterCard**. In this case, the filter results will display all matches that contain both Visa and MasterCard.
9. To search by ports, select one or more port numbers that are listed in the **Ports** drop-down list. The filter is an AND operator when searching for multiple port numbers, such as **25** and **34**. In this case, the filter results will display all matches that contain both 25 and 34.
10. To filter by source type, select one or more sources from the **Source Type** drop-down list. The options are listed below:
 - **Custom**
 - **Live**
11. To filter by enabled/disabled status, select one or more statuses from the **Enabled/Disabled Status** drop-down list. The options are listed below:
 - **Enabled**
 - **Disabled**
12. To filter by subscription status, select one or more statuses from the **Subscription** drop-down list. The options are listed below:
 - **Subscribed**
 - **Unsubscribed**
13. To filter by a resource created date range, under the **Resource Created Date**, select the start date and end date from the date fields.

For example, to filter contents that were created between July 1 and July 30, you select July 1 as the start date and July 30 as the end date. You must enter dates in **mm/dd/yyyy** format or you click and pick dates from a calendar.
14. To filter by date range, under the **Last Update Date**, select the start date and end date from the date fields.

For example, to filter search pattern rules that were updated between May 1 and May 31, you select May 1 as the start date and May 31 as the end date. You must enter dates in mm/dd/yyyy format, or you can click and pick dates from a calendar.
15. To hide, click the  icon at the top-right of the panel.

The search pattern rules are displayed in the right panel according to the filter you selected. Click **Reset** to clear the existing filter results.

Filter Content Rules

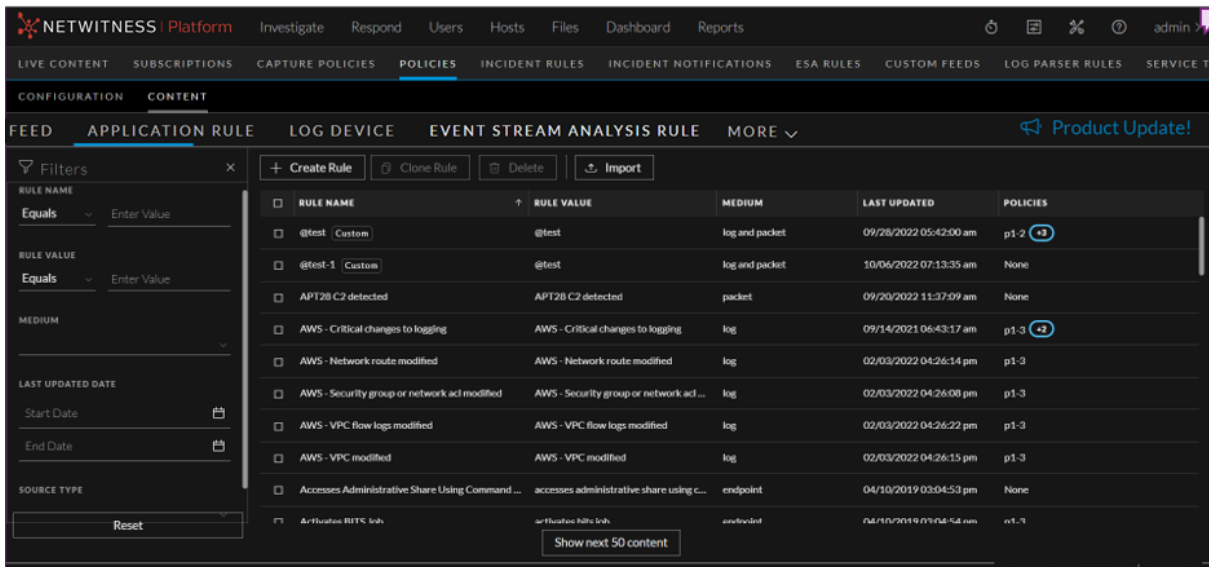

The Filters panel allows you to filter the list of displayed contents under the content library based on the name, medium, date range, and source type.

This applies to the following content rule types:

- Feed
- Application Rule
- Log Device
- Lua Parser
- Network Rule
- Event Steam Analysis Rule
- SASE Integration Plugin
- Search Pattern Rule
- Bundle

To filter the content rules

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. Click **Content Library**.
4. By default, the filters panel is hidden, click the  (Filters) icon in the toolbar to expand the filters panel.

5. To search by rule name:
 - Set the filter option to **Contains** operator from the drop-down list and start typing the name of the rule. Type one character and a list of rules that contain that character is displayed, as you continue to type the list is filtered to match.

- Set the filter option to **Equals** operator from the drop-down list and enter the full name. The particular content type will be displayed.
6. To filter by rule value:
 - Set the filter option to **Contains** operator from the drop-down list and start typing the rule value. Type one character and a list of rules that contain the rule value with that character is displayed, as you continue to type the list is filtered to match.
 - Set the filter option to **Equals** operator from the drop-down list and enter the full rule value. The particular content type will be displayed.
 7. To filter by medium, select one or more mediums from the **Medium** drop-down list. The options are listed below:
 - **endpoint**
 - **log**
 - **log and packet**
 - **packet**
 8. To filter by date range, under the **Last Update date**, select the start date and end date from the date fields.

For example, to filter policies that were updated between July 1 and July 30, you select July 1 as the start date and July 30 as the end date. You must enter dates in **mm/dd/yyyy** format or you click and pick dates from a calendar.
 9. To filter by source type, select one or more sources from the **Source Type** drop-down list. The options are listed below:
 - **Custom**
 - **Live**
 10. To hide, click the  icon at the top-right of the panel.

The contents are displayed in the right panel according to the filter you selected. Click **Reset** to clear the existing filter results.

Manage Groups

This section contains:

- [Create a Group](#)
- [View a Group](#)
- [Delete a Group](#)
- [Edit a Group](#)
- [Filter Groups](#)

Create a Group

You can create a group with one or more services and assign one policy to it. Groups may be created without any assigned policy; however, a policy must be assigned to a group and Published in order for any content changes to take effect.

To create a Group

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. In the left panel, click **Groups**.
4. In the tool bar, click + **Create New**.
5. In the **New Group** panel, do the following:
 - Enter the name of the group.
 - Enter the description for the group.
6. Click **Next**.
7. In the **Define Group**, click + to assign services to the group.

Note:

- A service is disabled if it is assigned to another group.
- A service is disabled if it is not managed by Policy-based Centralized Content Management.
- ESA Services are not disabled when assigned to a group, as the ESA services can be assigned to more than one group.

8. Click **Next**.
9. In the **Assign Policies**, click + to assign policies to a group. You can assign only one policy to any particular group.

10. Do any one of the following:
 - Click **Save and Publish** to save and publish the settings.
 - Click **Save and Close** to save the settings.

View a Group

This topic describes the steps to view the properties of Group.

To view the properties of the selected Group

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. Click **Groups**. The available groups are displayed. By default, 50 groups are displayed per page. To go to the next page, click . To go to the last page, click .

| NAME | DESCRIPTION | SERVICES | POLICY | POLICY STATUS |
|--------|-------------|------------------------------|--------|---|
| A | | packethybrid - Decoder | A | Unpublished |
| fsd | | endpointhybrid - Log Decoder | sdsadb | Partial  |
| test23 | | None | None | N/A |

1 - 3 of 3 Groups | 0 selected

50 Groups per page

- Click a row to view details about the selected group in the right panel.

The screenshot shows the NetWitness Platform interface. The top navigation bar includes 'NETWITNESS | Platform' and various menu items like 'Investigate', 'Respond', 'Users', 'Hosts', 'Files', 'Dashboard', 'Reports', and 'admin'. Below this is a secondary navigation bar with 'LIVE CONTENT', 'SUBSCRIPTIONS', 'CAPTURE POLICIES', 'POLICIES', 'INCIDENT RULES', 'INCIDENT NOTIFICATIONS', 'ESA RULES', 'CUSTOM FEEDS', and 'LOG PARSER R'. The main content area is divided into 'CONFIGURATION' and 'CONTENT'. Under 'CONTENT', there are sections for 'Content Library', 'Policies (4)', 'Groups (3)', 'Services (2)', 'Settings', and 'Event Stream Analysis'. A table lists policies with columns for 'NAME', 'DESCRIPTION', 'SERVICES', 'POLICY', and 'POLICY STA...'. The 'fsd' policy is selected, and its details are shown in the right-hand panel. A warning message states: 'Some of the services associated with the policy are not managed by Policy-based Centralized Content Management'. The table shows the following data:

| NAME | DESCRIPTION | SERVICES | POLICY | POLICY STA... |
|--------|-------------|----------------------------|--------|---------------|
| A | | packethybrid - Decoder | A | Unpublished |
| fsd | | endpointhybrid - Log De... | sdasdb | Partial ▲ |
| test23 | | None | None | N/A |

Caution:

- An icon  is displayed in the Groups View indicating policy status unpublished, if any services are part of the selected group and do not have any deployment then some of the associated correlation services require ESA deployments.
- An icon  is displayed in the Groups View, indicating that the policy status failed for multiple reasons. Please see the groups overview section in the UI to find the failure reason and the workaround.

Delete a Group

You can delete one or more groups. Once the group is deleted, all services will be removed from the group and all the policy content will be deleted from the services.

To delete a Group

- Go to  (**CONFIGURE**) > **Policies**.
- In the policies panel, click **Content**.
- Click **Groups**. The available groups are displayed.
- Select one or more Groups and click **Delete**.
The Delete Groups dialog is displayed.
- To delete the deployed content from the services upon deleting the group, select the option **Delete deployed content from the services on group removal**. For ESA service, the content will be deleted upon deleting the group.
- Click **Delete** to permanently delete the selected group.
The confirmation message is displayed.

Note:

- For a group with multiple services, even if we fail to delete a particular service under the group, the other services will get deleted. The service which is not deleted will be in **Failed** state.
- The group status changes to **Failed** if group deletion fails for any particular reason.

Edit a Group

You can edit the properties of the group at any point in time. The status of the updated group is unpublished if you change the service or policies in a group. If you just change the group name and description, then the status remains published (if it is already published).

To edit the selected Group

1. Go to  (CONFIGURE) > **Policies**.
2. In the policies panel, click **Content**.
3. In the left panel, click **Group**. The available groups are displayed.
4. Select a group to edit and click **Edit**.
5. Make the required changes in the group.
6. Do any one of the following:
 - Click **Save and Publish** to save and publish the policy.

Note:

- While removing a service from the group, you can opt to either delete the content of the service and remove the service or just remove the service from the group. While removing a service that has Log Device content, you can delete the Custom Parser and disable the Base Log Device Parser from the service.
- While removing the group from the policy, the ESA content will be deleted by default.

- The policy will be listed under the Unpublished category.
- Click **Save and Close** to save the settings and return to the Policies view.

Filter Groups

The Filters Panel for content group allows you to filter the list of displayed groups, based on the group name, policy status, services and policies.

To filter the Groups

1. Go to  (CONFIGURE) > **Policies**.
2. In the policies panel, click **Content**.
3. In the left panel, click **Groups**. The available groups are displayed.

4. To filter the groups, click . The filter panel is displayed.

5. On the filter panel, do the following:
 - a. Select the **Name** drop-down value as either **Equals** or **Contains**. To search the group name using the **Contains** operator, set the filter option to **Contains** operator from the drop-down list and start typing the name of the group. Type one character and a list of group that contain that character is displayed, as you continue to type, the list is filtered to match. To search the group name using the **Equals** operator, set the filter option to **Equals** operator from the drop-down list and enter the full name. The particular group name will be displayed.
 - b. Select the **Policy Status** from the drop-down list. The various drop-down values are:
 - i. **Published**: Groups that are published to use.
 - ii. **Unpublished**: Groups that are saved but not published.
 - iii. **Failed**: Groups that are failed to publish.

- iv. **N/A:** Groups for which publication status is not applicable.
- v. **Partial:** Groups that are partially published.
- c. Select the **Services** from the drop-down list.
- d. Select the **Policies** from the drop-down list.
- e. To reset the fields, click **Reset**.

Manage Policies

This section contains:

- [Create and Publish Policies](#)
- [Clone a Policy](#)
- [Delete a Policy](#)
- [Edit a Policy](#)
- [View a Policy](#)
- [Enable Content for a Policy](#)
- [Disable Content for a Policy](#)
- [Subscribe Content for a Policy](#)
- [Unsubscribe Content for a Policy](#)
- [Filter Policies](#)
- [Filter Policy Content Details](#)
- [Merge Policy with ESA Content](#)

Create and Publish Policies

You can create a policy and assign it to one or more groups.

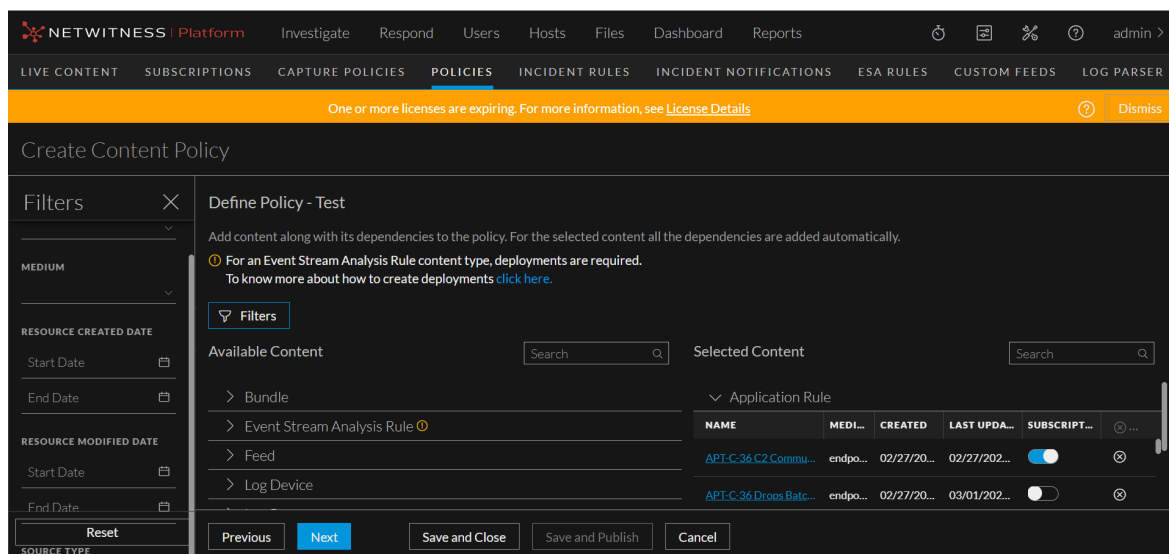

To create a Policy

1. Go to  (CONFIGURE) > **Policies**.
2. In the policies panel, click **Content**.
3. Click **Policies**.
The available policies are displayed.
4. Click + **Create New** to add a new policy.
5. In the **New Policy** panel, do the following:
 - Enter a unique policy name.
 - Enter a description for the policy.
6. Click **Next**.
7. In the **Available Content**, select the content type and click + to add the content to the policy. To add all content based on the resource type, click . After you add the content, you can enable subscription (if required) by clicking subscribed toggle. Once the content is subscribed the updates are pushed automatically. To conveniently search the available content, type the initial content text in

the **Search** box available under the **Available Content** .To conveniently search the selected content, type the initial content text in the **Search** box available under the **Selected Content** .

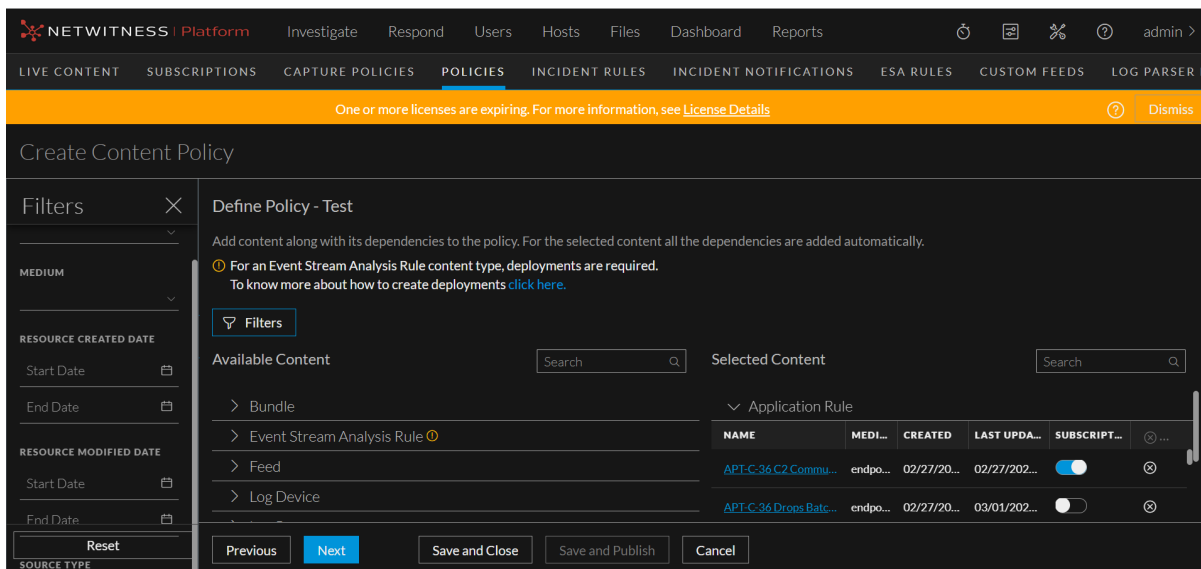

8. To filter both available and selected content, do the following:

- Click the  icon. The filter panel window is displayed.

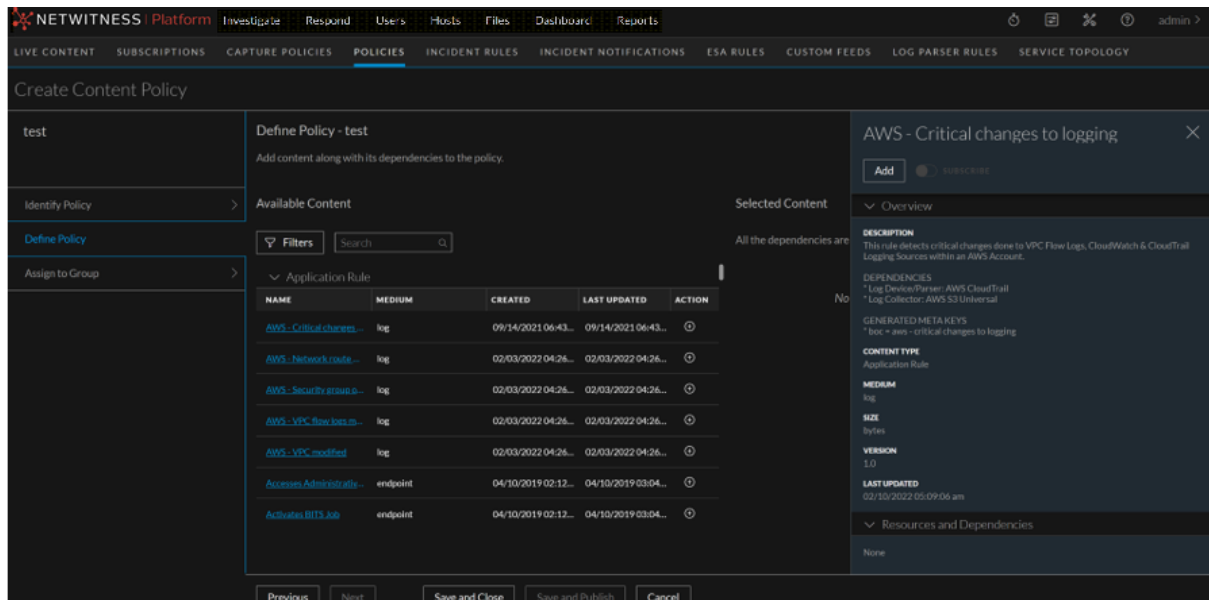

- Select the **Resource Types** from the available drop-down values.
- Select the **Medium** from the available drop-down values.
- Select the **Resource Created Date** and **Resource Modified Date**.
- To reset the fields, click **Reset**.

Note: Subscription is not allowed for custom content.

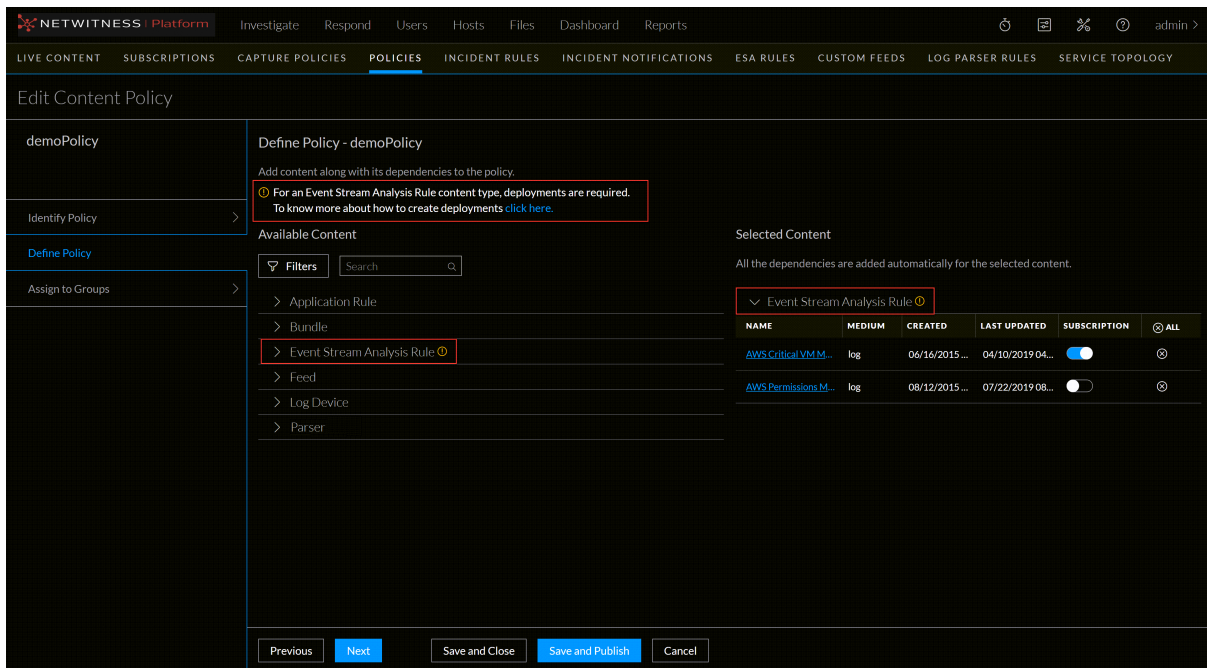

9. **Note:**
 - All the dependencies are added automatically for the selected content. You can click on the content name highlighted in blue and look for details such as content description, content type, resources and dependencies and so on. You can also add and subscribe the resource from the details view.

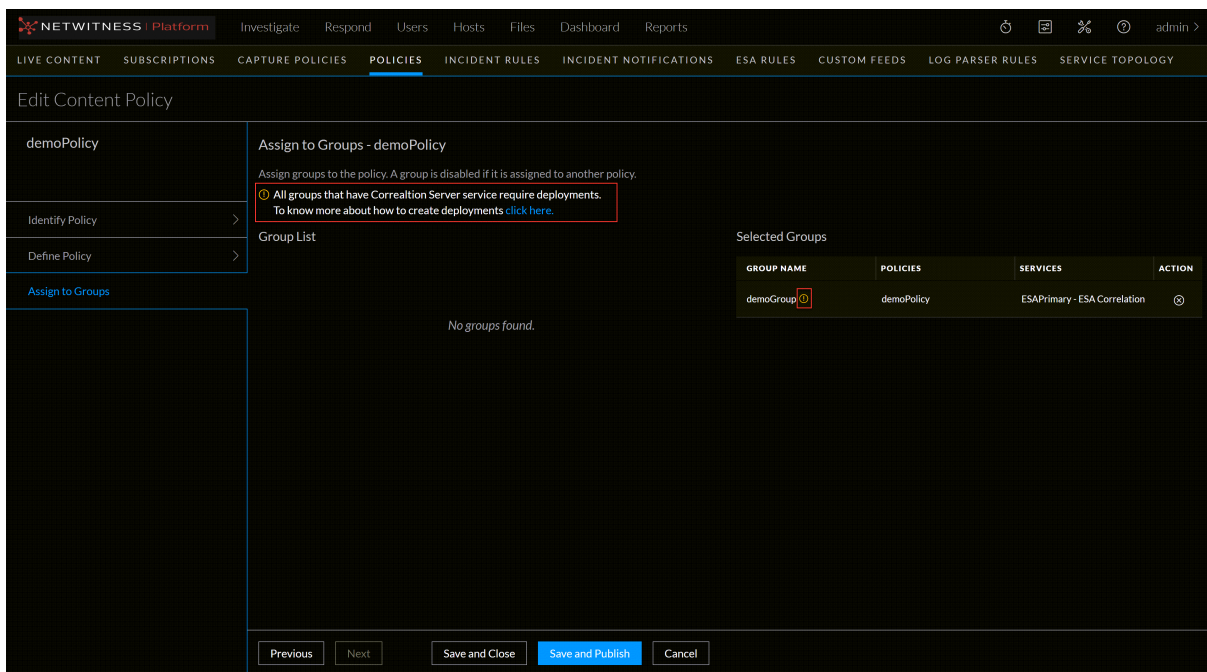

A caution icon  is displayed to create a deployment on three scenarios.

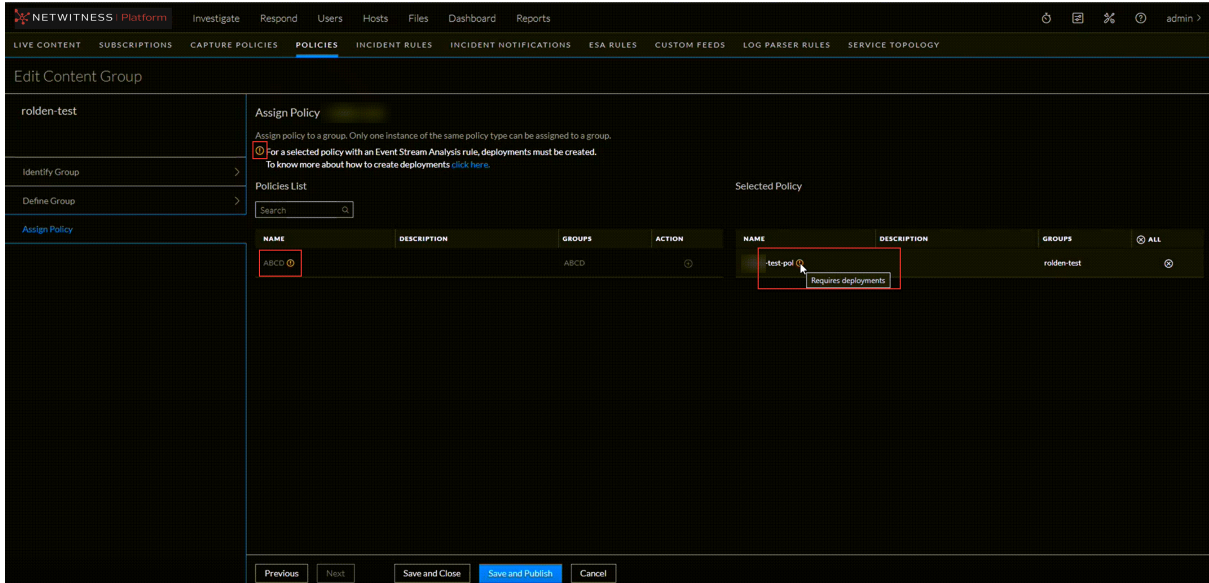

- To implement the **Event Stream Analysis Rule** content type, you must have a deployment.

- All groups that have correlation server service must have a deployment.

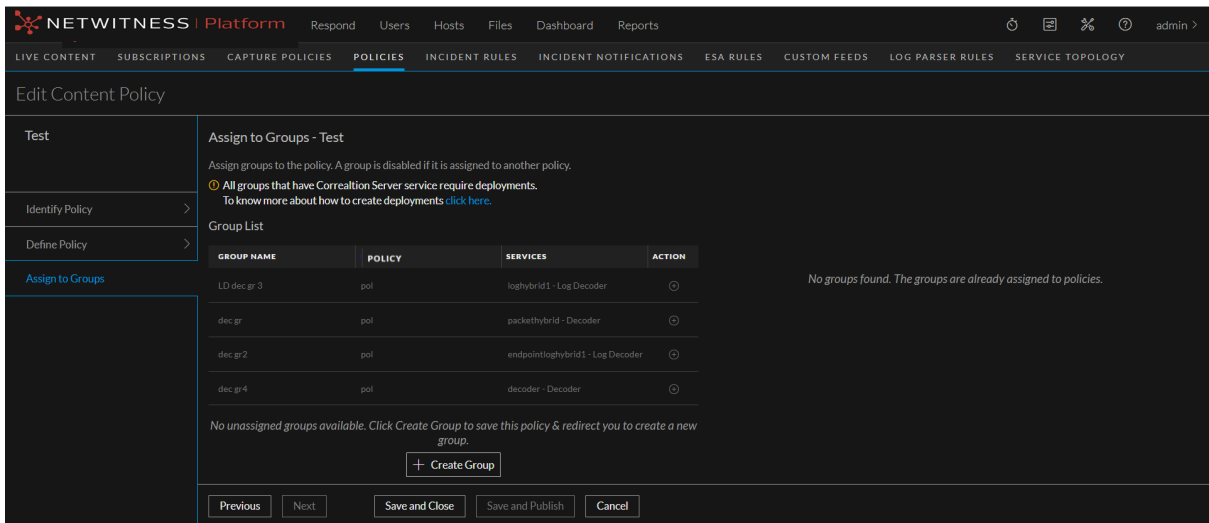

- For any selected policy with an ESA rule, deployment are must be created.

To create and manage deployments, refer to [Manage Deployments](#) feature.

- In the Group List, click + to assign groups to the policy.

Note: A group is disabled if another policy of the same type is already assigned to this group.

- If there are no unassigned groups available, click + Create Group to save the policy and redirect you to **Create New Group** screen. For more information on creating a new group, see [Create a Group](#) feature.
- Click **Save and Publish** to save and publish the settings.

Note: You can also publish a policy from **Policy Details** screen. For more information on publishing a policy from **Policy Details** screen, refer [View a Policy](#) feature.

- Click **Cancel** to cancel the publish content dialog.

14. Click **Save and Close** to save the settings.

IMPORTANT:

- From 12.3 version onwards, contents of services are not wiped out while publishing the first policy.
- The endpoint risk scoring requires certain application rules. Refer [Endpoint Risk Scoring Rules](#) to view the list of these application rules.

Clone a Policy

When you clone a policy, all the content from the old policy is copied to the new policy. The cloned policy can be assigned to a new group. You can clone only one policy at a time.

To clone a Policy

1. Go to  (CONFIGURE) > **Policies**.
2. In the policies panel, click **Content**.
3. Click **Policies**. The available policies are displayed.
4. Select a policy to clone and in the More actions drop-down list in the tool bar, click **Clone**.
The policy is cloned successfully.

Delete a Policy

Deleting a policy removes all content from the associated group.

To delete a Policy

1. Go to  (CONFIGURE) > **Policies**.
2. In the policies panel, click **Content**.
3. Click **Policies**. The available policies are displayed.
4. Select one or more policies and in the More actions drop-down list in the tool bar, click **Delete**.
The **Delete Policies** dialog is displayed.
5. To delete the deployed content from the group's services upon deleting the policy, select the option **Delete deployed content from the group's services on policy removal**. For ESA service, the content will be deleted upon deleting the policy.
6. Click **Delete** to permanently delete the selected policy.
Deletion will take immediate effect and the policy will no longer be available in any group.

Note:

- While deleting a policy that has Log Device content, you can delete the Custom Parser and disable the Base Log Device Parser from the service.
- The services associated with this policy still require a restart if the restart is pending.
- You can also delete a policy from **Policy Details** screen. For more information on deleting a policy from **Policy Details** screen, refer [View a Policy](#) feature.
- The policy status changes to **Failed** if policy deletion fails for any particular reason.

Edit a Policy

You can edit the content and settings of the policies. Once the policy is edited, the changes in the policy are reflected upon saving the policy. The changes are applied to the service once published. After saving and before publishing, the publication status of the changed policy is set to **Unpublished** if any settings are changed.

To edit a Policy

1. Go to  (CONFIGURE) > **Policies**.
2. In the policies panel, click **Content**.
3. Click **Policies**. The available policies are displayed.
4. Select a policy to edit and click **Edit**.
5. Make the required changes in policy.
6. Do any one of the following:
 - Click **Save and Publish** to save and publish the policy. The policy will be listed under the Unpublished category.

Note:

- While removing a service from the group, you can opt to either delete the content of the service and remove the service or just remove the service from the group. While removing a service that has Log Device content, you can delete the Custom Parser and disable the Base Log Device Parser from the service.
- While removing the group from the policy, the ESA content will be deleted by default.

- Click **Save and Close** to save the settings and return to the Policies view.

Note: You can also edit a policy from **Policy Details** screen. For more information on editing a policy from **Policy Details** screen, see [View a Policy](#) feature.

View a Policy

This topic describes the steps to view the properties of a Policy.

To view properties of the selected Policy

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. Click **Policies**. The available policies are displayed. By default, 50 policies are displayed per page. To go to the next page, click . To go to the last page, click .

| NAME | DESCRIPTION | GROUPS | POLICY STAT... | LAST UPDATED | UPDATED ... |
|----------------------|-------------|------------------------|---|--------------------|-------------|
| 3 | | None | N/A | 07/27/2023 03:0... | admin |
| A | | None | N/A | 07/27/2023 03:0... | admin |
| ant-2 | | None | N/A | 07/27/2023 03:0... | admin |
| on-1 | | None | N/A | 07/27/2023 03:0... | admin |
| packethybrid_Decoder | | packethybrid - Decoder | Unpublished  | 07/31/2023 05:5... | admin |
| Policy-gr-test | Test Policy | None | N/A | 07/27/2023 05:4... | admin |
| test | | None | N/A | 08/01/2023 01:3... | admin |
| Za | | None | N/A | 07/27/2023 03:0... | admin |

Caution:

- An icon  is displayed in the Policy View indicating policy status unpublished, if any services are part of the selected policy and do not have any deployment then some of the associated correlation services require ESA deployments.
- An icon  is displayed in the Policy View, indicating that the policy status failed for multiple reasons. Please see the policy overview section in the UI to find the failure reason and the workaround.

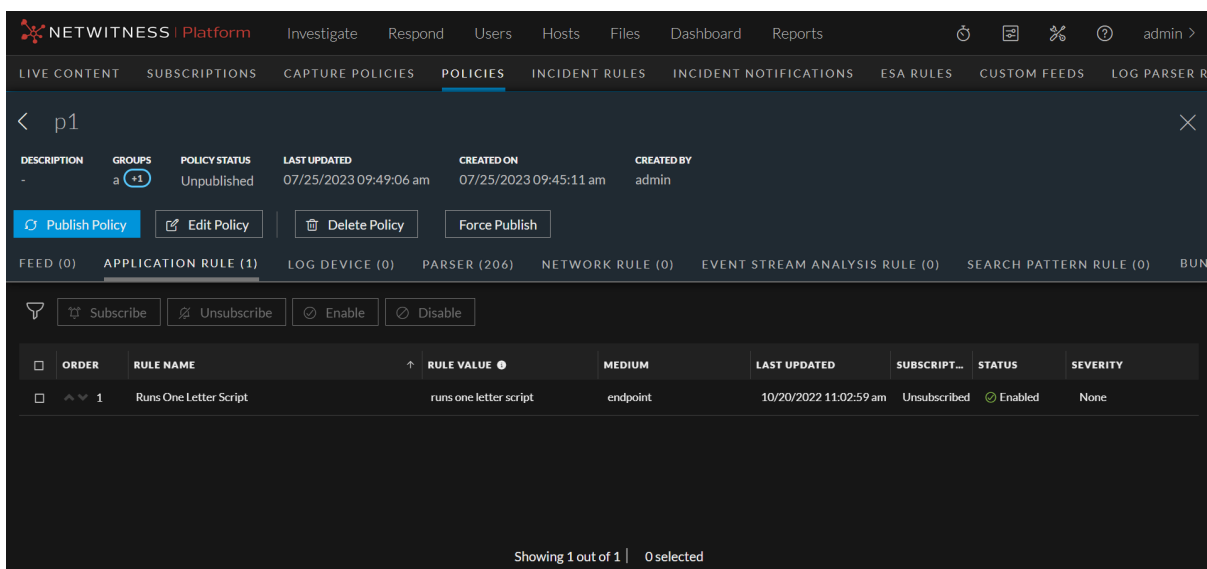

4. From the policy listing page, you can perform the following actions:
 - Select a policy and click **Edit** to edit the policy. For more information on editing a policy, see [Edit a Policy](#) feature.
 - Select the policy and click **Publish** to publish the policy if the policy is unpublished.
 - Select the policy and click **More Actions** > **Assign to Groups** to assign policy to available group.
 - Select the policy and click **More Actions** > **Clone** to clone the policy. For more information on cloning a policy, see [Edit a PolicyClone a Policy](#) feature.
 - Select the policy and click **More Actions** > **Delete** to delete the policy. For more information on deleting a policy, see [Delete a Policy](#) feature.
 - Select the policy and click **More Actions** > **Force Publish** to force publish the policy. This action allows you republish all the content irrespective of the policy status.
5. Click a row to view details about the selected policy on the side panel.

6. To change the order of application rule assigned to the policy, do the following:
 1. To move the application rule or network down the order, click  in the **Order** column.
 2. To move the application rule up the order, click  in the **Order** column.
 3. You can also manually enter the order number in the **Order** column.
7. To change the order of network rule assigned to the policy, do the following:
 1. Click **Network Rules** tab.
 2. To move the network rule or network down the order, click  in the **Order** column.
 3. To move the network rule up the order, click  in the **Order** column.
 4. You can also manually enter the order number in the **Order** column.

IMPORTANT: It is recommended not to order application rules or network rules deployed on the service from Service Config page if the service is part of Centralized Content Management.

8. Click the policy to view the details on the policy in a new page.

9. From the policy details page, you can perform the following actions:

- To edit the policy, click **Edit Policy**. For more information on editing a policy, see [Edit a Policy](#) feature.
- To delete the policy, click **Delete Policy**. For more information on deleting a policy, see [Delete a Policy](#) feature.
- To publish the policy, click **Publish Policy**. For more information on creating and publishing a policy, see [Create and Publish Policies](#) feature.
- To force publish a policy, click **Force Publish**. This action allows you republish all the content irrespective of the policy status.
- To filter the content, click . For more information on filtering policy content details, see [Filter Policy Content Details](#) feature.
- To enable or disable subscription, click **Subscribe** or **Unsubscribe** respectively.

Note:

- Subscription is not allowed for custom content.
- The **Subscribe** and **Unsubscribe** button is disabled if any one of the content selected is custom.

Enable Content for a Policy

This topic describes the steps to enable the content for a Policy.

To enable content

1. Go to  (**CONFIGURE**) > **Policies**.
2. In the policies panel, click **Content**.
3. In the left panel, click **Policies**.

4. Click the policy name to view the policy details.
5. In the **Application Rule, Network Rule, Feed, Log Device, SASE Integration Plugin, Search Pattern Rule** or **LUA Parser** panel, click the row to select the content to be enabled. You can either select all content or select any specific content to be enabled.
6. Click **Enable**.

If a Custom Log Device has a Base Parser as its dependency, then:

- The enable or disable status of the Custom Log Device will be same as that of the enable or disable status of Base Parser.
- You will not be able to enable or disable the Custom Parser.

Disable Content for a Policy

This topic describes the steps to disable the content for a Policy.

To disable content

1. Go to  (CONFIGURE) > **Policies**.
2. In the policies panel, click **Content**.
3. In the left panel, click **Policies**.
4. Click the policy name to view the policy details.
5. In the **Application Rule, Network Rule, Feed, Log Device, SASE Integration Plugin, Search Pattern Rule** or **LUA Parser** panel, click the row to select the content to be disabled. You can either select all content or select any specific content to be disabled.
6. Click **Disable**.

If a Custom Log Device has a Base Parser as its dependency, then:

- The enable or disable status of the Custom Log Device will be same as that of the enable or disable status of Base Parser.
- You will not be able to enable or disable the Custom Parser.

Subscribe Content for a Policy

This topic describes the steps to subscribe content for a Policy.

To subscribe content

1. Go to  (CONFIGURE) > **Policies**.
2. In the policies panel, click **Content**.
3. In the left panel, click **Policies**.
4. Click the policy name to view the policy details.

5. In the **Application Rule, Network Rule, Feed, Log Device, LUA Parser, Event Stream Analysis Rule, SASE Integration Plugin** or **Bundles** panel, click the row to select the content to be subscribed. You can either select all content or select any specific content to be subscribed.
6. Click **Subscribe**.

Unsubscribe Content for a Policy

This topic describes the steps to unsubscribe the content for a Policy.

To unsubscribe content

1. Go to  (CONFIGURE) > **Policies**.
2. In the policies panel, click **Content**.
3. In the left panel, click **Policies**.
4. Click the policy name to view the policy details.
5. In the **Application Rule, Network Rule, Feed, Log Device, LUA Parser, Event Stream Analysis Rule, SASE Integration Plugin** or **Bundles** panel, click the row to select the content to be unsubscribed. You can either select all content or select any specific content to be unsubscribed.
6. Click **Unsubscribe**.

Filter Policies

The Filters Panel allows you to filter the list of displayed policies, based on the policy status and service type:

- **Decoder**
- **Log Decoder**
- **Concentrator**

Additionally, you can filter based on publication status or service status:

- **Published:** Policies that are published to use.
- **Unpublished:** Policies that are saved but not published.
- **Failed:** Policies that are failed to publish.
- **N/A:** Policies for which publication status is not applicable.

The **Filters** panel can be hidden or displayed:

- To display if hidden, click the  icon in the toolbar.
- To hide, click the  icon at the top-right of the panel.

Filter Policy Content Details

The Filters panel allows you to filter the list of displayed content in the policy details view based on the name, medium, source type, enabled/disabled status, subscription status, severity, resource created date, and last updated date.

This applies to the following content types:

- Feed
- Application Rule
- Log Device
- Lua Parser
- Network Rule
- Event Stream Analysis Rule
- SASE Integration Plugin
- Search Pattern Rule
- Bundle

To filter policy content details

1. Go to  (CONFIGURE) > **Policies**.
2. In the policies panel, click **Content**.
3. Click **Policies**. The available policies are displayed.
4. Do one of the following:
 - Click a policy name.
 - Click a row to view details about the selected policy and click **View Details**.

The policy details view is displayed.

5. By default, the filters panel is hidden, click the  (Filters) icon in the toolbar to expand the filters panel.
6. To search by name:
 - Set the filter option to **Contains** operator from the drop-down list and start typing the name of the content rules. Type one character and a list of content rules that contain that character is displayed, as you continue to type the list is filtered to match.
 - Set the filter option to **Equals** operator from the drop-down list and enter the full name. The particular content type will be displayed.
7. To filter by medium, select one or more mediums from the **Medium** drop-down list. The options are listed below:
 - **endpoint**
 - **log**
 - **log and packet**
 - **packet**
8. To filter by source type, select one or more sources from the **Source Type** drop-down list. The options are listed below:
 - **Custom**
 - **Live**
9. To filter by enabled/disabled status, select one or more statuses from the **Enabled/Disabled Status** drop-down list. The options are listed below:
 - **Enabled**
 - **Disabled**

Note: Enabled/Disabled Status filtering is not applicable to Event Stream Analysis Rule content.

10. To filter by subscription status, select one or more statuses from the **Subscription** drop-down list. The options are listed below:

- **Subscribed**
- **Unsubscribed**

11. To filter by severity of the content, under the **Severity** field, select the drop-down values as either **Low, Medium, High** or **Critical**.

Note: This field is applicable only for the content type 'Application Rule'.

12. To filter by a resource created date range, under the **Resource Created Date**, select the start date and end date from the date fields.

For example, to filter contents that were created between July 1 and July 30, you select July 1 as the start date and July 30 as the end date. You must enter dates in **mm/dd/yyyy** format or you click and pick dates from a calendar.

13. To filter by date range, under the **Last Update date**, select the start date and end date from the date fields.

For example, to filter contents that were updated between July 1 and July 30, you select July 1 as the start date and July 30 as the end date. You must enter dates in **mm/dd/yyyy** format or you click and pick dates from a calendar.

14. To hide, click the  icon at the top-right of the panel.

The contents are displayed in the right panel according to the filter you selected. Click **Reset** to clear the existing filter results.

Merge Policy with ESA Content

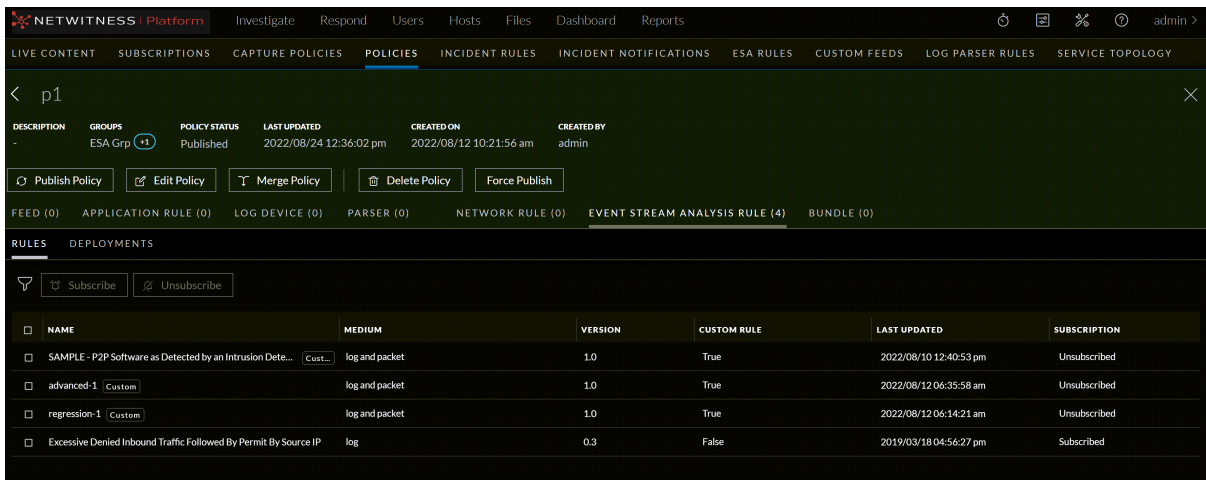

From the 12.1 version, the ESA content is managed through the  (**CONFIGURE**) > **Policies** page. After you upgrade to the 12.1 version, all the existing ESA deployments will be migrated to the policies and groups view. The **Merge Policy** button will be available only for the policy having ESA content and can only be merged with a policy with no ESA content.

Note: On merging a policy with another policy, the original policy gets deleted, and the other policy gets updated with the original policy content.

To merge Policy with an ESA Content

1. Go to  (**CONFIGURE**) > **Policies**.
2. In the policies panel, click **Content**.
3. Select a policy having ESA content to merge with another policy.

The selected policy with ESA content view is displayed.

4. Click **Merge Policy**.

The Merge Policy dialog is displayed.

5. Select a policy from the list or search for the name and Click **Merge**.

A confirmation pop-up is displayed.

6. Click **Confirm**.

Manage Services

A service performs a unique function, such as collecting logs or archiving data. Each service runs on a dedicated port and is modeled as a plug-in to enable or disable, according to the function of the host.

This sections contains:

- [Migrate Content from Service](#)
- [View a Service](#)
- [Enable or Disable CCM for Individual Decoder Services](#)

View a Service

This topic describes the steps to view the details of a service.

To view details of the selected Service

1. Go to  (CONFIGURE) > **Policies**.
2. In the policies panel, click **Content**.
3. Click **Services**. The list of services are displayed. By default, 15 services are displayed per page. To go to the next page, click . To go to the last page, click .

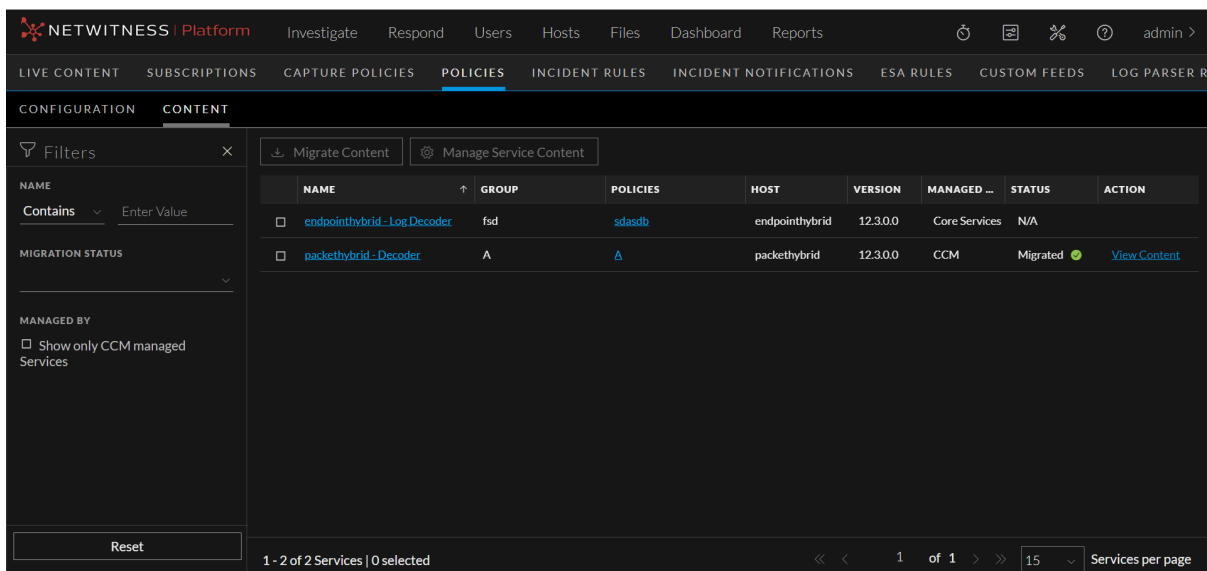

The screenshot shows the NetWitness Platform interface. The top navigation bar includes 'NETWITNESS | Platform' and various menu items like 'Investigate', 'Respond', 'Users', 'Hosts', 'Files', 'Dashboard', 'Reports', and 'admin'. Below this, there are tabs for 'LIVE CONTENT', 'SUBSCRIPTIONS', 'CAPTURE POLICIES', 'POLICIES', 'INCIDENT RULES', 'INCIDENT NOTIFICATIONS', 'ESA RULES', 'CUSTOM FEEDS', and 'LOG PARSER R'. The 'POLICIES' tab is active, and the 'CONTENT' sub-tab is selected. On the left, there is a sidebar with 'Content Library', 'Policies (3)', 'Groups (3)', 'Services (4)', 'Settings', and 'Event Stream Analysis'. The 'Services (4)' section is expanded, showing a table of services. The table has columns: NAME, GROUP, POLICIES, HOST, VERSION, MANAGED..., STATUS, and ACTION. The services listed are:

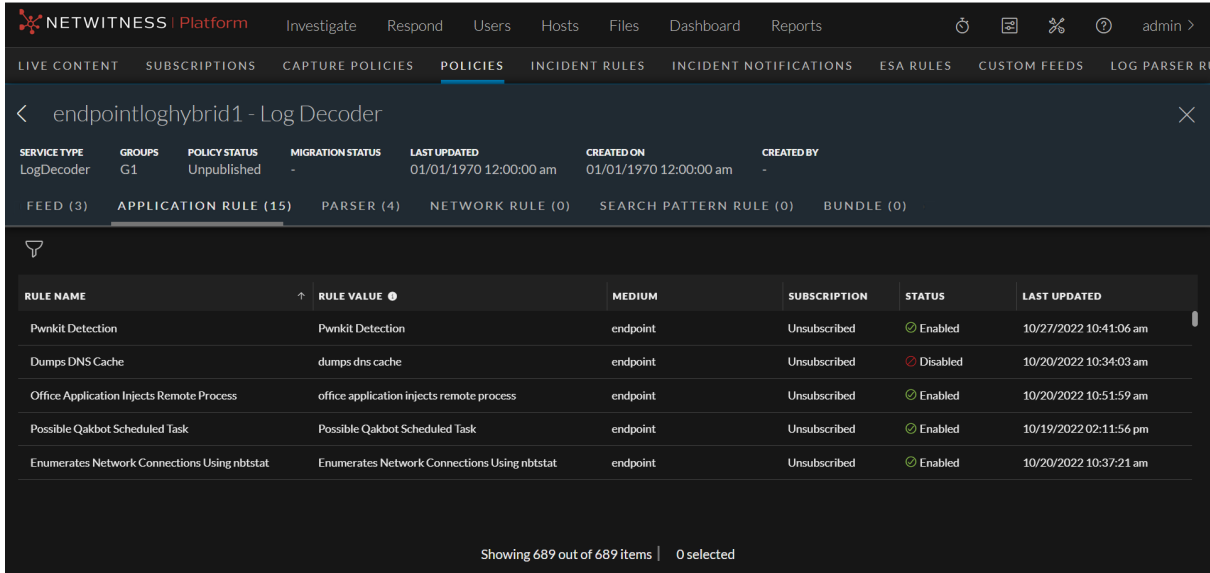

| NAME | GROUP | POLICIES | HOST | VERSION | MANAGED ... | STATUS | ACTION |
|--|-----------------------|-------------------------|-------------------|----------|-------------|------------|---------------------------------|
| <input type="checkbox"/> decoder-Decoder | decoder-Decoder | decoder-Decoder ▲ | decoder | 12.3.0.0 | CCM | Migrated ● | View Content |
| <input type="checkbox"/> endpointloghybrid-Log Decoder | group1 | policy1 | endpointloghyb... | 12.3.0.0 | CCM | N/A | |
| <input type="checkbox"/> loghybrid-Log Decoder | loghybrid-Log Deco... | loghybrid-Log Deco... ▲ | loghybrid | 12.3.0.0 | CCM | Migrated ● | View Content |
| <input type="checkbox"/> packethybrid-Decoder | None | None | packethybrid | 12.3.0.0 | CCM | Failed ● | View Error L... |

At the bottom of the table, it says '1 - 4 of 4 services | 0 selected' and '15 Services per page'.

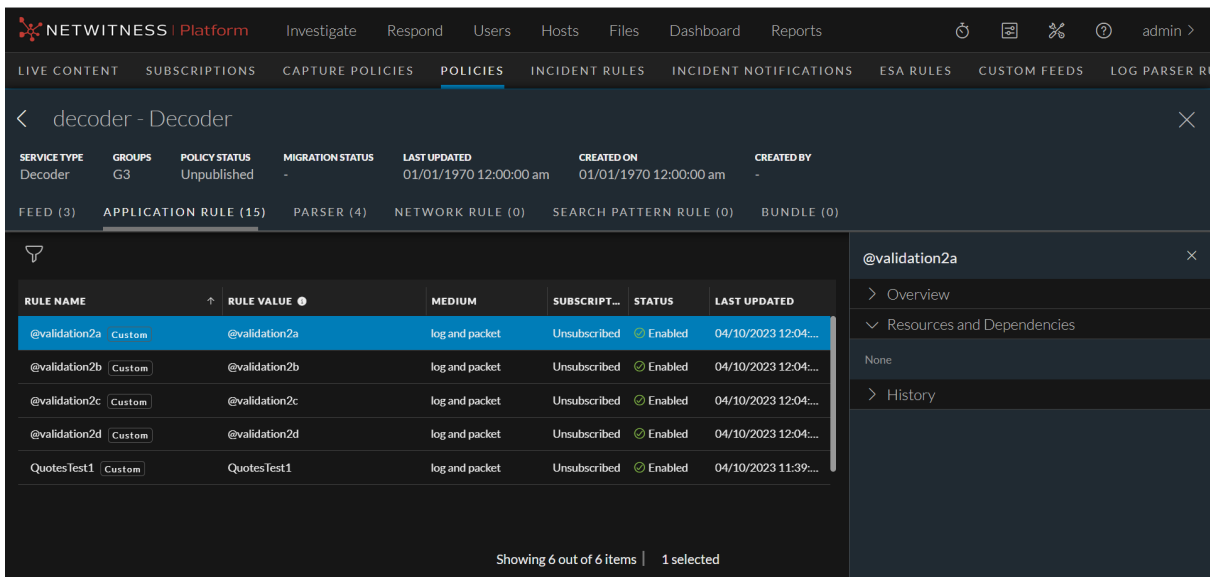

4. To filter the services, click . The **Filters** panel is displayed.

5. On the **Filters** panel, do the following:
 - i. Select the **Name** drop-down value as either **Equals** or **Contains**. To search the service name using the **Contains** operator, set the filter option to **Contains** operator from the drop-down list and start typing the name of the service. Type one character and a list of service that contain that character is displayed, as you continue to type, the list is filtered to match. To search the service name using the **Equals** operator, set the filter option to **Equals** operator from the drop-down list and enter the full name. The particular service name will be displayed.
 - ii. Select the **Migration Status** drop-down value.
 - iii. Select **Show only CCM Managed Services** check-box under the **Managed By** field to display only the CCM managed services.
 - iv. To reset the fields, click **Reset**.
6. Click the service to view the details of the service. The different details of the service are displayed. These details include the contents which will be deployed to the services from CCM policies.

7. To filter the content based on various parameters, click .
8. Click the content to view the details of the content on the right side panel. The complete content details such as **Overview**, **Resources and Dependencies**, and **History** are displayed.

9. To view the details of the policy for the migrated service, click the policy name present under the **Policies** column in the **Service List** page.
For more details on the policy details, see [View a Policy](#) feature.
10. To view the details of the migrated content for the service, click the **View Content** hyperlink present under the **Action** column in the **Service List** page.
11. To view the details of the logs for failed migration, click the **View Error Log** hyperlink present under the **Action** column in the **Service List** page.

For more details on the migrating content from service, viewing migrated content and viewing error logs, see [Migrate Content from Service](#) feature.

Migrate Content from Service

This option allows you to migrate the contents of 12.3 and above version services.

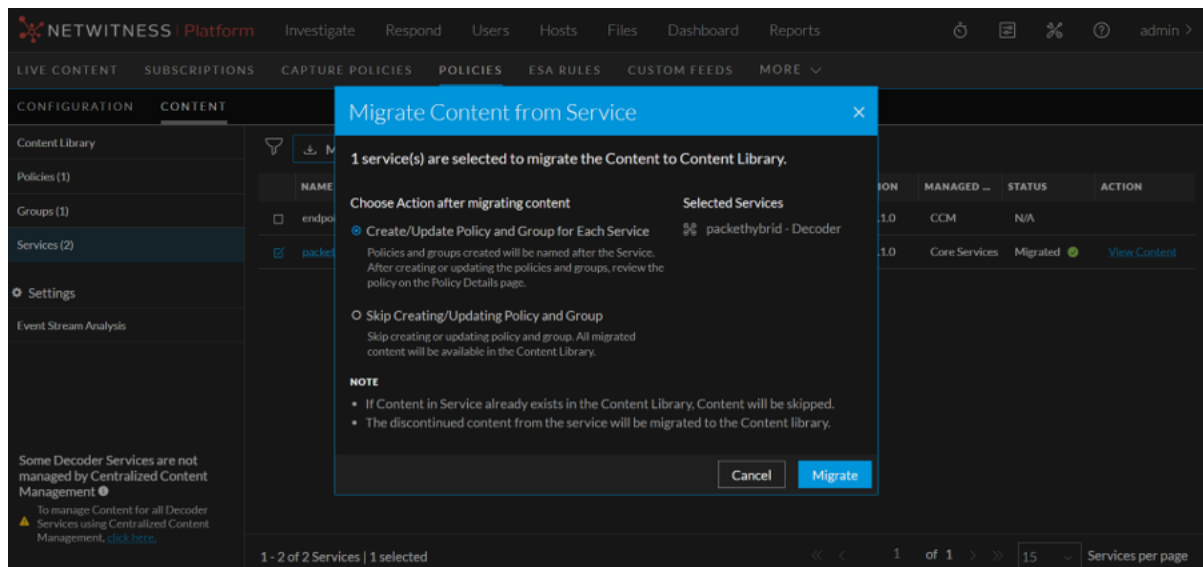

To migrate Content from Service

1. Go to  (CONFIGURE) > **Policies**.
2. In the policies panel, click **Content**.
3. In the left panel, click **Services**. The list of services are displayed.
4. Select the services from which you want to migrate the content.

Note: By default, you can select up to 5 services for migration. This also includes the services which are under migration. However, you can modify this number from **Admin -> Source Server -> Explore -> Central/Content -> Migration**.

5. Click **Migrate Content**.

The **Migrate Content from Service** pop-up window is displayed.

6. On the **Migrate Content from Service** pop-up window, choose action and click **Migrate**.
 - If you select **Create/Update Policy and Group for Each Service**, policy and group will be created or updated for each service selected for migration. Once the migration process is complete, the policy and group will be listed under the respective listing pages. The policy and group which is created or updated for the service will be in 'Unpublished' state and it can be published only after it is reviewed. In the **Policy Listing** page, the **Publish** button for such a policy will be disabled until the policy is reviewed. The policy can be published only after reviewing it either from **Policy Details** page or **Edit Policy** Page. When the policy or group gets updated with the

new content, the order of the new content will be given priority.

- If you select **Skip Creating/Updating a Policy and Group**, only the content will be migrated. All the migrated content will be available in Content Library.

Note:

- If the service is assigned to a group which is not attached to any policy, then the **Create/Update Policy and Group for Each Service** is disabled.
- When migrating content from two Decoders that have two different types of Custom or Live Base Parser associated with same Custom or Live Base Parser, both the Custom Parsers are added to Content Library. The association inside the Policy will be with the most recently migrated Custom Parser.
- Within a migrated Policy, a Custom Parser will have only one Custom or Live Base Parser associated with it.
- Migrated content version will be in the Policy, if as part of migration, the Policy is auto created. If you remove this content, you cannot add the old version of the content back.

Note: If a service migration fails to update a policy:

- You can edit the existing policy and add only the required content.
- Remove the service that is part of a group and remigrate the content. This will only create a policy if the content number is less than 8000.

7. The migration initiation message is displayed on the screen. The **Status** column displays the following values based on the status of migration:

- Queued
- Initializing
- Analyzing Content
- Migrating Content
- Migrated
- Failed

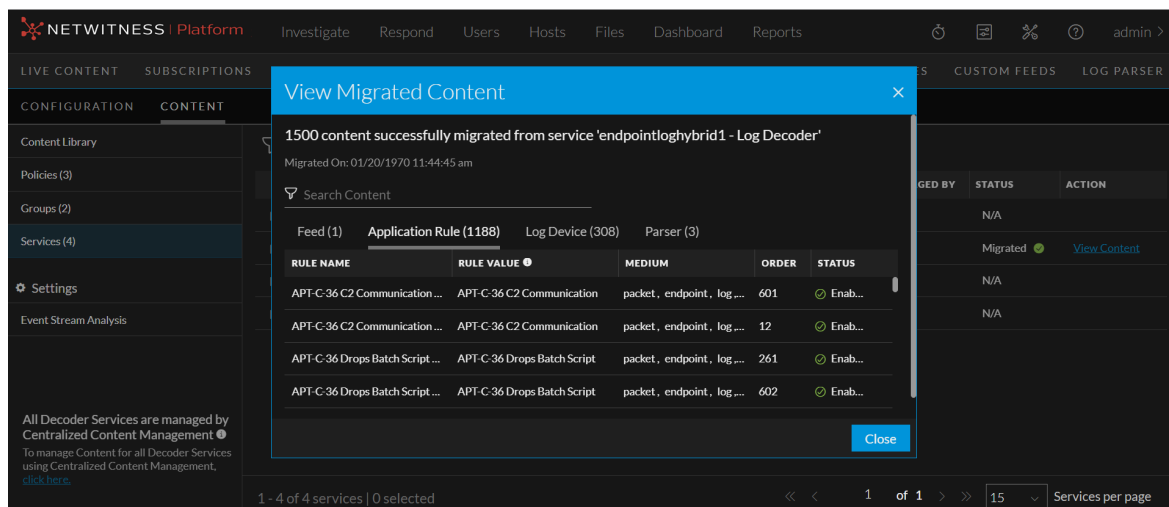

Note:

- The service can also be remigrated if it is already migrated and assigned to groups and policies.
- During parallel migration, if the selected services are updating common policies or using policies that are already being updated, you will receive a warning message on the screen. In such a scenario, it is recommended to update the policies through migration one service at a time to ensure that the last migrated service influences the policy in terms of order and version.

8. To view the migrated content details, do the following:

- Click the **View Content** hyperlink present under the **Action** column. The hyperlink is available only after the migration process is complete.

The **View Migrated Content** pop-up window is displayed with the different tabs such as **Feed**, **Application Rule**, **Network Rule**, **Log Device** and **LUA Parser**.

Note:

- **Network Rules** tab is not applicable for Log Decoders.
- **Log Device** tab is not applicable for Decoders.

IMPORTANT: During the process of migration, if a Decoder that is being migrated contains multiple application rules and/or network rules with the exact same rule name and rule condition, only one of those rules will be retained in the service. The remaining rules will be considered duplicates and removed. Therefore, post migration, none of the migrated services will have multiple rules with the same rule name and the same rule value.

- Click  to search the migrated content based on various parameters.

Note:

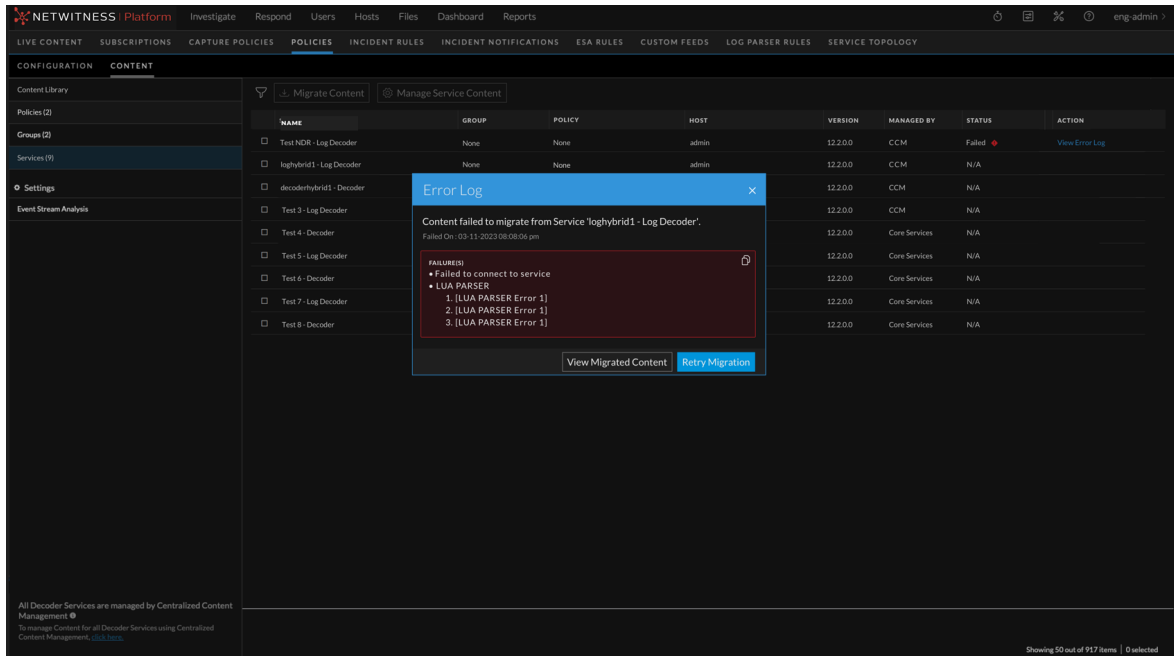

- For Application Rule and Network Rule, the search is based on **Rule Name** and **Rule Value**.
- For Feeds, Log Device and LUA Parser, the search is based on the **Name**.

- Click each tab to view the content details. The **Application Rule** and **Network Rule** tabs will have details such as **Rule Name**, **Rule Value**, **Medium**, **Order** and **Status**. The **Log Device**, **Feeds** and **LUA Parser** tabs will have details such as **Name**, **Medium** and **Status**.
9. To view the error log details in case of failed migration, do the following:
- Click the **View Error Log** hyperlink present under the **Action** column. The hyperlink is available only if the migration process has failed due to some reason.
The **Error Log** pop-up window is displayed with the details of error.
The following screen is displayed if no content is migrated to Content Library.

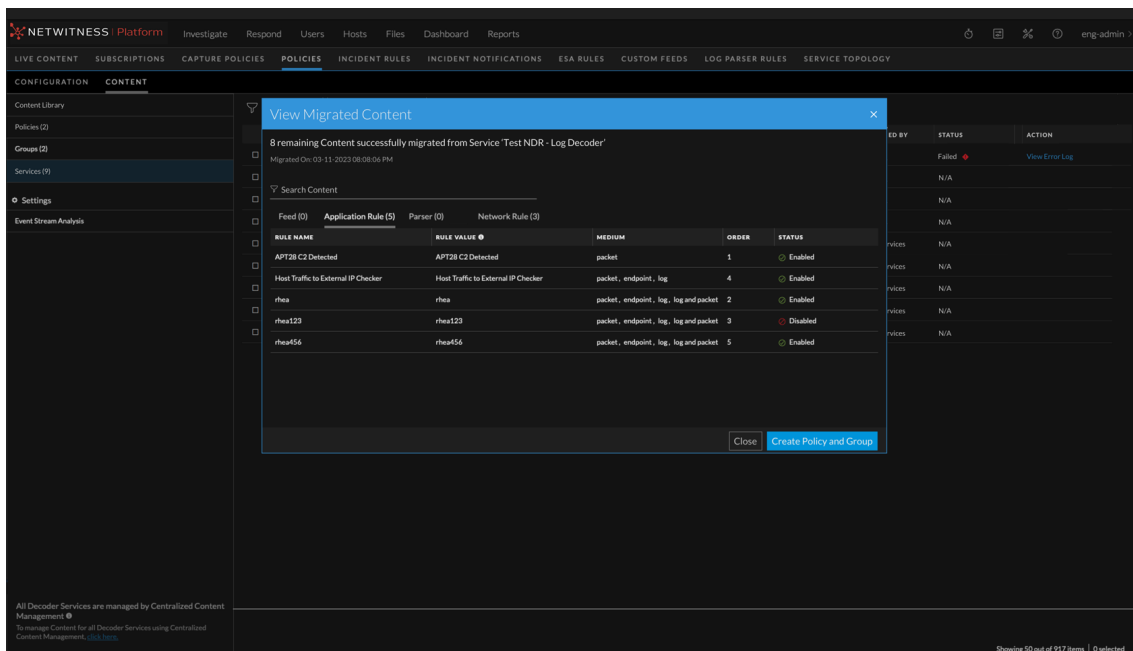

Note: You should manually migrate the content in case of failed automated migration.

The following screen is displayed if some content is migrated is Content Library.

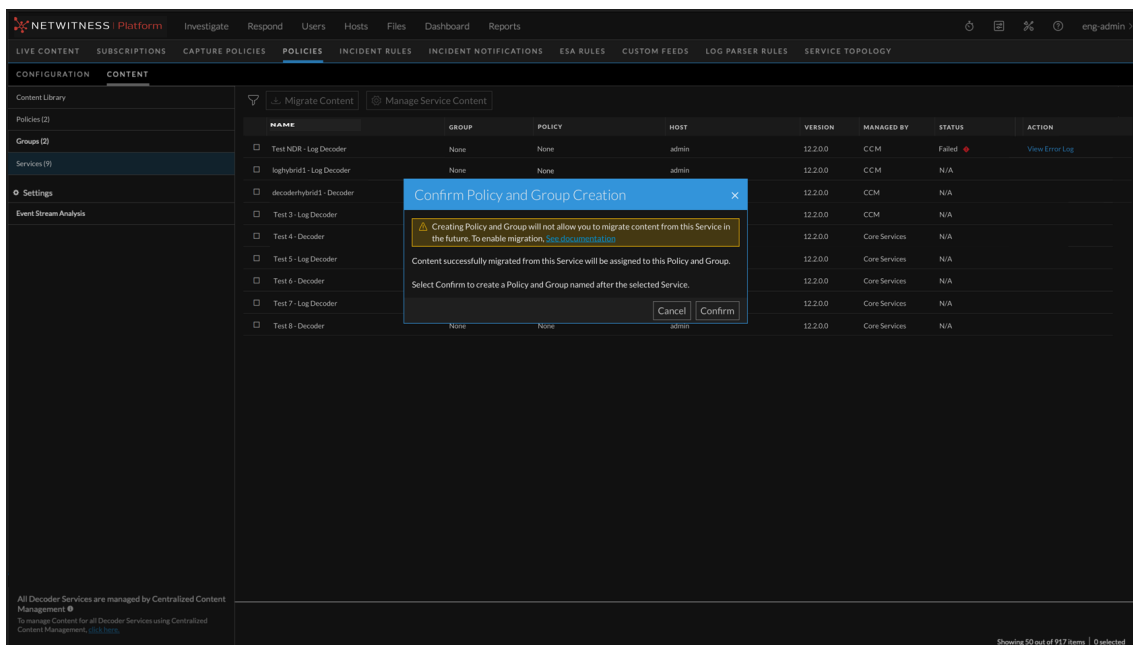

- To copy the error logs, click .
- To retry migration, click **Retry Migration**.
- In case of partial migration, to view the content that have been migrated successfully, do the following:

- Click **View Migrated Content**. The **View Migrated Content** pop-up window is displayed with the details of migrated content.

- To create policy and group for the service which is partially migrated, click **Create Policy and Group**.

The **Confirm Policy and Group Creation** pop-up window is displayed.

Best Practice Recommendation: Before creating policy and group for partially migrated service, it is recommended to retry migration.

- To confirm creation of policy and group, click **Confirm**. The policy and group will be listed under the **Policy Listing** and **Group Listing** pages.
 - To go back to the **Service List** page, click **Cancel**.
 - If you do not want to create policy and group for partially migrated service, click **Close in View Migrated Content** pop-up window.
10. To cancel the migration, click **Cancel** in the **Migrate Content from Service** pop-up window.

Note: Migrated Live contents will be categorized as Custom contents, if:

- You have modified the Live content manually before migrating it.
- The migrated Live content is an older version of the content.

Enable or Disable CCM for Individual Decoder Services

This topic describes the steps to enable or disable CCM for individual Decoder Services.

To enable or disable CCM for individual Decoder Service

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. In the left panel, click **Services**. The list of services are displayed.
4. Select the service(s) for which you want to enable or disable CCM and click **Manage Service Content**.

The **Manage Content for Decoder Services** pop-up window is displayed.

The screenshot shows the NetWitness Platform interface. The top navigation bar includes 'NETWITNESS | Platform' and various menu items like 'Investigate', 'Respond', 'Users', 'Hosts', 'Files', 'Dashboard', and 'Reports'. The main content area is divided into 'CONFIGURATION' and 'CONTENT' tabs. Under 'CONTENT', there are sections for 'Content Library', 'Policies (5)', 'Groups (5)', and 'Services (1)'. A pop-up window titled 'Manage Content for Decoder Services' is open, displaying the following text:

For Network Decoders and Log Decoders, content can either be managed by Centralized Content Management or Legacy Content Management.

Allow Centralized Content Management to manage content for selected Decoder Services

Yes

No

A warning message in a yellow box states: 'To avoid content loss or content errors, it is recommended not to enable or disable Centralized Content Management frequently'.

At the bottom of the pop-up are 'Close' and 'Save' buttons. The background interface shows a table with columns for 'VERSION', 'MANAGED BY', 'STATUS', and 'ACTION'. The 'STATUS' column shows 'Migrated' with a green dot and a 'View Content' link. The bottom of the interface shows '1 - 1 of 1 services | 1 selected' and a pagination control for '15 Services per page'.

5. In the pop-up window, select **Yes** for **Allow Centralized Content Management to Manage Content for Selected Decoder Services** to enable CCM for the selected service. Select **No** to disable CCM for the selected service.
6. Click **Save** to save the changes.

Manage ESA Datasources

This section contains:

- [View an ESA Datasource](#)
- [Add an ESA Datasource](#)
- [Edit an ESA Datasource](#)
- [Delete an ESA Datasource](#)

View an ESA Datasource

This topic describes the steps to view the ESA datsources available.

To view an ESA Datasource

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. Under **Settings**, click **Event Stream Analysis** > **Data Sources**.

The available datasources are displayed.

| NAME | ADDRESS | PORT | TRUSTED AUTHENTICATION | SSL | COMPRESSION |
|--|------------|-------|------------------------|------|-------------|
| <input type="checkbox"/> loghybrid1 - Log Decoder | [REDACTED] | 56002 | true | true | false |
| <input type="checkbox"/> loghybrid1 - Concentrator | [REDACTED] | 56005 | false | true | false |

Add an ESA Datasource

You can add one or more ESA data sources, such as Concentrators, to use for your selected ESA Service. This enables you to specify different data sources for each deployment.

To add an ESA Datasource

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.

3. Under **Settings**, click **Event Stream Analysis > Data Sources**.

4. Click **+ Add Datasource**.

The Add New Datasource dialog is displayed.

Note: You can add a Log Decoder as a data source for ESA. But, it is better to add a Concentrator to take advantage of undivided aggregation as the Decoder may have other processes aggregating from it.

5. Select a service and click **Continue**.

Note: You can add only one service at a time.

6. Do one of the following:

- Select the **Trusted Authentication** checkbox.
- Enter your credentials (username and password) for the datasource.

Note:

- If you select **Trusted Authentication** instead of username and password. This option will enable the use of SSL by default. However, you can still configure the compression settings.
- If you choose to enter your username and password. You can configure both SSL and compression settings.

7. To enable the SSL settings, select the **SSL** checkbox. You can set your desired port number.

IMPORTANT: Ensure that you turn on SSL only if necessary, in order to avoid performance impact on the SSL protocol.

8. (Optional) You have the option to adjust the Compression Level for Concentrators on ESA. To enable compression, select the **Compression** checkbox. You can set the **Compression Level** for a Concentrator from 0-9:
 - Compression Level = **0** (If compression is enabled, it allows Core Services to control the amount of compression.)
 - Compression Level = **1** (It uses the lowest amount of compression and has the highest performance.)
 - Compression Level = **9** (It uses the highest amount of compression and has the worst performance.)

Somewhere in the middle between 1 and 9 is usually the best setting, which is what you get when you select a compression level of 0. For more detailed information, see the *Core Database Tuning Guide*.

Note: When you set the compression level for a Concentrator on ESA, it sets the same compression level for that Concentrator for ESA Correlation Rules.

9. Click **Test Configuration** to make sure that it can communicate with the ESA service.
10. Click **Save**.

After you configure your data sources and they appear in the Available Configured Data Sources dialog, you can use them for your deployment.

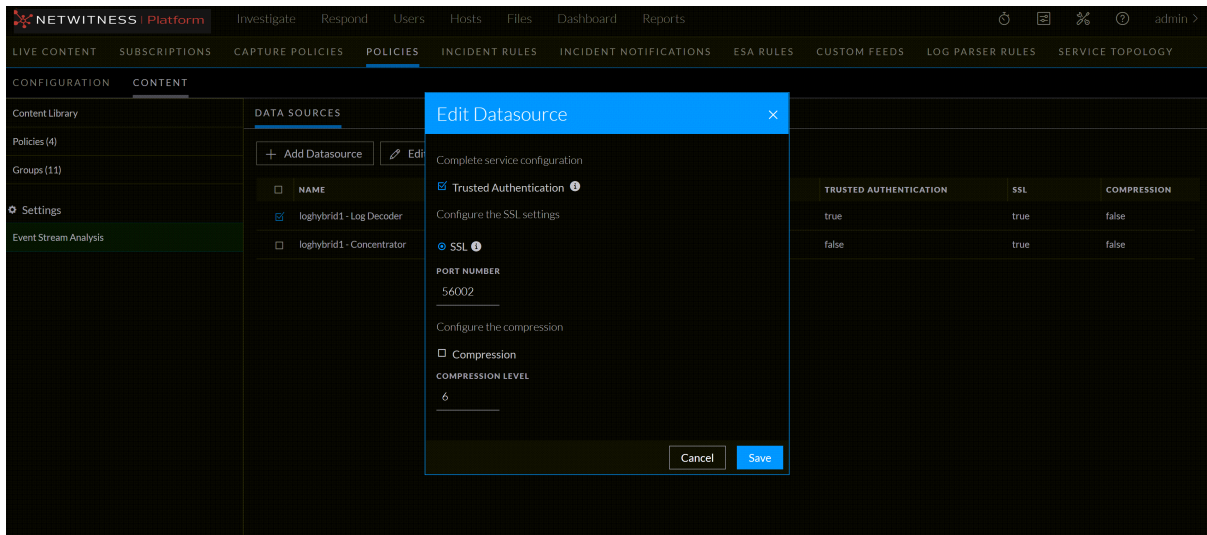

Edit an ESA Datasource

You can edit the properties of the datasource at any point in time. You can edit the user credentials, SSL, port, and compression value of the datasource. When a data source password changes, it is important to change the password on the data source so that ESA can continue to communicate with the data source.

To edit an ESA Datasource

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
3. Under **Settings**, click **Event Stream Analysis** > **Data Sources**.
4. Select a datasource and click **Edit Datasource**.

The Edit Datasource dialog is displayed.

5. Make the required changes in the datasource.
6. Click **Save**.

Delete an ESA Datasource

You can delete one or more ESA datasources. Once the datasource is deleted, the service will be removed from the available configured list.

To delete an ESA Datasource

1. Go to  (CONFIGURE) > **Policies**.
2. In the policies panel, click **Content**.
3. Under **Settings**, click **Event Stream Analysis** > **Data Sources**.
4. Select a datasource and click **Delete Datasource**.
A confirmation pop-up is displayed.
5. Click **Delete Datasource**.

Manage Deployments

The ESA deployment consists of a policy with ESA rules, ESA services, and data sources. The ESA service scans your network for suspicious activity whenever you deploy policies. An ESA rule detects a different event every time, such as when a user account is created and deleted within 24 hours.

In addition, you can perform other steps on your deployment, such as changing a data source, editing or deleting a rule from the deployment through policy, renaming or deleting the deployment, or showing updates to the deployment, see [Additional ESA Correlation Rules Procedures](#)

In 12.1 and later versions, you must create a policy with the ESA rule content type and associate the policy with the group having a correlation service to create a deployment.

For more information on policies, see [Policies](#)

For more information about groups, see [Groups](#)

Note: With the unified ESA Deployments tab, you can manage deployments from a single view across all policies within Policy-based Centralized Content Management (CCM).

You can do the following:

- [View a Deployment](#)
- [Create a Deployment](#)
- [Edit a Deployment](#)
- [Start a Deployment](#)
- [Fast Deployment](#)
- [Deployment Stats](#)
- [Remove a Deployment](#)
- [Stop a Deployment](#)
- [Migrate ESA Deployments to Policies and Groups](#)

View a Deployment

In the ESA deployment view, you can view a list of all the deployments associated with the policies and the actions you can perform with them. It helps you manage and set-up deployments within CCM to create, edit, deploy, remove, and stop deployments. NetWitness Platform provides two methods to manage deployments.

You can view deployments in the following ways:

- Using the **ESA Deployments** tab. The ESA Deployments tab provides a consolidated view of all the available deployments within CCM. You can create, edit, remove, and pause deployments.
- Using a specific policy. In this method, you cannot view other deployments. You need to go to each policy and create, edit, remove and pause a deployment.

To view all deployments using the ESA Deployments tab

1. Go to  (CONFIGURE) > Policies > Content.
2. Under Settings, click Event Stream Analysis > ESA Deployments.

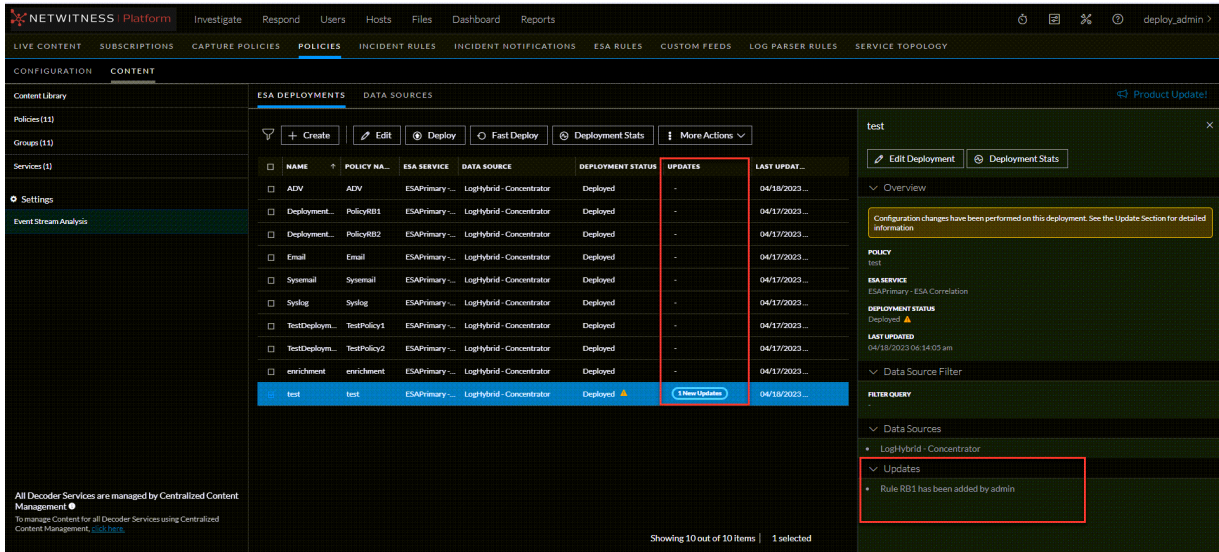

The available deployments are displayed.

| NAME | POLICY NAME | ESA SERVICE | DATA SOURCE | DEPLOYMENT STATUS | UPDATES | LAST UPDATED |
|-----------------|-------------|-----------------------|---------------------------|-------------------|--------------|--------------------|
| 1 | policy | esa - ESA Correlat... | log-hybrid - Log Decoder | Deployed ▲ | - | 04/05/2023 16:5... |
| ddd2 | demo-policy | esa - ESA Correlat... | None | Stopped ▲ | 1 New Update | 04/05/2023 14:4... |
| ddmra2 | policy | esa - ESA Correlat... | log-hybrid - Concentrator | Failed ▲ | 1 New Update | 04/03/2023 15:2... |
| demo-deployment | policy | esa - ESA Correlat... | log-hybrid - Concentrator | Stopped ▲ | 1 New Update | 04/05/2023 10:4... |
| deploymentdemo | demo-policy | esa - ESA Correlat... | log-hybrid - Concentrator | Deployed | - | 04/05/2023 10:5... |
| deployment | demo | esa - ESA Correlat... | log-hybrid - Concentrator | Stopped ▲ | 1 New Update | 04/05/2023 16:5... |
| dfda | policy1 | esa - ESA Correlat... | log-hybrid - Concentrator | New ▲ | - | 04/17/2023 05:0... |
| dmera | policy1 | esa - ESA Correlat... | log-hybrid - Concentrator | Stopped | - | 04/05/2023 10:4... |
| esa | p1 | esa - ESA Correlat... | log-hybrid - Concentr... | Deployed | - | 04/17/2023 10:4... |
| mrd1 | policy1 | esa - ESA Correlat... | None | Failed ♦ | 1 New Update | 04/03/2023 14:5... |
| test | demo | esa - ESA Correlat... | log-hybrid - Log Decoder | Deployed ▲ | 1 New Update | 04/05/2023 16:5... |

Note: Any changes made, like add / edit / delete to rules, notifications, and enrichments on the ESA Rules page for deployments, are displayed in the Updates section of the ESA Deployments view.

IMPORTANT: Any changes required for rule configurations must be made on the ESA Rules page only.

To view a deployment from a selected policy

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click Content.

The available policies are displayed.

3. Click a Policy.

The selected policy view is displayed, and the Application Rule is default selected.

4. Click Event Stream Analysis Rule > Deployments.

The available deployments for the selected policy are displayed.

Caution: An icon  is displayed in the deployments view indicating services require deployments, publish policy will fail for correlation servers. You may need to create deployments for such services if required.

Create a Deployment

When you create a deployment, you need to select a policy, ESA service, and data sources. An ESA rule deployment consists of an ESA service, one or more data sources, and a set of ESA rules. When you deploy rules, the ESA service runs them to detect suspicious or undesirable activity in your network. Each ESA rule detects a different event, such as when a user account is created and deleted within one hour.

For more information on data sources, see [Data Source](#)

In 12.1 and later versions, you must create a policy with the ESA rule content type and associate the policy with the group having a correlation service to create a deployment.

For more information on policies, see [Policies](#)

You can create deployments in the following ways:

- Using the ESA Deployments tab. The ESA Deployments tab provides a consolidated view of all the available deployments within CCM. You can create deployments.
- Using a specific policy. In this method, you cannot view other deployments. You need to go to each policy and create a deployment.

Prerequisites

- The group is assigned to a policy
- The Correlation server service is available in the groups assigned.

- A minimum of one ESA rule is added to the policy.
- ESA data source must be configured.

For more information about groups, see [Groups](#)

To create a deployment using the ESA Deployments tab

1. Go to  (CONFIGURE) > Policies > Content.
2. Under Settings, click Event Stream Analysis > ESA Deployments.

The available deployments are displayed.

3. Click + Create

The Create Deployment dialog is displayed.

4. Select an eligible policy from the policy list.

Note: All the policies that meet the criteria mentioned above are listed in the policy drop-down. It is required to select a policy to proceed further.

If required, you can click on View ESA Rules to search for rules associated with selected policy.

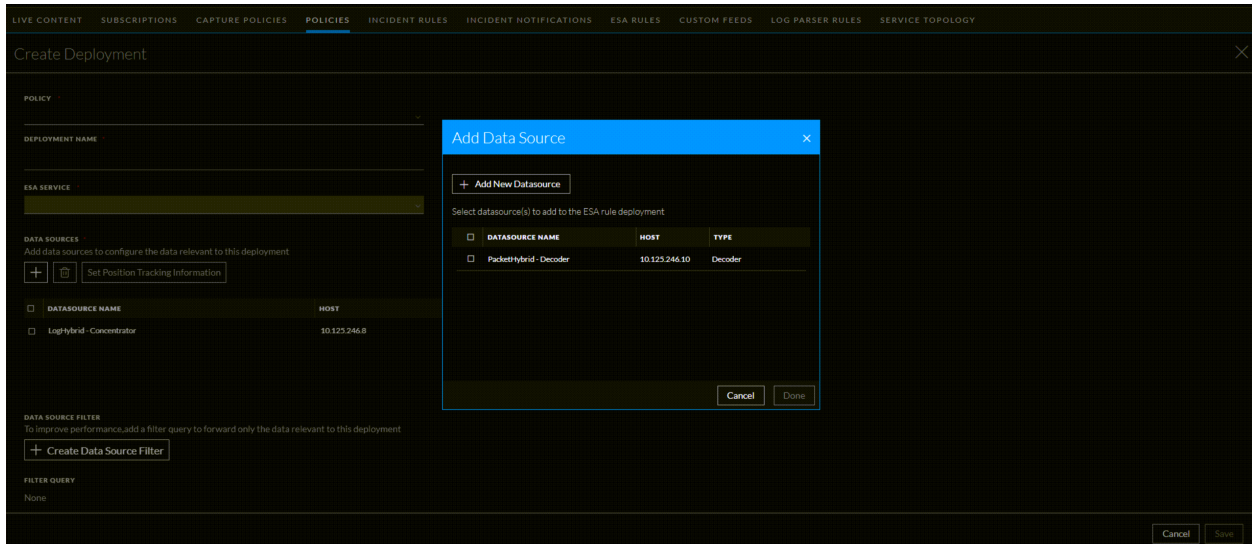

5. Enter a name for the deployment.

6. Select a service from the **ESA Service** drop-down list.

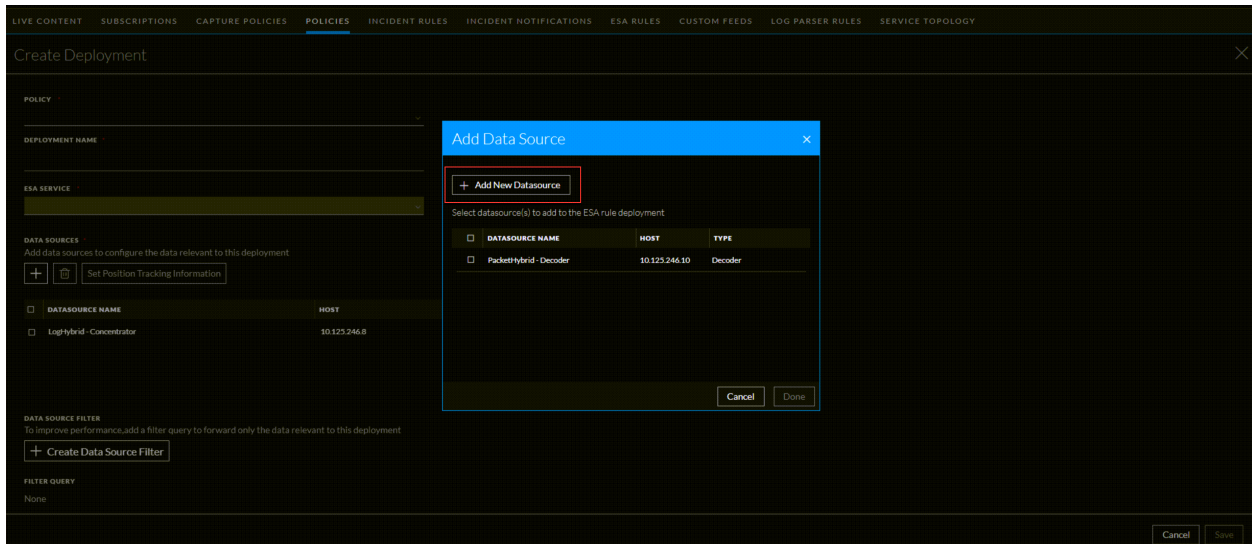

Note: Once the deployment is saved, the selected policy, name and ESA service cannot be modified.

7. Under **Data Sources**, click + to add a data source.

The **Add Data Source** dialog is displayed.

If required, you can add a new data source by selecting **+ Add New Datasource** tab in the dialog-box.

IMPORTANT: If the data sources are not listed, you can add the required datasource. For more information, see the topic [Add an ESA Datasource](#).

8. Select one or more data sources and click Done.
9. To delete the data source, select the data source and click .
10. (Optional) Select the required data source and click **Set Position Tracking Information** to process specific or ignore certain sessions.

The Set Position Tracking Information dialog is displayed.

- a. In the Position Tracking Information dialog, perform the following:
 - i. If you want to set the position tracking information based on date and time stamp:
In the **Go To** drop-down menu, select **Date and Time** and enter the date and time.
 - ii. If you want to set the position tracking information, based on the session ID:
In the **Go To** drop-down menu, select **Session ID** and enter the session ID in the **Session ID** field.

The ESA Correlation service starts processing the events from the session ID that you entered.
- b. Click **Calculate Sessions** to calculate the number of sessions that will be processed to the existing position of the data source, if any.
- c. To save the edited position tracking data source, click **Save**.

For more information on Position Tracking Information, see [Position Tracking Information](#).

11. (Optional) To filter out specific session data coming into ESA, under Data Source Filter, click + **Create Data Source Filter**.

Caution: The data source filter is for advanced users familiar with Decoder application rules. Improper filtering can cause the required data not to be forwarded to and analyzed by ESA.

The **Create Data Source Filter** dialog is displayed.

a. Specify the filter query in the below format as shown in the following example:

Select *where service = 443

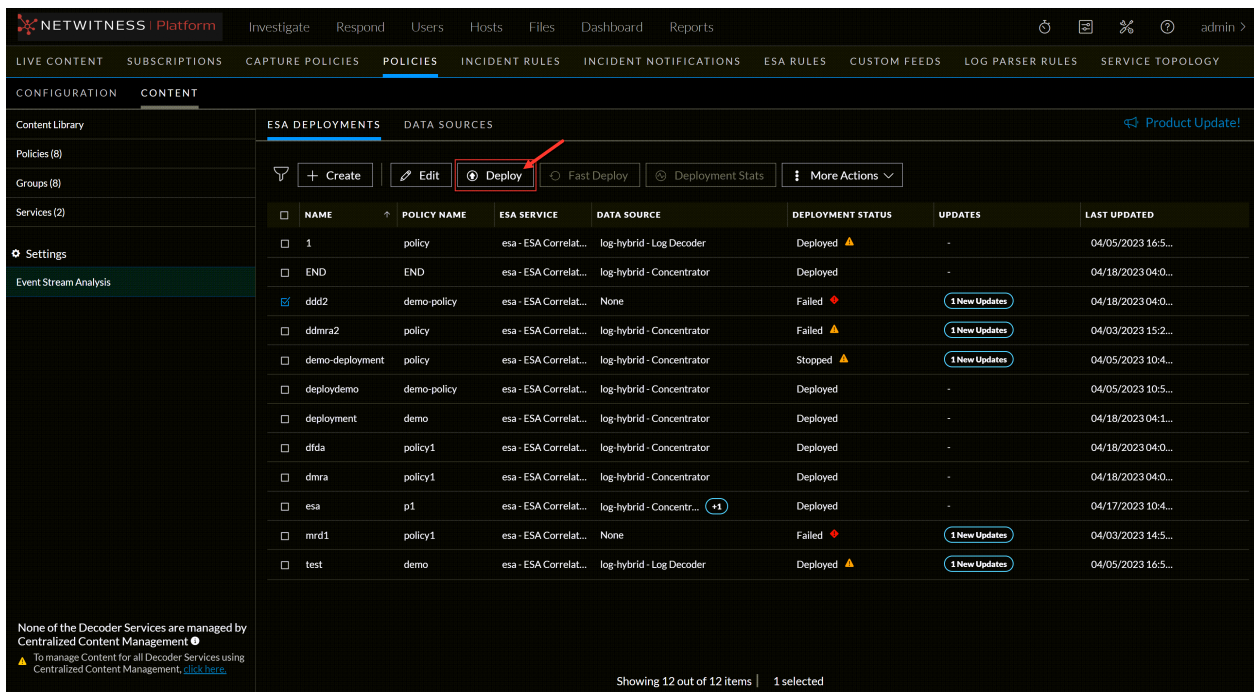

Based on the query processed, it will filter out only HTTPS logs-related sessions and will be forwarded to the ESA.

b. Click **Add**.

c. If you want to delete the existing data sources filter, click **Clear Data Source Filter**, and **Save** to remove it permanently.

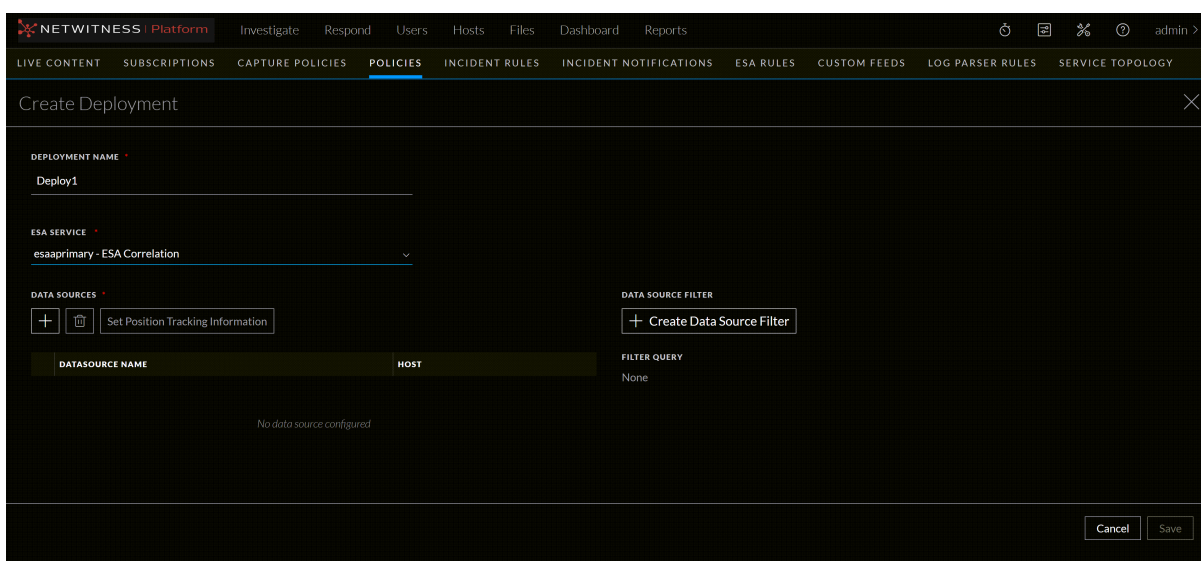

12. To save the deployment, click **Save**.

13. Select the created deployment and click **Deploy**.

To create a deployment from a selected policy

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
The available policies are displayed.
3. Click a Policy.
The selected policy view is displayed and by default **Application Rule** is selected.
4. Click **Event Stream Analysis Rule** > **Deployments**.
The available deployments for the selected policy are displayed.
5. Click **+ Create Deployment**.
The Create Deployment dialog is displayed.

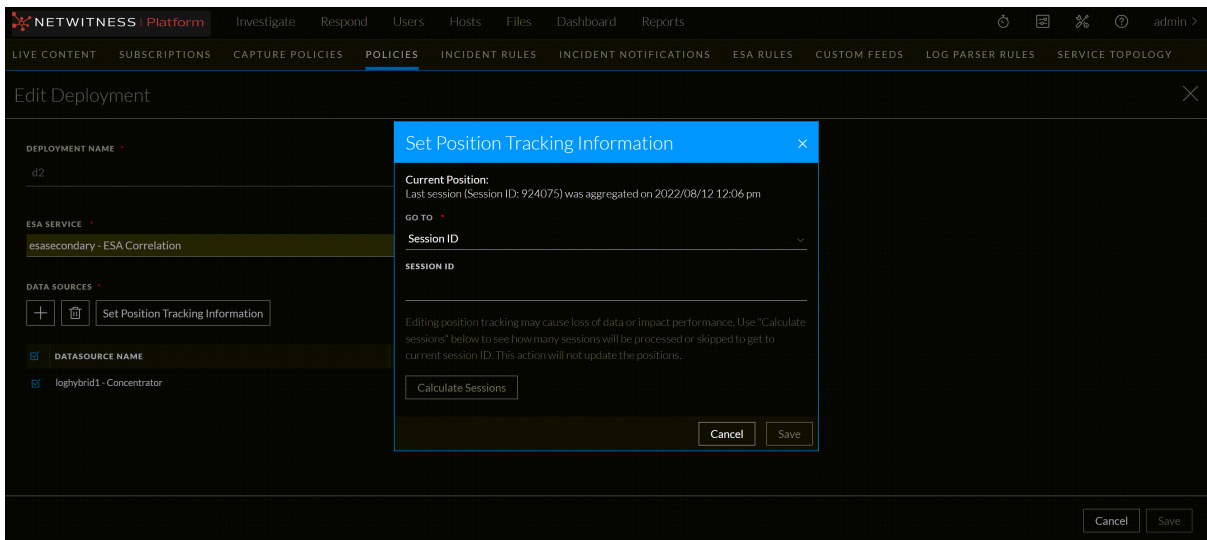

6. Enter a name for the deployment.
7. Select a service from the **ESA Service** drop-down list.
8. Under **Data Sources**, click + to add a data source.
The Add Data Source dialog is displayed.
9. Select one or more data sources and click **Done**.

Note: The policy is preselected as the user creates the deployment from the policy details view.

IMPORTANT: If the data sources are not listed, you can add the required datasource. For more information, see the topic [Add an ESA Datasource](#).

10. To delete the data source, select the data source and click .
11. (Optional) the required data source and click **Set Position Tracking Information** to reprocess specific sessions or ignore certain sessions.
The Set Position Tracking Information dialog is displayed.

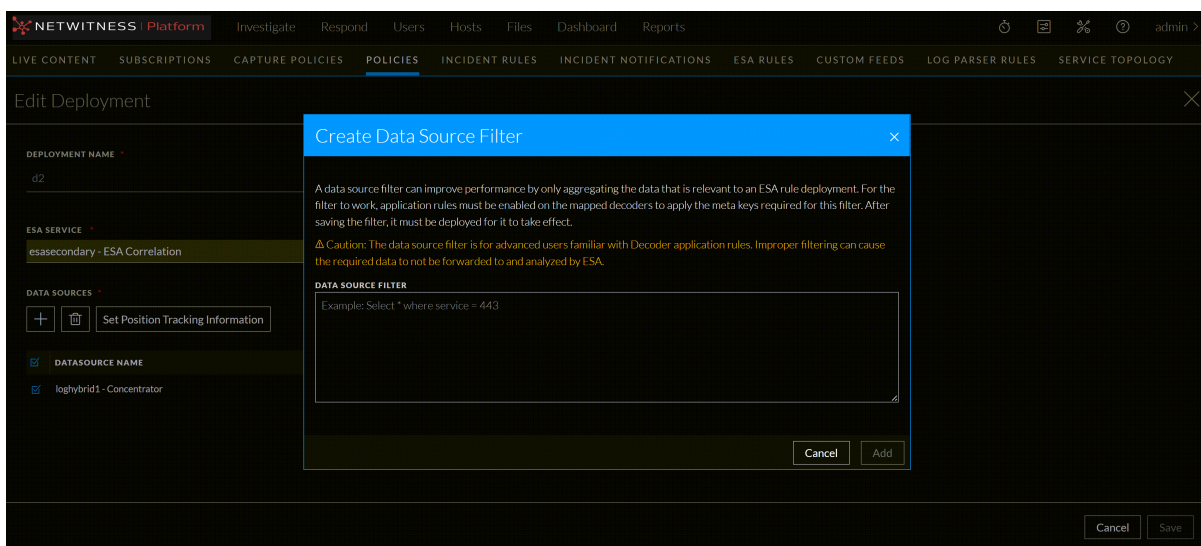

- a. In the Position Tracking Information dialog, perform the following:
 - i. If you want to set the position tracking information based on date and time stamp:
In the **Go To** drop-down menu, select **Date and Time** and enter the date and time.
 - ii. If you want to set the position tracking information, based on the session ID:
In the **Go To** drop-down menu, select **Session ID** and enter the session ID in the **Session ID** field.

The ESA Correlation service starts processing the events from the session ID that you entered.
 - b. Click **Calculate Sessions** to calculate the number of sessions that will be processed with respect to the existing position of the data source, if any.
 - c. To save the edited position tracking data source, click **Save**.
 - d. The tracking position information will be deployed to the ESA Correlation service, only when the deployment is successfully completed.

For more information on Position Tracking Information, see [Position Tracking Information](#).
12. (Optional) To filter out certain session data coming into ESA, under Data Source Filter, click + **Create Data Source Filter**.

Caution: The data source filter is for advanced users familiar with Decoder application rules. Improper filtering can cause the required data to not be forwarded to and analyzed by ESA.

The Create Data Source Filter dialog is displayed.

- a. Specify the filter query in the below format as shown in the following example:
Select *where service = 443
 Based on the query processed, it will filter out only HTTPS logs related sessions and will be forwarded to the ESA.
 - b. Click **Add**.
 - c. If you want to delete the existing data sources filter, click **Clear Data Source Filter** and click **Save** to remove it permanently.
13. To save deployment, click **Save**.
 14. Select the created deployment and click **Deploy**.

Edit a Deployment

You can edit a deployment to change the data source, create a data source filter, and view ESA rules that are associated with this deployment. A data source filter can improve performance by only aggregating the data that is relevant to an ESA rule deployment. For the filter to work, application rules must be enabled on the mapped decoders to apply the meta keys required for this filter. After saving the filter, it must be deployed for it to take effect.

However, you cannot change the deployment name, or ESA service that are associated with the deployment.

You can edit deployments in the following ways:

- Using the ESA Deployments tab. The **ESA Deployments** tab provides a consolidated view of all the available deployments within CCM. You can edit deployments.
- Using a specific policy. In this method, you cannot view other deployments. You need to go to each policy and edit a deployment.

To edit a deployment from the ESA Deployments tab

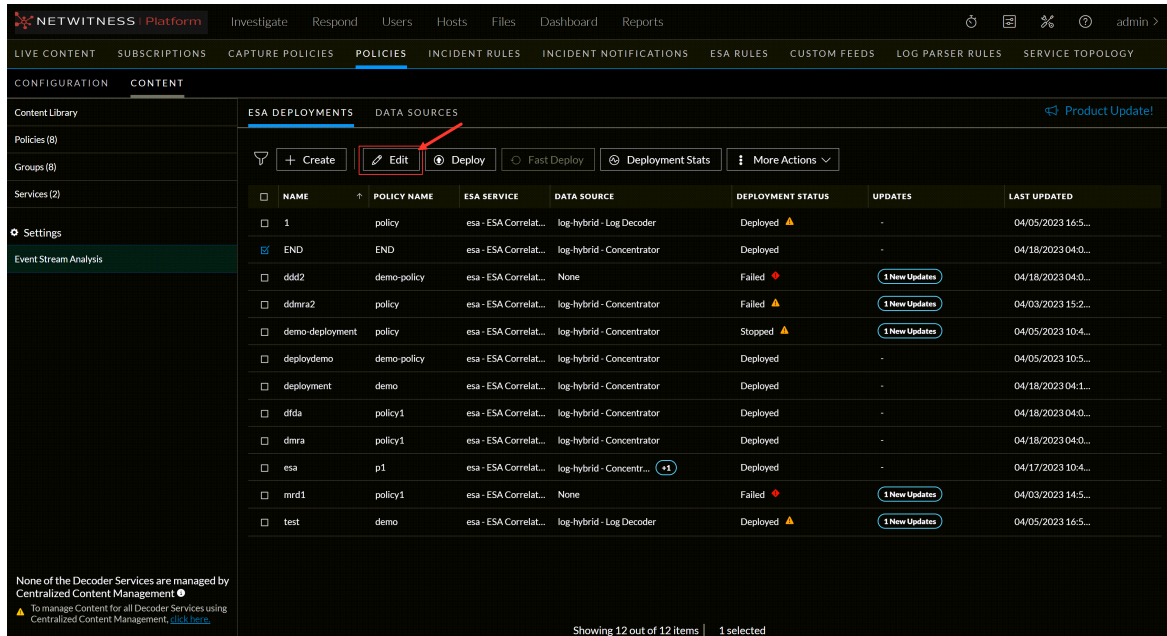

1. Go to  (CONFIGURE) > Policies > Content.

2. Under **Settings**, click **Event Stream Analysis > ESA Deployments**.

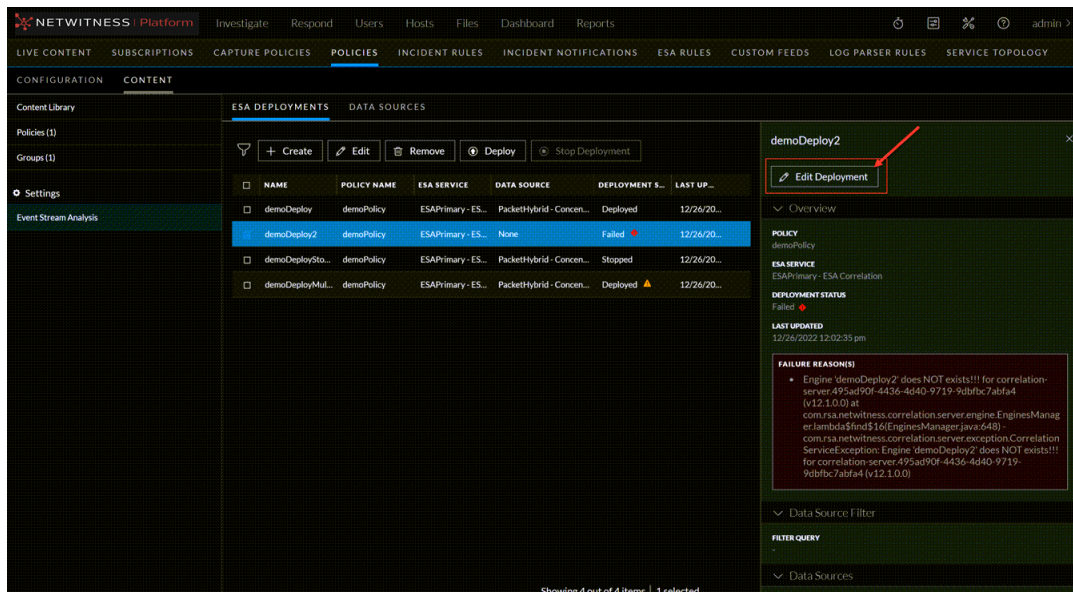

The available deployments are displayed.

3. Select a deployment and click **Edit** or **Edit Deployment**.

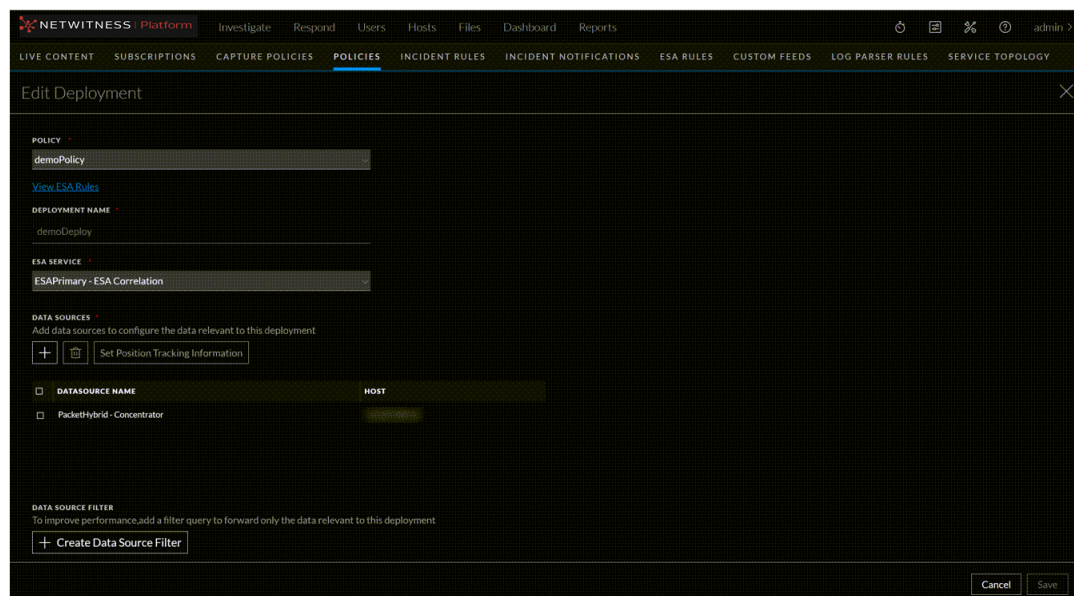

- a. When you select the checkbox and click **Edit**.

- b. When you select or click a row of the deployment, a right panel is displayed to click **Edit Deployment**.

The **Edit Deployment** dialog is displayed.

- (Optional) you can click on **View ESA Rules** to search for rules associated with selected policy. To save current changes to the deployment and modify the policy, select **click here** and navigate to the **Edit Content Policy** page.

- Make the required changes in the deployment.
Policy, deployment name, and ESA service are pre-populated and cannot be modified.
- Under **Data Sources**, click + to add a data source.
The **Add Data Source** dialog is displayed.

- If required, you can add a new data source by selecting **+ Add New Datasource** tab in the dialog-box.

IMPORTANT: If the data sources are not listed, you can add the required datasource. For more information, see the topic [Add an ESA Datasource](#).

- Click **Save**.
- Select the deployment and click **Deploy**.

To edit a deployment from a selected policy

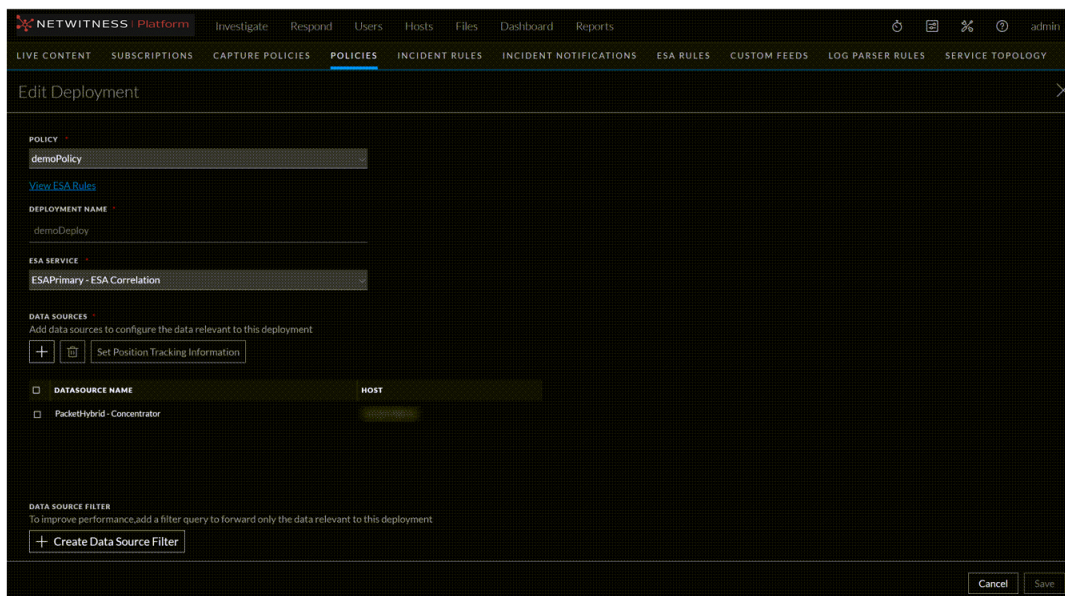

- Go to  (**CONFIGURE**) > **Policies**.
- In the policies panel, click **Content**.
The available policies are displayed.
- Click a Policy.
The selected policy view is displayed and by default **Application Rule** is selected.

4. Click **Event Stream Analysis Rule > Deployments**.

The available deployments for the selected policy are displayed.

5. Select a deployment to edit and click **Edit Deployment**.

The **Edit Deployment** dialog is displayed.

6. Make the required changes in the deployment.

7. Click **Save**.

8. Select the deployment and click **Deploy**.

Note: You can deploy the changes either by performing a **Deploy** action on selected deployment or by publishing the policy. Publishing a policy with deployment in stopped state, will not deploy the deployment.

Start a Deployment

The deployment includes ESA services with policy and associated ESA rules. When you initiate deployment, the correlation services start processing sessions from the configured data sources for matching events for the selected ESA rules in the policy.

For more information about ESA services and rules, see [Alerting with ESA Correlation Rules](#)

You can start deployments in the following ways:

- Using the ESA Deployments tab. The ESA Deployments tab provides a consolidated view of all the available deployments within CCM. You can initiate deployments.
- Using a specific policy. In this method, you cannot view other deployments. You need to go to each policy and initiate a deployment.

To initiate a deployment, with the ESA Deployments tab

1. Go to  (CONFIGURE) > Policies > Content.
2. Under Settings, click Event Stream Analysis > ESA Deployments.

The available deployments are displayed.

3. Select a deployment and click **Deploy**.

| NAME | POLICY NAME | ESA SERVICE | DATA SOURCE | DEPLOYMENT STATUS | UPDATES | LAST UPDATED |
|-------------------------------------|-----------------|-----------------------|---------------------------|--|---------------|--------------------|
| 1 | policy | esa - ESA Correlat... | log-hybrid - Log Decoder | Deployed ▲ | - | 04/05/2023 16:5... |

Showing 12 out of 12 items | 1 selected

To start a deployment with selected policy

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
The available policies are displayed.
3. Click a Policy.

The selected policy view is displayed and by default **Application Rule** is selected.

4. Click **Event Stream Analysis Rule** > **Deployments**.
The available deployments for the selected policy are displayed.
5. Select the deployment to deploy and click **Deploy**.

Note: You can deploy the changes either by performing a Deploy action on selected deployment or by publishing the policy. Publishing a policy with deployment in stopped state, will not deploy the deployment.

Fast Deployment

The **Fast Deploy** option is a feature that allows a user to quickly load the latest rule that runs entirely on the Esper Engine without redeploying the entire engine.

To do fast deployment

1. Go to  (CONFIGURE) > Policies > Content.
2. Under Settings, click Event Stream Analysis > ESA Deployments.

The available deployments are displayed.

You can use the **Fast Deploy** option when there has been a change to an ESA rule, i.e., a rule has been added, modified, or deleted. If any other changes have been made, such as adding a data source, then the **Fast Deploy** option will not be available.

3. Select the deployments that are updated and need to be deployed.
4. Click **Fast Deploy**.

| NAME | POLICY NAME | ESA SERVICE | DATA SOURCE | DEPLOYMENT STATUS | UPDATES | LAST UPDATED |

| mrd1 | policy1 | esa - ESA Correlat... | None | Failed ◆ | 1 New Updates | 04/03/2023 14:5... |
| test | demo | esa - ESA Correlat... | log-hybrid - Log Decoder | Deployed ▲ | 1 New Updates | 04/05/2023 16:5... |

Deployment Stats

When an ESA deployment is deployed, you can view details about how the deployment is performing, such as statistics on the engine, rule, and alert. You can also view information on which rules are enabled or disabled and change their status.

This topic describes how to view an ESA Correlation service’s deployment statistics (stats). This procedure is useful when determining a rule's effectiveness or troubleshooting an ESA rule deployment.

Caution: When you modify and re-deploy an ESA rule deployment, all the stats are removed from that deployment. The generated alerts are not removed from NetWitness.

To view a Deployment Stats

1. Go to  (CONFIGURE) > Policies > Content.
2. Under Settings, click Event Stream Analysis > ESA Deployments.

The available deployments are displayed.

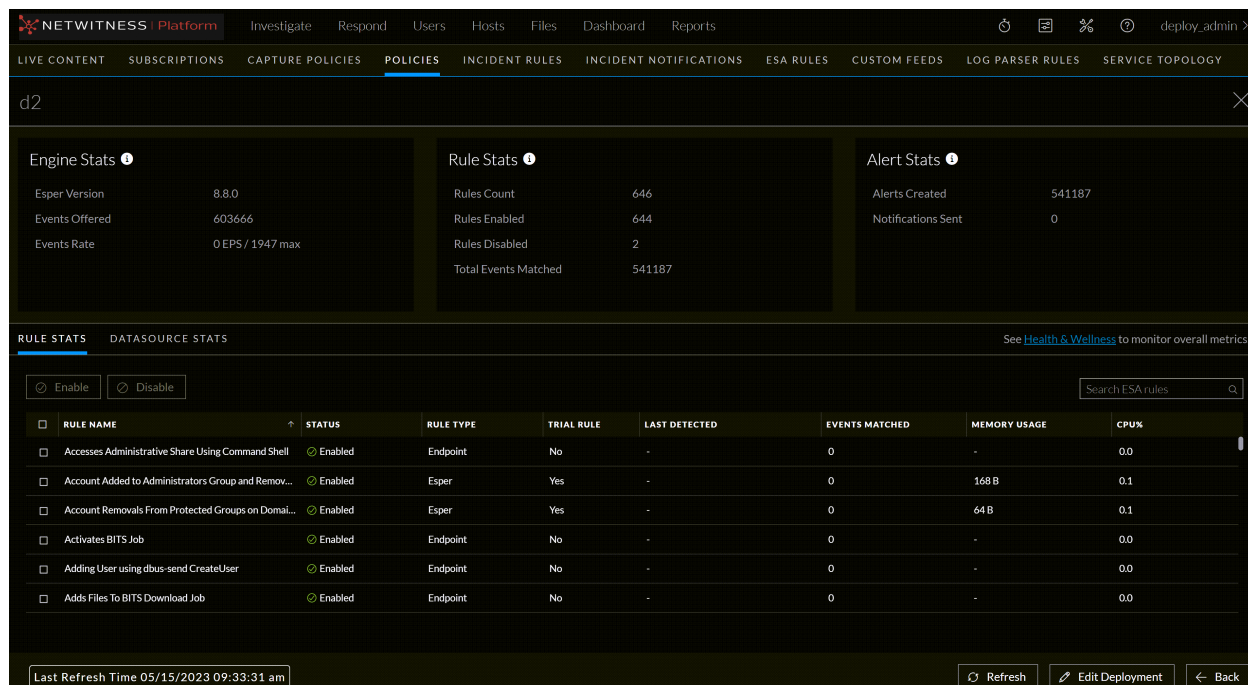

3. Select a deployment you want to see the stats.
4. Click on the **Deployment Stats** tab.

The screenshot shows the NetWitness Platform interface. The top navigation bar includes 'NETWITNESS Platform' and various menu items like 'Investigate', 'Respond', 'Users', 'Hosts', 'Files', 'Dashboard', and 'Reports'. Below this is a secondary navigation bar with categories like 'LIVE CONTENT', 'SUBSCRIPTIONS', 'CAPTURE POLICIES', 'POLICIES', 'INCIDENT RULES', 'INCIDENT NOTIFICATIONS', 'ESA RULES', 'CUSTOM FEEDS', 'LOG PARSER RULES', and 'SERVICE TOPOLOGY'. The main content area is titled 'CONTENT' and contains a table of 'ESA DEPLOYMENTS'. The table has columns for 'NAME', 'POLICY NAME', 'ESA SERVICE', 'DATA SOURCE', 'DEPLOYMENT STATUS', 'UPDATES', and 'LAST UPDATED'. Four rows are visible, with the first row selected. A 'Deployment Stats' button is highlighted in the top right of the table area. At the bottom of the interface, it says 'Showing 4 out of 4 items | 1 selected'.

| NAME | POLICY NAME | ESA SERVICE | DATA SOURCE | DEPLOYMENT STATUS | UPDATES | LAST UPDATED |
|------|-------------|-----------------------|---------------------------|-------------------|---------------|--------------------|
| d1 | policy | esa - ESA Correlat... | log-hybrid - Concentrator | Deployed ▲ | 1 New Updates | 05/15/2023 06:0... |
| d2 | policy2 | esa - ESA Correlat... | log-hybrid - Concentrator | Deployed ▲ | - | 05/15/2023 06:0... |
| d3 | policy | esa - ESA Correlat... | log-hybrid - Concentrator | New ▲ | - | 05/15/2023 06:1... |
| d4 | policy2 | esa - ESA Correlat... | log-hybrid - Concentr... | Stopped ▲ | - | 05/15/2023 06:1... |

The deployment stats for the selected service are displayed.

Review the following sections of selected Deployment Stats. For a complete description of each statistic in each section, see the Deployment Stats Information.

- **Engine Stats**
- **Rule Stats**
- **Alert Stats**

The following figure shows the Deployment Stats panel.

5. Review the list of details about the rules deployed on the ESA.

- If the rule is enabled or disabled
- Rule name
- Rule type
- Rule trial mode
- Last detected
- Events matched
- Rule memory usage

- Deployment CPU percentage used by the rule.

For a complete description of each column in each section, see Deployment Stats Information.

Check Health and Wellness

To monitor your ESA Correlation service's overall memory usage and health, click **Health & Wellness**.

The screenshot shows the NetWitness Platform interface with the following data:

| Engine Stats | | Rule Stats | | Alert Stats | |
|----------------|------------------|----------------------|--------|--------------------|--------|
| Esper Version | 8.8.0 | Rules Count | 646 | Alerts Created | 541187 |
| Events Offered | 603666 | Rules Enabled | 644 | Notifications Sent | 0 |
| Events Rate | 0 EPS / 1947 max | Rules Disabled | 2 | | |
| | | Total Events Matched | 541187 | | |

Below the stats is a table for Rule Stats:

| RULE NAME | STATUS | RULE TYPE | TRIAL RULE | LAST DETECTED | EVENTS MATCHED | MEMORY USAGE | CPU% |
|--|---------|-----------|------------|---------------|----------------|--------------|------|
| Accesses Administrative Share Using Command Shell | Enabled | Endpoint | No | - | 0 | - | 0.0 |
| Account Added to Administrators Group and Remov... | Enabled | Esper | Yes | - | 0 | 168 B | 0.1 |
| Account Removals From Protected Groups on Doma... | Enabled | Esper | Yes | - | 0 | 64 B | 0.1 |
| Activates BITS Job | Enabled | Endpoint | No | - | 0 | - | 0.0 |
| Adding User using dbus-send CreateUser | Enabled | Endpoint | No | - | 0 | - | 0.0 |
| Adds Files To BITS Download Job | Enabled | Endpoint | No | - | 0 | - | 0.0 |

At the bottom right, there is a link: "See [Health & Wellness](#) to monitor overall metrics."

To Enable or Disable Rules

1. Select a rule from the **Rule Stats** panel grid.
2. Click **Enable** to enable the rule or click **Disable** to disable the rule.

The screenshot shows the same Rule Stats table as above. The 'Enable' and 'Disable' buttons at the top left of the table are highlighted with a red box.

To Refresh the Statistics

The Services tab does not update statistics automatically unless you enable or disable a rule.

1. Click the **Refresh** tab in the bottom right corner to refresh the information.

The Services tab is refreshed to show the changes which take effect immediately.

2. View the updated information.

The screenshot shows the NetWitness Platform interface with the 'POLICIES' tab selected. The interface displays three summary cards: Engine Stats, Rule Stats, and Alert Stats. Below these is a table of rules with columns for Rule Name, Status, Rule Type, Trial Rule, Last Detected, Events Matched, Memory Usage, and CPU%. At the bottom right, the 'Refresh' button is highlighted with a red arrow.

| Engine Stats | Rule Stats | Alert Stats |
|-------------------------------|------------------------------|------------------------|
| Esper Version: 8.8.0 | Rules Count: 646 | Alerts Created: 541187 |
| Events Offered: 603666 | Rules Enabled: 644 | Notifications Sent: 0 |
| Events Rate: 0 EPS / 1947 max | Rules Disabled: 2 | |
| | Total Events Matched: 541187 | |

| RULE NAME | STATUS | RULE TYPE | TRIAL RULE | LAST DETECTED | EVENTS MATCHED | MEMORY USAGE | CPU% |
|--|---------|-----------|------------|---------------|----------------|--------------|------|
| Accesses Administrative Share Using Command Shell | Enabled | Endpoint | No | - | 0 | - | 0.0 |
| Account Added to Administrators Group and Remov... | Enabled | Esper | Yes | - | 0 | 168 B | 0.1 |
| Account Removals From Protected Groups on Domai... | Enabled | Esper | Yes | - | 0 | 64 B | 0.1 |
| Activates BITS Job | Enabled | Endpoint | No | - | 0 | - | 0.0 |
| Adding User using dbus-send CreateUser | Enabled | Endpoint | No | - | 0 | - | 0.0 |
| Adds Files To BITS Download Job | Enabled | Endpoint | No | - | 0 | - | 0.0 |

Edit the Deployment

To edit the deployment, Click the **Edit Deployment** tab in the bottom corner of the page.

The screenshot shows the NetWitness Platform interface with the 'POLICIES' tab selected. The interface displays three summary cards: Engine Stats, Rule Stats, and Alert Stats. Below these is a table of rules with columns for Rule Name, Status, Rule Type, Trial Rule, Last Detected, Events Matched, Memory Usage, and CPU%. At the bottom right, the 'Edit Deployment' button is highlighted with a red arrow.

| Engine Stats | Rule Stats | Alert Stats |
|----------------------------|---------------------------|-----------------------|
| Esper Version: 8.8.0 | Rules Count: 646 | Alerts Created: 160 |
| Events Offered: 100 | Rules Enabled: 643 | Notifications Sent: 0 |
| Events Rate: 0 EPS / 8 max | Rules Disabled: 3 | |
| | Total Events Matched: 160 | |

| RULE NAME | STATUS | RULE TYPE | TRIAL RULE | LAST DETECTED | EVENTS MATCHED | MEMORY USAGE | CPU% |
|--|---------|-----------|------------|---------------|----------------|--------------|------|
| Accesses Administrative Share Using Command Shell | Enabled | Endpoint | No | - | 0 | - | 0.0 |
| Account Added to Administrators Group and Remov... | Enabled | Esper | Yes | - | 0 | 168 B | 3.9 |
| Account Removals From Protected Groups on Domai... | Enabled | Esper | Yes | - | 0 | 64 B | 2.9 |
| Activates BITS Job | Enabled | Endpoint | No | - | 0 | - | 0.0 |
| Adding User using dbus-send CreateUser | Enabled | Endpoint | No | - | 0 | - | 0.0 |
| Adds Files To BITS Download Job | Enabled | Endpoint | No | - | 0 | - | 0.0 |

Last Refresh Time

This information indicates the last time when the deployment stats page was refreshed.

| Sections | Parameter | Description |
|--------------|----------------|--|
| Engine Stats | Esper Version | Esper version running on the ESA service |
| | Events Offered | Number of events processed by the ESA service since the last service started. |
| | Events Rate | The rate that the ESA service processes current events / The maximum rate that the ESA service processed events. |

| Sections | Parameter | Description |
|-------------|----------------------|--|
| Rule Stats | Rules Enabled | The number of rules enabled. |
| | Rules Disabled | The number of rules disabled. |
| | Rules Count | The number of rules inside a deployment. |
| | Total Events Matched | Total number of events matched to all rules on the ESA service. |
| Alert Stats | Notifications | The total number of notifications sent by email, SNMP, syslog, or script for the deployment. (ESA SNMP notifications are not supported in NetWitness Platform version 11.3 and later.) |
| | Alerts Created | The total number of alerts sent to Respond for the deployment. |

The Rule Stats panel details:

The Rules Stats provides details on the rules that are deployed on the ESA service. The following figure shows the **Rule Stats** panel.

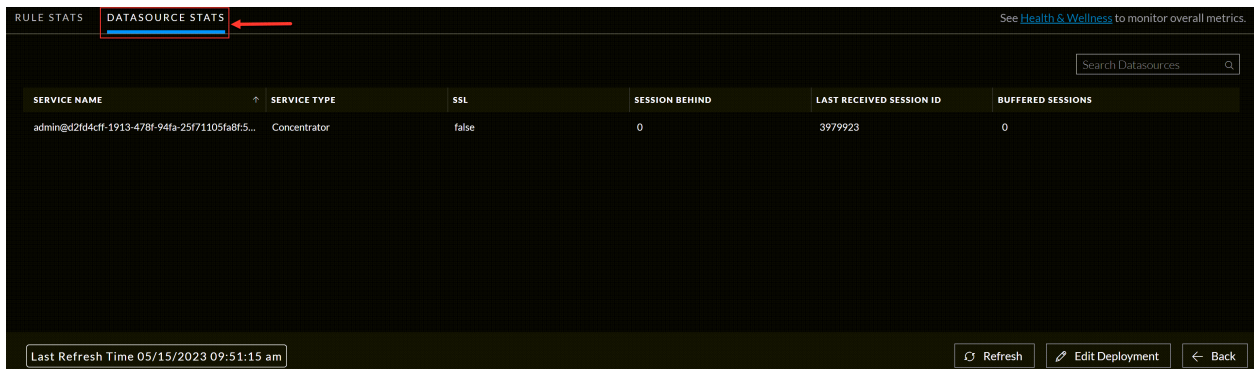

The table below lists the various parameters in the Rules Stats view and their description.

| Parameters | Description |
|--|--|
|  Enabled | Enables a rule that was disabled. |
|  Disabled | Disables a rule that was enabled. |
| Health & Wellness link | Enables you to monitor overall memory usage and health of your ESA Correlation service. |
| Status | Indicates whether the rule is enabled or disabled. A green circle icon  Enabled indicates that the rule is enabled. A white circle icon  Disabled indicates that the rule is disabled. Note: If a rule has an error on deployment, it shows up as 'Failed' . Hover over the Failed icon to view the error message in the tooltip. |
| Rule Name | Name of the ESA rule. |

| Parameters | Description |
|----------------|--|
| Rule Type | <p>Endpoint indicates a rule from the Endpoint Risk Scoring Bundle and Esper indicates Esper-specific rules, such as Rule Builder and Advanced EPL rules.</p> |
| Trial Rule | <p>Indicates if the rule is running in trial rule mode.</p> |
| Last Detected | <p>The last time alert was triggered for the rule.</p> |
| Events Matched | <p>The total number of events that matched the rule.</p> |
| Memory Usage | <p>The total amount of memory used by the rule.</p> <div data-bbox="1222 1314 1417 1556" style="border: 1px solid green; padding: 5px;"> <p>Note: The Endpoint Risk Scoring Rules Bundle rules do not show memory usage.</p> </div> |

| Parameters | Description |
|------------|---|
| CPU % | <p>The percentage of the deployment CPU used by the rule. For example, a deployment with 1 rule shows 100% CPU usage for that rule and a deployment with two equally CPU heavy rules show 50% each.</p> <div style="border: 1px solid green; padding: 5px; margin-top: 10px;"> <p>Note: The Endpoint Risk Scoring Rules Bundle rules do not show CPU usage.</p> </div> |

The Data Source Stats panel details:

| Parameters | Description |
|--------------|--------------------------|
| Service Name | Identity of the service. |
| Service Type | Type of the service. |

| Parameters | Description |
|--------------------------|---|
| SSL | Data Source connected to ESA deployment over an SSL connection using SSL port (For example, for the concentrator, it is 56005). |
| Session Behind | Difference between the last latest session id on the concentrator and the currently processed session id on ESA. |
| Last Received Session ID | The latest session id received by the deployment from the data source. |
| Buffered Sessions | Number of sessions in the ESA buffer to be consumed by the Esper engine. |

Remove a Deployment

You can delete one or more deployments when those deployments are not required. Once the deployment is deleted, all the configurations associated with the deployment will be permanently deleted from the correlation server. The alert process will be stopped for the deleted deployment.

You can remove deployments in the following ways:

- Using the **ESA Deployments** tab. The ESA Deployments tab provides a consolidated view of all the available deployments within CCM. You can remove deployments.
- Using a specific policy. In this method, you cannot view other deployments. You need to go to each policy and remove a deployment.

To remove a deployment from the ESA Deployments tab

1. Go to  (CONFIGURE) > Policies > Content.
2. Under Settings, click Event Stream Analysis > ESA Deployments.

The available deployments are displayed.

3. Select the deployment that needs to be removed and click **Remove**.

A confirmation pop-up is displayed to confirm.

4. Click **Remove**.

The screenshot shows the NetWitness Platform interface. The top navigation bar includes 'NETWITNESS Platform' and various menu items like 'Investigate', 'Respond', 'Users', 'Hosts', 'Files', 'Dashboard', and 'Reports'. Below this is a secondary navigation bar with 'LIVE CONTENT', 'SUBSCRIPTIONS', 'CAPTURE POLICIES', 'POLICIES', 'INCIDENT RULES', 'INCIDENT NOTIFICATIONS', 'ESA RULES', 'CUSTOM FEEDS', 'LOG PARSER RULES', and 'SERVICE TOPOLOGY'. The main content area is titled 'CONFIGURATION' and 'CONTENT'. On the left, there's a sidebar with 'Content Library', 'Policies (7)', 'Groups (7)', 'Services (2)', and 'Settings'. Under 'Settings', 'Event Stream Analysis' is selected. The main area shows 'ESA DEPLOYMENTS' with a table of deployments. The table has columns: NAME, POLICY NAME, ESA SERVICE, DATA SOURCE, and LAST UPDATED. A 'More Actions' dropdown menu is open over the table, showing 'Stop Deployment' and 'Remove Deployment' options. A red arrow points to the 'Remove Deployment' option. At the bottom, it says 'Showing 11 out of 11 items | 4 selected'.

To remove a deployment from a selected policy

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
The available policies are displayed.
3. Click a Policy.
The selected policy view is displayed and by default **Application Rule** is selected.
4. Click **Event Stream Analysis Rule** > **Deployments**.
The available deployments for the selected policy are displayed.
5. Select the deployment that needs to be removed and click **Remove Deployment**.
A confirmation pop-up is displayed to confirm if you want to remove it.
6. Click **Remove**.

Note: It is required to have at least one deployment associated with the correlation service present in the group associated with the policy.

Stop a Deployment

You can stop a deployment to temporarily pause an ESA deployment. This will stop processing the event stream analysis alerts corresponding to the deployed policy.

To delete a deployment completely, see [Remove a Deployment](#)

To initiate a deployment again, see [Start a Deployment](#)

You can stop deployments in the following ways:

- Using the ESA Deployments tab. The ESA Deployments tab provides a consolidated view of all the available deployments within CCM. You can stop deployments.
- Using a specific policy. In this method, you cannot view other deployments. You need to go to each policy and stop a deployment.

To stop a deployment from the ESA Deployments tab

1. Go to  (CONFIGURE) > Policies > Content.
2. Under **Settings**, click **Event Stream Analysis > ESA Deployments**.
The available deployments are displayed.
3. Select the deployment that must be stopped temporarily and click **Stop Deployment**.

The screenshot shows the NetWitness Platform interface. The top navigation bar includes 'Investigate', 'Respond', 'Users', 'Hosts', 'Files', 'Dashboard', and 'Reports'. The main navigation bar has 'LIVE CONTENT', 'SUBSCRIPTIONS', 'CAPTURE POLICIES', 'POLICIES', 'INCIDENT RULES', 'INCIDENT NOTIFICATIONS', 'ESA RULES', 'CUSTOM FEEDS', 'LOG PARSER RULES', and 'SERVICE TOPOLOGY'. The 'POLICIES' section is active, showing a table of deployments. A red box highlights the 'More Actions' dropdown menu, which includes 'Stop Deployment' and 'Remove Deployment' options. A red arrow points to the 'Stop Deployment' option.

| NAME | POLICY NAME | ESA SERVICE | DATA SOURCE | STATUS | DATES | LAST UPDATED |
|-----------------|-------------|-----------------------|---------------------------|----------|---------------|--------------------|
| 1 | policy | esa - ESA Correlat... | log-hybrid - Log Decoder | | | 04/05/2023 16:5... |
| END | END | esa - ESA Correlat... | log-hybrid - Concentrator | Deployed | | 04/18/2023 04:0... |

None of the Decoder Services are managed by Centralized Content Management. To manage Content for all Decoder Services using Centralized Content Management, [click here](#).

Showing 12 out of 12 items | 1 selected

To stop a deployment from a selected policy

1. Go to  (CONFIGURE) > Policies.
2. In the policies panel, click **Content**.
The available policies are displayed
3. Click a Policy.
The selected policy view is displayed and by default **Application Rule** is selected.
4. Click **Event Stream Analysis Rule** > **Deployments**.
The available deployments for the selected policy are displayed.
5. Select the deployment that needs to be stopped temporally and click **Stop Deployment**.

Note: Publishing the policy will not deploy the stopped deployments.

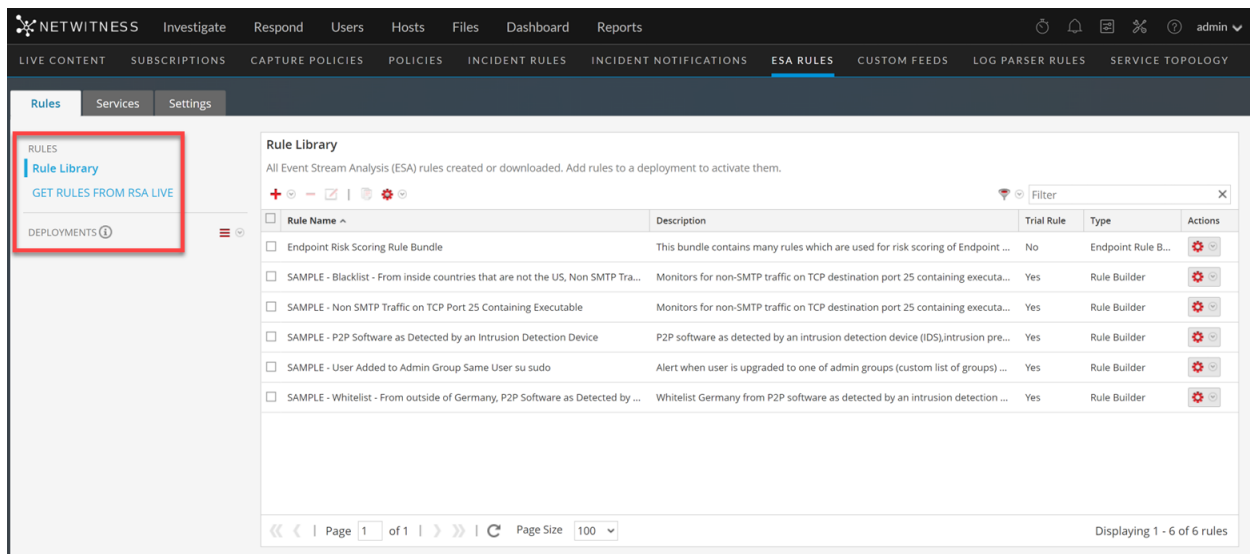

Migrate ESA Deployments to Policies and Groups

From version 12.1 and later, on successful upgrade of the Admin Server, the ESA deployments are managed by the policies and groups page. The deployments are not available on **(CONFIGURE)** > **ESA Rules** page.

12.0 and Earlier version

ESA Rules page in the 12.0 version.

12.1 version

Updated ESA Rules page in 12.1 version, where only rule libraries are available.

Note: The ESA deployments, after upgrading the Admin Server to 12.1 are not available to view or modify until the Correlation servers are also upgraded to the 12.1 version. However, the events are consumed, and ESA alerts are processed by the Correlation server.

All the deployments are automatically migrated to policies and groups:

- Each deployment is converted into a policy and a group.
- Once the ESA Correlation server is upgraded to the 12.1 version, you can access these deployments as groups and policies.

IMPORTANT: If there is any need to import ESA Rules and Enrichments. NetWitness recommends importing those missing rules and enrichments before the upgrade.

The following table provides the information on different deployment states for Policy and Groups:

| SINo | Pre-upgrade Deployment State | Post-upgrade Deployment State | | |
|------|------------------------------|-------------------------------|---------------|------------------------------|
| | | Creates Policy | Creates Group | The policy will be Published |
| 1 | Healthy deployment | Yes | Yes | Yes |
| 2 | Deployment with errors | Yes | Yes | Yes |
| 3 | Deployment with only rules | Yes | No | No |
| 4 | Deployment with no rules | No | No | No |

Healthy deployment contains no errors, and the required resources such as ESA Server, Data source, and ESA rule are added.

Note: NetWitness recommends that all the deployments maintain an error-free state and also remove any unnecessary or unused ESA deployments.

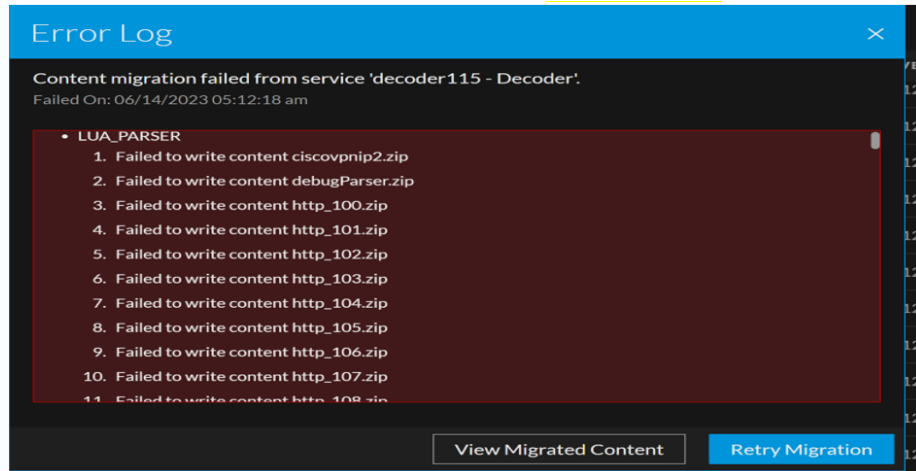

Troubleshooting

This topic provides information about possible issues that NetWitness users may encounter when using Centralized Content Management (CCM) in NetWitness. You can look up explanations of issues and their solutions.

| Problem | Solution |
|---|---|
| <p>Failed to connect to service</p> | <p>Generally this error occurs when service is offline. If the service status is offline, then restart service and retry migration. If the service status is online, then retry migration.</p>  <p>The screenshot shows an 'Error Log' window with a blue header and a dark background. The main text reads: 'Content migration failed from service 'decoder - Decoder'. Failed On: 06/12/2023 09:50:46 am'. Below this, a red box labeled 'FAILURE(S)' contains a list: '• GENERIC' followed by '1. Failed to connect to service'. At the bottom, there is a 'Retry migrating the service' button and an 'Ok' button.</p> |
| <p>Failed to list content of type LOG_DEVICE_PARSER</p> | <p>This is a temporary failure. Retrying migration resolves this issue.</p>  <p>The screenshot shows an 'Error Log' window with a blue header and a dark background. The main text reads: 'Content migration failed from service 'LD111 - Log Decoder'. Failed On: 06/12/2023 04:38:33 am'. Below this, a red box labeled 'FAILURE(S)' contains a list: '• LOG_DEVICE' followed by '1. Failed to list contents of type NW_LOG_DEVICE_PARSER'. At the bottom, there are three buttons: 'Retry migrating the service', 'View Migrated Content', and 'Ok'.</p> |

| Problem | Solution |
|---------|----------|
|---------|----------|

| | |
|-------------------------|--|
| Failed to write content | This is a temporary failure. Retrying migration resolves this issue. |
|-------------------------|--|

Please check source server logs for more details.

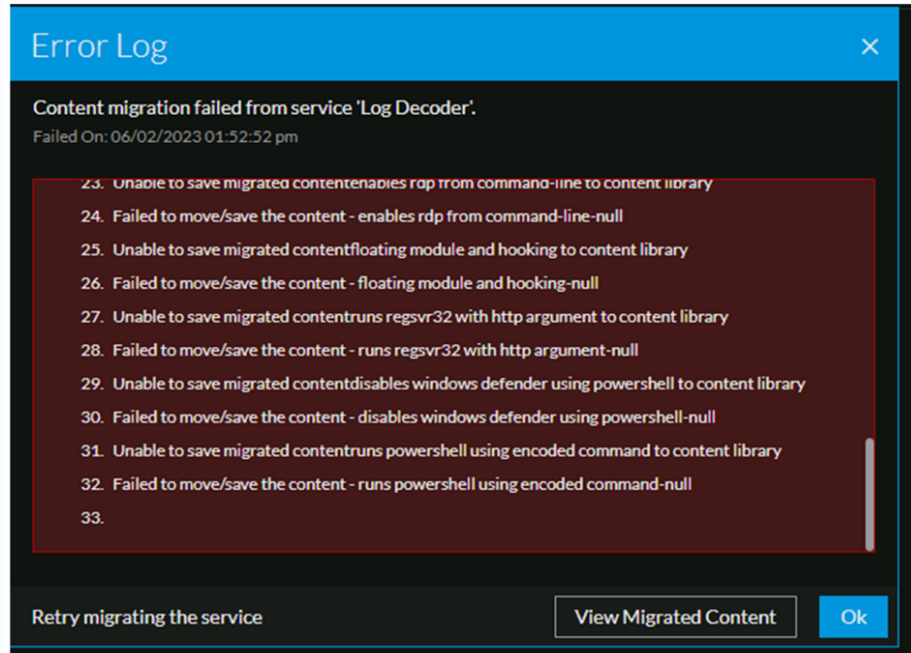

This error occurs when source server goes offline during migration. Hence, restart source server and retry migration.

| Problem | Solution |
|---------|----------|
|---------|----------|

Failed to move/save the content

This error may occur for various reasons and needs more investigation. Hence, please raise a CE ticket and share mongo dump and source server log with ticket.

References

This section is a collection of references, which describe the user interface and more detailed information about how Policy-based Centralized Content Management works in NetWitness. The topics are presented in alphabetical order.

- [Content Library Tab](#)
- [Data Sources Tab](#)
- [Deployments Tab](#)
- [Groups Tab](#)
- [Policies Tab](#)
- [Services Tab](#)

Content Library Tab

The  (CONFIGURE) > **Policies** view contains two tabs: **Configuration** and **Content**.

The **CONTENT** tab has **Content Library**, **Policies**, **Groups** and **Services** on the left panel.

Below is an example of the Content > Content Library tab:

The screenshot displays the NetWitness Platform interface. The top navigation bar includes 'NETWITNESS Platform' and various menu items like 'Investigate', 'Respond', 'Users', 'Hosts', 'Files', 'Dashboard', 'Reports', and 'admin'. The main navigation bar shows 'LIVE CONTENT', 'SUBSCRIPTIONS', 'CAPTURE POLICIES', 'POLICIES', 'INCIDENT RULES', 'INCIDENT NOTIFICATIONS', 'ESA RULES', 'CUSTOM FEEDS', and 'LOG PARSER RULES'. The 'POLICIES' section is expanded to show 'CONFIGURATION' and 'CONTENT' tabs, with 'CONTENT' selected. The left sidebar contains 'Content Library', 'Policies (8)', 'Groups (2)', 'Services (1)', 'Settings', and 'Event Stream Analysis'. The main content area shows a table of application rules with columns for 'RULE NAME', 'RULE VALUE', 'SEVERITY', 'MEDIUM', 'LAST UPDATED', and 'POLICIES'. A red box highlights a warning message: 'Decoder Services under 12.0.0.0 cannot be managed by Centralized Content Management'.

| RULE NAME | RULE VALUE | SEVERITY | MEDIUM | LAST UPDATED | POLICIES |
|------------------------------------|--------------------------------------|----------|----------------|------------------------|----------|
| Custom | [] | None | log | 08/01/2023 01:35:35 pm | None |

1 - 50 of 818 Application Rules | 0 selected << < 1 of 17 > >> 50 Application Rules per page

All Decoder Services above 12.0.0.0 are managed by Centralized Content Management

To manage Content for all Decoder Services using Centralized Content Management, [click here](#).

The screenshot shows the 'CONTENT' configuration page in the NetWitness Platform. The main area is a table of application rules. The table has the following columns: **RULE NAME**, **RULE VALUE**, **SEVERITY**, **MEDIUM**, **LAST UPDATED**, and **POLICIES**. The table contains several rows of rules, including 'Custom' rules and specific system rules like 'Accesses Administrative Share U...'. A toolbar at the top of the table provides actions: '+ Create Rule', 'Clone Rule', 'Delete', and 'Import'. A notification box on the left side of the interface contains the text: 'None of the Decoder Services are managed by Centralized Content Management. To manage Content for all Decoder Services using Centralized Content Management, click here.'

The following table describes the Content Library tab.

1 By default, 50 contents are displayed per page. To go to the next page, click . To go to the last page, click .

- 2 **Toolbar**
- Create Rule - Lets you create a rule.
 - Clone Rule - Lets you clone an application rule or network rule. For more information, see [Clone Application Rule](#) or [Clone Network Rule](#).
 - Delete - Lets you delete an application rule or network rule. For more information, see [Delete Application Rule](#) or [Delete Network Rule](#).
 - Import - Lets you import an application rule or network rule. For more information, see [Import Content to Content Library](#).

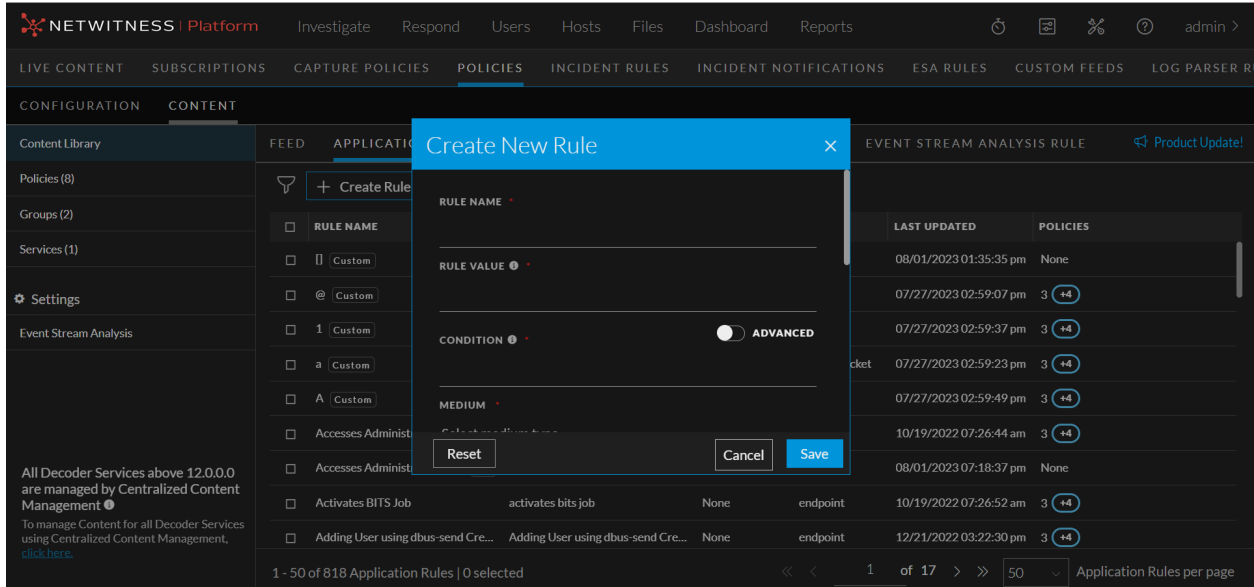

- 3 **Rule List Pane**
- Rule Name - Name of the rule.
 - Rule Value - The rule value.
 - Medium - Medium through which the rule is created.
 - Last Updated - Displays the time when the rule is updated.
 - Policies - Policies to which the rule is applied.

You can also sort on any column. If you mouse over a column header, a sort icon is displayed: .

Click the icon to sort by the selected column.

Create New Rule dialog:

Below is an example of the Create New Rule dialog:

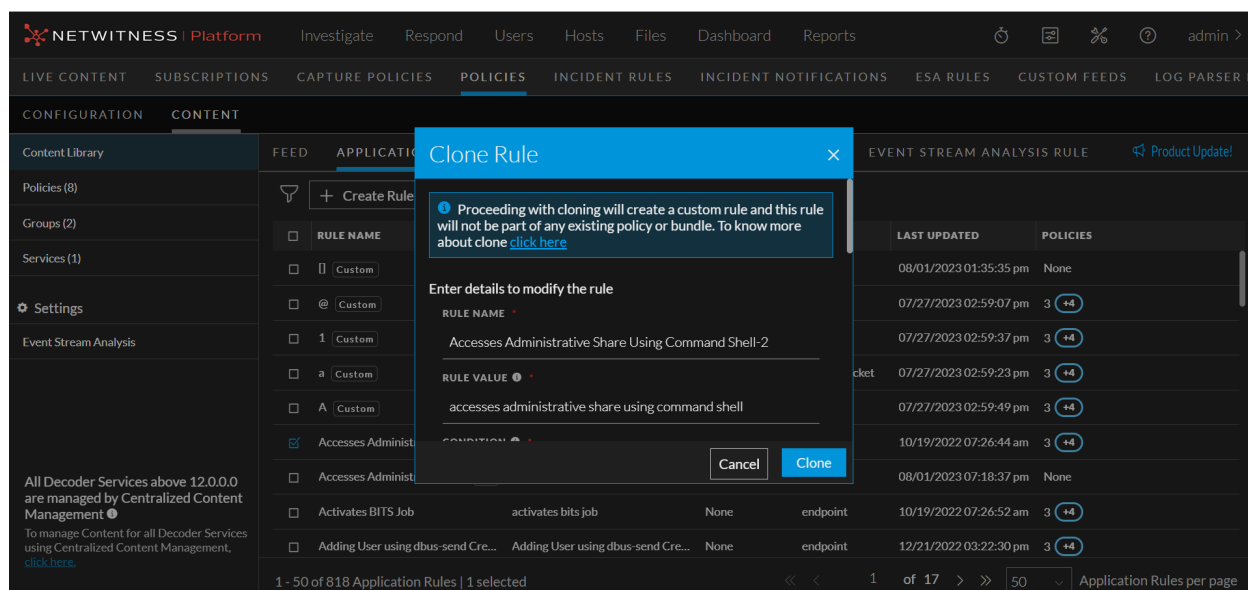

The table describes the information and options in the Create New Rule dialog:

| Field | Description |
|-------------------------|---|
| Rule Name | Name of the new rule. The name should be unique. |
| Rule Value | The rule value. While creating a new rule, the rule value is defaulted with the rule name. However, you can modify the same. |
| Condition | <p>Condition for the new rule. You can apply two types of conditions for the rule.</p> <p>Normal mode:</p> <p>It gives suggestions for supported metas (ip, host and so on) and operators (“=”, “Not Equal To”, “Contains”, “Exists” and so on).</p> <p>The entered User condition will be enclosed in a ‘Pill’. When you enter multiple conditions, the conditions are automatically joined by an ‘AND’ operator. On clicking the ‘AND’ operator, you can toggle between ‘AND’ and ‘OR’ operators.</p> <p>Advanced:</p> <p>You can customize the conditions as a free form text.</p> |
| Medium | Medium through which the rule is created. For a network rule, the value of medium is selected as Packet as default and you cannot edit it. |
| MITRE ATT&CK Tactics | <p>Tactics associated with the rule.</p> <p>For example: Credential Access.</p> <p>For more information on MITRE ATT&CK Tactics, see Use MITRE ATT&CK Framework topic in the NetWitness Respond User Guide for 12.4</p> |
| MITRE ATT&CK Techniques | <p>Techniques associated with the rule.</p> <p>For example: OS Credential Dumping.</p> <p>For more information on MITRE ATT&CK Techniques, see Use MITRE ATT&CK Framework topic in the NetWitness Respond User Guide for 12.4</p> |

| | |
|---|---|
| Description | The description of the new rule. |
| Session Data | Session data for the new rule. Indicates if the rule processing should stop, keep, filter or truncate when the session data is running. |
| Session Options | Session options for the new rule. Indicates if the session options should be alert, forward or transient. |
| Flag session with rule name in meta key | Conditions for which the alert should be turned on. |
| Save | Saves the settings and closes the Create New Rule dialog. |
| Cancel | Cancels the operations. |

Clone Rule dialog:

Below is an example of the Clone Rule dialog.

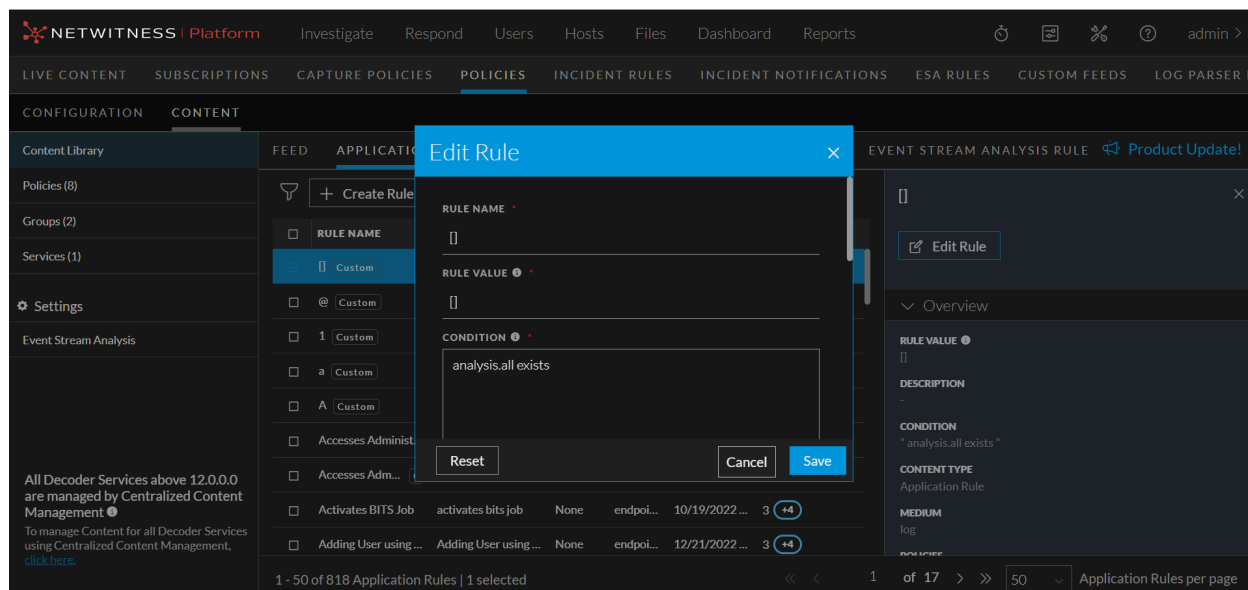

The table describes the information and options in the Clone Rule dialog:

| Field | Description |
|------------|---|
| Rule Name | Name of the cloned rule. The name should be unique. |
| Rule Value | The rule value written to the alert meta. |

| | |
|---|--|
| Condition | <p>Condition for the new rule. You can apply two types of conditions for the rule.</p> <p>Normal mode:</p> <p>It gives suggestions for supported metas (ip, host and so on) and operators (“=”, “Not Equal To”, “Contains”, “Exists” and so on).</p> <p>The entered condition will be enclosed in a ‘Pill’. When you enter multiple conditions, the conditions are automatically joined by an ‘AND’ operator. On clicking the ‘AND’ operator, you can toggle between ‘AND’ and ‘OR’ operators.</p> <p>Advanced:</p> <p>You can customize the conditions as a free form text.</p> |
| Medium | Medium through which the rule is created. For a network rule, the value of medium is selected as Packet as default and you cannot edit it. |
| MITRE ATT&CK Tactics | <p>Tactics associated with the rule.</p> <p>For example: Credential Access.</p> <p>For more information on MITRE ATT&CK Tactics, see Use MITRE ATT&CK Framework topic in the NetWitness Respond User Guide for 12.4</p> |
| MITRE ATT&CK Techniques | <p>Techniques associated with the rule.</p> <p>For example: OS Credential Dumping.</p> <p>For more information on MITRE ATT&CK Techniques, see Use MITRE ATT&CK Framework topic in the NetWitness Respond User Guide for 12.4</p> |
| Description | The description of the new rule. |
| Session Data | Session data for the new rule. Indicates if the rule processing should stop, keep, filter or truncate when the session data is running. |
| Session Options | Session options for the new rule. Indicates if the session options should be alert, forward or transient. |
| Flag session with rule name in meta key | Conditions for which the alert should be turned on. |
| Clone | Clones the rule and closes the Cone Rule dialog. |
| Cancel | Cancels the operation. |

Edit Rule dialog:

Below is an example of the Edit Rule dialog:

The table describes the information and options in the Edit Rule dialog:

| Field | Description |
|-------------------------|--|
| Rule Name | Name of the new rule. The name should be unique. |
| Rule Value | The rule value. |
| Condition | <p>Condition for the new rule. You can apply two types of conditions for the rule.</p> <p>Normal mode:</p> <p>It gives suggestions for supported metas (ip, host and so on) and operators (“=”, “Not Equal To”, “Contains”, “Exists” and so on).</p> <p>The entered condition will be enclosed in a ‘Pill’. When you enter multiple conditions, the conditions are automatically joined by an ‘AND’ operator. On clicking the ‘AND’ operator, you can toggle between ‘AND’ and ‘OR’ operators.</p> <p>Advanced:</p> <p>You can customize the conditions as a free form text.</p> |
| Medium | Medium through which the rule is created. For a network rule, the value of medium is selected as Packet as default and you cannot edit it. |
| MITRE ATT&CK Tactics | <p>Tactics associated with the rule.</p> <p>For example: Credential Access.</p> <p>For more information on MITRE ATT&CK Tactics, see Use MITRE ATT&CK Framework topic in the NetWitness Respond User Guide for 12.4</p> |
| MITRE ATT&CK Techniques | <p>Techniques associated with the rule.</p> <p>For example: OS Credential Dumping.</p> <p>For more information on MITRE ATT&CK Techniques, see Use MITRE ATT&CK Framework topic in the NetWitness Respond User Guide for 12.4</p> |

| | |
|---|---|
| Description | The description of the new rule. |
| Session Data | Session data for the new rule. Indicates if the rule processing should stop, keep, filter or truncate when the session data is running. |
| Session Options | Session options for the new rule. Indicates if the session options should be alert, forward or transient. |
| Flag session with rule name in meta key | Conditions for which the alert should be turned on. |
| Save | Saves the settings and closes the Edit Rule dialog. |
| Reset | Reset the fields. |
| Cancel | Cancels the operation. |

Search Pattern Rule tab

Following is an example of the **Content > Content Library > More > Search Pattern Rule** tab:

1 Toolbar

- **Create Rule** - Allows you to create a search pattern rule.
- **Clone Rule** - Allows you to clone a search pattern rule. For more information, see [Manage Search Pattern Rules](#)
- **Delete** - Allows you to delete a search pattern rule. For more information, see [Manage Search Pattern Rules](#)

2 Rule List Pane

- **Name** - Name of the search pattern rule.
- **Keywords** - Displays the keywords associated for each search pattern rule.
- **Ports** - Displays the ports associated for each search pattern rule.
- **Last Updated** - Displays the time when the rule is updated.
- **Policies** - Policies to which the rule is applied.

You can also sort on any column. If you mouse over a column header, a sort icon is displayed: .

Click the  icon to sort by the selected column.

Create New Rule dialog for Search Pattern Rule:

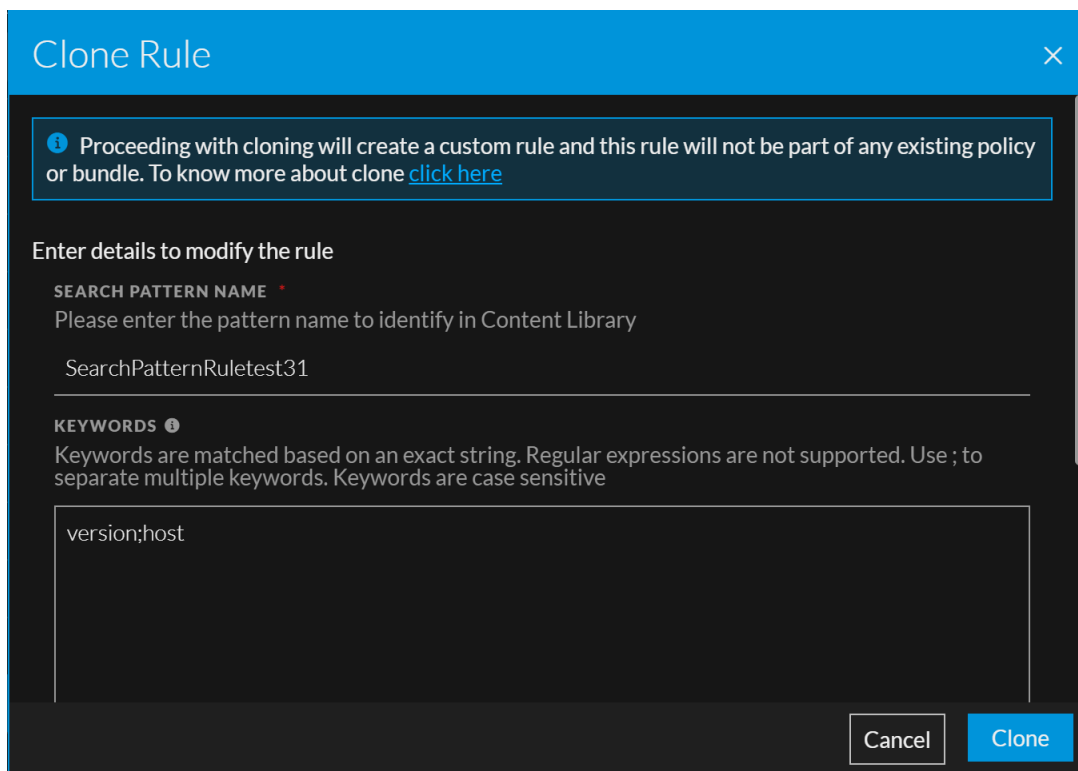

Below is an example of the Create New Rule dialog for Search Pattern Rule:

| Field | Description |
|---------------------|---|
| Search Pattern Name | Name of the new rule. The name should be unique. |
| Keywords | Allows you to add one or more keywords. Keywords are matched based on an exact string only. Regular expressions (Regex) are not supported. Use semicolons (;) to separate multiple keywords. For example, CreditCard;VISA;US . |

| Field | Description |
|--------------|---|
| Service Port | Allows you to add one or more ports. Use semicolons (;) to separate multiple port numbers. For example, 20;21;23 . The port numbers must be between 1 and 65535. |
| Save | Saves the settings and closes the Create New Rule dialog. |
| Cancel | Cancels the operations. |
| Reset | Reset the fields. |

Clone Rule dialog for Search Pattern Rule:

Below is an example of the Clone Rule dialog.

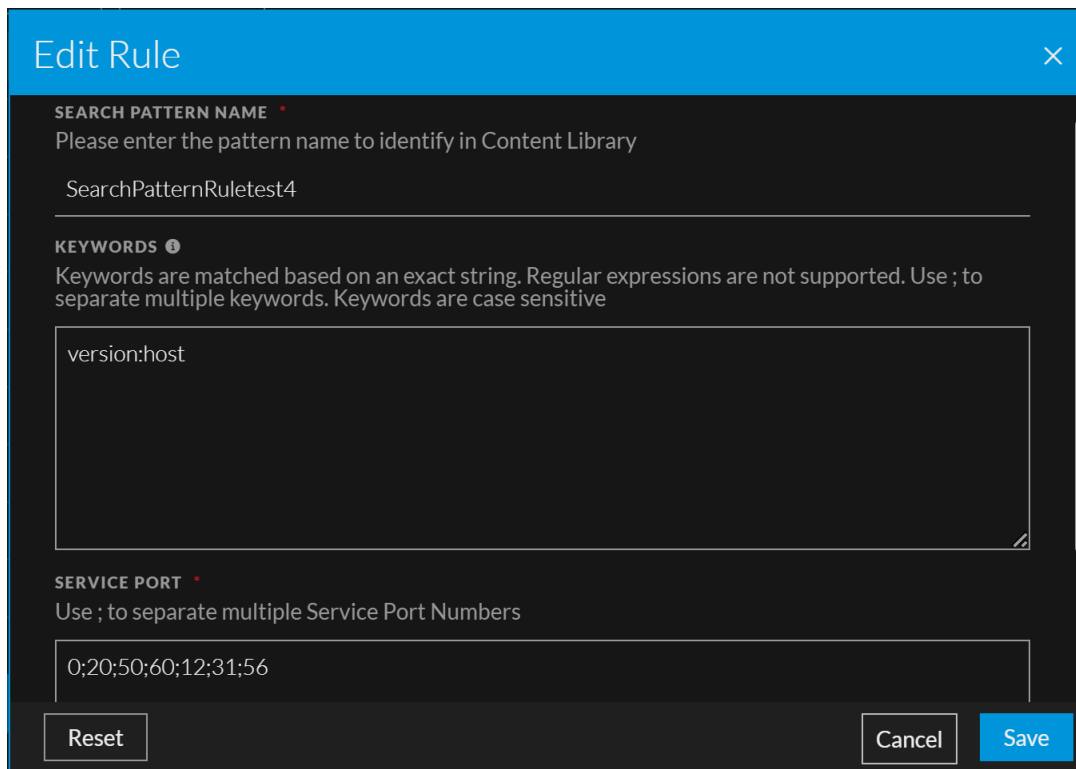

| Field | Description |
|---------------------|---|
| Search Pattern Name | Name of the new rule. The name should be unique. |
| Keywords | Allows you to add one or more keywords. Keywords are matched based on an exact string only. Regular expressions (Regex) are not supported. Use semicolons (;) to separate multiple keywords. For example, CreditCard;VISA;US . |
| Service Port | Allows you to add one or more ports. Use semicolons (;) to separate multiple port numbers. For example, 20;21;23 . The port numbers must be between 1 and 65535 . |

| Field | Description |
|--------|--|
| Clone | Clones the rule and closes the Cone Rule dialog. |
| Cancel | Cancels the operations. |

Edit Rule dialog for Search Pattern Rule:

Below is an example of the Edit Rule dialog.

| Field | Description |
|---------------------|--|
| Search Pattern Name | Name of the new rule. The name should be unique. |
| Keywords | Allows you to add one or more keywords. Keywords are matched based on an exact string only. Regular expressions (Regex) are not supported. Use semicolons (;) to separate multiple keywords. For example, CreditCard;VISA;US . |
| Service Port | Allows you to add one or more ports. Use semicolons (;) to separate multiple port numbers. For example, 20;21;23 . The port numbers must be between 1 and 65535 . |
| Save | Saves the settings and closes the Edit Rule dialog. |
| Cancel | Cancels the operations. |
| Reset | Reset the fields. |

Data Sources Tab

Below is an example of the **Content > Settings > Event Stream Analysis > Data Sources** tab:

| NAME | ADDRESS | PORT | TRUSTED AUTHENTICATION | SSL | COMPRESSION |
|---------------------------|------------|-------|------------------------|------|-------------|
| loghybrid1 - Log Decoder | [REDACTED] | 56002 | true | true | false |
| loghybrid1 - Concentrator | [REDACTED] | 56005 | false | true | false |

The following table describes the Data Sources tab.

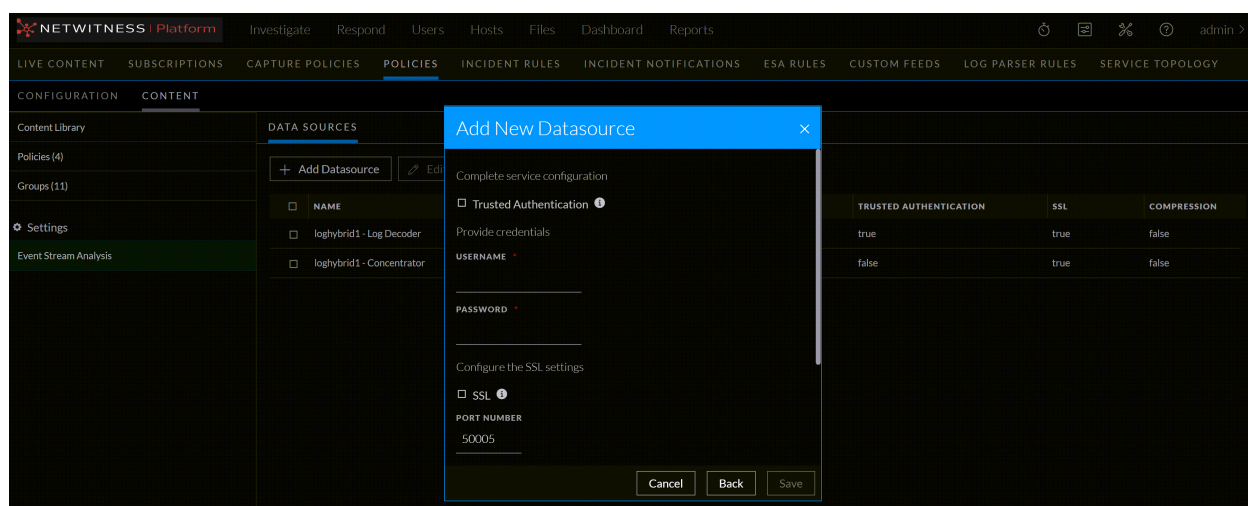

1 Toolbar

- **Add Datasource**- Lets you to add a new Datasource. For more information, see [Add an ESA Datasource](#).
- **Edit - Datasource** - Lets you edit the Datasource. For more information, see [Edit an ESA Datasource](#).
- **Delete Datasource** - Deletes the selected Datasource.

2 Data Sources List Pane

- **Name** - Shows the name of the data sources used by the selected ESA service. Data sources can be Concentrators or Decoders.
- **Address** - IP address of the datasource where the ESA service is installed.
- **Port** - Shows the port number used for authentication.
- **Trusted Authentication** - Indicates that it uses Trusted Authentication for communication with ESA Service.
- **SSL** - Indicates that it uses SSL for Authentication.
- **Compression** - Enables you to adjust the Compression Level on different datasources for ESA.

Below is an example of the **Add New Datasource** dialog:

The table describes the information and options in the **Add New Datasource** dialog.

| Field | Description |
|------------------------|---|
| Trusted Authentication | This option will enable the use of SSL by default for authentication. |
| Username | The username used to sign in to your account for authenticating the datasource. |
| Password | The password for authenticating the datasource. |
| SSL | This will enable the use of SSL for authentication. |
| Port Number | This will enable the use of the port number for authentication. |
| Compression | This option enables you to adjust the Compression Level on different datasources for ESA. |
| Compression Level | Enables you to set different compression level. Compression Level: 0 , 1 , and 9 . For more information, see Add an ESA Datasource . |

| Field | Description |
|--------------------|--|
| Test Configuration | Validates the provided configuration. |
| Save | Saves the settings and closes the Add New Datasource dialog. |
| Cancel | Cancels the operations. |

Deployments Tab

Below is an example of the **Content > Policies > select a policy > Event Stream Analysis Rule > Deployments** tab:

The screenshot shows the NetWitness Platform interface. The breadcrumb trail is **Content > Policies > select a policy > Event Stream Analysis Rule > Deployments**. The main content area displays a table of deployments for the selected policy.

| NAME | ESA SERVICE | DATA SOURCE | DEPLOYMENT STATUS | LAST UPDATED |
|-------------|-----------------------------|--|-------------------|---------------------|
| Deployment1 | esprimary - ESA Correlation | loghybrid - Concentrator | Deployed | 08/16/2022 09:50:02 |
| Deployment2 | esprimary - ESA Correlation | loghybrid - Concentrator ⁺¹ | New ▲ | 08/16/2022 09:50:36 |
| Deployment3 | esprimary - ESA Correlation | loghybrid - Concentrator ⁺³ | Stopped | 08/16/2022 09:51:04 |

Showing 3 out of 3 items | 0 selected

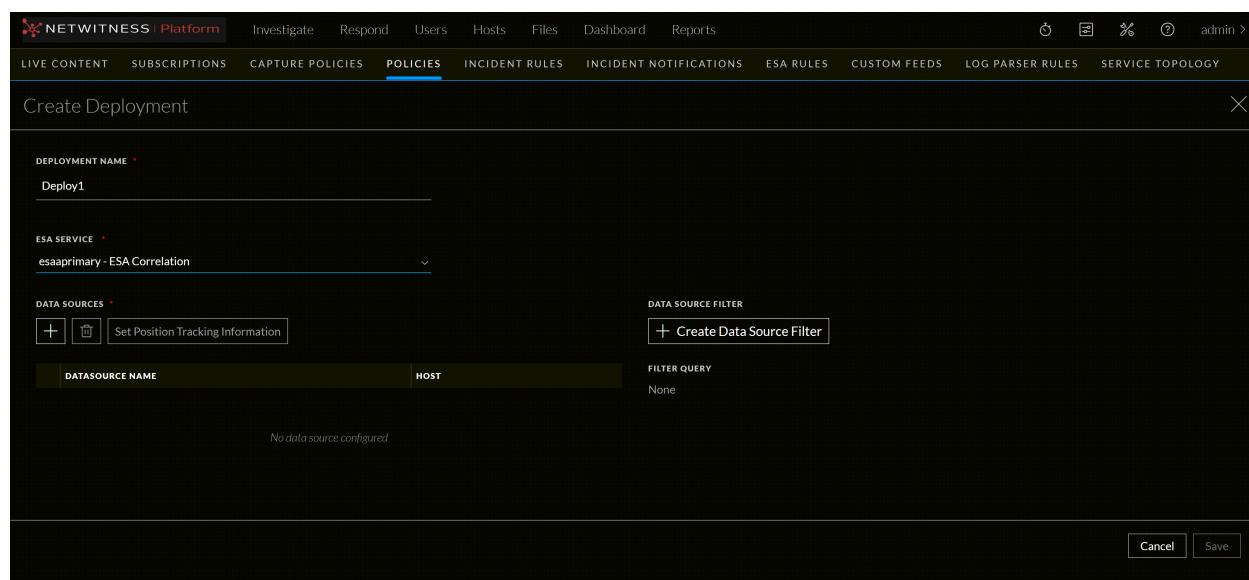

The following table describes the Deployments tab.

- 1 **Toolbar**
 - **Create Deployment** - Lets you to Add a new Deployment. For more information, see [Create a Deployment](#).
 - **Remove Deployment** - Lets you to remove the Deployment. For more information, see [Remove a Deployment](#).
 - **Deploy** - Lets you to deploy the Deployment.
 - **Stop Deployment** - Lets you to stop the selected Deployment.

- 2 Deployment List Pane
- Name - Name of the content.
 - ESA Service - Displays the ESA service selected.
 - Data Source - Displays the Datasource added for ESA deployment.
 - Deployment Status - Status of the deployment. The values are: Deploying, Deployed, New, Stopping, Stopped, and Failed.
 - Last Updated - Displays the time when the deployment is updated.

Create Deployment dialog:

Below is an example of the Create Deployment dialog:

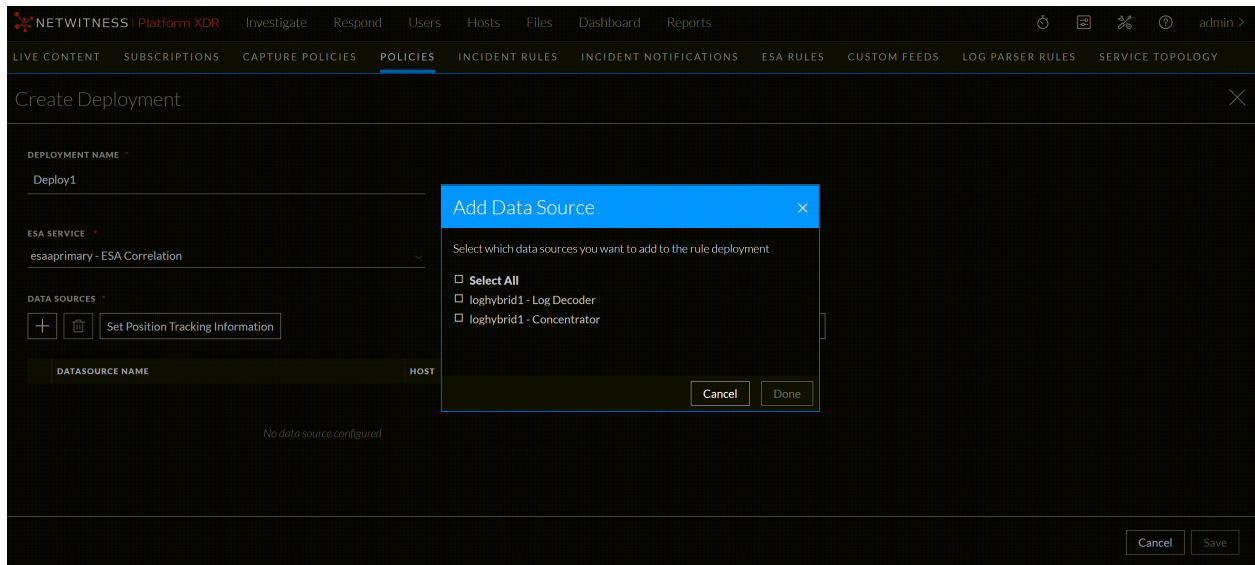

The table describes the information and options in the **Create Deployment** dialog.

| Field | Description |
|-----------------|---|
| Deployment Name | Name of the deployment. The name must be unique. |
| ESA Service | Displays the list of ESA services from the drop-down list. <ul style="list-style-type: none"> • esaprimary – ESA Correlation • esasecondary – ESA Correlation |
| | Adds a Datasource from the available list. At least one Datasource is required to set the position tracking information for ESA. |
| | Deletes the datasource that you are currently editing. |

| Field | Description |
|-----------------------------------|--|
| Set Position Tracking Information | Adds a position tracking information on different datasources for ESA. Position Tracking Information enables you to visualize the progress of the sessions that ESA has processed, and provides information on the session IDs and the time/date when the events were processed. For more information, see Position Tracking Information . |
| Create Data Source Filter | Enables you to create the datasource filter to get the required results. |
| Save | Saves the settings and closes the Create Deployment dialog. |
| Cancel | Cancels the operations. |

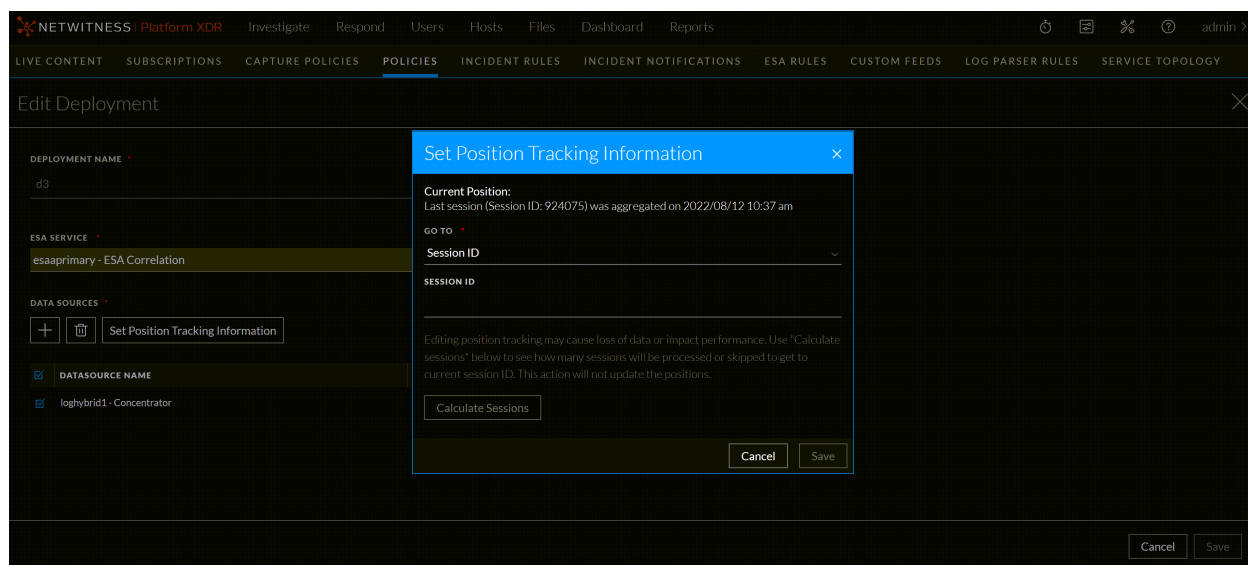

Below is an example of **Add Data Source Dialog**.

The table describes the information and options in the **Add Data Source** dialog.

| Field | Description |
|--------------------------------|--|
| Select Datasource / Select All | Allows you to select one or more datasources. |
| Done | Adds the datasource and closes the Add Data Source dialog. |
| Cancel | Cancels the operations. |

Below is an example of **Set Position Tracking Information** dialog.

The table describes the information and options in the **Set Position Tracking Information** dialog.

| Field | Description |
|--------------------|---|
| Go To | This option will enable the use of Session ID and data and time for ESA Correlation Service for the events. |
| Session ID | The ESA Correlation service starts processing the events from the session ID that you entered. |
| Date and Time | The ESA Correlation service starts processing the events from the date and time that you entered. |
| Calculate Sessions | This will calculate the number of sessions that will be processed with respect to the existing position of the data source. |
| Save | Saves the settings and closes the Set Position Tracking Information dialog. |
| Cancel | Cancels the operations. |

Below is an example of **Create Data Source Filter** Dialog

The table describes the information and options in the **Create Data Source Filter** dialog.

| Field | Description |
|--------------------|---|
| Data Source Filter | Enables you to enter the data source filter. For example, you can type Select *where service = 443 to filter based on the query processed, it will filter out only HTTPS logs related sessions and will be forwarded to the ESA. |
| Add | Adds the configurations and closes the Create Data Source Filter dialog. |
| Cancel | Cancel the operations. |

Groups Tab

Below is an example of the Content > Groups tab:

| <input type="checkbox"/> | NAME | DESCRIPTION | SERVICES | POLICY | POLICY STATUS |
|--------------------------|--------|-------------|------------------------------|--------|---------------|
| <input type="checkbox"/> | A | | packethybrid - Decoder | A | Unpublished |
| <input type="checkbox"/> | fsd | | endpointhybrid - Log Decoder | sdasdb | Partial ▲ |
| <input type="checkbox"/> | test23 | | None | None | N/A |

The following table describes the Groups tab.

- 1 By default, 50 groups are displayed per page. To go to the next page, click . To go to the last page, click .

2 - Filter the groups based on various parameters.

| NAME | DESCRIPTION | SERVICES | POLICY | POLICY STATUS |
|---------------------------------|-------------|------------------------------|--------|---------------|
| <input type="checkbox"/> A | | packethybrid - Decoder | A | Unpublished |
| <input type="checkbox"/> fsd | | endpointhybrid - Log Decoder | sdasdb | Partial ▲ |
| <input type="checkbox"/> test23 | | None | None | N/A |

Filter Panel:

- Name - Select the **Name** drop-down value as either **Equals** or **Contains**. To search the group name using the **Contains** operator, set the filter option to **Contains** operator from the drop-down list and start typing the name of the group. Type one character and a list of group that contain that character is displayed, as you continue to type, the list is filtered to match. To search the group name using the **Equals** operator, set the filter option to **Equals** operator from the drop-down list and enter the full name. The particular group name will be displayed.
- Policy Status - Select the **Policy Status** from the drop-down list. The various drop-down values are:
 - **Published**: Groups that are published to use.
 - **Unpublished**: Groups that are saved but not published.
 - **Failed**: Groups that are failed to publish.
 - **N/A**: Groups for which publication status is not applicable.
 - **Partial**: Groups that are partially published.
- Services - The service type to which the group is attached.
- Policies – The policies to which the group is attached.

3 Toolbar

- Create New - Lets you create a new group. For more information, see Create a group.
- Edit - Lets you edit the group. For more information, see Managing Groups.
- Publish - Publishes selected groups.
- Delete - Deletes the selected group.

4 Group List Pane

- Name - Name of the group.
- Description - Description of the group.
- Services - Displays the service to the which the group is applied.
- Policies - Displays the policy to which the group is applied.
- Policy Status - Status of the policy. The values are: Published, Unpublished, Failed, N/A.

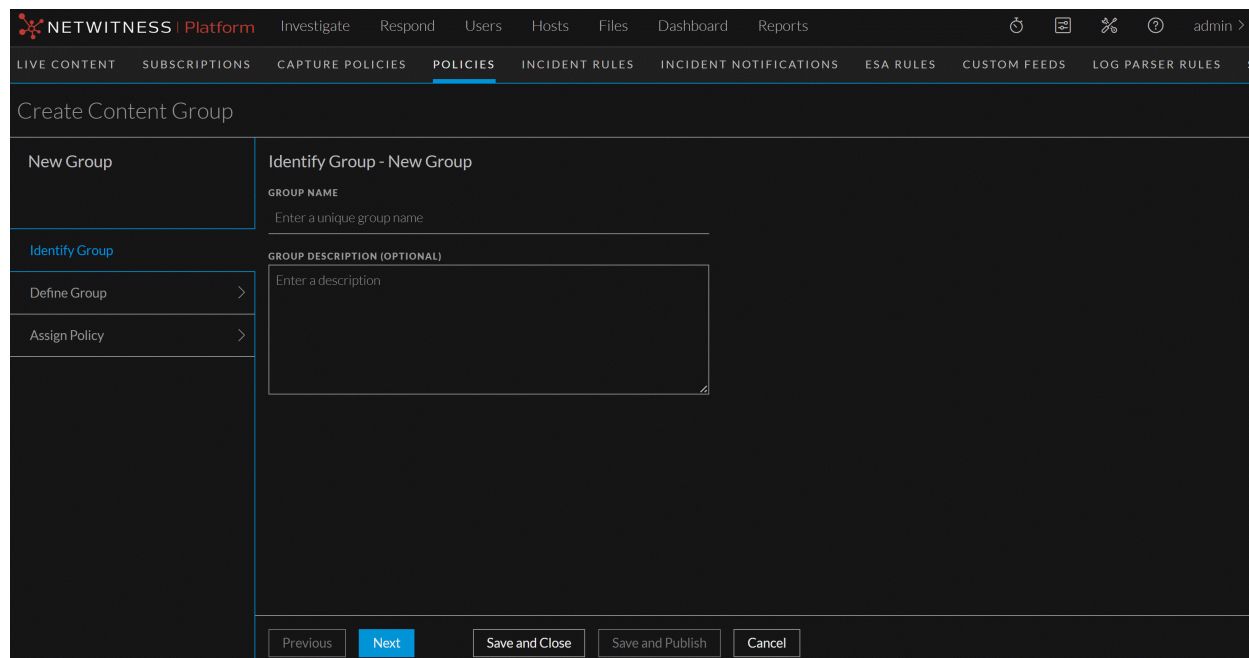

You can also sort on any column. If you mouse over a column header, a sort icon is displayed:

. Click  to sort by the selected column.

5 Groups Details Panel

Displays the properties of the selected group.

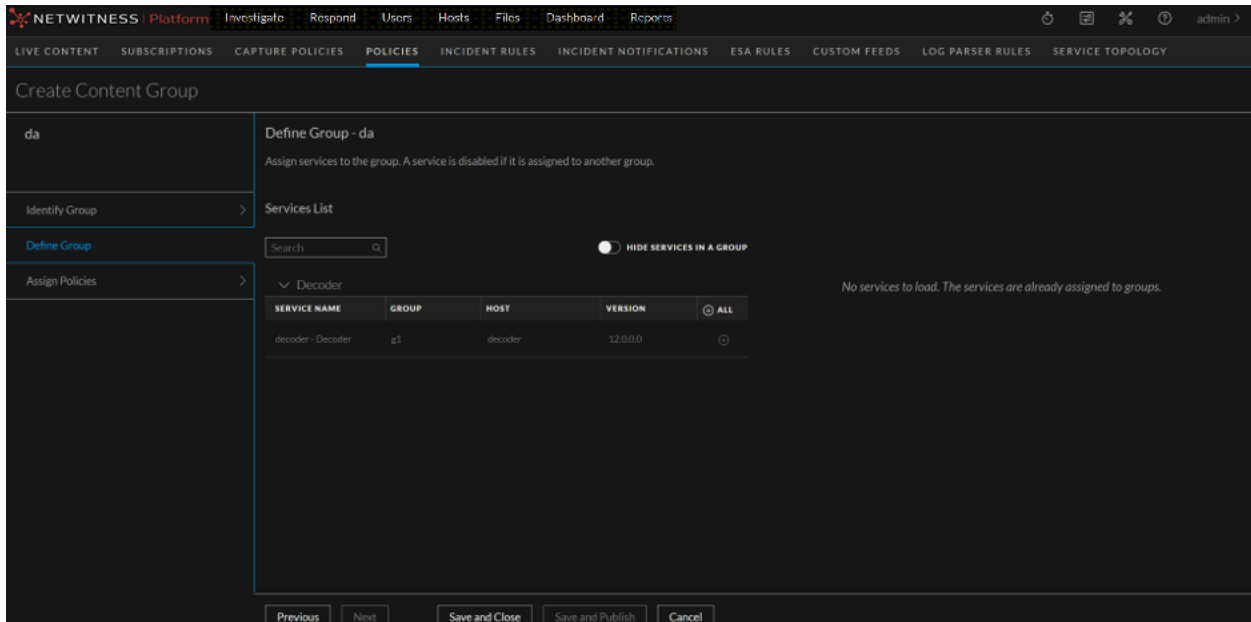

Below is an example of the Create group dialog:

The table describes the information and options in the Create Group dialog:

| Field | Description |
|------------------------------|--|
| Group Name | Name of the group. The name should be unique. |
| Group Description (Optional) | Description of the group. Description should not exceed 8000 characters. |
| Save and Close | Saves the settings and closes the Create Group dialog. |

Below is an example of the define group dialog:

The table describes the information and options in the Define Group dialog:

| Field | Description |
|--------------------------|---|
| Services List | <p>Displays the list of services.</p> <p>The following describes services list:</p> <p>Service name – Name of the service.</p> <ul style="list-style-type: none"> • Group - Name of the group. • Host - Host name of the service. • Version - Service version. • All - Lets you to add services to the group. You can either click to add all services or click to add specific service. |
| Hide Services in a Group | Displays the services that is not assigned to any group. By default, this option is disabled. |
| Selected Services | Displays the list of selected services for the group. |
| Save and Close | Saves the setting and closed the create group dialog. |
| Save and Publish | Saves and publishes the created group. |
| | <p>Note: This option is disabled if you have not:</p> <ul style="list-style-type: none"> - Assigned services. - Assigned policies. |

Below is an example of Assign policy dialog:

The following table describes assign policy dialog:

| Field | Description |
|-------------------|---|
| Policies List | <p>Displays the list of policies associated with the group.</p> <p>The following describes policies list:</p> <ul style="list-style-type: none"> • Name - Name of the policy. • Description - Description of the policy. • Groups - Groups associated with the policy. • Action - Click to add policies to the group. |
| Selected Policies | Displays the list of selected policies for the group. |
| Save and Close | Saves the setting and closed the create group dialog. |
| Save and Publish | Saves and publishes the created group. |
| | <p>Note: This option is disabled if you have not:</p> <ul style="list-style-type: none"> - Assigned services. - Assigned policies. |

Policies Tab

The  (CONFIGURE) > Policies view contains two tabs: **Configuration** and **Content**. Below is an example of the **Content > Policies** tab:

1 - 8 of 8 Policies | 0 selected

<< < 1 of 1 > >> 50 Policies per page

The following table describes the Policies tab.

- 1 By default, 50 policies are displayed per page. To go to the next page, click . To go to the last page, click .

2 Toolbar:

- Create New - Lets you create a new policy. For more information, see [Create a policy](#).
- Edit - Lets you edit the policy. For more information, see [Edit a Policy](#).
- Publish - Publishes selected policy or policies.
- More Actions:
 - Assign to Group --Lets you assign policy to a group.
 - Clone - Lets you clone a policy.
 - Revert to - Lets you view the previous policy versions and revert policy to any previous version.

Note:

- The current version of the policy is disabled.
- This option is disabled either if no policy is selected or multiple policies are selected.

-  - Lets you name a policy version when you revert the policy.
- Delete - Deletes the selected group or groups permanently.
- Force Publish - Lets you republish all the content irrespective of the policy status. This option allows you to re-push all content or configurations to all services in the group. Some of the scenarios where you might want to force publish the policy are:
 - There was a service that was down or did not successfully receive content when it was first pushed out.
 - Some content may have been modified or removed locally on a service (outside of CCM control) and you want to re-apply the content from the policy.

3 Policy List Pane:

- Name - Name of the policy.
- Description - Description of the policy.
- Groups - Lists the group to which this policy is applied.
- Policy Status - Status of the policy. The values are: Published, Unpublished, Failed, N/A.
- Last Updated - Displays the time when the policy is updated.
- Updated By - The user who updated the policy. You can also sort on any column. If you mouse over a column header, a sort icon is displayed: . Click the  icon to sort by the selected column.

4 Policy List - Side Pane:

The screenshot shows the NetWitness Platform interface. The top navigation bar includes 'Investigate', 'Respond', 'Users', 'Hosts', 'Files', 'Dashboard', and 'Reports'. The main navigation menu is divided into 'LIVE CONTENT', 'SUBSCRIPTIONS', 'CAPTURE POLICIES', 'POLICIES', 'INCIDENT RULES', 'INCIDENT NOTIFICATIONS', 'ESA RULES', 'CUSTOM FEEDS', and 'LOG PARSER RULES'. The 'POLICIES' section is active, showing a table of policies.

| NAME | DESCRIPTION | GROUPS | POLIC... | LAST UP... | UPD... |

| Zn | | None | N/A | 07/27/2... | admin |

The details pane for the selected policy 'packethybrid - Decoder' shows the following sections:

- Buttons: Publish Policy, Edit Policy, View Details
- Overview
- Application Rule
- Feed
- Parser
- History

At the bottom of the table, it shows '1 - 8 of 8 Policies | 1 selected' and '1 of 1' with a dropdown for '50 Policies per page'.

- **Publish Policy** - Lets you publish all the unpublished and/or failed content. For more information, see [Create a policy](#).
- **Edit Policy** - Lets you edit the policy. For more information, see [Edit a Policy](#).
- **View Details** - Lets you view the complete policy details.
- Expand the sections **Overview**, **Application Rule**, **Bundle**, **Feed**, **Lua Parser** and **History** to view the details of the policy.
- The table contains details such as **Policy Version**, **Version Name** and **Published By**.

5 Policy Details Panel:

Displays the properties of the selected policy.

Toolbar:

- Publish Policy - Lets you publish all the unpublished and/or failed content. For more information, see Create a policy.
- Edit Policy - Lets you edit the policy. For more information, see Edit a Policy.
- Delete Policy - Deletes the selected policy or policies permanently.
- Force Publish - Lets you republish all the content irrespective of the policy status.

Policy Details Pane:

- Order - Order of the content. Click  to sort and display the content in the ascending order.

Click  to sort and display the content in descending order. This field is applicable only for **Application Rule** and **Network Rule** tabs.

- Rule Name - Name of the rule. The rule name will be unique. This field is applicable only for **Application Rule** and **Network Rule** tabs.
- Rule Value - The rule value. It is the value written to the alert meta. The rule value can be duplicate. You can clone existing rules with different rule names, but with same rule value. This field is applicable only for **Application Rule** and **Network Rule** tabs.
- Name - The content name. This field is applicable only for **Feed**, **Log Device** and **Parser** tabs.
- Type - The type of parser. For example, **Lua Parser** or **Native Parser**. This field is applicable only for **Parser** tab.
- Medium - Meta data source medium.
- Severity - The severity of content. For example, **Low**, **Medium**, **High** or **Critical**. This field is applicable only for **Application Rule** and **Event Stream Analysis Rule** tabs.
- Last Updated - Displays the time when the content is last updated.
- Subscription - Indicates if the content is subscribed or unsubscribed.
- Status - The status of resource.
-  - Filter the list of displayed content in the policy details view based on the name, medium, source type, enabled/disabled status, subscription status, severity, resource created date, and last updated date. Following are the fields available in the filter panel:
 - Name - If you set the filter option to **Contains** operator from the drop-down list and start typing the name of the content rules, a list of content rules that contain that character is displayed, as you continue to type the list is filtered to match. If you set the filter option to **Equals** operator from the drop-down list and enter the full name, the particular content type will be displayed.
 - Medium - Select one or more mediums from the drop-down list. The available options are 'endpoint', 'log', 'log and packet' and 'packet'.
 - Source Type - Select one or more sources from the drop-down list. The available options are 'Custom' and 'Live'.
 - Enabled/Disabled Status - Select one or more statuses from the drop-down list. The available options are 'Enabled' and 'Disabled'. This field is not applicable for Event Stream Analysis Rule content type.
 - Subscription - Select one or more statuses from the drop-down list. The available options are 'Subscribed' and 'Unsubscribed'.
 - Severity - Select the severity from the drop-down list. The available options are 'Low', 'Medium', 'High' and 'Critical'. This field is applicable only for Application Rule and ESA content type.
 - Resource Created Date - Select the resource created date range.
 - Last Update Date - Select the last update date range.
- Subscribe - Lets you subscribe for the content if it is unsubscribed.

- Unsubscribe - Lets you unsubscribe for the content if it is subscribed.
- Enable - Lets you enable the content for the policy.
- Disable - Lets you disable the content from the policy.
-  - Move the content down the order.
-  - Move the content up the order.

Below is an example of the Create Content Policy dialog.

The table describes the information and options in the Create Policy dialog:

| Field | Description |
|-------------------------------|---|
| Policy Name | Name of the policy. The name should be unique. |
| Policy Description (Optional) | Description of the policy. Description should not exceed 8000 characters. |

Available Content

Displays the available content resources in your deployment. Click  to expand the resource type.

The following describes resource type:

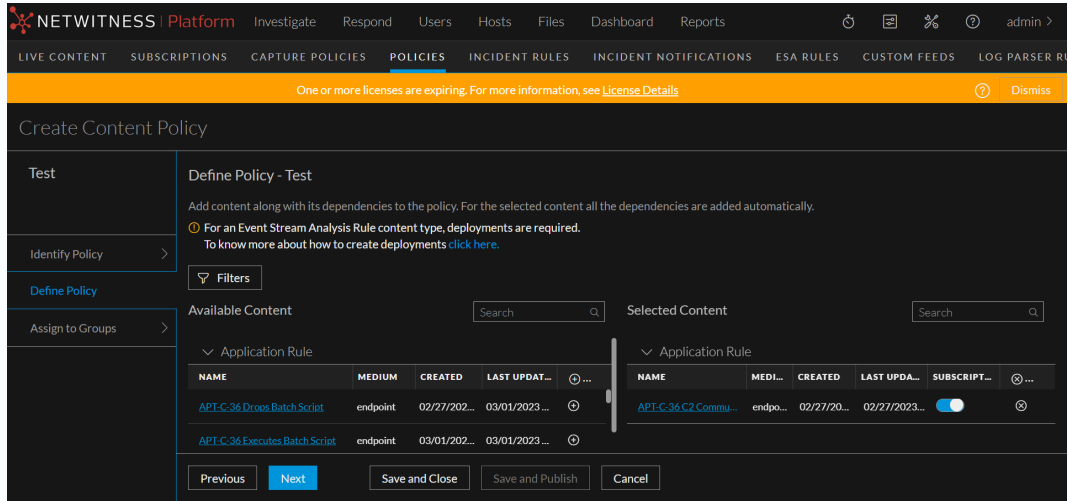

- Name - Name of the resource.
- Medium - Meta data source medium. Available values for medium are as follows:
 - **Endpoint:** applied to content that uses meta derived from endpoint agent and endpoint server data
 - **Log:** applied to content that uses meta derived from log data
 - **Packet:** applied to content that uses meta derived from network packets
 - **Log and packet:** applied to content that correlates meta derived across log and packet data
- Created - Displays the time when the resource is created
- Last Updated - Displays the time when the resource is updated last.
- Action- Click + to add the resource and its dependencies to your deployment.
-  - Click to add all content based on the resource type.
-  - Filter the available content based on the following parameters:
 - **Resource Types** - The resource or the content type.
 - **Medium** - Meta data source medium. Available values for medium are as follows:
 - **Endpoint:** Applied to content that uses meta derived from endpoint agent and endpoint server data
 - **Log:** Applied to content that uses meta derived from log data
 - **Packet:** Applied to content that uses meta derived from network packets
 - **Log and packet:** Applied to content that correlates meta derived across log and packet data

- **Resource Created Date** - The date on which the content was created.
- **Resource Modified Date** - The date on which the content was modified.
- **Reset** - Reset the fields.
- **Search** - Conveniently search the available content.

Selected Content

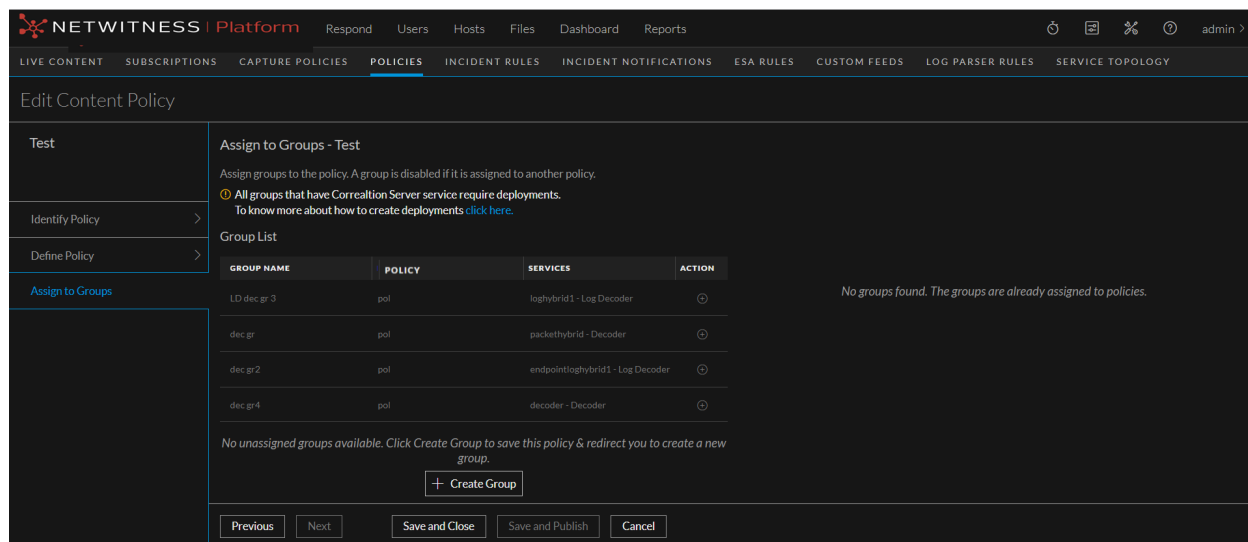

Lists the selected resource.

Additionally, you can subscribe the content. Once the content is subscribed, the content resources are updated automatically in case of any changes.

-  - Filter the selected content based on the following parameters:
 - **Resource Types** - The resource or the content type.
 - **Medium** - Meta data source medium. Available values for medium are as follows:
 - **Endpoint**: Applied to content that uses meta derived from endpoint agent and endpoint server data
 - **Log**: Applied to content that uses meta derived from log data
 - **Packet**: Applied to content that uses meta derived from network packets
 - **Log and packet**: Applied to content that correlates meta derived across log and packet data
 - **Resource Created Date** - The date on which the content was created.
 - **Resource Modified Date** - The date on which the content was modified.
 - **Reset** - Reset the fields.
- **Search** - Conveniently search the selected content.

Assign to Group:

Group List Displays the list of groups associated with the policy. A group is disabled if it is already assigned to another policy.

- Group Name
- Policies
- Services
- Action

 Click to create new group.

Selected Group Lists the selected groups. Click  to add groups.

Save and Close Saves the settings and closes the Create Policy dialog.

Save and Publish Saves and publishes the created policy.

Note: This option is disabled if:

- Policy settings are not customized.
- Policy is not assigned to groups.

Services Tab

The  (CONFIGURE) > Policies view contains two tabs: **Configuration** and **Content**.

The **CONTENT** tab has **Content Library**, **Policies**, **Groups** and **Services** on the left panel.

Below is an example of the Content > Services tab:

The screenshot shows the NetWitness Platform interface. The top navigation bar includes 'Investigate', 'Respond', 'Users', 'Hosts', 'Files', 'Dashboard', and 'Reports'. The main navigation bar includes 'LIVE CONTENT', 'SUBSCRIPTIONS', 'CAPTURE POLICIES', 'POLICIES', 'INCIDENT RULES', 'INCIDENT NOTIFICATIONS', 'ESA RULES', 'CUSTOM FEEDS', and 'LOG PARSER R'. The left sidebar shows 'CONFIGURATION' and 'CONTENT' tabs. Under 'CONTENT', there are sections for 'Content Library', 'Policies (3)', 'Groups (3)', 'Services (4)', 'Settings', and 'Event Stream Analysis'. The 'Services (4)' section is active, displaying a table of services. The table has columns: NAME, GROUP, POLICIES, HOST, VERSION, MANAGED..., STATUS, and ACTION. The services listed are: 'decoder - Decoder' (Migrated), 'endpointloghybrid - Log Decoder' (N/A), 'loghybrid - Log Decoder' (Migrated), and 'packethybrid - Decoder' (Failed). Below the table, there is a note: 'All Decoder Services are managed by Centralized Content Management. To manage Content for all Decoder Services using Centralized Content Management, click here.' At the bottom of the table, it says '1 - 4 of 4 services | 0 selected' and '15 Services per page'.

By default, 15 services are displayed per page. To go to the next page, click . To go to the last page, click .

1 Toolbar

- Migrate Content - Lets you migrate content from service. For more information, see [Migrate Content from Service](#).
- Manage Service Content - Lets you enable or disable CCM for individual service(s). For more information, see [Enable or Disable CCM for Individual Decoder Services](#).

2

 - Filter services based on various parameters.

The screenshot shows the NetWitness Platform interface. The top navigation bar includes 'Investigate', 'Respond', 'Users', 'Hosts', 'Files', 'Dashboard', and 'Reports'. The main menu includes 'LIVE CONTENT', 'SUBSCRIPTIONS', 'CAPTURE POLICIES', 'POLICIES', 'INCIDENT RULES', 'INCIDENT NOTIFICATIONS', 'ESA RULES', 'CUSTOM FEEDS', and 'LOG PARSER R'. The 'POLICIES' tab is selected under the 'CONTENT' section. A filter panel is open on the left, showing 'NAME' set to 'Contains' and 'MIGRATION STATUS' set to 'Migrated'. The table below shows two services:

| NAME | GROUP | POLICIES | HOST | VERSION | MANAGED BY | STATUS | ACTION |
|---|-------|----------|----------------|----------|---------------|---|------------------------------|
| <input type="checkbox"/> endpointhybrid-Log-Decoder | fsd | sdasdb | endpointhybrid | 12.3.0.0 | Core Services | N/A | |
| <input type="checkbox"/> packethybrid-Decoder | A | A | packethybrid | 12.3.0.0 | CCM | Migrated ● | View Content |

The filter panel includes a 'Reset' button and a 'Show only CCM managed Services' checkbox. The bottom of the interface shows '1 - 2 of 2 Services | 0 selected' and '15 Services per page'.

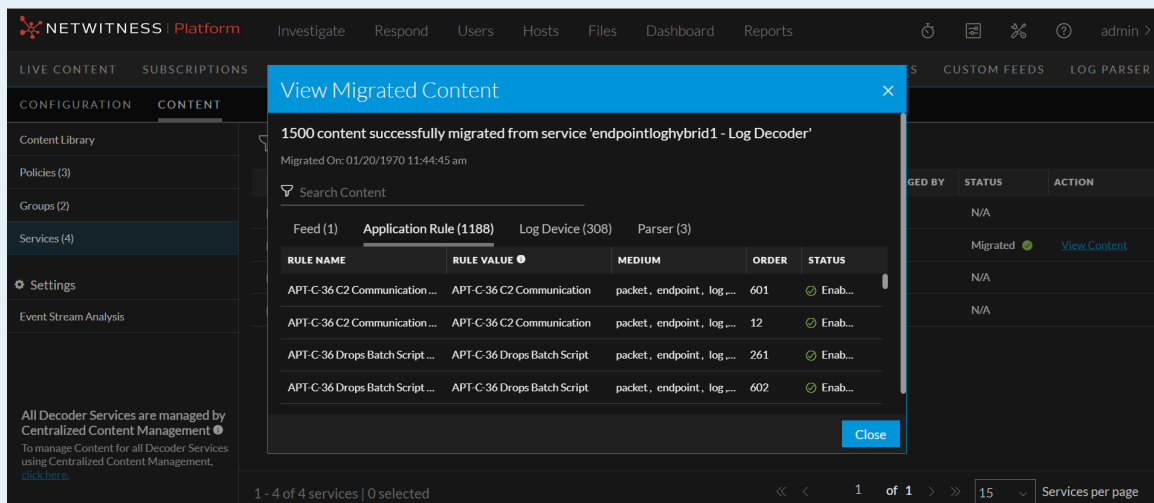

Filter Panel:

- Name - Select the **Name** drop-down value as either **Equals** or **Contains**. To search the service name using the **Contains** operator, set the filter option to **Contains** operator from the drop-down list and start typing the name of the service. Type one character and a list of service that contain that character is displayed, as you continue to type, the list is filtered to match. To search the service name using the **Equals** operator, set the filter option to **Equals** operator from the drop-down list and enter the full name. The particular service name will be displayed.
- Migration Status - The **Migration Status** drop-down value. The drop-down values are 'Migrated', 'Migrating', 'Failed' and 'NA'.
- Managed By - Select the **Show only CCM Managed Services** to display only the CCM managed services.
- Reset - Reset the fields.

3 Services List Pane:

- Name - Name of the service.
- Group - The group to which service belongs.
- Policies - The policy to which the service is assigned. Click the policy name to view the details of the policy.
- Host - The service host name .
- Version - The service version number.
- Managed By - Indicates if the service is managed by CCM or Core Services.
- Status - Displays the migration status of the service. The column displays the following values based on the status of migration:
 - Queued
 - Initializing
 - Analyzing Content
 - Migrating Content
 - Migrated
 - Failed
- Action - Displays the action on the migrated content. The following actions are available:
 - View Content - If the **Status** is 'Migrated'.
 - View Error Log - If the **Status** is 'Failed'.

- View Content - Click the hyperlink under the **Action** column to view the migrated content details in the **View Migrated Content** Pop-up window.

Available Tabs in the **View Migrated Content** Pop-up Window:

- Feed
- Application Rule
- Network Rule
- Log Device
- LUA Parser

Note:

- **Network Rules** tab is not applicable or Log Decoders.
- **Log Device** tab is not applicable for Decoders.

IMPORTANT: During the process of migration, if a Decoder that is being migrated contains multiple application rules and/or network rules with the exact same rule name and rule condition, only one of those rules will be retained in the service. The remaining rules will be considered duplicates and removed. Therefore, post migration, none of the migrated services will have multiple rules with the same rule name and the same rule value.

- Search the migrated content based on various parameters.

Note:

- For Application Rule and Network Rule, the search is based on **Rule Name** and **Rule Value**.
- For Feeds, Log Device and LUA Parser, the search is based on the **Name**.

Content Details for Feeds, Log Device and LUA Parser:

- Name - The content name.
- Medium - Meta data source medium.
- Status - The status of resource. For example, Enabled or Disabled.

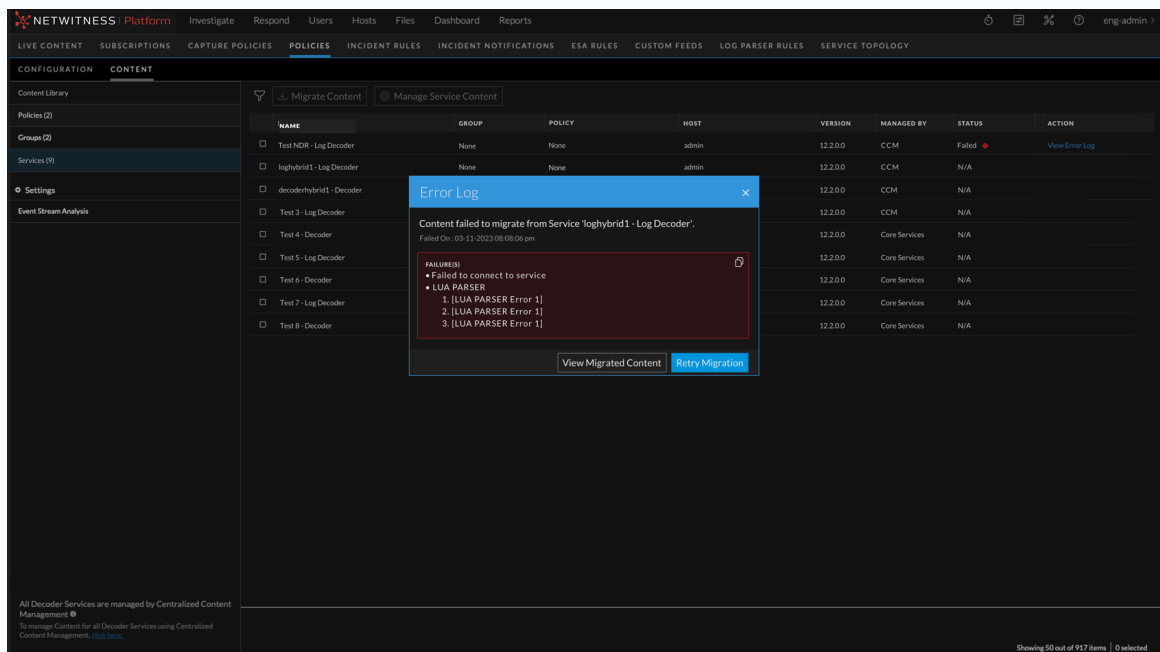

Content Details for Application Rule and Network Rule:

- Rule Name - Name of the rule. The rule name will be unique.
- Rule Value - The rule value. It is the value written to the alert meta. The rule value can be duplicate. You can clone existing rules with different rule names, but with same rule value.
- Medium - Meta data source medium.
- Order - The order of rule.
- Status - The status of resource. The status of resource. For example, Enabled or Disabled.

Available button in the **View Migrated Content** Pop-up Window:

- Close - Close the pop-up window and return to **Service List** page.

- View Error Log - Click the hyperlink under the **Action** column to view the log details in case the migration is failed.

Available buttons and Icons in the **Error Log** Pop-up Window:

-  - Copy the error logs.
- View Migrated Content - Click to View the content that have been migrated successfully. This button is present only in case of partial migration.

Available buttons and Icons in the **View Migrated Content** Pop-up Window:

- Close - Closes the pop-up window.
- Create Policy and Group - Creates policy and group for the partially migrated service.
- Retry migration - Retry migration.

6 Service Details Panel:

The screenshot shows the 'Service Details Panel' for 'endpointloghybrid1 - Log Decoder'. The top navigation bar includes 'NETWITNESS Platform' and various menu items like 'Investigate', 'Respond', 'Users', 'Hosts', 'Files', 'Dashboard', and 'Reports'. Below the navigation, there are tabs for 'LIVE CONTENT', 'SUBSCRIPTIONS', 'CAPTURE POLICIES', 'POLICIES', 'INCIDENT RULES', 'INCIDENT NOTIFICATIONS', 'ESA RULES', 'CUSTOM FEEDS', and 'LOG PARSER R'. The main content area displays the service name and a metadata table:

| SERVICE TYPE | GROUPS | POLICY STATUS | MIGRATION STATUS | LAST UPDATED | CREATED ON | CREATED BY |
|--------------|--------|---------------|------------------|------------------------|------------------------|------------|
| LogDecoder | G1 | Unpublished | - | 01/01/1970 12:00:00 am | 01/01/1970 12:00:00 am | - |

Below the metadata table, there are tabs for 'FEED (3)', 'APPLICATION RULE (15)', 'PARSER (4)', 'NETWORK RULE (0)', 'SEARCH PATTERN RULE (0)', and 'BUNDLE (0)'. The 'APPLICATION RULE (15)' tab is selected, showing a list of rules:

| RULE NAME | RULE VALUE | MEDIUM | SUBSCRIPTION | STATUS | LAST UPDATED |
|--|--|----------|--------------|----------|------------------------|
| Pwnkit Detection | Pwnkit Detection | endpoint | Unsubscribed | Enabled | 10/27/2022 10:41:06 am |
| Dumps DNS Cache | dumps dns cache | endpoint | Unsubscribed | Disabled | 10/20/2022 10:34:03 am |
| Office Application Injects Remote Process | office application injects remote process | endpoint | Unsubscribed | Enabled | 10/20/2022 10:51:59 am |
| Possible Qakbot Scheduled Task | Possible Qakbot Scheduled Task | endpoint | Unsubscribed | Enabled | 10/19/2022 02:11:56 pm |
| Enumerates Network Connections Using nbtstat | Enumerates Network Connections Using nbtstat | endpoint | Unsubscribed | Enabled | 10/20/2022 10:37:21 am |

At the bottom of the panel, it says 'Showing 689 out of 689 items | 0 selected'.

Displays the properties of the selected service.

Toolbar:

- Service Type - The type of service. For example, LogDecoder.
- Groups - The groups associated with the service.
- Policy Status - Indicates if the policy associated with the service is published or unpublished.
- Migration Status - The migration status of the service content.
- Last Updated - The date and time stamp on which the service was last updated.
- Created On - The date and time stamp on which the service was created.
- Created By - The user ID of the user who has created the service.

Available Content Tabs:

- Feed
- Application Rule
- Log Device. This tab is not applicable for service type 'Packet Decoder'.
- LUA Parser
- Network Rule. This tab is not applicable for service type 'LogDecoder'.
- Bundle

Service Details Pane for Feeds, Log Device, LUA Parser and Bundle:

- Name - The content name.
- Medium - Meta data source medium.
- Last Updated - Displays the time when the content is last updated.

- Subscription - Indicates if the content is subscribed or unsubscribed.
- Status - The status of resource.

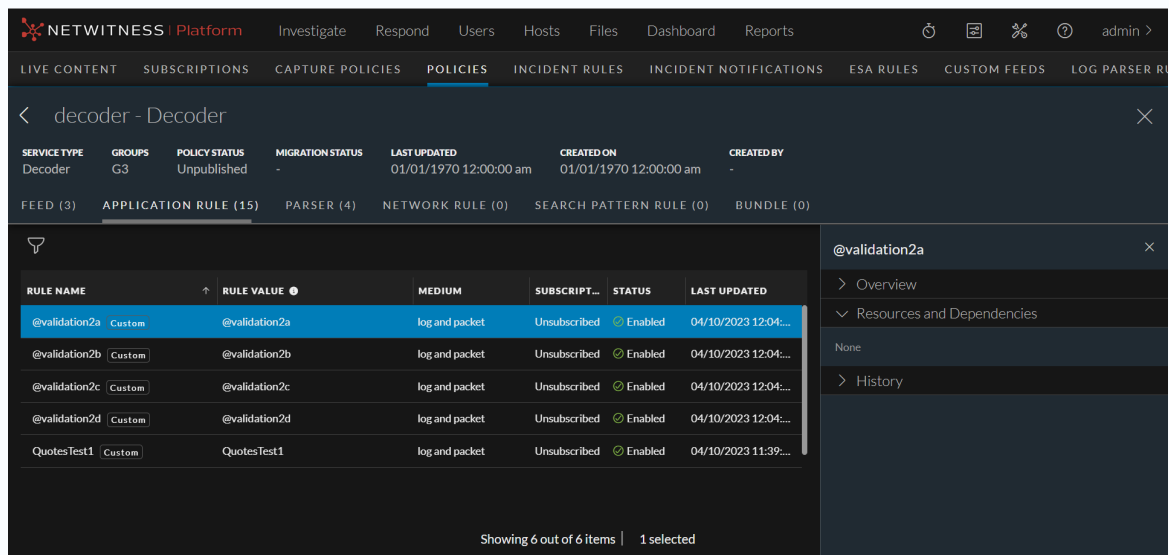

Service Details Pane for Application Rule and Network Rule:

- Rule Name - Name of the rule. The rule name will be unique.
- Rule Value - The rule value. It is the value written to the alert meta. The rule value can be duplicate. You can clone existing rules with different rule names, but with same rule value.
- Medium - Meta data source medium.
- Last Updated - Displays the time when the content is last updated.
- Subscription - Indicates if the content is subscribed or unsubscribed.
- Status - The status of resource.

 - Filter the content based on various parameters.

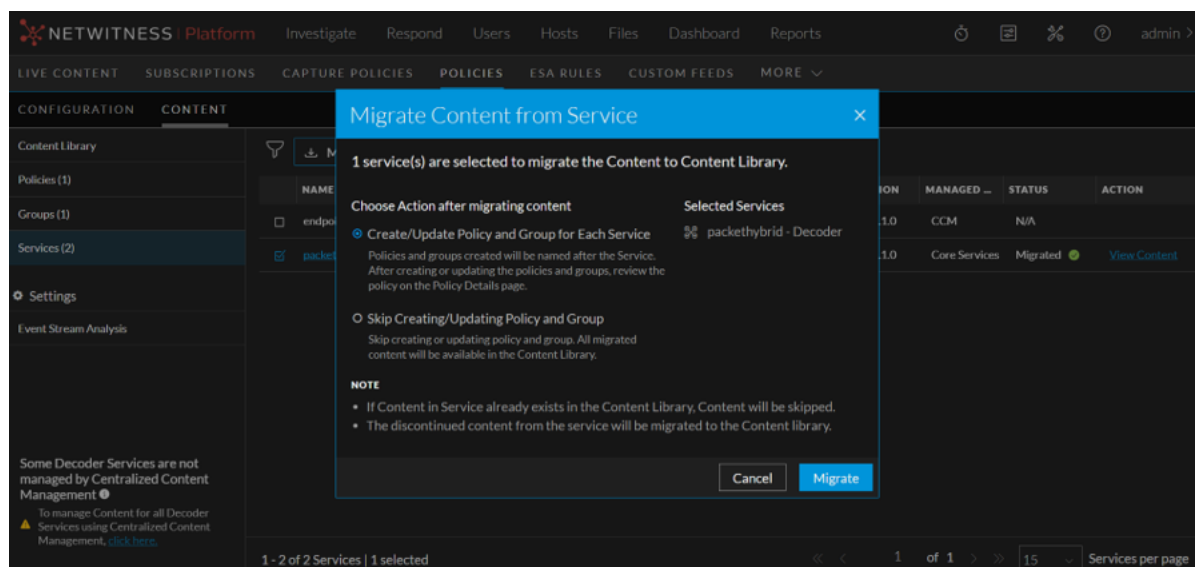

7 Service Details Right Panel:

Displays the complete content details such as **Overview, Resources and Dependencies and History.**

Migrate Content from Service dialog:

Below is an example of the Migrate Content from Service dialog:

Note:

- If you select **Create/Update Policy and Group for Each Service**, policy and group will be the created or updated for each service selected for migration. Once the migration process is complete, the policy and group will be listed under the respective pages.
- The policy and group which is created or updated for the service will be in 'Unpublished' state and it can be published only after it is reviewed. In the **Policy Listing** page, the **Publish** button for such a policy will be disabled. The policy can be published only after reviewing it either from **Policy Details** page or **Edit Policy** Page. When the policy or group gets updated with the new content, the order of the new content will be given priority.
- If you select **Skip Creating/Updating Policy and Group**, only the content will be migrated. All the migrated content will be available in Content Library.

For more details on publishing a policy, refer [Create and Publish Policies](#) feature.

For more details on editing a policy, refer [Edit a Policy](#) feature.

For more details on policy details, refer [View a Policy](#) feature.

For more details on editing a group, refer [Edit a Group](#) feature.

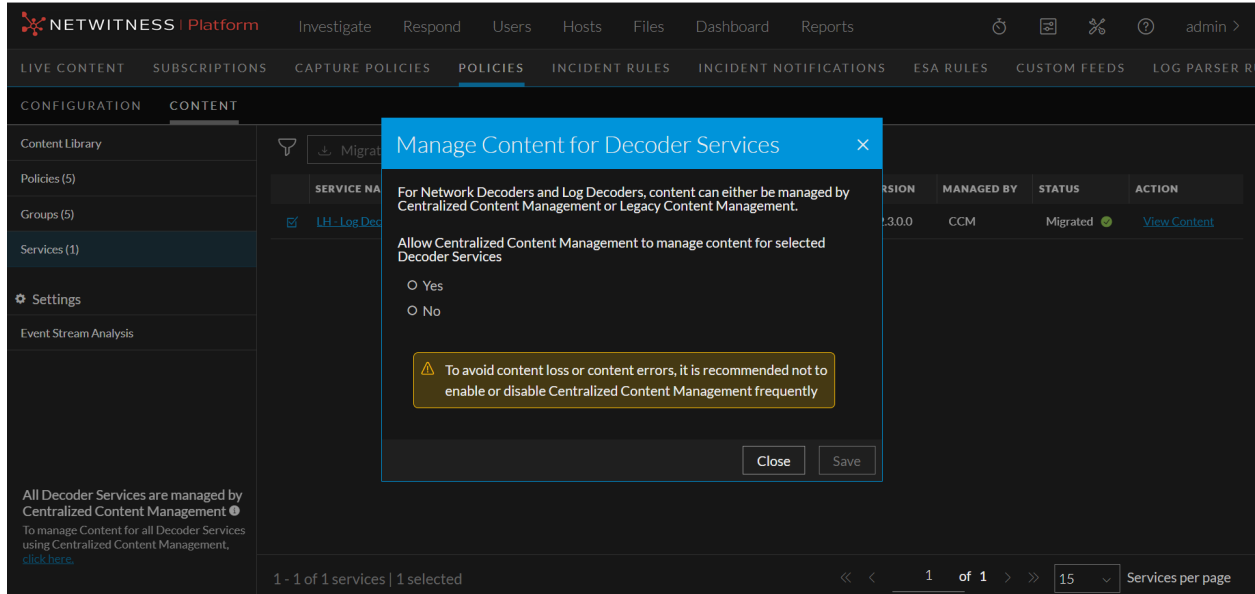

For more details on group details, refer [View a Group](#) feature.

The table describes the information and options in the Migrate Content from Service dialog:

| Field | Description |
|---------|---|
| Migrate | Initiate the migration of content for the selected service. |
| Cancel | Cancels the operation. |

Manage Content for Decoder Services dialog:

Below is an example of the Manage Content for Decoder Services dialog:

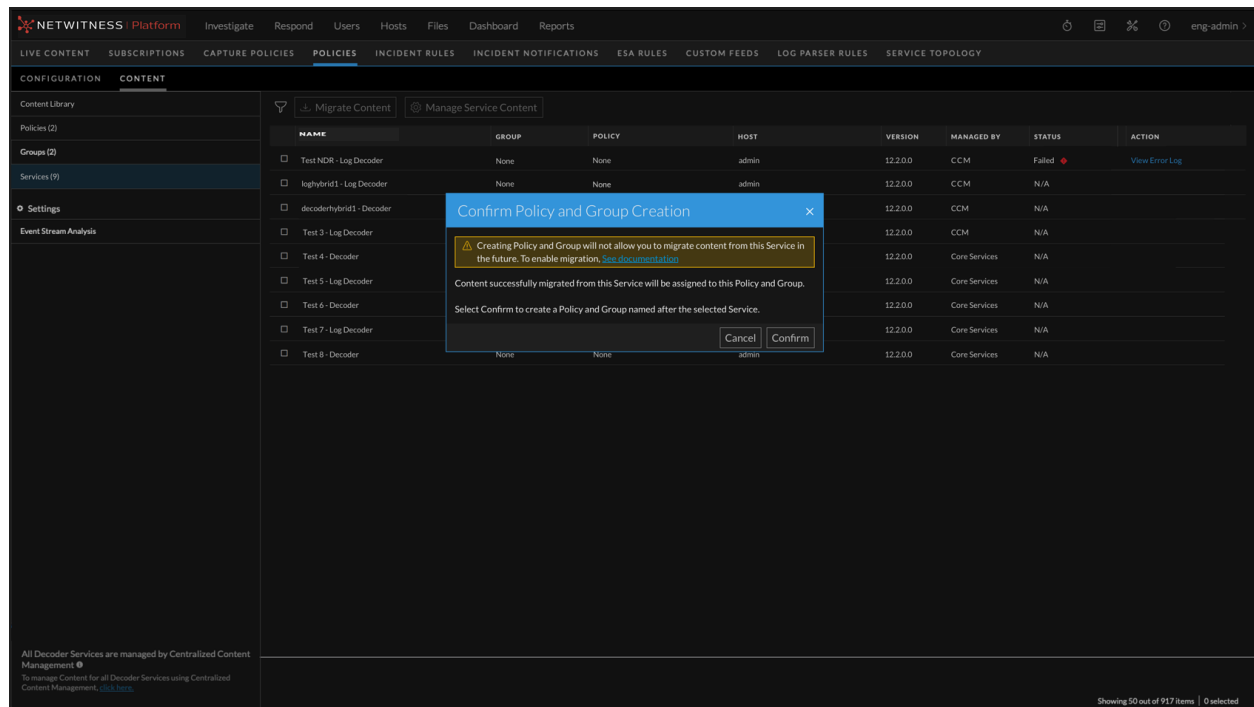

The table describes the information and options in the Manage Content for Decoder Services dialog:

| Field | Description |
|--|--|
| Allow Centralized Content Management to Manage Content for Selected Decoder Services | Select Yes to enable CCM for selected service(s). Select No to disable CCM for selected service(s). |
| Save | Save the changes. |
| Close | Close the Manage Content for Decoder Services pop-up window. |

Confirm Policy and Group Creation dialog:

Below is an example of the Confirm Policy and Group Creation dialog:

The table describes the information and options in the Confirm Policy and Group Creation dialog dialog:

| Field | Description |
|---------|--|
| Cancel | Close the pop-up window and cancel the policy and group creation for the partially migrated service. |
| Confirm | Creates the policy and group for the partially migrated service. The policy and group will be listed under the Policy Listing and Group Listing pages. |

Appendix A: Endpoint Risk Scoring Rules

Endpoint risk scoring requires the following content:

- "accesses administrative share using command shell"
- "activates bits job"
- "adds files to bits download job"
- "adds firewall rule"
- "allocates remote memory"
- "antivirus disabled"
- "archiving software reads multiple documents"
- "autorun debian package mismatch"
- "autorun file path not part of debian package"
- "autorun file path not part of rpm"
- "autorun key contains non-printable characters"
- "autorun"
- "autorun rpm mismatch"
- "autorun unsigned active setup"
- "autorun unsigned appinit_dlls"
- "autorun unsigned bho"
- "autorun unsigned bootexecute registry startup method"
- "autorun unsigned explorer registry startup method"
- "autorun unsigned hidden"
- "autorun unsigned hidden only executable in directory"
- "autorun unsigned ie toolbar"
- "autorun unsigned in appdata local directory"
- "autorun unsigned in appdata roaming directory"
- "autorun unsigned in programdata directory"
- "autorun unsigned in temp directory"
- "autorun unsigned logon type registry startup method"

- "autorun unsigned lsa provider"
- "autorun unsigned servicedll"
- "autorun unsigned winlogon helper dll"
- "autorun unsigned winsock lsp"
- "bad certificate warning disabled"
- "blacklisted file"
- "browser runs command prompt"
- "browser runs mshta"
- "browser runs powershell"
- "builds script incrementally"
- "clears application event log"
- "clears event logs using powershell"
- "clears security event log"
- "clears setup event log"
- "clears system event log"
- "combines binaries using command prompt"
- "command line usage of archiving software"
- "command line writes script files"
- "command prompt obfuscation"
- "command prompt obfuscation using value extraction"
- "command shell runs rundll32"
- "completes bits download job"
- "configures image hijacking"
- "configures port redirection"
- "copies binary over administrative share"
- "created in last month"
- "creates browser extension"
- "creates domain user account"
- "creates executable in startup directory"
- "creates local driver service"

- "creates local service"
- "creates local task"
- "creates local user account"
- "creates password-protected archive"
- "creates recursive archive"
- "creates remote process using wmi command-line tool"
- "creates remote service"
- "creates remote task"
- "creates run key"
- "creates shadow volume for logical drive"
- "creates suspicious service running command prompt"
- "debian package hash mismatch in important system directory"
- "debian package hash mismatch"
- "deletes backup catalog"
- "deletes firewall rule"
- "deletes shadow volume copies"
- "deletes shadow volume copies using powershell"
- "deletes usn change journal"
- "disables event logging service"
- "disables firewall"
- "disables safe mode"
- "disables security service"
- "disables startup repair"
- "disables uac"
- "disables uac remote restrictions"
- "disables windows audit policy"
- "disables windows defender using powershell"
- "downloads binary using certutil"
- "drops credential dumping tools"
- "dumps dns cache"

- "dyld inserted"
- "enables cleartext credential storage"
- "enables login bypass"
- "enables rdp from command-line"
- "enables safe mode"
- "enumerates arp table"
- "enumerates available systems on network"
- "enumerates domain account policy"
- "enumerates domain administrators"
- "enumerates domain computers"
- "enumerates domain controllers"
- "enumerates domain groups"
- "enumerates domain users"
- "enumerates enterprise administrators"
- "enumerates exchange domain servers"
- "enumerates exchange servers"
- "enumerates ip configuration"
- "enumerates local account policy"
- "enumerates local administrators"
- "enumerates local administrators on domain controller"

Position Tracking Information

The ESA Correlation service continuously streams data from the data sources like decoders (log and network), and concentrators. ESA retrieves events from the data sources, and applies rules to generate alerts to detect malicious activities. When you deploy a data source, ESA starts processing information from the latest available session, by default. Position Tracking Information enables you to visualize the progress of the sessions that ESA has processed, and provides information on the session IDs and the date and time when the events were processed.

Set Position Tracking Information enables you to:

- Visualize the number of sessions that a particular ESA data source has already analyzed, review the number of sessions ESA would process after you edit the position tracking, and plan your work.
- Set the tracking position information based on:
 - Session ID
 - Date and Time (Collection Time)
- Set position tracking for multiple data sources before you deploy them.
- Calculate the number of sessions that the ESA Correlation Service is scheduled to process for a particular data source to either process, reprocess, or skip sessions with respect to the current position of the data source.

Note: The Position tracking feature with the Date and Time option works based on the profile time settings in the NetWitness Platform UI. This time-zone based time from the UI is converted to UTC, and is sent to the core, to retrieve the corresponding session ID for that time stamp. Example: If the UI follows IST, the UI converts it to UTC and sends it to the core. The session ID is fetched for the specific UTC time stamp, and set to position tracking at deployment.

Use Case Scenario

This section provides information about how you can use position tracking information in a real-world scenario.

Case 1: If you have deployed a data source with a total of 400 sessions that ESA has already processed, and if you want to start processing the events from the beginning, perform the following steps to reprocess the sessions.

Edit the position Tracking Information

1. Select the deployment and click **Edit Deployment**.
2. Select the datasource and click **Set Position Tracking Information**.

The Set Position Tracking Information dialog is displayed.

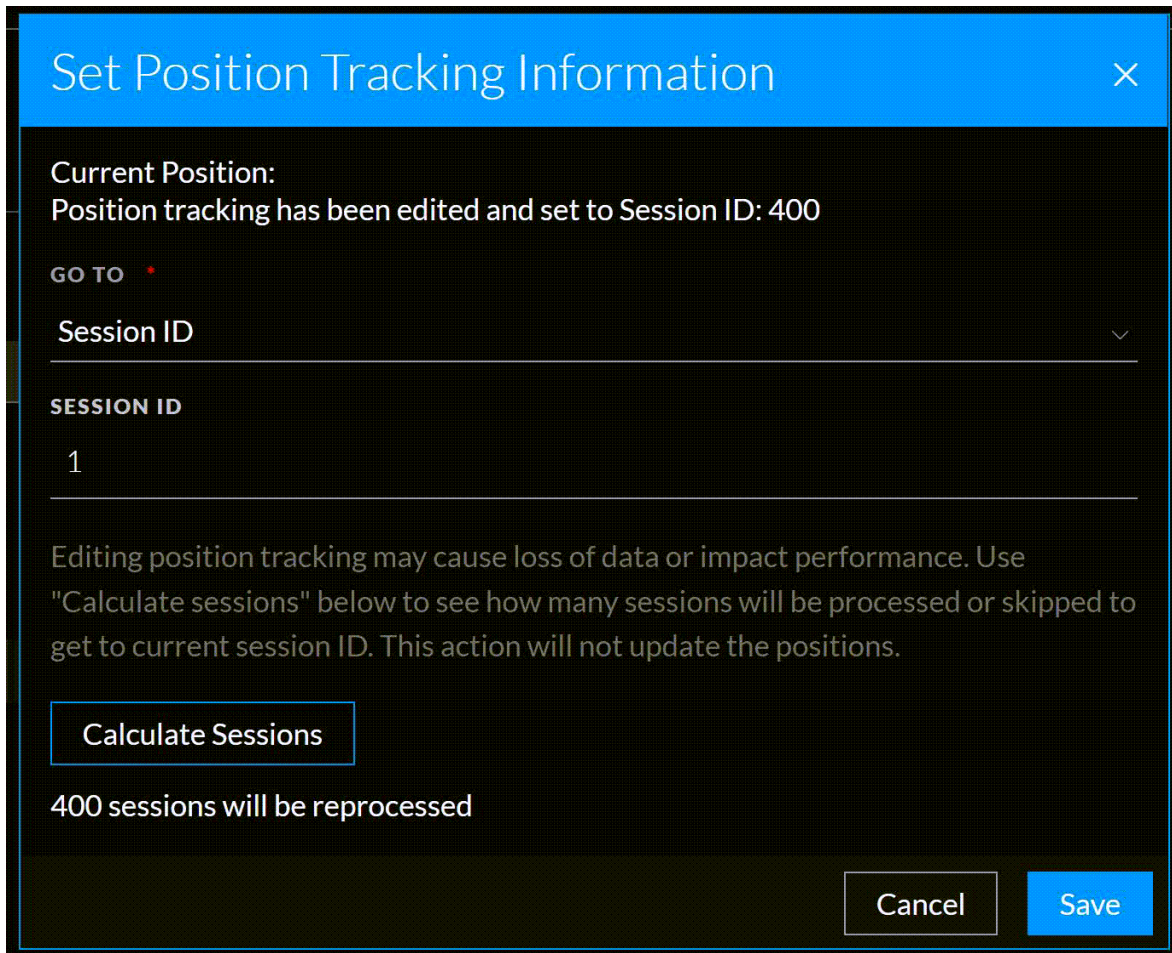

3. In the **Go To** drop-down menu, select the **Session ID** and enter the session number as 1 in the **Session ID** text field.

You can also set the position tracking information based on date and time and the sessions will be calculated using data and time.

4. Click **Calculate Sessions**.
5. Click **Save** twice.
6. Select the Deployment and click **Deploy**.

All the 400 sessions will be reprocessed.

The following image shows the use case scenario.

Case 2: If you have deployed a data source with a total of 700 sessions available and the current position of the data source is at 100 and if you set the sessions ID to 250. In this case, 150 sessions will be skipped. You can also set the sessions based on the date and time.

The following image shows the use case scenario.

Set Position Tracking Information [X]

Current Position:
Position tracking has been edited and set to Session ID: 100

GO TO •

Session ID [v]

SESSION ID

250

Editing position tracking may cause loss of data or impact performance. Use "Calculate sessions" below to see how many sessions will be processed or skipped to get to current session ID. This action will not update the positions.

Calculate Sessions

150 sessions will be skipped

Cancel Save

Case 3: If you have deployed a data source that has a total of 1921237 sessions available and if you set the session ID higher than the available sessions for the data source. In this case, no remaining sessions will be processed. You can also set the sessions based on date and time.

The following image shows the use case scenario.

Set Position Tracking Information ✕

Current Position:
Position tracking has been edited and set to Session ID: 100

GO TO •

Session ID ▾

SESSION ID

1921245

Editing position tracking may cause loss of data or impact performance. Use "Calculate sessions" below to see how many sessions will be processed or skipped to get to current session ID. This action will not update the positions.

No sessions remaining to be processed

Note: Editing the tracking information is optional. If you add a new data source to an existing ESA deployment, and you do not edit the tracking information, ESA follows the default behavior to process events.
