

NetWitness[®] Platform

Version 12.5.1

Live Services Management Guide

Contact Information

NetWitness Community at <https://community.netwitness.com> contains a knowledge base that answers common questions and provides solutions to known problems, product documentation, community discussions, and case management.

Trademarks

RSA and other trademarks are trademarks of RSA Security LLC or its affiliates ("RSA"). For a list of RSA trademarks, go to <https://www.rsa.com/en-us/company/rsa-trademarks>. Other trademarks are trademarks of their respective owners.

License Agreement

This software and the associated documentation are proprietary and confidential to RSA Security LLC or its affiliates are furnished under license, and may be used and copied only in accordance with the terms of such license and with the inclusion of the copyright notice below. This software and the documentation, and any copies thereof, may not be provided or otherwise made available to any other person.

No title to or ownership of the software or documentation or any intellectual property rights thereto is hereby transferred. Any unauthorized use or reproduction of this software and the documentation may be subject to civil and/or criminal liability. This software is subject to change without notice and should not be construed as a commitment by RSA.

It is advised not to deploy third-party repos or perform any change to the underlying NetWitness Operating System that is not part of the supported NetWitness version. Any such change outside of the NetWitness approved image may result in a service or functionality conflict and require a reimage of the NetWitness system to bring NetWitness back to an optimized functional state. In the event a third-party repo is deployed, or other non-supported change is made by the customer without NetWitness approval, the customer takes full responsibility for any system malfunction until the issue can be remediated through troubleshooting efforts or a reimage of the service.

Third-Party Licenses

This product may include software developed by parties other than RSA. The text of the license agreements applicable to third-party software in this product may be viewed on the product documentation page on NetWitness Community. By using this product, a user of this product agrees to be fully bound by terms of the license agreements.

Note on Encryption Technologies

This product may contain encryption technology. Many countries prohibit or restrict the use, import, or export of encryption technologies, and current use, import, and export regulations should be followed when using, importing or exporting this product.

Distribution

Use, copying, and distribution of any RSA Security LLC or its affiliates ("RSA") software described in this publication requires an applicable software license.

RSA believes the information in this publication is accurate as of its publication date. The information is subject to change without notice.

Live Services Management

NetWitness Live is the gateway to a rich environment that offers access to feeds, tools, and other resources.

NetWitness Live

Live is the component of NetWitness that manages communication and synchronization between NetWitness services and a library of Live content available to NetWitness customers. Live provides a simple interface for browsing, selecting, and deploying content from the NetWitness Live Content Management System to NetWitness services and software. In addition to managing feeds from the CMS Library, Live allows users to deploy custom feeds and packages.

Note: Any customer with valid maintenance can access NetWitness Live.

Note: If you are logged into an Analyst UI, you can only view but cannot enable, disable, edit, or configure NetWitness Live.

The content management system (CMS) library (known as *Live*) is a valuable source of the latest internet security resources for NetWitness customers. It provides a view into the collective intelligence and analytical skills of the worldwide security community to ensure that users have the most current visibility into attack vectors.

Live gathers the best advanced threat intelligence and content in the global security community - the ideas, research, ongoing tracking, and analysis - and brings it directly into the user's security operations center to definitively classify computers associated with botnets, malware, and other malicious exploits. Live aggregates, consolidates, and illuminates only the most pertinent information relevant to an organization on a real-time basis.

NetWitness Feedback and Data Sharing

Live Feedback is intended to help improve NetWitness. Once you set up and configure a Live account, usage data is shared with RSA.

For more details, see [NetWitness Feedback and Data Sharing](#).

For Debian Linux and NetWitness Endpoint Users

If you are upgrading to NetWitness 12.5 and you are using NetWitness Endpoint and also have any Debian Linux endpoint systems, NetWitness recommends that you go to Live and download the following application rules:

- autorun debian package mismatch
- autorun file path not part of debian package
- debian package hash mismatch in important system directory
- debian package hash mismatch

- file path not part of debian package in important system directory
- file path not part of debian package

Deploy Content

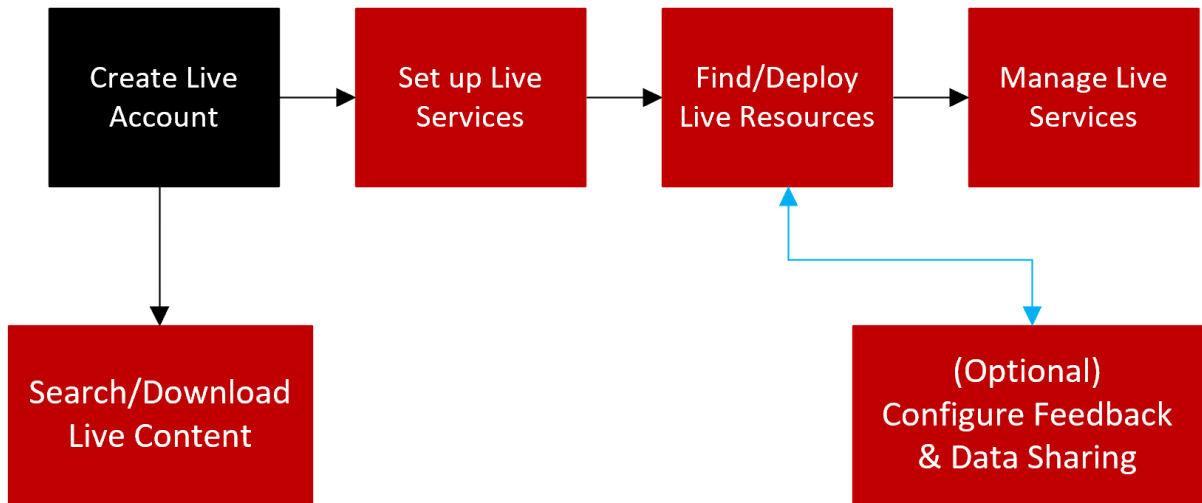

This section explains the different ways available to deploy content:

- [Deploy Content using Live Content UI](#)
- [Centrally Deploy Content using Policy UI](#)

Create Live Account

Note: The NetWitness Live Registration Portal now has a new user interface and supports email verification.

You must create a Live account using the NetWitness Live Registration Portal (<https://live.netwitness.com/registration/>) on the Live server. Live Account is required to access all Live services including CMS. The CMS Library provides access to all NetWitness content in one place where you can view, search, deploy, and subscribe to NetWitness content.

Make sure the following are available to set up a NetWitness Live account:

- Active internet connection to access the portal.
- A valid and registered NetWitness License Server on the Flexera Server, before you can register for a Live account. You can view the License ID on the  (Admin) > System > Info panel.

Note: If the License Server is not set up, contact [NetWitness Customer Support](#).

To create a Live Account:

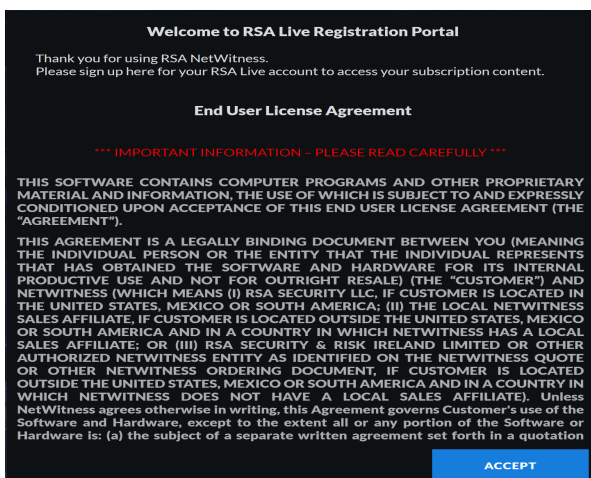

1. Access the NetWitness Live Registration Portal using the URL: <https://live.netwitness.com/>
The NetWitness Live log in page is displayed.

2. Click **Sign Up For Live**.

The End User License Agreement page is displayed.

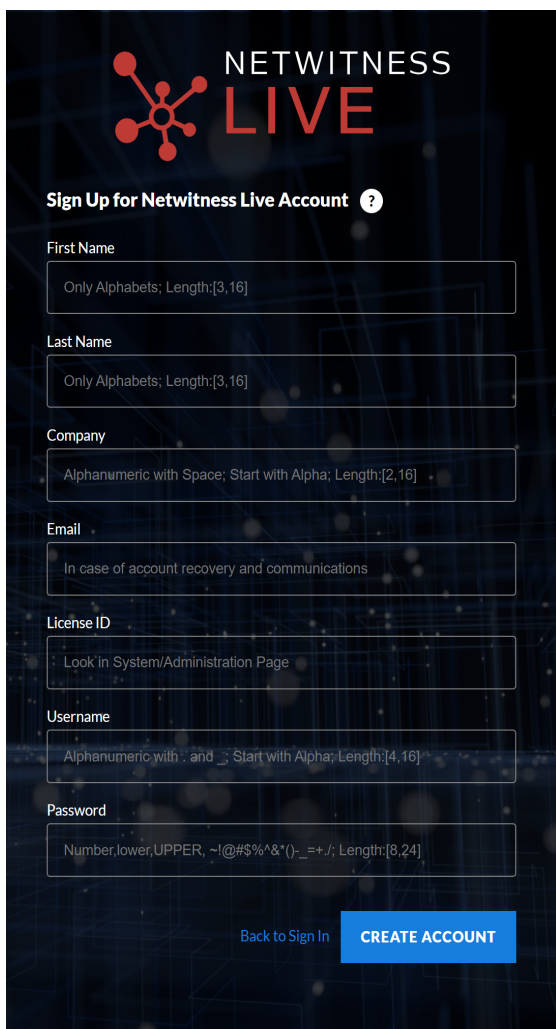

Read the Terms and Conditions carefully and click **Accept**.

3. In the **Sign Up for NetWitness Live Account** page, enter all the fields:

- The **First Name** and **Last Name** of the user.
- The **Company** for which the Live Account is being created.
- The **Email address** you enter will be used to receive the verification code for your new Live account and other notifications related to the Live account.
- The **License ID** can be viewed on  (**Admin**) > **System** > **Info** panel.

- The **Username** and **Password** for the Live Account.

The screenshot shows the 'Sign Up for NetWitness Live Account' form. At the top left is the NetWitness Live logo, which consists of a red network icon and the text 'NETWITNESS LIVE'. Below the logo is the title 'Sign Up for NetWitness Live Account' with a help icon. The form contains several input fields with their respective validation rules: 'First Name' (Only Alphabets; Length:[3,16]), 'Last Name' (Only Alphabets; Length:[3,16]), 'Company' (Alphanumeric with Space; Start with Alpha; Length:[2,16]), 'Email' (In case of account recovery and communications), 'License ID' (Look in System/Administration Page), 'Username' (Alphanumeric with -, and _; Start with Alpha; Length:[4,16]), and 'Password' (Number,lower,UPPER, ~|@#\$\$%^&*()-_ =+.; Length:[8,24]). At the bottom right, there is a blue button labeled 'CREATE ACCOUNT' and a link labeled 'Back to Sign In'.

4. Click **Create Account**.
You will be directed to **Confirm Sign up** page.
5. Enter the **Confirmation Code** sent to your registered email address.
Click **Confirm**.
You can see the confirmation message for your NetWitness Live Account registration.

Note: You cannot create more than one Live account for the same License ID. For additional license, contact [NetWitness Customer Support](#).

6. Once the account is created, enter your credentials and click **Sign In** to access the NetWitness Live.
7. After you sign in, you can perform the following:
 - [Search and Download Content from NetWitness Live](#)
 - [Share Telemetry Data to NetWitness](#)

Reset the Password for Your NetWitness Live Account

If you want to reset the password for your NetWitness Live Account, do the following:

1. Access the NetWitness Live Registration Portal using the URL:

<https://live.netwitness.com/>

The NetWitness Live log in page is displayed.

2. On the Sign Up page, click **Forgot Password?**.
3. Enter your **Username** and click **Send Code**.
A verification code will be sent to your registered email address.
4. Enter the **Verification Code** and **New Password** on the Reset Password page and click **Submit**.

Set Up Live Services on NetWitness Platform

To set up Live on NetWitness Platform, you configure the connection and synchronization between the CMS server and NetWitness. The user interface for this setup is the  (Admin) > System > Live Services Configuration panel.

To configure the connection to the CMS Server:

1. Navigate to  (Admin) > System > Live Services.
2. Click Sign In and enter your credentials in the Live Services Account dialog box.

The screenshot shows the 'Live Services Account' configuration dialog box. It contains the following fields and options:

- Host:** cms.netwitness.com
- Port:** 443
- SSL:**
- Username:** admin
- Password:** *****
- Buttons:** Test Connection, Cancel, Apply

3. Click **Test Connection** to make sure your connection is working.

4. If the test is successful, click **Apply**. If not, contact [NetWitness Customer Support](#) for help connecting to the Live server.
5. Configure the timing for synchronization of NetWitness Platform with updates from NetWitness Live.

For more details, see the "Configure Live Services Settings" topic in the *System Configuration Guide*.

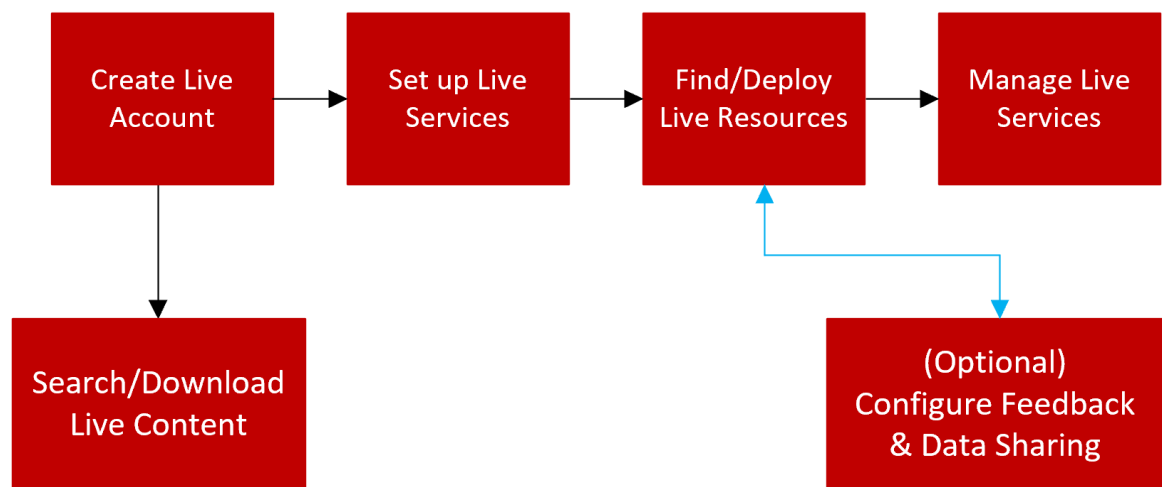

Deploy Content using Live Content UI

This topic explains the process of deploying the content using Live Content UI.

- [Live Services Required Procedures](#)
- [Additional Procedures](#)
- [References](#)
- [Troubleshooting Live Services](#)

Live Services Required Procedures

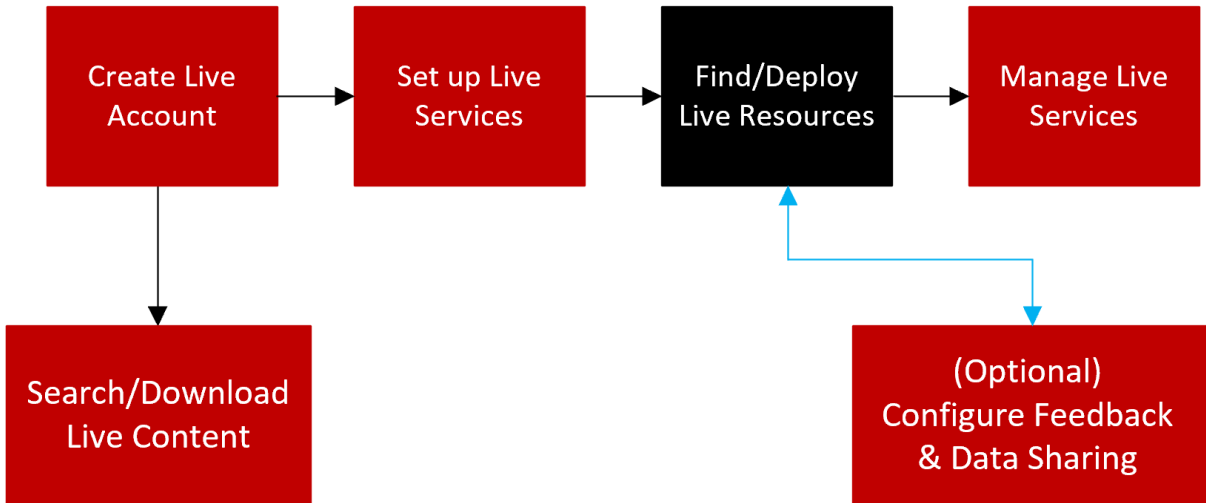

The following workflow describes the basic setup into four steps, which you perform individually.

Configuration Step	Description
Create Live Account	Create a Live Account on the NetWitness Live Registration portal URL: https://live.netwitness.com/registration/ .
Set Up Live Services on NetWitness Platform	Set Up Live Services on NetWitness Platform by configuring a connection with the CMS server.
Find and Deploy Live Resources	Search and browse for resources in the Live Search view, and then, deploy the selected resources.
Manage Live Resources	Procedures for administrators to search for, subscribe to, and deploy resources from Live.
Search and Download Content from NetWitness Live	Search and browse for content in the NetWitness Live, and then, download the selected content.
NetWitness Feedback and Data Sharing	Describes the feedback and data sharing features provided in NetWitness, from Live Services. Participation is optional, but can help to provide useful threat intelligence for the community.

Find and Deploy Live Resources

Administrators can search for resources in the Live Search view, which is also the same as browsing the Live CMS for resources using the Search Criteria panel of the [Live Search View](#).

Find Resources in Live

IMPORTANT: ESA Rules cannot be deployed manually via Live Services. By default, all the ESA rules are available in the ESA Rule library if Live Service is configured.

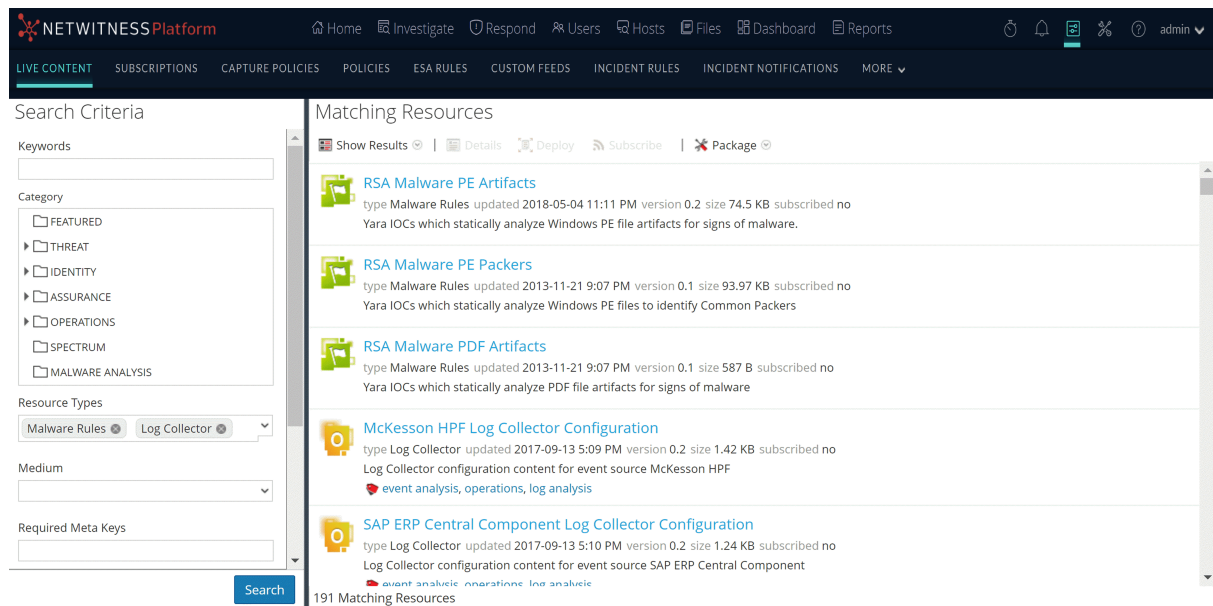

To find resources:

1. Navigate to  (Configure) > Live Content.
2. In the **Search Criteria** panel, specify search criteria. Enter any or all of these: keyword, category, type of resource, medium, meta keys, meta values, date resource was created, and date resource was

modified.

3. Click **Search**.

The Matching Resources panel displays detailed results.

4. (Optional) To further narrow the results In the Matching Resources panel, click on a tag, meta key, medium or resource meta value in a result.

Deploy Resources in Live

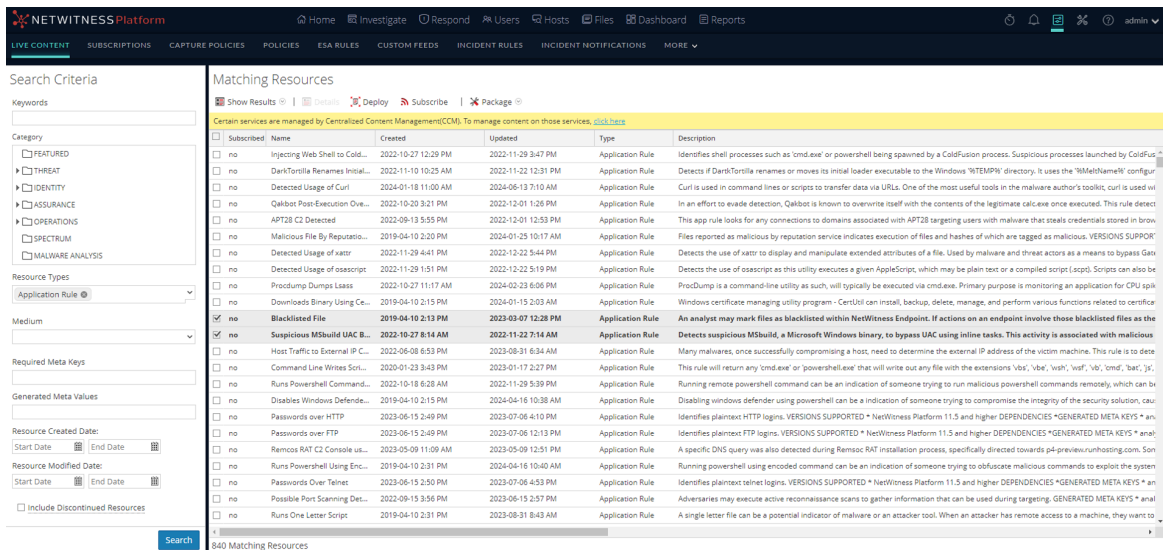

In NetWitness, you can deploy selected resources manually, using the Deployment Wizard, or you can subscribe to a group of resources.

- When you have results from browsing resources in NetWitness Live, you can deploy resources manually to a service or a service group without subscribing to the resources. To deploy resources, select one or more from the list.
- Deploying resources manually deploys to services without taking advantage of the powerful resource management capabilities of NetWitness. If you want to receive notification and updates for updated resources and be able to easily remove resources from a service, you must subscribe to resources in the Live Search view and deploy them in the [Live Configure View](#).
- If you have previously created and saved a resource package, you can deploy the package to services. Please refer to [Resource Package Deployment Wizard](#) for instructions on how to create a package.

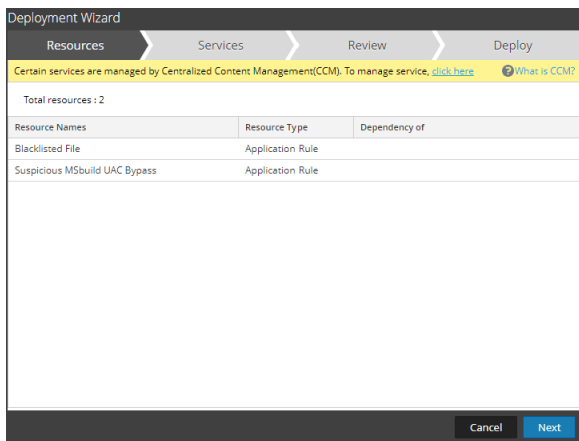

Caution: For NetWitness latest version, there is a new Content bundle for Endpoint, which contains approximately 400 application rules. Do not deploy this bundle (or the Endpoint application rules) onto any Log Decoder that is running an earlier version of NetWitness. The rules are only useful for the latest version, and would have major performance implications if deployed on Log Decoders that cannot process them.

To deploy resources manually:

1. Go to  **(Configure) > Live Content**.
2. Select a group of resources, or a previously created resource package.
To select a resource or group of resources:
 - a. In the **Live Search View**, browse Live resources (for example, search for the **Log Collector** resource Type).
 - b. In the **Matching Resources** panel, select **Show Results > Grid**.
 - c. Select the checkbox to the left of the resources that you want to deploy

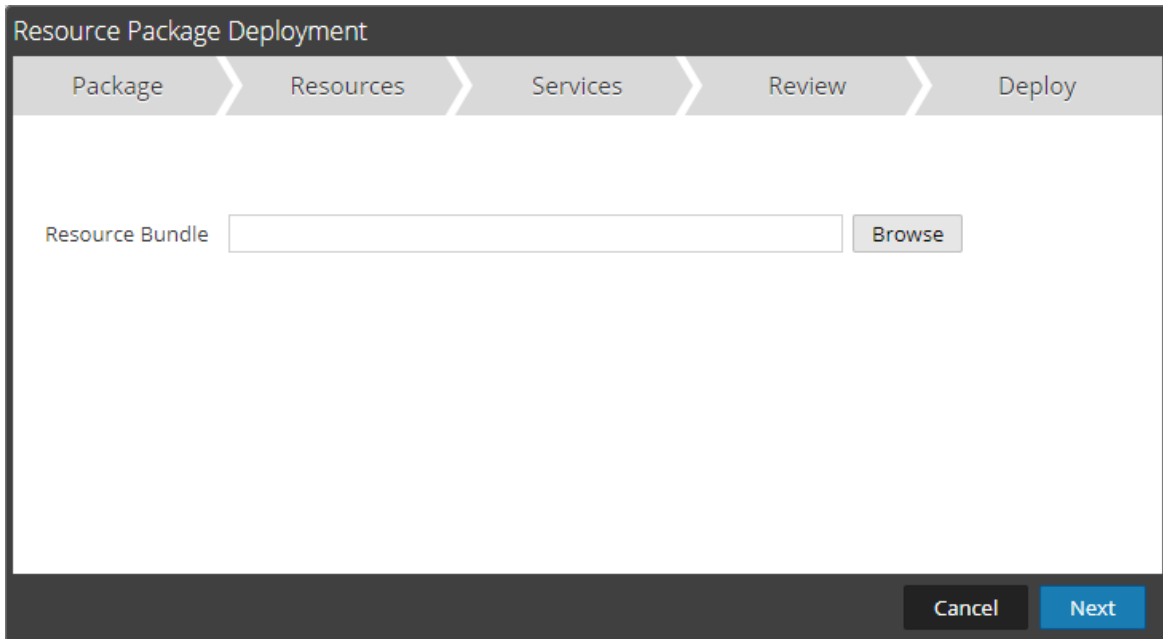

d. In the Matching Resources toolbar, click  Deploy .

3. To select a resource package to deploy:

a. In the Live Search view - Matching Resources toolbar, select **Package >Deploy** .

The Package page of the Resource Package Deployment wizard is displayed.

- b. Click **Browse** and select a package from your network (for example **resourceBundle-FeedsParsersContent.zip**).
- c. Click **Open**.

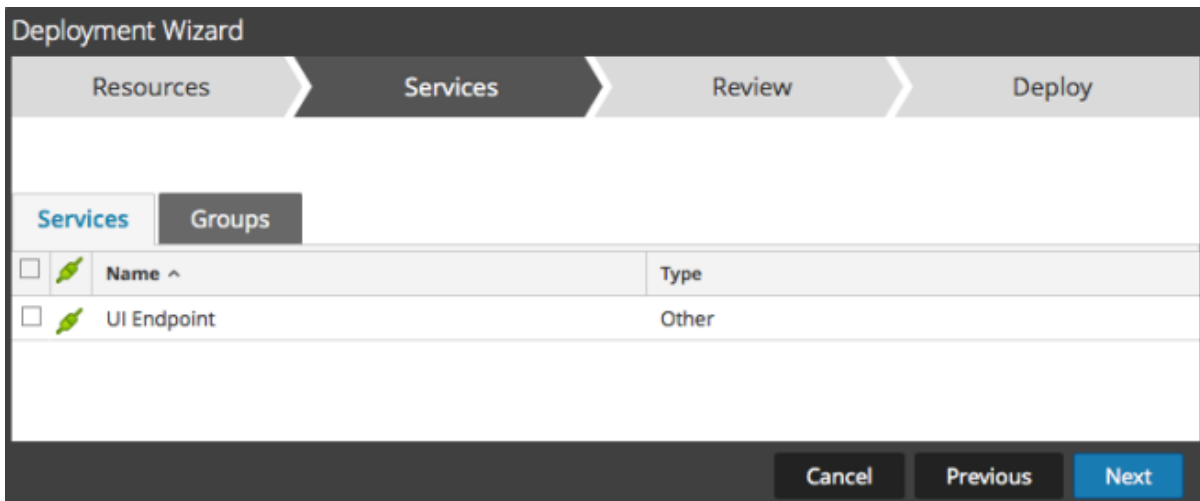

At this point, whether you are deploying a package or a group of resources, the **Deployment Wizard** opens, and the **Resources** page is displayed.

4. Click **Next**.

The **Services** page displayed has two tabs, **Services** and **Groups**, which provide a list of services and service groups that are configured in the  (**Admin**) > **Services** view. The columns are a subset of the columns available in the Services view.

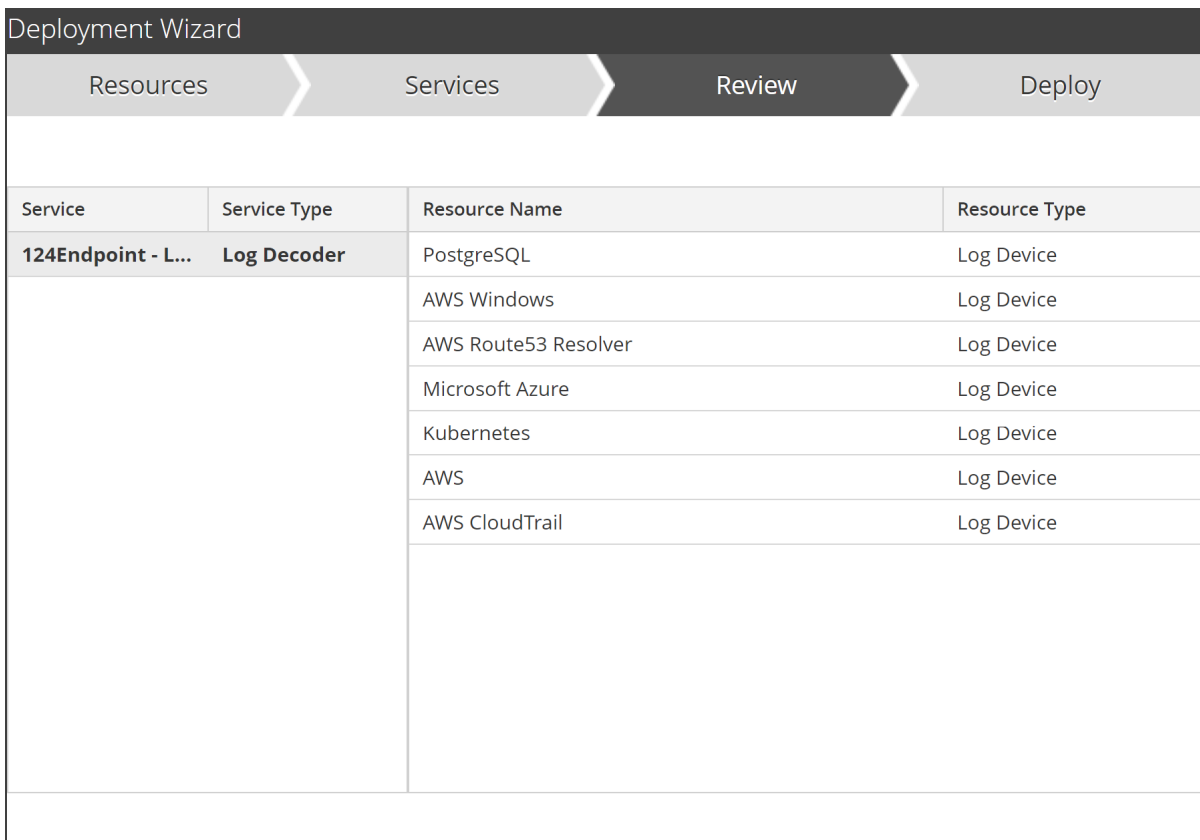

Note: The Live server is "smart" about deploying resources to Services. For example, it does not deploy resources that have a Medium of packets to any Log Decoders. This means that only applicable content resources are deployed to each Service.

5. Select the services on which you want to deploy the content. You can select any combination of services and service groups.
 - Use the **Services** tab to select individual services, list of services, and service groups that are configured in the  (**Admin**) > **Services** view.
 - Use the **Groups** tab to select groups of services.

6. Click **Next**.

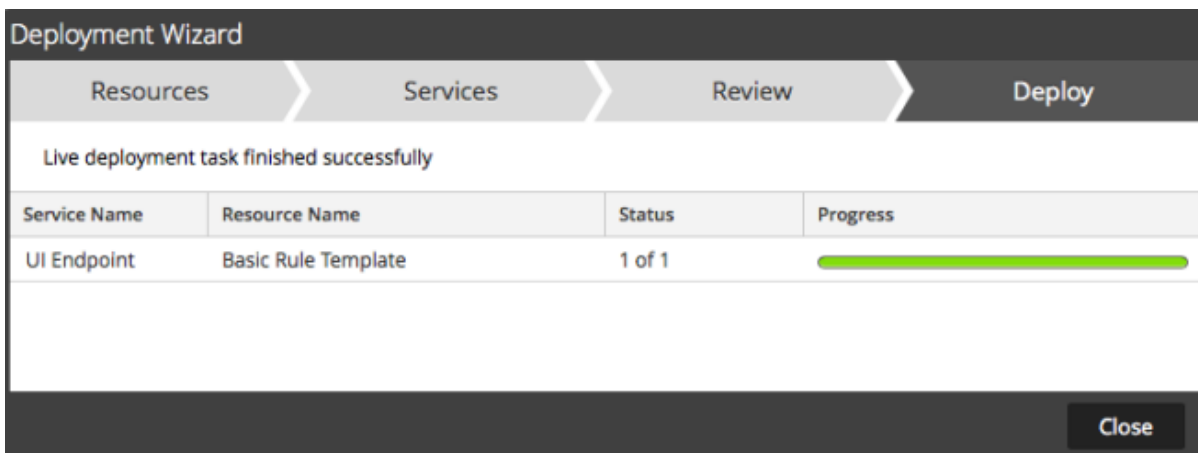

The **Review** page is displayed.

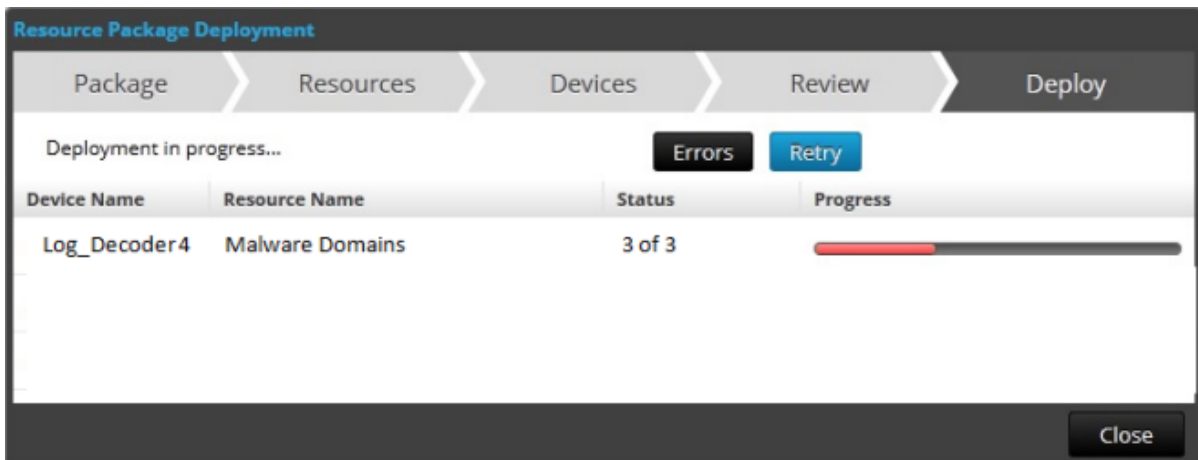

Make sure that you have selected correct resources and the services on which you want to deploy them.

7. Click **Deploy**.

The **Deploy** page is displayed. The Progress bar turns green when you have successfully deployed the resources to the selected services.

If you try to deploy resources and services that are not compatible, NetWitness displays the Errors and Retry buttons, which you can click to review the errors and re-attempt the deployment.

8. Click **Close**.

Next steps

After deploying parsers to Decoders and Log Decoders, you must enable parsers on the individual services. For more information, see the [Decoder and Log Decoder Configuration Guide](#).

Manage Live Resources

With a connection to the CMS server, you can search for, subscribe to, and deploy resources from Live in accordance with your subscription level. Once you have found resources, you deploy them to services and service groups that have been configured in the the  (Admin) > Services view.

There are several workflows for deploying resources to services and managing those deployments. These include:

- Subscribe and deploy resources
- Deploy a resource bundle
- Remove deployments of resources
- Download resources
- Set up data feeds

Manage Subscription and Deployment

The subscription and deployment workflow takes advantage of the resource management tools available in Live. By subscribing to resources, you agree to receive updated resources in accordance with the synchronization configured in the  (Admin) > System > Live Services panel.

By adding subscribed resources to the deployments list, you configure NetWitness to automatically push those resources to the selected services at the configured synchronization intervals. This method requires some planning of service groups and services where resources are deployed. In addition:

- You can remove a resource from the deployments list in the [Deployments Tab](#).
- You can unsubscribe from a resource in the [Subscriptions Tab](#) and the [Live Resource View](#).

To manage subscriptions and deployment:

1. In the  **(Admin)** > **System** > **Live Services** panel, specify an interval at which NetWitness checks for updates to subscribed resources in Live and specify the email addresses of people to receive an email listing subscribed resources that have been updated.
2. In the  **(Configure)** > **Live Content** search view, search for and subscribe to Live resources.
3. In the  **(Configure)** > **Subscriptions** > **Deployments** tab, select subscribed resources and add them to the deployment list for services groups.
4. (Optional) In the  **(Configure)** > **Subscriptions** > **Deployments** tab, click  to deploy the resources listed in the Deployments tab immediately.
5. In the  **(Configure)** > **Subscriptions** > **Deployments** tab, select deployed resources from a Group, and remove them from services.
6. In the  **(Configure)** > **Subscriptions** tab, unsubscribe from resources.

Remove a Deployed Resource

Once deployed to a service, Live resources remain on the service until removed. It is a good practice to remove unused resources from services on which they are deployed.

To remove deployed resources:

1. Go to the [Live Resource View](#) .
2. Unsubscribe from a resource, and remove it from deployed services.

Deploy a Resource Bundle

To deploy a content package, use the [Resource Package Deployment Wizard](#). You can deploy a content package created in Live to one or more services. NetWitness accepts packages in **.nwp** files or **.zip** files.

Download Resources

To download resources to your local file system, use the **Download** button in the Live Resource view.

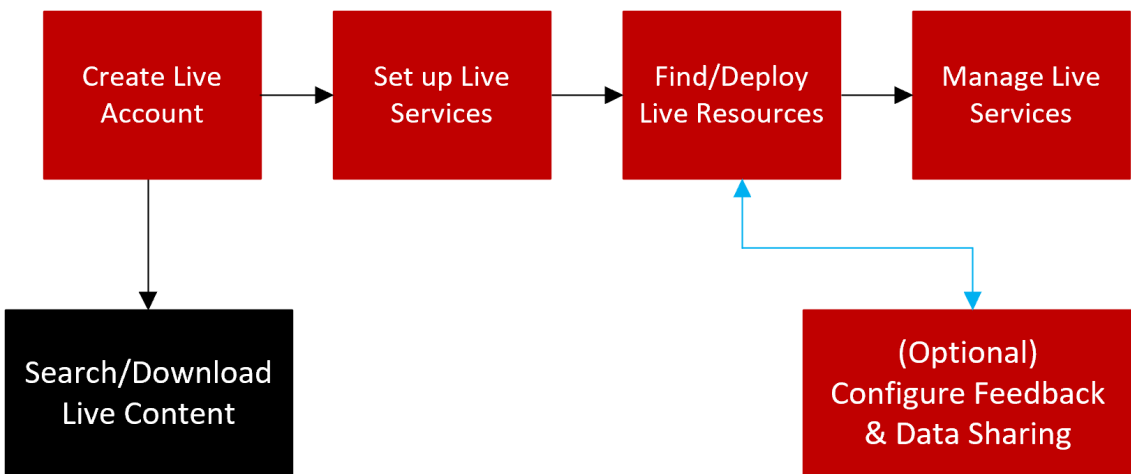

Set Up Data Feeds

In the **Live** > **Feeds** view, you can set up and maintain Custom and Identify feeds.

Search and Download Content from NetWitness Live

Administrators can search for live content using the Search Content panel in the NetWitness Live, which is similar to browsing the live CMS content in the  (Configure) > Live Content page on the NetWitness Platform.

Note: If Admin server is not connected to the Live Services, you can use the NetWitness Live to search and download the required content.

Prerequisites

- Ensure that you have created the Live account. For more information, see [Create Live Account](#).

Quick Search for Content

You can now select and view the content based on the Sources available in the NetWitness Live. You can select either NetWitness or Community from the Source drop-down list.

- **NetWitness:** Displays all the content provided by NetWitness.
- **Community:** Displays the content collected and retrieved from third party and open source communities.

You can also quickly select and view the available content types under Content section.

Clicking  expands the **Content** section and displays the following options:

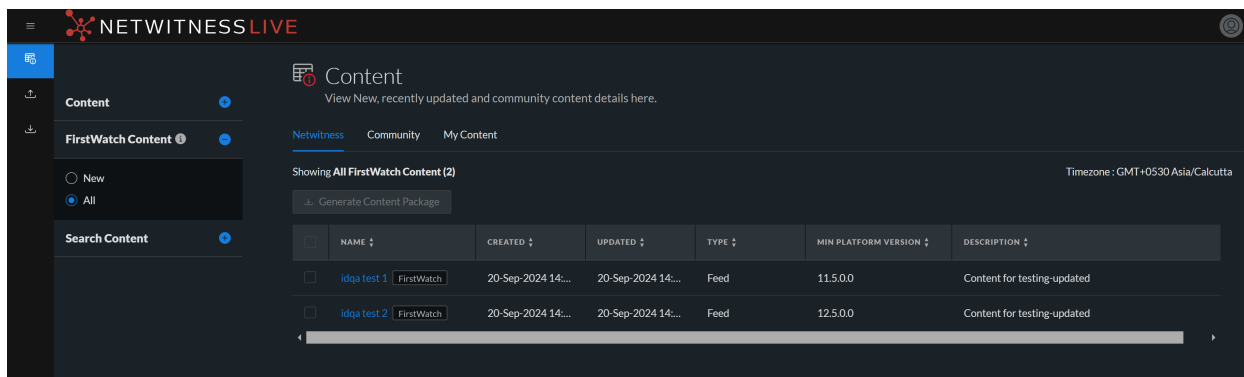

- **New:** Displays the content which is created in the last 21 days.
- **Recently Updated:** Displays the content which is created or updated in the last 21 days.

FirstWatch Content

From 12.5 version or later, NetWitness introduces the **FirstWatch Content** section within the NetWitness Live. This **FirstWatch Content** section serves as a centralized hub for accessing up-to-date threat intelligence, including curated data and IOCs provided by NetWitness, to help you detect and respond to threats. This threat intelligence is continually updated by NetWitness to ensure you have the most current and actionable information for securing your network environment.

Clicking  expands the **FirstWatch Content** section and displays the following options:

- **New:** Displays the FirstWatch content which is created in the last 21 days.
- **All:** Displays all the FirstWatch content provided from NetWitness.

Advanced Search for Content

You can search for the specific content in the Search Content view. For more information, see [Live Search Content View](#).

To search the content:

1. Click  to expand the **Search Content** section.
2. In the **Search Content**, specify the search criteria. Enter any or all of these: FirstWatch, keyword, type of resource, medium, risk, tag, platform versions, Mitre ATT&CK Tactics and Techniques, meta keys, meta values, date when content was created, date when content was modified, and (optional) discontinued content.

3. Click **Search**.
The matching results are displayed on the right panel.

The following is an example of FirstWatch Content Search results.

You can sort the content using the name, created, updated, type, or any of the column.

Note: Clicking **Reset Filter** removes the existing filters applied from the **Search Content**, and displays all the available content on the right panel.

Download Content

You can download the content from the results displayed in the right panel by performing the following steps:

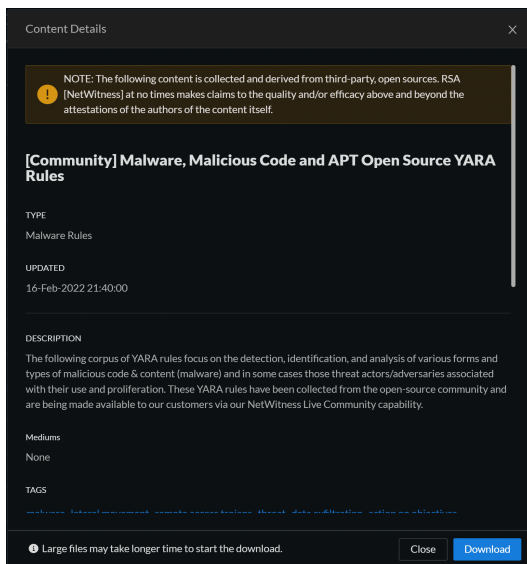

Note:

- You cannot download a discontinued content.
- NetWitness provides no assurance related to the quality and accuracy of the content provided by the third parties and open source communities.

To download the content:

1. Click the name of the content that you want to download.

The **Content Details** dialog is displayed.

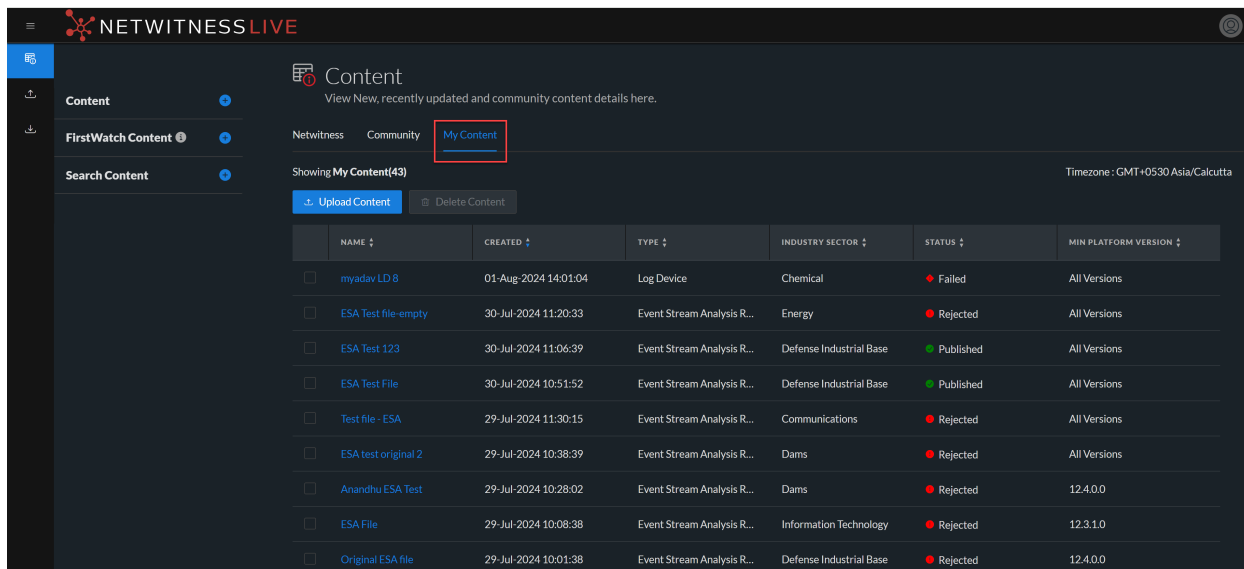

2. Click **Download**.

The content file is downloaded.

Manage Custom Content

NetWitness introduces the new My Content option, which allows users to upload, delete, and download custom content from the Live UI. Custom content refers to any content created by users using NetWitness, such as Log Devices, Event Stream Analysis rules, parsers, feeds, etc. Using this capability, users can facilitate the exchange of useful and relevant content among users and reduce the time and effort required to publish content through content development teams. Users can choose from a range of content options that suit their needs and use cases.

Users can perform the following tasks on the My Content tab:

- [Upload Custom Content](#)
- [Delete Custom Content](#)
- [Download Custom Content](#)

Upload Custom Content

The NetWitness Live My Content tab allows you to upload your own custom content, such as Log Device and Event Stream Analysis, in the Live UI portal. Upon upload, NetWitness Live processes each piece of content, which is displayed in a table that displays the type, the name of each content, the created date, industry sector, platform version, and one of the following content statuses:

- **Under Review:** The content is uploaded successfully and submitted for review.
- **Published:** The NetWitness Live successfully processed and published the uploaded content.
- **Rejected:** NetWitness Live could not process the uploaded content. The uploaded content contains invalid data, formatting errors, or malicious data.

Note: If the uploaded content file is rejected, check if the file contains any errors, fix them, and do one of the following:

- You can delete the existing rejected content file from the UI and upload the rectified content file. Follow steps 1- 12.
- You can upload the rectified content file with a different name.

- **Failed:** NetWitness Live could not process the uploaded content. The upload failure could be due to a network outage or technical error.

Note:

- Users will receive an email notification and feedback from NetWitness Live, either approving or rejecting their submission.
- Only the content that is in a published state will be available for the users to download.

To Upload Custom Content

1. Log in to NetWitness Live using your Live account credentials.
2. Navigate to the **My Content** tab.
3. Click **Upload Content**.

The Upload Community Content dialog is displayed.

4. Under the **Identify Content** section, provide the following details:
 - a. **Resource Types:** Select the required resource type from the drop-down list. The available options are Log Device and Event Stream Analysis.
 - b. Under the Content file upload area, click and browse to the file that you want to upload, select the file, and then click **Open**.

The format of a file depends on the type the user selects.

- For Log Device content, the supported file formats are xml, zip, and .envision.
- For ESA content, the supported file format is .esaa file exported from the NetWitness Platform UI ESA Rule Builder with no extension.

Note:

- NetWitness Live recommends not to upload zipped files that contain more than one content file for Log Device. This will cause the upload to fail. Currently, NetWitness Live only supports uploading single content files.
- The maximum file size allowed for upload is 10 MB.

- c. **Name:** Enter a unique name to identify or label the content.

Note: File name must not contain special characters or spaces.

- d. **Description:** Enter a brief description of the content.
- e. Under **Provide contributor** details, do one of the following:
 - Select the checkbox **Use Account owner name and email address**. NetWitness Live will automatically populate the relevant fields with the administrator user's live account details.
 - Provide the name and email address of the contributor in the **Contributor Name** and **Email Address** fields.

5. Click **Upload and Continue**.

6. Under the **Define Content** section, provide the following details:

Note: Only the Industry field is mandatory, and other fields are optional.

- a. **Medium:** Select one or more mediums from the drop-down list. The available options are **packet, endpoint, log, and log and endpoint**.
 - b. **Risk:** Select the required risk from the drop-down list. The available options are **High, Medium, and Low**.
 - c. **Tags:** Select one or more meta tags from the drop-down list to describe the content type. For example, **malware analysis**.
 - d. **Tactics:** Select one or more MITRE ATT&CK Tactics from the drop-down list. After selecting the tactics, you will be allowed to choose the appropriate techniques. For example, **Command and Control: TA0011**.
 - e. **Techniques:** Select one or more MITRE ATT&CK Techniques from the drop-down list. For example, **Data Obfuscation: T1001**.
 - f. **Minimum Platform Version:** Select the NetWitness platform version from the drop-down list. Ensure that the custom content being uploaded is compatible with the minimum required NetWitness platform version. For example, **12.4.0.0**.
 - g. **Industry:** Select the required industry from the drop-down list to see the custom content relevant to that industry. For example, **Communications**.
7. Click **Save and Continue**.

Upload Community Content

1 Identify Content — 2 Define Content — 3 Add Dependency — 4 Review And Confirm

Provide details to describe the content.

Back Save and Continue

A preview of the list appears, displaying the first 15 items.

8. **(Optional)** Under the **Add Dependency** section, you can select the existing NetWitness content available in the list, add it as a dependency, and additionally sort and filter the required content:
 - a. Sort the contents based on the following options from the drop-down list: **Name (Ascending)**, **Name (Descending)**, **Created (Oldest)**, and **Created (New)**.
 - b. In the search field, enter the required content name or keywords and click **Search**. The required contents will be displayed.

Note: Click the clear button to remove any text typed in the search field.

- c. Select one or more contents from the available list and click **Save and Continue**.

**Note:**

- You can navigate between pages using the page navigation options and view all the contents seamlessly.
- You can select the number of content entries per page using the drop-down list. By default, 15 rows are displayed per page. However, you can modify the number of rows displayed per page.
- You can use the scroll bar to navigate through the list of contents.

9. Under the **Review And Confirm** section, review the content details.
10. Click **Back** to return to the previous view. You can then edit any of the details you want to modify.
11. Click **X** to close the dialog.

12. Select the **Terms and Conditions** checkbox and click **Save and Upload**.

TERMS AND CONDITIONS
 By checking the box, you agree to the [Terms of Service for Netwitness Live](#)

Back Save and Upload

Delete Custom Content

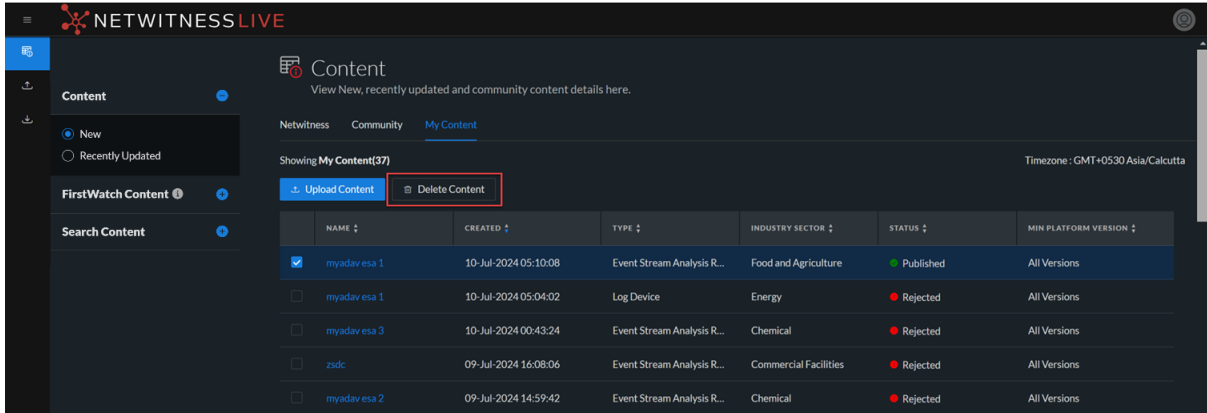

You can delete content if the content type is no longer valid. However, you can delete only the content that you have uploaded.

Note:

- Deleting this content will remove the content permanently and cannot be restored. This action will also impact any other content that uses it as a dependency.
- You can only delete one content file at a time.

To delete the content

1. Select the content that you want to delete and click **Delete Content**.

A confirmation message is displayed.

2. Click **Delete**.

This permanently removes the content from the NetWitness Live.

Download Custom Content

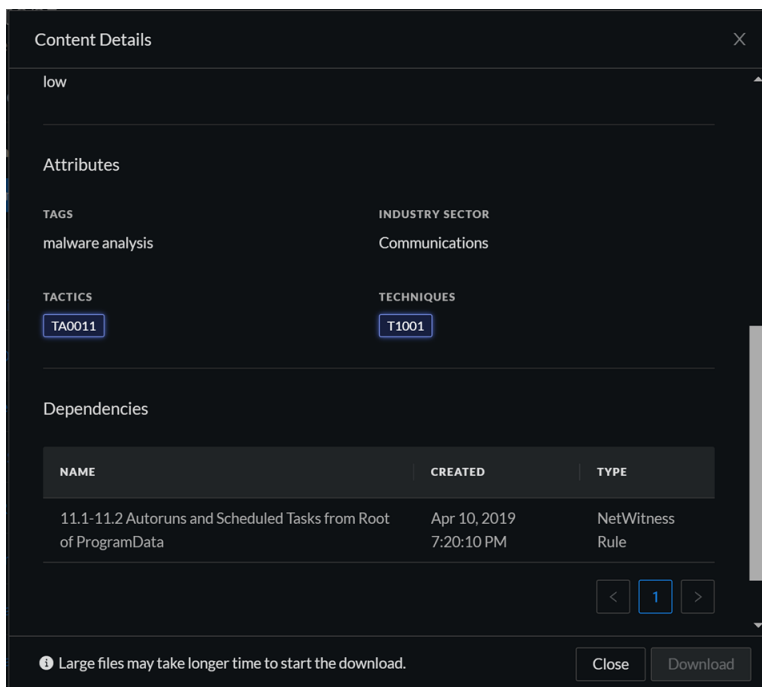

You can download any published content from the results displayed in the My Content tab.

Note: NetWitness provides no assurances about the quality and accuracy of the content beyond the author's assurances.

To download the content

1. Click the name of the content that you want to download.

The **Content Details** dialog is displayed.

2. Select the **Terms and Conditions** checkbox and click **Download**.
The content file is downloaded.

Additional Procedures

This topic explains the additional procedures an administrator could choose to follow which are not essential for the configuration or use of Live Services.

- [Export Data to NetWitness](#)
- [Packaging Resources](#)
- [Manage Custom Feeds](#)
 - [Creating a Custom Feed](#)
 - [Create a STIX Custom Feed](#)
 - [Creating and Managing an Identity Feed](#)
 - [Editing a Feed](#)
 - [Removing a Feed](#)
- [Miscellaneous Live Services Procedures](#)

Export Data to NetWitness

In the Live Services Configuration panel, there is a Live Feedback Activity Log which enables you to download the usage data required for Live Feedback. This is active regardless of the Live Account configuration.

A NetWitness administrator can export the metrics in NetWitness for Live Feedback.

About Live Feedback

If the Live Account is not configured, you can manually upload the usage data to NetWitness. For more information, see the "Configure Live Services Panel" topic in the [System Configuration Guide](#).

You must first download the Live Feedback historical data, and then upload it to share with NetWitness.

Download Live Feedback Historical Data

To download the Live Feedback historical data:

1. Go to  (Admin) > System.

2. In the options panel, select **Live Services**.

The **Live Account** screen is displayed which consists of the **RSA Live Status** and **Download Live Feedback Activity Log**.

3. Click **Live Feedback Activity Log**.

The **Live Feedback Activity Log** window opens which allows you to download the required Live Feedback historical data.

4. Select one or multiple entries by selecting the checkboxes and click **Download**.

Note: If you select multiple entries in the history table, the Live Feedback data is downloaded into a ZIP archive, consisting of individual JSON files for each month.

Share Telemetry Data to NetWitness

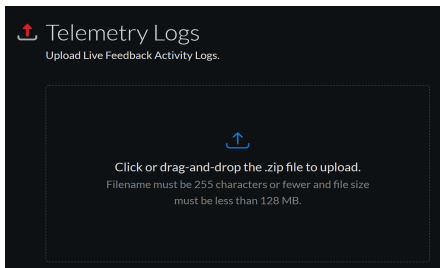

After you download the Live Feedback data, you can then upload it using the following procedure.

Note:

- To download the Live Feedback data, see topic [Download Live Feedback Historical Data](#).
- You can share data through NetWitness Live portal. For more information, [Create Live Account](#).

To share the data to NetWitness

1. Log in to the NetWitness Live using your Live account credentials.
2. Click  on the left panel.
The **Telemetry Logs** dialog is displayed.

**Note:**

- You can upload only .zip files.
- Filename must be 255 characters or less and file size must be less than 128 MB.

3. Click or drag-and-drop a file onto this area to upload.

Packaging Resources

The primary use for creating and subsequently deploying a resource package is for customers using an air gap network environment. In this case, you create a resource package on the network that is connected to the internet, and then deploy the resource package on a more secure network.

Create and Deploy Resource Package Use Case

The basic steps are as follows:

1. Access NetWitness Live Services using an instance that is connected to the internet.
2. Create a Resource package as described below, adding whichever content items you need.
3. Copy the ZIP archive of the packages to your secure NetWitness instance, by using a thumb drive or other manual copying process.
4. On the secure NetWitness instance, deploy the resource package. For more information, see [Resource Package Deployment Wizard](#).

Prerequisites to Create a Resource Package

A prerequisite for creating resource packages is configuration of the connection and synchronization between the CMS server and NetWitness and the ability to search for resources in the User Interface.

Creating a Resource Package

The following procedure describes how to create a resource package, as a ZIP archive and save it to your local file system.

To create a resource package:

1. Go to  (Configure) > Live Content from the NetWitness UI.
2. Select the resources that you want to package in the Matching Resources grid.

The screenshot displays the NetWitness Platform interface. On the left, the 'Search Criteria' panel includes fields for Keywords, Category (with a tree view showing options like THREAT, IDENTITY, ASSURANCE, OPERATIONS, SPECTRUM, and MALWARE ANALYSIS), Resource Types, Medium, Required Meta Keys, Generated Meta Values, and Resource Created/Modified Date ranges. A 'Search' button is at the bottom of this panel.

The main 'Matching Resources' panel shows a table of results with columns: Subscribed, Name, Created, Updated, Type, and Description. Two resources are selected with checkboxes:

Subscribed	Name	Created	Updated	Type	Description
<input checked="" type="checkbox"/>	Runs ACL Management T...	2019-04-10 2:29 PM	2019-04-10 3:09 PM	Application Rule	Running ACL management tool
<input checked="" type="checkbox"/>	AWS Security Hub Log Col...	2020-07-28 6:17 PM	2020-07-29 7:52 AM	Log Collector	Log Collector configuration cor

At the bottom of the Matching Resources panel, it indicates '663 Matching Resources'.

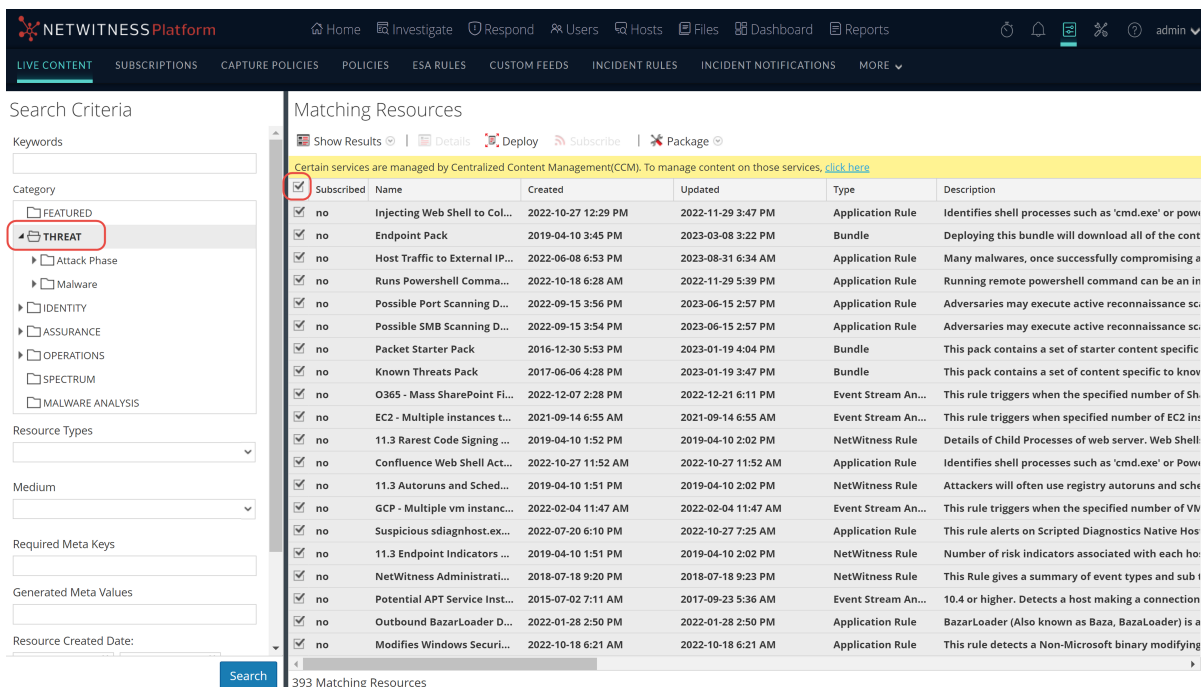

3. Select some or all the resources that are listed in the Matches Resources pane.
4. Select Package > Create.

NetWitness creates a **.zip** archive that contains the selected resources and downloads it to your default download folder. NetWitness gives the package a generic name. You should rename it when you save it so that it identifies the resources contained in the package.

Creating Threat Package

The following procedure describes how to create a resource package that contains all the content that is categorized as **Threat**. Then we rename it, using the type of content and date.

1. Go to (Configure) > Live Content.
2. From the **Category** section, select **Threat**.
3. Select all items returned by clicking on the checkbox in the column header row of the **Matching Resources** pane.

4. Select **Package** > **Create**.

A ZIP archive is saved to your Downloads folder. For example, **resourceBundle8740753704980701969.zip**.

5. Rename the package to something meaningful. For example, in this case, you could change the package name to **threatResourceBundle_2018_01_31.zip** (assuming today's date is January 31, 2018).

The resource package is now available for later deployment.

Deploying a Threat Package

This procedure assumes that you saved a package named **threatResourceBundle_2018_01_31.zip**, as described in the previous section. It describes how to deploy a saved resource package

1. Go to **(Configure)** > **Live Content**.
2. In the **Matching Resources** pane, select **Package** > **Deploy**.
3. Click **Browse** and navigate to the **threatResourceBundle_2018_01_31.zip** file that were created earlier.

4. Click **Next**.

The **Resources** page displays details for the resources in the package.

5. Click **Next**.

The **Services** page displays two tabs, **Services** and **Groups**, which provide a list of services and service groups that are configured in the  (**Admin**) > **Services** view. The columns are a subset of the columns available in the Services view.

6. Select the services on which you want to deploy the content. You can select any combination of services and service groups.

7. Click **Next**.

The **Review** page is displayed.

Note: Make sure that you have selected correct resources and the services to which you want to deploy them.

8. Click **Deploy** to complete the deployment process. Alternatively, you can choose **Cancel** or **Previous** to either cancel the deployment or go back to the previous screen.

Manage Custom Feeds

The custom feed capability is implemented using the Custom Feed Wizard in NetWitness, allowing you to quickly populate Decoders with custom and identity feeds.

Custom Feed Creation

You can use the **Live > Custom Feeds > Setup Feed > Configure a Custom Feed** wizard to create and deploy Decoder feeds based on deterministic logic that offers the meta keys specific to the selected Decoders and Log Decoders. Although the wizard guides you through the process to create both on-demand and recurring feeds, you should understand the form and content of a feed file when you create a feed.

Feed file names in NetWitness are in the form `<filename>.feed`. To create a feed, NetWitness requires a feed **data** file in `.csv` or `.xml` (for STIX) format and a feed **definition** file in `.xml` format, which describes the structure of a feed data file. The Configure a Custom Feed wizard can create the feed definition file based on a feed data file, or based on a feed data file and the corresponding feed definition file.

The files that you use to create an on-demand feed must be stored on your local file system. The files used to create a recurring feed must be stored at an accessible URL, whence NetWitness can fetch the most current version of the file for each recurrence. After a NetWitness feed is created, you can download the feed to your local file system, edit the feed files, and edit the NetWitness feed to use the updated feed files.

Sample Feed Definition File

This is an example of a feed definition file named `dynamic_dns.xml`, which NetWitness creates based on your entries in the Feed wizards. It defines the structure of the feed data file named `dynamic_dns.csv`.

Note: The feed file path should be `.csv` regardless of the Feed Type (Default or STIX).

Sample Feed Definition File

```
<?xml version="1.0" encoding="utf-8"?>
<FDF xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:noNamespaceSchemaLocation="feed-definitions.xsd">
  <FlatFileFeed name="Dynamic DNS Domain Feed"
    path="dynamic_dns.csv"
    separator=","
    comment="#"
    version="1">

    <MetaCallback
      name="alias.host"
      valuetype="Text"
      apptype="0"
      truncdomain="true"/>

    <LanguageKeys>
      <LanguageKey name="threat.source" valuetype="Text" />
    </LanguageKeys>
  </FlatFileFeed>
</FDF>
```

```

    <LanguageKey name="threat.category" valuetype="Text" />
    <LanguageKey name="threat.desc" valuetype="Text" />
  </LanguageKeys>

  <Fields>
    <Field index="1" type="index" key="alias.host" />
    <Field index="4" type="value" key="threat.desc" />
    <Field index="2" type="value" key="threat.source" />
    <Field index="3" type="value" key="threat.category" />
  </Fields>

</FlatFileFeed>
</FDF>

```

Feed Definition Equivalents for Custom Feed Wizard Parameters

The NetWitness Feeds wizard provide options to define the structure of the data feed file. These correspond directly to attributes in the feed definition (.xml) file.

NetWitness Parameter	Feed Definition File Equivalent
Define Feed tab	
Feed Type	Select: Default - to define a feed based on a .csv formatted feed data file. STIX - to define a feed based on STIX formatted .xml file.
Feed Task Type	Select: Adhoc - to create an on-demand feed. Recurring - to create a feed that recurs automatically.
Name	Enter a custom feed name in the feed data file that corresponds to the flatfeedfile name attribute in the feed definition file; for example, Dynamic DNS Test Feed.
File/ Browse	Enter a name of the feed data file that corresponds to the flatfeedfile path attribute in the feed definition file; for example, dynamic_dns.csv.
(STIX, Recurring) Trust All Certificate	Select Trust All Certificate , if you do not want to validate the REST server certificate. This option is enabled by default (checked).
(STIX, Recurring) Certificate/Browse	For client authentication with the REST URL, in the Certificate field, click Browse and select the self signed certificate. The supported certificate formats are .cer, .crt with Base64 & DER encoded files.
Define Feed tab - Advanced Options	
XML Feed File	Enter a name of the feed definition file, for example, dynamic_dns.xml.
Separator	The separator character used to separate attributes in the feed data file. It corresponds to the flatfeedfile separator in the feed definition file; for example, a comma.

NetWitness Parameter	Feed Definition File Equivalent
Comment	The character used to identify a comment in the feed data file. It corresponds to the flatfeedfile comment attribute in the feed definition file; for example, #.
Remove STIX data older than	The number of days for which the STIX packages downloaded from TAXII server have to be stored. The STIX packages older than the specified number of days are deleted automatically. The default value is 180 days, which is also the maximum.
Select Services tab	Select the services to which you want to send the data feed.
(Define Columns tab, Define Index) Type	The type of lookup value in the index position of the feed data file. IP means that each row in the feed data file contains an IP address in the lookup value position. The IP value is in dotted-decimal format (for example, 10.5.187.42). IP Range means that each row in the feed data file contains a range of IP addresses in the lookup value position. The IP range is in CIDR format (for example, 192.168.2.0/24). Non IP means that the each row in the feed data file contains a metadata value other than IP address in the lookup value position. The Service Type and Truncate Domain, and Callback Keys fields become active for a Non IP index.
(Define Columns tab, Define Index) CIDR	Specifies that the IP value in the lookup position is in CIDR format. The CIDR attribute sets the IP address format in the field to Classless Inter-Domain Routing (CIDR) notation.
(Define Columns tab, Define Index) Service Type	For a Non IP index, the integer service type to filter meta lookups. It corresponds to MetaCallback apptype attribute in the feed definition file. A value of 0 indicates no filtering by service type.
(Define Columns tab, Define Index) Truncate Domain	For a Non IP index, for meta values that contain domain names (for example, hostnames), the system can strip off the host specific element in the data. Truncate Domain corresponds to the MetaCallback truncdomain attribute. If the value is www.example.com, it is truncated to example.com. A value of False selects no truncation, and True selects truncation.
(Define Columns tab, Define Index) Ignore Case	If this option checked, the feed will ignore the case.
(Define Columns tab, Define Index) Callback Keys	For a Non IP index, the available meta keys to match on instead of ip.src/ip.dst (the defaults for IP index type) are selectable from the drop-down list. The Callback Key corresponds to the MetaCallback name attribute, and the index column of the csv file must contain data that can match the chosen meta key. For example, if the username meta key is chosen, the index column of the csv file needs to be populated with users to be matched.

NetWitness Parameter	Feed Definition File Equivalent
(Define Columns tab, Define Index) Index Column	Identifies the column in the feed data file that provides the lookup value for the row. Each position in each row of the feed data file is identified by a Field index attribute in the feed definition file. A field with an index of 1 is the first entry in a row, the second field has an index of 2 , the third field has an index of 3 , and so on. You can select multiple index columns, if the Feed Type is STIX and Index Type is Non IP . When you select multiple index columns the values from all the selected columns are merged in the first index column that you selected.
(DEFINE VALUES) Key	The name of the LanguageKey , as defined in the feed definition file, for which meta is created from this row of the feed data file. It corresponds to the Field key attribute in the feed definition file. A key applies only to a field whose type is set to value . In the feed definition file, there is a list of LanguageKeys from index.xml , or a summary name if Source Name and Destination Name are used. For example, reputation is a summary name for reputation.src and reputation.dst). This value is referenced by the Field key attribute.

Creating a Custom Feed

This topic provides instructions for creating a custom feed using a .csv or STIX formatted feed data file in NetWitness. For more information about STIX and creating a STIX custom feed, see [Create a STIX Custom Feed](#).

You can easily create a custom feed using the Custom Feed wizard. To complete this procedure, you need a feed data file in .csv or .xml format. If you also have an associated feed definition file in .xml format, which describes the structure of the feed data file, you can use the feed definition file to create a feed. The Custom Feed wizard can create the feed based on a feed data file, or based on a feed data file and corresponding feed definition file.

After completing this procedure, you will have created a custom feed.

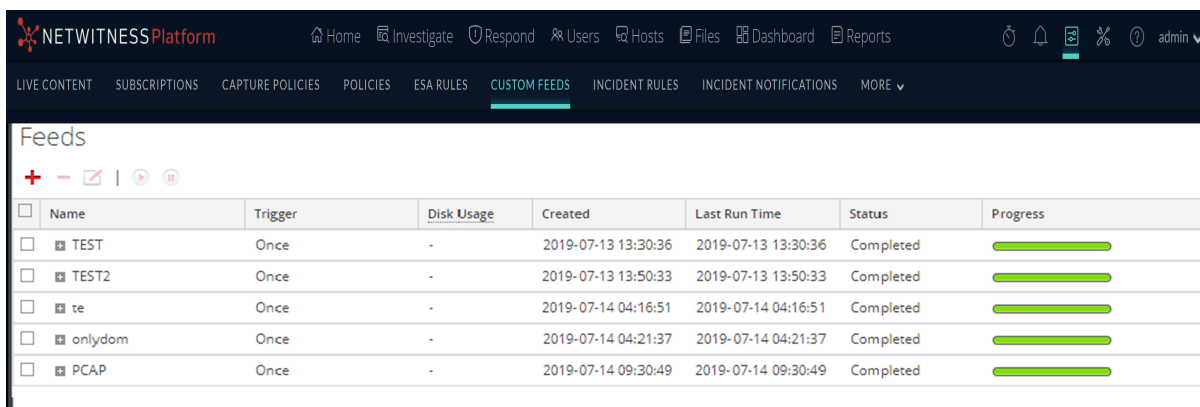

The feed data file (.csv or STIX (.xml)) and optionally the feed definition file (.xml) must be available on the local file system for an on-demand custom feed. For a recurring custom feed, the files must be available at a URL that is accessible to the NetWitness server.

Note: Any feeds that are created will be automatically pushed to Context Hub as Lists. The lists can be looked up in the context lookup panel of the Respond and Investigate pages. If Context Hub is not configured or the service is down, then the feeds will be pushed to Context Hub the next time the server is available.

To create a custom feed:

1. Go to  (Configure) > CUSTOM FEEDS.

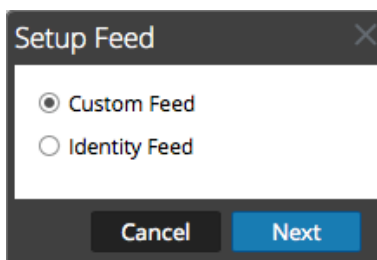

The Custom Feeds view is displayed.

Name	Trigger	Disk Usage	Created	Last Run Time	Status	Progress
TEST	Once	-	2019-07-13 13:30:36	2019-07-13 13:30:36	Completed	100%
TEST2	Once	-	2019-07-13 13:50:33	2019-07-13 13:50:33	Completed	100%
te	Once	-	2019-07-14 04:16:51	2019-07-14 04:16:51	Completed	100%
onlydom	Once	-	2019-07-14 04:21:37	2019-07-14 04:21:37	Completed	100%
PCAP	Once	-	2019-07-14 09:30:49	2019-07-14 09:30:49	Completed	100%

2. In the toolbar, click .

The Setup Feed dialog is displayed.

Setup Feed

Custom Feed

Identity Feed

Cancel Next

- To select the feed type, click **Custom Feed** and **Next**.

The Configure a Custom Feed wizard is displayed, with the Define Feed form open.

The screenshot shows the 'Configure a Custom Feed' wizard in the 'Define Feed' step. The 'Feed Type' is set to 'CSV' and 'Feed Task Type' is set to 'Adhoc'. The 'Name' field is empty. The 'Upload As Csv File Feed' checkbox is unchecked. The 'File' field has a 'Select File' button and a 'Browse' button. The 'Advanced Options' section is collapsed.

- To define a feed based on a .csv formatted feed data file, select **CSV** in the **Feed Type** field.
- To define an on-demand feed task that executes once, select **Adhoc** in the **Feed Task Type** field and do one of the following:
 - (Conditional) To define a feed based on a .csv formatted feed data file, type the feed **Name**.
 - Select the checkbox **Upload As CSV File Feed**, if required.
 - Select a .csv content **File** from the local file system, and click **Next**.
 - (Conditional) To define a feed based on an XML feed file, select **Advanced Options**.

The Advanced Options are displayed:

The screenshot shows the 'Configure a Custom Feed' wizard in the 'Define Feed' step with 'Advanced Options' expanded. The 'XML Feed File' field has a 'Select File' button and a 'Browse' button. The 'Separator' field contains a comma (,) and the 'Comment' field contains a hash (#).

- Select an XML feed file from the local file system, choose the **Separator** (default is comma), and specify the **Comment** characters used in the feed data file (default is #), and click **Next**.
- The Select Services form is displayed. This is an example of the form for a feed based on a feed data file with no feed definition file. If you are defining a feed based on a feed definition file, the

Define Columns tab is not needed.

6. To define a recurring feed task that executes repeatedly at specified intervals, during a specified date range.
 - a. Select **Recurring** in the **Feed Task Type** field.

The Define Feed dialog includes the fields for a recurring feed.

- b. In the **URL** field, enter the URL where the feed data file is located, for example, `http://<hostname>/<feeddatafile>.csv`, and click **Verify**.

NetWitness verifies the location where the file is stored, so that NetWitness can check for the latest file automatically before each recurrence.

- c. (Optional) If the URL has restricted access and requires authentication using your username and password, select **Authenticated**.

NetWitness provides your user name and password for authentication to the URL.

- d. If you want the NetWitness server to access the Feed URL through a proxy, select **Use Proxy**. For more information on configuring a proxy, see the **Configure Proxy for NetWitness** topic in the *System Configuration Guide*. By default, the **Use Proxy** checkbox is not selected.

NOTE:

If you are using an HTTPS based feed server, ensure that you import and install the certificates. For more information, see [Import Certificates for HTTPS Service](#)

- e. To define the interval for recurrence, do one of the following:
- Specify the number of minutes, hours, or days between recurrences of the feed.
 - Specify recurrence every week, and select the days of the week.
- f. To define the date range for the execution of the feed to recur, specify the **Start Date** and time and the **End Date** and time.

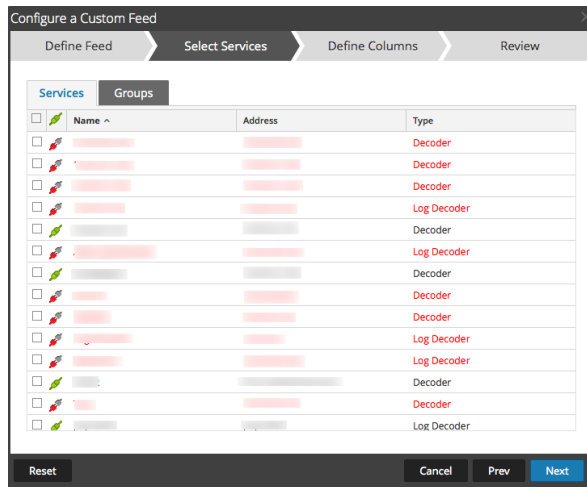

7. (Conditional) If you want to define a feed based on an XML feed file:

- Type the feed **Name**, select **Advanced Options**.

The Advanced Options fields are displayed.

- Select an XML feed file from the local file system, choose the **Separator** (default is comma), specify the **Comment** characters used in the feed data file (default is #) and click **Next**.

The Select Services dialog is displayed.

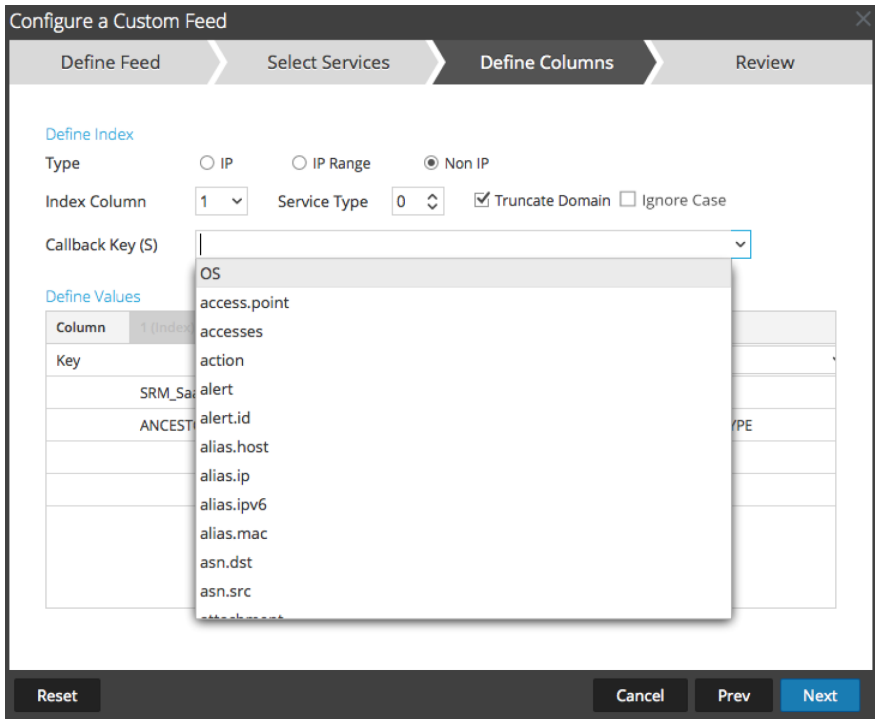

8. To identify services on which to deploy the feed, do one of the following:

- a. Select one or more Decoders and Log Decoders, and click **Next**.
- b. Click the **Groups** tab and select a group. Click **Next**.

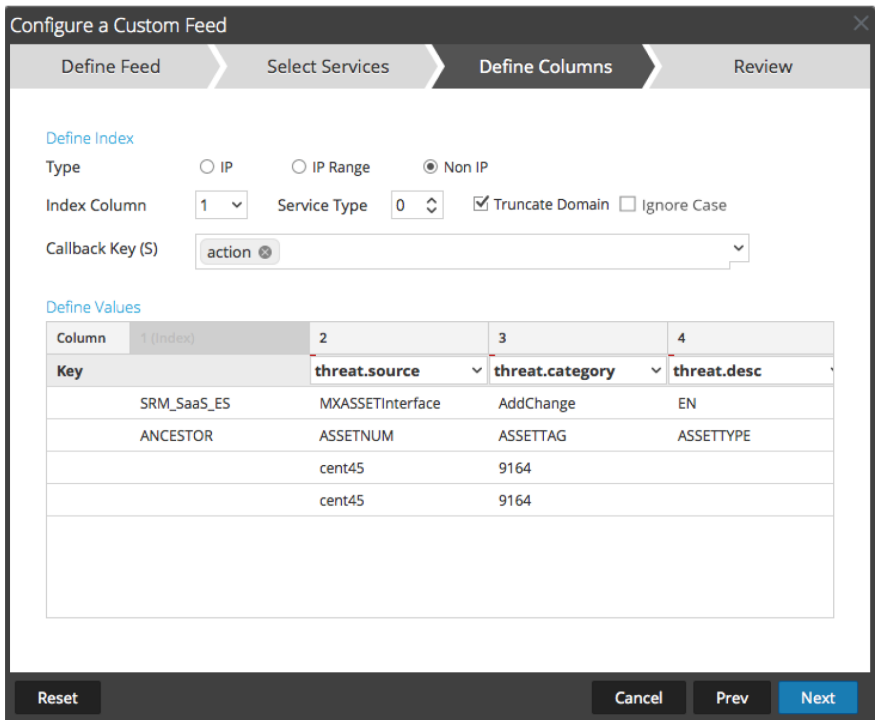

The Define Columns dialog is displayed.

9. To map columns in the Define Columns form:

- a. Define the Index type: **IP**, **IP Range**, or **Non IP**, and select the index column.
- b. (Conditional) If the index type is **IP** or **IP Range** and the IP address is in CIDR notation, select **CIDR**.
- c. (Conditional) If the index type is **Non IP**, additional settings are displayed. Select the service type and **Callback Keys**, and optionally select the **Truncate Domain** and **Ignore Case** option.

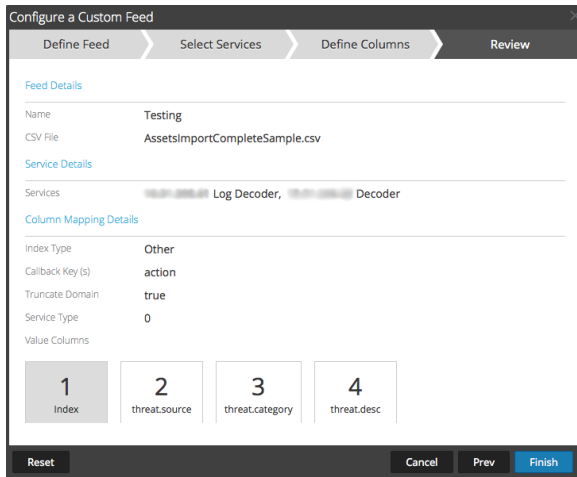

- d. Select the language key to apply to the data in each column from the drop-down list. The meta displayed in the drop-down list is based on the meta available for the service define values. You can also add other meta based on advanced expertise.

Note: When a custom feed gets converted into a context hub list, you must map at least one meta key with one or more meta types by mapping a column header with a meta. However, you can add or edit the entity mapping of a list by clicking  in the Lists tab. For more information, see the *Context Hub Configuration Guide*.

e. Click **Next**.

The Review dialog is displayed.

The screenshot shows the 'Review' step of the 'Configure a Custom Feed' wizard. The 'Feed Details' section includes 'Name' (Testing) and 'CSV File' (AssetsImportCompleteSample.csv). The 'Service Details' section lists 'Log Decoder' and 'Decoder'. The 'Column Mapping Details' section shows 'Index Type' (Other), 'Callback Key(s)' (action), 'Truncate Domain' (true), and 'Service Type' (0). Below this, 'Value Columns' are numbered 1 through 4, corresponding to 'Index', 'threat.source', 'threat.category', and 'threat.desc'. At the bottom, there are 'Reset', 'Cancel', 'Prev', and 'Finish' buttons.

10. Anytime before you click **Finish**, you can:

- Click **Cancel** to close the wizard without saving your feed definition.
- Click **Reset** to clear the data in the wizard.
- Click **Next** to display the next form (if not viewing the last form).
- Click **Prev** to display the previous form (if not viewing the first form)

11. Review the feed information, and if correct, click **Finish**.

12. Upon successful creation of the feed definition file, the Create Feed wizard closes, and the feed and corresponding token file are listed in the Feed grid and progress bar tracks completion. You can expand or collapse the entry to see how many services are included, and which services were successful.

Note: When you create a feed, and if there is no entity mapping done such as in case of custom meta, then those columns in the List will not have entity mappings in Context Hub. You have to manually map the entities from the List page.

Import Certificates for HTTPS Service

Import certificates to communicate with the HTTPS services:

1. SSH to the NW node and copy the CA certificate located in the following directory:
/etc/pki/ca-trust/source/
2. Execute the following command to update the certificates:
`update-ca-trust`

3. Execute the following command to add the certificate to the java keystore:
`keytool -list -keystore /etc/pki/java/cacerts -storepass changeit |& head`
4. Restart the service on the NW node.

Note: Perform the procedure for all the HTTPS servers.
Example: HTTPS proxy server and HTTPS feed server.

Create a STIX Custom Feed

You can create a custom feed using a .csv or STIX formatted feed data file in NetWitness.

Note:

- NetWitness supports Structured Threat Information Expression (STIX) 1.0, 1.1 and 1.2 versions.
- NetWitness supports STIX V2 (2.0 and 2.1) indicators from 12.5 version or later.

Structured Threat Information Expression (STIX™) is a structured language for describing cyber threat information so it can be shared, stored, and analyzed in a consistent manner. For more information about STIX, see <https://oasis-open.github.io/cti-documentation/>.

Caution: If STIX recurring feed is configured and you update Security Analytics from 10.6.x to NetWitness 12.5, you must re-configure the STIX recurring feed.

In NetWitness Platform, STIX feeds are supported. You can upload STIX content in different formats based on its version. For the older versions the format is ".xml". From version 12.5 or later, you can upload in ".json" (STIX V2 indicators) file. The constructs such as Indicator Title and Description, Observable Title and Description, and Indicator Sightings information are parsed from STIX and pushed to the decoders or log decoders that are selected during feed configuration. Information such as IP addresses, File hashes, Domain names, URIs, and Email addresses are extracted from the STIX observable to be included in the feed.

Make sure the following criteria are met before you upload the STIX file:

1. Only STIX Observables with property values in the "Equals" operator
2. The uploaded STIX xml or json file must have only one STIX_Package

TAXII (Trusted Automated eXchange of Indicator Information) is the main transport mechanism for cyber threat information represented in STIX. Using the TAXII services, organizations can share cyber threat information in a secure and automated manner.

The STIX and TAXII communities work closely together to ensure that they continue to provide a full stack for sharing threat intelligence.

Apart from TAXII server, STIX data can also reside on REST server and you can fetch STIX file from the REST server by providing the URL of the REST server. For example, <http://stixrestserver.internal.com>.

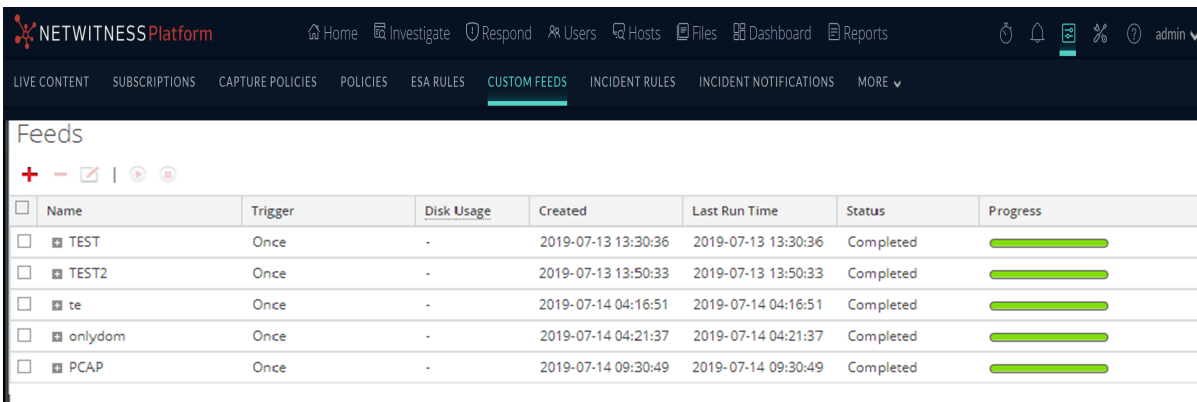

The feed data file (.csv or STIX (.xml or .json)) and optionally the feed definition file (.xml) must be available on the local file system for an on-demand custom feed. For a recurring custom feed, the files must be available at a URL that is accessible to the NetWitness server.

In NetWitness Platform, STIX (.xml) and (.json) feed of type Indicators or Observable which contains the properties such as the IP addresses, File hashes, Domain names, URIs and Email addresses are supported. The properties values in the Equals operator is only supported. The STIX constructs that are parsed are Indicator Title and Description, Observable Title and description and Indicator Sightings information. The STIX (.xml and .json) with a single STIX_Package is only supported."

To create a STIX custom feed:

1. Go to  (Configure) > CUSTOM FEEDS.

The Custom Feeds view is displayed.

- In the toolbar, click .

The Setup Feed dialog is displayed.

- To select the feed type, click **Custom Feed** and **Next**.

The Configure a Custom Feed wizard is displayed, with the Define Feed dialog open.

The following figure represents a datasource containing STIX version 1.2 or lower indicators uploaded in XML format.

The screenshot shows a dialog box titled "Configure a Custom Feed" with a close button (X) in the top right corner. The dialog is divided into four steps: "Define Feed", "Select Services", "Define Columns", and "Review". The "Define Feed" step is currently active. The configuration options are as follows:

- Feed Type:** Radio buttons for "CSV" and "STIX", with "STIX" selected.
- Name *:** Text input field containing "STIXFiles".
- STIX Source:** A dropdown menu with "All STIX V1 Files" selected. This dropdown is highlighted with a red rectangular border.
- Recur Every:** A numeric input field set to "5" and a unit dropdown menu.
- Date Range:** An unchecked checkbox.
- Advanced Options:** A section with a collapse icon and the following fields:
 - XML Feed File:** A "Select File" button next to a text input field, with a "Browse" button to its right.
 - Separator:** A text input field containing "~".
 - Comment:** A text input field containing "#".

At the bottom of the dialog, there are four buttons: "Reset", "Cancel", "Prev", and "Next". The "Next" button is highlighted in blue.

The following figure represents a datasource containing STIX version 2.0 and 2.1 indicators uploaded in JSON format.

4. Enter the following details:
 - a. **Feed Type:** Select **STIX**, to define a feed based on a STIX formatted `.xml` or `.json` file.
 - b. **Name:** Type the feed name, to define a feed based on STIX formatted `.xml` or `.json` file.
 - c. **STIX Source:** Select a STIX data source from the drop-down which is added in Context Hub.
 - d. **Recur Every:** Specify a recurring feed task that executes repeatedly at specified intervals.

Note: NetWitness verifies the connection to the server, so that NetWitness can check for the latest file automatically before each recurrence.

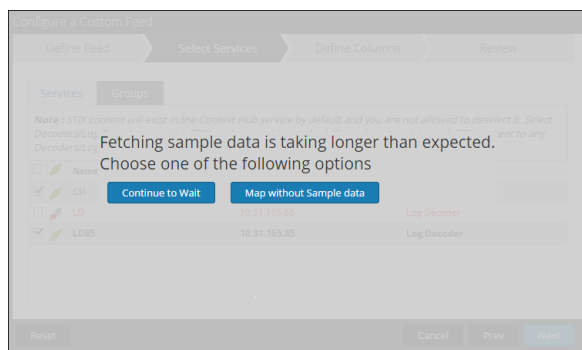

- e. **Date Range:** Select the checkbox and specify the date range for the feed task to recur.
5. (Optional) Select **Advanced Options**, to define a feed based on an XML feed file.

- a. **XML Feed file:** Browse and select an XML feed file from the local file system.
 - b. **Separator:** Choose a separator (default is comma).
 - c. **Comment:** Specify the comment characters used in the feed data file (default is #).
6. Click **Next**.
7. The Select Services dialog is displayed. This is an example of the form for a feed based on a feed data file with no feed definition file. If you are defining a feed based on a feed definition file, the Define Columns tab is not needed.

8. To identify services on which to deploy the feed, do one of the following:
- a. Select one or more Decoders and Log Decoders, and click **Next**.
 - b. In case of STIX feed, Context Hub will be selected by default and you are not allowed to deselect it. In addition, you can select one or more Decoders and Log Decoders and click **Next** or Click the **Groups** tab and select a group. Click **Next**.

If the data from the STIX server is large, the following message is displayed:

- If you click **Continue to Wait**, it continues to wait till the sample data is fetched or timeout (10 minutes) whichever is sooner. In case of timeout no sample data is retrieved even after 10 minutes.
- If you click **Map Without Sample data**, the mapping column is displayed without any sample data.

The Define Columns dialog is displayed.

9. To map columns in the Define Columns form:
- a. Define the Index type: **IP**, **IP Range**, or **Non IP**, and select the index column.
 - b. (Optional) If the index type is **IP** or **IP Range** and the IP address is in CIDR notation, select **CIDR**.

- c. (Optional) If the index type is **Non IP**, additional settings are displayed. Select the service type and **Callback Keys**, and optionally select the **Truncate Domain** option.

The screenshot shows the 'Configure a Custom Feed' dialog box in the 'Define Columns' step. The 'Define Index' section has 'Type' set to 'IP' (selected) and 'Non IP' (unselected). 'Index Column(S)' is set to '10' and 'CIDR' is unchecked. The 'Define Values' section contains a table with 4 columns and 5 rows of data.

Column	1	2	3	4
Key				
Header	Indicator Title	Indicator Description	Observable Title	Observable Description
	Some Indicator	<p>Some Indicator</p>	domain:domain1.exa...	domain:domain1.exa...
	Some Indicator	<p>Some Indicator</p>	domain:domain2.exa...	domain:domain2.exa...
	indicator-domain	auto domain test	domain test	domain desc
	Another Indicator	<p>Another Indicator...	domain:domain3.exa...	domain:domain3.exa...

Note:

- If the **Index Type** is Non IP, you can select multiple index columns in the **Index Column(S)**. The values from all the selected columns are merged in the first index column that you selected and the merged values are pushed to the Log Decoder for parsing. For example, in the **Index Column(S)** if you select 2,4,7 as index columns the values from the 2,4 and 7 columns are merged in the column 2 and the values are pushed to Log Decoder for parsing.
- Indexing cannot be done for the columns such as Indicator Title, Indicator Description, Observable Title, Observable Description, as the look up cannot be performed for those columns.

- d. Select the language key to apply to the data in each column from the drop-down list. The meta displayed in the drop-down list is based on the meta available for the service define values. You can also add other meta based on advanced expertise.
- e. Click **Next**.
- The Review dialog is displayed.

10. Anytime before you click **Finish**, you can:
 - Click **Cancel** to close the wizard without saving your feed definition.
 - Click **Reset** to clear the data in the wizard.
 - Click **Next** to display the next dialog (if not viewing the last form).
 - Click **Prev** to display the previous dialog (if not viewing the first form)
11. Review the feed information, and if correct, click **Finish**.
12. Upon successful creation of the feed definition file, the Create Feed wizard closes, and the feed and corresponding token file are listed in the Feed grid and progress bar tracks completion. You can expand or collapse the entry to see how many services are included, and which services were successful.

<input type="checkbox"/>	Name	Trigger	Disk Usage	Created	Last Run Time	Status	Progress
<input type="checkbox"/>	TEST	Once	-	2019-07-13 13:30:36	2019-07-13 13:30:36	Completed	<div style="width: 100%;"></div>
<input type="checkbox"/>	TEST2	Once	-	2019-07-13 13:50:33	2019-07-13 13:50:33	Completed	<div style="width: 100%;"></div>
<input type="checkbox"/>	te	Once	-	2019-07-14 04:16:51	2019-07-14 04:16:51	Completed	<div style="width: 100%;"></div>
<input type="checkbox"/>	onlydom	Once	-	2019-07-14 04:21:37	2019-07-14 04:21:37	Completed	<div style="width: 100%;"></div>
<input type="checkbox"/>	PCAP	Once	-	2019-07-14 09:30:49	2019-07-14 09:30:49	Completed	<div style="width: 100%;"></div>

Note: Health and Wellness raises alerts when the available heap memory of Context Hub server is critically low and the status displays as unhealthy due to low memory. For more information on how to troubleshoot the `OutOfMemoryError` on the Context Hub Server, see "Troubleshooting" in the *Live Services Management Guide*.

MetaCallback Feeds using CIDR Index Range for IPv4 and IPv6

You can use CIDR index ranges for IPv4 and IPv6 in custom MetaCallback feeds. As with other custom feeds, you must create feed data file in .csv format, and a feed definition file in .xml format.

Note: Using MetaCallback feeds with CIDR index ranges is supported only through the Advanced Configuration wizard or the REST interface.

The following example shows the content of both a .csv file and an .xml file for a MetaCallback feed using CIDR index ranges for IPv4 or IPv6.

CSV File Content

```
192.168.0.0/24, Sydney
192.168.1.0/24, Melbourne
```

XML File Content

```
<?xml version="1.0" encoding="UTF-8"?><FDF
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:noNamespaceSchemaLocation="feed-definitions.xsd">
<FlatFileFeed name="ip_test" path="ip_test.csv" separator="," comment="#">
<MetaCallback name="DstIP" valuetype="IPv4" apptype="0" truncdomain="false">
<Meta name="ip.dst"/>
</MetaCallback>
<LanguageKeys>
<LanguageKey name="alert" valuetype="Text" />
</LanguageKeys>
<Fields>
<Field index="1" type="index" range="cidr"/>
<Field index="2" type="value" key="alert" />
</Fields>
</FlatFileFeed>
</FDF>
```

Note: To configure a CIDR index range for feeds with single or multiple MetaCallbacks of value type IPv4 or IPv6, the field of type index MUST contain a range attribute with range="cidr". Also, configuring "cidr" index ranges for feeds with MetaCallbacks of multiple different value types is not supported.

Creating and Managing an Identity Feed

You can easily create an Identity feed and populate it to selected Decoders and Log Decoders. After completing this procedure, you will have created an Identity feed.

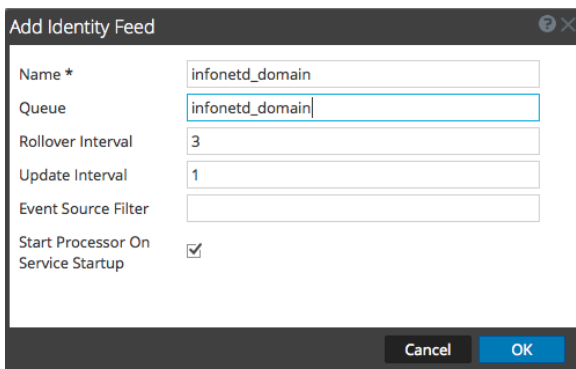

To create an identity feed:

1. Add a destination for the feed.
 - a. Go to  (Admin) > Services and in the Services.
 - b. In the list of services, select a **Log Collector** service, and select   **View > Config**.
 - c. Select the **Event Destinations** tab.
 - d. In the Select **Event Destinations** field, select **Identity Feed**.

- e. Click  and enter a unique name for the feed.

The Queue name identifies the feed within the Log Collector. Use the name of the feed for the Queue.

 The 'Add Identity Feed' dialog box is shown. It has the following fields and values:

- Name *: infonetd_domain
- Queue: infonetd_domain
- Rollover Interval: 3
- Update Interval: 1
- Event Source Filter: (empty)
- Start Processor On Service Startup:

 At the bottom, there are 'Cancel' and 'OK' buttons.

- f. Click **OK**.
2. Test generation of messages.
 - a. Have users log into Windows boxes on the domain to generate the appropriate log messages on the domain controllers for testing.

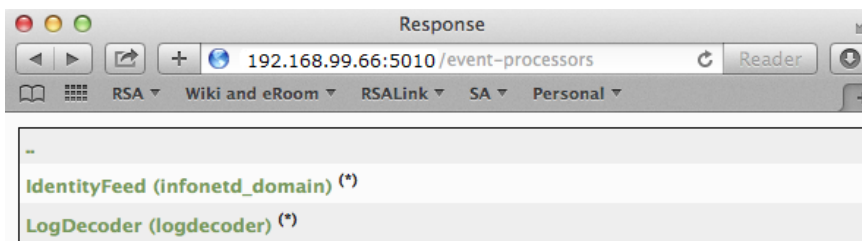

- b. Verify that data is written to the feed files. SSH to the Log Decoder/Collector or Virtual Log Collector being configured. Navigate to `/var/netwitness/logcollector/runtime/identity-feed` and verify that the `Identity_deploy` files are getting populated with data.

```
[root@tps-reports identity-feed]# pwd
/var/netwitness/logcollector/runtime/identity-feed (channel 541720): id
[root@tps-reports identity-feed]# ls -lah
total 20K
drwxr-xr-x. 2 root root 109 Nov  8 18:06 .
drwxr-xr-x. 8 root root 4.0K Nov 12 23:14 ..
-rw-r--r--. 1 root root 106 Nov 13 15:24 identity_deploy.csv
-rw-----. 1 root root 408 Nov 13 15:24 identity_deploy.feed
-rw-r--r--. 1 root root 981 Nov  8 09:06 identity_deploy.xml
-rw-r--r--. 1 root root 158 Nov 13 15:17 identitycache.csv
[root@tps-reports identity-feed]#
```

- c. Open up a web browser (Non-Internet Explorer browsers preferred) and log in to the REST interface of the Log Collector. Use administrative credentials when logging in. For example, if the IP address of your Log Collector is 192.168.99.66, the URL would be:

- SSL not enabled: **<http://192.168.99.66:50101/event-processors>**
- SSL enabled: **<https://192.168.99.66:50101/event-processors>**

The browser screen should look like this:

The screen contains the name of the identity feed you created earlier (`infonetd_domain`, in this example).

For the identity feed to function correctly, port 50101 must be active on the Log Collector, and you must determine whether SSL encryption is active.

- d. Go to  (Admin) > Services > <Log Collector being setup>  > View > Explore.
- e. In the left pane, expand **rest** > **config**.

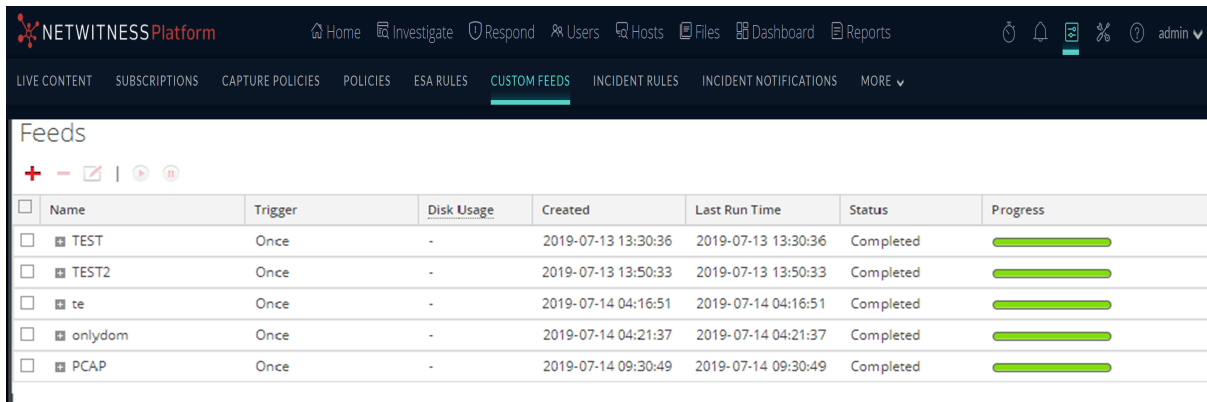

For REST to be active, **enabled** must be set to **1**.

f. Note the value for **ssl**. If SSL should be enabled for your environment, this must be set to **on**.

Note: If you changed the setting for either the **enabled** or **ssl** option you must restart the Log Collector service before moving forward.

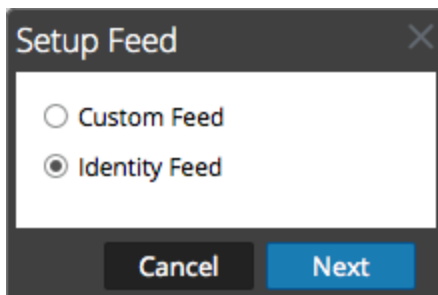

3. Go to  **(Configure) > Custom Feeds**.

The Feeds dialog is displayed.

4. In the toolbar, click .

The Setup Feed dialog is displayed.

5. Make sure **Identity Feed** is selected and click **Next**.

The Configure Identity Feed panel opens with the **Define Feed** tab displayed.

6. (Conditional) You can create an on-demand or recurring feed.
 - To define an on-demand Identity feed task that executes once, select **Adhoc** in the **Feed Task Type** field, type the feed **Name**, and browse for and open the feed.
 - To define a recurring Identity Feed task that executes on a recurring basis, select **Recurring** in the **Feed Task Type** field.

The **Define Feed** dialog includes the fields for a recurring feed.

Note: NetWitness verifies the location where the file is stored, so that NetWitness can check for the latest file automatically before each recurrence.

7. Enter a value and verify the URL field.
 - a. In the **URL** field, enter the URL where the feed data file is located. This is the REST API interface that was setup earlier. Make sure you have the following information to construct the URL:
 - The IP address of the Log Collector being used to construct the Identity Feed file.
 - The identity queue name, as set in [step 2c](#).
 - Whether or not SSL is enabled on the Log Collector REST port, as set in [step 2f](#).

You can construct this value as follows:

- SSL enabled: `https://<LogCollector>:50101/event-processors/<ID Event processor name>?msg=getFile&force-content-type=application/octet-stream&expiry=600`
- SSL not enabled: `http://<LogCollector>:50101/event-processors/<ID Event processor name>?msg=getFile&force-content-type=application/octet-stream&expiry=600`

So, using the example from earlier, the complete value that you would enter into this field is as follows:

```
http://192.168.99.66:50101/event-processors/infonetd_domain?msg=getFile&force-content-type=application/octet-stream&expiry=600?msg=getFile&force-content-type=application/octet-stream&expiry=600
```

- b. For the URL verification to work correctly, it is important that the NetWitness UI server can access the Log Collector's REST API port (50101). This can be tested by going to the NetWitness UI server via SSH. Once there, run the following command:

- SSL enabled: `curl -vk https://<ip of log collector>:50101`
- SSL not enabled: `curl -v http://<ip of log collector>:50101`

If the `curl` command does not connect then there may be a network firewall or routing issue between the NetWitness UI server and the Log Collector.

Example of a bad connection:

```
* About to connect() to 192.168.99.66 port 50105 (#0)
* Trying 192.168.99.66... No route to host
* couldn't connect to host
* Closing connection #0
curl: (7) couldn't connect to host
```

Example of a good connection:

```
* About to connect() to 192.168.99.66 port 50105 (#0)
* Trying 192.168.99.66... connected
* Connected to 192.168.99.66 (192.168.99.66) port 50105 (#0)
> GET / HTTP/1.1
> User-Agent: curl/7.19.7 (x86_64-redhat-linux-gnu) libcurl/7.19.7
NSS/3.19.1 Basic ECC zlib/1.2.3 libidn/1.18 libssh2/1.4.2
> Host: 192.168.99.66:50105
> Accept: */*
>
< HTTP/1.1 401 Unauthorized
< Content-Length: 71
< Connection: Keep-Alive
< Pragma: no-cache
< Expires: -1
< Cache-Control: no-cache, no-store, must-revalidate
< WWW-Authenticate: Basic realm="NetWitness"
< Content-Type: text/xml; charset=utf-8
<
<?xml version="1.0" encoding="utf-8"?>
<error>401 Unauthorized</error>
* Connection #0 to host 192.168.99.66 left intact
* Closing connection #0
```

8. The REST API requires a username and password when attempting to pull the `identity_deploy.csv` file from the Log Collector. This can be any username and password that is available on the service itself. For more information, see the "Services Security View" topic in the *Hosts and Services Guide*.

To see which accounts are available, go to  (Admin) > Services > <log collector being setup> > Actions > View > Security.

Under the Users table, you see all the users that can be used in this step. It is suggested that a separate user account is created specifically for this setup, and is used nowhere else in the environment, for added security. For details, see "Add a User and Assign a Role" in the *System Security and User Management Guide*. (Go to the [NetWitness All Versions Documents](#) page and find NetWitness Platform guides to troubleshoot issues.)

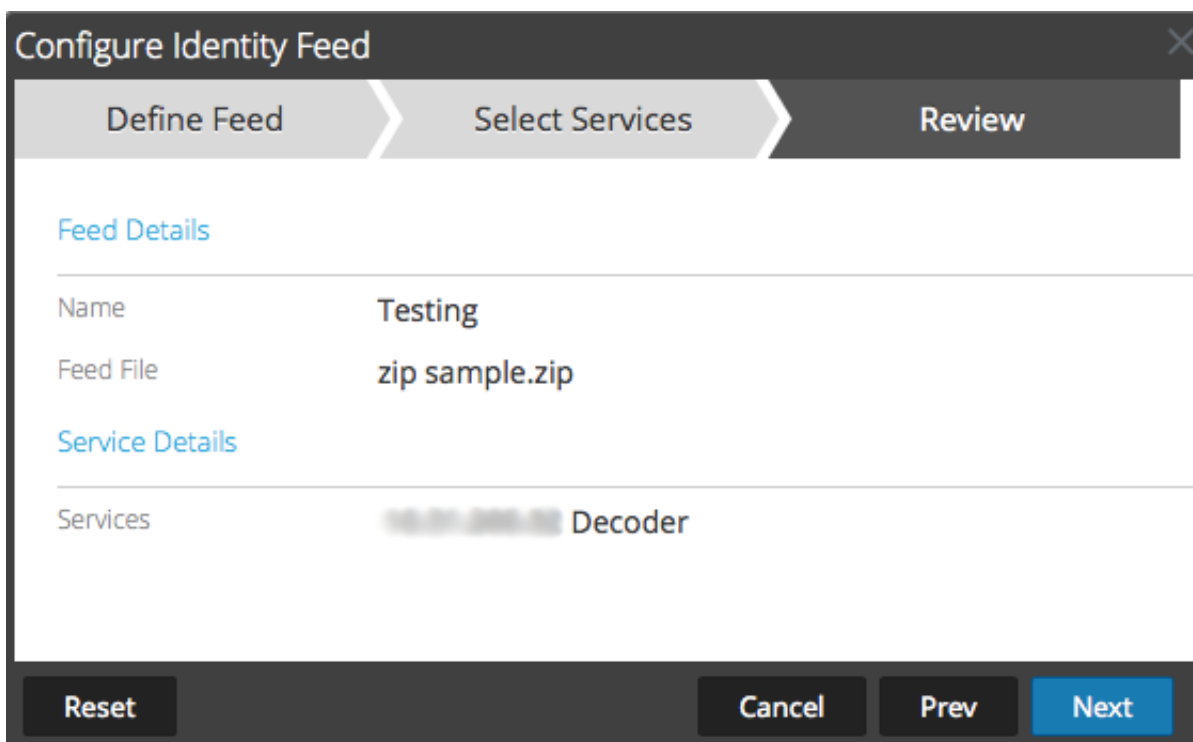

9. To define the recurrence interval, do one of the following:

- Specify the number of minutes, hours, or days between recurrences of the feed.
 - Enter the date range for the execution of the feed to recur, specify the **Start Date** and time and the **End Date** and time.
10. If using SSL encryption, you need to install the REST API SSL certificate for the Log Collector into the NetWitness UI server. For more information, see [Import the SSL Certificate](#).
If, after importing the SSL certificate, the verification of the URL still fails, see [Cannot Verify Identity Feed URL](#).
 11. Click **Verify** to verify your identity feed configuration before you proceed to the Select Services dialog.
 12. Click **Next**.

The Select Services dialog is displayed.

13. To identify services on which to deploy the feed, select one or more Decoders and Log Decoders and click **Next**.
14. Click the **Groups** tab, select a group, and click **Next**.
The Review dialog is displayed.

Note: If a group of devices with Decoders and Log Decoders is used to create recurring or custom feeds and this group is deleted, you can edit the feed and add a new group to the feed.

15. Anytime before you click **Finish**, you can:
 - Click **Cancel** to close the wizard without saving your feed definition.
 - Click **Reset** to clear the data in the wizard.
 - Click **Next** to display the next form (if not viewing the last form).
 - Click **Prev** to display the previous form (if not viewing the first form).

16. Review the feed information, and if correct, click **Finish**.

Upon successful creation of the feed definition file, the Create Feed wizard closes, and the feed and corresponding token file are listed in the Feed grid and progress bar tracks completion. You can expand or collapse the entry to see how many services are included, and which services were successful.

Name	Trigger	Feed Size	Created	Last Run Time	Status	Progress
FILEHASH	Fetches STIX feeds from 2020-May-19 03:16, running every 5 minutes	0 bytes	2020-05-19 03:25:23	2020-05-22 05:16:01	Completed	<div style="width: 100%;"></div>
FILESTIX	Fetches STIX feeds from 2020-May-19 03:32, running every 5 minutes	0 bytes	2020-05-19 03:32:09	2020-05-22 05:12:09	Completed	<div style="width: 100%;"></div>
AllIndicatorsREST	Fetches STIX feeds from 2020-May-19 04:48, running every 5 minutes	0 bytes	2020-05-19 05:03:52	2020-05-22 05:13:26	Completed	<div style="width: 100%;"></div>
ALLIndEdited	Fetches STIX feeds from 2020-May-19 05:13, running every 5 minutes	0 bytes	2020-05-19 05:13:54	2020-05-22 05:13:54	Completed	<div style="width: 100%;"></div>
TAXIServer1	Fetches STIX feeds from 2020-May-19 05:44, running every 5 minutes	288 bytes	2020-05-19 05:44:38	2020-05-22 05:14:38	Completed	<div style="width: 100%;"></div>

Import the SSL Certificate

If SSL is configured on the Identity feed's Log Collector, follow these steps to import the Log Collector's SSL certificate into the NetWitness UI server key store. If this certificate is not imported, the NetWitness UI server will be unable to pull the Identify feed file from the Log Collector.

1. To pull the SSL certificate off the Log Collector, SSH into the NetWitness UI server and run the following command:

```
echo -n | openssl s_client -connect <HOST>:<PORT> | sed -ne '/-BEGIN
CERTIFICATE-/,/-END CERTIFICATE-/p' > /tmp/<SERVERNAME>.cert
```

This command saves the SSL certificate to /tmp/<SERVERNAME>.cert. For example:

```
echo -n | openssl s_client -connect 192.168.99.66:50101 | sed -ne '/-BEGIN
CERTIFICATE-/,/-END CERTIFICATE-/p' > /tmp/logcollector.cert
```

2. To import the SSL certificate into the NetWitness UI server, SSH into the UI server and run the following command:

```
keytool -importcert -alias <name an alias for the cert> -file <the cert
file pathname> -keystore /etc/pki/java/cacerts
```

For example:

```
keytool -importcert -alias logcollector01 -file /tmp/logcollector.cert -
keystore /etc/pki/java/cacerts
```

3. The system requests a password. Enter the password for the keystore on the NetWitness UI server, not for the jetty keystore. The default password is **changeit**.
4. Restart **jetty** to allow jetty to read the new certificate in the store.

Cannot Verify Identity Feed URL

If the Identity feed URL cannot be verified, and you are using SSL, make sure you followed the steps in [Import the SSL Certificate](#).

If there are issues, it is possible that the internal name of the certificate does not match the hostname of the Log Collector. The following procedure checks this.

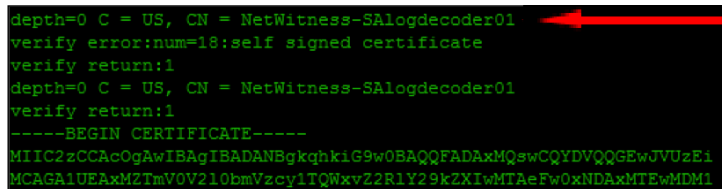

1. SSH to the NetWitness UI server.
2. Run the following command to output the CN name of the SSL cert:

```
echo -n | openssl s_client -connect <log decoder>:50101 | sed -ne '/BEGIN
CERTIFICATE-/,/-END CERTIFICATE-/p'
```

For example:

```
echo -n | openssl s_client -connect salogdecoder01:50101 | sed -ne '/BEGIN
CERTIFICATE-/,/-END CERTIFICATE-/p'
```

3. Retrieve the CN name of the SSL certificate.

```
depth=0 C = US, CN = NetWitness-SALogdecoder01
verify error:num=18:self signed certificate
verify return:1
depth=0 C = US, CN = NetWitness-SALogdecoder01
verify return:1
-----BEGIN CERTIFICATE-----
MIIC2zCCAcoGAwIBAgIBADANBgkqhkiG9w0BAQQFADAMQswCQYDVQQGEwJVUzE1
MCAGA1UEAxMZTmV0V210bmVzcy1TQWxvZ2R1Y29kZ2l0MTAeFw0xNDExMTEwMDM1
```

4. Edit the `/etc/hosts` file and add the IP address and CN name to the file.

```
# Created by NetWitness Installer on Fri Jan 10 21:42:10 UTC 2014
127.0.0.1 SAserver01 localhost.localdom localhost
::1 SAserver01 localhost.localdom localhost ip6-localhost ip6-loopback
192.168.10.23 NetWitness-SALogdecoder01
```

5. Restart the network service on the appliance.
6. Confirm that the name placed in the `/etc/hosts` file is used instead of the FQDN or IP address in the Identity feed URL.
7. Re-verify the Identity feed URL.

Investigating an Identity Feed

An identity feed tracks interactive log on events from the Windows operating system. Identity feeds do not track interactive log off events.

In order for an identity feed to process events and tag them, the events need to be collected using a Windows Log Collection module where an Active Domain Controller or non-Domain Controller is configured. Note that identity feeds can only be processed via an Identity Feed Event Processor.

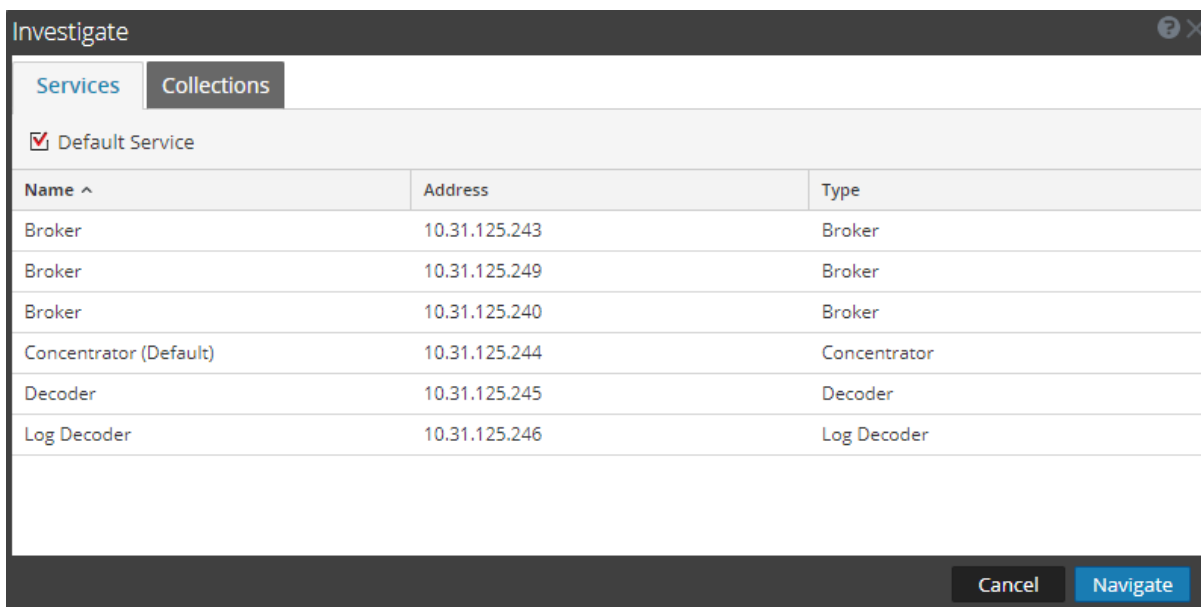

Note: An identity feed only tracks one log in at a time. If two users log in to a system at the same time, the second user will overwrite the first user's data in the identity feed.

Once you have created an identity feed, you can view the results by investigating the feed.

To investigate a configured identity feed:

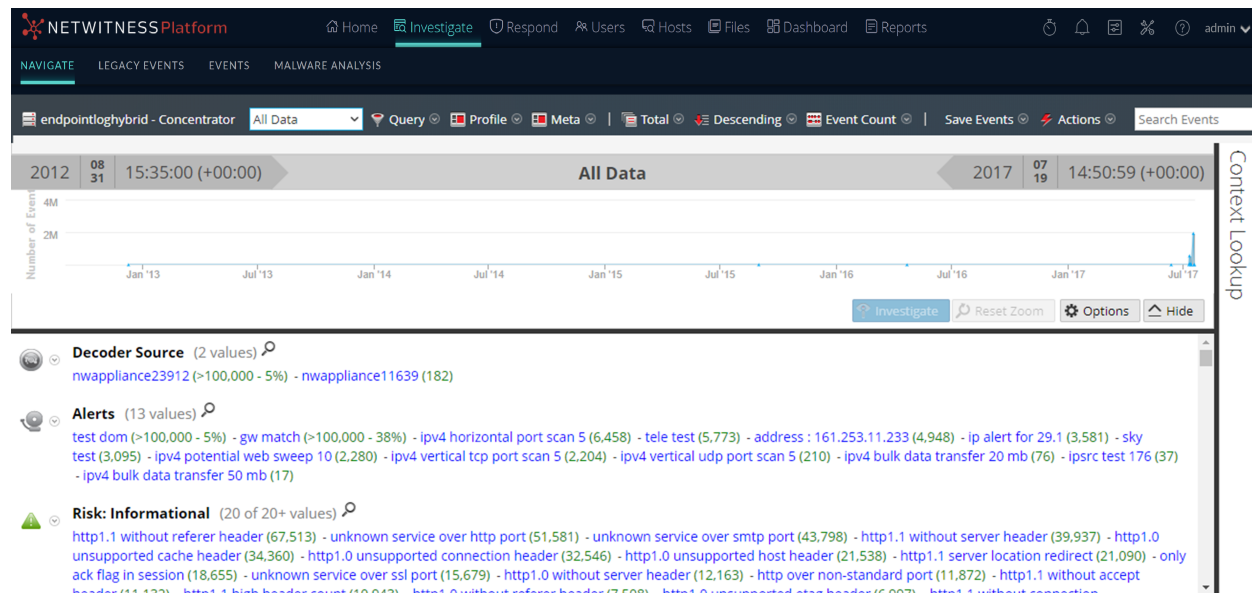

1. Go to **INVESTIGATE > Navigate**.

If no default service is selected, the Investigate dialog is displayed.

2. Select a service, usually a Concentrator, and click **Navigate**.
3. Select **Load Values** to retrieve meta data.

In the Values panel, scroll down to find the Meta Keys:

The identity feed provides information to selected Decoders and Log Decoders. It associates the Host IP data from the Windows operating system to the user logging into that Host in order to tag all logs associated with that IP and investigate.

Editing a Feed

This topic provides instructions for editing a custom feed using the Custom Feed Wizard.

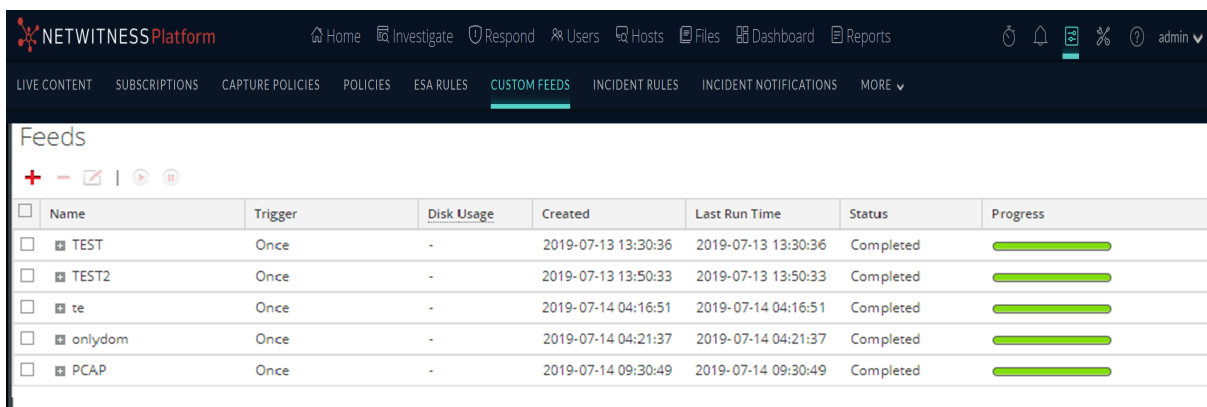

After you edit a feed:

- The feed (**.zip** format) or the file used to create the feed (**.csv** or **.xml**) has been downloaded and edited.
- The feed has been recreated with the updated file and new feed specifications.

To edit an existing feed:

1. Go to  (Configure) > CUSTOM FEEDS.

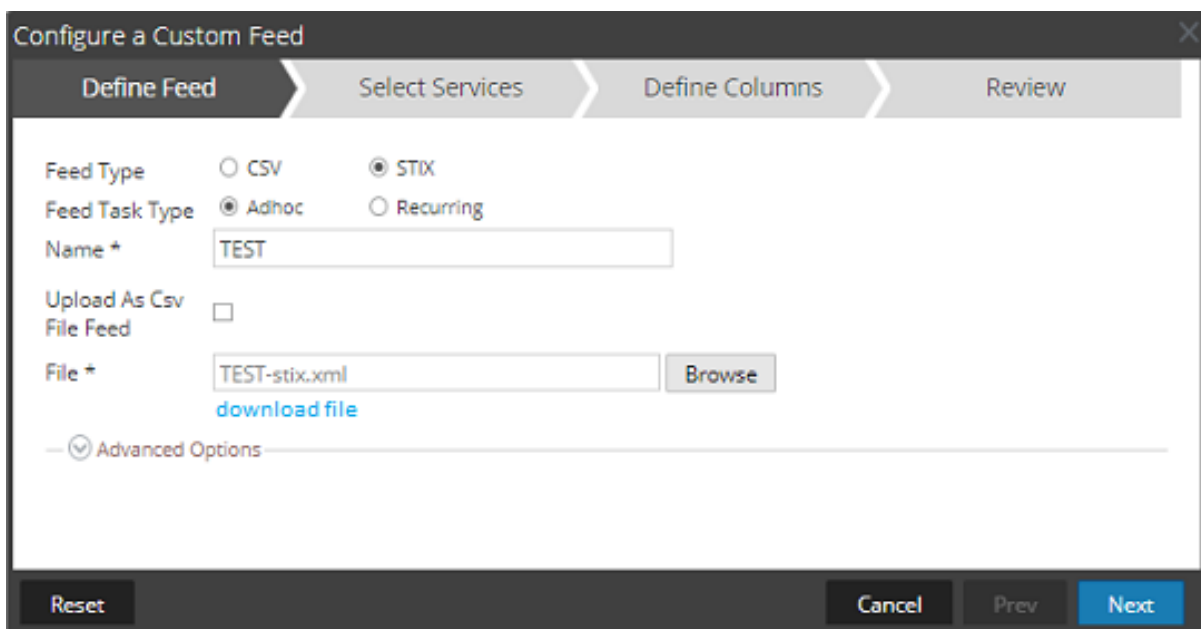

The Custom Feeds dialog is displayed.

Name	Trigger	Disk Usage	Created	Last Run Time	Status	Progress
TEST	Once	-	2019-07-13 13:30:36	2019-07-13 13:30:36	Completed	<div style="width: 100%;"></div>
TEST2	Once	-	2019-07-13 13:50:33	2019-07-13 13:50:33	Completed	<div style="width: 100%;"></div>
te	Once	-	2019-07-14 04:16:51	2019-07-14 04:16:51	Completed	<div style="width: 100%;"></div>
onlydom	Once	-	2019-07-14 04:21:37	2019-07-14 04:21:37	Completed	<div style="width: 100%;"></div>
PCAP	Once	-	2019-07-14 09:30:49	2019-07-14 09:30:49	Completed	<div style="width: 100%;"></div>

2. In the toolbar, select a feed and click .

The Configure Custom Feed or Configure Identity Feed panel opens in the Custom Feed wizard.

Configure a Custom Feed

Define Feed | Select Services | Define Columns | Review

Feed Type: CSV STIX

Feed Task Type: Adhoc Recurring

Name:

Upload As Csv:

File Feed:

File:

[download file](#)

Advanced Options

3. If you want to edit the feed file:
 - a. Click **download file**.

For an Identity feed, the .zip file is downloaded. For a custom feed, the .csv or .xml file is downloaded to your local file system.
 - b. Edit and save the file.
 - c. In the **Define Feed** tab, browse for and open the edited file.
4. Edit any other parameters in the **Define Feed** tab, **Select Services** tab, and **Define Columns** tab that apply to the type of feed.
5. Anytime before you click **Finish**, you can:
 - Click **Cancel** to close the wizard without saving your changes.
 - Click **Reset** to clear the data in the wizard.
 - Click **Next** to display the next form (if not viewing the last form).
 - Click **Prev** to display the previous dialog (if not viewing the first form).
6. In the **Review** tab, review the feed information, and if correct, click **Finish**.

The feed is added to the feeds list and progress bar tracks completion. Upon successful creation of the feed definition file, the Create Feed wizard closes, and the feed and corresponding token file is listed in the Feeds list. You can expand or collapse the entry to see how many services are included, and which services are successful.

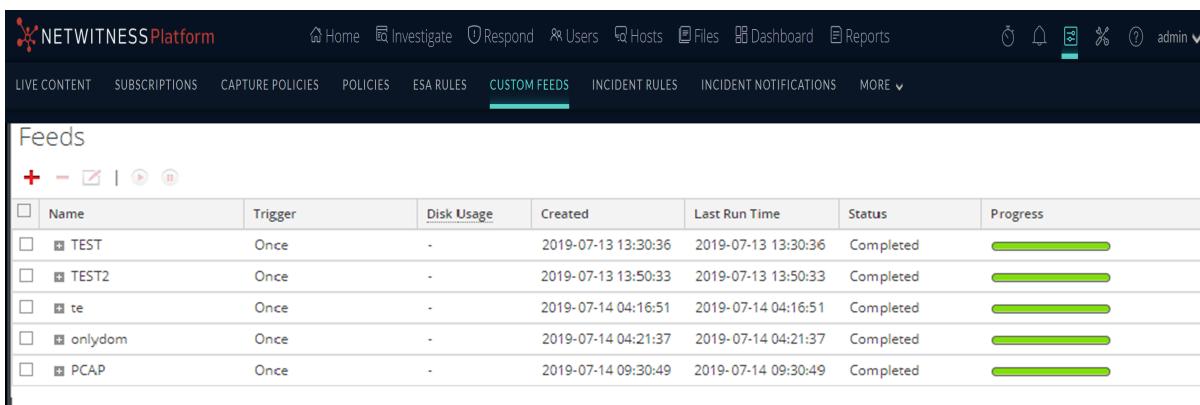

Removing a Feed

This topic provides instructions for removing a feed. You might want to remove a feed when some or all of the information in the feed is no longer useful for your organization.

To remove a feed:

1. Go to  **(Configure) > CUSTOM FEEDS.**

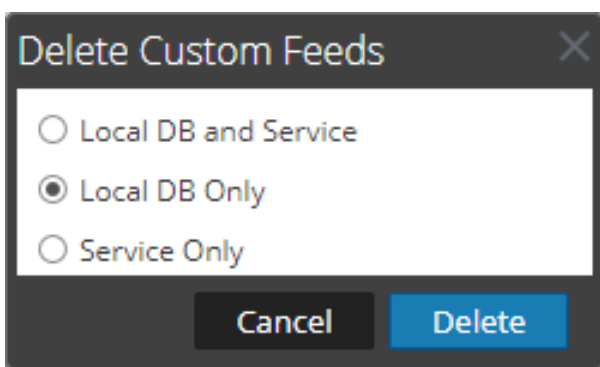

The Custom Feeds dialog is displayed.

<input type="checkbox"/>	Name	Trigger	Disk Usage	Created	Last Run Time	Status	Progress
<input type="checkbox"/>	TEST	Once	-	2019-07-13 13:30:36	2019-07-13 13:30:36	Completed	<div style="width: 100%;"></div>
<input type="checkbox"/>	TEST2	Once	-	2019-07-13 13:50:33	2019-07-13 13:50:33	Completed	<div style="width: 100%;"></div>
<input type="checkbox"/>	te	Once	-	2019-07-14 04:16:51	2019-07-14 04:16:51	Completed	<div style="width: 100%;"></div>
<input type="checkbox"/>	onlydom	Once	-	2019-07-14 04:21:37	2019-07-14 04:21:37	Completed	<div style="width: 100%;"></div>
<input type="checkbox"/>	PCAP	Once	-	2019-07-14 09:30:49	2019-07-14 09:30:49	Completed	<div style="width: 100%;"></div>

2. In the toolbar, select a feed and click .

The Delete Custom Feeds dialog is displayed.

You can select one of the following options to delete the feed:

- If you choose to delete the feed from **Local DB and Service**, the feed is deleted from both the service and the local NetWitness box. The deleted feed will no longer be seen on the NetWitness user interface.
- If you choose to delete the feed from **Local DB Only**, the feed is deleted from the local NetWitness box. The deleted feed will not be seen on the NetWitness user interface; however, the last deployed version of the feeds will be present on the service. The undeployed feeds will be deleted forever.
- If you choose to delete the feed from **Service Only**, the feed is deleted from the service. The deleted feed will appear on the NetWitness user interface and can be deployed again.

3. Select which feed you want to delete and click **Delete**.

A warning dialog is displayed.

4. Click **yes** to confirm that you want to delete the feed from the selected areas.

Subscribing to Live Resources

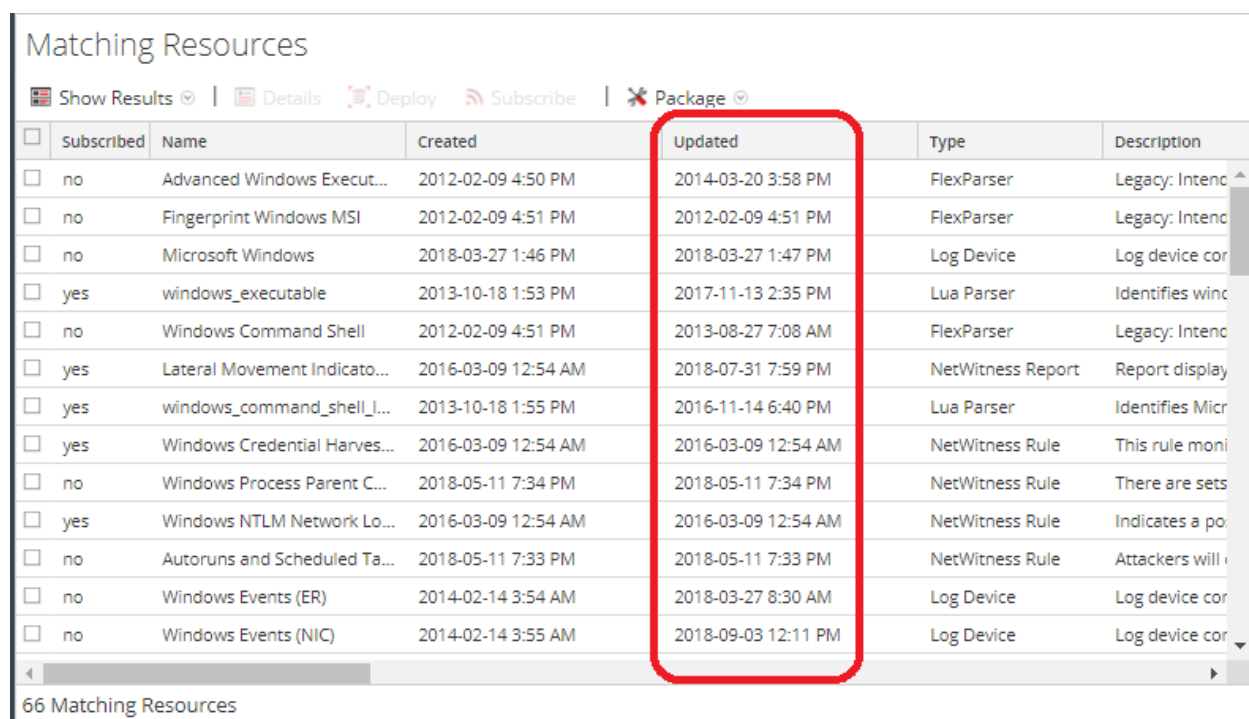

This section describes subscriptions in Live.

Threats and the corporate landscape change over time. NetWitness periodically reviews existing content to determine whether it needs to be updated based upon current campaigns, or has become irrelevant due to changes in technology or attack techniques and tools.

You can discover new content by using the What's New dashlet within the Default Dashboard, or by searching through NetWitness Live by data range since last deployed. Be sure to subscribe to any content for which you want to receive update notifications.

Subscription Updates

When you view resources in the Matching Resources panel of the Live Content view, there is a column named **Updated**:

<input type="checkbox"/>	Subscribed	Name	Created	Updated	Type	Description

66 Matching Resources

This value is also displayed when you select the detailed view for a resource. Every time a resource changes, its **Updated** value changes to match the specific update. If you are subscribed to a resource, and it gets updated, your system is automatically updated with the latest version, and you receive a

notification. You can view your notifications by clicking the Notification icon, , from anywhere in the NetWitness UI.

You can also get email notifications when subscribed resources are updated. System Administrators can add email addresses in the  (Admin) > SYSTEM > Live Services view. For more information, see the "Live Services Configuration Panel" topic in the *System Configuration Guide*.

Adding Subscribed Resources for Deployment to Services

- Go to  (Configure) > Subscriptions > Deployments.
- In the **Groups** panel, select a group.
Subscribed resources, if any, are listed in the Deployments tab Subscriptions panel.
- In the **Subscriptions** panel, click  .
The Add Subscription dialog, which lists subscriptions available for deployment, is displayed.
- Select the subscribed resources that you want to deploy to the services group.
- Click **Save**.
The dialog closes and the subscriptions are added to the listing in the Deployments tab, Subscriptions panel. This stages the resources for deployment at the next synchronization.
- You can click the Synchronize icon,  , to immediately synchronize your changes.

Deleting a Subscription

When you delete a subscription to a resource, deployed instances of the resource are not deleted. The deployed resource remains on services until explicitly removed, but the resource is no longer synchronized with the resource in NetWitness Live.

To delete a subscription:

- Go to  (Configure) > Subscriptions.
- In the **Subscriptions** tab, select the subscriptions you want to delete.

3. Click , then choose **Delete** to delete your selected resources or **Delete All** delete all subscriptions. A dialog asks for confirmation that you want to delete the subscription.
4. To confirm removal, click **Yes**.
Your selected subscriptions are deleted from the subscriptions list, but any deployed instances of the subscribed resource remain on the services.

Removing Subscribed Resources from the Deployments Subscriptions Grid

Subscriptions that are selected for deployment to a service group are deployed during synchronization. You can remove subscriptions from the Live  (Configure) > Subscriptions > Deployments panel, but any that have actually been deployed to services remain deployed until someone removes them.

To remove resources from the Deployments tab Subscriptions panel:

1. Go to  (Configure) > **Subscriptions** > **Deployments**
2. In the **Groups** panel, select a group.
Subscribed resources, if any, are listed in the Subscriptions panel.
3. In the Subscriptions panel, click .
A dialog requests confirmation that you want to delete the resource from the service group. The resource is removed from the Deployments tab Subscriptions panel, but is not removed from services on which it is deployed.

Subscribe and Unsubscribe to a Resource

When you subscribe to resources, you will receive notification when new versions of the resources are available.

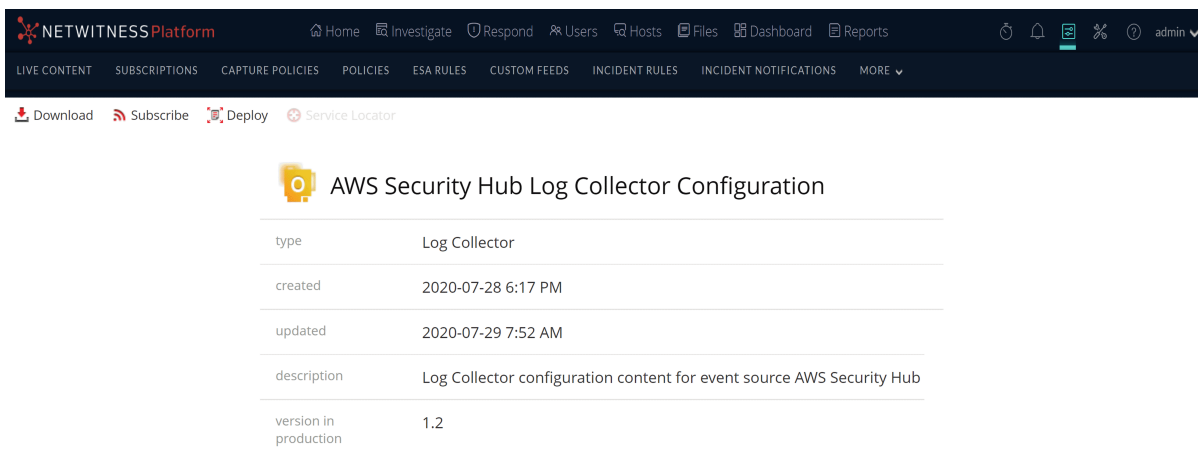

To subscribe to a resource:

1. Go to  (Configure) > **Live Content**.
2. In the **Search Criteria** panel, specify search criteria and click **Search**.
3. Select one or more resources and click  **Subscribe**.
A confirmation dialog is displayed: **By subscribing to these resources, you are indicating that you wish to receive notification when new versions are available.**
4. To confirm that you want to subscribe to the resource, click **OK**.
The resource is added to the subscriptions managed in the Subscriptions tab and is available for deployment in the Deployments tab.

When unsubscribing from a resource, you have the option to leave the resource on services on which it is deployed or to remove it from services.

To unsubscribe from a resource:

1. Open a detailed view of a resource in one of the following ways:
 - Perform a search,  **(Configure)** > **Live Content** > enter search criteria, then select the resource in the Matching Resources panel, then click  **Details**.
 - View subscriptions,  **(Configure)** > **Subscriptions**, select the resource from the Subscriptions list, then click  **Details**.

2. With the detailed view of a resource displayed, click  **Unsubscribe**.
A confirmation dialog is displayed.

3. Do one of the following:
 - To confirm that you want to unsubscribe from the resource and leave it on the services where it is deployed, click **Unsubscribe**.
 - To confirm that you want to unsubscribe from the resource and remove it from the services where it is deployed, click **Unsubscribe and Remove from Services**.
 - To close the dialog without unsubscribing, click **Cancel**.

The selected action is applied.

Viewing Subscribed Resources Selected to Deploy on Services

In the  **(Configure)** > **Subscriptions** > **Deployments** tab you can view subscribed resources that have been selected for deployment on services.

To view subscribed resources that have been selected for deployment on services:

In the **Groups** panel, select a group, and expand it to view services in the group. The resource subscriptions selected for deployment are listed in the Deployments tab Subscriptions panel.

Miscellaneous Live Services Procedures

This section describes several other procedures.

Displaying Resource Details in Live Resource View

After you select a resource (in the Live Resource View), you can view its detailed information.

To open a separate tab in the Live Resource view with details of a selected resource, do one of the following:

- If you are viewing the results in **Show Results > Detailed view**, click the resource type icon or the resource name.

The screenshot displays the NETWITNESS Platform interface. The top navigation bar includes links for Home, Investigate, Respond, Users, Hosts, Files, Dashboard, and Reports. The main content area is divided into two sections: Search Criteria and Matching Resources.

Search Criteria:

- Keywords: [Empty text input field]
- Category:
 - FEATURED
 - THREAT
 - IDENTITY
 - ASSURANCE
 - OPERATIONS
 - SPECTRUM
 - MALWARE ANALYSIS
- Resource Types:
 - Malware Rules (selected)
 - Log Collector
- Medium: [Empty dropdown menu]
- Required Meta Keys: [Empty text input field]
- [Search button]

Matching Resources:

- RSA Malware PE Artifacts**

type Malware Rules updated 2018-05-04 11:11 PM version 0.2 size 74.5 KB subscribed no

Log Collector configuration content for event source SAP ERP Central Component
event analysis, operations, log analysis

191 Matching Resources

- If you are viewing the results in **Show Results > Grid view**, double-click a resource or select a

resource and click **Details**.

Downloading a Resource

You can download a single resource from the [Live Resource View](#).

To download a resource:

1. Go to (Configure) > Live Content.
2. In the **Search Criteria** panel, enter the criteria needed to return the resource you want to download.
3. Select a single resource, then click **Details**.
4. Click **Download**.

The resource is saved as a ZIP archive to your local Downloads folder.

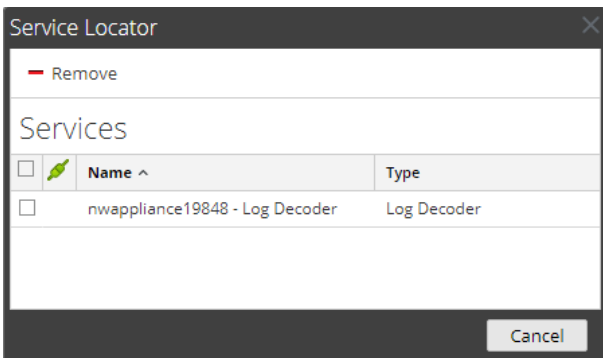

Locating and Removing a Deployed Resource from Services

You can locate and remove a deployed resource from services from the [Live Resource View](#).

To view a list of services on which a resource is deployed:

1. With a resource displayed in the **Resource View**, click **Service Locator**.

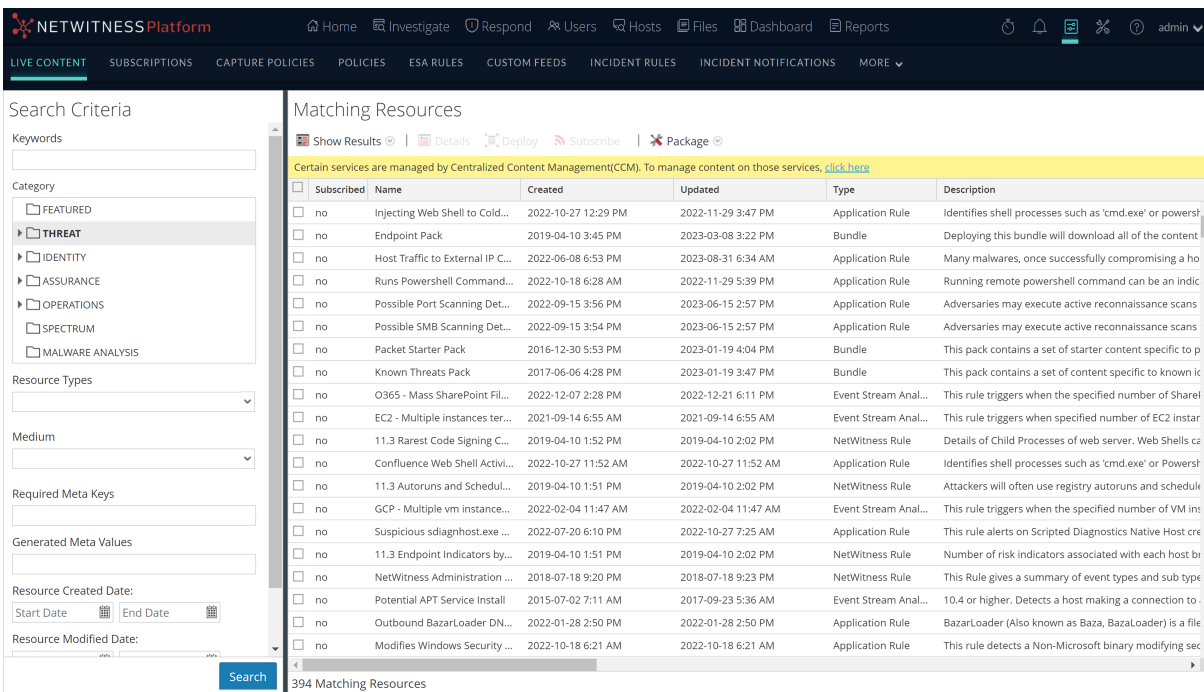

The Service Locator dialog is displayed.

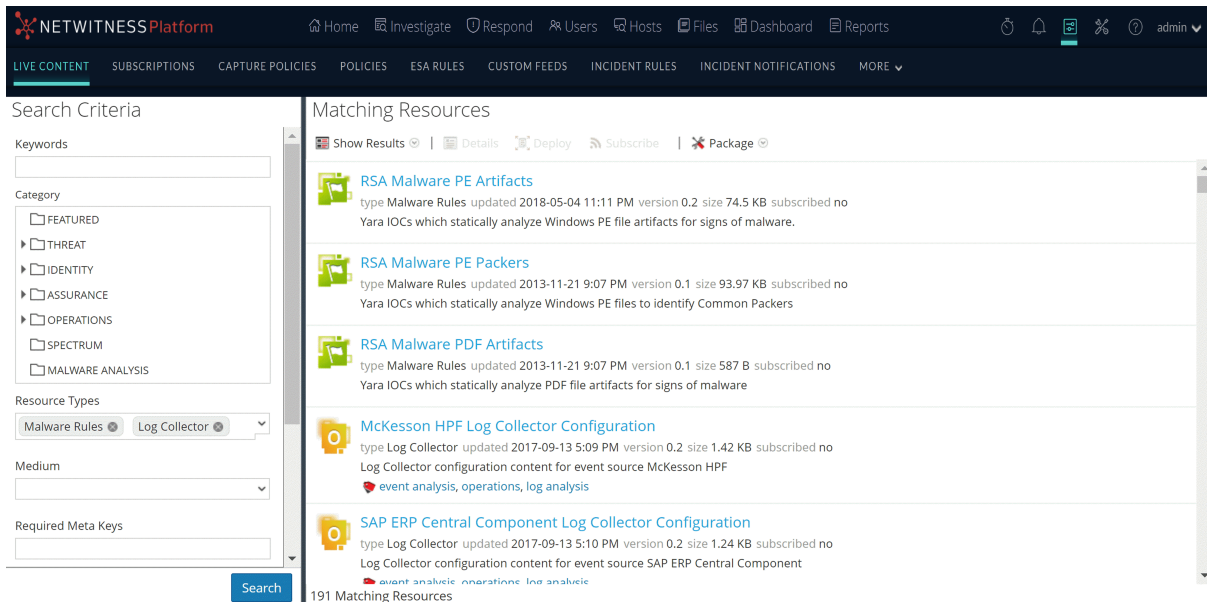

2. Select one or more services in the **Services** list.
 3. Click **-**.
- The resource is removed from the selected services.

Showing Results as a List or in Detail

1. Select **Show Results > Grid** to change to grid results when viewing detailed results.

2. Select **Show Results > Detailed** to change to detailed results when viewing grid results.

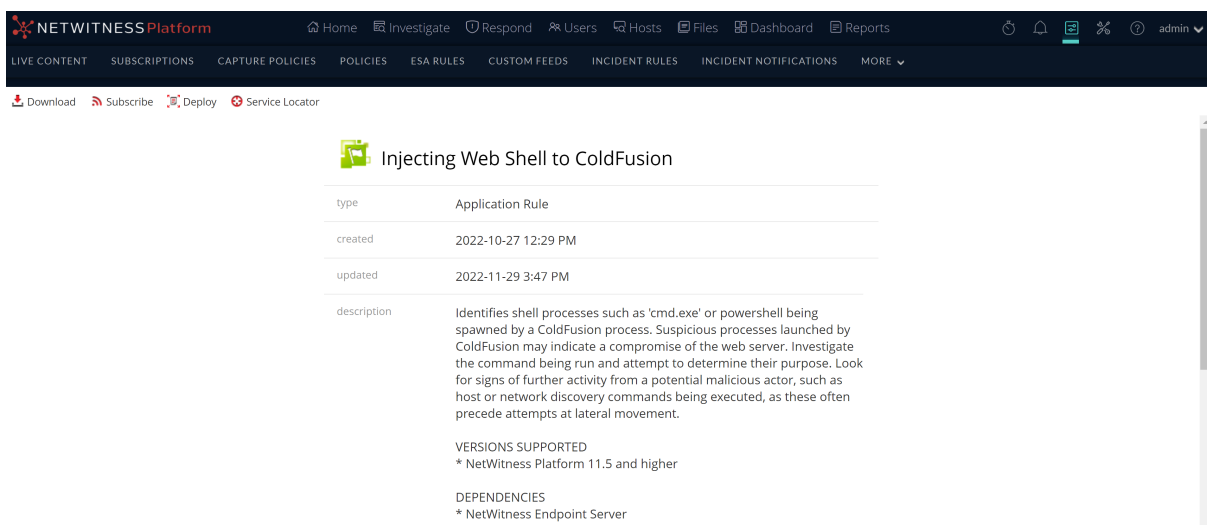

Viewing Resource Details

You can display detailed information about a subscribed resource in the Resource View.

To view details:

1. In the **Subscriptions** tab, select a single subscription.
2. Click  **Details**.

The details of the resource are displayed in the Resource View.

References

This topic is a collection of references, which describe the user interface and more detailed information about how Live works in NetWitness. These topics are presented in alphabetical order.

Live Configure View

In the Live Configure view, NetWitness provides integrated tools for managing Live resources. You can manage resource subscriptions, deployments to services and discontinued resources. The required role to access this view is **Configure Live Resources**. For a high-level description of how to use the different views in NetWitness Live, please read [Live Services Management](#).

To access this view, navigate to  **(Configure) > Subscriptions**. The view has three tabs: [Deployments Tab](#), [Subscriptions Tab](#), and [Discontinued Resources Tab](#).

Deployments Tab

The Deployments tab provides a user interface in the Live Configure view for:

- Viewing subscribed resources that are selected for deployment on services in a service group.
- Selecting subscribed resources to deploy to services in a service group.
- Removing resources that are selected for deployment on services in a service group.

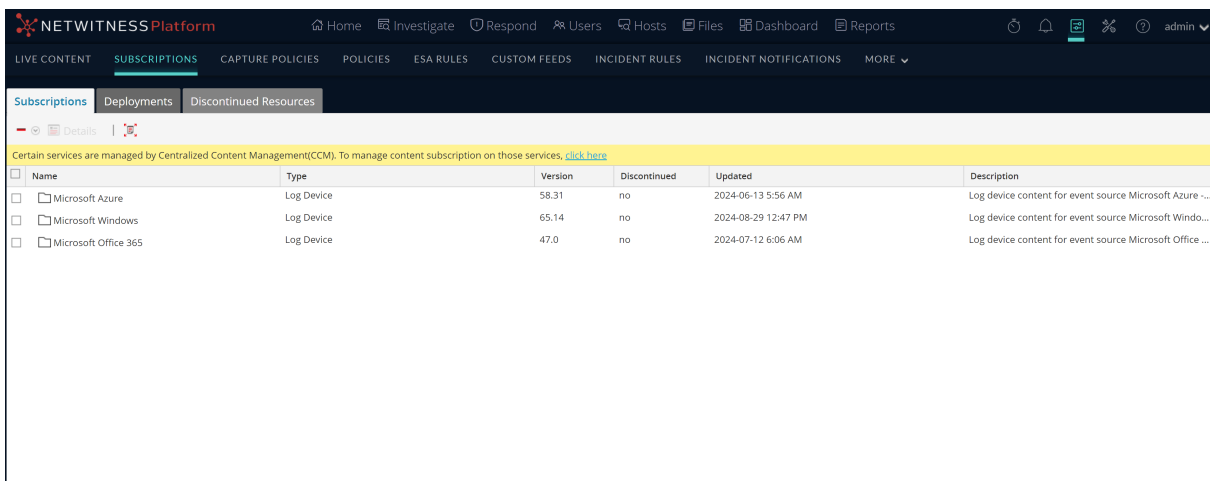

The resources listed here are not deployed immediately after adding to a service group. Instead the subscribed resources are pushed to the services when NetWitness synchronizes with NetWitness Live. The synchronization schedule is configured in the Live Configuration panel. Additionally, you can synchronize immediately in the  **(Configure) > Subscriptions > Deployments** tab.

Likewise, resources deleted from the Deployments panel are not deleted from service where they have been deployed. To delete resources from services, delete them in the Live Resource View.

The required permission to access this view is **Manage Live Resources**.

To access this view:

1. Go to  **(Configure) > Subscriptions**.
The **Subscriptions** tab is displayed.
2. Click the **Deployments** tab.

The Deployments tab has two panels: **Groups** and **Subscriptions**.

Groups Panel

The Groups panel is a static display of configured service groups that were created in the Administration Services view. Selecting a group in the Groups panel populates the Subscriptions panel with a list of subscriptions that are selected for deployment on the services in the service group.

Feature	Description
Name	Displays the service group name. Clicking the plus sign displays a nested list of services in the group.

Feature	Description
Address	Displays the IP address of each service in the group.
Type	Displays the type of service.

Subscriptions Panel

The following table describes the features in the Subscriptions panel.

Feature	Description
	Click  to open a dialog that lists subscriptions that were added in the Live Search view or in the Live Resource view and are available for deployment.
	Click  to delete the selected subscriptions from the deployment list for service group.
	Click  to synchronize your resources to the latest versions available on Live.
Name	Displays name of the resource.
Created	Displays date and time that the resource was created.
Updated	Displays date and time that the resource was last updated.
Type	Displays type of resource.
Description	Displays description of the resource.

Subscriptions Tab

Subscriptions are NetWitness Live resources to which you subscribed in the Live Search view or Live Resource view. When you subscribe to a resource, you agree to receive updates on a regular basis from NetWitness Live. The choices made in the Live Configuration panel determine the synchronization frequency and also whether you receive update notifications through email. In addition, if you don't want to wait for the next update, you can force an immediate synchronization.

The Subscriptions tab provides a way to manage subscriptions. Each resource to which NetWitness is subscribed is listed in this tab.

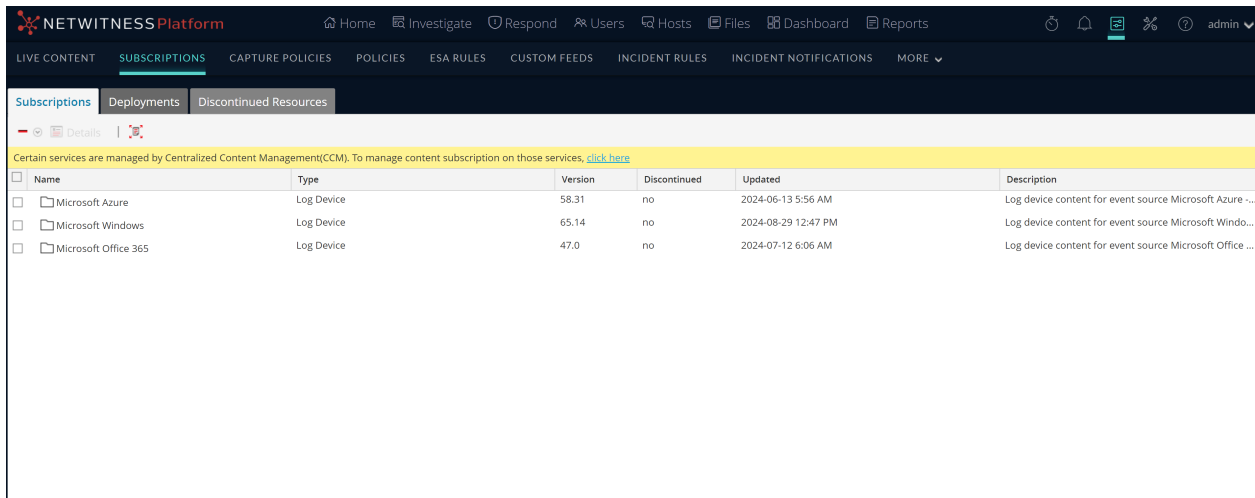

In the Subscriptions tab, you can:

- View all resources to which this NetWitness instance is subscribed.
- Open a detailed view of a subscription in the Live Resource View.
- Delete a subscription.

Note: Subscribing to a resource does not deploy the resource to any services. To deploy one or more subscribed resources, go to the Deployments tab. To deploy a single resource manually, use the Deploy option in the Resource View.

The required permission to access this view is **Manage Live Resources**.

To access this view, in the main menu, select  **(Configure)** > **Subscriptions**. The Subscriptions tab is displayed.

The **Subscriptions** tab has a toolbar and a grid.

Toolbar

This table describes the options available in the toolbar.

Feature	Description
	Deletes the selected subscriptions.

Feature	Description
 Details	Displays the details of a single subscribed resource in the Resource View.
	Check the Live Server for the latest discontinued resources.

Grid

Column	Description
	Selects subscribed resources to view in detail or delete. You can view details for a single resource. You can delete one or more resources from the subscribed resources, in effect unsubscribing.
Name	Displays name of the subscribed resource.
Type	Displays type of subscribed resource.
Version	Displays version of the subscribed resource.
Discontinued	Indicates the status of the discontinued resources for the subscribed resource. Yes - Resource is discontinued. No - Resource is not discontinued. -- - The Live Server is not checked for the discontinued resources.
Updated	Displays date and time when the subscribed resource was last updated.
Description	Displays description of the subscribed resource.

Discontinued Resources Tab

The Discontinued Resources tab provides a user interface in the Live Configure view:

- Scan the services for the discontinued resources.
- Remove the discontinued resources from any service or service group.

Note: Discontinued content still appears. With discontinued content there just won't be any updates, and users won't see these items when they search in Live, unless they check the **Include Discontinued Resources** box while searching.

In the RSA Content space on NetWitness Community, you can view the complete, up-to-date list of discontinued resources ([Discontinued Content](#)). For each resource, there is a description of why it was discontinued. Use these details to determine whether or not to remove a discontinued resource from your installation. .

The required permission to access this view is **Manage Live Resources**.

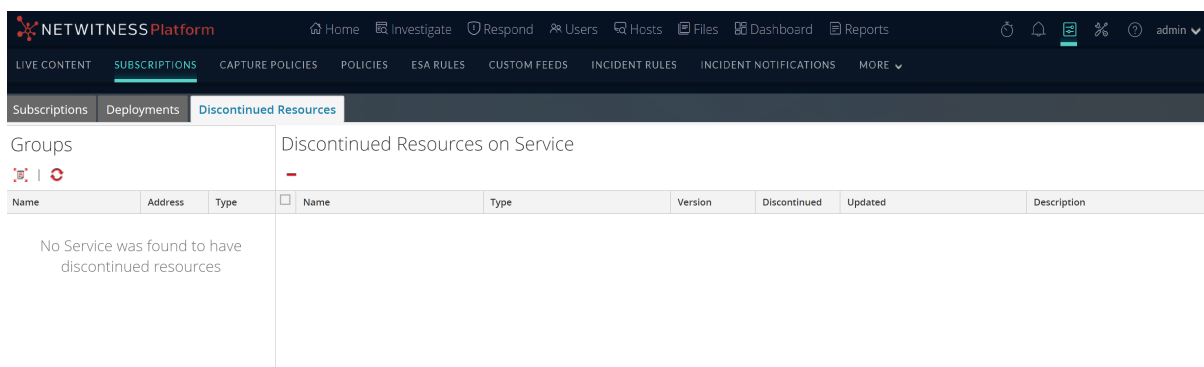

To access this view:

1. Go to  **(Configure) > Subscriptions**.

The **Subscriptions** tab is displayed.

2. Click the **Discontinued Resources** tab.

The Discontinued Resources tab is displayed.

The Discontinued tab has two panels: Groups and Discontinued Resources on Service.

Groups Panel

The Groups panel is a static display of configured service groups that were created in the Admin Services view. Selecting a group in the Groups panel populates the Discontinued Resources panel with a list of discontinued resources which are deployed on the selected service or service group.

Feature	Description
	Click the button to scan the services for a discontinued resource.

Feature	Description
	Displays the current status of the discontinued resources on a service. Note: The status of a service may change while the services are being scanned.
Name	Displays service group name. Clicking the plus sign displays a nested list of services in the group.
Address	Displays IP address of each service in the group.
Type	Displays type of service.

Discontinued Resources on Service Panel

The following table describes the features in the Discontinued Resources on Service panel.

Feature	Description
	Click the button to delete the selected resources from the service or service group.
Name	This is the name of the resource.
Type	This is the type of resource.
Version	Version of the discontinued resource.
Discontinued	Indicates the status of the discontinued resources for the subscribed resource. Yes - The resource is discontinued. No - The resource is not discontinued. -- - The Live Server is not checked for the discontinued resources.
Updated	Displays date and time that the resource was last updated.
Description	Displays description of the resource.

Live Feeds View

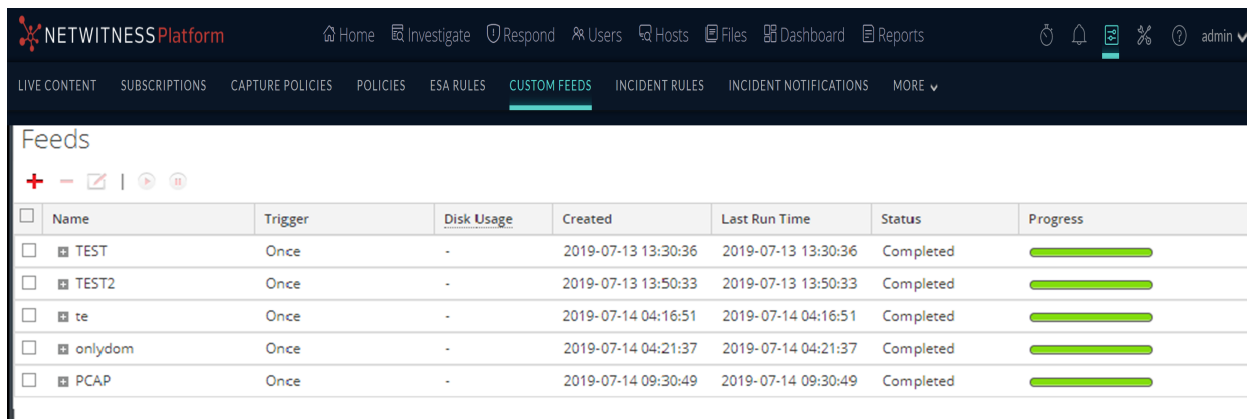

Use the Live Feeds View to:

- Create custom feeds.
- Create identity feeds.
- Edit feeds.

The required role to access this view is **Manage Devices**.

To access this view, navigate to  **(Configure) > Custom Feeds**.

This is an example of the Feeds view.

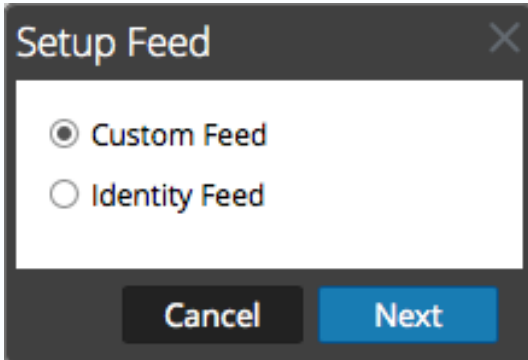

<input type="checkbox"/>	Name	Trigger	Disk Usage	Created	Last Run Time	Status	Progress
<input type="checkbox"/>	TEST	Once	-	2019-07-13 13:30:36	2019-07-13 13:30:36	Completed	<div style="width: 100%;"></div>
<input type="checkbox"/>	TEST2	Once	-	2019-07-13 13:50:33	2019-07-13 13:50:33	Completed	<div style="width: 100%;"></div>
<input type="checkbox"/>	te	Once	-	2019-07-14 04:16:51	2019-07-14 04:16:51	Completed	<div style="width: 100%;"></div>
<input type="checkbox"/>	onlydom	Once	-	2019-07-14 04:21:37	2019-07-14 04:21:37	Completed	<div style="width: 100%;"></div>
<input type="checkbox"/>	PCAP	Once	-	2019-07-14 09:30:49	2019-07-14 09:30:49	Completed	<div style="width: 100%;"></div>

The **Feeds** tab has a toolbar and a grid.

Toolbar

This table describes the options in the toolbar.

Feature	Description
	<p>Initiates the creation of a custom or identify feed by displaying the Setup Feed dialog is displayed.</p>  <ul style="list-style-type: none"> • Custom Feed opens the Configure a Custom Feed wizard. • Identity Feed opens the Configure Identity Feeds wizard.
	Deletes the feed that you selected.
	Opens the Configure Custom Feed or Configure Identity Feed wizard for the feed that you selected (see Editing a Feed).
	Start or resume data feed.
	Stop or pause data feed.

Feeds Grid

This table describes the columns in the grid.

Column	Description
	Selects a feed.
Name	<p>Name of the feed.</p> <div style="border: 1px solid green; padding: 2px; margin-top: 5px;"> <p>Note: You can now use special characters to define the name of the custom feed.</p> </div>
Trigger	Displays how often the feed runs which is determined by what you defined in Feed Task Type when the feed was created.
Created	Displays date and time when the feed was created.
Disk Usage	Displays the MongoDB storage size used by the TAXII feed.
Last Run Time	Displays date and time when the feed was last run.
Status	The status of the feed.
Progress	Progress bar.

Live Resource View

The Live Resource View shows a detailed view of a selected resource, and has the following options:

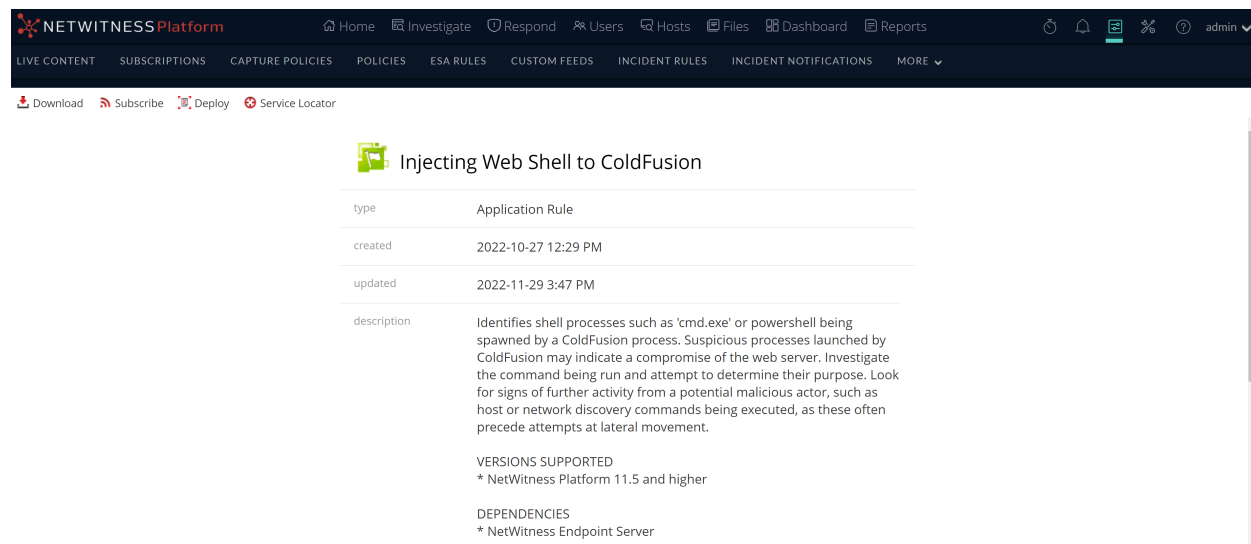

- Download the resource.
- Subscribe or unsubscribe the resource.
- Deploy the resource to services.
- Locate services on which the resource is deployed and remove the resource from services.

The required permission to access this view is View Live Resource Details.

To access this view, do one of the following:

1. Go to  (Configure) > LIVE CONTENT > Search Criteria.
2. In the Live Search view, **Detailed Results**, click the resource type icon or the resource name.
3. In the Live Search view, **Grid Results**, double-click a resource or select a resource and click **Details**.

This is an example of the Resource view.

The screenshot shows the NetWitness Platform interface. The top navigation bar includes Home, Investigate, Respond, Users, Hosts, Files, Dashboard, and Reports. Below the navigation bar, there are tabs for LIVE CONTENT, SUBSCRIPTIONS, CAPTURE POLICIES, POLICIES, ESA RULES, CUSTOM FEEDS, INCIDENT RULES, INCIDENT NOTIFICATIONS, and MORE. A toolbar at the top left contains icons for Download, Subscribe, Deploy, and Service Locator. The main content area displays the details for a resource named 'Injecting Web Shell to ColdFusion'. The resource is an 'Application Rule' created on 2022-10-27 12:29 PM and updated on 2022-11-29 3:47 PM. The description states: 'Identifies shell processes such as 'cmd.exe' or powershell being spawned by a ColdFusion process. Suspicious processes launched by ColdFusion may indicate a compromise of the web server. Investigate the command being run and attempt to determine their purpose. Look for signs of further activity from a potential malicious actor, such as host or network discovery commands being executed, as these often precede attempts at lateral movement.' Below the description, it lists 'VERSIONS SUPPORTED' as '* NetWitness Platform 11.5 and higher' and 'DEPENDENCIES' as '* NetWitness Endpoint Server'.

The Live Resource View has a detailed view of a single resource and a toolbar.

Resource Details

The following table describes the elements in the Resource Details section.

Feature	Description
Resource Type Icon	A graphic representation of the resource type, for example  .
Name	The name of the resource, for example, <code>fingerprint_office_lua</code> .

Feature	Description
Type	The type of resource, for example, RSA Lua Parser .
Created	The date the resource was created, for example, 2013-09-15 02:16 PM .
Updated	The date the resource was last updated, for example, 2013-09-15 02:16 PM .
Description	The description of the resource, for example, Identifies Microsoft Office 95, 2007 Word, Excel, and PowerPoint documents .
Version in production	The version of the resource, for example, 0.1 .
Size	The size of the resource, for example, 9.079 KB .
Required Resources	A list of resources on which this resource depends, for example, NetWitness Lua Library . Clicking a resource replaces the currently displayed details with the details of the one you clicked.
Tagged as 	The tags that apply to the resource. In the example, the tags are featured, informational . Clicking a tag opens the Live Search View with the search narrowed to match resources with that tag.
Required Meta Keys	The meta keys  that apply to the resource. In the example, there are no meta keys required. Clicking a meta key opens the Live Search View with the search narrowed to match resources with that meta key.
Generates Meta Values	The meta values  that the resource generates. In the example, there are no meta values generated. Clicking a meta value opens the Live Search View with the search narrowed to match resources with that meta value.
Permissions	The permissions required for the resource.

Resource View Toolbar

This table describes the Live Resource view toolbar options.

Feature	Icon	Description
Download	 Download	This option downloads the resource currently displayed in the Resource View.
Subscribe or Unsubscribe	 Subscribe  Unsubscribe	<p>This option subscribes to or unsubscribes from the resource currently displayed in the Resource View.</p> <ul style="list-style-type: none"> Clicking Subscribe opens a dialog notifying that you are agreeing to receive notification when the selected resources are updated. You can cancel or click OK. Clicking Unsubscribe asks for confirmation that you want to stop receiving notification when the selected resources are updated. You can then choose to cancel or you can click Unsubscribe or Unsubscribe and Remove, which also removes the resource from services on which it is deployed.
Deploy	 Deploy	This option provides a way to deploy the resource currently displayed in the Resource View. Clicking Deploy opens the Manual Resource Deployment dialog.

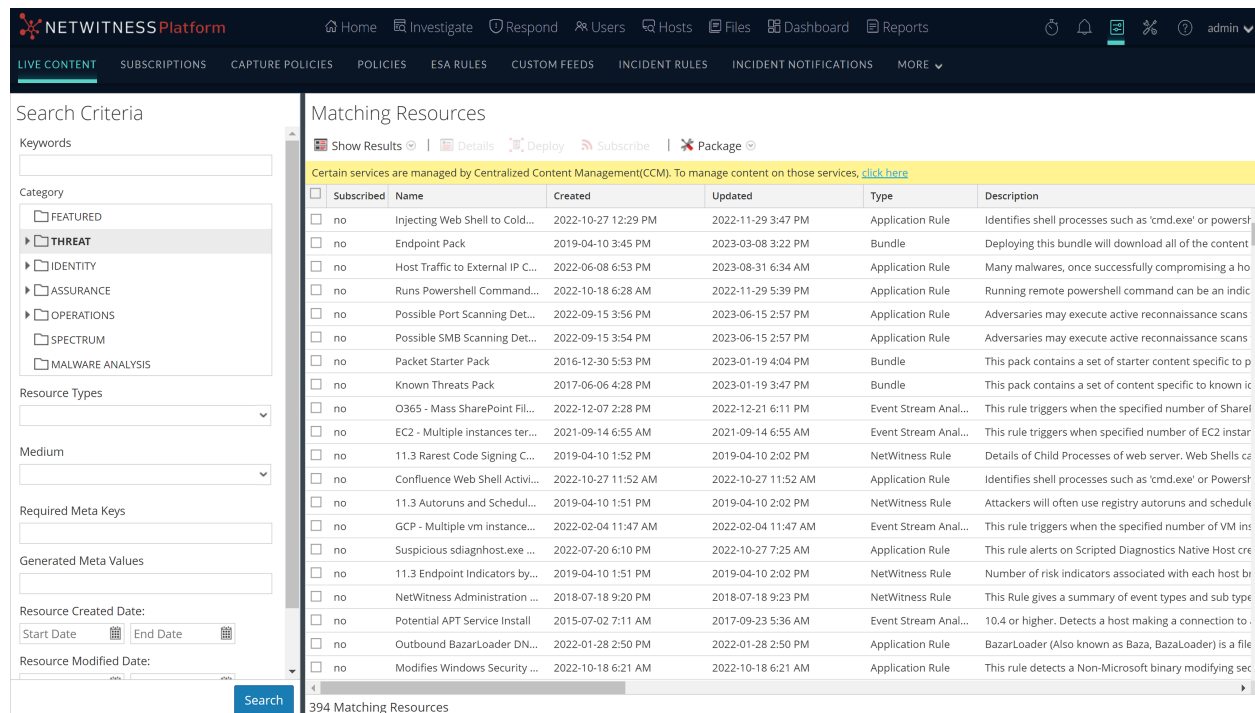

Feature	Icon	Description
Service Locator	 Service Locator	This option displays a list of services on which the currently displayed resource is deployed. You can remove the resource from all services or selected services.

Live Search View

The Live Search view provides the ability to browse the configured Live CMS for resources. Once matching resources are found, you can view details, subscribe to resources, and deploy resources to services and service groups.

Note: If you are logged into an Analyst UI, you can only view but cannot enable, disable, edit, or configure NetWitness Live.

This is an example of the Search view.

The Live Search view has a panel for specifying search criteria and a panel that displays matching resources. The Search Criteria panel is collapsible to provide more width for viewing the Matching Resources panel.

Search Criteria Panel

This is an example of the Search Criteria panel.

The following table provides descriptions of the Search Criteria panel features.

Feature	Description
Keywords	Enter a keyword or keywords to browse for resources that have the keyword in the resource name or the resource description. You can use wildcards when you enter a keyword.
Category	The categories mirror the hierarchical Investigation Model that NetWitness uses to organize resources. The purpose of the Investigation model is to deliver an accurate path to information security incident response. For more information, see the Investigation Model topic in the NetWitness Content space on NetWitness Community.

Feature	Description
Resource Types	<p>Select resources types from the drop-down list to filter resources by type of resource. Possible values are:</p> <ul style="list-style-type: none">• Advanced Analytics (Warehouse)• Application Rule• Bundle• Correlation Rule• Event Stream Analysis Rule• Feed• FlexParser• Investigation Column Group• Investigation Meta Group• Investigation Profile• Log Collector• Log Device• Lua Parser• Malware Rules• NetWitness List• NetWitness Report• NetWitness Rule• (Latest Versions) Health and Wellness Dashboards• (Latest Versions) Health and Wellness Monitors <p>Note: Some rules that have been deployed to an earlier version of NetWitness may not deploy or execute on NetWitness . For more information, see the Troubleshooting Live Services.</p>

Feature	Description
Medium	Select one or more mediums from the drop-down list to search for content based on the meta data source. Available values for medium are as follows: <ul style="list-style-type: none"> • endpoint: for NetWitness latest versions: applied to content that uses meta derived from endpoint agent and endpoint server data • log: applied to content that uses meta derived from log data • packet: applied to content that uses meta derived from network packets • log and packet: applied to content that correlates meta derived across log and packet data
Tags	Select meta tags from the drop-down list to browse based on how the meta is tagged. For example, to browse resources for a Log Decoder, select the netwitness for logs tag. Alternatively, you can click a tag in the Matching Resources panel to insert that tag in this field.
Required Meta Key(s)	Enter a specific meta key; for example, threat.source . Alternatively, you can click a meta key in the Matching Resources panel to insert that tag in this field.
Generated Meta Value(s)	Enter a generated meta value; for example, netwitness . Alternatively, you can click a generated meta key in the Matching Resources panel to insert that tag in this field.
Research Created Date	Specify a date range during which resources were created. For example, to browse resources that were created between January 1 and January 4, you select January 1 as the start date and January 4 as the end date. You must enter dates in mm/dd/yyyy format or you click  and pick dates from a calendar.
Research Modified Date	Specify a date range during which resources were modified. For example, to browse resources that were modified between January 1 and January 4, you select January 1 as the start date and January 4 as the end date. You must enter dates in mm/dd/yyyy format or you click  and pick dates from a calendar.
Search	Click Search to send the search request to the Live server. More specific search criteria return matching resources more quickly.
Cancel	Click Cancel to cancel the search in progress.
Include Discontinued Resources	Check Include Discontinued Resources to include the discontinued resources in the search result. For an up-to-date list of resources that have been discontinued, see the Discontinued Content topic.

Matching Resources Panel

The Matching Resources panel displays search results based on the selections made in the Search Criteria panel. Results are initially displayed in a grid, but you can switch between two Show Results options: Detailed or Grid.

Detailed Results

In the detailed results, you can click a tag, meta key, or resource meta value to auto fill the Search Criteria panel and pivot the search results.

The following table describes the elements in the detailed results.

Feature	Description
Resource Type Icon	A graphic representation of the resource type. For example  .
Name	The name of the resource, for example, Group Management . <div style="border: 1px solid green; padding: 2px; margin-top: 5px;">Note: (Discontinued) is displayed next to the resource name if a resource is discontinued.</div>
Type	The type of the resource, for example, Rule .
Updated	The date when the resource was last updated, for example, 2015-09-15 4:27 PM .
Version	The version of the resource, for example, 0.1 .
Size	The size of the resource, for example, 153 B .
Subscribed	Subscription status: <ul style="list-style-type: none"> • yes: This NetWitness instance is subscribed to this content resource. • no: This NetWitness instance has not subscribed to this content resource.
Description	The description of the resource, for example, Compliance Rule-Group Management .
Tags	The tags that apply to the resource. Clicking a tag narrows the search to resources with that tag. For example,  .
Meta Keys	The meta keys that apply to the resource. Clicking a meta key narrows the search to resources with that meta key. For example,  .
Resource Meta Values	The meta values generated by the resource. Clicking a meta value narrows the search to resources that generated the meta value. For example,  .

Grid Results

In the grid view, you can select one or more resources and use additional options in the toolbar to view the details of a single resource, subscribe to resources, and deploy resources.

The following table describes the elements in the grid results.

Feature	Description
Subscribed	Subscription status: <ul style="list-style-type: none"> • yes: This NetWitness instance is subscribed to this content resource. • no: This NetWitness instance has not subscribed to this content resource.
Name	The name of the resource, for example, Group Management . <div style="border: 1px solid green; padding: 2px; margin-top: 5px;">Note: The resource name is displayed in red color if it is discontinued.</div>
Created	The date when the resource was created, for example, 2015-08-12 3:11 PM .

Feature	Description
Updated	The date when the resource was last updated, for example, 2015-09-15 4:27 PM .
Type	The type of the resource, for example, Rule .
Discontinued	The status of the discontinued resources: <ul style="list-style-type: none"> • yes: The resource that matches the search criteria is discontinued • no: The resource is not discontinued • --: The Live Server is not checked for the discontinued resources
Description	The description of the resource, for example, Compliance Rule-Group Management .
Toolbar	
 Show Results	This menu offers two ways to view search results: Detailed and Grid .
 Details	This option applies to a single selected resource. Clicking Details opens the selected resource in the Live Resource view.
 Deploy	This option applies to one or more selected resources.
 Subscribe	This option applies to one or more selected resources. Clicking Subscribe opens a dialog that asks for confirmation that you want to receive notification when the selected resources are updated.
 Package 	This menu offers two packaging functions for the selected resources: <ul style="list-style-type: none"> • Create: creates a resourceBundle.zip file that contains the selected resources and opens a dialog in which you can either: <ul style="list-style-type: none"> • open the file, or • save the file for subsequent deployment. • Deploy: opens the Deployment Wizard, in which you can choose a resourceBundle.zip file and deploy it.

Live Search Content View

The Live Search Content view provides the ability to search the configured Live CMS for content. Once matching content are found, you can view the details, and download the content.

This is an example of the Search Content view.

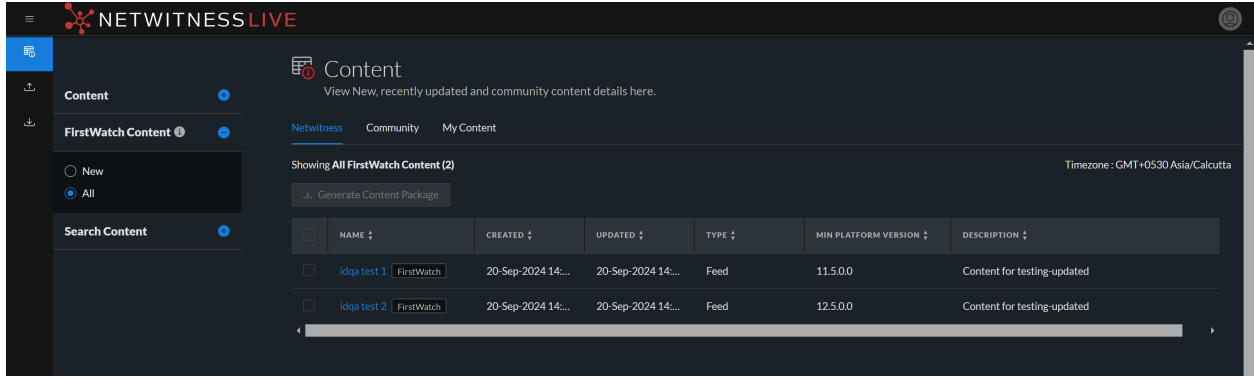

The Live Search Content view has a panel for selecting the source and specifying search content. The matching content are displayed on the right panel.

The following table provides descriptions of the Live Search Content panel features.

Feature	Description
NetWitness	Select NetWitness tab to search for the content that is provided by NetWitness Platform Live.
Community	Select Community tab to search for the content collected and retrieved from third party and open source communities.
New	Select New to retrieve the content which is created in the last 21 days.
Recently Updated	Select Recently Updated to retrieve the content which is updated in the last 21 days.

FirstWatch Content Panel

This is an example of the FirstWatch Content panel.

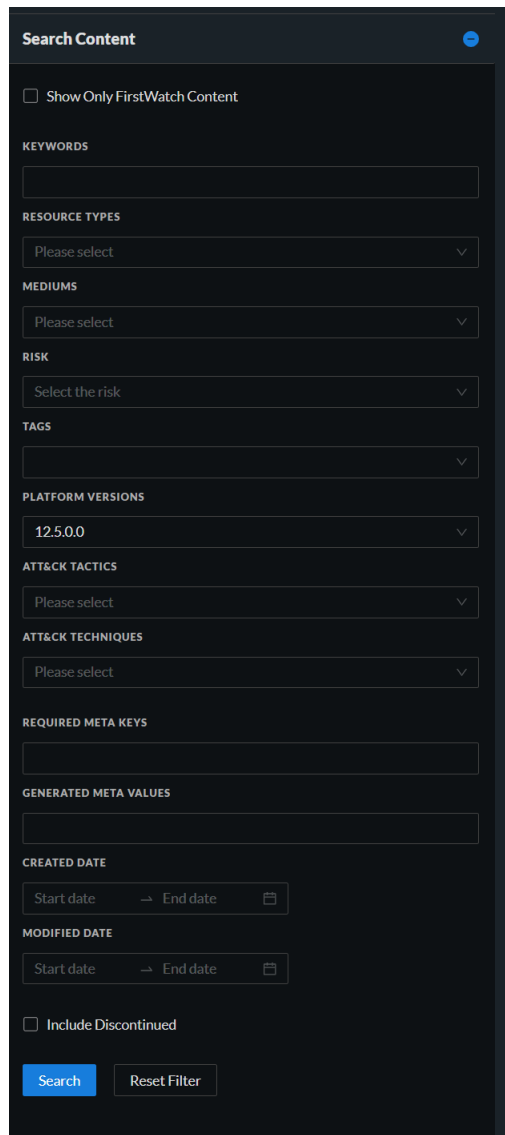

The following table provides descriptions of the FirstWatch Content panel features.

Feature	Description
New	Select New to retrieve the FirstWatch content which is created in the last 21 days.
All	Select All to retrieve complete list of the FirstWatch content.

Search Content Panel

This is an example of the Search Content panel.

The following table provides descriptions of the Search Content panel features.

Feature	Description
Show Only FirstWatch Content	Click the Show Only FirstWatch Content checkbox to include only the FirstWatch content in the search results. The Show Only FirstWatch Content option is only applicable for the content displayed in the NetWitness tab.
Keywords	Enter a keyword or keywords to browse for content that have the keyword in the resource name or the resource description. You can use wildcards when you enter a keyword.

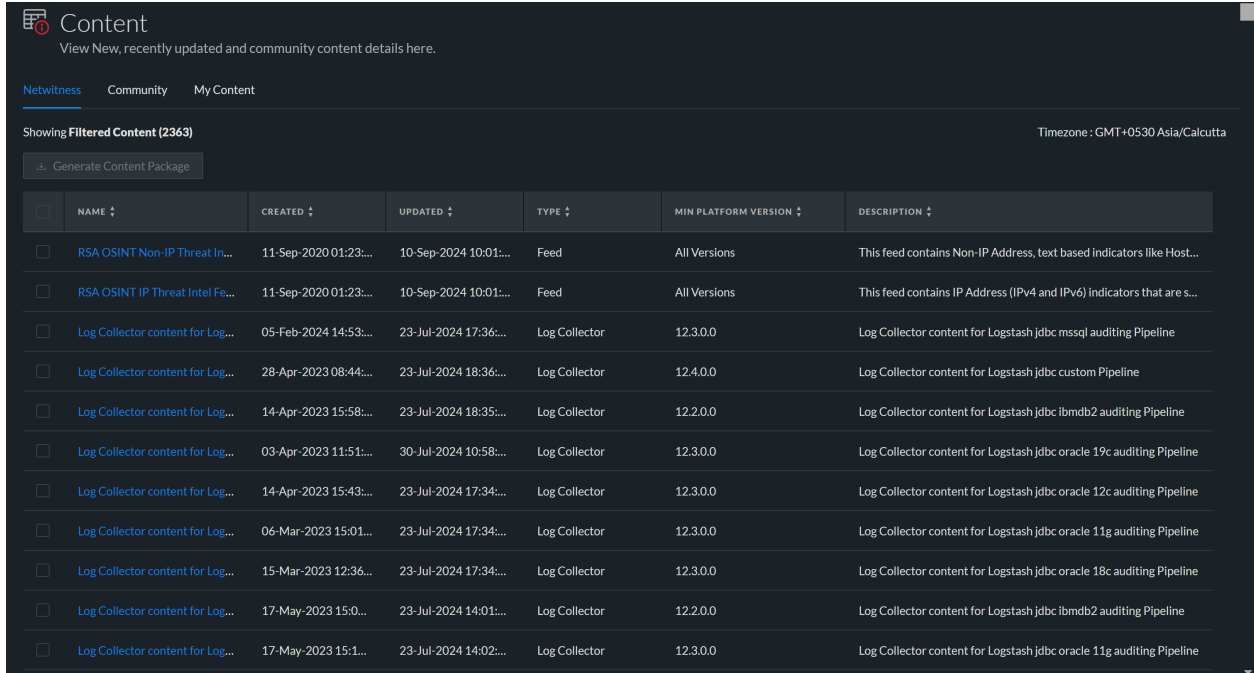

Feature	Description
Resource Types	<p>Select resources types from the drop-down list to filter resources by type of resource. Possible values are:</p> <ul style="list-style-type: none"> • Application Rule • Feed • Log Device • Correlation Rule • NetWitness Rule • NetWitness Report • Lua Parser • Log Collector • NetWitness List • Malware Rules • Event Stream Analysis Rule • Advanced Analytics (Warehouse) • Bundle • Health and Wellness Dashboards • Health and Wellness Monitors • Investigate Profile • Investigate Column Group • Investigate Meta Group
Mediums	<p>Select one or more mediums from the drop-down list to search for content based on the meta data source.</p> <p>Available values for medium are as follows:</p> <ul style="list-style-type: none"> • endpoint: applied to content that uses meta derived from endpoint agent and endpoint server data • log: applied to content that uses meta derived from log data • packet: applied to content that uses meta derived from network packets • log and packet: applied to content that correlates meta derived across log and packet data.
Risk	<p>Select the level of risk of the content from the drop-down list to view. Available are High, Medium, and Low.</p>

Feature	Description
Tags	Select meta tags from the drop-down list to browse based on how the meta is tagged. For example, to browse content for a Log Decoder, select the netwitness for logs tag.
Platform Versions	Select one or more platform versions from the drop-down list to search for content based on the versions. For example, 12.5.0.0 .
ATT&CK Tactics	Select one or more platform Mitre ATT&CK tactics from the drop-down list. For example, Command and Control: TA0011 .
ATT&CK Techniques	Select one or more platform Mitre ATT&CK techniques from the drop-down list. For example, DNS: T1071.004 .
Required Meta Keys	Enter a specific meta key. For example, threat.source .
Generated Meta Values	Enter a generated meta value. For example, rsa-firstwatch .
Created Date	Specify a date range during which content were created. For example, to browse content that were created between January 1 and January 4, you select January 1 as the start date and January 4 as the end date. You must enter dates in yyyy/mm/dd format or you click  and pick dates from a calendar.
Modified Date	Specify a date range during which content were modified. For example, to browse content that were modified between January 1 and January 4, you select January 1 as the start date and January 4 as the end date. You must enter dates in yyyy/mm/dd format or you click  and pick dates from a calendar.
Search	Click Search to send the search request to the Live server. More specific search criteria return matching content more quickly.
Reset Filter	Click Reset Filter to reset the existing search results and displays all the content on the right panel.
Include Discontinued	Click the Include Discontinued checkbox to include the discontinued content in the search result. For an up-to-date list of content that have been discontinued, see the Discontinued Content topic.

Search Results Panel

The Search Results panel displays search results based on the selections made in the Search Content panel.

This is an example of the Search Results panel.

The following table describes the elements in the search results panel.

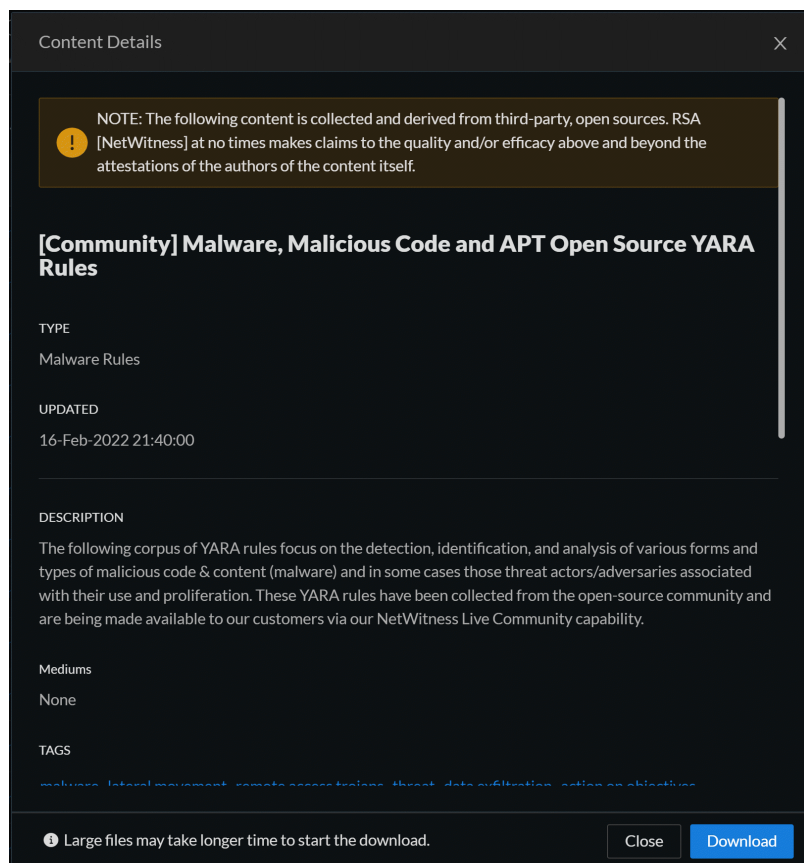

Feature	Description
Name	The name of the content. For example, Log Parser Pack . For FirstWatch Content, the name of the content has label.
Created	The date when the content was created. For example, 04-Aug-2017 15:19:06 .
Updated	The date when the content was last updated. For example, 29-Sep-2020 20:27:14 .
Type	The type of the content. For example, Bundle .
Min Platform Version	Platform version that the content supports. For example, 12.4.2.0
Description	The description of the content. For example, Contains all parser files and log collection files .
Discontinued	The status of the discontinued content: <ul style="list-style-type: none"> Yes: The content that matches the search criteria is discontinued No: The content is not discontinued

Content Details Panel

In the Search Results panel, you can select any content titles to view the details in the pop-up window and download the content.

Note: NetWitness provides no assurance related to the quality and accuracy of the content provided by the third parties and open source communities.

This is an example of the Content Details panel.

The following table describes the elements in the Content Details section.

Feature	Description
Name	The name of the content. For example, Log Parser Pack .
Type	The type of the content. For example, Bundle .
Created	The date when the content was created. For example, 04-Aug-2017 15:19:06 .
Updated	The date when the content was last updated. For example, 29-Sep-2020 20:27:14 .
Description	The description of the content. For example, Contains all parser files and log collection files .
Risk	The level of severity for the Content. For example, High .
Tactics	The particular tactics associated with the content. For example, Command and Control: TA0011 .
Techniques	The particular techniques associated with the content. For example, DNS: T1071.004 .

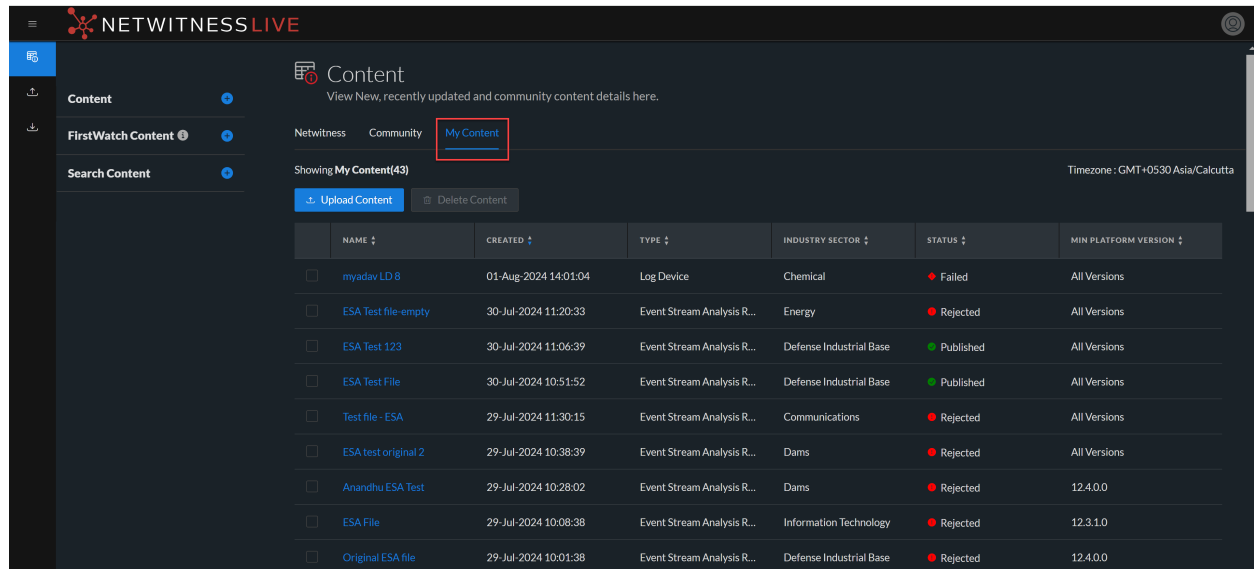

Feature	Description
Version on Production	The version of the content. For example, 0.5 .
Size	The size of the content. For example, 14.96 KB .
Required Resources	A list of resources on which this resource depends. For example, NetWitness Lua Library . Clicking a resource replaces the currently displayed details with the details of the one you clicked in the pop-up window.
Tags	The tags that apply to the content. For example, threat . Clicking a tag opens the Live Search Content view with the search narrowed to match content with that tag.
Required Meta Keys	The meta keys that apply to the content. For example, Threat Category . Clicking a meta key opens the Live Search Content view with the search narrowed to match content with that meta key.
Generated Meta Values	The meta values that the content generates. For example, rsa-firstwatch . Clicking a meta value opens the Live Search Content view with the search narrowed to match content with that meta value.
OOTB	The content provided NetWitness Platform Live.
Discontinued	The status of the discontinued content: <ul style="list-style-type: none"> • Yes: The content that matches the search criteria is discontinued • No: The content is not discontinued

My Content Panel

Following task you can perform on the My Content panel.

- Upload Content
- Delete Content
- Download Content

This is an example of the My Content panel.

The following table describes the elements in the My Content section.

Feature	Description
Name	The name of the uploaded content. For example, Logtest .
Created	The date when the content was created. For example, 23-Aug-2024 11:22:48 .
Type	The type of the content. For example, Log Device .
Industry Sector	The industry sector the content belongs to. For example, Defense Industrial Base .
Status	The status of the uploaded content. Available statuses are Under Review , Published , Rejected , and Failed .
Min Platform Version	Platform version that the content supports. For example, 12.5.0.0 .

Resource Package Deployment Wizard

If you have created a package of resources and saved it on a network drive, you can use the Resource Package Deployment Wizard to deploy the resources manually to a service or a service group without subscribing to the resources. NetWitness accepts packages in **.nwp** files or **.zip** files.

Deploying resources manually deploys them directly to the services without taking advantage of the powerful resource management capabilities of NetWitness.

If you want to receive notification and updates for updated resources and be able to easily remove resources from a service, you must subscribe to resources in the Live Search view and deploy the resources in the **Live Configure** view.

Note: Use NetWitness Live to create resource bundles; this is a different application that is not part of NetWitness. Selecting **Package > Create** in the **Live Search - Matching Resources** toolbar displays the Content Package Tool window. You can choose resources to include in a package and save the package as a NetWitness Package File.

The required permission to access this view is **Deploy Live Resources**.

To access this view:

1. Go to  **(Configure) > Live Content**.
2. In the **Live Search - Matching Resources** toolbar, select  **Package** > **Deploy**.

The Resource Package Deployment wizard is displayed.

Features

The Deployment Wizard has five tabs: **Package**, **Resources**, **Services**, **Review** and **Deploy**. Use **Close** to exit before you complete the wizard.

When you complete the wizard, NetWitness returns to the Live Resources View.

Package Tab

You use this tab to select a resource bundle from your network in this page.

This is an example of the Package tab, with a resource bundle already selected.

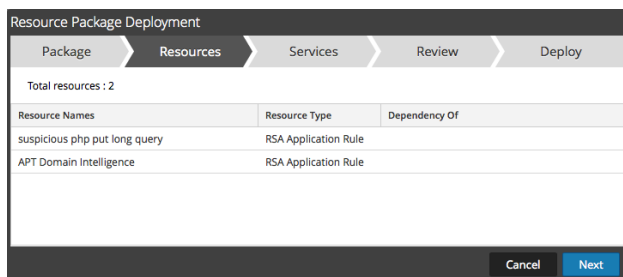

The following table describes the elements in the Package tab.

Column	Description
Resource Bundle	The input field to specify a resource bundle. You can type a path in this field or search using the  button.
Command Buttons	
Browse	This button opens a File Upload dialog in which you can browse the local file system and select a bundle.
Cancel	Cancels the deployment and closes the wizard.
Next	Displays the next tab of the wizard.

Resources Tab

This tab displays the resources contained in the bundle.

The following figure shows an example of the Resources tab.

The following table describes elements in the Resources tab.

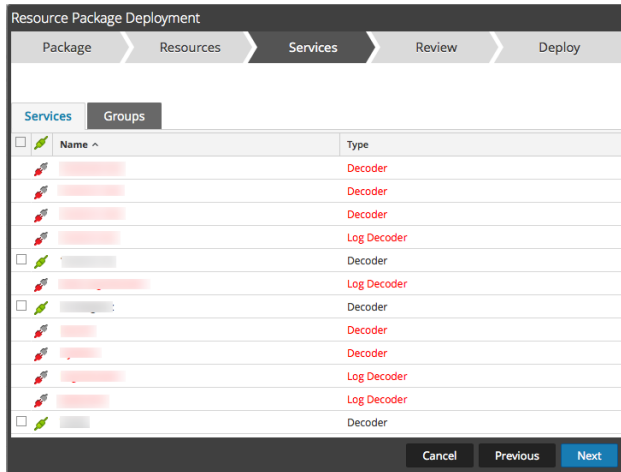

Column	Description
Resource Name	Displays the name of the resources in the bundle (for example, NetWitness Lua Library).
Resource Type	Displays the resource types for the resources in the bundle (for example, RSA Lua Parser)
Dependency Of	Displays Resources on which the selected resource depends (for example, AIM lua).

Services Tab

You select the services on which you want to deploy the resources in the bundle.

The Services tab has two tabs, **Services** and **Groups**. These provide a list of services and service groups that are configured in the  (**Admin**) > **Services** view. The columns are a subset of the columns available in the Services view. You can select the services or the service groups on which you want to deploy the resources in the bundle.

This is an example of the Services tab.

The following table describes the elements in the Services tab.

Column	Description
Services	
	Selects services on which you want to deploy the content. You can select any combination of services and service groups.
Name	Displays the services in your environment on which you can deploy the content.
Host	Displays the name of the resource host.
Type	Displays the type of NetWitness service.
Groups	
	Selects service groups (if you have service groups defined in your environment).
Name	Displays the names of the service groups.

Review Tab

Displays the resources and services on which the resources will be deployed.

In this tab, you can do the following:

- Review the content and services before you deploy.
- Initiate the deployment of the resources.

The following figure shows an example of the Review tab.

The following table describes the elements in the Review tab.

Column	Description
Service Information	
Service	Displays the services in your environment on which you can deploy the content.
Service Type	Displays the type of each NetWitness service (type of host or service).
Resource Information	
Resource Name	Displays the name of the resources you have selected (for example, NetWitness Lua Library).
Resource Type	Displays the resource types for the resources you have selected (for example, RSA Lua Parser).
Deploy	Initiates the deployment of the resources and displays the Deploy page (final page of the wizard).

Deploy Tab

This tab allows you to do the following:

- View the progress of the job
- Cancel the job

This is an example of the Deploy tab.

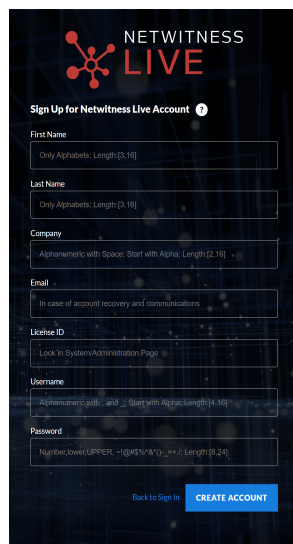

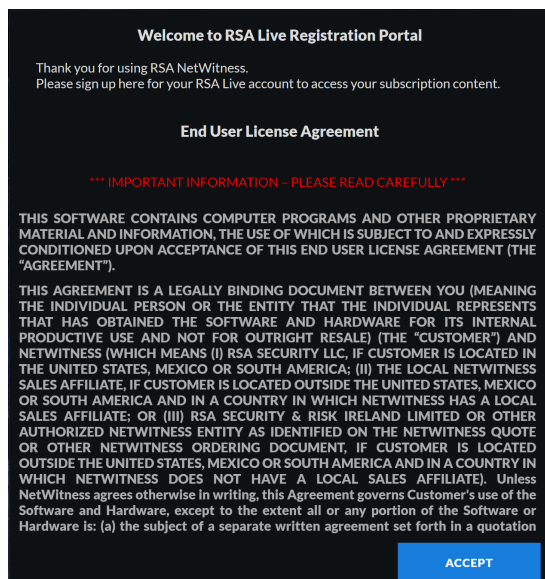

The following table describes the elements in the Deploy tab.

Feature	Description
Service Name	Name of the services to which resources are deployed.
Resource Name	Name of the resources.

Feature	Description
Status	Status of the manual deployment.
Progress	Progress of the manual deployment in a progress bar. When complete, the bar turns solid green.
Command Buttons	
Close	Closes the wizard.
Errors	Only displays if NetWitness encountered any errors. Click to display the errors.
Retry	Only displays if NetWitness encountered any errors. Click this button to try to deploy the resources again using the wizard.

NetWitness Live Registration Portal

The NetWitness Live Registration Portal is a self-service wizard in which customers can set up a Live account and change or reset the password. A Live account is required to get access to the feeds, parsers, rules, and other content in NetWitness Live library. To access the portal, go to the following URL: <https://live.netwitness.com/registration/>.

Click **Sign Up For Live**. The License Agreement page is displayed, once you agree to the Terms and Conditions, click **Accept**: the fields for setting up an account are displayed. These include Contact Information, and License ID.

The following table lists the contact information section fields and its descriptions:

Parameter	Description
First Name	Your first name.
Last Name	Your last name.
Company	The name of your company.
Email	The email address where you want to receive notifications related to the Live account.
License ID	This is the License ID on the  (Admin) > System > Info page.
	<div style="border: 1px solid yellow; padding: 5px;"> <p>Caution: The license ID on the NetWitness must be valid and must be registered on the Flexera Server. If not, contact NetWitness Customer Support.</p> </div>
Username	The username used to sign in to NetWitness Live account. The username must contain a minimum of four characters and a maximum of 16 characters.

Parameter	Description
Password	The password for the NetWitness Live account. The password must contain minimum of eight characters and the maximum length is 24, with at least one uppercase, one lowercase, one number, and one special character.

NetWitness Feedback and Data Sharing

The Live Feedback Activity Log enables you to download the usage data required for Live Feedback. After you download the Live Feedback data, you can then upload it to share with NetWitness.

The settings for these features are available in  (Admin) > System > Live Services view, in the Additional Live Services section.

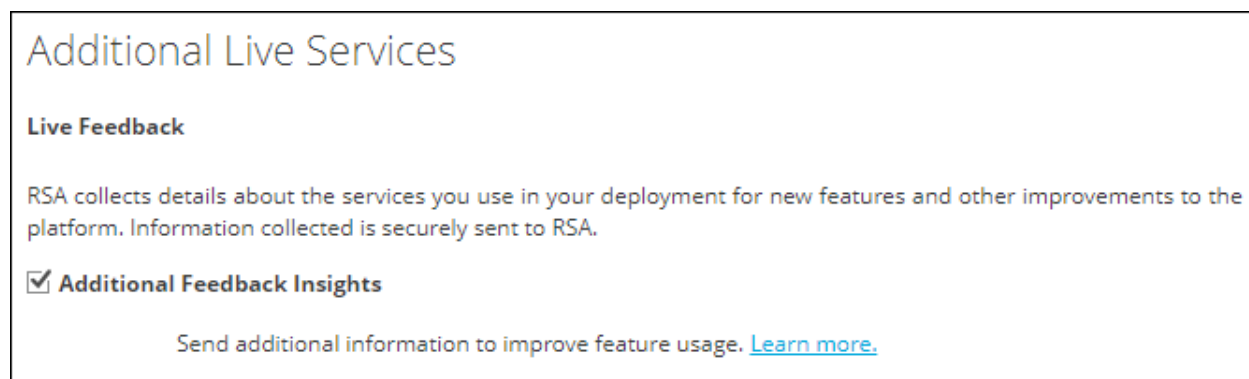

Additional Live Services

Participation in the Additional Live Services is configured in the  (Admin) > System > Live Services view.

Live Feedback

Note: For NetWitness latest versions, this section in the UI has been removed. NetWitness has created the Customer Experience Improvement Program. For details, see "Configure the Customer Experience Improvement Program" in the *NetWitness System Configuration Guide*.

Live Feedback is intended to help improve NetWitness.

Additional Live Services

Live Feedback

RSA collects details about the services you use in your deployment for new features and other improvements to the platform. Information collected is securely sent to RSA.

Additional Feedback Insights

Send additional information to improve feature usage. [Learn more.](#)

Once you set up and configure a Live account, usage data is automatically shared with NetWitness and is protected in accordance with the applicable license agreement. All such data shall be anonymized and shall not have any Personally Identifiable Information.

Before data is sent to NetWitness, all Personally Identifiable Information is removed. Thus, only anonymous usage data gets transferred to NetWitness.

For more information, see the "Live Feedback Overview" topic in the [System Configuration Guide](#).

File Reputation

File Reputation service provides instant access to the latest signatures using the RSA Live feed so data is more relevant, with fewer false positives. With this service, users always have reliable data about the reputation of files in their NetWitness Endpoint system. In addition to the whitelisting service, it provides blacklisting information as well.

File Reputation

Enable **File Reputation** Not Connected

This option is used to view reputation status of files. The File Hash information from NetWitness Platform is sent to RSA Live to get the reputation status. Reputation status is leveraged by analysts during investigation of files.[Learn more.](#)

Troubleshooting Live Services

This section provides troubleshooting instructions for issues faced when using the Live Services module in NetWitness.

OutOfMemoryError on Context Hub Server

You may encounter an OutOfMemoryError on Context Hub server, and the service becomes unresponsive.

If there are any TAXII feeds configured, Health and Wellness raises alerts when the available heap memory of Context Hub server is critically low. If the status of Context Hub server is Unhealthy because of low memory, perform the following steps:

1. Make sure that the feeds **Start Date** is within 180 days.
2. Check if any TAXII feed is consuming too much disk space. A TAXII feed can consume maximum of 300 MB. If it consumes more disk space, you must reduce the value in the **Remove STIX data older than** field under **Advanced Options** in the **Custom Feed Creation Wizard** when you edit a TAXII feeds.

Note: If the issue still persists, you must execute step 3.

3. To decrease the number of parallel threads available for processing STIX:
 - a. Go to  (Admin) > **Services** > **Context Hub service** > **View** > **Explore**.
 - b. In the tree panel, navigate to **enrichment/stix/ config**.
 - c. In the right panel, set the **stix-query-scheduler-pool-size** field value to 2. By default the value is 5. This setting controls how many number of threads are allowed to process queries for STIX data at the same time.
 - d. Set the **taxii-poll-scheduler-pool-size** field value to 2. By default the value is 5. This setting controls how many number of threads are allowed to poll TAXII servers at the same time.
 - e. Restart the Context Hub server.

Troubleshooting Live Connect Threat Data Sharing

This section discusses troubleshooting Live Connect Threat Data Sharing.

Query Log Retrieval Sample

To retrieve a sample of threat intelligence data sent to Live Connect, you must construct a URL by setting the following parameters:

- **sendReport:** value is **true** or **false**: true to send this report to the Live Connect server. False to just create the report for viewing. The value defaults to false.
- **hashValues:** value is **true** or **false**: true to hash the values as md5/sha256. False to show values in clear text – should use only for manual viewing. Defaults to false.

- **startDate / endDate**: Dates for time boundaries for log entries. Format: YYYY-MM-DD HH:mm:ss

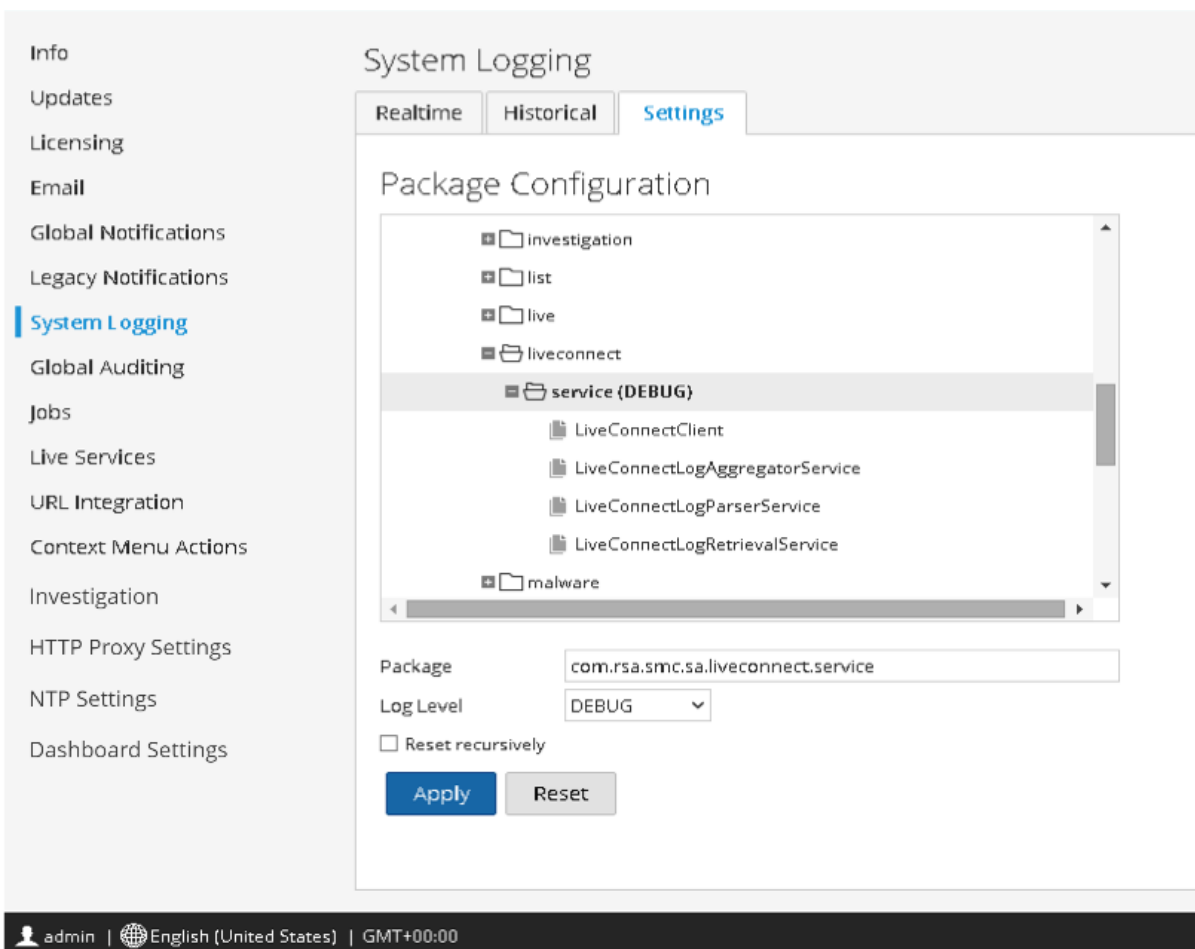

The following is an example of the URL used to retrieve query logs:

```
https://<server>/admin/liveconnect/force_aggregation?startDate=2016-01-18%2000:00:00&endDate=2016-01-19%2010:10:00&sendReport=false&hashValues=true
```

System Logging: Debug

To access debug information:

1. Go to  (Admin) > System > System Logging.
2. Select the **Settings** tab.
3. In the Package Configuration section, select **com > netwitness > platform > server > liveconnect > service (DEBUG)**.

The screenshot displays the 'System Logging' configuration interface. On the left is a navigation menu with 'System Logging' highlighted. The main area has tabs for 'Realtime', 'Historical', and 'Settings'. Under 'Settings', there is a 'Package Configuration' section with a tree view. The tree shows a hierarchy: Investigation, list, live, liveconnect, and service (DEBUG). The 'service (DEBUG)' package is expanded, showing sub-packages: LiveConnectClient, LiveConnectLogAggregatorService, LiveConnectLogParserService, and LiveConnectLogRetrievalService. Below the tree, the 'Package' field contains 'com.rsa.smc.sa.liveconnect.service' and the 'Log Level' dropdown is set to 'DEBUG'. There is an unchecked 'Reset recursively' checkbox and 'Apply' and 'Reset' buttons at the bottom.
